CURRENT TOPICS.

CHARLES FRANCIS ADAMS, in his Phi Beta Kappa Oration last week, advanced views in regard to collegiate education and the classics which are likely to provoke discussion. He sustains the views substantially of Herbert Spencer, as presented in his famous essay on Education.

ACCORDING to a statement in an exchange, Dr. Macon, of the Inebriates' Home at Fort Hamilton, L.I., has looked into the family history of one hundred and sixty-one patients there. He learned that ninety-eight of the number had drunken fathers; six, drunken mothers; and sixteen, grandparents and other near kindred who were intemperate. Fifteen were of families in which insanity existed, sometimes along with inebriety.

AN amendment to the school laws of the State of Michigan has been made, requiring a provision in every school for "instructing all pupils in physiology and hygiene, with special reference to the effect of alcoholic drinks, stimulants, and narcotics generally upon the human system." The same amendment requires that every teacher, before receiving a certificate to teach, shall pass a "satisfactory examination" in regard to these subjects.

REFERRING to "the God-in-the-Constitution party," which fortunately is not very large or prosperous, the *Banner of Light* well observes: "Professing to desire but larger rights on the one hand, and to demand a guarantee for a surer morality, with expressions of a higher reverence, on the other, the real purpose is to obtain joint control of the fundamental law on which our civil and religious freedom rests, and use it for the benefit of sects, instead of defending it for the spread of the largest possible human liberty."

SAYS the *Christian Statesman:* "No man need be deeply versed in the history of a hundred years ago to know that Thomas Jefferson's views of personal liberty involved the denial of all right of the State to acknowledge God, or to render him public homage or service," and the *Statesman* might have added, at the same time, to protect the adherents of all religions in their worship, and the adherents of all systems in the enjoyment of their beliefs, requiring only that they do not infringe upon the equal rights of others.

AT coronation banquets in Russia, the toasts are greeted with salvos of cannon, the number of guns being in proportion to the importance of the toast from a courtly point of view. "The Emperor" calls for sixty-one guns; "The Empress," for fifty-one; "The Imperial House," for thirty-one; and "The Clergy and all faithful Subjects"—that is, the whole population, the house of Romanoff excepted—calls for only twenty-one guns. In this ceremony, the Czar is recognized as three times greater than the people, and the Romanoff family as seven-eighths of the State.

A NEW YORK correspondent of the *Congregationalist* writes: "The Salvation Army does not get on well in East Brooklyn. The citizens complain of the noise and rowdyism of the gathered street crowds, and the ancient church in which the Army has rendezvoused was set on fire during a service. A girl of twenty, known as 'Captain Lou,' lately one of their exhorters, was arrested for theft on Thursday evening, while haranguing a crowd from the steps of a house in a hard neighborhood in this city. She had on a dress and jewels stolen from a Brooklyn lady, and had four tickets for valuables stolen from two or more Brooklyn ministers, whose confidence she had gained by her pious pretences."

IT is often said that theology begins where science ends. We have not lately seen a better illustration of this statement than is afforded by the following extract from a report of a sermon by Rev. W. H. Cudworth of this city: "Men and women perfected on earth or in heaven are angels. If we can find out how the angels are occupied in heaven, we can also find out how we shall be occupied when we get there. The angels bless God. The angels are actively employed in the execution of God's commandments. The angels teach God's Word, and are taught by it. The angels are God's ministers messengers, emissaries. Lastly, the angels do God's pleasure. Here are seven distinct classes of occupation for the soul in heaven, covering the exercise, development, and perfection of all the faculties the soul possesses."

A WRITER in the *Congregationalist* thus refers to the appearance of the ruin wrought by a cyclone in the West: "It is not a straight and direct blow: it is a grinding, mashing, twisting, crushing, as if the great vials of wrath were being poured out, and all the furies of the abyss were clamoring and shrieking to see which could do the most hurt. Two churches were smashed to splinters. One of them shows the pews almost intact on one side the aisle, and on the other side they are ground to powder. I have been to look at the ruins twice, and the last time with a sickening heart, which leads me fervently to add to my litany, From cyclones, good Lord, deliver us. No power can resist, no foresight prevent. The place of safety is the hole of a fox, deep in the ground. A bomb proof might do, but nothing less."

CHIEF MOSES and his band, who were brought to Washington recently by authority of the War Department, attempted to show their adaptedness for civilized life, one evening, by getting drunk. A Washington paper contains a report of an interview with Commissioner of Indian Affairs, Price, a well-known temperance worker, from which we give the following: "'Mr. Commissioner, did you furnish the money for the Indians with Chief Moses to get drunk?' 'No,' replied the commissioner. 'I guess the War Department furnished the money.' 'Are you going to prosecute the people who sold them the liquor?' continued the reporter. 'I tried that once in this town,' was the emphatic reply, 'and I will not attempt it again. I don't believe there is enough virtue and intelligence in this town to convict a man for selling liquor to an Indian, and I would like to get up on a platform and tell the people so. We had a clear case last time, but it was lost by perjured testimony.'"

THERE is a desire among the liberal people of Washington to open the National Museum, the Smithsonian Institute, the Congressional Library, and other similar institutions on Sunday. One of the reasons urged is that these places observe the same hours as the government offices in opening and closing, and thus the government clerks and employés are debarred from using them. The *Christian Statesman* gravely remarks: "It does not occur to those who reason thus that the rule which closes these institutions in the early afternoon is a purely human arrangement, while the rule which consecrates every seventh day to the duties of religion is a law of God." The same paper adds: "We are glad to see it stated that, of many ministers in Washington who answered a request for an expression of opinion on this subject, only two, and one of these a Roman Catholic, are in favor of the proposed change." We hope the movement on foot in Washington will succeed in spite of the so-called "law of God" and the "opinion on the subject" of the orthodox ministers of that city, who are in favor of depriving the people of opportunities for instruction and enjoyment on Sunday under the pretence of obeying a divine command, when there is not a line in the Old or New Testament directing the observance of Sunday as the Sabbath.

JUDGE HOADLY AND THE FREE RELIGIOUS ASSOCIATION.

Correspondence between Judge Hoadly of Ohio and the President of the Free Religious Association, on the Meaning of the Association.

CINCINNATI, June 27, 1883.

My dear Mr. Potter,—As the newspapers have informed you, I have been nominated as the Democratic candidate for Governor of Ohio. Almost immediately upon the heels of this nomination came a series of charges in the Republican press, *first*, that I am an atheist; *secondly*, that I am an agnostic; *thirdly*, that, by reason of my connection with the American Free Religious Association, I am pledged to the destruction of the Christian religion and of Christian principles. I telegraphed you on Saturday last for a copy of the constitution of the Free Religious society. I think I understand the constitution, but should be glad to have authentic documents before me. When I was asked, many years ago, to become a vice-president of the American Free Religious Association,—of which, as you are aware, I have never been able to attend any meeting,—three circumstances strongly impelled me to yield a graceful assent; namely, *first*, the character of the men connected with the society. At the head of the list of vice-presidents was the greatest American then living, Ralph Waldo Emerson; and with him were associated that eloquent political orator and leader of the progressive Republicans of New York, George William Curtis, editor of *Harper's Weekly Journal of Civilization*; that robust and eloquent divine, as truly a man of God as any who stands in any American pulpit, Robert Collyer; that learned *savant* and teacher of science, E. L. Youmans, of the *Popular Science Monthly*; that scholar, preacher, soldier, statesman, who first led the colored men of America to fight in battle array for their country, Thomas Wentworth Higginson; the rabbi of the synagogue of my own city, my personal friend, Dr. Isaac M. Wise; and other gentlemen and ladies whose efficiency in the work of philanthropy, high standing in society, and established and deeply religious character gave assurance that the work of their hands would be one to the building up of true religion. And, *secondly*, I was attracted by the pledge of one of the articles of the constitution, that no man by joining the American Free Religious Association surrendered any religious opinion or gave assent to any religious dogma. And, *thirdly*, I believed with my whole heart in the fundamental principle of the society; namely, in the advancement of religion and morality in the spirit of liberty. These views I still entertain. And I have been glad to know that in the years that have passed, during which I have been prevented by remoteness of residence from attending any of the meetings of the society, there have appeared on its platform, at its anniversary meetings and elsewhere, men of all shades of religious opinion, including Evangelical Christians.

Now, it is said publicly that in some way this society is pledged to receive no members or to have no affiliation with persons or societies who recognize the Christian name. I have not the exact alleged phrase before me, or I would communicate it to you. I never heard of anything of this kind before; but I await with anxiety the receipt of a copy of the constitution in order that I may know whether the freedom which I have supposed was characteristic of the American Free Religious Association, and which has included men like Robert Collyer and James Freeman Clarke, associated on its platform with men like Minot J. Savage, John W. Chadwick, and yourself and your associate. Mr. Underwood, is really hampered by any such statement in the constitution. Please send me a copy of the constitution at once, and greatly oblige Your friend,

GEORGE HOADLY.

Rev. WILLIAM J. POTTER,
3 Tremont Place, Boston, Mass.

BOSTON, June 30, 1883.

Hon. GEORGE HOADLY:

My dear Sir,—In reply to your letter of the 27th inst., I hasten to say that a copy of the constitution of the Free Religious Association has been sent to you. If you have received it, you have already been made aware that your understanding of it, as expressed in your letter, was correct in every particular. But lest that may have failed to reach you, let me quote here the articles which define the objects and membership of the Association. They are as follows:—

I. This organization shall be called the Free Religious Association, its objects being to promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history: and to this end all persons interested in these objects are cordially invited to its membership.

II. Membership in this Association shall leave each individual responsible for his own opinions alone, and affect in no degree his relation to other associations; and nothing in the name or Constitution of the Association shall ever be construed as limiting membership by any test of speculative opinion or belief, or as defining the position of the Association, collectively considered, with reference to any such opinion or belief, or as interfering in any other way with that absolute freedom of thought and expression which is the natural right of every rational being. Any person desiring to co-operate with the Association shall be considered a member, with full right to speak in its meetings; but an annual contribution of one dollar shall be necessary to give a title to vote, provided, also, that those thus entitled may at any time confer the privilege of voting upon the whole assembly on questions not pertaining to the management of business.

The other articles refer only to the election and duties of officers, the appointment of meetings, and the terms of amending the constitution. The important parts above given will make it plain, to every one who understands the English language, that the Free Religious Association makes no religious name, dogma, or opinion a bar to fellowship. And as a matter of fact, having been Secretary of the Association from its organization in 1867 until a year ago, and President of it since the latter date, I know that a very considerable portion of its members adhere to "the Christian name." The Association is entirely unsectarian, with a membership of different religious views and even of different religions. The members are united only in the application of the principle of free inquiry to religious problems, and in placing the moral and philanthropic interests of religion before its speculative. A large part of them, doubtless, believe that the special religions of dogmatic authority must in time disappear by reason of the advance of liberty of thought and the corresponding growth of a larger idea of religious unity and of practical human brotherhood; but even that belief is not constitutionally imposed on any as a condition of membership in the Association.

You are entirely right, too, in the list of names with which yours has been associated in the vice-presidency of the Association,—with one technical exception. Rev. Robert Collyer has not been an officer of the Association, but he has been a member—is possibly so to-day—and a speaker on its platform, as have been all the others you name. Persons of various religious opinions, including Evangelical Christians, have been repeatedly invited, and have in a number of cases accepted the invitation, to speak in its lecture courses and at its conventions. Bishop McQuaid of the Catholic Church once lectured by invitation before the Association, giving the Roman Catholic view of the public school question.

It is but right that I should add that I state these things solely in the interest of truth and fair dealing, and not from any special wish to forward your canvass for the governorship. I have always acted with the Republican party; and so far as I understand, at this distance, the issues involved in the pending election in Ohio, much as I respect your ability and character, I cannot consistently hope for your political success in this contest. But truth and justice are dearer to me than any party; and, were I a citizen of your State and these slanderous stories should continue to be repeated by the Republican press against the Free Religious Association for the purpose of damaging you on account of your connection with it, I might be compelled to exercise the "divine right" of bolting the ticket of my own party in order to make my protest against such means of winning a victory. Your letter does not refer to the charges against *The Index*, as the organ of the Association, which have appeared in some of the Ohio journals, and which only a still more reckless and malicious ignorance could have originated. They are, doubtless, a part of the outburst of the same partisan bigotry. That a publication which receives in any way the countenance of such persons as you mention—and several of them are among its regular contributors—should be a "vile" and "socially-degrading sheet" is a charge too absurdly incredible to require other refutation. Yet you know, from many years' acquaintance with the paper itself, as do many readers of it in your State, what it may be reasonably hoped all the better informed of your editors know, that *The Index* has been conspicuously distinguished for its vigorous defence in the liberal ranks of the very highest standards of social and personal morality.

I am, sir, with great regard, yours sincerely,

WM. J. POTTER,
President of the Free Religious Association.

SACRED SCRIPTURES.

"Each nation," said Emerson in the *Dial*, "has its Bible more or less pure. None has been as yet willing or able in a wise or devout spirit to collate its own with those of other nations, and, sinking the civil-historical and the ritual portions, to bring together the grand expressions of the moral sentiment in different ages and races, the rules for the guidance of life, the bursts of piety and of abandonment to the Invisible and Eternal,—a work inevitable sooner or later, and which we hope is to be done by religion and not by literature." Since this was written, more than forty years ago, there have been various attempts in the direction pointed out by it. The sympathy of religions has since then been greatly fostered and developed. A science of Comparative Religion has been born and grown to lusty manhood. What a roll of honorable names is that reporting the masters of this science, and how it lengthens as the years go by! What deeper introduction we have had into the heart and life of all the great religions of the ancient world! But we are still far enough from that collation of the Sacred Scriptures of Antiquity which the prophetic soul of Emerson divined. Mr. Conway's *Sacred Anthology* is, I believe, the most notable attempt that has yet been made in this direction, and it leaves much more to be desired than is made up by Mr. Schermerhorn's more recent *Sacred Scriptures of the World*. Only by the multiplication of such attempts will come the

Digitized by Google

realization of Emerson's prophetic dream. No nation, no religion, ever will in any formal way, through certain duly accredited representations, collate a Bible of Humanity. Not mechanism, but organic evolution is the method of religious change and growth. The universal Bible must ever be as undefined and indefinable as the universal church. In the mean time, blessed are they who know that there is such a Bible, and who do their part as best they can to cause its general recognition. And those of us who are the ministers of religion must not permit their work to lie in the infertile soil of books as seed-corn in the hand of an Egyptian mummy. We must take the seed corn of their thought, and with the living voice scatter it abroad upon the hearts of those whom we address. It is a lamentable fact that seldom are the sentences in other scriptures translated into such wholesome, homely, hearty phrases as those of our own Hebrew and Christian Scriptures. It is the difference between "much learning hath made thee mad" and "excessive erudition hath impaired thine understanding." But, in spite of such discouragements, it is still possible to read from week to week to an attentive congregation the sentences of a universal Bible in which there is neither Jew nor Greek exclusively, neither Christian nor Mohammedan, nor Buddhist nor Brahman.

Having done this, shall we have done enough? It seems not so to me. I crave a Bible of humanity, a universal scripture that shall be something infinitely more inclusive and expansive than any collation of ancient scriptures that has yet been made, or that ever can be made, whatever wit or taste or spiritual discernment goes to the culling of its phrases in the wide gardens of the ancient world, however catholic in their inclusion. I think we grieve the Holy Spirit when we speak and act as if the canon of the Bible of Humanity would be complete if all the noblest scriptures of the ancient world were strung into one glorious anthology. For myself, if I had to choose between such a Bible and a Bible containing all the highest wisdom, all the purest ethics, all the most generous aspiration of the modern world, I should take the last and cleave to it, and let the other go. We need a catholicity that shall be equal to this perception and to the action that it demands. "Why should not we also enjoy an original relation to the universe?" It is the voice of Emerson that speaks, and it continues: "The sun shines to-day, also. There is more wool and flax in the fields. There are new lands, new men, new thoughts. Let us demand our own works and laws and worship." Why not, and our own Bibles, too? Is the water of life only there in China, or India, or Judea, that we should be craning our buckets over into those ancient wells. Nay, but as pure and sweet as they are bubbling at our feet. Within this present century, more noble scriptures have been written than you can find in Vedas or Tripitka, in Bible or Avesta. We want a catholicity that shall perceive that this is so and act accordingly. "The highest problem of authorship is the writing of a Bible," said Carlyle to Herand, quoting Novalis. "That is precisely what I am doing," said Herand. I know not if even such conceit is not more creditable than the prevailing disposition to believe that Bible writing is entirely an affair of by-gone times. If we can add no sentence to the Bible of humanity, we can at least allow that sentences are being added every day; and it is incumbent on us to honor these new sentences by our habitual use in our religious services.

If long familiarity with sacred sentences makes them a fount of sweet association, surely it has another and a very different operation. It may not breed contempt, but it often breeds indifference. If the Scripture lessons read on Sundays in the majority of Christian churches were read backwards instead of forwards, the amount of inspiration and suggestion proceeding from them would not be appreciably less. Both sense and heart are as dull to them as to the recurrent phrases of a liturgical service. And seeing that these things are so, we want a Bible of Humanity that shall be inclusive not only of the best in all the ancient scriptures, but of the best that finds an utterance in each new time. "The word of God is not bound." It is a Bible saying, and how true! It is not bound within the covers of the Bible. It is not bound within the compass of all ancient scriptures. It is not bound to any past. We want a catholicity that shall take its stand upon this wide and deep foundation. A pebble is not so much smaller than the planet to whose side it clings as is the Bible less than the already realized experience of the human soul, beyond whose boundaries lie immeasurable realms awaiting our appropriation. Let us, with all tenderness and reverence,—those of us who are to this manor born,—cleave to the Bible for its honest worth, unswerved from our allegiance to it by the inanities of those whose noisy advocacy is the worst it has to fear. But let us never forget how little of the total scriptures that we need for our harmonious development is written here, or in the aggregate of all the scriptures of the ancient world.

JOHN W. CHADWICK.

THE OATH QUESTION IN ENGLAND: ITS PAST AND ITS FUTURE.

The rejection by a majority of three votes of the government bill to admit newly elected members of Parliament on affirmation, if they prefer, instead of on oath, brings the oath question in England to a definite conclusion, so far as regards the immediate questions round which it has centred. It will now take a much wider form, and become in the future a plain and important discussion of the elementary principles of liberalism which have been obscured up to the present time by considerations of personality and party politics. This conclusion forms a fitting time for a review of the affair from the beginning; and, although most persons know something of its successive steps, and although, as has been said, the principles involved are but the most elementary ones of civil liberty, still, as an index of contemporary thought and religious feeling, and because it is destined to form the basis of a much more comprehensive movement, such a review is very desirable.

In the first place, the oath question has been before the public so long that an historical recapitulation is necessary. It has followed a logical development from the beginning; and this I will narrate as briefly as possible. There can be no doubt that, in years to come, this phase of English political history will be regarded with extreme interest and no less amazement, so that we shall do well to obtain a consecutive view of it. On May 3, 1880, the Speaker of the House of Commons was informed that Mr. Charles Bradlaugh, one of the members for Northampton, claimed to make an affirmation or declaration in place of taking the usual oath of allegiance. A committee was appointed to consider the matter, and subsequently reported that he had no right to do so; whereupon, he presented himself at the table of the House, and claimed to be sworn in the usual manner. After prolonged debate, amid much excitement, Mr. Labouchere—the other member for Northampton—moved that Mr. Bradlaugh be allowed to affirm. This was defeated by two hundred and seventy-five to two hundred and thirty. The next day, Mr. Bradlaugh addressed the House from the bar, and, on refusing to withdraw, was taken into custody by the Serjeant-at-arms, being released, however, on the following day. A resolution was subsequently moved by Mr. Gladstone, and carried by three hundred and three to two hundred and forty-nine, allowing Mr. Bradlaugh to affirm, "subject to any liability by statute," *i.e.*, liability to a fine of £500. The courts of law decided against him, and their decision was confirmed by the Court of Appeal. Mr. Bradlaugh then resigned his seat, and was re-elected at Northampton. After re-election, he again presented himself to be sworn; whereupon, Sir Stafford Northcote, the leader of the opposition, moved and carried a resolution forbidding him to do so. Soon afterward, the Attorney-General moved for leave to bring in a bill allowing members to affirm. The bill was debated at great length, and the debate adjourned. Mr. Bradlaugh then presented himself again to be sworn, was again ordered to withdraw. He did so, and the Sergeant-at-arms was ordered "to remove Mr. Bradlaugh from the House until he shall engage not further to disturb its proceedings." Mr. Gladstone having announced that the Parliamentary Oaths Bill would not be proceeded with that session, Mr. Bradlaugh addressed a great meeting of his supporters in London, and expressed his determination to proceed forthwith to the House and to take the oath. Accompanied by many thousands of persons loudly cheering him, he went to the House and was about to enter, when he was confronted by the officials and refused admission. A violent struggle ensued, and he was forcibly expelled. After two more fruitless efforts on his part to be sworn, Mr. Labouchere moved for a new writ for Northampton. Another long debate followed, in the midst of which Mr. Bradlaugh made his way into the House, walked up to the table, drew a copy of the New Testament from his pocket, and, before the astounded members knew what he was doing, administered the oath to himself and took his seat. A very lively debate followed; and on the next day he was expelled by a vote of two hundred and ninety-seven to eighty, moved as usual by Sir Stafford Northcote, and a new writ was ordered for Northampton. It was generally believed in London that the electors of Northampton could not be depended upon to return him again, his majority having fallen from seven hundred in 1880 to one hundred and thirty-two in 1881. In spite, however, of every effort on the part of his opponents, he was returned for the third time, but by a small majority. When he presented himself in the House, the same old scene was repeated. An amendment to Sir Stafford Northcote's motion to permit oath or affirmation at option was lost by two hundred and fifty-seven to two hundred and forty-two, although supported by the government. During the remainder of the session of 1882, Mr. Bradlaugh was occupied and his name kept prominently before the public by several actions at law, arising out of his parliamentary proceedings. At the opening of the session of 1883, he addressed a mass meeting, at Trafalgar Square, of his supporters from all parts of England. From this meeting, he went to the House to learn the intentions of the government, and retired to wait on hearing from Mr. Gladstone that an Affirmation Bill would be introduced at once. This bill was formally read a first time without opposition, but was rejected on its second reading on May 4, by two hundred and ninety-two to two hundred and eighty-nine. This result, which was caused by the defection of a number of Liberals and nearly the whole Irish vote being cast with the Conservatives, was received by the victorious party with

Digitized by Google

such riotous demonstrations of joy as have perhaps never before been witnessed in the House of Commons. On May 5. Mr, Bradlaugh again offered himself, with the customary two introducers, to be sworn. Sir Stafford Northcote again moved that he "be not permitted to go through the words of the oath." Mr. Bradlaugh was then, at his own request, heard at the bar of the House, and retired.

So much for the history of this question. As I have said, the principles involved in it have been for many people completely, and by many people deliberately, obscured. Therefore, it is necessary to separate clearly the two issues which have been raised. We may call these the personal and the theoretical, or, more simply, the question concerning Mr. Bradlaugh, and the question concerning religious tests in politics. In the first place, then, it is very unfortunate that such a question has come to the front in close connection with the personality of Mr. Bradlaugh. For it cannot be denied that, justly or unjustly, he is extremely unpopular; and this not only among the conservative and orthodox persons to whom his political and religious views would naturally be abhorrent, but also among many people who hold views more or less like his own. His connection with Mrs. Annie Besant in the publication of certain works upon which I need not dwell, but which the Tory papers have never hesitated to call the "filthy book," has, again justly or unjustly—I am merely stating facts and not discussing his opinions—roused against him a wide-spread and bitter dislike. Many unpleasant stories, however untrue, have been circulated about him and readily enough believed by people who hold moral obliquity to be the logical result of intellectual scepticism; and I think much harm has been done to him by the repulsive appearance given him in the cartoons of *Punch*.

The opponents of the Affirmation Bill were, beyond all question, actuated more by hatred of Mr. Gladstone than by love of religion,—"more by the desire of worrying a government than of honoring God," as Mr. Bright put it,—and of course they availed themselves to the utmost of Mr. Bradlaugh's unpopularity. In every possible way, they sought to connect his personality and his views with the government and the bill. "Gladstone and Bradlaugh," "Bradlaugh and Blasphemy," "Bradlaugh, Beer, and Blasphemy," "Bradlaugh, Beer, Blasphemy, and Blatheramskite," were, according to these truthful and delicate critics, ministerial war-cries. The Tories persistently alluded to the measure as the "Bradlaugh Relief Bill"; and at the present moment the walls are placarded with some self-styled "Thoughts that speak and words that burn," of which the following is a fair specimen: "The miserable atheist Bradlaugh, with a small, wretched, and blasphemous rabble, is thundering at the doors of the British House of Parliament; but the voice of the nation has been heard, and Blasphemy is vanquished." Taken simply as a statement of facts, this clap-trap is a string of gross lies, as the composers of it must have known perfectly well. Mr. Bradlaugh's demeanor has not been unobjectionable, but he has raised himself in public estimation by his dignified and self-restrained speech from the bar of the House after the rejection of the bill. This trick of the Tories has been unfortunately most successful, as may be gathered from the following passage from Mr. Gladstone's great speech: "Do you suppose that we are ignorant that in every contested election that has happened since the case of Mr. Bradlaugh came up you have gained votes and we have lost them? [Cheers and counter cheers.] You are perfectly aware of it. We are not less aware of it." If the Tories had not had the name of Bradlaugh to conjure with, if Mr. John Morley, for instance, had refused to take the oath, the issue would almost certainly have been otherwise. (And, by the way, that Mr. Morley—in whose books the name of God is spelt with a small *g*, so unorthodox was he, and who is the author of the apposite remark, "If unbelievers and doubters were more courageous, believers would be less timorous"—should not have thus refused, making a conspicuous protest at the time when the first principles of civil liberty were in danger of being overthrown, was to many a disappointment, and remains a puzzle.) It is said that a Tory squire, feeling sure that Northampton would not return Mr. Bradlaugh a third time, deplored, as he gave his vote for the expulsion of the latter, that they were "killing their best fox." The story is a condensation of what I have termed the personal aspect of the oath question, the immediate result of which has been to make Mr. Bradlaugh a martyr in a good cause, to increase enormously the circulation of his paper, the *National Reformer*, to embitter the relations between the orthodox and the freethinkers, and to raise Mr. Bradlaugh himself to the position of one of the most prominent men in England.

With regard to the second or theoretical side of the oath question, little need be said. To any one who is not blinded by religious prejudices or induced by political considerations to close his eyes, this much-discussed matter is as clear as daylight. Mr. Bradlaugh's original request to be allowed to affirm was perfectly natural. When it was refused, he simply yielded to necessity in the shape of the law of the land in offering to take the oath. The reconciliation between his own belief and the words "So help me, God," concerned him and him alone. When the House of Commons, as represented by Sir Stafford Northcote's motion that "Mr. Bradlaugh be not permitted to go through the words of the oath," took charge of Mr. Bradlaugh's conscience, the first unjust step was taken, and the seed of all the subsequent trouble was sown. Such a motion can hardly have been dictated by genuine regard for the sanctities of religion. It probably originated in a kind of malice, as expressed in the old saw,—

> "He that will not when he may,
> When he will, he shall have nay,"

and was continued at first for the sake of consistency, and afterwards for political expediency. The upstart and self-appointed adviser and censor of the Tory party, young Lord Randolph Churchill, has just declared that the procedure of the opposition, as taught by Lord Beaconsfield's career, should be, "Never take office except when it suits you, and put the government in a minority whenever you decently can." There is no need to go any further for an explanation. As to the position that the oath must be retained in defence of religion, and that to abolish it would be to un-christianize the land, that was shown to be untenable a dozen times before Mr. Gladstone's great speech utterly demolished it. Taking the merely personal ground, there is nothing to prevent Mr. Bradlaugh from taking the oath in the next Parliament; and there is nothing to-day to prevent a man from planting his atheism in the face of the public from platform and press, and next day taking the oath in Parliament, deliberately insulting the House and mocking the religion whose forms he thus burlesques. Surely, to retain a ceremony which admits of such a possibility is infinitely more harmful to the cause of religion than to permit an option which at least insures that those who take the oath do so with reverence and belief. As Mr. Gladstone pointed out, the present oath excludes from Parliament the conscientious sceptic, while it would admit Voltaire, with *Ecrasez l'infâme* upon his lips. A rule which thus admits the dishonest and rejects the honest is a strange safeguard for religion. It is, as Mill said, "self-convicted of absurdity." And as to the abolition of a compulsory oath being equivalent to the national negation of Christianity, the very opposite is true. Those who should deliberately take the oath and kiss the Book of Christian revelation,—as they believe it to be,—when they were at liberty to adopt the simpler form of affirmation, would be restoring to the oath its full meaning, and paying an unforced homage to the Christian faith. A Christian who would not prefer this freedom with its better possibilities must be singularly destitute of confidence in his co-religionists. But apart from all these considerations, which are so self-evident that if it were not for the way in which they have recently been ignored one would hesitate to commit them to paper, the whole question is settled by the first and most fundamental of the principles of civil liberty. Mr. Gladstone, quoting Lord Lyndhurst, expressed this principle as follows: "There is to be a total divorce between religious differences and civil privilege and power; there is to be no test whatever applied to a man with respect to the exercise of civil functions, except the test of civil capacity, and a fulfilment of civil conditions." Beyond this there is nothing to be said. A majority of the British House of Commons has committed it to a repeated injustice, to an injustice which recalls the persecutions of what we term the Dark Ages, to an injustice which Englishmen in years to come will look back upon with amazement and with shame, to an injustice for which the present generation will demand a day of reckoning, and will certainly secure it.

I began with the past, and I will finish with the future. Mr. Bradlaugh has just received a vote of confidence and approval from his constituents at Northampton. He has gone on a fishing trip for the benefit of his health; and, beyond vague threats that "the seat was his and he would have it," that he would "take sufficient means," and so on, he has given no hint of his plans. But in truth it matters little now what he does. Of course he will ultimately get into the House, and the test-retaining, religion-guarding, and party serving majority will find their defeat all the more complete and bitter because the longer delayed. For, as was said at the beginning, the question has now become a much more comprehensive and weighty one. A cry is going up from liberals throughout the country for the abolition of all oaths, and in the presence of this great reform Mr. Bradlaugh will drop out of sight. The liberal sentiment of the people has been aroused by the refusal of this little act of simple justice, and they will not be satisfied until the logical development of previous reforms does away with every kind of test, affirmation, and promissory oath. HENRY NORMAN.

THE BIBLE AND WOMAN.

A book that puts a man's wife in the same category with his ox and his ass of course cannot afford much aid and comfort to the movement for citizenizing woman and placing her on the same political plane with men. But the Bible can afford but little aid and comfort to any movement of modern civilization. In fact, the Bible is a book as foreign to all the objects and aims of the enlightened civilization of to-day as are the terra-cotta records of the old extinct Assyrian monarchy. It might have fallen from the moon, so irrelevant is it to the life of to-day of the foremost nations. It is a mere literary relic and curiosity for the study of the archæologist, who alone can understand it.

Digitized by Google

The mass of mankind who existed in the Bible period were slaves or savages, creatures of habit and instinct almost as much as are beasts. Two natural personalities, supplemented by an alleged supernatural person,—namely, priest, king, and God,—are all the personalities whom the Bible recognizes. Now, it is precisely the three domineering, official persons just mentioned that the enlightened civilization of to-day is successfully endeavoring to eliminate as factors in human affairs. Of course, the God here meant is the old-fashioned theological personage,—the Czar or Pope in the heavens who made the world once on a time, and so forth, and who requires worship and incense to keep him in good temper toward his creatures.

The only people existent in Bible days among whom women were the equals of men, socially, were that great division of the Greek race known as Dorians. Among the Dorians, the Spartans, for instance,—who were the most conspicuous community of the Dorian branch of the Hellenic race,—the wife was the co-equal of the husband,—nay, more, his mistress (*despoina*). Exceptional women among the ancient Oriental nations, such as Semiramis among the Assyrians, and Deborah the prophetess among the Israelites, became supreme rulers and judges, it is true. But that fact argues nothing for the social condition of the mass of their sex. The heroine of the beautiful Biblical pastoral entitled *Ruth* was the subject of purchase on the part of her Hebrew husband Boaz, who evidently loved her, but whose behavior toward the beautiful object of his affection was dictated by mere cast-iron custom and usage, and not by the heart at all. A nearer kinsman of Naomi would have had Ruth if he had wanted her, but he did not happen to. Ruth is represented as "falling on her face and bowing herself to the ground" before Boaz, the Israelite grandee, whom, under the shrewd instructions of her mother-in-law, she was trying to captivate.

The above citation from the Bible sufficiently indicates the prostrate and servile condition of the fairer sex within the domain of the Hebrew lawgiver, Moses.

Let us pass now, in the discussion of "The Bible and Woman," from the days of the pastoral barbarism of Israel, and from the Israel of Moses and the prophets, to the great Hebrew of that later Israel, which had passed under the all-absorbing rule of Roman imperialism. St. Paul, the Hellenized Jew, who was imbued with the poetry and philosophy of Greece as well as with the lore of Israel, was the true founder of Christianity, the primitive author of Christian theology, the spiritual ancestor of all the formulators of Christian creeds of whatever race or century. He contained Augustine and Dominic and Ignatius Loyola and Calvin, *in posse*, as an oak contains in germ a forest of oaks.

From the writings of Paul, it is evident that the Christian Hebrew held woman in no more respect than did the Mosaic Hebrew. Instead of Paulism, or Pauline Christianity, being a movement in behalf of the elevation of woman, it was a movement to make the subserviency and subordination of woman to the ruder sex permanent and eternal. Paul seems to have regarded women as that later Arabian sectary and prophet, Mohammed, did,—as in permanent eclipse to man, and a mere means of the continuation of the human race. If Renan's description of the personal appearance of Paul is correct, the saint could not have been a favorite with womankind; for he "was ugly, stout, short, and stooping, and his broad shoulders awkwardly sustained a little bald head." But ugly men—the famous Englishman, Wilkes, for example—have been able to ingratiate themselves into the affections even of the loveliest of women. But Paul, homely as he was corporeally, was also, beyond doubt, a man of genius; and he is to be classified along with the Greek dramatic poet, Euripides, as a woman-hater, a misogynist.

In his First Epistle to Timothy, Paul says arrogantly, "I suffer not a woman to teach, nor to usurp authority over the man, but to be in silence." Then, he cites the old Mesopotamian Adam-and-Eve myth in justification of his godly ungallantry and misogynism. But Paul kindly holds out a hope to woman of salvation, if she is a good child-bearer. In the fourteenth chapter of the First Epistle to the Corinthians, Paul's Oriental spirit breaks out in full bloom. He writes as we might suppose the master of a seraglio would: "Let your women keep silence in the churches: for it is not permitted unto them to speak; but they are commanded to be under obedience, as also saith the law." Thus, the Pauline idea of woman approached that of Mohammed and of the old Greek poet Hesiod, according to which she is a mere toy and means of sensual pleasure and of the continuation of the human species,—a necessary evil, imperiling by her subtlety and beauty masculine virtue and continence, forsooth, unless she is kept carefully under lock and key in a gynecēum or harem.

All theologies, pagan, Hebrew, and Christian, have curiously enough been at accord in denouncing woman as the cause of all our woes. And Paul was a genuine theologian. As for Christ, who was not a Christian in the Pauline sense of the word, the most beautiful of his characteristics was his chivalrous and deep-souled love and respect for woman,—for woman even in her degradation and sorrow.

Though the Feudal Church exalted the alleged mother of Christ, the *Mater Dolorosa*, above Deity, and made the worship of her universal, yet that same church steadily represented woman as essentially impure and unclean, and an instrument of the Evil One. There were any number of holy places from which woman was barred on the ground that her presence therein would be pollution. Christianity is in its origin and doctrine an Orientalism; and, being such, it is an obstruction rather than a means of progress for women. Strangely enough, it is the female sex which now keeps Christian churches of whatever name or denomination in countenance. Everywhere, but for the devotion and attendance of women, their priests and ministers would have for audiences mere beggarly accounts of empty boxes. B. W. BALL.

ORTHODOXY'S PREMIUM UPON DISHONESTY.

The Cleveland *Leader*, after some delay, concluded to publish the letter from Mr. E. D. Stark, in correction of its false statements regarding *The Index*, but not until the letter had already appeared in the Cleveland *Plaindealer*, and had been copied into other journals. In the same number of the *Leader*, however, which contains Mr. Stark's communication, we find an editorial paragraph which, in justice to that paper, we here reproduce: —

On the 16th inst. there appeared in the *Leader* a paragraph denouncing Judge Hoadly for his connection with *The Index*, a paper published by the Free Religious Association, of which Judge Hoadly is one of the vice-presidents. We are free to acknowledge that we were in error in regard to the character of *The Index*. It is devoted to the discussion of all religious sects and non-religious opinions, the tone of the articles generally bearing marks of much scholarship and thought. The editor of *The Index* says that the Free Religious Association, of which Judge Hoadly is one of the vice-presidents, "is broad and liberal enough to welcome to membership the adherents of Materialism, Atheism, Agnosticism, Positivism, Spiritualism, Judaism, Christianity, Paganism, and the adherents of all other systems and phases of thought, if they are willing to join it for the study and discussion of the subject of religion." The second president of the Association was the son of a Jewish rabbi, who never believed in any phase of Christianity, and who was and still is an infidel. We judge of the tendencies of a society by the character of its representative members; and, as the second president of this society is an infidel, the natural conclusion is that the leanings of the society are toward infidelity. We do not believe that Judge Hoadly's high position with this Free Religious Association will recommend him to the people of Ohio.

What the religious views of Judge Hoadly are we do not know, and the question is not to us one of great importance. We are not aware that he has ever made any public statement of his religious belief. If he is what the *Leader* terms an "infidel," he is, in this respect, only what Jefferson, Franklin, Paine, and other founders of this government were; only what Lincoln, Stephens, Wade, Sumner, and other foremost statesmen of this country were; only what Humboldt and Darwin, Mill and Emerson were; only what the majority of the greatest men in the various departments of thought are in the most enlightened nations of the world to-day. The fact that Judge Hoadly belongs to the Free Religious Association affords no indication of his particular opinions on the subject of religion, although it is an indication that he is a man of unsectarian and liberal spirit, who is disposed to "promote the interests of pure religion, to increase fellowship of the spirit, and to encourage the scientific study of man's religious nature and history." He was chosen one of the vice-presidents of the Free Religious Association probably because he was known to be a gentleman of ability and character, of broad and liberal views and sympathies in regard to questions of public interest.

We are probably safe here in saying that Judge Hoadly, whatever be his religious views, is not more heterodox than the great majority of the journalists in Ohio, especially the journalists in charge of Republican papers in that State, who as a rule are much less orthodox than Democratic editors. We are acquainted with many editors in Ohio, and among those who belong to the Republican party we know of but very few who are remarkable for their Orthodoxy or piety, or have any claim to be classed, to use an expression of the Cleveland *Leader*, among "the God-fearing people of the State." But some of these editors think that Judge Hoadly's connection with the Free Religious Association can be made the basis of personal assault which will excite prejudice against him among the bigoted and superstitious, and contribute to his defeat. That he is a man of irreproachable private character, as well as of distinguished ability, cannot be denied; that he has been identified, like Ingersoll, with active aggressive opposition to Christianity, nobody claims; that the Association of which he is one of the vice-presidents has ever encouraged political corruption or immorality cannot be shown; that he represents the political principles of the party that nominated him, irrespective of the various religious beliefs among the members of that party, is of course implied by his nomination. But the Democratic candidate is recognized as a strong man, the political contest in the State, it is known, will be hot, and the result is doubtful. Under the circumstances, Republican journals, adopting party tactics which are in keeping with that party morality which teaches that "all is fair in love and war," are doing their utmost to divert from the Democratic party of the State the votes of large numbers with whom the word "infidel" is a sort of

Digitized by Google

scarecrow to frighten them away from the support of their candidate.

Democratic journals have used the same tactics whenever they could do so with advantage. In Maine, when Ingersoll was stumping that State for Connor, the Democratic managers had the most pronounced, and what they thought the most offensive, but what Ingersoll declared were the best passages in his writings, culled from his anti-theological books and printed in tract-form and circulated broadcast, in order to take votes from the Republican candidates. The witty and brilliant orator declared at the time that he was entitled to the credit of having made the Democratic party pious; for, said he, "the Democrats of Maine have gone to reading the Bible whenever they can get time between drinks."

The leaders of both the Republican and Democratic parties have frequently employed these mean and contemptible methods when they could with a chance of success. And the orthodox clergy and press, while expatiating continually upon the importance of their faith in developing those qualities of character and securing those moral and social conditions without which good laws, stable government, and a progressive civilization are impossible, have almost invariably encouraged these tactics.

These facts illustrate what we should conclude *a priori* from an examination of the orthodox theology, and what is abundantly demonstrated by the history of orthodox Christianity, that it fosters bigotry and intolerance, that in practical life it sustains injustice and iniquity, and makes men the willing dupes of demagogues as well as the unreasoning devotees of an unreasonable faith. Sincere belief in a large amount of theology is compatible with an undeveloped moral sense and with moral conception and conduct which are immeasurably below the teachings and practice of those "infidels" whose names are used dishonestly by hypocritical editors to influence the votes of ignorant and superstitious men.

It is unfortunate that there is a large class in whose education the principles of morality have been subordinated to the dogmas of theology, and whose devotion to their religion, in consequence, is far stronger than their sense of justice or their understanding of its requirements in their relations with their fellow-men, who are willing at any time to support measures that they think will promote the interests of their faith, without regard to the personal or legal rights of those who cannot adopt their views. Many of them lack the breadth of thought and catholicity of spirit to understand that there is any wrong in censuring and punishing those who reject their creeds, which they not only firmly believe to be true, but regard as surpassing in importance all other truths. Hence they would conscientiously, to the extent of their ability, prevent all discussions and suppress all doubts tending to disparage them, and interdict any denial of their truth or divine origin. They would gladly have the government changed to correspond with their religious views, and so administered as to favor and enforce exclusively their religious beliefs.

Notwithstanding its preaching and pretension, the orthodox Christianity of to-day, like that of the past, continually offers a premium upon dishonesty. Its intolerant and proscriptive spirit subjects those who dissent from its dogmas, in proportion to its power and influence, to injury in business and to loss of positions of honor and profit which they would otherwise receive, and rewards those, whatever their belief, who conform to the creeds; whereby men are *bribed* into silence and even hypocritical conformity to the belief of the majority. The merchant, the physician, the lawyer, the teacher, is virtually offered a premium to suppress his honest sentiments and join an orthodox church or give it his support. Men who aspire to political positions, as a rule, keep silent and even pretend to believe what they do not believe, if their religious views are unpopular. The tendency of such assaults as have been made upon Judge Hoadly, on account of his alleged "infidelity," is to fill the churches with "infidels" whose cautiousness in expressing their views will be proportioned to the amount of ignorance and superstition to which it may seem necessary to pander, to avoid personal or political injury.

This temporizing practice is an indication of moral weakness, and is not to be defended; but what shall be said of that system whose representatives and devotees, while professing to be the friends of the highest morality, by their intolerance, by their putting creed above character, conscience, and loyalty to conviction, by their demanding conformity to their faith, and punishing those who openly differ from them, actually encourage men to be dishonest, to conceal their real views, and to support and perpetuate what they in fact regard as a hindrance to progress? A method better adapted to undermine true character and to make men dissemblers, hypocrites, and liars it would not be easy to devise.

B. F. UNDERWOOD.

EDITORIAL NOTES.

UNDER the new temperance law in the State of Illinois, the license for selling whiskey is $500, and that for selling beer is $150. Communities that do not want any saloons can refuse to grant license, the old principle of local option still remaining.

THE essay by Count Goblet D'Alviella, which was recently reprinted in *The Index* from *Revue des Deux Mondes*, will form part of a volume about to be published with the title, *L'Evolution Religieuse Contemporaine chez les Anglais, les Américains, et les Hindous*. The author writes us, "I wish to thank you for the honor you have shown me in having my essay translated, and also for the notes you added to the translation. I shall make use of them while correcting the proof-sheets of my book, which has just gone to the printer."

THE bill to legalize marriage with a deceased wife's sister has been defeated in the House of Lords, after being admitted to a second reading, by a vote of one hundred and forty to one hundred and forty-five, an adverse majority of five in a house of two hundred and eighty-five. Another bill will probably be brought forward in the House of Lords next year, and with fair prospect of success; but, should it fail, the attempt will be renewed, until the sister of a dead wife shall be permitted, as in the United States, to marry her brother-in-law.

IN a lecture on Cuneiform Inscriptions, Prof. B. M. Smith, of Union Theological Seminary of Richmond, Va., if we may trust the report in the Lynchburg *Advance*, said that "the inscriptions show that Cyrus, the Persian king, sent Darius, the Mede, to capture Babylon." We wish Prof. Smith would give his authority. It would delight us greatly to find this so. It was our impression that this is one of the very few cases in which the inscriptions, so far from confirming the Scripture story, seem absolutely to contradict it. We would like light.—*Independent*.

"IF," says Moncure D. Conway, "Christianity offered educated people a genuine conviction of the truth of immortality, one that would make us feel happy in the death of a child or friend, more might be said against disturbers of that creed. As a matter of fact, it is a doctrine much overrated in the imagination, and does not take away the sting of death at all. The ancient faith which made men court death was related to the earthly horrors which made them hate this life. As the foreground of earth has brightened, the celestial glory beyond has been less radiant; and, now, we have come upon a time when thought must consider the basis of the hope that survives, and whether it points to any reality."

IT is a popular belief that Guillotin perished by his own invention, the guillotine. A writer in the Boston *Herald* writes thus in correction of the error:—

I was under the same impression for many years, and until I read what is said about him and his reputed invention in Brande's *Dictionary of Arts, Science, and Literature*. This is what a writer in that work says: "In 1790, Guillotin proposed the adoption of decapitation—up to that time used only for nobles—as the only method of capital punishment. From sentiments of humanity, he recommended the employment of a machine which had long been known in Italy under the name 'mannaja.' . . . It is equally a vulgar error that Guillotin perished by the instrument which bears his name. He was imprisoned during the Reign of Terror, but released at the revolution of July, 1794, and died in 1814, after founding the association termed the Academy of Medicine."

THE following paragraph is from a report of a discourse by Mr. S. J. Stewart, which we find in a Bangor paper: "Prayers with some men weigh more than conduct. On the other hand are men who make no pretension to piety, who are really good in the natural sense on account of their humaneness, justice, and manliness. Their religion does not consist in mere sniffle and cant, but in self-respect, honesty, and devotion to truth. It would be a great loss to have no sentiment, poetry, and ideality, no sense of mystery, no wonderings as to what lies beyond the golden, western gate of life through which we all at last shall go; but a man's speculations in regard to the unknown are no more proof of his goodness than his belief that the back of the moon is inhabited. A really moral man is a man of honor, of justice, of humaneness, of vitality, and not he who confines himself to talking in transcendental language of unknown mysteries."

WHILE so much is being said regarding the interference of Leo XIII. in the political affairs of Ireland we are reminded that in the tenth book of his *Norman Conquest*, Thierry gives a most interesting account of the invasion of Ireland by the Normans, under the favor and apostolic benediction of the then pope. Christianity in Ireland up to that time, it seems, had been spontaneously organized outside of papal control. The Irish bishops were simple priests designated by election to superintend or visit the churches. There was no hierarchy at that time in Ireland. Thierry, in describing the primitive Irish of that day, says: "They were enthusiasts in many things, and especially in religion. They mixed up Christianity with their poetry and their literature. Their island counted a host of saints and learned men, venerated in England and in Gaul; for no country had furnished more Christian missionaries uninfluenced by other motives than pure zeal to communicate to foreign nations the opinions and faith of their land." Thierry goes on to say that the primitive Irish whom he describes were great travellers, and always ingratiated themselves with the people they visited by the extreme facility with which they conformed to their customs and modes of life. Thus does the great French historian bear testimony of the highest kind to the existence of an independent Christian civilization in Ireland in the centuries before the Norman conquest of England. But, after the Normans had

Digitized by Google

conquered England, they naturally wished to reduce to subjection the smaller island lying to the west of Britain. Meantime, the pope was equally anxious to Romanize Irish Christianity, and so used Henry II. as his convenient tool to do so.

POETRY.

For *The Index*.

YESTERDAY.

BY E. P. POWELL.

But yesterday, beneath yon elm,
We two together stood and talked;
Our arms we linked; above the rose
Our souls embraced; our speech was one:
Each said "Dear friend!"
It was the end.

To-day in yonder cottage lies
A something white and mystical.
They say, "Behold the one you loved!"
I look aside to hear him say,
"Not there, but here,
My friend most dear."

Alone, beneath the elm, I stand;
Its arms droop heavy round my head;
My arms grope yearnings undefined;
As yet I cannot touch his hand.
Is there another
Life, my brother?

His footprint lingers in the grass;
His breath still mingles in the air;
The rose, that withering lies, he plucked;
It was but yesterday we talked:
We said, "Dear friend!"
It was the end.

AN AGNOSTIC VIEW.

At the end of every road there stands a wall
Not built by hands, impenetrable, bare.
Behind it lies an unknown land, and all
The paths men plod lead to it and end there.

Each man, according to his humor, paints
On that bare wall strange landscapes dark or bright,
Peopled with forms of friends or forms of saints,
Hells of despair or Edens of delight.

Then to his fellows, "Tremble!" or, "Rejoice!"
The limner cries, "For lo! the land beyond!"
And ever acquiescent to his voice
Faint echoes from that painted wall respond.

But now and then with sacrilegious hand
Some one wipes off those painted landscapes all,
Muttering, "O fools and slow to understand,
Behold your bourn,—the impenetrable wall!"

Whereat an eager, angered crowd exclaims:
"Better than yon dead wall, though pale and paint,
Our faded Edens. Better fiends and flames
By Fancy painted in her coarsest paint

"On the blind, bald, unquestionable face
Of that obstruction, than its cold, unclad,
Uncallous emptiness, without a trace
Of any prospect either good or bad!"

And straightway the old work begins again
Of picture-painting. And men shout, and call
For response to their pleasure or their pain,
Getting back echoes from that painted wall.

ANON.

IT is owing to the very general misconception of the nature of law that there arises the misconception of necessity. The fact that events arrive irresistibly whenever their conditions are present is confounded with the conception that events must arrive, whether the conditions be present or not, being fatally predetermined. Necessity simply says that whatever is, is, and will vary with varying conditions. Fatalism says that something *must be*, and this something cannot be modified by any modification of the conditions. *Lewes.*—

The Index.

BOSTON, JULY 5, 1883.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index*.

SIXTEENTH ANNUAL MEETING

OF THE

FREE RELIGIOUS ASSOCIATION.

(Continued from last week.)

THE PRESIDENT.—Our next speaker is one who is very familiar to this platform and needs no introduction to it, yet one whom many of us have never had the opportunity to hear. We are glad of that opportunity to-day. I present to you Mr. James K. Applebee, minister of the Twenty-Eighth Congregational Society, who has had practical acquaintance with the working of Co-operation in England.

SOCIAL DISINTEGRATION, AND ITS ARREST BY CO-OPERATION.

Address of James K. Applebee.

There is no escaping from the fact that our modern industrial life is full of very grave anomalies. It bristles all over with very ugly defects. We are making vast strides in the production and accumulation of wealth. Industrial enterprises assume to-day vaster proportions than any they ever assumed before in all the history of humanity. And yet, in spite of this unprecedented production of wealth, we have the most abject and the most crushing poverty. More than a quarter of a century ago, John Stuart Mill warned the world that the production and accumulation of wealth were of but little importance "so long as either the increase of the population, or anything else, prevents the mass of the people from reaping any part of the benefit of them. . . . It is only," he said, "in the backward countries of the world that increased production is still an important object; in those countries most advanced, what is economically needed is a better distribution." We have sufficiently solved the problem, "How to amass wealth." But here is another problem confronting us and demanding solution, "How can we bring about an equitable distribution of the wealth created among those engaged in creating it?" We have not approached anything like an equitable distribution yet. Under our present system of conducting industrial enterprises, it is estimated that one-fourth of the people engaged in various ways in producing wealth receive for their own exclusive use and benefit three-fourths of the wealth produced; while three-fourths of the people engaged in producing wealth are compelled to put up with the starveling's share of but one-fourth of the wealth produced. And what is the consequence of this? The one-fourth of the producers, who monopolize three-fourths of the production, live an average of forty-four years; while the three-fourths of the producers, who only succeed in getting one-fourth of the production, live an average of but twenty-two years!

If intelligence were to come to us that some barbaric monarch in the heart of Africa was in the habit of sacrificing annually on the altar of his god, Mumbo-Jumbo, three-fourths of his subjects before they attained half their possible span of life, Christendom would stand aghast at the enormity. Every pulpit would ring with denunciations of that cruel barbarism. Even Unitarian preachers would warm up for once, rend their garments, and prophesy in every market-place. But here, in our very midst, a quite similar enormity is in constant process of perpetration. Three-fourths of the producers of our great wealth, before they have lived out half their possible days, are sacrificed on the altar of the God Mammon,—a god who is the most brutal, the most lustful, the most unclean of all the false gods men ever worshipped.

"Mammon, the least erected spirit that fell
From heaven: for even in heaven his looks and thoughts
Were always downward bent: admiring more
The riches of heaven's pavement, trodden gold,
Than aught divine or holy, else enjoyed
In vision beatific."

Of course we have missions to the heathen abroad; but we have a heathenism at home, to countenance which the dirtiest savage who ever lunched on a missionary would be ashamed. We have a heathenism which builds tenement houses which are inevitable nests of filth and fever; which compels delicate girls to shiver with hunger as they toil, and offers them no refuge from the hunger save the brothel; which compels wives, instead of regarding motherhood as the chiefest grace and crowning glory of womanhood, to avoid it, by any and every means, as an additional curse and burden to an already sufficiently cursed and burdened life; which makes manhood gaunt with hunger, sullen with despair, and righteously savage at the presence of an unsatisfied desire.

Of course we have all sorts of home missionary societies in operation; but the great mischief is that these societies invariably send their missionaries to the wrong people. It is to the Vanderbilts of society, whose wealth, after all, only represents so much watered stock; it is to the gamblers of Wall Street, and the Stock Exchanges of our great cities, to whom home missionaries should be sent. These people really need the services of the home missionary; for they are as blind as any heathen to whom Paul preached, and as stiff-necked as any Pharisee whom Jesus denounced.

For the past week, Boston has been enjoying its annual philanthropic carnival. For the past week, all sorts of philanthropists have congregated together in Boston and have pelted each other with their rival philanthropic schemes, just as vigorously, but not by any means as innocently, as the Roman people, at their annual carnival, pelt each other with comfits. The comfits with which the Roman people pelt each other at their carnival have just about as much relation to the evils under which the Italians groan as the schemes with which Boston is just now agitated have relation to the evils under which Americans groan. So far as I can see, all the philanthropic schemes which have been discussed in Boston during this week have had for their object the mitigation of the evils consequent on poverty. Nobody has thought about discussing the question, "Why does poverty exist?" It is left for the Free Religious Association, meeting at the fag end of this blatant week, to discuss that question. And herein is that Scripture fulfilled which saith, "The last shall be first."

We know very well that the offenders against decency—the poor, forlorn, vice-and-crime overcome wretches who are daily haled up before our police courts—are drawn, as a rule, from the most indigent of our population. What is the moral of that fact? They are so degraded because they are so poor. Annihilate poverty, make men socially well-to-do, and they will gravitate toward the respectabilities, the decencies, and the pieties, just as easily and just as naturally as Newton's apple gravitated earthward. Even a Roman Lucretia would hardly be able to preserve her virtue in conditions which compel so

Digitized by Google

many American girls to shiver with hunger as they toil. Job himself would utterly lose his patience if he were an honest laboring man compelled to enter the labor market and compete with the labor produced by thieves in jails. The angel Gabriel would lose his angelhood in a month if he were compelled to live in a tenement house in Boston, and keep himself and Mrs. Gabriel and half-a-dozen little Gabriels on seventy-five cents a day!

The gulf between rich and poor, between the employer and the employed, is deeper, wider, more impassable to-day than ever it was on any former day. At the same time,—and this it seems to me is the worst aspect that our modern industrial life presents,—a sense of moral separation has grown up between the two classes. A disintegration of society is threatened. The rich and the poor have fewer sympathies in common, fewer aims in common than they ever had. The two classes are fast becoming two castes. They are losing mutual sympathy and mutual regard. The causes of this are not far to seek. The men of either caste are not to blame. The fault is in the system. The tendency of modern industrial enterprise is to concentrate effort in large centres. The development which the railroad system has taken has called into existence mighty monopolies employing great armies of workmen. The development of machinery, in all branches of industry, has favored the growth of large factories, in which multitudes of men, under the control of one firm, daily win their bread. In agriculture the same process is going on, calling into existence vast farms on which all the modern improvements in machinery can be worked. In England, the ancient yeomanry—the owners of small estates—have entirely disappeared. Their estates have been swallowed up by a few great estates, which have been parcelled out into a few correspondingly great farms. In America, the same process is going on. On referring to the Report of the Massachusetts Bureau of Labor Statistics, I find that the farms of Massachusetts are constantly increasing in size. In 1875 there were only eleven farms in Massachusetts of over one thousand acres. In 1880 there were forty. "This tendency," as Henry George has pointed out, "is even more clearly noticeable in the newer States and Territories.... In California there are farms (not cattle ranges) of five, ten, twenty, forty, and sixty thousand acres; while the model farm of Dakota embraces one hundred thousand acres." These facts are noted by all writers on political economy. In all our industries, the class of small employers are gradually disappearing. "Each year," says Prof. Fawcett, "the production of wealth is conducted on a grander scale: manufactories are enlarged, farms are extended in area, and in every branch of industry there are those who seem, from the very vastness of their capital, to monopolize additional profit, and thus compel the smaller producers to succumb. "Hence, each year it becomes more difficult for the laborer to engage in any industry on his own account."

The man of large capital can conduct business to better advantage, can purchase in better markets, can avail himself more thoroughly of improvements in machinery, than can his poorer neighbor. The small capitalist is compelled to meet his wealthier brother at every point, and at every point to find himself defeated. Small farmers, small merchants, small manufacturers, are fast being driven out of existence as farmers, merchants, and manufacturers, and are compelled to swell the ranks of those who work for weekly wages. The greater profits obtained by large capitalists in conducting business on an extensive scale—involving as this does the use of the newest machinery, a minute and still more minute division of labor, resulting in cheapness of superintendence—are gradually forcing men of inferior pecuniary means to retire from the contest. Fifty years ago, the worsted weavers and lace-makers of England pursued their work at home, in breezy cottages scattered over England's fair midlands, where they could breathe the breath of the crow's-foot and clover, of the honeysuckle and the wild rose; but now they are congregated together in dense masses, in the immense factories of England's great commercial centres. Spinning-wheels and hand-looms have been driven out of existence by spinning-jennies and power-looms. The flail has given way to the steam threshing-machine, the sickle to the reaping-machine; and, of all the persons in this world engaged in mowing, Old Father Time is the only one left who carries a scythe.

Our industrial world is thus sharply divided off into two strongly marked and bitterly hostile divisions. One division—the capitalists—are constantly decreasing in numbers, and as constantly increasing in wealth; the other division—the laborers—increasing enormously in numbers, and every day finding it more and more difficult to hold within their hands the means by which they can honestly and comfortably live. Unless this process can be arrested, it needs no prophet to tell us into what social chaos it must inevitably land us.

But note how these two classes have degenerated into two *castes*, by virtue of the moral severance that has grown up between them,—a moral severance which threatens society with disintegration. The old-time farmer, cultivating his two or three hundred acres, personally superintended the business of his farm, led the men he employed to their tasks with a cheery, "Come on, my boys!" He was one with them; and he joined with them in the rough, hearty, humanizing merriment of their leisure hours. The relationship between them was sweetened and softened by much of personal kindliness and sympathy. The old-time merchant or manufacturer knew by name all the men he employed. They lived in his own cottages surrounding his own house, which was itself built close to the factory or mill. If a workman's wife or child were sick, his own wife or daughters would take welcome delicacies to the sufferer. At Christmas time he would give each of his workmen a Christmas box, accompanied by a hearty shake of the hand and a genial "A Merry Christmas, John, and a Happy New Year!" These old-time employers, who knew their workmen by name, and between whom and the men and women they employed a kindly personal interest was maintained, have almost entirely disappeared, and a state of things has grown up which renders it impossible for the kindly personal relationships of old times to exist, the sympathies belonging to those relationships to be felt, or for their binding duties to be done. The lives of employer and employed are no longer felt to be bound together by sympathetic effort. Personal intercourse, personal kindness and sympathy, a real personal regard based on a mutual service,—these things are no longer possible. As a rule, the modern laborer is not employed by a warm flesh-and-blood entity like himself, but by an impalpable and bloodless something which is only vaguely know to him as the "Firm" or the "Company." Corporations, we know, have no souls; and a "Firm" or a "Company" may be defined as a sort of magnified man, with all the brains and all the smartness left in him, and with all the heart and all the conscience and all the sense of honor taken out of him. The more the workman can get out of the firm, and the less he can succeed in giving the firm for what he gets, the better, he thinks,—and rightly, too,—for himself. Instead of the old kindliness and sympathy, there is a new-born and bitter antagonism. Instead of the old friendliness there is a spirit of insurgency, leading often to a strife that is fierce, and threatening always to culminate in a strife that may be bloody.

And here it is that we come upon the origin of trades unions. Under the circumstances, their existence was inevitable, although they have added another and a most powerful disintegrating force to these already at work in society. So long as manufactures were carried on in separate cottages, or in small and scattered work-shops, anything like continuous, effective, and wide combination among workmen was scarcely possible. Just in proportion, however, as commerce concentrated its operations and massed its "hands" together in vast factories, so did it afford facilities, which beforetime were wanting, for workmen to combine. It was thus that trades unionism came into being. Thornton, a distinguished English writer on political economy, has well said: "In human affairs extremes are always meeting, action is constantly followed by reaction, and despotism stirs up insurrection. And thus it has come to pass that the seemingly overwhelming preponderance of capital has aroused against itself an opposition to which it is not unfrequently fain to succumb. Those very multitudinous assemblages of work-people, by which capital most imposingly displays and most effectively exercises authority over labor, afford also to labor its most obvious means of emancipation from the thraldom of capital."

In the present condition of the industrial world, then, I consider trades unionism as a thing of immense value. The wonderfully vast growth of industrial enterprise, the development of the joint-stock system, the existence of vast monopolies,—these things have given such increased power to the capitalist class that, if labor had not learned, or learning had not put into practise, the art of combination, labor must have been reduced to a condition harder to bear than that of slavery itself. If the immense power of self-assertion, which the vast growth of our industrial enterprise has placed in the hands of the capitalist class, had not been counterbalanced by the power of self-assertion which combination has placed in the hands of the laboring class, it is frightful to think how entirely, how helplessly, and how hopelessly labor—the creator of all things that give worth, dignity, nobleness, grace, and sweetness to life—*must* have gone to the wall. Trades unionism, with all its inevitable faults and follies, has done much toward saving modern society from that most odious of all tyrannies,—the tyranny of what Douglas Jerrold called "a bowelless Plutus." When the workmen, as earnestly as they have applied it to the endeavor to get "a fair day's wage for a fair day's work," shall apply the associative principle to the establishment of partnerships of industry among themselves, then the great dispute between employer and employed will be forever ended. The two classes will then have become *one class*, with interests no longer antagonistic.

This is the condition of the world's industrialism to-day. Our great industrial army is divided off into two hostile camps,—one camp composed of capitalists combined together for the purpose of keeping wages down, the other camp composed of laborers combined together for the purpose of keeping wages up. Adam Smith said there was always a tacit combination on the part of employers to keep wages low. John Stuart Mill went further, and affirmed that the existence of a trades union on the part of the workmen was an essential condition of fair bargaining between them and their employers. Anyhow, the workmen themselves believe this; and, acting on the belief, they unite together in vast, intricate, and admirably managed combinations. It is not possible to persuade them to give up their unions. They turn a deaf ear to the twaddling preachers who twaddle to them about the interests of the capitalist and the laborer being identical. They know better. The preachers might just as well, as Addison would say, try to persuade them to swallow pills to cure an earthquake. Yet the present state of things is not good to contemplate. It is most dangerous. It is a state of warfare. At any moment, by the one army refusing to grant what the other army demands, we may be plunged into the midst of a conflict as disastrous as a civil war would be. You cannot pick up a newspaper without reading about "labor troubles." In this morning's *Herald*, I read that the employers of Pittsburg have just acceded to the demands of their workmen, and so averted a ruinous strike. But I also read that to-day is to witness the inauguration of a strike in the iron trade farther west; that thousands of workmen will be thrown out of employment; that both parties are equally determined, and equally equipped for a long and a heated battle. Where and in what is it to end, this insurgent spirit? If some peaceful solution of the problem cannot be found, it must inevitably end in revolution. John Stuart Mill affirmed that "in the present stage of human progress,—when ideas of equality are daily spreading more widely among the poorer classes, and can no longer be checked by anything short of the entire suppression of printed discussion, and even freedom of speech,—it is not to be expected that the division of the human race into two hereditary classes, employers and employed, can be permanently maintained." But here, aghast as we should otherwise be in the presence of this vast difficulty, co-operation steps in and clearly demonstrates that it is by no means an inevitability that these hitherto distinct classes—capitalists and laborers—should exist; that it is possible to make of them *one* class, with aims, hopes, and ambitions entirely in common.

The present division of the industrial army into two distinct classes—capitalists and laborers—is an altogether artificial division, simply because the two things, capital and labor, are not in essence two things, but one thing. The operations of labor lead to the results of labor,—capital or wealth. Labor, having produced the capital, employs it again in the production of more capital, or wealth. All the world's wealth to-day is the world's labor of yester-

Digitized by Google

day stored up. "Labor," as Henry George expresses it, "is the active and initial force." There is no shred of wealth anywhere that labor did not create. In the industrial millennium that is to be, instead of capital employing labor, labor will employ capital; instead of labor being the servant of capital, capital will be the servant of labor.

Co-operation, although it is a principle which may be indefinitely applied to the concerns of life, has so far developed itself mainly in two ways. There is distributive co-operation, for instance, which brings the consumer more directly into contact with the producer, to the certain benefit of both. The best known example of this kind of co-operation is found in the "Rochdale Equitable Pioneers." Another and a higher sort of co-operation is productive. In distributive co-operation, people are moved by the desire to obtain commodities at the cheapest possible rate. In productive co-operation, people are moved by the more ambitious desire of laboring together in the production of wealth, that they may equitably share in the wealth produced. Productive co-operation means a mutual creation of wealth, and a mutual sharing in of the wealth created. There are two methods of bringing this about. One method is for workmen to combine for the purpose of producing wealth, in carrying on industrial enterprises. Another method is for employers of labor, with due regard to their own rights, to take their workmen into some sort of partnership, giving them a share in the profits of the business proportionate to the amount and quality of the labor they have contributed. Both of these methods have been tried, and they have both succeeded. Employers of labor who have adopted the latter plan have found in it a solution of the great labor problem. They have lost nothing, even in a pecuniary sense: for the increased zeal and activity of their workmen have more than made up for the profits renounced. Each workman has been pleasantly conscious of the fact that the more strength, energy, and honesty he could put into the business, the greater would be the profit he could get out of it. The workmen have improved in habits and in demeanor. Their lives have had a better and a brighter outlook. Their self-respect has been quickened, and every relationship of their lives elevated and purified.

There have been failures, of course,—for co-operators are but mortal. We can afford to admit the failures; for, after all, it is the old competitive system, and not the new co-operative system, that must be allowed to "take the cake" for having most succeeded in failing. Ninety-seven per cent. of the industrial enterprises of Boston, conducted on the old competitive system, turn out failures. When co-operators are taunted with their failures, it is well that a little fact like that should be remembered. Thou hypocrite, first cast out the beam from thine own eye, and then shalt thou see clearly to cast out the mote from the eye of thy co-operative brother!

For myself, I firmly believe that the industrial world of the future must be one of two things,—it must either be co-operative or it must be communistic. To this complexion or to that we must come. The present system is as surely doomed as slavery was surely doomed when the great Civil War broke out. Co-operation is part and parcel of my religion. I believe that the triumph of any system which tends to lessen the inequalities, inseparable in some degree from all human condition, is a new triumph for religion. If I did not believe that religion, the pure and the undefiled, was opposed to all unjust inequalities,—to all social separations which class interest and class prejudice tend to create and foster,—then I would neither pray to God nor preach to man any more. In every movement which raises men anywhere in dignity and in worth, in every progress of economic science which tends to make a state of degrading poverty a less inevitable condition, in every blow given to slaveries, whether credal, commercial, political, or social,—I see a fresher manifestation of that divine energy which rules this vast universe, and which is ever flowing in affluent measure upon humanity. Our social estrangements are great. The gulf separating class from class is broad and deep. There is a dearth of all that which makes life rich and sweet and gracious among the great majority of earth's children. But a cloud has arisen. Once no bigger in the industrial sky than a man's hand, it is now spreading itself over the wide industrial firmament. It will soon shiver into gracious raindrops that will give new courage to the heart and new cheerfulness to the looks of all the sons of labor. The reproach of poverty shall pass away, and

"Rivers of gladness water all the earth,
And clothe all climes with beauty."

The PRESIDENT.—None of us hereafter, I think, will feel any doubt that the society of Theodore Parker is in the hands of a valiant workman. We had intended at this stage in the discussion to throw the question open to voluntary speakers on the floor of the house. It was hoped that two or three gentlemen, who have been specially interested in the Labor question here in Boston, would be present to give their word. It is not known that those gentlemen are present, but if there are any persons here who would like to contribute something to the discussion in five minutes' speeches, we will gladly hear them.

In response to this invitation, Mr. E. C. Towne urged that legislation might effect more than it had yet done in solving the problem, and offered the following resolution:—

Resolved, That the executive committee be requested to take steps to secure for publication the best possible essay or treatise on the legislation necessary to secure a just recognition of the right of labor to a fair share in the profits of labor.

The resolution was adopted.

Dr. J. R. Buchanan thought the fundamental work required was to improve the laborer himself; to fit every child for the pursuit of some useful, self-supporting avocation. In other words, the great thing needed was industrial education.

Mrs. Clara Neymann spoke of co-operation, in its moral bearings, as the spirit of brotherly love, which must sooner or later permeate all societal life. She also urged earnestly that Liberals should show more of the spirit and practice of co-operation in their own work.

The PRESIDENT.—According to the programme of the Committee, the discussion will now be brought to a close by Mrs. Anna Garlin Spencer.

Address of Mrs. Anna Garlin Spencer.

The lateness of the hour obliges me to put a very abrupt period to this discussion. I only want to say that this question of industrial co-operation is here because this Association welcomes to its platform every special reform. We are not here to-day so much to discuss the method by which a new industrial system may be organized, a system which shall recognize equality of rights, as we are to emphasize the principle which underlies all kindred reforms; and, when one of our good friends lamented that the meeting this afternoon was not equal to some of the meetings which preceded it in character, it seemed to me he was so deeply interested in his special subject that he lost sight of the universal, which this Association must always represent in the world. The new industrial organization is but the lineal descendant of the new political organization; and the trouble has been in government, in the organization of society in its economical features, in the organization of the family, in all those organizations in which the idea of the superiority of the mass to the individual has been carried out, the difficulty has been that the primitive need, which Bagehot said is quantity and not quality of control, has been allowed to usurp that place wherein the individual life, as Mrs. Fales has so beautifully told us, must take the precedence of any organization for the improvement of the external condition. And this movement for industrial co-operation, what is it? As I said before, it is the lineal descendant of the political movement which has given us democratic government. When the Czar of Russia to-day, the striking anachronism that he is, indicates to his own thought, and by pageantry attempts to indicate to the world, that he is the government of Russia, we know better. We know that there is not so dumb a person, so ignorant a person, not a person so besotted that he flings his body down for the Czar to walk over, but is a part of the government of Russia. And what is it here to-day in America? We say sometimes that it is painful to see the dangers incident to democracy; it is a terrible thing to have all the vice and ignorance express itself at the ballot box. Ah, no, my friends! It is the grandest opportunity of Democracy that it can make a moral diagnosis every day of its life, that it may understand what there is hidden under the surface of society. And now comes the industrial problem, which means nothing more than the political problem, so far as our history is concerned; which means simply this,—that, in taking our account of industrial factors, we leave out no contributing atom of humanity.

The last speaker gave me my special text for what I was to say. That is, that here on this platform, the industrial co-operation which has been advocated is but one of a great circle of co-operative movements which we seek to represent in principle, not in specialty of act. I do not apprehend that our Executive Committee can do much of the work of the Sociologic Society of Boston. I would have you go from this meeting prepared not so much to make the platform of the Free Religious Association a place for the discussion of the details of the industrial problem as to go, each individual member of this Association, to the Sociologic Society of Boston, where the principles of this special reform are discussed and elucidated. But what we are here for, and what we invite this question here for, is to show that this Association—as far as I know, unlike in that respect all others—stands for the counting in of every factor of human life in making up the sum of ethical judgment. We have no castes or classes that we recognize as superior, even in religion. The most ancient Vedic hymn joins hands with the latest hymn of that "life of ages, richly poured." We have no class appointed to tell us what we shall accept as truth or how we shall be blessed, but open wide the doors to all inspirations. And why? Simply because we have learned in the political organization of society, we are learning in this new principle of industrial co-operation, that it takes the all to make one, and every one to make the all; and that no ethical judgment can be formed, either upon religion or politics or domestic life, without counting in all the factors. We forget all this in every direction, simply because the primitive need of society is for efficiency of organization, and to it must be sacrificed the individual life. At first, the individual life of the organization of the home, which was the first germ of the social state, was nothing but manhood: that early history tells only of masculine laws and traditions. But the stones set by man's efforts are united by the cement of the heart's blood of womanhood; and to-day, wiser grown, we read it clearly, seeing the crimson hue of martyrdom. And now we take account of the masculine and the feminine sides, and thus we have one element of co-operation. And then in politics, as I have before said, we are beginning to learn the truth, that the full expression of the State must be the full expression of the individuals in the State; and, in industry, we are coming to learn (so much has been taught us this afternoon) that, in order to solve the industrial problem, we must ascertain and count in all the factors. And, lastly, and highest of all, that finer, more interior essence of co-operation which we represent, or seek to, feebly as we may,—we have come to the acceptance of the principle that, into the religious judgment, into the sense of our universal relation both to that which is above us and to that which is around us, there must enter all of the factors of human experience.

So, friends, we go not hence simply to engage in some especial work. We are full of reforms; and we sometimes find there is danger in too much organization,—danger that we forget the needs of the inner life. Let us, on this Free Religious day,—so full and pure and sweet is this name that I love to say it over,—let us, on this Free Religious day, remember that we stand for the individual life, which must be pure and strong in order to fill those channels of organization with that human substance which shall make them helps in the development of the race.

The PRESIDENT.—We have been accustomed to regard this as the close of our Convention, and the Festival as being only an appendix. I hope this year, and hereafter, we shall regard it only an adjournment from this meeting to the Festival,—that being our communion service, around whose board the whole congregation is expected to gather.

Social Festival.

Nearly five hundred people sat down to the tables in Horticultural Hall, at 6.30, P.M. This new departure for the Festival was regarded as an entire success. After the viands on the tables had been discussed, Col. Higginson, who presided on the occasion, called the meeting to order and opened the intellectual repast in an entertaining speech. Five minutes' lively speeches followed from Frederick Douglass, Wm. J. Potter, Miss Mary F. Eastman, Samuel Longfellow,

Digitized by Google

John W. Chadwick, Mrs. Clara Bisbee, Robert C. Adams, and others, and a ten minutes' poem from M. J. Savage. The Convention thus closed with *éclat* and enthusiasm.

CORRESPONDENCE.

POEMS OF JONES VERY:

WITH AN INTRODUCTORY MEMOIR BY WM. P. ANDREWS.

Editors of The Index:—

Nothing could at first sight be more remote from the mood of this scientific, critical, questioning, realistic age than this little book of poems. While we are active, this is contemplative; while we are analytic, this is devoutly trustful; while we are more or less agnostic, this is full of confident assurance of things divine; while we exalt the senses and the understanding as the instruments of knowledge, this knows by inward insight experience; while we honor man and make him his own inspirer, helper, and providence, this finds man apart from God to be but a prisoner, a slave, nay, dead; while we on the one hand exalt the power of the will, or, on the other, the omnipotence of environment and circumstance, this emphasizes self-surrender and the interior reception of life; while we look around with pride and joy to see man's conquest over nature, his energies of invention, enterprise, philanthropy, led by science, this mourns that faith is not found on earth, that none walks with God, that worship is no more, and that idols stand in the holy place.

Nevertheless, this is exactly the book that our time needs, if it does not wish for. And it is a book that it might well take to its heart. For, in spite of my antitheses, there is no real contradiction, no necessary hostility between the spirit of these poems and the spirit of the age. It is quite possible to unite the two and make a more perfect whole. The spirit of the age does not wish to be irreverent or haughty, still less to be lawless or trustless. It is busy in teaching the world to know, and therefore to trust, the steadfast universal power which works according to law. It urges conformity with, obedience to, that law as the one condition of safety, peace, and fulness of life. It conceives of this power as not only the ground of physical order in the material world, but also as the ground of moral order in the social world of man. Since this twofold order can be studied by human intelligence in its intelligent manifestations, this power is perceived to be akin to the human mind and conscience. Since it can be trusted and, if obeyed, is found to be beneficent to our life, it is possible to feel a warm attraction to it. Now, translate all this into the language of feeling, and what is it but saying that we are children of God, and that submission and obedience to our Father's will is our truest life, our safety, our freedom, and our peace?

To the readers, then, the intelligent and reasonable readers of *The Index*, I wish earnestly to commend this little book of devout poems. In the pure theism of the greater part of them, they will find an expression of devotional sentiment not hostile, but complementary, to their rationalism. It cannot but be good for them to read these fair pages, if they will read, and not merely turn them over with a glance. If they will let these words sink into their hearts, and so enter into their quiet, it will do them the same good which it would do them to enter for a while the solemn aisles of some silent cathedral, without criticism of the superstition that built it or question of the cost that "might have been given to the poor." It will do them good as it does to go into the forest and be hushed and tranquilized and cooled by its influences, and come out rested and refreshed for work and duty. The life that finds no hour for quiet contemplation and devout meditation, however useful and active and dutiful it may be, is apt to be hurried and superficial. And books like this are ministrants to stillness and to depth, and so to enlargement of life in some of its most beautiful directions.

Those few readers of *The Index* who can recall their early delight in Mr. Very's poetry, who remember what it was to them to read again and again, "Father, there is no change to live in Thee," or "Wilt thou not visit me?" or "Father, I wait thy Word," will be glad to find in this new edition other verses not unworthy to be set with these.

The exquisite beauty of the page and print are but a fitting enshrinement of the exquisite thought and feeling of the verse. It is a shrine of holiness, trust, reverence, communion with the Highest and the Best. Every word uttered in it has the tone of the most perfect sincerity. These are the hymns of a soul that has not heard about God, but heard him and walked with him.

SAMUEL LONGFELLOW.

VEDAIC BRAHMINISM.

Editors of The Index:—

Vedaic Brahminism is the most ancient religion in the world. Its sacred books, the Vedas, date back as far as the Talmud. Yet we see, strange to say, that this great religion is confined only to India, while its offspring, Buddhism, which sprang from Brahminism, is spread to-day over nearly all Asia, having its followers in India, Burmah, Siam, Thibet, China, and Japan. Vedaic Brahminism has the same relation to Buddhism as Judaism has to Christianity. The reason so little is known to the world of Vedaic Brahminism is that its sacred books are entirely written in Sanscrit; and it may be truly said of this great religion that it is as little known in India to-day as it is understood by Europeans. Brahminism as it is now presented to the Christian world, with its idols and its early marriages, the burning of widows, and its tyrannical caste system, was little known to the early Brahmins in India. The present Brahminism, with its thousand grand old gods, its idolatrous rites and superstitions, is openly confessed by the learned Brahmins to have been introduced for the ignorant classes so as to keep them from falling into infidelity.

The Vedaic Brahminism, as it is taken from the Vedas, is a religion solely of the worship of one God, but God not taken in the sense of a "Personal Being" such as the Christians, Jews, and Mohammedans recognize, nor as an "Immeasurable Law" that is utterly true, which the doctrine of Buddha teaches; but the Vedas theology thus speaks for itself,—that the sun, earth, moon, stars, and all planets are revolving in a "Vacuum," which is called "*Shree*," and means the "Power" that controls and governs the universe and all living things in it, that never had beginning and will never have an end, and that it is a power within itself.

The word "*Shree*" is therefore always used by all classes of Hindus at the beginning of their books, letters, and writings in respect to the great Deity, though "*Shree*" is not taken by them in the original sense. Caste was also enjoined in the Vedas, but not held in that iron hand of slavery which is acknowledged by the present Brahminical system. Caste in Vedaic Brahminism was never meant to be hereditary as is taken by the present Brahmins of India,—that a Brahmin, or priest, must be the son of a priest, and a Sudras, or shoemaker, must be the son of a shoemaker. But the Vedaic Brahminism had its caste divided into four classes; namely, the Brahmins, the Kshatyas, the Vaisyas, and Sudras. But these were not hereditary, as with the present Brahminical system; but it more wisely said that, since men had to have some code of laws to govern themselves, they should be classified into four classes; and that a man who took the pains to study himself and overcame his animal passions, and was well versed in the Vedas, should then reach the highest position a man could enjoy in this world,—a *Brahmin;* and, likewise, one who was naturally of a warlike disposition, a Kshatyas; a man of commercial taste, a Vaisyas; and a man illiterate and contemptible, a Sudras.

P. S. LACKERSTEEN.

BOOK NOTICES.

PHILOSOPHIE ORGANIQUE, HOMME ET NATURE. (Organic Philosophy, Man and Nature.) By Hugh Doherty, M.D. Paris: Didier & Co. pp. 442.

This volume is one more attempt at a solution of problems which baffle the wisest. Some indication of its scope may be found in the following phrases on the title-page: "Immortality of the Soul"; "Circulation of Life"; "Natural and Supernatural Worlds"; "Matter and Force Indestructible"; "Sciences and Religion."

A few extracts will serve as an introduction to the author. In his preface Dr. Doherty says: "We wish to prove that human reason can discover the invariable laws of science and of conscience in human nature and in universal nature, the bases of natural and of spiritual religion.... To discover these laws, one must have spiritual eyes capable of seeing the ideas of the Creator in the works of creation." [Query.—Are "spiritual eyes" and "human reason" identical?] "The Materialist has only mathematical sciences to explain the phenomena of matter and the modes of motion of gravitation, light, heat, and electricity. The Spiritualist has now at his service the discoveries of biotechnical science to explain the phenomena of life and the modes of motion of spiritual love, scientific reason, artistic instinct, and physical vitality."

In a "Biotechnical Glossary" at the end of the work, we find "biotechnics" defined as "a method of schematic analysis of the forces and forms associated in any individual organism, collective kingdom, or universal unity, cosmic or epicosmic." Supposing "biotechnical science" must be science obtained by this "method," we look for an exposition of the method, expecting to find it in the opening chapters. We do not, however, come upon it until we reach the final chapter. Here it is given (professedly) in a table headed "Biotechnic Analysis," which is in three divisions: the first consisting of four "Connecting Principles," to which we will refer the reader; the second, of six "Biotechnical Methods"; and the third, of six "Biotechnical Theories." Under "Biotechnical Methods" are enumerated, "Dynamics of Vital Forces," "Vital Cinematics" (modes of motion), "Vital Statics" (equilibrium of health, etc.), "Structural Equations," etc., "General Biometry" (comparative anatomy), and "Vital Statistics."

Dr. Doherty tells us that "the various methods indicated in this table have been applied to biology, sociology, and epicosmology in this volume."

So much for his "method." Now for results. These he begins to declare in his first chapter, where he says, "The soul is distinct from the matter of the body before birth, during life, and after death." Elsewhere he says, "There are no souls without bodies, either in the natural or the supernatural world"; also, that "physical forces are physical souls," and "vital forces are psychologic souls."

Though he talks of evolution, he does not mean by it what is usually understood by this term. He has a "theory of limits," to which he attaches much importance, which is that there is "a limit to each type of organic forms"; *i.e.*, he believes in fixity of species. We find, however, no attempt to prove his "theory," unless the following may be so considered. He says (p. 317): "When the visible form disappears, the hidden force preserves all its *potentiality* of motion and of *form* in invisible space, and can anew, at a given moment, commence again an evolution of form and of motion in the visible world.... We assume this to be true of all created forms, of simple elements, organic cells, specific types of living organisms (men, animals, and plants), types of suns and planets, and of the solar systems of the universe."

"This hypothesis," he goes on to say, "is supported by the known fact of the existence of the human soul with its specific form in ethereal substance after the death of the visible body. The possibility of rendering the transparent body of ghosts more or less opaque and visible for some moments in certain conditions of the physical atmosphere of our planet has often been demonstrated."

The following is perhaps as noteworthy as any passage in the work: "The evolutions and revolutions of life have always existed. There is nothing new in the experience of humanity but the sensations of phenomena of which the soul had lost the memory. ... The inventive conceptions of man come to him by suggestion or inspiration." They have "eternally existed in an infinite number of worlds, and are only new to man because he has lost remembrance of his innumerable evolutions and revolutions of existence before coming into this world."

Elsewhere (p. 144) the author states the "revolutions" of existence to be "1st. The separation of soul and body at death: 2d. The purgation of the vices of the soul; 3d. Progressive education and useful employment of the soul; 4th. Decline in the forces of the soul and of the spiritual body; 5th. Departure of the soul for an alternation of existence elsewhere."

In his "Biotechnical Glossary," under the head of "Prophecy," our author has this passage: "A spirit of the celestial world may prophesy the future results of the social evolution of terrestrial humanity, because celestial humanities on all the globes of the universe have had experience of this class of phenomena from all eternity."

The foregoing extracts will, we think, give a pretty fair sample of the amount of logic used by Dr. Doherty in his *Organic Philosophy*. By many of

Digitized by Google

those who accept "spiritual vision" as a substitute for human reason, the work will probably be welcomed.

POEMS by John Albee. New York: G. P. Putnams' Sons. 1883.

There is genuine poetry in this little book both in thought and in form, but it is not of the popular kind. The thought at times is not at once transparent through the form, but it will pay to read a second time to find it. There is, perhaps, somewhat too much of reflective thought; too much at least for the popular taste, to which it will seem to obstruct the flow of the poetic emotion. Even the love-poems, of which there are many, and which should seem to have grown on the spot to be wholly popular, appear to have been nursed in the garden of reflection, and thereby to have lost a little of their spontaneity. But the sentiment is always sweet and chaste, and the refined intellectual element will only enhance the value of the poems to their own appropriate circle of readers. "Parson Moody's Prayer" and "The Captain's Oath," which preserve legends of the neighborhood of the author's New Hampshire home, are good specimens of ballad poetry; and "St. Aspenquid of Agamenticus" and "Walbach Tower" are poems of considerable length that serve the same purpose in statelier verse. But the tender poem "In Memory of H. R. A.," the wife still mourned and loved, the charming friend so many reverently remember, is the one to which many readers will turn first and linger upon last. Mr. Albee has a quick, sympathetic eye for nature, and leaves in his lines many tempting glimpses and vivid pictures of natural scenery.

THE *Unitarian Review* for June opens with an article by Rev. A. P. Peabody, D.D., on "Negative Preaching," in which the writer, if we understand him correctly, broadly intimates that there is a certain class of Unitarian ministers for whom the pulpit is no proper place. "If you have outgrown Christ," he says, "have got beyond him, feel no need of him, are ashamed to name him in sermon, in prayer, or even at the communion-table, . . . if such be your position, you have no rightful place in a Christian church. Christ calls himself the door of the fold; and I cannot but think that those who do not come in at the door, but climb up some other way, are not unaptly described in those words of his which you know too well to need that I quote them. The only honest course for you is openly to disclaim the name of Christian; and then, if there be a body calling itself a church, which, having the choice fairly presented between Christ and you, elects you rather than him as its spiritual head, you may fittingly assume such a leadership and lead such a flock in straight paths or in devious ways or nowhither, at your own discretion." The main portion of the article is directed against "negative," or "antagonistic," preaching. The way to expose a congregation, he says, to erroneous views is to argue against them. Furthermore, "No man," he declares, "was ever made devout or honest or merciful by arguments against the Trinity, or the supreme Deity of Christ, or the personality of the Holy Spirit, or the vicarious atonement." He would have preachers say nothing to encourage scepticism, which he thinks is now alarmingly prevalent but to preach positive truth; by which he means not the positive views of Mr. Savage, Chadwick, or Gannett, but that which is "no great remove from the Unitarianism of half a century ago." The second article, by Rev. N. P. Gilman, is a very readable notice of Mr. William Graham's *The Creed of Science, Religious, Moral, and Social*, a work which was noticed at length in *The Index*, by Mr. J. W. Chadwick, several months ago, but which Mr. Gilman thinks his review, with the exception of a few lines of commendation in the *Nation*, is the only one it has received from any American writer. The other articles are "Fichte and his Popular Works," by Rev. Albert Walkley; "Lydia Maria Child and Mary Russell Mitford," by Caroline H. Dall; "The Glory of the Son of Man," by Rev. Henry Giles; "Editors' Note-Book"; "Notes from England," by Rev. John Page Hopps; "Things at Home and Abroad," by Mrs. Martha P. Lowe; and "Review of Current Literature." Among the books noticed is Moncure D. Conway's *Emerson at Home and Abroad*, in which the reviewer has this kind word to say of the author, "Mr. Conway is a romancer, and has very little regard for the truth when he can say a fine thing or tell an interesting story." The reviewer is "G. W. C.," who had himself made Emerson the subject of a book before Mr. Conway's charming volume appeared.

PERSONAL ITEMS.

A STATUE is shortly to be erected to the German philosopher Leibnitz, in his birth-place, Leipsic.

JENNY LIND GOLDSCHMIDT is said to be particularly the reverse of handsome in her old age,—she always was plain; but her voice is as lovely as ever in speech, and in song, too, though she cannot sing as she used to, and rarely sings at all, only for the queen or for the Bach choir, which her husband founded.

MR. P. S. LACKERSTEEN, a native of Calcutta, Hindustan, from whom we print a communication this week, would like opportunities to lecture on India and its Religions. Rev. A. A. Miner speaks of him as a gentleman "whose familiarity with the religions of the East enables him to edify and instruct our communities in the West," and adds, "His lecture to my congregation some months since was received with favor." He can be addressed at 10 Chapman Street, Boston.

THE FREE RELIGIOUS ASSOCIATION

was organized in 1867. Though having its headquarters in Boston, it is a national organization, and has members and officers in various States of the Union. It has the following

CONSTITUTION.

I. This Organization shall be called the Free Religious Association, its objects being to promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history; and to this end all persons interested in these objects are cordially invited to its membership.

II. Membership in this Association shall leave each individual responsible for his own opinions alone, and affect in no degree his relations to other associations; and nothing in the name or Constitution of the Association shall ever be construed as limiting membership by any test of speculative opinion or belief,—or as defining the position of the Association, collectively considered, with reference to any such opinion or belief,—or as interfering, in any other way, with that absolute freedom of thought and expression which is the natural right of every rational being. Any person desiring to coöperate with the Association shall be considered a member, with full right to speak in its meetings; but an annual contribution of one dollar shall be necessary to give a title to vote,—provided, also, that those thus entitled may at any time confer the privilege of voting upon the whole assembly, on questions not pertaining to the management of business.

III. The officers of the Association shall be a President, twelve Vice-Presidents, a Secretary, an Assistant Secretary, a Treasurer, and twelve Directors. They shall be chosen by ballot at the annual meeting of the Association; and the President, Vice-Presidents, Secretaries, and Treasurer shall hold their offices for one year, or until their successors be chosen. The Directors shall be chosen for four years, and, at the expiration of that term, shall not be eligible for reëlection until after two years. One fourth of their number shall be chosen annually; but, at the annual meeting of 1882, the full number of twelve shall be chosen in sections of three respectively for one, two, three, and four years. The President, Secretaries, Treasurer, and Directors shall together constitute an Executive Committee, intrusted with all the business and interests of the Association in the interim of its meetings. They shall have power to fill any vacancies that may occur in their number, or in the list of Vice-Presidents, between any two annual meetings. Six members of the Executive Committee shall constitute a quorum.

IV. The Annual Meeting of the Association shall be held in the city of Boston, on Thursday of what is known as "Anniversary Week," at such place and with such sessions as the Executive Committee may appoint, of which at least one month's previous notice shall be publicly given. Other meetings and conventions may be called by the Committee, according to their judgment, at such times and places as may seem to them desirable.

V. These Articles may be amended at any Annual Meeting of the Association, by a majority vote of the members present, provided public notice of the amendment has been given with the call for the meeting.

Officers elected for the year 1882-83:—

PRESIDENT.

WILLIAM J. POTTER, New Bedford, Mass.

VICE-PRESIDENTS.

JOHN C. BUNDY,
EDITOR AND PUBLISHER.

NOW READY:
BIBLE MYTHS,

And their Parallels in other Religions: being a comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations. 1 vol. Royal 8vo. 600 pages. Cloth. $4.00.

This work fills a place hitherto vacant in Biblical literature, and will attract the earnest attention of all interested in this special field of research. It is a book not for scholars only, but appeals to all those who care for the future of religion. Its object is to point out the myths with which the Old and New Testaments abound; to show that they were held in common with other nations; and then to trace them to their evident *origin* and *explain their meaning.*

It contains quotations from nearly all the sacred books of heathen nations, and from other rare and valuable works which are not accessible to people in general. The chapters are so arranged that it is a perfect cyclopædia of reference. Years of research would be necessary to discover all the information it contains. It is a most searching investigation into the origin of Christianity. Every fact is verified by copious notes and authorities, so that it may be trusted as a thoroughly reliable work. *It contains information which will be startling to many.*

J. W. BOUTON, Publisher,
706 Broadway, New York.

The office of the Free Religious Association and of *The Index* has been removed to 44 Boylston Street, next door east of the Public Library, and in the same building with the Household Art Rooms. Correspondents will please take notice.

CURRENT TOPICS.

IN Rome, Augustus' tomb is the site of a variety theatre, and Cæsar's death-place is occupied by a grocery store.

THE one hundred and seventh anniversary of the Declaration of American Independence was celebrated throughout the country, especially by Young America, with an exuberance of zeal which, whether regarded as an indication of patriotism or not, showed unmistakable appreciation of a national holiday.

THE New York *Sun* says of religious teachers: "Too many of them preach one thing in the pulpit and say another thing in private among safe friends. The lack of earnest conviction in the pulpit is now apparent in very many directions. Proportionately, perhaps, there is more scepticism there than among the pews, where examination into religious questions is less a matter of habit."

THE *Christian Statesman*, with its characteristic breadth and liberality of thought, denies that Bradlaugh has a right to represent Northampton in the House of Commons. It says: "The insult to the moral sense involved in the election of an atheist deserves rebuke so emphatic as to need no repetition, and would receive it if it were not that unbelief has eaten so like a canker into the vitals of society."

THAT superstition is deadly appears from what recently happened on the Island of Vinal Haven, Me., now regularly visited by summer boarders on account of its rare coolness. A young American broke open the coffin of a friend, who had died of consumption, in order to turn over the corpse, by which it was hoped that the life of a member of the same family, similarly afflicted, might be saved. The effluvium has so injured the believer in vampires that his own death is near.

ONE of the provisions of the new French law in regard to religious and civil funerals is that the last wishes of every individual as to ceremonies shall be fully respected. When the intention is disputed, the decision rests with the court. The last will or other written testimony is the only admissible evidence, and the bench must decide within twenty-four hours. Any minister of religion who disobeys the order of the court is liable to a year's imprisonment for the first offence, and to fine for the second.

THE Abbe Morgno, of Paris, is the projector of a scheme and has raised $150,000 to meet the expense of the work of dragging the Red Sea in search of Pharaoh's chariots and treasures. The expedition, composed of a party of Frenchmen, among whom are a number of experienced divers, is said to be on its way to the scene of operations. Alluding to the expedition, the Boston *Post* remarks: "We think we know of one party which is going to become convinced that the Bible is a mess of extravagant romances."

THE infliction of torture in the name of religion was once a common practice, survivals of which, even in the most enlightened countries, have not wholly disappeared. A woman at Scranton, Pa., put her boy's hands on a hot stove to cure them of stealing, praying while the little fellow was screaming and begging, and ordering him to join in the prayer; "yet," says the paper which gives these facts, "neither the prayer nor the stove cured him of pilfering." A woman capable of such parental brutality is unfit to be a mother or to have charge of children.

THE House of Commons last Friday rejected by a vote of 130 to 114 a motion in favor of female suffrage, limited, however, to those women who, by virtue of the proper legal qualification, already possess the municipal suffrage. The motion was advanced by Mr. Hugh Mason, Liberal, seconded by Baron Henry de Worms, Conservative, and supported by Mr. Leonard H. Courtney, financial secretary to the treasury. It was opposed by Sir Henry James, the attorney-general. Mr. Gladstone, the Marquis of Hartington, and Mr. Bright were among those who voted against it.

SAYS the *Commonwealth:* "The Cleveland *Leader*, a Republican journal, is making itself quite ridiculous by attacking George Hoadly, the Democratic candidate for Governor of Ohio, because he is a vice-president of the Free Religious Association and a subscriber to *The Index*, its representative of this city. It says hard things of him and of the paper. As to *The Index*, no more courteous, able, and honest journal exists, discussing great problems of thought and opinion with rare sweetness and impartiality. Mr. Hoadly is a rationalistic Unitarian, which, in these days, is about the designation all zealous Unitarians prefer to have applied to them. No political advantage has ever come to a party in this country by attacking its opposite on the ground of religious differences of its chief members, and we shall be surprised if thousands of really independent thinkers in Ohio do not resent this latest most foolish attack by giving Mr. Hoadly their votes."

THE directors of the almshouse at Erie, Pa., some weeks ago decided to act upon the recommendation of the grand jury that married couples on the score of humanity be allowed to occupy the same room, instead of being separated as heretofore. When the work of fitting up rooms for joint occupation was nearly finished, the superintendent discovered a secret movement among the unmarried paupers, the object of which was to get themselves married in the institution, and then to demand rooms "on the score of humanity." The unmarried inmates number about one hundred and fifty. The marriages were to be effected under the Pennsylvania law, which recognizes as a legal marriage a simple declaration made at any time and place in the presence of a third party. The candidates for marital accommodations are of ages ranging from eighteen to eighty, and of varied nationalities. The Buffalo *Courier* says: "A number are quite young people, and this fact made the plot the more terrible to the directors, who are appalled at the narrow escape the county has had of having to enlarge the institution to accommodate countless paupers in the near future. The reunion prospect is off, and the grand jury will have to suggest something less expensive."

THE national fête day of France is July 14, the anniversary of the fall of the Bastile. This holiday was established in 1880. The Parisian way of enjoying it may be inferred from the following description of the first celebration of the day, which was printed in a New York paper: "No description of that most extraordinary manifestation of republican power and enthusiasm, the fête of the 14th of July, would convey any idea of its pomp, its picturesqueness, its gayety, its glow, or its spirit. One thing of peculiar significance I noticed as I made my way through the rejoicing millions,—the fraternization of the troops with other citizens. In the Rue de Rivoli, one of the most notable streets for that night of the illuminated and bedizened city, as well as in many other streets and avenues, you could see thousands of young soldiers marching arm in arm to and fro with the serried and multitudinous young men and women of the locality, Phrygian-capped and many-spangled, dancing, singing the 'Marseillaise,' and exuberant with festivity. . . . Here let me say, in leaving this point, that, though twice as many people as inhabit our city of New York took part in the fête, not a policeman was to be anywhere seen; and if there was any drunkenness, it was not visible to one who saw as much of Paris that day and night as any man in it."

THE PROBLEM OF DEITY.

It is a vain effort to try to evade the problem of Deity. The old question of the first cause of things, of a substance behind all phenomena, of a creative power within all processes of creation, of something, give it what name we will, that is the vital essence and sustaining energy of all things that are or have been in the world,—the unity of their manifoldness, law of their laws, force of their forces,—this is a question which, as it has engaged the thoughts of men of all races, in dim or in clearer way, from the most primitive eras of history, so to-day protrudes itself into all human thinking, into all philosophy and science and life. Science may profess to ignore the question, but scientific men cannot ignore it. It is no more obsolete to-day than it was thousands of years ago, when our Aryan ancestors in Asia looked up to the overarching sky and found in that clear expanse of creative and vivifying light a poetic symbol of the sustaining cause of all things, and from it named their idea of Deity; or than when the poet-seers of the Hebrews thought out the process of creation which they put into the book of Genesis; or than when the ancient Greek philosophers or the tough-brained Scandinavians were working out their strange cosmogonies.

The old problem to-day comes up in different shape, but it none the less comes. It is not escaped by the evasive efforts of even those philosophers who declare that they will not enter its domain; for they testify to its existence while they affirm it to be insoluble; and, beyond the wall of the positive facts to which they would limit their inquiry, they leave a fascinating cloud-land of mystery which is forever enticing their disciples to peer over into the forbidden ground. Their ever-recurring question must needs be, What is the basis of phenomena? And it is a question that is not pushed aside nor silenced by saying that its answer belongs to the Unknowable. Write "Unknowable" with a capital *U*, mean by it the Absolute, the Infinite, and it becomes for the time being a name for Deity to those thus using it. Write it with a small *u*, and true science recognizes no such word, no such limit to inquiry. Science, in this sense, has already accomplished impossibilities. Things that would have been and were deemed unknowable generations ago have now been made known. Nor is the problem of Deity escaped or answered by calling the primal and central power of the universe Law, or Force, or Nature, or the Essence of things; for these words are then made to embrace the mysterious element of creativeness and vitality, which is the very centre of the problem.

Men of science may say that in their scientific work they have nothing to do with a great First Cause, but only with secondary causes; nothing to do with Absolute Being or Power, but only with beings and powers; and it may not be well that they should encumber their special problems of investigation with any presupposition concerning a primary cause and power. Nevertheless, they cannot trace any of the metamorphoses of phenomena nor touch a single secondary cause without touching the problem of Deity. They may not name it, they may shut their eyes to it, but, all the same, there it is. The very word *secondary* implies a *primary*. And, amidst the changing, shifting phenomena of the material universe, in the play of laws and forces and atoms, the question inevitably comes, What is the secret power that is doing it all? It is a question that is not answered by saying that the universe is self-evolved from primordial fire-mist. From fire-mist to Emerson and Darwin is an ascending journey that is not explained by affirming that the engine has all along carried its own fuel and made its own steam. The fuel itself and the original lighting of the fire are still unaccounted for,—to say nothing of the assurance with which the engine has steadily kept its ascending track.

And in whatever direction science works, and whether in details or in mass, it comes up against this question. It finds it alike at the end of telescopes pointed into the heavens and revealing the processes of forming globes, and through the lenses of microscopes unfolding the hidden things of animalcule existence. The botanist comes upon the question every time that he analyzes a plant, laying bare the laws and forces of its life, its method of germination, of growth, of blossoming, of fertilization. The geologist comes upon it in the mightier forces that have built and shaped the earth; the zoölogist, in the wondrous structures of animal existence ranging through all orders from polyp to man; the biologist, in his investigation of nerves and brain-cells; the embryologist, in his study of eggs. Whence the first egg? is still as unsettled a problem as it was when the ancient Hindus puzzled over it. The chemist finds the same question among his atoms; the sociologist, as he traces the forces of thought and sentiment in human communities; the evolutionist, as he reviews the vast cosmic forces that have resulted in a universe. To follow back all forms of terrestrial life to a shapeless ascidian ancestor or to protoplasm, or to show that all kinds of forces may be correlated and reduced to one, to be called Force, does not remove the question, but rather takes us closer to its heart. It must be said, therefore, that, though science has not solved the problem of Deity, it has quite as little removed it; rather has it restated and reëmphasized the problem.

Advancing knowledge, however, through the aid of exact science, has settled many things in the problem of Deity, as that problem has been conceived in the past. Many beliefs concerning Deity have been dispelled as irrational. Many forms of worship for propitiating Deity have been abolished as superstitious. Many beings worshipped as Deity have been dethroned. Some of them have vanished as myths, others have been resolved into poetry, others have taken their natural place as human beings. The mechanical view of the creative power of the universe may be said to have been set aside. Various theistic structures that the human mind from time to time has built for explaining the universe, the same human mind has afterward demolished as inadequate for the purpose. Nevertheless, the foundations of those structures remain. The demolition of imperfect conceptions of Divine Power does not involve the destruction of Divine Power itself, nor of belief in it. There are two stones in the foundation of all historical structures of religion which it is difficult to see how the human mind by any process of criticism can ever displace without impeaching its own sanity or denying the basis of its own being. One of these is the existence and authority of the moral law; the other is the existence and necessity of some kind of power as the vital and sustaining energy of the universe.

WM. J. POTTER.

THE MILLENNIUM.

The hope of a brighter future, a perfect day for the world, has had a place in the mythologies of almost all nations. The Greeks and Romans, while lamenting the decline of the world from the Golden Age in which it commenced, comforted themselves with the assurance of its restoration. The Persians expected the triumph of Ormuzd over Ahriman and the consequent overthrow of all ill. The Jews and Christians, in their millennium or thousand years of blessedness, have only voiced again the yearning and hope of humanity for a blessed era of peace, prosperity, righteousness, and happiness.

If universal beliefs have a basis of truth, it may be asked whether science gives any intimation of a foundation fact for this universal hope of "a good time coming."

Research of the past and observation of the present reveal *progress*, and when this is recognized hope seizes upon the fact as a promise of perfection. Not only in history do we see a growth upward in man's development in morals, knowledge, and arts, but study of the earth reveals an upward progression in life. The earliest stratified rocks show us only the remains of the lowest forms of animal and plant life, and in successive later deposits come the higher orders of life. Haeckel divides the history of life upon the earth, as shown by the testimony of the rocks, into five great epochs in which life developed in an ascending scale, in the following order: 1. Skulless vertebrates and seaweeds; 2. Fishes and ferns; 3 Reptiles and pines; 4. Mammals and leaf forests; 5. Man and cultivated forests. The earth tells this story of progress, and analogy asks, Why should progress stop short of perfection? A development of matter from moneron to man gives warrant for all the fondest dreams of the future development of life into angelic forms, and of the enlargement of man's powers to godlike efficiency. If atom develops to man, man may advance to God.

The early Christians believed this Golden Age to be "at hand," and many now look for the speedy coming of the Lord and the deliverance of the groaning creation into "the glorious liberty of the sons of God." It may be asked, If science admits the probability of a state of future blessedness upon the earth, what has it to say of times and seasons? Here again the analogies of the past prompt the hope that the day of promise "draweth nigh."

Haeckel estimates that the life-bearing rocks, which have been deposited in strata by the waters have a thickness of about one hundred and thirty thousand feet. The strata bearing the low forms of the first epoch are about seventy thousand feet, or more than half the whole thickness. The strata of the second period—that of fishes and ferns—are considered to be about forty-two thousand feet thick, or one-third of the whole. The third period—the reptile and pine era—shows strata fifteen thousand feet thick, or one-ninth of the whole. The fourth epoch—the age of mammals—shows only three thousand feet of rock, or one-fortieth of the whole. And the strata of the fifth epoch—or age of man—are but one two hundredth part of the whole life-bearing strata of rocks. Thus the brevity of the past periods of development appears in the ratio of 2, 3, 9, 40, 200. From this we learn that, as forms become higher, the period of development has shortened; and a continuance of this process will evolve a continually hastening change to higher and better things.

In our observation of society, we observe the rapid improvement made in many departments of life by one invention. We see how benefits act and interact in constantly growing proportions, and influence spheres never contemplated in their origin. We see material forces promoting moral progress, as when railroads and telegraphs assist the detection and therefore the repression of crime. Each advance promotes activity in thousands of channels, and the progress of development is continually accelerated.

Thus the analogies of the past excite the expectation of constantly shortening epochs of advance-

ment, and Science proclaims the glad tidings that "the coming of the Lord draweth nigh," "the night is far spent, the day is at hand." A better and brighter day for humanity approaches with ever quickening footsteps, and promises a career to man unlimited by harps and crowns, but leading ever on to infinite attainment.

ROBERT C. ADAMS.

PHILOSOPHY AND SCIENCE, FROM A COMMON-SENSE STAND-POINT.

There is a wide-spread confusion in the use of these terms,—very often philosophy being called science and *vice versa*. A conspicuous instance of this appears in a late criticism of Herbert Spencer. The various sciences furnish the *data*, the *facts* upon which a true *philosophy* bases its logical chain of reasonings to solve "the problem of life and the mysteries of the universe."

Herbert Spencer, with indefatigable labor, has devoted his life to the work of collecting these facts of science and showing that they all demonstrate the truth of the evolution philosophy. Darwin, with wonderful sagacity and patience, has studied the sciences of zoölogy, anatomy, and geology, and has given the result to the world in his *Origin of Species*, *Descent of Man*, etc. But Spencer is not a special scientist; he has taken a wide survey of many sciences,—of astronomy, geology, biology, psychology, etc.,—and built his philosophy upon the data furnished by them. To be a practical scientist in any one of these would require a life time. This true philosopher uses "his enormous drag-net," as Col. Higginson terms it, and flings it out in every direction to collect all the established facts of these sciences, and then, with wonderful intellectual grasp, shows that they afford the data for the true cosmic philosophy of evolution, and in very truth give us "an intellectual guide of life." Spencer, indeed, called to his aid special scientists to furnish such facts pertaining to their respective sciences. In his "descriptive sociology," the facts were compiled by Profs. Duncan, R. Scheppeg, and James Collier.

Philosophy in truth requires the logical intellect, the comprehensive mental grasp of a Spencer, but does not go into the practical details of the scientist to spend a life with a Sir Charles Lyell, a Sir Isaac Newton, or a Dr. Bain, but, collecting all the demonstrated facts (not the mere hypotheses) of the several sciences, shows their bearing and to what they must lead.

Yet the philosopher is subject to the same danger as the scientist, in so far as he is liable to mistakes in his logical reasoning. Hence, the scientific method has to be adopted by the philosopher: his individual logical reasoning from such scientific data counts only as an hypothesis, until it has been verified by the consent of other competent philosophic minds. A logical chain of reasoning is easily constructed when the data are furnished, but such data have to be looked at from all sides by several competent minds. One individual mind in philosophy is not sufficient any more than in science, because there is unfortunately such a tendency to look only on one side, the side that individual organization and peculiar environment have made habitual to us. The idealist, the transcendentalist, the Kantian, has "grooves of thought" in which ideas flow, in spite of themselves; and it is only when the logical reasonings from all sides have been compared that a true philosophy is attained.

Science collects facts by close observations and individual experiences in the great field of nature, while philosophy shows the bearing of such, and uses them as the only reliable data in constructing logical reasonings, instead of the old scholastic metaphysical method of reasoning from so-called "intuitions" or individual convictions built upon imagination and fine-spun theory. It has been said that "every theological creed is in some measure a philosophy of the universe." Before the sciences of geology and astronomy furnished reliable facts for data, when the earth was considered flat and the sun and planets mere lights for man's accommodation, the primitive philosophy considered the earth as God's footstool, and starlight a kind of provision for man's wants.

In the absence of facts, theology draws upon imagination for data, and its creed is the logical result. We are all philosophers, more or less logical; but few can become special scientists, a whole life being required for one practical science. The logical faculty will be active, in spite of us, and it mostly depends upon our data whether we reach right conclusions or not. Mere literary acquirements will not answer for scientific precision. A brilliant writer is not so much needed as a clear thinker, who can discriminate fine shades of differences, rather than see ideal resemblances. Before the science of psychology had shown that subjective impressions are often illusions; before it had shown that all human knowledge was relative; that our various senses and reasoning faculties were the medium through which objective realities were seen; that, in short, man is a wonderful organic mechanism upon which the forces of nature operate, and at the same time gradually develop its capacities,—it was supposed that each individual mind was competent to construct a philosophy by merely reasoning from his own individual conceptions and imaginations, each earnest conviction of the individual being supposed the result of direct inspiration from the superintending Deity; even the transcendentalists attributing their highest ideals to such a divine source. Inspiration in the old theology was confined to very few, but with the modern transcendentalist every earnest conviction on morals and religion was attributed to such "divine afflatus."

Conscience and the mysterious "ought to do" were considered by them, and by some modern spiritualists, as a divine endowment. The stubborn fact that such "conscience" prompts the individual to directly opposite lines of conduct was overlooked. Conscience, or "our own opinion of our actions," has been demonstrated to be dependent upon our education, upon our organization, and this upon the experiences of our ancestors; in short, to be nothing more and nothing less than the result of surroundings and social environment of ourselves or of our ancestors. It has often led man into terrible errors and cruelties, such as the wars of the Crusades, the burning of witches, and the fires of Smithfield,—all done by the promptings of conscience, and a stern sense of duty to God. Nevertheless, philosophy, collecting these facts of history, and observing how this powerful but blind instinct prompts always the individual to do what he thinks is right, sees the vast importance of such a sentiment, needing only to be enlightened by the sciences; the ultimate analysis of the sentiment showing that it has been gradually developed from the primitive "self-interest" which prompts every being to seek its own welfare,—the highest regards for the rights of others originating from the same, just as much as the lowest form of animal indulgence. The necessity of controlling selfish indulgence in order to attain higher and more lasting good is gradually forced upon the attention as population becomes dense and social forces come into play. "Do to others as you would wish to be done by" is a moral rule that would first be forced upon the attention in a densely populated country, such as China, because competition would be so much greater in the various walks of life, and the rights of others more likely to be trampled on by the individual. Hence, Confucius was the first to formulate this moral rule.

Instead of a so-called revelation furnishing the data for religion, the various sciences will give the only reliable premises upon which to build the coming religious philosophy.

J. E. SUTTON.

THE SECRET OF THE EAST;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

CHAPTER VI.

An Expensive Creed.

"Insani fugiunt mundum, immundumque sequuntur."—*Jordan Bruno.*

The most cherished dogma of the modern Jesuit is the belief that the conditions of our earthly happiness are influenced by the continual interference of preternatural agencies; for he has to postulate a continued miracle to explain the fact that the creed, which he calls the best of all possible religions, has been a constant source of misery and error. But, if the true reason of that fact has once been named, its concordance with the historical records of the last sixteen centuries will be a sufficient vindication of its correctness; for the consistency of theory and experience may reach a degree that can defy the wiles of sophistry.

From the first council of Nice to the last conference of the "Evangelical Alliance," the history of the Galilean Church has been the history of an unremitting war against nature; and the propaganda of her dogmas could prosper only at the expense of our earthly happiness. The direct results of that warfare would be amply sufficient to account for the fact that the Age of Faith, the era when the rule of the cross maintained its supremacy, was the dreariest period in the history of the human race; but, unhappily, those results were not confined to the suppression of harmless amusements and scientific investigations. *It is easier to pervert than to suppress a natural instinct.* Wherever pessimism crushed the flowers of this earth, the soil began to teem with poisonous weeds. The suppression of healthful pastimes begat a passion for vicious pastimes, and made the fancied identity of sin and pleasure a sad reality. The Olympic games and the Capitoline festivals were abolished by the order of a Christian emperor. The field-sports of the Gaelic peasants were suppressed by the influence of the Scotch clergy. The worship of sorrow spread its gloom over every emotion of the human heart. But, when the Church had succeeded in making life as dismal as the dogmas of her creed, her victims took refuge in secret sins and drunkenness. Even the slaves of ancient Rome had their saturnalia, when their masters indulged them in the enjoyment of their accumulated arrears of happiness; but our laborers toil like machines, whose best recreation is a temporary respite of work. Human hearts, however, will not renounce their birthright to happiness; and, if joy has departed this life, they pursue its shadow into the land of dreams, and try to spice the dry bread of daily drudgery with the sweets of delirium.

The attempt to suppress the pursuit of natural sciences led to the pursuit of *pseudo*-sciences,—to supernaturalism, demonism, and all sorts of hideous chimeras. The attempt to suppress the worship of nature led to the worship of *unnatural*-

Digitized by Google

ism, the veneration of a whole almanac full of nature-hating, self-torturing maniacs. The fanatical asceticism that begat callousness to personal sufferings led its victims to behold with indifference, and at last with delight, the sufferings of their fellow-men. The cruelties of the worst pagan despots were surpassed by the absolute inhumanity of pious Christian monks and priests. The suppression of the spirit of manful emulation that assembled the champions of the Olympic festivals forced that instinct to seek its gratification in cunning and treachery, in the sordid competition of hypocrites and sycophants. The suppression of rational freedom led to anarchy, to communism and nihilism. The ordinance of celibacy became the mother of secret vices. Intolerance is the parent of hypocrisy.

Pessimism has been on trial for sixteen hundred years; and the history of the Middle Ages has taught us that man's divorce from his earthly instincts is the removal of a tree from its native soil, a removal from the basis of life. For sixteen centuries of faith and trust, our ancestors tried to reach heaven by abandoning their place in nature; and we can now estimate the costs of the experiment.

The dogmas of the Christian Church have cost the world three million square miles of lands, which once were the garden spots of this earth, but which have been turned into deserts by the neglect of rational agriculture and the influence of a creed which labored to withdraw the attention of mankind from secular to *post-mortem* concernments. "The fairest and fruitfullest provinces of the Roman Empire," says Prof. Marsh,—"precisely that portion of terrestrial surface, in short, which, about the commencement of the Christian era, was endowed with the greatest superiority of soil, climate, and position, which had been carried to the highest pitch of physical improvement,—is now completely exhausted of its fertility. A territory larger than all Europe, the abundance of which sustained in bygone centuries a population scarcely inferior to that of *the whole Christian world at the present day*, has been entirely withdrawn from human use, or, at best, is thinly inhabited. . . . There are regions where the operation of causes, set in action by man, has brought the face of the earth to *a desolation almost as complete as that of the moon;* and, though within that brief space of time which we call 'the historical period,' they are known to have been covered with luxuriant woods, verdant pastures, and fertile meadows, they are now too far deteriorated to be reclaimable by man, nor can they become again fitted for his use except through great geological changes, or other agencies, over which we have no control. . . . Another era of equal improvidence would reduce this earth to such a condition of impoverished productiveness as to threaten the depravation, barbarism, and, perhaps, even the extinction of the human species." (*Man and Nature*, pp. 4, 43.)

And the ruin of these countries* is not due to the recklessness and intentional destructiveness of their inhabitants, but is the inevitable consequence of a persistent attempt to follow the precepts of an anti-natural creed.

Christianity has retarded the progress of the human race by at least fifteen hundred years. The fruits of science and social reform, which our descendants will reap in fifteen centuries hence, might be enjoyed at the present moment, if the last sixty generations had not wasted their time in disputes about the interpretation of idiotic dogmas, and the attempt to gain the heaven of a future world by despising the blessings of the present.

On the altar of her anti-natural idol, the Christian Church has sacrificed the lives of eighteen millions of the noblest and bravest of our fellow-men. Two millions were butchered in the wars against the freedom-loving children of nature, the Saxons, the Sarmatians, and the pagan Scandinavians; one million, in the wars against the Arian heretics; at least five millions, in the seven larger and four smaller crusades. The extermination of the Spanish Saracens reduced the population of the peninsula by seven millions. One million was slaughtered in the fifteen years' man-hunt against the Albigenses, the Thirty Years' War against the Protestant princes, the massacres of the French Huguenots, the Waldenses, and the insurgents of the Netherlands. A full million human lives were devoured by the Moloch of the Holy Inquisition and the witch tribunals, which for nearly seven centuries infested all the principal cities of Christian Europe. To this number, we might add the twelve million aborigines of the New World, who in less than a century fell victims to the insane fury of their Christian conquerors and the unremitting persecutions of the Christian Inquisition. Many of the Inquisitors were men of spotless personal morality. Montfort, the butcher of the Albigenses, was a pious and righteous cavalier. Jean Bodin and Judge Sprenger, the defender of the witch tribunals, sincerely pitied the fate of their victims; but their horrible creed left them no choice. The blood of thirty millions of our fellow-men cries out against the nature-hating fanatic who inculcated the belief in the sinfulness of our natural instincts, the guilt of scepticism, and the possibility of Satanic incarnations.

Christianity has turned whole nations of freedom-loving men into slaves and flunkeys. The precepts of self-abhorrence and passive submission to tyranny and injustice was a direct declaration of war against the manly self-reliance that is the basis of all true independence. The worst tyranny that has ever oppressed the children of this earth was perpetrated in the name of the Christian God. When Charlemagne conquered the land of the pagan Saxons, thousands of brave men were slain like wild beasts; thousands were transported to the slave-farms of the Abbot Alcuin or imprisoned in Christian convents; hundreds of widows and bereaved mothers committed suicide; hundreds of children were scourged to death for resisting the tyranny of their jailers or trying to regain their liberty. The Spanish Unitarians, the Jews and Moriscoes, the most industrious inhabitants of the peninsula, were hunted from province to province; and when, after centuries of horrible persecutions, a remnant of the fugitives sought a refuge in Portugal, the Christian monarch of that country was forced by the priests to break his promise of protection: the refugees were banished, and their children dragged away to the slavery of the Christian convents. "Piercing shrieks of anguish filled the land: women were known to fling their children into deep wells or to tear them limb from limb rather than resign them to the Christians." (Lecky's *History of Rationalism*, ii., p. 270.) The Church that abolished slavery in name promoted it in fact; for her doctrine implied a divine sanction of despotism, and an entire disregard for man's natural rights. The slave-barracks of ancient Rome were temples of liberty compared with the dungeons of the hierarchical torture-dens, where thousands of nature's noblemen vainly invoked death and madness as a refuge from the power of a more cruel foe.

The ascetic dogmas of the monstrous delusion have darkened the life-light of countless millions; for, in the zenith of its power, Pessimism rose almost to the climax of a worship of sorrow for its own sake. And, when the sources of earthly misery were exhausted, the Church elaborated that dogma of a hell of eternal and all but inevitable tortures, which destroyed the last solace of the wretched as well as the peace of daily life. Dissenters were silenced by armed force. Pessimism solved the problem of inflicting the greatest possible amount of misery on the greatest possible number. Every appeal to common sense and mercy was punished as a crime against the authority of an infallible church; every atrocity was sanctioned that would help to crush the instinct of free inquiry, the dignity of manhood, the sense of justice, the love of joy, freedom, and nature. How many thousands of the countless victims who were induced to take the vow of the monastic orders must have awakened to the significance of their sacrifice, and sought, too late, to regain a world which to them was as hopelessly lost as if they had crossed the ferry of Styx! How many children of the joy-loving nations, whose countries had been cursed with the gloom of the cross, must have pined for the freedom of nature as the captives of Tartarus pined for the sunlight of the upper world; or sought refuge in death, in the hope of reaching a land where the code of Pessimism was unknown. "According to that code," says Buckle, "all the natural affections, all social pleasures, all amusements, and all the joyous instincts of the human heart were sinful. . . . The clergy looked on all comforts as sinful in themselves, merely because they were comforts. The great object of life was to be in a state of constant affliction. Whatever pleased the senses was to be suspected. It mattered not what a man liked: the mere fact of his liking it made it sinful. Whatever was natural was wrong." And that creed dares to boast of its charitable institutions! The charity of the Christian Church is the charity of the fanatic, who for the love of heaven turned a flower-garden into a desert, and for the love of earth housed a few of the withered plants and watered them with his sickly tears.

The Christian Church has spread the blight of its influence far beyond the boundaries of her spiritual empire. The freedom of the North-European pagans and the civilization of the South-European Moors succumbed to the incessant attacks of their Christian neighbors, instigated by the light-and-freedom-hating fanaticism of their priests.

The dogmas of the Christian Church have smitten its victims with the nauseous disease of hypocrisy. The atmosphere of our whole social life is tainted with the poison of cant and dissimulation. By invoking the aid of the secular powers to protect the authority of dogmas which to all clear-sighted men have become a mixture of blasphemy and absolute nonsense, the Church offers a premium for intellectual dishonesty. Every lover of truth is branded with the reproach of eccentricity by the upholders of a system whose centre has always been an untruth, and generally a very transparent untruth. After doing their best to turn this world into a hell, after insulting the Creator by disregarding his physical laws and despising his marvellous earth, the moralists of the Galilean Church hope to conciliate this favor by lying for the glory of his "son."

The anti-natural dogmas of the Christian Church have so perverted our ideas of duty and natural religion that the worst enemies of mankind perpetrated their enormities for the sake of conscience, and millions still despise this earth for the sake of

*Asia Minor, Turkey, and Northern Africa were for centuries inhabited by priest-ridden Christians, and lost their fertility before they passed under the sway of their present master. India, Persia, and the Caucasus, and those parts of Southern Egypt and Eastern Armenia that were never under Christian control, have preserved much of their ancient fruitfulness. The so-called Christian countries of Northern Europe were not converted before the eleventh century of our era, and revolted in time to prevent their utter ruin.

Digitized by Google

heaven. Neither the vices of the Roman Caesar nor the excesses of the French Revolution have contributed so much to weaken the respect for the authority of the law as the systematic inhumanity of the Christian Middle Ages, when laws were so intolerable that only the lawless could enjoy life,—outlaws and irresponsible princes, Robin Hood and Robert le Diable. The delusion of anti-naturalism has certainly caused more mischief than the bane of all human vices taken together. "Translated into plain speech, the foundation-principle of our system of ethics is this: that all natural things, especially our natural instincts, are essentially evil, and that salvation depends upon mysterious, anti-natural, and even supernatural remedies. This bottom error has long biassed all our physical and metaphysical theories. The use of our reasoning powers is naturally as agreeable as the exercise of any other normal function. The anti-naturalists declared war against free inquiry, assured us that the study of logic and natural science is highly dangerous, and that the seeker after truth must content himself with the light of ghostly revelations. We have since ascertained that the ghosts are grossly ignorant in all terrestrial concernments, and that their reports on the supramundane state of affairs are, to say the least, suspiciously conflicting. In all but the vilest creatures, the love of freedom is as powerful as the instinct of self-preservation. The anti-naturalists inculcated the dogma of implicit submission to secular and spiritual authorities. The experiment was tried on the grandest scale; and the result has demonstrated that blind faith leads to idiocy, and that absolute monarchs must be absolutely abolished. The testimony of our noses justifies the opinion that fresh air is preferable to prison smells: the anti-naturalists informed us that at various seasons of the year, and every night, the out-door atmosphere becomes mortiferous, and that sleepers and invalids ought to be confined in air-tight apartments. We believed, till we found that the most implicit believers got rotten with scrofula. Happiness is the normal condition of every living creature; for, in a state of nature, every normal function is connected with a pleasurable sensation. 'To enjoy is to obey.' Animals have not lost their earthly paradise: he who has observed them in the freedom of their forest-homes cannot doubt that to them existence is a blessing, and death merely the later or earlier evening of a happy day. The anti-naturalists assured us that God delights in the self-abasement and mortification of his creatures, and hoped to gain his favor by afflicting themselves in every possible way,—by voluntary seclusion, fasts, vigils, the wearing of dingy garments, and abstinence from every physical pleasure. Failing to enamour mankind with their doleful heaven, they revenged themselves by depriving them of their earthly joys. In hopes of making the hereafter more attractive, they made life as repulsive as possible: kill-joys and persecutors were the active heroes of those times; ascetics and self-tormentors, their passive exemplars. Virtue and joylessness became synonymes. Men aspiring to superior merit exchanged the glories of the sunny earth for the misery of a gloomy convent. 'A man of sorrows' became a type of moral perfection. The cross, an instrument of torture, became the trade-mark of the new religion. *Kosmos* —i.e., beauty and harmony—was the oldest Grecian term for God's wonderful world; a 'vale of tears,' the favorite Christian epithet.

"'Worldly pleasures' are still under the ban of our spiritual purists. Daily drudgery and daily self-denial are still considered the proper sphere of a law-abiding citizen, and special affliction a special sign of divine favor. Life has become a sacrage duty. We do not think it necessary to alleviate the distress of the poor till it reaches a degree that threatens to end it. We have countless benevolent institutions for the prevention of outright death, not one benevolent enough to make life worth living. Infanticide is now far more rigorously punished than in old times. We enforce every child's right to live and become a humble, tithe-paying Christian; but, as for its claim to live happy, we refer it to the sweet by-and-by. We shudder at the barbarity of the Cæsars, who permitted the combat of men with wild beasts to cater to the amusement of the Roman populace; but we contemplate with great equanimity the misery of millions of our fellow-citizens wearing away their lives in work-shops and factories: millions of children of our own nation and country who have no recreation but sleep, no hope but oblivion; to whom the morning sun brings the summons of a task-master, and the summer season nothing but lengthened hours of weary toil,—nay, we make it the boast of our pious civilization to deprive them of their sole day of leisure, to interdict their harmless sports lest the noise, or even the rumor of their merriment, might disturb the solemnity of an assemblage of whining hypocrites. Hence, the recklessness, the nihilism, and the weary pessimism of our times, the melancholy that everywhere underlies the glittering varnish of our social life. Hence, also, that vague yearning after a happier hereafter, which the murderers of the happy past have made the principal source of their revenues.

"The Christian dogma of the reformatory value of misery has been refuted by the most dreadful arguments in the world's history. The unhappiest nations are not only the most immoral, but the most selfish and the meanest, in every ugly sense of the word. Virtues do not flourish on a trampled soil. Genius, too, is a child of light. The Grecian worship of joy favored the development of every human science, while the monastic worship of sorrow produced nothing but monsters and chimeras; for, to modern science, Christianity bears about the same relation as the plague does to the quarantine." (*Physical Education*, p. 186.)

The doctrine of anti-naturalism still perverts the principles of our system of education, as it perverted the ethics, the science, the social tendencies, and the religion of the Middle Ages. It is the extra-mundane fulcrum of the lever that forced the moral world from its normal orbit.

Has the happiness of the human race been secured, or in any degree promoted, by the dogmas of the Christian religion? Cowardice and stupidity have too long connived at the crime of abetting the dissemination of that earth-blighting superstition, and it is time to say the truth in plain terms. The demonstrable truth then is that, if all the countries of Europe that were destined to pass under the yoke of the cross had, instead, for a thousand years been covered by the ashes of the fire-storm that buried the cities of Pompeii and Herculaneum, the world would to-day be benefited by the result. Our earth would be more fertile and populous, our fellow-men would be freer, wiser, and happier. The waste of the volcanic cinders would have proved less irreclaimable than the desert of pessimism. The survivors of the catastrophe would have saved their children from the alternative of death or moral slavery that awaited the next forty generations of their descendants. The nations of the Caucasian race would have been spared the systematic extirpation of their wisest and bravest men. The Saracens, whose western empire was destroyed by the insane fanaticism of the Christian priests, would have cultivated the garden of civilization in a more grateful soil. The discoverers of America would not have deluged the New World with a sea of blood. The relics of pagan art and science would have been safer in the custody of the elements than in the hands of the monkish forgers and fanatics.

We read of Ammonite devotees sacrificing their first-born to Moloch; of Egyptian peasants starving their children, to fatten a herd of lazy dervishes; of Hindu pilgrims performing seventy-seven thousand seven hundred and seventy-seven somersaults, "for the benefit of their souls," and compelling their families to join in the exercise. But such poor maniacs are, after all, less to blame than the juggler-guild of priests and mystics who first persuaded them to renounce their right of free investigation in favor of any human authority. As soon as reason surrenders to a dogma, the power of the exponents of that dogma becomes autocratic: they can securely further their selfish interests by almost any outrage on common sense and justice. If the philosophers of future centuries should recognize this chief root of superstition, they will perhaps acquit the nations of the Dark Ages from the guilt of their manifold sins against nature, and explain their strangest delusions, with one exception. If they read the history of pessimism and the fate of the nations who had accepted its doctrines, they will fail to understand how the author of that creed could ever be mistaken for a Saviour.

FELIX L. OSWALD.

TEACHERS AND LEADERS.

Every man is a part of a vast social organism to which he owes incomparably more than it can ever owe him, but upon which he exerts more or less influence, good or bad, or partly both, during his entire life, and an influence that outlasts his conscious life as the race outlasts the individual.

But there are persons in every country and age, in every community and generation, whose natural qualities and a combination of circumstances apparently, but only apparently accidental, enable them to exert an influence far greater than that of men in general. Preëminent intellectual ability, great moral enthusiasm, unusual force of character, intensity of conviction with earnestness, persistence and persuasiveness, ambition and a scheming disposition, combined with knowledge of human nature and capacity to arouse the passions and prejudices of the people,—these are among the qualities that give men power over their fellows, either to teach or to lead. One class appeal to the intellect of their age and of future ages, presenting truths that are new or far in advance of popular thought and theories, reaching at first only a few, the largest, the freest, the best minds. Their immediate influence is necessarily restricted; for between their thought and that of the people, in their particular province, there is so little in common that there is no point of contact or passage from one to the other. Their teachings cannot be understood, much less assimilated by average minds. "All originality is estrangement," says Lewes. Darwin's writings at first were but little read, although evolution in a general way had been taught by a few minds centuries past. His thought was too far advanced, not only for the masses, for the clergy, for common educators, for the readers and writers of the popular and even the best literature, but for the scientific men of the day.

The views of Darwin have, notwithstanding, grown into favor with a rapidity unprecedented and which would have been impossible in any other age, and are, in the main, now accepted as probable by large numbers, among whom are many popular teachers and even clergymen.

The works which, when they appeared, scarcely

Digitized by Google

produced a ripple on the surface of popular thought have already effected a revolution in zoölogy and contributed to modify theological beliefs, and will continue to influence the minds of men centuries hence. And yet to all appearances the amount of influence likely to be exerted by Darwin seemed small a quarter of a century ago in comparison with that of a preacher or political orator who could sway audiences with his eloquence.

Another class of reformers, and by far the largest class, exert their influence by appealing to the people direct. To do this the most effectively they must be in intellectual contact with the people, in sympathy with their main thought and methods of thinking, sharing their prejudices and superstitions to a very large extent, and possessing the power to reach and influence them through their emotions. Such a man may express views somewhat in advance of the people he addresses, on one or more subjects, provided he gives prominence to those thoughts and feelings which he has in common with the people, and assails only those beliefs which are half out-grown, and that part of them with objections to which, through the labors of unrecognized or hated iconoclasts, the people have become familiar.

One of the ablest leaders of the latter class is Henry Ward Beecher, of whom it may be said that he generally keeps a little, and but a little, in advance of the popular mind. His sermons and lectures are of no value to thinkers except as an indication of the drift and tendency of thought; but his sympathies have generally been on the side of right, and he has from time to time given his assent to and administered in homœopathic doses truth really in conflict with his theology; and with the continual and rapid decay of the old faith he has ventured to express disbelief in doctrines supposed to be a part of the Christian system. In all this, he has probably hardly gone beyond the average thought of his own congregation; but his sermons have been widely read and have no doubt helped many to a higher level of thought. It is not strange, therefore, that there are people of progressive tendencies, but who know nothing of liberalism except what they have received from him and other less able preachers, who imagine that he is a profound, advanced, and even original thinker, although he himself has too much good sense to believe anything of the sort.

There are liberal leaders, both in this country and in Europe, who influence large numbers partly because they are superficial in thought and can move men through their emotional nature. Leaders of this class are necessary, and often among the most useful reformers; but the quality of mind their work requires is not like that required for the intellectual work which has to wait generations for appreciation and acknowledgment.

B. F. UNDERWOOD.

EDITORIAL NOTES.

SEVEN young Jewish rabbis were consecrated at Cincinnati last Tuesday; the first class of rabbis ever educated wholly in this country, it is said.

IT was the Duc de Morny who defined a polite man to be "one who listens with interest to things he knows all about when they are told by a person who knows nothing about them."

IN one of his lectures in this city last winter, Joseph Cook said that, having asked Chunder Sen concerning the prospects of Unitarianism in India, that gentleman replied that the present representative of Unitarianism in India had made it so ridiculous that the question was not worth considering. In the *Christian Register* last week were printed two letters from Keshub Chunder Sen denying the correctness of Mr. Cook's statement. In one letter he writes: "The statement is wholly unfounded"; and in the other, "Please assure Mr. Dall that nothing is farther from my heart than the absurd charge mentioned in the American papers."

THE society to which Mrs. Clara M. Bisbee devotedly ministers in Dorchester held its second anniversary exercises Sunday before last. Mr. Applebee, of the Parker Memorial Society, Messrs. C. R. Eliot, J. Sallaway, and W. G. Babcock, Unitarian ministers, and Mr. Allen Putnam, Spiritualist, as well as Mrs. Bisbee, participated. A Roman Catholic priest of the neighborhood was also invited, and expressed a readiness to take part, had not a service in his own church prevented. The exercises bore good testimony to the value of Mrs. Bisbee's work, which is growing under her hands both in the numbers reached and the interest manifested. She should be well supported in it.

SAYS the *Christian Statesman*:—

The moral and religious significance of Judge Hoadly's nomination as Democratic candidate for Governor in Ohio is further enhanced by the fact, already widely commented on, that he is one of the Vice-Presidents of the Free Religious Association. The fact was urged by his opponents in the lobbies of the convention. One delegate is reported by the Cincinnati *Gazette* as saying: "The people in the country are honest, God-fearing folks, and they never will support a man who has anything in common with Ingersoll. Such men are dangerous to the nation; for if their belief, or want of belief, ever prevailed, order and society would have an end." Copies of *The Index*, bearing his name as one of the Vice-Presidents of the Free Religious Association, were circulated among the members; yet, notwithstanding all this, he was nominated. As we have said before, all this would have greater significance if the Republican party had avowed itself, in any responsible way, as the party of Christian ideas in government, or even Christian morality.

THE pious and orthodox Governor of Massachusetts delivered an address at the Williams College Commencement last week, from which the following is an extract:—

Brought up in a Baptist college, it yet never seemed to me that it was any consequence what amount of water was used to give the sign to the living soul that it belonged to Christ. Afterward struck with the beauty of the liturgy and litany of the Episcopal Church in its rhythmic flow almost in numbers, satisfied with the apostles' creed, and fully content to wind up the morning devotion with the prayer of Chrysostom,—*O* Lord, listen to our petitions, as they are most convenient for us, certain that all is well done,—I became a member of an Episcopalian congregation. But there are some things, my young friends, as you go forth in the world, that you must never lose hold of; for, if you do, there is no place where you can stop. He, in my judgment, who claims to believe that the Scriptures are the word of God and the New Testament is the history of the life of his Son, and then does not believe that that Son is divine, has given up the whole case; and he has but one step farther to take to deism, and then but a single step to atheism and the denying of existence of God at all. I cannot talk to you like a clergyman, but I have some ideas of my old soldier life; and upon this question I say to you, Stand to your guns, don't give up the ship. This was the doctrine on which your fathers reared these walls. They put no restrictions upon you, gentlemen of the trustees, because it never occurred to them that Massachusetts could swerve from these doctrines; and Massachusetts, by the bulk or majority of her people, can never do so; and these doctrines and these fundamental provisions, I trust, will always be taught in this our beloved, steadfast, firm, and Christian alma mater.

At the close of Gov. Butler's address, a gentleman remarked: "There is but one thing now left for this college. She must give him the degree of D.D., and put him in charge of the Mission Park prayer-meeting."

THE following is from the Cleveland *Leader*:—

The Democrats are considerably concerned about Hoadly's religious faith. Some assert that he is an atheist, while others deny it. This morning's Ohio *State Journal* produces *The Index*, the well-known infidel organ of Boston, as proof of the charge. That paper of June 7 contains a report of an executive meeting of the "Free Religious Association," at which Judge Hoadly was elected Vice-President. Quoting from the official records, the "Free Religious Association" seeks to "subject the traditional authority of all special religions and alleged revelations, *the Christian no less than others*, to the judgment of scientific criticism and impartial reason." The society "excludes from its fellowship *all societies bearing the Christian name and specially emphasizing by creed or ceremony a personal Deity*." *The Index*, in its report of the meeting at which Judge Hoadly was elected Vice-President, notes with gratification "the general decline of interest in the old theologies everywhere reported, and a constant increase in the number who stay away from church, and who are ready for the principles which free religion represents." The Catholic Democrats are particularly disgruntled on the religious question. They say, "The party would not take up Ben LeFevre because he is a Catholic, but it nominates a man who is an infidel." And then Judge Daugherty, of Franklin County, did not receive a single vote from his own delegation for the Supreme Bench, and the reason assigned by his co-religionists is because he is a Catholic.

The Ohio *State Journal* and the Cleveland *Leader* are in pretty small business in persistently misrepresenting the Free Religious Association in order to prejudice the people of Ohio against a political candidate who happens to be an officer of this Association. It is not true that the Free Religious Association "excludes from its fellowship *all societies bearing the Christian name and especially emphasizing by creed or ceremony a personal Deity*"; and only by distorting the language he pretends to quote could the writer of the above paragraph have made to appear what is affirmed. The sentence is dishonestly garbled—words being omitted and others substituted for them—in order to make the report affirm what was not stated and what cannot be truthfully said.

POETRY.

For *The Index*.

AGNOSTICISM.

Worlds you may number,
Time you may name;
Yet from its slumber,
Deep as the skies,
Secret ne'er hies
Nor wisdom gives flame.

Charm of mystic word
And sight of seer
Ne'er life's "wherefore" stirred
Nor "whither" hear;
Day is night, dark,
Illumed by no spark
From the celestial sphere.

Sever thou not earth
From heaven, or
Part not death from birth,—
The open door
Passing, who knows
To what hard throes
Or bliss held in store?

The gentle ways lent
By love to hate
Make life sweet when sent
By love not late:
All known in art
Is brother-heart;
Else is night unspent;
Morn hand in hand we wait!

HORACE L. TRAUBEL.

The Index.

BOSTON, JULY 12, 1883.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index.*

THE STUDY OF EVOLUTION.

BY EDWARD C. TOWNE.

Mr. Darwin's English publisher had brought out last year the twenty-fourth thousand of his chief and epoch-making work, being "the sixth edition, with additions and corrections to 1872." The full title of this great work, exactly announcing the theory to support which it was written, was *The Origin of Species by Means of Natural Selection, or the Preservation of Favored Races in the Struggle for Life.* Mr. Darwin could not claim as his own the idea of evolution, nor did he propose merely to study the fact of evolution. His writings have, as a matter of fact, served to make the world study the fact and accept the idea of evolution. But this has resulted from a discussion the immediate aim of which has been to show not so much that evolution has taken place as by what means it has taken place. The *Origin of Species* was written to show that evolution has taken place "by means of natural selection," or through "the preservation of favored races in the struggle for life." If evolution has taken place by means of something quite apart from natural selection, and not as the result of a struggle for life, then the grand structure of Mr. Darwin's work is honeycombed with error, and his vast service as the first successful advocate of evolution has been rendered in spite of the fact that what he built upon was a false foundation. It would come to this,—that in expounding his peculiar theories he has necessarily set forth facts going to prove evolution on *some* theory, and has thus caused evolution to become a dominant commonplace of science, without reference to the special theory by which he himself explained it. We may find evolution true beyond all question, yet find Mr. Darwin's explanation of evolution not only very questionable, but entirely false. It may turn out that the magnificent studies by which Mr. Darwin established in science a belief as just as it is profound in evolution have entirely failed to establish "natural selection," "sexual selection," "struggle for life," "survival of the fittest," "pangenesis," and, in fact, all the special Darwinian conceptions as the means by which nature has accomplished evolution. My own confident opinion is that, while Mr. Darwin has done the greatest work ever done in science, in establishing the truth of evolution, —the conception of which was not original with him, —not one of the conceptions which he originated to explain evolution will stand, and least of all "natural selection" as *the* means by which species have originated.

In the Introduction to *The Origin of Species*, Mr. Darwin said that he began to think on the subject in 1837, and in 1842 drew up some short notes, which in 1844 he enlarged into a sketch of the conclusions which then seemed to him probable. Mr. Darwin further stated that from 1844 to 1859, a period of fifteen years, he had "steadily pursued the same object." He added: "My work is now [1859] nearly finished; but as it will take me many more years to complete it, and as my health is far from strong, I have been urged to publish this abstract."

The Origin of Species was thus an abstract only of a greater work on which Mr. Darwin had been steadily engaged for fifteen years, and which was nearly finished in 1859,—a work so great that to complete it would still take many years. Mr. Darwin further said: "This abstract which I now publish must necessarily be imperfect. I cannot here give references and authorities for my several statements. . . . I can here give only the general conclusions at which I have arrived, with a few facts in illustration, but which, I hope, in most cases will suffice. No one can feel more sensible than I do of the necessity of hereafter publishing in detail all the facts, with references, on which my conclusions have been grounded; and I hope in a future work to do this. For I am well aware that scarcely a single point is discussed in this volume on which facts cannot be adduced often apparently leading to conclusions directly opposite to those at which I have arrived. A fair result can be obtained only by fully stating and balancing the facts and arguments on both sides of each question. And this is here impossible."

The several works with which Mr. Darwin followed up the publication of his "imperfect abstract" can hardly be said to have made good his promise of a great work covering the same ground as the "abstract." Was it, in real fact, "nearly finished" in 1859? Did it not then and ever after exist only in Mr. Darwin's vast collection of materials and in his own shaping imagination, which held the idea of it in grand, misty outline, but never saw it take clear and exact form? And was not this due to the fact that Mr. Darwin never really cleared up the question of what he called "the complex and little-known laws of variation"? The more than four hundred closely printed pages of Mr. Darwin's "abstract" should have amply sufficed, "as this whole volume is one long argument" (so he says himself) to state, illustrate, and prove twice over the professed main point of the work, but for the fatal fact that the cause of variations was not made out, and that, in consequence, darkness rested of necessity on what is really the secondary question of how variations are caused to become specific. The footing of the great naturalist was speculative rather than scientific when he was compelled to write at the beginning of his chapter on "Laws of Variation" (the fifth chapter, pp. 106–132): "I have hitherto sometimes spoken as if the variations—so common and multiform with organic beings under domestication, and in a lesser degree with those under nature—were due to chance. This, of course, is a wholly incorrect expression; but it serves to acknowledge plainly our ignorance of the cause of each particular variation (p. 106). . . . Our ignorance of the laws of variation is profound" (p. 131).

If, then, as Mr. Darwin says, "species are only strongly marked and fixed varieties," what folly to guess at the origin of species, or of the great examples, when the origin of the small examples lies buried in profound darkness! The guess made by Mr. Darwin carried with it a variety of assumptions, any of which might prove false if the cause of variations were known, and about all of which are, I am confident, quite contrary to fact. Thus, the one stated above, that variations are less common under nature, is quite false. Nature at all times of change in creation is not at all, as now, at rest, but is in commotion far more than is the domestic state of animals; and this profound commotion, not to say cataclysm, in the environment is the first and external condition of considerable variation. The second and chief condition is the absolute plasticity of reproductive germs, existing and acting as structural patterns, and of embryonic forms, under any pressure reaching them from the environment through the parent form. The existence and action of the germs as structural patterns (not as fixed and set structures, however) is due to the fact that their molecules are electrically and magnetically controlled by the parent form, and give their results precisely as the telephone and microphone do. Mr. Darwin was in profound ignorance of any possible action such as nature manifestly includes; and, knowing nothing of the key to his subject, he went wrong at every step of his groping for causes, although entirely right as to the fact of evolution which he was seeking to explain, and which he was so grandly instrumental in establishing. Thus, he took for granted that there have been no leaps in nature, although forced to see that "species rarely endure for more than one geological period," and compelled to confess that "geological research does not yield the infinitely many fine gradations between past and present species required on the theory," and that "whole groups of allied species appear to have come in suddenly on the successive geological stages." Mr. Darwin breaks the force of this last confession by claiming that "this appearance is often false"; but this leaves the decisive fact untouched and the plea that the geological record is very imperfect Mr. Darwin admits that few will allow to the extent required by his theory. He describes variation as "a long-continued and slow process,—a very slow process requiring a long lapse of time. . . . After a thousand generations, two fairly well-marked varieties," he says; and he conjures at will with indefinite time, without a scintilla of evidence for it, and against both all reason and all knowledge. Among the cases which I have found illustrating the power of nature when sufficiently appealed to, one is that of a young woman of dog-like look and way of life,—running aimlessly about, able to take decent care of herself, never mind enough to learn or to do anything, and suggesting in her face the look of a spaniel; another, that of a man of good family who has the look of an ape, and is in so beast-like a condition of mind and habits as to require a keeper; and a third, that of a young woman born of teetotal parentage, with good health and good mind and character, but in her gait and speech and whole manner exactly representing an intoxicated person. These cases were results at a single stroke of intrusion, upon the respective mothers, of a spaniel, an ape, and a drunken man, with the effect of a terrible creative impression upon the unborn offspring,—a fatal pressure, through the impression on the mother, upon the absolutely plastic embryo. The law is of immense power and breadth and exactness, and just in proportion as it is brought into play does it give leaps in creation upward or downward. Through it the environment of living things has done the whole work of the ascent of the creation, with small regard to the fanciful and confessedly feeble means of evolution on which Mr. Darwin's speculations dwelt.

No Darwinian disciple has made the least advance upon the guesses in the dark of the master. Tyndall has said of Mr. Darwin's views that he "deemed it indeed certain that these views will undergo modification." Huxley says that "the causes and conditions of variation have yet to be thoroughly explored"; and, not without great reason in the unscientific credulity and dogmatism of the common Darwinian, Huxley further says: "History warns us that it is the customary fate of new truths to begin as heresies and to end as superstitions; and, as matters now stand, it is hardly rash to anticipate that, in another twenty years, the new generation, educated under the influences of the present day, will be in danger of accepting the main doctrines of *The Origin of Species* with as little reflection, and it may be *with as little justification*, as so many of our contemporaries twenty years ago rejected them. Against any such consummation, let us all devoutly pray."

In his *Scientific Evidences of Organic Evolution*, a capital study as far as it goes, Mr. G. J. Romanes admits that it is uncertain how great a part natural selection plays in organic evolution. He makes no attempt to find out, but confines himself to weighing the evidence in favor of organic evolution, and even says: "I shall not go into this subject, but shall always speak of natural selection as the only cause of organic evolution,"..."natural selection manifested during the countless ages of the past." It comes to this, therefore: The whole of Darwinism which was original with Darwin, and which he proposed to prove in a great work never published, but on which he labored in various important works without any better result than that of his "imperfect abstract," is *taken for granted.* In view of the usual assumption and dogmatism of Darwinian disciples, it seems to me

Digitized by Google

not unfair to say that the latest Athanasian damnatory creed is that which runs in the names of Darwin and Haeckel.

The *Chapters on Evolution*, by Andrew Wilson, which fill a substantial and well-illustrated volume, have the high merit of lucid exposition of the wide range of facts which are now accepted as evidences of organic evolution. There is no work on the subject of equal value for the general reader. The marshalling of the interesting illustrative facts is remarkably well done, and the argument for evolution is put in the most convincing form. The work is easy to read and easy to understand. But the author again and again confesses that Darwinism has not taught him the origin of variations. He says, on one of the last pages of his book, "We are comparatively ignorant of the exact factors to which the work of evolution is due." He sets out in his task with saying: "It forms no part of the purpose of this volume to discuss the exact nature of the factors to which evolution owes its force and power." It is "fully and freely admitted that the causes of variation are still obscure." He says that "of the exact influence and extent of the external causes of variation, we know very little"; and he "leaves, as still under the shadow of unapprehended causes, the variation of parts from outward forces operating upon the living being and its structure." He quotes Huxley as confessing that "the nature of the physiological factors to which evolution is due is still open to discussion," and speaks of evolution as due to "causes which at present we are unable to trace." But in one passage he says, "There are two great factors at work in living nature,—a tendency to vary and change, and the influence of environments or surroundings." Mr. Darwin spoke of "innate tendency to new variations," and said that he was inclined "to lay less weight on the direct action of the surrounding conditions than on a tendency to vary due to causes of which we are quite ignorant." The fact of causes is recognized, and entire ignorance of them is confessed. It explains nothing to speak of a "tendency to vary." We must, for any real knowledge, get at the causes. Mr. Darwin says on the first page of his work, "As far as I am able to judge, after long attending to the subject, the conditions of life appear to act in two ways,—directly on the whole organization or on certain parts alone, and indirectly by affecting the reproductive system." But, as one "quite ignorant," Mr. Darwin gave but a guess, and did not guess right.

The true facts are these: All vital states and action are electrically (and magnetically) conditioned. All structure is electrically and magnetically established and operated. The highest examples of this are the reproductive germs and the embryonic forms by means of which new generations of life appear. Each germ, of either sex, is in effect a reproductive pattern, and every new form is woven of two germinal stuctures, making all forms of plant and animal, above some of the lowest, dual. Species arise where the difference between two germinal structures is such that they cannot develop into one. The whole method of variation in nature is by means of pressure from external conditions, through the parent form, upon the reproductive germs or upon embryonic forms. Insects pressing on the form of a flower cause the reproductive germs of the parent plant to take a form varied to correspond with the pressure. The force of an environment demanding immense mental effort from the highest non-human creature acts through mother-forms upon unborn young with the effect necessary to initiate the human largeness of brain and power of mind, and, in an age of sufficient pressure that way, rapidly pushes the non-human creature up to the first stage of human nature and power. Except for the absolute plasticity of reproductive germs and embryonic forms, there could never have been an evolutionary ascent of the creation. But with this there has been from first to last a process of natural creation, pushing living things outward and upward exactly according to the advancing changes of the environment,—with great leaps whenever ages of great change came, and these leaps the greater, the easier, and the quicker, in proportion as the power of the mother over the embryo came into play; the latest, greatest, and most marvellous changes having been accomplished with the most ease and in the shortest time.

Mr. Darwin's absurd imagination of one or a few first living things started supernaturally is avoided upon the hypothesis that the oxygen of the air electrically starts and maintains life in any and all protoplasm got ready in nature, and under the same law of electro-vitality carries the whole creation onward and upward, with the aid of the changing and advancing state of the environment.

For *The Index*.

MR. E. D. MEAD ON EMERSON.

NOTE.—Mr. Edwin D. Mead's address upon Emerson, at the Emerson-Darwin Commemoration at the Free Religious Convention, will appear in full in an early number of the *Princeton Review*; but we are able here to print the following synopsis of it prepared by Mr. Mead :—

Your president tells me that I am to speak of "The Problem of the Universe as approached from the Thought-side by Emerson," and that I have half an hour to do it in. "The Problem of the Universe" is a very considerable subject, as things go, and, were I not sure that your president is my friend and not my enemy, I should half suspect he was attempting to make me appear a bit ridiculous. But a half-hour is so brief that, were a problem considerably smaller than the problem of the universe ordered to be dealt with somehow in it, the less time spent in deprecation and apology the better.

We call Emerson a Transcendentalist. That is simply another word for Idealist. "What is popularly called Transcendentalism among us," he said himself, in the midst of the Transcendental movement in New England, "is Idealism,—Idealism as it appears in 1842." "The Idealism of the present day," he said, "acquired the name of Transcendental from the use of that term by Immanuel Kant, of Königsberg, who replied to the sceptical philosophy of Locke, which insisted that there was nothing in the intellect which was not previously in the experience of the senses, by showing that there was a very important class of ideas, or imperative forms, which did not come by experience, but through which experience was acquired; that there were intuitions of the mind itself; and he denominated them *Transcendental* forms. The extraordinary profoundness and precision of that man's thinking have given vogue to his nomenclature in Europe and America to that extent that whatever belongs to the class of intuitive thought is popularly called at the present day *Transcendental*."

As thinkers, men have ever divided into two great classes, Materialists and Idealists; and the character and relations of these two modes of thinking were discussed at some length. In appointing as the subjects of this address and that which is to follow the Problem of the Universe as approached respectively from the Thought-side by Emerson and from the Matter-side by Darwin, there was, of course, said the speaker, no intention to imply that we have here an instance of this old antithesis between Idealism and Materialism. Emerson and Darwin represent no such opposition,—represent no opposition whatever. The likenesses and differences of the two men, in aim and method, were touched upon; and it was spoken of as worthy of noting, in an hour when we come to speak of Emerson as approaching the world-problem from the side of mind, and of Darwin as a student of the principles of nature, that Emerson's own most systematic attempt to find and formulate the absolute ground of things is the essay on, not the Soul, but "Nature." The essay on "Nature" was then made the text or basis for a discussion of Emerson's speculative philosophy, as the essay on "Fate" was made the text, further on, for the discussion of his ethics.

Nature, to Emerson, always speaks of spirit. It suggests the absolute. It is a perpetual effect. It is a great shadow always pointing to the sun behind us. It is "a remoter and inferior incarnation of God." The perfect parallelism between nature and the laws of thought, as maintained by Emerson, was discussed with considerable fulness, and it was shown how precisely herein is the key to the interpretation of nature. "Things are knowable," Emerson says, "because, being from one, things correspond. There is a scale; and the correspondence of heaven to earth, of matter to mind, of the part to the whole, is our guide." And as with the intellectual, so with the moral. "The moral sentiment speaks to every man the law after which the universe was made." Here, incidentally, the frequent notion that Idealism is unpractical, careless of fact, and even inimical to exact science, was discussed; and the Positivist's appeal to the Idealist to leave his Idealism to strengthen the ranks of reform was especially spoken of as irony's *ne plus ultra*. Appeal was made to history to show that the Idealists have ever been the great workers for the regeneration of society. The Transcendental movement in New England was spoken of. Never in New England, it seems, was such a turnout of men to regenerate society as in those two decades. Each man inoculated with the "new views" straightway appears with a recipe for the divine commonwealth in his pocket. The labor of those men and women for a new earth was as energetic as their faith in its coming was indefectible. But for them and their labor and their faith, we surely should not be here to-day, for one thing. On the whole, it would seem that, if our social reformers desiderate in the people a zeal according to knowledge, they had better pray for a new influx of Transcendentalism, rather than seek to minimize what we have.

The same answer which is given him who seeks to antagonize Idealism and philanthropy stands for him who seeks to show a conflict between speculation and science. The answer is Aristotle and Bacon, Descartes and Leibnitz, Kant, Goethe, and Emerson. The important relations of Kant and Goethe to the philosophy of evolution were spoken of, and a large part of the address was devoted to the discussion of the "Darwinism" in Emerson. The fact that the great pioneering and revolutionizing work in science and the study of nature has so commonly been done by those who have approached the problem of the universe on the thought-side is certainly interesting and significant, not at all a strange thing. If Idealism be a true philosophy, then it was but natural and regular that Emerson should see and say betimes what Darwin verified experimentally. If Darwinism be a true theory of the origin of species and the descent of man, then this insight and conclusion bear notable witness to the primary virtue and validity of Emerson's method.

The latter portion of the address was devoted to the discussion of the relation of the doctrine of evolution to ethics and the individual, with special reference to the question of the freedom of the will. The principle of freedom was maintained to be the very corner-stone of morality, and strictures were made upon recent writers who have almost seemed to identify freedom with caprice, and have even suggested the substitution of "lawlessness" for "freedom," as a more accurate term. The confusion, said the speaker, is a monstrous one, and the suggestion by the apostle of free religion is self-satire. Say "lawless religion" instead of "free religion"? It is what your enemies and mockers say. Is the lawless state the free state, or the state where law is perfect and supreme?

"Intellect annuls fate," says Emerson. "So far as a man thinks, he is free. And it is chiefly wholesome to man to look not at fate, but the other way: the practical way is the other." The application of the principle of freedom to methods of reform was touched upon as concerning both appetite and crime, and the speaker concluded as follows:—

I went to a temperance convention the other week, and the women had many essays on heredity,—so many that by and by the air grew very heavy, and I began to think myself a tried and convicted drunkard, helplessly predestined to dilirium tremens. And each had Emerson's word for it that, if you would have a sound man, you must begin with his grandfather. But one woman of insight rose and said, "This may all be very well, but I counsel to say very little of it to the drunkard. Say to him, You are to blame and must stop this." And straightway the windows were open and we breathed, and none but saw that this was the true voice of Emerson for then and there,—the voice of Emerson and the voice of the nature of things. I bethought me of that word of his: "It is wholesome to man to look not at fate, but the other way. . . . 'Tis weak and vicious people who cast the blame on fate." And that other: "The order or proceeding of nature is from the mind to the body; and, though a sound body cannot restore an unsound mind, a good soul can, by its virtue, render the body the best possible."

As God counts, it will be but to-morrow before the only thing, perhaps, by which this Association will be remembered will be the mention of it in Emerson's biography,—the fact that he loved it, that he spoke often from its platform, that he was, indeed, as Al-

Digitized by Google

cott has well said, its father. Its platform was the place he chose to voice most explicitly his last and constant creed. "I am ready," he said here, "to give, as often before, the first simple foundations of my belief: that the Author of nature has not left himself without a witness in any sane mind; that the moral sentiment speaks to every man the law after which the universe was made; that we find parity, identity of design through nature, and benefit, to be the uniform aim; that there is a force always at work to make the best better and the worst good." The men who have led in this movement are men who, as has been said, were largely influenced by him and owed to him their main thought and purpose. Without his thought and influence, it is not too much to say, perhaps, that this Association had not been. Is it, then, too much to urge that it should never meet without commemorating him—not punctiliously, not needfully by naming him, but by its men and women letting some quick thought of theirs turn ever reverently to him as they come together? Not to be coerced by his great and beautiful authority,—it is he who has taught us to say, I also am a man, and to know that nature and the mind are fathomless and truth altogether infinite, perennially surprising us by its disclosure of a yet larger circle. Only let none forget, in the circumscription of any lesser circle, that sublime creed which he voiced from this platform fourteen years ago. Let none hang up his logic on psychology, nor choke intellect and freedom in mechanism, lawlessness, or fate.

CORRESPONDENCE.

MR. GEORGE AND POPULATION.

Editors of The Index:—

It is pleasant to see that bright journalist and entertaining writer, Mr. F. B. Perkins, neatly slip the linchpin out of Mr. George's cart, and then tell him to drive on, sure that he will get along much faster without his load! It is, if possible, still more cheerful to hear his exhortations to farmers and small householders to come up heroically to the mark, and vote to saddle themselves with the whole load of taxation, so that capital may be relieved and Mr. George's theory may have free course and be glorified.

I infer from this counsel, given with such grave and good-humored irony, that there is no further occasion to discuss seriously the scheme of "nationalization of land" (which two months ago looked so engaging), at least with the readers of *The Index*. But there is another point, of which Mr. George has not exaggerated the importance, and of which a good deal remains to be said. And of this I will beg the patience of your readers while I say a few words on the question of population.

I shall not trouble myself here to attack or defend the theory of Malthus. I do not care much about anybody's theories, except as convenient summaries of facts. I have, it is true, read his *Law of Population* in the original,—that is, in the first edition,—and have within easy reach a later one, which appears to defend the theory with a painstaking gathering of additional evidence. But Mr. George concedes all I want or care about when he says it is not *likely* (as he thinks) that in a given state of civilization population will outrun its means of subsistence. This means, if it means anything, that civilized man spontaneously accepts certain "preventive checks" to a too rapid increase, which, in Mr. George's judgment, are sufficient, and which may as well be Malthus's as any other. In fact, it would be strange if they were not included in Malthus's list, as he interprets it.

That these checks, whatever they may be, are accepted and in force, nobody doubts. I was speaking with a very intelligent man the other day, who told me that he regrets now that he did not some years ago allow himself five or six children instead of one, having had, it seems, an unreasonable fear of putting his father's household to inconvenience. Two years ago, I saw in Geneva a strong appeal, on moral or religious grounds, as to the assumed causes of a stationary population in France. Dr. Lord has made us all familiar with what he thinks a threatening decline of relative numbers in our native as compared with our foreign population. And so on.

Now, I am wholly on the side of those who deal with this matter hopefully and courageously, not in a pessimistic and despairing way. Moreover, I believe it to be true that, where population presses vigorously upon the "limits of subsistence" (if that is the correct phrase), there we find not only the strongest motive to progress, but along with it the maximum of intelligence and joy in living, all things considered. I do not see that I have a particle to quarrel about with Mr. George as to his principles or his facts. But I think that some of his arguments are weak and some of his inferences dangerous, as I shall try to explain.

I have spoken before of the fallacy which deals only with the food-supply, and omits various other things equally demanded by the higher civilization. I will, therefore, say no more of these. But I will say, in general, that Mr. George's reasonings seem to me often such as would apply only to a race of immortal beings living on ambrosial food, of which there should be a spontaneous, constant, and inexhaustible supply,—angels, in short. In other words, they seem to me ideal as distinct from practical.

As soon as we come to realize the fact that man is a perishable creature,—is in fact perishing, in round numbers, at the rate of about one hundred thousand a day,—we see it to be a necessary inference from that fact that population is not only continually pressing against the limits of subsistence, but is continually pressing beyond them. This is merely to say, in other words, that the weakest perish first; while all must perish sooner or later. There is nothing very shocking in this. If, indeed, I looked at the bare fact, and knew that I alone, of all men, must soon come to suffer old age, decrepitude, and death, the prospect would be very horrible. As it is, I look upon it with perfect equanimity, because it is the law of the condition in which I live. Now, it sometimes seems to me that sentimental reformers look at the bare fact, and cry out against it as some poets cry out against pain and death. I think Mr. George shows this amiable fallacy in his sentimental protest against the law of population.

Then, how does he attempt to meet it? In two ways, besides that which I have spoken of before.

First, he says, the more hands, the more profitably they can be employed, and tries to prove it by the wealth of crowded countries like England and Belgium. But, as he elsewhere urges, progress in wealth has always been accompanied by increase of poverty, which might suggest some inherent difficulty in the case beyond even his own theory about it. And then, if his assertion were true *without limit*, as he seems to imply, it would follow that, if you could only land a million men, women, and children in Massachusetts every day, and keep them there, nobody owning any of the soil, the prosperity and comfort of Massachusetts, and of the poorest people in it, would increase in like proportion. But not even Mr. George himself believes this. Accordingly, there must be a limit somewhere, as he will grant,—a limit varying with the increase or decrease of wealth and the conditions of civilization.

In the second place, he says two or three times over, as if there were great and precious novelty in it, that with every mouth there comes into the world a pair of hands. Hence, as he explicitly infers, supply may always be more than equal to the demand.

This is as if he had never heard of babies, or invalids, or idiots, or vicious people. And I will do him the justice of supposing that he never has,—dealing, as I said, with angels and not human beings. But that does not alter the fact, as he will find out by inquiring in the next street. A few years ago, a few doors from where I lived, a poor mechanic, a Canadian, living half the time on private charity, was "increased" (as Cicero expresses it) with a thirteenth child, having already lost eleven of the other twelve. I suppose Mr. George will say that he was richer by the birth of this poor thing, and better able to maintain his family, because it had "two hands and only one mouth." I suppose it had; but even with that advantage, if he will believe me, it was felt to be more of a burden than a help. There can be no question, I should think, that the astonishing ability the French peasantry have shown, to take up an almost unlimited amount of public debt, is a direct corollary —granting their actual capacity to produce and save —of their *stationary population*. What would have gone into children's food, clothes, and schooling, went actually into the public funds.

Now, the law (if we will consent for the present to call it so) of the pressure of population is disguised from us in two ways. These make that law graver for us to consider, instead of lighter; and, therefore, we ought to see them as distinctly as we can.

The first is that the "preventive check" of prudence, which I have already spoken of, is effective chiefly among the prudent, fairly well-to-do, middling class, who marry late, have few children, generally lay something by for a rainy day, and constitute the stock from which the wealthier class is constantly recruiting. If any class could afford to multiply rapidly, and if it is the interest of the public that any class in particular should multiply indefinitely, it would be these. But, as we have seen, from the nature of the case they do not.

The other is that, as the check of prudence is less felt among the very rich and very poor, we have at both ends of the scale the spectacle which impresses us with the keenest sense of injustice,—among the rich, children who suffer from indulgence, with the ailments and inefficiency created by luxury; and among the poor, those born only to poverty, struggle, and suffering, the criminal and vicious classes being lowest in the scale. This mass of misery, which so often wrings our heart by its apparent fatality and hopelessness, may be an *effect* of poverty, but is quite as apt to be its *cause*.

A glance shows us the danger, when we think of the future prospects of our prosperity or of our safety. In the middle of the scale,—the position of chief security, intelligence, and progress,—we find a population almost stationary, and, from the nature of the case, likely to continue so. At one end of the scale, we find a class, small in numbers, in command of great wealth, peculiarly liable from the nature of the case to be indolent, luxurious, and obstructive. At the other end, we find a large class, increasing perhaps the most rapidly of all,—at least in great cities, —and likely more and more to control the politics, possibly to threaten the stability and order, of the country. I am not in the least an alarmist. But the spectacle is quite too grave to let us spend the time disputing about our pet theories. I have no quarrel whatever with Mr. George in his desire to expose and remedy the evil. But I do not think that he or anybody else will mend the matter by putting us on impossible tracks, or by refusing to let us see things as they are.

I do not pretend to defend things as they exist and because they exist. I wish Mr. George all success in investigating the causes of misery and preventing the effect. But he is in a dangerous way, and he will be apt to lead his readers in a dangerous way, if he refuses to see when and where he is dealing with the necessary conditions of human life; and if, instead of the calm and scientific study of these conditions, he flies in the face of those who are trying to understand them, and contents himself with amusing us by Utopian dreams.

J. H. ALLEN.

ITHACA, N.Y., June 15, 1883.

A NOTE FROM CHARLES BRADLAUGH.

Editors of The Index:—

May I in mere fairness ask a word of reply to the extraordinary letter signed "George Jacob Holyoake," which appears in yours of June 7? The *National Reformer*, which I founded, was announced as "atheistic, Malthusian, and Republican," in its original prospectus in 1859. The pamphlet by Dr. Charles Knowlton, with which Mr. Holyoake reproaches me, was published by Mr. Holyoake for many years, and was only repudiated by him publicly when I was prosecuted for the publication. It is not true that Mr. Holyoake has in my case helped the affirmation. All his letters in 1880 were hostile. Mr. Holyoake is guilty of absolute inaccuracy in his reference to my constitutional struggle and the oath.

Yours respectfully, CHARLES BRADLAUGH.

LONDON, ENG., June 27, 1883.

LINES SUGGESTED BY A FUNERAL SERMON.

Editors of The Index:—

I have just read in *The Index* the account of the death of Mary Powell, and her request in regard to her burial. Her ideas of the last rites to the dead came so near to my own that I enclose to you some lines written several years ago. They were suggested by hearing and reading eulogistic remarks of ministers over some prominent members of their churches, whose only merit consisted in their membership in the church.

Her request expresses my own feelings on that subject. "Let those who knew me say a few words, if they will, and then leave me to my rest." How

Digitized by Google

simple the request, and how appropriate! The very thought denotes the love and purity of the heart that expressed it.

When I am dead, let no false priest
Utter a prayer above my grave:
The God who gave me life will know
If aught there is in me to save.

But if on earth I have a friend,—
A dear loved friend who knew me well,—
Let him repeat of me the good,—
The bad my enemies will tell.

So let me pass from life away
In quiet rest as when I came;
And if on earth but one is left
Who loved and will revere my name,

That one dear friend is more to me
Than all on earth I've left beside,
Where sorrow, care, and treachery
Were sure to come, what else betide.

Though many years on earth I've lived,—
The sands of life have almost run,—
I cherish dear those little ones
Whose earthly days have just begun.

Then let me in the time to come,
Appointed here for me to stay,
Cherish the love of those who live,
As well as loved ones passed away.

The Almighty Power that rules o'er all,
Extending to the farthest star,
Who listens to the sparrow's fall,
Will watch o'er us, where'er we are.

C. A. H.

TAUNTON, June 7, 1883.

A WARNING.

Editors of The Index:—

I observe that a Mr. P. Lackersteen, a native of India, is advertised in your columns. If I am not mistaken, this is the same little rascal who has imposed on credulous and kindly people at the West for some years past, been in prison for bigamy, and a tramp mendicant, impostor, and scamp generally. I think it my duty to warn you against him.

Respectfully, CHARLES W. WENDTE.

NEWPORT, R.I., July 3, 1883.

BOOK NOTICES.

SACRED SCRIPTURES OF THE WORLD. Being Selections of the most Devotional and Ethical Portions of the Ancient Hebrew and Christian Scriptures, to which have been added Kindred Selections from Other Ancient Scriptures of the World. Compiled, edited, and in part retranslated by Rev. Martin K. Schermerhorn, M.A. New York: G. P. Putnam's Sons. 1883.

In a large and handsome volume of over four hundred pages, very clearly printed in double columns, and prepared "primarily for his own use as a preacher and pastor," Mr. Schemerhorn, who has had an active life on the radical side of Unitarianism, has made a carefully arranged selection of passages from the Books of our ordinary Bible, filling therewith pp. 1-282, and after this a like selection, pp. 283-406, of choice passages from other ancient scriptures,—Persian, Egyptian, Hindu, Buddhist, Chinese, Grecian, Roman, and Arabian. The compiler has intended to include from our common Bible "all that seems of practical value for purposes either of moral instruction or of devout inspiration,—the most devotional and ethical portions, the essence or essential parts included, and all else omitted." The selected passages have been taken in the order of their respective sources, with no attempt to bring together under topical heads texts of kindred meaning or interest, except as the Four Gospels are run into one, and a pair of Epistles is made one, and within the limits of any one section the parts are more or less rearranged for better effect. There are no notes to speak of, no citation of similar texts from modern authors, and no historical or critical dissertations beyond the dozen prefatory pages. Some correction of errors of translation has been attempted, and some changes from literal rendering have been made to get a better thought than this rendering naturally suggests. A part of the compiler's work is in his chapter headings, which constantly suggest radical meanings for what would otherwise be read in an orthodox sense. The Greek-English name "Jesus" is retained where it would have been useful to recover the real name, "Joshua." For "Lord," we have the correct term, "Master"; but another of the capital errors of all orthodox versions remains uncorrected, that of saying "master" for "teacher" in rendering the Greek word *didaskalos*, which no more means master than didactic means magisterial. There is not the smallest attempt to sift out everything critically doubtful, although there seems to be an assumption that this has been done. In the thirty pages, for example, from the Book of Acts, there is no more escape from legend and fiction and devised false gospel than in the book at large. The excision that has taken place has been mainly of parts that could be dropped out and yet leave a body of gospel, or history, or epistle. The Old Testament appears, indeed, in only ninety-three pages of selections, leaving the mass behind; but the New Testament largely stands, although a good deal is left out, and the Four Gospels are run into one. The freely uncritical way in which this one body of selections has been made up may be seen from the titles of its two last sections: "The Reappearance of Jesus after his Death; by Various Manifestations he reveals himself to Many of his Followers, and encourages them to spread abroad his Teachings." "Some Beautiful Accounts of the Reappearance of Jesus, not historically verified, that are given by One Biographer, but not confirmed or in any way referred to by the Others."

As the Fourth Gospel is not an authority at all, and the three Synoptics are fundamentally one, and are very doubtfully historical, there is no critical ground for admitting as historical "all that is reported by two out of the four New Testament Biographies or Gospels." But not even this limit has prevented Mr. Schermerhorn from ingeniously retaining an expurgated form of the story of Lazarus brought forth from the tomb four days after burial. It is given as a case of "resuscitating persons supposed to be dead." The story as given is that "he had been in the tomb four days already," and that when Joshua had had the stone taken away from the tomb's mouth, and had "cried with a loud voice, Lazarus, come forth! . . . he that was dead came forth, bound hand and foot with grave bands, and his face tied about with a cloth." Had there been such a case, every form of the story of Joshua must have given it, and the earliest form might have given it as Mr. Schermerhorn does. But, occurring in the book which even the article on "Gospels" in the new edition of the *Encyclopædia Britannica* pronounces a work not of history, but of dramatic representation, there cannot be the smallest doubt that the Lazarus story was written as we have always read it, and was meant boldly to picture Joshua raising the really dead, although there was no historical ground for the story.

A pretty thorough example of Mr. Schermerhorn's work is his reduction of the two Thessalonian Epistles to a couple of chapters which leave out about all that Paul wrote the Epistles for, and which yet retain matter tainted with the errors of Paul, or of no present rational value. In other selections from Epistles, Paul's individual and independent gospel—devised by himself out of imaginings and ignorance and Old Testament readings all his own—has as distinct a place as in the original Epistles. And in the Gospel selections there appears a great deal which is not pure teaching, and which one who thinks that Joshua of Nazareth attained to pure teaching must consider unhistorically ascribed to him.

The somewhat more than a quarter of the volume, nearly one-third in fact, which is given to selections from other scriptures will add much to the value of the work for all the uses to which it can be put. The compiler says of his use of the various ethnic sources: "But very few and very fragmentary selections have been gathered from these sources, for the reason that this volume was from the first designed to be *chiefly* a volume of selections from the Hebrew and Christian Scriptures."

This is one of many signs afforded by the whole work that Mr. Schermerhorn's plan, studies, and resources do not go beyond the introductory stage compared with what must one day be attained in the way of making a Book of Scripture. But the beginning is one which will greatly interest the common reader and the ordinary student, and will make him thankful that so much has been so well done.

THE BASIS OF THE ETHICAL MOVEMENT. Opening lecture before the Society for Ethical Culture of Chicago, April 1, 1883. By W. M. Salter.

WHY UNITARIANISM DOES NOT SATISFY US. A lecture before the Society for Ethical Culture of Chicago, May 20, 1883. By W. M. Salter.

These two discourses by Mr. Salter are worthy of careful perusal. They are the production of a mind that is scholarly, judicial, and imbued with the noblest moral enthusiasm. No words of ours can convey so fair an idea of Mr. Salter's thought and spirit as the extract from each which we here give:—

We do not propound new views of the universe. We wish rather a new sense of duty, we wish to throw ourselves into the stream of moral progress. We need not ask how it is there, we need not peer down along its course to catch a glimpse of the sea into which it flows: we want to throw ourselves into it and bathe in it, because we know it is good; because, when we have so much as touched our feet or hands to it, we have experienced its sweetness and felt the life and quickness of its waters,—we want to, because we are parched and dry, and there is only an arid waste around us. Yet all this is not religion in the ordinary sense; and we have no right to take advantage of the popularity which that word has with the community, to commend ourselves by the use of it. Yes, we should ignore the very cause of that future religion, which I at least have at heart, if we should confuse it with the religions which now exist, and which rest on other than moral foundations. If any one asks us, then, are we a religious society, we will say, No; not as you probably understand religion: we are an ethical society. If he sees no religious meanings or possibilities in this word "ethical," it will certainly be vain, in the present state of thought as to these matters, to point them out to him. . . .

Other churches will not allow the doubt that the Bible is the word of God or that Jesus is divine. Unitarianism does not regard these or many other doctrines as essential. It holds only to the simplest postulates of Christian faith; namely, that men have a Father in Heaven; that they will live again after they die; that Jesus, meantime, is our Guide and Master. But the time has come when even these postulates are under a shadow for some good and earnest men. Not any moral unfaithfulness, not any craving for novelties, but simply reflection, serious reflection, has led not a few to regard a personal Deity and individual immortality as problems rather than matters of faith, and to look on Jesus as too far removed from us, in his thought of the world and hope for humanity, to be our Guide and Master. This attitude of mind is growing. And yet, before it was distinctly taken, before there was any break with historic Christianity, and only a vague unwillingness to call Jesus by the title "Lord and Master," it was frowned upon, if not repudiated, by the Unitarians in their National Conference. The result was that those who manifested this unwillingness felt obliged to leave the Unitarian fellowship. The Free Religious Association which they formed aimed at a fellowship limited by no confession, Christian or other, a fellowship in the spirit. Since the time of that Conference, the professions which Unitarians sometimes make of allowing complete liberty of thought, and of ranking the deed above the creed, have an air of inconsequence.

There is a similar lack of seriousness in the Unitarian attitude to Jesus. As they pray without any deep belief in prayer, so they own Jesus as Master with scant sense of that supreme devotion, that passionate love, which has inspired earnest Christian men and women the world over. It is a venerable and beautiful form of words, "our Lord and Master"; and they seem to use it simply because they *can*, and not because they must. Often their claim has been to represent primitive Christianity; but, in simple truth it must be said, they have made little effort to understand primitive Christianity; they have generally looked at it from nineteenth century, and not from first century eyes: they have been anxious to see what interpretation the Gospels *would bear*, rather than what they really teach. And, at best, granting whatever formal resemblance there may be in Unitarianism to primitive Christianity, it is as much really like it as the framework of a building that is falling to pieces is like a similar framework around which a noble structure is going up. The framework may be the same; but, in the case of early Christianity, the house was building, and to-day it is falling in ruins. One cannot, I venture to say, be a genuine, whole-hearted Christian after the primitive type without becoming something more. Or if Unitarians do not own Jesus as Master, or claim to represent primitive Christianity, they incline to play fast and loose with the Christian name. There is little generous treatment of Christianity as a great historical movement, and only by an ungracious minimizing of its essentials can they call themselves Christians at all. Sometimes their Christian faith is at so low an ebb that they claim the Christian name only because they are of Christian descent or live under a Christian civilization.

THE *Art Amateur* for July comes duly to hand, and will undoubtedly be a welcome companion at many a watering-place where decorative work often fills up the vacant hours. There are many patterns and instructions for different styles in this number, especially for china-painting and carved wood-work, which we hope will take the place which needle-work has held too exclusively. We find a lively sketch called "Two Ateliers des Dames," how women study art in Parisian studios. It would be more satisfactory if it gave more information and were less flippant in its tone. The longest article is a very good

Digitized by Google

essay on the "Theory and Practice of Pen-Drawing," well illustrated by sketches from various masters.

THE *Catholic World* for July opens with an article entitled "Dr. John Hall on the Failure of Protestantism," by Oswald Keatings, D.C.L. The other articles are "Psyche, or the Romance of Nature," "St. Irenæus and the Roman See," by Arthur H. Cullen; "A Descendant of the Puritans," by Maurice Francis Egan; "A Mediæval Culturkampf," by Mary H. Allies; "Drawing the Line," by A. F. Marshall; "Armine," chapters xii., xiii., xiv., by Christian Reid; and "Santa Fé in the Past," by Rev. James H. Defouri.

LIVE THOUGHTS.

GENIUS never grows old, young to-day, mature to-morrow, always immortal. It is peculiar to no sex or condition, and is the divine gift to woman no less than to man.—*Juan Lewis.*

A SOLID and substantial greatness of soul looks down with a generous neglect on the censures and applause of the multitude.—*Addison.*

VIRTUE and vice are heaven and hell.—*Hindu.*

GOD, when he makes the prophet, does not unmake the man.—*John Locke.*

THERE is always a spot in our sunshine: it is the shadow of ourselves.—*Thomas Carlyle.*

PERSONAL ITEMS.

CAPTAIN JOHN ERICSSON, still hale and hearty, is now eighty, looks about seventy, "and," says the New York *World*, "works like sixty."

PRINCE LEOPOLD is by far the most accomplished and highly educated of Queen Victoria's sons. He is an effective orator, and has made speeches which would have been highly creditable to any young man.

MR. JOHN B. GOUGH has been "counting up"; and, as the result of that process, he announces that he has made eight thousand five hundred speeches and travelled four hundred and sixty thousand miles since he entered the lecture field.

HUXLEY, Tyndall, and some four hundred and seventy members of the British Association for the Advanced Sciences will meet in Montreal in August of next year, the Canadian government having appropriated $30,000 for their entertainment. The American Society for the Advancement of Science is asked to hold its session at Philadelphia next year, so that the foreign contingent of wise men may be shipped there after the Montreal session.

PROF. JOHN STUART BLACKIE has enlisted with all his soul in behalf of the Highland Crofters. At a recent meeting in London, he said that he had resigned the Greek chair at Edinburgh, that he might do something better; and he had found something immeasurably better in aiding the Crofters. "Let Greek die," he cried; "let Hebrew die; let learning go to the dogs; but let human beings live, and let human brotherhood and charity live."

QUEEN VICTORIA has outlived nearly all the men who surrounded her throne when she was first placed upon it. Earl Grey is the only member of the Cabinet of 1837 who remains. Lord Palmerston, Lord John Russell, and Sir John Cam Hobhouse have long passed away. There are only three members of the present Parliament who were in the Parliament of 1837. These are Gladstone, Talbot, and Villiers Her Majesty has had eight Prime Ministers, and they are all gone but Mr. Gladstone. It is not surprising that the Queen sometimes speaks as though she found herself in a world she does not know.

THE ex-Empress Charlotte of Mexico, sister of the king of the Belgians, is in a much more tranquil state of mind than formerly. Her splendid black hair has whitened, but her health is good, and she has recovered from the attack of madness which followed her being told of the execution of Maximilian. She is very fond of music, spending many hours in playing duets with one of her ladies of honor, and also shows much interest in her garden. When the weather is fine, she walks a great deal in the park surrounding her Château de Bouchant, and plays with a dog which the queen of the Belgians one day rescued from some boys who were tormenting it, and gave to her sister-in-law.

MR HEALY'S election to Parliament from County Monaghan, in Ulster, Ireland, is the most significant indication of Irish sentiment that has occurred. This county has been the stronghold of Liberalism. Mr. Parnell took an active part in the canvass, and nothing else would have converted the sturdy Presbyterian Liberals of Monaghan into adherents of the Irish movement. There is no longer any doubt that Ireland, Protestants and Catholics alike, is united against English rule. Mr. Healy's success shows that Goldwin Smith wrote unadvisedly when he asserted in print that Ulster alone would put down an Irish outbreak without assistance from across St. George's Channel.

A HANDSOME monument of Aberdeen granite, to be placed over the grave of the late Mr. John Brown in the parish churchyard of Crathie, is being executed by Messrs. MacDonald, Field & Co., Aberdeen, by command of the Queen. It is of a chaste design, the chief ornamentation being the Scottish thistle on the cornice, which is carved in relief, and a border of oak and ivy. The inscription is as follows: "This stone is erected in affectionate and grateful remembrance of John Brown, the devoted and faithful personal attendant and beloved friend of Queen Victoria, in whose service he had been for thirty-four years. Born at Crathienaird, Dec. 8, 1826; died at Windsor Castle, March 27, 1883. 'That friend on whose fidelity you count, that friend given you by circumstances over which you have no control, was God's own gift.' 'Well done, good and faithful servant; thou hast been faithful over a few things, I will make thee ruler over many things; enter thou into the joy of thy Lord.'"

A NEWPORT correspondent of the Boston *Transcript* writes: "George Bancroft always strikes me as a man at peace with all the world, sailing always on an unruffled sea. He is the most placid man on Bellevue Avenue, to all appearances. He bears the mark of the diplomate and the bookworm and the man of fashion. There is always a rose in his button-hole, and half the day at Newport there are roses in his thoughts and in his hands. He is as happy as a child in his rose garden. I have known him to fill the hands, yes, and even the over-dress, gathered up apron fashion, of a passing stranger who merely looked admiringly, possibly wistfully, upon his treasures. He will be eighty-three years old in October. He rides daily, he is passionately fond of music, he gives good dinners, and he is very gallant to ladies. He keeps several secretaries at Newport constantly at work. He is, indeed, as some one has said of him, the well-seasoned man of the world as well as scholar. He has more facts stored in his head than almost any man in America; yet he can at any moment give you the Latin names of his eighty varieties of roses."

WILLIAM SPOTTISWOODE, LL D., F.R.S., who died recently was born in London, Jan. 11, 1825, and educated at Eton and Harrow, where he gained the Lyons scholarship. He graduated at Balliol College, Oxford, as a first-class in mathematics, in 1845, gaining university mathematical scholarship in the two years following. A change in his circumstances after leaving college compelled him to adopt a business career, and he became the manager of the business of the Queen's printer. He pursued his studies unremittingly, however, making mathematics, philosophy, and Oriental and European languages his principal subjects. He took an active interest in educational matters as well as in all matters affecting the social state and improvement of the working classes. He was a fellow of the Astronomical, Royal, Geographical, Asiatic, and Ethnological Societies, and of the Society of Arts. He had been treasurer of the Royal Society since 1871, and a corresponding member of the Paris Academy of Sciences since 1876. He was elected president of the British Association at the Dublin meeting in 1878, at which time the degree of LL.D. was conferred upon him by the University of Dublin. He had previously received the same degree from the University of Edinburgh. Mr. Spottiswoode was public examiner in mathematics in Oxford, in 1857-8, and acted as an examiner under the civil service commission for the Society of Arts and the Middle-class schools. He was the author of *Meditations Analyticæ* (mathematical), of a volume of travels in Russia, and a work on *Polarization of Light*. He was also a contributor of papers to the philosophical transactions of the Astronomical Society, and to English, American, and European journals.

THE FREE RELIGIOUS ASSOCIATION

was organized in 1867. Though having its headquarters in Boston, it is a national organization, and has members and officers in various States of the Union. It has the following

CONSTITUTION.

I. This Organization shall be called the Free Religious Association, its objects being to promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history; and to this end all persons interested in these objects are cordially invited to its membership.

II. Membership in this Association shall leave each individual responsible for his own opinions alone, and affect in no degree his relations to other associations; and nothing in the name or Constitution of the Association shall ever be construed as limiting membership by any test of speculative opinion or belief,—or as defining the position of the Association, collectively considered, with reference to any such opinion or belief,—or as interfering, in any other way, with that absolute freedom of thought and expression which is the natural right of every rational being. Any person desiring to coöperate with the Association shall be considered a member, with full right to speak in its meetings; but an annual contribution of one dollar shall be necessary to give a title to vote,—provided, also, that those thus entitled may at any time confer the privilege of voting upon the whole assembly, on questions not pertaining to the management of business.

III. The officers of the Association shall be a President, twelve Vice-Presidents, a Secretary, an Assistant Secretary, a Treasurer, and twelve Directors. They shall be chosen by ballot at the annual meeting of the Association; and the President, Vice-Presidents, Secretaries, and Treasurer shall hold their offices for one year, or until their successors be chosen. The Directors shall be chosen for four years, and, at the expiration of that term, shall not be eligible for reëlection until after two years. One fourth of their number shall be chosen annually; but, at the annual meeting of 1882, the full number of twelve shall be chosen in sections of three respectively for one, two, three, and four years. The President, Secretaries, Treasurer, and Directors shall together constitute an Executive Committee, intrusted with all the business and interests of the Association in the interim of its meetings. They shall have power to fill any vacancies that may occur in their number, or in the list of Vice-Presidents, between any two annual meetings. Six members of the Executive Committee shall constitute a quorum.

IV. The Annual Meeting of the Association shall be held in the city of Boston, on Thursday of what is known as "Anniversary Week," at such place and with such sessions as the Executive Committee may appoint, of which at least one month's previous notice shall be publicly given. Other meetings and conventions may be called by the Committee, according to their judgment, at such times and places as may seem to them desirable.

V. These Articles may be amended at any Annual Meeting of the Association, by a majority vote of the members present, provided public notice of the amendment has been given with the call for the meeting.

Officers elected for the year 1882-83:—

PRESIDENT.

WILLIAM J. POTTER, New Bedford, Mass.

VICE-PRESIDENTS.

OCTAVIUS B. FROTHINGHAM, Boston, Mass.
FELIX ADLER, New York City.
GEORGE W. CURTIS, Staten Island, N.Y.
EDWARD L. YOUMANS, New York City.
FREDERICK SCHUENEMANN-POTT, San Francisco, Cal.
THOMAS WENTWORTH HIGGINSON, Cambridge, Mass.
ELIZABETH B. CHASE, Providence, R.I.
GEORGE HOADLY, Cincinnati, O.
NATHANIEL HOLMES, St. Louis, Mo.
ROWLAND G. HAZARD, Peacedale, R.I.
BERNHARD FELSENTHAL, Chicago, Ill.
ANNIE L. DIGGS, Lawrence, Kansas.

SECRETARY.

FREDERICK A. HINCKLEY, Providence, R.I.

ASSISTANT-SECRETARY.

CHAS. H. CODMAN, Boston, Mass.

TREASURER.

JOHN C. HAYNES, 451 Washington St., Boston, Mass.

DIRECTORS.

Four Years.

FRED. MAY HOLLAND, Concord, Mass.
MRS. CLARA M. BISBEE, Dorchester, Mass.
J. A. J. WILCOX, Chelsea, Mass.

Three Years.

B. A. BALLOU, Providence, R.I.
WILLIAM H. HAMLEN, Boston, Mass.
ANNA GARLIN SPENCER, Florence, Mass.

Two Years.

EDNAH D. CHENEY, Jamaica Plain, Mass.
ARTHUR G. HILL, Florence, Mass.
RICHARD P. HALLOWELL, Boston, Mass.

One Year.

CHARLES D. B. MILLS, Syracuse, N.Y.
JOHN L. WHITING, Boston, Mass.
HELEN M. IRESON, Lynn, Mass.

The office of the Association is at 44 BOYLSTON ST., BOSTON (next door east of the Public Library), where is also the publication office of *The Index*.

All letters pertaining to the business of the Association (payment of membership fees, orders for its publications, etc.) should be addressed to "Free Religious Association," at the office.

Communications intended specially for the Secretary, as well as his personal correspondence, should be addressed to him at PROVIDENCE, R.I.

F. A. HINCKLEY, *Secretary F.R.A.*

EDITOR AND PUBLISHER.

NOW READY:

BIBLE MYTHS,

And their Parallels in other Religions: being a comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations. 1 vol. Royal 8vo. 600 pages. Cloth. $4.00.

This work fills a place hitherto vacant in Biblical literature, and will attract the earnest attention of all interested in this special field of research. It is a book not for scholars only, but appeals to all those who care for the future of religion. Its object is to point out the myths with which the Old and New Testaments abound; to show that they were held in common with other nations; and then to trace them to their evident *origin* and *explain their meaning.*

It contains quotations from nearly all the sacred books of heathen nations, and from other rare and valuable works which are not accessible to people in general. The chapters are so arranged that it is a perfect cyclopædia of reference. Years of research would be necessary to discover all the information it contains. It is a most searching investigation into the origin of Christianity. Every fact is verified by copious notes and authorities, so that it may be trusted as a thoroughly reliable work. *It contains information which will be startling to many.*

CURRENT TOPICS.

THE President of Chili, in his message to the Chilian Congress, boldly declares that the separation of Church and State offers the only possible solution of the difficulties which are continually arising between the civil and ecclesiastical powers.

ON the 27th of September, the enormous statue of Germania, opposite Bingen on the Rhine, is to be inaugurated in the presence of the Emperor and all the German sovereigns and princes. The inauguration will be followed by festivities on a large scale in the palace at Wiesbaden.

DURING a recent thunder-storm near Albany, N.Y., a young man sitting near a window reading his Bible was struck by lightning, which stripped the clothing from his back and tore his flesh badly. He was dead when raised from the floor. The Bible had been thrown across the room. If the young man had been reading an "infidel" work when the sad occurrence took place, there are many preachers for whom the event would have furnished a text for sermons.

THE late Henry Seybert left, among other bequests, $50,000 to endow a chair of moral and intellectual philosophy in the University of Pennsylvania, on condition that the university should investigate modern Spiritualism. The university which accepted the bequest has taken steps to carry out the wish of the testator. A commission has been appointed, composed of men of acknowledged ability and scientific attainments. Here is a chance for Slade and other mediums to have their claims subjected to careful scientific examination, from which they have nothing to lose, but much to gain, if their claims are true.

SAYS the London *Inquirer:* "A memorial to the President, Vice-President, Treasurer, and Members of Council of University College, London, is in circulation, signed by past and present students of the college, respecting the rejection of Mrs. Besant and Miss A. Bradlaugh from the botany class. The pith of the memorial is contained in the two opening sentences: 'That the fundamental principle of the establishment and existence of University College was and is the admission of students to its classes without regard to their opinions, creed, or belief. That no precedent exists in the history of the college for taking into consideration the opinion, creed, or belief of intending students on their applying for admission to the classes of the college.' But the whole question will have to be decided now, not by the council, but by the general meeting of proprietors."

THE Boston Sunday *Herald*, referring to the discussions that have taken place at the Institute of Instruction, which has been holding its annual meeting at the Fabyan House, in the White Mountains, where Prof. Seelye, Rev. A. A. Miner, and others affirmed the need of religious training in our schools, remarks that it "must be admitted that those who are defending the cause of secular public education are not receiving that support from the leading instructors in our schools that they have been led to expect. It may be that those to whom we have referred have not yet sufficiently realized the possibility of imparting moral training in the complete absence of dogmatic theology. We fancy that the addresses made at the Fabyan House will furnish material for those who are fighting to bring about a sectarian division of the public money devoted to the purposes of education."

SAYS Prof. Tait, in a lecture on thunder-storms: "I have said nothing of what is commonly called *summer lightning*, which is probably, at least in a great many cases, merely the faint effect of a distant thunder-storm, but which has also been observed when the sky appeared tolerably clear, and when it was certain that no thunder-storm of the ordinary kind had occurred within a hundred miles. In such cases, it is probable that we see the lightning of a storm which is taking place in the upper strata of the atmosphere, at such a height that the thunder is inaudible, partly on account of the distance, partly on account of the fact that it takes its origin in air of small density." The editor of *Nature*, who quotes the above, adds, "We know that Prof. Tait speaks from having himself seen what he here describes, which shows unquestionably that (*on some rare occasions*) its source is really above our heads, and not (as is the general rule) a thunder-storm of the ordinary kind several miles off."

A DR. BRATENBURG, of Bay City, Mich., told the mother of a sick child that she had been bewitched before the child's birth, that the spell had descended to the little one, and that he would remove it for seven dollars. After getting the money, he wrote the following on a sheet of paper, folded it triangularly, enclosed it in a bag and hung it to the child's neck: "William John Warner will regain his health in the name of the Lord, God Father, God Son, and God Holy Ghost. Amen. † † ‡ I. N. † N. I. † Beelzebub and all the bad spirits, I forbid you my bedstead in the name of God, my house and also my yard. I forbid you in name of the holy Timothy, my blood and flesh, my body and soul. I forbid you as many times as we have nail-holes in my house, as many times as drops in the water, as many times as leaves on the trees, as many times as stars in the heavens, until the last day of judgment arrives, and Mary, the Mother of God, gives birth to her second son. In the name of God Father, God Son, and God Holy Ghost. Amen. Thou arch fiend, thou hast taken hold of our William John. Go hence. I beseech you, for the sake of the five wounds of Jesus Christ, get out this very hour." The child died. Dr. Bratenburg is under arrest.

THE question arose recently in New York City, whether trusts made for saying masses for the repose of the souls of the dead are valid, and has just resulted in a judicial decision that they are not. A Catholic lady, eighty-five years old, put $2,300 into the hands of a friend, and directed that the money should be used after the death of herself and her husband to pay for expense of the funerals, the erection of a monument, and to have masses said for the repose of their souls. Judge Freedman of the New York Superior Court says, in his decision, that there is no objection to the trust on the ground that it is "superstitious," since the law recognizes complete equality among religious beliefs; but that in this case there is no person in existence for whose benefit the property is held, no person who "is capable of taking an interest in the property left behind." The comments of the *Nation* on this decision seem to us pertinent and just. It says: "Mrs. Gilman and pious Catholics generally think that the soul will be benefited by masses; but living Catholics have never seen one so benefited, and living Protestants have never seen the contrary. Protestants say that there is no purgatory, Catholics say that there is. If the Catholics are right, it is obvious that the souls of Mr. and Mrs. Gilman are now deprived of a substantial property right, and the decision can only be supported on the theory that the Catholic religion is a superstition and the Protestant religion true. This is exactly what the courts in this country have always refused to decide, on the ground that one religious belief (in the eye of the law) is no more irrational than another; that the law has no machinery for deciding between them; and that it cannot undertake such a task without establishing, as far as it goes, a State creed. The Gilman funeral expenses were, in Protestant eyes, just as ill calculated to benefit the Gilman souls as the masses. A judge who has made up his mind that it is part of the common law that a soul cannot be benefited in any way by the expenditure of money in religious rites is entering, we believe, on a new and, we may add, a not very safe field."

Digitized by Google

HAVE WE RELIGIOUS FREEDOM IN THIS COUNTRY?

The questions are sometimes asked, What is the use of any further special effort in behalf of freedom of thought? What need of such an organization as the Free Religious Association? Is any body's conscience oppressed in religious matters in this country? Has not liberty of inquiry been achieved? Is not every American citizen perfectly free to adopt whatever religious belief he will or must? perfectly free to worship where and as he chooses, or, if his conscience so dictate, not to worship at all? perfectly free to speak or print, without hindrance or molestation, his opinions on religion, whatever they may be? Is there not absolute equality before the law in respect to religious privileges for all citizens?

And when, in reply to such questions, certain inequalities in the Sunday laws are pointed out, or certain unjust discriminations in favor of the special religious beliefs of a portion of the citizens are quoted from many of the State constitutions, or the laws of several States are brought forward whereby the testimony of witnesses in courts is not received unless they hold certain religious beliefs, or the exemption of churches from taxation is referred to as a legalized method by which all citizens are compelled to give financial support to churches whether they believe in them or not,—when these proofs are produced to show that equality before the law in respect to religious opinion and privilege is not yet a fact in this country, it is alleged that these are but legal survivals from a past age which are fast becoming obsolete, and which will soon vanish entirely; that the general progress will sweep them away without any special help; that the argument-battle for religious freedom and equality is really finished, and that all that is now wanted is a little reconstruction of statutes, which will come as a matter of course in time. And, in the mean time, it is claimed every one is free to utter and act upon his opinions, whether they be evangelical or atheistic. He may go to a Catholic church on Sunday or to hear an infidel lecture, as he chooses. Nobody interferes, for instance, with Col. Ingersoll's lectures, though, according to the laws of several States, they are forbidden and punishable as blasphemy. Only from little Delaware does there come even a threat of trying to silence him.

That there has been great progress toward liberty of thought and speech is not to be denied. People are not imprisoned in this country for heresy to-day. Some of the injustices named, however, are by no means yet obsolete, and by no means beyond the need of practical earnest work, in order to hasten their departure. But how far the country is from complete religious freedom is specially evidenced by such a discussion as that which has arisen over Judge Hoadly's religious views in connection with his candidacy for the governorship in Ohio. The need of the Free Religious Association was never made more manifest than by the fact that, since Judge Hoadly's nomination for Governor, a large number of persons and of influential newspapers have been seriously putting forth the argument that, because he is a vice-president of that Association, he is disqualified for the Ohio governorship. His eminent intellectual ability for the office, his high moral character, are conceded by all. No question has been raised of his fitness for the place in either of these respects. But, because he happens to be an officer of a society for the promotion of religious freedom, his political opponents have raised the cry that he is an unfit man to be the executive head of the State. And by this argument, appealing to the *odium theologicum*, they hope to catch the ears and votes of the evangelical religious people of Ohio. Nor would it be strange, so closely are the political parties divided in that State, if this outcry against Judge Hoadly because of his religious associations were to affect votes enough to turn the scale against his election. Those who have started this argument evidently believe in its strength. Though they have been compelled to withdraw their first reckless charges against the character of the Free Religious Association and *The Index*, they persist nevertheless in asserting that if a man belongs to a society which is so liberal as to fellowship all earnest seekers after truth whether Christian or non-Christian, and so radical as to put all religious beliefs and alleged revelations, Christian or non-Christian, to the test of impartial reason, he is thereby incapacitated for being governor of what they are pleased to call a Christian commonwealth.

As a matter of fact, the connection of Judge Hoadly with the Free Religious Association does not necessarily determine his special religious views. But with the question of his religious views the voters of Ohio have properly nothing to do. They are not asked to elect him to an office which requires any official religious duties. And religious freedom does not exist so long as any man, who is regarded in all other respects as a suitable candidate for a public office, cannot be elected to it until he has answered, to the satisfaction of the electors, a catechism concerning his religious beliefs. Equal freedom of conscience does not exist so long as the public offices are not equally open to all citizens who are qualified for them, irrespective of their ecclesiastical connections or their religious opinions. Yet there is a large section of citizens who will withhold their votes from candidates otherwise satisfactory, if they do not like their religious views. There is, indeed, a party in this country which advocates only the election of professed Christians to public office. This party would make the national and State constitutions theologically Christian documents, and thus render it impossible for any but professed Christians to declare their sincere allegiance to the governments founded on such constitutions. The audacious arrogance with which these narrow dogmatists would thus take away the equal rights and privileges of citizenship from a large class of their fellow-citizens would arouse not only indignant opposition, but even armed resistance, if it had any chance of success. But, fortunately, the party that would go to this extreme is small, and is not favored by all the Orthodox sects. There are many, however, who do not go with this party entirely who are more or less affected by its arguments. And all voters who not only inquire into the mental and moral fitness of the candidates for public office for whom they are solicited to vote, but also demand that they hold certain religious opinions, violate the equal rights of citizenship on which all genuine republican government is founded. In this class of voters, it is quietly assumed that the liberal thinkers in the party will vote without question for candidates who may hold orthodox creeds,—and as a usual thing they do, voting year after year for men who do not represent their religious views at all; but, when it comes to nominating a candidate of supposed or known liberal views, then the boot is on the other leg, and the pious dogmatists, in the interest of religion, bolt the nomination! No person who thus allows his adherence to religious dogma to interfere with his perception and practice of the political doctrine of the equality of civil rights can be a good republican citizen.

Many of the voters of this country need to revert to some of the lessons set by the fathers of the republic before they will learn the full breadth and meaning of the principle of religious freedom. Let them ponder that great text to which George Washington as President put his name in the treaty made with Tripoli: "The government of the United States is in no sense a Christian government"; that is, is a government for Jews and people of other religious beliefs as well as for Christians. Let them study Washington's letter to a Hebrew congregation, wherein he said: "It is now no more that toleration is spoken of, as if it was by the indulgence of one class of the people that another enjoyed the exercise of their inherent natural rights. For, happily, the government of the United States, which gives to bigotry no sanction, to persecution no assistance, requires only that those who live under its protection should demean themselves as good citizens, in giving it on all occasions their effectual support." Let them consider the answers that were made to the objection to the national Constitution in the conventions of North Carolina and Massachusetts, that it would admit to public office and power Mohammedans, pagans, and even atheists, when in the convention of the former State it was said that "it would be happy for mankind if religion was permitted to take its own course and maintain itself by the excellency of its own doctrines," and when in the Massachusetts convention the reply was given by Theophilus Parsons, afterward Chief Justice, in these wise words: "No man can wish more ardently than I do that all our public offices may be filled by men who fear God and hate wickedness; but it must remain with the electors to give the government this security.... What security is it to a government that every public officer shall swear that he is a Christian? For what will then be called Christianity? The only evidence we can have of the sincerity and excellence of a man's religion is a good life, and I trust that such evidence will be required of every candidate by every elector."

Not until the broad philosophy and spirit of these old sentences, from the days when the foundations of our national government were being laid, shall have been so generally infused among the citizens of this country as to determine practically their relations to each other and to the government of which they are equal members, will perfect religious freedom be attained.

WM. J. POTTER.

PROVOKINGLY NON-COMMITTAL.

This is what *The Index* is called by "a diligent and earnest reader," who finds fault with the Free Religious Association thus: "What great questions have you settled the last sixteen years? What affirmations have you made in reference to Immortality, Inspiration, Prophecy, Miracle, Book-revelations, etc.?" Her complaints arise from such a state of mind as makes many of the conservative Unitarians wish they had a creed, and as keeps those churches which profess the *Thirty-nine Articles*, the *Westminster Confession*, and similar statements of faith, thronged with worshippers. It was in this spirit that Luther rebuked Erasmus for confessing his inclination to be sceptical whenever the Church permitted, and declared that, for his own part, he wished to be as certain as possible even about trifles. "The Christian naturally delights in assertions," said Luther. "Take away assertions and you have taken away Christianity." So thought those pious and patriotic Athenians who condemned Socrates to death, because he had tried to unsettle the prejudices and hasty conclusions he found prevalent. People wished then as now to be able to feel sure of the truth of opinions

Digitized by Google

which they had taken up without examination, and held fast without reflection. Socrates thought that such mental habits were incompatible with true knowledge or high virtue. So he went to work trying to force the Athenians to think for themselves, and they killed him for it. His judges would probably have approved of Oliver Goldsmith when he said, "I go to a tailor for my clothes, and so I go to a priest for my religion." Most people still prefer to have religion manufactured for them in some popular church. Hegelianism owes its momentary ascendency in this country to its capacity for supplying opinions on all sorts of subjects to order, and telling people exactly what to believe in every direction. Only accept Hegel's fundamental definition of the Infinite, and you can go on logically, and find out precisely what to think about theology, politics, art, history, literature, chemistry, astronomy, optics, or anything else you choose. It is only the difficulty of making Hegel's machine work in any but very skilful hands that has prevented its becoming popular.

The same passion for certainty meets us in other fields. Scarcely had the Smithsonian Institute opened, when a letter came from a farmer who wanted to know what the weather in his county would be during the rest of the year. He was told that no one but a charlatan could answer such questions. Whereupon, he wrote to the Director of the Institute: "*Dear Sir*,—If you are not the charlatan for this county, please to tell me who the charlatan for this county is." Many minds keep this notice always hanging out in plain sight, "*Wanted, a Charlatan.*" Almost everybody was delighted to have Vennor promise to tell what the weather was to be on every day of the next year. Any one who will make predictions confidently is sure to find dupes. Astrologers and clairvoyants grow rich, even in Boston. The wisest physician cannot make money like the makers of patent medicines warranted to cure all diseases. *The Index* has been perfectly consistent in refusing to advertise such nostrums, for they appeal to the very habits of thought which stand most in the way of our success. What was the Reformation itself but a quarrel between quack doctors? The Pope said, "Pay for my ceremonies and they will save your souls." "No," said Luther; "take my creed as your only means of salvation, and heaven is secure." What has theology been since but a competition between people who get their living by urging the advantages of different creeds and rituals, each of which is warranted to save the believer without his having to trouble himself about morality.

But the children of this world are wiser than the children of light. A sensible man will not listen to people who profess to have infallible and supernatural knowledge about how he should take care of his health or his business. Here, he investigates for himself, thinks nothing certain except on the testimony of his experience, and satisfies himself in most cases with following the strongest probability, because he sees that well-founded certainty is out of reach. He knows, for instance, in regard to the weather, that the probabilities, calculated by men of science, are worth a great deal more than what the almanac-makers try to pass off as certainties. So in severe illness he trusts the cautious and experienced physician, who only promises to help him gradually, if possible, rather than the quack, who is perfectly sure he can cure him at once. Even the pillars of the churches keep on their guard against self-confident advisers in practical matters. The deacons and church-members would all be bankrupt if they were to listen to such presumptuous advice about their business as they follow complacently in regard to their religion. Men who would not invest a cent without the guidance of personal experience will let themselves be influenced in their social and literary tastes, and even their moral conduct, by an ignorant and arrogant youth whose opinions would not seem worthy of notice if uttered anywhere else than in their pulpit. They indulge themselves at church with a credulity which they dare not let themselves fall into outside of their pews. For six days of the week they have to act with manly independence, but on the seventh they let themselves sink back into the unreasoning submissiveness characteristic of children and savages. Thus the opportunities which this one day of rest offers for purifying and invigorating their minds, by familiarity with high culture and advanced thought, are sacrificed, and the reign of narrow and degrading prejudice is made firm and final. Thus the great teacher of the age and mighty leader of civilization, Science, finds but few pupils for her noblest and highest truth. Men who owed their daily bread to their fidelity to her elementary lessons about material things cannot take the freedom of thought she offers them, because they have not learned to think for themselves when not compelled to do so by the coarsest and lowest needs.

The Free Religious Association is not organized to settle great questions or to make affirmations for people to take on trust. Our work is helping people to think for themselves, and to form their opinions cautiously and independently. When we can make the average American as unwilling to listen to dictation or take assertions on trust in his religion and morality as he is in his business and his politics, when we can give the authority of science as much weight in the highest as in the lowest fields of thought, then our mission will be fulfilled. Affirmations about God and immortality were made more satisfactorily and successfully during the Dark Ages than they ever will be again. It was very easy then to feel settled about theology. The advance of knowledge has caused differences in opinion which every new utterance of dogmatic affirmations only makes wider and more bitter. The attempt to suppress these differences resulted three hundred years ago in massacre and civil war, so that it had to be given up. Unity of belief about theology can come only through going back into mediæval darkness. We shall, I think, ultimately all agree about God and immortality; but this will be when we are all convinced that these questions are insoluble, and that the only field where we can find truth is that within the limits of observation and experience. And as we learn to content ourselves with seeking there after what is really to be known, we shall gain ever clearer knowledge of morality and firmer faith in what is most certain of all things, the Law of Duty. Here is a subject on which our Free Religious Association has made many precious affirmations, and will doubtless make still richer and nobler ones as theology ceases to claim the attention of its members. The ideas which we are most urgently called on to assist in settling are those of justice, purity, and brotherly love.

F. M. HOLLAND.

GREEK AND LATIN.

Of course, a liberal or thorough education no longer means merely the more or less perfect acquisition of Greek and Latin and a restriction of the student to Greek and Latin authors and ideas. By the way, one would infer from the works of Shakspere that his stock of Latin and Greek both was very large; for his diction is, as much as Milton's, a learned diction, emphatically so. But we have the testimony of Ben Jonson that his mighty contemporary was not at all what is called a classical scholar. At last there is a distinctive modern world and a modern spirit; there is modern thought and modern science and an ever-widening modern literary realm, so extensive that the most diligent reader can only take a cursory survey of it. Meantime, modern thought, science, art, and literature are all movements of the mind on the line of old Greek thought, science, art, and literature,—in one word, are continuations of the latter. The Greek rationalists were, twenty-five and thirty centuries ago, on the right track,—were, in fact, moderns in the best sense of the word. So that the greatest scientists and thinkers of this century, such as Humboldt, Tyndall, Lange, and the rest of them, take old Greek thought and science for their points of departure. For reason is one and the same faculty in all ages. And the old Greeks were remarkable for their reasonableness above all other things or characteristics.

Thus, it has happened that the old Greek writers have never lost their currency and never will lose it. What narrative of travel, adventure, and war, for instance, is more modern to-day than Xenophon's *Anabasis* is?

Had it not been for a deluge of other-worldly religious fury, fanaticism, and monkery, to which the beautiful, strong-minded Greek woman, Hypatia, fell a victim, the Scientific School of Alexandria would have reached, fifteen centuries ago, the stand-point of Newton, the Herschels, Humboldt, Lyell, and Darwin. The Greek mind was thus a modern, rational mind from the start. It always detested barbarism and all that barbarism means. Thus, the more Greek we are, the more modern we are. Aristotle, according to the testimony of Humboldt, is still the high-water mark of reflective thought, still the foremost of those who know, to borrow Dante's style of characterizing him.

To-day, Greek is as much the language of science and reflective thought as it was in the days of Aristotle and the Alexandrian *savans*. It remains to this day the chief Aryan language of the West, with a flexibility, felicity, and subtlety of expression and verbal definition which no other language possesses. The astronomer, the geologist, the psychologist, botanist, chemist, mineralogist, etc., cannot get along without it. Curiously enough, it furnishes a vocabulary and technical phraseology for sciences and branches of investigation which were not even dreamed of by the old Greeks. *Moreover, it is not a dead language.* It was for ages the language of the Aryan civilization of the West; and as Aryan civilization still lives and thrives, more and more overshadowing the earth, its continuity having been restored at the Renaissance after a thousand years of superstitious barbarism, the Greek, merely as a large element of most of the chief current Aryan languages, still lives along with them. Furthermore, in Southeastern Europe or the Levant, it is still a live, oral speech in the old land of battle and of song, whose atmosphere was first musical with its accents.

The modern Greeks would doubtless be highly indignant, if they were told that they did not still possess the speech as well as the blood of their illustrious Hellenic predecessors on the soil of Hellas, about whom Prof. Mahaffy, of Dublin, exhibits such an intimate knowledge. But it is as philological studies and exercises chiefly that Greek and Latin are indispensable. Through them, the young student acquires a knowledge of the principles of grammar and rhetoric, and fits himself to master and understand his own and the other modern languages.

It is a fact that Greek and Latin, as languages, are still unrivalled, so that they exercise a sort of

Digitized by Google

glamour over the young philological enthusiast by the subtle expressiveness, splendor, and resonance of their words, and by the unequalled diction of their best writers. It is no wonder that Virgil became a school-book in his own day, and has continued to be such to this time. The charm of his verses fascinates even the dullest student. As a mere word-study and style-study, he could not be supplanted by anybody but Homer. Were it not for the large infusion of Greek and Latin which the English language contains, the splendid literature, which is now the pride and glory of the English-speaking world, would never have existed. The Anglo-American-Teutonic-or-Saxon mind would have had no lingual organ fit for the production of such a literature. The homely and so largely monosyllabic Saxon would have failed the great poets, philosophers, divines, and orators, and been unable to voice the glowing effusions of their minds. Moreover, the canon of Greek and Latin is fixed and unalterable; and therefore they are peculiarly adapted to be the means of teaching the young student the science and principles of language in general. Moreover, while he is learning them, he is also learning English, French, Spanish, and Italian, and qualifying himself to learn languages of all kinds with facility.

All the languages of Western Aryan civilization are knit together by the bond of a common descent from the primitive speech of the mysterious Aryans of Central Asia. From the Indus and Oxus to the Missouri and Oregon, the primitive and mysterious Aryan language still lives, and makes all languages of Aryan descent, whether ancient or modern, living and akin. Scholars and cultivated persons abroad usually speak several modern languages, but they all began with Greek and Latin.

The Greek and Latin question or Humanism has been discussed abroad to threadbareness. Nothing new can be said upon it. As preliminary, philological, grammatical studies, as gates of entrance to the chief modern languages and a knowledge of the technical phraseology of current science and art, Greek and Latin cannot be dispensed with. Of course, it goes without saying that distinctive current thought and science and the vast world of current literature cannot be learned from Greek and Latin authors. Although it is not to be forgotten that at the time of the Renaissance it was Greek history, philosophy, oratory, poetry, and science which extricated the human mind from the slough of mediæval superstition and barbarism, and put it upon the high road of a rational and enlightened progress once more.

Let us not, therefore, be in haste to kick from under us the ladder by which the world has climbed to its present intellectual altitude, especially as the ladder still has its uses. As long as articulate speech shall be the vehicle of human thought, Greek and Latin will be studied, and held in honor. Persons who deliberately and ostentatiously decry all except bread-and-butter studies, as likely to be hindrances to success in life, are demagogues, and may fairly be accused of talking clap-trap for some selfish aim.

Henry Clay was a great statesman and orator, in spite of his ignorance of Greek and Latin and all other languages save his own, by virtue of extraordinary native mental vigor. But how much better would his speeches read to-day, if he had been a scholar like Burke! Doubtless, he winced somewhat, when the famous Congressional crank, John Randolph, after using a Latin quotation, proceeded to translate it into the vernacular, "for the benefit of the gentleman from Kentucky," as he invariably informed the House of Representatives, over which Clay was presiding at the time.

It cannot be denied that the American mind is altogether too practical and utilitarian, altogether too much imbued with the bread-and-butter spirit. Therefore it is that the study of the generous, virile, heroic, old Greek and Latin literatures, in which the mere petty spirit of bargaining, traffic, and gain, is always spoken of with contempt, is just the intellectual and moral antidote that our young men require.

B. W. BALL.

ON CALAMITIES.

When such as the recent appalling calamity at Sunderland, by which nearly two hundred little children met with sudden death, brings us face to face with our deeper nature, *our better nature*, it is as well to look within us a little and see our connection with that deeper nature when there are no appalling calamities about but the minor calamities of daily life.

When a nation has experienced a great calamity and all her people are in sorrow, it is significant how unanimous and sympathetic we become. There seems to be a mutual flowing to and fro of self-denial, brotherly love, and sympathy. The time is evidently too solemn to descend to party or individual differences. Parliament lends its aid, whether the town needing it be radical or tory; radical and tory become human, and not fanatic; the people meet the Parliament, and show no obstruction or opposition. Expediency is the object of all, and expediency with decency and sympathy is the result. Town councils can be unanimous and decorous, and lend their aid ungrudgingly to all who need it, when they are brought face to face with their deeper or better natures. They with one unanimous effort rise above their immediate surroundings, and take a broad view of the situation, and all pull together victoriously. Then burial boards, local boards, school boards, guardians, all can agree and work hand in hand. And finally, but most significantly, Jew and Gentile, Catholic or Protestant, Independent or Methodist, free thinker or no thinker, agree to sink dissent and bow beneath the rod. All are humbled to the dust in sorrow and sympathy, all feel that a heavy hand is laid upon some of them; and they cry out in their anguish that God may comfort and support, and show mercy and forgive. A time like this tries the fibre of the people, from Queen to peasant, and proves what they are made of; tries their faith, their infidelity, their humanity. And what are we, individual or nation, without a faith in a higher life, without humanity? And why do we neglect to exercise these attributes at all times? Why do we shut our eyes and ears to the minor calamities of individuals? Why do we trifle with divine laws, with what divinity there is within us? The history of the Ten Plagues is being repeated time after time, and yet some of us cannot see how the warning still applies. Our hearts are still hardened; the higher nature is day by day ignored; the good that is in us gives place to the ignoble; the paltry, the mean, the narrow spirit rules our being. But all this is arrested by a national or international shock: we pause, we allow breathing time for reflection, for recuperation,—a time which shows what by nature we readily are, but what by selfishness we have degenerated to. We see what we are, and find ourselves sadly wanting in daily deeds. Our hearts are softened. We start afresh. We have passed through the scourge. We are purified. All selfishness, all worldliness, all pride, all deceit, all that makes us unworthy of a higher life, we trample under our feet, and so endeavor to lead a life more worthy of our Leader and King. Alas, that it should last only for a season! We grow careless in well-doing. The whirlwind of social, political, religious, and business rivalry proves stronger than our repentance or higher nature, and we fall away into our old grooves: we harden our hearts; each—individually or collectively—stands aloof on the defensive toward his brother, each fearing the other and trusting none; not meeting as brethren of one inheritance, of one common lot, of one earth and one heaven, not bound together by the everlasting bond of faith, hope, and charity, but as aliens and estranged pilgrims on the earth that was made for us and we for it. We become children of darkness instead of children of light; and so the world wags in its race toward progress, and is impeded in its advance toward the higher life; and we, like the children of Israel (through disobedience to the divinity within us), wander about in the wilderness and do not gain the Canaan of Promise.

MARGARET E. TIREBACH.

LEEDS, ENG., June 19, 1883.

BLASPHEMY.

Blasphemy is a fictitious offence, an imaginary crime, for which many, including some of the bravest and best men, have been subjected to imprisonment, torture, and death. It is still punishable in the most enlightened Christian countries at both common law and statute law. In England and in the United States are laws unrepealed, but now generally obsolete, under which men have been tried, convicted, and sentenced for expressing disbelief in a God, in the divinity of Christ, and in the superhuman origin and character of the Bible.

But, with the increasing prevalence of disbelief in these doctrines among men of culture, reputation, and influence, there has been a disinclination in the secular courts to pronounce such disbelief blasphemy, and a disposition to make it consist instead thereof in speaking, writing, and publishing profane words, vilifying or ridiculing God, Jesus Christ, the Holy Ghost, the Old or New Testament, or the Christian religion in general, in a way to bring it into contempt. Mr. Justice Stephen, an able exponent of the criminal law, in his *History of the Criminal Law in England*, says that "the true legal doctrine upon the subject is that blasphemy consists in the character of the matter published, but not in the manner in which it is stated." According to this opinion, the law against blasphemy, if enforced, would require the punishment of many of the leading writers of England,—men like Spencer, Tyndall, and Matthew Arnold. But the Lord Chief Justice of England, in his address to the jury in the case of *Reg.* v. *Foote and others*, said:—

If the law, as I have laid it down to you, is correct,—and I believe it has always been so,—if the decencies of controversy are observed, even the fundamentals of religion may be attacked without a person being guilty of blasphemous libel. There are many great and grave writers who have attacked the foundations of Christianity. Mr. Mill undoubtedly did so: some great writers now alive have done so too; but no one can read their writings without seeing a difference between them and the incriminated publications, which, I am obliged to say, is a difference not of degree, but of kind. There is a grave, an earnest, a reverent, I am almost tempted to say, a religious tone in the very attacks on Christianity itself, which shows that what is aimed at is not insult to the opinions of the majority of Christians, but a real, quiet, honest pursuit of truth. If the truth at which these writers have arrived is not the truth we have been taught, and which, if we had not been taught it, we might have discovered, yet, because these conclusions differ from ours, they are not to be exposed to a criminal indictment. With regard to these persons, therefore, I should say they are within the protection of the law, as I understand it.

According to this, the latest judicial decision, no

Digitized by Google

opinion, however antichristian or even atheistic, can any longer be regarded, from a legal point of view, as blasphemous. The blasphemy must consist in the *manner* in which the opinion is expressed, not in the character of the opinion. While this decision indicates progress, the law, as thus interpreted, is still open to grave objections. The cultivated and refined mind expresses its thoughts in language like that of Mill or Matthew Arnold; but there are many whose opposition to popular beliefs is far less effective, but just as sincere, whose language must necessarily be offensive to those whose views they antagonize. Even in the writings of some of the ablest English writers of to-day are passages which a jury, even with the above decision in mind, might regard as blasphemous libels. Take, for instance, the following from Herbert Spencer: "Here, we have theologians who believe that our national welfare will be endangered, if there is not, in all our churches, an enforced repetition of the dogmas that the Father, Son, and Holy Ghost are each of them almighty; that yet there are not three Almighties, but one Almighty; that one of the Almighties suffered on the cross and descended into hell to pacify another of them." So long as theology gravely teaches such absurdities as the Trinity, the Incarnation, etc., which make even a serious thinker like Spencer smile, it need not expect to escape being ridiculed and caricatured more or less, as people outgrow it. Its defenders must consider, as Conway says, "that there are more muscles to draw the mouth up than to draw it down, and that man's control of his risibles has its limits."

The early Christians ridiculed the faith of the pagans and kicked over their idols. Cartoons and caricatures were used freely by the Protestants against the Pope during the Reformation. Luther had little regard for the feelings of papists. True, we live in a better age, and coarseness in the advocacy of opinions is not in harmony with the best methods of to-day; but let not the *law* impose upon the discussion of Christianity restraints which are not equally imposed upon the discussion of other subjects. Science asks no protection from ridicule and caricature. None should be extended to Christianity. The religious feelings of the Christian are no more "sacred" than the convictions of the free thinker. Sarcasm and ridicule are legitimate weapons, and any system that fears them shows thereby that it has points of weakness.

The law in regard to blasphemy should be abolished altogether. An expression of belief should not be punished simply because it is offensive to the feelings of those whose views are assailed. Several years ago, when George Jacob Holyoake was lecturing in England on Emigration and the Poor Laws, a man rose and said: "The lecturer has been speaking of our duty to man. Has he nothing to tell us as to our duty to God?" Holyoake said in his reply: "I do not believe there is such a thing as a God.... I would have the Deity served as they served the subaltern,—place him on half pay." During the trial, Mr. Justice Erskine said to the jury, "If you are convinced that he uttered the words with levity for the purpose of treating with contempt the majesty of the Almighty God, he is guilty of the offence." Holyoake was convicted and sentenced to six months' imprisonment. For saying in a terse way that he would have the expense of worshipping God reduced one half—a very sensible proposition—he was punished, and could have been even under a decision like that of the Lord Chief Justice of England quoted above.

We have never seen the paper for publishing which Foote and others were convicted of "blasphemous libel"; but, judging from what we have read in English papers and from references in the letters of our English contributors, it contained pictorial representations of Jehovah and Jesus, which, although by no means obscene, must have been extremely offensive to pious Christians. They were no worse, however, than many of the caricatures of Romanism that have appeared in Protestant publications, or of Darwinism that have been printed and circulated by the very class who urged on this prosecution; no worse than those which appear in papers like *Punch* and *Puck*, designed to expose the absurdities of theories or the weaknesses of individuals. Far from approving the methods of Foote and his associates, we believe they are wholly indefensible on moral grounds, and, moreover, that they inflict injury upon the liberal movement. But the offences of these men belong to a class that may wisely be left to the condemnation of public opinion. To single these men out for punishment because theirs was an antichristian publication, when similar offences against good taste, in opposing other religious and scientific and political views, pass unnoticed by the law, is an act of injustice and intolerance. Our concern is for the principle of freedom, which in the imprisonment of these men, whatever be thought of them personally, is clearly violated.

B. F. UNDERWOOD.

EDITORIAL NOTES.

A FREE THINKERS' Convention is announced at Carthage, N.Y., for July 27, 28, and 29.

WE will at any time extend six months the term of a subscriber who sends us, with the money for one year, a name not already on our list; experience having shown that the circulation of the paper is increased less by solicitations through agents than by the private recommendation of its readers.

THE *Investigator* quotes Mr. Cudworth's reference to angels with their "seven distinct classes of occupation," and adds: "Mr. Cudworth is a very excitable preacher, and, his imagination being lively, he appears to have a thorough acquaintance with angels. He is the only Unitarian we ever heard who got warmed up and was addicted to soaring."

MR. HOLYOAKE, in reply to the question why he refused to sign the petition for the liberation of Mr. Foote, says: "I offered to sign a petition that Mr. Foote approved. All that I did was refuse to insult him by signing a petition which assumed that he was crying for 'mercy.' In that matter, I did only as I should wish to be done unto. I should look with shame on my signature had I attached it."

THE following is an extract from a letter received from a prominent member of the New York bar: "The disgusting attempt of my party to make a cheap sort of capital out of Hoadly's independence in theology has called my attention to your Free Religious Association, and convinced me that it is the duty of every friend of tolerance to support the same. If you deem me an eligible member, 'join' me. In any event, I enclose five dollars as my yearly subscription to the enterprise."

AN Exhibition of Hygienic Dress and Sanitary Appliances, intended to illustrate as far as possible the aims and objects of the National Health Society, was opened by the Lord Mayor on Saturday afternoon, in Humphreys Hall, Knightsbridge. The exhibition, which will continue for a fortnight, includes clothing, food, products, everything connected with the sanitation of the house and hygienic decoration, appliances for the sick-room, home nursing, and home education, industrial dwelling and cottage hygiene, heating, lighting, and cooking apparatus, fuel, etc. Perhaps, however, the greatest attention will be devoted to the stands of the Rational Dress Society, and another close to it, where are shown examples of ladies' dresses made on purely hygienic principles.—*Nature.*

THE semi-centennial celebration of the establishment of Oberlin College in 1833, amid the forests of Northern Ohio, on the basis of equal rights irrespective of sex or color, took place on the 4th inst. It was the most significant and noteworthy occasion of the century, educationally considered. Here was a "jubilee" indeed! Think of forty-seven separate class reunions, covering a whole half-century, their members gathered from every quarter of the globe to greet their *alma mater* and to renew their old associations! In some cases, men and women came thousands of miles to attend. In one case, ten thousand miles were travelled. Here were graduates from India, China, Jamaica, Japan, Africa, and the Sandwich Islands. In some cases, parents and children, all of them graduates, came to meet their respective contemporaries. The exercises occupied one entire week.—*Woman's Journal.*

MRS. EMMA SCHUMM, one of the editors of the *Radical Review*, in a well-written and sensible article in that paper on "An Aristocracy of Culture," says:—

No man of however superior education and refinement has a right to that feeling of proud superiority that is so liable to take possession of him in the presence of man in his crude or deformed mental condition. In ninety-nine cases out of a hundred, the superior advantages he has enjoyed, and not his own merit, have made him what he is. And even if he be a self-made man, who owes his attainments to his own superior qualities and perseverance, he need only be thankful that nature has endowed him more liberally than most of his fellow-men. But, on the other hand, is not every one entitled to a share in the achievements of civilization just as much as he is entitled to live? Let us but thoroughly comprehend this, and aristocracies of culture will cease to be necessities. It will then no longer be an act of self-sacrifice for men and women of culture to associate with the humble and ignorant laborer without making him feel that he is the recipient of an immense favor rather than a creditor receiving interest due on the debt which humanity owes him.

GOV. BUTLER, in a letter accepting an honorary membership in the Jefferson Democratic Association of New York, thus expresses himself in regard to Thomas Jefferson:—

To no man does this country owe so much as to Jefferson. But for him, our form of government would have descended into the government of the few, which is worse than an actual despotism, for in that the people have only to contend with the vice, ignorance, and extravagance of one tyrant. In a government of the few, the people have many tyrants to contend against, until they become an intolerant burden, only to be removed through such a tremendous upheaval as was the French revolution. From this, Jefferson's examples and teachings have thus far preserved us. If the country wanders much further away from Jefferson's doctrines, and the burdens of monopolies and special privileges increase much more, a despotism must be the relief, if the people are not obliged to appeal to other means. It seems to me that it is the part of true statesmanship to so change the present system of the conduct of affairs as to avoid these evils. Renewing my sensibilities at the honor conferred upon me, I am, very truly, friend and servant.

PRESIDENT ELIOT, of Harvard, thus expresses his substantial agreement with Charles Francis Adams, Jr., on the Greek question: "The practical measure proposed by Mr. Adams, namely, an option

Digitized by Google

between Greek and modern languages in the examination for admission to college, seems to me a judicious one. Indeed, I proposed it ten years ago to the academic council of Harvard University; but it then obtained the votes of only one-fourth of all the professors, those of the scientific and medical schools included. Since 1873, I think there has been some change of opinion upon the subject, but there is still great fear lest Greek lapse into the condition of Hebrew, unless all boys who go to college are forced to study it. The unsubstantial character of the study of the modern languages, as commonly pursued in this country, is also a serious obstacle to the adoption of the proposed option; but in this respect Mr. Adams sets his standard very high. I believe that the measure would advance true scholarship in all departments of learning, and increase the influence of universities."

CAPTAIN HUNTER and Private McMullen, of the Salvation Army, were arrested last week at Bridgeport, Conn., and marched to the police station, the former charged with assault, the latter with a breach of the peace. By their side marched the damsel known as "Hallelujah Lass," who was not under arrest, although she demanded that she be allowed to share martyrdom with her brethren. When a policeman said he would be obliged to arrest them unless they desisted from disturbing the peace, Captain Hunter replied, "Well, you won't, you bold son of Belial. You serve your master well, but you can't terrify me. I am willing to be arrested, so is Private McMullen, so is Hallelujah Lass; so are we all, are we not?" turning to the pair. "We are," said they. "Oh, take us if you dare!" howled the captain. "Drag us off: we are willing to suffer for the Lord." The detachment of the Salvation Army at Syracuse, N.Y., says the Springfield *Republican*, "is fast breaking up from its own rottenness. The first sign of dissolution was a charge brought by Miss Houser against Mr. Mott of seduction under promise of marriage. Then it came to light that Major Moore, who was raising funds to build a barracks, had had the deed made out in his own name. A little later, Miss Capt. Hall, commander of the detachment, married contrary to rules, and left the service; and Miss Lieut. Richardson also left, rather than obey an order to return to New York, made in consequence of gossip about her. She, too, is going to be married; and, as her good looks made her the chief attraction at the meetings, the young men do not attend any more, and even for the street parade the army cannot muster more than half a dozen members."

POETRY.

For *The Index*.

SONNET TO M. M.

Two roads run parallel: the one
Along a valley, where the sun
Is torrid, and the winds all day
Are in thick-clouded dust at play;
The other creeps along the hills
With trees o'ershadowed, and the rills
Soft music make adown their bed,
While bees make honey overhead;
The birds build nests; their merry song
Sweet, spicy breezes bear the paths along.

Yon hillside road, dear friend, is thine;
The dustier way of travel mine.
Your sturdy step, your questioning eye,
Through clouds of dust I oft descry.
But why the valley road I choose
And why the shady hill refuse
I can't explain; but this I know,—
That some time yours must be the glow,
And some time mine shall be the shade.
As now, so then, let friendship be our aid.

E. P. POWELL.

The Index.

BOSTON, JULY 19, 1883.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index*.

REFLECTIONS ON THE SITUATION.

BY WILLIAM I. GILL.

V.

The conclusion to which we are driven by modern psychology will, to many minds, be very unwelcome. But, instead of wasting our strength in vain lamentation or in a passionate and credulous adherence to an old, exploded conceit, let us proceed to take a calm and thoughtful survey of the new situation, that we may discover how best to endure and judiciously improve the inevitable.

Individualism of all Evolution.

From the foregoing exposition, we see more clearly and correctly into the nature of evolution. We discover that, in making it co-extensive with the known universe, we only make it co-extensive with the changing modes of our own individuality. Hence, evolution is never the beginning and ending of successive individuals and races, each surpassing its predecessor in extent and variety and rank of faculty. It is always exclusively a change in the mode of the existence of the same one individual. The known evolving universe is the evolution of myself only. Its successive phases are myself in those forms and processes. Hence, the so-called known *past* is always the present. It is that which exists as known, and is known as thus existing; and it is always a mode of myself. Even the fossil and pre-fossil world, back to the primordial chaos (to speak accommodatingly), is known as only a present phenomenon or subjective state. It has been said that the present has no existence, being always coming and going, but never here. We reverse this proposition. It is the present, and the present only, that does exist or can. This is true logically as well as psychologically, for its converse is self-contradictory. The very notion of past and future existence is that of non-existence now, and nothing can more perfectly contradict itself than to say these only exist. The past and future, then, we never reach, never directly know. When we have overtaken what was future, it is future no more. When we recede to what we call the past, we have only imposed upon ourselves if we believe it to be the past. It can never be more than a symbol of the past. This is the avowed character of all monuments; but it is equally the character of all phenomena whatever, as all have their lexical antecedents, which, according to the proximate perfection of our knowledge of nature's laws, may be known from the known phenomena. This is the process of all branches of paleontology, and by this method we trace back the history of the universe to its most incipient condition; and, as the known and knowable universe is *ego*, we thus in that process trace back its own history and show the route of its upward development and its successive stages where the *ego* has remained for a period comparatively stationary between the greater changes before and after. Thus, some modes of myself are vita-scripts of my successive states and experience and action. From them, I infer that I myself once existed in a state below that of man or monkey or any animal or vegetable, and that I have risen by successive changes through all the forms of existence up to my present condition, and that, hence, all inferior things are preliminary men. Thus, nothing is ever wasted. Everything is utilized forever, instead of being destroyed or dissolved to start again, as the common evolution assumes; or instead of being created and then annihilated, as the common theism assumes concerning the lower animals. The very individuals of the lower orders of existence are always evolved into higher (with exceptional deterioration).

The pre-Animal World a Sentient World.

On the same principle, we are justified in inferring the sentient condition of the world, or *ego*, through all its changes and in all its forms and states of existence. The alleged pre-animal states of the cosmos are as really egoistic as any other of our experiences. As symbols of the past, therefore, none of them can represent the infra-conscious, or insentient, which is unimaginable and inconceivable, and hence cannot be represented at all by anything. Further, the inorganic cosmic forms of every order and class are admitted to be conscious forms or subjective states *now*; and they are also generally assumed to be just what they were before there was a human organism or any animal organism, and even before there was a vegetable organism. If, therefore, they are sentient states now, we must infer that they were sentient states then and always. They are not organic states now, and they never were; and they are supposed to have preceded and originated organic states. But, though not organic, they are egoistic; and thus the conscious *ego* existed in those states which constituted the inorganic universe before the origin of any of its fauna and flora. The nebulous gas which is an extra-organic subjective state of me now was a sensation or sentient mode of me then. And so, forward and upward, through all the cosmic changes till an animal organism is reached, and still forward through all the organic evolutions up to man, all the known are conscious modes of the *ego* and symbols of past sentient states. There was thus a pre-organic (and there will probably be a post-organic) consciousness. The *ego* is the universal power of which all cosmic phenomena are the conscious, or at least sentient, unfoldings. Thus, while protoplasm may be considered as the lowest and the symbol of the earliest or initial form of that action of the *ego* or energy which we call life, organic life, yet the *ego* and its sentient life were before the protoplasm, and were the source of it and of all that flows from it in all the subsequent successive stages of the evolutionary process. However ludicrous or absurd this may appear to some readers, it is but just that they should reflect that it is a logical necessity from the prevailing psychology, and direct their ridicule against the premise, and not against the legitimate conclusion from it.

It would not militate against my main thesis if any one, on the basis of inorganic phenomena, were disposed to infer an infra-conscious world, which for one while I held to; and, as such a world cannot be directly known, I could only suppose it to be symbolized by inorganic phenomena. But from this I was subsequently obliged to recede. There is no scientific ground on which to affirm this symbolism. Besides, if the assumption is made, it is a mental void; because the inconceivable cannot be symbolized, and such is the alleged infra-conscious world. Thus the assertion of the existence of this world is arbitrary, baseless, and meaningless. It has no purpose to serve, no office to fill, no function to perform. Finally, if this infra-conscious world is admitted, it is insusceptible of discrimination from the alleged great unknown, the agnostic source of all the known. To this final conclusion I do not here object, for reasons which will soon appear. But I object to such a method of proving anything,

Digitized by Google

much more of proving the incogitable. Here, as everywhere, I prefer to steer along the coast and soundings of positivism, as some would call it, but which, in its profounder conception and bearing, I call philosophical realism.

This gives me occasion to withdraw a previous blind statement to the effect that the organism and all its characteristic phenomena do not originate from the external world. This was consistently made in logical deference to the prevailing physiological psychology, which makes the organism a perceptive power, equivalent to the *ego*, instead of accounting it to be, as it is, only a plexus of sensations. If the known external phenomena are affections of the organic *ego*, they cannot exist before the organism. It is usually allowed, in general terms, that all phenomena are modes of the *ego*, and then the *ego* is tacitly assumed to be limited to the organism, whence all external phenomena prior to the organism are logically though unwittingly precluded. They cannot exist before that of which they are the modes or forms and manifestations. But on the other hand, if we take the more common-sense view, which in this one case happens to be the more scientific, that the external inorganic world existed before our bodily organism, then it is clear that those external phenomena cannot be the creations or modes or affections of our organism; and, conversely, if both these classes of phenomena, the organic and extra-organic are egoistic; and if the inorganic existed long before the organic, then it follows that the *ego* is not confined to the organism, that it existed long before the organism, that it constitutes and is co-extensive with all the known worlds and agencies in the realms of space, and that thus and only thus the external and inorganic world can be the source whence the organism is by successive steps evolved. We thus see that the theory of objective evolution is here broken in two right in the middle, unless it be supplemented by our doctrine of subjective evolution; for the organic cannot be evolved from the extra-organic, unless the latter had a prior existence, which it could not have unless its subject, the conscious *ego*, had a prior existence in said extra-organic forms.

We cannot yet dismiss the question of the supposed infra-conscious condition of the pre-animal world. The shadow of pre-scientific notions here still stretches over us, as it always does with deepest density along the line where science and philosophy meet.

It will seem a needless truism to say that the infra-conscious condition is one which cannot be depicted or imagined, that this is possible only of the conscious. But just here all objective evolutionists have perpetually blundered, being blind to this very truism. They speak of what is affirmed to be an infra-conscious state, and describe it in detail as a familiar, sensible phenomenon, oblivious of the acknowledged truth that every phenomenon, external or internal, is always simply a fact of experience, a mode of the speaker's own consciousness. One writer, in words which have rung through the world, has spoken of the fire-mist or fiery-cloud as the potent source of all the forms and powers of consciousness, as the *unsentient* fountain of all sentience, assuming that it is itself non-egoistic (*ego* not yet being generated). It is thus made the natural cause of the *ego*, and the womb and generator of all human souls and all their powers. On the same erroneous assumption that all the cosmic universe is unsentient, other writers elaborately trace back the evolutionary history of things to the nebulæ, and these to a probable single primordial gas, whence all consciousness has ultimately evolved. I do not quarrel with the philosophy which traces all later life and thought and cosmic forms and motions back to the earliest and lowest known forms of existence. On the contrary, I fully accept that method and doctrine. I only complain that the analysis here is imperfect and erroneous. Whatever be otherwise the rank of these gases in the scale of existence, they are modes of my present self; therefore, they are not unsentient; and while their pre-organic existence is allowed, their pre-conscious existence cannot be allowed: whence it follows that, while they could be the source of my organic forms, they could not be the source of my conscious existence. Before consciousness there was no cosmos nor nebulæ nor gas, because all these are modes of consciousness. A dubious view of this pervades some of the writings of Mr. Spencer. At times he loses sight of it, and then again it dimly recurs to him, and he tries to explain it by saying that all phenomena are symbols of an unknown power or force. Whence it would seem that he thus relegates the effective agency and process of evolution to the region of the unknown, and leaves it to be supposed that the phenomenal forms and motions are only an ineffective play of unsubstantial images.

This Sentient Being or World is a Force.

Symbols of an unknown force these phenomena may be, but they are surely themselves forces, else they could not be symbols. This explanation is, therefore, very erroneous and irrelevant, if it is designed to insinuate that all phenomena are forceless and that all force is unknown. While an objective evolutionist may thus escape from the false position that the lower cosmic phenomena are unconscious and the generator of consciousness, this escape is no better than its alternative. It contradicts the theory of objective evolution, and goes against the general index of all modern science, which surely declares or indicates that the known pre-organic world is a force which evolves the organic forms of life. It also confounds all speech and action in the practical world. If all phenomena are forceless, and so evolve nothing, then it is but to repeat the same in more concrete form to say that there is no force in all the known action of gravitating bodies, in all the motions of winds and waters, fire, hail and frost, thunder and lightning, or in what is called electric energy; and all the science of modern dynamics is a nullity and misnomer. Surely there is no possible evasion of the fact that phenomena are themselves forces and not merely symbols of forces unknown. "Whatever is is force." It can prove its existence only by its action as force; so that not the forceful but the forceless it is that must be forever unknown. To say in reply that the known is the powerless effect of the unknown is to say that all the heavens and earth and sense and inner consciousness do nothing and suffer nothing. In that case, they cannot symbolize and represent the action of the unknown, for to do that is a vast and varied exercise of power. Further, if the known universe is powerless and so cannot do or suffer anything, what is it, and what is the use of it all? It is a wondrous panorama of nothing. Yet, being so wondrous, it certainly is a power to produce the feeling of wonder. But common sense and all science ascribe quality to all known things, and we classify and describe and designate them according to these alleged qualities; and the term quality is but another term for force.

This Sentient Being or World is One with the Alleged Great Unknown.

If we attempt a recession to a pre-sentient existence, we shall undertake a task which is much greater than we have imagined. That goal has heretofore been supposed to be reached as soon as we attain the pre-organic world. We have now seen that this was an error, that the said pre-organic world is only a complex mode of our conscious self, and that this must be so forever, however far back we go. The pre-sentient can never be known by experience. Whether it can be inferred from experience is the next question to be considered. This question must be answered in the negative. The world is known and conceivable only as phenomenal, and its lowest and supposed earliest known forms (as well as all later and higher forms) are sentient modes of the *ego*. Heretofore, no one has attempted the incogitable supposition that a world existed prior to all phenomena, before there was any gas or light or fire-mist. The proposition is without meaning, and only verbal because the term "world" is here empty of every thought or image. Were this supposition maintained, it would admit of no proof, because the proof must be phenomenal. In short, such a world is every way inconceivable, and there is neither logic nor common sense nor practical use to call for the assertion of its existence; and the assertion if made would be only verbal, a mental nullity.

In considering the existence of a known force whose extent we may not yet know, a force which may in future exist in infinitely different and nobler forms than in the past, we have a very different question before us. We are not supposed to necessarily know everything that exists, or the capability of everything which is more or less known. We are conscious of perpetual changes. Forms come and go in countless multitudes and endless variety. These changes are not examples of annihilation and creation, but of evolution, and imply a continuity of substance and force as common to all phenomena. This great common substance or force is that which has been called the unknown. In one aspect it is unknown, but in its correlate aspect it is well known. It is that which appears in the phenomena, and they are nothing else than it, and they are perfectly well known.. But then, perhaps no phenomena present it in its total capability. It has an unknown power of change. In this respect, and this only, is it unknown; but the unknown is identical in substance or force with the known or sentient.

And both the Known and Unknown of this Universe are One with the "Ego."

If next we inquire what these are in relation to the *ego*, the answer will be prompt and clear. All phenomena being one with the unknown and one with the *ego*, it follows that the *ego* is one with them. The *ego* and the unknown bear the same relation to phenomena. Their identity is therefore an obvious demonstration, an example of the axiom that things which are equal or identical with a third are equal or identical with each other. Hence, we need not go beyond the *ego* for any of the purposes of physical science. If there is an ether, it is *ego;* and all its vibrations are modes of the *ego*, conscious or unconscious. Egoistic are all the chemical forces, all the so-called correlated forces, as well as the uncorrelated force of gravitation, all forms, colors, and motions of chaos and cosmos, and also the great unknown whence they all are supposed to spring. Evolution is thus made complete and consistent by being made subjective. All phenomena and their intrinsic source are one; and, as the former are *ego*, so are the latter.

Sublime Representation of Man.

This exposition brings before us the nature of man in an aspect which is truly sublime. Man, in his essential being and quality, is not confined to a corner, like his organism; nor, like it, is he a thing of yesterday, but of all time and all space. Every man may say of himself: "I am not only descended from the worm, in the common meaning of descent, but once I was a worm. Yet I was never all worm. So, with less emphasis, I am a worm yet (known worms being modes of me); but I am also immeasurably more, just as each of my modes is me, but not all of me. So my organism is me, but not all of me. I am all that my senses can know, and all that the instruments and researches of science can reveal. Oceans, worlds, suns, and stars are rays and flashes of my individual force and fire. The pealing thunder and the vivid lightning are exhibitions of an energy of unknown extent stored up in the magazine of my being. All knowable space and time are of me, and are marks of my presence and action."

Relation of "Ego" to Organism and Environment.

We shall hence be led to modify certain prevalent notions concerning the relation of the *ego* to the organism and its environment. We allow that the organic world is evolved from the inorganic. But our organism is not all of the *ego*, not the sum total of man. It is only one complex form in a countless host, a very small fraction of the known *ego;* and what remains unknown we cannot, of course, define.

It should also be observed that every man who is in the possession of all the recognized human senses has at least two organisms and two brains and nervous systems, the visible and tangible. These are utterly unlike each other, and have no identity or connection except as they are both modes of a common subject A blind man has only one organism and brain, the visual brain being extinct or undeveloped.

Now, all objective evolutionists uniformly expound the relations of the organism to the environment on the assumption that they are thereby expounding the relations of the *ego* to the *non-ego*, strangely overlooking the fact that all the environment, whatever its place, form, or influence, is itself wholly *ego*, though not the whole of *ego*,—a great, grand combination of its conscious modes, a portion of the surface and crust of the egoistic world. The relations of the brain and the organism and environment to thought and to each other are but relations of some modes of the *ego* to other modes of the *ego*.

Hence, another obvious conclusion is that the *ego* is not evolved from the environment (though we allow

Digitized by Google

that the organism is thus evolved), since the environment itself is *ego*. It is the evolution of one mode of the *ego* from other modes of the *ego*, not from the *non-ego*.

We are now prepared to see that we have no proof nor any reasonable ground for a conjecture that the *ego*, as such, is the product of evolution. As it includes all the knowable universe, there is nothing conceivable from which it could be evolved. If the *ego* had a beginning, that could not be by evolution. It must be created. Evolution is only the beginning of new modes in that which has existed previously in other modes. The *ego*, or universe, cannot, therefore, be evolved from anything whatever. It is eternal, indestructible, and self-sufficing, or it is the product and created pendant of a Higher Power.

All knowable evolution, then, is within the *ego*, a change in the modes thereof by the interaction of part on part; and it is the great office of science, in all its various departments, to observe the laws and conditions in accordance with which this evolution occurs, whether as between the organism and its environment or between the different parts and forms of either of them. The *ego*, as the individual man, is the great abiding and universal fact and factor, and the seat of all immediately known authority and power; and we have nothing but its modal changes to observe and chronicle, to deduce their laws and thence to learn how to make use of them. And, while doing this, an imitator of Pascal may find more evidence than even Pascal could ever before see of "the greatness and littleness of man."

Relation between Thought and Brain.

A little further reflection will hence teach us that we must modify some of our notions of the relation between thought and brain, and that we should learn to be less profuse and confident in our comparisons between thinking things and what we call unthinking things, which, so far as we know, are modes of our conscious selves. To say that we know of no thought or consciousness without a brain has now become unmeaning or false. Thought is everywhere, and everything is thought. Thought is the substance and force, the essence and form, of all the universe. We know nothing else, and nothing else can we conceive; because everything is mind in action, a mode of consciousness. Whenever known, brain is itself simply a mode of the conscious *ego* equally with every tree, rock, or star, or other sensible object. There was thought before there was brain, because there was a pre-organic world, or conscious *ego*. Brain, so far as we know, is always associated with an *organic* form of consciousness, but with no other; and that form is infinitesimal compared with all the rest. This annihilates the modern *a priori* argument against the existence of intelligence without a brain and nervous system. The contrary fact meets us everywhere in the inorganic world. To deny the existence of a personal Deity because he cannot be supposed to have any brains is an apparition of the old defunct mediæval apriorism in antagonism with the acknowledged *dicta* of modern psychology. This, of course, is no proof of Deity; but it is a rebuttal of an opposing and false assumption.

Relation between Organic and Extra-organic Phenomena.

The most difficult task which sensism has ever been called upon to perform is to explain the connection between organic and extra-organic phenomena. Here the old dualists enjoyed the comfort of a supposed obvious advantage over the old atomists. For years, it is said, Hobbs labored unsatisfactorily to answer the question, "What kind of motion can it be that produces the sensation and imagination of living things?" Modern evolutionists are here in little better condition, according to their own confession. Several of them, Spencer, Huxley, Tyndall, and John Fiske, have given utterance to the feeling of despair on the subject. They have said that no satisfactory explanation has been given, or seems as yet possible.

I hope I shall not be hastily and inconsiderately pronounced superficial if I say that, if the old atomism is abandoned, the case is altered so that even on their own theory they make this gulf artificially wide and raise an unscientific difficulty. I deserve the credit of candor for saying this, because I could easily make capital for my own theory out of their admission, if I thought it anything more than a misapprehension; for, on my theory, I can easily show the scientific unity of inner and outer phenomena, which they despair of showing on their objective theory. The subject should be contemplated simply and solely in the light of the great scientific law of phenomenal uniformities. Science does not recognize the legitimacy of any inquiry or answer concerning the mode or the "how" of the results of nature's operations, except so far as they refer for explanation or justification to the uniform connection of phenomenal antecedents and subsequents. When these are not traceable there is no scientific explanation. When they are traceable, then the explanation is scientific. I hold that such a connection is traceable between the extra-organic world of phenomena and the organic consciousness. We have no right to say that no molar or molecular motions in the external world in any condition can produce the forms of organic consciousness; and we have no evidence of the power of aught for the production of aught else, except from their uniform relation as antecedent and consequent or subsequent. Hence, we need not in any case to do more than show this connection (and in no case can we do more) in time and place as proof that the connection is one of cause and effect. On this ground, I see no more gulf between these two classes of phenomena, on the objective theory of evolution, than I see between different classes of external phenomena regularly connected. There can be no question that the organic and inorganic are as regularly connected with each other as are the phenomena of the external world with each other. So much in aid of a theory which I supersede or rather absorb, and which will be my most vigorous opponent.

This question, however, assumes quite a new aspect under the light of philosophical realism, which annihilates the gulf between things and feelings or thoughts, by making all things to be modes of consciousness, different species of feelings under one genus, as egoistic modes or subjective states; and so the change of chyle into muscle and nerve and brain and thought and volition is only the evolution of one set of experiences or subjective states into others. The transition is, therefore, not so great on this theory as on the other. There is no transmutation from unconscious thing to feeling, for all things are feelings. The change is only of inorganic and extra-organic feeling into organic feeling and super-organic feeling or thought and volition. The whole known universe being but one individual, which we call the subject or *ego*, there is throughout it very manifestly a perfect unity of efficient causation. The origination of organic life from pre-organic forces presents on this theory no *a priori* improbability, as it is only the progress of one individual from a lower to a higher condition, a process which in various forms and degrees is allowed by all, without any question.

CORRESPONDENCE.

A QUESTION AND A CRITICISM.

Editors of The Index:—

Was it a deliberate step in advance? Was the day of the late anniversary meeting of the Free Religious Association its "red-letter" day? Because more time was given to co-operation and more interest was apparently elicited by the discussions upon that topic than any other which came before the meeting, can it be justly inferred that the Association, as such, committed itself in favor of co-operative ideas and methods, or that it has expressed an opinion even regarding them? It would be a satisfaction to a not inconsiderable number of liberal minds to be able to feel that, by the fact of having admitted that discussion to its platform, the Association had committed itself, and meant thereby to commit itself to practical as contradistinguished from merely metaphysical and theological righteousness. Much, however, as I might desire it, I do not expect to see *The Index*, as a result of that discussion, taking that lead in religious journalism which it might easily obtain by championing co-operation and other kindred questions of social equity so sorely called for in the interests of public and private morality and the common welfare.

Perhaps there are those who think the adoption of the resolution of Mr. Towne's, calling for the appointment of a committee to report a plan of "restrictive taxation," commits the Association henceforth to actual measures of practical reform. But the meeting, I noticed, after adopting the resolution without dissent, adjourned for the supper-table without appointing the proposed committee. And besides, the measure proposed, that of restrictive taxation, is one whereby a citizen shall have his entire income above a sum fixed by statute taken by the State in the shape of taxes for the public use. This is one of the most radical and revolutionary measures of the social democrats, and has been denounced in all countries by the property-holding class as among the most intrusive and anarchical of all the schemes of those exacting agitators. Will not Herr Most, when he reads of this action of the Free Religious Association, feel that his ideas are winning converts by the wholesale, and that he can best serve his cause by doing nothing himself? Will he not be tempted to say to the Association, as Agrippa said to Paul, "Almost you persuade me to be" a Free Religionist? Will not Mr. Henry George also feel a laudable pride in the success of his book? For is not "restrictive taxation" one of his measures? If Mr. Towne's resolution was intelligently and deliberately adopted by the Association, the occasion was certainly a "red-letter day" for Herr Most and Mr. George, whether it was or was not for that body. Now, I do not by these remarks intend them as derogatory to the Free Religious Association on the one hand, nor derogatory or complimentary to Messrs. Most and George on the other; and in respect to restrictive taxation as a measure of negative action for the reformation of social oppression, I here make no objection. In all the foregoing queries and suggestions are implied reasons for doubting that the Association, at its last anniversary meeting, made any new departure, or that it either committed or intended to commit itself in any way to co-operation or any other measure of practical reform, and that it acted hastily, even impulsively, in adopting Mr. Towne's resolution.

I am sceptical as to the Free Religious Association having any purpose of entering into practical reform, even religious reform; much more as to its disposition to indorse and promote practical co-operation. The elements which compose it forbid that it should. The Free Religious Association is only a platform of incoherent, not even agglomerated thought, where men and women of a certain degree of culture and respectability may sow their opinions to the air; but whether or not these shall fall into a receptive and generous soil, germinate and fructify into beneficent institutions for the elevation of the people and their redemption from systems of organized temptation and compulsion to crime, vice, and general social wrong, has never been its purpose or business to say. I could wish that my desire and that of many others for a religious movement earnest enough to grapple with institutionalized injustice and iniquity might find an answer in the action of the Free Religious Association. I greatly fear such a wish cannot with reason be cherished. When I hear from its officers and members rejoicing over the increase in numbers of the rich and very reputable people who come up to their annual feast, rather than over the sturdy and earnest work it has done, in the cause of righteousness, for the poor and oppressed, I am made to feel that we are to look elsewhere for the religion which is to lift up the people, to save them and make them one in the Divine Humanity. JOHN ORVIS.

[This year is not the first time that the topic of "Co-operation" and kindred subjects have been discussed in meetings of the Free Religious Association. At its first anniversary, an essay was presented on "Philanthropy and Social Reform," and after it Wendell Phillips made an address of which the main thought was *co-operation* as the method of solving the social problem. "Religion as a Social and Philanthropic Force" was one of the subjects at the third anniversary, and "The Relation of Religion to Social Science" has been more than once discussed on the Association's platform. In its former lecture courses in Horticultural Hall, one series was almost wholly devoted to social topics. That these topics might profitably receive more attention is doubtless true. But the introduction of them is no new departure. *The Index* has always been open to their treatment, and we always welcome any wise and earnest words upon them.

As to Mr. Towne's resolution, our correspondent could not have heard it, or else he had forgotten its purport. It proposed no such special measure as "restrictive taxation," but simply requested the executive

Digitized by Google

committee "to take steps to secure for publication the best possible essay or treatise on the legislation necessary to secure a just recognition of the right of labor to a fair share in the profits of labor"; and, as the resolution referred itself to the executive committee, no appointment of a special committee was called for.

In his last paragraph, Mr. Orvis not only shows a confusion of ideas in his own mind as to the province of the Association, but he uses words which amount nearly if not quite to a charge of insincerity against the Association. Surely, it is not possible that the men and women who have been at work all these years in that organization, and at their various posts of duty elsewhere, have been merely playing at reform; that they have had no earnest purpose in their work! And if they have not accomplished all that they themselves might have wished, it may be because the problem of human amelioration to which they have set themselves is vaster than those who labor at special reforms are apt to imagine.—ED.]

RELIGIOUS RATIONALISM, — "AMERICAN SPIRITUALIST ASSOCIATION."

Editors of The Index:—

In your issue of May 31 was a thoughtful article by Count D'Aviella on "Religious Rationalism in the United States," in which the Free Religious Association, Unitarianism, etc., were discussed as to their aims and tendencies. Spiritualism was but briefly alluded to, the author having no documents from which to give information. Any view of the tendencies of thought among us which leaves out a movement which influences millions of our people, more or less, must be imperfect. At a meeting in Sturgis, Mich., June 14–17, called by the committee of a national conference held at Detroit last October, the American Spiritualist Association was organized in response to the wishes of thoughtful persons from different parts of the country. A statement of objects and principles will give some idea of the tendencies and scope of Spiritualism:—

American Spiritualist Association.

OBJECTS AND AIMS.

The objects and aims of this Association are to study Spiritualism in its scientific, philosophical, and religious aspects and uses, and to teach its truths as we learn them; to maintain high and pure principles on all vital questions of practical life and duty; to seek for the best spiritual culture and the most harmonious character.

DECLARATION OF PRINCIPLES.

While no assent to a fixed creed or confession of faith is required, the following statements may be held as embracing leading ideas accepted and sacredly cherished by most of our members:—

IMMORTALITY.

Man is an indestructible, conscious entity. The change called death is but the separation of the spirit from the earthly body and its passage into a higher life, retaining an indestructible body of spiritual substance.

SPIRIT INTERCOURSE.

It is a demonstrated fact that arisen spirits, under favorable circumstances, can and do communicate with man to aid him, to give him consolation, heal his maladies, correct his errors, lead him to higher truth and happiness, manifesting their presence in various ways. All are susceptible to the influence of spirits, some in a much greater degree than others. This, like other faculties, can be cultivated; and, when well developed, some persons can be controlled by a spirit to speak and act for that spirit more or less perfectly. In ancient times, such persons were called seers or prophets, and are now usually called mediums. Seers, prophets, mediums, and spirits cannot be infinite and infallible; therefore, all revelations thus given should be judged as they may merit.

LAW.

Everything in the mundane and spiritual world is governed by immutable law.

DEITY.

A supreme Intelligence, a central and all-pervading Soul, rules all by universal law.

RIGHTEOUSNESS THE SAVIOUR.

Happiness is the result of the harmonious exercise of wisdom, virtue, love, and purity. While right belief is of consequence as an inspiration to right conduct, yet character is the supreme consideration,—not the belief so much as what we are.

PROGRESS.

Eternal progress is the normal condition of the human spirit,—evolution of mind and soul, as well as of rock and plant, to finer uses and larger powers.

RIGHT AND DUTY OF AMENDMENT.

As man is progressive, we hold to the right and duty of every organization to revise its declared principles as deemed best; therefore, these statements may be amended.

It is a noteworthy and peculiar feature of this declaration that its last clause makes its amendment a "right and duty," and thus puts progress in thought as a blessing, its promulgation as a "duty" instead of a heresy. Let all dogmatic creed-makers take note and take warning.

J. G. Jackson, of Hockessin, Del., is president of the association,—an excellent man of Quaker lineage.

A new study of the *inner life* of man, of his wondrous spiritual faculties and relations, of the *fact*—clear to soul and senses—of a life beyond and an open door between us and the people over there, and a perception of the positive control of mind over matter—from the microcosmic life and being of man to stars and suns—leading to the Supreme Intelligence in and over all things, may be briefly given as the tendencies of the spiritual movement. As we must reach that, or atheism and materialism, it certainly is worthy attention and thought. Truly yours,

G. B. STEBBINS.

DETROIT, MICH., July 2, 1883.

THE ORIGIN OF CHRISTIANITY.

Editors of The Index:—

In an article by Mr. Robert C. Adams, in *The Index* of March 8, entitled "The Bible a Human Book," we are told: "Draper, in *History of the Conflict between Religion and Science*, shows the Oriental origin and human development of Christianity. Greg's *Creed of Christendom* and Taylor's *Diegesis* do the same. All the Christian dogmas are found in previous creeds in Egypt, Persia, and in India, or in classic mythology." These statements, I take it, are too sweeping.

I fail to find where Draper and Greg show the Oriental origin of Christianity,—that is, outside of Judaism, which seems to be Mr. Adams' meaning, according to the context. Christianity did not originate in Paganism, but was, in its incipience, a purely Jewish development. Even the root, the foundation, of modern Orthodoxy is Judaistic. The central principle of Christianity is the Messiahship of Jesus, and this was an exclusively Jewish conception originally The doctrines taught by Jesus were essentially, not to say exclusively, Jewish, so far as his derivation of them was concerned. They are all found in previous and contemporary Jewish literature. Everything attributed to Jesus in the Synoptic Gospels parallel with the sayings of heathen writers is paralleled as well in the sayings and writings of his own countrymen, the Jews. Jesus evidently knew nothing of heathen literature or philosophy. It is well known that the first Christians (using the term afterward applied to them in the Gentile world), the twelve apostles and their converts, the original primitive Christians, were strict Jews, observers of the Mosaic ritual, and differed in no respect from other Jews, except in their acceptance of Jesus as the Messiah and their belief in his speedy reappearance on earth to establish his Messianic kingdom. To be sure, after the new *cultus* had been disseminated in Gentile lands, with its Pauline modifications, it gradually attracted to itself pagan accretions, culminating with the large absorption of heathen elements under the Roman Catholic hierarchy. But it is the accretions, the modifications of Christianity, which are pagan,—not its fundamental basis, which is purely Jewish.

Certainly, also, the strict monotheism of Christianity was not derived from paganism, but from Judaism. The communion service had its origin in an incident at Jesus' last supper in Jerusalem. Baptism was Jewish in origin. Preaching and sermonizing, a distinctively Christian practice, sprang from the synagogue services of Judea. Christian prayer is descended, in a direct line, from the use of prayer by Jesus and his Jewish contemporaries. The doctrine of the vicarious atonement of Jesus had its origin in the sacrificial system of the Jews. Paul, a Jew, laid the foundations of this dogma, basing it on the Jewish animal sacrifices; and the pseudo-Pauls in the spurious Pauline Epistles, with later leaders in the Church, expanded the nascent Pauline dogma, until it assumed its modern proportions. The doctrine of the existence and action of the Holy Ghost was Jewish in its origin. The millennium was a Jewish-Christian dogma, being found at length in the Book of Revelation, an intensely partisan work of an intolerant Jew Christian. The speedy end of the world, the resurrection, the judgment day, the reward of the righteous in heaven, and the punishment of the wicked in hell, were all derived by Christianity from Judaism, as was also the dogma of the existence of a personal devil. Some of these dogmas may have been derived by the Jews from the Persians, during the Babylonian captivity, such as those concerning the resurrection, Satan, heaven, hell, etc.; but this is by no means a settled fact as yet. Some of the best scholars hold that, although points of similarity exist between the Persian and Jewish conceptions on these points, the points of contrast are also so strong between them, and those of the Jews are so Hebraic in character, that the more rational conclusion is that they were the product of Jewish development from pre-existing germs, found in the earlier religious consciousness of the Hebrew race. Justification by faith is also of Jewish origin, Paul having been its most earnest promulgator, though it is possible a modified form thereof was also inculcated by the twelve apostles at Jerusalem. The terms "salvation," "grace," "redemption," "regeneration," "Son of God," "Son of man," "kingdom of heaven," "Father in heaven," etc., were household words in Talmudic Judaism in the first century. (See Deutsch's *Literary Remains*, essay on the Talmud.) The Deity of Christ, though never inculcated by Paul, yet had its roots in Paul's undue exaltation of Jesus to a pinnacle of glory but little inferior to God himself; while the pseudo-Pauline Epistles come very near to, if they do not really reach, the ascription of absolute divinity to Jesus. The Trinity, as essentially non-Jewish as it is, was merely the natural efflorescence of Jewish-Christian seedlings. The Father, the Son, and the Holy Ghost were all recognized in early Jewish Christianity,—the Son as a man chosen of the Father as the Messiah, and the Holy Ghost as an influence from the Father. By a natural process of theologic evolution, in due time these three became hypostatized into the triune personality of the Nicene creed.

Instead of being borrowed from pagan originals, as Mr. Adams' remarks would imply, nearly all the distinctive features of Christianity are Jewish in their origin. The Messiahship of Jesus, the ethics and theology of Jesus, the unity of God, vicarious atonement, baptism, the Lord's Supper, the resurrection, the judgment day, heaven, hell, Satan, prayer and preaching, faith, regeneration, salvation, the Holy Ghost, the millennium, these—the very essential basis of Christianity—all had their origin in Judaism; while even the Deity of Christ and the Trinity, non-Jewish as they are, had their roots in first-century Judaism. The statements quoted by Mr. Adams, that "every Christian dogma had its origin in a heathen rite.... Christian theology is only a *potpourri* of pagan mythologies," and that "nearly everything in Christianity is mere baggage brought from the pagan mysteries" (Renan) are misleading. Indeed, Mr. Adams' next sentence following this quotation from Renan, in which he states that Renan claims that the Jewish prophets, Isaiah especially, were the founders of Christianity, all that Jesus did being to repeat the ideas of those prophets, is a contradiction of his (Renan's) assertion that Christianity was borrowed from "pagan mysteries." Verily, the ethical injunctions of Isaiah, Micah, Hosea, etc., have little in common with the pagan mysteries. There is some truth in this latter idea of Renan; for the eighth-century prophets did largely anticipate the teachings of Jesus, and the general ethical import of the two has much in common. So much the more clearly, then, is Christianity not derived from paganism. Moreover, Renan (*Hibbert Lectures*, p. 16) says, "Christianity at its origin is no other than Judaism."

Mr. Adams quotes from Taylor, "Everything of Christianity is of Egyptian origin," and adds, "The fables of India and Persia were brought to Egypt and recast." Really, very little in Christianity is of Egyptian origin. It is often stated by superficial scholars and thinkers that Christianity was largely derived from the philosophy of Alexandria in Egypt, and that the Alexandrian philosophy was largely a product of Hindu genesis: *ergo*, Christianity is of Indian origin to a great degree. Now, it is probable that the Greco-Alexandrian philosophy very considerably influenced the development of Christian metaphysics in the early Christian centuries; but the Egyptian or Indian origin of these speculations is very problematical. Rather are they purely Grecian. Le Page Renouf, one of our leading Egyptologers, in his *Hibbert Lectures* on "The Religion of Ancient Egypt," pp. 256–259, remarks as follows: "The existence of Egyptian elements in Hellenic religion and philosophy has long since been disproved. The supposed travels of Pythagoras and other ancient

Digitized by Google

philosophers to Eastern climes — Chaldea, Persia, India, and Egypt — are fabulous inventions. . . . The importance of Alexandria as a medium of exchange of ideas between the Eastern and Western worlds must also be considered as exploded. . . .

"The most accurate analysis of the Alexandrian philosophy has not succeeded in discovering a single element in it which requires to be referred to an Oriental source. All attempts to refer Alexandrian opinions to Eastern sources have proved abortive. And, long before the great work of Zeller on Greek philosophy had dealt with the problem in detail, M. Ampère had shown how extremely improbable the received hypothesis was. Alexandria was a commercial Greek town, inhabited by a population which cared not the least for Eastern ideas. The learned men in Alexandria were Greeks, who had the utmost contempt for barbarians and their opinions. Of the Egyptian language and literature they were profoundly ignorant. . . . And, if Alexandria was not the means of communicating Egyptian ideas to the Western world, still less was it the channel of learning from the farther East. It is an error to suppose that Alexandria was on the chief line of traffic between Europe and Asia. During the whole period which followed the foundation of Alexandria down to the Roman times, there was no direct communication between this city and the distant East. Indian traffic was in the hands of the sea-faring Arabs of the Persian Gulf, the Gulf of Oman, and the Gulf of Akaba. It came to the shores of the Mediterranean through Seleucia, Antioch, and Palmyra, or through Gaza and Petra, the chief town of the Nabatæans." There is no trace anywhere that India ever exerted any extensive influence on Egyptian thought, philosophy, or science. The nonsense on this subject that was formerly so prevalent has been disproved, and no competent scholar of to-day but knows its falsity. The Buddhistic origin of the Essenes, and through them of Christianity, is another exploded absurdity, though still upheld by "cranks," like Ernest de Bunsen. The Therapeutæ of Egypt, with whom the Essenes and Christians have been identified, are now known never to have had an objective existence, the account given of them in the *De Vita Contemplativa*, falsely attributed to Philo, being, in all probability, written by a Christian in the name of Philo, in the third or fourth century. (See Kuenen's *National Religions and Universal Religions*, pp. 214, 215.) No proof exists that Indian and Persian fables were recast in Egypt, and thus transferred to Christianity. Christianity is essentially Jewish, with Grecian and Roman additions and modifications. The influence of any other forms of religious or philosophic thought upon it in its earlier phases of development was but slight, except, perhaps, in the cases of certain ceremonial observances, etc., which may have been derived from Buddhism. This is still an open question among scholars. W. E. COLEMAN.

THE WORK OF BRUGSCH BEY.

Editors of The Index:—

I note in your last issue that a Parisian party are proposing to drag the Red Sea in search of the chariots of Pharaoh. Perhaps they would do well first to examine the recent work of Brugsch Bey, a learned German with an Egyptian title, who has been for many years a diligent and successful student of the antiquities of the land of Egypt. A very interesting sketch of this work was given by Mr. F. H. Underwood two or three years ago in the *Atlantic Monthly*, from which it appears that the researches of the Bey have led him to the assured conviction that the Israelites did not cross the Red Sea at all, but proceeded on this side of it along a sandy tract some twenty or thirty miles long,

> "'Twixt Damieta and Mount Casius old,
> Where armies whole have sunk,"

and bounded by the Mediterranean on the north and the Serbonian Bog on the south. They succeeded in crossing in safety; but Pharaoh's pursuing host, overtaken by a not very extraordinary high tide, shared the fate of those other "armies whole." And this conclusion the Bey asserts is not only proved by records and monuments, but is fully borne out by a true interpretation of the Hebrew Scriptures.

It is surprising that this portion in particular of the valuable work in question has not commanded more general attention. C. W. S.

BOOK NOTICES.

THE BOTTOM FACTS CONCERNING THE SCIENCE OF SPIRITUALISM. Derived from Careful Investigations covering a Period of Twenty-five Years. By John W. Truesdell. With many descriptive illustrations. New York: G. W. Carleton & Co. 1883. Pages 331. Price $1.50.

The author of this work claims to have devoted considerable time during the past twenty-five years to the careful investigation of the so-called manifestations of modern Spiritualism; and, in this volume, he presents to the public the results of his efforts to get at the "bottom facts" of the subject. How "spirits" communicate by means of the "ballot-test," how they do "slate-writing" by seven different methods, how they "materialize" and "dematerialize," how they conduct "the dark circle" exercises, how they exhibit their power through "the cotton bandage tie," how they construct paraffine moulds from materialized hands, how they cause the names of the dead to appear upon the naked human arm,—these, among other performances, are explained with illustrative figures which greatly help the reader to understand some of the processes by which deception is practised by mediums. The explanations given of the so-called phenomena described have the appearance of probability in their favor, although their validity depends largely upon the honesty and veracity of Mr. Truesdell.

He relates his experience with a number of noted mediums, and describes what he represents as different ways of practising their art. He gives a description of a sitting with the medium Foster, and the method by which he discovered his deception in the "ballot-test," and exposed his fraud: "In a moment, Foster was in a towering rage. He ordered me out of his house, swore that he would call the police, and demanded his pay for the sitting all in the same breath. I took it all very coolly; for I had met such mountebanks before, and knew that, as a rule, 'barking dogs seldom bite.' After his obstreperous wrath had somewhat subsided, I quietly said, 'Mr. Foster, is your malady owing to mental trouble, or are you suffering from the attack of a remorseless diakka?' He looked at me for a moment in amazement, when I smiled; and it was not long before we both broke into a hearty laugh. I told him that he was one of the best actors I had ever met; and he returned the compliment by telling me a fact which I had never before suspected, that I was a medium of no small calibre. Foster then explained to me many hitherto inexplicable mysteries. . . . He congratulated me upon my development in spiritual knowledge thus far, and declared that he could plainly foresee bright prospects before me as a medium in the near future. He cautioned me against confiding the secrets of the spirit world to any who are unable to bear them."

Afterward, Mr. Truesdell visited Slade, two sittings with whom enabled him to see through the fraud of his slate-writing feat, which he also exposed. "He seemed appalled. Had a thunder-bolt from heaven fallen at his feet, he could not have been more astounded." But Slade was soon "as mellow as a ripe apple," and, like Foster, imparted to him "the great secrets of our wonderful and delicate spirit manifestations," declared that from him there was nothing more to conceal, and added, "We cheerfully welcome you to our royal ranks as a true and absolute medium, through whom we hope to make many converts to our glorious cause." After this, Mr. Truesdell says that *he* began giving private circles, that crowds of people came pouring in upon him, that hundreds of Spiritualists from all quarters sent him hearty congratulations; and he adds, "So rapidly did I rise in the spiritual ranks, so astounding and miraculous were the reported phenomena occurring through my influences, that, within four months after my ordination by Slade and Foster, I even began myself to doubt my suddenly acquired gifts." He was especially proficient as a slate-writer. During these years, although many became convinced by his performances that they had received communications from spirit friends, Mr. Truesdell did not deny that he was a "medium" or that his tricks were the doings of spirits. So convincing were his "tests" to Mr. L. W. Chase, whom Mr. Truesdell describes as "an honest, earnest seeker after spiritual knowledge," that the former gentleman, in 1872, publicly called upon scientific men to investigate the proofs of spirit communication through Mr. Truesdell, who, he said, "seems willing to devote a good share of his time gratuitously to the development of this great truth." Imagine the chagrin and pain with which he must have read in this work, ten years later, that a few clever tricks like those of a juggler "are the bottom facts regarding that great séance which Mr. Chase admitted at the time was the most remarkable and convincing proof of immortality he had ever witnessed during an active experience in spiritual research for more than a quarter of a century"! In this matter, Mr. Truesdell does not appear morally in a very favorable light.

In regard to slate-writing, Mr. Truesdell says, on page 179, "I hold myself in readiness, at any moment within the next twelve months, to enter into a contract with any honorable and responsible party, to pay any slate-writing medium in the world the sum of five hundred dollars, if he will induce a spirit to write, in my presence, a message containing three or more intelligible words upon any slate without the aid of some external and physical force." The main conditions are that expenses of the experiment must be guaranteed, and he "must be the last person who is allowed to examine the slate after the circle is formed and before the writing is attempted."

Some of the alleged phenomena of Spiritualism no attempt is made to explain, nor are they referred to; but the author evidently believes that about all that passes under the name of spiritual phenomena is attributable to trickery and fraud of one kind or another. And this is not strange, since, according to his account, he has found trickery and fraud at the bottom of all the wonderful "manifestations" which he has closely examined. The last chapter, "To Spiritual Mediums only," concludes as follows: "If you would rank high as a professional medium, be very guarded and reticent in your intercourse with the whole of your professional brethren. Never, in any circumstances, be inveigled into an acknowledgment of any mediumistic powers which they claim, or the recognition of any spirit-control whatsoever apart from your own. By strictly adhering to this course, you will command the respect of the whole fraternity of mediums, many of whom will be inclined to believe that *you* may possibly be genuine, although they know themselves to be frauds. . . . Like a clairvoyant physician who pretends to interpret character and diagnose physical ailments by the aid of a lock of hair, you will thrive and fatten upon the credulity of the people; and, while one clear-headed person may penetrate your deliberate and almost transparent hypocrisy, half a score of new converts will rally to your support."

The work is written in an easy, entertaining style, through which runs a vein of sarcasm that leaves one in doubt, until he gets fairly into the book, in regard to the extent to which the writer rejects the claims of Spiritualism. All through the work, the author professes humorously to be under the control of a "diakka," who is described by Andrew Jackson Davis as "a spirit who takes insane delight in playing parts, in juggling tricks, in personating opposite characters," etc. The work may have the effect of causing some of the adherents of Spiritualism to re-examine the basis of their belief, while it will tend to make general readers more doubtful than heretofore in regard to the spiritual character of performances claiming to be such.

STARTLING FACTS IN MODERN SPIRITUALISM, with a Graphic Account of Witches, Wizards, Table-tipping, Spirit Rapping, Spirit Writing, Spirit Speaking, Spirit Telegraphing, and Spirit Materializations of Spirit Heads, Spirit Hands, Spirit Faces, Spirit Forms, Spirit Flowers, and every other Spirit Phenomenon that has occurred in Europe and America since the 31st of March, 1848, to the present time. By N. B. Wolfe, M.D. Revised, enlarged, and appropriately illustrated. Cincinnati: Startling Facts Publishing Company. 1883. Price $2.25. (For sale at *Banner of Light* office, 9 Montgomery Place, Boston.)

The first edition of this work appeared in 1873. It is a sketch of personal experiences the author has had in "investigating the facts of modern Spiritualism." And no new phenomena having appeared, as he claims, since the work was written, he thinks it may be considered a full and well-digested *résumé* of modern phenomenal Spiritualism from 1848 up to the present time. The writer claims to have had unusual opportunities to find out whether what is claimed for Spiritualism is true or false. He asks the reader to discriminate between what he records as facts and the opinions he has advanced. "Opinions," he says, "are tramps, vagabondizing through the empire of mind, subsisting on flattery or the charity

Digitized by Google

of pampered ignorance. Truth attended with facts walks with majestic mien in the honored palaces of the soul, seeking no human applause at human shrines." When he was a boy, the author heard much about witches, and, in full sympathy with Sir Matthew Hale, "thought the man who did not believe in witchcraft an obdurate Sadducee, and should be made happy in his disbelief by a little roasting." "What wonder, then," says Mr. Wolfe, "if, in after life, when the subject of witches or witchcraft came under my notice, I pricked up my ears to hear everything that was said." He gives a graphic account of his first experience with witches, consisting in observations of strange occurrences, such as the movement of objects without physical agency many years ago; and then proceeds to give with much circumstantiality narratives of performance, such as table-tipping, spirit rapping, reading sealed letters, interviewing spirits, slate-writing, singing by spirits, communications from spirits in various languages, from Josephine, Ney, and others, touches by spirits; an orchestra floating in the air, mediums floating along the ceiling, materialization of Josephine who displays her pearls, and of Ney in regimentals; the materialization of flowers; the appearance of Buchanan and Douglas, also Napoleon, Cardinal Richelieu, Marie Antoinette, Charlotte Corday, Madame Lafayette materialized, and other "manifestations," with accounts of which the public are now quite familiar. There is, apart from these narratives and descriptions,—which get to be rather monotonous to one who has no faith in the spiritual character of the performances,—considerable philosophizing; and some of it is quite sensible. For one who can believe so much, it seems somewhat strange to see that he has little, if any, confidence in the "pretensions of trance-speakers." He says that L. Judd Pardee used to claim that he spoke under the influence of the Nazarene or John the Baptist, when his lectures had been written out and committed to memory. Mr. Wolfe says he assisted him in preparing some of these lectures. Of Miss Emma Hardinge, he says she is a woman of fine natural powers and education; and her "assumed staring entrancement" is "a sham, and ought to be abated." And he represents that Thomas Gates Forster practises deception in "shutting his eyes" and pretending a spirit is *speaking* through him. He says Forster is familiar with the classics and the Scriptures, and "why he will shut his eyes and chew tobacco when he quotes from the Bible is as much a mystery to me as the profligate assumption of the departed Pardee." He has no patience with Lizzie Doten's playing "bo-peep"; for, he says to her, "You can *write* as good sentiments as you can speak, and your own style and composition are not inferior in fervor or eloquence to those which are falsely ascribed to the lamented Poe." John M. Speer he denounces as a vile impostor, with "the craft and cunning of an Indian in his nature." "If he were not a trance medium, he would be an enigma to none." "He mystifies his movements for money-making by mincing mediumship." Of E. V. Wilson, whose tests were a wonder to his audiences, our author says, "Wilson's seership is a fraud, and his clear hearing is no better"; and "Spiritualism is brought into undeserved reproach by the conduct of such charlatans." The author of *Startling Facts* is evidently an honest writer, and desires to see what he regards as genuine spiritual phenomena judged by themselves, unencumbered by the dishonest claims made and the tricks performed in the name of Spiritualism. But his judgment and discrimination are not always so evident as his honesty.

THE *Popular Science Monthly* for August is an extremely brilliant and attractive number. The opening article, by Dr. Nathan Allen, on "Changes in New England Population," is full of statistics in regard to the native New England population, which are made the basis of most interesting reflections and suggestions. W. D. Le Sueur writes on "The Anarchy of Modern Politics." Dr. Oswald continues his valuable papers on "The Remedies of Nature." An article likely to cause some excitement among holders of telephone stock is "The Telephone, with a Sketch of its Inventor, Philipp Reis," by Dr. W. F. Channing. If the statements in the paper are true, the whole claim of the Bell Telephone Company, that the art of talking through a wire was first invented by Bell, is exploded, and the courts will have to reverse their decisions, and make the telephone free to the world. An interesting and suggestive paper is that by William T. Hornaday on "The Mental Capacity of the Elephant." There are several other articles of interest. The election of Herbert Spencer to membership in the French Academy is discussed in the Editors' Table.

PERSONAL ITEMS.

THE step-daughter of John Stuart Mill, Helen Taylor, has the honor of being the first woman elected to the presidency of a standing committee on the London school board.

SAYS the Boston *Herald*: "Judge Hoadly's appreciation of Emerson is adding to his trouble with the little churches and narrow creed men of Ohio. They don't know anything about Emerson, but believe him to be 'one o' them Boston infidels.'"

MR. CHARLES WATTS, editor of the *Secular Review*, writes us that he has decided to come to the United States again in September, and hopes to speak in Boston in October. He would like to make engagements to lecture week evenings in places near Boston. Applications can be addressed to him at this office.

LESSONS

For Liberal Sunday Schools or for Home Use.

I. THE ORIGIN AND GROWTH OF CHRISTIANITY. A series of Twenty Lessons by Mr. LEWIS G. JANES, of Brooklyn. Written entirely from the Rationalistic stand-point. Prepared originally for use in Mr. Chadwick's Sunday-school. Each lesson printed in a separate slip. Twenty-five cents for the series, including postage.

II. FREEDOM, FELLOWSHIP, AND CHARACTER IN RELIGION. A series of Five very suggestive Lessons, by Mrs. KATE GANNETT WELLS. Each lesson contains enough material for several exercises. Seven cents for the series, in separate sheets, including postage.

III. THE WORLD WE LIVE IN. A Series of Elementary Lessons in Natural History, by Mr. FREDERIC A. HINCKLEY. Adapted both to interest and profit a class of children. In slips. Twenty-five cents for the series, including postage.

Teachers will do well to examine these lessons. A liberal deduction made for ten copies or more to one address.

Supplied at THE INDEX office, 44 Boylston Street, Boston.

Freedom and Fellowship in Religion.

This is a volume of Essays published by the Free Religious Association. It contains "The Nature of Religion," by D. A. WASSON; "The Unity and Universality of the Religious Ideas," by SAMUEL LONGFELLOW; "Freedom in Religion," by SAMUEL JOHNSON; "Religion and Science," by JOHN WEISS; "Christianity and its Definitions," by WM. J. POTTER; "The Genius of Christianity and Free Religion," by F. E. ABBOT; "The Soul of Protestantism," by O. B. FROTHINGHAM; "Liberty and the Church in America," by JOHN W. CHADWICK; "The Word Philanthropy," by THOMAS WENTWORTH HIGGINSON; "Religion as a Social Force," by EDNAH D. CHENEY. Also extracts from Addresses on the platform of the Free Religious Association, by Ralph Waldo Emerson, Lucretia Mott, Dr. Bartol, A. Bronson Alcott, Julia Ward Howe, Charles H. Malcom, Celia Burleigh, C. D. B. Mills, Horace Seaver, Isaac M. Wise, Robert Dale Owen, Wm. C. Gannett, Lucy Stone, F. B. Sanborn, Wendell Phillips, and others.

This book was published eight years ago, but is a live book still, and is a good answer to the question, What does "Free Religion" mean?

Price $1.50. Address "FREE RELIGIOUS ASSOCIATION," 44 Boylston Street, Boston.

BUILDING FUND.

THE Free Society of Dorchester was founded two years ago by Clara M. Bisbee, its present resident speaker; and, seeking greater facilities, also permanence as an institution, it now asks aid toward the erection of a small and simply constructed hall. Three thousand dollars will cover the entire expense, and friends of progress are respectfully invited by material gift practically to advance the cause at once of Woman's Ministry and of Free Religion. For further knowledge of the Society, address the President or Secretary of the Free Religious Association or Mrs. Clara M. Bisbee, Clark Street, Dorchester. Contributions sent to Mrs. Bisbee will be promptly acknowledged.

THE PRESENT DAY.

A Monthly Journal discussing Agitating Questions without agitation.

EDITED BY

GEORGE JACOB HOLYOAKE.

The *Present Day* is addressed to all who hold the brave and cheersome faith that life according to Reason is the best religion for the world that is, and the best qualification for the world that may be.

"False Ideas may be confuted by argument, but only by True Ideas can they be expelled."—*Cardinal Newman.*

Annual subscription, 2s. 6d. Single copies, 2d. Published by R. H. SQUIRE, 52 Fleet Street, London, E.C.

PUBLICATIONS

OF THE

FREE RELIGIOUS ASSOCIATION.

Freedom and Fellowship in Religion. A volume of ten essays upon speculative and practical problems of religion, by D. A. Wasson, Samuel Longfellow, Samuel Johnson, John Weiss, W. J. Potter, F. E. Abbot, O. B. Frothingham, J. W. Chadwick, T. W. Higginson, and Mrs. E. D. Cheney, and extracts from Addresses by Ralph Waldo Emerson, Lucretia Mott, Robert Dale Owen, Dr. Bartol, Wendell Phillips, Rabbi Wise, Horace Seaver, A. B. Alcott, Lucy Stone, Charles H. Malcom, Julia Ward Howe, and others,—all given on the platform of the Free Religious Association. Price (reduced) $1.50.

Reports of Annual Conventions of Free Religious Association, from 1872 to 1879 inclusive. These contain essays and addresses by the various distinguished men and women who have spoken on the Free Religious platform, together with yearly reports of the Executive Committee. 10 cts. each.

TRACTS.

I. *Taxation of Church Property*, by James Parton. 5 cts.; ten, 30 cts.; one hundred, $1.50.
II. *The Bible and Science*, by John Weiss.
III. *The Sympathy of Religions*, by T. W. Higginson. Enlarged edition.
IV. *Transcendentalism*, by Theodore Parker. Never before published.
V. *The Public School Question*, as understood by a Catholic American citizen (Bishop McQuaid) and by a Liberal American citizen (F. E. Abbot).
VI. *How Shall We Keep Sunday?* An Answer in Four Parts: 1. Sunday in the Bible. 2. Sunday in Church History. 3. Sunday in the Massachusetts Laws. 4. The Workingman's Sunday. By Charles K. Whipple, Minot J. Savage, Charles E. Pratt, and Wm. C. Gannett.

Nos. II., III., IV., V., VI., 10 cts. each; ten, 60 cts.; one hundred, $3.00.

Reason and Revelation, by W. J. Potter. 5 cts.; ten, 30 cts.; one hundred, $1.50.

Address
FREE RELIGIOUS ASSOCIATION,
44 Boylston Street, Boston Mass.

Remittances should be made by Money Order, Registered Letter or Draft on New York, payable to JOHN C. BUNDY, Chicago, Illinois. Do not in any case send checks on local banks.

JOHN C. BUNDY,
EDITOR AND PUBLISHER.

NOW READY:

BIBLE MYTHS,

And their Parallels in other Religions: being a comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations. 1 vol. Royal 8vo. 600 pages. Cloth. $4.00.

This work fills a place hitherto vacant in Biblical literature, and will attract the earnest attention of all interested in this special field of research. *It is a book not for scholars only, but appeals to all those who care for the future of religion.* Its object is to point out the myths with which the Old and New Testaments abound; to show that they were held in common with other nations; and then to trace them to their evident *origin* and *explain their meaning.*

It contains quotations from nearly all the sacred books of heathen nations, and from other rare and valuable works which are not accessible to people in general. The chapters are so arranged that it is a perfect cyclopædia of reference. Years of research would be necessary to discover all the information it contains. It is a most searching investigation into the origin of Christianity. Every fact is verified by copious notes and authorities, so that it may be trusted as a thoroughly reliable work. *It contains information which will be startling to many.*

J. W. BOUTON, Publisher,
706 Broadway, New York.

For sale at INDEX Office, 44 Boylston Street, Boston.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price $3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR'S basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

The office of the Free Religious Association and of *The Index* has been removed to 44 Boylston Street, next door east of the Public Library, and in the same building with the Household Art Rooms. Correspondents will please take notice.

CURRENT TOPICS.

THE American Association for the Advancement of Science will hold its thirty-second annual meeting at Minneapolis, August 15.

M. LABOUCHERE has no belief in the validity of the claims of Spiritualists or of so-called "mind-readers." He offers a bank note of £1,000 to any man who, under conditions that will make fraud impossible, will, without seeing it in the usual manner, give the correct number of the note.

BABOO PROTAP CHUNDER MOZOOMDAR, leader of the Indian theistic church, now seeking converts in Great Britain, is an ardent advocate of teetotalism. He deplores the prevalent use of alcoholic liquors in India, and asserts that fifty per cent. of the educated natives of India die from over-indulgence in intoxicating drinks, having acquired the baneful habit from their intercourse with Europeans.

THE *Present Day* says that Prof. Tyndall, with a solicitude for the honor of free thought as great as his courage in expressing its results, attached to his signature words to the following effect: "Believing the 'punishment' to be 'excessive,' I sign this memorial. I would, however, remark that the ribaldry in which certain professed free thinkers of our day do not scruple to indulge, renders them, in my opinion, the enemies of true freedom."

SOUTHERN "gentlemen" can no longer claim that they alone are equal to the high demands of the "code of honor." Two colored men recently fought a duel with rifles at twenty paces. Each man shot the other, and both died in a few hours. The names of the heroes are not recorded. "This," observes an exchange, "is not an isolated instance of the resort to the code by colored men; and, among barbaric tribes and other animals than human, it is the usual test of personal supremacy."

THE "Harmonial Philosophy" does not always harmonize, judging from the following paragraph, which we take from that bold and honest spiritualistic organ, the *Religio-Philosophical Journal:* "A common belief in a life beyond the grave and that spirits return and communicate does not of itself make people congenial associates. The moment this common ground is left, the divergence between different classes grows rapidly wider; and they can never be brought together in this world. The sooner Spiritualists recognize this fact and cease to try to live under one roof, the better for all concerned."

SAID Mr. Chamberlain, Mr. Bright's colleague, in his recent Birmingham speech: "We want in the first place a suffrage from which no man, who is not disqualified by crime or the receipt of relief, who is expected to fulfil the obligations of a citizen, shall be excluded. We want equal electoral districts, in order that every vote may have an equal value. And we want, I think, payment of members, in order that every man who has the capacity to serve his country, who has honesty and intelligence, and who is selected for that purpose by his fellow-countrymen, shall not be excluded for want of means."

A GENTLEMAN lately inquired the way to Rev. John Jasper's church in Richmond, Va. He was told to take the car to Second Street, "and then follow the crowd." The same reply, with the name of the street changed, would indicate to an inquirer the place of Moody's preaching in any of the cities of the United States or of Great Britain. And yet, intellectually, Moody is not much superior to Jasper, and as an orator inferior to him. Both are on a level with the crowds they address and whom they reach through their emotions. Wide is the gate and broad is the way that leadeth to the preaching of foolishness, and many there be which go in thereat.

SAYS the Boston *Post:* "We want to see the Mormons rid themselves of it (polygamy) at the earliest possible day. But they can no more pass at once from polygamy to monogamy without injustice and injury than the country could pass from the evil of protection to free trade, by one grand economic revolution, without confusion and harm to the interests of the nation. In getting rid of what is bad, we desire to preserve what is good; and, in the work of eliminating polygamy, tendency is with us in the Mormon community. Let discretion accompany our zeal. Let the Mormons find that the Gentiles are disposed to befriend them and encourage what is good in them, and they will all the more readily surrender what is evil."

THE *Iron-Clad Age*, commenting on the use made by the late Archbishop Purcell of the money put in his hands for safe keeping, says: "More than three millions of dollars, the hard earnings and little savings of some four thousand of his dupes (called parishioners), were put into his hands for safe keeping, he being a holy man and a safer custodian than any bank. The most of this he deliberately spent in building Catholic churches, nunneries, and school-houses, and in promoting the interests of Catholicism. Some of it went to Rome. Finally, it was discovered that he hadn't a cent to restore to any one who had made him a custodian of his or her savings. This is high-handed, studied, deliberate robbery. The only saving plea was that the money went to build up 'Mother Church.'"

THE Boston *Herald* says that the Western Union Company has had steady and profitable increase in its business, has made hardly any concessions in rates, but by the gradual diminution of capable operators, who have been forced by reduced pay and longer hours of service out of the employ of the company, it has lowered the value and efficiency of its service, which is no longer what it was ten years ago. The *Herald* adds: "It must be obvious to any one who has watched the development of the Western Union Company that, as a result of its peculiar financial operations, some one must suffer. No corporation could go on adding millions upon millions of fictitious capital to the debit side of its account without injury to some one. Either the shareholders will not receive large dividends, or these will be obtained at the expense of the public or of those that the company has in its employ. In this particular instance, the company has paid a seven per cent. dividend upon its scores of millions of watered stock by squeezing both the public and its employés in every way that it could."

SAYS the Springfield *Republican:* "President W. H. Barnum, of the Housatonic Road, asks leave to continue the Sunday train which now runs up as far as Canaan, Conn., through to Pittsfield, from which point a milk-train is still run Sunday afternoon. The men and train for this purpose are sent up on Saturday evening, necessitating the working of two sets of train-hands all day Sunday, one to take a train to Canaan and one to bring another down to Pittsfield; whereas, if the Canaan train were allowed to run through, it would be necessary to employ only one set. Nevertheless, Councillor Smith, E. W. B. Canning, Rev. Dr. Field, and a large delegation of godly people protested against the running of the train as contrary to the Word of God and in violation of the peace of the community. Justin Dewey, who represented the railroad, showed that the Christian Sunday did not require the Jewish Sabbatarian observance, and retorted with severity on the clergymen for faring between pulpits on Sunday and on the councillor for conducting repairs in his paper-mills on Sunday. He declared that no laboring people appeared against the train."

MORAL FREEDOM.

If the term *moral freedom*, instead of the term *free will*, had been used in the discussion of the question whether man is a free agent or not, it is possible that the world might have been spared much of the metaphysical fog which has inhered in this long-standing debate.

There have been two prime errors that have contributed greatly to the confusion of this question. Extremists on the one side have contended that the human will is an absolutely independent power, capable of initiating action capriciously and arbitrarily,—an original cause without relation to anything anterior. Extremists on the other side have maintained that the human will acts merely automatically, as part of a machine; that it can only act as it is acted upon, or impelled by motives, and that these motives, or impelling powers, cannot be within its own control. To the former of these assertions, it is a sufficient answer to point to the obvious fact that man himself is not an independent being; that he exists in vital relation to the world-forces around him and to the world-forces back of him, his very nature—physical and mental—growing out of and still dependent upon those forces; and that therefore it is an absurdity to suppose that his mind or any faculty of it, since it is itself a product, can act as a power absolutely unrelated to anything going before it. And, to the extreme assertion on the other side, it should be a sufficient answer to say that man is not an automatic machine such as his own brain can devise and his hands construct, but a *living organism*, such as he has never been able to construct; that, as a living organism, he has an inward assimilating faculty by which he can draw to him those things that are adapted to nourish his being and reject those that are harmful. All living organisms, vegetable and animal, have this power; and the higher the structure, the greater the power. In man, this power becomes intelligent, conscious, and, to large extent, voluntary, and is concerned with mental nutriment and preservatives more than with physical. Man understands not merely by instinct, but by reason and experience, what is good,—good not only for him as an individual, but for his race,—and perceives what it is right for him to do; and these things which he thus pronounces right and good he may choose, draw unto himself, and discard their opposites.

Thus, a truer philosophy of human nature will find the truth with regard to the human will with neither party of extremists as they ranged themselves in the old debate, but on the higher and firmer ground that all genuine freedom for mankind means not caprice nor mere license nor arbitrariness of power in acting, but the capacity of discrimination and choice among motives, so that action shall be determined by one motive as better than another. Moral freedom means conduct guided by consciously chosen motives of reason and beneficence. It is liberty, but liberty controlled by the laws of intelligence. Though it is to be conceded that man must always act from some motive,—even if it be but the whimsical one of just showing that he *can* act,—yet he has the faculty of selecting among motives that which he will follow. He can say of motives presented to him: "These are good: I will base my conduct upon them. Those are bad: I will shun them." And this is a power vastly higher and infinitely more fruitful in great results than would be that kind of freedom which should mean merely the faculty to go this way or that way without reference to any considerations of usefulness or reason or right. Morality has no interest in that phase of human freedom which means liberty to do as one may please, unless one pleases to do the true and the right. Its only interest is in that liberty which means choice of the true and the right as the highest end of human existence. Moral freedom, so far from being incompatible with obligation to heed certain principles of conduct, has no meaning without the recognition of such an obligation. Lawlessness of conduct is not human freedom. The man who attempts to act on the idea that it is soon finds himself brought to a halt by laws on the other side. Even in physical movements there is not always the most freedom where there seems least constraint. A locomotive leaps from the rails, and we say hastily that it has freed itself. But very quickly, with that kind of freedom, it is brought to a standstill. Only by keeping the track to which it is adapted by the law of its own structure is it free to follow and complete its career. And moral freedom is that condition of human life and activity whereby, through conforming to the principles of mental and moral growth, man attains to the stature of the completest manhood.

This illustration of the locomotive, however, suggests one of the sources of confusion on this subject. Moral causation has been confounded with physical causation. The pressure of moral obligation, or the inward sense of constraint to follow the better motive, has been regarded as if it were of the same nature with the physical force which binds a material effect to its efficient cause. If this were the case, man would indeed be a creature of necessity,—a machine. But, in fact, the special quality which differentiates man from other living creatures is not only that he is conscious of a gradation in motives, as bad, good, better, and best,—some of the higher brute creatures may have a degree of that consciousness,—but that he regards certain mental and moral motives as higher in the grade than physical ones, and has the power to subject the latter to the former in determining his conduct. In a sense, it may be correct to say that man always follows the *stronger* motive. But it should not be forgotten that the word "stronger" is derived from observation of physical forces, and that, strictly speaking, there can be no comparison between a moral motive and a physical motive, because, not being the same in kind, no common standard of measurement for them is possible. For instance, the physical sense of hunger may tempt one to theft, but the sentiment of honesty may keep one from theft in spite of the pangs of hunger; or the tortures of flame may be inflicted on a man's body to induce him to retract his convictions, but he may suffer his body to be burned to death rather than deny what he believes to be the truth. We say in such cases (though speaking somewhat loosely) that the moral and mental motives are stronger than the physical. But what do we mean by that? We mean that moral and mental convictions have not been subjected to nor enchained by the painful sensations of the body, nor even by the laws of physical well-being. We mean that the higher life of mind, the integrity of thought and sentiment, have been preserved intact in spite of the importunate, distracting demands of the tortured physical nature. And this is the essence of moral freedom; the supremacy, namely, of moral and intellectual principles in the conduct of life.

And that man has in himself the ability to put and hold these principles in their rightful supremacy is a fact that is at the bottom of all schemes of education, of all moral reform movements, of all efforts at propagating truth and planting right sentiments among mankind. All these enterprises proceed on the assumption that the mental and moral nature of human beings is malleable, plastic, free to be shaped by one set of influences and to be rendered sensitive to one class of motives rather than another. No one will deny that persons who have the requisite moral and intellectual force have the power thus to mould the character and conduct of other people. But have these persons a power over others' conduct which they have not over their own? The same principle must operate in self-education as in the education of one class of people by another. That is, all education, all progress, must depend on the human ability to choose a higher rather than a lower motive for the guidance of action. It is true that there are many people who appear to have no power of moral choice. There are human beings who, on account of some malformation of brain or inherited vicious propensities or evil surroundings amid which they have been born and bred, will in all probability never be awakened to moral activity until aroused by some external stimulus. But such beings not only are not free, but they are not moral beings: they are not moral beings just in proportion as their natures are enslaved, beyond their own extrication, to animal passions and propensities. It is possible that there are beings in the guise of humanity who only exist under the laws of brute organism. But such beings, if there are such, have not found the liberation from animalism which comes through mental and moral development. They can, indeed, hardly be called human. Let that development come which justly entitles them to the name of humanity, and with it must come in time the condition of free moral agency. Possibly, such a development would come to them in the course of time through the natural struggles in the evolution of their own career. But it may certainly be hastened by the helping action of those who have already achieved their moral freedom. That is, the social conditions for developing moral life in any human community may be voluntarily and designedly improved.

Mr. Grote, in speaking of moral accountability, has precisely reversed the terms which, in our view, would be properly applied to man in his normal condition of moral activity. He says: "The madman is exempted from punishment, his volition being presumed to be not capable of being acted upon by the deterring motive of legal sanction. The *free* agent, thus understood, is one who can neither feel himself accountable nor be rendered accountable to or by others. It is only the *necessary* agent (the person whose volitions are determined by motives, and, in case of conflict, by the strongest desire or the strongest apprehension) that can be held really accountable, or can feel himself to be so." This able writer has here fallen into the error above referred to of confounding that kind of causation which inheres in a moral motive with the causation that inheres in physical force. A madman is not free. His action is determined to a certain course by a physical disease of the brain. He is the "necessary agent." It is a physical cause that has made him "incapable of being acted upon by the deterring motive of legal sanction." He has neither moral nor mental freedom so long as that abnormal brain condition exists. To that, all his manhood is enslaved. Yet it is not true that he acts without motives. He acts from motives; but they are irrational ones, based on his false view of things. They, too, are enslaved to his dread disease. Not until that chain is broken and he recovers his sanity can he recover his ability to distinguish what are true and right motives and to determine his conduct by them; nor until he comes again into this condition of free moral agency does society hold him responsible.

"NATURAL RELIGION."

The little book with the above title, by the author of *Ecce Homo*, is a contribution to the discussion that has helped me more than any merely literary production I have met with. For catholicity of appreciation, acuteness of analysis, and brilliancy, it deserves all praise. I say "merely literary," not as slighting its depth and scope, but because it does not pretend to be a general philosophy or even psychology of the subject, though abounding in discriminations of such penetration and breadth as to entitle them to be called philosophic.

The recognition of religion as being an idealism —a construction of theory and sentiment adapted to ideal relations and conditions, and in that way affiliated with art and science, which are also idealisms—seems to me a profound and helpful generalization. But because those of art and science, like that of religion, ennoble and dignify character, and because they are all alike in being constructions of thought adapted to and derived immediately from ideal objects and relations, it does not follow, as the author claims, that devotion to art and science *is* religion, or that these devotions are fairly embraced in the term. That would be as though one should claim that, the chief office of clothing being to warm the body, a person in a warm room was clothed. Then, in popular discourse (the author quotes an expression from Goethe), we say of a musician, a poet, or a sculptor, of a chemist, naturalist, or astronomer, that his art or his science is his religion: we are never understood as defining the word, but as comparing or identifying a certain elevating absorption characteristic of all of those devotions.

Whether there can be a religion without a deity (the author thinks there can) will depend upon whether a scheme of life and sentiment capable of sustaining admiration and enthusiasm and regulating conduct by ideal standards can be formed without that hypothesis. In order to a discussion of that question, it is needful to refer to still more fundamental principles and definitions than Mr. Seeley has attempted.

It may be limitation and idiosyncrasy, but to me there is no really helpful treatment of this or any elementary matter except by the aid of a naturalistic theory of its genesis and history. The mental constitution and the religious sentiment as a constituent part of it are amenable to the same intellectual method that has illuminated the study of languages and political and social institutions. To consider mental qualities as "gifts" or "endowments" is simply to abandon all attempt at a philosophic treatment. It leaves all in the chaos of a divine caprice, without power or warrant in us to question or explain. But, if I may arrange the facts of mind and morals, or that part of us we call religious, if I may formulate its manifestations *as though* it were a growth, an orderly adjustment under the natural forces and within the mundane social environment, I have a working hypothesis under which, regarded even only as provisional, a rational order begins to show itself. To our animistic, anthropomorphic traditional mental moods and habits, that theory lacks dynamic and causative quality, being only dry formularies of the behaviors of things. It is stone dumb to the nursery question, "*Who* made it?" yet, for every purpose of a guiding philosophy, evolution has no competitor. Any hypothesis is easily overworked, as when we pervert history and distort facts to make them fit; but in no department, so far as my investigations have gone, do the facts fall more aptly and beautifully into the evolutionary order than here, the very home of supernaturalism and the transcendental method.

Religion, then, like art and science, being a construction with reference to ideal relations, its difference from them is to be found in the difference of their respective subject-matters. Art relates to the beauty of things, and is derived from, is abstracts and generalizations of, sensible objects; and its ideals and principles derive all their validity and justification from the reals that are their source. The subject-matter of science is truth. Its deductions and formularies are not less idealisms, and have their being only in reference to ideal objects and conditions, yet find their validity and justification by reference to reals. Religion is an idealism of duty as related to an ideal civil polity, to a controlling power and authority in the State. Rites, cults, moods, and sentiments, and the religious faculty itself, are all a product of governmental experience. They are derived from the facts of social control, find their origin, validity, and justification by reference to the aggregate of governmental facts, and their use and value in the amount of help they give in the actual conduct of life. The universal test of sanity in all ideal construction is, Can we by them better handle the actuals of existence, and do they conform to the facts of sensible experience?

When and where social authority derives from a sovereign person, then and there it will come to pass that a celestial sovereign, invested with ideal excellences conceived as appropriate to the office and expanded to the required dimensions, will be the central figure in the ideal state or kingdom,—the object challenging the "dearest action" of our moral sinews. At that stage of social progress, the best thought and morality have that form. But I am persuaded that is not the final stage. All along the line, the movement is away from imperialism. Nature is a commonwealth of interrelated, mutually dependent parts; and things do not exist for the glory of a great head centre. That notion is repugnant alike to our science, our philosophy, our governmental theory, and moral sense.

It follows, then, that the old-time inner life, ideal scheme of conduct and social polity, are largely survival, which, though justified by and adapted to the facts of past social conditions, are not valid for us, and, when attempted in earnest by a sincere person who is also observing and thoughtful, will bring a sense of unreality and sham. They do not nourish the best quality of thought and action now; and the burning question is, Can a "sustained admiration" exist? Can there be an ideal of conduct that will yield the precious flowering and fruitage of loyalty, humility, heroism, aspiration, and self sacrifice under the changed conditions? I believe there can. Nature is not bankrupted. It is the stupefaction of a conventional sanctity that blinds us to a finer quality of character and a nobler heroism around us in our own time than the world has ever yet seen. Within the modern movement names in goodly number could be given. The conventional worshipper will cry out for "something in the place of" the God you have taken away, and modern thought can give what seems to him only—nothing. His sacred temples torn down, his holy days, places, and Bibles all taken away, his rites and symbols and pious formularies even all gone, his God finds no resting place; and the grand idealism which, however haltingly, and in many respects confessedly unsatisfactory, does yet sustain for him a higher life, he fancies is all gone too. Say to him, Make your home and counting-room a sanctuary, the common offices of life sacred rites, all days Sabbaths, the daily meal and ablution sacraments, all literature that nourishes a Bible, and good men and women your divine examplers, your avocation worship, and spare your prostrations and genuflexions, standing erect, self-poised, with claim and grant of equal rights to all, and you will seem to him to vacate the world of all divinity, and drag life down to the slum of animalism. You are in that melancholy plight of being "without God in the world," are at least guilty of the blasphemy of making yourself equal with God.

No: with every natural normal decay of the old divinities, idealisms of conduct and social control conformable to approved theories of human government and the truer cosmic order will spring up adequate to all the high ends of our individual and aggregate life.

E. D. STARK.

DISCERNMENT OF HYPOCRISY.-THE FOUNDER OF "CHAMBERS' JOURNAL."

Amid maxims of Carlyle not to be disputed—as some of his sayings may be—is this: "We must all toil or steal (howsoever we name our stealing)." Now, I am for naming things according to my knowledge of them. I neither deride nor defame any one for not accepting a standard of truth which commends itself to me. Still, it is good or certainly useful that every one, in due season, should declare what he conceives the standard of truth or right to be. I may not be able to act up to it when I define my own; but I see no good in pretending that I have not done so, or disguising my shortcoming. I am content to be counted as an "agnostic," uncomfortable as that affected word is, rather than be connoted with those who represent themselves as so well informed concerning Deity as to be able to declare its existence. I would not like to be counted an "atheist," if the choice was given me, because the term means denial of a Deity and denial of morality also. Now, denial of a Deity implies the same confident knowledge of its non-existence as the theist claims to have as to its certainty. The late George Henry Lewes invented the term "Suspensive Atheist" to describe me; but it needs the term Suspensive Theist also, or some simple English term which means both, to meet my view.

Because I have publicly pointed out that it is not desirable that any free thinker who has not in him the faith implied by the Christian oath should take it, I do not therefore assume that he is much worse than the Unitarian, who takes it while he does not believe in an avenging Deity. Still, as I think a free thinker should have a higher morality than the Christian, he should be scrupulous and of perfectly good faith. If this excellence is pointed out, many will try to attain to it; but, if it is never insisted upon, it will be thought of no consequence.

Many years ago, Major Evans Bell, a writer of many works on Indian questions, which Mr. Bright has highly spoken of not only for their accurate diplomatic knowledge of India, but for their lofty sentiments of justice, published a work entitled *The Task of To-day*. Its wisdom and power of popular statement of principles and results of theological criticism and secular aims might be read with equal profit at the present time, though it was issued thirty-one years ago. The author did me the honor to inscribe the book to me, in words which I value no less than in the days when they were written. No one has a better right than he to call upon me to explain how I have or would apply my principle of consistency in affairs foreseeable and unavoidable. His letter appeared in the *Daily News*. Its nature and purport will be evident from my reply, which was as follows:—

Major Bell, whose opinions it is never in my mind to disregard, puts to me a question in your paper: "Did I, if married before 1837, perpetrate

Digitized by Google

a piece of hypocrisy by twice invoking the Trinity?" at the time of that agreeable ceremony. There is an immoral maxim which says, "All is fair in love and war." Of this, I need not avail myself. I was among those who in 1839 took early advantage of the law which permitted civil marriage. Though this reply frees me from the question, it does not answer its purport, which is, Had the church service been obligatory, should I have complied with it, and how should I regard compliance in that case? A person bent on marriage is not usually in a mood to give effect to theoretical obstacles, and probably I should not. I do not pretend to be more virtuous than other men, but I do pretend to know "a piece of hypocrisy," when I see it; and if, under any compulsion, I "perpetrated it," it would never occur to me to say it was not "hypocrisy." "Invoking the Trinity" contrary to conviction might be a social necessity, or the lesser of two evils; but it would not therefore cease to be an evil. I should certainly dislike whoever forced me to say what I knew to be wrong, but he would not do his worst against me until he prevailed upon me to go about saying it was right. However, I should do my friend, Major Bell, great injustice, if I did not own that he is in his heart wholly for the truth, as all his life shows. He is for the substance (no mean thing, as times go). I am for the form also. He is for the spirit more than the letter. I am for both, and I regard all legislation as immoral which divorces them.

One need not recur to this subject further. If any of your readers care to understand what my views are upon this subject, they will be able to do it now. If they do not, the fault will not be theirs, but mine. When I have had a fair opportunity of explaining anything, I want to be understood. If it be not perfectly clear to others, I never complain of them, but of myself. Stupidity in the scholar is generally traceable to stupidity in the teacher.

We have lately lost a journalist of whom your readers may be willing to have some details as to his life and methods of success. The death of Dr. William Chambers, better known as the founder of *Chambers' Journal*, will be regretted among all "English-speaking people," to use Sir Charles Dilke's phrase. When the Senatus Academicus of Edinburgh University conferred upon him the honorary degree of LL.D., it was as though he was elevated to the House of Lords; for, under his title of "Dr. Chambers," the public, whom he had instructed and who honored his name, knew him not. Without disease or pain, merely by the exhaustion of the power of life, he died in his eighty-fourth year, in Edinburgh, not far from the great cathedral of St. Giles, which stands opposite his printing-offices, and which cathedral he has really restored to itself (it was divided into three churches) at a cost of from £40,000 to £50,000. The first church on the spot where the cathedral stands owes its erection to a propaganda of Anglo-Saxon times. Its patron saint, St. Giles, is said to have been imported by the ancient French Legue, St. Giles being identified with Languedoc. The first rude church was replaced by a stately building reared by Alexander I. In 1385, it was burnt at the English invasion of Richard II. The pillars of the choir are all that remain of the church of 1885. The subsequent incidents in the fortunes of this cathedral are worth reciting.

In 1466, James III. changed the parish church into a collegiate foundation, including sixteen prebendaries and chaplains for serving the thirty-six altars which stood under the one roof. They were all handsomely endowed; but the barons and lairds, at the Reformation, were so inspired with the holy fervor of reform that they appropriated all the endowments, and left the town to provide a modest stipend for the new ministers. It was Charles I. who first set up a bishopric at Edinburgh, and declared St. Giles' a cathedral church. It was here John Knox thundered twice on a Sunday and several times in the week; it was here Jenny Geddes flung her stool at the minister's head. After the Reformation, the Town Council met in the cathedral; the Justiciary Court held its sittings there; the Police Office was established in it; and it was as late as 1829 when these unholy bodies were removed, and an architect, madder and more ruthless than they, was let loose on the grand old church, and "destroyed the whole exterior." Two fine chapels on the south and two on the north were swept away. "Steep roof and graceful pinnacle and quaint gargoyle disappeared." Inside, pillars were hewed to pieces, doorways were cut open here, built up there, rich ceilings were plastered over, bare and ghastly divisions were erected. Galleries and pews of heavy and dismal construction were inserted. "As far as could be, the church was murdered." At last, the good secular saint, St. Chambers, came, who cleared the cathedral from end to end, abolished the galleries, peeled off the plaster, revived the old tombs, revealed the traceries of vaulted roofs, and made the whole place a gladness to heart of worshipper and citizen. Dr. Cameron Lees, the brilliant preacher in it, more so than any one, has done graceful justice to the memory of this heretical restorer; for Dr. Chambers was kept from the Lord Provostship of Edinburgh several years under the suspicion, not improbable or ill-attested, that he was the author of a famous book in its day, *The Vestiges of the Natural History of Creation*,—a work which was the precursor and popularizer of the doctrines of evolution, which the genius of Darwin has since demonstrated.

"Dr. Chambers"—as he ought to be called by posterity, since he valued the title which he justly considered he had earned, but which he never expected—had the merit of making popular a new kind of literature, prudent, politic, and unsensational. He kept on the margin of disputed questions, never stepping over it. At the same time, with politic discernment, he suggested that the writer knew there were disputed questions close by; and he said as much about them as satisfied those who cared for them that they were receiving some sort of recognition. But it was such recognition that, while it gratified the thinker, never committed the writer to agreement with him. Thus this famous *Journal* followed after new thought and discoveries of science, and often walked beside them, but never in their train, so as to be confounded with them or compromised by them. It is proof of the increased intelligence and morality of the age that the Chamberses made their *Journal* popular without pandering to sensation; and it was no mean merit in himself and his equally famous brother Robert (who had humor, and William business) that they knew how to make actual practical knowledge more interesting than other men made folly. The sagacious lines of Landor might be reversed in their case:—

> "Alas, how soon the hours are over
> Counted us out to play the lover!
> And how much narrower is the stage
> Allotted us to play the sage!
> But, when we play the fool, how wide
> The theatre expands! Beside,
> How long the audience sit before us!
> How many prompters! What a chorus!"

The theatre of public readers "widened" to witness the wisdom of the Brothers Chambers. Their audience has continued "to sit before them" to this day; and on Wednesday, when the cathedral was again opened in its pristine glory, the Queen —by the Earl of Aberdeen, in her name—joined in honoring "choruses" to the sage acting of the famous publisher.

GEORGE JACOB HOLYOAKE.

34 ALFRED PLACE, W.,
SOUTH KENSINGTON, LONDON, S.W., July 4, 1883.

PROGRESS AND POVERTY.

One may imagine the professor of the future as remarking to his class in sociology, "Mr. A., you may give your views concerning the relation of the popular impossible to the unpopular inevitable."

It is easy to be positive; it is easy to be mistaken. But let us see: value is utility, utility is righteousness, righteousness is perfect adaptation. But some things grow. Adaptation becomes evolution, evolution becomes a maze of dim lines that tangle into inscrutable futurities.

It is easy to write respectable mottoes upon our foreheads. It is common to carry a whirlpool of doubt and distrust and ignorance in our hearts. But who are they that have written between the lines of every chapter of history, "Choose now whether ye will dig in the sand or whether ye will hew among the rocks." The rocks will remain; but what a series of misshapen temples have we builded, to what a host of deified insanities! But gather together these insanities of this nineteenth century of Nazareth, and analyze their primary enthusiasms.

There are found the beginnings of a great philosophy, which is as yet a popular impossible, which develops toward an unpopular inevitable, which some coming day and some coming generation will love with all its sunshine and with its whole heart and life. That philosophy will be constituted of every principle and of every definition that is able to bear the light of the sun and of the eyes of honesty.

Let us consider the righteousness of these words of one whom the world just now delights to honor with impertinences: "Life without industry is barren, and industry without art is barbarism." Art, in the last analysis, is an attempt to express an appreciation of idealized types of emotion that takes us back to the primary enthusiasms of our deified insanities. *That which, under barbaric environment, grew into religion, is now developing, under cultivation, into the artistic temperament.* The deities fade. It is a revolution, begun but not accomplished as yet to the hundredth part. It is a new righteousness, growing out of a new adaptation,—an evolution which can neither be stayed by argument nor hastened by impatience. It is in the inner soul, beyond the reach alike of the reason and the animal nature. And the reason and the animal bend to it as the magnetized needle to its meridian.

Out of the necessity of advance has grown an appreciation of economy of expenditure in the matter of constituted energy. The word of a poet becomes a better defence than walls of stone. Wheels and levers and sciences answer better than slaves and servitudes. Liberty, knowledge, and kindliness become a trinity.

This is the inspiration of idealism. But the opponent is neither dead nor sleeping. It is difficult to measure these things. It is easy to be positive. It is easy to be mistaken. But even as the certainty of order and correlation in the world, so is the certainty that *the great dispute of the future will be between the trader and the poet.* The poet has prevailed over the soldier and over the priest, and has set the counsels of despotism at nought. But the trader is yet the master, either directly or indirectly, of every foot of soil and of every handful of food. The dispute is between two divergent standards of value: the essential elements of it are

Digitized by Google

unmistakable. The protest of the poet is against trivialization, against the vain balancing of doles of food and hoards of trumpery, against lifetimes of waste and stolid weariness and renunciation. His position is for liberty, knowledge, and kindliness; for an honest-hearted joyance in the lives of men and women and children; for emancipation from tinselry and pretence; for helpfulness and hopefulness toward the bondmen of stupidities and destitutions. The position of the opponent is for clan and class and the exploitation of egoism: it necessitates the division of the race into servants and task-masters.

The counsel of the trader will come to nought. A new science has entered into the dispute. Political economy is one letter of an alphabet. Sociology will become a volume of revelation. *The power of the trader consists in the popular acceptance of trivialization.* The day will come: the poet of the future will clothe the new science with measure and music, with the inspiration of idealism, with the enthusiasm of a new heaven and a new earth. And a new social order will grow up, in which there shall be no place for the changer of money and no need for coercive institutions; in which it shall not be needful to shrink from the entire implication of such entire freedom as is limited solely by an exact renunciation of fraud and violence; in which entire honesty of purpose and competence of judgment shall turn the former elements of strife into a united endeavor toward that righteousness which is utility, which is symmetry of development, which is the elimination of poison.

As the power of the trader consists in the acceptance of trivialization, so does the centralization of destitution and of sin become the complement of the centralization of his enterprises. Upon the high housetops of the modern city is repeated the old temptation of the Christ: "All this power will I give thee, and the glory of it; for it is delivered unto me, and to whomsoever I will I give it." Down beneath are displayed the possessions of the trader,—his storehouses, his churches, his servants. The new Satan is proud in the life-long devotion of a great democracy; in the great mills of hireling production, in which the lives of men and women are consumed and swept away as cinders from under a furnace grate; in a system under which nobody labors for that which he expects to use, but for something which is exchangeable for the medals of the trader.

The basis of the industrial problem is unmistakable: *so long as the seed-beds of the earth are made subjects of merchandise, and so long as wages remain the measure of effort, poverty must remain the heritage of the masses, and an endless series of concomitants of dishonor must remain the price of luxury.*

The old order must pass away. Our political history, from despotism and ignorance to constitutional freedom and general education, is a portion of the answer to those who doubt the adequacy of the materials and of the forces involved.

WILLARD PENNINGTON.

THE STRIKE.

There ought not to be any antagonism between capital and labor. Each being dependent upon the other, the interests of both are so inseparably connected that whatever affects one must necessarily affect the other. Yet it is undeniable that between them there is what seems to be a sort of "irrepressible conflict." It has existed from "time whereof the memory of man runneth not to the contrary"; and, if we may judge from present indications, many generations will appear and pass away without seeing the end of the strife. At one time, we witness movements among capitalists for the curtailment of wages; at another, combinations among working-men to protect the interests of labor from the exactions and encroachments of capital. Both classes seem persistent and determined in the assertion of their "rights,"—the one to pay what it chooses for labor, and the other to demand what it pleases for its services. Each claims the right to declare how many hours shall constitute a working-day, and to settle all other questions in regard to the relations between capital and labor. We observe, as a natural consequence of this state of things, strikes, suspensions of business, and an interminable wrangle between employers and employés.

The present strike of the telegraph operators attracts general attention, because it extends all over the country, and immediately affects all classes of men and almost all kinds of business. The telegraph is an important and indispensable function of modern life; and its arrest or even disturbance, felt at once in the business and social world, becomes a matter of universal interest and of grave private and public concern.

Who is responsible for whatever inconvenience, discomfort, and business disarrangement and loss may result from this labor movement? The Boston *Advertiser* last week warned the telegraph operators that, in the event of their striking for an advance of pay, they would be obliged to "accept what society at large always gives to those who defy or rob it." The refusal of the operators to resume work was affirmed to be like "that of a nursery maid who demands higher wages on the ground that but for better pay she will expose her infant charge to disease or inclement weather."

The New York *Evening Post*, in view of the necessary disturbance of business resulting from the refusal of thousands of telegraph operators to work their instruments until satisfactory concessions shall be made to them, says: "Telegraphers, railroad men, post-office clerks, and policemen fill places in society very like that of soldiers. In fact, they together do for society what soldiers used to do."

This is one view of the subject; but there is another side on which, in our opinion, far more can justly be said. The operators claim that they have been overworked and underpaid, that during the past ten years their wages have been repeatedly reduced, that these reductions have not been rendered necessary by decrease of profits nor made in the interests of the public, but that a wealthy corporation has ungenerously and unjustly curtailed the compensation of its employés, in order to pay large dividends on extravagantly watered stock. The operators laid their grievances before the company, and respectfully petitioned it to give reasonable consideration to their needs and just dues. Every opportunity was offered the company for a mutual settlement of the issues raised. Only when the means of peaceful negotiation had been exhausted and fair notice of their intentions had been given, did the operators strike. Then, they exercised what seems to us both a moral and legal right in quitting work. They have been guilty of no violence, but have done what as freemen they had a right to do. Capitalists form combinations and act in concert to keep down wages and to increase rates and fares, often against the interests of the public, in order that they may secure large dividends. Certainly, working-men have an equal right to unite in asking for an advance of wages and declining to work until what is fair and just is conceded, refraining meanwhile, as the operators have, from any acts of violence or compulsory policy toward non-striking operators.

The Western Union Company has shown no conciliatory spirit toward the operators, and no disposition to submit the matter in dispute to arbitration. It is not strange, therefore, that the sympathy of the public is with the strikers, that even those who as a rule regard strikes as unwise are disposed to commend the course of the operators in this movement. Without attempting to decide whether the specific demands made by the operators are entirely just, they hold the Western Union Company, whose management under Gould has reduced the wages of the employés, and directed its vast influence to get the courts to confirm the validity of millions of stock on which not a cent was ever paid in, responsible for any disastrous consequences that may come from this strike.

It is sufficient to say in reply to the *Advertiser* that, if the public can endure dishonest stock watering, the tyranny of an unscrupulous monopoly, its frequent curtailment of the pay of men and women in order to carry out its stock operations, it certainly will not regard the strike of these men and women for more pay and fewer hours as defiers or robbers of society. Nor will the government under which the Western Union has made its enormous accumulation, and watered its stock to such an extent that large dividends amounting in the aggregate to millions of dollars every year have been distributed on capital never paid in, treat the employés of the corporation, who work for a few hundred dollars a year, as soldiers deserting their posts, in asking for an advance of wages, and refusing to work longer until their request shall be granted, or at least some concessions shall be made to them.

It is time, we may here add, for the public to consider with the utmost seriousness whether there is not something wrong in business methods by which one man can accumulate fifty or a hundred millions of property, when this enormous aggregation of wealth can be traced largely to the reduction of wages which were before hardly sufficient for the reasonable needs of the employés, when the employers pursue a course in defiance of every obligation of public policy, and when it is known that the money power is always aggressive, often soulless, and can, in the absence of public vigilance and an enlightened public sentiment, purchase voters, and elect and use in its interests legislators and judges, leaving the people, although millions in number, without means of redress and as helpless as children.

The only hope of putting an end permanently to the conflict between capital and labor and the consequent evils lies in the introduction of some plan which will more closely and plainly unite the interests of capitalists and working-men, and whoever shall help to accomplish this will help to solve the problem of the ages. B. F. UNDERWOOD.

EDITORIAL NOTES.

SAYS the Sydney (N.S.W.) *Liberal:* "A man named H. B. Freund, who has given trouble before, has been sent to prison for a month for holding forth outside St. Paul's Cathedral on the enormity of the ritualism going on inside. Things are clearly getting a little mixed on the subject of religious liberty in England when we have a ritualist, an anti-ritualist, and a blasphemer all in prison at once."

THE *Present Day* is the name of a new monthly edited by George Jacob Holyoake, the first number of which has been received at this office. Mr. Holyoake has had large experience in the field of journalism, his return to which will be welcomed by his many friends. An extract from the leading editorial, which will be found in another column, will give some idea of the aim and object of the

Digitized by Google

new publication, which has our best wishes for its success.

THE British Parliament seems doomed to be foolish in its treatment of Mr. Bradlaugh. The sensible thing to do is to admit him to the seat to which he has been lawfully elected, and to which he is therefore entitled. The principle for which he and his constituents are contending must win in the end; and the sooner the House of Commons yields the point, the better. Mr. Bradlaugh is strong as the representative of that principle.—*Independent.*

AT the Fourth of July celebration in Hartford, all the Sabbath-schools were invited to unite in the exercises for the children. The leading Catholic priest required as a condition of the Catholic schools joining in the exercises that they should have the right of the line, and that the Garibaldi hymn and the prayer by a Methodist clergyman should be omitted. The condition was not agreed to, and the Catholic schools did not put in an appearance.

THE editors of *The Index* have received a kind invitation, which they regret circumstances compel them to decline, from the General Council of the International Federation of Free-thought Societies (founded at Brussels in 1880) to assist in the exercises of the fourth annual congress of the organization, at Amsterdam, Holland, August 31–September 2. Dr. H. C. Muller writes us, "Every free thinker and friend of your great nation will be cordially welcomed." A number of eminent European free thinkers will address the congress.

THE Concord philosophers commenced their exercises last week. Prof. Harris delivered a discourse on "Space and Time," which, according to a reporter of the Boston *Journal*, produced a transformation scene of a somewhat startling nature; for he writes that, as Prof. Harris "uttered his long considered thoughts, the walls of the little chapel stretched wider till they melted into a world which in turn changed to all space and all time. By the power of the speaker's imagination, from the knowledge of time and space the audience felt that they could predict *a priori* of a world, could tell of the laws of creation."

THE *Independent* relates the following: "Dr. D. P. S. Davis, editor of the *Messenger*, was invited to attend a dinner given by Geo. W. Childs to eight hundred Philadelphia newsboys; and his duty was to ask the blessing, for which just half a minute was allowed him. When the time came and the boys were seated, a signal on the drum was given for the boys to come to reverent attention while Dr. Davis should proceed with his duty. But the boys were too much for him, and took the drum as a signal to fall to with knife and fork, which they did with so much vigor and unanimity that the clergyman was 'all broke up.' He wants to see anybody else try it who thinks he could do better. We decline."

IN a report of a lecture by Mr. A. B. Camm, at Sydney, N.S.W., we find the following paragraph: "Prof. Haeckel had occasioned the anger of some one in comparing the reformation recently wrought by Charles Darwin in thought to that era introduced by Martin Luther three hundred and sixty years before; and that person had suggested that, if Martin Luther had heard himself thus classed among the infidels, Haeckel's head, like the devil's, would have received the impact of the fighting reformer's inkstand. Darwin, in trusting solely to the religion of nature, had had many inkstands thrown at his head; but the spatterings from them, instead of marring him, had turned into streams of light, and formed themselves into a halo round his beloved, venerable head."

A CORRESPONDENT of the *Commonwealth* writes: "Does Hoadly's position in the Free Religious Association compromise his Americanism? How, then, was it with Emerson, and is it with Curtis? Our weapons are double-edged. We find ourselves cut by their use at the very heart of our dearest beliefs. A Republican who condemns Hoadly now on the religious score writes out a disclaimer for the origin of his own party. The injustice done or threatened to be done to Hoadly should be stopped at the start. It is not justified by Americanism or by human good sense and comity. It may be a good political cudgel, and yet must be weak and poisoning in its ultimate effect. All is fair in war that is fair in honor: war nowise can make decency convertible. A party contest that cannot be won squarely never can be won in any other way."

MR. CHARLES FRANCIS ADAMS, JR., is not opposed to Greek and Latin in school and college, but chiefly desires the rescinding of the rule which makes Greek one of the requirements for entering Harvard. In a recently printed letter from him occurs the following: "I never suggested that Greek and Latin should be 'set aside for French and German in college and school.' I never suggested anything which could be construed into this; on the contrary, I should oppose it most earnestly. What I did venture to suggest was simply that Greek alone should no longer be a compulsory requirement for admission to college. I never proposed to set it aside. I particularly and carefully said that I would encourage its study by putting a heavy educational bounty on it; but I did ask that it should no longer be exacted from those who, like myself and all the members of my family, were unfortunately unable to acquire it."

ON the ninth anniversary of his first appearance in Boston, Mr. M. J. Savage spoke as follows in regard to the uniqueness of his own position: "And, in one sense at least, my doctrine has been new. So far as I know, I am the first minister in either America or Europe, not who has acknowledged the truth of evolution, but who has not only frankly and publicly accepted it, but has made it the basis of his regular pulpit teachings, and who has attempted something like a reconstruction of theology in consistency with it." These words provoked *Unity* to say, "We can readily give to Mr. Savage the names of at least a dozen ministers who, to our personal knowledge, labored to do just this thing, not only before Mr. Savage was heard in Boston, but while he was yet the favored and popular minister in the orthodox church." We do not question the statement of *Unity*, and quote it here only to ask our valued contemporary for the names of the "dozen ministers," if it has no objection to giving them.

THE *Catholic Review* is pleased with nothing that the French government does nowadays. "The sorry stipends of the State," it says, "have been 'docked' in the cases of a multitude of priests; and the salaries of the bishops, miserable as they already were, have been cut down, while at the presentation of each new budget come fiery petitions and fierce debates over the matter of allowing clergy any salary at all. Perhaps it were a blessing in disguise, were the government to put into act its visible wish, and cut off every penny of State money from the Church in France, leaving the Church to rest wholly on the faith and faithfulness of the Catholic people." A very sensible suggestion. The *Review* continues: "But the crowning infamy of this sneak-thief, lock-picking pack of antichristians — whom the folly of the Catholic politicians in France has allowed to steal the government—is the recent decree of the municipality of Paris closing the chapels attached to hospitals, and refusing admission to any priest unless he is specially called for by a patient."

JACK-IN-THE-PULPIT.

(*Arisæma triphyllum.*)

JACK *loquitur in lingua valde antiqua, hic quasi interpretata.*

TEXT:—
"And this our life, exempt from public haunt,
Finds tongues in trees, books in the running brooks,
Sermons in stones, and good in everything."

My text I take from the Druid old,
Whose words are better than silver or gold;
Whose genius peopled the ranges free,
Under the shade of the woodland-tree,
With lovely ladies and exiled men,
In the widespread forest of far Ardennes.

Under my tent of this greenwood-beech,
To the simple sylvan people I preach;
And long my sermons have said, or sung,
In the mystic tones of an antique tongue
The woodman only can read or speak,—
A language older than Hebrew or Greek.

Mysterious voices I hear from the green
And moss-grown boughs of the ancient treen,
Where, for the vanished, a dryad moans;
And I find a theme in the runic stones,
And sweeter hymns in the pebbly brooks
Than any found in the printed books.

In his hidden nook sits the quiet hare,
With all at peace, at his humble fare,
Like the innocent king so sorely shent,
And the crown that he wears is called Content.
The simple preacher, oh! do not scorn,
Though lowly he be, in the forest born.

The squirrel spreads on his mossy board
The picnic feast of his plenteous hoard,
And the wood-thrush pours through the forest mute
A solo sweet on his greenwood-flute,
Then feeds on a banquet, simple indeed,
He finds in the thicket of lichen and seed.

Down the rock comes the walking-fern;
There stands in the pool the listening hern;
And even the gaudy butterfly
Stops on her way, as she flaunteth by,
And a lesson to all unconsciously gives
Through the useless and frivolous life she lives.

At evening, down from the darkling hill
With spectral voice comes the whip-poor-will;
And there, in her robe of pearly white,
The ghost-flower* stands at the dead of night;
While the beetle in black, with his fire-fly torch,
Pauses in front of my sylvan Porch,
And listens awhile, with a stolid stare,—
An empty gaze in the empty air;
But little, I fear, he seizes aright
Of the thought I utter,—the simple wight!

And the burden this of the sermon I preach,—
That each should lend of his gift to each:
The dewberry offer her sweetest fruit,
And the thrush the music of forest-flute,
The chestnut the nuts from her burs that burst,
The brook a draught for the summer thirst,
The wilding her beauty and fragrance give
To all in these shadowy haunts that live.

From my pulpit, in bronze and green arrayed,
'Tis thus I preach in the forest-shade;
And he who comes to this temple grand,
Older than any that man hath planned,
By a magic spirit forever renewed
For the tribes whose haunt is the solemn wood,
And lists, with obedient mind and heart,
To the daily lessons I here impart,
Returns to the feverish cities of men
With soul refreshed for his work again.

HOWARD WORCESTER GILBERT.

The Index.

BOSTON, JULY 26, 1883.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index.*

THE RATIONALE OF INTELLIGENCE.

BY GEORGE STEARNS.

The beginning of ontology,—or the synthetic philosophy of being in the superlative sense of both these latter terms,—the beginning also of cosmology,—or the synthetic science of mundane existence,—is the conception that whatever IS, in any sense of the verb, is either of necessity or a product of causation; that all things of necessity are infinite and absolute,—that is, eternal, ubiquitous, and immutable: whereas, every product of causation is finite and relative,—that is, phenomenally transient, local, and mutable; that causation is of two species, natural and connatural, the one being identified with the operations of nature, so called, and the other with the works of art, the analogue of nature; that causation of either species cannot obtain without a causal agent, that of connatural causation being never other than a sentient being, and, in its higher modes, a person, yet a product of natural causation whose adequate agent is conceivably no other than absolute mind.

Knowledge is an attribute of mind; and *mind*, even in the common acceptation of the word, is the noblest product of evolution, as science has named the progressive course of nature, which is yet to be cognized as natural causation. But mind, as the present apparent ultimate of existing things, partakes of their general relativity. It is not an absolute entity, and is yet to be apprehended as the finite impress of the infinite mind, the nominally "Unknowable," who also is to be apprehended as the Author of all that is imputed to nature. As there can be but one infinitude of any given quiddity, so there is but one Infinite Mind, whereof every species of mentality or finite mind is a partial expression. For this reason there can be of the latter but one general system; this being idealized as a combination of the several constituents of sentiency, which are diversely exemplified by all the known developments thereof.

Anticipating a future opportunity to make good these assertions by rational explication, I respectfully request the readers of this paper to take them for granted, virtually, for sake of the argument which follows.

It is not to be logically inferred from what is said thus far that every (nor any) species of extant mentality purports a proper expression of the Infinite Mind, since mentality is a thing of development, and nature as yet has yielded no example of its maturity. But the process of its development and the gradations thereof are manifest to reason, and there is no mistaking the relative fitness of animals and persons to typify the supreme character. More than this is not to be accorded to the noblest of mankind, who in this respect excel the lowliest of brutes only by representing more plainly what mentality ekes to become.

Of the Infinite Mind, nothing is known or knowable but by inference from the patent works and offspring thereof, whose aggregate is nature, whose crown is personality,—not as phenomenally manifest, but as commended by the human ideal of its ultimate. This—the most cherishable want of human nature, the proper paragon of personal character—is the best attainable expression of the Infinite Mind. Yet the discrete truth here asserted is commonly missed by ardent students of overt nature, whose interests in the mere sight of her doings prevent an equal insight of the uses of things. This is the rationale of atheism and materialistic negations of evidence touching human destiny. Science concerns only phenomena. It begins with their discovery, and ends with their description and relation. The special physicist comprehends little more of nature than is thrust upon reason by the external organs of sense. He quite ignores, in effect, that unobtrusive world of realities which is revealed exclusively to the brain-organs of introspective observation. The fruits of sensible experience he regards as the sole elements of intelligence. Experience is, indeed, the mother of science, but not the only parent of a certain higher grade of intelligence, the very reality of which one must be something more than a scientist to apprehend. The justness of this discrimination is inceptively brought to light, or at least rendered credible, by reflecting:—

1. That reasoning is the complement of observation in every act of perception, the five senses, so called, being the mere implements of sense.

2. That the inception and process of thought are both instinctive; so that, in rational investigation, the subject only is elective, whereof the judgment (if logical) is compulsory and inevitable.

3. That all problems are solved and all propositions tested by discovering their relation to certain truisms or unwitting assumptions which qualify the organs of intelligence; these, having one and the same bent of intellective purpose and the same scheme of collocation, verifying the same conventional agency in every grade of mentality.

4. That the constituents of rational mentality are classifiable according to their specific functions and order of development as pertaining distinctively to three categories of consciousness, (1) that of Natural Want, (2) that of Natural Faith, and (3) that of Natural Right, otherwise distinguished as the affectional, the rational, and the moral sensibilities.

5. That natural faith is the pedestal of all finite intelligence.

6. That what validates natural faith is its preterrational genesis, it being an issue of natural causation whose supernatural agent is Absolute Mind, the Author of all finite cognoscibility.

7. That the substratum of science embraces a part—the primary elements only—of natural faith; other elements thereof, later in the order of their conscious entertainment, being fundamental to what is properly named philosophy.

That the basic elements of science are distinct from those of philosophy is ascertained by analysis and comparison of their respective characteristics. Scientists claim that nothing is knowable but by observation and induction from the facts of sensible experience. But experience itself becomes sensible, or its facts become cognizable, only through an instinctive belief and trust in:—

1. *The reality of existence* (distinctively as to selfhood and its environment).

2. *Reliability of the senses and its intellective faculties*, as avenues and agencies of perception, so that *whatever is perceived to be* IS *what and as it is perceived to be.*

So much is prerequisite to even the inceptive intelligence of brutes. To these must be added for the beginning of science:—

3. *The continuity of existence and the undeviating course of nature*, or sequence of virtual cause and effect, in the past, present, and future, as determined by the fixed character and correlation of its physical elements and forces; these being the embodiments of natural law, in effect of which *the lessons of experience at any time become practically useful for all time.*

No inductions of science are better established than these self-evident truths, which are so called because they do not admit of demonstration, yet are indisputable and indubitable. They are instinctive; and make what we will of instinct, or set at naught as we may in words the authenticity of natural faith, we are rationally assured that science is superstructed thereon, and, therefore, that, if these prime elements thereof are fallacious, science itself is imaginary and human intelligence merely simulative. It is in the light of this dilemma, or in view of its only possible disposal, that the validity of natural faith is apprehended; and this apprehension is the steppingstone from the plane of scientific to that of philosophic intelligence. For the basic elements of philosophy, as constituents of natural faith, must be co-ordinate in purpose and prestige with those of science, making the lessons of insight or introspective observation of the same validity as those of sight or extrospective observation. But these pertain exclusively to existence, as shown above: whereas, those savor of existence only with regard to its cause and use. They consist of the instinctive and therefore irresistible belief:—

1. That no entity can be either self-made or self-sustained.

2. That every entity is either of necessity or a product of causation.

3. That causation, the act (including the means and method) of causing something to be that was not, requires a causal agent.

4. That the products of causation are in all cases significant to the character of its agent.

From these truisms, it is within the province of reason to deduce an equivalent of the following propositions:—

1. That all agents of causation are voluntary.

2. That no agent of causation can act without a purpose.

3. That causation never occurs without a use germane to the character of its agent.

4. That the character of the Infinite Mind, the certified Agent of natural causation, is adumbrated by the human ideal of personal excellence.

5. That the extant process of mundane existence implies a use corresponding in grandeur to the conceived magnanimity of its supernal agent.

6. That the use of existence when attained must be sempiternal.

7. That the purpose of the Infinite Mind, to be wrought out in the process of existence, is the generation and education of immortal persons, the use of whose being shall culminate in HAPPINESS, such as must accrue from the progressive ability of each to commune with all and with the Author of all.

Here is a proffer of ultramundane information which science can never reach. Here is a method of solving the problem of existence which so far transcends the method of science that no mere scientist is competent to test its value. It is the method of philosophy proper, and none but proper philosophers are expected to appreciate and apply it. The problem of human destiny, involving as it does that of integral nature and somewhat even of its Author, is regarded by the great lights of science as an involution of mysteries, impenetrable, inscrutable. This complex mystery, as inspected by the sagely author of the unseen universe, is triune, embracing within each other "the mystery of matter, the mystery of life, and the mystery of God; and these three are one." But, besides this trinity, it were easy to demonstrate that each of its constituents—essentially, collaterally, and adjunctively—entails a multitude. Yet it is the policy of philosophy to treat all mysteries as problems, thus insinuating their possible solution. Still, Science, within her appropriate sphere, is confident—even to the extent of allowing her children to speculate negatively—as to matters of which nothing is knowable by experience.

There are notable exceptions to the license here adverted to, whereof Herbert Spencer is most conspicuous. According to his science, mysteries are knowable as such by experience. It is the nucleus of them all that he calls the Unknowable. His system of philosophy, so called, is the true exponent of science proper, whose logical consistency with itself and with experience is the final test of its sophical genesis. It represents what Spencer *knows;* and whatever is *known* is veritable, though all his critics ignore his

Digitized by Google

ken of truth. Spencer is a model scientist, and few are his compeers.

Of a much lower grade are those special scientists who are always at variance with each other,—a fact imputable to no other virtual cause than defective intelligence. Is this science? It is the popular science of to-day. It is not science proper. "'Tis but a part we know, and not the whole," wrote the poet Pope, borrowing from Paul the least significant part of the latter's saying, apparently heedless of its context: "But when that which is perfect is come, that which is in part shall be done away." This is as pertinently said of the rationality of human nature as of anything. The truth is, it is impossible to know anything *per se*, or as well as it may and should be known, without a *quasi* knowledge of all things relative thereto or an apprehension of all essential truth as constituting a logical whole. This is the rationale of progress in science regarding its pith as well as bulk, whose inception and growth as a thing of sight (the perceptive grasp of truth) is to be complemented by insight, or the intellective assimilation of truth. The popular science of to day is fraught with crude notions and theories, as indicated by the variance of its votaries; and these are outgrown in the process of intellective development only in proportion as science becomes sophical.

In proof of these assertions, see the vogue of scientists regarding the gravity of matter as due to an inherent principle of "attraction," often calling it Newtonian, whereas Newton called it preposterous. No professor of physical science that I know of has as yet surmised that the medium of lumination is also the agent of gravitation. Ingersoll, the most noisy advocate of no mind (either relative or absolute) apart from matter, thinks the earth would fall into the sun, if it were not attracted in other directions by other suns, these being also attracted by still remoter suns, and so on to infinity; presuming that the mundane universe is boundless and eternal, thus ignoring the proximal truism, or truismic axiom, that an infinite number of finite things is impossible. So the German Prof. Haeckel, agreeing with Ingersoll as to the supremacy of matter as an absolute entity, declares that "all vital phenomena are based on mechanical processes which are themselves conditioned by the constitution of organic matter"; that the "phenomena of soul-life are also, in this respect, not different from other vital phenomena"; and that "reason is only a higher degree of development and combination of the elements" of matter. But what if "there is no matter," as Mr. John Fiske affirms, who is fully persuaded in his own mind that the table whereon he seems to be writing exists only in thought; that in fact, if there be any fact, what is called "cosmos" is nothing but "an orderly phantasmagoria"? Yet Mr. Fiske claims to be a physical scientist, and as such is the author of two bulky volumes concerning what he calls *Cosmic Philosophy*. The literary character here presented is a seeming puzzle, which a word from Dr. Alexander Bain, Professor of Logic in the University of Aberdeen, may help to explain. Mr. Bain is a profound student of *mind* and *body*, as his treatise on their relation in nature exemplifies. But what he means by the term "mind" is mentality. Of the Infinite Absolute Mind, he says nothing. Here, in brief, is the result of his lucubration: "The arguments for the two substances have, we believe, now entirely lost their validity: they are no longer compatible with ascertained science and clear thinking. The one substance with two sets of properties, the physical and the mental, *a double-faced unity*, would appear to comply with all the exigencies of the case." Does this settle the question? It is precisely what its advocate *believes*, not what he *knows*. And all scientists are in quest of knowledge.

All this dissension among scientists is the natural outcome of defective intelligence, as said above. Love of truth prompts inquiry, and science is progressive. Misconception is the offspring of abortive attempts at preconception. The wish to know is stronger than the will to wait and learn. There is no antidote to this predicament of rational beings but science proper, or that positive knowledge of things which certifies their reality. In proportion as this obtains, conventional intellection is uniform in all its subjective phases regarding any given object of perception or act of reason. Science proper is noumenal, whereas the asophical popular science is phenomenal; but this is inceptively that, or that becomes this by maturity. In like manner, philosophy is the *alma mater* of science, and every scientist is a sophomore; that is, a nascent philosopher. So cosmology is the prospective instauration of all the special sciences, being itself a graduate of ontology.

But has not Mansel told us that ontology is an unattainable desideratum, whose verisimilitude is phenomenology? Yes; and he has also told us that the normal sight of things is no evidence of their reality. Mansel is a metaphysician, and metaphysicians are generally addicted to fantastic ways of thinking. If there is any practical truth in metaphysics proper, there is no certainty in science, and there can be no science proper. But science is competent to nonplus metaphysics, as in fact Spencer has done already. Science is precocious and never to be abashed, but no truant nor fanatic. It must be admitted, however, that as yet, and it may be for long to come, the prestige of science is too imposing for the credit of philosophy; and the fact is imputable to their chronological relation. Phenomenal science is the proper antecedent of philosophy, from which it differs otherwise and variously.

1. *As to objective matter.* Science pertains to existence, philosophy to the cause and use of existence; the proceeds of philosophy being adjunctive to those of science.

2. *As to genesis.* Science is first in order of development, and without it philosophy would never obtain. This does not supersede that, but follows it as a broader view and profounder ken of nature. Thus, science does not support philosophy dialectically, but analogically; existence, the objective matter of science, being the fulcrum of ultramundane possibilities. In another and more obvious sense, philosophy confirms and elucidates science.

3. *As to basic principles.* These are categorically one for both science and philosophy, but not identical. Each is built upon truisms which, as distinct elements of natural faith, are equally authentic. Moreover, diverse truisms are the only possible timber of their distinctive constitution.

Apart from these three specifications of difference, science and philosophy resemble each other, the mode of intellection being one and the same for all grades of intelligence. This mode comprises three co-operative agencies, denoted by the terms perception, memory, and reasoning, the first and last being productive, while memory merely conserves the products of perception as data for reasoning. These three orders of the intellective faculties, or categories of consciousness, are simultaneously effective and concurrently productive, the sole issue thereof being *perception* under diverse aspects; perception, in the full sense of the word, being identical with cognition, of which knowledge is the product. The word "knowledge" is indifferently understood to signify something known or whatever is known, including the act of knowing. In the larger sense, its scope and aspect are symbolized by three concentric circles: the first or inmost circle representing the comparative limitation of vulgar intelligence; the second or middle circle, the more extended reach of phenomenal science; and the third or outmost circle, the superior scope of philosophy. Vulgar knowledge is first implicit, as with brutes and infants, then inceptively explicit, as with uninstructed human adults. Science is of two grades,—first, rudimental, the product of explicit yet asophical inquiry; next, explicit, the product of sophical investigation of phenomena,—the process relevant to the former being inductive, and that of the latter both inductive and deductive. Philosophy is integrally comprehensive of nature as including two spheres of existence as well as an inkling of Being ultra-natural; its range of inquiry or quest of truth being pantological, and its ken of truth noumenal. Philosophy is the natural outgrowth of science and the consummation of rational intelligence.

Science as well as philosophy is a product of reasoning; for, though the one is said to rest upon facts and the other upon principles, it is sagaciously perceived that principles themselves, or their concepts,—the proper constituents of science,—are intellectively composed of principles; and principles consist of truisms: there is no other stuff of thought. This truth is found by analysis of any intellective process. For instance, *cogito, ergo sum*, is no more self-evident than *sum atque cogito*. Why not *ergo cogito?* The answer is in the suppressed part of the argument, which is completed thus: "I think, therefore I am; for thought implies a thinker." But to interchange the predicate of inference with that of the minor premise is illogical and abortive, since thought is not predicable of *all* beings. This is the only reason that Descartes' proposition cannot be logically inverted, though "I am" and "I think" are equally self-evident items of consciousness, yet as truisms they are but proximately pristine. For of pristine truisms there is no consciousness prior to the intellective process of their special cognizance, inasmuch as they are identified with the intellects themselves, or with that which underlies consciousness and makes intellection possible. For to be conscious of a truth is to know it, which makes the scope of consciousness include that of general intelligence. It is not a faculty. All attempts to discriminate consciousness from either the acts of cognition or their issues have proved thus far, and must ever prove, abortive.

It has been said that consciousness consists not merely in knowing, but in knowing that we know. But this pleonasm rather flouts than explicates the subject. Is it not the immediate transformation of perceptions into what are called conceptions, whereby things known are committed to memory, that the apparent knowing that we know consists? However this may be, the word "truism," according to scientific usage, applies exclusively to the prime elements of consciousness, which itself is complex and progressively comprehensive, always embracing some differential aggregation of perceptions. These are never simple, but always as units they are more or less complex in consequence of the simultaneous excitation of the intellects of which each is a unanimous verdict. Nothing is known but objects of perception (extrospective or introspective), and whatever is known or perceived (the two words being equally expressive of certainty) is real; that is, indubitable and never to be ignored. In this sense, every component of knowledge is truismic, as self-evident as any truism proper. So long as a proposition is open to doubt, its truth is not perceived. When its truth is perceived, assent to it is inevitable. This is just what is meant by calling any proposition self-evident, as that two and two make four. This mathematical truth is not simple, neither is its perception a pristine element of consciousness. It is an excogitated truth, a product of intellective experience; yet it has the aspect and prestige of a simple truism.

So "I am" and "I think" are compositive issues of cognition. One cannot say "am" or "think" prior to the intellective birth of the subject "I"; and one cannot say "I," the symbol of selfhood, till one is conscious of self as discriminated from other entities, which must be thought of to make this possible. In a word, thinking must precede the consciousness of thinking. Consciousness, then, cannot be the agent of that whereof it is the product. The inception of consciousness must follow that of cognition, which initiates with the instinctive presentiment, or unconscious assumption, of selfhood as being endowed with potential attributes and related to environing realities. This assumption involves several formulative truisms which are aboriginal or pristine, though susceptible of excogitation by educated thinkers. Pristine truisms are thus identified with the simple elements of natural faith, the substratum of knowledge, whose fabric is of excogitated truisms. Again, knowledge is perception of truth; and the test of truthful perception is conviction,—an involuntary and indubitable sense of truth. Now, perception is of two aspects, phenomenal and rational; and that species of conviction which ratifies phenomenal perception is no more positive and persistent than that which authenticates a reasoning process. In fact, that which enforces an inference or consummates a judgment is itself a perception,—the perception that the minor premise is germane to the major. Besides, every act of perception is reasoning in disguise, and terminates in a masked inference. So conviction in all its attitudes tallies with some pristine truism, showing that the acme of intelligence, the ultimate test of knowledge, is natural faith. Does this discovery tend to invalidate knowledge or to validate truisms, the elements of natural faith? It must do one or the other, either this or that alternative is inevitable. Of logical necessity, either the substratum of consciousness is equivalent to absolute intelligence, or else conviction is no test of truth and knowledge is suppositious. But this equivocal postulate is wholly gratuitous. The apparent dilemma it entails is forced and repugnant to reason. Common sense, the vulgar appellation of natural faith, forestalls it. Every sentient being declares by actions—which proverbially speak

Digitized by Google

louder than words—that knowledge is a reality; that the faculties of cognition, though relative and finite, are implicative of absolute efficiency within the scope of their normal exercise. This, too, coincidently with the consciousness that the verdicts of sense and reason are involuntary and altruistic to selfhood. Moreover, it is a fact of introspective observation that natural faith, to use a figure of speech, is the alphabet of knowledge; and, as words are composed of letters, so are perceptions composed of truisms, as shown above. And, furthermore, as a syntatic collocation of words constitutes a proposition, so a certain correlation of perceptions constitutes an axiom, a thesis, or a descriptive thought. It thus appears that knowledge is not only based upon natural faith, but is born out of it, and in a manner to consist of the elements thereof. So that intelligence, in the broad sense of the word, may be regarded as a multiplex synthesis of truisms.

Now, what is the goal of reasoning in this direction, if not this? that absolute knowledge is not an attribute of mentality, that the ability to know or discover truth is virtual, not actual, not anturgic; the intellect being made to operate, through manifest incentives, by an occult, exogenetic impulse. This is Natural Faith, and is imputable to no other agency than that of the Author of mentality, the Infinite Mind, of whom absolute knowledge is exclusively predicable. How can it be otherwise, the Author of existence being the Maker of all our susceptibilities and faculties? Are we not conscious of the passivity of our affectional nature? Are we not subject to supervening pleasure or pain according to sensible environments not always of choice? Are we not at times possessed of emotions and even desires which are irresistible? Is not consciousness thrust upon us in the unwelcome as well as welcome scenes of experience? Why should the rational department of mentality obtain by a different law of nature from that which determines the character of our appetites and aspirations? No wonder that we cannot *see* other than the objects of sight, or see to the best advantage without seeing things as they are; nor is there cause for wonder that the mental vision is as rigidly governed by law as the physical.

But how does this revelation affect our estimate of reason and the enthusiasm of would-be sages? In no wise adversely. The discovery that man in himself knows nothing in the Absolute does not warrant the inference that what he instinctively seems to know is of no account. It remains a certainty that knowledge is conviction of truth; and conviction is a word of intuition,—the provisional name for an occult tribunal of thought whose verdict is final. Intuition is otherwise designated as Instinct; and this word is less objectionable, as being devoid of fallacious implication. If the principle were understood, its appropriate name would express a special impress of Omniscience, due to a communion of MIND with *mentality* in all its phases, as well as with every species of living organisms. Instinct as thus conceived is characteristic of evolution in every stage of its process. It is the soul of existence,—the utilizer of Force in the physical and physiological operations of nature, so called, and the real agent of all involuntary achievements in the animate world. Instinct is infallible, *because* it represents MIND, whose living scripture it is, which we merely read and call our reading knowledge. Let it smother vanity. It is no disparagement of sense or reason: it exalts our estimate of both as attributes of human nature, to be mindful of the philosophic discovery that what we know, or only seem to know, is God's own word of truth.

For *The Index*.

REFLECTIONS BY THE WAY.

BY MONT E. COLLINS.

III.

True courage consists in dexterously avoiding dangers that are avoidable and calmly facing dangers that are inevitable.

Those who are capable of the grandest thoughts and deeds are also capable of the greatest follies. It requires the richest soil to produce the rankest growth of weeds.

In youth we should hope, in manhood labor, in old age rest, and at all times trust in that Infinite Power that folds us in its unseen arms.

Perhaps the reason why some of the streams of ancient thought were so pure and bright was because they flowed through such a barren and sterile country, there being very little loam along their banks to wash in and soil their waters. The richness of the lands through which modern thought-streams flow keeps them continually muddled.

True manhood is not lacking in that modesty and tenderness peculiar to woman; nor is a noble womanhood destitute of that courage and perseverance characteristic of man.

Personality implies conditions; and, as that which is conditioned is the servant of force and not the sum of all force itself, it follows, to some minds, that God, who is the Infinite and Unconditioned, cannot be a person, nor contained in the thought of a personal existence.

There is no pain like passion, no sorrow like remorse, no darkness like error, and no grief like that which results from a wasted and misspent life. Neither is there any joy like love, light like truth, blessedness like virtue, nor happiness like that which flows from our endeavors to be a man.

Weak minds only are given to scoffing. The truly great never mock at ignorance: they treat all subjects with becoming fairness, and never give their opinion as absolute truth. In the realm of the unknown, they never pronounce any phenomenon an impossibility. Knowing the limitations of knowledge more than others, they ever hold, even their deepest convictions, subject to the influence of evolving thought.

CORRESPONDENCE.

BUDDHISM.

Editors of The Index:—

I regret to observe in your issue of March 1, which a friend has just given me, an article, very well written, as they all are, and therefore the more capable of mischief if a false position be assumed. It is Mr. Oswald's, on the "Secret of the East." Permit me to state why I regard this paper as a squinting view of the Buddhist doctrine, of which my own notions have been formed mainly from the writings of Mr. Rhys Davids and of Edwin Arnold. Mr. Oswald fails sufficiently to recognize the sphere of ideas, faiths, modes of philosophic and religious thought, ceremonial and social conditions, so different from ours, in which arose the Buddhist doctrine as a modifying agent.

With regard to the confusing and degrading superstitions into which Brahminism had lapsed from the noble attitude of its Vedas, Buddha's eliminative and pacific method in exalting morality above fantastic creeds was more radical than Mohammed's monotheism and less costly to humanity. Mr. Oswald justly objects to the indifference of Buddhism toward the goods of this world, toward that sensuous and affectional culture which befits our terra-solar life, and which Goethe so happily justifies in his "Prometheus." But when this pessimism and asceticism are compared with the darker hues of that Brahminic insanity, with that furor of suicidal anti-naturism which its gentler spirit essayed to reclaim, it deserves from us a relative sympathy. Much farther west, and nourished by more liberal traditions, do we not find Christianity, as well as Buddhism, wearing the mendicant's garb? Did Jesus himself teach the organization of labor,—that watchword of our true salvation army?

Certainly, we miss in Buddha's teachings that emotional element which we recover in his biographical traditions; for his charity embraced not humanity only, but all animality. By his alienation from domestic ties, if he was inferior to Mohammed, he assimilates with Jesus. The vagueness of his moral precepts allows of manifold directions in their practical evolution. If they encouraged in the Orient a certain languid passiveness toward destiny, they cannot hurt us in the same way, and may act rather as a wholesome sedative over our suicidal ambitions and personal aggressiveness.

I like their manly indifference toward those problems of the future state which nature has shrouded in mystery, and I feel, in reading Arnold's statement of Buddha's precepts, much the same impression as from Longfellow's "Psalm of Life." Rectitude, with a charity of which suavity and dignity are the social tone and manner, gushes from the Buddhist fountain in a stream unmuddied by collateral affluents from the soil of selfish hopes and fears, rewards and punishments.

An old man who, after hard and persevering efforts to benefit his race, has little else than the memory of perfidies and of stolid irreceptiveness to reflect upon, drops into the Nirvana as into a philosophical easy-chair; but he does not recommend it as a substitute for the gymnasium or the workshop to enterprising youth. This tallies with Mr. Oswald's citations from the Sanskara and from Zimmermann; but, when Mr. Oswald reproaches Buddha with inculcating premature senility, and with emasculating manhood, he ignores the noble effort of the spirit to conquer that attitude of stoic self-control and beneficent influence which characterize march in the "four noble paths." Substitution of will for desire, and of the love of justice and of charity for self-indulgence, much rather than the apathy of satiety, seem to me the legitimate consequences of Buddha's teachings; and Arnold's poem has reminded me of that noble story of the old stoic soldier in the hospital of St. Louis, which Alibert has so admirably rendered. I find Mr. Oswald no less unjust toward Christianity—*i.e.*, the proper life and teaching of Jesus—than toward Buddhism. Both doctrines have, in their descent through time and space, experienced parallel perversions. Instead of reproaching them with this human misfortune, it should be the office of enlightened thought to reinstate them in their pristine dignity, and, condoning their errors, which we have outlived, to honor them for their truths, which have been stepping-stones to the actual attitude of the Church of Humanity.

Learned studies and fair views of the historical correlations between Buddhism and Christianity in its Roman phases, may be found in the London *Quarterly Review*, 1860, July, in the latter part of the article, "Stonehenge."

Respectfully, M. E. LAZARUS, M.D.

COLUMBUS, GA., June 18, 1883.

MISCELLANEOUS.

PROGRESS is brought to a standstill by the inertness of those who think but do not act, as it is ruined by the recklessness of those who act and do not think. There is no sense in life except in that use of the present which profits by the past and provides for the future. Many do not know that yesterday has gone by, and that the foolish day has passed when men could be shocked into the truth by sensation or kicked into it by outrage. There will long be persons, impatient to change the world at once, who sincerely believe in these dynamite methods. But it will prevent confusion in the public mind if they are kept distinct from Secularism (first advocated by the editor of this new journal in the *Reasoner*, from 1846 to 1872). That order of opinion teaches the improvement of this world by material means,—substitutes exposition for denunciation, contends that reason is a force in public affairs, and holds that intelligent, well-intended usefulness is piety, whose creed is service, and whose altar is everywhere. Unless a journal exists showing that the Secular is separate in its nature and utility, the efforts of the highest scientific thinkers will be confounded with mere anti-theology, and retard by distrust. The *Present Day* is addressed to all who hold the brave and cheersome faith that life, according to reason, is the best religion for the world that is, and the best qualification for the world that may be.—*George Jacob Holyoake, in the "Present Day."*

CAN THE ATHEIST BLASPHEME?—It is evident that, strictly speaking, blasphemy can only be committed by a person who believes in the existence and in the attributes of the Deity he impugns, either by ridicule or by reasoning. An atheist is wholly incapable of the crime. When he heaps epithets of abuse on the Creator or turns his attributes into ridicule, he is assailing or scoffing at an empty name, at a being whom he believes to have no existence. In like manner, if a deist—one who disbelieves in our Saviour being either the Son of God or sent by God as his prophet upon earth—shall argue against his miracles or ridicule his mission or his person, he commits no blasphemy; for he firmly believes that Christ was a man like himself, and that he derived no authority from the Deity. Both the atheist and the deist are free from all guilt of blasphemy; that is, of all guilt

Digitized by Google

toward the Deity or toward Christ.—*Lord Brougham, in "Men of Letters in the Time of George III."*

SCIENCE AND PROVIDENCE.—Men are taught to believe in an overruling Providence. They look for evidence of it, and they find that, so far as human power extends over nature, there are traces of a moral government; but that it is such a government as man himself establishes for the protection of society, and nothing more. To what we call good and evil, nature, as such, is indifferent; and nature submits to man's control not as he is just or unjust, believing or sceptical, but as he fully understands the laws by which the operations of nature are directed. The piety of the captain does not save the ship from the reefs. He depends upon his knowledge of navigation. Prayer does not avert the pestilence, but an understanding of the conditions of health. The lightning strikes the church, but spares the gambling-house provided with a conducting-rod.— *Froude, in "Short Studies on Great Subjects."*

BOOK NOTICES.

UNSTERBLICHKEIT. Von Fritz Schütz. Zweite Auflage. Preis 35 cents. pp. 196. Carver, Minn.: Fritz Schürz. 1882.

Students of German will find much to interest them in this pamphlet on "Immortality,"—the work of a liberal thinker of high culture, who has been zealously preaching Free Religion for nearly twenty years in this country, as well as in Germany, where his sermons were interrupted, in 1866, by orthodox mobs. He opens by submitting the Biblical doctrine to a series of keen criticisms, such as that, if Jesus went up among the stars while his disciples were looking at him, he must have moved with such velocity as would have turned him into a fiery meteor. Then the lessons of reason are examined, and it is suggested that whatever genuine phenomena there are in Spiritualism may be due to the unconscious influence of minds still in the body. For instance, apparitions of the dying to distant relatives may be due to some force exerted just before death, but not afterwards, as is commonly supposed. To illustrate the transitoriness of personal identity, reference is made to the case of Christopher Sly in "The Taming of the Shrew," as well as to a similar story in German poetry. The last part treats of the emotional needs arising from the imperfections and evils of earth, from the injustice experienced in this life, from the difficulty of making one's self holy, and from the pain of separation from our friends. The author endeavors to show that nothing is gained in any of these respects by faith in immortality. The mother may wish to recognize in another world the baby she has lost, but her wish could not be realized unless the child should remain a child to all eternity. If there is growth, there cannot be recognitiou. If there is no growth in heaven, the imperfections of this life will not be removed in the next. But if we look at this life as the place where all abuses must be reformed, if at all, and all wrongs righted, then we shall have the strongest possible motives to philanthropy and high morality. Thus, as the author urges in conclusion, the deliverance of all the enslaved is brought rapidly nearer by the passing away of that faith in justice hereafter which has done so much to make men patient under injustice here.

TEN TIMES ONE IS TEN. The Possible Reformation. By Col. Frederic Ingham. Boston: Roberts Brothers. 1883. Price $1.00.

That another edition of this now well-known, uniquely told story is called for, thirteen years from the date of its first publication, is sufficient indication of its merits to those unacquainted with the Harry Wadsworth Clubs and their originator, Rev. E. E. Hale, who masquerades on the title-page as Col. Ingham. The story is a most graphic illustration of the ever-widening influence of generous actions and philanthropic work by even the humblest means.

THE AMERICAN CITIZEN'S MANUAL. Part I. The Functions of Governments (State and Federal). By Worthington C. Ford. New York: G. P. Putnam's Sons. 1883.

This is a plainly written, practical treatise on State and Federal government, apparently one of a series on the same or correlative subjects. It is divided into four leading parts, entitled "Protection of Life and Property," "The Federal Government," "Functions of the State Government," and "State Finances," these divisions having again appropriate subdivisions. The volume is well adapted to those interested in learning what all citizens should understand,—their personal and political rights under our national and State laws.

THE *Catholic World* for August sustains this periodical's deserved reputation for literary excellence as well as devotion to the Catholic Church. An Englishman, in the opening article, entitled "Some Remarks on Mr. Matthew Arnold," claims that, with faith as his basis, the writer "might have written for eternity, whereas his pen belongs to time, and, as in the case of worn-out human mortality, the earth will close over its tomb." The other articles are "Sir Charles Gavan Duffy and his Contemporaries," by Thomas P. Gill; "At Caughnawaga, P.Q.," by A. M. Pope; "Tale of a Haunted House," by C. M. O'Keefe; "Jacopo de Benedetti da Todi," by Jean M. Stone; "Hopeful Aspects of Scepticism," by Oswald Kealenge, D.C.L.; "Gomes and Portuguese Poetry," by H. P. McElrone; "A Day in Macao," by H. Yardley Eastlake; "Armine," chapters xv.-xvii., by Christian Reid; "Morality in the Public Schools," by Rev. Walker Elliott.

THE *Unitarian Review* for July is an unusually interesting number. It opens with a very appreciative and discriminating article on "Ralph Waldo Emerson," by Christopher P. Cranch, which is followed by a paper full of thought and written in the best spirit on "Speculative Theology," by J. H. Allen. An article on "Herbert Spencer's Theory of Morals," by V. D. Davis, an attempt to show that the *Data of Ethics* "misses the very essence of morality," will please those who lay stress on the usual theological and transcendental objections to Mr. Spencer's philosophical teachings. The other articles are "Cardinal Manning," by Julia R. Anagnos; "The God of Abraham, Isaac, and Jacob," by Rev. F. Frothingham; "The Religious Genius of the Races," by James T. Bixby; "Things at Home and Abroad," by Mrs. Martha P. Lowe; and "Review of Current Literature."

IN addition to an extra amount of lighter literature, the *Atlantic Monthly* for August has an excellent and interesting article on "The Trustworthiness of Early Tradition," from the pen of Brooke Herford; Henry James gives the second instalment of his travels "En Provence"; Herbert Tuttle treats of "Academic Socialism"; Ernest W. Longfellow contributes some charming "Reminiscences of Thomas Couture," the eminent French painter whose pupil he was; F. C. Baylor gives us one phase of life as it exists to-day "In the Old Dominion"; Olive Thorne Miller writes of the result of an eight months' "Study of a Catbird"; Charles Dudley Warner describes a trip made by him "Around the Spanish Coast"; and among the reviews there is a very appreciative one of Renan's *Reminiscences*.

IN the *North American Review* for August, the subject of "Moral Instruction in the Public Schools" is considered by Rev. Drs. R. Heber Newton and F. C. Patton; Mr. Henry D. Lloyd exposes the methods of the grain speculators of the West most effectually; Dr. William Hammond writes against "Women in Politics"; Francis A. Walker treats of "Henry George's Social Fallacies"; Simeon Sterne has a paper on "Crude Methods of Legislation"; Charles F. Wingate, one on "The Unsanitary Homes of the Rich"; and "Science and Prayer" is discussed with opposite views by President Galusha Anderson and Thaddeus B. Wakeman.

PERSONAL ITEMS.

BISHOP WILLIAMS, of Connecticut, is reported as saying that the Pilgrim Fathers first fell upon their knees, and then upon the aborigines.

MISS SUSAN B. ANTHONY will reach home from Europe next month, and will at once begin work on the third volume of her History of Woman Suffrage.

THERE is a movement on foot in Washington to erect a monument to Luther in that city, to be unveiled on the four hundredth anniversary of his birth, November 10.

A MONUMENT to the memory of the celebrated naturalist, Lorenz Oken, will be unveiled at Offenburg on the 1st of August. It will be in the shape of a fountain crowned with a marble bust of Oken.

SAYS the *Independent:* "Agassiz was the great foe of evolution, and his scarcely less distinguished son is one of its stoutest defenders. Prof. Park's nephew, after eleven years of very successful missionary work in India, comes back an adherent to the new theology."

MISS EMILY J. LEONARD, of Meriden, vice-president for Connecticut of the association that is to give the industrial exhibition in Boston in September, is succeeding in interesting her towns-women in the scheme; and there will probably be a creditable exhibit of the work of Meriden women.

MR. A. BRONSON ALCOTT is gaining health and strength at a wonderful pace, and is now fully as well as at any time since his first attack of illness. His appetite is good, he is gaining flesh, and he talks freely and fluently. Every pleasant day, he sits on the piazza, and spends much time in playing checkers.

ANNA DICKINSON'S tour will begin on September 17, at Wheeling, West Va., and will be continued through the Western sections of the country to San Francisco. Her repertory is "Hamlet," "Ruy Blas," "Richard III.," "Lady of Lyons," in the leading male characters, and "Anne Boleyn," her own play, in the title rôle.

IT is related that Senator Edmunds was once urged to join a Congregational church. He requested to see the articles. After several days' deliberation, he returned them, and agreed to become a member if ten out of twenty-seven clauses were omitted, six modified, and two new ones added. The result may be inferred from the fact that he is now a pew-holder at the Episcopal Church of the Epiphany in Washington.

THE Newport correspondent of the Boston *Transcript* writes: "There is given annually at the high school here a prize to the best male Greek scholar. It is a medal valued at $75. This year, a colored girl, the daughter of George Rice, the steward on the steamer "Pilgrim," passed the best examination, but, being a girl, could not be given the medal, which went to a young gentleman. A wealthy New Yorker, hearing of this, sent the girl, anonymously, $75 in gold money."

MR. JUSTICE MOULE sentenced a rural prisoner in England in the following words: "Prisoner at the bar, your counsel thinks you innocent, the counsel for the prosecution thinks you innocent, I think you innocent. But a jury of your own countrymen, in the exercise of such common sense as they possess, which does not seem to be much, have found you 'guilty'; and it remains that I should pass on you the sentence of the law. That is, that you be kept imprisoned one day; and, as that day was yesterday, you may go about your business."

IN an article on the late William Spottiswoode, *Nature* says: "It must not be forgotten that the presidency of the Royal Society is the highest honor which it is in the power of the Fellows of that society to bestow. How worthily and how well it was bestowed in the case of Spottiswoode is patent to all! A great responsibility, therefore, now rests upon them; for he upon whom their choice falls will not be merely the representative of English science in London, he will represent it on the Continent and in America. The choice must bear the criticism of scientific men in other lands."

REFERRING to the revelations of Dorsey, some of which unfortunately have the appearance of truth, while others are plainly incredible, the Boston *Gazette* observes: "History may in the end modify somewhat the verdict as regards the assassinated President; but he is safe with the people of this generation. The worst that will ever be said of him will be that he failed in strength of will and in administrative power, came sometimes under the influence of bad advisers, and made mistakes in matters of policy which a man of less talent but different mental organization would have avoided. But even of this view the public is impatient at the present time."

THE London correspondent of the Boston *Daily Advertiser* writes to that journal: "It is the fashion now

Digitized by Google

to utilize prominent American visitors to London for various political purposes. Not only was Mr. Horace White thus made use of by the Cobden Club, but two ladies long connected with the women's suffrage movement on your side of the water have recently addressed a large audience in the new and beautiful Prince's Hall, in Piccadilly, on the great 'woman' question; namely, Mrs. Elizabeth Cady Stanton and Miss Susan B. Anthony. Mr. Jacob Bright presided, and introduced the ladies as the two chief leaders of the woman suffrage party in America. Both ladies were attentively listened to by a very sympathetic audience, and were pronounced to be very able speakers."

PHOTOGRAPHS.

Cabinet Photographs of the following named persons are for sale at THE INDEX office, and will be sent by mail upon receipt of price:—

Darwin, 75 cts.; Huxley, Tyndall, Spencer, Holyoake, and Abbot, 50 cts.; Emerson, Parker, Garrison, Sumner, Curtis (G. W.), Weiss, Adler, and Hinckley, 35 cts.; Card Photographs of Adler, 25 cts.; of Higginson, Abbot, and Frothingham, 15 cts.

Address THE INDEX, 44 Boylston Street, Boston.

LESSONS

For Liberal Sunday Schools or for Home Use.

I. **THE ORIGIN AND GROWTH OF CHRISTIANITY.** A series of Twenty Lessons by Mr. LEWIS G. JANES, of Brooklyn. Written entirely from the Rationalistic stand-point. Prepared originally for use in Mr. Chadwick's Sunday-school. Each lesson printed in a separate slip. Twenty-five cents for the series, including postage.

II. **FREEDOM, FELLOWSHIP, AND CHARACTER IN RELIGION.** A series of Five very suggestive Lessons, by Mrs. KATE GANNETT WELLS. Each lesson contains enough material for several exercises. Seven cents for the series, in separate sheets, including postage.

III. **THE WORLD WE LIVE IN.** A Series of Elementary Lessons in Natural History, by Mr. FREDERIC A. HINCKLEY. Adapted both to interest and profit a class of children. In slips. Twenty-five cents for the series, including postage.

Teachers will do well to examine these lessons. A liberal deduction made for ten copies or more to one address.

Supplied at THE INDEX office, 44 Boylston Street, Boston.

Freedom and Fellowship in Religion.

This is a volume of Essays published by the Free Religious Association. It contains "The Nature of Religion," by D. A. WASSON; "The Unity and Universality of the Religious Ideas," by SAMUEL LONGFELLOW; "Freedom in Religion," by SAMUEL JOHNSON; "Religion and Science," by JOHN WEISS; "Christianity and its Definitions," by WM. J. POTTER; "The Genius of Christianity and Free Religion," by F. E. ABBOT; "The Soul of Protestantism," by O. B. FROTHINGHAM; "Liberty and the Church in America," by JOHN W. CHADWICK; "The Word Philanthropy," by THOMAS WENTWORTH HIGGINSON; "Religion as a Social Force," by EDNAH D. CHENEY. Also extracts from Addresses on the platform of the Free Religious Association, by Ralph Waldo Emerson, Lucretia Mott, Dr. Bartol, A. Bronson Alcott, Julia Ward Howe, Charles H. Malcom, Celia Burleigh, C. D. B. Mills, Horace Seaver, Isaac M. Wise, Robert Dale Owen, Wm. C. Gannett, Lucy Stone, F. B. Sanborn, Wendell Phillips, and others.

This book was published eight years ago, but is a live book still, and is a good answer to the question, What does "Free Religion" mean?

Price $1.50. Address "FREE RELIGIOUS ASSOCIATION," 44 Boylston Street, Boston.

BUILDING FUND.

THE Free Society of Dorchester was founded two years ago by Clara M. Bisbee. its present resident speaker; and, seeking greater facilities, also permanence as an institution, it now asks aid toward the erection of a small and simply constructed hall. Three thousand dollars will cover the entire expense, and friends of progress are respectfully invited by material gift practically to advance the cause at once of Woman's Ministry and of Free Religion. For further knowledge of the Society, address the President or Secretary of the Free Religious Association or Mrs. Clara M. Bisbee, Clark Street, Dorchester. Contributions sent to Mrs. Bisbee will be promptly acknowledged.

THE FREE RELIGIOUS ASSOCIATION

was organized in 1867. Though having its headquarters in Boston, it is a national organization, and has members and officers in various States of the Union. It has the following

CONSTITUTION.

I. This Organization shall be called the Free Religious Association, its objects being to promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history; and to this end all persons interested in these objects are cordially invited to its membership.

II. Membership in this Association shall leave each individual responsible for his own opinions alone, and affect in no degree his relations to other associations; and nothing in the name or Constitution of the Association shall ever be construed as limiting membership by any test of speculative opinion or belief,—or as defining the position of the Association, collectively considered, with reference to any such opinion or belief,—or as interfering, in any other way with that absolute freedom of thought and expression which is the natural right of every rational being. Any person desiring to coöperate with the Association shall be considered a member, with full right to speak in its meetings; but an annual contribution of one dollar shall be necessary to give a title to vote,—provided, also, that those thus entitled may at any time confer the privilege of voting upon the whole assembly, on questions not pertaining to the management of business.

III. The officers of the Association shall be a President, twelve Vice-Presidents, a Secretary, an Assistant Secretary, a Treasurer, and twelve Directors. They shall be chosen by ballot at the annual meeting of the Association; and the President, Vice-Presidents, Secretaries, and Treasurer shall hold their offices for one year, or until their successors be chosen. The Directors shall be chosen for four years, and, at the expiration of that term, shall not be eligible for reëlection until after two years. One fourth of their number shall be chosen annually; but, at the annual meeting of 1882, the full number of twelve shall be chosen in sections of three respectively for one, two, three, and four years. The President, Secretaries, Treasurer, and Directors shall together constitute an Executive Committee, intrusted with all the business and interests of the Association in the interim of its meetings. They shall have power to fill any vacancies that may occur in their number, or in the list of Vice-Presidents, between any two annual meetings. Six members of the Executive Committee shall constitute a quorum.

IV. The Annual Meeting of the Association shall be held in the city of Boston, on Thursday of what is known as "Anniversary Week," at such place and with such sessions as the Executive Committee may appoint, of which at least one month's previous notice shall be publicly given. Other meetings and conventions may be called by the Committee, according to their judgment, at such times and places as may seem to them desirable.

V. These Articles may be amended at any Annual Meeting of the Association, by a majority vote of the members present, provided public notice of the amendment has been given with the call for the meeting.

Officers elected for the year 1882-83:—

PRESIDENT.

WILLIAM J. POTTER, New Bedford, Mass.

VICE-PRESIDENTS.

OCTAVIUS B. FROTHINGHAM, Boston, Mass.
FELIX ADLER, New York City.
GEORGE W. CURTIS, Staten Island, N.Y.
EDWARD L. YOUMANS, New York City.
FREDERICK SCHUENEMANN-POTT, San Francisco, Cal.
THOMAS WENTWORTH HIGGINSON, Cambridge, Mass.
ELIZABETH B. CHASE, Providence, R.I.
GEORGE HOADLY, Cincinnati, O.
NATHANIEL HOLMES, St. Louis, Mo.
ROWLAND G. HAZARD, Peacedale, R.I.
BERNHARD FELSENTHAL, Chicago, Ill.
ANNIE L. DIGGS, Lawrence, Kansas.

SECRETARY.

FREDERICK A. HINCKLEY, Providence, R.I.

ASSISTANT-SECRETARY.

CHAS. H. CODMAN, Boston, Mass.

TREASURER.

JOHN C. HAYNES, 451 Washington St., Boston, Mass.

DIRECTORS.

Four Years.

FRED. MAY HOLLAND, Concord, Mass.
MRS. CLARA M. BISBEE, Dorchester, Mass.
J. A. J. WILCOX, Chelsea, Mass.

Three Years.

B. A. BALLOU, Providence, R.I.
WILLIAM H. HAMLEN, Boston, Mass.
ANNA GARLIN SPENCER, Florence, Mass.

Two Years.

EDNAH D. CHENEY, Jamaica Plain, Mass.
ARTHUR G. HILL, Florence, Mass.
RICHARD P. HALLOWELL, Boston, Mass.

One Year.

CHARLES D. B. MILLS, Syracuse, N.Y.
JOHN L. WHITING, Boston, Mass.
HELEN M. IRESON, Lynn, Mass.

The office of the Association is at 44 BOYLSTON ST., BOSTON (next door east of the Public Library), where is also the publication office of *The Index*.

All letters pertaining to the business of the Association (payment of membership fees, orders for its publications, etc.) should be addressed to "Free Religious Association," at the office.

Communications intended specially for the Secretary, as well as his personal correspondence, should be addressed to him at PROVIDENCE, R.I.

F. A. HINCKLEY, *Secretary F.R.A.*

THE PRESENT DAY.

A Monthly Journal discussing Agitating Questions without agitation.

EDITED BY

GEORGE JACOB HOLYOAKE.

The *Present Day* is addressed to all who hold the brave and cheersome faith that life according to Reason is the best religion for the world that is, and the best qualification for the world that may be.

"False Ideas may be confuted by argument, but only by True Ideas can they be expelled."—*Cardinal Newman.*

Annual subscription, 2*s.* 6*d.* Single copies, 2*d.* Published by R. H. SQUIRE, 52 Fleet Street, London, E.C.

PUBLICATIONS

OF THE

FREE RELIGIOUS ASSOCIATION.

Freedom and Fellowship in Religion. A volume of ten essays upon speculative and practical problems of religion, by D. A. Wasson, Samuel Longfellow, Samuel Johnson, John Weiss, W. J. Potter, F. E. Abbot, O. B. Frothingham, J. W. Chadwick, T. W. Higginson, and Mrs. E. D. Cheney, and extracts from Addresses by Ralph Waldo Emerson, Lucretia Mott, Robert Dale Owen, Dr. Bartol, Wendell Phillips, Rabbi Wise, Horace Seaver, A. B. Alcott, Lucy Stone, Charles H. Malcom, Julia Ward Howe, and others,— all given on the platform of the Free Religious Association. Price (reduced) $1.50.

Reports of Annual Conventions of Free Religious Association, from 1872 to 1879 inclusive. These contain essays and addresses by the various distinguished men and women who have spoken on the Free Religious platform, together with yearly reports of the Executive Committee. 10 cts. each.

TRACTS.

I. *Taxation of Church Property*, by James Parton. 5 cts.; ten, 30 cts.; one hundred, $1.50.

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—**The Christian Amendment,** by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents, 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

The office of the Free Religious Association and of *The Index* has been removed to 44 Boylston Street, next door east of the Public Library, and in the same building with the Household Art Rooms. Correspondents will please take notice.

CURRENT TOPICS.

BY a rigorous enforcement of a law making education compulsory, crime has been reduced fifty-one per cent. in seven years in the Grand Duchy of Baden, and pauperism has been reduced in the same time twenty-five per cent.

ACCORDING to a Chicago paper, an Illinois woman has been so injuriously affected by her recent "conversion" that she has done no work; and the husband has sued the revivalist, who, he affirms, has been instrumental in destroying the household usefulness of his wife.

NOWHERE do religious ideas get more incongruously mixed than in the minds of a mining population. For instance, in Leadville, Col., there is said to be a gambling saloon the stained-glass windows of which are ornamented with Scriptural subjects, and in which is a large open Bible on a stand, while the case of the clock bears the injunction in large letters, "Please do not swear."

THE trustees of the University of Pennsylvania, with a view to instituting a formal investigation of modern Spiritualism, in accordance with the conditions of the late Henry M. Seybert's bequest, have appointed a commission, which contains the following names: Dr. William Pepper, provost of the university, Joseph Leidy, M.D., Rev. Robert E. Thompson, George A. Koenig, and George W. Fullerton.

SAYS the Springfield *Republican:* "The men who patronize Prof. Huxley's biology lectures at South Kensington, London, have every reason to view the aggressiveness of the opposite sex with fear and trembling. Last winter, a young woman applied for admission to the course. The men objected, but she gained her point. At the recent examination, she carried off the honors against two hundred and fifty male competitors.

WHEN such events occur as the devastation, last Sunday night, of the Island of Ischia, an island lying off the Bay of Naples, where, by the subsidence of the ground, Casamiccola was destroyed, other towns damaged, and four thousand persons killed, it is not strange that there are individuals who are agnostics, or who express doubts as to the government of the world by a personal Being who numbers the hairs of our heads and notes even the fall of a sparrow.

A LADY correspondent of the *Christian Union* sensibly protests against the wearing of "mourning" for the dead, on the ground that it is "heathenish" and unhealthy. "The goods worn," she says, "are hot and close and depressing, the veils are heavy, often poisonous, and when worn over the face the diagonal lines are ruinous to the eyes." There is already a tendency to reform in this respect among all classes, and we hope to see the day when this depressing and foolish custom will be as unfashionable as it is useless.

"IT seems," says the New York *Sun*, "that Caravaggio is running Lourdes hard as a popular shrine. An eye-witness declares that every day at noon a vision of the Virgin Mary rises from a dark recess behind a pillar in the chapel, when the shrieks and screams of those knocked down and trampled on by others desiring to see is appalling. Outside the holy fountain stand groups of devotees of every class and condition, who in due course are lifted by friends into the fountain. Ever since the Duke of Norfolk took his little blind boy to Lourdes, he has been pestered by letters begging him to take him to Caravaggio."

DR. HENRY MACAULAY, of Belfast, Ireland, suggests that Monchot's sun-engine should be used to pump cold air into dwellings, factories, etc., declaring that in this way the temperature can be reduced from 100° or more to 60°, guaranteeing fresh air and exemption from the plague of flies and insects during the day and rendering sleep possible at night. "The weak point about this arrangement," says *Nature*, "is that it requires ice. We think, however, that sooner or later, in America, where the heat in summer is more distressing than in any other part of the world, and ice is everywhere, this arrangement or one like it is certain to be adopted."

THE Central Labor Union, at their meeting in New York recently, refused to hear a harangue by the notorious Dennis Kearney, who was present with the expectation of addressing the Union. "It speaks very well for the workingmen that they repudiate Kearney," says the New York *World*. "He is the last man in the world to be intrusted with any leadership or authority, especially in a movement based on the inherent principles of equality and democracy. His only qualification is his impudence, which is quite equalled by his ignorance; and he attempts the high and noble rôle of a popular leader with the temper and spirit of a pirate and slave-trader. But the workingmen have interests and aspirations which demand the presence, if not of leaders, at least of competent and authorized spokesmen and representatives."

THE following statement from the New York *Sun* hardly admits of dispute: "For many years past, the torments of hell have not been talked about in orthodox pulpits, especially those occupied by educated men addressing the more intelligent congregations. By tacit consent, the disagreeable subject was avoided in polite religious society. Latterly, too, not a few evangelical ministers have even had the courage to denounce the doctrine of hell; and it is apparent that they express the opinions secretly held by a great part of the clergy and laity both. It may perhaps be said with truth that now the majority of intelligent Protestants have either given up their belief in eternal punishment or are very doubtful regarding it. Hell has no longer the terrors for them it had for their fathers. According to present appearances, the venerable doctrine will be pretty completely abandoned by Protestantism within a quarter of a century." And yet, when one alludes to the decay of the orthodox theology, his attention is directed to the strength and influence of the churches, just as though the decay of theology were not one of the conditions of the prosperity of the churches.

THE "Come-to-my-arms-my-boy" spirit of Washington's father is apparently not cultivated by the authorities over the Iowa State University, if a recent report is to be credited. We quote from the Boston *Herald:* "The trouble between the law class of the State University and the university authorities has been settled by excusing all the students but one, R. H. Hawkins of Maryville, Kan., who was asked these questions: 'Were you at the indignation meeting?' to which he replied, 'No'; 'Did you hiss in the Opera House?' to which he said, 'No'; 'Did you sympathize with those who did?' to which he said, 'Yes.' To the last remark he was afterward requested to say, 'No,' and for refusing to do this his degree was forfeited. He asked the privilege of making a statement, which was denied him; and he then refused to say 'No' to what he had said 'Yes.' The board stood three to three, the president casting the deciding vote. Mr. Hawkins is one of the finest students, of exceptionally good character; and the action of the regents has caused great indignation among the students who know all the facts." Teachers who by thus punishing a student for speaking the truth offer a premium upon dishonesty are the ones who should be expelled from the institution in place of the truth-telling student.

A UNITARIAN GROVE MEETING.

Three years ago, we took a run, largely from curiosity, up to Weirs, N.H., to get a glimpse of the Unitarians in the novel enterprise of holding a camp-meeting. On returning, we gave our impressions in an article in *The Index*, headed "The Unitarians in Camp." That, if we remember aright, was the second year of the enterprise; and the movement had all that flush and promise of success which inhere in novelty. The attendance was large. There were numerous ministers present, and some of the best in the denomination. There was no lack of talk. The meeting even vied with the Methodists' in lasting for eight days, and had, like the Martha's Vineyard camp-meeting of that sect, its "big Sunday." Indeed, our judgment then was that there was too much zeal to last; that there was hardly enough of the natural article in the whole denomination throughout the country to keep up an eight days' camp-meeting, and that any artificial stimulation of zeal would soon exhaust itself.

The past week, we went up to the Weirs' meeting again,—this time by invitation, to read an essay. The meeting, we are bound to say, has always been conducted on a pretty broad basis. At the time of our former visit, being detected in the audience, we were called upon for remarks; and our plea for the largest fellowship (the subject under discussion admitting of that line of address) appeared to be well received. This year, being cordially invited by the Committee of Arrangements to take part in the meeting, we had no hesitation in accepting; and our essay found in its small evening audience in the hotel parlor a gracious response. Dr. Peabody had spoken in the same place in the afternoon, and so the conservative ballast was ample. But we could not help getting the impression that this missionary enterprise is nearing its end. The attendance this year has been small. Very few of the ministers have put in an appearance. Those who have come by invitation to do some special service have for the most part come only for that service, and have departed as soon as it was over. And the meetings have been cut down from eight days to four and a half.

These things certainly indicate a slackening of interest. The condition of things, however, was explained by those most interested as the result of several special causes. And, first and foremost among these causes, they put the fact that for the two previous seasons the weather during the week of the meeting had been excessively hot, and that people who had then come hoping for a week at a cool summer resort had been frightened from trying the experiment again. Unitarian zeal could not, certainly, be expected to keep pace with the zeal of a thermometer that goes up to one hundred. This year, it has been delightfully cool, and the lake and the mountains have been in their glory. Then, again, it was said that at the previous meetings too much was attempted. The meeting was held too many days, and too many sessions were put into a day, so that people were really wearied instead of refreshed.

And the persons who thus explain the diminished interest do not admit that the enterprise is going to die. They think that the reform inaugurated this year in the length of the session, and, to some extent, in the character of the meetings, will tend to put the enterprise on a more solid and permanent basis. They are disposed, too, to recognize the fact that Unitarians will not go to a camp-meeting, as the emotional pietists do, *to get* religion, or even to *enjoy* their religion as something apart from the rest of life, but only for the sake of a general enjoyment and refreshing in all the associations of the time and place. And, recognizing this fact, they are disposed to accommodate the arrangements of the meeting to it,—allowing time for pleasure excursions to the many points of interest in the natural scenery of the neighborhood, and for that social intercourse out of which many think they derive a large part of the benefit of the occasion.

With such changes, it is possible that the Grove Meeting may be continued. The meeting this year, in spite of the small attendance (except on Sunday when there were good audiences), has been an interesting one to those who have been present. And there seems to be no reason in the nature of things why people of liberal beliefs should not hold meetings out of doors as well as in halls or churches. It is not necessary to have emotional demonstrativeness in an out-door meeting more than in an indoor meeting, though it is necessary, perhaps, to have more living power than Unitarian ministers have usually been trained to use. And there is doubtless a temptation in such a meeting to use lung-power in the place of brain-power, a temptation to be strenuously guarded against. Assuming that proper precautions be taken against this and some other liabilities to error, it seems to us that, in the present tendency to long summer vacations from labor, a part of the time may well be given to a reasonable amount of such mental and moral stimulation as may be obtained from bringing people of various societies and communities together in a meeting like this at Weirs.

WM. J. POTTER.

"THE UNDISCOVERED COUNTRY."

While Cardinal Newman was yet in his Birmingham oratory, from which he was so reluctantly dragged to be a prince in his church, I visited about daybreak the chapel there in which he used to celebrate early mass. I wished to see if there were legible in that face any sign that could suggest a solution of the problem how it came that a great and learned man should abandon his age, turn from his scholarly circle, leave his friends, give up the fairest prospects, and devote his genius and culture to the work of muttering before wafers, bending before images, parading in tawdry vestments, and teaching young men to do the same. With the exception of our small party,—my wife, myself, and a lady who belongs to the English Church,—only one auditor had come at that early hour, an Irish servant girl. In a corner of the unlighted chapel, in that murky morning, with the assistance of two neophytes and one tallow candle, the famous Father Newman went through the mass. A strange face! At times, it seemed the ideal of a witless crone going through formularies of witchcraft. The sight of it became painful, and my eyes wandered to the only picture visible, St. Francis in ecstasy. When I looked back, Father Newman's head happened to be just this side the candle, which made a halo around it. The bold outlines of head and feature stood in relief: all that nature meant in that brain seemed shadowed out. Another moment, the glory was gone: there was visible in the corner only the tallow-candle and what all the promise of nature in that man had come to,—a face with light gone out, muttering forms whose light had gone out, and beneath their sad cry, as if to the painted saint in his genuine ecstasy, "Give us, Francis, of your oil!"

When the dismal affair was over, and the aged man had gathered up his books and with feeble step passed out through a blind way, we went out, and found the murky night fog cleared, the sun risen, the birds singing their Vedic hymns to the Dawn. I said to the lady with us, "How can such a phenomenon be explained?" She answered, "By the blinding splendor of man's least glimpse of the infinite." No doubt, it has been for what man believed his glimpse of the infinite that man has scorned his common sense and his transient world. Only for that pearl does man sell all he has. But, now that all trustworthy tests have proved it a mere Roman pearl at best, might one not suppose that human nature would adapt itself to fact and reality? And is this world then so poor, is there so little in glimpses of the infinitude shining in the eyes of children, in the loveliness of man and woman, in love and friendship, that one glimpse of some other world may rightly eclipse this? I cannot help believing that, in this respect, the man of to-day is generally the victim of a philter, a potion distilled out of the hells and heavens of ancient belief, and mastering his nerves after the infernal fires are extinguished, the celestial retorts shattered. I suppose that the stoutest free thinker, if shut up all night amid the tombs of Westminster Abbey, might become conscious of some drop of this supernatural philter in his system. It seems to require a special drill and training to keep the rein over the nerves in the hand of reason. There will probably be, in the coming college, a chair of common sense to train in people some principle by which they may be able to distinguish complete from incomplete inductions. At present, any will-o'-the-wisp appears to be a sufficient glimpse of the infinite, even to well-informed men.

Here is a bit of personal experience. Not long ago, I had a queer dream. In the night during whose small hours the Affirmation Bill was to be voted on in Parliament, I dreamed that the bill had been lost by "two or three votes," to use my words on awaking. An hour or so later, the news came to our suburb that the bill had been defeated by a majority against it of three. It was, no doubt, a notable coincidence, because no paper of either party had dreamed of any defeat except a majority for the government too small to go into committee with,—say ten or fifteen. My own prediction had been that we should win by thirty. Nevertheless, such was the dream and its near fulfilment. I casually mentioned it to a friend or two, and soon after was stopped on the street by several Spiritualists, who congratulated me on having received a convincing proof of the spiritual universe. I am hearing of this little dream on all sides, enlarged and improved, and am in daily fear of finding myself paraded as a converted sceptic. But, in all this, nobody has asked me to tell them the precise fact. I have been an inveterate dreamer through some eighteen thousand nights, and it is not preternatural that one single dream should come true. I have had a previous experience of the peril of even a suspense of judgment as to any alleged fact, so quickly do the superstitious catch at any straw that seems to suggest a supernatural universe. Mr. Irving Bishop, holding my hand in the presence of a company of scientific and literary men, discovered a small card which I had concealed in his absence. Dr. Carpenter's theory that this was done by unconscious muscular guidance by the "subject" did not strike me as a sufficient explanation in my own and one or two other experiments. I expressed that doubt in a note to a London paper, and soon found my hand cordially shaken by the children of eternal glimpses. It now appears to me certain that Mr. Irving Bishop's more important performances succeed by help of confederates. There is not the slightest doubt that it was by mere trickery that he read the number of a bank-note,

Digitized by Google

for he refused one after another every person known in London, and succeeded only with an unknown individual from Manchester. Concerning the antecedents of this individual, inquiries have succeeded only in proving that he was one of Bishop's "subjects" in Manchester, and was sometimes seen with him in London.

This bank-note business has been fatal to Bishop's pretensions to the consideration of scientist. It has been proved that, when the "subject" is blindfold and cannot guide him to the object he has hidden, the object remains hidden. Unless guided by the subject, Bishop is not guided at all. It is now proved that he is willing to pretend that his tricks are scientific experiments. He now announces that he means shortly to discontinue his public performances, in order "to resume my investigations of the mysteries of the East." This may appear a mysterious remark of Mr. Bishop's, but I assure you it is of great significance. Spiritualism came here from the West. Its mediums, so far as they professed to work miracles, have been successively exposed in London, until not one remains to represent a glimpse of the infinite. There are eminent believers in Spiritualism still, but Crookes and Wallace have been compelled to witness the exposure of the impostors on whom they based their belief before the public. We now have no medium of note in London. I could not write here the name of any medium in England giving "physical manifestations." But the "glimpses" are not to be snuffed out that way. Suddenly, Spiritualism comes to us from the far East, comes with a chocolate complexion, professes to have got nothing from the West, calls itself "Theosophy," "Esoteric Buddhism," and to be about to give us by degrees the secret of the universe as preserved by an association of adepts in India through the lapse of ages. When Bishop speaks of resuming his studies of "the mysteries of the East," it must not be supposed that he will leave London. There is now a Theosophical Society in London which already numbers among its victims such fine brains as those of Edward Maitland and A. P. Sinnett, and it is to be feared that Henry Sidgwick and the Rev. Mr. Haweis are far on the same road. For whatever may be said of "the undiscovered country," Spiritualism is a bourne from which few travellers return. Last week, Sir Lewis and Lady Pelly gave out invitations for an afternoon company to hear Mr. Sinnett explain "Esoteric Buddhism." It turned out to be nothing but an exposition of the theosophisticism of Mr. Olcott and the spiritism of Madame Blavatsky masquerading in the growing prestige of the *Light of Asia*. Of this, Mr. Sinnett was no doubt unconscious; but, when I asked him in the presence of the company what connection there could be between the Theosophists and Buddhism, he gave me the unsatisfactory reply that Buddha was a distinguished "Adept." What has befallen the author of *The Pilgrim and the Shrine* may be discovered by reading *The Perfect Way*. The latter book is the joint production of Edward Maitland and Mrs. Dr. Anna Kingsford. I understand that these Hindu and Thibetan Adepts claim to have inspired Bulwer's *Zanoni*, and that, since the Maitland-Kingsford book appeared, they sent over a message that it contains potentially the secret they (the Adepts) have kept for thousands of years. They (Adepts) have, in a high episcopal way, appointed Maitland and Mrs. Kingsford (wife of an English clergyman) to head the English branch of the Theosophical Society, as the only condition on which they would impart the secret doctrine. The lady and gentleman consented, and were elected. They note that, by a coincidence, they were chosen on January 7, festival of "the Kings of the East." Some even note that the lady's maiden name, Anna Bonus, comes near being the "Acceptable Year"; and King's-ford signifies the path opened for the Kings of the East. But one would like to know more of these Oriental Magi. I asked Mr. Sinnett whether there would be a chance of my meeting one of the "Adepts," if I went to India. He said there was not the least. "You will be able to see Madame Blavatsky and Dr. Olcott, of New York." No doubt. But I would like to see a regular "Adept" whose complexion will wash. Especially as an Anglo-Indian barrister tells me that the Theosophists have a veiled oracle, named Rantoon (or something like that), residing in the centre of Thibet. The Theosophists converse with him from afar, but nobody has ever yet been able to get a realistic "glimpse" of this prophet. Perhaps Mr. Irving Bishop may discover him; but, at present, it looks much as if the making of Oriental mythology is not altogether a thing of the past. It seems a phenomenal thing that the overpowering other-worldliness of our ancestors should at last evolve a new church in London, based on belief in the inspiration of Hindu dervishes and the divine sanctity of a Veiled Prophet in Thibet and Seer of the Seven Heavens. Of course, that implies utter reversal of the idea of evolution. To find the climax of our race, as to knowledge and illumination, among Hindu or Syrian barbarians, living in a pre-scientific age, is, for the believer in any law of progression, to put darkness for light and light for darkness. It may be, however, that good will come out of it all. My friend, the Rev. Mr. Haweis, boldly includes the spiritual phenomena, or "transcendental physics," with the Biblical miracles. "Do you not," he lately asked his fashionable congregation, "call to mind the trances of David and Solomon, the voice heard by Samuel, the lights seen in the presence of the Shekinah, and the use of the crystal in connection with the Urim and Thummim?... Why, the Bible is full of witchcraft as well as of messages from the Lord!" This eminent clergyman admits that these things are similar to "the oracles of Delphi and the gifts of healing among the Egyptian priests." It may be that this is the beginning of the end. As little by little solid and sensible men of the world, dozing comfortably on their pew cushions, wake up to the fact that they are committed to a gigantic system of spiritism, that the traditions they thought so dignified are but Biblical versions of the performances of Eastern Irving Bishops, Slades, and Homes, it may be that they will become tired of spending their money for dust-cakes painted like bread. It may be, too,—which is more important,—that as the world becomes more cultured, the human mind more refined, these glimpses of the infinite will be felt as adding new terrors to death. Of all that profess to have revelations concerning things beyond the grave, who has told us, who now tells us, of anything there so sweet as love, friendship, and health in this world, or of anything so attractive as unconscious, dreamless rest after life's labors? It may be individual consciousness will survive death. If so, let us hope that it will not be under any such conditions or in any such region as those rumored to have visited the glimpses of the spiritualistic moon, whether eastern or western. MONCURE D. CONWAY.

HISTORY.

Geologists only know the crust of this planet. That is, only the skin, so to speak, of the globe is accessible to their observations, which are limited to the small distance of ten miles from the surface toward the centre, the total distance being some four thousand miles. In like manner, the historian's data confine him to a retrospect of some twenty-five or thirty centuries, when his backward glance finds itself involved in the twilight shadows of fable and prehistoric time. Hitherto, only a few countries, nations, and races have had a history or been historic. Barbarians are as unhistoric as plants or the lower animals. The vast empires of Asia furnish but little material for the historian. They at a very early period reached a certain low stage of development, and then were stricken with stationariness and immobility, so that one century of their past is as like another century as one pea is like another, to use the homely horticultural illustration. Asia has in fact never advanced beyond the theological stage of evolution.

Asiatic humanity has hitherto been a vast anonymous multitude, countless as the sands upon the seashore, without individuality, without citizenship, blindly obedient to force and unbending tradition and to arbitrary personal power. Like ants, bees, and beavers, the Asiatics have gone on from time immemorial repeating their industrial and artistic methods from age to age, without improvement or versatility. In fact, Tubal-Cain was the last inventive genius that Asia has produced. But the ten-thousand-yeared lethargy which has hitherto brooded over the vast regions and populations of the Orient is beginning to be disturbed. Europe, which was originally peopled from Asia, is beginning to arouse the mighty continent, which was the cradle of the leading races, from its dreams and mystical reveries. India and China are, erelong, to be the seats of a rational, modern civilization.

What is called ancient history means mainly the history of Greece and Rome, which were for ages the sole radiating points of light and civilization. In those two countries, man first became a citizen and legislator; that is, first exercised his regulative faculty, or reason, in the conduct of his social and political affairs. After the decay of pagan civilization, there was a social chaos, during which the history of the European nations, with the exception of the Spanish Saracens and Italian republics, may be summed up as "a mere battle of crows and kites." Might made right. Reason, or the regulative faculty, was in abeyance. Imagination overpowered it. Robber barons, with iron pots over their thick skulls, were the ruling class. But the human race, being of a tough, much-enduring fibre, finally emerged from that long, dismal twilight, and took a new and more hopeful departure. Suffice it to say that civilized man has at last reached the stage of a rational social and political evolution. But our higher reason tells us that society is not yet what it ought to be, but that by patient endeavor and persistence it may ultimately be made what it ought to be. Man is *human* only so far as he is reasonable and intellectual. The mind is the man, in the higher sense of the word. So far forth as the human being is the creature of capricious impulse and appetite, of mere inherited belief, usage, and custom, or of prejudice, superstition, and blind habit, he is only an animal. Old-fashioned governments of force and personal authority are badges of barbarism and animalism. If all men were thoroughly intelligent and rational, government would not be the complicated, expensive affair that it now is. The political system of this country proceeds upon the assumption that the masses are capable of self-government. And so they are, when they are disciplined and educated to it, but not otherwise. Meantime, the nations cannot expect to pass from under the yoke of strong personal governments to popular self-rule, except through many tribulations, temporary failures, and obstructions.

Digitized by Google

Imported ignorance and superstition are already blocking the wheels and embarrassing the operations of our free American system of popular sovereignty; while the land and wealth of the country are being remorselessly and rapidly appropriated by gigantic monopolists, individual and incorporated. Just now, the outlook here is discouraging for the friends of social and political equality. We are already beginning to learn by sad experience that enormous populations, when they are not of the right sort, are, as Emerson says in one of his essays, like moving cheese,—the more, the worse they are for our purposes.

Mankind seems, indeed, to consist largely of what may truly be called "guano-races," who are so animalized that the franchises of a free citizenship are worse than thrown away upon them,—are literally pearls cast before swine. When called upon to engage in the deliberations of a political assembly, they are capable of nought but sound and fury, signifying nothing. When they exercise the right of suffrage, some vile demagogue is sure of their support. According to present appearances, our great Western republic is likely to be injected erelong—unless precautionary measures are adopted—with such an excess of human rubbish from beyond seas as to make universal suffrage a peril and a nuisance in connection with a free and easy system of naturalization.

The experiment of our good old Commonwealth in erecting huge barracks for the housing and support of alien paupers having resulted in her being cursed by the objects of her bounty, and stigmatized by a vile Yankee renegade and demagogue-other States are not likely to copy her example. Meantime, popular sovereignty and popular education, in spite of all temporary obstructions and discouragements, are yet to be the rule throughout the area of civilization. For the civilization of to-day is armed with irresistible powers, and its trend is in the direction of popular freedom. Society cannot fail finally to be reconstructed the world over according to the ideal of the higher reason, or supreme regulative faculty of the mind. It is needless to say that our American institutions were organized in accordance with that ideal, and sooner or later they are bound to be a perfect success.

THE SECRET OF THE EAST;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

CHAPTER VII.

Daybreak.

And many of them that sleep in the dust of the earth shall awake.—DANIEL xii., 2.

The revival of rationalism at the beginning of the sixteenth century forms the turning-point and the most interesting era in the history of the Middle Ages; for all the developments of our present civilization can be traced to germs which then first ventured into the light of day. But the researches of the few free-thinking historians of that period have been sedulously perverted by the hired pettifoggers of the Christian cliques. The insurrection against the authority of the Church has been ascribed to the national antipathies of the Latin and German races, to a revival of Latin literature and paganism, to the lessons of the Crusades, to the intrigues of the Spanish Jews, to the pantheism of Averroes and other Moorish philosophers. The most extravagant theories have been elaborated to avoid the confession of the simple truth,—that the excess of the evil itself produced a reaction which led to its abatement.

Like the idol of the Baal priests, insatiable devourers sooner or later swallow an explosive mixture; and the very triumphs of an intolerable tyranny have thus often led to its overthrow. The power of the Roman Empire was broken by the revolt of barbarians whose troops had been trained in the imperial armies. The Turks selected their janizaries from the stoutest young men of the vanquished Slavonians, and these very janizaries eventually compassed the ruin of the Ottoman Empire. During the first ten centuries of the Christian era, the power of the Church was balanced in the North by the untamed pride of the Teutonic princes, and in the South by the lingering influence of pagan philosophy. The fanaticism of her militant apostles prevailed against valor and common sense, but the plenitude of her triumph proved fatal to her supremacy. Europe had become an ecclesiastical allodium. Wealth, the treasures of literature, the control of the censorship, the institutes of learning, were almost entirely in the hands of the clergy. Legislators were their obedient tools. The civilization of the Moors had been annihilated. The high-schools of Toledo and Cordova had lost their protectors. The establishment of the Inquisition and the vigilance of her spies insured the punishment of non-conformists. In less than a century, the prodigious number of convents had more than doubled. In 1450, the Franciscans had sixteen thousand two hundred convents. In 1520, the subdivision of the order known as the "Observants" had thirty-four thousand monasteries of their own. In the fifteenth century, the Dominicans and Augustinians had spread all over Western Europe. In many parts of Spain there were six friars and two priests for every dozen workingmen. In Spain and Portugal, the Jews had shared the fate of the Moriscoes; and, in Germany, the Inquisitor Hogstraaten attempted the destruction of their entire literature, with the exception of the Old Testament. Free thinkers were not only unaided in the pursuit of truth, but effectually debarred from its dissemination. The Church controlled the whole machinery of education, and the votaries of knowledge had to become priests or monks. Among the many millions who entered the monasteries in search of peace or in quest of the refectory, a few hundred came with higher aims, and their unselfish love of truth drove them to a fierce rebellion against the power of her enemies. The Church that tried to digest this mixture of monachism and philosophy found that she had swallowed the prescription of Daniel. The font of her consecrated water had been vaunted as the fountain of truth. All other well-springs of knowledge had been stopped, and pilgrims whose thirst could not be stilled with sophisms had been admitted behind the scenes. The revelations that dispelled the shadows of the Middle Ages did not come from Cordova or Bagdad, but from the strongholds of the Christian hierarchy. Luther, Campanella, Eckardt, Charron, Roger Bacon, Lipsius, and Jordan Bruno were monks. Duns Scotus, Vanini, Abelard, and Woolston were theologians. Jean Meslier was a Catholic clergyman. These men, and hundreds of their contemporaries, had entered the Church without any special bias in favor of anti-naturalism. In Northern Germany, the word "*Pfaffe*" (a Romish priest) had never ceased to be a synonyme of everything unmanly and contemptible. In Southern Italy, the descendants of the old hero race still cherished the traditions of their forefathers, and hated the chains which they were unable to break.

In the hearts of such men, the study of ancient history, the echoes from the paradise of the past, and the knowledge of the true character of the moralists who had sacrificed that paradise to force their way to the throne of the world,—this knowledge, and the comparison of the past and present condition of their native lands, must have produced a degree of indignation which we can only conceive by imagining an analogy of our own country and age.

Suppose that the Californian Chinese manage to propagate a superstition which finally enables them to subvert the civilization of the North American continent. The new Celestial Empire is governed on the principle of Buddha, that all earthly possessions are vain, and that salvation can be obtained only by suppressing our natural instincts. By the alliance of Pagoda and State, the Buddhists secure the aid of the civil powers, and, in return, sanction the basest tyrannies of the secular rulers by inculcating the duty of passive submision to "the powers that be."* In the summit regions of the Rocky Mountains, a few Anglo-American tribes still maintain the independence of their Republican forefathers; but the farmers of the plains are captured, branded like sheep, and divided in chain-gangs to work for the monks of the Buddhistic convents that spring up like mushrooms in every town. Turner Halls, gymnasiums,† and public baths‡ are suppressed as "fleshly vanities," tending to divert the minds of men from things spiritual. Our public libraries are demolished;§ some of the larger volumes are packed off to the monasteries, not from an appreciation of their literary value, but for the sake of their flyleaves and blank margins, which are to be used for the record of Buddhistic ghost stories. The New England universities are closed by order of the Grand Mandarin.‖ Industrial progress is limited to the invention of improved machinery for the torture of heretics. The government bounty for timber plantations is discontinued. The forests are devastated, and the bonzes advise the proprietors to avert droughts by prayer-meetings. The Grand Lama instructs his provincials to suppress unbelief by the enforcement of an elaborate penal code. Thousands of scholars are burned alive for maintaining the difference between one and three. Mathematicians are treated as enemies of the human race.** The professors of the Washington Observatory receive forty bamboo stripes for demonstrating the annual motion of the earth, and twenty-five extra for maintaining her diurnal motion. Public festivals are enlivened by the wholesale burning of misbelievers. All cities, all schools, all places of public resort are infested with the spies of the Mongolian Inquisition. Clerical terrorism depopulates the land. Misery and famine follow in the wake of the Buddhistic propagandists. The industrial classes abandon their homes by thousands. Buddhistic monks fatten on the spoils of the exiles; but before the families of nonconformists are permitted to depart, their sons and daughters are dragged away to the slavery of the Mongolian convent. Would we not, like the Span-

* As long as their own necks were in danger, the clerics of the early Christian Church inveighed against tyranny and intolerance; but, as soon as that danger was past, the doctrine of passive submission to injustice bore its natural fruit, and the lot of the European peasantry became infinitely worse than that of the so-called slaves of the Roman Empire and the Grecian Republics, where their servitude was so often merely nominal, as many of them were employed as pedagogues and artists,—nay, as bankers, actors, and historians. Besides, the worst Roman despots enslaved only foreign prisoners of war, while the Christian princes, bishops, and abbots enslaved their own countrymen, and treated them with a degree of relentless and systematic inhumanity that produced an incomparably greater aggregate of misery than the occasional truculent caprices of the pagan tyrants.

† The Olympic festivals and the Capitoline games were suppressed by order of the Christian Emperor Theodosius, A.D. 394.

‡ The Spanish clergy abolished the public baths of the Moriscoes. Even baths in private houses were at last interdicted.

§ The Christian monks destroyed the Serapian Library of Alexandria and murdered the citizens who resisted the vandalism, A.D. 389.

‖ The University of Athens and the academies of Berytus and Thessalonica were suppressed by order of the Christian Emperor Justinian.

** Justinian and several of his successors issued edicts for the "suppression of mathematicians."

Digitized by Google

ish Moors, tear our children limb from limb to preserve them from such a fate?

Yet all this is a mere outline of the change from the civilization of the nature-loving pagans to the barbarism of the Galilean pessimists: the realities of the Middle Ages supplied the details of the dreadful contrast. The very stones of the South-European convents still proclaimed the godlike forms of the men who celebrated life as a festival, and whose desecrated temples now housed a whining brood of nature-hating and nature-hated caricatures of the human shape.

The peasants of the North still cherished the battle-hymns and hunting-songs of their free forefathers, while their children were forced to chant the puling cant of the Christian litany. The traditions of the folk-lore still preserved the memory of a time when the arena of life awarded its wreaths to valor and manly strength, while now hypocrisy and servility were the beaten roads to advancement. Wasted fields, starving hamlets, and gloomy cloisters covered the face of the earth where sculptured ruins mourned the glory of bygone times; the temples and palaces of Italy, the academies of Greece, the sacred groves of Daphne, the shady mountain forests of Taurus and Lebanon, had been devastated to fatten the foul vampires of the Galilean Church.

Nor need we doubt that the clearer-sighted students of ancient literature had discerned the change which had come over the moral world. No educational bias could entirely blind them to the glaring contrast between the logic, the critical acumen, the manly eloquence, the noble self-reliance, the sublime poetry of the Pagan philosophers and old Hebrew prophets, and the idiotic rant and disgusting sophistry of the monastic writers. No great poet, no independent philosopher, had appeared for the last eleven centuries. The Muses had fled the desecrated land; the laurel withered in the soil of pessimism; Nature had revenged herself upon her enemies. The philosophers of the sixteenth century might fail to recognize the secret of pessimism, but they could not help seeing the result of its tendencies, the stultifying, soul-diseasing, unmanning, debasing, and earth-blighting influence of its dogmas. They saw that hypocrites and sycophants prospered, while thousands of free thinkers, many of whom they must have known as the truest of Nature's noblemen, had to rot behind prison walls, or could fertilize the seed of liberty only with their blood. What had the world gained by its conversion from Naturalism to Anti-naturalism? "Faith," blind faith, the supposed soul-saving merit of mental prostitution, as the only recompense for so many sacrifices. And now the foundations of that faith proved unsound, nay, utterly unsubstantial and untenable. The honest inquirers into the evidences of the saving faith awakened to a recognition of the fact that the supposed heavenly star which had lured the last forty generations to neglect and ruin their earth was the *ignis fatuus* of a bottomless swamp. In short, the fearful truth dawned upon them that the paradise of antiquity had been sacrificed in vain. They could no longer doubt that the chains which galled the noblest races of Europe were an unmixed curse, and the worst curse which had ever befallen the children of men. That this conviction begat a thirst for freedom which often overcame the fear of death is proved by the martyrdom of the twenty-six thousand Protestants, in the noblest sense of the word, who in the course of the sixteenth century bartered their lives for the luxury of breaking the silence which threatened to crush their hearts.* Those who declined the crown of martyrdom or hoped to see the dawn of a better day, and yet wished to promote its advent, adopted two indirect methods of attaining their object. They veiled their revelations in the language of allegory, like Eckardt, Silesius, and Campanella, or they published their views in the name of former free thinkers, and for the feigned purpose of refuting them. The latter plan was adopted by Reuchlin, Lipsius, and Woolston, and with eminent success by the precursor of Voltaire, Lucilio Vanini. Thomas Woolston's *Apology* is not weaker than his statement of the heresies he pretends to controvert. But Vanini's *Amphitheatre* anticipates the best arguments of Voltaire, Hume, and Thomas Paine. The masterly exposition of these arguments—in pretended quotations from the writings of obscure heretics—is followed by a not less masterly burlesque of the monkish method of controversy, clumsy dogmatism, personalities, and swaggering threats. Yet this scathing satire not only received the imprimatur of the government censor, but was published with the special recommendation of an ecclesiastical college, and did, probably, more to disseminate anti-clerical tenets than any work of the professed reformers. But no man can always wear a mask. In Toulouse, Vanini discovered himself to a better-masked bigot, who hastened to betray him to the Holy Inquisition. He was burned at the stake. Jordan Bruno, Savonarola, Leszynski, Arnold of Brescia, Stephen Dolet, Mathew Hamount, were tortured and burned. Campanella was racked and persecuted till a merciful death ended his misery; Roger Bacon was persecuted and exiled; Thomas Woolston died in prison; Eckardt, Abelard, and Lipsius were bullied into silence. Their works were burned, their disciples were suppressed; but their labor had not been in vain. Their fate had proved that only the success of an open rebellion could liberate the human race from the hell of Anti-naturalism; and only in this sense is it true that the fiendish intolerance of the Middle Ages has promoted the progress of European civilization.† The tyranny of the Church led to the Protestant Revolt, as the tyranny of the French autocrats led to the French Revolution. Christian intolerance has promoted science as the plague has promoted the quarantine.

FELIX L. OSWALD.

*Between 1500 and 1580, the Inquisition murdered two hundred and seventy thousand non-conformists. Nine-tenths of these were American pagans and Spanish Mohammedans and Jews; the rest were Caucasian sceptics.

†Every *ne plus ultra* is interesting, and the impudence of Jesuitical sophistry has never surpassed the following dictum of a Protestant Jesuit: "So large a thinker as Albert Réville has expressed his belief that the intolerance of Christianity indicated *a passionate love of truth*, which has *created modern science*. He says that, 'if Europe had not passed through those ages of intolerance, it is doubtful whether the science of our day would ever have arrived.'" —*North American Review*, May, 1883, p. 473. In justice to the honor of our age, I must quote another contemporary. "The persecutor," says W. H. Lecky, "can never be certain that he is not persecuting truth rather than error, but he may be quite certain that he is suppressing the spirit of truth. And, indeed, it is no exaggeration to say that the doctrines I have reviewed represent the most skilful and at the same time most successful conspiracy against that spirit that has ever existed among mankind. Until the seventeenth century, every mental disposition which philosophy pronounces to be essential to a legitimate research was almost uniformly branded as a sin; and a large proportion of the most deadly intellectual vices were deliberately inculcated as virtues.... In a word, there is scarcely a disposition that marks the love of abstract truth, and scarcely a rule which reason teaches as essential for its attainment that theologians did not for centuries stigmatize as offensive to the Almighty."—*Hist. Rat.*, vol. ii., p. 90.

"Every man loves liberty," says Ludwig Boerne; "but the unjust claims it for himself alone, the just for all." Between dogmatism and the "love of truth" there is just as much difference as between despotism and the love of freedom. A disposition to *take liberties* would be a queer claim to the merit of liberalism. In the last eight years of his reign, the Czar Nicholas sentenced forty-two thousand political prisoners to the Siberian mines or the worse misery of a Russian jail, and at his command eleven thousand Polish boys were torn from their parents and dragged away to the military barracks of Eastern Russia. These exploits of the Slavonic Pope the eulogist of Mons. Albert Réville would probably ascribe to a passionate love of liberty,—the liberty of tyrannizing his subjects. For more than eleven hundred years, the activity of Monsieur Réville's passionate friends obstructed the progress of all sciences, with two exceptions; for it cannot be denied that they successfully cultivated the science of forging miraculous biographies and the science of suppressing free inquiry.

EDITORIAL NOTES.

AN exchange observes that it "is an insult to the marble to make its polished surface bear a chiselled falsehood," and adds: "Of one whose life was notorious for crime, yet of whom it was said that he 'fell asleep in the Lord,' Carlyle asks indignantly: 'Asleep in the Lord? If such a mass of laziness and lust fell asleep in the Lord, *who*, fanciest thou, is it that falleth asleep elsewhere?'"

THE *Congregationalist* makes the following note: "A Romish priest of Newark, Ohio, says that he has celebrated fifty-six marriages of Roman Catholics with Protestants. In watching them subsequently, he has seen eight Romanists become Protestants, and only three Protestants become Romanists. Whoever studies a Roman Catholic neighborhood in the midst of Protestants for a few years will see ample evidence of the weakening of the hold of Romanism upon it."

THE Concord correspondent of the Springfield *Republican* (Frank B. Sanborn) writes to that journal, under date of July 28, that the day previous, "in the morning, Dr. Harris, by logical demonstration and a strict use of the insights and presuppositions of philosophy, proved the existence of the Christian Trinity in one substance and three persons." Remember this intellectual feat was performed in the morning, Friday, July 27, 1883, by Dr. Harris, at Concord, Mass.

OUTSIDE the story books, it is not always safe to place too great faith in the immediate good results of generous and kindly actions. A Peoria Sunday-school found this out, when it invited a number of roughs to attend one of its excursions, in hopes that their association with Sunday-school scholars would have a refining and reformatory influence upon them. But the result was that there were seven fist fights during the day. One of the pupils was among the whipped, and three of the sinners have gone to jail.

BARON HENRY DE WORMS of the House of Commons has received the following letter from Amsterdam, under date of July 4:—

Sir,—In my own name, and in the name of some German friends who read your speech of last Saturday, I wish to express to you our full approval of every word you spoke on this occasion. The anti-Semitic movement is a stigma upon German civilization. At the same time, we think you would do much better not to speak about such matters. You have voted for the expulsion of Mr. Bradlaugh from Parliament. You have certainly not the right to complain of persecution as long as you persecute others. I am, etc.,

G. DIETSCH.

A REMARKABLE instance of the fidelity and sagacity of the dog happened on Friday last at Milford Haven, and is recorded in the daily papers. Two men named Davies and Taylor were out in a boat which was swamped. The former of these was the owner of a dog; and, while the men were struggling in the water, the animal caught hold of Taylor with the object of supporting him. Finding, however, that it was not his master to whom he was rendering this assistance, he relinquished his grasp, and went to the aid of Davies, his master, supporting him until he was rescued by a passing steamer, the other man being drowned.—*Nature*.

W. BOURKE COCKRAN, in a Fourth of July speech in New York, said:—

Above all, let us on this day, when our political conduct is before us for inspection, resolve that free speech shall never be invaded in this land of liberty and of law. While we can discuss public measures and public men, we are all law-makers; for we are forming that public opinion which in a free country controls statesmen and shapes their policy and legis-

Digitized by Google

lation. As an element of free speech, a free press must always be the object of zealous care in a well-ordered community. The importance of free newspaper discussion, forming as it does a channel for the interchange of ideas between men widely scattered in territory, but closely allied in interest, can never be overlooked. It is true that the liberty granted to the press may often be abused and frequently degenerate into license. Indeed, the exact bounds to which it should be confined have been the subject of much speculation. But, to my mind, the absolute liberty which it is permitted is the best guarantee against any gross abuse of its privilege.

THE Boston *Transcript*, mentioning Secretary Folger's desire that some female clerk in his department should be promoted without running the chances of the civil service examination, which led to the promulgation of the rule that heads of departments could promote from one grade to another by requiring the persons designated for promotion to pass, not a competitive examination, but the ordinary examination which has been customary in the departments, remarks: "Civil service reform can stand any amount of buffeting from its enemies, and has in fact won its way into the administration of the government in the face of the ridicule and resistance, more or less open, of nearly all the practical politicians. But it will not survive treachery among its friends. Weakness and pliability under the private purposes of persons in power on the part of the commissioners will quickly bring the whole thing into contempt.

REV. J. GILMOUR, an English missionary to India, states that the Buddhists of that country have a very easy and practical method of praying. Printed prayers are put into a wheel; and the person who wishes to pray them simply has to turn a handle attached to the wheel, and the prayers are considered to be duly offered. The Mongols have patent family praying-machines; and, oftentimes, the aged grandmother, who is unfit for any other work, is set to grinding out the prayers for the whole family. But a better device even than this is now commonly adopted. The praying-machine, filled with the requisite prayers, is connected with a windmill, which turns them safely and expeditiously, thus saving all hand labor. Clock-work has also recently been utilized to drive a cylinder filled with prayers covering all possible human needs. Dr. Cullis may find a serviceable hint in this Buddhist fashion, by which the number of his faith-cures can be increased.

A NEW religious society, on a very liberal and useful basis, has been organized in Boston, to be called the Appleton Street Chapel. Mr. William G. Babcock, lately the efficient minister of the Warren Street Chapel, is to be the minister of it. It puts forth the following statement:—

The Appleton Street Chapel originated with teachers, parents, and children who had long been associated with Mr. Babcock at the Warren Street Chapel. In order to continue together as pastor and people, they were obliged to form a new society. Their object is to do the best they can, by Sunday-school teaching, public worship and preaching, social gatherings and personal friendship, to make this a better and happier world; and they welcome to their number all who sympathize with the object. The Sunday-school and pastor's address to the young will be united in one service at 2 P.M., and the adult service will be held at 3 P.M. One evening each month will be successively for Sunday-school teachers, social recreation, literary studies, and public entertainment. The society has rented one of the halls in the Paine Memorial building on Appleton Street, and all who are interested are cordially invited to attend the opening meeting on the first Sunday in September.

THE contest between the telegraph companies and operators has led to a movement for a co-operative telegraph scheme, to which the New York *Herald* thus refers: "There is an abundance of the skilled labor necessary, and the good judgment and excellent organization displayed by the operators give promise of a business capacity that would also be essential. It is said that a very large sum of money has been collected to maintain the strikers. Why not use a part of this to build and equip the new lines, allotting to each operator such a number of shares as he can afford to take? Such a company would be based upon no 'water,' and each shareholder would be interested in the enterprise and in keeping down all unnecessary expenses. Going into the contest without the burden of paying dividends upon an enormous bogus capital, with every hand personally interested in the success of the company, and with the confidence of the public, which the operators well deserve, there would be little question as to the result of the fight."

AT the Lane Theological Seminary Commencement this year, one of the students in his oration suggested some amendments to the Presbyterian confession of faith. The *Herald* and *Presbyter* promptly denounced the young man for presuming, in his immature condition, to meddle with things so delicate and portentous, whereupon Prof. Evans of the seminary, in defence of the student's right to express his views, says: "And when, forsooth, is he to become competent? Where runneth that awful, mysterious line which he must cross to become competent? At what age can he begin to whisper with bated breath about 'such a subject' as the revision of the standards? As a matter of fact, every man in the Presbyterian Church has the right to discuss its standards. A layman can do so. A private member can do so. An elder can do so. A candidate can do so. A minister can do so. What is needed is more discussion rather than less. There would then be greater interest in the symbols. If they are what they are claimed to be, there would be deeper reverence and affection for them."

PROF. FLOWER, in a lecture "On Whales, Past and Present, and their Probable Origin," delivered at the Royal Institution and printed in *Nature*, brings forward conclusive evidence that whales were not originally aquatic in habit, but are derived from terrestrial mammals of fairly high organization, belonging to the placental division of the class,—animals in which a hairy covering was developed, and with sense organs, especially that of smell, adapted to living on land; animals, moreover, with four completely developed pairs of limbs, on the type of the higher vertebrata, and not that of fishes. This Prof. Flower considers certain; but he finds greater difficulty in determining the particular group of mammals from which the Cetacea arose. The seals are, obviously, modifications of the land Carnivora, the sea lions and sea bears being intermediate. Although many naturalists have held that the whales represent a still farther stage of the same modification, Prof. Flower thinks there are fatal objections to this view, and that the derivation of the Cetacea from the Ungulata is more probable. He indulges in the following speculation, "which," he says, "may or may not be confirmed by subsequent paleontological discovery":—

We may conclude by picturing to ourselves some primitive, generalized, marsh-haunting animals, with scanty covering of hair like the modern hippopotamus, but with broad, swimming tails and short limbs, omnivorous in their mode of feeding, probably combining water plants with mussels, worms, and fresh-water crustaceans, gradually becoming more and more adapted to fill the void place ready for them on the aquatic side of the borderland on which they dwelt, and so by degrees being modified into dolphin-like creatures inhabiting lakes and rivers, and ultimately finding their way into the ocean. Here, the disappearance of the huge Enaliosaurians, the *Ichthyosauri* and *Plesiosauri*, which formerly played the part the Cetacea do now, had left them ample scope. Favored by various conditions of temperature and climate, wealth of food supply, almost complete immunity from deadly enemies, and illimitable expanses in which to roam, they have undergone the various modifications to which the Cetacean type has now arrived, and gradually attained that colossal magnitude which we have seen was not always an attribute of the animals of this group.

THE PROBLEM.

With dear dead bird in dimpled hand, a child,
With wide eyes upturned to wider sky,
Met the weary problem of the Ages.
"I shall know," he sobbed, "just where and why,
When I'm a man."

"A little farther on, and I shall find
The answer." With fevered brow, the youth
Burned his midnight oil. "A little farther on,
And I shall pierce the mystic deeps of truth,—
A little farther on."

"A little farther on," the wild-eyed man
Scalded a still face with hopeless rain;
The lore of sages with their random books
Mocked and shouted in the dizzy brain,
"A little farther on."

With but an hour to live, the aged man cried:
"Farther on! I cannot, will not die."
Searching with wide, weird eyes the arching dome,
"I shall know and teach just where and why,"
He shrieked and died.

With threescore years of vain research, the sage
With conjectures of a thousand creeds
Knows not the great Wherefore more than the child
Who at his mother's knee, lisping, reads
His first baby prayer.

SARA WARD.

For *The Index*.

THE ETERNAL "YEA."

"Do not, my child, forget to pray."

Unfixed by gloss of olden things,—
The pride of priests, the boast of kings,—
Or by that mother-plea whose pain
Would lead you to the womb again,
From light of knowledge that unfolds
The fruitful riches nature holds,

I would not have you, child, forget
To follow wrong with swift regret;
For ne'er was word of duty said
By gods of heaven, or wisdom bled
From fount of human souls, to stand
In place of this sublime command.

Neglect to pray? What ill, if you
Have sunk the dream in wish to do?
Or what if you have turned your eyes,
Steadfast, to earth, from clouded skies,
To which no constant soul e'er rose
Who made not less our fellow-woes?

I charge you, spare the needless blow!
But, when the call is issued, go
Your way as men have done whose cares
Have wrought the crown your learning wears,
And from whose richest blood there came
The blush to vanquish every shame.

Oh! I could beg for you the will
To take your stand on highest hill;
For who does nearest meet the skies
Sees better of the goddess-eyes,
Though not the prayers your mother spake
Unasked the awful silence break.

HORACE L. TRAUBEL.

The Index.

BOSTON, AUGUST 2, 1883.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

Viktor Rydberg, and Liberal Thought in Sweden.

Read before the Woman's Western Unitarian Conference, at Unity Church, Chicago, May 11, 1883.

BY MISS. A. A. WOODWARD (AUBER FORESTIER),
OF ASGARD, MADISON, WIS.

It was in Stockholm, Sweden, at one of the charming evening receptions held every week by Fredrika Bremer for strangers in the Swedish capital, that Mr. W. W. Thomas, then holding the office of United States Consul at Göteborg, and a guest of the occasion, became deeply impressed with the glowing description the hostess gave of a Swedish novel just issued, *The Last Athenian*, by Viktor Rydberg.

"It ought to be read in America," said the delightful little old lady, turning to Mr. Thomas. "Americans would appreciate it. Why cannot you translate it for your countrymen? Indeed, you must translate it," she added, noticing the smile her enthusiasm called forth. "I insist upon it."

It was not long before Mr. Thomas was as enthusiastic over the book as Miss Bremer herself, and personally acquainted with the author, whom he found the most accomplished gentleman and scholar he had ever met, and already acknowledged to be the foremost living prose writer of Scandinavia. When the consul was about to sail for his native land, in the autumn of 1865, he wrote to Miss Bremer that her command had been obeyed. Her note in reply served both as introduction to the translation and as Fredrika Bremer's farewell to the American public she had so dearly loved; for it contained the last words written by her for publication. After expressing her pleasure that her request had not been forgotten, she offered her congratulations that the American public was about to receive "the best, most genial historical novel ever written in the Swedish language." The English version of the book appeared in Philadelphia in 1869, and should be read by all who are interested in the progress of liberal thought, of rational, practical religion.

Viktor Rydberg was born in Jönköpfing, Sweden, Dec. 18, 1829. His rare intellectual gifts made themselves apparent in his early school days, and later enabled him to defray most of his expenses at the Vexio Gymnasium and the University of Lund through a multitude of literary and political contributions to the public journals. Thus, he entered a career whose significance for himself and his country has been so great, especially since early in the fifties he became connected with Göteborg's *Handels og Sjöfartstidning*, in the feuilleton of which appeared his first long historical romance, *The Free-booters of the Baltic*. This was followed by the still more characteristic work, *The Last Athenian*, which was dedicated to the editor of the Göteborg paper, S. A. Hedlund, whom the English translator calls "the Swedish Chrysanteus, a European republican, the true friend of America in her darkest hour, and a knight *sans peur et sans reproche*." Editor Hedlund evidently sat for the portrait of Chrysanteus, the hero of our romance.

The Last Athenian has taken an eminent place in the modern literature of the North; and it represents more completely than is often the case in any one work the author's intellectual and spiritual tendency, giving the clearest possible expression to Viktor Rydberg's liberal religious views. Moreover, in addition to the profound investigation displayed in important theological and ethical questions, we find in the romance a powerful and faithful portrayal of the history, manners, customs, and daily household life of the interesting period it describes, all clothed in language whose beauty and purity procured for Rydberg the rank of the foremost prose stylist of Sweden. The scenes of the romance are laid in and about Athens in the fourth century, when the Christian Church was divided into two principal sects, who were contending with the utmost bitterness one against the other, although, so far as names were concerned, separated only by a little "i." The Ho-moiousians, the so-called orthodox of the day, followers of Peter, Bishop of Athens, held that the Son was of *like*, but not of the *same*, essence as the Father; and the followers of Athanasius, Bishop of Alexandria,—the Ho-mo-ousians,—spoken of by one of the orthodox in the book as "those horrid heretics, who contend that the Son is of the same eternal, divine being as the Father."

Athens was the bulwark of heathendom. At Rome on the Tiber and Rome on the Bosphorus, in all the densely populated cities of the Great Empire, the Christians were already superior in numbers. The gift of a garment and twenty pieces of gold was the bait wherewith that fisher of men, Constantine, had drawn up souls from the depths of paganism, strengthening the power that fell into the hands of his successor, Constantius. Athens lay without the circle of the imperial court, and into its soil philosophy had struck its firmest roots. The cultivated Athenian, bound to the faith of his fathers by glorious historic recollections and the enchanting power of a sublime philosophy, found it hard to regard Socrates and Plato as the tools of evil spirits, and clung to the ancient belief with increased affection, because its existence was threatened. But the great masses hastened to exchange for the certainty of atonement for sin and eternal life a religion fitted only for great souls, for joyous, harmonious, or thoughtless mortals, and which offered little comfort to the down-trodden and oppressed, the poor, wretched, weary, guilty, and contrite in that hard, unhappy, chaotic period.

Chrysanteus, the champion of freedom, justice, morality,—Chrysanteus, the enlightened philosopher, whose whole being bore the stamp of a soul struggling toward the fountain of beauty and truth,—freely employed his wealth and his reason in his efforts to uplift and befriend humanity. He is represented as having purified from hatred and inspired with an exalted sense of morality the soul of young Julian (known as the Apostate), who had been embittered by his teachers in the Christian faith, among whom he found countless intriguers and hypocrites who made creeds at the church councils to suit their own ambitions, banishing freedom of conscience, and teaching that the power of rulers and the bondage of the people came from God. Thus, while the Christian Church was torn with internal dissensions, while cruel persecutions and wicked strife were carried on in the name of Christianity, Chrysanteus, the last Athenian, the earnest truth-seeker, was preparing the way for the spread of the true spirit of Christ. Every shaft aimed by Rydberg at the evils of the undue supremacy of the priesthood and of tyrannical dogmatic decrees unerringly strikes the evils of the union of Church and State of his own age and country. He shows how far from the teachings and spirit of Christ disputes and bitterness concerning doctrines about Christ always have led and always will lead. When Julian came into power, freedom of conscience was proclaimed for all; and, then, the faithful few, both of the old and the new religion, who had been striving to bring about the reign of reason, justice, purity, and peace, found more room than they had previously known, and heathen philosopher and *true* follower of Christ walked hand in hand toward a common goal.

The daughter of Chrysanteus, his joy and pride, the sharer of his labors, the comforter of his dark hours, the pure, noble Hermione, who had been ardently devoted to the faith of her fathers and was well versed in its grandest teachings, stricken down at last by crushing afflictions, became oppressed with gloomy doubts as to the "nature of that Power which rules the world and the fate of men, and felt that, if the problems of life were to receive a solution that would satisfy the heart, there was need of a firm faith in the all-loving Father in heaven." Theodorus, an honest-hearted Christian who had suffered much from the persecutions of the orthodox Ho-moi-ousians, and who denied the right of the priesthood to give fixed rules for the understanding of the Scriptures, had become the ally of Chrysanteus in all his charities. Although not attempting to make proselytes, this Theodorus had compelled respect for Christianity, had sown many seeds to spring up in the future, and had long endeavored to show Hermione that the step leading from her religion to his was but one from truth veiled to the unveiled living reality, and to convince her that all she had abhorred in the Christian Church proceeded from the dogmas of the priests, and had nothing in common with Christ. Her brother Clemens, who had been stolen in childhood by a Christian slave, and who was a fanatic adherent of Bishop Peter, told her that the views of Theodorus were false and heretical, worse than the doctrines of Athanasius or of heathenism itself. Still, she listened to Theodorus; for the Christ he preached was indeed different from anything she had seen manifested in the contentions about her. The words of this Christ she thought the simplest, most sublime, the lips of man had ever uttered; the tidings he proclaimed, the mission his death completed, the highest possible proof of divine wisdom and love. In the hour of her dire need, at last, the New Testament became to Hermione something "in comparison to which Plato and Porphyry were as night to day; and it made all the deeper impression on her because no conceptions of Christ had previously been beaten in to disturb its force." In Christ, the man who bore everything that can be heaped upon mortal in the way of poverty, contempt, care, and anguish, yet renounced neither courage, power, faith, nor gentleness and love toward those that persecuted him, she found the example in suffering she needed, and from his glorious life she learned how love may exist without a heart to respond to or comprehend it, and how, in fighting against a vain desire to live for one's own happiness, one may become strengthened and purified.

But Hermione would not have been so much helped by this contemplation of Christ, Rydberg reminds the reader, had he been to her God himself who, "conscious of the infallibility of his mission, had accomplished the work of redemption with a little time of voluntarily assumed suffering. What impressed and awed her was to see this being neither greater nor less than herself, for whom the book of the future was closed, as it was to her, for whom doubts might arise as to the fruits of his labors, for whom tests were real tests, temptations real temptations,—to see this mere mortal come out conqueror in the strife between the highest requirements of the good and the instigations of the world, and reveal, in his purity, the image of God, thereby becoming the example and redeemer of the human race, armed for this mission, not with supernatural powers, not with superhuman knowledge in divine things, not with power over the hosts of heaven, but with an unfaltering faith in a moral government of the world and a good Father in heaven." Still, she shrank from calling herself a Christian; nor could she in all things agree with Theodorus, who believed that Christ was the Word incarnated in a mysterious and to man not fully comprehensible sense. But Theodorus willingly admitted that salvation was not confined to the acceptance of certain doctrines, that the words of Jesus bore no trace of metaphysical problems proposed or

Digitized by Google

solved, and begged her to acknowledge the Galilean as her master. Hermione dreaded the pain compliance might cause her father; and yet, as soon as she was sure of her position and knew that the myths she had loved to interpret were but pale images of the eternal truth Jesus had so clearly and so simply disclosed to the whole human race, she resolved no longer to deny him whom she wished to follow.

Chrysanteus was prepared for his daughter's conversion; for he, too, had learned that Christianity, like philosophy, bore the eternal truth in its bosom, and that the former could accomplish what the latter could not. "I have found," said he to Theodorus, "that there is a philosophy for the whole human race, and that the highest truths, the warmest love for the true and good, can be implanted in the most ignorant breast. If this be Christianity, which I doubt not, it stands in the ranks of the oppressed, by the side of those who fight for reason, freedom, and human worth."

The death of Julian brought a renewal of religious oppressions. The little band of true Christians that had gathered about Theodorus, and for whose weal both he and Chrysanteus had labored, were once more attacked. "Let us fight and die together," said Chrysanteus to Theodorus. "Our cause will find other and stronger champions, if not in these times, at least when ages shall have rolled over our graves." Chrysanteus fell in battle, Hermione became a victim to the persecutions of the so-called orthodox, Theodorus, who had striven in vain to obtain protection for her, escaped to Africa, and there lived, scattering blessings till old age. "He formed," says Rydberg, "one of the links in that chain of Protestants which runs through the time previous to the event called the Reformation,—the pickets of the congregation of Christ in its great strife with the priest-church."

"A new day has now come," says Rydberg, in conclusion. "Antiquity and Christianity pervade each other, their truths are wedded in one harmonious whole, and the cause for which the last Athenian fought the fight of despair, the cause of freedom in politics, science, and religion, still fights on, no longer in despair, but with the certainty of victory."

How far-seeing the prophetic vision of which these concluding words testify!

The Last Athenian, issued in the early part of the sixties, was followed by Rydberg's polemic treatise, *The Bible's Teaching about Christ* (*Bibelns lära om Kristus*), the object of which is to investigate how far the doctrines of the Lutheran State Church agree with those of the New Testament. In this work, Rydberg throws clear light on the foundation of the poetic utterances of his great romance; and he shows plainly the glaring inconsistency of first protesting against the tyrannical decrees of an Established Church and then building up a new set of dogmas as binding and as oppressive as the old ones. Luther's reformation, as Rydberg says, was but a beginning; and yet the march of progress inaugurated by it had long been interrupted, until a new reformation, a new protest, was needed to lead triumphantly onward to freedom, light, truth. In his learned and well-authenticated statements concerning the history of all the known early manuscripts of the New Testament, Rydberg proves beyond dispute that the doctrine of the Trinity is of later growth than the first Christian centuries. He points out the sentences known to be interpolations, even considered so by Luther himself, and explains fully the Messiah idea, as well as other beliefs and customs among the Hebrews before and after Christ. I have never read anything more crystal clear and convincing than these statements and the answers to the attacks made upon them by the organs of the State Church, which are included in the latest edition of the book. I am happy to say this valuable work has been translated into English by the Rev. Ephraim Turland, a prominent Unitarian minister in England, and will soon be accessible to an English-reading public. I know of no book the Unitarian society would find more useful for distribution.

The ideal church of Viktor Rydberg is one that unites with the bond of religious aspiration all who are striving to live aright, in the spirit of Jesus of Nazareth, no matter what their creed may be; and he would have the Bible subjected to the light of reason, just as any other book, believing that thus only it can be made useful. As lay delegate to the Swedish Church Conference in 1868, he had an opportunity to enter the lists in behalf of his cherished views regarding freedom of conscience; yet his attacks were made in so fair and liberal a spirit that he won the esteem of his most distinguished official opponents. The excitement thus made by Rydberg among his countrymen sent him in 1870 to the second chamber of the Swedish parliament, where he warmly advocated an ideal democracy and a liberal national education. The winter of 1873–74 was passed by him in Rome; and the result of his studies was his *Roman Days* and sundry essays on religious topics and on the history of art, all showing how far he soars above the ephemeral currents of the day. Among the brilliant triumphs of his literary skill may also be mentioned his translation into Swedish of Goethe's *Faust*, which is said to be the finest translation of this great poem ever made in any language. In recognition of his profound erudition, the University of Upsala bestowed upon him a doctor's title; and, as a mark of distinction for his creative genius, the Swedish Academy elected him to fill a vacancy in its charmed circle of eighteen.

How great his influence has been in Sweden, indeed throughout Scandinavia, it would be difficult to estimate. Certain it is that liberality and freedom of thought have gained a new impetus through him; and many grand, noble souls—among them the Scandinavian missionary of the American Unitarian Association, the poet-preacher Kristofer Janson—were first guided to Unitarianism by Viktor Rydberg.

One of the most delightful outgrowths of the vigorous struggle for religious freedom now going on in Sweden, a result of the sentiment fostered by Rydberg, is the Society of Truth-seekers. This is a body of earnest thinkers who, in their search for truth, have outstripped the barriers of the old established Orthodoxy, and have united "for their children's sake" to strengthen the influence of all who desire to promote the welfare of rational and practical Christianity. In our land of liberty, we can scarcely realize the position of those enlightened men and women, who must either submit to having their children become members of a church whose doctrines they (the parents) condemn as dwarfing and prejudicial to honest advancement, or else see these children cut off from their full privileges as citizens. Some restrictions have been removed of late, owing to agitations thus set afloat; but all who have not been confirmed in the State Church still suffer more or less from disadvantages. You must be confirmed and retain your church membership, no matter what rationalistic views you may cherish in private. What can be more hurtful to character than to make solemn vows which are understood to be merely assumed as a matter of conventional form? Against such evils, the Truth-seekers protest. A little band of them has been in the habit of assembling at Stockholm, and elsewhere, to confer together; but they first publicly organized in August, 1880, at Jönköpfing. Since then, branches have been established in other towns and cities, religious services held, lecture courses and libraries started, and various efforts made for mutual improvement. It is pleasant to note that, according to the charter of this society, women hold equal rights with men, have a voice in all the proceedings, and may be elected to office.

The creed adopted is very expressive of the prevailing spirit. Here it is:—

> We believe it to be our duty to investigate, earnestly and independently, everything we meet with in our walk through life. We hold in high esteem the words of the wise prophets of old. Still more highly do we honor the voice which speaks from the heart's depths, the hand which traces the writing of the stars on the canopy of heaven, the mind which guides our race to truth and light.
>
> We believe in one only God,—the eternal Author of the universe, the loving Father of all created beings, whose wisdom prescribes laws for the course of the planets and for the destinies of mankind. His blessed love watches over all his children, and will gather them together at last in the everlasting home of light.
>
> Him whom the world has for centuries worshipped as God we honor as the Father's noblest messenger to earth, the first-born among many brothers. His teachings, embraced in the precept "Love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind, and love thy neighbor as thyself," we would accept as the guide to our actions, taking his life as the model for ours. May his beloved image in its ideal beauty, penetrating the veil of darkness woven about his personality, ever stand clear and bright before our soul s eye.
>
> We believe that we are justified in calling ourselves, as his disciples, "Christians"; and, to those who would deny us this privilege because of our confession of faith, we can only reply that truth is worth more to us than all the names in the world.

A small monthly magazine, called the *Truth-Seeker*, now in its seventh year, is the organ of these representatives of a rational faith. It is edited at present by Viktor Pfeiff, who in 1866 published his Swedish translation of Theodore Parker's works. The names of Parker, Channing, Emerson, and other American thinkers, are often found in the *Truth-Seeker*, as well as frequent translations of articles in *The Index*, the *Unitarian Review*, the *Christian Register*, and the *Christian Life*. Were the Chicago *Unity* among the exchanges, that fearless little sheet would doubtless be represented. Among the names that thus reach Sweden, we find those of Mrs. Ednah D. Cheney and Dr. Bartol.

The Swedish Protestant Union, with which the Truth-seekers unite, endeavors also to promote every degree of ethical culture, and to place religion on an equal footing with scientific, political, and social progress. In spite of the youth and the modest dimensions of this Union, it has called forth many expressions of ill-will from the organs of the Established Church. Messages of sympathy have been received from Holland; and, last September, the Rev. Ephraim Turland visited Sweden as bearer of cordial greetings from the English Unitarians to the liberal Christians and Truth-seekers of Sweden, also of good wishes for the success of their noble efforts to reform and purify Christianity in their native land. At the Semi-centennial Celebration of the American Unitarian Association in Boston, Dr. C. von Bergen, President of the Union, represented the Free Religious thought of Sweden, which so well harmonizes with that of America; and he bore with him a letter from Viktor Rydberg, in which Channing was spoken of in the warmest terms of admiration and praise. Through a friend who was present, Mr. Turland had his attention turned to the liberal movement in Sweden; and he studied the Swedish language, in order to follow it. His translation of Viktor Rydberg's *Bible Teaching about Christ* and his visit to Sweden are among the results. He has also translated passages from the *Truth-Seeker* for the English *Christian Life*.

After his reception by the Protestant Union in Stockholm, Mr. Turland was welcomed at Göteborg by Viktor Rydberg, Editor Hedlund, and others. Göteborg is the head-quarters of the Truth-seekers; and there a meeting was called, which was addressed by Mr. Turland in most excellent Swedish. It is thought that the visit of this honored English gentleman will lead to the recognition of the Society of Truth-seekers by the State as a Unitarian church.

Thus, I have given you an outline of the life of Viktor Rydberg and some of its fruits. In Norway, his Titanic friend, Björnstjerne Björnson, is working in his way to hasten the reign of liberty and enlightenment. The day for a grand free republic of the North is drawing near, and to these two men is largely due the rapidity of its approach.

CORRESPONDENCE.

THE CAUSES OF VARIATION.

Editors of The Index:—

In Mr. Towne's "Study of Evolution" in *The Index* of July 12, much stress is laid on the failure of the doctrine of evolution to account for, or give the cause of, original variations.

Every one who has studied the theory of evolution has doubtless felt the insufficiency, or supposed insufficiency, of the theory at this point; or rather, I should say, has marked the hesitancy of the interpreters of evolution logically to apply the theory to the end. A theory, to be consistent, must be logical throughout, and not in part only.

The supposition of Darwin, recited also by Romanes in his *Scientific Evidences of Organic Evolution*, that all beings are the lineal descendants of some few beings, or of one, specially created, is illogical, and must in the end be rejected.

It is unnecessary, and as inconsistent with the whole theory of evolution to require the special creation of a single organic form, or a single cell, as it is of the special and separate creation of all the millions of forms that now exist. But, starting with organized matter, variations do occur, how? Mr. Towne would make electricity the principal cause.

Digitized by Google

But how far electricity or magnetism or any other single force may operate to produce variations remains to be determined. But variations are more likely, I think, to be found the result of many causes combined than of any single cause. Indeed, to me it seems impossible that the offspring of any pre-existing being or form can be, or become, exactly like or precisely the same in every organ and cell as the parent form. To give to any germ exactly the same development and form of its prototype, every condition and every operating cause under which it is generated and developed from embryo must be exactly the same as existed, acted upon, and determined the development of the parent form. To suppose otherwise is to suppose that causes can operate without producing effects.

But it is impossible in the nature of things that any two germs, starting in different places and at different points of time, will be acted upon by precisely the same forces, and have always the same environments; and, with every variation in the environment, variations *must* take place in the being developed. And, hence, variations are the *natural* resultants of generation, growth, and development under necessarily varying conditions. Such variations are often inappreciable, it is true, and generally slight, but by accumulation they become important. It is at this point that natural selection comes in to preserve variations that are helpful, and to drop those that are not.

That Darwin did not live to work out more fully the many causes that operate to bring about variations does not detract from the mighty work he did accomplish, and because all the causes that operate on living forms to produce variations have not been yet pointed out takes nothing from the theory of evolution or the doctrine of natural selection as taught by Darwin. W.

PAULISM AND CHRISTIANITY.

Editors of The Index:—

Any extended criticism of "The Bible and Woman," as it appears in *The Index* of July 5, would be too long for a newspaper article; but I trust space will be accorded to a brief notice of one or two points in the article above alluded to.

The writer, B. W. Ball, says: "Let us pass now, in the discussion of 'the Bible and woman,' from the days of the pastoral barbarism of Israel, and from the Israel of Moses and the prophets, to the great Hebrew of that later Israel, . . . St. Paul, the Hellenized Jew, . . . who was the true founder of Christianity.'

This writer has done what he was obliged to do to sustain his position that the Bible is an enemy to woman,—passed clear over the record of the life and sayings of Jesus of Nazareth. He (I say "he," because I hope a woman did not write the article) does just what every defender of chattel slavery did, just what every oppressor of woman who calls himself a Christian does; for, as Mr. Ball says later, in an obscure portion of the article, "As for Christ, . . . the most beautiful of his characteristics was his chivalrous and deep-souled love and respect for woman."

What I most object to is the statement that "Paul was the founder of Christianity." That statement has been made many times, but I deny it. Christianity has struggled on, despite the load Paul piled upon it, and because of its inherent and eternal vitality survives and will survive, though it can never show its full power; and it must be to itself as a dwarf to a giant until the swaddling bands in which Paul wrapped it are cast off.

Where is the authority for the statement that Paul is the true founder of Christianity? Read carefully the first eight chapters of the Acts of the Apostles, and, while we find Saul—afterward Paul—"consenting unto the death of Stephen," and "breathing out threatening and slaughter against the disciples," we find them with over three thousand converts in one day, and a community of interests established among them.

To be sure, we read that "the disciples were called Christians first in Antioch," and that was after Paul's conversion. But "what's in a name?" The *fact* was established in the face of Paul's savage and determined resistance, and had grown to such proportions as to cause great excitement.

If Mr. Ball had said that Paul is preached and practised by Christians more than the Christ himself, I would not deny it. But better times are coming, thanks to some who dared be *called* infidels to Christianity rather than *be* infidels.

I would as soon think of calling any one of the early leaders of the Republican party the founder of Abolitionism as of calling Paul the founder of Christianity. Paul was a politician. He meant success. So did the Republican party. He was successful, after a fashion; and so were they, but not genuinely so. He succeeded in giving popularity to a spurious Christianity faster than the true could probably have attained it at that time. The Republicans tried to prevent the expansion of slavery. It burst and scattered, so now we have it all over the country instead of in the South alone. Yet that party boasts of freeing the slaves, and has elected Presidents on that issue (?) ever since.

There is as much difference between Paul and Christ as between a Republican and an Abolitionist, even though the former does boast of freeing the slaves; and I know of nothing that illustrates this difference in the spirit of the two better than their action regarding women. (Your pardon, if this *seems* irrelevant. I do not think it is.) When William Lloyd Garrison was sent to England as a delegate to an anti-slavery convention, he refused to take his seat, because the women (or a woman, I am not certain which) who went with him as delegates were not allowed to take part in the proceedings. Has the Republican party ever been known to refuse its seat anywhere, because a woman was not allowed to take hers? Oh, no; and, when it does, tell it to an admiring world.

It does not seem half so strange to me that "it is the female sex which keeps Christian churches in countenance" as it does that a great majority of women cling to the Republican party, because the spirit of the former would emancipate woman, while the spirit of the latter is oppressive to both men and women.

And there are men, not a few, inconsistent enough to denounce the Bible as an oppressor of women, and at the same time vote to keep a party in power which years ago could have enfranchised woman, if it had chosen to do so, and still keeps her the peer of idiots, aliens, criminals, etc. Let us hope Mr. Ball is not one of these. CELIA B. WHITEHEAD.

A WORK FOR COMPARATIVE RELIGIONISTS.

Editors of The Index:—

In the twenty-third chapter of Matthew, Jesus says to "his disciples and *the multitude*, . . . 'Ye have but one teacher, even Christ; and all ye are brethren.'"

According to this saying, the utterances of Paul or any other apostle, of even the magnificent Isaiah or any other prophet or hagiographer, are of no authority for Christians.

Mainly for not heeding this fact, Mr. Conway's *Religious Anthology*, nor any other book on comparative religion, is, as far as Christianity is concerned, worth one straw. For example, if every utterance of the Book of Proverbs, if every religious and theological utterance of every epistle of the New Testament, could be paralleled a million times over from every nation and tribe on earth, it would not go one step toward proving that the religion of Jesus Christ is not absolutely unique among the religions of the earth.

It is beginning to dawn upon men that the real religion of Jesus is stated with scientific precision, with an artistic finish and proportion that Demosthenes could not have equalled, and with a fulness of suggestion and inspiration entirely unrivalled elsewhere in the Sermon on the Mount.

Hence, as far as Christianity is concerned, every work on comparative religion will prove—as every such book thus far has proved—a poor failure, unless it can take the Sermon on the Mount, and, beginning with its first beatitude and ending with its magnificent peroration, give to the world the equivalent, from any or all other quarters, of each and every one of that sermon's teachings.

I respectfully request *The Index* to give us in its columns such equivalents as I have above suggested, simply adding that I know that the work I have here proposed is an impossibility. JOHN B. WILLARD.

STILL RIVER, WORCESTER CO., MASS.

A LOVING act does more good than a blazing exhortation. What the race needs is not more good talkers, but more good Samaritans.—*J. S. Breckenridge.*

MISCELLANEOUS.

SAYS the Boston *Transcript:* "Dr. Bartol, in his address at the Concord School, dismissed Darwinism apparently because it is unpleasant: 'Not our origin or history concerns us, but what we are. I should not care to find out when I was a fish.' On the other hand, the good doctor had just warned his hearers against the disliking of disagreeable things. 'Webster,' he said, 'was a recreant, but laid the foundation of good. Goethe was a wicked man, but he wrote one of the world's poems. Mirabeau lacked principle, but postponed civil storm. Some of you do not like the Governor. Is he not awaking you? No one is perfect. Let us beware of thorough-going disapprobation.' But who shall fathom the inscrutable teachings of the summer philosophy?"

MR. HOWELLS, in his *Wedding Journey*, gives this description of the frightful maelstrom in which Capt. Webb last week lost his life: "Here, within the compass of a mile, those inland seas of the north, Superior, Huron, Michigan, Erie, and the multitude of smaller lakes, all pour their floods, where they swirl in dreadful vortices, with resistless undercurrents boiling beneath the surface of that mighty eddy. Abruptly from this scene of secret power, so different from the thunderous splendors of the cataract itself, rise lofty cliffs on every side, to a height of two hundred feet, clothed from the water's edge almost to their crests with dark cedars. Noiselessly, so far as your senses perceive, the lakes steal out of the whirlpool, then, drunk and wild, with brawling rapids roar away to Ontario through the narrow channel of the river. Awful as the scene is, you stand so far above it that you do not know the half of its terribleness; for those waters that look so smooth are great ridges and rings forced by the impulse of the currents twelve feet higher in the centre than at the margin. Nothing can live there, and with what is caught in its hold the maelstrom plays for days, and whirls and tosses round and round in its toils with a sad, maniacal patience. The guides tell ghastly stories, which even their telling does not wholly rob of ghastliness, about the bodies of drowned men carried into the whirlpool and made to enact upon its dizzy surges a travesty of life, apparently floating there at their pleasure, diving and frolicking amid the waves, or frantically struggling to escape from the death that has long since befallen them."

CHARLES BRADLAUGH, in his "Appeal to the People," in which he charges the House of Commons with treason against the Constitution, says: "But, as a despairing effort to conceal the treason, it is said I am a bad man, and the House will not have me. Have I driven men to dishonor and suicide by gambling? No; yet men who have done this sat and voted against me. Have I been drunken within the House or even out of it? No; yet men parading their piety staggered tipsily through the lobby to record their votes against me. Have I used my influence and sold my title as a director of a foreign company? No; yet a noble lord who had done this was in the House to speak and vote against me. Have I prostituted my rank on a directorate whose transactions have been judicially condemned as fraudulent? No; yet at least one right honorable who voted against me has so done. What is my offence? It is said, You are a socialist. That is not true. Then, it is declared, You have written against marriage and family. That is without foundation. You are an atheist. So were George Grote, Sir William Molesworth, John Stuart Mill, and Ashton Dilke. It is true that many really good-meaning men think that their honest objection to the views which they think I hold, and to the manner in which they think I have made known such views, is sufficient justification. But it is needful to remind the nation that 'the most dangerous acts, and those least to be defended in principle, are very apt to proceed from that party which has the best intentions, and thinks that the end may sanctify the means.'. . . The most impudent and brazen-faced defence offered of the treason—and this by Conservative statesmen—is that the electors of Northampton, when they last elected me, knew the House of Commons would not receive me. The electors of Middlesex knew that the House would not receive John Wilkes; but they re-elected him, and the House of Commons at last ordered that its illegal resolutions excluding Mr. Wilkes should be expunged from its journals 'as being subversive of the rights of the whole body of the electors of this kingdom.'"

BOOK NOTICES.

EVOLUTION: A Summary of Evidence. A Lecture delivered in Montreal, March, 1883. By R. C. Adams. New York: G. P. Putnam's Sons. 1883.

This pamphlet of forty-four pages is an excellent abstract of many books in explanation and defence of the theory of evolution. It treats briefly and comprehensively of "Natural Selection," "Sexual Selection," "The Unity of Animal Life," "The Unity of Plant Life," "The Unity of all Life," "Unity of Substance," "Embryology," "Metamorphosis," "Morphology," "Resemblances," "Mimicry," "Distribution," "The Fertilization of Flowers," "The Imperfection of the Record," "Man's Animal Origin," "Mind," "Speech," "Morals," "Spontaneous Generation," "History of Evolution," and "The First Cause." We do not remember to have seen before so good a general statement of evolution in the same space, or one so well adapted to those who wish to get some idea of the theory, but have not the leisure or disposition to read more extended works on the subject.

RELIGIONS BEFORE CHRISTIANITY. A Manual for Sunday-schools. By C. C. Everett, D.D. Boston: Unitarian Sunday School Society, 7 Tremont Place. 1883.

This is an excellent and valuable book, not only useful in teaching Sunday-school scholars something definite in regard to the religions which preceded Christianity, but as a handy statement of the rise and progress of religious ideas, which will be welcome to all students. We give the table of contents which shows the scope of this concise work: "The Earliest Religion," "Ancient Aryan Religion," "The Hindu Religion," "Buddhism," "The Religion of the Parsees," "The Roman and Greek Religions," "The Religion of Egypt," "The Religions of China," "Comparison of these Religions with One Another and with Christianity," to which is added a catalogue of "Books for Reference." This manual is in the form of question and answer, and is contained in a little over fifty pages.

THE DISEASES OF MEMORY. By Th. Ribot. Translated from the French by F. Fitzgerald, A.M. J. Fitzgerald, 20 Lafayette Place, New York. Price 15 cts.

This is a cheap edition (No. 46 of the Humboldt Library) of a monograph of the diseases of the memory by a distinguished author, who has made the memory a subject of profound study from its pathological side. The work is an essay in descriptive psychology; and it acquaints the reader with a mass of curious observations and numerous cases scattered through various compilations, and here for the first time collected in one volume. It is not only full of curious facts, but it is a philosophical study of memory as exhibited in sundry forms of mental disease, and offers a scientific explanation of many abnormal conditions of memory which, from time immemorial, have puzzled students of mental science. The book will be read with interest by all who believe "the proper study of mankind is man."

RECORDS OF JESUS REVIEWED, and Fifty Questions answered through Five Hundred Reverent Reasoners. By Benjamin F. Burnham. Boston: The Union Company. 1883. pp. 296. Price 50 cts.

This work contains, in a condensed form, the views of many thinkers and writers on historical, ethical, theological, and metaphysical subjects, presented with clearness, conciseness, and orderliness, making the matter available for immediate reference. Judge Burnham's experience as a digester of law reports has been of marked advantage to him in marshalling his witnesses and summarizing their testimonies. The author is, evidently, a Christian of the liberal wing, and about as unsectarian as it is possible for a Christian to be.

THE ABIDING MEMORY. Sermons. By Richard Metcalf, pastor of the Winchester Unitarian Society. From 1866 to 1881. With a brief memoir. Boston: Geo. H. Ellis, 141 Franklin Street. 1883.

This is a collection of sixteen sermons, all of them full of incentive toward higher and nobler living and thorough methods of thinking. The book takes its title from the first of these. The memoir which prefaces the volume bears testimony to Mr. Metcalf's personal worth and high moral character. Rev. Oliver Stearns says of him that "his breadth as a thinker and scholar gained the attention of all who were willing to give him a hearing." The book, however, will have value chiefly among his personal friends.

OUT OF THE STREETS. By Mrs. Herbert Martin. London: The Sunday School Association. 37 Norfolk Street, Strand. 1883.

This is a pleasantly told story of the development of hereditary genius in music, with a temperance lesson quietly inculcated, though in a somewhat romantic style. The book is handsomely bound and neatly printed.

THE *Art Amateur* for August has some pleasant notices of pictures by American women in the Paris Salon, although the writer is very severe in her strictures upon some of the artists. But there is less danger just now of hurting women by severe censure all than by excessive praise. What is needed most of is careful, impartial criticism, which distinguishes real merit from superficial attractiveness. "My Date Book" has, as usual, a good deal of entertaining gossip about men and pictures, of which the anecdotes of Oscar Wilde will probably be most eagerly read. The most important article is on "Japanese Art and Artists," with a biographical sketch of the celebrated reviver of Japanese art, Hokonsai. This is mainly drawn from Prof. Morse's article in the *American Art Review*. There are some very clever illustrations which preserve very well the *bizarre* vigor and quaintness of Japanese work. We are glad to see the article on "Wood Carving," and the simple but excellent models for work in horizontal lines of decoration. Among the patterns for embroidery is a pleasing design of large Japanese lilies for Kensington stitch.

THE *Modern Review* is a quarterly, published at London by James Clarke & Co., Fleet Street. It is a periodical of marked ability, the leading object of which is "to serve the cause of liberal theology, of impartial scholarship, and free inquiry in matters pertaining to religion." It deals with questions at issue in the religious, philosophical, and historical controversies of the day, and in a manner to command for its articles the attention of the most intelligent and thoughtful class of readers. This *Review* for July opens with a paper on "The Book of Judges," by Prof. J. Estlin Carpenter, M.A., and is followed by "The Talmud and the New Testament," by Dr. H. Oort; "Ernest Renan's Recollections," by R. Rodolph Suffield; "George Ripley," by William Henry Channing; "Science Teaching as Relief from the Overstrain in Education," by Wm. Lant Carpenter, B.A., B.S.C.; "Elementary Education in Social Economy," by Mrs. F. Fenwick Miller; "The Law relating to Heresy and Blasphemy," by W. Blake Odgers, LL.D.; "Note on Denominational Training Colleges," by R. A. Armstrong, B.A.; and "Notices of Books."

WE have received the first number of *Dio Lewis' Monthly*. It is breezy in tone, and intends to be truly hygienic in its teaching, although there will be questioning among some doubters as to the real tendency of Mr. Lewis' methods. It is nicely printed on heavy paper, and is to contain every month ninety-six pages of reading-matter. It is published by Clark Brothers, 68 and 69 Bible House, New York.

"THE CONTINENT" for July is received. Its leading feature is a graphically told story, "Judith, a Chronicle of Old Virginia," by Marion Harland. It is published by Our Continent Publishing Co., 36 Eleventh Street, Philadelphia, Penn., A. W. Tourgee, editor.

"THE PANSY" and *Babyland* for August are received from the publishers of *Wide Awake*, and are full as usual of bright and clever stories and pictures.

PERSONAL ITEMS.

B. F. UNDERWOOD will speak for the Free Religious Society of Dorchester next Sunday morning.

PROF. SIMON NEWCOMB has been elected Corresponding Member of the Berlin Academy of Sciences.

THE Munich Academy of Sciences has appointed Prof. Marsh of Yale a member of the Academy.

PRINCE KRAPOTKINE makes prison life endurable by instructing his fellow-convicts in cosmography, geometry, and algebra.

EX-REV. W. H. H. MURRAY has announced his intention to open a law office in New York and another in San Antonio, Texas.

THE widow of Lord Frederick Cavendish will be married again before the termination of the present year, with the approval, it is said, of her late husband's relatives.

JUDGE HOADLY is described as a bright little man with a boyish face and a complexion which almost approaches the color of a ripe banana. Upon the stump, he is not brilliant; but he speaks rapidly, and with nervous emphasis and self-reliance.

ZADKIEL, the London astrologist, is trying to frighten President Arthur out of his peace of mind. "The President of the United States," he says in his July predictions, "will be in personal danger at the latter part of this month, and should take precautions accordingly."

A RUSSIAN literary gentleman who has been travelling in America, in an account of the literary people he met here, printed in a Russian paper, says of Henry James, "At the time of my visit, James was not in America: he comes hither only for funerals and weddings."

MRS. EMMA HARDINGE-BRITTEN, says the *Religio-Philosophical Journal*, "announces as ready for publication her great new work, *The History of the Modern Spiritual Movement all over the Earth*. The author has aimed to make the book all that its title implies, and it will be a volume of from five hundred to seven hundred pages."

MR. M. D. CONWAY lately gave a reception to Mr. Howells. The distinguished American author, says a late correspondent, must have been greatly impressed with the singularly picturesque surroundings of Conway's English home at Bedford Park, where modern architects have realized, in fact, the ideal pictures of Caldecott and other delineators of "the olden days."

LOUISE MICHEL, the famous leader of the French Communists, was recently tried for "rioting and pillage," and was sentenced to six years' imprisonment and ten years' police supervision. As the woman is evidently an earnest fanatic who believes she has a "mission," much sympathy is expressed by many in her behalf on account of the severity of her sentence. There was much excitement in the court-room when the jury brought in its verdict of guilty, and the foreman has since received several menacing letters.

THE death of Montgomery Blair, at seventy, removes another of the notable men of the generation which was active in the discussions which preceded the late war and in the work of carrying on that struggle for Union and Constitution. Mr. Blair was an anti-slavery Democrat, and as such joined the Republican party when that was formed for the purpose of putting a constitutional check to the further spread of slavery. He was Mr. Lincoln's Postmaster-General, and was one of the ablest and most effective members of a Cabinet composed for the most part of men of uncommon ability. It is said that he has left a mass of valuable papers and correspondence, his father's and his own, which he never found time to arrange for publication.

THE *Unitarian Herald*, London, referring to Prof. Huxley's acceptance of the Presidency of the Royal Society, says: "There is no question about his being the leading scientific man of England. There is no English authority like unto his in this country; there is no English authority so well known abroad. Both as a scientific man and as a philosopher and metaphysician, he has taken a high place. Physicist, chemist, biologist, physiologist, botanist, comparative anatomist, expounder of Hume, and preacher of the newest gospel of science, he stands, at fifty-eight years of age, at the very head of the scientific schools. The boldest of speculators, he is perhaps the only man of his school who regularly attends church. On some of his predecessors, the presidency of the Royal Society has conferred distinction. He confers distinction on the presidency of the Royal Society."

IRVING BISHOP, who has been creating so much excitement in London, is well known to many older citizens of New York, from the circumstances of his birth and youthful troubles. His father was at one time a millionnaire. His mother was a relative of Washington Irving, for whom the son was named. About fifteen years ago, Mrs. Bishop became interested in Spiritualism, domestic trouble followed, and a separation and divorce ensued, shortly after which Mr. Bishop died, leaving his divorced wife and son,

Digitized by Google

then about ten years old, in destitute circumstances. Henry J. Raymond and others interested themselves in Mrs. Bishop's behalf, but could not effect a reconciliation between husband and wife. Mrs. Bishop also became a Socialist, and continued a Spiritualist. In his efforts to cure his mother of her infatuation, young Bishop undertook his exposures of the tricks of mediums, which he does in the sight of people as readily as the Davenport Brothers or Mr. and Mrs. Herrmann do in the dark. He drifted to London, where he learned the latest trick of "mind-reading," and exhibited it to considerable profit. It is said that his mother, who was once active in many charities, is keeping a boarding-house in New York.

PHOTOGRAPHS.

Cabinet Photographs of the following named persons are for sale at THE INDEX office, and will be sent by mail upon receipt of price:—

Darwin, 75 cts.; Huxley, Tyndall, Spencer, Holyoake, and Abbot, 50 cts.; Emerson, Parker, Garrison, Sumner, Curtis (G. W.), Weiss, Adler, and Hinckley, 35 cts.; Card Photographs of Adler, 25 cts.; of Higginson, Abbot, and Frothingham, 15 cts.

Address THE INDEX, 44 Boylston Street, Boston.

LESSONS

For Liberal Sunday Schools or for Home Use.

I. **THE ORIGIN AND GROWTH OF CHRISTIANITY.** A series of Twenty Lessons by Mr. LEWIS G. JANES, of Brooklyn. Written entirely from the Rationalistic stand-point. Prepared originally for use in Mr. Chadwick's Sunday-school. Each lesson printed in a separate slip. Twenty-five cents for the series, including postage.

II. **FREEDOM, FELLOWSHIP, AND CHARACTER IN RELIGION.** A series of Five very suggestive Lessons, by MRS. KATE GANNETT WELLS. Each lesson contains enough material for several exercises. Seven cents for the series, in separate sheets, including postage.

III. **THE WORLD WE LIVE IN.** A Series of Elementary Lessons in Natural History, by Mr. FREDERIC A. HINCKLEY. Adapted both to interest and profit a class of children. In slips. Twenty-five cents for the series, including postage.

Teachers will do well to examine these lessons. A liberal deduction made for ten copies or more to one address.

Supplied at THE INDEX office, 44 Boylston Street, Boston.

Freedom and Fellowship in Religion.

This is a volume of Essays published by the Free Religious Association. It contains "The Nature of Religion," by D. A. WASSON; "The Unity and Universality of the Religious Ideas," by SAMUEL LONGFELLOW; "Freedom in Religion," by SAMUEL JOHNSON; "Religion and Science," by JOHN WEISS; "Christianity and its Definitions," by WM. J. POTTER; "The Genius of Christianity and Free Religion," by F. E. ABBOT; "The Soul of Protestantism," by O. B. FROTHINGHAM; "Liberty and the Church in America," by JOHN W. CHADWICK; "The Word Philanthropy," by THOMAS WENTWORTH HIGGINSON; "Religion as a Social Force," by EDNAH D. CHENEY. Also extracts from Addresses on the platform of the Free Religious Association, by Ralph Waldo Emerson, Lucretia Mott, Dr. Bartol, A. Bronson Alcott, Julia Ward Howe, Charles H. Malcom, Celia Burleigh, C. D. B. Mills, Horace Seaver, Isaac M. Wise, Robert Dale Owen, Wm. C. Gannett, Lucy Stone, F. B. Sanborn, Wendell Phillips, and others.

This book was published eight years ago, but is a live book still, and is a good answer to the question, What does "Free Religion" mean?

Price $1.50. Address "FREE RELIGIOUS ASSOCIATION," 44 Boylston Street, Boston.

BUILDING FUND.

THE Free Society of Dorchester was founded two years ago by Clara M. Bisbee. its present resident speaker; and, seeking greater facilities, also permanence as an institution, it now asks aid toward the erection of a small and simply constructed hall. Three thousand dollars will cover the entire expense, and friends of progress are respectfully invited by material gift practically to advance the cause at once of Woman's Ministry and of Free Religion. For further knowledge of the Society, address the President or Secretary of the Free Religious Association or Mrs. Clara M. Bisbee, Clark Street, Dorchester. Contributions sent to Mrs. Bisbee will be promptly acknowledged.

THE FREE RELIGIOUS ASSOCIATION

was organized in 1867. Though having its headquarters in Boston, it is a national organization, and has members and officers in various States of the Union. It has the following

CONSTITUTION.

I. This Organization shall be called the Free Religious Association, its objects being to promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history; and to this end all persons interested in these objects are cordially invited to its membership.

II. Membership in this Association shall leave each individual responsible for his own opinions alone, and affect in no degree his relations to other associations; and nothing in the name or Constitution of the Association shall ever be construed as limiting membership by any test of speculative opinion or belief,—or as defining the position of the Association, collectively considered, with reference to any such opinion or belief,—or as interfering, in any other way with that absolute freedom of thought and expression which is the natural right of every rational being. Any person desiring to coöperate with the Association shall be considered a member, with full right to speak in its meetings; but an annual contribution of one dollar shall be necessary to give a title to vote,—provided, also, that those thus entitled may at any time confer the privilege of voting upon the whole assembly, on questions not pertaining to the management of business.

III. The officers of the Association shall be a President, twelve Vice-Presidents, a Secretary, an Assistant Secretary, a Treasurer, and twelve Directors. They shall be chosen by ballot at the annual meeting of the Association; and the President, Vice-Presidents, Secretaries, and Treasurer shall hold their offices for one year, or until their successors be chosen. The Directors shall be chosen for four years, and, at the expiration of that term, shall not be eligible for reëlection until after two years. One fourth of their number shall be chosen annually; but, at the annual meeting of 1882, the full number of twelve shall be chosen in sections of three respectively for one, two, three, and four years. The President, Secretaries, Treasurer, and Directors shall together constitute an Executive Committee, intrusted with all the business and interests of the Association in the interim of its meetings. They shall have power to fill any vacancies that may occur in their number, or in the list of Vice-Presidents, between any two annual meetings. Six members of the Executive Committee shall constitute a quorum.

IV. The Annual Meeting of the Association shall be held in the city of Boston, on Thursday of what is known as "Anniversary Week," at such place and with such sessions as the Executive Committee may appoint, of which at least one month's previous notice shall be publicly given. Other meetings and conventions may be called by the Committee, according to their judgment, at such times and places as may seem to them desirable.

V. These Articles may be amended at any Annual Meeting of the Association, by a majority vote of the members present, provided public notice of the amendment has been given with the call for the meeting.

Officers elected for the year 1882-83:—

PRESIDENT.

WILLIAM J. POTTER, New Bedford, Mass.

VICE-PRESIDENTS.

OCTAVIUS B. FROTHINGHAM, Boston, Mass.
FELIX ADLER, New York City.
GEORGE W. CURTIS, Staten Island, N.Y.
EDWARD L. YOUMANS, New York City.
FREDERICK SCHUENEMANN-POTT, San Francisco, Cal.
THOMAS WENTWORTH HIGGINSON, Cambridge, Mass.
ELIZABETH B. CHASE, Providence, R.I.
GEORGE HOADLY, Cincinnati, O.
NATHANIEL HOLMES, St. Louis, Mo.
ROWLAND G. HAZARD, Peacedale, R.I.
BERNHARD FELSENTHAL, Chicago, Ill.
ANNIE L. DIGGS, Lawrence, Kansas.

SECRETARY.

FREDERICK A. HINCKLEY, Providence, R.I.

ASSISTANT-SECRETARY.

CHAS. H. CODMAN, Boston, Mass.

TREASURER.

JOHN C. HAYNES, 451 Washington St., Boston, Mass.

DIRECTORS.

Four Years.

FRED. MAY HOLLAND, Concord, Mass.
MRS. CLARA M. BISBEE, Dorchester, Mass.
J. A. J. WILCOX, Chelsea, Mass.

Three Years.

B. A. BALLOU, Providence, R.I.
WILLIAM H. HAMLEN, Boston, Mass.
ANNA GARLIN SPENCER, Florence, Mass.

Two Years.

EDNAH D. CHENEY, Jamaica Plain, Mass.
ARTHUR G. HILL, Florence, Mass.
RICHARD P. HALLOWELL, Boston, Mass.

One Year.

CHARLES D. B. MILLS, Syracuse, N.Y.
JOHN L. WHITING, Boston, Mass.
HELEN M. IRESON, Lynn, Mass.

The office of the Association is at 44 BOYLSTON ST., BOSTON (next door east of the Public Library), where is also the publication office of *The Index*.

All letters pertaining to the business of the Association (payment of membership fees, orders for its publications, etc.) should be addressed to "Free Religious Association," at the office.

Communications intended specially for the Secretary, as well as his personal correspondence, should be addressed to him at PROVIDENCE, R.I.

F. A. HINCKLEY, *Secretary F.R.A.*

THE PRESENT DAY.

A Monthly Journal discussing Agitating Questions without agitation.

EDITED BY

GEORGE JACOB HOLYOAKE.

The *Present Day* is addressed to all who hold the brave and cheersome faith that life according to Reason is the best religion for the world that is, and the best qualification for the world that may be.

"False Ideas may be confuted by argument, but only by True Ideas can they be expelled."—*Cardinal Newman.*

Annual subscription, 2*s.* 6*d.* Single copies, 2*d.* Published by R. H. SQUIRE, 52 Fleet Street, London, E.C.

PUBLICATIONS

OF THE

FREE RELIGIOUS ASSOCIATION.

Freedom and Fellowship in Religion. A volume of ten essays upon speculative and practical problems of religion, by D. A. Wasson, Samuel Longfellow, Samuel Johnson, John Weiss, W. J. Potter, F. E. Abbot, O. B. Frothingham, J. W. Chadwick, T. W. Higginson, and Mrs. E. D. Cheney, and extracts from Addresses by Ralph Waldo Emerson, Lucretia Mott, Robert Dale Owen, Dr. Bartol, Wendell Phillips, Rabbi Wise, Horace Seaver, A. B. Alcott, Lucy Stone, Charles H. Malcom, Julia Ward Howe, and others,—all given on the platform of the Free Religious Association. Price (reduced) $1.50.

Reports of Annual Conventions of Free Religious Association, from 1872 to 1879 inclusive. These contain essays and addresses by the various distinguished men and women who have spoken on the Free Religious platform, together with yearly reports of the Executive Committee. 10 cts. each.

27 Bond Street, New York.

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—**The Christian Amendment,** by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents, 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyses the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

CURRENT TOPICS.

THE Dismal Swamp in Virginia, immortalized by *Moore's* lugubrious song, and through its notoriety in *ante-bellum* days as a refuge for runaway slaves, is fast losing its old characteristics by reason of the practical science of to-day. It has been drained and improved until it now contains some of the best farming land in the State, and has a railroad running across it. Further improvements are projected in the near future.

LAST Monday, a great demonstration took place in Trafalgar Square, the object of which was to protest against the exclusion of Mr. Bradlaugh from the House of Commons. About thirty thousand persons were present. The meeting passed resolutions favoring Mr. Bradlaugh's resistance of the mandate of the House of Commons, copies of which were forwarded to the Queen, Mr. Gladstone, and to the Speaker of the House.

THE trial of the ten Jews at Nyireghyhaza, Hungary, who were charged with murdering a Christian girl in the synagogue at Tiza Essalar in order to obtain her blood to mix in the passover bread, resulted in a verdict of not guilty. The verdict, although entirely just, has caused great excitement; and, at Presburg, a mob of Christians became so hostile in their demonstrations against the Jews that the authorities were compelled to order out the military to disperse them.

HOW MUCH a matter of mere *form* the prevailing religion has come to be in these days is shown in no way more clearly than in the general desertion of their "flocks" by the Christian pastors who fancy themselves the Lord's shepherds during the hot months of the year. So general is this desertion that the Young Men's Christian Union of this city has issued a circular, begging the addresses of the few clergymen who stay in town during the vacation season, as a favor to those who may think they need their ministrations during the absence of their own pastors.

EASTERN revivalists who deplore the coldness and hardness of heart in unawakened sinners could get valuable hints as to the best methods of arousing religious interest by studying some unique Southern innovations. As, for instance, in a church in Arkansas recently, a party of men armed with Winchester rifles walked into a church in the middle of the sermon, ordered the preacher to interpolate into his discourse a paper threatening the lives of several church members present, after the reading of which they departed in an orderly manner. But think of the religious excitement sure to follow on such startling announcements.

ONE day last week, in St. Louis, two hundred and thirty-six warrants were sworn out against violators of the Browning Sunday law; the day previous, a large number of persons, including keepers of livery stables, newspaper men, from proprietors down, street railway and express companies, and the Union Depot Company, as well as barbers, hackmen, and others, who have been accustomed to follow their business on Sunday, having been reported by the police. The attempt to enforce the law has led to much bad feeling. A combination has been formed to resist it, and prominent lawyers have been retained to carry cases, if necessary, to the United States Supreme Court. Test cases will at once be advanced on the docket against the street car companies and newspapers.

THE Boston *Sunday Herald*, referring to reports in the same paper of a crowd of people assembled at Old Orchard, Me., to be cured of diseases through the instrumentality of Dr. Cullis, and of another crowd of invalids in Canada thronging to the Church of St. Anne de Beaupré to be cured by the intervention of some dead saint on duty, there, thus remarks: "Superstition is confined to no country or sect. We find it among the descendants of the Puritans as well as among the simple French Canadian Catholics. There is naturally a strong element of superstition in the human mind, which is sometimes honestly and sometimes dishonestly developed. Designing knaves can always count upon it, as well as mistaken zealots. It flourishes in the darkness of the human understanding concerning life, death, and immortality. It is at the base of much that is pitiable in human life, and also much that is noble and beautiful. Miraculous cures are reported both at Old Orchard and at Beaupré."

WE have received the constitution of the Fédération Internationale des Sociétés de Libres Penseurs (or International Federation of Societies of Free Thinkers), which was founded in Brussels, August 29, 1880, in order, "first, to facilitate the propagandism of rationalistic ideas by a mutual understanding between all who believe it necessary to free humanity from religious prejudices and ensure liberty of conscience; and, second, to create bonds of union between free thinkers." A congress is held by this body annually, under the direction of a general council, consisting of two representatives for each nation, these delegates to be elected before the first of January by the united action of the liberal societies in each country, or, where no such organizations exist, by individual free thinkers acting in concert. Each affiliated society is to contribute two cents per member, and have the right, should its membership amount to one hundred, of appointing a correspondent to hold communication with the general council.

NOW, AN orthodox minister is charged with violating the postal laws against sending obscene literature through the mails. We find the following in one of our exchanges: "The Rev. J. P. Lichtenberg has been hauled up before United States Commissioner Dennison, of Utica, charged with sending obscene matter through the mails. He is pastor of the German Lutheran Zion Church of Utica. His trial will take place in Buffalo, in September." The Liberal League leaders say that the real object of the law under which this arrest has been made was to suppress free-thought literature; but they will not have the hardihood, we think, to assert that the arrest of an orthodox minister for "sending obscene matter through the mails" is a blow aimed at free thought. They may yet see their error in regard to the object of Congress in enacting the law, for the repeal of which they have unavailingly and foolishly clamored, thereby making impossible—for a time, at least—that *reform* even of the law which is really needed, and which has been advocated by *The Index* and other liberal journals, and by Judge Hurlburt, Col. Ingersoll, and other prominent free thinkers, who are utterly opposed to the "repeal" policy of the Liberal League.

THE London *Inquirer*, commenting on the action of the majority of the proprietors of University College in supporting the decision of the Council in excluding Mrs. Besant and Miss Bradlaugh from the botany class, remarks: "With all possible respect, those arguments seem to us to have been dictated rather by the policy of expediency than by clear and high principle. With almost cynical frankness, it has been alleged, in the absence of better reasons, that these two ladies have been excluded on account of a 'prejudice' against them. We do not deny the existence of a very strong prejudice; we do not deny that in the case of one of these ladies the case is somewhat complicated by well-known proceedings in a court of law. But it is poor policy for a great institution like University College to go with the multitude in proscribing an accomplished woman whose motives are conscientious, however mistaken her judgment may have been. As for Miss Bradlaugh, she is avowedly excluded simply because she was the companion of Mrs. Besant, and unavowedly on account of the obnoxious name she bears. Is it not time to change our method of dealing with Atheists? For centuries past, our fathers have tried the policy of burning, excommunication, social obloquy, and exclusion. Suppose we try now a little Christian charity and forbearance, and try to win them in that way to the sweet reasonableness and light of pure religion."

AN EDITORIAL OUTING.

The nearest way round from the Grove Meeting at Weirs to the coast of Maine was over Mt. Washington. To be so near the White Mountains was too great a temptation to visit them again to be easily resisted. So, after seeing the Unitarians safely through their meeting, we turned the editorial face (that is, the senior half of it) northward and mountainward. On counting back, we were surprised to find how long had been our abstinence from this mountain-trip. We could hardly believe the record when it said fifteen years; while, in the eight years previous, we made the journey three or four times. But it is one of the things that keeps its freshness in spite of the changes of fashion and the improved facilities of travelling.

One of the reasons, perhaps, of our long abstinence from the White Mountain region has been a feeling of revolt against the invasion of those wild precincts by railroads and other modern inventions and luxuries of journeying. To go through the Notch at Crawford's in a drawing-room car; to make the ascent of Mt. Washington by rail, instead of the good old way on foot by the bridle path; to sleep on its top in a comfortable bed and spacious room, instead of in the narrow berths where travellers were wont to be laid up for the night along the rocky sides of the old "Tip-Top House"; to dine up there in just such a dining-room and by just such an æsthetically designed bill of fare as may be found in thousands of hotels all through the country,—these were things of the nature of sacrilege to which we had almost made a vow we never would be made a party.

Yet some of these very things we have just done, and with no such shock to our sensibilities as we had anticipated. We did not, indeed, do the effeminate thing of going through the Notch in a drawing-room car; but we at once and forever forgave the railroad company for building its road there, when we walked four or five miles down its track from Crawford's, and got that magnificent view, which the road has opened, of the Saco Valley and its carpet of fir-trees stretched across at our feet for miles and miles away between the gigantic walls of Mts. Webster and Willey. Nor, when we were eating on top of Mt. Washington in a steam-heated dining-room a regular Boston dinner, did we have any very caustic regrets for the lost shiverings and aches of the night when once we sat on an unbacked bench for our chowder and tea, and then were laid up in one of the aforesaid berths to keep for the sunrise, which, by the way, never came, though, wrapped in our bed-blankets, we dutifully filed out into the frosty fog to look at the place where it ought to have been. On the whole, therefore, we are disposed to accept, if not with full cordiality, yet with serene resignation, the new travelling facilities of the mountain region. The greater comforts have certainly made the grandeur of the mountains accessible to many persons who could not otherwise penetrate so near their heart; and we hale fellows, who remember with pride our old pedestrian tours, and like to think, perhaps, that we could do the same thing now, ought to have philanthropy enough to allow the less robust the poor privilege of the palace car and the comfortable mattress,—especially since *we* still can, if we choose, shoulder our knapsacks and take our mountain-staffs and keep proudly to the old carriage-roads and foot-paths. And one thing in this mountain *outing* (it should rather be called an *inning*) leaves us a little pang of regret; and this is that we did not begin the tour just as we did our first one, twenty-three years ago, by walking up the Pemigewasset Valley, and thus getting those fine views of that mountain gateway, growing in wonder as one ascends, of which the new railroad to North Woodstock allows only meagre and unsatisfactory glimpses. It was a real joy to leave the cars for the top of the old-fashioned stage-coach the rest of the way into the Franconia Notch.

But one feature in the boasted improvements of the mountains as places of resort we cannot forgive; and we wish here and now, before we have left the solemn mountain shadows behind us, to enter the strongest possible protest against it. It is the artificialness of the life which so many of the tourists bring up here, right into the heart of nature, that has most excited our indignation. And the leading hotels are now made so attractive by their comfort and elegance within and by the tasteful laying out of their grounds immediately around that they help to foster this artificialness. They tempt people to linger in their spacious parlors and halls and on their broad and shady piazzas instead of getting out into the midst of the nature which is lavishing its treasures all around them. We saw people at all the great hotels—young persons, too, who should be active of limb and enthusiastic of heart—spending their forenoons at lawn-tennis, their afternoons in listening to the music of a city band, followed by lawn-tennis again, or bowling, or a stroll around the neighboring shady grounds, or the regulation excursion in the hotel carriages to some near points of interest, and their evenings in parlor dancing and flirtation and gossip and exhibitions of the latest fashions in both feminine and masculine dress. The lawn-tennis, which is to be seen at almost every house of any pretension, especially excited our ire. In the cities, where you have only a piece of ground big enough for a tennis-court, or in average country places where there are no wonders of nature to explore, lawn-tennis is a fine game to keep those who play it out of doors as well as for its own exhilaration. But why, pray, should you come up here to play lawn-tennis? Why bring a puny, artificial game of the city up here in sight of these great mountain ranges, where nature is inviting you to use the same physical energy in a mountain tramp or in a scramble after cascades or in a search for the secrets of her primeval forests? Every lawn-tennis court seemed to us an affront to the presiding genius of the mountains; and, while anywhere else we could have admired the agility and skill and costumes of the young men and maidens as displayed in the game, here, in the presence of nature's attractions, all these things only betokened a dearth of soul.

But in spite of all the new fashions and follies which the increased facilities of travel have brought to the mountains, and in spite of the passing away of many of the old customs and traditions that old travellers would like to keep, the mountains themselves remain in all their ancient stability and grandeur. The Old Man of the Mountain looked down from his cliff in the sky with the same stony countenance—wise with wonderful histories, yet telling no tales—with which he had thrice greeted us years ago. And there was the same beautiful lake at his feet, the same echo from the mountain on the other side, the same gems of ravines and glens, the same clear-cut outline of the peaks of Adams and Jefferson and Madison against the sky, the same hoydenish play of the summit of Washington with the fog; for even the fog in these mountains, though ceaselessly moving and shifting, is also emblem of eternity.

No, even the mountains change. Nature does not fail to assure us that even she has nothing that is fixed, nothing absolutely unchangeable, except her own ceaseless creative power. Only the other day, she showed that she has not yet even finished her mountains by exhibiting as still active one of the powerful forces by which she has shaped their huge sides. A rain, with a land slide of half an hour, has swept out the chasm of the Flume, and, while making its rocky precipices still more awful, has destroyed most of the picturesque beauty of shrub and moss and tree and fern and weather-stain, which it had taken centuries to create. And there above, amidst the dark green of the mountain-side, is the ugly gap where the destroying work began, visible miles away down the valley. So that even that clear-cut line of the mountain range against the sky is not precisely the same that our eyes looked upon fifteen years ago. Yet the power is only destructive of one form that it may create another. At once, it will set about to heal the wound on that mountain-side and to recreate the beauty in the overwhelmed chasm below. The forms change, the creative process is never finished, but the creative power abides. It may work slowly, and with seemingly infinite patience, or it may work rapidly; but it never ceases to work.

WILLIAM J. POTTER.

ENGLISH NOTES.

In my paper on the English blasphemy laws, I hinted that the monstrous sentence passed by Judge North on Foote and Ramsey for blasphemy in their journal called the *Freethinker* would probably lead to an agitation for the immediate repeal of those obnoxious laws. This has proved true. In May, a meeting was held in London, at which a society was formed for the purpose of securing a repeal of these laws. This meeting was synchronous with the annual conference of the British and Foreign Unitarian Association, and many prominent Unitarian ministers attended. Indeed, the movement has been mainly due to the active exertions of two Unitarian ministers, Mr. Sharman of Plymouth and Mr. Geldart of Croydon, the former of whom has resigned his pulpit in order to prosecute his labors in the direction of securing full and absolute equality in this land of inequality and injustice. It must be said that the Unitarians have done well in this important crisis; for, after a long and at times somewhat hot debate, their conference passed resolutions in favor of the repeal of the blasphemy laws, and in favor of the instant release from prison of Messrs. Foote and Ramsey. On Wednesday, July 11, this new association held a great mass meeting in St. James' Hall, London, to demand the repeal of the laws and the release of the prisoners. I have attended at various times a great number of London meetings, especially in that very hall; but I never find any meetings so large, so enthusiastic, so altogether impressive as those called either by Mr. Bradlaugh or under his auspices. It was so upon the present occasion. The night was warm; and the great hall was unpleasantly warm,—almost, indeed, like a hot vapor bath. Yet the vast audience of between five thousand and six thousand was quiet, patient, and attentive, and at the same time filled with enthusiasm and determination. There are some people who believe or, at any rate, affect to believe that the only persons anxious to see justice done to Mr. Bradlaugh and to his humbler coadjutors are the scum of the populace, —the "residuum," as they have been called. A glimpse of this great meeting was sufficient to dispel any such illusions. There were a few of the *profanum vulgus* in the top gallery, though even there I found, when I went up before the meeting began, perfect order and many intelligent faces; but the great bulk of the meeting was composed of respectable, well-dressed, middle-class peo-

Digitized by Google

ple, or the best portion of the working classes. Those present were not vulgar, howling, unwashed masses; for it is these who rally to the cry of "church and throne." They were, on the contrary, thoughtful young men, respectable citizens, and, notably, great numbers of intelligent women. There may have been several Christian people present, but I should judge that the vast majority were secularists or heretics of some particular stripe; and, if this be so, I can only say that secularism and heresy in England are becoming highly respectable, not to say decidedly well-bred. The ovation given to Mr. Bradlaugh when he ascended the platform, and when again he rose to address the meeting, was of the kind he always receives whenever I see him at one of his meetings; that is to say, it was such an ovation as would probably not be accorded to any other man in England. I have witnessed the kind of reception given by vast gatherings of people to our two foremost public men, Gladstone and John Bright, and to such popular politicians as Lord Hartington, Mr. Fawcett, Sir Wilfrid Lawson, and Mr. Labouchere; but I have never seen such general and unbounded enthusiasm as when Mr. Bradlaugh addresses a great meeting of his countrymen. I say this all the more readily, because Mr. Bradlaugh's style and manner of speaking are not at all to my taste. Next to Mr. Bradlaugh, the applause was greatest for Mrs. Besant, who spoke with her wonted power. The ability and influence of this lady are remarkable. There is not a political leader in England who speaks with her power or logical force. Both she and Dr. E. B. Aveling, the young and able scientific recruit of the secularist party, imitate palpably, though doubtless unconsciously, the manner and even voice of Mr. Bradlaugh; but that they are two of the most forcible speakers in England no one who has heard them can doubt. Mr. Conway also spoke, and met with a very cordial reception; for he is quite a marked intellectual force in London.

The meeting was remarkable, in that a Unitarian minister occupied the chair, and that the resolution demanding the repeal of the blasphemy laws was spoken to by another Unitarian minister and by an Anglican clergyman. This latter gentleman —the Rev. Stewart D. Headlam—is in some respects an English copy of your own Dr. Heber Newton, although with far less power and originality, since he is a very earnest radical, strongly imbued with socialist tendencies, a great friend of all the prominent London heretics, and has undergone some social persecution on account of the line of conduct he has thought it right to follow. The speaking at the meeting was very good; the points aimed at being the radical injustice of the existing laws, the folly of attempting to employ force in the realm of opinion, the hypocrisy of those who are persecuting Bradlaugh in the persons of his relatives, friends, and co-workers, and the hardship endured by the two men now in prison. It was stated that these latter are confined for twenty-two out of twenty-four hours within the limits of a narrow cell; *i.e.*, they are treated as though they were a very bad species of criminals. Yet our so-called liberal Home Secretary, Sir William Harcourt, has declined to interfere in any way with this excessive and vindictive punishment, although a memorial was presented to him, asking him to exercise his power of clemency, signed by a great number of the leading thinkers and not a few of the leading religious teachers of this country. There can be little doubt that Messrs. Foote and Ramsey, when they come out of prison, will be regarded by many people as heroes and martyrs in the cause of free thought. I must candidly say that I think this a matter to be regretted; for I regard the *Freethinker*, and especially its incriminated Christmas number, as a vulgar and coarse production, and I could not join in the expression of feeling at the meeting that these two persons are to be ranked with Socrates and Bruno and the Christian martyrs. I fail to see any nobility of purpose or any high and worthy aim in the sort of work they were doing. But the apotheosis of people like Mr. Foote and Mr. Ramsey is the inevitable result of the action of bigots and hypocrites like those who have been engaged in the anti-Bradlaugh crusade during the last three years. Our nineteenth century martyrs are oftentimes very singular specimens of humanity. We must take them as they are, "with all their imperfections on their heads," and be thankful that there is sufficient passion for justice among the common people to raise even these victims of theological tyranny to the rank of sufferers in the cause of progress.

The slow but sure growth of liberal sentiment in matters pertaining to religion has recently been shown by the comments of the press on the death of Dr. Colenso. Only a few years ago, he was reviled throughout England on account of his proof of the unauthentic character of much of the Pentateuch. Now, he has passed away; and the papers have scarcely any words but those of praise for him. Two of the ablest organs of toryism, the *Saturday Review* and the *Standard*, were indeed exceptions to the general rule; for they made his death the occasion for some carping and ungracious criticism. But, generally, words of praise were reserved for the noble and fearless and honest man who, in his old age, came over to England for the sake of pleading the cause of the oppressed Zulus before the Colonial Office and at the bar of English public opinion. I wonder how many of the well-fed ecclesiastical pluralists and indolent colonial bishops (who spend most of their time in Pall Mall) who abused him so violently would have had the courage and nobility of nature to imitate him in his work for humanity.

WILLIAM CLARK.

MYTHOLOGY.

II.

Besides the myths of explanation of the type mentioned in a former article (*Index* of June 21), and which are almost innumerable, we have a considerable group which come from homonymy, as it is called, the same or a like name given to two quite different objects. An instance of this is found in the confounding of words somewhat like, but made through mispronunciation to appear the same. Thus, for example, I have often heard the word *engine* pronounced *injun;* and the idea so became easily expressed that this piece of mechanism was a person, from certain likeness in quality to be characterized as one of the aborigines. Asparagus is not seldom pronounced *sparrow-grass*, and a myth might easily arise about this. Sweetheart in our language seems of itself to tell its own tale in regard to the origin and proper meaning of the word; but, according to Prof. Max Müller, the second syllable is properly the same that we have in the term drunkard, blinkard, etc., the *ard* contracted from German *hart*, Gothic *hardu*, meaning *strong*. The exact sense, therefore, of *sweet-heart, sweet-ard*, is a very sweet person. But, in the form in which we have the word to-day, mythology might easily arise upon it: nay, the belief that the term literally is sweetheart is a little piece of actual though rather harmless mythology.

In this way have come some of the most significant and influential myths of ancient and of modern time. It was related among the Greeks that Lykaon, king of Arcadia, for a certain gross and monstrous insult that he once offered to Zeus, was transformed by that deity into a wolf; and an important religious rite observed yearly in Arcadia, sprang from this source. The belief originated in the confounding of the name *Lykos* and *Lykaios*, light and the bright one, with *Lykos*, wolf. And there are other myths of like purport arising from the same cause; as, for example, one in regard to Phoibos. He was called *Lykegenes, offspring of light;* but the term was interpreted as meaning *wolf-born*. So of *Autolykos*, literally *self-luminous*, the interpretation was *a very wolf*. And simply from this confusion, originating in misapprehension of a name, have sprung in large degree the doctrine of lycanthropy,—the turning of men into wolves,—and the excesses and horrid crimes of the Bersekir madness.

The Hindus speak of the seven bright stars in the constellation of the Great Bear as the seven Rishis or sages, for no other reason than that the same or nearly the same name was applied to the poet, *rishi* or *bright one*, as was employed to designate the stars. And so an ingenious myth has sprung up, explaining the transfer of these bards from earth to the heavens. Nay, it appears that, as applied to the stars, the name Bear itself, *Arktos* in Greek, has originated in the same way, the name of the constellation originally signifying the shiner; but, as the bear in the ancient tongue bore the same designation, this cluster of stars was called the Bear, and the imagination was active doubtless in conceiving some resemblance in the form to that animal. All arose from the confusion just named, and the survival of this bit of mythology comes down to our own time. The very term of the olden days continues in our words Arctic, Antarctic, etc.

Another example we find quaintly in connection with Sir Francis Drake's voyages. In the days of that navigator, the multitudes supposed the world to consist of two parallel planes, the one lying some distance away from the other. It was said in common parlance that Sir Francis had "shot the gulf," the meaning being that his ship had gone over the edge of the upper plane, and reached the seas of the plane below. "There is," says Mr. Davis Gilbert, "an old picture of Drake at Oxford, representing him holding a pistol in one hand, which, in former years, the man who acted as showman to strangers was wont to say (still improving upon the story) was the very pistol with which Sir Francis *shot* the gulf." This would seem to belong to a very simple and primitive mythology; but there are like examples that still survive, and act with marked power in Europe to-day.

The most interesting as well as the most fruitful source of mythology in all ages is *metaphor*. In other words, myth is perpetually springing up from misapprehension of the language of figure or symbolism. Anything may become the occasion of mythology, when the mind is in such frame as to take figurative expression in the letter. No language is safe from such wresting: even the most transparent metaphor may be so taken and abused

Odin, said the Norsemen, wandered over the earth in a blue cloak,—*i.e.*, the sky; but this meaning was very soon forgotten, and many tales were told of the one-eyed rider on his eight-footed horse, Sleipnir. And thus a story of the sun, first poetry, became an elaborate myth. Athene, the Greeks said, sprang full-grown from the forehead of Zeus, which had been cleft by Hephaistos. The dawn bursts from the forehead of the sky; and Hephaistos, a name for the young sun, cleaves every morning that forehead. But the Greeks lost the sense

Digitized by Google

of their tale as early and fatally as the Norsemen did the meaning of theirs.

Or to take another from the Norse: Night and Day each are drivers, mounted on their car, with swift steed attached. Night drives first, her steed named Dew-hair; and the dew in the morning is the shining foam dropped from his bit as his journey is done. Day drives Shining-hair, and the light of his mane causes earth and sky to glisten. The same thing happened with regard to this, and with the same effect. Read as it was first conceived and written, it has a beauty of poetry; read as literal relation, it is illusion and snare.

So the story of the carrying off of Europe,—the wide-faced, the dawn,—borne away on the shoulders of a white bull to Crete, the western land; tale of Demeter and Persephone, the long search by the mother for her daughter; the voyage of the Argonauts for the recovery of the Golden Fleece; the achievements of Perseus, child of the golden shower, with the Gorgons, and his rescuing of the exposed maiden from the monster,—these and many more in the Greek and other mythologies have originally, as we find, a metaphorical meaning. Thus, rescued from the misapprehensions and perversions, the old mythologies are found a mine of wealth, full of thought and bright suggestiveness never before suspected.

The poems of the Iliad and Odyssey, the Nibelungen Lay, the Volsung Tale, etc., have a new and enhanced significance, as interpreted in the fresh light shed by comparative studies. "The war of Ilion," says Mr. Cox, "has been fought out in every Aryan land." Yes, we may add, its scenes have been witnessed and marked all over the globe, and told, if not sung, in the speech of every people. The conflict of light and darkness, of the bright or friendly and the sinister powers, the genial warmth of summer and the blight, the chilling cold of autumn and winter,—this has supplied the theme, the germ of the great epics of the world down to the "Hamlet" of Shakspere. Often, as in the case of Homer probably, of Shakspere certainly, the poet himself was not conscious of the fact, did not know what furnished the originating hint of his poem. And the mind has set these scenes in infinite kaleidoscopic variations. This strikes one especially in reading the Greek mythology.

As in every department of life, so here, the letter killeth. The finest conceptions, the most beautiful, picturesque, and stimulating representations have been bereft of their significance and strength, been transmuted to puerilities or absurdities, or in some cases to revolting horrors, by the crude and sensuous mind. The best may become the worst. The most monstrous, savage, and repulsive stories are told of gods and goddesses, originally personifications of the powers and operations of nature through this pragmatizing and individualizing tendency in man. Herakles is represented in some connections as the creature of boundless and indiscriminate lust. And yet the conception so expressed took its birth from some representation of a poet, who told in fine symbolism how

> "The sunlight clasps the earth,
> The moonbeams kiss the sea."

And the same will hold of other absurd or monstrous tales told of the gods, as Lykaon offering up a meal of human flesh to Zeus,—the sun in time of drought offering his own offspring, the withered fruits, plants, etc.

Indeed, the very thick of mythology is reached when the original appellative sense of the words that have been given as names is lost, and these names are conceived purely as personal designations. When the last faint consciousness of this description as imagery is gone, then come the riot of the fancy, and the fictions and illusions without end, of myth. Hence, the stories of Zeus and Olympos, of the gods and goddesses, their amours, jealousies, and quarrels, of Phoibos, Apollon, Meleagros, Oidipous, of Odin, Thor, Freya, the Valkyries, etc. All were borne on the same road, and the sense more and more removed from the relation in this disposition universal to pragmatize, personify, and historicize what man in thought saw in nature.

Historical elements intermingled. Not only was the god made man, but man was lifted to divinity, name and memory of some marked person blended with the deity; and so by an endless mixing and weaving together of fact and fiction, history and fable, inextricable confusion was brought throughout the mythology and religion. The mind was caught and enmeshed, held under a spell of incantation. Hence have come the idolatries, the obscurations, and paganisms with which all history is full.

Zeus and Olympus, the Pantheon, the Elysium, and the Tartaros are not dead: they are represented with us to-day. The old mythic beliefs have wonderful tenacity of life. They may change their form, their name; but they keep their nature. Zeus may succumb to Odin or Guodan (a word which Prof. John Fiske tells us has become our name God), Olympus be exchanged for another and somewhat remoter heaven, the Divs may be degraded to Devas, and new Divs be inaugurated in their stead; but the Devas will somehow be found present and dominant in the old place still.

What have been the adventures and the fortunes of the mythic conceptions and representations in the course of history, the transformations and the constant survivals, may be considered in subsequent papers. CHARLES D. B. MILLS.

THE DECLINE OF THE MINISTRY.

From many quarters arise complaints that the number of young men in preparation for the ministry is continually lessening. In England, it is said that the learning of Oxford and Cambridge diverts their graduates from the Church; and in America, we are told, the physics of the colleges indisposes students from the pursuit of metaphysics in theological seminaries. It appears that we are called to consider the prospect of an important decline in the supply of ministers, and it is therefore timely to reflect upon its causes and probable results.

Those who habitually sneer at the ministerial profession, and devote themselves to cataloguing and portraying its crimes, do injustice to a body of men who are unsurpassed in excellence of character, social virtue, and intellectual culture, and who in the past have been eminent in influences for good. What may seem to us at present injurious in their methods may have been beneficial in former conditions of the general knowledge and social habits of the people. They have been the trusted counsellors of the young, the consolers of the afflicted, the comforters of the aged, the promoters of all charitable effort, and their practical influence has usually been on the side of human advancement, except where the maintenance of dogma has in some cases interfered. But the fact remains that their number is becoming proportionally less.

The first and most immediate result of a scarcity of ministers will be the decline of sectarianism. This will proceed from two causes. First, Baptist, Methodist, and Congregational churches in small villages will be led by economical reasons to unite. Universalists and Unitarians will often, from the same motives, coalesce; and even Episcopalians may consent to embrace outsiders in their fold, though not likely to merge their organization in those of other sects. The second influence is the same that causes the scarcity of ministers,—the growth of knowledge that destroys belief in the dogmas of supernaturalism. This affects minister and people alike, leading to less insistence upon what are considered non-essentials, and creating a necessity for union upon the central truths vital to the existence of the Christian system, in order to resist the inroads of the hosts of rationalism. A continuation of this process, now perceptibly progressing, leads logically to a future existence of one Protestant Church united in a struggle for existence.

Some significant instances of this spread of modern ideas among theologians will be useful in illustration of the tendency of the Church toward liberal views that favor the union of sects. A free thinker yielded to the urgent desire of his friends that he should confer with an eminent doctor of divinity, thoroughly versed in science and philosophy, and competent to refute modern scepticism. With trepidation, he entered the doctor's house; but the genial theologian put him at ease, and, instead of criticising scepticism, proceeded to utter such sentiments as these: "When the Reformation came, a substitute was needed for the infallible Church of Rome as a rallying point and centre of faith; and the disconnected and fragmentary literature of the Hebrews was elevated into an infallible book. This Bibliolatry must be destroyed. Men need to learn that the Bible is not a book, and to judge of its contents as other writings are studied. Intolerance and bigotry are founded upon this false estimate of the authority of the Scriptures. I reject the supernatural entirely. I think something occurred which made the Bible writers think they saw what they described; but, if the events occurred, they were in harmony with natural law." The doctor went on to make light of the dogma of eternal punishment, and to deprecate the abuse which Christians shower upon unbelievers whose reasons they either lack courage or intelligence to examine. He said, "The Church is gradually coming to these views upon inspiration and Calvinistic dogma; and you should remain in the Church, and help those of us who are trying to bring her to a rational position, instead of attacking it from outside, where you have but little influence."

The free thinker said, "Do I understand that you have no criticism to make upon my doctrinal position, but only upon my attitude in leaving the Church and attacking its errors?"

"I do," the doctor replied. "You are substantially right, and the Church will some day stand where you do; but it will be a long time, and you do not want to associate with these infidels and low fellows, and throw away your influence."

"But," said the free thinker, "where are your honesty and consistency in remaining in an orthodox pulpit?"

"My Church has no creed," replied the doctor. "You could state your views to your pastor, and yet remain in association with the Church." He extolled the benefits of Christianity as a system, and pleaded for the necessity of its continuance as an organization with modified beliefs.

Another orthodox doctor of divinity was asked by a rationalist to give his views of the inspiration of the Bible. He replied as follows: "In the evolution of the human mind, the Greeks developed the greatest aptitude for art, the Romans for law, and the Hebrews for religion. As I accept a Greek statue and Roman law, so I take the religious writings of the Hebrews. The authority of

Digitized by Google

these writings is not in their origin, but in their merits; and I adopt only what appeals to my own consciousness as truth." Some remarks excited a question as to the doctor's "soundness" upon the trinity and the deity of Christ, and he went on to say: "I gave up the doctrine of eternal punishment twenty years ago. I don't know that I am 'orthodox,' but such are my convictions. I do not state them in my pulpit, because the time has not yet come, and the people are not prepared for such utterances; but, if any one asks my opinions in private, I express them frankly."

Both these good men, upon prominent occasions, when they were reported widely by the press, made vehement denunciations of extreme rationalism, and said nothing against superstition. Thus, their status among the orthodox was preserved; and the heresy hunters, who already were on their tracks, were turned aside. Some may call them hypocrites, but they are not consciously insincere. They are most estimable men; but they have outgrown the system to which they are allied, and upon which their support and all that is to them pleasant in life depends. They are in advance of their people and their creeds; but they know they will be overtaken in time, and prudence suggests patience and accommodation to the changing age. Perhaps they also share somewhat in the considerate temper of another orthodox minister of high repute, who wrote to an unbelieving and critical correspondent: "I do without any concealment declare that I do not believe the whole Bible to be true; that there are human additions and interpolations; that, in fact, Robertson Smith is right in the view he takes. Must I say all I think to the weak and stupid public? for such it is. I never say anything I *don't* believe. I only act on Christ's own principle,—'I have many things to say unto you, but you cannot bear them now.' Yes, God is afraid of upsetting weak minds, if Christ echoed the divine view of things in that statement."

Men not in the ministry hesitate to enter a profession where such suppression of conviction is a necessary policy; but it is perhaps fortunate that many who are in it can conscientiously square opposed belief and profession, as they save themselves much distress, and may aid in the slow process by which nature usually acts in promoting the evolution of ideas. People may be led better by those a little ahead of them than by those far in advance. But, unless the host advances rapidly, near leaders will be scarce; for new men will not assume such equivocal positions.

The question then arises, How can we do without ministers? The chief offices of the ministry are in connection with marriages, funerals, visitations, sacraments, and church services. What substitutes can be employed? The civil magistrate can secure the marriage bond. The professional utterance at the side of the dead will either not be missed by the mourners, with whom each word at such times stirs up the fountains of grief, or it may be acceptably replaced by the simple tribute of a friend and comrade, who knew the departed as few ministers ever come to know their parishioners. Visitation of the sick can be more agreeably carried on by neighbors and friends, who now often deprive the invalid and themselves of the mutually beneficial expression of sympathy and acts of kindness, because that is considered the pastor's sphere. Sacraments, if continued, can be administered by laymen. Church attendance has too many social attractions to be given up; and, where a minister is lacking, the services might be conducted after this manner: A committee should be formed to control them, one of whom should in turn preside. The music could be indefinitely improved; and its sphere and character, as to words, tunes, and instruments, enlarged. Readings of scriptures from ancient and modern authors should be given by young people of both sexes who possess oratorical talent. If prayer is not outgrown, there will be always good brethren "gifted" in that respect, some of whom may even exercise the somnolent influence attending "the long prayer." But how can the sermon be replaced? By reading a printed discourse? By no means. Every congregation possesses thinking and cultured men with good utterance. Let these read original papers upon the themes they are most familiar with, the subject first being approved by the committee. Let there be one paper of half an hour's length at each service, and let a discussion follow for another half-hour in five-minute speeches. At the close, let the people linger for friendly greetings. Many advantages will be gained by this method. Each person's mind runs in certain directions and emphasizes particular truths, and one man's instructions must lack variety. How many churches have been bored by their minister's specialty! How many have got tired of the pre-millennial advent, election, free grace, eternal punishment, the sinfulness of the world, or praises of its progress, when one of these things has been lugged into every sermon for a year! Few men have the versatility to preach instructively to the same people continuously; or, at any rate, people are benefited by receiving truth from varied sources. What interest would be felt in each new speaker, and what attention would be given to the essay in anticipation of the discussion! The joys of church-going would still exist: the best clothes can be worn and seen; the invalid, the baby, the absent, can be inquired for; the new-comer can be observed; acquaintance can be made that otherwise would never be formed; differences healed by a shake of the hand in passing in the aisle or porch; and Augustus can exchange a word or glance with Mary Jane, which will make his step the lighter in the store and her carol the livelier in the house throughout the week. Perhaps, too, with the absence of the theologian, theology will disappear, and men will talk of what they *know* and of what concerns their present lives. Salary will be saved, and independent thought secured from men whose opinions are unbiassed by their pay.

If, then, the vicissitudes of time deprive us of ministers, we may still hope that beneficent nature will supply substitutes, and that progress and happiness will continue. We need not wait till the clerical race is extinct before these methods are tried. Any pastorless church might make the experiment, and, while saving the salary, leave one more available minister to supply the field. Some Liberals, in whom early habit has confirmed the church-going instinct, would be likely to resume church-going under such secular auspices.

ROBERT C. ADAMS.

THE CHURCH AND REFORM.

Of the Church, the *Christian Union* observes:—

She is losing her hold on the masses. Socialist and infidel writers and speakers are gaining a hearing where Christian teachers have practically no influence. To win the working classes, we must interest ourselves in the things which interest them. The frequent struggles against the tyranny of great corporations, the endeavor to retain manhood in a system which has so divided and sub-divided labor that it is hard for a man to be more than an animated machine, the aspiration to secure better homes and a fairer portion of the fruits of industry,—these things call for Christian counsel, Christian sympathy, and Christian co-operation. If the working classes have lost confidence in the churches, the first duty of the churches is by sincere words and works to seek a renewal of that confidence. Let us begin with the Saturday half-holiday. Champion it! Secure it for the people, and the reward shall be ours. It will help the people, and no less will it help the Sabbath and the churches. Leave this work to unbelievers; and then, though the people will still be gainers, the Sabbath and the churches will be no whit helped. We commend the subject to Christian teachers, Christian employers, and Christian workmen.

The chief concern here seems to be for "the Sabbath and the churches." "Socialist and infidel writers and speakers are gaining a hearing where Christian teachers have practically no influence," because the former have and the latter have not been with the people in their struggles against injustice and wrong. And now, since the Church "is losing her hold on the masses," something must be done to secure "a renewal of that confidence" which the Church has lost by her indifference to the people's interests. Very good; but, if the Church has divine truth in her possession, why has she fallen behind "socialist and infidel writers" in matters of vital interests, involving "the aspiration to secure better homes and a fairer portion of the fruits of industry"?

Similar complaint has been made by Christian writers in Europe. A few years ago, Gilfillan confessed that, "for a wise and moderate extension of the right of voting, or any other boons to the lower orders, she (the Church) never asked, and probably never will." "All this," he added, "shows the weakness of our present Christianity; its want of vital force; its incapacity to cope with the age; and the uncertainty of its prospects as to the future, if not favored by supernatural aid."

The same in effect, although different in spirit, is the testimony of Rev. J. W. Carter, who, in *Lloyd's Newspaper* a few years ago, said: "The republican and infidel walk hand in hand, sowing broadcast the seeds of their pernicious doctrine. . . . Some in high places openly advocate republican principles and sneer at the theory of constitutional monarchy in this liberal, enlightened nineteenth century as an anachronism. Privileged classes, they advise, should be abolished, and the power of the government delegated to the people."

This is true. The free thinkers of England and other European countries have been untiring in their efforts to extend the right of suffrage and to better the condition of the masses. Their reward has been not unfrequently imprisonment, fine, or exile. Some of them, happily, have lived to witness the partial triumph of the reform which they initiated, or for which they labored and suffered, and to hear the clergy claim it as an outgrowth of their faith. "It is not," as Higginson says, "that there were worse men inside the Church, but they were preoccupied with saving the souls of men by some doctrine or ritual, and so left it to unbelievers and secular men to look after the bodies."

"The first nation in Europe," to quote again the words of Higginson, "that abolished slavery in the colonies (France, in 1793), did in the same session abolish Christianity; and, when Christianity was restored, slavery came back also." Free thinkers were prominent in the anti-slavery movement in this country long before it became popular, and when the clergy and Bible believers were quoting Scripture in its favor. When no pulpit in Boston was open to the "infidel" Garrison for an anti-slavery lecture, Abner Kneeland,—who was imprisoned in this city two months for blasphemy,—opened his hall to the Abolitionist, and told him to occupy the desk. The cause of woman's rights was "cradled in infidelity." Frances Wright and Ernestine L. Rose, fearless pioneers of the movement, were, with a few others, pointing out the disadvantages and disabilities under which women labored when the clergy were everywhere quoting

Digitized by Google

St. Paul to show that submission is woman's first duty, and that the measures advocated by the persons named were "infidel" in their character and degrading in their influence.

More than a quarter of a century ago, the New York *Independent* said:—

To the shame of the Church, it must be confessed that the foremost in all our philanthropic movements, in the interpretation of the spirit of the age, in the practical application of genuine Christianity, in the reformation of abuses in high places, in the vindication of the rights of man, and in practically redressing his wrongs in the intellectual and moral regeneration of the race, are the so-called infidels in our land. The Church has pusillanimously left not only the working oar, but the very reins of salutary reform in the hands of men she denounces as inimical to Christianity, and who are practically doing with all their might for humanity's sake what the Church ought to be doing for Christ's sake. And, if they succeed, as succeed they will, in abolishing slavery, banishing rum, restraining licentiousness, reforming abuses, and elevating the masses, then must the recoil on Christianity be disastrous. Woe, woe, woe to Christianity when infidels, by the force of nature or the tendency of the age, get ahead of the Church in morals and in the practical work of Christianity. In some instances, they are already far in advance. In the vindication of truth, righteousness, and liberty, they are the pioneers beckoning to a sluggish Church to follow in the rear.

During the past twenty-five years, the theology of the Church has become somewhat rationalized, and its more sagacious and advanced representatives have endeavored to bring the Church in harmony with the thought and spirit of the age; but it is still true that Liberals "are the pioneers beckoning to a sluggish Church to follow in the rear." The whole influence of the Church is, to-day, in favor of Puritanical Sunday laws. Every effort made to banish sectarianism from our public schools, the judicial oath from our courts, to make the churches bear their just proportion of taxation,—in short, to secularize our government by removing the remaining vestiges of the union of Church and State,—is stubbornly resisted by the Church. Her preachers prate of righteousness and purity, while opposing almost every reform necessary to their realization in this world. In England, in France, in Germany, in Russia, the Church is the foe of freedom and the main obstacle to the people's advancement. Is it strange that the Church "is losing her hold on the masses," that "socialist and infidel writers and speakers are gaining a hearing where Christian teachers have, practically, no influence"? B. F. UNDERWOOD.

EDITORIAL NOTES.

IT is a popular belief that the practice of reckoning time from the birth of Christ was instituted soon after his death. The fact is that the use of this epoch was introduced in Italy in the sixth century by a monk, Dionysius, the Little, and was not used in Gaul and England till about two centuries later.

THE number for July 15 of *Menschenthum* (or Humanity), a paper published in Gotha as the organ of the German Free-thinkers' League, contains an article entitled "Charles Bradlaugh's Battles with the English Parliament," and remarkably valuable, not only for precision and minuteness of information, but for comprehension of the grandeur of the struggle.

THE *Investigator* quotes our statement in regard to Mr. Labouchere's offer to Spiritualists and "mind-readers," and adds: "That reminds us of one of our correspondents, Dr. George A. Hammett, who, some thirty odd years ago, offered a reward of $3,000 to any medium who could tell him six words, without seeing them, which he had written on his chamber wall. This reward was published in the *Investigator* six months, but the doctor did not lose his money. The 'clairvoyants' said then that spirits did not work for money! Dr. Hammett was a scientific man, and he took this course to test the spirits."

DEATH takes on for us poor mortals new terrors under some of the revelations of Spiritualism, when, for instance, we are assured by a Spiritual paper that the poet Robert Burns, whose verse in life was irradiate with genius and common sense, comes back to us after nearly a century of spirit life, and perpetrates a half-dozen verses, of which we give one, and that not the worst:—

"Oh, I would live always,
I am willing to stay
Where sunshine and flowers
Enliven the way."

There is no more trace of the poet's mother-tongue in the other five verses than in the one we give. He has apparently devoted his weakened energies to learning to talk poor English since his advent into spirit life. For ourselves, we prefer the living poet, with all his faults, to this tiresome ghost.

HENRY WARD BEECHER'S latest attempt to define his position is a letter dated July 23 to Rev. J. S. Kennard, of Chicago, who had reviewed some of his recent utterances. In this letter, Mr. Beecher says:—

I do not agree, by any means, with all of Spencer—his agnosticism—nor all of Huxley, Tyndall, and their school. They are agnostic: I am not, emphatically; but I am an evolutionist. Evolution strikes at the root of all mediæval and orthodox modern theology,—the fall of man in Adam, and the inheritance by his posterity of his guilt, and, by consequence, any such view of atonement as has been constructed to meet the fabulous disaster. Men have not fallen as a race, men have come up. No great disaster met the race at the start: the creation decree of God was fulfilled. Any theory of atonement must be one which shall meet the fact that man was created at the lowest point, and, as I believe, is, as to his physical being, evolved from the animal race below him; but, as to his moral and spiritual nature, is a son of God, a new element having come up in the great movement of evolution at the point of man's appearance.

THE Hon. William W. Thompson, recently appointed United States minister to Sweden and Norway, in an oration at Portland, Me., on the Fourth of July, related an anecdote of personal experience to illustrate the fact that among far distant people there is profound interest in the success of our experiment of free government. "In the summer of 1865," said he, "the summer after the downfall of our great rebellion,—a company of Americans, sailing along the Arctic Ocean, landed on the wild coast of Norway, where the ice-clad fields overtop the sea, and where the sun sinks not, but shines full and clear throughout the night. A giant cliff towered from the beach half a mile in air. At its base, clustered around a fire of drift-wood, crouched a group of Lapp savages clad in the skins of the reindeer. As we approached, the chief of the party, an old man, decrepit and bent with years, advanced to meet us, inquiring in the Norwegian tongue whence we came. When we replied, 'From America,' the old man paused. Then, raising himself to his full height and stretching forth his hand, he asked with eager, trembling voice: 'Tell me, sirs, does freedom yet live in that far-off land?'"

THE New York Free-thinkers' Association will hold its convention this year at Rochester, commencing August 29. The speakers engaged are, with a few unimportant exceptions, persons especially identified the past three or four years with the National Liberal League, of which the Association, it will be remembered, was two years ago made an auxiliary by the strange tactics of a few individuals who "run" both organizations. The great majority of the men and women of the New York Free-thinkers' Association are worthy people; but they must themselves take charge of the Association, and rescue it from the baneful control of a few scheming, ambitious demagogues who make it subserve their own purposes, before it can fairly be regarded as a State association or command much attention from the better class of Liberals. For saying this, we expect, of course, to receive the usual amount of abuse from the League leaders and papers, and in their characteristic style; but to their abuse we have become accustomed, and are quite indifferent.

AT a meeting held at St. James' hall to demand the repeal of the Blasphemy Laws, the following resolution was adopted: "1st, That this meeting demands the repeal of the Blasphemy Laws, as contrary to the spirit of the age, and as endangering the freedom of speech, which is a condition of all progress. 2d, That this meeting earnestly requests the Home Secretary to advise the Crown to remit the remainder of the excessive sentences passed on G. W. Foote and W. J. Ramsey, under laws which have been treated as obsolete for many years." The first resolution was moved by Rev. E. M. Geldart, and seconded by Moncure D. Conway. The second was moved by Mr. Symes, and seconded by Dr. Aveling. The Pall Mall *Gazette*, in mentioning the meeting (in regard to which an interesting letter from our London correspondent, Mr. William Clark, will be found in another column,) says:—

It is surely high time that the law should be rescued from the imputation of harshness and partiality by the remission of the rest of the sentences upon Ramsay and Foote. Nor is it clear what reason can induce a Liberal Minister to hesitate in so plain a case, unless it be, as was suggested, that they dread the Tory outcry about the alliance of Liberalism and Atheism. That cry, whatever its value, is sure to be utilized to the utmost in any case. But, even if the Government could escape some odium by acquiescing in injustice, would not such a course be a direct contradiction of Mr. Gladstone's eloquent declaration in the similar case of the Affirmation Bill, that he was prepared to defy clamor, and risk the loss of popularity for the sake of fairness? The sentence was shameful and indefensible, and Sir William Harcourt no doubt feels this as strongly as anybody else. He will do an honest and courageous act, if he at once remits the rest of a scandalously excessive punishment.

POETRY.

For *The Index*.

REJECTED.

The lute that to Terra descended
From out of the heavens above
Had a soul well attempered with love,
In melodious cadences blended.
And it sought to enrich with its blessing;
But the sons of the earth could not hear,—
Their hearts were too sodden and sere,—
No music their spirit possessing!

And its tone only won their displeasure,
For it did not attune with their clang,
Nor agree with the songs which they sang
To their own inharmonious measure.
So they cursed it, and cried, "Crucify it!"
And out to the multitude bore,
Who injured and trampled it sore;
And they broke its sweet strings to decry it,

And crushed its dear heart with their scorning,
Though it plead but its scorners to bless,
And for injuries sought no redress.
And it sits in the dew of its morning,
And can only surcease its pained quiver,
As it lingers with wavering breath
To return through the portal of death,
When the last string is broken forever.

The Index.

BOSTON, AUGUST 9, 1883.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for MR. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

MIND-EXPRESSION IN EVOLUTION.

BY J. H. FOWLER.

Principles.—"the Unknowable."

"A power of which the nature remains forever inconceivable," once admitted in our philosophy, becomes a "fourth dimension" of "the dark circle," here to materialize mind, there to dematerialize matter. Not content with the unknown, it invades the known, and threatens the whole realm of nature to the confines of consciousness. Thus are we afloat on this ever-changing sea of consciousness, whose shore and bottom are but shadows of "the unknowable,"—a name of power to conjure by, of strength to support a weak position, but, as an ally in philosophy, cowardly and treacherous. What cannot be known or conceived should not be relied upon.

In the Unknown

there is hope. In "the unknowable" there is, for us, nothing. That very much of reality is unknown, none can doubt; but that any reality is "unknowable" is an irrational affirmation. The attempt to conceive of an inconceivable cause for any known phenomena is the absurdity of modern philosophy. Science assumes that we know things by their behavior; that phenomena are verities known by observation; and that affirmations, tested by experiment and accepted by the competent, will maintain intellectual supremacy. In morals, the tree is known by its fruits: that which bears the test of past experience guides in the future. Thus, science and morality have but one method in proceeding from the known to the unknown. Why should philosophy distrust this common-sense method, and part company with science and morality in the advance of mankind?

Do we know Reality?

Consciousness seems to be the one fact unquestioned. Consciousness is a state of subjectivity, of self-*ego*. I am conscious. Of what? Sensation. I know sensation. But sensation is a state of myself. Can I go outside of self to find a limiting cause of my known sensation? Common sense says, Yes. Practically, this affirmation holds good against all negations of philosophy. Instantly and irresistibly, my eyelids close at the approach of a stick. So close the shells of a living oyster. Sensing pressure, the unhatched chick pecks and bursts the binding shell; then, in sense of want, guided by sight and smell, gathers nourishment, and fails not to interpret rightly sounds of friendly call or warning. Thus is reality environed and recognized by reality.

A Sense of Objective Reality

is clearly implied by the behavior of every organic being. Whether vegetable or animal, simple or complicated, every individual responds to heat and light. Each senses environment as objective reality, and therefrom selects material with which to build up its own structure, and secure internal economy and external harmony. This primary sense of objectivity is simpler than sensation proper, and precedes it. It is a pre-perception more direct and simple than perception proper, and antedates consciousness. It is the simplest mental element of life, and without it no life could maintain itself, no organic evolution be possible. But, simple as it is, it is knowing, a function of mind, a common sense of all organic beings, holding all by a chain of intelligence to mind reality and binding all to environment reality.

Sensation proper is a higher mental function, co-ordinate with more specialized structure,—organs of hearing, seeing, feeling, smelling, tasting, connected by nerves to ganglia and sensoria, whereby special groups of external phenomena are gathered up and presented with focalized intensity, enabling the mind to distinguish qualities and get a higher grip of nature. They are to the previously considered simple sense of objectivity as telephone, telescope, and spectroscope, to enlarge, intensify, and specialize the impression from external things. But, as simple, primitive impressibility is closely connected with and followed by a sense of the impressing object, so sensation proper—though in effect subjective, yet in cause objective—is therefore closely connected with

Perception Proper.

How does the mind pass from sensation proper to perception proper? We know the sense of hearing, seeing, smelling, tasting, and feeling. Do we know that external reality which causes these sensations? The answer is already given, in what has been said of pre-perception. By habitually sensing objective reality in a more primitive form, the mind has acquired a sort of pre-perception of objectivity as knowledge of fact, and, on coming into possession of sensation proper, applies this knowledge at once in the form of perception proper. In other words, it grasps nature through sensation proper in the light of a more primitive experience as intuitive knowledge. The recognition of a primitive, simple sense of objective reality common to all organic beings would have saved philosophy much perplexity at this point.

Whence and by What

are sensation and perception? The external forces, as heat, light, sound, gravitation, each in its peculiar vibratory character, is propagated along the nerves of sense to the sensorium, where its effect is cognized by the mind; and this *cognition* of the effect, not the effect itself, is sensation. There may be sensation where no effect on the sensorium exists. But, in that case, the mind supposes it cognizes the effect. On the other hand, there may be external phenomena propagated to the sensorium, but no sensation, because no cognition. Whenever cognition supposed or real exists, then the mind, as before shown, perceives or supposes objective reality as the cause of the sensation; and this is perception.

Consciousness

is necessary to proper sensation and perception, but not to the simpler impressible condition of mind or to simple pre-perception; for it is not essential mentality. It is a form of mental activity, but not the only form. The presence of mind is manifested unmistakably in connection with all the lower vital functions, in the conduct of the simpler animal and vegetable organisms, where we see the acts of choosing, refusing, appropriating, and rejecting, constructing and reproducing. All functional action is mental: call it automatic, reflex, or what we will, the element of *purpose* in it is essentially psychical. Consciousness appears as a subsequent endowment or acquirement of individuality. It is the power of self-recognition, a luminous condition in which the mind sees itself and its own action as distinct from that which is not self.

In States of Consciousness not as States of Consciousness,

I trace my being back step by step through successive stages of evolution to the time when there could have been no state of consciousness. But I do not yet reach the beginning, nor do I discover with the dawn of consciousness any break or leap. I go beyond this through many stages, organic and functional, to that simplest possible structure, the primordial cell, physically like the beginning of all other beings, psychically different from all. In this psychical element I find my identity, which has never been lost, and which to-day constitutes my personality.

Unconscious Mental Activity

is a well-known fact. Consciousness is not permanent. In natural sleep and in trance, the mind often works with wonderful capacity; and these experiences may or may not enter into conscious memory, yet they may influence subsequent conscious mental action. We know we have experienced certain things of which we are unable consciously to recall a single item. Consciousness never covers the whole mental area. From fields unconscious, thoughts come before us framed and clothed in language often surprising ourselves. Consciousness is the luminous ray of mental activity, smaller in proportion than light to the whole solar energy. Our best mental energies are held in reserve, and come to our help, when they will, as inspiration.

Mind

is known to us as other things are known, by what they do,—never in naked reality, but in character. That which knows, that which chooses, that which directs, we call mind. It may perform these acts in states which we call consciousness, personally or individually, or in other states that we know but little of. We cannot conceive of mind in space as matter, nor can we conceive of mind under the guise of dynamics. It is not a force, but a force cognizer and director. It is not matter or form, but a cognizer and director of these. Mind is the organizing reality, the architect of nature, that which gives function to energy and structure to matter. It sees in its own being, as it were, ideas, and expresses them in nature; and evolution is its method. It is that which becomes intelligible in nature and intelligent in man.

Matter, Force, Space, and Time

are cognized as external. Feeling and thought are in the mind as states or actions. Matter and force cannot be conceived as in the mind as states of consciousness or as phenomenal or real mind elements. The identity may be asserted, but cannot be conceived. We cannot think matter, force, space, and time being in the mind, nor can we think of their not being external to the mind. It is impossible for them not to be, out of mind. It is impossible for them to be, in mind. Externally, they are a necessity; internally, impossibility. Matter changes form and relations, but is indestructible. Energy assumes the forms of many co-ordinate forces, but the sum total is always conserved. Space cannot be abolished or conceived as absent. Time is necessary succession: we cannot conceive of its stopping; but my consciousness, every and all consciousness, may cease. Matter, force, space, time, continue. They may be symbolized in thought and feeling, but not identified with them.

Relations.

Nothing is sufficient unto itself. Subjective reality implies objective reality: the two are related by phenomena and knowing. Everything is conditioned by all things. Sensation must have object as well as subject, and we deny our perceptions of the outward realities at our peril. The distrust of our senses is mental insanity, and leads to physical distruction. Doubt of mind is negation of self. In evolution, mind is as essential as matter, and the evidences of its presence are as palpable. Evolution is a process of mind-expression, and the aim of science is rightly to interpret the language of nature. To know and obey are the chief functions of man.

Language as an Analogy.

Agassiz, referring to the changes produced in plants and animals under domestication as forcibly presented by Darwin, said, "All this is the work of mind, which is but the continued influence of that agency by which these beings come into existence." The earth itself, in his view, had passed through all its previous modifications preparatory for the abode of man, who appeared as the interpreting and co-working mind.

Evolution involves the preparation of the earth for man and the production of man upon the earth, also

Digitized by Google

all the modifications and achievements brought about in connection with man as an allied agency. However limited and selfish in conscious endeavor man may have been, and however hostile and relentless the attitude of nature toward him, the two have wrought together as parent and child, achieving results which can be appreciated by comparing our highest civilization with the brute life of primitive man, as revealed with that of his extinct associates in the drift-filled caves of the glacial epoch.

When we consider the achievements of man,—co-operating with nature in modifying other organic beings of both kingdoms, in changing the face of the earth itself, in utilizing the physical forces in agriculture, in commerce, in the arts and sciences, producing all the civil, political, and other institutions of social life, and, above all, language itself,—we shall have to regard the human mind not merely as a co-modifying factor, but as co-creative being in evolution,—creative not in the absolute, but in the proper relative sense.

Evolution may be considered in two parts, according to the presence or absence of the human mind as a factor. Though the distinction both in product and mode of proceeding may be very clear, yet we shall find the analogy so striking that the presence of a factor closly akin to the human mind in other parts of universal evolution can hardly be doubted. If mind in animate beings, and even in ourselves, appears so obscurely outside of consciousness that even philosophers of high rank claim that all we know of mind is as stages of consciousness, denying its presence elsewhere, we cannot expect them to see its presence in inanimate nature.

To meet this view of mind as stages of consciousness, or as limited to conscious being, was the purpose of our previous number. Aware of the necessarily imperfect manner of a brief popular discussion and of at least partial failure, we shall proceed as if confident of success thus far, our primary object being to add to Mr. Wasson's admirable presentation of the "Analogy of Language in Evolution" some thoughts of thirty years' evolution.

In the non-human evolution as in the human evolution, there are two factors. One factor (existing nature) is common to both. In the human, the other factor is mind. In the non-human, the other factor is the "unknown."

What is this "unknown" factor, or how does it compare with the mind factor in human evolution?

We have a universal creation by the process of evolution. We have a part of the universal (the human creation) also by evolution. The two factors in the last are mind and objective nature. The two factors in the former are "the unknown" and the same objective nature as in the other. Two terms of a problem are here given to find a third. Its solution may be stated as follows: Let x represent "the unknown," m the known (or mind), on the factor objective nature, working both with mind in the special evolution, and with "the unknown" in the universal evolution. Then we have

$$m : on :: x : on$$

therefore

$$m = x$$

The unknown factor in universal evolution is mind. Of course, the correctness of this demonstration depends on the analogy in the two evolutions.

However, we must expect only analogy,—possibly, homology,—but not perfect identity; *e.g.*, the vegetable kingdom is analogous to, but not identical with, the animal kingdom. But the process of evolution in the one is even homologous with that in the other, and the two factors are the same in both. So language proper is not identical with architecture, but they are analogous, and the evolutionary processes are also analogous; while the two factors are essentially the same in both. Yet it seems to me the process of evolution in language proper differs as much from the process of evolution in architecture as it does from the process of evolution in the animal kingdom.

The entire human evolution is a part of the universal; and why should not evolution in any minor part of the human closely resemble evolution in any minor part of the universal?

"All are but Parts of one Stupendous Whole."

Is it possible that from two or any number of existing factors in nature there has been evolved another factor essentially differing from any previous being or existence, and that this new factor, as product of the previously existing system of nature, goes right on with it, but by a *new* and *essentially different* process evolves a special creation,—language,—differing essentially from all other creations of nature?

> "From nature's chain, whatever link you strike,
> Tenth or ten thousandth, breaks the chain alike."

We are not disposed to insist upon this argument *a priori*, as anything more than preparatory to the more scientific method of presenting the analogies; namely, the animal kingdom a special evolution, compared with language as another special evolution, both considered as parts of the universal evolution.

Here we see at a glance two serial evolutions, grading from lower to higher forms, in chronological order, in embryological development, and in geographical distribution.

Some Analogous Facts in these Two Series.

In the animal kingdom, we find the lowest or simplest existing organic structures, which are probably the representatives of the first in time, to be simple cells having no specialization of function or parts. In language, we have analogies in the first and primitive monosyllabic utterances expressive of simple sensations.

Below this simple cell organism, we find a homogeneous structural substance called protoplasm. The analogy in language is the monotonous cry expressive of simple diffused nervous emotion. Higher forms of animals are seen in cells modified by extension or contraction of certain parts, then by spontaneous subdivision and combination in various ways by repeating the primitive form more or less modified, tending to specialization of structure and function.

As a parallel in language, monosyllables are varied by inflection or doubled, to express further perception of qualities or relations, until we reach the expression of an idea. This brings us to the commencement of languages proper, a stage analogous to the commencement of the four great classes in the animal kingdom,—Radiata, Molluska, Articulata, and Vertebrata. In the lower and earlier forms of these several classes, we have typical structures but less specialized than in the higher and later forms. So we have great classes of languages commencing in lower typical root forms and less specialized elements of expression, but each class ascending in arboreal development like the classes in the animal kingdom to the higher and more specialized, forming peculiar groups or branches, which we call orders, families, genera, species, varieties, and individual peculiarities. Thus, to be more specific, we find existing a group of closely allied European languages which we may call a genus. Of this genus, the French, German, and English are species. These species we find to consist of smaller groups, distinguished by local, idiomatic, and other peculiarities, which we may call varieties, breeds, or races. Parallelisms in the animal kingdom are obvious. Groupings of languages according to more general types from genera, to families, orders, and classes, have been repeatedly pointed out by philologists, and need not here be mentioned.

In the animal kingdom, we find not only ascending chronological series and geographical groupings, but we find also embryological development corresponding to serial gradation and chronological evolution. Now, if we trace the embryological development of language either in the species—*e.g.*, in the English language as a whole—or in the growth of any individual mind, we shall find a beginning in the lowest and simplest forms of expression and a passing through higher and more specialized forms to the highest actual attainment, and that these several steps of development are analogous to the existing gradations and to the chronological order of evolution.

Darwin has shown how, by intercrossing, by local changes, by cultivation, and by various other external influences, breeds, races, varieties, and even species may originate. In modes parallel to this, we see species of language change into new varieties and new species. In the history of our English species of language, we all know the effects of the Anglo-Saxon cross and of the infusions of the Latin, French, German, and other elements, also how it has been improved by such great sires as Shakspere, Milton, Emerson, and others; how culture acts like domestication and high breeding.

Nature is orderly, and in all her special operations and productions presenting analogies and homologies, but never perfect identity except in essence of being and in law of action.

Individuals.

What are to be considered individuals in language compared with individuals in the animal kingdom, and to what extent are they analogous?

It may seem very evident to most people that they have a very clear idea of individuality among animals; but those who have made the subject a close study find it often quite difficult to determine what constitutes individuality among many of the lower orders of organic beings, while among the higher orders, as those of the vertebrata, we find individuality to involve not simply *one* structure or organ, but a combination of many, and such a combination as to express a complete idea.

We have considered the simple cell as an individual, and so the monosyllabic utterance. But, on ascending a little, we find a more complex individual built up by these simple cells, more or less modified and variously combined. Just so in language, as already implied, the higher individual is made up of modified and variously combined simpler elements. And so we trace among animals and in language the individual in the ascending scale, finding always more and more complexity of structure and specialization of function.

Hence, single words in language are to be considered individuals only when they express the whole of a sensation, perception, or thought. And that combination of words only which completes an expression of thought is to be regarded as an individual, analogous to individual in the animal kingdom.

Reproduction.

In individual reproduction there is a very striking analogy. The phenomena of the process of multiplication may be more obvious in the animal kingdom than in language; but there is a psychical or potential element in both, which may be even more readily seen in language. In language-reproduction, the activities of the mind are partly conscious and partly unconscious at the same time, and involve emotions, sensations, conjunctions, conceptions, thoughts, and expressions extending into the unconscious activities, which are not easily cognizable.

The mind gets impression by conjunction with objective nature through the general nervous system; then, it gets sensation through specialized arrangement of nerves; then, it becomes conscious of sensation in perception; perceptions combine, and there is new conception; then, by a sort of gestation or assimilation, thoughts develop; and, finally, language is delivered.

In the primitive or simplest individual forms, multiplication is mostly monœcious, resembling gemination of animals of one cell; *i.e.*, monosyllabic utterances repeat themselves, then two combine to form a third, and so on to the higher methods of reproduction. We see how, in the mind, through sensation, a new perception combines with an existing perception, when a new conception is followed by new thoughts. And we know how rapidly these processes may take place.

We often speak of a pregnant thought, of suggestive ideas. We listen to the utterances of a friend or read an interesting book, and our minds are filled with a brood of new thoughts. New language, begotten by individual contact with existing individuals, in our own minds urges deliverance. Who has not experienced this invigorating influence by contact of other thoughts with one's own thoughts, giving birth to new expression? Every thought comes of *conception*. Every expression is a *delivery*. "I am a midwife," said Socrates: "my business is to deliver minds of ideas." Swedenborg maintained that the celestial function of conjugal love is the conception and reproduction of offspring in thought, of which language is the outward symbol. Watch when the mind is in its twofold states of activity, unconsciously exciting memory, the unconscious with the conscious thoughts conjoining for new conceptions, ideas gestating perfect structures, forming and delivering language all at the same moment.

Agassiz said organic beings are expressions of thought. There are definite plans of structure in nature intelligible to man, and the animal kingdom is grouped and classified in nature by thought which we may know and interpret. Oken saw this so clearly as to exclaim, "I think thy thought after thee, O God!" What is the mind-factor in the special, but another or specialized form of the unknown in the universal evolution?

CORRESPONDENCE.

ATHEISM AND MORALITY.

Editors of The Index:—

In last week's number of your paper appears the sentence from the pen of Mr. George Jacob Holyoake, "I would not like to be counted an 'atheist,' if the choice was given me, because the term means denial of a Deity *and denial of morality also*" (*sic*). Such a statement might have passed unchallenged, if it had emanated from that numerous class of writers whose strength lies in their cleverness of establishing a "logical" deduction by substituting two words of unlike meaning for one another. To such, "God and morality," "no God and no morality," are interchangeable terms. Let us grant them this license: it is the chief stronghold of their bigotry and slander. But what induces Mr. Holyoake to say that a man who denies a Deity denies morality also? Does his dislike of the term "atheist" carry him away so far as to blind him to the possibility of a man believing himself entitled, in logic even, to the term "atheist," and still claiming for himself a belief in morality? We would all shun a man who "denies morality." If the Christian shunned the atheist, we might excuse him on the ground that morality for him depended on a belief in God; though, even among the intelligent Christians, we shall now find few so bigoted as not to allow that a man may be blind to God and yet have an excellent conception of morality. Does Mr. Holyoake intend to feed the prejudices of the ignorant? Is the strength not sufficient which the bigots wield? Conceded, for the sake of argument, that "atheism" is a term absurd in logic, does that justify one in a statement like that of Mr. Holyoake? But, after all, what is there so terrible in the name "atheist"? Is it not a term assumed by those who see no evidence for the theory of the theist? And, if so, why so decry it? But no matter which explanation is given the term "atheist," to say that the atheist denies morality requires more than the mere assertion, even by Mr. Holyoake.

M. B.

MISCELLANEOUS.

GEORGE JACOB HOLYOAKE.—Mr. George Jacob Holyoake's high character and noble services have not prevented his receiving the past year much mean abuse on one pretext or another from certain professed Liberals in this country,—the same sort of Liberals and, in the main, the same individuals who, inspired by the same purpose and spirit, have denounced and misrepresented *The Index*. Only last week, the editor of a "liberal" paper, published in New York City, in a paragraph abusing *The Index*, says, "It contains an article quoted with compliments from *that apostate to liberty, George Jacob Holyoake.*" Even in the *Investigator*, whose editor is not ignorant of Mr. Holyoake's sterling qualities, have appeared lately articles assailing his motives in the most ungenerous manner. We are glad to observe that these have called out a reply from Col. Ingersoll, in which he vigorously defends Mr. Holyoake, declaring that "in these attacks there is not one word of truth," and paying a fine tribute to his character and services. He writes of him thus: "There is not in this world a nobler, braver man. In England, he has done as much for the great cause of intellectual liberty as any other man of this generation. He has done as much for the poor, for the children of toil, for the homeless and wretched, as any other living man. He has attacked all abuses, all tyranny, and all forms of hypocrisy. His weapons have been reason, logic, facts, kindness, and, above all, example. He has lived his creed. He has won the admiration and respect of his bitterest antagonists. He has the simplicity of childhood, the enthusiasm of youth, and the wisdom of age. He is not abusive, but he is clear and conclusive. He is intense without violence, firm without anger.... In one of the articles to which I have referred, it is charged that Mr. Holyoake refused to sign a petition for the pardon of persons convicted of blasphemy. If this is true, he undoubtedly had a reason satisfactory to himself. You will find that his action, or his refusal to act, rests upon a principle that he would not violate in his own behalf. ... Why should we suspect the motives of this man who has given his life for the good of others? I know of no one who is his mental or moral superior. He is the most disinterested of men. His name is a synonyme of candor. He is a natural logician, an intellectual marksman. Like an unerring arrow, his thought flies to the heart and centre. He is governed by principle, and makes no exception in his own favor.... I know something of his life,—something of what he has suffered, of what he has accomplished for his fellow-men. He has been maligned, imprisoned, and impoverished. 'He bore the heat and burden of the unregarded day,' and 'remembered the misery of the many.' For years, his only recompense was ingratitude. At last, he was understood. He was recognized as an earnest, honest, gifted, generous, sterling man, loving his country, sympathizing with the poor, honoring the useful, and holding in supreme abhorrence tyranny and falsehood in all their forms.... The idea that this man could, for a moment, be controlled by any selfish motive, by the hope of preferment, by the fear of losing a supposed annuity, is simply absurd. The authors of these attacks are not acquainted with Mr. Holyoake. Whoever dislikes him does not know him.... There is no man for whom I have greater respect, greater reverence, greater love, than George Jacob Holyoake."

HUXLEY.—The choice of Prof. Huxley by the Council of the Royal Society to succeed Mr. Spottiswoode as president was practically unanimous. It was the turn, as they say, of the natural sciences. Mathematics and physics had theirs in the last election; and, if the new man was to be a physiologist, Prof. Huxley was indicated by natural and almost necessary selection. There is no other living authority in his own branch of investigation who fills so large a part in public estimation.... The most complete senate of the English scientific world is beyond dispute the Royal Society, and the wisest among them are of the Council. What these twice-tried specialists think of Prof. Huxley their choice of him to reign over them sufficiently shows. The outsiders have declared their opinion with equal clearness by crowding to his lectures and reading his books, and those who know him personally by heartily admiring and liking the man. The remark most commonly made about him is that he would have won distinction in whatever profession he might have adopted, had not science claimed him for her own. A student and scientist of the widest general culture, of the most practical, hard-headed business talent, versed in affairs, a sound judge of men, liberal in the best sense, a man of the world in the best sense, with all which that wide title implies, the divorce between literature and science, which one has so often to lament, has been annulled in his person. He has the gift of letters and of speech,—a style, whether spoken or written, which never misses its mark and fails to charm. If these are the days when science is to extend its kingdom, stretching out its hand or its sceptre to the universe, Prof. Huxley is surely its appointed apostle in England. The scientific and non-scientific spheres alike have much to gain from an interpreter of this stamp, and reason to rejoice in the sanction now set on his authority.—*Nature*.

ENGLISH BISHOPS.—Mr. Smalley, the London correspondent of the New York *Tribune*, writes thus of the bishops in the House of Lords: "There sat some seventeen elderly persons in episcopal robes, their puffed lawn sleeves suggesting in a rather curious way that a feminine element, not youthful either, had somehow found its way into the house. Look at their faces. The stamp of their profession is on them. Nobody would say that these are men of the world or men of business or men of affairs. The pinched lips, the eyes mostly too near together, the skin drawn firmly over cheek and chin, the sloping corners of bitter mouths, the air of sanctimony, the air of always posing before the world as superior beings with a divine mission and a divine sanction for acts sometimes certainly not human,—all this and much more you may see,—the most casual observer may see,—as he glances at this phalanx of spiritual legislators. Good men, of pure lives in their vocation, and useful as ecclesiastical administrators, they all are, I freely grant. But their whole teachings, their studies, their lives of pastoral labor, have utterly unfitted them for the business of law-making; and it is this unfitness of which I read the signs in their faces and bearing. Intolerance is branded on almost every brow. A bishop could hardly be a bishop, if he were not intolerant. His vow binds him to recognize but one Church out of many; and, outside of the pale of his one Church, nobody has any rights that he, as a functionary of the Church, is bound to respect or permitted to respect. What sort of people are these to intrust with authority over the interests of a whole community, made up of members of many churches and of no church at all?"

ATHEISTS.—It may comfort some to know that there are among us many, whom the gladiators of the pulpit would call atheists and materialists, whose lives, nevertheless, as tested by any accessible standard of morality, would contrast more than favorably with the lives of those who seek to stamp them with this offensive brand. When I say offensive, I refer simply to the intention of those who use such terms, and not because atheism and materialism—when compared with many of the notions ventilated in the columns of religious newspapers—have any particular offensiveness to me. If I wished to find men who are scrupulous in their adherence to engagements, whose words are their bond, and to whom moral shiftlessness of any kind is subjectively unknown, if I wanted a loving father, a faithful husband, an honorable neighbor, and a just citizen, I would seek him in the band of atheists to which I refer. I have known some of the most pronounced among them not only in life, but in death; seen them approaching with open eyes the inexorable goal, with no dread of a hangman's whip, with no hope of a heavenly crown, and still as mindful of their duties, and as faithful in the discharge of them as if their eternal future depended upon their latest deeds.—*Prof. Tyndall.*

HONORARY DEGREE.—The *Nation* has some sensible words in regard to bestowing honorary degrees. It says: "Originally, they meant something positive and well defined. A master of arts was once a man who had pursued a certain course of study and passed certain examinations successfully. So was a doctor of divinity or a doctor of laws. At present, these three degrees have no definite meaning at all. They are bestowed lavishly by all the colleges for all sorts of reasons, some of them not altogether creditable,—because a college benefactor has asked for it; because the grantee is himself a college benefactor; because a man has written a book; because he has reached the age of sixty; because somebody else has to have it, and his feelings would be hurt if he did not get it, too; because he has himself teased the trustees for it; because he has a large congregation; because 'charges' have been made against him unsuccessfully, but have left him in low spirits. The result is that the country is swarming with masters of arts who have never mastered any arts, and doctors of law who do not know any law, and doctors of divinity with whom divinity has very little indeed to do. There is just now a good deal of talk about university reform and changes in the curriculum and in the status of both students and professors. It would seem, therefore, an eminently fit time to discuss the propriety of giving reality and definiteness to college degrees and stripping them of their mediæval drapery, or rather of the drapery which modern custom has hung round the mediæval idea."

NOT myself, but the truth that in life I have spoken,
Not myself, but the seed that in life I have sown,
Shall pass on to ages, all about me forgotten,
Save the truth I have spoken, the things I have done.

—*Bonar.*

MANKIND is altogether too previous. Lots of people are preparing themselves for the next who haven't begun to make themselves fit to live in the present world.—*Transcript.*

A MAN has to build his own monument: that erected after he is dead is not enduring.—*Dr. J. R. Monroe.*

BOOK NOTICES.

EARLY FACTORY LABOR IN NEW ENGLAND. From the Fourteenth Annual Report of the Massachusetts Bureau of Statistics of Labor. By Harriet H. Robinson. Boston: Wright & Potter, 18 Post-office Square.

It is not often that "bureaus of statistics" are able to offer in their reports such interesting reading as this pamphlet of Mrs. Robinson's affords. It is, she says, "a description of factory life in Lowell, Mass., from 1832 to 1848." And a very graphic and glowing description it is, which should be read to be appreciated. The mill girls of those days, though working longer hours, were better paid and less hard worked than the same class to-day, and were also more intellectual in their tastes and pursuits. "In 1843," Mrs.

Digitized by Google

Robinson says, "eight books had been published, written by contributors to the *Lowell Offering;* and every contributor to that unique magazine was a *bona fide* worker in the mills. Among the best known of these to-day are Lucy Larcom, the poetess; Margaret Foley, the sculptor; and Mrs. Robinson herself, speaker, authoress, and equal rights agitator. The pamphlet closes with an earnest appeal that some effort be made to restore among the workers of to-day something like the old spirit of ambition and emulation of higher things which inspired those Lowell girls nearly half a century ago. "I do not despair," says the writer, "of any class of artisans or operatives. There is among them all some germ of mental vigor, some higher idea of living, waiting for a chance to grow. The same encouragement on the part of employers, the same desire to lift them to a higher level, would soon show of what the present class of operatives is capable."

DEEP BREATHING: As a Means of Promoting the Art of Song, and of Curing Weaknesses and Affections of the Throat and Lungs, especially Consumption. By Sophia Marquise A. Ciccolina. Translated from the German by Edgar S. Werner. New York: M. L. Holbrook & Co.

The editor and publisher of this short treatise says of the effect of its teachings: "In a leading sanitarium, a class for deep breathing was formed soon after reading one of the chapters of this book; and the inmates rose early, and practised it for an hour before breakfast. One young lady invalid increased the size of her chest in a few weeks three inches, and her health more than the size of her lungs. Others were also greatly benefited. That the same benefit will be extended to thousands there can be no doubt."

THE *Revue de Belgique* for August opens with a discussion of local plans for giving the suffrage to graduates of the public schools. Then comes an article indorsing the view of the original identity of Christianity and Judaism and their gradual separation, published by Renan in the *Revue Politique-littéraire* of June 2, 1853. The Book of Acts and other ancient documents are cited to prove that the Church of the first century observed the law of Moses with the utmost strictness. Not until about 135 A.D. did that aversion to Judaism show itself which was soon to find a voice in the Fourth Gospel. The essayist apparently gives his own views rather than Renan's, when he calls the Reformation a reaction toward Judaism; for that religion is so intensely ceremonial as to be much more like Romanism than Protestantism. Another article tells how serfdom was abolished in Russia, and gives all due praise to Alexander II., while not overlooking "the inability of the people to control the expenditure of money, the absence of any guarantee against injustice in State trials, the silence of the press, and the prohibition of all discussion of great public questions." Among the book notices is one of the French translation of *My Years of Slavery and Liberty*, by Frederick Douglass. This version, published in 1883 by Plon & Co., Paris, is here and there disfigured by notes expressing the religious bigotry of the anonymous translator, who otherwise seems to have done justice to the orator, "whose eloquence was as grand as his cause," and the book "which deserves to be read in every language where there are readers able to appreciate simple grandeur of character."

THE *Century* for August is an attractive number for midsummer reading, containing in addition to its more substantial articles an unusual number of poems and stories. There are over twenty poems, two completed short stories, one, "The Silk-dress Story," claiming to be written by James D. Hague, but bearing evident traces of the style of E. E. Hale. The new serial, by an anonymous author, "The Breadwinners," begins strongly, and seems to give evidence of a vigorous genius; Howells' "A Woman's Reason" deepens in interest; and Mr. Joel Chandler Harris' "Nights with Uncle Remus" is a wonderful reproduction of negro dialect. Threadbare as "Carlyle" seems worn as a subject of literary criticism, yet John Burroughs' article so entitled in this number is well worth reading. Henry James has a discriminating article on "Alphonse Daudet," the French novelist, accompanied by a fine portrait; and H. H. has an exceedingly interesting article on "The Present Condition of the Mission Indians in Southern California." The illustrations are, as usual, numerous and excellent.

"WIDE AWAKE" for August shows no sign of midsummer languor. It is as full of piquant stories, poems, and pictures as it could be even in the most bracing months of the year. "The Runaway Rings," a story by Sophia May, contains a moral which grown people will do well to apply to themselves, as does the ninth of Mrs. Diaz's John Spicer Lectures, on "Crying." The continued stories, Mr. Fred Ober's "Cacique John," "More than they Bargained For," and M. C. Catherwood's "On Indiana Roads," all seem to tend toward most interesting *denouements*. Rev. E. E. Hale resumes his delightful and instructive talks with the young readers of *Wide Awake* on topics of current interest, "The French Republic" being the subject for this number. John Ruskin's life and work are portrayed in "Pleasant Authors." The other manifold attractions of the number must be seen and read to be appreciated.

BESIDES the pretty rhymes, the amusing stories, and lovely engravings always to be found in *Our Little Ones*, there are also short articles full of interesting information for the young. The August number has two of these, one on "Beavers and their Houses," by Mrs. G. Hall, and "Queer Conveyances," by Lavinia S. Goodwin.

PERSONAL ITEMS.

MR. W. H. AND MRS. ANNA GARLIN SPENCER have gone West to spend a few weeks in Wisconsin.

IT is said that Peter Cooper left his autobiography all ready for publication, and it will appear soon.

MR. JAMES K. APPLEBEE will speak for the Free Religious Society of Dorchester (Mrs. Bisbee's society) next Sunday afternoon, at three o'clock.

THERE has just been brought out in Paris a Commonplace Book kept by Voltaire, which on his death passed into the hands of the Empress Catherine II.

MR. GEORGE MACDONALD, the Scotch novelist, with eight members of his family, is giving dramatic recitals in costume of "Polyeucte" and "Macbeth" in London.

MR. JOSIAH P. MENDUM, publisher and proprietor of the Boston *Investigator*, accompanied by one of his daughters, is spending a few weeks' vacation in the West. He is now in Denver, Colorado.

AN English paper, the *Echo*, states that the daughter of William Howitt has become a Roman Catholic, and only awaits the death of her mother, Mary Howitt, to enter a convent. The priests have thus revenged themselves on the author of the *History of Priestcraft*.

ONE of the old-time abolitionists, Zebina Eastman, died lately near Chicago. He was associated with the veteran Benjamin Lundy in the publication of the *Genius of Universal Emancipation*. In 1861, he was appointed consul to Bristol, England, by Mr. Lincoln. At the time of his death, he was engaged in writing his reminiscences of the early days of abolition.

MR. PARNELL is reported to have said recently, when asked how he was affected by the papal excommunication, "I don't know what it will do for me in the next world, but it has made my fortune in this." His testimonial fund is rapidly nearing the intended sum of $125,000, while before the Pope's circular was issued there was little prospect of it ever reaching $50,000.

THE *Sanitarian* says: "M. Louis Pasteur, the well-known French chemist, has offered to organize a mission with the object of investigating the nature and origin of the cholera in Egypt. The Hygiene Commission has indorsed the scheme; and M. Pasteur has applied to Lord Granville, the British Foreign Secretary, to furnish him with facilities for carrying out his mission."

THE remains of George Whitefield are beneath the pulpit of the old Presbyterian church in Newburyport, Mass. Probably none of Mr. Whitefield's relatives had ever visited the tomb until last week, when Mrs. Walsh of Savannah, Ga., a grand-niece of the distinguished divine, went to the church, handled reverently the Bible from which her ancestor preached, and visited the tomb where his remains lie.

JOHN BURROUGHS, in an article on Carlyle in the August *Century*, says: "Regarded simply as a man of ideas, the possessor of a multitude of clear and shapely thoughts, Carlyle ranks below Landor or Ruskin; as philosopher, he is not on a par with Mill or Spencer; certainly not with the latter, who is mainly a systematizer and organizer of ideas,—a sort of intellectual clearing-house on a scale befitting the nineteeth century."

MR. EDWIN ARNOLD has finished another Indian poem, which Messrs. Trübner will probably publish in October. It will contain five idyls from the Sanskrit of the "Mahabharata,"—"Savitri, or Love and Death," "Nala and Damayanti," "The Enchanted Lake," "The Saints' Temptation," and "The Birth of Death." At about the same time, an illustrated edition of Mr. Arnold's *Light of Asia* will also be published by Messrs. Trübner.

NO ENGLISH fortunes have ever been accumulated by individuals in England equal to those of Stewart and Vanderbilt. The largest personalty was that of Mr. Brassey, the great railroad contractor, $30,000,000. The next largest was that of Mr. Morrison, dry goods, $20,000,000, with real estate equal to some $2,500,000 more. The Duke of Westminster's realty can fall little short of $100,000,000, but his father only left $4,000,000 personalty, and this included a famous collection of pictures.

DR. HORATIUS BONAR, the well-know hymn-writer, in a recent address, as moderator of the General Assembly of the Free Church of Scotland, lamented the rapid decay of religion in the present age. The old beliefs are vanishing, the old hopes are fading, and Christianity is becoming nothing more than a name. Dr. Bonar sees in the present reconstruction of religious thought only the evidence of the coming triumph of unbelief. Robertson Smith and those who think with him come in for a large share of the blame for this state of affairs.

PROF. RUDOLPH VIRCHOW, the most eminent physician and surgeon in Germany, if not in the world, has withdrawn from the Society of German Physicians. The cause for this action he states to be that, during his illness last winter, he received a box of pills from an apothecary in Schaffhausen, which he took with good effect. He subsequently wrote a note to the apothecary, thanking him for his courtesy, which the latter printed without his knowledge. The physicians of the society charged him with violation of its rules, and he left in disgust.

PROF. FRANCIS W. NEWMAN, brother of the cardinal, has been elected an honorary Fellow of Trinity College, Oxford. It is remarkable that the two brothers, reared by a pious mother and educated in the same university, should both have departed from their early training, and gone in diametrically opposite directions. They took their tickets on the same Oxford platform, but one went north, the other south. That Oxford should, half a century after, recall them both by honorary fellowship, is a significant symptom of the intellectual tendencies of the age.

MRS. LOUISE REID ESTES, whose death has been announced, was born in 1844, and was married in 1867 to Mr. Dana Estes, of the firm of Estes & Lauriat. She possessed rare literary abilities, combined with excellent judgment; and several successful volumes of compilation are from her hand. Among her literary acquaintances and correspondents was the late George Eliot. Mrs. Estes was warmly beloved by a very wide circle of friends, who fully recognized her high intellectual and womanly qualities, and who sincerely mourn her loss. She leaves three children, the youngest a babe only eight months old.

MONSIGNOR CAPEL, the famous Roman Catholic revivalist, whom Disraeli embodied as a type of a modern churchman in *Lothair*, has arrived in this country in pursuance of a plan, contemplated for ten years, to study this country socially, educationally, and religiously. He will spend several months here, he says, and will examine more particularly into secular and Catholic education, and into the influence of our "independence and free air" upon Roman Catholic institutions. In the autumn, he may lecture upon the Puseyite movement, the probability of the disestablishment of the English Church, the reconversion of England to Catholicity, and kindred topics with which his career is closely identified.

OSCAR WILDE lately gave a lecture in London, which, in point of attendance, was not a success. Labouchere's *Truth* says: "Wit and beauty and nobility entirely declined to be bidden to the feast of unreason, and lo! before him was a sparse gathering of mere suburban vulgarians. Weary of platitudes, old jokes, and school-girl airs, sick of the painful spectacle of a clever gentleman deluded into mistak-

Digitized by Google

ing a forgotten butterfly notoriety for permanent fame, and lancying that twice in the term of a lifetime a grown-up man can emerge from the herd by the cut of his trousers or the color of his pocket handkerchief, the attenuated audience grew restless and fidgety. The lecturer himself supplied the suggestion for what followed. Having retailed his experiences, he explained that, when American audiences do not care for a play or player, they do not hiss, but simply walk out of the room. That was quite enough for Oscar's audience. They required no further hint, but did ditto. The joke is played out; the soap bubble of prismatic hues blown from a clay pipe has burst. Exit Oscar!"

PHOTOGRAPHS.

Cabinet Photographs of the following named persons are for sale at THE INDEX office, and will be sent by mail upon receipt of price:—

Darwin, 75 cts.; Huxley, Tyndall, Spencer, Holyoake, and Abbot, 50 cts.; Emerson, Parker, Garrison, Sumner, Curtis (G. W.), Weiss, Adler, and Hinckley, 35 cts.; Card Photographs of Adler, 25 cts.; of Higginson, Abbot, and Frothingham, 15 cts.

Address THE INDEX, 44 Boylston Street, Boston.

LESSONS

For Liberal Sunday Schools or for Home Use.

I. THE ORIGIN AND GROWTH OF CHRISTIANITY. A series of Twenty Lessons by Mr. LEWIS G. JANES, of Brooklyn. Written entirely from the Rationalistic stand-point. Prepared originally for use in Mr. Chadwick's Sunday-school. Each lesson printed in a separate slip. Twenty-five cents for the series, including postage.

II. FREEDOM, FELLOWSHIP, AND CHARACTER IN RELIGION. A series of Five very suggestive Lessons, by Mrs. KATE GANNETT WELLS. Each lesson contains enough material for several exercises. Seven cents for the series, in separate sheets, including postage.

III. THE WORLD WE LIVE IN. A Series of Elementary Lessons in Natural History, by Mr. FREDERIC A. HINCKLEY. Adapted both to interest and profit a class of children. In slips. Twenty-five cents for the series, including postage.

Teachers will do well to examine these lessons. A liberal deduction made for ten copies or more to one address.

Supplied at THE INDEX office, 44 Boylston Street, Boston.

Freedom and Fellowship in Religion.

This is a volume of Essays published by the Free Religious Association. It contains "The Nature of Religion," by D. A. WASSON; "The Unity and Universality of the Religious Ideas," by SAMUEL LONGFELLOW; "Freedom in Religion," by SAMUEL JOHNSON; "Religion and Science," by JOHN WEISS; "Christianity and its Definitions," by WM. J. POTTER; "The Genius of Christianity and Free Religion," by F. E. ABBOT; "The Soul of Protestantism," by O. B. FROTHINGHAM; "Liberty and the Church in America," by JOHN W. CHADWICK; "The Word Philanthropy," by THOMAS WENTWORTH HIGGINSON; "Religion as a Social Force," by EDNAH D. CHENEY. Also extracts from Addresses on the platform of the Free Religious Association, by Ralph Waldo Emerson, Lucretia Mott, Dr. Bartol, A. Bronson Alcott, Julia Ward Howe, Charles H. Malcom, Celia Burleigh, C. D. B. Mills, Horace Seaver, Isaac M. Wise, Robert Dale Owen, Wm. C. Gannett, Lucy Stone, F. B. Sanborn, Wendell Phillips, and others.

This book was published eight years ago, but is a live book still, and is a good answer to the q estion, What does "Free Religion" mean?

Price $1.50. Address "FREE RELIGIOUS ASSOCIATION," 44 Boylston Street, Boston.

BUILDING FUND.

THE Free Society of Dorchester was founded two years ago by Clara M. Bisbee. its present resident speaker; and, seeking greater facilities, also permanence as an institution, it now asks aid toward the erection of a small and simply constructed hall. Three thousand dollars will cover the entire expense, and friends of progress are respectfully invited by material gift practically to advance the cause at once of Woman's Ministry and of Free Religion. For further knowledge of the Society, address the President or Secretary of the Free Religious Association or Mrs. Clara M. Bisbee, Clark Street, Dorchester. Contributions sent to Mrs. Bisbee will be promptly acknowledged.

THE FREE RELIGIOUS ASSOCIATION

was organized in 1867. Though having its headquarters in Boston, it is a national organization, and has members and officers in various States of the Union. It has the following

CONSTITUTION.

I. This Organization shall be called the Free Religious Association, its objects being to promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history; and to this end all persons interested in these objects are cordially invited to its membership.

II. Membership in this Association shall leave each individual responsible for his own opinions alone, and affect in no degree his relations to other associations; and nothing in the name or Constitution of the Association shall ever be construed as limiting membership by any test of speculative opinion or belief,—or as defining the position of the Association, collectively considered, with reference to any such opinion or belief,—or as interfering, in any other way with that absolute freedom of thought and expression which is the natural right of every rational being. Any person desiring to coöperate with the Association shall be considered a member, with full right to speak in its meetings; but an annual contribution of one dollar shall be necessary to give a title to vote,—provided, also, that those thus entitled may at any time confer the privilege of voting upon the whole assembly, on questions not pertaining to the management of business.

III. The officers of the Association shall be a President, twelve Vice-Presidents, a Secretary, an Assistant Secretary, a Treasurer, and twelve Directors. They shall be chosen by ballot at the annual meeting of the Association; and the President, Vice-Presidents, Secretaries, and Treasurer shall hold their offices for one year, or until their successors be chosen. The Directors shall be chosen for four years, and, at the expiration of that term, shall not be eligible for reëlection until after two years. One fourth of their number shall be chosen annually; but, at the annual meeting of 1882, the full number of twelve shall be chosen in sections of three respectively for one, two, three, and four years. The President, Secretaries, Treasurer, and Directors shall together constitute an Executive Committee, intrusted with all the business and interests of the Association in the interim of its meetings. They shall have power to fill any vacancies that may occur in their number, or in the list of Vice-Presidents, between any two annual meetings. Six members of the Executive Committee shall constitute a quorum.

IV. The Annual Meeting of the Association shall be held in the city of Boston, on Thursday of what is known as "Anniversary Week," at such place and with such sessions as the Executive Committee may appoint, of which at least one month's previous notice shall be publicly given. Other meetings and conventions may be called by the Committee, according to their judgment, at such times and places as may seem to them desirable.

V. These Articles may be amended at any Annual Meeting of the Association, by a majority vote of the members present, provided public notice of the amendment has been given with the call for the meeting.

Officers elected for the year 1882-83:—

PRESIDENT.

WILLIAM J. POTTER, New Bedford, Mass.

VICE-PRESIDENTS.

OCTAVIUS B. FROTHINGHAM, Boston, Mass.
FELIX ADLER, New York City.
GEORGE W. CURTIS, Staten Island, N.Y.
EDWARD L. YOUMANS, New York City.
FREDERICK SCHUENEMANN-POTT, San Francisco, Cal.
THOMAS WENTWORTH HIGGINSON, Cambridge, Mass.
ELIZABETH B. CHASE, Providence, R.I.
GEORGE HOADLY, Cincinnati, O.
NATHANIEL HOLMES, St. Louis, Mo.
ROWLAND G. HAZARD, Peacedale, R.I.
BERNHARD FELSENTHAL, Chicago, Ill.
ANNIE L. DIGGS, Lawrence, Kansas.

SECRETARY.

FREDERICK A. HINCKLEY, Providence, R.I.

ASSISTANT-SECRETARY.

CHAS. H. CODMAN, Boston, Mass.

TREASURER.

JOHN C. HAYNES, 451 Washington St., Boston, Mass.

DIRECTORS.

Four Years.

FRED. MAY HOLLAND, Concord, Mass.
MRS. CLARA M. BISBEE, Dorchester, Mass.
J. A. J. WILCOX, Chelsea, Mass.

Three Years.

B. A. BALLOU, Providence, R.I.
WILLIAM H. HAMLEN, Boston, Mass.
ANNA GARLIN SPENCER, Florence, Mass.

Two Years.

EDNAH D. CHENEY, Jamaica Plain, Mass.
ARTHUR G. HILL, Florence, Mass.
RICHARD P. HALLOWELL, Boston, Mass.

One Year.

CHARLES D. B. MILLS, Syracuse, N.Y.
JOHN L. WHITING, Boston, Mass.
HELEN M. IRESON, Lynn, Mass.

The office of the Association is at 44 BOYLSTON ST., BOSTON (next door east of the Public Library), where is also the publication office of *The Index*.

All letters pertaining to the business of the Association (payment of membership fees, orders for its publications, etc.) should be addressed to "Free Religious Association," at the office.

Communications intended specially for the Secretary, as well as his personal correspondence, should be addressed to him at PROVIDENCE, R.I.

F. A. HINCKLEY, *Secretary F.R.A.*

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—**The Christian Amendment,** by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents, 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

CURRENT TOPICS.

AN English vicar, whose influence has been the means of keeping open on Sundays an annual exhibition of pictures over which he had control, so that the working men and women of the vicinity could have opportunity to view it, announced recently that a flower show on his grounds would remain open over a Sunday for the same purpose.

THE present Czar of Russia seems inherently unable to take more than half-way steps toward reform of any sort. On his coronation, he issued a decree granting liberty of worship to dissenters. This decree, however, only affects one million of so-called registered dissenters. There are fourteen million still unrelieved of their religious disabilities.

AN exchange says: "An Italian newspaper announces that, in consequence of the secularization of a convent, the effects will be sold at auction, and adds, with malice prepense, that the auctioneer values a weeping madonna, with boiler, spirit lamp, and tubing in working order, at $7, but would accept an offer of eighty cents for the bones of St. Peter, sixty cents for those of St. Anastasius, and forty cents for those of St. Clement."

THE average American citizen never fully appreciates the glorious privileges of his own free country until he reads some such arbitrary decision as the following, which we find in an exchange: "Mr. Berthold, of Breslau, Prussia, used his railroad director's pass to frank his wife's and daughter's baggage, and was condemned to a week's imprisonment for obtaining fraudulently $1.38 worth of accommodation. He appealed, but sentence was confirmed." Such rulings as that in a republican government like ours would be utterly repugnant to the sensitive feelings of thousands who in America feel privileged to "deadhead" their way through life.

THE *Christian Statesman* evidently does not believe that "cleanliness is next to godliness"; for, in its zeal against Sabbath desecration, it says: "There should be a ban placed upon Sunday bathing at the watering-places, inasmuch as it is plainly a desecration of the holy character of the day. In deference to a memorial presented by the Established, Free, and United Presbyterian congregations, the town council of Aberdeen have agreed to prohibit bathing on Sabbath in that part of the river Dee under their jurisdiction. The memorial described the practice 'as highly offensive and detrimental to good morals.' Can we not have similar action at Cape May, Long Branch, Saratoga, and the many other resorts?"

WHEN the veil is lifted here and there upon the despotism of Russia and we catch such glimpses of its cruelties as are shown by the letter of a correspondent of a French journal, we can no longer wonder at the desperation and determination of the Nihilists. He writes that on the 10th of June there arrived a transport at Tomsk from Tioumen, having on board 664 Siberian exiles. The prisoners were in a deplorable condition, the voyage having been delayed six days by ice. In addition to being half-starved, they were suffering from diphtheria, typhus, and small-pox. Two days after, another load of 538 arrived; and on the 21st of the same month came a third transport, containing 700 of these unhappy creatures,—1,902, a whole colony of exiles in less than two weeks.

THE woman's movement is making rapid strides in India, where the position of women has heretofore been deplorable. Among the more recent of the now constantly occurring instances of the new spirit awakened there, we cite the following: A Hindu widow of the Brahmin caste, about twenty-five years of age, has entered upon a public agitation against the custom of infant marriages, and in behalf of the education of her sex in her own country. She is said to be an eloquent speaker who attracts large audiences. The wife of the postmaster at Serampore, a Brahmin lady of good social position, has recently left home to enter a woman's medical college in this country, with a view to fit herself for aiding the elevation of her sex in her own land. Each of these women loses caste by her action, and becomes socially ostracized.

THE New York *Times* says: "The real ground of opposition to Bradlaugh's admission to the House of Commons is the opinion of a large majority of its members that Bradlaugh is what they would call a 'cad,' an eminently unclubable person who ought to be kept at all hazards out of 'the pleasantest club in London,' and whom the members owe it to the club to blackball whenever an occasion presents itself." But the *Times* adds: "The merits are all with Bradlaugh; and the thirty thousand people who met in Trafalgar Square were engaged in vindicating a right which never ought to have been questioned, and which never would have been questioned if the religious and social prejudices of the classes, which alone the House of Commons represents, were not far stronger than their logic or their sense of justice. A body which defines the right of representation to be the right of a constituency to elect anybody, subject to the chance that his colleagues may find him a cad, is not a body which has any real attachment to political freedom."

WE have heard much complaint recently from leading Catholics in regard to the evil results of "mixed marriages." The more pious and orthodox Jews are quite as much opposed to the removal of the "traditional restrictions" which forbid the intermarriage of their people with Christians. Thus the *Jewish Messenger:* "The Jew who marries a Christian — there are, of course, rare and fortunate exceptions—estranges himself gradually from the synagogue, and injures himself more than the general body. There was a time when a whole generation were condemned to die, and the race was the better and the stronger for the purification. The loss is individual rather than national, and yet it is a loss not to be overlooked. We do not favor harsh measures, which it is easy to proclaim, but impossible to execute. We do not approve of indignant invective and unrestrained rebuke: let rather the Jew reason kindly with his brother who contemplates such a step, and let our congregations refuse to permit their rabbis to remove the traditional restrictions in the way of such intermarriages, whose final harvest is generally discord and unhappiness."

THE opening lecture in the historical course for young people, to be given at the Old South Meeting-house, was delivered Wednesday afternoon last week by Mr. Edwin D. Mead. The subject was "Governor Bradford and Governor Winthrop." The attendance was good; and the lecture was instructive and entertaining, not only to the younger people present, but to the older people as well. This course of lectures is under the auspices of Mrs. Hemenway, who seems to be full of generous and noble impulses. For years, she has done much toward stimulating a love of American history, and awaking people to an adequate sense of political responsibility. She feels that our great hope for the future lies in strengthening a wise patriotism and intelligent conceptions of the cost and meaning of liberty in the rising generation. These lectures are to that end. They will all be of a very simple character, and will, we hope, suggest similar work all over the country. Mr. Mead is editing a little leaflet each week on some subject cognate to that of the lecture, for distribution among the young people. The lectures of the course yet to be given are as follows: "Plymouth," by Mrs. A. M. Diaz, August 15; "Concord," by Frank B. Sanborn, August 22; "The Town Meeting," by Prof. James K. Hosmer, August 29; "Franklin, the Boston Boy," by George M. Towle, September 5; "How to Study American History," by Prof. G. Stanley Hall, September 12; "The Year 1777," by John Fiske; "History in the Boston Street," by Edward Everett Hale, September 26. This enterprise is an important one, and it should be encouraged by the public.

A LEAP FROM MT. WASHINGTON TO MT. DESERT.

It was on Friday we dined on the top of Mt. Washington. We had, this time, but three hours on the summit,—two hours of its cold, driving fog, and one of its glories. But we remembered one long and cloudless day there years ago, when we sat serenely among the rocks and looked far out on the shining sea,—remembered gratefully though sadly; for one who sat with us then has since passed on to the shining sea of life, beyond the line of mortal sight, and we now climb the heights or grope under the fogs alone. Yet, having seen the view from Mt. Washington under various aspects, we should prefer, could we see it but once again, to have cloud scenery mingled with its panorama of landscape rather than the cloudless day, which is there so rare. The lifting of the veil of fog from the heads of the giant mountains around, the rolling of the clouds across and down the valleys, with the changing intermixture of light and shadow thereby produced, are elements that add greatly to the interest of the picture.

A rapid drive down the mountain road,—which we were not sorry to find is now heroically rough,—and we were at the Glen. This place we decided once again to be the gem of all the mountain sites. The Profile is a little paradise; but it is too confined, and you see no way to get out of its gates. Crawford's has a grandeur peculiarly its own,—one could stay there many days and fill them with joy,—yet it also is too shut in. Bethlehem has its attractiveness, but, on the whole, is disappointing; and it has too many people, and just now, especially, too much lawn-tennis. Jefferson may be justly proud of its view of the Mt. Washington range, but it is at a distance. At the Glen House, you are right at the foot of the highest mountains, and can see them from base to summit. You are close to their great ravines, and yet you are in one of the loveliest of green valleys, through which you can see your way out into the rest of the world. We were down in this gem of a valley in ample time for a four miles' walk to the Crystal Cascade and Glen Ellis Falls. The recent rains had well filled their springs, so that there was no occasion to repeat the joke that the waterfalls at the White Mountains would be very fine but for one defect: they have no water. These falls had all the water that the painters put into their pictures of them, and beauties which no painter's art has ever caught, as we sat alone and gazed upon them that afternoon, with the shadows gathering around us and the sunlight still streaming across the mountain ranges above. Not the falls alone, but all the surroundings in which they are set, make the beauty of the natural scene. What art, for instance, can imitate, much less picture, that exquisite carpet of mosses interspersed with delicate vines, with which nature has covered the high, jutting rock on which one may stand (if of steady nerves), and gaze directly into the midst of Glen Ellis Fall?

The next morning, by a drive of fifteen miles in a mountain wagon of the old-fashioned sort, we went throught the Pinkham Notch and Glen Station, and thence by rail the short distance to North Conway. There, we halted the rest of the day to write last week's article for *The Index*, and to look up some of the old rambles of a former visit. North Conway, too, though injured from an artistic point of view by its two railroads (would not one suffice?) is one of the places where one could halt contentedly for a long time. We have, for our part, selected many such places among the mountains and by the sea-coast and in quiet country nooks for a permanent residence. The earth, in fact, is so full of these delightful spots that, when it comes to the point, it is impossible to choose one out of the many; and hence, as is well, people continue to live and work where they have to, while the ideal places remain, awaiting with their several enchantments the opportunity of some future choice; and happy is it for those into whose real place of every-day life and work there drops meantime some refreshing and comes some uplifting from the waiting ideal. At evening, even North Conway must be left: we must take the last look of Mt. Washington away up there under its hood of clouds, board the cars again, and turn seaward. In a little more than two hours, we were on the sea, and the next morning awoke to look out from our steamer upon the bold ridge of Mt. Desert. It was Sunday, and the god of the day was in all his glory. A brighter summer morning never dawned. Not a sliver of the proverbial Mt. Desert fog was to be seen over land or ocean. The steamer came to its landing just at the hour when pious people should have been wending their way to church; but we judged that the whole population of the place, guests and natives, were at the wharf to see the boat come in, and to greet or stare at the new-comers.

Our leap from Mt. Washington to Mt. Desert was, therefore, a quick one. One evening, we were gazing up the towering form of Mt. Washington until its top was lost in the clouds; the next morning, we were among the humbler ridges of Mt. Desert. The change was too sudden for the vision to adjust itself to common standards of measurement; and, for a time, the repute of Mt. Desert suffered in our eyes, which had been familiarizing themselves with greater grandeurs. The mountains seemed dwarfed, and they did not rise out of the sea with such frowning precipices as we had anticipated. It was our first visit; and we landed with an unhappy feeling of disappointment and a touch of homesickness,—especially as we could not easily find a room to shelter us. But this difficulty surmounted, and our vision having gradually returned to normal conditions, we are now ready with the foremost to praise Mt. Desert. Foot excursions and wagon journeys for several successive days, in the most glorious weather, with not a fog yet, have familiarized us with the beauty of the famed island; and we confess ourselves in love with it. And this, in spite of the fact that the primitive simplicity of the place, so far as the means of living are concerned, has mostly departed, and fashion and gayety have come in, and the incorrigible lawn-tennis meets you at every turn (somehow, it does not seem *quite* so much out of place here as at the White Mountains), and you may see barouches with drivers in livery, and English dog-carts with the liveried legs of footmen dangling out behind. In truth, the place, minus the bathing, is fast becoming a little Newport. In all natural advantages except a bathing-beach, it surpasses Newport. Several of its hotels are of palatial ambition in size, if still somewhat barn-like in architecture; and they manage to feed and lodge a great multitude of people, though their managers may not have all become the best experts in judging the quality of food or of mattresses. But more picturesque or more comfortable and elegant cottages cannot be found anywhere than here. They look like permanent homes rather than summer cottages. And the available places along the shore and on the cliffs with outlook to the sea are rapidly being occupied by them. It looks as if, in a few years, art and fashion will have so invaded nature throughout the island as to make it hardly enjoyable here for any except for those who have large wealth and live in an artificial style.

But one thing we would ask of this invading army of wealthy summer *migrants* from the cities, if our voice could reach them: build your houses along these shores and on these beautiful hillsides, if you have the money to do it, and lay out your lawns and arrange your drives and walks with all the taste you can command, but leave to the common people—your equals in citizenship, if not in riches—a generous breadth of soil and shade and rock, where they, too, may walk or sit or loiter in groups, to enjoy the same beauty that has attracted you. Be more sparing of your placards, "This is private property," "No crossing here." Leave the choicest spots wild and free, even though you hold a deed of them. Nature has made some places so beautiful that no man has a right, through the mere power of money, to make a corner in them, and cut off his fellows from their share in the enjoyment of them.

WM. J. POTTER.

CARDINAL MANNING ON AUTHORITY, OBEDIENCE, BROTHERHOOD.

"Without God no Commonwealth," is the caption of an article from the pen of Cardinal Manning in the July number of the *Contemporary Review*. Cardinals, by the way, went out of fashion in the English-speaking world in the days of Henry VIII., who could not endure them. Now, in this latter part of the nineteenth century, they seem to have come into vogue again in England and in this country even, although the mass of Englishmen and Americans can have no particular use for them, as such kind of outlandish officials are hardly in accord with Anglo-Saxon freedom and invincible personal independence, so far as opinion is concerned, and the free expression of opinion.

The official dress of a cardinal is that of the old Roman, pagan college of augurs, which was an Etruscan institution. It is therefore older than Christianity. Cardinal Manning is so far pagan in belief as well as costume as to have a kindness for Dea Roma, or for Rome personified and worshipped as a divinity; for as such the Eternal City was regarded in pagan times. He says that Dea Roma had a sanctuary surrounded by four hundred and twenty temples, and in every city of the empire Dea Roma had a shrine. In fact, any and every form of paganism and superstition is palatable to Cardinal Manning, in comparison with the modern free, secular state, and popular sovereignty. Paganism had temples and priesthoods and religious rites, and holy water in vases at the entrance of its temples. But modern Democracy and Liberalism prefers school-houses for the education of the masses, prefers popular well-being and intelligence to superstitious rites and gorgeous temples and expensive priesthoods in scarlet hats and cloaks.

For the French republican motto, *Liberty, Fraternity, Equality*, Cardinal Manning would substitute the priestly formula, *Authority, Obedience, Brotherhood.* By the word God, Cardinal Manning evidently means *Priests and Kings* writ large. The fundamental doctrine of the papacy to-day is that a community that undertakes to exist without priests and the sanction of the Pope is gravitating rapidly to anarchy and a state of social chaos. The indefinite word God is the vague and convenient background of popes, cardinals, archbishops, bishops, and priests, who are the *soi-disant* representatives of Deity by special commission. Hence, they constitute a supreme "authority," transcending and overriding all other mere civil authorities, whether they be kings or presidents. In this country, the *will of the people* has been the supreme authority hitherto. An old Latin proverb says that *the voice of the people is the voice of God*, which

Digitized by Google

is equivalent to saying that the will of the people is the will of Deity. The creed of the famous positivist philosopher, Comte, alleges that the human race in its entirety, in all its generations, past, present, and to come, is God.

But, while such an aggregate constitutes a most sublime subject of contemplation, it is evidently not the infinite power which moulds and pervades the universe at every point of boundless space and at every moment of infinite time. By the word *authority*, Cardinal Manning does not mean the will of the people, but the will of the Roman Curia, which is quite a different affair. By the word *obedience*, he means that attitude of unquestioning credulity, faith, and acquiescence toward the princes of the Roman Church which Western Europe used to occupy toward that Church in the Dark Ages, or ages of faith; or, in other words, of ignorance, brutality, unreason, and popular squalor and poverty. Unfortunately for Cardinal Manning, the old God of orthodox tradition and orthodox priesthoods is now pretty generally, in all thinking quarters, regarded as a mere convenient ecclesiastical phantom and simulacrum in the heavens, in whose name in the past all sorts of despotisms, civil and religious, and all sorts of outrages on the naturally free spirit of man, have been maintained and perpetrated. Cardinal Manning's God is the old *opifex Deus*, who made the world once on a time out of nothing, and then went to sleep. He is the old ecclesiastical Deity who gave the reins of human society into the hands of priests and kings to rule *gratia Dei*, without any regard to the will of the people. Fortunately, that sort of God is pretty nearly dethroned. The God of the live nations and churches, and the live and thinking men and women of to-day, is an immanent, indwelling Deity, who makes himself known in the sphere of mind through the pure reason of man, who inspires all men and not merely a few priests and kings, who is found glowing in every ardent, unselfish, and noble impulse and generous thought and conviction of every human being, whose infinite might is felt pulsing through every atom of matter and every point of space in every instant of time. That is the Deity of to-day, the God of all nations, and the immanent might, which is constantly moulding, dissolving, and remoulding infinite nature. Under the reign of real Deity, all men are priests and kings, so far as they act in accordance with the dictates of pure reason or conscience, so long as they are obedient to those eternal, inner laws of truth, justice, and beauty, which constitute our higher nature. Man has at length reached, or is upon the point of reaching, the majority of reason. Ralph Waldo Emerson is the genuine high-priest of to-day, and not a Roman cardinal.

It is not mouldy parchment or a God of tradition, which rules to-day, but that sovereign reason which is God in us all, that sovereign reason which Kant proclaimed and vindicated as the fountain of truth and the final tribunal before which all historic institutions, whether civil or religious, must at length give an account of themselves, and, if they are found wanting, submit to abolition as out of date and no longer of the least use or relevancy. This is indeed the age of science and reason, when authority and precedent and tradition weigh not a feather, if they are found violating the dictates of reason.

It is the living, rational present, which is enthroned now, and not parchment. Less and less do men care for the past, as they come to understand its spirit more and more clearly. History and the historical school of thinkers are becoming of less and less weight. As Castelar truly says: "The historical school has consecrated and defended all secular iniquities, merely because they had in their favor the privilege of time. No notion could be falser than that right is found only in its development, in its movement, in its history. For is there not one fundamental idea of right superior to all modifications?"

"The organization of human society should not be perpetuated, when it contradicts the idea, the spirit of the time, of the century, because it may be merely the product of an historic fatality. Instinct, which confounds us with the brutes, cannot prevail over reason, which is the divine faculty, the faculty of the infinite. By this road, we should come to place secular tyranny—the pontificate, which has endured fifteen centuries, and monarchical power, which has endured twenty—over our *natural right*, which has virtually existed in us for a whole eternity." In contests between pure reason and the ideas and institutions of the past, "all the reactionists" (like Cardinal Manning) "cling" to "authority" and tradition as "to their safety-raft." "The king, who is born with the privilege of commanding slavish hordes; the priest, who aspires in the name of God to subject the free conscience to the yoke of dogma imposed by coercion and force; the feudal aristocracies, who watch as if it were a thunder-cloud the idea of right passing over the brow of their serfs,—all oppressors, in fact," affirm the omnipotence of instituted authority, orthodoxy, and tradition, and confidently invoke them, when they would "rivet anew the chains of the people, and gild the diadems of despots."

B. W. BALL.

SIDGWICK ON POLITICAL ECONOMY.*

It is fast becoming the fashion to disparage the claims of economics to the title of a science. A gradual spirit of discontent with its aims, its methods, and its conclusions, is manifesting itself; and an unmistakable distrust of some of its cardinal doctrines is slowly spreading. This sad condition has in a great measure been brought about by the exaggerated antagonism between the so-called orthodox and the German school,—between the disciples of Ricardo, as McCulloch, Fawcett, Cairnes, and, to a qualified extent, Mill, on the one hand, and the majority of modern German writers, De Laveleye in Belgium, Leroy-Beaulieu in France, Cossa in Italy, Leslie, Ludlow, and perhaps Rogers and Jevons in England, on the other. The difference is not so much between the deductive and historical methods, for the exclusive use of either leads to patent absurdities, producing, as the case may be, an utterly unreal science or a body of archæological facts. A judicious combination of both methods is the only permissible one, as is now almost universally admitted. The chief point of divergence lies rather in the general undercurrent, —in treating the science from an atomically individualistic, or from what may be termed the social, stand point. The one tends to develop a private rather than a political economy: the other looks upon the science as only a branch of the wider sociology whose far-reaching laws must be taken into account before reaching any positive conclusions. The one posits the "universal spirit of self-interest" as the sole factor in evolving the "immutable" laws of the science "which belongs to no nation, which is of no country"; the other lays stress on the multiplicity of motives which cannot be jumbled together in the phrase "desire for wealth," on the importance of legal systems and historical causes in moulding economic facts and economic tendencies, on the close connection between ethics and economics as sister moral sciences.

Although these different starting-points inevitably lead to some widely varying results, it is only the extremists on both sides who utterly ignore all claims of their opponents, and thus contribute not a little to the growing discredit of the general doctrines. Mr. Sidgwick is well known as the author of the admirable *Methods of Ethics*, whose cardinal value lies in the eminent fairness shown to opposing doctrines, and in the reconciliation of seemingly contradictory views. The same characteristics are plainly perceptible in the present work; and, although he still leans in some respects to the more orthodox school,—as in his theories of rent and profit,—he introduces many qualifications, and thus divests the theories of much of their hypothetical nature. The author's special aim is "to eliminate needless polemics by a guarded restatement of traditional doctrines, with due recognition of the advances made by recent writers." How necessary such guarded statements have become is shown by the practical use to which bald, unqualified, and therefore untrue theories have been put in late years, the scientific socialism of Marx and Lassalle being but the logical conclusion from the premise that labor is the cause of all value, while many of Mr. Henry George's wild fallacies are traceable to an almost superstitious acceptance of the Ricardian law of rent.*

Mr. Sidgwick divides his book into the science and the art of political economy,—the science treating of what is, the art of what ought to be. This division, it might be urged, involves a misconception of the nature of a science. It is perhaps true that some color has been lent to the above idea by the action of a few bigots, who repel all reforms of a general character by asserting that "political economy does not warrant such innovations," on the principle that whatever is, is good. A science has to investigate the principles not only of what is, but also of what may be. It explains the causes of existing facts, but is not in the least precluded from showing the probable workings of future combinations. Economics does not only treat of the nature of present phenomena, but necessarily discusses the possible variations from the existing plan, showing their relative inferiority or superiority. The problems of communism, co-operation, international trade, etc., must all be solved in this way: if one method works unsatisfactorily, it is the duty of the economist to show under what conditions and forms an improvement can be effected. The science thus becomes a progressive one, keeping pace with the demands of a higher civilization and a higher morality. The art of political economy, in the sense of the practical application of the scientific principles, is really politics: it is a portion of statecraft, the province of the legislator and administrator. But the art of political economy considered as a study of what ought to be is contained in the science itself, and nothing is gained in convenience or principle by drawing the sharp line of separation.

While there is not much of a novel character in the author's discussion of capital, wages, and profits, he is to a great extent free from the besetting vice of so many writers,—the unfortunate endeavor to ascribe simple causes to complex results. Such assertions as that price depends ultimately on the cost of production or of reproduction, as Carey puts it, that high wages are the result of the protective tariff, that profits rise as wages fall, and

**The Principles of Political Economy.* By Henry Sidgwick New York: Macmillan & Co. 1883.

*If Mr. George had ever lived in the country districts of Italy, South Germany, etc., he would soon have been cured of his physiocratic hallucination, that a tax on real estate alone should be the goal of governmental endeavor. The peasants and land-owners there are already so ground down by taxes and vexatious imposts that it is a marvel how they continue to exist at all. Their lot is far from being one that we would expect to find the "vampires of a nation's life blood," as the property owners have been called by a particularly wild communist; and the prospect of burdening them with the additional taxes which are now paid by the owners of personal property (in Germany amounting to a large percentage) would be frightful to contemplate.

Digitized by Google

many others, are patently untrue, or at most only half-truths, because they give prominence to only one of the many factors in the problem. The author hence naturally opposes the wage-fund doctrine, formulated with so much care by Mill, but which was never adopted by the majority of continental economists, and which was itself finally discarded by Mill. He qualifies, to a considerable degree, Ricardo's law of rent, but still fails to see that it is only an explanation of the "how much," not of the "why" of rent. He lays great stress on the moral element in co-operation, and the need of some means of developing in the members of a modern industrial community a fuller consciousness of their industrial work as a social function.

But by far the most significant portion of Mr. Sidgwick's book is his discussion of the limits of governmental interference. It is this that most plainly shows the gradual revulsion of feeling which old England is undergoing. The school of Adam Smith and his immediate precursors, the physiocrats, were brought into being by a natural reaction against the "grandmotherly" doctrines of eighteenth century absolutism and merchantilistic influences. But the pendulum swung from one side to the other without attaining any equilibrium, and the doctrine of absolute *laissez-faire* was in turn triumphantly proclaimed and in part systematically followed. The plan could not, however, be prosecuted to any great extent. The excessive reaction proved to be as exaggerated as the former extreme, and the horrors of English industrial life in the first quarter of this century made it manifest even to the English government that something more was demanded than mere inaction. No *a priori* reasons can be laid down claiming the free play of individualism as an undoubted axiom of political science. It is of course true that an undue dependence on governmental aid tends to deaden the manly impulse of self-help, and that many of the petty methods of state interference in the seventeenth and eighteenth centuries were ill-advised and even injurious. But this only shows that a reasonable caution must be employed. The defenders of the absolute let-alone system confound possible ultimate necessities with present needs. A time may doubtless come when the social world will near perfection, when men's selfishness will be so naturally permeated with sympathy, when egoism and altruism will be so synonymous that the best possible results may be expected from the simple workings of individual action. That will be the realization of Bastiat's Harmonies Economiques. But the ideal vista is in the haze of far distant ages. We have only to look about us to perceive the scarcely concealed feuds, the internecine struggles of society,—the envy, fear, and hatred on one side, the pride, contempt, and indifference on the other. Almost every great revolution will be found to have its roots in economic reasons, from the contests that preceded Lycurgus, through the many agrarian struggles of Rome, during the fierce wars of mediæval society, to the upheavals of 1789 and 1848. The tension becomes greater with every stride of democracy: those who feel themselves wronged and outraged are gradually seizing the helm of state, and, finding their often just strictures on present conditions unanswered and unnoticed, naturally fall into the extravagances and vagaries of the extreme socialists and communists. The state has hitherto contented itself with enacting strict penal codes and administrative measures: it has verily acted as the "night watchman" of society. But it seems to have been almost entirely unnoticed that it also has a moral function to perform; that it has not only a right, but even a duty, to interfere in those cases where the system of free competition ends disastrously, where undue advantages are given to the increase of the ever-growing inequalities of wealth, where the powers of state themselves are threatened to be engulfed by corporate monopolies. Prof. Sidgwick has done some valuable work in taking a kindred stand-point, and his book may be earnestly recommended as conducive to a less biassed discussion of this important subject. E. R. A. S.

NINETEENTH CENTURY BARBARISM.

The hero of the day in Boston last week was a "slugger," Sullivan by name. He had just returned from a sparring match with another slugger from Australia, before fifteen thousand people in Madison Square Garden, New York. A daily journal says: "There were a choice collection of the higher elements in the boxes,—brokers, bankers, lawyers, speculators, curious men, a few women; but, in the main, it was a gathering of all that was evil in the great city,—thieves, roughs, gamblers, cut-throats,—there were fifteen thousand people, mainly rascals, left outside the garden when the door shut. And it is narrated that New York was quiet and secure everywhere that night, because the criminal classes were surging around the garden."

The next day there were columns in the newspapers about the contest. Here are a few sentences from the Boston *Herald's* despatch:—

When they broke, Sullivan struck Slade and knocked him around, . . . slugged him in the back of the neck, and with one tremendous blow knocked the half-breed right through between the upper and lower ropes to the floor beneath. Then, indeed, it seemed as if pandemonium had broken loose. The yelling was enough to raise the roof. . . . Sullivan struck his opponent on the side of the neck, and he went down in the middle of the stage. He was no sooner up than they clinched again, and again hammered each other short blows. Then, separating, Sullivan again floored the Maori. With a swinging, right-hand blow, he knocked him clean from his pins and laid him sprawling. . . . Then, as they broke, Sullivan hit Slade an awful blow square on the nose. The Maori wheeled about, and Sullivan plugged him twice in the neck. The half-breed attempted to put up his hands. He could not. Again, Sullivan struck him in the face; and the big man from Australia staggered clear across the stage, and then fell in a heap. . . . Slade tried to get up, and after an effort did; but he staggered against the ropes, and would have fallen again, had not Barney Aaron helped him to his chair. His nose was bleeding, and blood was on his white tights. That was the end of the fight, for fight it was from the start. Howls and yells that could be heard a mile greeted the victorious Sullivan.

Having attained to the very summit of earthly glory in knocking a weaker slugger "clean from his pins," "Boston's champion," as the *Herald* calls him, returned to his own city to receive the plaudits of the multitude. As the gladiators of old who had acquired distinction in gladiatorial combats often retired from the amphitheatre to keep wine shops, so this slugger comes back to Boston to be the presiding genius of a whiskey-saloon, in opening which he is glorified as the chiefest among ten thousand, the one altogether lovely, by throngs of bibulous Bostonians, who drink to his health, keeping his bar-tenders busy all day and late at night. The crowd in front of the saloon was so large that it obstructed the sidewalk. The services of eighty policemen, many of them mounted, were brought into requisition to protect life and property while the slugger was the object of these enthusiastic demonstrations. The papers which have given full accounts of the reception—one of the most disgraceful events that ever occurred in a civilized community—state that the receipts at the bar from Tuesday night until Thursday noon were over three thousand dollars. And the saloon is still crowded daily from early morn till midnight by men who are proud of the brutal achievements of a brutal fellow who is a representative of that nineteenth century barbarism which survives among us, and of which so much is thinly covered by a veneering of civilization in multitudes whom we are accustomed to regard as a portion of civilized and enlightened humanity. And yet there are people who doubt whether the early condition of man was one of barbarism. B. F. UNDERWOOD.

THE *Nation* has just been publishing several communications from college professors and others upon the manner in which the chairs of American colleges are still hedged about by theological tests. The discussion has made still more evident what there has often been occasion to charge in these columns, that positions, not only for teaching philosophy and history, but even for teaching geometry and Greek, are conditioned in many and perhaps a majority of the colleges of this country by virtual subscription to the thirty-nine Articles and the Westminster Confession. If there is dissent, there must be either falsehood or deadening diplomacy, or else exclusion. The first-rate scholar who does not sign the creed is pushed aside for the second-rate scholar who does. One of the writers in the *Nation*, a professor of thirteen years' standing in a Western college, referring to several typical cases of this sort which have come under his own eye, continues: "In another case, one of the most eminent young scientists of the country was dismissed from a college because he did not belong to a church. In another instance, where the majority of the professors in a State college happened to be Presbyterians, it was understood that, for a vacancy in the faculty, membership in that organization would be regarded as an insuperable objection to any aspirant, however high his qualifications might be. Other churches were clamoring for a representation. I do not exaggerate when I say that membership in some Trinitarian church is a *sine qua non* for obtaining a position in almost any Western college. Fitness for the position is a matter of secondary importance." There is no doubt whatever that this is a true statement of the case; and, wherever and just so long as this condition of things obtains, a premium is put upon mediocrity and obtuseness, and the grossest and most mischievous injustice is done. We do not say that the intellectual qualification is the only thing to be considered in the teacher. There is much besides that; and Liberals have no right, and we believe none has any disposition, to complain, if adherents of the popular religion are advanced in cases where their superior general influence is clearly probable. But this has very rarely been true in the cases where complaint is made; and the discrimination against scholarly and faithful men in our colleges solely on grounds of theological opinion is a thing so baneful and so common that every Liberal and every person who has at heart the interests of sound and respectable learning in America is bound to protest against it emphatically and persistently.

EDITORIAL NOTES.

THE Springfield *Republican* says of camp-meetings: "The Spiritualists and Radicals and Freethinkers are fast making this institution a powerful weapon in their favor. And, in this view of the case, together with the laxity in camp regulations too often prevalent among Methodists, these tent-meetings are no longer an unmixed good."

BOSTON gave birth to Emerson. The time is coming when Boston will be made a place of pilgrimage because of that fact. The thing for which, in future ages, Boston will be most renowned, will be the fact that it was, for Emerson,

Digitized by Google

the "darling town" in which he first drew the breath of mortal life.... But—and here is the shame of it—the homage which Boston never paid to Emerson, the great thinker, Boston paid, on Wednesday last,—in a measure filled to the brim, pressed down, and running over,—to Sullivan, the great "slugger."—*Commonwealth.*

SAYS the Boston *Transcript:* "If our ministers could more accurately discern the signs of the times, if they could bring themselves to view with a larger sympathy the currents of thought among the most intelligent and active portion of the community, if they would endeavor to guide, without violently repressing, the generous hopes of souls that are burdened with the dark questions of the future, they would be acting far more wisely than if they insist on visiting with the stigma of ecclesiastical censure every departure from lines of thought traced in other days, under different conditions of life and thought."

SAYS the Springfield *Republican:* "It occurs to us that it rather settles the religious notion of special providences and divine judgments that the earthquake, or 'subsidence of the ground,' or whatever it was that visited Ischia the other day, should have chosen that theatre for its operations and destroyed several thousand mainly innocent and worthy peasants, when there were so soon to be twenty thousand of the worst possible population gathered in a convenient mass at New York, and nearly as many in Boston directly after, ripe and ready for a discriminating cataclysm. But, unfortunately, the divine Providence does not shift the volcanic forces to serve moral ends."

SAYS Mr. Holyoake, in his paper, the *Present Age:* "The important meeting at St. James' Hall, in favor of the liberation of the persons imprisoned for an unusual expression of opinion, will, we hope, be effectual. So late as St. Swithin's day, just past, Henry Goodwin, beadle of St. George's Borough, was convicted of assaulting, in the church, one Emma Mills, a pew-opener. He had knocked her down in the church, dragged her about, called her 'bad names,' and threatened to shoot her. Sentence upon him was only two months' hard labor. Since no one can assault opinion, drag about divinity, nor shoot the Thirty-Nine Articles, nine and twelve months' imprisonment for attempting it is, certainly, 'excessive,' to put it in the mildest form."

IN an exchange, we find the following: "A convert in a Methodist congregation had been a strictly honest man, but profane and a Sabbath-breaker. The *Christian Advocate*, in telling the story, says that he made a full confession in one of the meetings. He said that he had lived an ungodly life, and considered himself an amazing instance of God's mercy. The tide of religious feeling rose high on his positive testimony; and, as he took his seat, a brother started the hymn, "The dying thief rejoiced to see that fountain in his day." To the surprise of all, the new convert, in a towering rage, left the building. On being asked what the matter was, he said: "There is one thing I never did, —I never stole; and that they should immediately sing like that was a personal insult."

ON Wednesday, September 5, the third annual exhibition of the New England Manufacturers' and Mechanics' Institute will be opened in the Exhibition Building on Huntington Avenue in this city. Many improvements have been made in the building since the last exhibition, and it is intended to make this year's exhibition surpass in variety and quality the manufactures and products shown in previous years. The whole of the central part of the main floor will be occupied by exhibits from the Southern States. The west gallery, comprising over an acre of space, will be devoted to the products of Woman's Industry and Ingenuity. Reeve's Band of Providence has been engaged to furnish the music. On Monday, September 3, the Foreign Exhibition will open with imposing ceremonies in the building of the Massachusetts Charitable Mechanic Association. This will continue some months, and is intended to include some rare foreign manufactures, etc. Both exhibitions are in entire harmony with each other this year, their fields being entirely distinct. Such exhibitions as these not only furnish entertainment to the amusement-seeking masses, but are genuine schools of instruction for all, enriching the mind and broadening the view of those whom no other mode of instruction could reach.

MISS CLARA BARTON is one of the true heroines of modern times. For twenty years, Miss Barton has worked steadfastly for the cause of humanity in nearly every form and without compensation. From a sense of duty, she accepted Gov. Butler's invitation to become the superintendent of the Woman's Prison at Sherborn, and has more recently taken upon herself the additional duties of treasurer and steward of that institution, thereby saving the State over one thousand dollars per year. Yet she finds time, in spite of these varied duties, to take an interest in broader fields of benevolence. In view of the possibility of danger from yellow fever and Asiatic cholera, she is making active preparations to fight these epidemics by every preventive means. She is the president of the American National Association of the Red Cross, a humanitarian organization which is composed of over one thousand of the best men in the country. And it is this organization which she is now keeping on the alert in case of these dreaded diseases. Since May 1st, Miss Barton, as President of the Society, has received and disbursed over $30,000 in relief work. A higher ambition and a nobler record this, for a woman, than the honor of receiving any number of "brushes" or "pads" of some poor, defenceless, hunted fox, and saved from the rapacious maw of the hounds who shared the "glory" of the "hunt" with presumably intelligent beings.

MR. M. J. SAVAGE has, if we mistake not, shown considerable vacillation on the subject of Spiritualism,—a subject concerning which his words are not entitled to great weight. But his sincerity and honesty are beyond doubt; and the following extract from his letter in the *Christian Register*, commending Mr. Truesdell's recent work which a friend asks us to copy, shows Mr. Savage's present attitude toward Spiritualism, which cannot be very gratifying to those who hoped, after the publication of his experience with Slade, to see him a confirmed believer in and open advocate of Spiritualism:—

Mr. Truesdell has been a careful student of his subject for twenty-five years. In my study, one day in last March, he gave me a regular séance. It was in daylight. He produced the raps, read names on folded slips of paper, described departed friends in a trance, and produced the phenomenon of slate-writing. Had he gone away declaring himself a genuine medium, I should have been completely deceived. And I am not willing to confess myself easily duped either. For I have detected many fine tricks of legerdemain, and have made quite a study of all these things. But, when it was over, he sat down and explained it all. From beginning to end, it was pure and simple trickery. At the same time, he explained to me how many other things could be done. *The Bottom Facts* claims to be an exposition of how the principal things of all the great mediums are done. If any one chooses to say that the book does not cover all the ground, I can simply confess that I do not know. But one thing I do know; and that is, that so long as Mr. Truesdell can perform, as tricks, all the principal things that the great mediums claim as manifestations of spiritual presence and power, their claims must lie under suspicion until they submit themselves to such tests as will preclude all possibility of deception. I earnestly advise all your readers to get and read this book.

POETRY.

For *The Index.*

"WHAT WE SHALL BE."

The past, dear love, is past. Or good, or ill,
The work of yesterday for aye remains:
No tears can blot these fixéd spirit-stains,
These emptied fountains of the soul refill,
No prayers the echoes of my words can still.
And shall I wait to mourn the slighted gains,
Or garner what I have of golden grains,
And seek once more the summit of the hill?

Hold up my hands, the while I strive, to-day:
My path with tokens of thy love surround.
Thy tears shall smoothen all the rugged ground,
Thy smiles shall brighten all my upward way,
Thy prayers shall guide me, when I else would stray,
Thyself shalt make the years in good abound!

WALTER L. SAWYER.

For *The Index.*

THE SHADOW OF THE WINGS.

Dear aged friend, farewell: though nevermore
Thy presence visible may meet my gaze,
I see thee still beneath thy vine-clad door,
Touched with the glory of the sun's last rays.

Even as I saw thee last, I see thee now,—
A sweet face shaded by a trembling hand;
Soft, silvery hair above a placid brow;
O'er all, light shadows by the breezes fanned.

Fair buds of childhood prattled at thy feet,
Full-blossomed womanhood was by thy side,
Yet to my eyes more perfect and more sweet
Thy faded form than youth in all its pride.

For thou wert as the fully ripened ear,
Perfected by the sunshine and the rain,—
Sweet alchemist of life, that year by year
Transformed unsightly dross to golden grain.

And now draws on apace life's sunset hour,
Too soon, alas! for those who love thee well,
Who mourn the shades of night that soon must lower,
The voice that soon thy summons hence must tell.

Yet, while we watch the slowly gathering shades,
And wait in fear and trembling for the voice,
A happier thought the burdened soul pervades,
And while it sorrows bids it still rejoice,—

The thought that while we watch the waning powers,
The mental vision dimming day by day,
The loosened grasp on memory's fading flowers,
Whose scattered petals flock the downward way,

We yet may trust that still the living soul,
Whose radiance pure upon our pathway fell,
Is rounding ever to a perfect whole,
And doth but cast aside an outworn shell.

And as great Nature, in her lower moulds,
Foreshadows nobler things that are to be,
And hidden treasures that her casket holds
'Tis given oft to searching eyes to see,

So, as I gaze on the unsightly worm,
Ere from its prison-house the insect springs,
And mark, beneath its withered, death-like form,
The semblance shadowy of folded wings,

I read the secret of unfolding life,
And learn the lesson of unfaltering trust,
Here where all mortal form with death is rife,
Where with each heart-beat dust returns to dust.

I turn again in thought, sweet friend, to thee,
O'er whom the coming change its mantle flings;
And 'neath its folds, though dark as death they be,
I see the shadow of the folded wings.

The Index.

BOSTON, AUGUST 16, 1883.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

Thoughts Upon the Future of Religion.*

BY R. W. BOODLE.

As I rise to address you this afternoon upon the most momentous of all subjects, I am naturally reminded of a lecture delivered under the patronage of this society which I happened to hear a few weeks ago. The lecturer, who took for his subject the celebrated Tom Paine, concluded with an eloquent peroration describing the antagonist armies into which he divided mankind. They were marshalled under opposing banners that bore two significant watchwords. On the one side was the party of progress and enlightenment, and the standard under which they fought was inscribed with the noble motto, "Knowledge is Power." On the other might be seen a motley host, composed of bigots and obstructionists, gathering round another banner, and upon it might be read the ominous words, "Ignorance is the mother of Devotion." I wish to recall the antithesis thus tersely put by the able lecturer, because it gives you more clearly than any words of mine can the spirit which is most opposed to that in which I wish to address you this afternoon. Such a division of mankind as that suggested by the lecturer is unfair to many of the noblest spirits in the past and the present, untrue to history, and as supremely ridiculous as the old classification of men into sheep and goats. As I listened to the able lecturer, I could not help thinking of the advice given by the great free thinker of the last century, advice which is only to be paralleled by the worst casuistry of Jesuitism: "Mentez, mez amis. Il faut mentir comme un diable, non pas timidement, non pour un temps, mais hardiment et toujours. Le mensonge n'est un vice que quand il fait du mal." Though the patriarch of Ferney too frequently followed his own precept, I trust there is one ideal at least dearer to modern free thinkers than that of freedom, the ideal of truth. It is as a humble follower of this noble cause that I now address you.

The subject of my lecture is the future development of the mysterious element in our life that severs us more than anything else from the brute creation. This heightened sense of mystery, which we call religion, has constantly attended our progress through different stages of civilization. In barbarians of the lowest type, it is almost imperceptible. As civilization advanced, religion to an ever-increasing extent pervaded men's lives. Changed, dematerialized in many respects, it has ever attended us. Is this element, I ask, all important in the history of man's progress in the past, to sink into insignificance in the future development of our race?

In considering this question, we have great need to bear in mind the warning words of Coleridge: "We have imprisoned our conceptions by the lines which we have drawn, in order to exclude the conceptions of others." Because religion was found to be associated with cosmical and other notions which had long been out-worn, it was at one time almost felt that the sentiment itself was pernicious, that the feeling of mystery must be, if possible, eradicated from life. Listen to the words of Harriet Martineau, written years ago, but only lately published in her Autobiography: "I do feel sadly lonely," she wrote to Mr. Atkinson, "for this reason,—that I could not, if I tried, communicate to any one the *feeling* that I have that the theological belief of almost everybody in the civilized world is baseless." Again, she writes: "About this matter of the extinction of theology by a true science of human nature, I cannot but say that my expectation amounts to absolute assurance, and that I believe that the worst of the conflict is over. I am confident that a bright day is coming for future generations. Our race has been as Adam created at nightfall. The solid earth has been but dark or dimly visible, while the eye was inevitably drawn to the mysterious heavens above. There, the successive mythologies have arisen in the east, each a constellation of truths, each glorious, and fervently worshipped in its course; but *the last* and noblest, the Christian, *is now not only sinking to the horizon, but paling in the dawn of a brighter time.* The dawn is unmistakable, and the sun will not be long in coming up. The last of the mythologies is about to vanish before the flood of a bright light." In other words, man is to live by bread alone, his life and thoughts are to be regulated solely by the dogmas of science, the dark and mysterious is to disappear in the broad light of knowledge.

Upon no subject has a more clearly marked revolution of thought taken place within twenty years in the minds of the best thinkers. In his Belfast address, Prof. Tyndall cautioned his hearers against entertaining such wild notions as these. "There is that deep-set feeling which, since the earliest dawn of history and probably for ages prior to all history, incorporated itself in the religions of the world. You who have escaped from these religions into the high and dry light of the intellect may deride them; but, in so doing, you deride accidents of form merely, and fail to touch the immovable basis of the religious sentiment in the nature of man. To yield this sentiment reasonable satisfaction is the problem of problems at the present hour." To the same effect, George Eliot writes in *Theophrastus Such*, "We have been severely enough taught (if we were willing to learn) that our civilization, considered as a splendid material fabric, is helplessly in peril without the spiritual police of sentiments or ideal feelings. And it is this invisible police which we had need, as a community, strive to maintain in efficient force."

This is, I think, the most valuable lesson that J. S. Mill's Autobiography has to teach us. Here was a man virtuously brought up and taught from his earliest years to find the full satisfaction of life in the exercise of his intellectual powers. "This did very well for several years," he writes, "during which the general improvement going on in the world, and the idea of myself as engaged with others in struggling to promote it, seemed enough to fill up an interesting and animated existence. But the time came when I awakened from this as from a dream." The fault he found to lie in the predominance in his mind of analysis over sentiment. "My education, I thought, had failed to create these feelings in sufficient strength to resist the dissolving influence of analysis, while the whole course of my intellectual cultivation had made precocious and premature analysis the inveterate habit of my mind. I was thus, as I said to myself, left stranded at the commencement of my voyage with a well-equipped ship and a rudder, but no sail; without any real desire for the ends which I had been so carefully fitted out to work for; no delight in virtue or the general good, but also just as little in anything else." How his gloom was dispelled and a new light broke upon him he tells us: "I was reading, accidentally, Marmontel's *Memoires*, and came to the passage which relates his father's death, the distressed position of the family, and the sudden inspiration by which he, then a mere boy, felt and made them feel that he would be everything to them,—would supply the place of all that they had lost. A vivid conception of the scene and its feelings came over me, and I was moved to tears. From this moment, my burden grew lighter. The oppression of the thought that all feeling was dead within me was gone. I was no longer helpless: I was not a stock or a stone. I had still, it seemed, some of the material out of which all worth of character and all capacity for happiness are made." "Thus," he adds, "the cloud gradually drew off, and I again enjoyed life; and though I had several relapses, some of which lasted many months, I never again was as miserable as I had been." To the conclusions suggested by the crisis through which he had passed I wish to call your attention. "I had now learnt by experience that the passive susceptibilities needed to be cultivated as well as the active capacities, and required to be nourished and enriched as well as guided. . . . The imaginative emotion which an idea, when vividly conceived, excites in us, is not an illusion, but a fact, as real as any of the other qualities of objects, and, far from implying anything erroneous and delusive in our mental apprehensions of the object, is quite consistent with the most accurate knowledge and most perfect practical recognition of all its physical and intellectual laws and relations." Emerson sums up the whole position when he says that "the intellect is stimulated by the statement of truth in a trope, and the will by clothing the laws of life in illusions. But the unities of Truth and Right are not broken by the disguise."

The illustrations that I have given you will put in a sufficiently clear light the religious problem before all those who have cut loose from the old faith. A religion of some sort is a necessity with men; and this sentiment requires not only to be recognized, but allowed its due scope. Of course there are many among us with whom still linger the old feelings of love and reverence for a Supreme Being regarded as an almighty and all-good Father. It is not for these that the present paper is written. To such as these, it would be little less than an impertinence. I speak to those confronted by the bare facts of life, of a life in which there is much that is ignoble, that partakes of the animal from which it sprung, to whom this life here is the only thing about which they can feel certain, from whom the ennobling idea of a future life beyond the clouds has passed away like a dream. Most of us have felt the saddening effect of the first loss of the ideas in which we were reared. Listen to the passionate words of William Black's hero as he laments the work of the Time-Spirit in tearing away the fond vistas of the past:—

"Why have they taken away from us the old dreams? If one could only believe, as in the old time, that heaven was a fair and happy island lying far out in that western sea, how gladly would I go away in a boat and try to find my Coquette! Only to think that some day I might see the land before me, and Coquette coming down to the shore with her dark eyes full of joy and welcome, only to believe that—only to look forward to that—would be enough; and if in the night-time a storm came, and I was sunk in the darkness, what matter, if I had been hoping to the last that I should see my Coquette?"

Happily for us, the problem that I have suggested is not one for which we are bidden to invent a solution. Nature herself repairs her ravages. While the expansion of the intellect lies to a very great extent within our power, the growth of the religious sentiment is mainly an unconscious process. Founded as it is upon the sense of the mystery that envelops our life, we are still left face to face with infinities, with inscrutable issues, into which the light of science seems as far from penetrating now as it was centuries ago. But, though we have very little power over the development of religious sentiment, its changes can be chronicled and the phases may be indicated through which it passes, losing upon one side, while it gains upon another. The work constantly goes on within us and without, for the most part independently of us. Something, however, may be learned by comparing the lives and thoughts of two typical characters who, standing at an interval of two centuries from one another, serve to show the direction in which the tide has set.

The first character to whom I would call your attention is the celebrated Florentine artist, Benvenuto Cellini, who lived in the sixteenth century. The religious side of his nature is fully developed on the

*Delivered before the Pioneer Free Thought Club of Montreal.

Digitized by Google

lines of the old faith. He sees salamanders, demons, and angels. He is blessed with visions of God, and enjoys personal interviews with God and Christ. He has a fervent belief in the efficacy of prayer, and constantly experiences its benefits. "God has promised to befriend such of his creatures as put their trust in him," and God befriends Cellini. "I do not write this narrative of my adventures from a motive of vanity, but merely to return thanks to God, who has extricated me out of so many trials and difficulties; who likewise delivers me from those that daily impend over me. Upon all occasions, I pay my devotions to him, call upon him as my defender, and recommend myself to his care. I always exert my utmost efforts to extricate myself; but when I am quite at a loss, and all my powers fail me, then the force of the Deity displays itself,—that formidable force which unexpectedly strikes those who wrong and oppress others, and neglect the great and honorable duty which God has enjoined them." What Cellini means by "exerting his utmost efforts to extricate himself," we learn from his life. When he quarrels with a man (if we may believe his own account), he generally murders him, apparently with as small feelings of compunction as he afterward showed when he wrote the story of his life. From his attempt to stab Guasconti, he barely escaped with his life, his victim's family closing round him; "but, as God sometimes mercifully interposes upon such occasions, it so happened that I neither received nor did any harm." Thus we see that, with all his faith in God, he barely has a notion of the sacredness of human life. Let us look at his life on another side. He requires a model for two figures of Victory. "For this purpose, I took into my house a poor girl about fifteen years of age. She was extremely well-shaped, lively, and of a complexion rather swarthy; and, as she was somewhat rustic, spoke little, walked fast, and had a sort of wildness in her eyes, I gave her the name of Scozzona; but her own name was Gianna. With her assistance, I completely finished my Fontainebleau and the two Victories intended for ornaments to the gate. By this Gianna, I had a daughter, on the 7th of June, at three in the afternoon, in the year 1544, when I was precisely in the forty-fourth year of my age." He then proceeds to give a short account of the baptism of Constantia, adding: "This was the first child that I ever had, to the best of my remembrance. I assigned the mother such a maintenance as satisfied an aunt of hers into whose hands I put her, and never had any acquaintance with her afterward. . . . Though I have spoken of the birth of my daughter as having happened in 1544, at the time now under consideration, the year 1543 was not quite elapsed. This was owing to my having occasion to speak of my daughter: however, to avoid interrupting the relation of affairs of greater importance, I shall drop the subject at present, and resume it in its proper place." In this, we have a fair picture of Cellini's domestic life and an indication of the importance that he attached to it.

From Cellini, in the sixteenth century, let us turn to Rousseau, in the eighteenth. The picture is a strange contrast to the career I have just reviewed; for, with Rousseau, the main importance attaches to a side of life that Cellini almost left out of consideration. Every act of meanness that Rousseau committed in his youth filled him years afterward with remorse. Instead of the entire freedom from introspection which characterizes the Italian of the sixteenth century, Rousseau is never tired of brooding over his actions, of reviewing his character, of striving to raise himself to what he conceives to be a higher standard of perfection. Cellini, with all his crimes, bears about within him a light heart and a contentment resting on the assurance of divine protection. Rousseau, though equally sure of his eventual justification in the eyes of his Maker, is constantly weighed down by the burden of sins committed during his wild and thoughtless youth. "It is not," he says in his *Confessions*, after narrating the account of a mean action committed in his boyhood,—"it is not when a base act is just done that it torments us: it is when long after it is recalled, for the memory of it cannot be extinguished."

By comparing the character and lives of these two men, we can, I think, estimate in some degree the difference between religion in the past and the present. With Cellini, sentiment goes for nothing: with Rousseau, it is everything. I will not say that the change is altogether for the better, yet what a change do we find! Cellini's religion was a purely external matter: with Rousseau, it is intimately concerned with his life and the feelings that attend upon his actions. There are some lines in *Wilhelm Meister*, put into the mouth of the old harper, in which Goethe adumbrates the sources through which the modern mind approaches to intimate knowledge of the divine in life:—

"Who never ate his bread in sorrow,
Who never spent the darksome hours
Weeping and watching for the morrow,
He knows ye not, ye gloomy Powers.

"To earth, this weary earth, ye bring us,
To guilt ye let us heedless go,
Then leave repentance fierce to wring us:
A moment's guilt, an age of woe!"

Yet, though the sense of the supernatural, of a Power guarding and watching over life, is more constantly present to Cellini than to Rousseau, the feeling of the degradation of guilt is ever present to the latter: it is entirely absent from the former. And Rousseau, in his mental attitude, in his exaltation of the subjective feelings, in the unwilling scepticism that underlies even his *Savoyard Vicar's Confession of Faith*, is the great forerunner of the modern attitude with regard to life and its mysteries.

The comparison of the lives of these two Bohemians should lead us to think. One of the most marked results of the course of modern thought has been the development in the world of what has been called an "intense self-consciousness," and this, too, when the position of man in the universe has lost ground in the way of external dignity. At one time, he believed himself to have been created in the image of God: now, he is regarded but as the consummate flower of a life—germ from which all animal nature is descended. Before Copernicus, the world was the centre of the universe, and man the highest creation thereon: now, our planet is but one of many that revolve round the sun, and the whole solar system is believed to be subordinated to a system vaster than its own. But what man has lost in extension, he has gained in intension. He scans his feelings and emotions more narrowly: what he has lost in spontaneity, in unconsciousness, he has gained in morality, in purity of heart. A strictness, once only expected of saints and devotees, is now theoretically due from each individual. The moral laws, the stability of society, which, in the ages of faith, were believed to be dependent upon a personal will outside ourselves, we now know to be determined by our aggregate action, and *this* by our individual conduct. While less compulsion is put upon man from without, louder are the voices that admonish him from within to purity of life, to doing what he can to better the condition of the social unit of which he is a part. No prayer from him, he believes, can now draw down intervention from a Higher Power to stay the legitimate results of his actions. Good or bad, they remain to work their will among his fellow-men. He who has lived an evil life has swelled, as far as in him lay, the aggregate of misery in the world, and must carry the consciousness about with him ever vivid. Macbeth reasoned:—

"If the assassination
Could trammel up the consequence, and catch,
With his surcease, success; that but this blow
Might be the be-all and the end-all here,
But here, upon this bank and shoal of time,—
We'd jump the life to come. But in these cases
We still have judgment here."

We, too, feel but in a fuller sense that *we still have judgment here*; though the careless liver needs no bravado courage in jumping the life to come. The even-handed justice of the laws that rule the world commends the ingredients of our poisoned chalice to our own lips. We cannot, if we would, pursue a separate path from the tide of life that surges about us. We are confronted with our actions in their results, we feel them ever pressing upon us in the throbs of our consciousness.

Thus, while the religious mystery that once enveloped our life from the side of the supernatural seems to have fallen away, it has grown stronger within us. This change merely betokens a shifting of the aspect of religion. Its power has not ceased, its direction only has changed. In the remarks that follow, I shall attempt to point out a few significant tokens of this change.

The first point of importance is the severance of religion and theology, at least the severance of religion from the traditional theology. Of the numerous people who live respectable lives in any great city, a fair proportion may be said practically to ignore the *forms* of religion, as far as regards attendance at churches. Of the majority who still go through the forms, no inconsiderable part do so from habit, out of deference to the feelings of parents or relatives, or for the sake of example, the traditional forms being still considered by a vast majority as a necessary training for the young. How long this will continue it would be vain to conjecture, but it is no testimony to the vitality of the theological side of religion. Meanwhile, the sentiments that Cellini lavished upon the God that inspired his works have taken a different direction. Instead of defining religion as "the practical recognition of a constraining bond between the inward life of a man and an unseen Person,"—the words are Dr. Liddon's,—a truer definition of religion as it now exists would be "the sense of beauty and awe in life and its relations." But, though the religion of the present is distinct from the theology of the past, with natural theology, the "true deduction of the laws that govern the universe," the "science of the relation of the universe to human ideals,"* its connection must ever be intimate. For religion is only distinct from the true theology as poetry is from science. Just as poetry is sensibly modified by the contemporary revelations of science, so religion changes as our scientific conceptions of life and its mysteries change. Thus, from a certain attitude of mind and sentiment toward an unseen Person, religion has been changed into an emotional attitude toward life and humanity. "A man's religion," writes Carlyle, "consists not of the many things he is in doubt of and tries to believe, but of the few he is assured of, and has no need of effort for believing. His religion, whatever it may be, is a discerned fact, and coherent system of discerned facts for him; he stands fronting the worlds and the eternities upon it; to *doubt* of it is not permissible at all!" The connection of religion with the theology of the past was due to the fact that such a theology contained the view of life then held. Our philosophy of life in the future may not be termed a theology, but that such a science of life is growing up among us we all know. And religion will be sensibly modified by it.

And as we should distinguish religion from theology, so must we keep it distinct in thought from morality. Herein lies the fallacy of such a definition of religion as "morality touched with emotion"; for not only morality, but also immorality, may spring from religion. There is a religion of the senses, a religion of the intellect, a religion of patriotism, and so on. The ideal religion, the religion of Humanity, is the combination of all these; but the natural outcome of any one element's being pushed to an extreme without regard to the others would result in immorality. To this fact, we have lately had appalling testimony in the murders to which an intense feeling of patriotism has goaded on the unhappy Irish.

Starting, then, with this point, that religion in the true sense is deep, emotional feeling in regard to life in its totality, we can find abundant scope for its exercise, even without the postulate of a Supreme Being. Instead of the conception of humanity fallen from a pristine state of purity and ever struggling upward to the attainment of superhuman virtue by means of supernatural aid, we have the picture of a race whose beginnings are wrapt in mystery, but of which we can say that its history, as far as it stands revealed to us, shows a veritable progress from a lower to a higher life. In the distant future, we have the vision, nobly portrayed for us by the genius of Tennyson, of

"The crowning race
Of those that eye to eye shall look
On knowledge; under whose command
Is Earth and Earth's, and in their hand
Is Nature like an open book;

No longer half akin to brute,
For all we thought and loved and did,
And hoped and suffer'd, is but seed
Of what in them is flower and fruit."

If James Mill had had presented to his mind this fresh conception of the evolutionist, would he have thought so meanly of human life as to call it "a poor thing at best, after the freshness of youth and of unsatisfied curiosity had gone by?"† Would he not rather have looked upon life with the eyes of George Eliot, to whose works, with their high but attainable

ideal of life, and the earnest feeling of its sacredness and the supreme importance that pervades it, I would point as containing an indication of the religion of the future?

The name of George Eliot is naturally associated with that organization which, starting in France with the great name of Auguste Comte, now enrolls among its disciples so many distinguished thinkers. It would, perhaps, be naturally expected that, in a paper which avowedly treats of the Religion of Humanity, its first great advocate should occupy a foremost place. I do not, however, intend to do more than glance, in passing, upon this part of my subject. Not are the details of the worship and doctrines of Positivism well known from the accounts of followers and critics, but the important element in the Religion of the Future will not be the details of Comte's legislation, the *ipsissima verba* of the master himself and of the high priests his successors, but the influence they have exercised upon other religious bodies. For the Religion of the Future will be found not in one body, but in all; and, to the common ideas that are beginning to pervade these, I wish to call attention now. It is but natural that the influence of Comtism should be more important than Comtism itself. All changes that have revolutionized the life and thought of the world—the change from Paganism to Christianity, from absolutism to democracy, from Catholicism to sectarianism, I may add, by anticipation, from landlordism to communism—were at first presented to society as an ideal, an ideal that strikes amazement into the minds of contemporaries' one that can never be carried out in detail. The attempt, however, to do so is always made, and always fails. Not only as an ideal is it found impracticable, but, in the mere process of attempted actualization, it influences the institutions by which it is surrounded. The best parts of the system are adopted everywhere, and the original ideal is lost sight of; but the reason is that it has passed from ideality into actuality. *That which thou sowest is not quickened except it die.* Thus, for the religion of the future, it would be vain to look to the church of Comte. The idea is there; but, to become a fact, it will have to compromise with its surroundings.

I will illustrate what I mean by a single doctrine,—the positivist doctrine of immortality. "We make the future life," writes Frederic Harrison, "in the truest sense, social, inasmuch as our future is simply an active existence prolonged in society; and our future life rests not in any vague yearning, of which we have as little evidence as we have definite conception: it rests on a perfectly certain truth, . . . that the actions, feelings, thoughts of each one of us, do marvellously influence and mould each other. . . . Can we conceive a more potent stimulus to rectitude, to daily and hourly striving after a true life, than this ever-present sense that we are indeed immortal,—not that we have an immortal something within us, but that in very truth we ourselves, our thinking, feeling, acting personalities, are immortal?" Such is the doctrine, as stated by the positivist; and it strikes the reactionary as impractical, he calls it "the superstition of Positivism."* But the cardinal doctrine of the religion of humanity is there: we are *moulded to the higher life not by a supernatural being, but by the influence of holy men whose example lives among us*,—a doctrine for which such poems as Shelley's "Adonais" and Tennyson's "In Memoriam" prepared the way. Let us next see how the doctrine influences other people who are not positivists. I will take my illustration from the pages of a Spiritualist journal,† not because I have any sympathy with the superstition of Spiritualism, but because the workings of the influence of evolutionary Positivism are most clearly to be seen in the writings of those outside the pale of the orthodox churches. The Spiritualist writes: "In place of despair in this world and uncertainty as to the next comes the bright faith that 'there is a remedy for every wrong and a satisfaction for every soul'; that everything is progressive and prospective, and man is to live hereafter; that this world is for his education only, and this life but a preparation for the real existence of which this is only the verge; also, that the real life on the other side of the grave is a refined continuation of our brief existence here; . . . that we can and indeed must continue to work out our higher future in obedience to the highest of God's laws; and, therefore, that there is something to live for, however dark our present surroundings, because compensation and development are certain hereafter." Here, we have the refined immortality of the Comtist materialized, clouded with what Matthew Arnold calls *Aberglaube;* but the central idea of progression is there, only it is compromised to suit the consciences of the weaker members. Among other indications of the persistence of the Comtist doctrine, I may point to the commemorations, now become very common, of the great men who in different ways have contributed to better the life of man on earth. Their names have not yet, it is true, found their way into the Catholic calendar, though, in the case of Columbus, canonization was proposed some years ago; but here, as elsewhere, Comte led the way in a path that will doubtless be followed in future years by people who now sympathize little enough with positivists.

The cardinal doctrines of the great religions of the past, such as the doctrines of Trust in God, of Atonement, of Personal Immortality, were not however, originally, theories thrown out by advanced thinkers. They were beliefs that forced themselves upon the consciences of mankind; and to doctrines different from these, though *each* of importance and similar origin, I would look as the essential elements of the Religion of the Future. Chief among these, I should rank the assertion of the dignity of man, of the importance of our present life, and our right to take joy therein, as also the sanctity of life and of the domestic affections. Upon these, I will speak a few words, beginning with a point to which Mr. Mallock has drawn special attention in his book upon the value of life, though he has attempted to turn it into an argument against Positivism. I refer to his chapter upon "Love as a Test of Goodness." He has succeeded to the full in showing its deep importance as part of the religion of life. "It is, as it were, the sun of sentiment,—the source of its lights and colors, and also of its shadows." But, while attempting to prove the necessary association of love with theology, he has ignored the historical facts of development. The picture of the pure loves of Hector and Andromache comes from a time when theology had not attempted to assert its influence over life as a whole; and marriage was a sacrament before it became one in the Catholic Church. Many ages after Homer, Christianity attempted the conquest of the world; and, true to its Catholic instincts, the Church sought to bring within its fold all influences tending to ennoble life. It fostered learning, it undertook the work of education, it championed the people against the nobles, the serf against his oppressor. The beginnings and the ends of life were rendered dignified by services, and marriage became a sacrament of the Church. But, even so, the marriage state only took an inferior position, the higher life being considered to be one of celibacy and asceticism. Its sacramental position in life at the present day is as much due to the heightened sense of the dignity of life on its secular side as to its casual association with the Catholicism of the Middle Ages. Like many other influences that go to make up the highest ideal of life, the marriage state was transformed by the revival of sentiment which started with the writings of Rousseau. In associating the sanctity of love exclusively with the doctrines of the Church, Mr. Mallock has ignored an important law in the development of thought; namely, that "ideas acquired long ago," to use George Eliot's words, "reappear as the sequence of an awakened interest, or as a line of inquiry which is really new to us."

I have referred to the great name of Rousseau. The influence he exerted in vindication of the dignity of man should not be forgotten. With him started the doctrine of Democracy, which, if on one side of purely political significance, on another finds its culmination in the apotheosis of man as man in the poems of Walt Whitman. The assertion of the sanctity of human life has had its bad sides as well as its good. It has led to the attempt to abolish capital punishment, and to the interposition of the State to prevent the lazy and useless from starving. Yet, if we reject such pernicious corollaries, we must not forget the cardinal doctrine to which these, as well as salutary measures of labor and prison reform, conclusively point. With the consciousness of the sanctity of life in its widest sense the Religion of the Future is bound up. Nor is this sanctity any longer associated with any one element of life. To a believer in the old faith, the soul alone is sacred, because alone immortal: the body is merely its vile tenement. Our life upon earth was to be one of few pleasures, an existence that courted pain and hailed asceticism as the means of perfecting the soul. But with the sanctity of life in its modern sense the joy of life is associated as a corollary. From this point of view, small things are important, as indicating the change in the tone of thought. The festival of Christmas once more lives in our midst,—no longer, as in the *Pickwick Papers* and the works of Lord Beaconsfield, a mere tradition of the good old times and the fine old English gentleman, but as the festival of the family, as the season during which the world does sacrifice to Jupiter Hospitalis. There is something even to be said for Christmas cards.

Thus, while the revival of festivals breaks the dull monotony of our life on earth, passed according to the Puritan ideal of preparation for another, the artistic movement has grown up in our midst as an attempt to increase the joy of life by surrounding it with forms of beauty. It is the fashion, I am aware, for many thinkers to dwell mainly on the ridiculous side of æstheticism, to make fun of its absurdities, and to ignore the work of reformation that it is rapidly effecting. Yet it cannot be denied that the revival of art is one of the many sides of the reaction against the other-worldliness of Puritanism. It is, in fact, a resolute protest against the spiritual pessimism that condemned our life here as mean and transient.

Before concluding these thoughts upon the Future of Religion, which I have had the honor to read before you, I must again draw your attention to an element in the discussion which I have merely touched upon in passing, but which is of the utmost importance in attempting to form a fair estimate of the subject before us. I have naturally dwelt at length upon the new and humanistic elements of the Religion of the Future, pointing out that its centre of gravity, so to speak, is changed from that of the religion of the past. I have attempted to show that, while Catholicism rested upon the supernatural and man was subordinated to it, the Religion of the Future takes humanity in its widest sense for its starting-point. But this is not all. Compromise is the leading factor of change, and conservatism lies at the root of religious thought. There are no gaps in nature. The Religion of the Future will not be the reversal of the religion of the past, but its corollary; and we must expect to see many elements lingering on within it, survivals of the Puritanism of the seventeenth century, of the Catholicism of the Middle Ages, of the paganism of the Greek, of the Jehovism of the Jew, of the nature worship of the primitive Aryan. Yet again, though humanism be the note of the religion of the future, the concrete idea wherein its essence lies, what definite extensions of *Aberglaube* will gradually gather round this central doctrine time only will reveal. Of this at least we may be sure: that mankind will not be content with life upon a merely scientific basis; that the sense of the mystery of life is one which science cannot, perhaps fortunately for us, extinguish; lastly, that the doctrine of the relativity of human knowledge is not merely a postulate of philosophy, but a rule of wide application to life as a whole.

CORRESPONDENCE.

A FAMILY IN A MINING-CAMP.

Editors of The Index:—

Once more, I hail *The Index* from a mining-camp. The name of the camp was "Knock-'em-stiff." A neighboring camp, five miles distant, is "Gouge-eye."

In approaching this mine, I have traversed what to the geologic eye is one of the most remarkable regions on the globe. There is still a place in geology for the school which held to the agency of paroxysmal forces in shaping the earth's face, and on a scale of grandeur not recorded in the history of our own age. The eastern slope of America was evolved, as the uniformitarian holds that all continents were evolved. As the western slope affords a refuge for the cave bear (under the name of "grizzly") and the sequoia, species elsewhere extinct, so it is the refuge of a well-nigh extinct species of geologist. Above the silver mines of Leadville is a fault which records a vertical slip of five thousand feet. In the Elk Mountains, we find evidence of a paroxysmal upward movement along a line of fracture eight thousand feet. The western wall of the Wasatch Mountains is the jagged face of a great earth rent. Utah slipped

Digitized by Google

down at least six thousand feet, and left this rim of mountains above her. Accompanying such movements of the earth's crust was a vast outpouring of lava. In reaching this Montana mine, I traversed a lava plain of three hundred square miles. Such a stretch of desolation I had never seen. It was the blister of Milton's hell, the burning marl which held the soles of unblessed feet. From the crest of the Rocky Mountains to the Golden Gate, the earth trembled once on the verge of ruin, and two hundred thousand square miles were laid under a mantle of molten fire.

On one of the Tobacco Root Mountains—overlooking ribs and plains of basalt, poured out in the world's last great paroxysm—lives the family of our sketch. Here is the O-go-along Gold Mine. And here, in an earlier day, was the camp whose morals gave it the name of Knock-'em-stiff. Dutch Dave was here, and Texas Joe, and Billy the Kid, and Tangle-foot Tom, and Feather-legs Sam. But the glory of the camp has departed,—gone perchance to a newer camp twenty miles away, and known as Gloryville. One family remains to entertain me. Two women, four men, and an unscored number of woodchucks are the only souls or things of life I have seen within five miles of Knock-'em-stiff.

Where will a man not go for the love of gold? And where is the solitude of desert or mountain to which woman will not follow for the love of man? The man came first; and for six years he lived alone in a dug-out, a sort of artificial cave. By day, he pecked and pounded at the mountain; and, by night, he did what he saw his companion, the woodchuck, do,—he crept into his hole and slept.

The woman who lived eighteen years alone on the Island of St. Nicholas was a psychological study to the scholars who saw her after her rescue. The tragedy lived by the woman Margaret or by Selkirk was as nothing to the tragic loneliness I have found on the Rocky Mountains. I saw a miner who went alone into his tunnel on the first day of October. He had a little hut at the tunnel's mouth, and in the hut a supply of that on which miners feed. On the 20th of the following June, he was able to beat his way through the snow down to another human habitation. He had not quite lost the faculty of speech; and he cried out to the first man he met: "Hello! Can you tell me who was elected President last fall?"

I have just seen a man whose home is above the clouds, on the serrated crest of Treasury Mountain. He was not an entire man; for he had lost his teeth, one ear, and the sharp edge of his faculties. Treasury Mountain is fourteen thousand three hundred feet above the sea. On its sharp, serrated crest is the Eureka Silver Mine. On a shelving rock between two cliffs, the miners have built their cabin. To reach it, they must climb, holding on to a rope, a steep wall of granite two hundred and fifty feet. And here three men live, or stay, summer and winter. There were four; but, a few weeks ago, the wind dashed a fragment of rock against the superintendent, which knocked him off the crest of the mountain. His body lodged on a shard of granite three hundred feet below. The very day on which this man came down, a snow-slide just tipped another of his companions. Had his steps been delayed one-half minute, the avalanche would have hurled him down along a sheer cliff six hundred feet. Whether from eating frozen raw potatoes—all they had for two days when a snow-slide had buried their pile of fuel—or whether from degeneration of the tissues in the thin air, three of the four men had lost their teeth. The man who talked with me was on his way back to his perch, his rope, his vast solitude of snow. "What a piece of work is a man! . . . How noble in *reason!*"

I was saying that my host at Knock-'em-stiff attacked the mountain by day with pick and drill, and at night slept in his den at the mountain's base. He was as much alone as Margaret on St. Nicholas. It may be said that the world, to him, began with the Missouri River. Everything he wore or ate cost, at the nearest store,—distant twenty miles,—the ruling price east of the Missouri plus forty cents a pound for hauling over the plains, plus two hundred or three hundred per cent.,—the profit of the local dealer. Flour for a time was $1.50 a pound. You could buy two needles for twenty-five cents, and one *big* needle for the same. I saw the first cooking-stove ever brought into Knock-'em-stiff. It was of ancient pattern and very large. The freight bill from the Missouri River was $70.

So mine host toiled and slept, purchasing with his toil, now and then, a sack of flour, a side of bacon, and a pound of tobacco. Sugar, he told me, he could not afford. I could not see that solitude had made him introspective. His mind had scaled down to its conditions. I felt him as Touchstone felt the shepherd, Corin:—

"Hast any philosophy in thee?"

"No more but that I know . . . that the property of rain is to wet and fire to burn, that good pasture makes fat sheep, and that a great cause of the night is lack of the sun."

My host was a philosopher of the Corin type. I have found solitary men much given to a sort of philosophizing. One such man I have found who smoked to harden his bones. I have known another who refrained from eating butter, because butter would delay his ascent in the resurrection. I suggested that the property of butter is rather to *lubricate;* but his idea had come to be a dogma of his religion, and of course he gave no heed to the voice of science. And this solitary man of Knock-'em-stiff had his stock of myths and such philosophy as he shared with Corin. He had philosophized much about the manners of a woodchuck in relation to the weather. Of grand phenomena, he was not observant. I asked him about electric storms. He knew only that sometimes there was a great deal of electricity in the air. It was my fortune to witness such a storm on his own mountain. There was no wind, rain, snow, or lightning. The thin air seemed charged as a Leyden jar. The discharger was the highest point of your body. Electricity sang through your hair, and in a pulsation of shocks entered your brain. If you lifted your hand above your head, you received the shock in the hand. The effects on a jack were ludicrous. The long ears were lightning-rods. Electric sparks snapped at their tips. I was greatly amused at the experiments of the animal with the "fluid," the "essence," the "entity," the—well, perhaps the ass knew as well what it is as I knew. But he could not get his ears out of the way of it. If I was amused at the jack, I was equally amused at the owner, sole proprietor, of the O-go-along. The ass seemed to understand that no terminal member of the body should rise above the head, and his efforts were directed to keeping the ears down. His owner, less asinine, and consequently, in this case, less intelligent, raised his arm to strike, received a shock, and dropped the whip.

I am late in coming to my theme, for the family was late in coming to Knock-'em-stiff. The wife came, and a family was established.

One evening in June, while a winter storm was pelting the cabin, she told me the story of her coming. The world to these people no longer began with the Missouri River. By the Union Pacific Railroad, it had moved forward to Ogden. From Ogden, my hostess must travel by stage three hundred miles. When the stage had made about half the journey, it upset, and her arm was broken. The accident occurred about midnight. She was the only passenger, and she was one hundred miles from a surgeon. With a bruised head and broken arm, she walked with the driver five miles to the nearest shelter. It was a stable. She lay in one of the stalls, kept warm by hay and horse-blankets. The details are too painful to recount here.

O woman, woman!

"What a piece of" *supplementary* "work is a woman!" At her coming, Gouge-eye takes the name of Sheridan, Knock-'em-stiff becomes Ellaville, the hut gives place to the house, the bunk to a bed, the rough board to a table, the sleeve to a napkin, pewter to china, fingers to forks, and Horsford's baking powder to respectable yeast. But, to accomplish this transformation,

"Hic labor, hoc opus est."

Ten years of banishment from churches, halls, schools, art, science, society, the prattle of children, the song of birds, the fragrance of spring, the fruitage of autumn,—"hic labor, hoc opus est." The world to her was a recollection. I tried to recall to her a New England summer by a couplet from Lowell:—

"To lie in buttercups and clover bloom,
Tenants in common with the bees."

She remembered too well; but she had not seen a buttercup, a clover, or a bee for ten years. She lived on recollections.

On the train with me as I went to Ellaville was an accomplished woman with a beautiful little child. She was going to join her husband on a lonely ranch in Montana. At some trifling occurrence, the child broke out in a fit of crying. When her sobbing had ceased, I took her on my knee; and, for the ears of men and women in adjoining seats, I said what, for the eye of any woman who thinks she would like to transform another Knock-'em-stiff into another Ellaville, I will write here:—

"My little one, you cry too soon. It is not yet the time to cry. When you go to that ranch in Montana, and when you stand in the door and look over a desert of sage-brush, on cold and barren mountains; when you see no garden and no fruit; when you have no breakfast till your mother opens a tin can, and no dinner till she opens another can; when the daily paper does not come, and there is no neighbor to call; when, now and then, there loiters about the house a red Bannock Indian,—whether a man or a woman you do not know,—and it has nothing on its body but a long red blanket, and never a smile on its face nor a frown, and never a tear in its eye, and it speaks never any word but this, '*Ugh! me hungry,*'—then, my child, *then* you may cry." W. D. GUNNING.

A CRITICISM.

Editors of The Index:—

You say, in one of the editorial notes in *The Index* of this date,—and words of the same import have occurred not infrequently in former editorial notes,—"How much a matter of mere form the prevailing religion has come to be in these days is shown in no way more clearly than in the general desertion of their flocks by the Christian pastors—who fancy themselves the Lord's shepherds—during the hot months of the year."

I do not know what you intend by these words. I should like to know. Do you mean that "orthodox" ministers ought never to take a vacation, or that the only way to prove faithfulness and the possession of an honest gospel is by preaching fifty-two Sundays in the year? If that be the point, then I fear that the new faith might be impeached as a "mere form" with quite as good grace as the old. It would certainly be a venturesome man who would assert that ministers' neglect of their people during the heated season—if you choose to call rest neglect—is in inverse proportion to the amount of their "Liberalism." I think, this moment, of Mr. Hale on his Rhode Island farm, and the gates at Union Park locked quite as tightly, at least, as those of Park Street. I think of Mr. Savage and Mr. Hosmer in Europe. I think of Mr. Salter reading Aristotle in the Colorado Parks. I remember that Prof. Adler's yearly vacation of his platform is five months long. But I am very sure that these men would resent it, and I think very properly, if told that the length of their summer rest is the measure of their formalism and unfaithfulness; and I am very sure that the arrangements of the orthodox churches in Boston (and I doubt not elsewhere) for proper attention to the people during the summer vacations of their ministers are quite as careful and efficient, to say the least, as those of the liberal societies.

There are certainly points enough upon which the prevailing religion is open to impeachment. But it certainly cannot be said that its ministers are not, for the most part, among the most faithful and hard-working men in the community. And I, for one, tired out as I find myself so often over labors that cannot be half so wearing as theirs, should feel that I was hard pushed for matter of criticism, if I brought it against them that they take a summer rest, like other people. I should certainly count them very unfaithful if they did not do it. EDWIN D. MEAD.

BOSTON, Aug. 9, 1883.

[Mr. Mead expends his strength needlessly in defence of a point on the line against which no assault, not even a feint, has been made by *The Index*. He says that he does not know what we mean by the words he has quoted. Perhaps a little attention to the sentence following the one given above, which Mr. Mead omitted to quote from our editorial paragraph, will help him to understand what we "intend by these words." It is as follows: "So general is this desertion that the Young Men's Christian Union of this city has issued a circular, begging the addresses of the few clergymen who stay in town during the vacation season as a favor to those who may think they need their ministrations during the absence of their own pastors."

It is clear enough, it seems to us, from these two sentences that our intention was to indicate the general

Digitized by Google

decline and decay of theological beliefs and notions, the form and phraseology of which only remain, and the inconsistency therewith of modern practice, as illustrated by the conformity of the clergy to the customs of the day. For instance, if the clergy were really regarded now as shepherds called or appointed by God to guard flocks of sheep intrusted to their care, the desertion of their flocks to escape the heat of summer, without at least having their places supplied with other shepherds, would excite universal condemnation. Or, if people generally believed multitudes to be rushing down to hell, to terrible and endless torment, and the devil, the enemy of souls, active and alert, full of resources, and entrapping age and youth alike, in hot weather as well as cold, they would not be content to see their ministers at pleasure resorts enjoying themselves, while their churches in the cities are "closed for the season," and the flocks are left without shepherds. Our esteemed friend will see at once that we have found no fault with the orthodox clergy because "they take a summer rest like other people," that we have made no reflection upon them as he imagined, and that his words in their defence as a reply to our note, although we cheerfully print them, are without point or relevance. We will add that we are glad to see the clergy take a vacation whenever they can, and act like people generally in other respects. We are also pleased with that spirit of perfect fairness in Mr. Mead, which makes him unwilling that even the slightest injustice shall be done to any class of men, however widely he may differ from them.—ED.]

WHAT DOES IT SIGNIFY?

Editors of The Index:—

The Rev. Dr. Withrow of your city occupied the pulpit of the First Presbyterian Church in this city yesterday, the 5th inst. In his evening discourse, he made a somewhat extended reference to Mr. O. B. Frothingham. He cited him as a conspicuous example of one who, having spent long and weary years in preaching in New York the gospel of denial, —fruitlessly, as he now himself sees and owns,—is returning to the faith of his fathers, and accepting, in degree at least, the truths of saving religion. Indeed, he affirms in a late article in the *North American Review* (which was specifically named and quoted from) the primal postulate upon which the evangelical structure rests, and from which all may be built up.

With evident satisfaction, the Rev. Doctor spoke of the change that had come to "this son," as he characterized him, "of Eunice, and grandson of Lois"; and he assured the congregation that he was "now drawing near to his knees." One is tempted to ask, What may this eulogy now of Mr. Frothingham, from intensely orthodox and conservative quarters, signify?

C. D. B. M.

SYRACUSE, N.Y., Aug. 6, 1883.

DAMON Y. KILGORE, President of the Susquehanna and Delaware River Railroad, writes: "Mrs. Kilgore, after a ten years' struggle, was admitted to practice as an attorney at law in Philadelphia, last June. Out of nearly ten thousand notices by the public press, I have not seen one in opposition. During her two years' course in the law department of the University of Pennsylvania, she never heard one disrespectful word. Professors and students treated her with marked courtesy and respect during the entire course. Several of the most prominent members of the Senior Class requested the privilege of using her name for president of the class, assuring her that she was the only member who could be elected without opposition. But, as she was the only lady in the class, and had two little girls at home, seldom intrusted to the care of servants, she declined to attend any meetings of her class not required by the University. The conduct of the students demonstrated one or both of two things: that there had been great progress made in the right direction in regard to woman's advancement within the last decade, or that law students are greatly superior to medical students in their gentlemanly deportment. After the summer vacation ends, Mrs. Kilgore will commence active practice in a profession in which very few of the two thousand members in this city, in her husband's judgment, are better qualified."

BOOK NOTICES.

GENESIS: The Miracles and the Predictions according to Spiritism. By Allan Kardec, author of *The Spirit's Book*, *Book on Mediums*, and *Heaven and Hell*. Translated by the spirit-guides of W. J. Colville. Boston: Colby & Rich. 1883. Pages 488. Price $1.50.

The translator of this work, in his preface, pronounces it "Allan Kardec's masterpiece." Its object is to explain the facts and teachings of the Scriptures, after eliminating the improbable or unreasonable parts, in harmony with "the recently known laws which are revealed through the observation of Spiritual phenomena." The first chapter is devoted to a somewhat extended explanation of the character of Spiritism as a revelation, in which are presented views now current among Spiritualists regarding spirits, their powers, limitations, etc. "To demand counsel of spirits," says the author, "is not to address supernatural powers, but persons like ourselves, those to whom we would turn for counsel in their earthly life, as parents, friends, and individuals more enlightened than ourselves." Arguments with which we are all familiar are adduced to prove the being and providence of God. The old problem of good and evil receives attention, but no original thought is bestowed upon it. The discussion of the origin and nature of intuition and instinct would be more valuable, if it included the results of the study of psychology during the past twenty years, with which the author of this work seems to have had no acquaintance. Quite a number of astronomic and geological facts are presented, and theories stated and discussed in connection with the philosophy of Spiritualism. Spontaneous generation is accepted as probable. The bodies of men may have been derived from those of brutes. "In that there is nothing impossible, although, if it be so, the dignity of man will naturally suffer." But the spirit, the soul, the real man, appeared on earth by incarnation. "Bodies of monkeys may have served very well for the vestment of the first human spirits, necessarily undeveloped, who have been incarnated upon the earth; these garments being more appropriate to their needs and for the exercise of their faculties than the bodies of any other animal." Whether the human spirit took possession of the monkey's body before the monkey was dead, or while he was yet alive, having a tussle with him, and dispossessing him of his birthright by superior cunning or strength, Mr. Kardec does not say; and what he offers on this subject, justice to him requires us to mention, is offered only as an hypothesis. The author has some wild theories in regard to the "Adamic race" and "fallen angels," and makes Genesis appear "grand and majestic," interpreted in the light of Spiritism. The miracles of the New Testament are accepted as facts, and explained by suppositions based upon assumptions. Thus, the writer says of Jesus walking upon the water: "Jesus, although living, appeared upon the water under a tangible form while his body was elsewhere. This is the most probable hypothesis." Two chapters are given to the Bible prophecies, in regard to which the author makes free use of his imagination. The work is written in a serious and earnest spirit, but is of little value to those who would subject the Bible to the acknowledged canons of historical criticism and Spiritualism to the tests of science. Although the translator says he has but "the most meagre acquaintance with the French language," yet since a lady, "whose wide acquaintance with the French tongue renders her an authority on all matters of translation," has, he says, "given a vast amount of her valuable time to assisting" him in preparing the volume for the press, we feel under no necessity of believing that "spirit-guides" had anything whatever to do with translating the work. The work as translated contains many grammatical errors and badly constructed sentences, which from a literary point of view do injustice to the author.

FREE-THINKERS' MAGAZINE AND FREE-THOUGHT DIRECTORY FOR THE UNITED STATES AND CANADA. H. L. Green, editor and publisher. July (E. M.), 283. Salamanca, N.Y. A.D. 1883.

A man from a small settlement on the Union Pacific Railway, while that road was being built, in reply to the question, "What is the size of your town?" said, "About the size of New York, but it ain't built up yet." Mr. Green's magazine before us, which is the fifth number published, is not much of a directory at present, but is so named, probably in anticipation of what the editor designs to make it. It contains articles by the editor on "The New York Sunday Laws" and "The Bible," a few communications that are quite readable, several pages of notes, and a few hundred names and addresses the most of which have evidently been taken from Liberal and Spiritualistic papers. The editor says, "Those who desire their names and post-office address to remain in the list through the next volume, or until the number five thousand is reached, will please remit at once ten cents in postage-stamps." Price $1.50 per year.

THE frontispiece of the September *Century* will be a remarkable portrait of Robert Burns, after a daguerreotype in the possession of Mr. Edmund Clarence Stedman, which was taken from a miniature belonging to Burns's sister. In the same number will be printed "A Burns Pilgrimage," by H. H.

PERSONAL ITEMS.

THE Czar has forwarded, through the French Ambassador, $400 toward a monument at Langres to Diderot, to whom the Empress Catherine was a generous patroness and friend.

REV. EDWARD EVERETT HALE has accepted the invitation of the managers of the New England Manufacturers' and Mechanics' Institute to open their third annual exhibition, September 5, with appropriate religious services.

THE death is announced of Dr. Robert Moffat, the missionary of Southern Africa, and the friend and father-in-law of Livingstone. He had of late years resided in Scotland, in the enjoyment of well-earned comfort and repose.

"THE BREAD-WINNERS," the new serial begun in the *Century* for August, which is exciting so much attention, is said to be a posthumous work of the late Leonard Case of Cleveland, Ohio, the founder of the Case School of Applied Science.

MR. JAMES JACKSON JARVES, the distinguished art connoisseur, has arrived in Boston from Florence, Italy, and is a guest at Hotel Vendome. Mr. Jarves has shipped one hundred and fifty tons of art works for the foreign exhibition, which opens on September 3.

HARRIET BEECHER STOWE is described by one who has seen her very recently as bearing a singular likeness to her brother, Henry Ward Beecher,—"a deep-lined, large-featured face, less comely in a woman than in a man, but expressive of vigorous character. She was soberly dressed, without much regard for fashion."

PROF. WILLIAM DINDORF, one of the first classical scholars of his day and one of the most accomplished Hellenists of modern times, died last week in Germany, aged eighty-one. He was for five years professor of literature at the University of Leipzig. His editions are the standard text-books of the Greek tragedians.

W. S. KENNEDY, in an article in the *Critic* of August 11, entitled "Wordsworth and Longfellow," gives his reasons for a belief in "the strong probability" of "a common descent" of those two poets; the principal reason being that "careful researches into the history of the Wadsworths reveal the fact that the spellings 'Wadsworth' and 'Wordsworth' are used in the old records to designate not only persons in the same family, but the same individual." Longfellow, as his middle name indicates, was a direct descendant of the Wadsworth family.

MR. EDWIN D. MEAD has accepted an invitation to deliver an address upon Luther at Chicago, November 10,—the four hundredth anniversary of Luther's birth. Mr. Mead will spend the summer and autumn in and near Boston, his address being 48 Pinckney Street. He is preparing a course of lectures upon "The Pilgrim Fathers," for delivery next season,—six lectures, under the following heads: 1. "Robert Brown"; 2. "New England in England"; 3. "New England in Holland"; 4. "Plymouth"; 5. "Bradford's Journal"; 6. "John Robinson."

MONCURE D. CONWAY, who is now in this country, speaks as follows of his intended travels: "After visiting my family in Virginia, I go to California, where I have never been, and where I expect to enjoy myself exceedingly. I sail from there on August 25

Digitized by Google

to Australia, where, at the request of many prominent citizens of Adelaide and Melbourne, I shall give a series of lectures, and expound, also, my religious views. From Australia, I shall sail to Ceylon, and thence visit the principal cities of India,—Bombay, Calcutta, Delhi, Agra, and so on,—and shall especially devote myself to examining into the present state of development of the various religions of that vast land. I shall visit their sacred cities and temples, and generally derive as much information on the subject as possible. If the cholera is kind enough to spare me, I shall return home by way of Egypt, and hope to reach London about March 1, thus making the circuit of the globe in about seven months."

PHOTOGRAPHS.

Cabinet Photographs of the following named persons are for sale at THE INDEX office, and will be sent by mail upon receipt of price:—

Darwin, 75 cts.; Huxley, Tyndall, Spencer, Holyoake, and Abbot, 50 cts.; Emerson, Parker, Garrison, Sumner, Curtis (G. W.), Weiss, Adler, and Hinckley, 35 cts.; Card Photographs of Adler, 25 cts.; of Higginson, Abbot, and Frothingham, 15 cts.

Address THE INDEX, 44 Boylston Street, Boston.

LESSONS

For Liberal Sunday Schools or for Home Use.

I. **THE ORIGIN AND GROWTH OF CHRISTIANITY.** A series of Twenty Lessons by Mr. LEWIS G. JANES, of Brooklyn. Written entirely from the Rationalistic stand-point. Prepared originally for use in Mr. Chadwick's Sunday-school. Each lesson printed in a separate slip. Twenty-five cents for the series, including postage.

II. **FREEDOM, FELLOWSHIP, AND CHARACTER IN RELIGION.** A series of Five very suggestive Lessons, by MRS. KATE GANNETT WELLS. Each lesson contains enough material for several exercises. Seven cents for the series, in separate sheets, including postage.

III. **THE WORLD WE LIVE IN.** A Series of Elementary Lessons in Natural History, by Mr. FREDERIC A. HINCKLEY. Adapted both to interest and profit a class of children. In slips. Twenty-five cents for the series, including postage.

Teachers will do well to examine these lessons. A liberal deduction made for ten copies or more to one address.

Supplied at THE INDEX office, 44 Boylston Street, Boston.

Freedom and Fellowship in Religion.

This is a volume of Essays published by the Free Religious Association. It contains "The Nature of Religion," by D. A. WASSON; "The Unity and Universality of the Religious Ideas," by SAMUEL LONGFELLOW; "Freedom in Religion," by SAMUEL JOHNSON; "Religion and Science," by JOHN WEISS; "Christianity and its Definitions," by WM. J. POTTER; "The Genius of Christianity and Free Religion," by F. E. ABBOT; "The Soul of Protestantism," by O. B. FROTHINGHAM; "Liberty and the Church in America," by JOHN W. CHADWICK; "The Word Philanthropy," by THOMAS WENTWORTH HIGGINSON; "Religion as a Social Force," by EDNAH D. CHENEY. Also extracts from Addresses on the platform of the Free Religious Association, by Ralph Waldo Emerson, Lucretia Mott, Dr. Bartol, A. Bronson Alcott, Julia Ward Howe, Charles H. Malcom, Celia Burleigh, C. D. B. Mills, Horace Seaver, Isaac M. Wise, Robert Dale Owen, Wm. C. Gannett, Lucy Stone, F. B. Sanborn, Wendell Phillips, and others.

This book was published eight years ago, but is a live book still, and is a good answer to the question, What does "Free Religion" mean?

Price $1.50. Address "FREE RELIGIOUS ASSOCIATION," 44 Boylston Street, Boston.

BUILDING FUND.

THE Free Society of Dorchester was founded two years ago by Clara M. Bisbee, its present resident speaker; and, seeking greater facilities, also permanence as an institution, it now asks aid toward the erection of a small and simply constructed hall. Three thousand dollars will cover the entire expense, and friends of progress are respectfully invited by material gift practically to advance the cause at once of Woman's Ministry and of Free Religion. For further knowledge of the Society, address the President or Secretary of the Free Religious Association or Mrs. Clara M. Bisbee, Clark Street, Dorchester. Contributions sent to Mrs. Bisbee will be promptly acknowledged.

THE FREE RELIGIOUS ASSOCIATION

was organized in 1867. Though having its headquarters in Boston, it is a national organization, and has members and officers in various States of the Union. It has the following

CONSTITUTION.

I. This Organization shall be called the Free Religious Association, its objects being to promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history; and to this end all persons interested in these objects are cordially invited to its membership.

II. Membership in this Association shall leave each individual responsible for his own opinions alone, and affect in no degree his relations to other associations; and nothing in the name or Constitution of the Association shall ever be construed as limiting membership by any test of speculative opinion or belief,—or as defining the position of the Association, collectively considered, with reference to any such opinion or belief,—or as interfering, in any other way with that absolute freedom of thought and expression which is the natural right of every rational being. Any person desiring to coöperate with the Association shall be considered a member, with full right to speak in its meetings; but an annual contribution of one dollar shall be necessary to give a title to vote,—provided, also, that those thus entitled may at any time confer the privilege of voting upon the whole assembly, on questions not pertaining to the management of business.

III. The officers of the Association shall be a President, twelve Vice-Presidents, a Secretary, an Assistant Secretary, a Treasurer, and twelve Directors. They shall be chosen by ballot at the annual meeting of the Association; and the President, Vice-Presidents, Secretaries, and Treasurer shall hold their offices for one year, or until their successors be chosen. The Directors shall be chosen for four years, and, at the expiration of that term, shall not be eligible for reëlection until after two years. One fourth of their number shall be chosen annually; but, at the annual meeting of 1882, the full number of twelve shall be chosen in sections of three respectively for one, two, three, and four years. The President, Secretaries, Treasurer, and Directors shall together constitute an Executive Committee, intrusted with all the business and interests of the Association in the interim of its meetings. They shall have power to fill any vacancies that may occur in their number, or in the list of Vice-Presidents, between any two annual meetings. Six members of the Executive Committee shall constitute a quorum.

IV. The Annual Meeting of the Association shall be held in the city of Boston, on Thursday of what is known as "Anniversary Week," at such place and with such sessions as the Executive Committee may appoint, of which at least one month's previous notice shall be publicly given. Other meetings and conventions may be called by the Committee, according to their judgment, at such times and places as may seem to them desirable.

V. These Articles may be amended at any Annual Meeting of the Association, by a majority vote of the members present, provided public notice of the amendment has been given with the call for the meeting.

Officers elected for the year 1882-83:—

PRESIDENT.

WILLIAM J. POTTER, New Bedford, Mass.

VICE-PRESIDENTS.

OCTAVIUS B. FROTHINGHAM, Boston, Mass.
FELIX ADLER, New York City.
GEORGE W. CURTIS, Staten Island, N.Y.
EDWARD L. YOUMANS, New York City.
FREDERICK SCHUENEMANN-POTT, San Francisco, Cal.
THOMAS WENTWORTH HIGGINSON, Cambridge, Mass.
ELIZABETH B. CHASE, Providence, R.I.
GEORGE HOADLY, Cincinnati, O.
NATHANIEL HOLMES, St. Louis, Mo.
ROWLAND G. HAZARD, Peacedale, R.I.
BERNHARD FELSENTHAL, Chicago, Ill.
ANNIE L. DIGGS, Lawrence, Kansas.

SECRETARY.

FREDERICK A. HINCKLEY, Providence, R.I.

ASSISTANT-SECRETARY.

CHAS. H. CODMAN, Boston, Mass.

TREASURER.

JOHN C. HAYNES, 451 Washington St., Boston, Mass.

DIRECTORS.

Four Years.

FRED. MAY HOLLAND, Concord, Mass.
MRS. CLARA M. BISBEE, Dorchester, Mass.
J. A. J. WILCOX, Chelsea, Mass.

Three Years.

B. A. BALLOU, Providence, R.I.
WILLIAM H. HAMLEN, Boston, Mass.
ANNA GARLIN SPENCER, Florence, Mass.

Two Years.

EDNAH D. CHENEY, Jamaica Plain, Mass.
ARTHUR G. HILL, Florence, Mass.
RICHARD P. HALLOWELL, Boston, Mass.

One Year.

CHARLES D. B. MILLS, Syracuse, N.Y.
JOHN L. WHITING, Boston, Mass.
HELEN M. IRESON, Lynn, Mass.

The office of the Association is at 44 BOYLSTON ST., BOSTON (next door east of the Public Library), where is also the publication office of *The Index*.

All letters pertaining to the business of the Association (payment of membership fees, orders for its publications, etc.) should be addressed to "Free Religious Association," at the office.

Communications intended specially for the Secretary, as well as his personal correspondence, should be addressed to him at PROVIDENCE, R.I.

F. A. HINCKLEY, *Secretary F.R.A.*

THE PRESENT DAY.

A Monthly Journal discussing Agitating Questions without agitation.

EDITED BY

GEORGE JACOB HOLYOAKE.

The *Present Day* is addressed to all who hold the brave and cheersome faith that life according to Reason is the best religion for the world that is, and the best qualification for the world that may be.

"False Ideas may be confuted by argument, but only by True Ideas can they be expelled."—*Cardinal Newman.*

Annual subscription, 2*s.* 6*d.* Single copies, 2*d.* Published by R. H. SQUIRE, 52 Fleet Street, London, E.C.

PUBLICATIONS

OF THE

FREE RELIGIOUS ASSOCIATION.

Freedom and Fellowship in Religion. A volume of ten essays upon speculative and practical problems of religion, by D. A. Wasson, Samuel Longfellow, Samuel Johnson, John Weiss, W. J. Potter, F. E. Abbot, O. B. Frothingham, J. W. Chadwick, T. W. Higginson, and Mrs. E. D. Cheney, and extracts from Addresses by Ralph Waldo Emerson, Lucretia Mott, Robert Dale Owen, Dr. Bartol, Wendell Phillips, Rabbi Wise, Horace Seaver, A. B. Alcott, Lucy Stone, Charles H. Malcom, Julia Ward Howe, and others,—all given on the platform of the Free Religious Association. Price (reduced) $1.50.

Reports of Annual Conventions of Free Religious Association, from 1872 to 1879 inclusive. These contain essays and addresses by the various distinguished men and women who have spoken on the Free Religious platform, together with yearly reports of the Executive Committee. 10 cts. each.

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—**The Christian Amendment,** by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents, 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

Discourses on Fundamental Church Doctrines

By S. J. STEWART.

"It seems to me admirable both in matter and in manner, and I hope it will have a wide circulation, as it is the kind of book people need."—*John Fiske.*

These discourses, delivered in Bangor, Me., include discussions of the Bible, Miracles, God, Jesus, Prayer, the Devil, Sin and Atonement, Hell and Salvation, Predestination and Scientific Necessity, Morality, Immortality, etc.

12mo. 324 pages. Cloth. $1.25.

THE QUAKER INVASION OF MASSACHUSETTS. By R. P. HALLOWELL.

1 vol., 16mo. $1.25.

Mr. Hallowell has made an exhaustive study of the persecution of the Quakers by the authorities of the Massachusetts Bay Colony, and in this book he tells the pitiful story very clearly, correcting many inaccuracies in the histories which have generally been accepted as authentic.

CURRENT TOPICS.

"TO SPEAK of Nihilists is an anachronism," says the writer of an article quoted from the *Neue Freie Presse* of Vienna by the *Freidenker* of August 19, showing how this wild movement has been superseded by the wiser one now carried on by the Revolutionists.

UPON the urgent representations of the distinguished scientist, M. Pasteur, the French Chambers have voted a grant of fifty thousand francs to send a scientific mission to Egypt to investigate the causes of cholera, which M. Pasteur believes is attributable to "the development in the body of man or animals of a microscopic animal, causing therein disturbances frequently fatal." Four young *savants*, doctors and biologist, have given their services cheerfully to this mission.

IN the Grand Duchy of Finland, a new sect has arisen, the adherents of which call themselves the "Pure by Excellence." They claim and teach as a doctrine that woman is superior to man, and should be supreme over him and control the family. In every house where the new doctrines are practised, a woman, elected by her companions, is invested with a sort of directing power, which gives her the right to inflict penance and even rigorous chastisement. The new creed requires that all its disciples shall confess their sins to certain women at least once a week.

OF seven hundred and eighty young men under twenty-one years of age sent to the Eastern Pennsylvania Penitentiary during one year, seven hundred and fifty-five had no trades, though five hundred and seventy-two were graduates of schools. The Chicago *Tribune*, commenting on these statistics, says that they show that our public schools are turning out boys who are not prepared for any occupation or any form of useful manual labor, and that mere book education is no protection to society against crime. These boys, unfitted for any kind of manual work, naturally drift into the easiest occupations they can find; and there is nothing easier than drifting into no occupation, and thence into crime."

THE *Catholic Review* has an article on the legend of the Veronica handkerchief, in which the writer says very correctly that "it is not more absurd than a list of other miracles recorded in Scripture. Is it not more touching, more ennobling, more heart-subduing than the miracle of the demons and the swine? Protestants should be chary of making this charge, else they may find the whole scaffolding of Scripture miracles tumbling about their ears." This leads the *Christian Register* to remark, "There is certainly logic in this caution, though little in the legend." This comment, which implies equally the rejection of Scripture miracles and the Catholic legend, is as terse as it is true, and as sensible as the stories against which it is directed are absurd.

JOHN BRIGHT has expressed himself pretty distinctly on the oaths question. He says: "On the question of oaths, probably there is nothing in the New Testament more especially condemned and forbidden than oaths. To those who do not care about the New Testament, this fact will have no weight. The practice of swearing to the truth of anything makes two kinds of truth and truthfulness. If oaths are of any avail, by so much as they make truth more certain, by so much they lessen the value of any ordinary statement and diminish the probability of its truth. If ignorant persons are sworn, they think they may tell lies with impunity; and their lying is to a large extent blameless in their eyes. I think oaths and oath-taking have done more than any other thing to impair and destroy a regard for truth."

A CORRESPONDENT of the *Nation*, who declares that he speaks from "some years of experience and observation," says: "I know of many towns in which an incompetent superintendent of schools has been retained for years simply by religious or church influences, and of instances in which very able men have lost their places, or failed in getting them, for the reason that they were no-church members. Now, our public schools are removed as far as possible, in theory, from religious influence, being supported by general taxation. Yet, in most towns, you will find some one church strong enough to make its leanings felt and obeyed in selecting a superintendent. The case of Superintendent Kiddle, of New York, a few years ago, is in point. In fact, I believe that even our denominational colleges are freer from this fault than many of our towns and cities."

THE New York *World* does not understand how Mr. Beecher can consistently call himself a "Christian evolutionist." It says: "The rejection of the doctrine of the fall and of inherited guilt very naturally dispenses with any necessity for an atonement or for a divine Redeemer. If we reject the idea of vicarious atonement, the whole divine element in the mission of Christ disappears at once. Such a form of unbelief is easy to understand, but it is not easy to understand why one who thus unceremoniously rejects the divine mission of Christ should take the trouble of calling himself 'a Christian evolutionist.' There would be as much meaning in the words, if, under the same circumstances, he should call himself a Christian pagan. It would be more seemly if those who wholly repudiate the authority of Christ would also repudiate the name of Christian altogether."

THE Springfield *Republican* says: "The time-honored profession of fortune-telling has received a blow from so conservative a source as the British magistrate. Charlotte Elizabeth Priscilla Veazie, a woman of sixty-eight years, who, for forty years has lived upon the sixpences and shillings of credulous girls in a district in London telling their fortunes by the shuffling of cards, has been sentenced to twenty-one days' hard labor 'for obtaining her living by a mode of cheating.'" Regardless of the feelings of the hundreds of Spiritual mediums at Lake Pleasant, who are affording the people of Western Massachusetts opportunities to converse with their ancestors, the *Republican* heartlessly adds: "There is a person in this city, 'born with a veil,' etc., who offers the same cheatery to the ignorant; but, for that matter, in a community which maintains Spiritualist mediums, any sort of humbug must be tolerated."

THE Milwaukee *Daily Journal* says of the meeting in that city, concerning which an associated press despatch was sent over the country, that "about fifteen persons were present." It was a meeting of the Milwaukee Liberal League. One of the prominent members stated "that the coming congress had for its object, not only uniting the members of the League hitherto divided into two factions, but to include in their organization other societies, such as the Freie Gemeinde, Knights of Labor, Turners, and the anti-monopolists." How is the union to be effected? We have not quite forgotten the promises of conciliation and compromise made by the leaders of the League at Hornellsville, N.Y., three years ago, by which they secured the New York Freethinkers' Association as an auxiliary, nor the action of the League at Chicago at its very next annual meeting, unequivocally committing it to the policy of demanding and working for the total repeal of all postal laws against the transmission of obscene literature through the mails,—the action which drove Ingersoll from the organization when he had already remained in it too long. The only possible way to "unite the members of the League hitherto divided," and to gain the confidence and support of the liberal public, is for the National Liberal League at its next annual congress to rescind its Chicago resolution, turn out of office those who have been managing the League in support of their hobbies, and determine that henceforth its entire strength shall be devoted to the cause of State secularization, the work for which the League was formed. But it is not likely that this will be done.

VACATION THEOLOGY.

A Sunday at Mt. Desert offered opportunities for various kinds of worship. To those inclined to church-going, four churches in the village of Bar Harbor opened their doors to welcome the native inhabitants and the summer guests alike. To those who preferred the natural temples of the woods, the doors were almost as near, and even more widely and invitingly open. And, if any wanted to ascend Green Mountain to be fifteen hundred feet nearer the sun, in order to give thanks for, if not to, that glorious creator of life, the way was provided. We concluded to do our "worshipping" both with nature and with man. One-half of the day we devoted to the sea, the woods, and the hills,—sitting on a grassy slope, whence to the right was an outlook oceanward without any objective bound; to the left, a view up the harbor and across its wooded islands to the Gouldsborough hills beyond; while behind us rose in near range the precipitous side of Newport Mountain, over which slanted the rays of the sinking sun. There was no more fitting temple in all the land for getting near to the heart of nature and to the great power there that is ceaselessly creating all this world of life and beauty. Compared with it, how puny seemed the house which man had built and called God's house, where we had spent a part of the morning!

Yet, after all, man at his best, with his creative power, is nature's masterpiece; and all the religions of mankind are expressions, however mistaken, of man's effort to know and to put himself into harmony with the mysterious forces of nature's life. We like, therefore, the chance to note the ways and thinking of different classes of religious people, and, when the chance offers, especially like to take note of what they are thinking and doing whose ways and opinions are farthest from our own. For this reason, among the four churches at Bar Harbor, we selected the one where Dr. McCosh, of Presbyterian Princeton, was to preach. We might have gone to the little Catholic church, whose simplicity of rustic architecture without and within we had admired the day before; but the Catholic service is the same thing the world over, and to me, not in sympathy with it, is a tedious formality. Or we might have heard a Broad Church Episcopalian at the more pretentious Episcopal church,—that is, if we had gone early enough to find a seat, for this fashionable temple was thronged. Or we might have heard the thoughtful and amiable Mr. Dole, of the Unitarian church of Jamaica Plain, who officiated at the Congregational Union Church, and who preached a sermon so appropriate to the compromise character of the pulpit in which he stood that an Episcopal hearer did not discover that he was a Unitarian. But all these attractions we put aside for Dr. McCosh.

The venerable doctor preached in the new Methodist chapel, in which he has shown a special interest; and this service was its dedication. The building was well filled with a not fashionable, but sunny and well-satisfied-looking people; and its bare plastered walls were made bright with a great abundance of flowers and ferns. The sermon was not a noteworthy one except for two features, and these were both in the direction of the liberal tendencies which are now so marked in Protestant Christendom. In its general structure, it was the ordinary orthodox plea for the acceptance of Christ, in order that one might become a new creature; but the dogma of the argument was softened and humanized by illustrations drawn from natural affections and sentiments throughout. The part, however, which most struck our attention was a concession made to the worthiness of man's natural affections and faculties. These were not to be sacrificed, not to be denied, not to be much transformed even when one should become "a new creature in Christ," but were simply to be lifted up and so regulated and spiritualized as to yield a greater satisfaction and delight. This was certainly quite a departure from the old Calvinistic view of human nature. The other noticeable point in the discourse was, evidently, an interpolation adapted to the occasion. The preacher, in referring to the dedicatory service, announced that he was not of the same denomination as that to which this particular church belonged, and then added with marked emphasis: "I believe in the holy Catholic Church, but I do not believe that any one denomination of Christians is entitled to that name. I believe that the true Church of Christ is to be found in all churches and among all good people that accept Christ as their Teacher and Saviour." This, of course, made no provision for the true and good people who are non-Christians; but it was liberal doctrine to come from a Presbyterian theologian. Dr. McCosh, by the way, is an unusually poor reader of hymns even for a minister. He must have been preaching nearly fifty years, and yet has not advanced beyond the schoolboy stage of reading a hymn.

On the day of leaving Mt. Desert, we took another lesson in theology. One of the occupations of the guests is *canoeing;* and so delightful a kind of journeying it seemed to be that we were not willing to depart without a trial of it. We were given the chance to paddle our own canoe, but preferred to lie dreamily on a deer-skin in the stern of the craft and trust that part of the occupation to a young Indian. He was of the Passamaquoddy tribe, was twenty years old, and had a strong, intelligent face and a fine athletic muscle. After he had paddled us around the bay for nearly an hour and we had gazed our fill up into the sky and to the wooded mountains and along the beautiful line of the island shores, and had sucked in through every pore the delicious air and sunshine, it occurred to us that we were not improving to the full our opportunity; that we ought to find out the religious belief of the young, tawny athlete to whom we had trusted our life. Accordingly, we then and there interviewed him. To our first question, "Is your tribe Christian?" he answered promptly and briskly, "Oh, yes, we are Christian." To the second question, "Are *you* a Christian?" the reply was also, but less promptly, "Yes." And then the interview continued as follows:—

"But don't you believe in the Great Spirit any longer?"

"Oh, yes: we believe in that," and he gave the Indian name for it.

"But you believe that Christ is God, don't you?" No reply in words, but a puzzled and somewhat incredulous kind of laugh.

"Do you believe that the Great Spirit came down to the earth in Christ, and went round among men and talked with them?" Answered by a kind of agnostic grunt, while he looked at his paddle and gave the canoe a turn.

"But what *do* you think about Christ? What kind of a being was he?"

"I don't know much about that," smilingly, but placidly.

"Do you believe that there will be any life after this?"

"Yes: I believe that."

"Do you believe that all the Indians of your tribe will have that life?"

"Yes, but not with so much assurance."

"Do you believe that all Indians will have a good time in the next life?"

"No: I guess not."

"Well, what have they got to do, in order to have a good time?" A puzzled look, but no coherent answer. Whether he was struggling with some idea of the atonement which had been taught him or did not quite comprehend the question was not clear.

"Some Indians get drunk, don't they?"

"Yes."

"Do you think that they will have just the same good time in the next life as those who keep sober?"

"No: I don't."

"Then you think, do you, that those Indians who do the right thing will have the good time, and those who are bad will have a bad time?"

"Yes: I believe that."

"What sort of a bad time will the bad Indians have? How will they be punished?" His countenance becomes agnostic again, and no reply comes.

"You have heard, probably, about there being a great fire to burn them forever. Do you believe that?"

"Yes: I do kind o' believe in some such thing as that."

The interview closed with some liberal instruction from the man on the deer-skin concerning the laws of natural reward and retribution, and with a confession of belief in Christ simply as a good and noble man, who was *one* of the Great Spirit's agents, upon which missionary effort we were fain to believe our athletic paddler beamed intelligent acceptance.

WM. J. POTTER.

THE STORY OF MY TRIAL.—MR. CONWAY'S OMISSIONS.

We have an insane society, which said it would set on foot an indictment against Tyndall, Huxley, Morley, and others, for blasphemy. It has been repeated by the press as though it were probable or possible. It was laid down by Mr. Justice Erskine, before whom I was tried, that serious arguments against Christianity were permissible, and were not indictable. He cited Strauss' *Life of Jesus* as an instance of what is allowable. Our Chief Justice Lord Coleridge, whom you will have shortly among you, has widened the liberty of criticism still more. On my trial in 1841, the Judge seemed to think that I had spoken (the words for which I was indicted) with levity. But, in this day, nobody is in any danger in England now, even for "levity." A writer in the *Secular Review* went last year beyond all the bounds of levity. He wrote of the Virgin Mary as "Moll of Bethlehem," and put songs into her mouth in that character. He was never prosecuted. Surely, that is liberty enough. I am not easily perturbed about language; but I left the *Review* on that account, because I thought Secularism was being dragged through the gutter by that sort of thing. It was an outrage on Catholic and Christian feeling, and had no elevation of thought in it. Now, Prof. Huxley, Prof. Tyndall, and John Morley are gentlemen. No one can find in their writings any of this coarse nature. They hold, like Dr. Darwin, by the facts of science, whether they comport with Christianity or not. But neither they nor Mr. Herbert Spencer always write otherwise than with perfect consideration for the views of others. It has been said here, as it has been said by one of your own contributors, that it is a sort of scandal that Prof. Huxley should receive honors while Mr. Foote, for instance, is made a scapegoat. He is no scapegoat for Mr. Huxley. There is no comparison between the persons imprisoned and the great self-regarding and fair-speaking professor,

Digitized by Google

and it does not seem to me just to Prof. Huxley and his compeers to suggest that he treats Christianity with ridicule and pictorial caricature.

In earlier years, I was what was in Robert Owen's days called a "Social Missionary." Dr. Hollick, of New York, was a colleague of mine, more distinguished than I could be; for he had singular talent as an expositor of opinion. Another colleague of ours was one Mr. Lloyd Jones, a speaker of great ability. When trouble came through the Bishop of Exeter condemning us and obliging a townsman of mine—Mr. William Pare—who was an officer in the social party, to resign his situation as registrar of births and marriages in the town of Birmingham, social missionaries came to be attacked by local clergymen. As the socialist body was then called a "Society of Rational Religionists," our halls were licensed as places of worship for persons of that persuasion. The persons of this "persuasion" did not worship, but lectured. The bishop of the diocese who licensed them knew that, but he had no choice but to issue licenses to all who demanded them for the purpose of worship. At the same time, the law regarded us as Protestant ministers; and an enemy might have called upon us to take the oath as Protestant ministers. Two lecturers were called upon to do this. The one was Robert Buchanan, the father of the present poet of that name, and Mr. Lloyd Jones whom I have mentioned. Mr. Jones took the oath readily, and called it a "performance," and announced himself as the "Rev. Lloyd Jones." As we regarded him as the greatest offender among us, in the matter of anti-theological lecturing, many of us were scandalized by this avowal of an unaccustomed and oft refuted faith; for, by the terms of the oath, each person publicly and solemnly swore that he was a Protestant minister who took the Bible to be the word of God and made it the guide of his life and conduct. I took with a colleague—Mr. Charles Southwell, who himself came to be imprisoned—a public part in objecting to this oath-taking; and Mr. Jones has, I fear, never forgiven me for it.

He has lately represented that I had by my reply broken the law of the Central Board, under which I was engaged, though the tenets we had to enforce were themselves contrary to all received doctrines of Christianity; and Robert Owen had taught us, as an important thing to bear in mind, that "all the religions of the world were wrong." This had given us the idea that so small a religion as Christianity was not one we were called upon to profess. I have therefore had reason to explain the matter recently in our *Co-operative News;* and I judge from what I have seen lately in two anti-theological papers, published in America (one in Boston), that it would be useful to explain in your columns how my own imprisonment came about.

The phrase "broke the law" would give the reader the idea that there was a law to break, which there was not. What I violated was a policy of compliances. The facts were these: The Bishop of Exeter had menaced us, under the impression that neither our teachings nor our tenets were to be reconciled with the Thirty-nine Articles. Two of our missionaries, notorious for years for denouncing Christianity, made public oath that they were Protestant ministers, taking the word of God for their guide. In the town of Cheltenham, where I had been a short time a lecturer, a socialist poet had recanted, under intimidation; and we were becoming to be regarded as a shuffling party, since everybody knew that the "five fundamental facts and twenty laws of human nature," which each missionary had to teach, were not reconcilable with Christianity. We thought there was a higher religion, and we were legally registered as "Rational Religionists." It came to pass, I was one night speaking in the Mechanics' Institution, Cheltenham, on "Home Colonies." Like co-operation, colonization was a purely economical subject, and I kept to my subject. It never was pretended that I introduced any other subject. Mr. Justice Erskine, before whom I was tried, said there was no evidence that I had done so. It was because I had not done it that a question was put to me at the lecture regarding my personal opinion as to including churches in home colonies. To have refused an answer would have been derided as open cowardice; and to pretend to hold opinions the contrary to those I professed did not occur to me as a duty I owed to the Central Board. I replied boldly and honestly, which brought upon me seven months' imprisonment. But that I did not foresee, and therefore did not seek it. Neither did I shrink from it, when it came; and I spoke nine hours and fifteen minutes in my defence at the trial. I always detested the policy of seeking martyrdom. Imprisonment meant privation at home; and, in my home, it proved death. There was no hope of aid from those of my colleagues best able to cause it to be given, since my scruples about saying one thing while believing another was a reproach to some, which they never forgave. Yet, in other ways and at other times, they may have displayed more courage than I could. Though, in one respect, my course was different from theirs, that never prevented me honoring them for great qualities which they had. Still, when it is said that I "brought the punishment of the law upon me" by wanton or wilful, intentional or "reckless, attacks upon religion," I must say that the writer has got upon the wrong road,—a road as far from the truth as the most ingenious explorer could discover. In fact, he must be guiding himself by a map of a country in which the road to truth is not laid down.

Mr. M. D. Conway reports to you (p. 615, June 28) that "a petition signed by the most eminent in literature and science asked the government to release these men,—the only person who refused to sign, so far as I have heard, being George Jacob Holyoake." It is singular that Mr. Conway does not add that I never did refuse to sign a petition, but only refused to sign that particular petition, which he and others signed, because it asked for "mercy," which I thought a coward term; and, even then, I offered to sign it, if Mr. Foote and Mr. Ramsay themselves knew of and agreed to a petition being signed on their behalf, containing that craven word; which, so far as my knowledge goes, was never introduced into any free-thinking petition before. It has always been my custom to choose my own risks and to incur them on my own responsibility, and never to impose upon others directly or indirectly the consequences I choose myself to take. Therefore, though I should feel sorry to see the persons imprisoned brought so low or filled with so much terror as to sue for "mercy," I would sign a petition, if they wished it, even for that. How could any one caring for the pride of free thought fill the mouths of every persecutor in England with exultation that two persons who had announced themselves as champions were in a few days after sentence suing for "mercy"! Had this been done in my name when I was imprisoned, I should have felt like shooting them when I came out. The old free thinkers of my time, in whose school I was trained, never asked for abridgment of sentence. We thought the sentence the strong argument against Christian error.

It was, I suppose, well known to Mr. Conway that I had written a letter in the *Daily News* before Mr. Foote's trial against any sentence being passed upon him. All London read it; and Mr. Conway, I conclude, saw it. He had seen my letter to Dr. Aveling, editor of the *Freethinker*, saying I would gladly sign a petition which I suggested to him to have drawn up for abatement of the sentences. I sent to Mr. Conway the *Present Day* in which this appears. I do not understand why he omitted all mention of it, and merely said that which would give ordinary readers the impression that I was the only bigot among public men in England, "so far as he had heard." I have written to Sir William Vernon Harcourt, our Home Secretary, making very plain why I think the prisoners should be liberated without delay.

GEORGE JACOB HOLYOAKE.

LEARNING LANGUAGES.

More than thirty years ago, I began to study Latin; then came Greek, French, German, Italian, and Hebrew, all which I read with pleasure twenty years ago; and this summer I am teaching myself Dutch. Latin I learned in the usual way, first committing all the grammar to memory, even the most trivial exceptions to the rules, and then studying Cæsar, Virgil, and Cicero, as if they had been providentially designed to furnish exercises illustrating Andrews and Stoddard. The theory followed at the Boston Latin School seems to have been not that this grammar was a useful guide to Latin literature, but that Latin literature was useful only for elucidating the grammar. The hardest work of my life was in grappling with the difficulties created by this method of study, which I soon had to apply to Greek also. The Greek grammar and reader proved too much for my eyes; and I went to Europe, where I occupied myself in my lonely darkness with repeating the Latin grammar page after page, going half through the book at a stretch. When my eyes permitted, I took up French, also beginning with the grammar, but not digging at it laboriously, and soon knowing this language better than I ever have done Greek or Latin, thanks to my residing at Paris. Next, I went to Germany, where I learned to look at Greek and Latin as delightful literatures, and not merely as difficult grammars. German I never studied grammatically; but I soon gained such facility in reading, writing, and speaking it as convinced me that the years I gave to Latin and Greek grammar, and even the weeks I spent on French grammar, were almost wasted. Then, I entered Harvard, where I was able to learn Italian in what seems to me much the best way. I began by studying Dante with an English translation, and hearing Prof. Lowell explain the meaning, which, however, I was erelong able to make out for myself. Thus, I learned Italian without a grammar much more thoroughly than I did Hebrew with one. Recently, I took up Dutch, without either a teacher or a grammar, and soon taught myself by the use of translations to read easily with a dictionary. I give these facts, because they justify the attack just made by Charles Francis Adams, Jr., at Cambridge on the grammatical study of Greek and Latin. My own experience is that we can learn a language thoroughly without ever looking at its grammar, and that the best way to begin is by reading interesting books with literal translation. Children, of course, need teachers; and facility in speaking a language can scarcely be hoped for without residence where it is the mother-tongue. Some knowledge of grammatical principles ought to be given to all scholars; but if I had been taught English grammar, as I never was, I should have got on well enough without the study of any other grammar, Latin, Greek, French, or Hebrew. I believe that, if Greek and Latin were studied

Digitized by Google

by the easy methods now applied to modern languages, either of these languages could be more thoroughly mastered in a single year than it is usually in six; for the best work is that which is done with delight.

The comparative value of these languages differs according to each student's aims and tastes. For finish of style and precision in expression, we must go back to Greek and Latin; and these languages have the peculiar advantage of introducing us to new fields of thought outside of Christianity. Modern thought began to dawn on mediæval darkness, when Greek and Latin literature were studied once more. But these great literatures can be better known through translations and histories than through the blind poring over grammars and lexicons still exacted in our schools and colleges. Those who cannot read Plato with ease in the original will get more inspiration from Jowett's translation or Grote's commentary than from the Greek grammar. The student of the New Testament needs Greek, but not more than German; and the latter is the language of philosophy, especially the transcendental school. The new and scientific philosophy, based on observation and experience, is best studied in English; but the German work is not to be overlooked. No classic author has any place in science; but Latin is used by some recent investigators, and is constantly furnishing new terms and names. So also, though to a less extent, is Greek. Neither language, however, has contributed so much as Anglo-Saxon to form English; and those who would study the origin of their language had better use special-books made for the purpose. There, they will find a direct and plain road; but that through grammars and readers is very crooked and dark. It is hard to say whether ancient and mediæval history is best to be studied in Latin, French, or German; but the last is undoubtedly our best guide in studying the general development of modern literature and culture. German authors seem to surpass all others, not only in richness of information, but in elevation of feeling, beauty of fancy, and originality of conception. For boldness of expression the preference must be given to French, which is peculiarly the speech of free thinkers. No other land can furnish a galaxy of liberal writers so bright as that formed by Rabelais, Montaigne, Diderot, Helvetius, Voltaire, Rousseau, George Sand, Comte, Renan, Taine, and Victor Hugo; and the general tone of French literature is more free than that of any other modern language from ecclesiastical trammels. Italian has always been the language of poets, and may yet become that of advanced thinkers. To the commercial value of Spanish I need only allude. On the whole, the language of most use to a student seems to me to be German; but French will probably give the most pleasure to the reader. I may add that translating from any language, ancient or modern, into English greatly increases our command of the latter tongue, but is not of much advantage otherwise. We do not really read a language until we have gone beyond translating it, and then we gain sight of new heavens and a new earth.

F. M. H.

"THE OUTERMOST RIM AND BEYOND."

This is the title of a little book prepared a year or two since by Charles Van Norden, a liberal orthodox minister in St. Albans, Vt., now of Springfield, Mass., who has a wide and growing reputation and influence among the progressive, thinking ones in the orthodox churches. On this account, and that I might know the utmost and best that can be said in favor of a supernatural knowledge as a basis for religion, I have perused the book with interest.

It is divided into three parts: The Outermost Rim; Voices from Beyond; and The Mystery of Godliness. The first part is a very good statement of the relative limits of knowledge, affirming that the outermost rim is not fixed, but is forever widening, expanding, and that there is a wide band of knowledge between the outermost rim of the savage and the mental scope of the philosopher. The author is evidently acquainted with the facts and present state of scientific inquiry, and wishes to treat them fairly. In the main, he is candid and fair as any theologian can be. Some of his delineations are concise, poetic, comprehensive,—artistic word-pictures.

In the second part, the topics are: "Hints of God in Physical Nature"; "Hints of God in the Moral Nature of Man"; "Teachings of the Religious Nature," and "God in History." Observing that in the world of matter and phenomena there are Thought, Unbroken Succession, Persistency of Law, and Progress of Thought,—in other words, indications of mind such as exists in the human body,—he assumes and argues that these are "Voices from Beyond" the "Outermost Rim" of natural knowledge; that they imply a supernatural Thinker, one beyond and apart from Nature. So, from the presence and action of conscience in man, which he affirms is fundamental, not derived, he argues a Moral Lawgiver and Judge beyond the "Outermost Rim." It will make no difference, he thinks, even if the Moral Sense should be shown to have originated, like Science and Art, from small beginnings. He affirms that in the Religious Nature of man there is a necessity of Consciousness, "a substructure of human intelligence," which necessitates the inference from Nature to Deity. Hence, he claims, "Atheism never makes lasting progress." "Atheism is a form of idiocy. The atheist is mentally lacking." He admits that "Natural Theology is not at all a region of exact knowledge, and we cannot expect clear outlines: it is the sphere of intuition, of aspiration and devotion." "To worship God is as much an instinct as to believe in God is an intuition. It is a religious soul-necessity." "It is simply a Spiritual Pressure within; and men yield to it in a thousand different degrees and with a thousand differing forms, according to the depth of their natures, their educations, and their surroundings."

In part third, the writer proceeds to consider whether we have not yet more than "hints, intuitions, instincts, and inferences"; "whether human genius ever becomes so far supernatural as to recognize by a divine insight, and declare by an authoritative revelation, truths from Beyond, unperceived of the ordinary eye and unprovided for in the common organization of human intelligence." This he answers, as of course he was bound to do, affirmatively; and he adduces the Hebrew prophets and Jesus Christ as proofs. Jesus was thoroughly unnatural, or supernatural, "unexpectedly alone, and, on the ground of ordinary conditions, impossible."

The remainder of the book is soundly orthodox, with slight modifications. He allows that "Theology is the most difficult of all sciences, and, as a mere science (without spiritual insight), is impossible." "A God-man, scientifically considered, is a monstrosity of conception. . . . Science here is out of place. Accept or reject, but do not dissect. The doctrine is either a sublime fable, or it is a supernatural fact, as high above the play of science as the stars above the mountains." "The word 'person' which occurs in our creeds is used in an extraordinary sense. The term is strained to bear its new and crushing load, as we have no knowledge whatever of any creature with more than one personality. The word covers a mystery." The moral theory of atonement, which just now is most popular among liberal orthodox believers, he pronounces a failure "equally with the others." "Christ died," he says, "if we are to believe his own words, to save the world from Sin and Hell."

He concludes, at last, that he has proved the existence of an Outermost Rim for all human thinking, and that there is a Beyond; that the Hebrew prophets and Jesus Christ were commissioned with "an authority which no mere genius can claim"; and the main doctrines of the orthodox creeds are true, though veiled in obscurity and mist. I do not discover any new argument for Orthodoxy. His hints of God in Nature, in Man, in History, are all on the *inside* of his "Outermost Rim"; are all *parts* of the great order of Nature, the divine wonder of infidels and atheists no less than of believers. I do not see that he has shown how to go beyond the outermost rim, or even that we do or can go. It is simply an assumption, a leap in the dark, a guess; and the guessing of one seems to be as satisfying as the guessing of another.

It is admitted, in fact, that there is no scientific basis for theology; that it depends on the insight or unnatural illumination of the believer. It is not rational knowledge; and its defenders do well to admit its mysterious character, and rest their claims for it on supernatural reasons. Why should liberal thinkers contend for the contrary? Why seek to bring a negation of knowledge under scientific rules as a basis of religion? Why not leave religion to itself, as the blind adoration of an imagined supernatural personality behind every phenomena, and go on to build up life and its institutions on the basis of what is known of the laws of growth and progress in whatsoever sphere will ennoble and perfect humanity?

A. N. ADAMS.

THE EVOLUTION OF MIND AND BODY.

Mr. Wallace—the naturalist, who, as is well known, is a believer in modern Spiritualism—some years ago, in yielding his assent to the theory that the physical structure of man has been evolved from the bodies of lower animals, expressed the opinion that the intellectual and moral difference between man and the brute indicates the intervention of some special intelligent agency in the evolutionary process at the time of man's appearance on the globe. The late Allen Kardec, a French spiritualistic writer of some distinction, thought that "the bodies of monkeys may have served very well for the vestments of the first human spirits, necessarily undeveloped, who have been incarnated upon the earth"; that, "instead of a special robe having been made for the spirit, it may have found one already made"; and that it "may then have been dressed in the skin of the monkey without ceasing to be a human spirit, as man is sometimes dressed in animal skins without losing his manhood"; that "ameliorated bodies, by procreating themselves, have reproduced themselves in improved conditions, like grafted trees," giving birth "to a new species which has been gradually removed from the primitive type, according as the spirit has progressed." Henry Ward Beecher, in a letter to a brother minister recently published, expresses the opinion that, physically, man has a genetic relationship with the brutes, but that "his moral and spiritual nature" is direct from God, instead of having been developed through lower forms of life. Mr. Beecher's own words are as follows: "Men have not fallen as a race, men have come up. No great disaster met the race at the start: the creation decree of God was fulfilled. Any theory of atonement must be one which shall

Digitized by Google

meet the fact that man was created at the lowest point, and, as I believe, is, as to his physical being, evolved from the animal race below him, but, as to his moral and spiritual nature, is a son of God, a new element having come up in the great movement of evolution at the point of man's appearance."

Any attempt to explain the ultimate origin and cause of either the physical structure or the mental and moral nature of man must of course result in failure. No phenomenon can be so explained. The movement of a feather is just as inexplicable as the thought of man. Neither is spontaneous. Both depend upon antecedents in an order of phenomena, which is determined by the nature of eternal self-existent power, of which all we can say is that it is knowable only under the conditions of sense and understanding,—conditions which necessitate the co-operation of object and subject in every act of cognition, and which make knowledge of the pure object unmodified by the subject utterly impossible.

What we should look for is not the ultimate cause of anything, but for the links in the chain, for the facts in the sequent order of phenomena necessary to meet the requirements of that continuity which prevails, science teaches, throughout the phenomenal world, and which the theory of evolution affirms, in opposition to the theory of creative fiats and miraculous interventions, has marked the development of vegetable and animal life on this globe.

But if the process of evolution has been an unbroken continuous one, which implies that every form and condition has naturally grown out of or been produced by the modifications of pre-existing forms and conditions, how can the admission that the human body is derived from the bodies of the lower animals be made consistently with the denial that man's mind has been evolved from the minds of the lower animals? The bodies and minds of animals are correlated with one another and have advanced together, both being the products of the concomitant modifications of pre-existing animal structures and intelligences. Did they arrive at a certain point of development together; and then did the mind of the animal, corresponding with the structural organization with which it has been evolved, leave its body, to make room for a different kind of mind, one entirely unrelated to the former occupant of the body,—a mind that never before had enjoyed the luxury of a body, if, indeed, it had had experience of any kind whatever, or an ancestral history, or relationship with the phenomenal world. Was the spirit of the animal driven out of its body by the human spirit, or did the human spirit have the patience and courtesy to wait for the natural death or departure of the spirit of the brute before taking possession of its body, and which would of course imply a resurrection of the body of a lifeless animal, as well as its subsequent occupation and use for defence, support, and reproduction by a human spirit, when it had been adapted to and correlated with the appetites, passions, and powers of a brute,—a notion the statement of which renders any argument against it unnecessary.

But some such absurdity is necessarily involved in the position of those who say that man's body is the product of the modifications of animal structures, but that man's mind is due to some supernatural intervention by which a soul, ready made and fully formed, was introduced into a body previously occupied by and adapted to the spirit of an inferior creature. Even supposing that the spirit of the brute was not expelled from its body to make room for the human spirit, but that a "new element" was added to the spirit of the brute sufficient suddenly to transform the brute into a man, then the difficulty arising from the necessary lack of correlation between such a transformed intelligence and the body of a brute would present a difficulty greater than any now urged against evolution as maintained by Darwin, Huxley, and Spencer. According to all that science teaches us, any radical change in the intelligence of a race must be accompanied with as great a change in the bodily structure of that race. There is no more reason to believe that the introduction of a "new element" (an element not involved in the order of nature) was necessary to produce the mind than to produce the brain and nervous system of man. The supposition of Wallace that angels or spirits taught early man and helped elevate him to that mental and moral condition which gives him pre-eminence over the beast, although a mere fancy, involves no such absurdity as the notion that the intelligence and structure of man were produced independently of one another, as taught by Kardec and implied by Beecher's statement of his belief, which for some time has been the belief of many people.

There is as much to show that the intelligence of man is derived from that of the lower animals as that the physical structure of man is derived from the bodies of brutes. There is as much in the mind of man that points to his primitive savagery and to the brutal life of his ancestors as there is in his body. This we should expect on *a priori* grounds, accepting the theory of evolution, since there is correspondence between functions and faculties and structural parts; and this we find confirmed, when we study anatomical, physiological, and psychological science.

The law of change from the simple to the complex is equally the law of mental and physical development. The differentiation of mind is as unquestionable as that of physical organization. The implications of the facts of embryology, of rudimentary structures, or vestiges of ancestral life, are the same in regard to physical and mental and moral evolution. The facts of inheritance, of variation, of the survival of the fittest, or natural selection, are as true of mind as of body. If it be said that there are principles deeper or more ultimate than these facts, it must be admitted; but it is true in reference equally to the mental and physical part of man. To ignore one side of the meaning of these facts, because it is opposed to their theological education, and at the same time to acknowledge the other side of their meaning, is natural enough for those who can neither wholly emancipate themselves from their early theological teachings nor remain wholly blind to the cumulative proofs of the truth of evolution. But the facts, with their implications, will not change in accommodation to the prejudice or false sentiment of those who, in their transition from decaying systems to scientific truth, try at the same time to hold to theories which are plainly in conflict with one another. Yet this is the way truth advances among the people. Much of the error of old systems is still retained, while truths which are gradually undermining it are gaining ground among those who see not the incongruousness of their conceptions. But there is a small minority with whom clearness and consistency of thought are a necessity.

B. F. UNDERWOOD.

EDITORIAL NOTES.

LORD SHAFTESBURY, who is an authority upon matters orthodox, lately said that in London not so much as two per cent. of the working class attend church or chapel. With splendid temples and educated speakers, this ought not to be. Why not try a little science and secular sense, just as an alterative to monotonous dogma, and watch the effect for a few months?—*The Present Age.*

IT is related as an illustration of Emerson's candor that a friend went to him one day and asked him what he meant by a certain passage in one of his essays. The essay was one of his earlier efforts. Emerson took the book and looked at the passage in question, and after a moment replied, "Well, I must have known what I meant, and I must have meant something at the time it was written; but I am sure I don't know now."

THE *Catholic Review* attributes the popularity of Sullivan, the slugger, in Boston, to decline of belief in the supernatural, which leads the *Herald* of this city to remark: "If the *Review* writer had mingled in the crowd which blocked the streets when Sullivan's rum-shop was opened, it would have found that nine-tenths of those present had been cultivated in the 'supernatural' and 'the ideal of the angelic Christian virtues' in the Catholic Church, and that Boston's 'boasted culture' was not present at all."

AMONG the subjects that will be discussed at the fourth annual congress of the International Federation of Free Thinkers, to be held at Amsterdam, Holland, August 31–September 2, are the separation of Church and State, religious wars, the influence of Christianity on the world, and the persecution of the Jews in European countries. The Secretary of the Council of the Federation writes us that A. S. Morin of Paris, Dr. Ludwig Burchner of Darmstadt, Charles Bradlaugh of London, and other well-known free thinkers, will address the congress.

AND the strangest of it all is that, while any avowed atheist had been admitted on condition only that he took the oath prescribed, the one professed atheist who is persistently excluded is he who, while as ready as the rest of the members to have the oath administered, is frank enough to say that it has no binding effect upon him that he is aware of. Not that it is necessary to defend atheism, any more than it is to condemn it: it is only a matter of opinion at the best; and no one is to be accounted a blasphemer, much less to be punished, who simply affirms that it is impossible for him to believe what somebody else believes. To deal justly and love mercy, that is the essence of religion; and no one can blaspheme against that.—*Banner of Light.*

SEED AND FLOWER.

Out of trust there came deserving
As from earth the flowers came;
And the proof of truth unswerving
Never rose to us in shame.

Ever manhood comes of yearning;
For no mystery of the spheres
E'er was solved by useless spurning,
When was needed rain of tears.

Ah! my loved one, I do wander
All alone my shaded way;
But I know thy trust is yonder
At the close of every day.

Evil tongues have vexed unbidden;
And, from words that came in jest,
I have felt the sting there hidden,
Smiting with its strength my rest.

Dark is life to him whose doing
Never overtakes his dreams,
Darker still the soul whose suing
Meets with no returning streams.

Only trust can foster duty,
And the heart unanswered grieves.
Beauty e'er responds to beauty
Where there else were barren leaves.

HORACE L. TRAUBEL.

The Index.

BOSTON, AUGUST 23, 1883.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index*.

A Rational View of Inspiration.

A Discourse read in the Second Unitarian Church, Brooklyn, N.Y., Sunday Morning, June 3, 1883.

BY LEWIS G. JANES.

Introductory Remarks.

Dean Stanley, in his very interesting work on the *Origin of Christian Institutions*, remarks that, "in the first beginning of Christianity, there was no such institution as the clergy, and it is conceivable that there may be a time when they shall cease to be." In our pastor's occasional invitation to a layman to fill his pulpit, he has, therefore, merely reverted to what was an original custom in the earliest Christian communities. I only regret that, in the present instance, I cannot better justify his too generous confidence in inviting you to consider what may appear to be the somewhat crude thoughts of a layman upon the subject of Inspiration. And, in rendering him this slight service, I feel that I do but repay in some small and insufficient measure the constant obligation which we all share.

Discourse.

Our English word "inspiration," like its Latin original, means simply the act of breathing. Its application to the supposed supernatural promulgation of religious truth appears to have grown naturally out of the primitive conception of the nature of man, and the relation of the spirit or soul of man to his physical body. The earliest religion of mankind was ancestor-worship,—the reverence of the departed soul. This soul or spirit seems to have been conceived as identical with the *breath*, which left the body with the cessation of life. It was a superstitious custom of the Mayas, the inhabitants of ancient Mexico and Central America, to place a precious stone or some small object into the mouth of a dying person, to receive the departing soul; and these objects were afterward venerated as fetiches. Every variety of fetichism appears to have originated in similar animistic notions, which universally prevailed among primitive peoples.

In harmony with this conception, the second account of the creation in Genesis represents that "Yahweh-Elohim formed man of the dust of the ground, and breathed into his nostrils the breath of life; and man became a living soul" (Gen. ii., 7). This notion also appears in other passages in the Bible. Thus, we read in Job (xxxii., 8), according to the current translation, "There is a spirit in man, and the inspiration of the Almighty giveth them understanding." Here, the same word* is translated "spirit" and also "inspiration," which in other passages is more literally rendered "breath." Gesenius, giving the word in both places the same rendering, translates: "There is a spirit in man, and the spirit of God giveth them understanding." The apocryphal book, "The Wisdom of Solomon," speaks of God having "inspired into man an active soul, and *breathed in* a living spirit"; the term used in the original being a Greek word,† which is literally rendered "having breathed in." In the familiar text of II. Timothy iii., 16, "All Scripture given by inspiration of God is profitable for doctrine, for reproof, for correction, for instruction in righteousness," the phrase "inspiration of God" is translated from a Greek original,‡ which means literally "God-breathed." Tracing back the etymology of words signifying "breath" in the Aryan languages, we find their common origin in a Sanskrit radical which means "mouth," from which are derived numerous words indicating "being," or "existence."§ Thus, we discover a very curious and perfectly natural relationship between the primitive ideas of breathing, living, and inspiration. To the same source, the breath or spirit or inspiration of God, primitive man traced, not only his own existence as a conscious, thinking being, but also his capacity to perceive and comprehend divine truth. To breathe was to live: to live was to be inspired. Inspiration was not an exceptional, but a universal fact. The contact and communication between man and the gods was not originally conceived as limited to any priestly or mediatorial class. The thought in its earliest form was crude; the conception of inspiration was rude, mechanical, and sensuous; but the most elevated, rational, and intelligible views of the present day have scarcely done more than to spiritualize these primitive notions, retaining their original, universal application, as opposed to the idea of special interposition through a mediatorial class, which grew up in later times.

The conception as found in the Bible appears to be that the soul or life of man was literally a part of the breath of God, transmitted by the creative act; that, by means of this common nature with God, man received divine inspiration or enlightenment; that, after the fall of Adam and the subsequent inheritance of sin and imperfection, the communication which had been broken was restored by the renewing of this divine spirit,—the literal inhalation of the breath of God.

Growing out of these primitive animistic notions, and of the ancestor-worship common to the early races of men, we find the ideas of *obsession* and *possession* by evil spirits, involving the subjugation of the person by the spirits of the dead or demons from the under-world, and the actual entering of these spirits into the body of the man and the expulsion thereby of his own spirit. These notions grew up among the Hebrews after the Babylonian captivity, being probably of Persian origin, and were held not only by the more ignorant of the common people, but by the Pharisees generally, and even by Jesus and his disciples in their day.

Out of these purely physical conceptions of the nature of the soul, and of its relations to the body, grew naturally what we may term the mechanical theory of inspiration. This theory, as applied to the Bible, holds that not only the thoughts, but the very words, are directly communicated by the divine mind. It conceives that the inspired writers were wholly subjected and controlled by this influence, that they were simply instruments for the recording of the thoughts and instructions of God, as the pen is an instrument in recording our human thoughts. This view, which appears to us so irrational, is still held by some among us to-day. It has even been believed —and not so very long ago, either—that the actual letters, and even the vowel points, in the original Hebrew, were thus inspired; but this crude notion disappeared when it came to be generally known that these vowel points were no part of the original manuscripts, but were inserted by unknown copyists long subsequent to the Christian era.

This mechanical theory is now held by very few educated theological writers, the prevailing orthodox explanation of inspiration to-day being that presented in the so-called evangelical, or dynamical, theory. This holds that "inspiration, without impairing the free use of each writer's own natural powers, so moulded his views, and, when necessary, his language, as to secure the communication of that, and that only, which is truth, in perfect accordance with the divine will."* Prof. E. T. Smith, an orthodox scholar of recognized authority, says: "If you inquire in what sense the Bible was breathed forth from God, the true answer is, The whole book was prepared by his direction,—in subservience to a scheme of redemption through Christ, which had been planned in his eternal wisdom,—by men to whom he gave direct revelations or imparted necessary wisdom and knowledge to guide them in their writings; and that, consequently, the whole book has indorsed upon it his name and authority. While others are liable to err respecting truth and duty, this is infallible."

Prof. Torrey defines inspiration as "the guidance from above, whereby the sacred penmen, in committing this divine revelation to writing, were preserved from all such error as would interfere with the end which God, in giving this revelation to man, proposed." This dynamical, or evangelical, theory is now held by the great mass of orthodox Protestants. The Catholic Church does not accept it, however, to the extent of declaring the uninterpreted text of the Bible to be infallible. It affirms the *continuity* of inspiration and the necessity of inspired interpreters—the Pope and ecclesiastics of the Church—to unfold the true meaning of the Scriptures. In confirmation of their theory, Catholics point with unanswerable logic, as opposed to the usual Protestant argument, to the diverse sects into which Protestantism is split, each holding a different interpretation of the Bible, yet nearly all agreeing that it is infallible and divinely inspired.

A third theory of inspiration, the so-called "Broad Church," or liberal theory, has recently gained ground among scholars of the orthodox faith. This explanation holds that inspiration secures the infallible correctness of the Scriptures only in regard to their moral and religious teaching. It admits that the Bible contains many errors and untruths in science, history, chronology, archæology, and geography, but holds it to be perfect as an exponent of morality and religion. The late Dean Stanley, an eminent teacher of Broad Church doctrines, says, "It is now clear to all students that the first and second chapters of Genesis contain two narratives of the creation, side by side, differing from each other in almost every particular of time, place, and order."

Prof. Robertson Smith, late of Aberdeen University, although a Presbyterian in faith, evidently accepts this Broad Church theory of inspiration, as is manifest from the positions taken by him in his recent articles in the Encyclopædia Britannica. That sincere and honest scholar, Bishop Colenso, was also an advocate of this theory. In our own country, this view is sustained by able churchmen like Rev. Heber Newton, of New York; and Bishop Clark, of Rhode Island, one of the ablest and most scholarly of Episcopal divines, declared in a recent church convention that, if the Church hoped to live, it must "unload" its doctrine of plenary inspiration and its false and barbarous views of the divine character. Matthew Arnold, who stands with the representatives of the Broad Church, argues that the inspiration of the Scriptures, Hebrew and Christian, is apparent solely in their presentation of righteousness as the supreme law of life, and in their revelation of God, not as a person, but as "the Eternal Power, not ourselves, that makes for righteousness."† The world, he says, goes to the Hebrew writings for inspiration for right living. Jesus renewed this inspiration after it had become overlaid and obscured by priestly ritualism and Pharisaic formalism, substituting the new life of the heart for the bondage of the law, giving a new impe-

tus of consecrated emotion to those who were growing callous, dumb, and blind under its formal observances.

The Rev. Frederick W. Robertson, another eminent expounder of Broad Church doctrines, extends his liberality yet farther in the direction of rationalism, declaring that "an inspiration as true, as real, and as certain as that which ever prophet or apostle reached is yours, if you will."

In harmony with this liberal view of inspiration, in the main, are the conceptions held by the New England Transcendentalists and that most Christian of all the sects, the Friends, or Quakers. Both the intuitional philosophy and the doctrine of the "Inner Light" regard inspiration as a universal fact, the operation of a general law, as possible to all men, here and to-day, as to any of former times. They appear, however, to involve a certain anthropomorphic conception of the character of God which does not accord with the most profound and rational philosophy of the universe; nor are there any apparent means of harmonizing the belief in an immediate and infallible revelation of moral truth with the varying ethical conceptions of different ages and diverse races of men, to say nothing of such contemporary and radical disagreements upon doctrinal questions as those which separate the orthodox from the liberal, or Hicksite, Friends.

As believers in rational religion, none of these definitions of inspiration will prove wholly satisfactory to our minds. On the one hand, we cannot admit, with our Broad Church brethren, that even the moral inspiration of the Bible is consistent or infallible. The conception of God as "the one Eternal Power that makes for righteousness" was only attained by the Hebrew prophets and law-givers after a long struggle with nature-worship, fetichism, and polytheism. The brightest ethical examples of the earlier periods of Hebrew history present many characteristics which nineteenth-century morality cannot indorse. Nor is the moral character of the Deity, as conceived in this early period, a whit better than that of his "chosen people." The attempts to harmonize and explain away these facts, and other Scriptural discrepancies and contradictions, by various mystical and spiritual interpretations, appear to us to be neither rational, successful, nor frankly honest.

But, on the other hand, neither are we willing to limit our admiration and appreciation of the Bible to its ethical teachings, nor to accept the lofty conceptions of righteousness which finally resulted from the evolution of the Hebrew religion as the sole product of its inspiration. As a record of progress, of development out of fetichism, nature-worship, and idolatry, up to the conception of the divine Unity (of God, the spirit, the life of the whole universe), not "resting" after a single series of creative acts as declared in Genesis, but "working *hitherto*," as proclaimed by the finer intuition of Jesus; as a record of the religious progress of a race "with a genius for religion," exhibiting as it does the steady stream of Hebrew thought, augmented by the impulse received from the more venerable civilization and religion of Egypt, stimulated and enlarged by contact with Zoroastrian monotheism at the time of the Babylonian captivity, broadened and illuminated by the more genial civilization and culture of the Greeks after the conquest of Palestine by Alexander the Great, developing finally into the strong yet tender and humane religion of Jesus, so full of power and "sweetness and light,"—the Bible literature stands, in the conception of rationalists, for something more hopeful, more helpful, and more inspiring than can possibly be derived from it under the bondage of a less generous and reasonable interpretation.

As believers in rational religion, we do not therefore "discard the Bible," as accused by our orthodox friends. Rather do we make it of greater use and value, secure for it the possibility of a nobler service of mankind than it has ever rendered when worshipped as a fetich or revered as the custodian of infallible truth. Elevating the living reason above the dead letter, we honor man the more and God not less than those who remain in bondage to ecclesiastical traditions. We have no quarrel with those who cannot see through our eyes, and only desire that the highest truth and most generous views may ultimately prevail. We cheerfully concede to all the same right and freedom of judgment in religious matters that we claim for ourselves, accepting, with free interpretation, the admonition of Carlyle: "Neither shall ye tear out each other's eyes struggling over plenary inspiration, and such like. Try rather to get a little, even partial inspiration, each of you for himself."

We cannot admit that inspiration is confined to the Hebrew and Christian Scriptures, or that the Bible in every part can properly be termed an inspired book. We would read and judge of its inspiration as we would of any other volume. Rather than be understood as indorsing the special claims of its orthodox defenders, we would discard the word entirely from our vocabulary as "damaged phraseology." Inspiration did not cease or begin with the Bible canon. With Robertson, we say, "It is ours, if we will." The divine fountains have never yet run dry; nay, purified by time, with channels widened by advancing culture and civilization, they flow still into the minds and hearts of this generation, purer, deeper, and sweeter than ever in the ages that are past. We dare to search, not only the sacred Scriptures of our own Bible, and those also of Zoroaster, of Buddha, of Confucius,—all of ancient time,—but those also of to-day; and often we find these of the later times best suited to our needs. "Sometimes," says Dr. Bartol, "Isaiah is not worth a farthing, I have such inward wealth; and, if a thought come over me, I lay Shakspere or Dante down; for, frankly, I prefer my own inspiration to Job's or John's. . . . What ignorant Orthodoxy preached to me that grace and salvation must come from without ourselves, as one picks a huckleberry? This is bad religion, aggravated by poor philosophy." Certainly, it was not the religion of Him who said, "The kingdom of heaven is *within you*."

"*In all ages*," says a scripture called apocryphal, "Wisdom, entering into holy souls, maketh them friends of God and prophets." So we sing in our beautiful hymn:—

> "Never was to chosen race
> That unstinted tide confined:
> Thine are every time and place,
> Fountain sweet of heart and mind."

The question, however, may well be asked whether we are not hereby assuming too much. Do we not deceive ourselves with a pleasant-sounding phrase? Is there any actual human experience which we may rationally designate "inspiration"? Or must we regard the conception as wholly a product of the superstitious imagination? No longer believing in any special or supernatural communication between God and man,—the transcendental doctrine of interior illumination, the "Inner Light," as commonly understood, no longer commending itself to our reason or harmonizing with the facts of a rational biology and psychology,—remains there anything which accords with a scientific understanding of our human nature, to which the old name may be applied?

Surely, we must still admit that all men do not stand upon the same plane of moral and spiritual insight; that they are greatly unequal in their ability to awaken in others the aspiration for ethical completeness and wholeness of life. Whatever system of philosophical thought may command our allegiance, whether idealist, materialist, or agnostic, intuitionalist or experientialist, this fact remains self-evident. Nor shall we greatly err, if we continue to use the old language to describe *phenomena which remain the same*, however much our understanding of their *rationale* may have been modified by the variation of the intellectual stand-point from which we view them. Regarding *fulness of life*—the perfect use and complete development of every natural human function and faculty—as the end of all social and individual endeavor, may we not define inspiration as *the constant perception of this end, and the voluntary, steadfast, enthusiastic striving toward its attainment?*

Such a view of inspiration would appear at once to offer a consistent explanation of the known facts of human experience, and to exclude, as it ought, that dangerous conceit of infallibility which naturally results in a refined degree from the lofty idealism of the intuitional transcendentalist, as it does in a coarser and more obvious form from the theological assumption of fanatics of the Guiteau and Freeman variety. It recognizes the necessity of the guidance of an educated conscience as a motive for right action, and commends itself to the reason as the intelligent perception of a universal law, confined to no distant period of time or special school of priestly mediators between man and the supernatural world.

What, then, are the conditions on which this universal inspiration may be ours?

There are times, I suppose, when to all of us life seems full of disappointment and sterility and the commonplace. How to lift and elevate it toward the ideal, how to build up the kingdom of heaven on earth,—these are the questions that press upon us for solution.

The first, the basic condition of true inspiration is *physical health*,—the perfect action and control of every bodily faculty. If we would be highly inspired, we must kneel first at the altar of Hygeia: live purely; eat moderately of healthful food; breathe pure air and enough of it—be *physically* inspired; keep the muscles equally strong, and all the bodily functions active by regular exercise; labor faithfully, yet with careful husbanding of strength; obey, in short, all hygienic laws.

Next, by untrammeled thought and active reason, by careful culture of the mind, we must preserve that harmony of mental and physical powers which constitutes perfect sanity. Inspiration is not an external commodity, which pours itself into an empty or "passive" mind, as some of our modern "spirit mediums" would have us think. The wordy and ill-considered outcome of such conditions is but the veriest counterfeit and travesty of true inspiration. Nothing valuable is obtained without effort. Culture, earnest striving for the truth,—these are essential conditions of genuine inspiration. As is the man, so will be his influence. Men do not gather grapes of thorns or figs from thistles. "Every one knows," says Matthew Arnold, "how those who want to cultivate any sense or endowment in themselves must be habitually conversant with the works of people who have been eminent for that sense, must study them, catch inspiration from them. Only in this way, indeed, can progress be made."

And, again, the problems of life must be handled with a sympathetic touch. The inner impulse toward a higher life, nobler conduct, helpfulness toward others, must be pure and constant. No formal morality, or merely mechanical effort, will offer adequate preparation for genuine inspiration. We must *consecrate ourselves* to high thinking and noble living, would we hope to receive this coveted boon.

And, finally, out of this health, broad culture, and earnest consecration will grow an ideal, a conception of something higher and better than we are,—a lofty height toward which the pure inner impulse urges us to aspire.

"Unless above himself he can erect himself, how poor a thing is man!" It is this upward look of the soul, this constant aspiration toward the higher and better, that is the germ of all true inspiration. "Those who aspire after what is holy and pure," said Rabbi Gamaliel, "shall have assistance from above."

There is one danger which threatens the disciples of liberal thought to-day, even as a corresponding danger threatened and overtook the Jews after the time of Ezra, the scribe. With them, it took the shape of a formal worship of the written law, which was substituted for the freer and nobler inspiration of the prophets. With us, it springs out of the general and too dogmatic acceptance of the philosophy of evolution, which threatens to swamp our sense of personal responsibility as co-workers with the Power that makes for righteousness, and to generate in us a willingness to float idly on the tide of affairs, and trust to evolution to do the work for us. This sort of fatalism is the subtlest foe of progress and enlightenment. The idolatry of a dogma, whether theological or scientific, is the worst of all idolatry. Against this danger, we have need to invoke the aid of a present inspiration which shall make us conscious co-workers with the Infinite in the elevation and regeneration of humanity.

Against the philosophy of evolution rightly understood, we have no argument to offer. We accept it fully, as the clearest and most reasonable explanation of the growth of the physical universe, the origin of man, and the development of the social organism. But to make this philosophy an excuse for indifference in religious, social, or political affairs, is to give it only the most superficial interpretation.

In the physical universe, we see how the crust of the earth, hardening around its central fires, has sometimes confined them too closely. The result is the destructive shudder of the earthquake or the lava deluge of the volcano. This phenomenon of violence is not the *abdication* of the principle of evolution, but

Digitized by Google

rather its natural outcome and fulfilment. He accepts this philosophy with but fatal superficiality of comprehension who does not recognize that revolution may be an essential phase of evolution, both in physical and social development.

Man is a self-conscious factor in the process of social evolution. If he retire into the shadow of his own selfishness, or sit in his study at his ease, wrapped in the mantle of conceit, saying: "It is not my business. I leave society to God and evolution," then, verily, God and evolution will do their work in the violent rupture of the crust of formalism and fatalism which thus hardens around society; and the self-satisfied waiter on fate will find himself buried in the ruins of a social Pompeii or Herculaneum.

The prophet and reformer are vital links in the chain of evolution. The law is ever constant; but, if the blood is not kept healthy by the stirrings of a life steadily striving toward the loftiest ideals, it will operate in the development of abnormal and diseased conditions instead of the production of a normal and healthy organism.

Those who possess this devotion to high ideals, this culture and consecration in the largest measure, are the heroes, the demi-gods, the inspired leaders of the world. What wonder that such men as Jesus of Nazareth have been deemed incarnate gods? Truly, the divine finds its best revelation to man in and through the nature of humanity. Inspired men have existed in all ages, and some are with us now. "No man was ever truly great," says Socrates, "without divine inspiration." Beethoven, Raphael, Spinoza,—"the God-intoxicated man,"—Carlyle, Emerson, Wendell Phillips, inspired by the spirit of the Declaration of Independence, Abraham Lincoln, in his speech at Gettysburg and his second inaugural address, George Eliot, Channing, and Theodore Parker,—these in their loftiest utterances have been as truly inspired as was ever Hebrew sage or prophet.

The inspired leader of the future,—what manner of man shall he be? No narrow mind, confined in the bondage of dogma or creed, can lead the world to-day,—no custom-bound worshipper of dead ideals. Listen to Emerson's prophetic description:—

> "Can rules or tutors educate
> The semi-god whom we await?
> He must be musical,
> Tremulous, impressional,
> Alive to gentle influence
> Of landscape or of sky;
> And tender to the spirit touch
> Of man's or maiden's eye.
> But, to his native centre fast,
> Shall into future fuse the past,
> And the world's flowing fates in his own mould recast."

If, then, you would seek and find inspiration, "to thine own self be true." Heed the inward impulse toward an ever diviner ideal. Put not on religion or morality or intellectual culture as a garment, but assimilate them into your very nature. Listen to the mandates of an enlightened conscience,—the product of education and inheritance of human experience, but not less "the voice of God within the soul." Grow, not by accretion like a rock, but by the impulse of an inner vitality, like a living organism. Be more and more manly, more and more womanly, according to the truest ideals of manhood and womanhood. Do not become a fossil. Keep the mind open to the living truth of to-day. Do something to help others to higher and holier possibilities of living. So living and so doing, you will be more and more the perfect channel through which the divinest inspirations pour; you will re-create yourself in the very image of your ideal,—of the God whom you worship. The law of true inspiration is universal; its sources are perennial: it is ours to seek and find it, if we will.

> "The Law which spheres the hugest sun
> That blazes in the depths of blue,
> And binds unnumbered worlds in one,
> So rounds the tiniest drop of dew.
>
> "The God who sowed the midnight gloom
> With stars that blossom evermore
> Still lights the lowliest lily-bloom
> That nestles by the cottage door.
>
> "An atom of the self-same fire
> That burned in Zoroaster's soul
> Kindles the humblest heart's desire,
> And beacons our eternal goal.
>
> "What Jesus felt, what Moses saw
> On Sinai, on Gennesaret,
> Love's boundless glow, the lightning law,
> *Our* hearts have known, *our* visions met.
>
> "For God in every nature folds
> The perfect future of its kind:
> The Eternal Love *thy* bosom holds,
> And thrills *thy* thought, the Eternal Mind.
>
> "Oh, not in over-weening pride,
> But calm in holy trust alone,
> Put every alien law aside,
> And walk serenely by thine own.
>
> "Cathayan clogs, Judean creeds,
> Deform and fetter limb and soul.
> Life only from within proceeds,
> Evolving one harmonious whole.
>
> "The heart self-centred, that alone
> Obeys what God within it bids,
> Holds firmly its inviolate throne,
> As Andes and the Pyramids."

CORRESPONDENCE.

BUILDING UP AND TEARING DOWN.

Editors of The Index:—

The accusation is frequently made against the Free Religionists and their radical papers that they indulge in sweeping tirades against Christianity, and devote their strongest efforts toward ridiculing and picking to pieces the faith of their Christian fellow-citizens, while they offer nothing in exchange for this faith that they would thus ruthlessly destroy. This accusation is, undoubtedly, true to a certain extent, and to a certain extent it is false. To be sure, we do see many and severe criticisms upon Christianity; and the reason for this lies, perhaps, partly in the fact that there is no believer so zealous as a new convert, and that many of these new converts to radicalism were trained in childhood to the observance of the strictest of Puritan Sabbaths and a belief in the most hellish of Calvinistic doctrines. Under these circumstances, it is most natural that, when one has at last been freed from these restrictions, he should turn against what has oppressed or repressed him so long. It is simply another phase of a child turning to kick the obstacle over which it has stumbled.

It is curious to note, however, that, if this same ridicule and criticism be directed against another religion, the Christian papers see no harm in it whatever. As an instance, I remember once listening to an address delivered by an eminent Hindu scholar and Brahmin, in which he was supposed to give his experience of Christianity and the means of his conversion from Brahminism. There was not one word of the peace and quiet and happiness that he found in the Christian belief, not one word of higher purposes in life, not one word of self-abnegation and humility, but tirade upon tirade against the old faith that he had abandoned, ridicule unbounded against the superstitions from which he had freed himself. The more absurd the superstition, with the greater gusto did he tell it; and the eloquent Ingersoll never excited more heartfelt laughter over the "Mistakes of Moses" before a sympathetic audience than this new convert before an audience composed almost entirely of Christian gentlemen and ministers excited against an old coat that his ancestors had worn for centuries, and in favor of the newer and more fashionable garment he had just assumed.

I am not complaining or criticising: I only say he simply followed the instincts of his nature. It was an impossibility to avoid it. If a child is bound down in his early years, and made to believe that to smile on the first day of the week is a sin, taken to church against his will, made to sit quiet during a long sermon of which he understands not a word, has his toys taken away at home, the piano is closed, the outer doors are barred against his exit, and he is left in a half-darkened room with a Bible and a goody-goody book to meditate on his sins and hell, while outside the flowers are blooming, the birds singing, and nature is in her gayest mood,—under these circumstances, I say, the boy does not meditate upon *his* sins and future torment, but every instinct in his nature rises up and protests against such treatment, his disposition is soured, and his meditations are upon his parents' sin in thus confining him, and in retaliation he resolves to "lick" some boyish enemy on the morrow. Is it any wonder that a child with such a training should grow up to hate the day of so many disagreeable associations, and that, as soon as his reason is unclouded and his tongue free, he should devote time and energy to decrying and ridiculing the dogmas whose advocates have so sorely oppressed and repressed his nature?

But the Free Religionists are accused of being mere iconoclasts without an idea of building up. Is this so? Is it probable that a society organized among educated people and having for its object the simple tearing down of a mere creed can thrive as this association has done? To me, it seems that their work is one of selection, natural selection, where the busy intellects of thinking men and women are prying into the philosophies of Socrates, Confucius, Zoroaster, Mohammed, and Christ, and are distilling the honey of truth from the sweetest blossoms of their thoughts. I do not remember ever hearing praise offered to degrading superstitions, whether they were emanations from a heathen or a Christian mind; and, though I have heard the moral flights of Zoroaster lauded, I never knew of criticisms against Christ's loftier and holier moods. "Love thy neighbor as thyself"; "Why perceivest thou the mote in thy brother's eye, and beholdest not the beam in thine own eye?" and the kindred doctrines in the Sermon on the Mount, are never ridiculed or derided. No, as I understand the object of this work, it is to raise the ideals of life, to build up a creed that shall be one grand mosaic composed of the corner-stones of truth that underlie every and all religions that have made any lasting impression upon the intellectual, moral, or social life of the world. GEORGE L. FOWLER.

EAST SAGINAW, MICH.

PRAYER AND ITS USES.

Editors of The Index:—

At a recent execution in a neighboring city, a man of extremely low organization, both intellectually and morally, "paid the penalty of his crimes." Did he? Of just that grade of intellect that made him appreciate notoriety even though connected with disgrace, he was waited on by public servants, fought for by lawyers, the county bore a heavy bill for him, although there was not a question of his guilt. Women petted him, reporters caught up every word he uttered, his daily bulletin was crowded into our public papers; and yet it was agreed that the world did not wish to keep him. But did he pay the penalty? Of course, it would not do to divest such a case of its religious values. The theory of the Church is plainly that Christ paid the penalty of every man's sins: and, if Ostrander can only be induced to accept of Christ, his sins, though as scarlet, will be white as snow. The inevitable clergyman is therefore on hand. It would be inhuman to let the poor wretch die without trying to save his soul. During his months of incarceration, he has had the services of a man deposed from the ministry. But, on the scaffold, a reverend in good standing waited upon him. "I don't want any prayer," he said. "They can take me out, and hang me up for a show as soon as they please. I'm ready, and I ain't afraid." How much more consoling it would have been, had he only "repented," and been duly prepared, and joined the "dying thief"! "I am going to hell," he cried. "I won't get on my knees again." But the clergyman was not to be balked. He was there to state this case to God, and he did it after this manner: "O God, thou art our Maker, Ruler, and Judge. Thou only art holy. We thank thee that thou hast not dealt with us according to our sins. We thank thee for the gift of a Saviour, even Christ our Lord. We thank thee for the promise of forgiveness of sins to those who repent and believe. Have mercy upon us this day. But thou hast said, 'Whoso sheddeth man's blood by man shall his blood be shed'"; and more of this sort, quoting as you see the old law of retaliation that all nations but Apaches and Sioux discard as a principle of action. Blood for blood! Life for life! Eye for eye! What did Jesus say? "Thou hast said." Did God "say" principles and rules that civilization has outgrown? The prayer then adds: "We do now pray for him whose life is to be taken, knowing that the Judge of all will do what is right. We do pray very earnestly now that, according to thy power in the Holy Spirit and the wishes of thy grace, thou wilt grant unto him preparation for death and to meet the judgment hour." Can any one tell what all this means? Has not God

Digitized by Google

"one way of salvation" and "only one"? Whoso refuses Christ cannot be forgiven. But the murderer does to the last reject him. Does the minister have the least hopes of influencing him? And suppose he does. Suppose God forgives; suppose the man suddenly is transformed into a saint: will that minister stand by and see him slain? Shall God forgive, and not man? No prayer to the people to be merciful, but a petition to God to be merciful. "And prepare him for the judgment." That is, if I understand it, get him ready to pass muster into Paradise. Meanwhile, the man stands with clenched teeth and hands; and, when he gets his say, he curses judges, citizens, juries, and everybody else. What shall we say or think of this religious attachment of the scaffold? Generally, I am aware, the criminal is made easily "ready" and goes "joyfully," calling all men to "follow him to glory." But, in even such cases, is not the farce just as well kept behind the bars, and out of print?

E. P. POWELL.

THE STATUS OF WOMAN IN JUDEA AND IN EGYPT.

Editors of The Index:—

The article by Mr. B. W. Ball on "The Bible and Woman," which appeared in *The Index* of July 5, a reply to which I find in the issue of August 2, seems to me to demand a somewhat further criticism.

The author, in his assertion that "the only people existent in Bible days among whom women were the equals of men, socially, were that great division of the Greek race known as Dorians," has made a very careless and unreliable statement. Had he presented all the known facts, he would, in my opinion, have added great strength to his main point,—that Jewish laws and customs and Christian teachings tended to the degradation of woman.

If he had also said that the status of women in the Hebrew nation, among the chosen people of God, was actually lower than in any other nation of antiquity not barbaric, he would have stated only what is now becoming more and more evident by many recent discoveries in the fields of historical and archæological research. It is now known that among various ancient nations women held not only an honorable, but an exalted position,—one that was equal, if not superior, to that of men.

If I understand the expression "Bible days" aright, —which I conceive to be the period, say, from Abraham to Christ,—then I must also dissent from another statement, that "the mass of mankind who existed in the Bible period were slaves or savages, creatures of habit and instinct almost as much as are beasts."

In the early days of the Jewish patriarch, and for many subsequent centuries, there existed on the borders of the Nile the most wonderful civilization that perhaps the world has ever seen,—the birthplace of art, the cradle of science, the home of literature, where all that was greatest, grandest, noblest, best, was fostered and encouraged, a land where dwelt a people whose splendid monuments not even the hand of time has been able to obliterate, and some of whose marvellous achievements modern skill can only imitate, not equal.

In this land, among this people, woman was the friend and companion, the social and political equal of man. She could, and very often did, ascend the throne and administer the government. Daughters frequently succeeded their fathers, where they were the elder children. It is supposed that under the early empire there was some special law giving them the preference over sons. Many of the wisest and most prosperous of Egypt's rulers were women; and the reigns of some of them, among whom were Nitocris and Hatasee, were periods of unexampled greatness and splendor.

Polygamy was unknown. The wife was respected and reverenced. She could buy, sell, and trade, and had exclusive control over her own property, which, in case of divorce, was returned to her with large interest from the date of marriage.

She could even hold the highest sacerdotal positions; and, frequently, a wife was attached to the service of one temple, and the husband to another. Pedigrees were traced through the female line, and maternal descent gave the right to both property and the throne. As far as we can learn from the records, men and women appear to have enjoyed the same social and political rights. To this fact more than to any other may, I think, be attributed the marvellous development, prosperity, and perpetuity of the Egyptian Empire.

Reginald Stuart Poole, in an address before the Imperial Institute of France, said: "It is certain that Egyptian civilization, in which women held equal rights with men of property, of family life, and of free entrance into society, lasted some five thousand years; whereas Greek and Moslim systems, in which woman is entirely ignored as a factor in domestic and national life, passed swiftly to decay, or moved on to be irrevocably arrested and thrown back."

In Ethiopia, the ancient civilization closely resembled that of Egypt. Queens often governed the country, and it is supposed that at one period women only could ascend the throne.

The powerful kingdom of Yemen, or Punt,—called by the Greeks Sabæan,—in Southern Arabia, and of which Sheba was a province, wealthy, populous, and enjoying an advanced civilization, was for the period of at least a thousand years ruled exclusively by women.

In Northern Arabia there existed about seven hundred years before Christ the empire of Dumu, or Dumah. The government was invariably gynæocratic, men not being permitted to wear the crown. The queens at the same time exercised the pontifical power, and were the priestesses of the God Shems.

Another people among whom the rights of women were apparently fully recognized was the Massagetæ, by whose valiant queen, Tomyris, Herodotus says Cyrus the Great was vanquished and slain.

Among the Libyan nations, as well as the early Cushites, there undoubtedly existed, as in early Egyptian times, social or political regulations, whereby women were considered the legitimate rulers instead of men.

Even among nations where the position of woman was the lowest, where her liberty was bounded by the walls of the harem, and her condition that of either a slave or a toy, we find that now and then a princess ascended the throne, as in the case of the fabulous Semiramis — presumably the historic Sammuramat of Assyria — and the famous Nitocris of Babylon.

Many more instances might be given of the equality of the sexes in Bible times; but enough have been mentioned to show that, in the most highly civilized nations of antiquity, the rights and privileges of woman were the same as those of man, and the place she occupied in society was both honorable and independent.

It was the peculiar province of the Hebrew nation to degrade and enslave her. Among the Jews, she was but the property, the chattel, of her lord. She could be bought and sold; and when her master tired of his slave, though she were the mother of his children, he could send her adrift, homeless and helpless, into the desert world, as the noble patriarch Abraham scrupled not to dispose of the troublesome Hagar.

In no instance that I can recall, save perhaps that of Deborah, was woman in Israel regarded as other than a slave; nor did her social or political status ever approximate that of man.

GEORGIE L. LEONARD.

HOLYOAKE'S REPLY TO BRADLAUGH.

Editors of The Index:—

I see in *The Index* of July 12 Mr. Bradlaugh sends you a note in reference to part of my letter in *The Index* of June 7. All I need say is that the words "atheistic," "Malthusian," and "republican" were not, so far as I have noticed, kept standing in the paper as they have for some time past, and that the words "Secular Advocate," which stood as the sub-title for several years, did not connote the same ideas. I never repudiated Dr. Knowlton's book otherwise than by saying it was not desirable that a free-thinking publisher should make the party answerable for its taste or its doctrines. And Mr. Bradlaugh has withdrawn it exactly as I advised. He knows I never selected it for publication, that it came to my house from Mr. Watson, and that I always discouraged its sale there. He confuses hostility to the oath with hostility to affirmation. I am the only person in England who has published "a plea" in favor of it, and have been foremost in petitioning Parliament for it. Had he worked for it and defended it as I have done, he would have a seat in Parliament now, and the great honor of representing the great question of affirmation.

GEORGE JACOB HOLYOAKE.

MR. GREEN, in a note to us, states that nearly all the names of persons in his *Directory* were put there "on their own application, or that of some friend who made the application for them, with a remittance of twenty-five cents for the insertion of each name." We stated our impression without intending to do injustice to any one, and now cheerfully print the above correction.

For *The Index*.

FREE THOUGHT RHYMES.*

In days gone by, the people thought
That only what the clergy taught
  Was worthy of belief;
They held the keys of heaven's gate,
And knew the mysteries of fate,—
  Eternal joy or grief.

Now, men have learned that all may pry,
With open ear and eager eye,
  Throughout all nature's realm.
There's no monopoly of light,
And he is safe who does the right;
  For Law controls the helm.

'Twas said that God from naught made earth,
And gave to varied life its birth
  Within six solar days;
He made things all at once, complete,
All very good to his conceit,
  So marvellous were his ways.

But Science says, throughout the past
The world has grown, in ages vast,
  By nature's forward plan;
The whirling star dust formed the world,
And life by slow degrees unfurled
  From Moneron to Man.

'Twas said that erring man eat fruit,
When tempted by a talking brute;
  God's curse upon him fell!
But mercy kept a chosen few,
For whom Christ's death should sin undo,
  And save their souls from hell.

But now we learn that man arose
From savage natures, and his foes
  By knowledge will be slain.
His path is ever up and on,
And conquests, by his study won,
  Redeem from ill and pain.

The railroad, telegraph, and press
Work mightily to render less
  Impunity of crime.
Extension of the reign of law
From evil deeds will men withdraw,
  And haste the Golden Time.

Man need not fear eternal wrath,
Nor vengeance lurking in his path,
  Should he presume to think.
But Nature gives her richest prize
To him who dares in search to rise
  And at her fountains drink.

Her works new revelations give,
A Bible that will ever live
  And shed increasing light;
Beyond the writings of the pews
Her precepts blessedness diffuse,
  And teach the true and right.

Ye earnest men, no longer shrink
From speaking what you truly think;
  Proclaim the truth you find!
And let free search, free speech, free thought,
By blood of ancient worthies bought,
  Advance the human mind.

R. C. A.

*Although written for *The Index* and in type weeks ago, the delay in the appearance of these rhymes led the author to believe they were rejected by us, and last week they were printed in another paper to which they had been sent.—ED.

MISCELLANEOUS.

THE PROTESTANT CHURCH OF GENEVA.—Under the heading, "An Anti-Christian Church," the *Spectator* has the following remarks: "Among the minor events that have recently come to pass on the Continent, none, perhaps, is more significant than the election, a few Sundays ago, of a new Consistory of the Protestant Church of Geneva. Two sets of candidates were in the field, the Conservative, or mildly orthodox, and the Liberal-Radical, or wisely heterodox. The election was by universal suffrage,—every Swiss citizen who chooses to inscribe himself as a Protestant, though he may never have entered a church in

Digitized by Google

his life, having the right to vote; and it resulted in the return of every one of the so-called Liberal candidates, to whom was accorded all the support that the Government were able to command. But the Genevan Consistory, the successors of the Venerable Company of Pastors, who in olden times were almost supreme in Church and State, is now little more than an ornamental body; and the importance of the election consists in the fact that it marks another stage in the decadence of Swiss Protestantism, and confirms the conclusion, which has long been patent to local observers, that the Protestant Rome has become the most free thinking of European cities, and the Church founded by Calvin the least Christian of churches. Since 1874, three consistories have been chosen: in the first, as in the last, the free thinkers were successful; and, having regard to the *drift* of public opinion, it is probable that their triumph is final. M. Carteret's reorganization of the Protestant Establishment has borne more fruit than his disendowment of the Catholic Church. By a law adopted in 1874, creeds, tests, and the right of ordination were abolished; and the sole qualification required for the office of pastor was declared to be the possession of a degree granted by the University of Geneva, or recognized by that body. The Consistory was deprived of all disciplinary functions; and the ordering of the services left to the discretion of the pastors, each of whom, in the words of the law, "is responsible for his preaching and teaching to himself alone." When the enactment containing those provisions was discussed in the Great Council, M. Carteret and his colleagues avowed that their object was the suppression of Orthodoxy and the triumph of free thought; and, as the law was subsequently sanctioned by the popular vote, there is no reason to suppose that they misrepresented the views of their fellow-citizens. The older ministers still preserve some remnants of Orthodoxy; but nearly every minister, elected since 1874, is either an avowed agnostic or a declared opponent of Christianity. The Church is a chaos of doctrines: there are as many opinions as parishes; the old and new pastors have nothing in common, not even a belief in God. The presence of a few orthodox ministers, instead of leavening the mass, serves only to intensify the evil. The city churches are supplied by a succession of ministers, some of whom preach a diluted gospel, while others denounce all religion as superstition. That which one man builds up another pulls down. The consequence is that the people are sinking into a condition of cynical indifferentism. They not only believe that there is no truth in religion: they doubt if there be truth in anything, look upon belief as the mark of an inferior understanding, and regard "religious manifestations" with as much horror as that with which their Puritan ancestors regarded the sacrifice of the Mass."

EVOLUTION AND THE FALL.—The *Christian Union* is not blind to the conflict between the teachings of the Bible and the theory of evolution, and it seems to be in doubt which to reject. Commenting on Mr. Beecher's recently published letter defining his position, this journal asks: "If there was no fall, what is the true interpretation of the second and third chapters of Genesis and the fifth chapter of Romans? If there was no fall, there can be no restoration. Why, then, did Christ come, and suffer, and die? If there is no race separation from God, is there, can there be, any race reconciliation to God? We do not state these as unanswerable questions. But they are clearly questions that ought to be considered. Mr. Beecher declares that 'evolution strikes at the root of any such view of atonement as has been constructed to meet the fabulous disaster' of a fall. What view of atonement has the Christian evolutionist to offer in its place? Christians will not abandon their faith in a divine salvation of the race from sin, at the demand of any scientific hypothesis. We do not say that Christian evolutionism asks them to do so; but, since it does ask them to abandon the view of atonement to which they are accustomed as a restoration of an historically fallen race, they are not unreasonable in asking, before they do so, that some other and better view be given to them. Mr. Beecher has propounded a view of sin in consonance with evolutionism: he restates it in this letter. He will do more for Christian evolutionism than any one has yet done, if he will formulate and state a view of redemption which shall at once agree with evolutionism as a scientific hypothesis and with the forgiveness of sins as a divine revelation and a profound human experience. We are far from saying that this cannot be done; but it certainly has not been done as yet."

BOOK NOTICES.

THE CHILDHOOD OF RELIGIONS. By Edward Clodd, F.R.A.S. No. 47 of the "Library of Science." New York: J. Fitzgerald, 20 Lafayette Place. Price 15 cents.

Edward Clodd is well known by his admirable little work, *The Childhood of the World*. In this second work, the author treats of the origin and development of religious ideas among the principal civilized nations of ancient times, as developed by the researches of men of science. The work exhibits the perfection of literary style, combined with profound scholarship. In thirteen chapters, it details the legends of the past about the creation, the history of creation as told by science, the legends of the past about mankind, the story of the early races of man, the Aryan or Indo-European nations of Hindu religions, the religion of Zoroaster, of Buddha, of the Chinese, of the Semitic nations, Mohammedanism, etc.

VIX. By George E. Waring, Jr., formerly Colonel Fourth Missouri Cavalry, U.S.V. Boston: James R. Osgood & Co. Price 10 cents.

This pretty little pamphlet will delight the hearts of all who admire a good horse, and would do excellent service as a tract in the interests of Henry Bergh's pet society. It is taken from a larger work by the author entitled *Whip and Spur*, and is written in a strong, vigorous, and interesting style.

THE *Popular Science Monthly* for September has for its first article "The Germ-theory of Disease," by Dr. H. Gradle, who explains the theory and sums up the evidence on which it rests. Dr. Felix L. Oswald continues his pungent prescriptions and recommendations of "The Remedies of Nature" with a paper on "Asthma" and its treatment. In "Fire-proof Building Construction," Mr. William E. Ward describes and recommends a system of building with iron and *béton* without wood. "Insanity," by one who has been insane, offers suggestions, derived from the author's own experience, as to points in which the treatment of the insane and the management of asylums should be improved. Mr. E. T. Merrick presents a different view of "Our Marriage and Divorce Laws" from that which was given by Mr. Stewart in the June number of the *Monthly*, especially as relates to conditions in the Southern States. In "How the Earth was Peopled," by the Marquis de Saporta, the eminent French botanist and paleontologist, attempts to show in what way and by what means the human race became scattered at the earliest stages of its existence. In "Insects and Disease," Prof. A. F. A. King charges mosquitoes with being the most active and efficient agents in the dissemination of malarial poison. Several other articles are of practical or special interest. The editor vigorously sustains Mr. Adams in his attack on "The Dead Language Superstition."

THE *Atlantic Monthly* for September contains the following articles: "En Province," the third of Henry James' series of articles on French country scenery, this time treating of Bourges, Le Mans, Angers, and Nantes; "King's Chapel" is a poem by Holmes, which will be read with interest by old Bostonians; George Walton Green has a political article, "Our Nominating Machines"; Harriet C. W. Stanton writes a criticism of some articles by Phil. Robinson on "Poets and Birds"; one of H. H.'s most interesting "bits of travel" is given in this number, entitled "Glints in Auld Reekie"; Edith Thomas describes in her own delightful style the shores of Lake Erie, under the title "Along an Inland Beach"; "Merimée in his Letters" is the subject of a paper by Marie Louise Henry; Bradford Torrey, in "Character in Feathers," gives one of his pleasant open-air studies. The chief book reviews are of Comte de Paris' *History of the Civil War in America*, Mark Twain's *Life on the Mississippi*, Marvin Vincent's *Shadow of the Pyrenees*, Parke Godwin's biography of the poet Bryant, and Weed's autobiography; Crawford's serial, "A Roman Singer," and George P. Lathrop's "Newport," grow in interest; there is a short story by W. O. Stoddard, entitled "Annexed by the Tzar"; Mrs. Annie Field has a poem, "Chrysalides." The Contributors' Club discusses various interesting topics.

THE *Unitarian Review* for August is an interesting number. Rev. James T. Bixby concludes his study of "The Religious Genius of the Races." To those interested in the troublesome Indian question, Rev. Henry F. Bond's article on "The Ute Indians of Colorado" will afford useful information. The near approach of the two hundred and fiftieth anniversary of the permanent settlement of the Jesuits in this country has inspired Rev. G. H. Hosmer to give some account of "The Company of Jesus, its Founder and Associates." Rev. F. B. Hornbrooke writes on "Preaching." The "Editors' Note-Book" and Mrs. Lowe's department, "Things at Home and Abroad," touch on many of the problems and topics of the day.

MACMILLAN'S MAGAZINE for August gives the twenty-ninth and thirtieth chapters of Mrs. Oliphant's serial, "The Wizard's Son." The finished articles in this number are "The Pulse of English Art in 1883," "Irish Local Government," "Ranch Life in the Far West," "Two Turkish Islands of To-day,—namely, Chios and Samos." There are an interesting sketch of the life and achievements of "Francis Garnier, the Eminent French Explorer," a criticism "On some Recent Theatrical Criticisms," and two chapters of Julian Hawthorne's romance, "Fortune's Fool." Current matters are noted and commented on in the "Review of the Month."

PERSONAL ITEMS.

REV. ROBERT LAIRD COLLIER, D.D., formerly of Boston, has accepted a call to the Free Christian Church in Kentish-town, England.

ERNEST INGERSOLL will contribute to the September *Century* an interesting description of Prof. Alexander Agassiz's laboratory at Newport, R.I., which is thought to be a model of its kind. A portrait of the Professor will accompany the article.

MRS. HENRY WARD BEECHER is described as an aged, fleshy woman, with a kind and benevolent face, who carries her years with lightness. She appears in excellent health, and dresses as a sensible old lady should, comfortably and plainly. She is an exceedingly industrious lady, and writes interestingly and usefully upon household affairs.

JEREMIAH S. BLACK, who died last Sunday at Brockie, his residence near York, Penn., at the age of seventy-three, was an able lawyer, a brilliant advocate, and a courageous defender of his honest convictions. In politics, he was a Jeffersonian Democrat; in religion, a Christian of the Campbellite denomination. He was not a man of great breadth of mind, but he was without doubt thoroughly conscientious.

HARTMANN, the most popular and most interesting of living philosophers, was originally an officer in the Prussian army. Illness, compelling him to abandon his profession, led him to the study of metaphysics, just as Zeno, the founder of Stoicism, a Cypriote merchant of Phœnician origin, was converted into a philosopher by the ruin of his fortunes. It must be good news to all earnest students that Messrs. Trübner are about to publish an English translation of Hartmann's principal work, the *Philosophie des Unbewussten*.

A LADY correspondent of one of our city dailies tells in a recent letter the following pleasant incident of Herbert Spencer: "Coming from Charing Cross the other day, I got into a carriage, in one corner of which sat a slender old gentleman. His face looked familiar, but yet I could not 'place' him. The smoke from the tunnel gave me a slight irritation of the throat, and I coughed. I had thought the slender old gentleman asleep, but he had heard my smoky cough. He started up, and, diving into an inner pocket, drew forth a little round box, and, leaning over toward me, said, 'You have a cold, try one of these lozenges.' I was surprised into a stammering 'Thank you,' and with much difficulty drew a piece of lozenge from the many other kinds of pill that floated around in that box. The slender old gentleman opened the door for me, smiled grimly, and then I saw who it was,—Herbert Spencer."

GEN. ROSECRANS, of California, was in Boston last week to encourage the formation of a State Jefferson Association which shall co-operate with similar associations in other States in the work of building a great monument to the illustrious author of the

Digitized by Google

Declaration of Independence, at the national capital. Gen. Rosecrans is urging upon Massachusetts Democrats that reverence to the memory of the founder of their party demands that Jefferson be fitly honored by a grand monument which shall perpetually impress upon the young men of the country the lesson of his political life. Gen. Rosecrans says he has no doubt that there are among Massachusetts Republicans very many who revere the memory of Jefferson, and who are at heart Jeffersonian Democrats. The *Herald* informs Gen. Rosecrans that both ex-Gov. Talbot and ex-Gov. Long are ardent admirers of the great Democrat, and are therefore eligible to membership in the proposed Jeffersonian Association.

PHOTOGRAPHS.

Cabinet Photographs of the following named persons are for sale at THE INDEX office, and will be sent by mail upon receipt of price:—

Darwin, 75 cts.; Huxley, Tyndall, Spencer, Holyoake, and Abbot, 50 cts.; Emerson, Parker, Garrison, Sumner, Curtis (G. W.), Weiss, Adler, and Hinckley, 35 cts.; Card Photographs of Adler, 25 cts.; of Higginson, Abbot, and Frothingham, 15 cts.

Address THE INDEX, 44 Boylston Street, Boston.

LESSONS

For Liberal Sunday Schools or for Home Use.

I. **THE ORIGIN AND GROWTH OF CHRISTIANITY.** A series of Twenty Lessons by Mr. LEWIS G. JANES, of Brooklyn. Written entirely from the Rationalistic stand-point. Prepared originally for use in Mr. Chadwick's Sunday-school. Each lesson printed in a separate slip. Twenty-five cents for the series, including postage.

II. **FREEDOM, FELLOWSHIP, AND CHARACTER IN RELIGION.** A series of Five very suggestive Lessons, by Mrs. KATE GANNETT WELLS. Each lesson contains enough material for several exercises. Seven cents for the series, in separate sheets, including postage.

III. **THE WORLD WE LIVE IN.** A Series of Elementary Lessons in Natural History, by Mr. FREDERIC A. HINCKLEY. Adapted both to interest and profit a class of children. In slips. Twenty-five cents for the series, including postage.

Teachers will do well to examine these lessons. A liberal deduction made for ten copies or more to one address.

Supplied at THE INDEX office, 44 Boylston Street, Boston.

Freedom and Fellowship in Religion.

This is a volume of Essays published by the Free Religious Association. It contains "The Nature of Religion," by D. A. WASSON; "The Unity and Universality of the Religious Ideas," by SAMUEL LONGFELLOW; "Freedom in Religion," by SAMUEL JOHNSON; "Religion and Science," by JOHN WEISS; "Christianity and its Definitions," by WM. J. POTTER; "The Genius of Christianity and Free Religion," by F. E. ABBOT; "The Soul of Protestantism," by O. B. FROTHINGHAM; "Liberty and the Church in America," by JOHN W. CHADWICK; "The Word Philanthropy," by THOMAS WENTWORTH HIGGINSON; "Religion as a Social Force," by EDNAH D. CHENEY. Also extracts from Addresses on the platform of the Free Religious Association, by Ralph Waldo Emerson, Lucretia Mott, Dr. Bartol, A. Bronson Alcott, Julia Ward Howe, Charles H. Malcom, Celia Burleigh, C. D. B. Mills, Horace Seaver, Isaac M. Wise, Robert Dale Owen, Wm. C. Gannett, Lucy Stone, F. B. Sanborn, Wendell Phillips, and others.

This book was published eight years ago, but is a live book still, and is a good answer to the question, What does "Free Religion" mean?

Price $1.50. Address "FREE RELIGIOUS ASSOCIATION," 4 Boylston Street, Boston.

BUILDING FUND.

THE Free Society of Dorchester was founded two years ago by Clara M. Bisbee, its present resident speaker; and, seeking greater facilities, also permanence as an institution, it now asks aid toward the erection of a small and simply constructed hall. Three thousand dollars will cover the entire expense, and friends of progress are respectfully invited by material gift practically to advance the cause at once of Woman's Ministry and of Free Religion. For further knowledge of the Society, address the President or Secretary of the Free Religious Association or Mrs. Clara M. Bisbee, Clark Street, Dorchester. Contributions sent to Mrs. Bisbee will be promptly acknowledged.

THE FREE RELIGIOUS ASSOCIATION

was organized in 1867. Though having its headquarters in Boston, it is a national organization, and has members and officers in various States of the Union. It has the following

CONSTITUTION.

I. This Organization shall be called the Free Religious Association, its objects being to promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history; and to this end all persons interested in these objects are cordially invited to its membership.

II. Membership in this Association shall leave each individual responsible for his own opinions alone, and affect in no degree his relations to other associations; and nothing in the name or Constitution of the Association shall ever be construed as limiting membership by any test of speculative opinion or belief,—or as defining the position of the Association, collectively considered, with reference to any such opinion or belief,—or as interfering, in any other way with that absolute freedom of thought and expression which is the natural right of every rational being. Any person desiring to coöperate with the Association shall be considered a member, with full right to speak in its meetings; but an annual contribution of one dollar shall be necessary to give a title to vote,—provided, also, that those thus entitled may at any time confer the privilege of voting upon the whole assembly, on questions not pertaining to the management of business.

III. The officers of the Association shall be a President, twelve Vice-Presidents, a Secretary, an Assistant Secretary, a Treasurer, and twelve Directors. They shall be chosen by ballot at the annual meeting of the Association; and the President, Vice-Presidents, Secretaries, and Treasurer shall hold their offices for one year, or until their successors be chosen. The Directors shall be chosen for four years, and, at the expiration of that term, shall not be eligible for reëlection until after two years. One fourth of their number shall be chosen annually; but, at the annual meeting of 1882, the full number of twelve shall be chosen in sections of three respectively for one, two, three, and four years. The President, Secretaries, Treasurer, and Directors shall together constitute an Executive Committee, intrusted with all the business and interests of the Association in the interim of its meetings. They shall have power to fill any vacancies that may occur in their number, or in the list of Vice-Presidents, between any two annual meetings. Six members of the Executive Committee shall constitute a quorum.

IV. The Annual Meeting of the Association shall be held in the city of Boston, on Thursday of what is known as "Anniversary Week," at such place and with such sessions as the Executive Committee may appoint, of which at least one month's previous notice shall be publicly given. Other meetings and conventions may be called by the Committee, according to their judgment, at such times and places as may seem to them desirable.

V. These Articles may be amended at any Annual Meeting of the Association, by a majority vote of the members present, provided public notice of the amendment has been given with the call for the meeting.

Officers elected for the year 1882-83:—

PRESIDENT.

WILLIAM J. POTTER, New Bedford, Mass.

VICE-PRESIDENTS.

OCTAVIUS B. FROTHINGHAM, Boston, Mass.
FELIX ADLER, New York City.
GEORGE W. CURTIS, Staten Island, N.Y.
EDWARD L. YOUMANS, New York City.
FREDERICK SCHUENEMANN-POTT, San Francisco, Cal.
THOMAS WENTWORTH HIGGINSON, Cambridge, Mass.
ELIZABETH B. CHASE, Providence, R.I.
GEORGE HOADLY, Cincinnati, O.
NATHANIEL HOLMES, St. Louis, Mo.
ROWLAND G. HAZARD, Peacedale, R.I.
BERNHARD FELSENTHAL, Chicago, Ill.
ANNIE L. DIGGS, Lawrence, Kansas.

SECRETARY.

FREDERICK A. HINCKLEY, Providence, R.I.

ASSISTANT-SECRETARY.

CHAS. H. CODMAN, Boston, Mass.

TREASURER.

JOHN C. HAYNES, 451 Washington St., Boston, Mass.

DIRECTORS.

Four Years.

FRED. MAY HOLLAND, Concord, Mass.
MRS. CLARA M. BISBEE, Dorchester, Mass.
J. A. J. WILCOX, Chelsea, Mass.

Three Years.

B. A. BALLOU, Providence, R.I.
WILLIAM H. HAMLEN, Boston, Mass.
ANNA GARLIN SPENCER, Florence, Mass.

Two Years.

EDNAH D. CHENEY, Jamaica Plain, Mass.
ARTHUR G. HILL, Florence, Mass.
RICHARD P. HALLOWELL, Boston, Mass.

One Year.

CHARLES D. B. MILLS, Syracuse, N.Y.
JOHN L. WHITING, Boston, Mass.
HELEN M. IRESON, Lynn, Mass.

The office of the Association is at 44 BOYLSTON ST., BOSTON (next door east of the Public Library), where is also the publication office of *The Index*.

All letters pertaining to the business of the Association (payment of membership fees, orders for its publications, etc.) should be addressed to "Free Religious Association," at the office.

Communications intended specially for the Secretary, as well as his personal correspondence, should be addressed to him at PROVIDENCE, R.I.

F. A. HINCKLEY, *Secretary F.R.A.*

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—**The Christian Amendment,** by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents, 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

THE IMMORTAL LIFE.

By JOHN WEISS.

12mo. 255 pp., with Heliotype Portrait of the Author. Price $1.50.

Mr. Weiss' great argument for a future existence is the nature of human *personality.* The argument probably will not convince persons with a strong natural tendency to disbelieve immortality; but it ably maintains that science has not yet, as many persons apprehend and some claim, given a negative decision on the old question of immortal life. The old faith still stands; and people may hold it with Mr. Weiss, and yet accept all the attested facts of recent science.

In this age of scepticism, when almost everybody doubts and insists upon proof, this work cannot fail to be a great help to those whose visions are clouded by fears that the grave ends all, and that there is no spiritual existence beyond the dark valley. —*Boston Herald.*

THE QUAKER INVASION OF MASSACHUSETTS.

By R. P. HALLOWELL.

1 vol., 16mo. $1.25.

Mr. Hallowell has made an exhaustive study of the persecution of the Quakers by the authorities of the Massachusetts Bay Colony, and in this book he tells the pitiful story very clearly, correcting many inaccuracies in the histories which have generally been accepted as authentic.

*** *For sale by all booksellers. Sent by mail, postpaid, on receipt of price, by the Publishers,*

HOUGHTON, MIFFLIN & CO., Boston.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions, . . . 10c. per line.

CURRENT TOPICS.

IN the case of the horse-car companies of St. Louis, the court has decided that, since they are obliged under their charter to run their cars every day, being public carriers and a public necessity, they are exempt from the provisions of the Sunday law which requires the suspension of business on that day.

A RECENT traveller in Abyssinia, named Winstanley, found a man trying to whip a devil out of his insane sister, and tried to make him understand that she was not possessed, but only diseased. The unanswerable reply was: "If you believe the Bible, you must believe in possession by devils. If you do not believe in the possession by devils, you cannot be a Christian."

THE attempt to stop recreation on Sunday in Pennsylania has produced much bad feeling, and is met by a threat to enforce rigidly the Sunday law which was passed nearly a century ago, and which, although for a long time unregarded, has, on account of the divergent views of legislators, remained unrevised. It forbids travel for any other than a religious or necessitous purpose, and almost everything else except going to church on Sunday.

LAST week, the "extinct" volcano Vesuvius showed renewed indications of activity. The earth trembled so that buildings and the railway running up the mountain were injured. This fact is of great interest, considering that Vesuvius forms one extremity of a chain of volcanoes whose other extremity is in Ischia, and that, before the great eruption of Vesuvius which destroyed Herculaneum and Pompeii, Ischia was a scene of volcanic activity.

THE Dutch correspondent of the *Evangile et Liberté* complains that Rationalism is in a fair way of killing the national Church of Holland by turning many young men from entering the ministry. He says there are two hundred and sixty-six parishes without pastors; and the ministers who remain in the Church are split into three factions designated as Orthodox, Moderate, and Liberals, or Moderns. The latter are in reality Rationalists, and comprise more than a quarter of the recognized preachers.

THE telegraph has made another step in advance in China. It has had the honor of being mentioned in a memorial to the throne. Li Hung Chang recently mentioned in a report to the Emperor that he received certain information by telegraph. And, more wonderful still, that mysterious and awe-inspiring document, an imperial decree, written with the vermilion pencil, has actually been despatched by telegraph; for the Viceroy of Canton reports recently in a memorial that a decree had been conveyed to him in this way.

PROF. G. B. WILCOX in the Chicago *Advance* thus represents the evangelical status of Germany: "The Lutheran Established Church has no power over the people to compare with the Established Church of England. It drags itself along like a paralytic. Ministers preach on Sunday mornings and play cards or go out to drive or sail in the afternoon. One Dresden pastor, while receiving a salary as a Trinitarian, is an undisguised Unitarian. Prayer-meetings in which laymen take part are altogether unknown. A pastor would be as much shocked to hear a layman as some good Chicago brethren to hear a woman. A professor, in opening his lecture, would as soon think of invoking Vishnu as of lifting a prayer for wisdom to the Father of Light."

YEARLY visitations of locusts and grasshoppers are expected by the Russian peasant farmers; and the general method of defence from these mischievous pests, which were believed to be sent by God as the messengers of his ever-ready wrath against man, was by means of prayer and supplication to the supposed avenging deity. Images of saints were placed in the path of the crop-destroying insects; and, if these failed—as they generally did—to stop the destructive raiders, it was considered that God's wrath could not be appeased. But, this year, the infliction was so terrible that piety ceased to be a virtue; and men, women, and children have turned to with a will to exterminate the plague. If this had been resorted to previous to praying, the pests would perhaps have been done away with long ago.

A WRITER in the Newport Casino *Bulletin* suggests a plan to render the fox-hunt quite harmless, except to those taking an active part in it. He says: "Let the Hunt lease a piece of land in the outskirts of the town, diversified as much as possible by hill and dale, and build thereon a number of stone walls, rail fences, and other obstructions. A brook with real water might be persuaded to meander slowly through this spot favored by nature and art; and in a corner should be placed a cast iron fox, with detachable brush, pads, etc., which would be awarded to the most skilful riders and returned to the field on the next day. The fox, of course, would be of comparatively little importance, and might be dispensed with entirely In this way, all the unpleasant features of the present method are obviated. The exercise remains, and the whole thing would be no more ridiculous than at present."

ACCORDING to a Catholic missionary publication of Lyons, which gives some interesting statistics of the distribution of the population of the world among the different religions, there are 212,000,000 Catholics, 208,000,000 Protestants, 200,000,000 Mohammedans, 423,000,000 Buddhists, 163,000,000 of the Brahministic faith, and of heathens, pure and simple, 230,000,000. This is a larger estimate of the entire population of the world than is currently accepted. Quite interesting is the comment made on these figures: that the faiths are bounded by geographical lines; that in three hundred years no nation has changed its religion, no country has gone from one faith to another; that Mohammedanism has spread in Africa, Buddhism in China, but none of the old changes are renewed; that the great changes in history and society, in politics, geography, faith, and social condition, have all been made, the world was changed once by the philosophy of a few thousand Greeks, later by the conversion of a few thousand Jews and Romans to Christianity, later still by Mohammed, lastly by Luther. All these movements have spent their force: now, religions grow not by conversion, but by inheritance. Certainly, these statistics do not afford ground for the expecting that the non-Christian two-thirds of the world will ever become Christian.

A CORRESPONDENT of the Springfield *Republican*, writing in regard to the Spiritualists' Camp Meeting at Lake Pleasant, says: "For years, outsiders have commented on the amount of driftwood which gathers about this camp every year, and the more conservative of the managers have realized that there must be a cleaning out of the place; and whether the weeding-out process is now to be vigorously prosecuted seems to be the real question of the whole fight. About the camp, the two opposing parties are known as the 'Bundyites,' after Col. Bundy of Philadelphia [Chicago], and the 'Free-lovers,' though many who are thus classed under the latter banner do not belong to that class in the ordinary idea of the name. . . . As usual, there is a legion of mediums, the hot-bed of which is down through Montague Street, where you find every variety, from the one who claims to be governed by the spirit of Jesus Christ direct to the one who is under the control of 'me big Injun.' It is high time for those in authority to say that much of the chicanery and clap-trappery should go for good. Aside from this quarrel which has been precipitated among the leaders of the association, the camping season has been a very successful one, more people than ever having stopped on the grounds through the season, and many more expect to put up permanent buildings another season; but many will remain some weeks longer, and the hotel will be kept open." In the contest referred to above, the party "known as the Bundyites" was overwhelmingly triumphant, as shown in the election of officers last week.

ON BRITISH SOIL.

The objective point of the editorial "outing" had, from the beginning, been Campobello. But the attractions of the White Mountains and of Mt. Desert led to an unexpected loitering on the way. The objective point, however, was reached at last, and has not lost its share of the "outing." We remembered that our schoolmasters used to solve the question of tardiness by making delinquents stay an equal time after school, and we could think of no better way to meet the fact of our editorial truancy than to stay after the time appointed for returning Bostonward just as many days as we had played truant. Consequently, what had been intended for three weeks was lengthened out to four. And Campobello has proved itself every way worthy of the added week. It has most satisfactorily completed the trinity of delights we had resolved to bring into this editorial journeying. The White Mountain region is grand, with inimitable pictures of beauty interspersed. At Mt. Desert, grandeur and beauty are combined in rare and exquisite proportions. Campobello gives you beauty predominant,—that which you would like to live near and with always,—though it has also spots of wildness and boldness which one wants to visit rather than to look upon continuously. The three places present three different types of natural scenery, each so distinct that it is difficult to compare them, and each so entirely good of its kind that it is hard to choose among them. Yet the three are one,—an illustration which we may expect to see adopted for the theological Trinity by some orthodox preacher, who will quote it, perhaps, as the concession of a free thinker.

We had seen Campobello twice before from Eastport and from the St. John steamer, and knew how beautiful it is for situation and how attractive across the waters are its green pastures and wooded hills; but we had never set foot on its soil. Our geography, too, had failed; so that we were not sure, until a map was consulted, whether it were the jumping-off place of the United States or the jumping-on place of British America. Of course, the map decided in favor of the latter alternative, and we had to admit that this lovely island belongs to Queen Victoria's dominions. These fishermen and farmers, the permanent inhabitants of the island, whom we have been meeting for the last eight days, are a part of the people whom the Queen, in her speech just now proroguing Parliament, calls "my subjects." The question naturally occurred to us whether these "subjects" would like to be "emancipated," and become *citizens* of the United States; and also whether they would have any more actual freedom than they now have, if the Queen were an elected president-ess, and should speak of them as her fellow-citizens instead of using the quaint phrase "my subjects," and were to say "the British army" where she now says, with a queer survival of antique language from which the meaning has gone, "my army." But we have not put to any of her "subjects" at Campobello either of these treasonable questions. We remember, however, several years ago getting into conversation with a Nova Scotia lumberman, when, somehow, such treason did get into the talk; and the lumberman freely confessed his desire for annexation to the United States, and added that this was a common feeling among his neighbors.

But whatever may be the feeling, latent or expressed, on this question of annexation to the United States among the Queen's six hundred Campobellian "subjects," there can be no question to a traveller from the States that the island gives abundant evidence of existing loyalty to England. Such a traveller cannot be many hours on the soil without being reminded in more ways than one that he is in a foreign land. It is only a ten minutes' ferriage from the American shore,—less even than that if one crosses at Lubeck Narrows; —yet, as soon as he leaves the boat, he will perceive that he has gone abroad. The flags that are flying are British; and they seem a trifle too numerous to satisfy the normal demands of the resident population. It looks as if they were intended to give notice to the invading summer guests that not only is the island now a part of the Queen's dominions, but that it will not easily be made otherwise. Even the roads are no longer roads, but the Queen's highways. And carriages on them, when meeting, turn to the left in the good old English fashion, instead of following the rebellious Yankee way of going to the right. The simple and inexpensive edifice of the Episcopal church of St. Anne is the established church, with rector and rectory; while the Baptist house of worship, though quite as large, is only a dissenting chapel. And possibly an inquisitive Yankee might be disposed to ask whether the less thrifty appearance of the native population, as compared with the smart-looking towns of Eastport and Lubeck on the Maine shore opposite, is not the result of the difference in political conditions on the two sides of the bay.

But, to the people who come to Campobello to enjoy its beauty and salubrity, we apprehend it makes not a particle of difference whether the island belongs to Old England or New. Perhaps to many of them, coming from the United States, it is an added attraction that they can so easily "go abroad." They may miss, possibly, some of the virtues of their own country, and yet may gladly escape for a time from some of its evils. It has been curious to note, in our own case, how the inability to get any daily newspapers from the States until the day after their publication, and somewhat irregularly at that, has begotten the indisposition to read them much after they did come. It has been good to forget for a while politics, catastrophes, crimes, panics, failures, the Andover creed, General Butler, and all other evils and misfortunes of the time. Campobello is a place for rest as well as for refreshment and exhilaration, a place where one could settle down for a long summer and find every day a joy. Not eight days nor eight weeks could exhaust its possibilities for giving healthful delight to body and mind. The drives and walks over the island, the water-excursions from it by sail or oars or steam, are numerous and varied, and reveal new beauty at every turn. To whatever country the soil may be subject, it is a piece of nature's loveliness, and as such may be enjoyed and possessed by the people of all countries. There is impressed on our own mind a sunset picture, seen from the hotel piazza on the evening of our arrival, of which we cannot lose the ownership. It is hung in the gallery of memory near to one once seen from Lake Maggiore, which has ever since been our ideal sunset. We say nothing of the proverbial fog of Campobello; for our eight days had but one of fog, and that did not prevent a pleasant ramble in the woods. The hotels, too, which are exceptionally good, make their guests very comfortable, even in a fog,—expecting them, however, to be willing to pay for the comfort.

There are, as we hear, interesting Indian traditions and stories connected with the island; but we have had no opportunity to search them out. Mr. Charles G. Leland, who has been spending the summer here, is devoting himself specially to them, and will give them, doubtless, in some form to the public. Some of the Passamaquoddy Indians are on the island, as at Mt. Desert, plying their vocation of selling fancy baskets and other wares to the summer guests. A portion, at least, of these Indians (we could not learn how many) have been converted to the Catholic faith. Perhaps the young athlete who paddled the canoe for us at Mt. Desert was of that church, and so may have been more familiar with the forms than the doctrines of his faith. But how all-pervasive has been the power of the Roman Church was strikingly illustrated by what was related to us by a Philadelphia lady, one of the guests at the Tyn-y-coed Hotel. She was fond of visiting and talking with the Indians; and, on the previous Sunday, one of the Indian women had sung for her with great correctness and with a weird pathos of voice a Catholic hymn in the Latin language, which some convent sisters had taught her. We who hold liberal beliefs like to think that the new thought—the doctrine of evolution, the scientific philosophy of the universe—is spreading very rapidly; and in some ways it is. But how long will it take it, even at its present pace, to reach so far as has the old thought? Has it as yet found so strong a motive for propagating itself? How long before it will overtake and rationally interpret that Latin hymn which the Catholic devotees have impressed on the Indian woman's brain?

WM. J. POTTER.

SPENCER'S PHILOSOPHY.

The June number of the *Revue de Belgique* contained an essay on this subject by Count Goblet d'Alviella, whose words are always welcome to the readers of *The Index*. Among the introductory sentences are these:—

"The name of Spencer is to-day as famous among Englishmen as any other in literature or politics. His system has conquered with a high hand the scientific world of England, revived those fountains of lofty speculation which were deemed exhausted, and taken possession of the theology of those sects which endeavor to move with the age. From its native country, it has sent out rays beyond the seas. In the United States, where Spencer received a few months ago the triumphal ovation reserved by Americans for the great examples presented by the Old World, it has given birth to a new form of worship, the religion of evolution. In Germany, it has begun to divide with pessimism the inheritance of Hegelianism. In France, it is making a breach in the ancient tradition of Cousin's eclecticism, and forming more and more completely the basis of all polemic philosophy. Wherever the new doctrine has planted itself, it seems to have transformed old controversies entirely, and driven out of public favor the materialism and spiritualism to one or the other of which views thinkers have hitherto adhered, and even to have taken away from the disciples of Comte the positions of which they had gained possession in the disorderly condition of the antiquated systems of metaphysics. Outside of orthodox theology, there is nothing but the schools of philosophy derived from Kant which has been able to hold out against the invasion; and, even if the fortress of the categorical imperative has furnished a base of operations which may be called impregnable, it must be confessed that the outworks, hastily constructed by the successors of the sage of Konigsberg, have not been defended so successfully. Nor is philosophy the only branch of human activity where Spencer's system has made its influence felt. In politics, it has furnished principles for all sorts of make-shifts, substituted the idea of evolution for the weapons of revolution, shown how the upward movement of democracy is limited according

Digitized by Google

to capacity, and by contesting all theories of abstract justice taken away from the aspirations of socialism that ideal prestige which gave them their power over former generations. In art and literature, it has given birth to the impressionist school, by propagating the conviction that we see things not as they really are, but as they are presented to us in our impressions. Perhaps it is about to call forth a more powerful and fruitful movement, by reviving that pantheistic sentiment of nature which gave so much glory to pagan Greece. And finally, by demonstrating the limitations of our knowledge, it has rescued the abstract sciences from their devotion to the absolute, at the same time that it has made the reconciliation between reason and religion easier, by admitting the existence of a supreme reality which is neither mind nor matter, but superior to both."

D'Alviella's statement of the fundamental principles of the New Philosophy is masterly, but is too long for insertion in this journal, where they have been already often set forth. It is good news to hear that he will soon give some account "of the many important works of that school of philosophers and theologians, in England and America, who are striving with increasing popularity to bring to light the resources which the religious sentiment, freed from the old dogmatic superstitions and brought back to its true office of moral and philanthropic stimulant, may find in Spencer's philosophy." In this connection, the recent letter of the great evolutionist to Rev. M. J. Savage is quoted, and the *Religion of Evolution* is mentioned as a remarkable work. Next, we are told how Spencer's philosophy differs from positivism in that:

1. Spencer rejects the classification of the sciences, and also the law of the three stages of thought proposed by Comte.

2. Spencer regards the philosophy of the mind as the foundation of all knowledge, whereas Comte makes psychology a result of the general teaching of all the other sciences.

3. Spencer rests on a theory of transformation which lacks experimental basis and has never been established by direct observation, but no positivist expects that the mystery of the origin of life will ever be solved.

4. Not only the origin, but the purpose of the world is beyond the limits of knowledge recognized by positivism, which maintains that experience gives no data for laying down the ultimate law of the universe.

5. And these limits of knowledge are further transgressed by Spencer, when he attributes positive existence to the unknowable, and still more when he asserts its unity, its omnipresence, its endless duration, and finally its relation to all phenomena as the cause of these effects, and substance underlying these manifestations.

6. In morality, both schools admit individual interest as the motive for our actions, and social utility as the test of their value. But, according to Herbert Spencer, we promote the general welfare by seeking individual happiness: according to the positivists, on the contrary, it is the happiness of our race which we must follow in order to secure that of the individual. Spencer, moreover, in order to insure moral progress, counts on the revelations given by science of the true laws of social life and the advantage of keeping them. But the positivists insist on the weakness of all such reasoning, whenever selfishness or blind desire makes us seek our happiness in some immediate personal gain, incompatible with the general interest. Hence, they deem it necessary to appeal to the sentiment of duty and the spirit of self-sacrifice, which have little place in Spencer's system, but which the followers of Comte accept as the principal springs of all progress, whether social or individual, and the great permanent motors of humanity.

To this list of the defects of evolutionism in the eyes of positivists is added a corresponding one, of still greater length, made from the stand-point of transcendentalism. The article on Evolution, in the eighth volume of the new edition of the Encyclopædia Britannica, by Huxley and Sully, is also cited at great length, to prove that Spencer's system is not considered perfect, even by its advocates. The Count d'Alviella admits that "no such criticisms can deprive the founder of evolutionism of the glory of having formulated one of the most grand as well as best established syntheses to be found in the history of science and philosophy."

He does not, however, consider this system so fully worked out that it should be substituted for those now taught in colleges. A better plan in his opinion would be to teach the history of philosophy so fully and impartially as to make each student competent to decide for himself between the various systems now in vogue. The practice, still almost universal in American schools of philosophy and universities, of presenting some one system of metaphysics, as if it constituted the sum total of truth, is simply a survival of mediæval intolerance, a relic of barbarism.

F. M. HOLLAND.

THE SECRET OF THE EAST;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

CHAPTER VIII.

The Protestant Revolt.

Tyranny begins her arguments by fettering free speech. Begin your reply by breaking your fetters.—*Mirabeau.*

The analogies of body and mind are most strikingly exhibited in the development of physical and moral *poison-habits*. At first, every poison is repulsive. Children abhor the very smell of alcohol. The first effect of tobacco is that of a nauseating drug. The disgusting taste of opium prevails through every disguise. Nature protests against the incipience of an insidious "second nature," and this protective instinct often saves where neither law nor science yield their aid. In the slum-alleys of our great cities, and beset by daily temptations, the children of poverty and ignorance often preserve their physical purity by an innate repugnance to vice; and even in Northern China there *is* a "Vigilance Society," whose members, in defiance of law, pledge themselves to antagonize the abettors of the opium traffic and use all possible means to restrict an evil which they cannot suppress. Gross vices do not achieve an easy conquest: the protests of a faithful conscience warn us again and again; but, if that protest is persistently disregarded, nature at last adapts herself to the abnormal condition, and the instinctive repugnance gives way to a morbid craving for the unnatural stimulus. Healthy food grows insipid. The toper becomes a slave to his drug; and, by educational influences, the baneful habit may develop into a hereditary or even national vice.

In a similar way, such moral poisons as hypocrisy, the miracle-mania, and pessimism have to overcome the resistance of every healthier instinct before they can enslave the mind of a whole nation. In Southern Europe, the doctrines of the Gallean Church have achieved this victory. Among the Caucasian races of the Mediterranean peninsula, millions of our fellow-men have lost the normal instincts of their species, and have come to enjoy the poison of anti-naturalism. The Greek and Roman monks vied in self-abasement, self-mutilation, and the voluntary sacrifice of their reason, as their forefathers vied in science and heroic games. Patriotism has withered under the influence of anti-natural dogmas. Unmanliness has ceased to be a reproach. Manly self-reliance and athletic sports have lost their charm. The prescriptions of the Jesuitical poison-mongers have made simple truth insipid: their victims have contracted a morbid craving for supernaturalism, and love cant for its own sake. The Celtic races, whose forefathers had become inured to the vicissitudes of anarchy and despotism, have accepted the yoke of the cross and reserved their protestantism for the struggles of the political arena. Their priests have maintained their influence by catering to their national prejudices.

But the Germanic races of Northern Europe have never been really converted. Their forefathers were compelled to submit to the logic of superior force; but their acquiescence was that of the North-China Vigilance Society—a latent protest. Their conqueror had to baptize them in their own blood, and they yielded only after all their able-bodied men had literally been cut into pieces. In the winter of 772, the apostle of Northern Germany crossed the Weser with an army of sixty thousand men, and founded the bishoprics of Halberstadt, Minden, and Paderborn; while the natives disputed every inch of the ground, and only retreated after the devastation of their villages had deprived them of the means of subsistence. Two years after, they rallied their forces, expelled their priests, and chased them across the Rhine, when the return of Charlemagne compelled them once more to yield their homes to the spoiler and take refuge in the wilds of the far North-east. Here, they were attacked in 776, and repelled the invaders with such slaughter that the royal propagandist thought it wiser to confine his efforts to the Westphalian lowlands. New bishoprics were founded; and the remaining inhabitants shared the fate of the peasantry in the priest-ridden Frankish crown-lands, and were treated worse than brute beasts, till the menaces of the Spanish Moors called their oppressor across the Pyrenees. As soon as he was gone, all Saxony rose in a fierce insurrection. The hero Wittekind united the scattered tribes, and advanced as far as Osnabrück, but was soon confronted by all the forces of the Frankish Empire; and, during the next seven years, a war of extermination turned his native land into a desert. When the insurgents had been driven into the furthest recesses of the Hartz Mountains, the priests returned; and the "converted" Saxons tilled their land as duly baptized bondsmen till 792, when the intolerable despotism of their oppressor goaded them into a fresh rebellion. But the dire tactics of the iron-clad Franks prevailed again, and the war now became a remorseless man-hunt. The natives were waylaid at the ruins of their homesteads and at the river-fords. Thousands of women and children were dragged off into exile, and the male captives were slain like wolves. In Quedlinburg alone, *four thousand* prisoners were beheaded in one day.

There was no gainsaying such arguments, and the next twenty generations of the Saxon yeomen acted on the principle that "Christian submission to the powers that be" may sometimes be the safest plan. But no other slaves have so loathed the chains they could not break. When famine and defeat began to thin the ranks of Prince Wittekind, the Franks erected large crosses, as rallying-places for "converts"; *i.e.*, deserters, who wished to accept baptism and the bread of bondage. *Zu Kreuze kriechen* (crawling to cross) has ever since been the most contemptuous term in the German language. *Pfaffenthum* and *pfäffisch* (from *Pfaffe*,

Digitized by Google

a Romish priest) have become the synonymes of obscurantism and Jesuitical intrigues. The heroes of the national ballads were not the whining saints of the Romish Church, but men like Robin Hood or Ritter Siegfried and Tannhäuser. The favorite political leaders were free thinkers, like Otto I., Frederic Barbarossa (as afterward Frederic the Great), or Goetz von Berlichingen, Ulric Hutten, and George Frundsberg, who openly adopted the motto, "Gottes Freund, der Pfaffen Feind."

The descendants of the manful old Odin-worshippers still prayed to a hero-protecting, bounteous All-father rather than to a joy-hating, cant-loving "head-of-the-clerical-interest." Long after the litanies and groaning procession hymns of Southern Europe had silenced the lyre of Anacreon, and even in Southern Germany passion-plays had superseded the lays of the minnesingers, the songs of the North still breathed a fervid love of nature.* Throughout Northern Europe, and long before Luther, independence and protestantism were as invariable concomitants as faith and slavery. The German nobles paid neither spiritual nor material tithes. A few of them kept private chaplains, in order to complete the *clientèle* of a liberal household, or for educational purposes (as their successors still employ candidates of theology); but their practical habits were the very antithesis of monkish humility, and that anti-natural renunciation of earthly happiness which the Church represented as the highest type of human virtue, "Self-help" was their motto. They redressed their own wrongs, and maintained their rights even against their sovereign. In their castle halls, the rule of free speech recognized no higher law whatever. They did not devote their holidays to the self-afflictions of nature-hating fanatics, but to the recreations of their free ancestors,—to the chase, to songs, and athletic sports. At a time when the Spanish cavaliers competed for the honor of marching in procession with the pageant of an auto-da-fé, Francis von Sickingen risked his head rather than surrender the free thinker Hutten, and Martin Luther found a protector in every German nobleman.† As soon as the cities of the Hanseatic League became strong enough to resist the tyranny of the Church, they exhibited the same spirit of defiance; and several of the North-German free towns renounced the advantage of a papal recognition rather than comply with the demands of the Inquisitor-general.

The priests, in the mean time, had not been idle. Their recognized efficiency as the allies of despotism secured them the connivance of every despotic ruler; they controlled the educational institutions; they influenced legislation; they founded convents and seminaries. But, in spite of all that, their Church remained an exotic plant, and had constantly to be fertilized by papal subsidies. Like the North-China Temperance League, the nations of Northern Europe were forced to connive at a pernicious poison-traffic, but never ceased to detest the poison. The temptations of the anti-naturalists had failed to corrupt their healthier instincts. Hence, the apparent parodox that the latest converts were the first to revolt; while those who had suffered most under the yoke of the Church were unable or unwilling to break their chains. For those chains were the fetters of an inveterate poison-vice. "Hear me first a few words," said a young man, whom Dr. Mussey had admonished about his intemperate propensities, "and then you may proceed. I am sensible that an indulgence in this habit will lead to loss of property, the loss of reputation, the loss of domestic happiness, to premature death, and to the irretrievable loss of my immortal soul; and now, with all this conviction resting firmly on my mind and flashing over my conscience like lightning, if I still continue to drink, do you suppose anything you can say will deter me from the practice?"

In similar words, Cardinal Retz might have answered the arguments of Erasmus. For the nations of the Latin races, the chance of salvation had come too late. The brain—their enlightened men—clearly saw the coming tophet of degeneration and national bankruptcy; but the body of the people were intoxicated with the fumes of the Moloch fire, and pursued the road to ruin like blindfolded victims. The poison of anti-naturalism had fastened upon their souls. They had lost not only their liberty, but their desire for liberation. The systematic murder of all avowed free thinkers had emasculated the national mind. They were contentedly ignorant. They had ceased to despise mental prostitution. They had come to enjoy the ceremonies and wretched mummeries of their Church. Spain and Portugal have sunk to the level of the East-Buddhistic nations. Ireland, Southern Germany, and Southern France still sleep; and Greece will awake no more. In Italy, however, the reaction of the Protestant propaganda has led to a quasi compromise,—the intellectual emancipation of the educated classes. By a system of mutual concessions, the lower orders have been abandoned to the wiles of their clerical obscurantists; while scholars indulge in a scepticism that transcends all that Southern Europe witnessed in the days of Lucretius and Diagoras. The writings of Leopardi, Mundt, and Taine throw a curious light on this anomaly of social life, even in Rome itself.*

In Switzerland, Hungary, and other countries of mixed races, a part of the populace had actually to be bribed to achieve their own salvation. Others merely exchanged creeds, and often adopted a gloomier though more consistent form of the old superstition, or yielded only to the eloquence of an inspired apostle.

But, in the North, such arguments could be dispensed with. The nations of Northern Europe waited not for a reformer, but for a liberator; and, when the intellectual support of a few prominent scholars and the political support of an influential prince had given Luther's enterprise the least chance of success, the moral support of the people took the form of a jubilant uprising, and the Protestant Revolt broke out like the torrent of a long-obstructed river. The common people took little interest in the theological subtleties of the dogmatic controversy: they had no cause to hope that the doctrine of the New Testament could in any degree be reconciled with human reason; but, with the broad instinct of self-preservation, they seized upon the main fact that the success of the insurrection meant liberation from the thraldom of an intolerable yoke. Their clear-seeing men foresaw that the wedge which now divided the power of the Church would soon split it into smaller and lighter pieces: they felt sure that, in the course of time, the antiseptic of free inquiry and the tonic of secular pursuits would eradicate the taint of anti-naturalism; and, in the mean time, they accepted the dogmas of Luther as a man accepts the cow-pox,—as a protection from the danger of a more horrible disease.

Martin Luther was not the first sect-founder who builded more wisely than he knew. Pythagoras, who intended to introduce the superstition of the Hindu Gnostics, succeeded only in reforming the hygienic habits of his countrymen. Mohammed, the Unitarian revivalist, was inspired by a purely religious zeal. He recommended neither physical education nor the culture of the intellectual faculties, but he was wise enough at least not to depreciate them. They recommended themselves as means to his ends; and, a hundred years after his death, the civilization of Islam rivalled the culture of Greece and Rome. Luther's chief purpose was to propagate his dogma of salvation by faith, etc., and to restore the theocracy of the early Christian churches; but, before he could plant, he had to uproot, and this weeding of the soil revived the suppressed germs of Naturalism and Philosophy. And though, like Moses, he called himself a humble servant of God, it is certain that neither the diatribes of Martial and Demosthenes, nor the philippics of Danton, Mirabeau, and Lord Brougham, have ever equalled the tremendous emphasis of his invectives; and to this negative preaching he owed his wonderful popularity.

"Freedom awakened in every breast";* the mere rumor of the first success gained over whole cities and provinces; the nations of the North flew to arms, like the old Saxons at the return of their heroic chieftain; Northern Germany became the arena of an international war; and after a struggle, in which the very earth seemed to rise in defence of her children, the enemies of nature were over-

---

*In the *Streitfragen* (Minden, Wilhelm Köhler) for January, 1881, Prof. Kepler quotes the following "Alte Jäger-Lied" (Old Hunter's Song):—

"Nun steig' ich nimmer wieder ins graue Dorf hinab.
Im Walde will ich wohnen; im Wald grabt mir mein Grab:
Wo mir des Pfarrer's Kühe nicht drauf zur Weide gehn;
Das Wild soll drüber springen, kein Kreuz im Wege stehn!"

Literally:—

"Now, nevermore shall I return to the gray old village.
In the woods let me live; in the woods dig me my grave:
Where the cows of the priest cannot batten upon its grass;
Above it let the wild deer play, no Christian cross stand in the way."

†At a time when a man had to choose between slavery and lawless independence, the chivalry of Northern Europe often maintained that independence at the expense of their fellow-men; but, in better times, they have produced many of those truest friends of liberty who demand freedom for others as well as for themselves,—*e.g.*, Coligny, Volney, Hutten, Holbach, Philip of Hessen, Stein, Humboldt, De Ligne, Mansfield, Bollingbroke, Byron, Halifax, Queensbury, Egmont, Barneveldt, Kossuth, Bathyani.

*In the fifteenth century, the revival of classical studies led to a somewhat similar result. The Colonnas and Medicis protected several avowed free thinkers, and the Dictionary of the French Encyclopædists has preserved the following anecdote: "Prince Pico de Mirandola once met Pope Alexander VI. at the house of the courtesan Emilia, while Lucretia, the holy Father's daughter, was confined in child-birth, and the people of Rome were discussing whether the child belonged to the pope, to his son Cesar, or to Lucretia's husband, Alphonso of Aragon, who was considered ——. The conversation immediately became animated and gay. Cardinal Bembo relates a part of it: 'My little Pico,' says the pope, 'whom do you think the father of my grandson?' 'I think your son-in-law,' replied Pico. 'What! how can you possibly believe such nonsense?' 'I believe it by faith.' 'But, surely, you know that an —— cannot be a father.' 'Faith,' replied Pico, 'consists in believing things because they are impossible. You require me to believe more incomprehensible mysteries. Am I not bound to believe that —— had no earthly father at all; that a serpent spoke; that from that time all mankind were damned; that the ass of Balaam also spoke with great eloquence; and that the walls of Jericho fell down at the sound of trumpets?' Pico thus proceeded with a long list of all the prodigious things in which he believed. Alexander absolutely fell back upon his sofa with laughing. 'I had better believe all that as well as you,' says he; 'for I well know that I can be saved only by faith, as I can certainly never be so by works.' 'Ah, holy father,' says Pico, 'you need neither works nor faith: they are well enough for such poor profane creatures as we are; but you, who are absolutely a vice-god, you may believe and do just whatever you please. You have the keys of heaven, and St. Peter will certainly never shut the door in *your* face. But as for myself, who am nothing but a poor prince, I freely confess that I should have found some very powerful protection necessary, if I had employed the stiletto and nightshade as often as your holiness.' Alexander VI. understood raillery. 'Let us speak seriously,' says he to the prince. 'Tell me what merit there can be in a man's saying to God that he is persuaded of things of which, in fact, he cannot be persuaded? What pleasure can this afford to God? Between ourselves, a man who says that he believes what is impossible to be believed is a humbug.' Pico de Mirandola at this crossed himself in great agitation. 'Mi Dio!' says he, 'I beg your Holiness' pardon, but you are not a Christian.' 'Upon my faith,' says the Pope, 'I am not.' 'That's what I suspected,' says Pico de Mirandola."

*Es gereicht den alten Deutschen zum Ruhm,
Dass sie gehasst das Christenthum,
Bis Kaiser Karolus leidigem Degen
Die edlen Sachsen unterlegen;
Auch haben sie lange genug gerungen,
Bis endlich die Pfaffen sie bezwungen
Und sie sich unter's Joch geduckt:
Auch haben sie immer einmal gemuckt.
Auch lagen sie nur in halbem Schlaf
Als Luther die Bibel verdeutscht so brav;
St. Paulus, als ein Ritter derb
Erschien den Rittern minder herb:
Freiheit erwacht in jeder Brust;
Wir protestiren alle mit Lust.—*Wolfgang Goethe.*

powered: the demon of the Buddhistic pest had found its victor.

The leaders of the Reformation intended a Christian-Patristic revival, but the soul of its success was a *protest*. FELIX L. OSWALD.

GARIBALDI.

When I was last in America, Dr. Hollick took me to Staten Island to visit Garibaldi's host of earlier and adventurous days. I gathered in the gardens flowers to send to Menotti Garibaldi, whose act of personal friendship when he was in London I can never forget. We have lately celebrated the first anniversary of Garibaldi's death, which was marked by honoring celebrations in Rome and London. The Italians in the metropolis have had a large marble medallion executed, which, by permission of the Duke of Sutherland, has been put over the door of the room through which Garibaldi passed on his entrance as the guest of the Duke, in 1864. Not only the General, but crowds of us who were his personal friends were admitted for days; and many fêted by the splendid hospitality of the Duke and Duchess in what Mr. Gladstone well described as their "palatial residence." The likeness of "The General" is very good. His Grecian profile, his soldier's face, and imaginative head are all in the basso-relievo portrait. Signor Cesare de Tivoli introduced the assembly of his countrymen to the Duke. Prof. Leoni Levi read a well-expressed address to the Duke and Duchess, her Grace having first withdrawn the flag. It was a flag, and not the mere cloth with which sculptors usually hide their unveiled works. In reply, the Duke of Sutherland spoke in a bold voice, and said graceful and regarding words of his personal knowledge of the General as his guest at land and sea, and when Garibaldi was his host at Caprera. Then, Mr. Gladstone spoke. He stood as he stood in the Birmingham Town Hall when addresses, some time ago, were made to him, but not with that peculiar, incredulous expression which he wears when he hears praises which he deems beyond his merit, though none others before him have misgivings thereupon. On that day, his gleaming eyes, which have lost none of their fire (which, even where he is unknown, arrest the attention of all who meet their glance), read every face around him as he listened to the words spoken. Though he had come in from the fatigue of a Cabinet Council, he expressed himself with a force and fervor which were the wonder of the hour. At one point, he said he would relate "an anecdote." "No," he added instantly, "a conversation." This was the only word he changed, or that was changeable, in his speech. In one report of his speech, where speaking of those now departed who were the friends of Garibaldi when all England first knew him, he is made to say that "they had not departed without leaving behind them the tenderest fancy and the most ineffaceable recollections." The reporter had lost a word, and it is difficult for another to find an equivalent for one Mr. Gladstone has used. Of course, the dead cannot leave their "tender fancy" behind them. What Mr. Gladstone said was, "They left behind them the tenderest, fondest, and most ineffaceable recollection." Mr. Gladstone, who excels all other speakers in his perfect knowledge of what he speaks upon, delineated more completely than any one else has done the main characteristics of Garibaldi,—his noble simplicity of manner and the utter absence of fear or cruelty in his nature. Those who knew Garibaldi when he had no English friend to whom he would appeal, save Mr. Cowen, M.P., could not divine more truly the nature of the hero of forlorn hopes than Mr. Gladstone did. Mrs. Gladstone, for whom Garibaldi had always words of honor to speak, was present at the proceedings at Stafford House. The Duke gave refreshments to his visitors. The strawberries, and especially the grapes, were of surpassing flavor, which Italy itself could not excel. One could not help thinking how glad Garibaldi would have been to have plucked one dark, delicious cluster for the poor, brave Anita in the last feverish flight, which was fatal to her. If the dead still linger about the earth, her faithful and happy shade must have been near the Duchess of Sutherland on that day.

GEORGE JACOB HOLYOAKE.

"SHALLOW" AND "MIXED."

The *Christian Register*, which, it is but just to say, is *usually* fair and courteous to all classes of thinkers, contained last week the following editorial paragraph:—

> When a stalwart and trained intellect like that of the late Judge Jere. Black is able to look both life and death in the face with an unfaltering faith in God's existence, God's work, and God's goodness, the shallow sceptics whose unbelief is rooted in an egotistic estimate of their own mental abilities may well be a little modest in pluming themselves upon their superiority to the mass of Christians. The greatest minds in the world have been the most reverent believers,—not in dogmas, but in God.

Raising no question here as to the reasonableness or unreasonableness of "an unfaltering faith in God's existence, God's work, and God's goodness," we may observe that an intellect can be too much "trained" in a certain way and in one direction to be able to deal fairly and impartially with questions requiring calm, unimpassioned, unprejudiced, independent thought. Of the truth of this statement, Judge Black's article in the *North American Review*, in reply to Col. Ingersoll, was sufficient proof and illustration.

"Unbelief," or the agnostic state of mind in regard to the existence of an intelligent Being who presides over and directs the operations of nature, is not confined to "shallow sceptics whose unbelief is rooted in an egotistic estimate of their own mental abilities." It is shared by many of the profoundest and broadest and, at the same time, most modest thinkers, who belong to an order of minds far above that of Judge Black,—thinkers who, like Humboldt, Darwin, Mill, Spencer, Huxley, Tyndall, Lewes, and George Eliot, cannot justly be charged with "shallow" scepticism nor with "an egotistic estimate of their own mental abilities," nor a lack of modesty in presenting their thought to the world. There are thousands of intelligent, honest, honorable, and truth-loving men and women who cannot conscientiously, and therefore *will not*, under any circumstances, say that they believe in God, as that word is commonly understood. They cannot accept theism for the reason that the arguments for theism do not convince their understanding.

Furthermore, agnostics, so far as we are able to judge from a somewhat extensive acquaintance with them, no more "plume themselves upon their superiority to the mass of Christians" than do Unitarians "plume themselves upon their superiority" to the orthodox people, whose theology they reject, criticise, and often ridicule. Some of the "greatest minds of the world" have been believers in God, and some have not. Many of them adhere to doctrines, as Judge Black did, which it is a part of the work, and we think the very useful work, of the *Register* to combat. On the other hand, not a few of "the greatest minds of the world" are unable to believe so much even as is taught or implied by Unitarianism, some of them questioning what the writer of the paragraph quoted above seems to think must be self-evident to all except "shallow" minds. It is doubtless true that there are "shallow sceptics." But, among the millions who have no difficulty in believing as Judge Black did, and as the *Christian Register* does, in regard to the existence of God, are there *none* whose minds are "shallow"? Is not the proportion of "shallow" minds among the adherents of Christianity and other systems of theology very large? If this fact be no argument against theism, the petulant reference to "shallow sceptics" is without logical force, irrelevant, impertinent, and unworthy so fair and liberal a paper as the *Christian Register*.

In keeping with the tone and spirit of the above paragraph are the comments of Christian and many secular papers on an extract which has been widely published, said to be from M. André Berthet's *Lay Catechism*. The extract is as follows: "What is God? I don't know. Who created the world? I don't know. Whence comes humanity, and whither does it go? I don't know. When and how did man come on the earth? I don't know. What will become of us after death? I don't know. Are you not ashamed of your ignorance? There can be no shame in being ignorant of what no one could know." They who get enraged on reading these old questions and the sensible answers thereto either lack the courage to say they "don't know," when *they actually do not know*, or the clearness of thought to distinguish between what they know and what they merely believe and wish to be true. One may believe a great deal and at the same time know but very little.

But Christian papers are not the only ones liable to do injustice to opponents, or to fall into inconsistencies of thought and to exhibit a narrow and illiberal spirit in defending their own or combating opposite views, as the following from the Sydney (New South Wales) *Liberal*, an antichristian and Spiritualistic journal, sufficiently indicates:—

> The curiosities of the human mind are past understanding. Perhaps no writer has more eloquently shown the crude and unworthy ideas of God and religion contained in the current creeds and their sacred writings than Frederic Harrison, the Positivist. And yet in a lecture on blasphemy, on a recent Sunday, he said that he reads the Bible to his children as a source of instruction and comfort. We are really getting so mixed on these subjects that we shall soon be unable to distinguish Ingersoll from the Archbishop of Canterbury.

What inconsistency or impropriety is there in a Positivist's reading "the Bible to his children as a source of instruction and comfort"? Are there not many chapters in the Bible full of wisdom, and well suited to instruct the youthful mind and to give it moral stimulus? Is there any more inconsistency in Mr. Harrison's reading certain portions of the Bible to his children than there is in his reading to them selections from Hindu or Persian literature? Because a man "has shown the crude and unworthy ideas of God and religion contained in the current creed and their sacred writings," does it follow that he must keep his children in ignorance of the history and traditions, the proverbs, the lessons and examples of wisdom,—indeed, the entire literature of a people whose writings have profoundly and widely influenced the minds of men through more than twenty centuries? We have as little belief in the superhuman origin of the Bible as has our New South Wales Spiritualistic contemporary; but we do not see how any man can justly escape the charge of narrowness and bigotry, be he Christian, agnostic, or atheist, who finds fault with a Liberal because he reads selections from the Bible to his children. It evidently is the editor of the *Liberal* who is "getting

Digitized by Google

so mixed on these subjects." The same paper, some weeks ago, intimated that there was no really liberal journal in the United States, and declared that the Nine Demands of Liberalism implied illiberality. Evidently, our far-off contemporary is in need of some lessons in liberal thought.

B. F. UNDERWOOD.

EDITORIAL NOTES.

SAYS the *Banner of Light*: "A greater number of people have attended the various Spiritualistic camp meetings in this country the present season than ever before. The secular press, for a wonder, admits this fact; but the denominational press is as silent as death upon the subject."

A NEW free chapel, for old and young, will be opened next Sunday afternoon on Appleton Street, in the Paine Memorial Building, under the care of Mr. Babcock and teachers, late of the Warren Street Chapel. There will be a children's meeting at two o'clock, followed by an adult meeting at three o'clock. Subject of discourse, "Our Platform."

IN the September number of the *Century* is a letter from the Episcopal Bishop of New Mexico and Arizona, who says: "I think I understand the case, when I say that in the great cities of the West not one in ten of the nominally Protestant population are in the habit of attending any place of worship. Farther west, and in thinly settled districts, the evil is still greater. In the Western States and Territories, you may travel hundreds of miles, and not meet with a place where any regular service is held."

THE "Daisy Millers" and other American girls, as portrayed in the novels of James and other pseudo-Americans, are reaping the legitimate harvest of such misrepresentations of American character in the publicly avowed dictum of the Princess de Sagan, a leader in French society, that no "American misses" shall be allowed in her set, unless they are regularly vouched for by "two ladies of undoubted rank." The American girl who would stoop to solicit or accept "characters" from "two ladies of undoubted rank" would show herself shamefully devoid of either character or self-respect.

THE *Critic* publishes the following story, which it says Bret Harte used to tell of himself: "He was at a reception in New York one evening, soon after his Eastern pilgrimage, and was, as a matter of course, the lion of the occasion. One of the ladies to whom he was introduced took him by the hand and said, in her most impressive tones, so that the whole room heard and appreciated: 'Mr. Harte, this is the proudest moment of my life. You are my hero among writers. I admire your verse as that of no other man; but, while I think that all your poems are perfect, there is one that I like immeasurably better than all the rest, and that is "Little Breeches"!'"

A CYCLONE is a rotary storm two or three hundred miles and sometimes as much as a thousand miles in diameter, which originates in the tropics and moves diagonally over the surface of the earth northward or southward. The centre of a cyclone is a region of calm. A tornado is a whirling windstorm, generally only a few hundred yards in diameter, the centre of which is occupied by the characteristic cone-shaped or funnel-shaped cloud, whose destructive power is terrific. All of the storms which have wrought so much destruction of property and loss of life in the West this year were tornadoes, though the name "cyclone" has often been improperly applied to them.—*New York Sun.*

THE Boston *Herald* says: "Julian Hawthorne's remark concerning the agnostics, that, 'if the Bible turn out true, their disappointment will be an agreeable one; if not, they will not be disappointed at all,' is a poor paraphrase of Mr. Howells' observation in *The Undiscovered Country*: 'If we [the dead] wake, we shall know; if we do not wake, we shall not even know that we have not wakened.'" Julian Hawthorne's remark is no paraphrase of Howells'. The truth of Howells' observation is self-evident, that of Julian Hawthorne's is questionable. Orthodox people do not think that, "if the Bible turn out true," the agnostic's "disappointment will be an agreeable one." Nor are liberals generally satisfied of the truth of the proposition.

IN *Nature* a letter is published, showing the attachment of a cat to a chicken: "The old cat was lying down, the kitten asleep, and the little chick nestling with the cat, who would lift up her fore leg whenever the chick came near to allow the chick to nestle under its arm, when it would close its arm around it in a most amusing and affectionate way, and seemed to be much more anxious about it than her own kitten." Commenting on the statement, Henry Cecil says: "It is to be noted that these aberrations from inherited habit, to which we have given the convenient name of instinct, occur almost invariably under the strong solvent of the maternal στοργή; but that they should occur at all points strongly toward the essential oneness and common origin of all life, however widely it may have deviated later along its ancestral lines of descent.

WHEN he was in Europe in 1789, and "some distant symptoms painfully suggested the idea that the principles of the revolution were expiring on the soil that produced them," Thomas Paine wrote a letter to an American lady in which he indulged in the following pensive soliloquy:—

A thousand years hence, for I must indulge a few thoughts, perhaps in less, America may be what Europe now is. The innocence of her character, that won the hearts of all nations in her favor, may sound like a romance, and her inimitable virtue as if it had never been. The ruins of that liberty for which thousands have bled may just furnish materials for a village tale, or extort a sigh from rustic sensibility; whilst the fashionable of that day, enveloped in dissipation, shall deride the principles and deny the fact. When we contemplate the fall of empires and the extinction of the nations of the ancient world, we see but little more to excite our regret than the mouldering ruins of pompous palaces, magnificent monuments, lofty pyramids, and walls and towers of the most costly workmanship; but, when the empire of America shall fall, the subject for contemplative sorrow will be infinitely greater than crumbling brass or marble can inspire. It will not then be said, here stood a temple of vast antiquity, here rose a Babel of invisible height, or there a palace of sumptuous extravagance; but here—ah, painful thought!—the noblest work of human wisdom, the grandest scenes of human glory, the fair cause of freedom, rose and ell.

COL. HIGGINSON, in the *Woman's Journal*, remarks: "Even in Newport, the 'polo' and fox-hunting itself are a stimulus to athletic exercise among the very class which needs it most; and those who regard either as an effeminate pursuit will soon find themselves corrected, if they try it." No doubt. We have never heard either called an "effeminate pursuit"; but fox-hunting, as usually conducted, is a very *mean* one. The Springfield *Republican*, referring to Monsignor Capel's sermon at Newport and his presence at the fox-hunt the day following, says: "He saw the 'golden lads and lasses'—there were two of the latter, enough to save the plural—start across country to follow imported English hounds, enticed along a trail of manufactured scents, until at a certain stone wall a poor little fox pup, trapped for the occasion, was turned out of a bag, dazed and stupid, and without a notion of what he ought to do. A little aimless run here, a stop, another little run, and then all the halloo and bellow from biped and quadruped brutes burst upon him. The pitiable little creature had no familiar cover to flee to, the country and the chase were not in his education; and, when he realized that the world was all against him, a hound's teeth were on his throat, and, with one desperate yelp, his inglorious career was over. What a scene for a moralist! And was this the service of Mammon, or of a lower divinity still? 'Why gratify your desires by being indifferent to those who are suffering about you? How shall we delight to think our lives have been passed, when we come to the brink of eternity?' asked Monsignor Capel. Is it too small an application of his questions to a fox-hunt, and a sham fox-hunt at that? A poet shall answer:—

'He prayeth well who loveth well
Both man and bird and beast.'"

THE President of the National Liberal League, in the latest issue of his organ, in referring to our recent notice of the Free-thinkers' Convention which is now being held at Rochester, ascribes our word of criticism and suggestion to "spleen and disappointment," because of the exclusion of *The Index* from "liberal conventions and congresses." This is the first time we ever read an intimation of the exclusion of *The Index* from any liberal convention or congress; and, in the statement, we know there is not one word of truth. But perhaps the President of the National Liberal League means that the editors of *The Index* are excluded. But this is not true; for they receive invitations to attend and address nearly all the liberal conventions, including even those of the New York Free-thinkers' Association. Indeed, the junior editor of *The Index* has during the past few weeks received a number of letters from the Secretary of the New York Free-thinkers' Association, urging him to address the Rochester Convention this month, once at least, offering him a choice of sessions, and requesting him to reply to a Christian minister who had consented to speak at the Convention in defence of his faith, and who, it is now announced, is to be answered by the President of the National Liberal League, who charges us with "spleen and disappointment." Our objection to the New York Free-thinkers' Association, as we before stated, is that it permitted itself by the sharp practice and adroit management of a few individuals to become an auxiliary of an organization which has "excluded" from membership good men like Judge Hurlburt, George William Curtis, F. E. Abbot, R. G. Ingersoll, and R. G. Spencer, by subordinating needed work for State secularization in which all Liberals believe, to a clamor for the repeal of all postal laws against obscenity, in the wisdom of which the majority of Liberals do not and never will concur.

POETRY.

CARLYLE AND EMERSON.

A bale-fire kindled in the night,
By night a blaze, by day a cloud,
With flame and smoke all England woke,
It climbed so high, it roared so loud.

While over Massachusetts pines
Uprose a white and steadfast star;
And many a night it hung unwatched,
It shone so still, it seemed so far.

But light is fire and fire is light;
And mariners are glad for these,
The torch that flares along the coast,
The star that beams above the seas.

MONTGOMERY SCHUYLER.

The Index.

BOSTON, AUGUST 30, 1883.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

INTRODUCTORY ADDRESS

Delivered in 1882, at the Opening of the London Hospital Medical College.

BY JONATHAN HUTCHINSON, F.R.S.,

SENIOR SURGEON TO THE HOSPITAL.

There is one topic which comes into the mind almost naturally when teachers and students meet again after a holiday; and that is, to ask how the vacation has been spent. I do not, however, propose, gentlemen, in any inquisitorial manner to ask what holiday tasks have been performed, or how far the good intentions of July find themselves fulfilled in October,—whether or not you have really read the books which you had determined to read. If for no other reason, I am conclusively deterred from venturing in this direction by the character of my audience; for we have the pleasure of the company of many who are not students of medicine. I propose, therefore, on this account, to discard professional topics, and, making my own guesses as to the literary pursuits of the past two months, shall try if I can find in connection with them the material for half an hour's comments.

I will guess, then, that we have most of us recently been brought into more or less sympathy with Mr. Paul Bultitude under the painful circumstances of his transformation as told us in *Vice Versa*, and that we have almost all of us read with a kind of pleasure —of which, I hope, we felt a little ashamed—the clever but exaggerated caricature which has appeared under the title of *Democracy*. Concerning neither of these books shall I have another word to say. My real topic will be one of no such ephemeral interest, but one which will hold its place among our literary treasures for many a year to come. We are, I doubt not, most of us fresh from the perusal of the Life of Thomas Carlyle. About a year ago there appeared—immediately after the death of one who was perhaps, take him for all in all, the greatest man of the present generation—two volumes of *Reminiscences*. In these, we found among much that we valued much also that needed excuse, and some things that it was hard to forgive. Those, however, who were most pained by certain passages in that work will, I cannot but think, have been greatly relieved by the reading of the two volumes of biography which Mr. Froude has just given us. In these latter, we have, full and complete, the story of Carlyle's life, his struggle and his victory; and the hero now again claims, if I mistake not, that lofty position in our estimation from which he had been almost threatened with dethronement. Here, we are permitted to see in full disclosure the sources alike of his weakness and his strength; and our marvel at the work which he did, and at the uses to which he put his troubled life, rises higher than ever. The unconquerable independence, the industry, the faith in the future,—unclouded in the main by the deep-rooted melancholy of his nature,—the sense of duty in his work, are features in which the character of Carlyle attains sublimity. His letters to his wife and to his mother, and, perhaps above all, those to his brother John, claim our admiration in the very highest degree. Especially to all young men, and to all young medical men,—for they were addressed to a struggling young physician,—I would commend his letters to his brother. His letters to his mother make constant appeal to the difficulty under which he feels himself in using expressions which she will understand, and which will not give her pain. She had remained a Scotch Puritan of the most austere creed; and, to her, no expressions on religious subjects were acceptable, scarcely indeed intelligible, which did not clothe themselves in the phraseology of the Hebrew Scriptures. To her son, many of those expressions had seemed to have lost their fulness of meaning, and to need new translation in accordance with the wider scope of modern thought. Over and over again, he has to assure his poor mother that she and he, although they phrase it differently, really mean the same thing, and have their hearts set on the same objects,—an explanation and assurance which in the present day many thousand sons find themselves, I fear, constantly compelled to make.

In truth, it was not an inconsiderable demand upon a middle-aged matron of strict opinions to expect that she should believe that *Sartor Resartus* really meant nothing more than what she had been taught in her early life. The book is itself a protest against the enslaving nature of dogma, and an enforcement of the duty of thinking, and, above all, of feeling for one's self. It abounds in strange and out-of-the-way expressions; and that not because its writer loved singularity, but because his main mission was to try to break the bonds of formula and make the reader see that there was a substance behind which current and well-worn phrases often tended rather to conceal than to show. As its name imports, it was an attempt to reclothe human opinions in fresh and more vivid modes of expression. As the man is more than the garments which he wears, so, it asserted, is the very thought itself more than the phrase in which it is customary to array it. Let us put the thought into a new dress. Let us, if need be, strip it naked, and see then how it looks. But this process, however useful, however necessary, to a large majority is not only a difficult one, but is also attended with pain. An old and well-known friend seems changed, and changed too often for the worse, by being made to wear a new-fashioned dress. For Carlyle's purpose, the method he adopted was absolutely necessary; and, what is more, it attained its end. Many before him had recognized the exceeding importance of precision in language, and had seen clearly enough the truth which Hooker so well expressed when he said that "the mixture of those things by speech which by nature are divided is the mother of all error." It was something more than this which Carlyle saw. It was that in all forms of language, and especially in all phrases, there is danger,—a risk that the thought which should be living and free may become, as it were, imprisoned, and no longer capable of expansive growth. Is it too much to say that with the publication of *Sartor Resartus* there came in a new order of literature, and one vastly superior to that which it superseded? Critics, essayists, biographers, and historians, one and all, began from that time to see things in a new light, to try to discriminate better between the husk and the kernel, to place a far higher value upon fact, and to spare no pains to make their words convey with vividness their meaning. In this way, the book itself has been half superseded; for all the leading writers of the day have caught some share of its lessons. I am old enough myself to remember the day when this book was at the height of its popularity, and when village ladies and young gentlemen formed themselves into classes for its study with the design of reading a few pages every day, and the not unnecessary pledge that there should be no going forward until what had been read was well understood.

I have wandered, I fear, rather far from my special topic, which was, I believe, to explain to you how it came to pass that Carlyle's mother, herself the wife of an Annandale mason, found some difficulty in understanding the writings of her eldest son, and was anxious and suspicious as to their strict Orthodoxy. Perhaps, after all, it was hardly necessary to explain it.

Over and over again, in his letters to his brother, and in his entries in his own diary, Carlyle enforces the paramount duty of keeping clear of the "gig-man" spirit. In one of his most pathetic letters to his wife, when their prospects were at the lowest, and he is endeavoring to incite her fortitude to further effort, he reminds her with pride that her soul was never that of a "gig-maness." To many present, it is, I know, not necessary that these terms should be explained; but it may be that there are some to whom elucidation is desirable. Especially, perhaps, is it possible that some of the young ladies before me may not feel quite sure as to in what consist the sin and shame of being a gig-maness. Since it would be a great pity that any one should run the risk of becoming a gig-maness unwittingly, or should be incapable of understanding the compliment if told that she is not one, I shall venture to offer a few words of explanation. The words in question are designed to denote merit and respectability as indicated by externals alone, and without regard to the inner character of the man. It is said that, at a celebrated criminal trial, a witness deposed that he had always considered Mr. Thurtell a very respectable man, and, when asked why he had thought so, replied, "Well, he kept a gig." I have heard other forms of the same anecdote, all turning upon the point that the keeping of a gig—in the times when gigs were more in use than now—was an accepted sign of a certain social position. Hence, to be a gig-man, in Carlyle's meaning of the word, is to trust to externals as our credentials to the respect whether of ourselves or of others. To be above the gig-man spirit is to be capable of maintaining our proper position in the forum of our own feelings, irrespective of success in life, and to be in the habit of according such position to others quite irrespective of theirs. It is to take measure of the soul rather than of the body's trappings. In proportion as I permit to myself no sentiment of inward satisfaction, excepting in regard to things pertaining to the soul's growth, do I keep clear of the gig-man standard. If I find my happiness, on the contrary, in increase of wealth or the acquisition of titles, then I am a gig-man. The social laws which draw abrupt lines of distinction between first-class and second-class passengers, between members of professions and those who follow trades, are laws of the gig-man order. If a young lady, in her preference of one admirer to another, allows herself to be influenced by the consideration that one is a doctor and the other only a draper, knowing all the time that the draper has the warmer feelings and the sounder taste, then I much fear that she is a gig-maness.

There is yet another word frequently occurring in these letters which it may be necessary to explain. It is the German word *entsagen*. Carlyle repeatedly congratulates his brother on having learned the meaning of this word; and in one place he writes, "My main comfort about you is to see the grand practical lesson of *entsagen* impressing itself in ineffaceable devoutness on your heart." He regards *entsagen*, he says, as the first lesson in all true life. With Mr. Froude's help, we may interpret his meaning to be that we should in the first place learn the doctrine of renunciation of worldly gains, and become able to say firmly that we can do without any and all of the various pleasant things with which the world usually rewards those who render services to it. It is in fact to learn, as we find it expressed in *Sartor Resartus*, "to do without happiness, and to find in its stead blessedness." Without doubt, a most important attainment. Respecting, however, both this doctrine of *entsagen* and that of gig-manism, I feel inclined, on behalf of the weakness of human nature, to protest against their being pushed too far. They are, if so pushed, the virtues of the stoic, and fit only for the few. The world would lose much useful work, if ready-money wages in current coin should cease to be paid or should lose their present value. We are all of us gig-men more or less, and there are times when we all find it helpful to look forward to early and commonplace forms of reward. The donkey that was enticed onward by a bunch of carrots fixed on the end of the cart-shaft at any rate accomplished his journey, and probably got the car-

Digitized by Google

rots at last; and, however humiliating it may be to say so, he is in truth but an illustration of the mode in which much of the labor of the world is exacted from those of us who have to toil long after the zest for work is exhausted. *Entsagen*, for the most part, is, let me further say, a doctrine for the grown-up man, and should not be enforced either on the young or on those who have the care of them. Many, too, beyond the age of childhood find it needful to cultivate the amenities and delights of life, lest too great austerity should land them in insanity.

Were we to attempt to sum up in brief the secret of Carlyle's strength, I think we should have to say that it consisted in his perception of the reality of things. This was a feeling which was ever present with him. Men were real to him,—spirit-possessing beings, never wholly without the capability of affection, never even in the degraded condition of partridge-shooters or gig-men losing all share in the divine element of life. Their differences, too, were real, and must be taken carefully into account. The world was real, the universe real. The past had really been, and the future would most certainly come. In truth, this sort of perception is the secret of strength in us all, and its absence is the cause of all weakness. It is the very basis of all motive and of all effort. It measures our devotion to truth and our belief in its value: upon it is rooted the distrust of all shams, the hatred of all forms of lying.

The gospel of duty, self-restraint, and devotion to work, was one which Carlyle had well learned, perhaps no man ever better. But there was a great failing in his attainments, one which marred the happiness of his life, and which not only robbed him of the reward which was his due, but considerably diminished the usefulness of his teaching. He had not learned what we may, I think, without irreverence style the Religion of Patience. By patience, I mean not the mere passive virtue of endurance, which, indeed, is not unfrequently no virtue: I mean rather the ability, when we have done our best under all possible circumstances, to rest undespairingly and trustfully for the result. Dare I venture, for one moment, to assume the prophet's mantle myself, I would foretell that the worship of patience in this exalted sense is one upon which the present age is about to enter. If we glance back over the great mythologies of the past and note their hidden meanings, we shall observe the worship, under various types, of various forms of power, of beauty, and of virtue. In the earliest ages, the gods were symbols of force: they did, and not always beneficently, the great deeds which controlled the destinies of men. Next, as in such types as that of Hercules, we see force combined with human-heartedness, but still force, gross and almost purely physical in its efforts. Side by side with this sprang up the worship of beauty, especially in human and female forms; and the shrines of Juno, Minerva, and Venus, under various names in different climes, claimed their countless votaries. As the moral sense grew and human sympathy expanded, the unsatisfying nature of these religions of the external became *felt*; and the world witnessed events such as the self-renunciation of Buddha and the advent of what has been well termed the Worship of Sorrow. In these sublimely loving creeds there were, however, elements of weakness and of unfitness for the every-day work of the world; and the pendulum of human sentiment, as it was sure to do, swung back again toward an exaggerated estimate of physical force and natural beauty. In truth, the worship of these was far too deeply rooted in our very being for it to have ever been put aside. The other had been added, but these had not been dethroned. Nor will the introduction of a new goddess effect the displacement of any one of her predecessors. We may pay vows at the altar of patience without ceasing, also render due homage to courage, energy, and physical vigor, and without bating one jot of our admiration for the charms of external beauty or of our reverence for that glory of soul which can place the happiness of life in pouring blessings on others. I am aware that, in offering these suggestions, I am giving but the barest outline of a subject full of detail and complexity. But we may probably still find that it is not very far from the truth, and that in all ages men have given their reverence—if we put aside their fears—first to manifestations of power, next, to those of beauty, and lastly to self-abnegation. In the temple which encloses these three shrines, we must all still worship. If we cease to revere strength, we shall reap as our reward weakness. If we shut our eyes to beauty, we shall lose the joyousness and brightness of life. If we fail to feel the divine attractiveness of self-abnegation, we shall soon find that the priceless capability of sympathy and love has faded from out our hearts. We may thankfully recognize that there is at present no sign that the world is likely to fail in its allegiance to any one of these three; and the sooner that the shrine of patience is admitted as a fourth, the better will it be for us all. I have let slip an expression, in suggesting that patience should be typified as a goddess, which I ought perhaps to recall or qualify; for it may be doubted whether the symbol of a female god would be quite appropriate. What is meant by the patience which the world is now in need of learning, and respecting which Carlyle so definitely failed, is the power on all subjects to receive all facts without prejudice; to accept the work, imperfect though it may appear, which is done by others; to be hopeful and trustful under all circumstances; to bear our lot in life, when unalterable, without resistance and without complaint. Other things being equal, patience gives to the character which possesses it an enormous advantage; for it shields the mind from a thousand sources of turmoil and discouragement. Here let me say that, if Carlyle failed in the exercise of this virtue, he did not do so in his appreciation of it. The German motto, "Ohne Hast ohne Rast" (without hurry and without sloth), was constantly on his tongue; and many and forcible were his exhortations to his brother to take courage, and vigorous were his expressions of faith in a future world. But, in spite of this, his patience often broke down; and he formed harsh judgments of others—both of their actions and opinions—simply because he could not compel his mind to examine them with candor.

Part of his impatience was creditable, being due to the greatness of his nature in other directions; his keen appreciation of the true making him correspondingly intolerant of what seemed to him false.

This topic of life-patience is one which concerns us as medical men, perhaps, more directly than some of the others which I have mentioned. To a large extent, impatience of life in its various forms—acute, chronic, and paroxysmal—is undoubtedly a result of inherited organization or of derangement of health. Its cure, if cure there can be, must be sought from physical means, and not from any new development of opinion or fresh insight into the order of the universe. That, however, the influence of opinion and of creed upon the mental health is often very great, no one knows better than the medical observer. This evening, I propose to eschew all purely medical matters; and I shall therefore now confine myself to a few remarks upon the bearing of different modes of belief upon cheerfulness in life. It is needless to remark upon the absurdity of exhorting a man to be cheerful or to be patient. You might just as reasonably exhort him to be six feet when he is really only five feet ten. The problem is to make him cheerful, and it cannot be done by preaching to him concerning the duty. Now, in studying the genesis of patience, I think it may, in the first place, be admitted that patience is in the main based upon hope. "We live by hope, we breathe the glad air of a bright futurity; and so we live, or else we have no life."

Next, let me assert that it is not so much the greatness of the things we hope for as the certainty that they will come which makes us feel able to wait. We are not by nature gamblers, loving to stake our all upon a throw; and the prospect of small but certain profits has a far more attractive power over most minds. I have said that Carlyle was impatient, and that he formed, under the influence of prejudice, very unjust opinions on some topics. Among others, he spoke of the doctrines of Darwin as too contemptible to be worth a moment's consideration. In putting them thus scornfully aside, I think he missed a main source of comfort in life. The truth is that what Carlyle himself was proclaiming in the language of the mystic Charles Darwin was explaining in the language of science. Carlyle was asserting that there is a spiritual power in nature; was bidding us reverence that power as supernatural, and as working through rough and mysterious ways toward certain and definite good. Darwin, looking at the same facts from a biologist's stand-point, explained how this result did indeed come about; and that, too, through the simplest and most unmysterious ways. It has been thought by many—by believers as well as sceptics—that Darwin's explanations are melancholy ones, and that they would in short land us again in regions of mere brute force. I cannot think that this view is correct. Darwin did not impose any new "law": he simply interpreted the facts of nature; and nature, whether his explanations be true or false, will go on in the future as it has done in the past. We may then expect confidently in the future the same kind, perhaps the same rate, of progress which there has been in the past. This consideration should certainly forestall despair. And there remains another which may, I think, reasonably give us a lively hope. When we use such phrases as "survival of the fittest," "the battle of life," "the struggle for existence," and the like, we by no means have regard to brute force only. Friendship is also a force, affection and love are forces of incalculable power; and it is with these which we have to reckon in estimating the prospects of the battle. That victory will, in the long run, be found on the side on which they are ranged, is certain, if we reflect for a moment on their nature. Love and friendship, as well as hatred and selfishness, will make use of material means and brute force in order to success. These means will be common to both; and since love leads to union, and hatred to isolation, love must of necessity in the end prove the stronger. Surely, a mind familiar with such thoughts gains much in the solid foundation of its hopes.

There is nothing here erratic or uncertain. Under the laws which the Creator has given to life, simple as possible in themselves, there must be progress in earthly happiness. Nor do the facts of history belie this speculative conclusion. Did time permit, it would be easy from various other departments of natural science to produce arguments of a similar nature, and show how much knowledge in these directions tends to produce patient hopefulness as to the destinies of mankind.

I hope that I shall not hurt the feelings of any by using the term prophet as applicable to Carlyle. In truth, there is none other suitable. Not one of the great Hebrew seers was more impressed with the importance of his message, or more resolute to deliver it faithfully than he. None ever more profoundly reverenced the Unseen Power, or sought more earnestly to live always as under his Master's eye. We must make allowance for changes in the age of the world, and for differences thus brought about in modes of expression; and, these being made, we shall find in Carlyle by far the closest resemblance to such men as Jeremiah, Isaiah, and Ezekiel that the present age has produced. He foretold, not the fall of this or that city or kingdom, but the general prospects of his race; and he denounced, with a fervency at least equal to that of those whom I have named, the penalties which must come from want of truthfulness, want of honesty, or, in a word, from ceasing to fear God. Nor were his modes of expression and of publication so very different from those of old, and what differences there were he could not well have avoided. At one place, we find him declaring, "Had I but two bread-loaves in the world and one true idea, I should hold it my duty to part with one loaf to buy pen and paper, and live upon the other till I got it written." At another, he expressly states that the great Hebrew writers were those with whom he most closely sympathized, finding in them an earnestness akin to his own. Like them, he had to bewail that his message found no hearing. "One's heart," he wrote, "is for hours and days overcast with the sad feeling,—'There is none, then, not one, that will believe in me!' Great in this life is the communion of man with man. Meanwhile, continue, then, to believe in *thyself*. Let the chattering of innumerable gig-men pass by thee as what it is. Wait, then, on the bounties of thy unseen Taskmaster, on the hests of thy inward *Demon*. Sow the seed-field of time. What if thou seest no fruit of it, another will. Be not weak. One way or other, thy message will and shall be uttered. Write it down on paper, anyway; speak it from thee,—so shall thy painful, destitute existence not have been in vain. Oh, in vain! Hadst thou, even thou, a message from the Eternal, and thou grudgest the travail of thy embassy! O thou of little faith!" With many such expressions do we find him in his private diary striving to sustain and strengthen his sense of responsibility in his work. The message which he believed that he had chiefly to deliver was that the natural is also the supernatural. He sought not to degrade the supernatural by bringing it down to the natural,

Digitized by Google

but rather to elevate the natural. In this there is doubtless a great meaning, but at the same time somewhat of the jargon of words. To say that the natural and the supernatural are really all one, and both the work of one and the same Maker, is probably to most of us the simplest and clearest mode of expression.

Many ages have had their prophets and their seers,—those who in the uttermost earnest have set themselves to deliver the messages with which they had been intrusted. If I am not mistaken, however, no age and no country has been more favored in this respect than our own. I will name to you four, not that they are the only ones, but rather that they stand foremost, and because, also, I think they may be fitly held to represent the four divisions of social religion to which I have referred. To Carlyle, of course, we give the chief place; and to him we assign the priesthood of the worship of strength. To him it was permitted to see that all power—physical, intellectual, and moral—is alike God-given, and must be used for the Maker's ends. This was his message: "Be strong, and to that end be truthful; be honest, for in falsehood and dishonesty there cannot possibly be other than weakness. Reverence your strength." Of him I have already said all that time will allow.

There cannot be the slightest doubt as to whom I ought to name as our seer of the beautiful. Note first how the domain of the beautiful has of recent years been enlarged. No longer are our conceptions of it almost solely associated with human or, at any rate, animal forms: we now find delight in a thousand aspects of inanimate nature to which our forefathers were well-nigh blind. Let us note, also, that only within the present century have we shaken ourselves clear of the trammels of an outworn Puritanism, which forbade us to seek pleasure from beauty of any kind. We do not owe our emancipation in this respect wholly to one man. There is, however, one author who, by his own intense purity of taste and almost unexampled power in the use of language, has done more to develop the perception of beauty in the minds of Englishmen than the rest of his generation taken together. Not only has he proclaimed "the duty of delight," but he has taught us *how* to practise it. What Carlyle has done for the worship of strength, his pupil, John Ruskin, has done for that of beauty.

To Wordsworth must, I think, be assigned the office of latter-day priest at the shrine of self-renunciation and human sympathy. This early-orphaned son of a country attorney devoted himself almost from boyhood to the task of reproving the pride of wealth and power, and of showing us the lovable side of lowly life. Having first, as all prophets must, trained his own heart by observation, and cultivated his own feelings until he could trust them, he then, with a calm carelessness of criticism, and without hoping for applause, set himself to his task. He had known from his youth the details of the lives of the peasants of the dales; next in Cambridge, then in London, and lastly in Paris and France, he brought himself into close contact with other phases of human life. His was not thoughtless feeling: he desired to know how best his sympathies should be directed. In his "Prelude," he has told us, in simple and pathetic language, what his feelings were while mixing with the poor of London and of France. Making allowance for difference in time and country, I do not think that even Buddha himself, when he left his father's palace for the desert, manifested a more calmly self-renouncing spirit than did Wordsworth at this epoch of his life. He would live on the smallest pittance, in the least possible cottage; and there he would do his share in the world's regeneration. The age of hermits and devotees was happily passed away: had it not been so, he would have become one. As it was, he married a wife, brought up a family, did his best to provide things honest in the sight of all men, and through a long life worked on with a most noble singleness of aim. Wealth and honors never tempted him, and probably not in any subject that he selected, not in a single line that he ever wrote, was he influenced in the least by the desire of praise. He did not preach, he was not didactic: his power was far higher. Instead of telling us what we ought to be, he finds us the means of becoming: he does not instruct us, he cultivates our hearts. The "Prelude" and the "Excursion," although studiously calm and self-repressed, are full of narratives which it is impossible to read without emotion or to dwell on without profit to the soul. His "Happy Warrior" and "Ode to Duty" ought to be fresh in the memory of every young man.

His nature was, however, not strong on all sides. He was ignorant in science, especially in biology and political economy, and very distrustful of them. His sympathy with the exercise of natural strength was but limited; and I do not think I should be wrong in even saying the same of his perception of external beauty, unless it could be linked with some human lesson. He was spiritual, not sensuous. Like Carlyle, he was subject to periods of depression; but, in the main, he was full of hope and of faith in an invisible Power under which all things worked together for good, a sentiment which he has well expressed in the lines which have been called Wordsworth's Creed:—

> "For me, consulting what I feel within,
> At times when most existence with itself
> Is satisfied, I cannot but believe
> That, far as kindly nature hath free course,
> And reason's sway predominates, country,
> Society, and time itself that saps the individual's
> Bodily frame and lays the generations low in dust,
> Do by the Almighty Ruler's grace partake
> Of one maternal spirit, bringing forth
> And cherishing with unbending love
> That tires not nor betrays."

If we go to Wordsworth to learn sympathy, we must, I think, turn to another poet for initiation into the cultus of life-patience. In this noble worship, if I mistake not, Robert Browning stands as chief priest. The *Ring and the Book* is an eloquent apology for human motives, a vehement and very successful attempt to make us feel how easy it is for men, under various phases of impulse, to entertain most different opinions as to the right or wrong of the same sentiments and actions. Intellectual perception of the possible good in all men, almost in all actions, is a lesson to be found more or less distinctly in all his writings. When once we perceive this, the spirit of anger and denunciation dies in us, and we become able to see things calmly, to reason and be patient. Of the fallibility of all human judgments Browning never ceases to remind us. He is forever pronouncing blessings on the eyes that can see, and has suggested, somewhat rudely, that it is possible that our ears may be "stopped and stuffed despite their length." He has, however, far nobler lessons than these. He teaches the continuity of time and absolute permanence of all moral force. He insists that evil is merely a negation, and foretells the triumph of the good. In his hands, death loses its terrors; for we are made to see that it can but change the body, and cannot possibly conquer life. The gain of earth, we are told, must of necessity be heaven's gain too; in other words, the gain of time must be also the gain of eternity. In speaking of Carlyle's contempt for Darwinism, I tried to show you that really these two were saying the same thing; and I am now desirous to extend that assertion both to Wordsworth and to Browning. They both, looking at the subjects from the spiritual side, and using poetical language, assert precisely the same conclusions as those of Darwin. What is the following but the doctrine of "survival of the fittest" applied to morals?—

> "To trace love's faint beginnings in mankind,
> To know even hate is but a mask of love's,
> To see a good in evil, and a hope
> In ill success; to sympathize, be proud
> Of their half reasons, faint aspirings, dim
> Struggles for truth, their poorest fallacies,
> Their prejudice and fears and cares and doubts,
> Which all touch upon nobleness, despite
> Their error, all tend upwardly though weak."

Or again,—

> "The evil is null, is naught, is silence implying sound;
> What is good shall be good, with, for evil, so much good more."

I could easily produce hundreds of other quotations to prove that Browning is in a most emphatic manner an apostle of hope and teacher of patience in its highest sense. I should do myself an injustice if I were to allow you to believe that this is the only lesson which I have got from his noble poetry; but it is the chief one, and for it I owe him a lifelong obligation. The same kinds of consolation and sources of hope are also often alluded to with most delicate force by Mrs. Browning. It is, I think, in *Aurora Leigh* that she expresses her longing wish

> "That no truth henceforth seem indifferent,
> No way to truth laborious, and no life,
> Not even this life I live, intolerable."

At another place in the same poem, she says, beautifully:—

> "There are nettles everywhere,
> But smooth green grasses are more common still.
> The blue of heaven is larger than the cloud.
> I would be bold, and dare to look into the swarthiest face of things,
> For God's sake, who has made them."

I have named the four authors to whom, chiefly, I have been myself indebted. It may easily be the case that others have found the same lessons as clearly brought home to them by other writers. To those who wish to find the teaching of them all combined in one man, I would commend the writings of Emerson; but they must be prepared for a considerable reduction in vigor. With still further dilution, but with much sweetness and grace, the same may be found in the prose and poetry of Longfellow.

While of the four whom I have named it is true that each one has his own particular message, so that I have been able to assign to each his special vocation, it is also true that they have much in common. One and all are eager to face the facts of man's existence, and the conditions which surround it,—to see and to feel the reality of all that concerns alike his physical and spiritual life.

> "Let good men feel the force of nature,
> And see things as they are,"

is the prayer of them all. Each one in turn has for himself faced these facts, and arrived at a sure basis of hope. All of them are zealous for man's effort and confident of man's reward.

One general remark as to these our prophet-poets, and I have done. They are of no use to those who will not believe them: it is only upon those who have ears to hear that their blessings rest.

Now, gentlemen, students of our College, in conclusion I can but hope that none of you will consider that I have unduly neglected an opportunity of speaking to you on subjects directly pertaining to your education. I hope to have other opportunities for doing that. It has seemed best this evening to address you on topics which concern us all as men. I might have devoted the hour to eulogy of the profession which you have chosen, but surely it needs no praise. So, also, I might have praised the school which you have selected, and paid compliments which would have been very sincere, however blunt, to those at present concerned in its management. But here, again, facts speak for themselves, and you are familiar with them. I have preferred to try to find you motives for work, and to give you strength and confidence in study. If now I were to sum up in one sentence what I have been enforcing, it would be this: The secret of all noble life lies in belief, and the characteristic of all noble minds is the vigor with which they believe that which is true. Try to attain belief in the reality of all things: so shall you never want for motives, so shall you be able to live and work without hurry and without sloth. Finally, permit me to commend to you this formula: Prize strength, love beauty, practise self-denial, and be patient.—*London Medical Times and Gazette.*

CORRESPONDENCE.

"THE CLAIMS OF RELIGION."

Editors of The Index :—

Mr. A. N. Adams' paper under this head, which has just fallen under my eye, pleases by its moderate tone and its evident reserve of force in thought. I take issue with none of its positions; but I think it does not claim enough for that positive religion of science and humanity, which inscribes no name upon its banner, of which morality is but a constituent principle. Its revelations, *continuous* for disciplined research and experiment in physics, are no less so in physiology, whether of the animal or in the social body for intelligent and energetic explorers. Achievements such as the telephone or the electric light, which by our ancestors would have been accounted miracles, are paralleled in the moral and industrial sphere by Rochdale, by the Leclaire and Robert Company, or by Godin's Familistère at Guise.

The term "religion" is conventionally applicable to any tie which a certain number of men acknowledge, and which regulates or tends to regulate their conduct toward each other. In this sense, drawn from the root of the word, "religo" (I bind together), Free

Digitized by Google

Masonry is as much a religion as those which parade the furniture of supernaturalism; but, while the ancient forms of pledge, however good, better, or best at their origin, have, by "broad spreading, increased to nought" as moral influences, the facts which appear to me basic in religion are seldom thought of, when that word is mentioned. Yet these facts are as patent to the uneducated farmer as to the most learned scientist, who, in tracing them among the stars and the atoms, often loses sight of their practical obligations over human conduct. The natural definition of *religion* is the *faithful performance of functions by the organs constituent of an organism.* A religious stomach digests well. A religious brain thinks well. A religious man or woman fulfils, with least friction, duties conducive to the welfare of family, friends, and the State. *Health* for the individual body, *harmony* for the social body, are the objects of religion. As the earth is an organ of the solar system, the religion of her races, nations, and individuals, has an essentially terra-solar character. *Agriculture is the body of religion.* All other industries are to be approved or condemned according as they harmonize with agriculture, as do useful manufactures and commerce, or are incoherent with it, like speculation, gambling, and war.

Doctrines and ceremonials may reinforce the natural religion of man as intelligent chief organ of the terra-solar organism. The difficulty has been that doctrines and ceremonies of a local expediency, at best but accessory and subordinate to the great industrial and social religion, have usurped an importance quite fictitious and fantastic. The phenomenon has apparently absorbed the substance, really concealed and misinterpreted it. The accredited exponents of these pseudo-religions have been really and generally, though not always, heretics and charlatans, whose impiety appears from their evasion of productive and distributive functions. That cerebral introsusception which would substitute verbiage or sentimental abstractions for worship with the plough and spade must be either insane or dishonest. Thus, it subordinates morality to ceremonial pietism, while taking care not to defraud its "Saviours" of their appointed function in vicarious atonement by the omission of any appetizing sin. If all those spiritual self-abuses that parade under the banner of religion were abolished and forgotten, religion would persist unshaken in the necessary and fundamental relations of the earth with her individual organs, man being their chief. Proprietorship in the soil is the foundation of morality, as it is accessory to the fulfilment of religious functions; and the most religious nation is that whose legislation and customs enable the greatest number of mankind to live healthily and happily by their labor. Labor itself has its diseases, as when, forfeiting propriety in its products, it is enslaved to idle and fantastic luxury. The atheism of atheisms is abstraction. Once losing sight of our terra-solar parents,—who, whether primary or secondary and mediatorial, are to us the real sources of all vital and consequently of all spiritual influx, and pretending to worship an hypothesis,—what can be expected but all sorts of charlatanry and swindling in its theocratic ministers? The disastrous result of this fiction is the decadence of agriculture. Under the stimulation of commerce, the fertility of most countries, and especially of our own, is being rapidly exhausted; while China—which, with all its vices and absurdities, has preserved the traditions of agricultural religion—bids fair to remain a garden when America shall have become a desert. M. E. LAZARUS, M.D.

GIVE US MORE LIGHT.

Editors of The Index:—

About the time when Joseph Cook began what he calls the Monday Lectureship, or a little earlier, I asked him this question, Why is Jesus *now* called Christ?

He gave no answer.

I repeated the question.

Instead of answering it, he began to talk of something else.

I respectfully requested an answer to my inquiry, but he gave none.

It seemed to me that a public champion of Christianity should have had ready for immediate use an answer to such a question. Still, if he had desired time to formulate it in seventeen or twenty-three concatenated propositions, I would have made no objection; but he took refuge in persistent silence. The impression he made upon me was that he knew no satisfactory answer, and was ashamed to acknowledge his inability.

The question is not an easy one for an orthodox man who is determined to adhere to his Orthodoxy. I mention it here for the purpose of saying that the elements of a correct reply are more clearly given in a book recently published by George H. Ellis of Boston than in any other within my knowledge. This book is entitled *Jesus, his Opinions and Character: the New Testament Studies of a Layman.* The author deals with his subject in a manner thoroughly independent, yet reverent. He seems free from bias, both theological and anti-theological, and shows minute and accurate acquaintance with Scripture, as well as a habit of candidly weighing evidence and forming conclusions. The work received critical notice in *The Index* some weeks ago, and in the *Christian Register* of earlier date. To me, it seems decidedly the best of the modern biographies of Jesus. C. K. W.

[We entirely concur in C. K. W.'s estimate of the book mentioned in the above communication.—ED.]

THE AUTHORITATIVE CHRISTIAN GOSPELS.

Editors of The Index:—

While I look upon *The Index* as a most able and conscientious religious paper, and far more valuable,—because it stimulates thought and study that are worth something,—far more valuable than any other religious paper now published, except the truly free (Quaker) journal published in Philadelphia, you personally know that I am bitterly and unrelentingly hostile to your paper's antichristian position. Knowing this feeling of mine, I was struck with the magnanimity and courage that led you to publish my letter entitled "A Work for Comparative Religionists"; for the letter called attention to a fact that disturbs Free Religion's chosen position most seriously. There is certainly no other paper of note in Boston, religious or secular, that would have shown the same high qualities in this matter as did *The Index.*

I wish to call your attention now to another fact as to the Christian canon. It is also a fact that will seriously disarrange every present point of view taken in relation to Christianity; but it is a fact that will soon be beyond ignoring. Hence, it will be wise as well as magnanimous and brave to give it audience.

Jesus' sayings in Matthew xxiii., 1–8, cut off every teaching of every apostle as of the slightest authority over Christians. Hence, they strike from the New Testament canon every book, beginning with the Acts and ending with Revelations. And it is all waste work, to one who plants himself on the true Christian foundation, to try to bother him with the innumerable tomfooleries with which those books abound. But Jesus reduces the New Testament canon still farther and most seriously.

In the fifteenth chapter of John, verse 27, we find Jesus saying to his twelve apostles, and to them alone, "And ye shall also bear witness [of me], because ye have been with me from the beginning." This was authorizing the twelve to "bear witness" of him for a reason based on the soundest common sense,—"because they had been *with him from* the beginning." Thus, the twelve had heard what Jesus had to teach so often and so fully, with such abundance of explanation, that his exact words they could not mistake. And, undoubtedly, in this intercourse, they wrote down the Master's words, so that the inestimable instructions should not be lost or misstated. Any other supposition than this last is idiotically doing violence to human nature. Now, Matthew and John were two of these authorized witnesses. But Mark and Luke were not so authorized. Hence, on the authority of the Master himself, the Gospels of Mark and Luke are to be stricken from the New Testament canon. And well should they be so; for, if any new Starkie or Greenleaf or Phillips should wish to show, by example, the worthlessness of hearsay as contrasted with original or direct evidence, he could find nothing more apposite than reports by Luke compared with those by Matthew. For example, Luke makes Jesus say, "If any man come to me and hate not his father and mother and wife and children and brethren and sisters, yea, and his own life also, he cannot be my disciple." A most infernal teaching, and which has in our day afforded a most powerful weapon against Christianity. Turning to Matthew, the authorized witness, I find the real saying, out of which hearsay evolved the villanous travesty of Luke. Jesus' real words were these: "He that loveth father or mother more than me is not worthy of me; and he that loveth son or daughter more than me is not worthy of me. . . . He that findeth his life [Daniel Webster on the anti-slavery issue] shall lose it; and he that loseth his life for my sake [John Andrew in the anti-slavery contest] shall find it." Let me illustrate, also, the first of the above verses. If my father bids me take revenge when the Master bids me forgive, and I obey the former, I love my father the better, and am not worthy of the other.

The first beatitude, as given by Luke, properly translated, reads thus: "Blessed are ye beggars; for yours is the kingdom of God." A most ruinous premium offered for mendicancy. This was a hearsay report of the opening of the Sermon on the Mount. Turning to Matthew's authorized report of the first beatitude, we find it to read, when rightly translated,* "Blessed are the beggars in spirit [undoubtedly meaning, Blessed are the beggars for light or information], for theirs is the kingdom of heaven."† This is of the highest, noblest, grandest.

By comparing the whole Gospel of Luke with the Gospel of Matthew, any one may find an abundance of illustrations of the point to which I am calling attention. Mark commits few such gross and fatal errors as Luke; but he is guilty of enough to vindicate the supreme common sense of Jesus in intrusting the transmission of his teachings to prepared and competent witnesses, and to such alone.

But the New Testament canon must be reduced still farther. There are portions of the Gospels of Matthew and John that merely convey to us the opinions of those two apostles. Such is the celebrated proem to John's Gospel. Except as a pleasing study in ecclesiastical and dogmatic development, this proem has no importance for Christians, not a letter of it is of the slightest authority over the Christian conscience or the Christian faith. The same is true of the first two chapters of Matthew, even if they be genuine. JOHN B. WILLARD.

STILL RIVER, WORCESTER CO., MASS.

WORKING FOR OTHERS.

Editors of The Index:—

What is it better than downright dishonesty in many Protestant ministers to argue and quote "to prove" to their hearers that a life of self-sacrifice brings some form of *reward* to such as so labor for others, when the notorious fact is that all sorts of persecution and distress of body and mind usually result to any one, who, having a single object in view,—that of helping others,—continually carries it out in his life? And the choice really seems to be either to accept all this personal evil for the chances of so giving good to others, or to allow the wide principle of the "survival of the fittest" to apply to mankind as it does in the rest of the living world.

Surely, at least, it can be safely said that it is not a noble, manly position to advise others to do anything for a price or reward, here or somewhere else, real or purely imaginary. It is more nearly sordid and worldly. Better would it be to tell the real state of affairs, or let the matter be unsaid wholly.

Frequently have honest inquirers tried to urge this on men who seem to be quite enthusiastic preachers of the system of reward for well doing, but all with no avail generally; individual experience and verified history even failing to demonstrate this mischievous doctrine in its true light.

The more one does for others, the less one does for one's self, as far as worldly comforts go; and the nobility of self-sacrifice is in the full understanding of just this fact, not in hoping that some return will be made for kindness given. JOHN DIXWELL, M.D.

BOSTON, Aug. 9, 1883.

INGERSOLL ON HOLYOAKE.—We gave two weeks ago an extract from a letter from Col. Ingersoll, printed in the *Investigator*, in reply to articles which had appeared in that paper "attacking the motives of George Jacob Holyoake." From the same letter, we give the following: "He has for forty years been preaching and practising industry, economy, self-reliance, and kindness. He has done all within his power to give the working-man a better home, better food, better

*For my philology, I refer to the Septuagint version of I. Samuel ii., 8.

†I would refer the doubter of my exegesis to Isaiah xxix., 24.

Digitized by Google

wages, and better opportunities for the education of his children. He has demonstrated the success of co-operation, of intelligent combination for the common good. As a rule, his methods have been perfectly legal. In some instances, he has knowingly violated the law, and did so with the intention to take the consequences. He would neither ask nor accept a pardon, because to receive a pardon carries with it the implied promise to keep the law, and an admission that you were in the wrong. He would not agree to desist from doing what he believed ought to be done, neither would he stain his past to brighten his future, nor imprison his soul to free his body. He has that happy mingling of gentleness and firmness found only in the highest type of moral heroes. He is an absolutely just man, and will never do an act that he would condemn in another. He admits that the most bigoted churchman has a perfect right to express his opinions not only, but that he must be met with argument couched in kind and candid terms. Mr. Holyoake is not only the enemy of a theological hierarchy, but he is also opposed to mental mobs. He will not use the bludgeon of epithet. Perfect fairness is regarded by many as weakness. Some people have altogether more confidence in their beliefs than in their own arguments. They resort to assertion. If what they assert be denied, the 'debate' becomes a question of veracity. On both sides of most questions there are plenty of persons who imagine that logic dwells only in adjectives, and that to speak kindly of an opponent is a virtual surrender. Mr. Holyoake attacks the Church because it has been, is, and ever will be the enemy of mental freedom; but he does not wish to deprive the Church even of its freedom to express its opinion against freedom. He is true to his own creed, knowing that, when we have freedom, we can take care of all its enemies. . . . Read his *Trial of Theism*, his history of *Co-operation in England*, if you wish to know his heart, to discover the motives of his life, the depth and tenderness of his sympathy, the nobleness of his nature, the subtlety of his thought, the beauty of his spirit, the force and volume of his brain, the extent of his information, his candor, his kindness, his genius, and the perfect integrity of his stainless soul."

BOOK NOTICES.

DAS HEIL DER VOELKER. Theil I., Judenthum und Katholizismus. Theil II., Protestantismus. KRITIKEN UND DEBATTEN. Abhandlungen und Gedichte. Three pamphlets, 150–200 pp. 35 cents each. Carver, Minn.: Fritz Schütz.

The first volume of the *Heil der Völker*, or Salvation of the Nations, compares the moral and political influence of Judaism with that of ancient and mediæval Christianity. The contrast between the encouragement of business enterprise and industrial activity by the Old Testament, and the discouragement exerted by the New, is brought forward with great power, as is the agency of the traders and artisans during the Middle Ages in developing, not only such material prosperity, but such civil and religious liberty as was not desired by the Church. Among the instances given of the power of the priests, one of the most curious is that Spain in 1787 had 142,830 clergymen and church officials, besides monks and nuns, but only 34,030 merchants and shopkeepers, and 39,073 laborers in factories. As a specimen of the philosophic spirit of the author may be quoted his remark, pp. 126, 127, that the present decay of religious institutions is not likely to produce such sad corruption as was seen at the fall of paganism or at the Renaissance, because "Protestantism, which to-day is perishing, has taken up a great deal of modern science, and builds up its morality, no longer merely on revelation and superstition, but also partly on knowledge and culture of the emotions; and, therefore, she will only in part sink to ruins as the Bible falls." The second and more interesting part of the work opens with a remarkably good account of the Peasants' War, and of the sanction which Luther was compelled to give to slavery and tyranny by his loyalty, not only to the letter, but to the spirit of the New Testament. In no other history of the period is the latter point brought out so clearly and powerfully. Then, we have a minute narrative of the confiscation by different governments of the property of the Church, with the result of building up many institutions of learning, though a large part of the spoils, especially in Great Britain, fell into the hands of the nobility, who have thus been aided to monopolize the land. Thus, two-thirds of Scotland is owned by 330 individuals, 21 of whom possess one-third of the kingdom, the Duke of Sutherland alone being lord of 2,000 square miles. Estates of tens and hundreds of thousands of acres are common there and in England also. The necessary result of this great power of the aristocracy over the soil is that the people who till it are sunk in such poverty and vice as is almost indescribable, many rural villages being more corrupt than the worst streets of London. Of the condition of Ireland, nothing can be said which is new to American readers; but they will be surprised to learn how much suffering falls upon poor people in Germany. The bright side of Protestantism, the tendency of its individualistic spirit to produce republicanism, is exhibited in detail, and with full knowledge of all the laws involved in this development of political liberty. The concluding chapter shows how strongly Protestantism favors commercial prosperity, but also how little is thus done for the benefit of the poorest people in the great emporium, London. The general aim of the writer is to show that Protestantism, though more conducive to national welfare than Catholicism, fails to give all the light we need for progress, so that we have still to look for some more beneficial system of thought. What this must be will be described in the third part, which is to appear during the coming winter. Then, we hope that the author will find, as he wishes, a kindred spirit to translate this interesting and instructive work into English, and give it a place by the side of the great histories of Lecky, Buckle, and Draper. A curious appendix to these volumes is given in that called *Kritiken und Debatten*, consisting of various criticisms made from the standpoints of orthodox Protestantism, Swedenborgianism, Socialism, and independent Theism, with the answers of Mr. Schütz, who fortifies himself in his advanced position by quoting some thirty spirited poems by various authors, thus forming a collection fully worth the thirty-five cents charged for this pamphlet. Even without such excellent aid, however, our friend shows that he is able to defend himself securely, and give his readers firm ground to stand upon.

THE *North American Review* for September opens with an article on "State Regulation of Corporate Profits," by Chief Justice T. M. Cooley, of Michigan, showing how far, by wise legislation and by applying in the spirit of enlightened jurisprudence the principles of the common law, the harrowing exactions of corporate companies and monopolies in general may be restrained, and the interests of the people effectually conserved. John A. Kasson, M.C., writes on "Municipal Reform," and offers suggestions for the abatement of the evils of misgovernment in our great municipalities. Richard Grant White treats of "Class Distinctions in the United States," a subject that is destined to occupy more and more the attention of the American people, as great fortunes increase. "Shooting at Sight" is the subject of some pertinent reflections by James Jackson, Chief Justice of the State of Georgia. In "Facts about the Caucus and the Primary," George Walter Green unveils the tricks practised by political managers in large cities. W. H. Mallock contributes "Conversations with a Solitary," in which he sets forth with much ingenuity the arguments adverse to popular government. The Rev. Dr. D. S. Phelan contributes an article on the "Limitations of Free-thinking." Finally, Grant Allen, one of the most charming of living writers on natural history, discourses on "An American Wild Flower."

PERSONAL ITEMS.

COUNT DE CHAMBORD died at Frosdorf last Friday.

B. F. UNDERWOOD will speak from the platform of the Cosmian Society of Florence, Mass., next Sunday afternoon.

LORD CHIEF JUSTICE COLERIDGE, of England, arrived in New York last week. He is the highest public functionary who has ever left England to visit this country.

M. BARTHELEMY SAINT-HILAIRE has just finished the printing of his translation of the *Natural History of Animals*, by Aristotle, which will be published in a very few days. It consists of four large octavo volumes.

MR. JOHN MORLEY retires from the editorship of the *Pall Mall Gazette*, desiring to free himself from continuous literary labors, and devote more attention to politics. He is making a good impression in Parliament.

AMONG those who called at *The Index* office last week was Andrew Jackson Davis, who is spending a few days in Boston and vicinity, and is at present the guest of his friend, Mr. A. E. Giles, of Hyde Park. Mr. Davis appears to be in health, and his belief in "another world" does not seem to abate his interest in the affairs of this world.

ANNIE LAVINIA JANE CAROLINE CLEGG DE CHARMINENT was fined at Brighton, in England, for having (in addition to bearing such a name) kept her husband awake all night by refusing to close one of many open windows, throwing off all the bed-clothes, and letting on the full power of gas; and, when summoned, she cooked the writ in batter, serving it up for dinner, and making him eat it.

CARLYLE'S old house in Cheyne Row, Chelsea, is advertised for sale. A correspondent of the London *Times* asks: "Are there not sufficient friends of Carlyle to start a subscription and buy the house? A library of the author's books, foreign translations, pictures relating to Carlyle, manuscripts, etc., might be placed in it, and the Carlyle Society could certainly find no place more suitable for their meetings."

EDWARD EVERETT HALE writes thus of the President of France in the *Independent*: "M. Grévy though a silent is a very wise man. Most Frenchmen in public life seem to be always *posing*, as if to gain the admiration of men. M. Grévy, on the other hand, always keeps himself in the background; but, when the right thing has to be done, it is done, and you find that this unpretending man has done it. On the other hand, Leo XIII. does not make himself very agreeable to the people who are around him. He certainly knows how to keep his secrets. If a heretic may venture to say so, he is not a popular pope. But he also is a man of sense. He is no such fool as to tie himself or the Catholic Church to the tail of the Count de Chambord's kite. Nor does he mean to kiss and be friends with Prince Napoleon. He knows that all through history the Roman Church has fared very well in its dealings with republics, and he does not mean to stake his power in France on the issue of any one of a dozen possible revolutions against the present constitution."

DENNIS MURPHY, the official reporter of the debates of the United States Senate, who is not only one of the finest short-hand writers in the world, but a thoroughly read lawyer and excellent classical scholar, and who has been in the Senate over thirty years, has been giving some reminiscences. Mr. Murphy was in the Senate during the last winter of Daniel Webster's service. He said Webster was gloomy, almost morose, in his manner during the day. He would pay no sort of attention to the regular business of the Senate, unless there was a chance for a speech: he was very reserved, and could only be approached with the greatest formality. Yet at a night session, when Webster was waked up and excited, he would be almost constantly on his feet. Mr. Murphy is of the opinion that Matt Carpenter was fully the equal of Webster as a lawyer, and that at times he could be even more eloquent. He believes Thurman to be also the equal of Webster in point of intellect. Henry Clay owed much of his success as a speaker to the charm of his manners and the general personal magnetism of his address. Yet Mr. Murphy thinks that Clay has had his equals in the Senate since. Blaine has something of Clay's manner, but he is not so good a speaker. Ingalls is as able a speaker as Clay, but is more inclined to be caustic. Edmunds, who has the reputation of being a clear speaker, is very involved, according to Mr. Murphy. Mr. Edmunds is inclined to put in long parentheses whenever opportunity will permit. He never revises his speeches, because he has perfect confidence in Mr. Murphy. Beck and Morgan are the two hardest Senators to report. Beck talks right along, over two hundred words to the minute, and does not articulate with any distinctness. Morgan appears to talk slowly, but his easy swing is very deceptive. He's in the neighborhood of two hundred words a minute all the time, and can go on for hours without a break. Beck makes a few long speeches, but Morgan is always at it.

WEST NEWTON, MASS.

The Gospel of Law.

Discourses on Fundamental Church Doctrines

By S. J. STEWART.

"It seems to me admirable both in matter and in manner, and I hope it will have a wide circulation, as it is the kind of book people need."—*John Fiske.*

These discourses, delivered in Bangor, Me., include discussions of the Bible, Miracles, God, Jesus, Prayer, the Devil, Sin and Atonement, Hell and Salvation, Predestination and Scientific Necessity, Morality, Immortality, etc.

12mo. 324 pages. Cloth. $1.25.
For sale at THE INDEX office.

THE PRESENT DAY.

A Monthly Journal discussing Agitating Questions without agitation.

EDITED BY

GEORGE JACOB HOLYOAKE.

The *Present Day* is addressed to all who hold the brave and cheersome faith that life according to Reason is the best religion for the world that is, and the best qualification for the world that may be.

"False Ideas may be confuted by argument, but only by True Ideas can they be expelled."—*Cardinal Newman.*

Annual subscription, 2*s.* 6*d.* Single copies, 2*d.* Published by R. H. SQUIRE, 52 Fleet Street, London, E.C.

PUBLICATIONS

OF THE

FREE RELIGIOUS ASSOCIATION.

Freedom and Fellowship in Religion. A volume of ten essays upon speculative and practical problems of religion, by D. A. Wasson, Samuel Longfellow, Samuel Johnson, John Weiss, W. J. Potter, F. E. Abbot, O. B. Frothingham, J. W. Chadwick, T. W. Higginson, and Mrs. E. D. Cheney, and extracts from Addresses by Ralph Waldo Emerson, Lucretia Mott, Robert Dale Owen, Dr. Bartol, Wendell Phillips, Rabbi Wise, Horace Seaver, A. B. Alcott, Lucy Stone, Charles H. Malcom, Julia Ward Howe, and others,—all given on the platform of the Free Religious Association. Price (reduced) $1.50.

Reports of Annual Conventions of Free Religious Association, from 1872 to 1879 inclusive. These contain essays and addresses by the various distinguished men and women who have spoken on the Free Religious platform, together with yearly reports of the Executive Committee. 10 cts. each.

TRACTS.

I. *Taxation of Church Property*, by James Parton. 5 cts.; ten, 30 cts; one hundred, $1.50.
II. *The Bible and Science*, by John Weiss.
III. *The Sympathy of Religions*, by T. W. Higginson. Enlarged edition.
IV. *Transcendentalism*, by Theodore Parker. Never before published.

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—**The Christian Amendment,** by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents, 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

THE IMMORTAL LIFE.

By JOHN WEISS.

12mo. 255 pp., with Heliotype Portrait of the Author. Price $1.50.

Mr. Weiss' great argument for a future existence is the nature of human *personality.* The argument probably will not convince persons with a strong natural tendency to disbelieve immortality; but it ably maintains that science has not yet, as many persons apprehend and some claim, given a negative decision on the old question of immortal life. The old faith still stands; and people may hold it with Mr. Weiss, and yet accept all the attested facts of recent science.

In this age of scepticism, when almost everybody doubts and insists upon proof, this work cannot fail to be a great help to those whose visions are clouded by fears that the grave ends all, and that there is no spiritual existence beyond the dark valley. —*Boston Herald.*

CURRENT TOPICS.

THE meetings of the New York Free-thinkers' Association at Rochester, which closed last Sunday evening, were largely attended.

THE *Independent* suggests the use of chloroform in the case of rum maniacs. Its advice is to "put them in the doctor's hands, and chloroform them to keep them out of mischief." A sensible idea.

AUSTRALIA has caught the prevailing rage for higher culture; and, at Melbourne, a "Browning Society" has been established for the purpose of studying the works of the poet, Robert Browning. It is thought that, when this society shall have mastered the meaning of all his poetry, it will be fitted to give the poet himself some information.

IT is estimated that thirty thousand persons have perished this season from cholera in India and Egypt, and that the destruction of life by the volcanic eruptions in Java, which commenced August 25, is not less than seventy-five thousand,—a loss of life greater than has occurred from any previous convulsion of nature of which history gives an account.

MARGERY DEANE, in a letter from Block Island to the *Transcript*, writes: "Many of the natives have never been off the island. One of these sent the other day for a physician to attend her sick son. 'You must cure him, doctor; for I tell you he's got a heap to live for. That boy of mine's got two yoke of steer and a fishin' smack. He's got a heap to live for: he hain't got no call to die.'"

SAYS the Boston *Herald*, "In order that Gabriel might make no mistake, it was inscribed on the coffin plate of Count de Chambord that he was, "by grace of God, King of France and Navarre." Better fustian on coffin plates than on tombstones: it will at least be out of sight.

THE following is from that very orthodox paper, the *Presbyterian*: "It is said that Dr. Cullis, of Boston, who professes to cure diseases through prayer and the faith of the patient, proposes to put his own faith to another test. He will build a $25,000 church, expecting the money to come entirely in answer to prayer. But is not the announcement of what he is doing an intimation that he is in need of help, and a hint that it would be acceptable?"

"MARGERY DEANE," writing from Newport to the *Transcript*, says, on the authority of a clerical friend, that "a circular has been sent to very many clergymen, by a New York wine firm, setting forth the merits of its liquors and wines, with prices by the case, etc. At the end of the circular, it reads: 'N.B. To avoid suspicion, every case sent you will be plainly marked "Canned Peaches."'" After this revelation, some will not dare to purchase genuine canned peaches openly.

A WRITER in the London *Enquirer*, describing the state of religious opinion in India, says: "The prevalence of bigotry in this country (England) has kept the general public in considerable ignorance about conversions of the heathen. Few writers have ventured to brave the anger which plain truth-telling would be certain to excite. Most members of the various churches have imagined that their missionaries have succeeded in Christianizing Hindus, Mohammedans, Polynesians, Negroes, etc., in a manner conformable to the home pattern; but, whenever a critical inquiry is made, it is found that what has been done is to mix some of the elements of Orthodox English Christianity with the superstitions belonging to the locality and the race of the converts. In like manner, the Romish Church converts in China or Madras live in a mixture of a certain quantity of popery with their own native heathenism."

A WRITER in *Nature* relates a circumstance illustrative of the sagacity of the horse, and for the truthfulness of which he says he can vouch. An old blind horse, turned out to graze, wound its way through lanes to the blacksmith's, where he had often been before. The entrance to the forge is difficult of access on account of the ditches on either side; but the animal reached it safely, took its stand by the forge, and then neighed. The blacksmith, being at work in his garden, and hearing a horse neigh, looked for it, and not seeing it returned to his gardening operations. In a short time, he heard it again, but could not see a horse anywhere, until he went into his shop, when he found it standing very quietly by the forge, as if waiting to be shod. Thinking some one must have brought it there, the blacksmith looked at its feet, and found one with the shoe pressing into the frog, causing great pain. He then put on another shoe, and sent the horse back to its owner.

THERE is a religious organization in Schuyler County, Ill., the character of which has just been disclosed in a case in court in which several members of the band were prosecuting witnesses. The organization was started a year ago at Rushville, Ill., by an ex-Methodist preacher named Caleb A. Obenshain, who is said to be a man of handsome appearance and great eloquence. He, with other leaders, claims the power of curing disease by the touch of the hand combined with faith and prayer. These fanatics call themselves the Pilgrim Band, and number over one hundred and fifty members. The spiritual wife dogma is accepted publicly by the Pilgrims; and one of the members has left the body because, he says, it is given over wholly to free-love practices. Obenshain has for a spiritual wife a woman who had been his wife's servant, and for whom he discarded his legal wife. He announced recently that it had been revealed to him in a vision that he was to become the father of a prophet who would "dictate to the world." A few evenings later, one of the sisters whose husband was present announced that she was to be the mother of the coming prophet. Her husband interposed no objection, and "the statement was received with delight by the community." A temple is being erected, and is nearly completed at Erwin, at a cost of $5,000. It is adapted to the wants of a community of four hundred people, and has, in addition to rooms for worship and secret meetings, a kitchen, bed-rooms, etc. The band includes among its numbers several wealthy men, and it is said to be growing rapidly in Schuyler and the adjoining counties.

MR. GEORGE JACOB HOLYOAKE has published a letter to Sir William V. Harcourt, respecting the recent sentences for blasphemy, and declaring that the sentences of Foote and Ramsay should be terminated as a matter of justice. He adds: "Blasphemy is the sin of all sects, but only punished in the weakest. There is, however, one thing more repulsive than blasphemy, and that is outrage. Outrage, as they who commit it know full well, is when any one imputes to others a conscious infamy of belief which they do not hold, and intends to shock or irritate them, regardless whether it insults and pains them or not. This is outrage, and in the interests of society and good feeling should be discouraged,—equally whether committed by the few against the many or by the many against the few. Yet this outrage is constantly committed by Christian preachers and writers against free thinkers, and the law never steps in to protect them. Since, therefore, the law does not deem it its duty to defend the few against the many, it is not needful nor seemly that it should be employed to defend the many against the few. Outrage may be committed in excitement or under provocation, and is then an error rather than a crime; while outrage as a method of argument, whether employed by the few or the many, is a polecat policy, which induces every self-regarding person to keep clear of the 'cause' which adopts it, whether it be free thought or Christianity. Therefore, in a civilized community, intellectual outrage may be left to its own consequences, and needs not that the law should decrease them by sentences which, by exciting public sympathy, obscure the intrinsic hatefulness of the offence."

AN AUGUST SUNDAY IN BOSTON.

The last of the summer Sundays, reckoning by the calendar, was as fair a day in Boston as ever need to be made for any latitude. Its sky was cheerfully clear, and its temperature warm enough to entice people to excursions whether on sea or land, and yet not so warm as to discourage church-going, if any were inclined to keep up or to resume that habit. We had the day mainly free for any use; and, looking over the church notices, we deliberately resolved, for one thing, to hear the noted evangelist, Rev. A. B. Earle, at Tremont Temple. In the absence of the pastor, Mr. Earle has been occupying the pulpit of the Temple society during the vacation weeks, and doing his best to keep the congregation in a revived condition. The meetings have been held in the smaller hall of the Temple, the Meionaon, which on this Sunday was well filled.

We had heard Mr. Earle a number of years ago, when he was conducting a protracted revival meeting. He then resorted to all those methods and devices which seem to us the most objectionable features of such meetings,—especially for exciting the feelings of young people. Our indignation, we remember, was much aroused by the way in which even children's hearts were wrought up to a pitch of excitement by ingenious appeals to their natural tenderness, until they were forced into an unnatural expression of penitence, sobbingly confessing sins which they hardly knew by name and had never even been tempted to commit. We foresaw for those children, if they should retain the religion which they were told they had then and there obtained, a growing up into a narrow and melancholy type of piety, opposed not only to the highest happiness, but to the highest human development; or, if they should happily lose faith in that kind of religion, then probably a dreary and tempestuous passage through the seas of a real scepticism before finding the solid ground of a satisfying and working belief. We were curious to see whether Mr. Earle, after nearly twenty years of added experience, and at this time of more general liberality of thought, would still adhere to the same methods.

Of course, we cannot say what this zealous apostle of revivalism might say and do at a regular revival meeting; but, though the old revival spirit and aim were evident through the whole service, we are glad to admit that on this Sunday he was quite free from those things which had most offended and shocked us at the previous hearing. Perhaps he had only given to his peculiar methods a vacation. Or perhaps, as we would rather believe, he, too, has become wiser and broader, as has Orthodoxy generally, in these last eventful years for the progress of thought. It seemed to us, at least, that he had softened with age; and, while there was an evident undercurrent of the old theology beneath all his utterances, that he was inclined to keep uppermost the tender and humane side of his beliefs. If we recall correctly, when we heard him before, he drew a fearful picture of an angry and avenging Deity dealing with a reprobate soul; but now he even made it appear that it is the very humaneness of God that causes him mercifully (!) to allow the incorrigibly wicked soul to go into hell. For such a soul, he ingeniously argued, being prepared only for the society and conditions of the infernal regions, could only suffer worse tortures, if forced to stay alive in the utterly uncongenial and unbreathable atmosphere of heaven. He forgot, of course, that it would be one of the natural vocations of a humane Deity and a humane heaven to try even to redeem such a soul and render it capable of pure enjoyments: yet it was evidence of some progress to find that the conception of a wrathful Deity was gone, and that even hell was grounded on a sentiment of pity; for having *humanity*, or the aim of moral benefit, as the predominant quality in the supreme Power of the universe, it may be trusted in the course of the ages to abolish or reclaim all the hells.

It was pleasant, too, to note in the general atmosphere of the Temple congregation the elements of social fellowship, of caring for one another, of natural enjoyment in the friendly shaking of hands, and of something more than a merely ecclesiastical interest in welcoming strangers. In some of these respects there were lessons set which many liberal societies, so called, would do well to copy. In short, we came away from the Tremont Temple meeting with the impression strengthened that, despite the errors of theology still taught in such churches, there is a large class of people who derive benefit from their services, and that they are gradually culling out the good and leaving the error behind. It was, perhaps, the impressive congregational singing, and especially the singing of one tune, "Watching and Waiting," that helped to put us into this amiable mood. (Why will not some one of our liberal poets write a hymn for that tune?) There was not, it is true, much excitation to robustness of thought,—we have to go back to the old Calvinism and not to the new Orthodoxy for that,—but there was a very humanizing sentiment running all through the service, and that was enough for an August Sunday.

Yet we were glad that this same Sunday had other hours, and that not all of them need to be devoted to church-going. In the afternoon, we joined the much larger congregation that listened to the music of the band on the Common. This, too, was a popular audience; yet we suppose that very few of the Tremont Temple audience were there. To the great majority of them, the music there on Sunday seems a sacrilege; and hence, though the Tremont Temple folk may be doing good in their way, we rejoice that their way no longer rules Boston. Nor should we judge that this congregation to which the band preached on the Common that afternoon was made up of people who are ordinarily found in any churches. For the most part, we should say, they were non-church-goers,—notwithstanding the presence of a good number of Irish Catholics who may have attended morning mass. The German face was largely represented. The majority were evidently people of small means, —working people; shopmen and shopwomen, mechanics, day-laborers and their families, who had put on their Sunday clothes and come out for this refreshment. Even the habitual idlers and roughs of the Common, who have no Sunday clothes, had crawled within hearing distance and stretched themselves on the grass,—the cleanlier and better clad people leaving them ample room. Some of these looked as if they had not yet gotten over their Saturday night's dissipation. Yet, perhaps, even into their wretched lives there fell some little drop of purer pleasure. It was, on the whole, a very orderly assembly; and we venture to say that there was no meeting that day in Boston where better work was done for human benefit.

On our way down Tremont Street from the Common there passed us a strangely laden wagon which brought another incident into the day. It was a rough, jobbing wagon, which evidently was put to no fastidious uses during the week. It was drawn by a horse built for work rather than speed or beauty, and not accustomed to the best stocked of stables. The occupants were a man, two women, and eight or ten children, boys and girls. None of them was tidily dressed, yet very likely they had on their best. The children were mostly without hats or bonnets, and all had the pinched and care-worn look of extreme poverty. They might, from appearance, have been denizens of that rickety, rag-pickers' tenement block on Lincoln Street, near the United States Hotel, which we never pass without thoughts of small-pox and typhoid fever, nor without a prayer that the elegant business edifices which are spreading that way may hasten on with their purifying mission. It is a shame for Boston that that old, foul block still stands. But, wherever this family came from, they had been having their "outing" into the country, and had broken the arid routine of their lives with one day of joy. The stakes of their wagon were decked with green branches from the woods, and some of the uncombed heads of the children were garlanded with wreaths of oak leaves. As the equipage passed on by the doors of Tremont Temple, we wondered whether any of the pious church-goers whom we had seen there in the morning could have the hardihood to cause the arrest of this family for their evident violation of the Sunday laws. And we also wondered whether, if such arrest should be made, Massachusetts judges would not now be found to interpret a Sunday excursion into the country for that family as a journey both of "necessity" and "charity." Still, it would be better to amend and humanize the law.

WILLIAM J. POTTER.

SWEDENBORG.

There are many who think that Swedenborg's day is yet to come.—*Frothingham.*

I notice an increased interest in Swedenborg. The New York *Sun* recently took the Rev. Howard Crosby to task for a somewhat unfair criticism in the *Observer*, and wound up by saying, "It is like passing from a world of cloud into a world of light to pass from the theology of Calvin to the theology of Swedenborg."

Let one who has made the transit make answer.

Swedenborg proceeds everywhere upon the assumption of the plenary inspiration of the Scriptures, omitting certain Books of the Old Testament and all but the Gospels and Revelation of the New. This is the very foundation-stone of his system; and this doctrine he carries to a degree unknown in orthodox circles, affirming divine inspiration as to every word and syllable, and alleging that not a single expression nor a single iota in the original language can be omitted without an interruption of the internal sense which he claims was specially revealed to him, and which forms the basis of his theology. He alleges that something divine pertains even to the little dots and twirls of the Hebrew letters. "The style," he says, "of the Word is such that there is holiness in every sentence and in every word,—yea, in some instances, in the very letters." And also, "Therefore, by the divine providence of the Lord, it hath been effected that the Word hath been preserved, especially the Word of the Old Testament, as to every iota and apex, from the time in which it was written." For this last statement, he had no better authority than the common opinion of the learned men of his time that the text had been preserved through the labors of the Masorites, as nothing conclusive was known in Christendom respecting the state of the Hebrew text till within a short period of his decease. Swedenborg, therefore, was utterly ignorant of historical and textual criticism; and his *dictum* of course is absurd and untenable, unless it can be proved that the Masorah exists in an uncorrupted state and that the Masorites were infallible. In that event, we shall have not only an infallible Bible, but also infallible Jews.

As to the genuineness and authenticity of the

Digitized by Google

books of the canon which he adopted, not a doubt or suspicion seems ever to have crossed his mind. "It is," he says, "universally confessed that the Word is from God, is divinely inspired, and therefore holy." It is evident that in Swedenborg's day there were no troublesome critics, no Strauss, Baur, or Renan without the fold, nor Colenso, Davidson, or Smith within to disturb his serenity, or he might have felt compelled to establish more firmly his premises and render impregnable the foundation before building up his magnificent structure; and, if he had done so, what a priceless boon it would have been to the world, especially if he had been "illuminated" in that direction also! Swedenborg, with all his vast learning and keenness of intellect, was wholly unsuspecting and ignorant of all that has been accomplished by modern textual and sceptical criticism. He surely illuminated the attic, but left the ground floor dark as ever. Has there yet appeared in New Church literature, or elsewhere, any complete and convincing reply to the assaults of the critics? Has any new light been shed upon the darkness by any disciple of Swedenborg? Is it not a fact that Protestantism is permeated through and through with scepticism, and that the conclusions of the critics are tacitly accepted by learned and scholarly divines? Until, then, some new light arises in the Swedenborgian fold, no one with any pretence to critical learning can accept for a moment Swedenborg's dogma as to the written Word; and it will continue to form an insuperable barrier to the progress of the New Church, although many may be enchanted with his peerless philosophy and in full sympathy with much of his theology. Until modern criticism is answered, until it can be shown that "the Word" exists somewhere in all its integrity, and that the records are genuine, there can be no certainty as to what "the Word" actually is. Swedenborg's *dictum* does not satisfy us. Biblical criticism was unknown in his day. It was sinful. Moreover, we find him quoting as genuine certain spurious texts. Can a chain be stronger than its weakest link? If Swedenborg's divine guidance and illumination could not detect a spurious text, how much and how far can his readers depend and rely upon it? What guarantee have we that many other texts on which he comments are not also spurious, and even whole books, as the critics well-nigh prove? If, as he says, "the Word is holy in every sentence, word, and letter" (*Vera Religio Christiana*, 191); if "all and every part of its contents, even to the most minute, not excepting the smallest jot and letter, signify and involve spiritual and celestial things" (*Arcana Coelestia*, 2),—if all this be true as to the written Word, and yet there be so many various readings in it, the question at once arises, What and where is that Word? "In heaven," says Swedenborg. "A copy of the Word [*i.e.*, his canon], written by angels inspired by the Lord, is kept with every larger society in its sacred place, lest as to any jot it should be changed elsewhere." Would to God a similar policy had been pursued in this world, and the history of the Pauline Church might not then have been two-thirds criminal!

It was well said by Theodore Parker, "There are many nuts in Swedenborg which a wise man may crack to advantage, but whoever swallows him whole will find he will lie very hard on the stomach." And this salient criticism will not lose its sting until some new light arises in the New Church, who shall find ammunition in Swedenborg's canon with which to silence the Krupp gun of modern criticism; who shall prove the Mosaic authorship of the Pentateuch and the Davidic authorship of the Psalms; and also that the Gospels of Matthew, Mark, and Luke, have any right to the names they bear; that the manuscripts were preserved intact, and that every scribe who ever made a transcript was miraculously guarded from error; and also that the manuscripts we now possess (or say Westcott's and Hort's recension) are exact counterparts of the originals, word for word, precluding the necessity of another Revised New Testament. If, also, he can assure us that John, the beloved disciple,—and not an Alexandrian mystic,—did in truth write the Fourth Gospel, around which the battle is now raging fiercest and hottest; that the hand that wrote the Gospel also wrote the Apocalypse, that the long discourses in the former were recorded many years after, exactly as they were uttered by the Master, word for word; and also if he shall solve the numerous other difficulties which convince able scholars and critics that this book was not written by John at all,—he will do much to strengthen the bulwarks of Swedenborg's foundation. As for Paul, well, he may leave Paul alone,—in hell,—where Swedenborg puts both him and David.

Let him first prove Swedenborg's premises that the written Word in all its integrity actually exists, and also that the earlier part of his canon is not a "priestly forgery," and the later not "an unapostolic digest of the second century," and we shall then be better prepared to accept the teachdings of Swedenborg entire, the philosophic part being in many respects, without doubt, the most intelligible, coherent, and satisfactory ever offered to man.

If, however, no such new light arises, if these and all the other difficulties, intricacies, and disagreements pertaining to the books of the Old and New Testaments are always to be subjects of doubt, debate, and dispute, it is safe to say that neither the *dictum*, *ipse dixit*, nor revelations of Swedenborg will ever have much weight with men. If we must have authority without reason, let us go at once to that which is most ancient and despotic,—Rome.

For the present, therefore, sound judgment must reject the canon of Swedenborg as well as that of the Paulists, for the plain and simple reason that would cause both to be thrown out as evidence in any court in the world; namely, there is no known copy in existence that is properly attested, none that is exemplified, none that bears a signature and seal.

"The two indispensable conditions of a nobler and truer theology for the time to come are, first, a thoroughly honest use of learning,—a determination never to ignore or evade whatever criticism, history, or science demonstrate to be *fact*, however it may upset our preconceived notions or unsettle our traditional beliefs."—*John James Tayler.*

J. F. M.

WAS CHRISTIANITY, THEN, ALL A CALAMITY AND A BLUNDER?

So Dr. Oswald seems to think, and so he has urged upon the readers of *The Index* in a very long, very learned, and very eloquent invective. The thing he especially attacks is the bigotry, the persecution, the obscurantism, and in general what he calls the "Galilean pessimism," which the name Christianity signifies to him; and, as to all that, I have nothing in particular to say. It would be easy enough to find facts, in the history of eighteen centuries, to prove all the counts of his indictment—against somebody; and it would be a perfectly futile controversy to set up a counter-plea to cover so wide a field. I have not the least intention to invite or enter into such a controversy. But two or three points have occurred to me, in surveying his numerous columns of attack, which, it seems to me, should be set in a different, at least in a clearer, light.

At the outset, I do not care one pin about his theory, which, if I understand it, is that Christianity is an offshoot of Oriental Buddhism. I do not know, indeed, of any historical ground for such a theory, and do not suppose there is any, except the very vaguest. We do know, indeed, that there was a fashionable craze for certain Eastern superstitions in Rome, very much dreaded by the magistrates; but that was nearly two hundred years B.C., and of course had nothing to do with what we call Christianity. Dr. Oswald will doubtless recall the story, which is, I think, in the thirty-eighth book of Livy. As to the hypothetical ground, it must rest, I should suppose, on the striking likenesses in detail between certain Buddhistic and Christian religious orders. But this would apply, at any rate, only to the Monastics, not to the Christians at large; and, even there, must be pure inference or guess-work. I have had occasion to study, more or less, most of the early authorities on this subject,—such as Philo, Athanasius, Basil, and the Gregories,—and nothing is plainer than the absolute lack of any *consciousness* of such an origin, or than the simplicity and confidence with which the Old or New Testament is taken as the ultimate authority. In the New Testament itself, again, the historical consciousness which derives the whole thing from Hebrew sources is positive and explicit, and is, moreover, sufficient to account for the facts. On the whole, we may dismiss the Buddhistic theory—in itself perfectly irrelevant and harmless—to the limbo of pure speculation or historical metaphysics,—at least till there is something like objective proof.

Let us come, then, to the terms of the indictment itself. And, here, we are reminded of Burke's phrase about the hazard of "drawing up an indictment against a whole people." Here, the case is much stronger; for it is against a whole era and order of civilization, against fifteen centuries in the lump, against all the intellectual leaders (with few exceptions) of the modern world. Such a charge as this may well give us pause, and make "the boldest hold his breath for a time." The charge, to be consistent, ought to go at least as far back as the Asiatic conquests of Alexander, which would seem to have induced this particular calamity. Nay, we ought, logically, to include the glacial epoch, if not the nebular condition of our globe itself. The obliquity alleged is, as we may say, due to the obliquity of the ecliptic. It puts us in mind of the man whom Sydney Smith "heard speak disrespectfully of the equator." For, in a strictly scientific interpretation of history, nothing is clearer than that the course of civilization must find its way, like a river, "along the line of least resistance." The fault charged by Dr. Oswald against Christianity is seen at once to be a fault inherent in human nature and the constitution of our globe, if not of the universe itself. So that we have in his indictment, all over again, something like the old Calvinistic dogma of original sin. Thus, extremes meet.

This, I admit, is rather running logic into the ground. It is easier, as well as fairer, to keep to facts. Is Christianity, in fact, a system of "pessimism," in any sense we can fairly give to that term?

In fact, as Horace Greeley once said that "the American people are not a fool," so we may say that "the human race are not a fool." In other words, any great historical movement, still more any great typical form of civilization, we may be sure has in it something that not only makes it inevitable, but makes it, for the time being, right. Fifty years ago, it would have been a strange heresy to hint that Mohammed was anything but an impostor, or at best a fanatic. Now, it is a commonplace of history to call him a reformer, and his

Digitized by Google

system, in its way, a much needed reform. I have myself, perhaps, as little sympathy as Dr. Oswald with Buddhism; but what slight notion I have of it makes me think that in its day it was without doubt a timely, helpful, and comforting belief, and that even now it is doing more good than harm where it belongs. But I do not at all see in it the likeness to Christianity that he does. And I cannot help thinking that, if he looks again, he will be struck with two things in the career of Jesus himself (where he finds this imaginary likeness), which seem to have escaped his attention. The first is that the contempt of the world he speaks of in the Sermon on the Mount is in the spirit, not at all of "pessimism," but of the serenest optimism; and the second is that, in the later (or Messianic) phase of his career, Jesus struck as emphatically and objectively as Dr. Oswald himself against the mischiefs of the system about him, and with as little allowance for anything estimable in its origin or pardonable in it then. We may say (if we will) that he did not do the scribes and Pharisees justice; but, then, he was speaking not as an historical philosopher, but as a prophet or impassioned declaimer; and, surely, this is the last thing that Dr. Oswald ought to object against.

Again, the distinctive thing in early Christianity —as I am sure Dr. Oswald will recognize upon reflection—is not at all its "pessimism," but its dominant and even exaggerated sentiment of *right and wrong*. This consciousness, as one may say, had very nearly perished outright in the old pagan civilization, until it was roused by this astonishing revival. Compare the representative men of the two systems,—Horace with Paul, for instance, or Pliny the younger with Ambrose. Certainly, Horace and Pliny make a more amiable pair than the other; and I am not sure that we should not have liked them better. But that is as we might like a polite gentleman or a professor of *belles-lettres* better than we should like a hardy navigator or a stalwart fighter,—Sir John Franklin or Capt. John Smith. But the world's work is done by the latter sort. Or compare the best picture we have of the later pagan society—by Plutarch, who, as an essayist, may rank about fairly with Sir Arthur Helps—with the resolute temper and ethical ideal shown in the way Augustine met the controversies of his time, and we shall quickly find, I think, that the term "pessimism" has got, this time, quite on the wrong side of the line in Dr. Oswald's eloquent diatribe.

I am afraid that it did not occur to Dr. Oswald, in this connection, to look at the earliest existing authentic Christian document, so as to see what its temper really was in this regard. If he had, he could not fail to have been struck with two things in it: first, a certain courage and cheerfulness expressed in such phrases as "Rejoice evermore," "In every thing give thanks,"—contrasting very strongly with the "pessimism" of Nero's court just then; and, secondly, a definite promise or expectation of some great good for mankind, just about to be effected by some sort of revolution,—a hope as ardent as that of the eager optimists of the first French Revolution, even if we should say as much mistaken. To take the testimony of this document, —worth more, by way of evidence, than forty Oriental guesses,—"pessimism" would seem the last term in the world to apply to the temper of Christianity, certainly in its origin.

And besides, if it had not been so understood, it would be impossible to account, on any rational principle, for the eager way in which Christianity was evidently received, and its complete triumph over classical Paganism in the course of three hundred years. I have not the least interest to defend any of the theories or dogmas on which its power was supposed to rest by any of its early believers. Their theology—that is to say, their philosophy—depended, of course, on the intellectual conditions of their time, which it would be impossible to reproduce in our time. But, as to the point in question, it is perfectly clear that Christianity was regarded, by those who received it then, as a deliverance from something very abominable and oppressive, which they found in the condition of things about them, political as well as religious. As a convenient illustration of this point—which I have no wish to argue—I will refer to what may be easily found in Justin, as cited (if the reader prefers) by Neander. The broad movement of Christianity in his time (that is, in the time of Marcus Aurelius) is wholly distinct from those forms of Eastern asceticism which began to be clearly visible, as a sort of side-issue, about a century later.

I have no disposition to measure swords with Dr. Oswald in the *champ clos* of classical learning. I will take for granted that his erudition is as great as his confidence of assertion, which is certainly much greater than mine. But my feebler recollection does not accord with his, and there are a good many sayings of his which I hope he will rise to explain. He appears—here I may have mistaken him—to suppose, seriously, that the classic Paganism of the third or fourth century of our era had the Arcadian simplicity and *naïveté* which we ascribe to the Homeric poems, if not to the Vedic hymns. In fact, they were as far apart as Dante's *Vita Nuova* and Voltaire's *Pucelle;* as different as a baby and a corpse. I should not think it worth while to argue the point, but Dr. Oswald's assertions puzzle me. He must remember how Plautus, two hundred and twenty years before Paul, riots in his travesty of the Olympian divinities. Certainly, he must know something of Horace and Martial, not to say Petronius and Lucian. A very little attention to the last serious attempt at a pagan revival, as shown in the correspondence of Julian and Libanius, would show any one, I should think, that the spirit of it was antiquarian, spasmodic, and lifeless. And, so far from Paganism at that date being a cheerful symbolism and a childlike joy in nature, the glimpses of it we do get are rather such as we find in the bloody horror of the *taurobolium* and the mesmeric "ecstasies" of the Neo-Platonists. I have a great respect for a good many pagans of the early Christian centuries, and think much better of them than of many eminent Christians of their day. But I am very much perplexed to know where Dr. Oswald got his impression of the comparative innocence and simplicity of Paganism at that date.

I should have a similar set of questions to ask as to the Moorish, or Moslem, civilization of Granada. I say nothing of the quality of the austere Catholic bigotry that suppressed it, which I abhor; but the thing itself presents itself to me as a gaudy material civilization, a state of society meretricious, luxurious, and despotic, resting on slavery and the degradation of women, sure to perish in its own vices, if not crushed by a more vigorous and even more cruel adversary. Also, as to the true relations of feudalism and the Church as factors of mediæval civilization, which I understand very differently from what Dr. Oswald appears to do. Here, too, I need light.

As to the horrors of Charlemagne's conquests, of which he makes so much, they affect me neither more nor less than the horrors of Sadow or of Frederick's Silesian wars. The historian gets well wonted—not to say, blunted—to such horrors, all the way down from the awful catastrophe of Xerxes, or Marius' extermination of the Teutons. The only question that really interests him is whether a given conquest, taken broadly, is in the interest of civilization and humanity, or the reverse. In the eighth century, the Christian empire of Charles meant civilization as against barbarism; and the horrible thing which barbarism then meant we see in Jornandes, Paulus Diaconus, and Gregory of Tours. The compulsory canonism of the Saxons was exactly equivalent to the compulsory allegiance and military service exacted of Alsace and Lorraine to-day. Charles himself was a jolly, homely, energetic, and good-humored German, the farthest possible from the religious bigot which Dr. Oswald makes him. On the whole,—with some misgiving, —I side with Charlomagne and with the Emperor William as against the barbarians and Dr. Oswald.

I do not think it at all necessary to defend, or extenuate, those things in Christianity which he attacks. But I think it a thorough misconception to judge, as he does, of a great historical era in the lump. Ecclesiastical Christianity, carrying with it some remnants of primitive Christianity, won the field by fair fight, in a pitched battle of some five hundred years. Good and bad were extensively mixed up in it; but it prevailed, on the whole (as I think fairly evidenced by the fact), in virtue of what was good in it more than of what was bad. The view I should take of it in the main is this: that it worked in the general direction of human advancement till about the middle of what we call "The Middle Age,"—that is (if we can draw so sharp a line in so large a thing), till about the date 1150. Most of its great service to humanity was rendered before this date; most of its horrors and oppressions will be found to have come later. I cannot, of course, give here the reasons for this general judgment, which I have set forth in detail elsewhere. But I throw it out thus summarily, because I think it may possibly hint a way to reconcile the large amount of truth in Dr. Oswald's argument with the rejection of much in it which seems to me purely illusory and conjectural.

J. H. ALLEN.

NANTUCKET, Aug. 26, 1883.

"THE REVOLUTION."

The human race is even now, for the most part, in a state of barbarism. Even in countries which are called enlightened, the masses of the people are unintellectual and incapable of thinking correctly. The ordinary pursuits of life are unfavorable to the habit of mind which is needed for the acquisition of truth and knowledge. Bread is a necessity, a *sine qua non*. Truth and knowledge are not in the same measure. Life may go on without them. The activity of the greater portion of mankind, even in enlightened communities, has reference almost solely to getting a living, or, in the language of Goethe's famous Venetian epigram, getting victuals and children. All the stir and movement in town and country, and by sea and land, have reference to this fundamental object mainly:—

"For most men in a brazen prison live,
Where, in the sun's hot eye,
With heads bent o'er their toil, they languidly
Their lives to some unmeaning task-work give,
Dreaming of nought beyond their prison wall.
. . . . . .
And, while they try to stem
The waves of mournful thought by which they are prest,
Death in their prison reaches them,
Unfreed, having seen nothing, still unblest."

The acquisition of wealth is the great, the universal passion in all free communities, where the race for riches and office is open to all. The necessities of the body are primary, and must be ministered to; and, these being taken care of, the spirit of luxury and ostentation puts in its claim, and makes the mind obtuse and indifferent to

Digitized by Google

truth. Mental hunger for truth is as yet felt only by the few. With the masses of people, the appetite for it is not pressing, and is satisfied with the husks of some established orthodoxy.

Thus, it is not singular that, under the almost exclusive influence of the bodily passions and appetites and of the lower mental faculties, as human nature has hitherto been, and as it still is for the most part, Truth and Reason should have been slow in emerging to a control in human affairs, while credulity, arrogant authority, imposture, and selfishness have easily borne sway. Continuous, reflective thought is difficult even for men of uncommon mental vigor; and reflective thought pursued to a certain point finds itself involved in contradictions and absurdities, which make a mock of its efforts, and which have made philosophy and metaphysics by-words, and the conflicting systems and schools of thought numberless, so that the final conclusion has been that we are intellectual impotents and imbeciles so far as ultimate truth is concerned, and that our only resource is action instead of thought, and an acquiescence in usage and the prevailing and customary belief, whatever it is, and however primitive, childlike, and absurd it may be in its demands on our faith.

Meantime, in the absence of a knowledge of the nature of things,—that is, in the absence of science,—the religious sentiment, common to all men, even to the lowest barbarians, was always imperious for satisfaction. Everywhere and always there have been, in the absence of positive, exact knowledge, crude theories of nature and theological cosmogonies or dogmatic, *a priori* accounts of the origin and government of the world, and of the origin of man and his final destiny, all savoring of gross ignorance and superstition and priestly arrogance, and redolent of the different environments and racial peculiarities among which they arose. These fanciful, crude theories of man and nature were quickly formulated into creeds and orthodoxies, to be believed under pains and penalties of persecution and social ostracism. Powerful priesthoods took charge of these orthodoxies, speaking in the name of an ecclesiastical God. Magnificent temples were built in honor of imaginary supernatural personalities, of "colossal men in the heavens." Thus, religion and hierarchies arose, and became the fundamental institutions of society. Up to the present century of the vulgar era, which is itself a theological institution and purely conventional, having no foundation in scientific knowledge, the above description is a correct sketch of the state of things in all countries and latitudes. Creeds and orthodoxies, priesthoods and Bibles, were omnipotent, and commanded reverence everywhere. Up to the present century, civil governments were for the most part personal and in the hands of hereditary rulers, who ruled by the grace of the ecclesiastical and traditional God of the prevalent superstitions.

As yet the will of the people was of little or no account,—a slighted, unrecognized, and undeveloped factor and force. The people under the old social and political order were mere footstools and drudges, without intelligence or property, with no rights which priesthoods, kings, and nobilities were bound to regard,—at the foot of the social ladder, undeveloped, more animal than human, grossly ignorant, and therefore brutal, sensual, fickle, irrational, and superstitious to the last degree, a mere herd. Whenever and wherever they undertook to rise against the privileged classes in society, their insurrections were ruffianly. Jack Cade outbreaks, devoted to plunder, massacre, and beastly excesses, and destructive of all law and order, so that they had to be in all cases suppressed, or human society would have collapsed and become anarchic. Thus were the privileged classes enabled to take advantage of their own wrong, and to say that the common people were not only not fit for self-government, but that it was necessary that they should be kept down by force.

Thus, the king, the priest, and the noble, and their tool the soldier, up to the advent of the nineteenth century, now rapidly waning, had been the masters of the world in all latitudes and in nearly all nations. The people up to the close of the eighteenth century were of no social account, weight, or influence. At that time, the monarchy, priesthood, and nobility in Europe had become so rotten, corrupt, and oppressive, and the misery and wretchedness of the overtaxed people had become so extreme, that a *ne plus ultra* had been reached in human degradation and sufferance. Then, it was that sundry men of genius, with big hearts and big brains, became indignant at the old social, political, and ecclesiastical order, with the immemorial reign of social inequality, force, and absolute monarchies, priesthoods, and aristocracies.

These powerful thinkers and large-hearted men began to investigate the old theories of civil government and the articles of religious faith,—or, in other words, the bases of the Church and State system, then all-powerful,—and to subject to criticism the alleged inspired documents handed down from a semi-barbarous past, which were the credentials of the said system. In other words, long insulted human reason, in spite of bastiles and inquisitions, began to summon infallible popes and inspired bibles and kings and nobilities to its bar to give an account of themselves, and to show cause why they should longer domineer to the degradation of human nature. With this menacing attitude of human reason toward the old civil and ecclesiastical order began what is called "The Revolution," a phrase which rightly designates the radical, irrepressible uprising and revolt of the human mind against authority. That is the significance of the phrase "The Revolution." There had been an imperfect revolution in England in the seventeenth century, in the direction of popular rights; but it had not removed the old-fashioned Church and State, but had left king, priesthood, and aristocracy standing in England.

In the spiritual and ecclesiastical order, the revolution means the reduction of the Bible to the rank of other books, as a product of the human mind, like them to be criticised with perfect freedom and assigned its proper position as an historical and ethical document. Of course, its supernaturalisms and miraculisms are summarily disposed of, as the eccentricities of writers having little or no genuine knowledge of nature and the world in which they lived. Of course, the reduction of the Bible to its proper position as one of many other literary documents handed down from the far past included, also, the reduction of the Pope to the ordinary level of humanity as the mere official head of a denomination of religionists, remarkable, as a body, for their ignorance and credulity. Wherever the revolution is triumphant, and as fast as it is triumphant, the supremacy of the Bible and the Pope is at an end, and tolerance and free speech and free thought and free popular government and, above all, popular schools and popular intelligence become established facts and institutions.

Meantime, science is at last giving to the mass of readers a taste of and respect for truth. As fast as the people are leavened with the spirit of truth and a knowledge of the methods of nature, with a knowledge of the true system of nature and their own inner mental constitution, of which the moral sense or moral law is as essential a feature as gravitation, or the law of gravitation is of matter, so fast they cease to be credulous and superstitious. In the light of current scientific knowledge, it is seen that orthodoxies and creeds are the puerilities of childish, imperfect, and primitive civilizations, but a single step from barbarism, suited to man as an animal rather than an intelligent being aware of his natural prerogatives and birthright to be his own priest and king. The revolution means that man, elevated to the plane of reason and full self-consciousness, cannot be the proper subject of arbitrary rule and dictation in matters of belief and conduct; that each intelligent, fully developed human being has a sovereign tribunal within in the voice of conscience and reason, and that despotisms of all kinds are insults to and outrages on that sovereign reason.

B. W. BALL.

EDITORIAL NOTES.

"LARRIKIN" is the Australasian term for the genus "hoodlum" or "gamin."

IN this number of *The Index* appears the first of a series of articles entitled "A Hundred Days Abroad," from the pen of Mr. George Jacob Holyoake, in which this distinguished reformer and author will give our readers the results of his observations and experience during his travels in this country and in Canada last year.

A CONSERVATIVE English paper publishes a letter from a correspondent whose faith seems to have suffered but little, if any, from the scepticism of the age. We give an extract:—

In these days of scepticism and rank infidelity, when men scoff at the truthfulness of the word of God; yea, there are those among us even professing Christianity, who doubt the authenticity of the Pentateuch. Many there are also who disbelieve in the Old Testament altogether, and look upon it as an obsolete book. In these days, therefore, it is refreshing to hear from what may be considered a reliable source that Noah's Ark has been discovered.

THE following is from an article in the May number of the *Princeton Review*, by President Eliot, of Harvard:—

Two practices which greatly discredit the ministry in the eyes of laymen ought to be stopped: I mean, first, the practice of subsidizing boys in academies and colleges from the funds of sectarian societies, on the understanding that the beneficiaries will subsequently go into the ministry; and, secondly, the practice of supporting in theological seminaries, and ultimately imposing upon parishes, young men of small mental capacity and flaccid physical or moral fibre. The belief prevalent among laymen that boys are tempted to pledge themselves to the clerical profession by the attractive offer of a liberal education, and that incompetent and unworthy persons are drawn into the seminaries by the standing offer of gratuitous board, lodging, and instruction, works incalculable injury to the Protestant ministry.

WE shall use no arts to win readers save those of boldness of thought, or rather relevance of thought to principle, which is boldness in these days of digression. We shall rely on explicitness of speech and fairness to others, by which we mean fairness to friends as well as to adversaries. These arts are not popular, because fairness is not sensational. Indeed, the very attempt to be fair is almost universally regarded as tameness; but it does good in the long run, though it does not usually pay. We never said the *Present Day* would supply a "felt want," for we did not think anybody felt any want for it; but we believed that, if we could make it useful, the public would tolerate it. The editor, therefore, is as much surprised as he is gratified (for reasons he does not state) at proofs of interest not foreseen.—*George Jacob Holyoake, in his Present Day.*

Digitized by Google

EXTREME men—of course I mean extreme men in the right direction—do this useful work: they keep advanced places occupied, and keep those places warm and soft until such time as timider people shall think it politic and safe to walk up to those places, sit down in them, and enjoy the warmth and softness they did not themselves create. There's no respectable, safe, moderate thinker of to-day, either in the theological or political world, who does not occupy a place which has been won for him, not by his own sweat at all, but by the toil and the sweat, the agony and the shame, of some extreme thinker of the past. I know hardly anything so contemptible and so cowardly as this fashionable denunciation of "extreme men" and "extreme views" in which some good people indulge. Those who indulge in this fashionable denunciation are indebted to the extreme men they denounce for almost everything that makes their own lives great and beautiful and free.—*James K. Applebee.*

IN a recent discourse before his society at East Saginaw, Mich., printed in the *Express* of that city, Rowland Connor said:—

Philosophers are currently supposed to be a race of beings by themselves, and the perusal of their works a task of immense difficulty. Without doubt, philosophy is seldom studied by the ordinary man or woman. We have all heard of Socrates and Plato and Kant and Hume and Hamilton, but very few persons know anything about them. The difficulty of philosophic study, however, has been greatly exaggerated; and any one at all familiar with modern knowledge should aim at a comprehension of modern philosophy. Lewes' *History of Philosophy* contains all that any one but a special student cares to learn about past philosophy, and there is only one living philosopher who is worth reading. This is Mr. Herbert Spencer, and it must be admitted that Mr. Spencer is not easy to read. But, when the peculiarities of his style have been conquered, he will well repay all the time and study that can be given to him. If you wish to study Herbert Spencer, begin with the volume entitled *Illustrations of Progress*. Read next the volume called *Essays, Moral, Political, and Æsthetic*. Then, you may undertake his *First Principles*; and, if you succeed in conquering this, you can study his *Biology*, *Psychology*, *Data of Ethics*, and *Sociology*, in the order here given. The task may be a severe one; but, if you succeed, you will have gained infinitely more than all the riches of the world could possibly give you.

THE *Investigator* says that "religion means a belief in the being and perfections of God, in the revelation of his will to man, in man's obligations to obey his commands, in a state of future reward and punishment in another life, and in man's accountableness to God. . . . The gentlemen referred to,—Messrs. Applebee and Potter,—if they accept religion as we have defined it (and we think our definition is correct), are religious, but otherwise they are irreligious, though no doubt they are excellent teachers." There seems to be considerable difference of opinion as to what constitutes religion. For instance, how widely different from the above view must be that of the Boston *Sunday Herald*, whose religious editor thus refers in complimentary terms to our neighbor!—

One would almost think, from reading the religious newspapers last week, that Christianity had become a department of social or political science, and that the Christian Church had closed its doors for good. . . . The *Investigator* is the only religious weekly that has not very largely given up strictly religious matters for the asides of the season.

According to the article from which this extract from the *Herald* is taken, *The Index* is not entitled to rank religiously with the *Investigator*, which is mentioned as the pre-eminently "religious weekly."

ONE of the most thrilling, graphic, yet realistic descriptions we have yet read of a tornado is that given by the Norwegian poet-preacher, Kristofer Janson, in a letter to *Unity* of Chicago, from which we extract the following pen picture of the beginning of the storm which wrecked his church and home:—

A cloud, black as the raven's wing, appeared in the west. Suddenly it split; and between the two black trains expanded the most fearful, dismal sky I ever saw. The color was green-gray-yellow, and it darkened the sun so it became as dim as twilight. Suddenly, the cleft widened between the two black cloud-wings; and the upper one came with a terrible speed hurrying back toward us. . . . In a moment, we were surrounded by a white cloud; and the wind and rain lashed the house, which groaned and shivered all through. It was not rain: it was furious torrents of water mixed with heavy hail, which poured down from heaven. The storm tried to burst open the door, but five men pressed against it with all their might. The wall seemed to give way, and stood in a bow: the building shook as in convulsions. I felt like a tightening of my heart every time the house seemed to be lifted from the ground and dropped down again. Twice we had these terrible shocks: then, in a moment, house, men, furniture, were hurled through the air one hundred feet away. I do not remember anything before I found myself on the ground crawling among the debris of my new home.

A subscription has been started among Unitarians to aid Mr. Janson in rebuilding both his church and his home.

REV. JAMES GILMOUR, of the London Mission at Peking, who has spent more than twelve years as a missionary in China and Mongolia, who is one of the few missionaries who have made themselves masters of the Mongolian language and who has labored incessantly since 1870 to extend a knowledge of Christianity among the people of the great plain north of China, says in his book, *Among the Mongols*, "I have as yet seen no converts from among the Mongols." He declares that "the seeming interest and apparent friendliness with which many of them have listened to the gospel message has, under God, been mainly owing to the fact that I tried to heal their diseases while I said that the kingdom of God had come nigh unto them." They sought bodily cures rather than spiritual light and comfort. The Mongols want to know in regard to the fate of the millions who have died without hearing of Christ. They ask hard questions about an eternal hell, and dispute the claims made for the Bible. "How do we know," they ask, "that all our Bible tells us of a future state is true? Has any one among us died, gone to the world to come, seen these things, and come back to life to report them?" There seem to be substantial barriers to the progress of Christianity in that part of Asia. "For a Mongol to profess Christianity," he tells us, "would be to face ruin. It is very doubtful if a consistent native Christian could subsist on the plain among his Buddhist countrymen. So great is the power of the lamas, and so intense seems to be the spirit of bigotry that pervades the whole community, that any one who refused to conform to the requirements of Buddhism would perhaps find it impossible to remain in his native country." Some idea of the intellectual and moral obstacles which arise in the minds of the Mongolian Buddhist may be inferred from the following extract, which is an example of the Mongol's reasoning: "Admitting for argument's sake the Christian doctrine that we can recognize and expect to meet such of our friends as go to heaven, he asks, How about those whom we do not meet there, and who are gone to the place of torment? Knowing that they are suffering, can we be happy? And if God knows everything, and knows before he has created them, that such and such men will be sinners, and not be saved, but go to hell, why, knowing all this, does he, who is goodness and love, make such men at all? And why did God, who made the world and rules it, and knows all and can do all,—why did not he not prevent the serpent from deceiving our first parents, and keep sin from entering the world at all?"

LIVE THOUGHTS.

ONE ungrateful man does an injury to all who stand in need of aid.—*Publius Syrus.*

DON'T waste life in doubts and fears: spend yourself on the work before you, well assured that the right performance of this hour's duties will be the best preparation for the hours or ages that follow it.—*Emerson.*

THE discovery of Copernicus was the destruction of all existing systems of theology.—*Emerson.*

'TIS the fine souls who serve us, and not what is called fine society. Fine society is only a self-protection against the vulgarities of the street and the tavern.—*Emerson.*

OPINION is twilight; science is daylight; ignorance is night.—*Anon.*

BEING less annoyed at the defects of others is one of the best proofs that we are approaching freedom from defects ourselves.—*Indian Witness.*

WE should do everything we can for others, if only to dissipate the thought of what they omit to do for us.—*Mme. Swetchine.*

NO MAN or woman that fills a large place in public view can please each person individually; no philanthropist give to every one, even though he possesses as many generous impulses per minute as the fabled Briareus had hands.—*Transcript.*

BE just in all thy actions; and, if joined
With those that are not, never change thy mind.
If aught obstruct thy course, yet stand not still,
But wind about, till thou hast topped the hill.
—*Sir J. Denham.*

IF there is any great and good thing in store for you, it will not come at the first or the second call. "Steep and craggy," said Porphyry, "is the path of the gods."—*Emerson.*

MODESTY never sells for its value in the open market.—*Dr. J. R. Monroe.*

NEVER a joy do we cause but we for that joy are the gladder.
Never a heart do we grieve but we for the grieving are sadder.
Never a slander so vile as the lips of the willing rehearser;
And curses, though long, loud, and deep, come home to abide with the curser.
He who doth give of his best, of that best is the certainest user;
And he who withholds finds himself of his gaining the pitiful loser.
The flowers that are strewn for the dead bloom first in the heart of the living;
And this is the truest of truths,—that the best of a gift is the giving. —*Carlotta Perry.*

ENDEAVOR to be always patient of the faults and imperfections of others; for thou hast many imperfections of thy own that require a reciprocation of forbearance. If thou art not able to make thyself that which thou wishest to be, how canst thou expect to mould another in conformity to thy will?—*Kempis.*

TO SOLICIT and persuade one another are privileges which belong to us all, and the wiser or better man is bound to advise the less wise and good; but he is not allowed, generally speaking, to coerce him.—*Gladstone.*

HE who here
Hath run his bright career,
And served men nobly, and acceptance found,
And borne to light and right his witness high,
What can he better crave than to die,
And wait the issue sleeping under ground?
Why should he pray to range
Down the long age of truth that ripens slow,
And break his heart with all the baffling change,
And all the tedious tossing to and fro?
—*Matthew Arnold.*

The Index.

BOSTON, SEPTEMBER 6, 1883.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER,
BENJAMIN F. UNDERWOOD, } *Editors.*

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index*.

WAS JESUS A FREE THINKER?

BY F. M. HOLLAND.

No one should speak positively about the opinions of Jesus, for the records of his words are uncertain as well as unreliable. The Greek of the New Testament is only at best a translation from the language he really spoke, and there are strong reasons for believing that none of the Gospels were written until long after his death. In fact, we have no right to be confident that any particular saying is really his, especially as we often find contradictory and inconsistent assertions put into his mouth. Still, there are some general opinions which occur so often and are expressed so earnestly that they have been generally and reverently accepted as his, and have done much to determine his place in history.

There can be little doubt that Jesus showed a noble freedom from prevailing superstitions and formalisms as well as a daring courage in disobeying despotic mandates. In predicting that the temple would be destroyed, he ran much greater risk than any one would now in declaring that Christianity will pass away. Calling himself greater than the temple was claiming to stand above the national religion; and such phrases in the first three Gospels agree with his prophecy in the fourth, that worship would soon cease to be held at Jerusalem. All the narratives agree that he drove by force from the temple the sellers of the birds and animals used in sacrifice; and it has been inferred from the statement that he "would not suffer that any man should carry any vessel through the temple," as well as from his desire to have the building called "the house of prayer," that he wished to put down the whole system of burnt-offerings supposed to have been ordained by Jehovah through Moses. Perhaps he was only trying to put down unseemly noises in a place used mainly for devotion, but even this was rebellion against the priests. The charge that he threatened to destroy the temple shows that he was not considered friendly to the national worship. We never read of his making any offering there; but we find him bidding those who would do so put it off, in order to do their duty toward their brethren. Evidently, he thought that love to God and man was holier than the whole Jewish ritual. Two ceremonies which he found already in use, baptism and the paschal supper, he seems to have regarded with some favor; but the former rite was never administered by him, and the passage to the effect that he declared it necessary to salvation is spurious. That he meant to turn the Jewish passover into the Christian communion is particularly unlikely from the fact that he invited no one but the twelve apostles, not even his own mother, to participate. His wish was evidently to found religion on morality rather than ceremony; and thus he worked directly, though unconsciously, in favor of free thought. Ceremonial religion means subjection to priests. Put morality above ceremony, and you make conscience free.

Among the precepts of Moses most hostile to individual liberty were the command to keep the Sabbath and the prohibition to eat certain kinds of food. But Jesus declared that no man can be defiled by what he eats. Still plainer was his assertion of his right to heal the sick on the Sabbath as well as of his disciples to gather grain in the fields. That he wished to have Sunday observed instead of Saturday is merely an unauthorized fancy. His words and acts show plainly that he did not wish to have observance of the Sabbath enforced. The same disregard of the authority of Moses was shown in the declaration of a new law about divorce. And, in commanding non-resistance, Jesus condemned not only Moses, but Joshua, Samuel, David, and Elijah. Indeed, he passed a daring censure on the conduct which had most been praised in the past, and which the men around him were most eager to imitate, as the nation soon did, to its destruction. What he said against fasting, swearing, and washing of hands, is less important, but not to be overlooked. Here, he did not come so directly in conflict with Moses as with the scribes and Pharisees; and the severity with which he denounced these religious rulers is rather to be wondered at than imitated: for Paul, who had been brought up among them, never speaks of them with praise. Jesus called them whited sepulchres and vipers, and in the same spirit sent a defiance to his sovereign beginning with, "Go and tell that fox." Similar independence appears in his behavior when on trial by Herod, the high priest, and Pontius Pilate. It seems to be the come-outers, iconoclasts, and non-conformists who imitate Jesus best.

There is, however, reason to believe that some of the passages just referred to express not so much the sentiments of Jesus as those of the Church of the second century, which had then separated much more widely from Judaism than was attempted. Paul, the most independent of the apostles, is shown by Acts xxi., 24, as well as by his own Epistles (I. Cor. vii., 18), to have kept the law himself and to have directed all Jews to continue to do so, in spite of their becoming Christians. His view that Judaism was about to give place to Christianity, and was not obligatory on heathens who became Christians, met with so much opposition from the eleven apostles that they can scarcely be supposed to have heard such ideas from Jesus. The Revelation, undoubtedly a Christian utterance of the first century, is full of reverence for the temple and the law; and this feeling reigned in the early Church according to Acts. Other ancient documents might also be cited to justify the opinion that nearly a century elapsed before Christianity reached the position to which it would have been elevated at once, if Jesus had really treated the temple, the Sabbath, and the law as he is said to have done. It is probable that Judaism had much the same hold on him as Catholicism had in the fourteenth century on Tauler and other mystics, who honored its creeds and its ceremonies, but only as helps to morality, and with full knowledge that duty has an intrinsic importance, in comparison with which forms and dogmas are worthless. What Jesus was historically is of little importance compared with the fact that the Four Gospels represent him as a rebel against the religion in which he was brought up, and thus give the strongest encouragement they can to heretics, come-outers, and free thinkers.

But it must be remembered that Jesus justified his independence, not by declaring the right of all men to follow reason and conscience, but by claiming that he had a supernatural authority, greater than ever had been given to any other man, or ever would be. Nothing less was involved in his calling himself Christ or Messiah, and it was for making this claim that he was condemned to death. Again and again, he asserts his right to be called Lord and Master, to forgive sins, to rule the winds and waves, and to command angels and evil spirits. All who have taught before him are thieves and robbers, but his words are never to pass away. He is the bread of life, the true vine, the way, the truth, and the life. No free thinker ever spoke of himself thus. I would not insist on single phrases, but all that is said of his relations with his fellow-men shows his desire for unreasoning agreement and unhesitating obedience. Those who would enter his kingdom must become like little children. Those whom he called to follow him must forsake business and property, father, mother, children, brother, sister, and wife. Even waiting to bury a dead father was not allowable. Keeping all the moral law blameless was not sufficient for him who would not give up all his property and devote himself to propagandism. The work of the disciples after his death, unto the end of the world, among all nations, was to be "teaching them to observe all things whatsoever I have commanded you." Denial of his inspiration was the only sin which could never be forgiven; and refusal to listen to him or the apostles or any of the seventy disciples was a greater guilt than that of Sodom. Here, the foundation was laid for that exaltation of theology above morality which has since done so much harm. To the same effect are such sayings as, "He that believeth not shall be damned"; "He that believeth not shall not see life, but the wrath of God abideth on him"; "He that heareth my word and believeth on him that sent me hath everlasting life, and shall not come into condemnation"; "No man cometh unto the Father but by me." Perhaps none of these speeches were spoken literally by Jesus; but they are all closely connected with him, as are the passages about becoming child-like, committing the unpardonable sin, and incurring greater guilt than that of Sodom. Thus, Jesus has been continually appealed to as an authority for such reliance on faith as has greatly hindered the growth not only of morality, but of her best proctector, liberty. Especially unfortunate for the progress of freedom have been these two sayings: "Blessed are they that have not seen, and yet have believed," and "Compel them to come in, that my house may be filled." The fundamental law of liberty is that no one should be constrained to enter even the house of God, or urged to believe anything to which he is not led by his own experience. How far Jesus is to be held responsible for the despotism exerted in his name by the Christian Church, it is hard to say. We hear of his promising the apostles thrones, giving them the keys of heaven and hell, with power to settle what should be considered right and wrong, and declaring that he who will not obey the Church shall be considered outside of it, like the heathen. But, on the other hand, we often find him check the bigotry of his disciples; and it may be judged from some passages in Matthew, as well as in Acts, that he wished to have all the brethren take part in church government. Whether his personal preferences would have been for Episcopalianism or Congregationalism can never be known. What is certain is that he did not wish to have individuals think and act for themselves. He cannot be charged with striving to check liberty of thought, for he probably did not know what it was. What independence he showed was as a mystic, not a rationalist; and the great work of his life was in laying the foundation for a religion which gave a much higher place to ceremony than he would himself have wished, but which has not shown any more regard for faith and belief than was fully warranted by his words and acts.

A HUNDRED DAYS ABROAD.

BY GEORGE JACOB HOLYOAKE.

CHAPTER I.

In the United States and Canada.

Were titles put up to auction, I should be a bidder for any lot containing one better to my mind than that I have chosen. Unfortunately, all the striking titles have been snapped up long ago. There is that famous one, "How I struck America, and How America struck me." There was a difficulty about using that, as people invariably put upon words their most obvious signification. For myself, I did not strike America at all. To use an expression of theirs, I "did not feel like it." And, had I struck America, it would not have mattered. The great, extended creature would not have been conscious of it, and certainly

Digitized by Google

would not have condescended to strike me again. If it had, I should not be left in a condition to tell the story. My business in the countries named was to obtain authentic information for the guidance of settlers. "Adventures in Search of a Settler's Guide-book" would describe the nature of my travels, but so many other incidents occurred that such a title would not cover them. In America, the press spoke of my "mission," to which I was never reconciled. There is but one "mission,"—one common to every traveller; and that is to keep his eyes open, and tell the truth (if he can make it out) with regard to whatever comes under his notice likely to be of public interest and use. So I have chosen a title of "A Hundred Days Abroad," as the indication of time is the best test of the opportunity of judging and verifying the facts recorded. Most things take twice seeing, and a long time looking at to make them out.

It is not of moment to any, save those who may profit by travel, to remark the effect of a sea voyage on health. When I went to America in 1879, the effects of the disabling illness of 1874 were not extinguished. The prospect of a journey or the sight of the sea, as I met it in coach or train, caused eagerness and gladness formerly. After 1874, all this had ceased; and life itself was uninteresting, except when I was working. On my voyage out in 1879, I felt no change. While travelling in America, I felt no exaltation. On my return, I was not conscious of being better or worse. Yet, all the while, I was entirely changed. The sense of intermittent weariness had gone out of my mind, and no more returned. In 1882, I longed to be again on the Atlantic, not doubting that I should rejoice in sight of the shoreless sea; and it all came to pass even as I had imagined. The second Sunday at sea, on the voyage out, ended with the wildest night I had seen. However, I had enjoyment in watching it, and counted that a gain.

There is no dust at sea. That is one of the first satisfactions which comes to a writer in London, whose books and papers are daily covered with the nimble particles. It again seems to me that a pleasant and useful book might be written on sea things and sea ways. The discomfort of sickness on the ocean, which comes to so many, is as much imaginary as mechanical. It is pretty much with sailing as with swimming: those who have the most confidence swim the best. New voyagers fare better, who keep their eyes from observing anything whose motion they can measure. Had I time and sufficient means, I should like much to make voyages in the chief vessels of the best-known lines, to describe their peculiarities and special advantages. There is no doubt that, if a ship-builder had instructions or permission to use his best judgment, he might, as captains have told me, greatly improve the arrangements for the convenience and comfort of steerage passengers. There are difficulties in introducing improvements; as the first vessel having them would be popular, and passengers would crowd to it, and, if full, wait for it to arrive in port again, instead of going by other vessels. Railway companies are reluctant to introduce improvements in carriages, as it disqualifies other rolling stock. In this way, improvements are delayed long after steamship and passenger companies are quite convinced that they should and ought to be introduced. Since passenger vessels multiply every year and will multiply more in the future, and an increasing number of people have to spend no mean portion of their lives at sea, it is surprising that obvious conveniences—such, at least, as are inexpensive—are not supplied.

There are the rooms of captain, doctor, purser, and other officers, bearing designation on the outside, generally written on plates so indistinctly that new passengers pass them scores of times without observing where they are, or knowing where to go to if they require to communicate with the official occupants. Besides, the names on the doors are placed so low down that only midgets of the Tom Thumb stature can possibly read them without stooping very low; and that action, in a lurching ship, is often attended with inconvenience. Why I recur to this is that a ship is sometimes called a "floating hotel"; but ships are so large now that they are floating towns, and have their High Streets, public buildings, squares, suburbs, professional and lower class quarters. The corridors are virtually streets, where scores of people live whom you come to know during a voyage. Why should not the corridors have names like streets? Numbers are now the sole designations of the state-room, or residences, which are unintelligible to persons unfamiliar with the ship, and difficult to find without inquiry. The chief parts of a ship should have names put up, so that passengers would be able to describe them, and know where they have been, and where appointments could be made. Officers of the ship and the few passengers able at all times to walk about the ship at pleasure, and who are therefore familiar with every inch of the ship, have little need of these facilities, which to them would seem absurd. But the greater number of passengers never make this acquaintance with the vessel during the whole time they are on it. With a little thought and taste, a ship might be made much more interesting and intelligible than it now is. Passengers are left to find out everything for themselves, and commonly never do it. Some day, these attractions will be added to passenger vessels.

In every stage of human life, most people are at some time or other discontented with their condition, and some have good reason to be so; but, excepting the very worst, there is often consolation to be had by reflecting that things are not so bad as they might be, nor is the comfort of comparison denied to those who spend their days at sea. It is good for saloon passengers to think of steerage inmates, and for steerage passengers to think of those in open boats, with no cooks or stewards with them.

In some warm parts of America there are races of accomplished mosquitoes as well informed as though they had attended Prof. Huxley's lectures on natural history at the School of Mines. These educated and fog-horn throated insects select English subjects, for operations, as being more full-blooded than the persons permanently on hand. The same intelligent quality is observable in the sea-gulls that visited the ship at Queenstown. They first appear at breakfast-time, when remains of meals find their way into the waters. Having obtained all they can, they retire, and do not return until luncheon-time. They know about the hour the repast bells ring as well as the passengers do. The dolphins and porpoises, farther out at sea, seem to understand when the steam hotel comes by, and follow it. One Sunday morning, a fine shoal leaped out of the water in the bright sunshine, and kept up with us for two hours. Gradually, the fatter kind fell behind; but two fine lean racers kept ahead for a time like two champions at a race, who, having more pluck and speed than their fellows, arrive at the winning-post at the same time. Their behavior appeared to more experienced travellers than myself quite like a human contest. In fact, an old colonel standing by me cheered the foremost fish.

On the last Sunday of our voyage, we had the pleasure of hearing the Rev. G. C. Lorimer, of Chicago, preach. On previous voyages, Church of England clergymen were selected, who were less competent and less distinguished than several American ministers on board. This time, I suggested that, if the authorities of the ship had difficulty in making the selection, all the reverend gentlemen on board should cast lots, and he who drew the prize should preach. It was unseemly, where so many passengers were American and many preachers of their own country were present, that they should not have at least an equal chance of conducting the ministerial office. Capt. Murphy assured me that he merely stipulated that the prayers read should be those of the Church of England. He did not say, but his choice implied that they were, in his opinion, the most efficacious. So it came to pass that I heard, for the first time on board ship, an American divine. Dr. Lorimer, of Chicago, is a perfect type of United States energy, and looks it. He has an impetuous voice, rushing on without pause or break, ever advancing with an iron alacrity. His discourse proceeded along like the engines of the "Scythia." Of course, any logical discourse should proceed from premise to sequence; but this hurried along, it incessantly advanced. It was not spoken: it was impelled. In a musical box, the dropping of a bar marks the succession of a new tune. The preacher had no bars between his service. Song and sermon and prayer were all on one reel, and constituted one piece of vocality,—which is an error in art and in reverence. Nevertheless, there was vigor of argument in it, and abounding, apt, and revelant illustration. As for words, the commissariat of the ship was not richer in edibles than the Doctor's treasury of terms. They flowed like the Gulf Stream, in fervid, caloric torrents. His exhortations were to the self-sacrifice and self-control of the Christian life, of which he assured the capacity, and, what is more, made clear the possibility. He drew similitudes from sailors and the sea,—a difficult thing to do with art in the presence of experts of the ocean; but the preacher did it. I tendered to Dr. Lorimer my thanks for his wholesome discourse, saying that, though I could not answer for his principles, I wholly agreed with his conclusions. On the following night, the reverend gentleman made a speech in the saloon on behalf of the Seaman's Orphan Fund, in which there were humor, naturalness, and modulation, which means spaces between the tones; and a subscription from his hearers of over £20 was made or rather collected.

To end matters pertaining to the sea, it only remains to remark that the voyage home was not less interesting than the voyage out.

The attractions in New York delayed our return until the hurricane month of December. For a fortnight before, the sea had been in a cyclonic uproar. "A cyclonic fit," I said formerly, "a fit with unmistakable convulsions, since the ocean shook and foamed at the mouth," but the printer put it "hooks and foamed." For a time, no one could guess how the word "hooks" was created. At length, I saw that the printer had put the s at the end of the k, instead of before the h, and so transformed "shook" into "hooks." I never saw so curious a misprint before. I have kept clear of "shook" this time. No doubt, the s had dropped out in lifting the forms, and got dropped in again at the wrong end of the word. The news of wrecks was served with our breakfast every morning. The "Catalonia," in which we had elected to sail, had been more than two days late in reaching New York, owing to storms and to her stopping on the way rescuing wrecks. That was a consoling consideration, since a ship which could ride the gale to save others might be depended upon to know her way about in turbulent seas. As neither pain nor pleasure lasts forever, it was fair to presume that neither tornadoes nor calm would endure, and, since they must take their turns, the turbulent sea, after a fortnight's commotion, might be pretty well tired of leaping up night and day, and about the beginning of December the billows might be found disposed to behave well. They did.

When we came to embark, New York was being as rapidly buried in snow as Pompeii by the ashes of Vesuvius. The ship appeared one vast bowlder of snow; and, as she had lain a week in the dock without steam, she was as cold as a well. No sooner were we out of Sandy Hook than the snow itself gave in, and we had four days of the best-conducted sea I have ever seen. The captain, however, who was a prophet of experience, had told us at New York that he thought the Atlantic would prove ill-tempered sooner or later, and that our prospect of bad weather was good. No sooner had we left behind us the sharks of the Newfoundland coast than the most excellent ocean turned rough. A vigorous north-west wind sent forth all its strength, blew the stout ship on her side, and mostly kept her there.

"Inconstant as the winds" is a proverb; but passengers find that the winds have virtues which have been overlooked. We found the wind could be constant when it pleased. The "Catalonia," being a freight ship, and what sailors call "broad in the beam," had good manners. When she rolled, she went down until her edge seemed in the sea,—but, then, she went down so deliberately that any one might have made his will on the road,—and, when she came back, it was in such a self-respecting way that you felt there was nothing mean about the "Catalonia." Day by day, I watched the mighty contest between the assaulting wind and the resenting waters. The sea was indignant at being attacked. Often driven below by bruises, as I found my strength insufficient to hold well by the ropes, I retreated to the saloon, not wanting to be washed away and leave no address. Still, I saw enough of this conflict to understand the exclamation of Henry IV. at the wild blasts:—

> "Which rocked the brains
> In cradle of the rude imperious surge,
> And in the visitation of the winds,
> Who took the ruffian billows by the top,
> Curling their monstrous heads, and hanging them
> With deaf'ning clamors in the slippery clouds."

These are vigorous proceedings, with which only good seamanship and stout ships can successfully compete.

It was clear to me that Shakspere had never been on board the "Catalonia," nor any other ship afford-

Digitized by Google

ing equal facility for studying a storm, or he would never have described the billows as "ruffian." He would have said instead "ruffian winds." The mischief came from them. The billows were decorous enough until the "ruffian" winds assailed them. Poets can sometimes be as unobservant as those critics who regard a controversy as a quarrel, never caring to discern between assailant and defendant. It is not always a fight when one person knocks another down, if he who has found his way to the floor began with outrage and provoked the blow. The waves are not the aggressors in a tempest. Of course, neither poets nor critics are prone to act as magistrates, and ascertain facts; but facts are worth attention, when they come in our way.

Mr. John Pender, M.P., was one of the passengers on the "Scythia" on the outward voyage. He said that a settler's guide book, of the kind I was going out to procure, would be of great service to him, if it existed, in the object he had in view in the interest of some of his constituents in visiting the United States. On our return in the "Catalonia," amid the passengers was Dr. Phene, who had just completed years of travel in the study of the Mound-builders. Capt. Gill, on my solicitation, agreed to his delivering a lecture to us, illustrated by many remarkable drawings. Dr. Phene succeeded in elucidating the ancient serpent worship by past races more completely than, in my opinion, it has ever been done before. On the part of the passengers, I moved a vote of thanks to Dr. Phene, and afterward drew up a certificate of the proceedings on the part of the ship's company, which Dr. Phene wished to preserve.

For *The Index*.

EUROPE—AMERICA.

Preem.

Eur pe, no more art thou personified
By maiden of the Grecian myth, whom o'er
The waves with fluttering vesture Jupiter
Bore tauriform: thou art a matron now,
With ripened and imperial loveliness,
But lines of thought and care are furrowed in
Thy queenly face. Though full of historied years,
And many-era'd, grand experiences,
Thou still refusest to be old, to lower
Thy haughty glance, proud with the consciousness
Of domination wide as earth, in sign whereof
Thy brow upbears a towery diadem,
Such as the ancient Mountain Mother wore,
When lion-drawn she through the nations rode,
Largess of roses on her car receiving
From roofs and pinnacles idolatrous;
And not alone thine eye imperiousness
Of martial sway rays forth, but of a rule
More high, august,—reason's supremacy,
Prerogative of thine Aryan colonists.

A bright auroral beam begins to touch
Thy forehead with purpureal light, the glow
Of freedom, which thy daughter o'er the sea
Hath from her cradle known,—thy daughter soon
To be thy peer. Palladian beauty marks
Her even now, the port of empire large,
As she confronts thee with unquailing glance.
Her head is filleted with coronal
Of maize-ears, scarlet foliage; she stands
Upon a mountain's brow, with sky above
Unfathomably deep of breezy blue,
And gazes dreamily o'er landscape vast,
Autumnal, iridescent,—forests, streams,
And lakes, and yellowing harvest-fields and blue
Sierras in the distance gleaming dim,
A landscape half-reclaimed from sylvan shade,
Where natures wild and tame jostle each other,
But lifting heavenward many a dome and spire
Of nascent city, young metropolis,
With many-nationed, many-languaged throngs.

What though an ocean rolls and roars
Between Europe, America? That hinders not
An intercontinental colloquy.

But America is not Europe's child
Purely: there is a native wildness in
Her blood proper to sylvan hemisphere.
The youngest of the mighty Aryan brood
Of nations, she is the lithest, loveliest,
With clearest eye, most hopeful, radiant.

Colloquy.

Europa.

O crowned with tasselled maize and hidden long
'Neath melancholy boughs, o'er waves unknown,
The ministers of memory—History, Song—
Your blank, inglorious centuries disown.

America.

Better my uneventful years than thine,
Gloom-fraught with deeds and superstitions dire;
Sweeter the whispers of my desert pine
Than groans from dungeon, rack, and penal fire.

Europa.

Thou speak'st of ugly things of long ago
Now mouldering to dust, disused, outgrown:
My forehead, too, with freedom's roseate glow
At last begins to glimmer like thine own.

America.

I but flung back thy taunt: alas! I, too,
My hateful memories had, even before
Thy dark Iberian bigots came and threw
The gleam of torture-flames upon my shore.

Europa.

Thy later children throng with eager eyes
My storied, battle-stricken soil; where'er
My gorgeous minsters, palaces, arise,
With long, admiring gaze, they linger near.

America.

Ah, yes, my later children,—those who sprung
Remotely from thy loins,—at times they feel,
For the old lands by many a minstrel sung,
A longing and homesickness o'er them steal!

Europa.

Not e'en the splendor of thy blue, blue heaven,
The golden plenty of thy prairies vast,
Nor perfect freedom, can my lingering leaven
From out your new-world bosoms wholly cast.

America.

If memory's magic draws my sons to thee,
Thine own are swarming hither,—those to whom
Thou hast a harsh step-mother been,—they flee
Westward, escaping a plebeian doom.

Europa.

My bounds are straitened, and I cast them forth
Strong-armed and simple-hearted to thine aid:
Thine untilled acres, east and west and north,
Are by their toil in cereal gold arrayed.

America.

Alas! thine outcasts hither to me bring
The hates and bigotries of thy dark years;
In my free air, to creeds they fiercely cling,
Which drenched of old thy soil with blood and tears.

Europa.

A truce to taunts, O sister, young, serene,
With Hesper glittering on thy cloudless brow,
Who wear'st of hope the joyous, dauntless mien,
While me dark memories and sorrows bow.

America.

Since science has our ocean-sundered shores
Made touch and thrill, thy sorrows now are mine;
Errors and wrongs of eld my heart deplores;
Fate will henceforth our lots together twine.
E'en now thy daughter France, whose lilies long
Their gorgeous beauty spread o'er land and sea,
Has doffed the crown and, renovated, strong,
At Freedom's board sits clothed and sane with me.

Europa.

If I with cares and wrinkles premature
Thy youthful brow, perchance, have furrowed o'er,
My myriad martyrs did for thee endure
Fierce struggle, wrong and death, in days of yore.

America.

I was a care-free, sylvan maiden then,
Listening the pine-tree's whispers in the wild;
Roaming o'er prairie, lake, and reedy fen,
While gleamed the hunter's moon with lustre mild.
The lavish splendors of my autumn skies,
My woods and streams, not wholly wasted were:
Beneath my mystic mounds now moulder eyes
And hearts which they to poesy could stir.

Europa.

For thee far back I battled, thought, and sung,—
To make thee mistress of a birthright grand
In thy green wilderness, my trumpets rung
At Marathon, the breeze my banners fanned.

America.

O mother, more than sister,—sister great!
Thy martyrs, heroes, taught to me the lore
Of liberty,—for thee shall ne'er abate
My love, my sons ne'er cease to hail thy shore.

Europa.

No diadem thy radiant forehead wears,
All else of power's insignia are thine;
The rods of empire Fate before thee bears
Where'er the sun's descending splendors shine.

America.

Though sad, reluctant, I, indeed, can wield
The pitiless sword with strong and mailed hand;
But not for conquest grasp I falchion shield,
With amplest bounds, wherein to breathe, expand.
Nor helmet plumed, nor trump's defiant peal
E'er me delighted; never at my feet
Longed I to see the nations vanquished kneel,
But rather knit to me in concord sweet

My starry 'scutcheon in his taloned grasp
The eagle proudly bears o'er land and sea;
For I was reared in conflict,—despot's clasp
But for my sword had never left me free.

Therefore I used it; but I ever yearned
My warlike panoply to cast aside,
And where the husbandman his furrows turned
Olives of peace to foster far and wide.

Europa.

The conqueror's banner on its staff droops low,
Me glory's glamor can allure no more;
But still in strife the nations' blood must flow,
And still be heard the deep-mouthed cannon's roar,

Till force barbaric shall to reason yield,
And Truth her sunbright gonfalon upraise
From morn to sunset,—then the embattled field
With fires of carnage will no longer blaze.

America.

Though still unfallen palace, minster stand,
Their gray walls are but relics of the past;
Some spasm of freedom their proportions grand
Will soon or late in ruins o'er thee cast.

Europa.

It matters not; for thought's ideals new
Upon my breast will fairer fabrics rear,—
The o'ermastering soul, from which their builders drew
Their plans and art, forever hovers near.

New forms of beauty still it gives to earth,
Leaving its shrines outworn to dull decay;
From ruin's wreck evolves a fairer birth,
And with fresh vesture doth each age array.

Where are the temples of the Hellene old,
Which on my bosom proudly once I bore?
Their beauty vanished as the centuries rolled
Or, crushed and fallen, charms the eye no more;

And sun-smit cross, like Dorian column lone,
Will yet in dust an outworn emblem lie
Through all the lands where ages long it shone,—
Faith's radiant hieroglyph in middle sky.

B. W. BALL.

CORRESPONDENCE.

A HEART RESPONSE.

Editors of The Index:—

In *The Index* of August 16, I find words that meet so full a response in my own feelings that I cannot refrain from expressing my pleasure at seeing them. In the "Leap from Mt. Washington to Mt. Desert," you say, "People continue to live and work where they have to, while the ideal places remain, awaiting with their several enchantments the opportunity of some future choice; and happy is it for those into whose real place of every-day life and work there drops, meantime, *some refreshing* and *comes some uplifting* from the waiting ideal."

Ah! we who toil and wait are thankful to read those brave words. And, again, we who are poor, and watch wealthy people laying the hands of iconoclasts on nature's beauties, are glad to read your exhortations to "leave to the common people a generous breadth of soil and shade and rock." We believe with you that "nature has made some places so beautiful that no man has a right, through the mere power of money, to make a corner in them, and cut off his fellows from their share in the enjoyment of them."

I shall not sign my name to this, for fear my motive in writing may be misconstrued; but be assured it comes from one who keenly appreciates your efforts for the COMMON PEOPLE.

MISCELLANEOUS.

DARWIN.—There is no need to go back now over the melancholy story of the slanderous attacks which were made on the greatest interpreter of the "order of [organic] nature" who has ever stood between its author and man; but they ought to be remembered as a lesson to the theologians of the future. No one has *now* ventured to throw a stone at Darwin's grave, since were any to do so it would bring upon him general condemnation. The revolution in the public feeling of this country, which has been silently and almost insensibly going on, but of which his departure from among us has brought out the manifestation, has been

Digitized by Google

a surprise no less to his friends than it must have been to his former opponents. The highest eulogies have been pronounced upon him from pulpits in which he was once reviled; and his life no less than his work has been held up as a model for imitation where his character as a man was formerly included in the depreciation of his achievements as a philosopher. . . . Those who knew Charles Darwin most intimately are unanimous in their appreciation of the unsurpassed nobility and beauty of his *whole* character. In him there was no "other side." Not only was he the philosopher who has wrought a greater revolution in human thought within a quarter of a century than any man of our time,—or perhaps of *any* time,—and has given what is proving the death-blow to theological systems,—which had been clinging yet more tenaciously to men's shoulders because of the efforts made to throw them off,—but as a man he exemplified in his own life that true *religion* which is deeper, wider, loftier than any theology. For this not only inspired him with the devotion to truth which was the master passion of his great nature, but made him the most admirable husband, brother, and father, the kindest friend, neighbor, and master, the genuine lover not only of his fellow-man, but of every creature.—*Dr. W. B. Carpenter, in Modern Review.*

To the Editors of the "Critic,"—You may not think the accompanying letter sufficiently interesting for publication; but, such as it is, I send it to you, and leave the matter to your own judgment. It interested me, because of the perfect calmness with which she alludes to her rapidly approaching death. We hear so much of the perfect fortitude of the religious that this testimony to the calmness of an atheist is, to say the least, interesting. The letter was written to Mr. Parker Pillsbury, of the anti-slavery movement, who gave it to me. A. W. R.

"AMBLESIDE, May 24, 1855.

"*My dear Friend,*—I am glad to hear from you, having requested Mr. Webb to tell you (for I did not know where to find you) that you will be most welcome here if you wish, as Mrs. Carpenter tells me you do, to look in on me on your return from the continent. You are well aware of the doubt of my being still here; and I am at present so ill that I feel the doubt very strongly. But, if I remain that long, I shall be glad to see you. Whether I can offer you a bed must depend on circumstances; but there is room at my table and by the side of my sofa. My love to your daughter, and best wishes for many happy years. I think you had better get the *Playfellow* for her. Twelve is not too old for that book, I think. I might have advised (for the sake of the cause) *The Hour and the Man*, but I fear it is out of print. I cannot write more to-day. I tried a drive yesterday; and it seems to have done me harm, I am so unusually ill and had an alarming attack last night. Mrs. Chapman's visit was a glorious treat. My autobiography is nearly finished, all the *most important* part being done. I don't lose my grasp on the *Daily News*, the editor of which tells me your pro-slavery people are the grief of his life. He knows more than most Englishmen about the whole business, and is stanch. Thank you heartily, my friend, for your affectionate letters. The Payres are in the South. Rev. Mr. Cotes is going to be married, *well*. My kind regards to Mr. Bishop. Does *he* come this way? I should like to shake hands with him.

Yours most truly, H. MARTINEAU."

—*The Critic.*

WALT WHITMAN.—The *Spectator* does not think very highly of Walt Whitman as a poet. In a review of his *Specimen Days and Collect*, it says: "According to the accepted canons of criticism and taste,—canons to which the best minds of the best epochs of civilization have successively added, or from which they have subtracted,—we should have expected that the greater part of Whitman's 'poems' would be set down as mere egotistical mouthing of sentiments either trite or untrue, sometimes deliberately nasty, and exhibiting very few traces of the inner qualities or external characteristics of true poetry." The *Spectator* says that "the examination of this volume has confirmed us in our conviction of the absence of any real and permanent significance in Whitman's writings." Again: "We will content ourselves with describing his characteristic as animalism,—the emphatic expression of the simply animal side of human nature. His works simply raise again, with greater vehemence perhaps, but with the same shallow views, the once famous cry, 'Retournons à la nature!' If to sit naked on a gate in the sunshine, rubbing one's self scarlet with a flesh-brush,—a process of which this volume contains a detailed account,—were in any way symbolic of human life, then Whitman would be our proper teacher. But as far as this '*al fresco* physiology' is from being such a symbol, so far is Walt Whitman from holding such a position. . . . These 'war memoranda' suggest one rather unpleasant question: he seems to have done good service in visiting the hospitals and purveying small comforts to the wounded; but, when we read his enthusiastic account of the young Union soldiers who faced death so simply and bravely, and bore their fearful sufferings and neglect without a word of complaint, it gives us rather a shock to find him saying immediately afterward: 'During the war, I possessed the perfection of physical health'; and, 'There has lately been much suffering here from heat. I go around with an umbrella and a fan.' We cannot help asking what would have become of the Union, if many men in the perfection of physical health had contented themselves with an umbrella and a fan and 'diary-jottings' instead of shouldering a musket and giving their lives in silence?"

BOOK NOTICES.

THE LIFE AND MISSION OF EMANUEL SWEDENBORG. By Benjamin Worcester. Boston: Roberts Brothers. pp. 473. Price $2.

This handsome volume, which is adorned with the best engraved portrait of Swedenborg, contains a very full account of the illustrious Swede, his parentage and early life, his education, his scientific labors and achievements, his travels, his connection with the government, his persecution by the clergy, his religious experiences, and his philosophic and religious views. It is probably the best biography of Swedenborg that has appeared in this country. The author had access to valuable documents, photo-lithographed a few years ago by Rev. R. S. Tafel, of London; and he gives considerable information about Swedenborg not contained in other biographies. The volume has a chronological catalogue of his works, amounting in all to a hundred and fifty, many of them, however, being quite small,—mere pamphlets. Swedenborg was certainly a remarkable man. He lived when Sweden was in the first rank of nations in the affairs of Europe. He was born 1688, nineteen years earlier than Linnæus and eighteen years earlier than our own Franklin; and he died in 1772. In him were combined the investigator of nature and the mystic; and he will ever be a unique figure in the history of science, philosophy, and religion. The volume here noticed is by a disciple of the "Swedish seer," and much that he writes only a Swedenborgian can accept; but the information which is given regarding a remarkable character is presented in a pleasant manner, and is of interest to all readers.

THE *Catholic World* for September is at hand. The leading article is a criticism of "Bancroft's History of the United States," by R. H. Clarke, the writer taking exception especially to the historian's treatment of the alleged discovery of this continent by the Northmen. "Thought is Free" is the title of a short essay by Rev. J. de Concilio. Alfred M. Williams writes a description of an Irish farmer's "Wedding at Connevoe." A. E. Marshall describes the present state of "Sundayism in England" from the Catholic point of view. "Socially, the English Sunday," he declares, "has become so deteriorated into a mere lounging day . . . that not even the Salvation Army can do more than tickle the humor of the thousands of strollers who won't be bored by religion." The article on "John Calvin," by E. Raymond Barker, is an interesting summary of Calvin's treatment of Servetus. We give part of its concluding paragraph: "And what is now the state of Calvin's own town? Geneva, which burnt Servetus for rationalism, has in our days expressly and officially repudiated all confession of faith whatever; and, where it was penal to be absent from sermon, a score or two surround the pulpit from which Calvin preached." Rev. E. M. Sweeny's "En Route to the Yosemite" is an interesting description; Bryan J. Clinche writes of the monastery at "Skellig Michel"; N. T. Thompson has an article on "The Church and Prohibition"; and Prof. Kavanagh pays a tribute to the memory of the lately deceased Father Burke, the Irish orator.

THERE is a new story by the favorite author, Mrs. A. D. T. Whitney, begun in the *Wide Awake* for September. Its title is "Buttered Crusts." The picture serial "Through Spain on Donkey-back" has a more than usually interesting instalment. Mrs. Diaz's "John Spicer Lecture" is on "Sneaks." Percy Bysshe Shelley's poem "To a Skylark" is given and beautifully illustrated. "Charlotte Brontë and Others" is the author of whom Amanda B. Harris gives a brief biography. Dr. Felix L. Oswald, Benjamin Vaughn Abbott, Mary Treat, Marion Harland, and Fred A. Ober are among the other writers for this number.

"OUR LITTLE ONES AND THE NURSERY" for September is, as usual with this magazine, brimming with instruction and amusement combined. In this number, "A Peep at the Menagerie," by Culmer Barnes, "The Long Sleep of Some Creatures," by Mrs. G. Hall, and "Cocoanut Island," by "Aunt Ria," all illustrated, are among the most instructive.

"OUR CONTINENT" of August 22 has a charmingly illustrated description of "Chautauqua, its History and its Mission." J. Ritner tells of "What it is, and Where," Obed Edson writes of "Its Name and Early History," and C. M. Nichols describes "The Assembly."

PERSONAL ITEMS.

REV. WILLIAM M. BAKER, the author of *His Majesty Myself*, *The New Timothy*, and other works, died at his home in South Boston, last week, aged fifty-eight.

SIR CLAUDE DE CRESPIGNY, in company with Mr. Simmons, has made a successful balloon voyage from Maldon in Essex across the North Sea to Flushing. The start was made at 11 A.M., and Flushing was reached about 8 P.M. The highest altitude reached was seventeen thousand feet.

PROF. STUART PHELPS, of Smith College, Northampton, son of Prof. Austin Phelps and brother of Elizabeth Stuart Phelps, accidentally shot himself dead, while on a hunting expedition in Maine, on Wednesday of last week. He was a contributor to the *Princeton Review* and other periodicals. His age was thirty-six.

MARTIN FARQUHAR TUPPER, whose "Proverbial Philosophy" and other poems were quite the rage with the young people of a generation ago, is still living in England, and in circumstances so reduced that a movement has been started to secure a testimonial fund for his benefit, to which his admirers in America are asked to contribute.

MISS MINNIE F. HOYT, of Connecticut, twenty-four years old, a Vassar graduate, is being celebrated as the first person appointed to a clerkship in the treasury department under the new civil-service rules. She is now a clerk in the census bureau. Her standing was 88.96: an Indiana woman was marked 85.75, a Virginia woman 74.75, and a Louisiana girl 73 75.

THE *Investigator* says it will not attach "Reverend" to the name of the senior editor of *The Index* any more. That is a sensible determination. Our neighbor frequently condemns the use of the title by those who believe in it, and when given to those who claim it; but far more objectionable is its use, when the person to whose name it is prefixed does *not* claim it and does not desire it, and when, too, he who forces it upon such a person regards the title as an extremely foolish one. This is the junior's view of the subject.

RICHARD HUMPHREY, of Brockton, Mass., died last week, aged sixty-nine. He was one of Garrison's friends and supporters in the anti-slavery agitation, and had been an earnest and radical free thinker many years. He was an unusually intelligent and well-informed man, and his character commanded the respect of all who knew him. The junior editor of this paper delivered a funeral address before the body was removed to another town, where a Christian burial service was held in accordance with the belief, not of the deceased, but of some of his surviving relatives.

PAUL BERT, recently Minister of Public Education in France, publishes an article in defence of vivisection. He says that savants do not resort to painful

Digitized by Google

experiments upon the bodies of living animals except with heavy hearts. They do it unwillingly, and are often forced to control their own sufferings while so engaged. They are also bitterly opposed to all perversion and abuse of such experimentation by heartless or incompetent persons. Science, however, he says, cannot dispense with vivisection. It is for the benefit of humanity and essential to the progress and development of human knowledge, and all efforts to prevent its perversion or abuse by legal restraints and regulations must prove useless and futile. In regard to the futility of attempts to subject such experimentation to legal control, M. Bert differs from many scientists equally distinguished with himself.

LESSONS

For Liberal Sunday Schools or for Home Use.

I. **THE ORIGIN AND GROWTH OF CHRISTIANITY.** A series of Twenty Lessons by Mr. LEWIS G. JANES, of Brooklyn. Written entirely from the Rationalistic stand-point. Prepared originally for use in Mr. Chadwick's Sunday-school. Each lesson printed in a separate slip. Twenty-five cents for the series, including postage.

II. **FREEDOM, FELLOWSHIP, AND CHARACTER IN RELIGION.** A series of Five very suggestive Lessons, by Mrs. KATE GANNETT WELLS. Each lesson contains enough material for several exercises. Seven cents for the series, in separate sheets, including postage.

III. **THE WORLD WE LIVE IN.** A Series of Elementary Lessons in Natural History, by Mr. FREDERIC A. HINCKLEY. Adapted both to interest and profit a class of children. In slips. Twenty-five cents for the series, including postage.

Teachers will do well to examine these lessons. A liberal deduction made for ten copies or more to one address.

Supplied at THE INDEX office, 44 Boylston Street, Boston.

Freedom and Fellowship in Religion.

This is a volume of Essays published by the Free Religious Association. It contains "The Nature of Religion," by D. A. WASSON; "The Unity and Universality of the Religious Ideas," by SAMUEL LONGFELLOW; "Freedom in Religion," by SAMUEL JOHNSON; "Religion and Science," by JOHN WEISS; "Christianity and its Definitions," by WM. J. POTTER; "The Genius of Christianity and Free Religion," by F. E. ABBOT; "The Soul of Protestantism," by O. B. FROTHINGHAM; "Liberty and the Church in America," by JOHN W. CHADWICK; "The Word Philanthropy," by THOMAS WENTWORTH HIGGINSON; "Religion as a Social Force," by EDNAH D. CHENEY. Also extracts from Addresses on the platform of the Free Religious Association, by Ralph Waldo Emerson, Lucretia Mott, Dr. Bartol, A. Bronson Alcott, Julia Ward Howe, Charles H. Malcom, Celia Burleigh, C. D. B. Mills, Horace Seaver, Isaac M. Wise, Robert Dale Owen, Wm. C. Gannett, Lucy Stone, F. B. Sanborn, Wendell Phillips, and others.

This book was published eight years ago, but is a live book still, and is a good answer to the question, What does "Free Religion" mean?

Price $1.50. Address "FREE RELIGIOUS ASSOCIATION," 44 Boylston Street, Boston.

BUILDING FUND.

THE Free Society of Dorchester was founded two years ago by Clara M. Bisbee, its present resident speaker; and, seeking greater facilities, also permanence as an institution, it now asks aid toward the erection of a small and simply constructed hall. Three thousand dollars will cover the entire expense, and friends of progress are respectfully invited by material gift practically to advance the cause at once of Woman's Ministry and of Free Religion. For further knowledge of the Society, address the President or Secretary of the Free Religious Association or Mrs. Clara M. Bisbee, Clark Street, Dorchester. Contributions sent to Mrs. Bisbee will be promptly acknowledged.

PHOTOGRAPHS.

Cabinet Photographs of the following named persons are for sale at THE INDEX office, and will be sent by mail upon receipt of price:—

Darwin, 75 cts.; Huxley, Tyndall, Spencer, Holyoake, and Abbot, 50 cts.; Emerson, Parker, Garrison, Sumner, Curtis (G. W.), Weiss, Adler, and Hinckley, 35 cts.; Card Photographs of Adler, 25 cts.; of Higginson, Abbot, and Frothingham, 15 cts.

Address THE INDEX, 44 Boylston Street, Boston.

THE FREE RELIGIOUS ASSOCIATION

was organized in 1867. Though having its headquarters in Boston, it is a national organization, and has members and officers in various States of the Union. It has the following

CONSTITUTION.

I. This Organization shall be called the Free Religious Association, its objects being to promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history; and to this end all persons interested in these objects are cordially invited to its membership.

II. Membership in this Association shall leave each individual responsible for his own opinions alone, and affect in no degree his relations to other associations; and nothing in the name or Constitution of the Association shall ever be construed as limiting membership by any test of speculative opinion or belief,—or as defining the position of the Association, collectively considered, with reference to any such opinion or belief,—or as interfering, in any other way with that absolute freedom of thought and expression which is the natural right of every rational being. Any person desiring to coöperate with the Association shall be considered a member, with full right to speak in its meetings; but an annual contribution of one dollar shall be necessary to give a title to vote,—provided, also, that those thus entitled may at any time confer the privilege of voting upon the whole assembly, on questions not pertaining to the management of business.

III. The officers of the Association shall be a President, twelve Vice-Presidents, a Secretary, an Assistant Secretary, a Treasurer, and twelve Directors. They shall be chosen by ballot at the annual meeting of the Association; and the President, Vice-Presidents, Secretaries, and Treasurer shall hold their offices for one year, or until their successors be chosen. The Directors shall be chosen for four years, and, at the expiration of that term, shall not be eligible for reëlection until after two years. One fourth of their number shall be chosen annually; but, at the annual meeting of 1882, the full number of twelve shall be chosen in sections of three respectively for one, two, three, and four years. The President, Secretaries, Treasurer, and Directors shall together constitute an Executive Committee, intrusted with all the business and interests of the Association in the interim of its meetings. They shall have power to fill any vacancies that may occur in their number, or in the list of Vice-Presidents, between any two annual meetings. Six members of the Executive Committee shall constitute a quorum.

IV. The Annual Meeting of the Association shall be held in the city of Boston, on Thursday of what is known as "Anniversary Week," at such place and with such sessions as the Executive Committee may appoint, of which at least one month's previous notice shall be publicly given. Other meetings and conventions may be called by the Committee, according to their judgment, at such times and places as may seem to them desirable.

V. These Articles may be amended at any Annual Meeting of the Association, by a majority vote of the members present, provided public notice of the amendment has been given with the call for the meeting.

Officers elected for the year 1882-83:—

PRESIDENT.

WILLIAM J. POTTER, New Bedford, Mass.

VICE-PRESIDENTS.

OCTAVIUS B. FROTHINGHAM, Boston, Mass.
FELIX ADLER, New York City.
GEORGE W. CURTIS, Staten Island, N.Y.
EDWARD L. YOUMANS, New York City.
FREDERICK SCHUENEMANN-POTT, San Francisco, Cal.
THOMAS WENTWORTH HIGGINSON, Cambridge, Mass.
ELIZABETH B. CHASE, Providence, R.I.
GEORGE HOADLY, Cincinnati, O.
NATHANIEL HOLMES, St. Louis, Mo.
ROWLAND G. HAZARD, Peacedale, R.I.
BERNHARD FELSENTHAL, Chicago, Ill.
ANNIE L. DIGGS, Lawrence, Kansas.

SECRETARY.

FREDERICK A. HINCKLEY, Providence, R.I.

ASSISTANT-SECRETARY.

CHAS. H. CODMAN, Boston, Mass.

TREASURER.

JOHN C. HAYNES, 451 Washington St., Boston, Mass.

DIRECTORS.

Four Years.

FRED. MAY HOLLAND, Concord, Mass.
MRS. CLARA M. BISBEE, Dorchester, Mass.
J. A. J. WILCOX, Chelsea, Mass.

Three Years.

B. A. BALLOU, Providence, R.I.
WILLIAM H. HAMLEN, Boston, Mass.
ANNA GARLIN SPENCER, Florence, Mass.

Two Years.

EDNAH D. CHENEY, Jamaica Plain, Mass.
ARTHUR G. HILL, Florence, Mass.
RICHARD P. HALLOWELL, Boston, Mass.

One Year.

CHARLES D. B. MILLS, Syracuse, N.Y.
JOHN L. WHITING, Boston, Mass.
HELEN M. IRESON, Lynn, Mass.

The office of the Association is at 44 BOYLSTON ST., BOSTON (next door east of the Public Library), where is also the publication office of *The Index*.

All letters pertaining to the business of the Association (payment of membership fees, orders for its publications, etc.) should be addressed to "Free Religious Association," at the office.

Communications intended specially for the Secretary, as well as his personal correspondence, should be addressed to him at PROVIDENCE, R.I.

F. A. HINCKLEY, *Secretary F.R.A.*

MRS. NEWHALL'S SCHOOL

FOR GIRLS AND YOUNG LADIES

Will reopen Oct. 1, 1883. Besides the regular courses in English studies and languages, there will be some work, each week, in the line of the new or **"creative method"** either with **tools upon wood** or in **modeling.** Another special feature will be a course of **lectures** upon the **great tone-masters,** illustrated with piano and voice. As aids to the study of History, Geography, and Art, **the use of the lantern** will be continued, and the **regular visits to the Art Museum.** For catalogues, address the Principal, 91 Newbury Street, Boston.

West Newton English and Classical School.

The ninetieth term of this Family and Boarding School for Boys and Girls will begin Wednesday, Sept. 19, 1883. For information and catalogue, address

NATH'L T. ALLEN,
WEST NEWTON, MASS.

The Gospel of Law.

Discourses on Fundamental Church Doctrines

By S. J. STEWART.

"It seems to me admirable both in matter and in manner, and I hope it will have a wide circulation, as it is the kind of book people need."—*John Fiske.*

These discourses, delivered in Bangor, Me., include discussions of the Bible, Miracles, God, Jesus, Prayer, the Devil, Sin and Atonement, Hell and Salvation, Predestination and Scientific Necessity, Morality, Immortality, etc.

12mo. 324 pages. Cloth. $1.25.
For sale at THE INDEX office.

THE PRESENT DAY.

A Monthly Journal discussing Agitating Questions without agitation.

EDITED BY

GEORGE JACOB HOLYOAKE.

The *Present Day* is addressed to all who hold the brave and cheersome faith that life according to Reason is the best religion for the world that is, and the best qualification for the world that may be.

"False Ideas may be confuted by argument, but only by True Ideas can they be expelled."—*Cardinal Newman.*

Annual subscription, 2*s.* 6*d.* Single copies, 2*d.* Published by R. H. SQUIRE, 52 Fleet Street, London, E.C.

PUBLICATIONS

OF THE

FREE RELIGIOUS ASSOCIATION.

Freedom and Fellowship in Religion. A volume of ten essays upon speculative and practical problems of religion, by D. A. Wasson, Samuel Longfellow, Samuel Johnson, John Weiss, W. J. Potter, F. E. Abbot, O. B. Frothingham, J. W. Chadwick, T. W. Higginson, and Mrs. E. D. Cheney, and extracts from Addresses by Ralph Waldo Emerson, Lucretia Mott, Robert Dale Owen, Dr. Bartol, Wendell Phillips, Rabbi Wise, Horace Seaver, A. B. Alcott, Lucy Stone, Charles H. Malcom, Julia Ward Howe, and others,—all given on the platform of the Free Religious Association. Price (reduced) $1.50.

Reports of Annual Conventions of Free Religious Association, from 1872 to 1879 inclusive. These contain essays and addresses by the various distinguished men and women who have spoken on the Free Religious platform, together with yearly reports of the Executive Committee. 10 cts. each.

TRACTS.

I. *Taxation of Church Property,* by James Parton. 5 cts.; ten, 30 cts; one hundred, $1.50.

Address THE INDEX, 44 Boylston Street, Boston, Mass.

The Basis of the Ethical Movement.
Why Unitarianism does not Satisfy us.

Two Lectures before the Society for Ethical Culture, of Chicago, by FELIX ADLER.

Price 10 cts. each. For sale at this office and GEO. H. ELLIS, 141 Franklin St.

THE

SECULAR REVIEW

A JOURNAL OF

English Liberalism.

CHARLES WATTS, } Editors.
W. STEWART ROSS, }

The representative English Freethought journal. In its columns are impartially discussed all Secular, Social, and Theological questions.

Price, 7 cents single number; $2.75 per year, postpaid.

Subscriptions may be left at THE INDEX office.

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—**The Christian Amendment,** by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents, 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

CURRENT TOPICS.

THE ceremonies of completing the Northern Pacific Railroad occurred last Saturday afternoon in the presence of a large crowd. The golden spike was driven "amid the cannon's roar and floods of eloquence."

THERE is a manufacturing company in Willimantic, Conn., that is evidently determined to reduce the percentage of illiteracy in that State. About a year ago, it notified its employés that, after the expiration of twelve months, those of them only who could read and write would be retained. Evening schools were established. The few who neglected to avail themselves of the schools or to learn to read and write have been discharged.

IN reply to the inquiry of a postmaster who wrote, "I desire to know whether, in case a suspected horse thief, whose mail is accumulating in this office, shall write to me to forward it to him at another office, I will be justified in disclosing his address," Judge Freeman, Assistant Attorney-General for the Post-office Department, says substantially that even in such a case as this the postmaster is not at liberty to disclose any private information received by him in an official capacity from patrons of his office.

THE Boston *Courier*, commenting on the unparalleled disaster in Java, well observes: "The lesson of mortal insignificance is certainly not one of which humanity seemed in especial need in this pessimistic age, but from it may still be deduced a sense of the ties of common weakness which should bind mankind together in a brotherhood of sympathy and helpfulness. It is always difficult to realize that the awful may become the actual; and such an event as this goes far toward engendering in man a realizing sense, to borrow a theological term, of his veritable place in the world and in the universe."

SAYS the New York *Sun*: "The Germans of Iowa are starting a movement to oppose the woman's suffrage agitation. They say that, if women obtained the right to vote, they would be under the influence of the clergy, and would take an extreme position in relation to beer and wine drinking and the observance of Sunday. It would be impossible to reason with them in favor of moderate and reasonable temperance and Sunday laws, and their votes would establish total prohibition and blue laws as bad as those formerly enforced in Connecticut. Various German journals affect to regard this threatened evil as of a serious and imminent character, and call upon the Germans as a body to take a pronounced position in opposition to it."

DR. SEXTON, in an illustrated circular of information distributed by the United States Bureau of Education, says that imperfect hearing "causes, among other things, defects in pronunciation through children not knowing the correct sound, and failure and ill temper among teachers who may be unaware of their pupils' defects or their own." He urges that the hearing of all pupils should be examined each session, and no one accepted as teacher who has not passed an aural test. He strongly recommends dental inspection of pupils, as from diseased teeth especially arise deficiencies of hearing, from which follow, first, the appearance of stupidity, and eventually the reality. Among the practical precautions recommended, abstinence from bathing seems a very costly one; but few pamphlets could show so clearly the interaction of physical and mental education.

C. ACTON IVES, of Newport, R.I., last Friday, at the annual session of the American Social Science Association, held at Saratoga, read a paper on "Reformation of Criminals." He advocated the plan that a prisoner should be paid the market price for his labor as far as possible, should work at his own occupation, earn all that he can, out of his earnings pay a fair price for board and lodging, and live in a style commensurate with his means; that the State should use every possible means for the reformation of criminals. He said that interest in honest labor makes men labor honestly. Few prisoners have fairly chosen between a life of honesty and a life of crime. They have never had a fair opportunity of making an honest start in life. They should be allowed to improve their condition and to save money. He asked for the plan the careful consideration of the Association. From those who derive profit from, or are in any way committed to, the present systems, opposition was to be expected.

SAYS the *Nation*: "A more curious and genuine 'shindy' than has been in constant operation since Judge Hoadly's nomination has never been seen in any State. It has been the evident purpose of a large section of his party to secure his defeat, not because he is not a desirable man for Governor, but because he is a reformer, and wants to make his party better. They are afraid that, if he is elected Governor, he will be nominated for President next year; and they do not want a reformer for President. They want a man who, as Judge Thurman said not long ago, 'will take the boys in by the fire and warm their toes.' If they can't have their toes warmed, what is the use in having a Democratic victory? Rather than run the risk of any reform nonsense next year, they will 'kill off' Hoadly this year. Republican confidence under these circumstances is not unjustifiable." There is a large element in the Republican party, we are sorry to say, quite as much opposed to "any reform nonsense" as the Democratic opponents of Judge Hoadly possibly can be.

A DESPATCH says that the propulsion of tram-cars by electricity was tested by the French Electrical Power Company in Paris last Thursday, with satisfactory results. The vehicle used was an ordinary three-horse tram-car, and it was propelled through the important thoroughfares for a distance of thirty miles. The trial lasted six hours, and it is said was not attended by any accident or the frightening of horses. The driver seems to have had no difficulty in bringing the car to a standstill within a second whenever he desired. The vehicle was turned off from one set of tracks to another, across several yards of trackless ground, with admirable ease. The locomotion is effected by Faure-Sellon-Volckmar accumulators. The speed was nine and one-third miles an hour on level ground, and five and one-half miles on an ascent. This experiment — the first ever made over a long distance—is regarded as proving the practicability of electric tram-cars. The estimated cost is one-half that of horse-trams. M. Ferdinand de Lesseps and several engineers and journalists witnessed the trial.

IN a little paper called the *Communist*, published at Glen Allen, Mo., we find a letter written to the editor by Prof. Richard Owen, of New Harmony, Ind., who evidently holds socialistic views much like those of his father, Robert Owen, the distinguished philanthropist. Prof. Owen writes: "It is very gratifying to learn by the last number of the *Communist* that your energy and perseverance had at length been the means of inaugurating another experiment in socialism. That it may be eminently successful is my sincere wish and prayer. I have not a doubt that some time in the future, if not now, the community system will be found the remedy for a host of the evils encountered in densely populated countries. As yet, perhaps, here we have not felt the pressure; but, at the present ratio of increase in population, another century would bring us face to face with all the evils encountered in most of the densely populated countries of Europe. Societies, therefore, showing in advance the great advantages of the community system in mitigating those evils, and offering a life free from most of the turmoils and passions of the world, would be most important to the human family."

MORAL FREEDOM AGAIN.

In the department of correspondents will be found, this week, two communications criticising our article on "Moral Freedom" in *The Index* of July 26. The gist of our California critic's objection appears to be that, in defining human freedom, we did not allow sufficient force to "the inner impellings of the actor." He also thinks the term "free agent" which we incidentally used, but did not press, is "self contradictory" and a "misnomer." The gist of Mr. Sutton's criticism, if we understand it, is that the human mind has not that choice among motives which our article affirmed and endeavored to prove, and that there is a prior question, which he thinks we overlooked; namely, "What governs the choice of motives?" Since one of these correspondents thus seems to think that we concede too much to the necessarian doctrine of the power of environment to determine human action, and the other that we claim too much ability in the human mind for liberation from the power of environment, perhaps we could not do better, having made our own statement, than now simply to turn the debate over to these two earnest contestants. Their communications, however, suggest two or three remarks supplementary to our previous statement.

And, in the first place, the fact that, while these writers criticise our position from opposite points of view, we yet find ourselves, if we understand the force of words, agreeing with the substance of the conclusion to which each of them comes, strengthens the conviction from which our article was written,—that many of the combatants on this theme, though they seem wide apart, are really aiming to say the same thing. The subject, in fact, has been wrapped in so much metaphysical fog that the very statement of the question appears to throw a glamour over the minds of the majority of writers who touch it, so that language is distorted from its ordinary meanings and the debaters fight as antagonists over words, when they really mean to convey the same idea. We do not claim to be entirely clear of the fog ourselves, yet had hoped to do something in our previous article toward dissipating it; and, perhaps for some minds (judging from responses of a different tenor from a few other persons), this was to some extent done.

In the second place, we have no desire to stick pertinaciously to words and phrases on this subject, if only the essential idea is reached and provided that words are used with tolerable nearness to their customary meanings. But we are unable to see the force of "W. H. G.'s" objection to the term "free agent." The generic definition of "agent" is simply "actor"; and this is doubtless its meaning, when used by writers generally on this theme. And even in its specific sense, when it denotes an actor for some other party as principal, it by no means signifies that action must be confined to a prescribed course in which there is no freedom of choice. Surely, there are plenty of men called "agents" in business and deemed such in the eye of the law—the executive officers of great corporations, for instance—who, within a certain general line of duties, are allowed wide latitude of judgment in action, and who are appointed to their places because of their supposed ability to make a wise choice among the different courses of action that may, under different circumstances, be presented to them. We see, therefore, nothing "self-contradictory" in the use of the term "free agent," as applied similarly to moral conduct.

Nor can we see the logical validity of the argument by which Mr. Sutton denies our position that man has "the capacity of choice among motives," while he himself speaks of man as having "a power of self-control," and concedes without hesitancy that, through this power of self-control, he has also "the power to delay action until all the motives of which he is capable have been brought before his mind." How, it may be pertinently asked, is a man to control himself to delay action without exercising a choice between different motives already presented to the mind? Grant this amount of self-control, this power to delay acting until all presentable motives can be considered, and we care little for any nice distinction that may afterward be drawn between *delaying* action and *initiating* action. The essence of moral freedom is in the former as well as in the latter function, for there is discrimination and choice among motives; and a being who has got so far in self-mastery as deliberately to "stop action until all his motives have been surveyed" will soon be equal to initiating action by taking the course which such survey shows to be wisest and best. As to our "overlooking the fact that the gist of the question is what governs the choice of motives," or, in other words, forgetting that not all men are capable of seeing, much less of following, what is really "wisest and best," even after surveying all their motives, it seems to us that a more careful reading will find this point amply covered in our article. But to reargue the point might lead to a side-issue on ethical theories, wherein Mr. Sutton would probably not agree with us; and, hence, we let it pass.

To all that Mr. Sutton says on the necessity of informing the intellect and enlightening the conscience, in order to put man into a condition for making right moral decisions, of course we fully assent. All this bears directly on the question of responsibility. It is another way of saying that man is responsible for the conditions of mind in which his motives arise. This question contains really the kernel of the whole matter. And, since we agree with both our correspondents in the conclusion to which they appear to come on this point, —Mr. Sutton no less than "W. H. G." holding man accountable for his conduct,—we will not stop to dispute over their ways of reaching this end. This principle of man's responsibility for his conduct is to us the sheet-anchor of moral order and progress. Our chief interest in maintaining the thesis that man is a free moral agent is that it seems to us the logical premise on which rests the truth of his moral responsibility. The two are indeed, in our view, nearly equivalent propositions. But, if any think they reach and hold the latter without the former, we are not so much disposed to quarrel about the way as to welcome the end.

Yet we do not, by any means, claim that all men are equally free agents, nor deny that there may be individual men who have not yet achieved moral freedom. What we maintain is that there is the natural capacity for moral freedom in the human race, and the increasing achievement of moral freedom in the race as a whole, and in individuals of it as humanity advances. In our opinion, the question in a nutshell is this: Is man wholly subject to his environment, or does he have inward power to control and adapt, to some extent, his environment to the bettering of his condition? We say the latter, as does our California correspondent. We agree with him, that man may act from an impulse within himself independent of his environment. That is the special human prerogative. Man is not a machine, but a machine-tender; not merely a blind organism, but a conscious, purposing organizer.

WILLIAM J. POTTER.

THE COURSE OF THINGS AND EVENTS.

The poet laureate of England exclaims, "O earth, what changes thou hast seen," and then proceeds to say that where now the ocean is rolling there were once growing the forest and the verdure of the meadow, and where now is heard the din of the long city street there was once the stillness of the central sea. In far geological and historic perspective, men and things and even the great globe itself wear a very different aspect from that which they now wear. The men, things, beliefs, and institutions of any given historic period are now known and felt to have been simply provisional, mere steps and stages of an unceasing process of social, moral, mental, and political development or evolution. All things are being borne along on a stream of tendency: all things are in process of becoming riper and maturer, of being evolved into higher moods, states, shapes, and manifestations. The *Zeitgeist*, or time-spirit, "halts never in one shape," but is forever assuming new forms and aspects, is undergoing an eternal metamorphosis. There is no pause nor rest in the process of evolution. The fashion of this world indeed passeth away. Thus, the pictures of the long dead and vanished look ghastly, desolate, and dread in the glare of the daylight; and their moth-eaten costumes, when too long preserved, excite a feeling of sadness and almost loathing in the observer. Like the fashions of their costumes, the mental and ideal moods or beliefs of mankind are changing also, so that imperceptibly in the lapse of time an almost entirely new belief will be found to have supplanted an old one, as night is silently succeeded by the morning twilight, and that by the full day. When the seven noble youths of Ephesus, to borrow an illustration from a famous ecclesiastical legend, went to sleep in the cave where they had taken refuge from their pursuers, the Roman world was pagan. When they woke up a century or so later, that world was Christian, and a cross surmounted the gate of the old pagan metropolis and temple city of their nativity.

If we could go back far enough, we should find the human race, which now in the best specimens of the men and women of the foremost nations is so remarkable for "the might, the majesty of its loveliness," and comeliness of person,—we should find our race, I say, latent in a hideous, anthropoid creature, more bestial than human, dwelling in caves or bivouacking on the floor of forests or under the open sky, hairy, prognathous, low-browed, with fangs or tusks for teeth, and dissonant shrieks and yells for speech, devouring its food, both animal and vegetable, in a raw, crude, uncooked state. Yet, in such a creature and its almost equally repulsive feminine mate, we were all of us, millions of years ago, latent. Such a creature was the remote ancestor and progenitor of Helen and Antinous and Cleopatra, and of the finest existing man's "imperial shape," and of the finest existing woman's "Ionic form." Furthermore, the brain of Plato, Verulam, Shakspere, Newton, and Humboldt was also latent in the hideous, primitive man of the evolutionist and geologist. Thus, bearing in mind the fact that history is the account of a continuous process of social and political development and amelioration, is a record of continual social changes and movements onward and upward, we can read it with some degree of patience, feeling that whatever things have been historic and have had a place in the historic development of the human race had a sufficient reason for being when and where they were, or they would not have been then and there.

We are meantime at liberty to say of this or that institution or belief that, as a finality, it

Digitized by Google

would be altogether wrong and bad, and that it has had its day, and should give place to something more in accordance with the spirit of the time. When we feel in the mood of severely criticising and finding fault with the devious course of the world and of human society in the past, we should remember that the world

"Was shapen long ago:
The Maker shaped it, and thought it were best, even so."

As we advance in enlightenment and civilization and the means of civilization, our ideal faculty, or "love of the best," becomes more imperious, exacting, and intolerant, so that we finally turn away from the past with its hateful, bloody records of oppression and persecution, and unspeakable stupidity and wrong-headedness, in disgust, to the future, which, we believe, is to realize all our brightest dreams and imaginations of social and individual excellence. Meantime, in dealing with the obsolescent historic institutions, ideas, and beliefs of the past, which still linger in the world of to-day, to obstruct progress, we have to denounce them occasionally, as if they had never been other than obstructions and nuisances, in order to hasten their disappearance. Slavery, as it existed a few years ago, in this free, enlightened republic or in the unenlightened, semi-barbaric Southern part of this republic, was a hideous anachronism, anomaly, and survival, the sum of all evils and villanies.

But, if we go back a few centuries, it was the normal condition of the laborer, and excited no indignation, even in minds of a high order. If we go back twenty or twenty-five centuries, we find such writers, moralists, and profound thinkers as Aristotle, Socrates, and Cicero taking it for granted that servitude was the natural and normal condition of the toiler, of the drudge. So low down, almost on a bestial plane, were the masses of *mankind* at that remote period. They were, in fact, rather anthropoid than fully human. In them, reason scarcely glimmered at all. They seemed to exist not for themselves, but for the behoof and convenience of the superior, rational, and fully *human* fraction of mankind, to be the hewers of wood and drawers of water, and hands and feet of the aristocratic few, who had reached the full stature, physical, moral, and intellectual, of genuine human beings. The glorious anthropomorphic paganism of Greece was an immense stride forward in the history of the religious development of man from primitive fetichism, tree-worship, serpent worship, and other low stages of the religious sentiment, or propensity to worship, adoration, and propitiation of the mysterious forces of nature, which seemed so personal to the primitive man. The gods of Greece were at least *human*, and were bodied forth to the eye in shapes of matchless ideal beauty and majesty. Thus there was a time when Greek polytheism indicated the high-water mark of primitive civilization, when it was a normal manifestation of the *Zeitgeist*, the fairest and highest efflorescence of man's ideal nature. But at length it was superseded by the worship of sorrow, by a religion of personal purity, self-abnegation, and humility, which was a later, riper, and higher manifestation of the Time-spirit.

There is of course, and must naturally be, a tendency in all ideas and moods of the Time-spirit, which have power to get themselves formulated and crystallized into institutions and established usages or orthodoxies,—a tendency, I say, to exhibit a certain unyielding tenacity, or to outlast their usefulness and currency; and there is also a disposition in their upholders to insist that they are finalities, and that it is in the nature of sacrilege to attempt their overthrow. Ecclesiastical Christianity and feudalism were once current institutions, full of sap and vigor (normal stages in the development of the races and nations of Western Europe). Through them, ultimately a higher social and political stand-point was to be attained. But, at this time of day, both of them have come to be mere obstructions, hindrances, and nuisances. They are not at all in keeping with the spirit of the time. Both of them are predicated upon a low social, mental, and moral condition of the masses of mankind; and both of them have a tendency to keep the masses in that low state. The eighteenth century was the culminating era of European royalty. In the Europe of to-day, the king is no longer the state, as he was in the Europe of Louis XIV. and Frederick the Great, of Prussia. The king and priest are becoming spectral and out of date, phantoms of the past; while the people, or aggregate mankind, are coming more and more to the front. Thus,—

"The old order changeth, yielding place to new;
And God fulfils himself in many ways,
Lest one good custom should corrupt the world."

In other words, all things, men and institutions, are good in their day and generation; but, when they are found outlasting their day and generation, they are out of place and time both, and, if they persist too long, they are liable to be suppressed by force, *vi et armis*.

B. W. BALL.

THE SECRET OF THE EAST:

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

CHAPTER IX.

Regenesis.

The night ends with storms; yet rejoice: They herald the Morning.—*Jean Paul.*

The history of Protestantism is the history of a progressive reform. When the congress of Westphalia accepted the terms of the Protestant princes, the power of anti-naturalism received its death-sentence; for, with the interests of the Christian religion, the right of free inquiry is as incompatible as sunlight with the interests of an owl-association. The spectres of the Middle Ages are fleeing from the morning air; dogma after dogma has silently evanished before the advance of that reform of which the Augsburg Confession was not the consummation, but the beginning. It is probable that few of the reformers could foresee the consequences of the movement they were setting forward, but the instinct of the people could not be deceived: they felt the true import of the great regenesis, and expressed their appreciation of its chief fact by the popular name of the cause of *Protestantism*. That protest has been repeated till we can no longer doubt that its causative principle is a *revival of naturalism*. The abolition of witchcraft laws, of religious disabilities and ecclesiastic privileges, the divorce of Church and State, secular education, civil marriages, our newspaper oracles, lecture-bureaus and cyclopædias, our republics, our railways, telegraphs, telescopes and electric lights, our life insurances and lightning conductors, mechanics' institutes and gymnasiums, our zoölogical gardens, Sunday excursions and festivals of the Turner-bund, are strange comments on the theory of the sages who ascribe our superior civilization to the restoration of the patristic dogmas. Anti-naturalism was not only the consequence, but the cause and essence of those dogmas.

The ministers of pessimism still disregard the signs of dawn, or mistake them for the reflection of their mystic light; but they cannot help perceiving that the demand for consecrated candles has alarmingly decreased. Their didactic functions have been intrusted to the exponents of secular science; their judicial and statistical functions to the municipal authorities; their tribunal of public censure has been surrendered to the public press; and the very foundation of their spiritual authority has been undermined by the agencies of that ominous phase in the decadence of a creed which drives its ablest champions into the camp of the opposition. Two hundred years ago, a considerable plurality of our educated clergymen would have been burned as heretics; and the veil of external forms can hardly disguise the fact that the doctrine now preached in the city churches of the progressive nations is neither Romanism nor Calvinism, but *eclectic casuistry*. The signs of a progressing change are, indeed, getting distinct enough to be visible even through the painted windows of the Roman cathedrals. The tenure of the infallible Church is in litigation; her drafts on heaven are sadly below par; her Hades has changed its climate, as well as its name. The plan of pressing science into the service of dogmatism has only hastened the progress of disintegration. Nature cannot be fought with her own weapons; by just as much as her enemies increase the knowledge of their disciples, they decrease their orthodoxy; the ministers of darkness try in vain to utilize the electric lights of civilization.

Yet the church of natural religion is still a militant church. Pessimism is fighting its last battle with bitter obstinacy. The aggressive agencies of the Galilean Church have become obstructive elements. The roars of the *bestia trionfante* have been silenced; the open war against truth has ceased, but her enemies still maintain a defensive warfare; such plain duties toward our fellow-men as the exposure of superstition and hypocrisy are still denounced as crimes against the majesty of our God. Monks and Puritans have ceased to enforce the worship of sorrow, but their influence still prevents the worship of joy; the poison of asceticism still blights our festivals; the love of earth is still a stigma. The Stylites have descended from their columns; self-mutilation and self-torture have ceased their work of degeneration; but the regenerating influence of physical education has not yet been recognized; even in America, we have a hundred mythology schools for one gymnasium. Like the deities of the Roman Empire, the gods of pessimism have lost their thunder; their butcher-priests have been disarmed, but their temples still cumber the land; the embers of their altar-fires still cloud the sky with their murky fumes.

Yet the rising sun will soon dissipate those clouds. Our pilgrimage to the land of regeneration is not yet finished; but the light of the new day has at least brought to view the goal of our journey, and will help us to avoid the obstacles of our path. The night-spectres flee. The morning sun begins to reveal the true form of the vampire whose loathsome embrace has sapped the life-blood of the last hundred generations. The demon of pessimism will not long hide his ghastly face under the guise of a heavenly messenger. One by one, his masks have dropped; and the hour of deliverance is near, when the hand of science shall lift the veil of the *Perversion-fallacy*,—the last sophism that still enables the Galilean Church to deprecate the odium of their crimes against the happiness of the human race. The outrages against the friends of science and freedom, they say, were the consequences of a perverted creed, while the founders of that creed inveighed only against earthly desires, against unbelief, against the love of wealth, of sensual enjoyments, and worldly honors. "I did not destroy the flowers and fruits of the tree," says

Digitized by Google

the fatuous gardener: "I merely aimed my blows at the base roots."

The dupes of the perversion-fallacy see the contrast between the lowly beginning and the outrageous consequences of anti-naturalism, but they fail to trace the inevitable sequence of cause and effect. They fail to see that the withering of the earthly roots of human life will equally blight the highest flowers of the spirit. They fail to see that decrepitude begets cowardice, meanness, and duplicity; that destitution is a worse tempter than affluence; that non-resistance leads to slavery; that blind faith opens the door to imposture; that the neglect of terrestrial affairs leads to moral and intellectual as well as material bankruptcy; that the spirit sickens with the body. They fail to see that a noble mind is a flower of which physical health is the stem and the root.

The New Testament, in fact, contains all the seeds of the insane dogmas that turned the world of the Middle Ages into a mad-house. Not the outcome only, but the very source of the Galilean creed is an earth-blighting superstition. And, wherever the tendencies of our so-called *Christian* civilization have led to health and happiness, it proves that we have left the age of St. Augustine very far behind. It proves that the doctrine of pessimism has become untenable, that our earth has awakened from the fever-dream of the Middle Ages, that the healing powers of nature have at last prevailed against the most terrible disease of the human race.

For a large number of our contemporaries, the day of deliverance has already arrived; but no one deserves his liberty who does not contribute his share to the emancipation of his fellow-men. The bigotry of a besotted fanatic is hardly more contemptible than the cautious selfishness of the man who silently enjoys the sweet air of freedom while thousands of his brethren sicken in the dungeon of anti-naturalism. The agnostic and apathic creed of science must become a positive religion. The energy which we owe to the fear of disease should be inspired by the love of health. Before the end of this century, the protest against the enemies of nature should consummate its triumph in a gospel of earthly happiness. Religion must cease to be a synonyme of hypocrisy.

The Religion of the Future will dispense with stakes and torture-chambers. It will employ no weapons but logic, no inquisition but the inquiry after truth. It will appeal to no higher canon than the progressive revelation of science. All the thinkers, discoverers, and reformers who were the enemies of religion will become its missionaries. Its work of redemption will not be achieved by the suppression, but by the encouragement of free inquiry; not by the renunciation, but by the promotion of temporal happiness; not by ghost-stories and self-torture, but by natural science, Olympic festivals, outdoor life, social and educational reforms, desert-redeeming forest culture, gymnastics, and health-schools. The path of its victory will not lead over the trampled flowers of this earth. The religion of nature will dispense with miracles. It will heal the sick by teaching them to avoid the causes of disease. It will help the poor by increasing their means of self-help: it will still their hunger after happiness with better fare than litanies and consecrated wafers.

We may keep our altars; but the priests of the future will not require the sacrifice of our reason, of our freedom and our natural affections, and will not reject an honest votary, though he should decline to hate his father and mother,—yea, and his own life. We shall worship our God in the temple of nature; and, if Paradise can be regained, we shall try to enjoy it on this side of the grave.

FELIX L. OSWALD.

THE JUDICIAL PERSECUTION OF THE JEWS IN HUNGARY.

The best account I have yet seen of this outrage is given substantially as follows in the *Revue de Belgique* for August, under the title of "L'Affaire de Tisza Eslar." Such is the name of the village in which the young servant-girl, Esther Solymossy, disappeared suddenly, during the passover in 1882. While engaged in the search, her mother met a servant of the synagogue, Joseph Scharf, who on hearing her story exclaimed, "May it never come to pass that the misfortune of your daughter should be used as a weapon against us Hebrews!" These words fell like a spark of fire into the mother's soul, which was thenceforth full of the fancy that Esther had been murdered by the Jews. Her first charges were rejected by the justice of the peace; but she kept repeating them through the village, and declaring that God himself had revealed to her the crime. Soon, the matter came to the notice of some of those servants of despotism who have been provoked, by the devotion of the German and Russian Jews to the cause of political liberty, to carry on a concerted persecution. Scharf and all his family were arrested. The eldest son, Maurice, aged fourteen, who had at first protested that his father was innocent, was finally led by the mal-treatment, threats, and promises of a clerk named Peczely, who had been convicted of murder, to repeat the well-known story of Esther's butchery in the synagogue, shortly after the Sabbath service. On this, the synagogue as well as the house of Scharf were sacked by a mob, with the connivance of the local authorities, who arrested more than seventy Jews, and subjected them to various tortures. One brave Hebrew obstinately refused to confess, though threatened with a beating and finally struck in the face till the blood came. He was forced to drink large quantities of water, first fresh and then salt; but he kept saying, "It is false." Two men on each side pulled at his long locks of hair, until they plucked them out; but he exclaimed, "You may tear out all my hair, but you will not tear a falsehood from me." Other tortures followed; but he and many others of his race held out during fourteen months of painful imprisonment and cruel tortures, which did force some of the weaker brethren to corroborate not only the story of the murder, but a later fiction invented to disprove the identity of Esther's body. This had been found meantime, without a wound, in the river, where she had probably drowned herself; but the intolerant officials took care to strip her of her well-known garments before showing her either to her mother or to her mistress, who, in their blind hate of the Jews, failed to recognize her. All this time, the Hungarian liberals generally remained in what one of them, Pulsky, denounced as a cowardly silence; while those friends of despotism who call themselves anti-Semitics clamored loudly for Hebrew blood. The same passion fired the spectators during the trial, which began on the 18th of June last. Such was the rage of the populace that the Hebrews had to be strongly guarded against them. When Joseph Scharf said to his child, who was trying to bring him to the scaffold, "My son, do you know the commandment, Thou shalt honor thy father and thy mother?" Maurice answered, "No," and declared that he had renounced his family as well as his religion. Two lawyers, of high ability and dauntless courage, named Eotvoes and Funtack, appeared in the defence. They forced the leading prosecutor, Peczely, to acknowledge in open court that he had himself been convicted of murder. They proved that Maurice and other witnesses could not possibly have seen or heard what they alleged. They established the identity of Esther's body by the testimony of a surgeon who swore to a peculiar conformation of her teeth and to a remarkable scar on her leg. They brought on the witness-stand a young Christian, who deposed, with many blushes, that one of the accused had been in her company at the very moment of the supposed murder. They were equally successful in proving an *alibi* for other culprits. In short, they made so strong a plea that the judge, on August 3, declared all the accused completely innocent. Thus did legal skill triumph over the union of blind bigotry with crafty servility to despotism.

F. M. H.

"CHANGES IN NEW ENGLAND POPULATION."

Dr. Nathan Allen had an article with the above caption in the August number of the *Popular Science Monthly*, containing interesting facts and figures indicating some of the changes taking place in the population of New England. According to this article, it appears from the United States Census, which gives every ten years the birthplace of the inhabitants of all the States, that in 1850 there were of persons born in New England 454,626 living in other States; in 1860, the number was 562,997; in 1870, 615,747; in 1880, 566,848. Of the 566,848 natives of New England living in other States and Territories, according to the census of 1880, 175,349 were from Massachusetts, 117,590 from Vermont, 108,797 from Connecticut, 93,256 from Maine, 49,397 from New Hampshire, and 42,459 from Rhode Island. These New Englanders were so distributed that New York had 133,272; Illinois, 53,128; California, 46,908; Michigan, 37,865; Wisconsin, 37,615; Minnesota, 34,636; Ohio, 32,819; Pennsylvania, 26,787; Kansas, 19,338; New Jersey, 18,148; and other States, less than 10,000.

To know how many native New Englanders have emigrated to other States during the time covered by these dates, it would be necessary to know what has been the amount of mortality, and that of course cannot be ascertained. Dr. Allen thinks it "may have been a quarter of a million, and possibly half a million." It is certain that the drain of people on New England has been uninterrupted and very large.

Dr. Allen calls attention to the fact "that those young men and women leaving their homes possessed as a general thing more physical energy and mental stamina than those remaining behind. Such a loss of physical vigor and character must have had a decided effect upon business interests as well as the present state of society." The loss of physical and mental vigor from a steady and large emigration of energetic and enterprising people must involve permanent deterioration.

Dr. Allen points out that there has, during the past forty or fifty years, been an exchange on a large scale of country life for the city, and a relative decline in the number employed in agriculture in every State in New England. "All experience," he says, "proves that an exclusive city population tends gradually to degenerate physically, and that the stock cannot be kept good from generation to generation." Degeneracy in cities can be prevented only by replenishing the population from the country. The birth-rate in New England, Dr. Allen says, has been for years on the decrease. Two facts, he thinks, are well established: "1. That the birth-rate of the foreign class is more than twice as large as the strictly American; and, 2. That in the country districts of New England, settled mainly by the Americans, it is questionable whether the birth-rate exceeds the death-rate,—that

Digitized by Google

is, there is no addition to the population by *natural* increase." The birth-rate of New England is declared to be less than that of any large nation of Europe, except France.

Of the population of New England, reported 4,027,439 by the census of 1880, 793,000 are foreign born; and Dr. Allen thinks that there are about half as many natives of foreign descent as there are of foreign birth, and that at the present time the "foreign element" numbers over 1,200,000 persons in New England. Among the alleged evils resulting from the introduction of this foreign element is a change in the physical organization of the New Englander. Work demanding physical strength has passed mainly into the hands of foreign help. The exchange of hard out-door work for lighter employment in-doors is calculated to reduce the vital forces of the system. "That a course of physical degeneracy to some extent has thus been going on with New England men must now, upon thorough examination, be generally admitted." A still more marked change has been going on in the female organization. "The ill health of New England women is proverbial. . . . A careful examination will show that its history and extent run almost parallel with the high pressure in education and the neglect of housework. The nerves and the brain have been cultivated at the expense of the muscles and physical stamina." Half the women cannot nurse their offspring, and the maternal instinct is "fading away." The family is breaking up. The primary cause of the evil is in the physical organization. Dr. Allen concludes his essay with the following sentence: "Judging from a physiological standpoint, the introduction of this foreign element into New England, instead of proving a blessing, may result in one of the greatest misfortunes that ever befell any race or people."

The figures given by Dr. Allen may be accepted as approximately correct; and his entire article is interesting and suggestive, although some of his statements are questionable, and his treatment of the subject is not very profound. It is certain that a large amount of energy and enterprise has by emigration been transferred from New England to the Middle and Western States, to the growth and prosperity of which it has been an important contribution. There was not room enough in New England for all her sons and daughters; and they wisely sought a larger field for their activity in those great States in which to-day they or their children are among the leaders in thought and business. This emigration was necessary to their own development, and to the incorporation of their mental and moral qualities into the life of the West. The native stock left behind is not, by any means, as degenerate as Dr. Allen with his figures attempts to show. It is in business and in education the controlling element. Its birth-rate is small; but, as Spencer says, the highest constitution of the family is reached when "the mortality between birth and the reproductive age falls to a minimum, while the lives of adults have their subordination to the rearing of children reduced to the smallest degree. The diminution of this subordination takes place in three ways: first, by elongation of that period which precedes reproduction; second, by decrease in the number of offspring born and reared, as well as by increase of the pleasure taken in the care of them; and, third, by lengthening of the life that follows cessation of reproduction." Dr. Allen utterly ignores among other things the small juvenile mortality among native New Englanders, compared with that among the foreign-born population. The tendency of a high civilization is toward fewer births, and, at the same time, a smaller proportion of deaths in infancy. This can be scientifically demonstrated.

It is not to be denied that, owing to changes which have been going on in New England and the rapidity with which they have occurred, some abnormal conditions have arisen in portions, especially in the manufacturing towns of New England. Nor can we doubt that the introduction of a very large, and for the most part a very low, ignorant, and superstitious foreign element in New England, far inferior to that of the West, has had a tendency to increase illiteracy, pauperism, and crime, and to give us such municipal governments as the one we have in Boston to-day. But the improvement of this foreign element, although it involves some demoralization and deterioration of the higher stock with which it comes in contact, is certain, and in any fair consideration of this subject must be taken into account. Our fathers established this nation with its free institutions, and invited the oppressed of all nations to come here and enjoy equal rights; and, while the good results of this great enterprise are everywhere visible, a certain amount of incidental evil is unavoidable.

B. F. UNDERWOOD.

EDITORIAL NOTES.

IN a reprint from *The Index* of August 23 of a portion of Mr. F. M. Holland's article on "Learning Languages," the Springfield *Republican* does not simply omit the name of the writer of the article and of this journal in which it appeared, but strangely enough credits it to the *Christian Register*.

WHAT is "the highest and truest exposition of Boston thought and culture in the general sense"? The *Catholic Review* tells us it is *The Index*, the organ of the Free Religionists. How can that be, when only some three weeks ago the *Catholic Review* held up the noisy crowd which required a hundred policemen to keep them in order before Sullivan's bar-room as the typical Bostonian?—*Independent*.

THE new postal notes which came in use last week will be found much more convenient than postal money orders for transmitting money by mail. No written application is made for the notes. They are bought at the window like postage stamps, and the person to whom they are payable is not required to identify himself. They satisfy the "long felt want" for a safe and convenient method of sending money by mail.

IN a postscript to a business letter, Miss Emily J. Leonard, who has given much attention to economic questions, writes as follows: "Speaking of Mr. George, let me say that not one of his critics, so far as I know, has called attention to the fundamental error of his book as an argument; namely, his tacit assumption that labor is the cause of value. Like so many others, he *confounds the creation of a thing with the creation of its value.* His book unquestionably has its merits, but not the particular merit he claims for it,—that of being a sound argument."

THE New England Anti-Death League announces that it will hold its sixth annual meeting in Hampshire Hall, this city, September 23 and 24, morning, afternoon, and evening. This organization will find, in its attempt to put an end to death, that it has a large-sized job on hand. Death is an indubitable and irreversible fact; at least, we have always so thought. The invitation to be present and address the meetings we must decline. We believe in death as a part of the natural order. And it just occurs to us that without death there would be no end to the race of cranks in the world.

THE following paragraph we find in the *Congregationalist*:—

A writer in *The Index* says he once asked Joseph Cook, "Why is Jesus *now* called Christ?" and got no answer from him. His explanation is that Mr. Cook "knew no satisfactory answer, and was ashamed to acknowledge his inability." We cannot speak for Mr. Cook, but another explanation occurs to us as even more probable. It is that having seasonably bethought himself of the direction given in Proverbs xxvi., 4, Mr. Cook concluded to follow it.

The *Congregationalist's* explanation is no doubt eminently pious, Scriptural, and orthodox, but none the less insulting to an intelligent, honest inquirer and to a philanthropic reformer who was opposing slavery when orthodox believers generally were quoting "the direction" given in the Bible to defend it.

REV. WASHINGTON GLADDEN has been travelling in West Virginia. From an article contributed by him to the *Independent*, entitled "On the Gandy," we copy the following paragraph:—

My study of the divorce question in its relations to social morality had made me curious as to the morals of this region, and I made careful inquiry on this point of intelligent natives. Their testimony was not encouraging. With much regret, they bore witness that the morals of the mountains are bad. Social vice prevails in these remote communities to a lamentable extent. If there are more divorces on the Western Reserve of Ohio than among these mountains, it is not because the morals of the former locality are worse than those of the latter. The base arts by which homes are destroyed and lives blasted prosper in these solitudes. And this low state of morals, be it noted, is not connected with any new departure in theology, nor with any German rationalism or liberalism. These people have not so much as heard that there is any new departure. They are as orthodox as they ever were. They hear, whenever they go to church, the good old doctrine about the lake that burneth with fire and brimstone. The eschatology with which they are familiar, and which no one of them thinks of doubting, is all that our conservative brethren could desire. Yet, somehow, it does not seem to restrain them from walking in evil ways.

IN his speech at the opening exercises of the New England Manufacturers' and Mechanics' Institute in this city, last week, Francis A. Walker said:—

There is great virtue in the inherited industrial aptitudes and instincts of a population, and those aptitudes and instincts may be wonderfully special and minute. You can no more make a first-class dyer or a first-class machinist in one generation than you can in one generation make a Cossack horseman or a Tartar herdsman, in the highest industrial sense. Artisans are born, not made. The problem is not so much to train as to breed. Aside from transmitted aptitudes and instincts, there is also great virtue in the inherited traditions and prescriptions which pertain to the body of workmen, where any occupation making large demands for nicety of perception and nicety of manipulation has been long pursued. Writers have been driven to explain the unapproachable excellence of the steel blades which have for centuries been made in the city of Toledo, by assuming some mysterious property in the water with which swords are tempered. It is not the baptism of the blade, but the baptism of the artisan, which works the miracle of peerless edge and perfect elasticity. It is the temper of the mind of the worker to which, in the first instance, is due the temper of the weapon he forges.

A LETTER has been sent to the Massachusetts Republican and Democratic State Central Committee, signed by Lucy Stone, Julia Ward Howe, Mary C. Ames, Mary A. Livermore, Mary F. Eastman, Louisa May Alcott, Ednah D. Cheney, Mary C. Shannon, Mary Shannon, Susan E. B. Channing, asking that no one be nominated for Gov-

Digitized by Google

ernor of this State who is opposed to woman suffrage. These ladies write :—

We send this to you *now*, in the hope that it will save us from the necessity of opposing a candidate who would oppose the equal rights of women. We have political preferences, and would far rather use the influence we have in the interest of the party to which we should belong, if we were not deprived of our political rights; provided always that its candidate is a friend of woman suffrage and a person who commands our respect. We hold that the enfranchisement of women *ought* to be the main question in politics. It would be considered the first question if, it were men and not women who are disfranchised; and men have no stake nor interest in the government which women have not. We hold that to tax and govern law-abiding women without their consent is the greatest injustice. In our judgment, therefore, it is the duty of political leaders to put forward the enfranchisement of women in their platforms as a question of the highest importance, alike as it affects the honor of men, the rights of women, and the welfare of the State. We feel that good government in the interest of high morality and the general welfare of humanity is of the first importance, and that the participation of women in all political power is of essential necessity to this end. We appeal to you, therefore: 1. for the sake of the public welfare; 2. to save women from the stigma which attaches to a disfranchised class; 3. to save Massachusetts from the historic discredit of holding its loyal women to the rank of Jefferson Davis.

THE SUN.

BY "OLD BIRCH."

Shout now for joy, and hail the rising sun,
Great King of day, from whom all life begun!
Give thanks, with bird and beast and living things,
And join the choral praise all nature sings!
See, glowing there, the one all-seeing eye,
With look that will not coldly pass you by.
No man so poor, but round his form we see
The sunshine fall with life's elixir free.
From that round, smiling face all blessings flow:
E'en rocks expand beneath that genial glow.
Each living germ will turn within its cell,
And reach with tiny arm where sunbeams dwell.
In splendor there, the great, white throne of power
In heaven's high dome will rule the noontide hour.
Prepotent force unknown is centred there,
Preparing earth to bring the harvest fair.
Search through the universe in each degree,
And heaven's high orb out-glories all we see;
Fit emblem of creative power divine,
Evolving life by laws of deep design.
When earth was new, and man, by instinct taught,
In reverence bowed, a sacrifice he brought,
On altars laid, where burned the sacred fire,
To light the hearth or burn the funeral pyre.
There grew the mystic lore, and yet it lives;
For yet we sunwise turn for luck it gives.
Deep in the secret chambers of my brain
The hopes and fears of ancient faith remain.
Through protoplasmic cells, from sire to son,
Has passed a reverence for the shining sun.
Let man revere the gift from nature's store
That first will meet the eye, and never more
Let telescopic eye profane the throne
From which there flows all blessings ever known.

CRAFTSBURY, VT.

THE SCEPTIC'S PRAYER.

O God, whatever, if ever, thou be,
Unknown, if not unknowing, to thee,
Creator, if not the creature of me,
My Father, or offspring, whatever thou be,
If thou hast approach and can'st listen to me,
I come to request, if thou answer'st a plea,
That what thou would'st have me to think or to do,
Thou'lt give me the proof to see that it's true,
And give me the will to carry it through,
Or give me the right to see for myself,
With power sufficient to do what is best;
Or, failing in this, to pardon me through,
Whatever I think, whatever I do.

—*Austin Bierbower, in Independent.*

The Index.

BOSTON, SEPTEMBER 13, 1883.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

THE REAL QUESTION.

A Paper read before a Private Circle in Fair Haven, Vt., June 6, 1875.

BY A. N. ADAMS.

The Rev. Edward Everett Hale, speaking at the recent Unitarian Festival in Boston, quoted the substance of a speech made some years since by Rev. Horatio Stebbins. There had been a discussion on Unitarian literature, history, and doctrine, and their value, in which Mr. Stebbins said: "Show your men. That is the real test of preaching. That is the real test of theology. That is the real test of religion."

Mr. Hale indorses the remark, and claims that Unitarianism has its men. In answer to a friend trained in the orthodox faith whom he met in a distant city, and who, having read the recent memoir of Dr. Gannett, written by his son, inquired of him if the men reared in his faith were really worthier, better men than those reared under Orthodoxy or other systems, Mr. Hale answered, "If you will go to Boston, where they know the Unitarians of New England; if you will go into any wholesale store or any jobbing store, and ask them what is the credit that they would give to a man of whom the only thing they knew was that he had been a steadfast, faithful, manly supporter of a Unitarian church for half a century, you will get your answer."

Now, whatever we may say of the Unitarian claim in particular (and I happen to know from personal knowledge that there is much truth in it), we must allow that the kind or quality of men that any particular system, or course of policy and instruction, is calculated to produce, and actually does produce, is the question, the real, important question, for our attention and interest. Bring on your men! Show us the test of your religion!

That such things as are not theology or religion may be so put into the pulpit *for* theology and religion, *as* theology and religion, that men's characters are improved and their lives elevated, I am well aware; and it is for this reason that the Unitarian literature and thought and preaching have resulted in practical, beneficent effects. Unitarians have laid great stress on right living, good deeds, and noble, manly principles. For this, they have been accused—and perhaps with some justice—of slighting theology and religion, and preaching morality. They have said nothing of any "scheme of salvation," of rescue from "divine wrath" beyond the grave; have laid no stress on punctilious observances of prescribed rites, ecclesiastical days and rituals; have not publicly broken into the sacred abode of the heart's inner experience, and made a profession or a creed a *sine qua non*, but have simply said: Keep a clean conscience. Do the thing that is right. Be a man. Think, learn, grow in knowledge and virtue. And, thus, neither energies nor opportunities have been lost, wasted in useless, imaginary quest; but childhood and youth and middle age have all been given to useful and beneficent toil. Their method has laid slight stress on either the theological or religious means which the great Catholic Church and the evangelical churches have urged as supremely necessary. And it has come to be a question among large numbers of thinking men and women of high moral character whether the churches, as they popularly teach, are really necessary to the good morals and peace of society; whether there is, as has so long been believed and taught, any necessary, vital connection between religion and morals. Certainly, it must be admitted that a man may be very devout in the Church, very pious and profuse in his Sunday professions and gifts, and yet be a very mean man,—hard, sensual, and untrustworthy in his doings and dealings during the week; while another man who makes no profession of pious observances may be a man of the most thoroughly upright, noble character and principle,—a man who, knowing no fear or compulsion, may be trusted always to do that which is good and true,—a most valuable factor in the social body. It cannot be disputed that many professors of religion, holding their profession as a kind of policy of insurance, content their conscience, or sense of moral obligation, by simply keeping within the bounds of statutory law and public opinion.

That there are persons in all churches who value a good life, and strive sincerely and earnestly for its attainment, cannot be denied. That the churches teach morality, and that many persons find pleasant and helpful associations in them, is, of course, admitted. But morality is taught, and pleasant, helpful associations are found, outside the churches as well. And, if equally good characters are formed and found outside, it proves the exclusive claim of the churches to be false. Moreover, men are everywhere coming to see and say that the chief concern of life here is practical and moral, independent of, and often inconsistent with, theological and religious considerations. Theology is the *doctrine* of a God, or gods, and may be wholly speculative. Religion is the worship of a God, or gods, and hence may be confined to devout observances or ceremonies. Morality is right living and acting, and is coming to be called practical religion; but it may be the religion of the Mohammedan or the Buddhist no less than of the Unitarian or evangelical Christian.

Good men and true, men of high, pure, and generous motives and spirit, are far from being peculiar to any exclusive system of theology or religion. It is not a little singular how, through the force of long-continued dogmatism, men of learning, doctors of divinity, can delude themselves with their own assertions on this subject. I have recently read a discourse, by an eminent college president before a theological school, wherein he urges the positive need of faith in a supernatural Christ, in the godhead of the man Jesus. "What we need," he says, "is belief in a person who moves us."

Now, it is undoubtedly true that faith in any person, historic or ideal, is a powerful natural agency to inspire ambition and incite to effort. We are creatures of sympathy and imitation. And I desire to observe just here that the discourse I am considering concedes, indirectly, the point I am making, and, unintentionally, in striking inconsistency with its fundamental assumption, concedes also the determining force of natural causes. It allows that the good life is the real end and desideratum, but complains that there are men, like Matthew Arnold, who dream that the study of morals will enable man to overcome the world,—that the study of manhood is enough. "They would substitute," he says, "the study of goodness for faith in God, and the idealization of Christian virtue for trust in the living Christ. . . . We have seen," he says, "that what the culture and science of to-day are longing for is manhood." That manhood is what is needed to make society better

Digitized by Google

and life more desirable will not, I presume, be doubted. But why insist that the old way, which the Church has been trying for ages with the most indifferent success, is the only way to get manhood? The Unitarians, it will be allowed, have in a large measure discarded the old way,—certainly, in so far as faith in Trinity, atonement, eternal punishment, and a miraculous God is concerned; and they insist on a larger degree of liberty and thought in religious concerns, the same as the fathers of the nation did in regard to affairs civil and political.

It is not unnatural or wonderful that belief in a supernatural Christ has been thought a great blessing and help. Intelligent and good men have believed just as strongly in witchcraft. Hundreds of thousands of people believe in the miraculous character of Buddha; but it would be difficult to show that such belief has a greater and better moral influence than an intelligent understanding of their own natural moral relations and duties would have. Have we not right among us every day as good, pure, true, and perfect men and women who have no faith in a supernatural Christ, as are any who hold such a faith? Suppose we were to begin to enumerate the saints of the heretical calendar, dead and living, where could we stop? Where, then, and wherein, is the vaunted superior goodness of your personal faith, or faith in a person? It is no evidence of goodness that a man wears a long face; that he goes to church regularly three times on every Sunday; thinks it a sin to play at innocent games or dance; and regards every person a sinner who does not read a chapter in the Bible every morning. Some of us believe in manhood, simple, independent, and free, not hampered by the yokes of bondage, which the free man never has been able to bear; and we appeal to the example of Jesus, who did not hesitate or fear to act from his sense of what was true and right in itself, independently of antiquated and domineering custom, as illustrating our ideal of what constitutes manhood.

The vital point is, Are men honest, true, regardful of all that is just, kind, helpful, and loving, contributing by example and act to make the world better? Or are they selfish, exclusive, narrow, untrustworthy, mere barnacles on human happiness and progress?

Is it said that without faith in the miraculous Christ one cannot have peace of mind and hope beyond the grave, cannot be saved from hell, and assured of heaven hereafter? I answer that men have had perfect peace, and have died calmly as they have lived, without the orthodox faith; and, therefore, I claim that all such preaching is false. Children may believe what the priest says, because he is a priest; but not so he who observes, thinks, and reasons. Facts are more than theory; and, whatever theoretic faith any one of us may cherish, it cannot truly be said that our particular faith is the sole requisite for life, any and every life. The Spiritualist has as much comfort and joy in his particular faith as the eminent doctor of divinity whom I have quoted can possibly have; but this does not prove the truth of Spiritualism. Yet the Rev. Dr. Porter, president of Yale College, would have us accept it as proof of the truth of his creed, that it gives him joy and peace. Surely, if the argument is sound in Dr. Porter's case, it must be equally so in the case of the Hindu or Buddhist, who derives equal joy and satisfaction from the faith which he holds, and who may be much more punctilious in his devotions.

My conviction is that the preaching of any particular theology or creed, as absolute, supernatural, essential, is hurtful, not only withdrawing time and attention from better things, but dividing society into unnecessary and unfriendly sects, each dogmatic and exclusive, not promoting love and good-will, because theology is necessarily speculative, conjectural, imaginary, not practical nor needful. I would say, Let each person have what theology he likes, or none; but let it be treated as it is, as his relative, speculative opinion, no more; and let the pulpit and the church devote itself to the improvement and perfecting of character and life, to the promotion of good offices and kindness between man and man, and to the best means and ways of educating children into manhood and womanhood. This is positive, tangible, intelligible, practical. All can unite in this work, as we did in the work of the Sanitary Commission during the civil war. This would unite, not divide society; and, instead of six to eight small, weak, sickly churches in every considerable New England town —all professing to be more Christian than any other, yet scarcely admitting one another to their exclusive communion boards,—instead of so many churches and so much expense of time and money, we might have one or two, well supported, at much less cost, on the whole, and doing vastly more good.

It is saddening to contemplate the dogmatism, exclusiveness, and intolerance of churches and sects, where there should be unity, co-operation, and the noblest endeavor to edify and build up the whole humanity. The theological method has palpably failed; and it now remains to try the moral or humanitarian method of love and good-will. I believe that this will ultimately prevail, and society will then come more under the guidance of sound knowledge and reason. Men will be judged by their good works, and not by any orthodoxy of opinion or belief, or miraculous grace. Until then, we must be content to labor and to wait.

A HUNDRED DAYS ABROAD.

BY GEORGE JACOB HOLYOAKE.

CHAPTER II.

Misgivings of Second Visit.—Manhattan Shores.

It was said to me, very naturally and reasonably, that I must not expect to be received a second time in America as I was the first. Why should I? Why should a people be expected to occupy themselves all their days with showing courtesy to one person? That would give no chance for others. It would often happen that some one else might be entitled to regard in his turn. It, therefore, did not occur to me to expect notice on a second visit. I had had my turn, and an abounding and ungrudging turn it was; yet a second came to me, greater than the first, in variety and vivacity, and, so far as I could judge, with equal cordiality. Not only in new places, but in the same places this occurred. This was, no doubt, owing to interest in the business I had on hand, and in the subjects on which it was supposed I could give information.

Indeed, on leaving England a second time, I ought to name the banquet at Brooklands Hotel, near Manchester. Though the proceedings of that night are not likely to pass from my memory, I pass them over because I cannot assume them to have interest to others.* Dr. John Watts, whose friendship has remained unchanged since we first met when we were both eighteen years of age, made one of his admirable speeches on labor and co-operation. What I said in reply to the eloquent and generous speech of Dr. Pankhurst in reference to myself was this:—

It seems to me that sometimes it is of the nature of a merit to continue to live, since thereby you come to know and to hear many pleasant things utterly inconceivable in earlier life. Not long since, I was assailed at once by darkness and by death, from which I was rescued and restored to light and to life by the kindness and generosity of many present now, and of others absent—whom I shall never forget. I cannot but be gratified that so many persons, eminent in their professions and mostly of views quite divergent from mine, should assemble, in some cases from a great distance, to show not only their tolerance, but their friendliness to me. All along, I have labored under the disadvantage of not being able to agree with everybody, as a man of prudent and well-regulated convictions should. This used to distress me very much, until I observed other persons took the liberty of not being of my opinion. Seeing, therefore, that they thought it right to maintain their view of things, it seemed equally reasonable that I should maintain mine. I wish to be thought neither opinionated nor obstinate, but I do not object to its being understood that I continue in my own way of thinking. The longer I live, the more clearly I see that the individual is more than is usually imagined. Truth is not the work of committees, but of solitary thinkers. Discoveries are not made by societies on platforms, but oftener by single, patient, secluded watchers of the ways of human nature. It does not escape me that I am under an engagement to read a paper to the Literary Club of this city, on the "Cultivation of Wild Ideas." My friend Morgan Brierley may excel me in the cultivation of birds, Mr. Axon in the cultivation of books, Mr. Russell and Mr. Nodal in the cultivation of politicians; but, in rearing and cultivating wild ideas, I have the greater experience. It may be objected to me that this is an unnecessary pursuit. There are, I may be told, a good many wild ideas about which are not very lovely. That is because they are not cultivated. There are persons who think you attack free speech, if you propose to put down foul speech. If you object to assassination, they accuse you of "limiting freedom of action." These persons are the victims of wild ideas. This only occurs to persons who are in that state when, having two distinct things before them, they know not which is which, and, in attaining their ends, they do not know that one means is not as good as another. There seems to me no good in having an order of advocates who shall be known as the ruffians of progress. In a representative country, I am for using force to maintain law and reason for changing it. He who would not maintain law by force, if it was threatened by force, is a coward, who would abandon men to carnage and society to tyranny. For conciliation I would substitute justice, for denunciation exposition, and for the doctrine of the usefulness of piety I would substitute the practice of the piety of usefulness. In public affairs, if I have any merit, it has been in acting upon these principles. I wish the ingenious country to which I am going, which has given us so many useful machines, had invented one by which a speaker under the greatest obligation to his hearers might be able to express his thanks adequately to them. Were such a machine perfected, I should have brought it down to this dinner, as without some such aid it is not in my power to make the acknowledgments in my mind to my own satisfaction. A famous friend of mine, who trusted me in matters when confidence was of the first importance to him,—Walter Savage Landor,—said at the close of his career:—

"I strove with none, for none were worth my strife.
Nature I loved, and, next to nature, art.
I've warmed both hands against the fire of life:
It sinks, and I am ready to depart."

When that time comes, I shall count this night among the satisfactions of life.

The journey outward was made pleasant to myself and those with me by the courtesies of the Cunard Company. On arriving at New York, more interviewers came on board than I had previously met at one time. Mr. Pender, M.P., who had received a collection of telegrams concerning the events of Europe since we had left it, had news of our navy before Alexandria, concerning which we were all interested. But the interviewers only permitted me to give scant attention to them, and entirely prevented me expressing the acknowledgments I felt to a deputation consisting of Gen. Crooks, Dr. Winterburn, Dr. Broughton, and others, who had done me the honor to come on board to welcome us (my daughter, Miss Emilie Ashurst Holyoake, and Mrs. Ethel Leach, member of the great Yarmouth School Board, who accompanied her to America) on behalf of my valued friend, Mrs. Elizabeth Thompson. The *Sun*, of New York, also sent me word that a reception would be tendered me at Pittsburg by the Knights of Labor. But for the aid of my friend, Mr. George S. M'Watters, it would have been a long time before I should have been able to land. The New York *Tribune* had, with its constant generosity to me, given information of the objects which had again brought me to the American shores.

At length, when greetings on the "Scythia" were over, we set foot on New York soil; and, after visiting Mr. M'Watters' family, and giving my companions a view of the bright Broadway and its railways through the air, we set out a few miles over the ever pleasant sea to Coney Island, where, at Manhattan Hotel, we found ourselves in a wilderness of gayety, and a welcome brighter than all from Mrs. Elizabeth Thompson, whose guests we were to be during many happy days. Interviewers did me the honor to come down by the trains; and on the pleasantest terraces in the world, with the cool sea breezes about us, I conversed, and they wrote columns which the opulent and hospitable press diffused over the land. "Far from the madding crowd," as the capable and accomplished interviewer of the Brooklyn *Sunday Eagle* termed it, we held interlocutory dialogues. With leaders and narratives, that journal devoted to me as much space as would have made an entire number of the *Times* in its earlier years. On the Sunday morning, I went down to the news-station of the hotel, and bought what copies were to be had of the aforesaid Brooklyn *Eagle*. Finding myself

*Dr. Pankhurst presided, and letters were received from John Bright, M.P., Arthur Arnold, M.P., Thomas Burt, M.P., John Slagg, M.P., Sir Thomas Bazley, Alderman Heywood, Prof. Roscoe. H. Rawson, Sam Timmins, J.P., Thomas Hughes, Q.C., Rev. W. Mitchell, Rev. S. Farrington, and the Rev. F. E. Millson. Among those present were Dr. John Watts, Alexander Ireland, Morgan Brierley, Edward R. Russell, editor of the Liverpool *Daily Post*, J. H. Nodal, editor of the Manchester *City News*, John Mackenzie, of Glasgow, Baillie Campbell, of Helensburgh, John Fraser, of Liverpool, and many others, including leaders in the co-operative movement, whose names I would repeat if they could all be inserted in one brief note. W. E. A. Axon was secretary.

Digitized by Google

charged double price for the paper, I asked why that was. "Because it is Sunday," was the answer. "Is that the penalty of the country for reading newspapers on the Sabbath?" I inquired. The reply was, "Wal, I guess it is." As it is my habit to comply with the customs of every country I visit, I answered, "There is your money; but I observe that your scruples as to seventh day reverence do not prevent you making double profit. However, I will not trouble you to get me more copies now, but to-morrow let me have six more." On Monday, I went down again to collect them, and again the stall-keeper charged me double price. "How is this?" I asked. "Monday is not Sunday." "No, sir," he said; "but you *ordered* them on Sunday." This was so sharp and clever, and showed such a fine capacity for making reverence profitable, the adroitness was so worthy of the country, that I paid the charges cheerfully, as a well-earned tribute to one who understood things.

The object I had in view—of procuring a Settler's Guide Book for America—being approved by Mrs. Thompson, she invited Senator Henry W. Blair, of New Hampshire, to meet me at Manhattan. Mr. Blair was a gentleman of good presence, of sincere manners, and of ready intelligence; a clear-headed, wholesome-minded man, shrewd without affectation. He was an advocate of temperance, without intemperateness either in mind, in sentiment, or in speech, so far as I observed. He understood at one statement what I sought, and defined it himself with so much accuracy and vividness that, when I made my report to our government, on my return home, I found no terms more forcible or fitting than those he employed. He saw at once that the information wanted by the intending settler lay everywhere about the country,—in departmental reports, in official publications, in congress speeches, in railway documents, in land agents' statements, in newspaper leaders, in books of travel, in encyclopædias, and even in advertisements; only requiring to be collected by responsible persons and published by government authority. Such a book would have to be approved by the Committee of Education, and Senator Blair is chairman of that committee. Therefore, his knowledge of the kind of work required in Europe, and his approval of it, was a matter of advantage and importance. He had travelled from the White Mountains to come down to Manhattan to discuss the subject.

The general conversation of visitors at the hotel indicated an increase of temperance sentiment in the short period since my former visit. It was seldom that you observed any guest having any indications of beer in his countenance. From observations incidentally made in my hearing, I learned that a bibulous expression of face had come to be considered "low." There were odd features about the Manhattan Hotel that may be observable elsewhere, but I first noticed them at that place. In the great dining halls, so many and so vast, a considerable army of waiters is engaged; and certain groups are under the direction of a superintendent to whom all difficulties experienced by a visitor, or inquiries he has to make, are referred. All the waiters are clean shaved, having a moustache only; but, whenever I had occasion to ask for a superintendent, there always appeared a gentleman without any moustache, but wearing a pair of what we call in England "mutton-chop" whiskers. So, whenever I wanted a special table for a chop, I looked out for a gentleman with chops on his cheeks, and he proved invariably to be the person able to make the arrangement I needed. This device of so shaving the face as to leave a portion of hair to serve as a natural badge saves the expense of ribbon rosettes or medals of office, and also saves the pride of the chief waiters, who might object to wearing them. This combination of consideration and economy is highly creditable to American ingenuity. Another mode of expediting business is to induce all the waiters to have their hair cut so close to the scalp that the head seems to be merely painted. This gives a picturesque appearance to them, and, besides, prevents them wasting time in combing their hair; for there is nothing to comb. Hotel-keepers in the New World are masters of saving devices. Afterward, I observed that "politicians" and "bosses" also wore their hair cut short in this way. As their wits are so constantly in exercise, the removal of the hair may be necessary, as admitting better and easier action of the brains. The idea of cutting off the hair arose, I believe, in the days before the Atchison, Topeka, & Santa Fé Railway ran its great civilizing and peace-making line through the "Kansas Desert" and New Mexico. In the old times of wagon travelling, the Indians always had a good pull at the long-haired travellers. Upon this hint, oft and unpleasantly repeated, our sharp New York "prospectors" took to going down without hair. Great was the disgust of the Indian at finding himself outwitted. He could scalp no longer. There was nothing to lay hold of. And the Indian gave up scalping. His nature did not change, but he could no longer carry on business for want of material. Many fashions have originated in this world that have not had so sensible and prudent an origin. In truth, the practice of cutting the hair short has extended itself among men of wit and mark in the States. But they have adopted it from a sentiment of gallantry to women. The hair being counted from time immemorial the glory of the human head, they have generously resigned this glory to women, who alone in America have the distinction of gladdening your eyes with golden or raven locks.

CORRESPONDENCE.

EVOLUTION AND THE AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

Editors of The Index :—

Being in attendance upon the annual meeting of the Association for the Advancement of Science, held in Minneapolis, August 16–22, I took interested note of whatever transpired bearing in any manner upon the advancement, or otherwise, of free thought.

The influence of the sciences upon modern thought regarding the views taken concerning the material universe has been of such great value in the establishment of a positive element in rational, progressive thought that perhaps many are led to expect, as I did, of the Association for the Advancement of Science, a far more general recognition of radical ideas than actually exists. I certainly found, as I expected to do, eminent expositors of the various departments of scientific knowledge, and workers in special sciences who are serving the world by their investigations, both by adding to the store of general knowledge and by the application of the results of their research to the practical affairs of life.

It was remarked by different persons during the week that at no former meeting had there been so many subjects presented bearing upon matters of public interest and the public welfare. Essays upon food, agriculture, sewerage, ventilation, cable-cars, insectivorous pests, anæsthetics, utilization of the sun's rays for heating dwellings, and similar topics, received attention, much to the relief of the unscientific listeners who are so often, at such meetings, doomed to listen to strictly technical papers, interesting alone to the student of the specialty under consideration.

To me, the pleasure in listening to these practical suggestions upon subjects immediately associated with the well-being of humanity was increased by the significance of a scientific body taking a broader and more consistent attitude than ever before toward the question of "physical morality"; for this is what it means, although not ostensibly acknowledged.

The consideration of these topics by the great men among scientists, and who are competent to instruct, points, it seems to me, to the greatest work which this Association may accomplish, and redeems it from the rubbish of bigotry with which it is now encumbered.

And not alone in these practical papers was the spirit of rationalism found stirring up the fossils that abound in stratas of scientific specialties. It was evident some of the livelier sort had got "evolution on the brain," and it seemed likely to become an epidemic during this recent meeting. Evolution occupied the lion's share of attention. President Dawson, of McGill College, in his retiring address, at the opening session gave the first kick to the hypothetical ball, which was sent back and forth throughout the session. The eminent doctor took to task the biologist who has written up evolution in the new edition of the Encyclopædia Britannica, and also the publication itself, which he "was sorry to say, instead of its proper rôle as a repertory of facts, has become a strong partisan, stating extreme and unproved speculations as if they were conclusions of science." "Perhaps," he also said, "the term evolution would serve as well as any other, were it not that common sense teaches that nothing can be spontaneously evolved out of that which did not previously exist."

At the opening session, Mr. William Folwell, in behalf of the local committee of reception, addressed the Association, and spoke of evolution in these words: "I feel bound to admit that the evolution doctrine, in one form or another, has quietly taken possession of the modern mind. Why may we not gladly accept it as a most useful working hypothesis of the mode of creation? I say of the mode of creation, for that mystery of creation itself will forever mock the powers of man. Only this we know: that, unless human consciousness is a juggle, and human language a mockery, there can never be to man a creation without a creator, nor an evolution without an evolver."

These last words turned out to be a fortunate text for the straight evolutionists. They were also bandied about by the newspaper writers who spun out fine-worded editorials upon evolution, without saying anything which the advocates of either side of the question could construe into any approach to a committal.

There were numerous interviews with the scientists also published. Editors buttonholed them, and made them talk "evolution." One of the D.D.'s was reported as saying that "his profession was less scared than formerly by this doctrine, for it had been shown that it could be held by a Christian as a method of creation"; while another member said that "in the National Academy of Sciences, which is much more philosophical, profound, and abstract in its discussions than the present body, there is not a member who is not an evolutionist. And in fact there is hardly a practical working scientist in the country who does not adhere to the theory."

Sermons were in order both in Minneapolis and St. Paul, taking "evolution with an evolver" for their text.

On the Sunday which intervened in Association week, a paragraph appeared in the Minneapolis *Tribune* entitled "Evolution and Christianity," which thus alluded to the matter that was evidently disturbing the public mind: "As yet there has been but little said concerning the alleged conflict between religion and science. Neither evolution nor Christianity has thus far received any particular attention. There will be, however, this afternoon, a prayer-meeting in Westminster Church, under the auspices of the religious members of the Association; and to-morrow morning, before the general session, Prof. E. Cope, who is one of the most ardent supporters of evolution, will defend his doctrine. These two influences may precipitate a lively discussion before the week is over."

The prayer-meeting was well advertised in all the Sunday papers, but I cannot say how well it was attended. I do not know either if the prayers of these "religious scientists" at Westminster were offered up for the conversion of all believers in evolution, or that the hypothesis itself might be overtaken by a cyclone of overwhelming Christian conviction; for I had not curiosity enough to attend a *scientific prayer-meeting* to offset the repugnance I felt toward what seemed an inconsistency bordering upon the ridiculous.

I was biassed enough, however,—bigoted maybe the orthodox advocates of an evolver would call it,—to attend the Monday morning lecture of Prof. Cope, and listen to his defence of evolution without an evolver. It was a splendid effort. It presented an array of facts that were indisputable, in a manner that was the perfection of public platform instruction. Clear, concise, and convincing was the essay or talk; for it was delivered off-hand, rapidly but impressively, with the earnestness of an enthusiast. The lecture occupied the largest space of time devoted to one topic through the session. The interest taken in it may be inferred from the fact that, upon the solicitation of the citizens of Minneapolis, Prof. Cope repeated the lecture on a subsequent evening, elaborating it more fully.

It is safe to conclude this will not be the last of the subject of evolution among the members of the Association for the Advancement of Science. The fact of

Digitized by Google

the important part it played during the recent meeting possesses a significance which rationalists cannot misinterpret.

It was a pleasure to me to note the large number of ladies who wore the red ribbon,—the badge of membership,—and that the attendance was made up equally of men and women. Papers of interest were read by ladies, though few were technical. They were of the class which might have been included in the section of sociology, but no such section existed that I could discover.

The hospitalities extended to the Association were as usual of the most genial and generous character. Seven thousand dollars voluntarily and cheerfully spent upon the social entertainment of scientific guests evinces a remarkable interest in science for a city not much over a quarter of a century old, and which is flushed with the excitement of a rapid development, and almost hilarious in the heyday of prosperity. The marvellous growth of Minneapolis was the pivot on which the public speeches turned during the junketings, which are a distinguishing feature of the annual meetings of the various large and learned associations of our country. B.

MORAL FREEDOM.

Editors of The Index:—

An able writing by Mr. Potter upon the question of "moral freedom" is found in your issue of July 26. I think, however, it fails to give the solution of the question. The term "free agent," used by all writers upon the question, is a misnomer. An agent acts under positive instructions from his principal, and his agency ceases the moment he passes the prescribed limits. The responsibility rests with the principal in all cases where the relation of agent can be rightfully assumed. In all cases of wrong-doing, the parties are held as conspirators equally criminal and amenable. As applied to moral conduct, the term is self-contradictory, tending to that confusion worse confounded in which this question of freedom has been involved since the days of St. Augustine down through Jonathan Edwards. There has always been a confounding of questions which should be considered and treated as separate and distinct. A free action is one which has as its motive force the inner impellings of the actor. An act not free has its impellings outside the actor. When this is said, all that legitimately can be has been said upon the question of freedom. The moment you pass beyond this, you enter that maze of metaphysical inanity in which the learned theologian delights to flounder. Next comes the question of responsibility. All forms in nature, including man, have an inner impelling force exciting and directing their activity, —a freedom the same in *kind*, differing in degree. With the lower forms, its manifestation is through "growth," "instinct," or by whatever term designated. Upon the plane of human activity, it is termed "moral freedom," for the reason that its manifestation is through a higher order of intelligence, cognizing moral relations and distinctions. And, upon all planes of activity, the same responsibility, *in kind*, adheres. The solidarity of nature, under all her forms, makes us individually and collectively responsible, under form of suffering, for all disorderly wrong-doing incidental to transitional periods of evolution. And not alone man, but all lower forms, in their degree and upon their plane of activity, are held to the same responsibility; for "all nature groaneth awaiting deliverance." If this is admitted, "why then punish for criminal wrong-doing?" The answer is that the law of societary evolution demands of each advancing social state to take all necessary measures for its own protection until its uses are fulfilled, for it is only by so doing that it can secure and transmit the resultant uses of its activity to the succeeding social state. All that is found standing in the way of individual right and social progress must be removed, by a restriction of its freedom, if that be deemed sufficient, or by its entire removal from the plane of its present activity, if that be found necessary. Society is not only justified, but would be chargeable with criminal negligence, if there is a failure to adjust all reasonable methods to this end. The first mediate and final end of all creative and redemptive energy is the perfect man, individual and collective,—a perfect state, *universal and absolute*, from mineral to man. With this end in view, the law of evolution, which is but the unfolding of providential purpose, regards our moralities and immoralities only as they are made subsidiary to this final end. The higher forces which take form and act through nature are inexorable, relentless in their demands, totally regardless of the expenses incident to the processes involved in the attainment of this destined perfect state. The moral life, with its good and its evil, its wisdom and its folly, its heavens and its hells, is but a transitional state of unfolding; and all its antagonisms are made conjointly subservient to the destined final universal harmony. This we will see and know "when the books are opened."

These suggestions are submitted in hope of a further hearing from Mr. Potter upon this question of moral freedom. W. H. G.

San Jose, Cal., August, 1883.

MORAL FREEDOM AND THE PROBLEM OF DEITY.

Editors of The Index:—

Mr. Potter brings up the old metaphysical question of free agency, under a new name,—moral freedom, as he terms it, making it appear that man has the power to "choose his motives"; and, although admitting that motives govern all sane actions, yet implying that choosing a motive is not a mental action.

But Mr. Potter overlooks the fact that the gist of the question is what governs the choice of motives. It must be admitted on all sides that man has the power to delay action, until all the motives of which he is capable have been brought before his mind; some individuals being able to call up many motives, which others cannot do, owing to defective education or deficient organization. Yet, after taking a survey of these individual motives, there must be a choice made; and it will be found that the choice is always determined by that motive, or aggregate of motives, which is strongest at the time of action. This power of self-control, this power of stopping action until all his motives have been surveyed, is indeed most important, especially in connection with a conscience, or the instinctive desire to do what he thinks is right. But it is not true that every man has "moral freedom" to do what is really right: he has only power to control action until his own motives are called up; and if he has, unfortunately, no high motives, owing to defective education, etc., he may delay or control action ever so long; yet at last, when his choice is made, his decision will not be just nor benevolent, simply because those higher sentiments have never been developed. All his self-control will only amount to a deliberate survey of how best to gain his own selfish ends. Mr. Grote says truly that we can always depend upon a sane man being governed by sane motives; but a mad man is free from all such motives, and his actions cannot be calculated on.

Having a conscience, or the instinctive desire to do what we think is right, and having also the power to delay action until all our motives have been called up, it is evident we only need the full development of conscientiousness, benevolence, ideality, and veneration, etc., to furnish the right motives. In the good time coming, when the intelleet will show that it is the part of enlightened self-interest to regard the rights of others, that the general welfare and individual welfare are so intimately connected that the one ultimately depends on the other; when all the higher sentiments are fully developed,—there will be no hesitation in choosing which motive to follow. Conduct will now take the direction indicated by such higher motives, and the result will be universal happiness and contentment. The flow of such sentiment and higher ideas will become habitual, such nerve channels will be always open, and, "motion always following the line of least resistance," organic change of the brain will follow, so that posterity will inherit such superior development until universal perfection is finally reached.

That there is a constant flow of ideas, sentiment, and feeling, independently of the will, along the line of least resistance, or along those nerve channels which have become fully open by long continued habit, is abundantly proved by I. Luys in his late work on the brain and its functions, also by J. H. Huxley, Dr. Carpenter, and others. At present, the selfish faculties being more fully developed, the nerve channels for such being always open, motion follows their line of least resistance, and selfish conduct is the result. It is only gradually that the repeated evil results of such selfish action is forced upon the attention, and it is seen that the rights of others must be regarded.

To say that man has "moral freedom" and has power to choose the really right motive is not true, and is misleading, even if his "choice" were really free. Because he could even then only choose what he believed was right, his opinion of right depending always upon his education and organization. It would lead us to condemn the sinner without considering the true cause of his wrong "choice of motives." The moral sense, or conscience, needs to be educated as much as any other faculty, all history showing what terrible wrongs have been done by the dictates of unenlightened conscience or a blind moral sense of duty. Religious persecutions, the wars of the crusades, and cruel fanaticisms on every side have been the inevitable result of obeying the authority of such "moral sense" or uneducated conscience. No doubt the paramount authority of conscience, or the moral sense, may be attributed to the crude idea that it was the "voice of God" and must be obeyed, no matter whither it led. Hence the close connection of this problem with that oldest of all questions, the existence of God,—a question most intensely interesting, never answered, yet always recurring in every age, and never losing its practical importance in its bearing on the philosophy of life. How many lives have been wasted in fanatical superstitions, in hermetical isolation, in present self-torture, to gain future happiness! How much time and energy have been devoted to gaining the favor of such a being,—prayers without number, sacrifices of friends, property, and life itself, for the sake of gaining divine favor or appeasing his anger or atoning for some misdeed! All originating from a misconception or misunderstanding of this problem of deity.

What light do the sciences throw upon this old yet always interesting discussion? Psychology, or the science of mind, helps us perhaps more than any others, showing that the Power behind phenomena cannot be known to our minds in their present condition, yet demonstrating that such a power must exist. The evolution philosophy, however, built as it is upon the facts furnished by the sciences, demonstrates very clearly that the laws of nature are never interfered with by such Power, are always uniform, always reliable. The more we get acquainted with such laws, the nearer we get to a glimpse of this Power. As we "eye all nature through," a gradual progression from a lower to a higher stage is manifested in the physical, animal, and mental kingdoms. Instead of man being created perfect at first, endowed with mental faculties that would infallibly lead him aright if obeyed, we find that he has been very gradually developed from a lower animal, the earth also having become gradually adapted for vegetable, animal, and human life.

If this gradual evolution is demonstrated throughout the cosmos, a gradual ascension from a lower to a higher stage, surely it is not going to end in annihilation! What is it all for, if dissolution is the final result, and all fall back into original elements?

But this Power,—in what sense can we call it "all-sustaining"? We know that law rules the universe, and is never interfered with. We must be content to say we don't know its character, yet with unbounded confidence we can rely upon the laws of nature which we can and do know, feeling that they are, in some mysterious way, connected with this unknowable Power. We also can and do know that we are factors in working out this evolution of our race,—mind coming in contact with mind, thoughts exchanged, ideas called out, sentiments aroused,—all powerful aids to social and mental evolution. This Unknown Power only reaches us through these laws, and that religion must be true which binds us to such laws as fast as they are made known to us.

J. E. Sutton.

A BIT OF HISTORY.

We are reminded by the presence of Lord Chief-Justice Coleridge in this country that he it was who twenty-five years ago acted as prosecutor in the famous Pooley case, referred to by Mill in his work on *Liberty*, published in 1858, in the following passage: "Penalties for opinion, or at least for its expression, still exist by law; and their enforcement is not,

Digitized by Google

even in these times, so unexampled as to make it incredible that they may some day be revived in full force. In the year 1857, at the summer assizes of the county of Cornwall, an unfortunate man, said to be of unexceptional conduct in all relations of life, was sentenced to twenty-one months' imprisonment for uttering and writing on a gate some offensive words against Christianity."

Thomas Pooley was a common laborer in Liskeard, Cornwall, where he had lived many years, and was known as a sober, industrious, and honest man. At the same time, he was eccentric, and generally regarded as of somewhat unsound mind in consequence of an accident from which he had suffered. This poor, harmless fellow wrote upon a gate a few foolish words expressing his views as to the potato rot and the Bible, and indicating his aversion to Christianity. For this, he was committed to jail by a magistrate, who was a clergyman, and upon information lodged against him by another clergyman of the neighborhood. At the next assizes, he was brought before Judge Sir John Coleridge, when the son of the Judge, the present Lord Chief-Justice of England now in this country, acted as counsel for the prosecution. The poor, simple laborer had no counsel to defend him. He was found guilty, and sentenced to imprisonment for a year and nine months.

Thomas Henry Buckle, who made the circumstances of this case a subject of investigation, wrote in regard to it as follows :—

"The father and son performed their parts with zeal, and were perfectly successful. Under their auspices, Pooley was found guilty. He was brought up for judgment. When addressed by the judge, his restless manner, his disordered countenance and glaring eye, betokened too surely the disease of his mind. But neither this, nor the fact that he was ignorant, poor, and friendless, produced any effect upon that stony-hearted man who now held him in his gripe. He was sentenced to be imprisoned for a year and nine months. *The interests of religion were vindicated*, Christianity was protected, and her triumph assured by dragging a poor, harmless, and demented creature from the bosom of his family, throwing him into jail, and leaving his wife and children without provision, either to starve or beg. Before he had been many days in prison, the insanity which was obvious at the time of his trial ceased to lurk, and broke out into acts of violence. He grew worse, and within a fortnight after the sentence had been pronounced he went mad, and it was found necessary to remove him from the jail to the county lunatic asylum. While he was lying there, his misfortune attracted the attention of a few high-minded and benevolent men, who exerted themselves to procure his pardon : so that, if he recovered, he might be restored to his family. *This petition was refused.* It was necessary to support the judge ; and the petitioners were informed that, if the miserable lunatic should regain his reason, he would *be sent back to prison to undergo the rest of his sentence.* This in all probability would have caused a relapse. But little was thought of that; and it was hoped that, as he was an obscure and humble man, the efforts made on his behalf would soon subside. Those, however, who had once interested themselves in such a case, were not likely to slacken their zeal. The cry grew hotter, and preparations were made for bringing the whole question before the country. Then it was that the authorities gave way. Happily for mankind, one vice is often balanced by another; and *cruelty is corrected by cowardice.* The authors and abettors of this prodigious iniquity trembled at the risk they would run, if the public feeling of this great country were roused. The result was that the proceedings of the judge were rescinded as far as possible by a pardon being granted to Pooley less than five months after the sentence was pronounced."

"By this means, general exposure was avoided; and, perhaps, that handful of noble-minded men who obtained the liberation of Pooley were right in letting the matter fall into oblivion after they had carried their point. Most of them were engaged in political or other practical affairs; and they were, therefore, obliged to consider expediency as well as justice. *But such is not the case with the historian of this sad event.* No writer on important subjects has reason to expect that he can work real good, or that his words shall live, if he allows himself to be so trammelled by expediency as to postpone to it considerations of right, justice, and of truth. *A great crime has been committed*, and the names of the criminals ought to be known. They should be in every one's mouth. They should be blazoned abroad, in order that the world may see that in a free country such things cannot be done with impunity. To discourage a repetition of the offence, the offenders must be punished. And, surely, no punishment can be more severe than to preserve their names."

Of the two clergymen, the informer and the magistrate, Mr. Buckle wrote:—

"Of the first two, little need be said. It is to be hoped that their names will live, and that they will enjoy that sort of fame which they have amply earned. Perhaps, after all, we should rather blame *the state of society which concedes power to such men* than wonder that having such power they should abuse it. *But with Mr. Justice Coleridge we have a different account to settle*, and to him other language must be applied. That our judges should have great authority is unavoidable. To them, a wide and discretionary latitude is necessarily intrusted. Great confidence being reposed in them, they are bound, by every possible principle which can actuate an honest man, to respect that confidence. They are bound to avoid not only injustice, but, so far as they can, the very appearance of injustice. . . . Above all, do we expect that they shall *not ferret out some obsolete law* for the purpose of oppressing the poor, *when they know right well* that the antichristian sentiments which that law was to punish are *quite as common among the upper classes* as among the lower, and are participated in by many persons who enjoy the confidence of the country, and to whom the highest offices are intrusted. That this was the case was known in the year 1857 to Mr. Justice Coleridge, just as it was then known, and is now known, to every one who mixes in the world. The charge, therefore, which I bring against this unjust and unrighteous judge is that he passed a sentence of extreme severity upon a poor and friendless man in a remote part of the kingdom, where he might reasonably expect that his sentence would escape public animadversion ; that he did this by virtue of a law which had fallen into disuse, and was contrary to the spirit of the age; and that he would *not have dared* to commit such an act in the face of a London audience and in the full light of the London press. Neither could he, nor those who supported him, have treated in such a manner a person belonging to the upper classes. No: they select the most inaccessible county in England, where the press is least active and the people are most illiterate; and there they pounce upon a defenceless man and make him a scapegoat. He is to be the victim whose vicarious sufferings may atone for the offences of more powerful unbelievers. Hardly a year goes by without some writer of influence and ability attacking Christianity, and every such attack is punishable by law. Why did not Mr. Justice Coleridge and those who think like him put the law into force against those writers? Why do they not do it now? Why do they not have the learned and the eminent indicted and thrown into prison? Simply because they dare not. I defy them to do it. They are afraid of the odium; they tremble at the hostility they would incur, and at the scorn which would be heaped upon them, both of their contemporaries and by posterity. Happily for mankind, literature is a real power, and tyranny quakes at it. But, to me, it appears that men of letters perform the least part of their duty when they defend each other. It is their proper function, and it ought to be their glory, *to defend the weak against the strong*, and *uphold the poor against the rich.* This should be their pride and their honor. I would it were known in every cottage that the intellectual classes sympathize not with the upper ranks, but with the lower. I would that we made *the freedom of the people our first consideration.* Then, indeed, would literature be the religion of liberty; and we, priests of the altar, ministering her sacred rites, might feel that we act in the present spirit of our creed when we denounce tyranny in high places, when we chastise the insolence of office, and when we vindicate the cause of Thomas Pooley against Justice Coleridge."

OUR venerable and esteemed neighbor, the *Investigator*, seems to be deeply interested in the thought and work of the seniore ditor of *The Index*. In order to elicft information in regard to his views and methods, it shrewdly attributes to him almost anything that comes in mind which it particularly dislikes. The latest charge against him is that he "preaches" and "gives an aspiration," as will be seen from the following interesting note from the *Investigator:* "R. N. inquires, 'Is Mr. W. J. Potter a preacher? and, if so, does he pray?'—[We understand that he preaches in New Bedford, but whether he prays or not we are unable to say. It is said by a friend of his who knows that he sometimes gives an 'aspiration,' whatever that is in a religious sense. Here, the Free Religious minister prays at length and with unction.]" Our esteemed contemporary's dislike of the title of "reverend" is equalled only by its aversion to the words "preaching" and "praying." Having promised not to "reverend" our senior any more, it was to be expected that some such query and reply as the above would soon appear in the columns of our esteemed contemporary; for *something* must be done to convey the impression that *The Index* is a semi-theological sheet, and not truly liberal like the *Investigator.* "We understand that he preaches." And hear, O heavens, hear! He "sometimes gives an 'aspiration.'" Now, we would like to learn from our esteemed contemporary whether the editor of the *Investigator* does not preach? He speaks nearly every Sunday at Paine Hall; and, if his talk is not preaching and that at New Bedford is, what is the difference between his talk and the other, which makes one preaching and the other not? By "here" is meant, we presume, Paine Hall, where there has been considerable preaching of one sort and another the past year or two, much of it decidedly superficial and sensational, and, if not in thought, at least in spirit and manner rather Methodistical. But we are glad to know that the quality of the speaking has improved at Paine Hall of late; and that, in addition to the Liberal Club meetings which have been held successfully through the summer, the meetings under the direction of Mr. Babcock, which are now being held there, are well attended and interesting.—Since the foregoing was put in type, our esteemed contemporary complains that the senior editor of *The Index* has not publicly disclaimed the title of "Reverend," and that, until he shall do so, it "may have to suspend judgment, unless the junior should certify that he is the duly authorized spokesman *of* the senior, in which case the testimony of the subaltern will be considered tantamount to that of the general." Our esteemed contemporary is evidently nettled, but needlessly so; for we desire only to set it aright. The senior "publicly" informed our neighbor some two years ago that he neither claimed nor desired the title. Our esteemed contemporary, we will add, is not now corrected by "a subaltern." The military rule does not govern in this office, the editors being of equal rank and equal authority and of equal indifference to titles, such as "Reverend" and "General."

TO HELP the young soul, add energy, inspire hope, and blow the coals into a useful flame; to redeem defeat by new thought, by firm action,—that is not easy, that is the work of divine men.—*Emerson.*

BOOK NOTICES.

KEY AND SEQUEL TO "BOSTON INSIDE OUT." Catholic Church in Politics; For Sale or To Let. Confessions of Twelve Apostles of Guilt. By Rev. Henry Morgan. Boston: Shawmut Publishing Co., 81 Shawmut Avenue. 1883. Price $1.50.

The highly sensational style indicated by the title of Mr. Morgan's new book is kept up throughout the more than four hundred pages it contains. Its animadversions are directed chiefly against the Roman Catholic Church and priesthood. The author strengthens his accusations by numerous indubitable statistics gleaned from public documents, and by extracts from leading Catholic organs. It is quite evident to the most prejudiced reader that the author is in downright earnest in his attack on the Catholic priesthood, and his effort to counteract Catholic influence in American politics. In the first chapter, he says of himself that, "though failing in health for the past few years, I have accomplished more for morality, humanity, and the cause of religion than in all my life before. Reform the priesthood of the Catholic Church, and you reform Christendom; American institutions are safe; doubtful Christianity is redeemed." This reform he evidently thinks it his own peculiar mission to accomplish. His methods can be best understood by reference to the book itself.

PERSONAL ITEMS.

THE Vatican will take a hand in the Luther celebration by publishing two volumes of documents concerning the career of the reformer, discovered among the archives of the Vatican by the principal librarian.

THE Victoria University of Coburg, Can., has just conferred the degree of M.D. upon Miss Augusta Stowe, of Toronto. She is the first woman who has taken a medical degree in Canada, and had received her instruction in a mixed class of both sexes.

FRANK JAMES, the pious bandit, with whose denunciations of infidelity the public are familiar, has been tried in the orthodox town, Gallatin, Mo., and, as was anticipated by his numerous admirers, among whom are many ladies, has been vindicated by "a jury of twelve honest men." Of his guilt, of course, there is no doubt; but that is a small matter, when he has been "vindicated" by a "jury of his peers."

A DESPATCH received from Paris last week announced the death of the distinguished Russian writer and novelist, Ivan Turgenef, whose works did so much toward abolishing serfdom in his native country. The late Czar admitted that it was the reading of one of Turgenef's works which opened his eyes to the demoralizing influence of serfdom, and so made possible the emancipation of the lower classes in Russia. Turgenef was born Nov. 9, 1818.

A LETTER from Oliver Johnson contains the following personal paragraph, which is gratifying to the junior editor of the journal to whom the letter was written: "I do not know that I have ever seen you, but I have read your contributions to *The Index* with great satisfaction; not that I agree with you in all respects, but that you always treat your opponents with generous fairness. If religious controversy were always characterized by the spirit you invariably manifest, the progress of truth would be more rapid than it is. Making my own definition of the word, I reckon myself a Christian; but I am not blind to the superstitious prejudices and fallacies that are current in the name of Christianity, nor unwilling to see them exposed."

THE Russian minister is spending the summer in Pittsfield, Mass., where he occupies the old Pomeroy mansion. According to the Boston *Journal*, he has shocked the good people of that region by sitting with friends on his vine-covered piazza, and playing cards on Sunday afternoons. "We have all seen him do it," says the *Journal's* informant; "for, as soon as his arrival was announced in the local papers, we all took pious Sabbath walks past the place where the Russians were domiciled." But the card-playing is not the worst of it; for somebody has seen the little De Struves running a Punch and Judy show under the trees on the lawn, also on Sunday. And the little fellow who manipulated the figures did it in such a worldly way that his younger brother actually "keeled over" on the grass, and kicked and screamed with delight. It is admitted, however, that the Minister and his family seem to be living very happily, and that "so far as they have made acquaintances everybody likes them."

THE Massachusetts branch of the National Woman's Suffrage Association held its first "field day" on Wednesday, the 5th inst. About fifty members of the Association met on the grounds of Mrs. H. H. Robinson in Malden; and, after an afternoon's rambling in the Middlesex Fells, reassembled in the evening at Mrs. Robinson's residence, where a bountiful collation awaited them, after partaking of which various appropriate toasts supplemented with witty and original verse were given by Mrs. H. R. Shattuck, the president of the Association, and responded to by members in the following order: Mrs. S. A. Underwood of Boston, Dr. Salome Merritt of Boston, Mrs. Harriet H. Robinson of Malden, Dr. Julia C. Smith of Boston, Miss Sophia Hale of South Boston, Miss N. W. Covell of Cambridge, and Dr. E. A. Brown of Chelsea. A fine original poem was recited by Mrs. A. M. Gannett of Malden, and another excellent one read by Mrs. A. G. Bill at the close of her thoughtful address. Short addresses were made by several others; and Miss Caroline Rosch, the talented young elocutionist of Malden, gave an excellent recitation from Whittier. The occasion was a very enjoyable one.

44 BOYLSTON STREET, Boston, Mass.

THE FREE RELIGIOUS ASSOCIATION

was organized in 1867. Though having its headquarters in Boston, it is a national organization, and has members and officers in various States of the Union. It has the following

CONSTITUTION.

I. This Organization shall be called the Free Religious Association, its objects being to promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history; and to this end all persons interested in these objects are cordially invited to its membership.

II. Membership in this Association shall leave each individual responsible for his own opinions alone, and affect in no degree his relations to other associations; and nothing in the name or Constitution of the Association shall ever be construed as limiting membership by any test of speculative opinion or belief,—or as defining the position of the Association, collectively considered, with reference to any such opinion or belief,—or as interfering, in any other way with that absolute freedom of thought and expression which is the natural right of every rational being. Any person desiring to coöperate with the Association shall be considered a member, with full right to speak in its meetings; but an annual contribution of one dollar shall be necessary to give a title to vote,—provided, also, that those thus entitled may at any time confer the privilege of voting upon the whole assembly, on questions not pertaining to the management of business.

III. The officers of the Association shall be a President, twelve Vice-Presidents, a Secretary, an Assistant Secretary, a Treasurer, and twelve Directors. They shall be chosen by ballot at the annual meeting of the Association; and the President, Vice-Presidents, Secretaries, and Treasurer shall hold their offices for one year, or until their successors be chosen. The Directors shall be chosen for four years, and, at the expiration of that term, shall not be eligible for reëlection until after two years. One fourth of their number shall be chosen annually; but, at the annual meeting of 1882, the full number of twelve shall be chosen in sections of three respectively for one, two, three, and four years. The President, Secretaries, Treasurer, and Directors shall together constitute an Executive Committee, intrusted with all the business and interests of the Association in the interim of its meetings. They shall have power to fill any vacancies that may occur in their number, or in the list of Vice-Presidents, between any two annual meetings. Six members of the Executive Committee shall constitute a quorum.

IV. The Annual Meeting of the Association shall be held in the city of Boston, on Thursday of what is known as "Anniversary Week," at such place and with such sessions as the Executive Committee may appoint, of which at least one month's previous notice shall be publicly given. Other meetings and conventions may be called by the Committee, according to their judgment, at such times and places as may seem to them desirable.

V. These Articles may be amended at any Annual Meeting of the Association, by a majority vote of the members present, provided public notice of the amendment has been given with the call for the meeting.

Officers elected for the year 1882-83:—

PRESIDENT.

WILLIAM J. POTTER, New Bedford, Mass.

VICE-PRESIDENTS.

OCTAVIUS B. FROTHINGHAM, Boston, Mass.
FELIX ADLER, New York City.
GEORGE W. CURTIS, Staten Island, N.Y.
EDWARD L. YOUMANS, New York City.
FREDERICK SCHUENEMANN-POTT, San Francisco, Cal.
THOMAS WENTWORTH HIGGINSON, Cambridge, Mass.
ELIZABETH B. CHASE, Providence, R.I.
GEORGE HOADLY, Cincinnati, O.
NATHANIEL HOLMES, St. Louis, Mo.
ROWLAND G. HAZARD, Peacedale, R.I.
BERNHARD FELSENTHAL, Chicago, Ill.
ANNIE L. DIGGS, Lawrence, Kansas.

SECRETARY.

FREDERICK A. HINCKLEY, Providence, R.I.

ASSISTANT-SECRETARY.

CHAS. H. CODMAN, Boston, Mass.

TREASURER.

JOHN C. HAYNES, 451 Washington St., Boston, Mass.

DIRECTORS.

Four Years.

FRED. MAY HOLLAND, Concord, Mass.
MRS. CLARA M. BISBEE, Dorchester, Mass.
J. A. J. WILCOX, Chelsea, Mass.

Three Years.

B. A. BALLOU, Providence, R.I.
WILLIAM H. HAMLEN, Boston, Mass.
ANNA GARLIN SPENCER, Florence, Mass.

Two Years.

EDNAH D. CHENEY, Jamaica Plain, Mass.
ARTHUR G. HILL, Florence, Mass.
RICHARD P. HALLOWELL, Boston, Mass.

One Year.

CHARLES D. B. MILLS, Syracuse, N.Y.
JOHN L. WHITING, Boston, Mass.
HELEN M. IRESON, Lynn, Mass.

The office of the Association is at 44 BOYLSTON ST., BOSTON (next door east of the Public Library), where is also the publication office of *The Index*.

All letters pertaining to the business of the Association (payment of membership fees, orders for its publications, etc.) should be addressed to "Free Religious Association," at the office.

Communications intended specially for the Secretary, as well as his personal correspondence, should be addressed to him at PROVIDENCE, R.I.

F. A. HINCKLEY, *Secretary F.R.A.*

English Liberalism.

CHARLES WATTS, } Editors.
W. STEWART ROSS, }

The representative English Freethought journal. In its columns are impartially discussed all Secular, Social, and Theological questions.

Price, 7 cents single number; $2.75 per year, postpaid.
Subscriptions may be left at THE INDEX office.

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—**The Christian Amendment,** by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents, 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

CURRENT TOPICS.

It is said that in St. Petersburg, when it is rumored that the Czar is to attend the theatre, the consequence is a remarkably thin house, as the citizens are so fearful of an attempt on his life as to keep them at home for fear of risking their own lives.

SEPTEMBER 12 was the two hundredth anniversary of the day on which John Sobieski, the King of Poland, defeated the Turks who were besieging Vienna, and averted thereby numerous calamities which must have befallen Europe, had not the march of the Turks been arrested.

A SINGULAR confession of the lack of journalistic enterprise in Russia was made by the newspapers of that nation on the occasion of the czar's coronation. Instead of giving original reports of the ceremonies, most of the leading Russian newspapers copied the reports contained in the English and other European journals.

LOUISE LATEAU, the "Stigmatica of Bois d'Haine," whose singular case attracted for so long the attention of devout Catholics, psychologists, and medical men, died in France a few days ago. She was a religious enthusiast, and had, it is alleged, abstained from all food since March, 1871, and professed to bear on her person the marks of Christ's wounds.

TOM HUGHES said to the New York brokers last week that America was the best country in the world in which to make money, but England was the best in which to spend it; that he had a number of relatives in this country who would probably retire to England by and by; and that eventually everybody on the other side would come here to make money, and everybody here would go over there to spend it.

THE Russian thief, who was last week arrested in New York for stealing 12,000 roubles from his employer in Moscow, with which he escaped to this country, is one of the many people who cannot be made to understand the difference between liberty and license. Understanding that this was said to be "a land of freedom," he put his own interpretation on the phrase, and took no pains to conceal himself or his crime, and was immeasurably disgusted when he found that he could be arrested.

CONNECTICUT furnishes the latest superstitious "miracle," this time a Jewish one. In the manufacturing village of Oakdale, a few weeks ago, a Russian Jew committed suicide; and the suicide was followed by a terrific thunder-storm. These events so worked upon the minds of the other Jews in the place that they told the overseer of the mill in which they worked that Moses had appeared to certain of them during the storm and commanded them to leave the place, which they did in a body.

"GEN." BOOTH, in a recent report of the present condition of the Salvation Army, said that in Great Britain and Ireland there were 493 corps and 241 outposts men. Saving work was done in villages, stables, cellars, and the back parlors of pawn-shops. There are 1,461 commissioned officers. Abroad there are 70 corps and 174 officers. In England alone, in addition to buildings already owned, there are in course of erection fifteen new halls, affording room for 25,200 people and costing more than £20,000.

CHROMOS, as inducements to newsboys and other children of the street to attend Sunday-school, are at a discount in Chicago; and more practical presents are held forth as a bait to attract them. Four hundred newsboys, who had attended ten consecutive Sundays at a rink Sunday-school, were rewarded with new suits of clothes of good material; and each boy who keeps up his Sunday-school connection is promised an overcoat for a Christmas present. Another illustration of the grand scale in which the West does all things.

A LONDON despatch to the Boston *Herald* says: 'Canon Wilberforce has made a vigorous attack, upon the holding by the Established Church of its immense properties in public houses, a number of the most prosperous gin palaces being maintained under its direct administration. The Church in London has long since admitted its inability to deal with the spiritual needs of the poor; but a recent report of the committee, which inquired into its public house property, shows that it has no scruple or difficulty in maintaining the liquor traffic. Strenuous efforts have kept this scandal quiet, and prevented the impairment of the church revenues which the application of a remedy would entail."

SAYS the Springfield *Republican:* "When the first intimation was given that the pope was about to open the Vatican library to students of history, we did not give it entire credence, but suggested that it might be opened only to the pupils of the Church in Rome. And this indeed proves to be the case. Leo XII. proposes to offer the privileges of the papal library to writers who will devote themselves to vindicate all the popes from whatever evil repute may have attached to them in the inexorable course of history. This is the extent and purpose of his offer. The Vatican library is not open for untrammeled research after truth, but for a great whitewashing scheme,—that is the long and short of it."

PENNSYLVANIA has a case of witchcraft for one of its law courts to settle. The infant daughter of Mrs. Sarah Kockert, of Reading, fell ill, and soon died. The disease was probably marasmus; but the witch doctor summoned to attend the child said she was bewitched, and accused Mrs. Snyder, a neighbor, of being the witch. Mrs. Snyder instituted legal proceedings against Mrs. Kockert for slander. During the trial, the following bit of interesting testimony as to the prescriptions of witch doctors was given: "The doctor," said Mrs. Kockert, "gave me a strip of paper to place around the child's breast to drive the witches away, telling me I must be careful to tie a knot in the paper. I fed some of the molasses with the papers in it to the child, but it could not eat it all. Next, the doctor told me, as the child was restless, to take a briar stick and whip the cradle in which the child lay until I was so tired that I could not strike any more. Before striking the cradle, I was to take a leaf off the briar whip, and dry it on the stove." Much more testimony was given of other curious methods adopted to drive off the witch and cure the child. The justice, after hearing it, decided to send the case to a higher court.

GOV. BUTLER, in a letter to the Insurance Commissioner of this State, after stating that by insurance the people endeavor to "provide for the calamities of life and those left dependent by death, and their reliance upon insurance companies must not be a 'broken reed,'" says: "Your report discloses the fact of a large number of violations of the law, to many of which penalties are attached and to others condign punishment. Your report also mentions cases of perjury in making sworn false statements of the condition of insurance companies, on which only the public can rely in their judgment on where they ought to insure. If your investigations, as your reports would seem to show, have disclosed or shall disclose any such instances of crime, you are hereby directed to report the evidence at once to the attorney-general, that they may be prosecuted to the full extent of the law, so that offenders may be taught what your report shows they do not seem to know now, that the required reports and examinations by the laws of the Commonwealth to verify the condition of the insurance companies are not, as one agent of a company, a gentleman of large experience, told you he deemed them to be, 'matters of form.' Let the man who perjures himself in making such statements, let any man who reinsures in violation of law one of our citizens in companies that are not permitted to do business in this State because they are not fully up to our standard, be prosecuted with a vigor that will teach all such rascals that frauds by assurers and insurance companies are very dangerous in the Commonwealth of Massachusetts while you are the examiner and under the present executive."

ARE MAN AND NATURE ALL?

Elsewhere in this issue, we print a discourse on "Man's Relation to Nature." The subject and the treatment suggest some added words, which may serve as a background, under the above caption. In a large sense, yet in a strictly scientific sense, nature includes man. To the eye of science, the advent of man in creation was only the continuance of nature's ceaseless energy and processes. Science sees not two worlds, but one. But, in a popular sense, there is between man and nature a broad and obvious distinction. And science also recognizes this distinction. In this sense, nature means the material world; and man denotes the highest race of animals that exist in immediate connection with it. When man and nature are thus defined, there are very intimate and even vital connections between them; and these connections appear all the more close and important, when man and nature are viewed in the relation to each other which science discloses. It is these connections and what is involved in them that the discourse referred to discusses,—using, as popularly understood, the terms "nature" and "man" as covering the two sides of the universe which are known to man.

But that last clause, "which are *known to man*," is a most important proviso. The terms "nature" and "man" do not necessarily cover all possible modes of being in an infinite universe. There are, it is true, persons who appear to think that material nature and human nature exhaust the possibilities of all existence, and who use the word "nature" in its large sense, as if it meant every thing that everywhere exists or can exist. And, to some of these persons, nature is the equivalent of the word "Deity," standing for the actual and potential energy of the whole universe, unless they hold with Auguste Comte that man, as the culminating development of nature, is the more fittingly entitled to that name. But, in this case, nature is either extended into an unknown realm, beyond all proper usage of the word, or else it remains too limited a term to express all that should be denoted by the supreme word of all. Wiser is it to say, with the wise as also devout Spinoza, that, of all the attributes of Absolute, Infinite Being,—which to him was another term for Deity,—only two are known to man, *Thought* and *Extension;* in other words, mind and matter, or the world of material nature and the world of humanity. There may, however, as he affirmed, be an infinite number and variety of other forms of being, conscious and unconscious, which constitute or belong as modes to universal existence, but of which neither the senses nor the understanding of human beings permit them to know anything.

Why, indeed, should there not be conscious beings somewhere in existence of an order entirely different from mankind, and from every other form of animal existence known to man,—different, too, from that celestial type of mankind imagined to exist under the name of angels? The fact that man cannot conceive how such beings can possibly exist or of what form they may be does not preclude, certainly, the possibility of their existence. Astronomers may assure us that certain of the heavenly bodies cannot be inhabited by beings like man, because they have no atmospheres for such beings to breathe. So let it be. Thus much may be susceptible of proof. But that does not prevent that they should be inhabited by beings unlike man, or unlike any kind of being that is dependent on such an atmosphere as envelops the earth. Surely, it is not rational to suppose that the omnipotent energy of the whole universe is shut up to the necessity of producing only a class of creatures that live by lungs and are adapted to no other conditions of animate existence than such as obtain on this comparatively insignificant globe which we inhabit. The time has long passed by when science could, it is rapidly passing when any phase of theology can, assert the old doctrine that the little earth is the centre of the whole universe, that the stars and firmaments, sun and planets, were made solely for it, and that the whole creative plan and arrangement of things, from and for all eternity, were adapted to a little colony of beings on this small planet, situated on a mere by-way of only one of an infinite number of solar systems of worlds. Nor is it less irrational to assume that there may not be other kinds of inanimate existence than that which we call "matter," although it be utterly beyond human power even to guess as to what they may be; for how were it possible that any finite creatures, however effective for their own work, who have been produced in this obscure corner of the universe and whom it has taken unknown ages to climb even to their small modicum of knowledge, should be able to understand all the possible ways in which absolute and universal being may exist?

It behooves mankind, therefore, to be very modest in the expression of opinions on this and kindred themes. But it is quite as important not to dogmatize in negations as in affirmations. Nay, it is more important. For science is competent to make positive declarations of its truths just so far as the actual facts of things and their mutual relations have been accurately traced. But, beyond the line of discovered facts and proved laws, it can assert nothing, and therefore can there deny nothing. It can there only conjecture and infer. Hence there is a vast realm of possible existence open to the imagination, open to research, open to the future even of man's attainment, concerning which science cannot now profess, if true to its own principles, to assert or deny anything. Least of all, can it deny the reality of such a possible realm.

And, in such realm of possible being, only the most irrational dogmatism can deny the existence of a Power, however dimly comprehended, that may be called divine,—a Power anterior to and greater than humanity, anterior to and greater than the material nature which man's senses reveal to him. Man may not be able to put his idea of the supreme, sustaining energy of the whole infinity of the universe into any defining words, and yet he may logically allow that such vitalizing and sustaining Power there must somehow be. And his conception, moreover, must be nearest to truth, when it is not limited by what may *appear to him* as the whole universe. Though material nature and human nature may seem to his senses to include all that there is, yet, as he can conceive of the possibility of other forms of existence, so he can conceive of a Power that is the law and life of them all,—the unifying force within all their manifoldness, the absolute Being of which they and humanity and material nature are only attributes or, perhaps, passing manifestations.

The averments, therefore, of materialistic philosophy, that nature is all the Deity which the universe needs, and of Comtism, that the supremest Being is humanity itself in its progressive development, are assertions of a narrow dogmatism. The Comtist assertion, indeed, though it is capable of being devoutly conceived and expressed (as in the prayerful rhapsody which may be read in another column), gives a Deity that is even smaller than the actual universe of human knowledge and infinitely smaller than the possible universe of human conjecture. It is a religious conception which is adapted, in our view, to gain little headway against even the erroneous metaphysical theologies it was meant to oppose; for they, to what ever irrational absurdities and mythological littleness they may have been carried, have yet served to keep the heavens open above man's head, and have connected him, though an inhabitant of this small planet, with the grand scheme and destiny of the whole universe. If this has made him a creature of dreams, it has also made him a creature of sublime aspirations and daring hopes. If it has led to the error of anticipating another and better world instead of rectifying the wrongs of this, it has also greatly helped to nourish and keep alive the ideal of a better world as a model for the work of rectification. On the other hand, the error of positivism in all its forms, with its philosophy of mere phenomena, is that it shuts man up in material nature as in a box. It scans the heavens, but only as the cover of the box which shuts down over him. It clips the wings of imagination, it tends to dry up the sources of poetry, it cuts the chords which have, from the earliest stirrings of thought in the human brain, bound man's life not merely to the nether earth and its hard facts, but to the upper universe of the sky and all its possibilities.

Nevertheless, it is necessary to admit and important to urge that the pressing practical problems of human life are involved in man's relation to the earth which he inhabits and to his fellowmen upon it: only, it does not follow that the thought-side of human life, or the philosophy which probes human life to its profoundest relations, should be closed by the same wall. Working with and upon nature's forces, man may make of this earth some day a little paradise, and create, in the generations to come, a happy and virtuous race of beings to dwell in it. But he need not therefore forget that, as neither this earth nor man upon it would ever have existed without a power imparted from yonder sun, ninety-six millions of miles away, so, probably, some more vital and omnipresent power is behind and within sun and planet and all the solar systems, visible and invisible, working with and through both matter and man and all things else that can possibly be. And this thought, whereby man perceives that the earth and himself are not alone, but form a part of the whole universe of things and forces on whose life he subsists and whose higher harmony he is helping to work out,—possibly, this thought may help him to a truer and more stimulating view of what he may do to fulfil his part of the great plan well, and nerve him to more resolute effort to right the wrongs which now deface the earth and to make it and its people fit company for the most angelic heavens of which the purest dreamer ever dreamed.

WM. J. POTTER.

THE DEGENERACY OF THE MODERN NOVEL.

Time was when novel-reading, if not classed among the unpardonable sins, was yet considered an impious waste of time and an immorality to avoid or repent of. That day is past, as the shelves of the Sunday-school libraries of to-day abundantly testify. In the catalogue of these libraries, fiction bears supreme sway. In public libraries, books in the department devoted to current fiction have to be renewed oftener than those of any other department. The novel has become an acknowledged power in literature. The prosiest nature grows weary of the constant succession of great expectations followed by chilling disappointment, which real life involves, and seeks solace in the skilful novelist's power to reward virtue and punish vice at will. This, at least, was the secret of the

Digitized by Google

attraction felt toward the earlier romancers. Of late, a degenerating change has taken place. This degeneracy is felt in the lack of strength and vivifying power in the *too* artistic novel of to-day.

Novels were once, and always should be, our teachers, our inspirations, our moral tonics. They should be permeated by a possible and sensible morality, which is not capable of "straining at gnats" while "swallowing camels." The earlier novelists who were "born, not made," even when coarse-grained,—like Fielding, Smollett, and others,—treated their subjects massively and grouped them effectively.

How is it with the novelist of to-day? The readers of the fiction of to-day, the living, genuine men and women, with thinking brains, feeling hearts, and sensitive nerves, who, in the intervals of their often tragic lives, turn for a brief space from the consideration of the burdens they are bearing and helping others to bear, to lose themselves in the realm where the novelist's imagination can order events to suit, are now surprised and pained to find themselves in a world of which they know, and care to know, nothing; a world of superficiality and tonelessness where they are asked to become interested in the analyzation of a characterless society belle's idle whims, or a society man's heartless egotism and transparent shams.

The novelists of to-day seem to avoid dealing with the real world or the people who are in earnest in doing the real world's work, and seem only bent upon drawing skilful portraitures of the butterflies of surface society. They give us reproductions of their æsthetic idealization of real things, but not reproductions of the things themselves. They aim to give us pen photographs of scenes, events, and persons, not in the manner they are viewed by the ordinary mind and vision, but as they are refracted in rare moods through certain exceptional temperaments, and therefore distorted. We are invited for our entertainment into mental dissecting rooms, where we are treated to a careful analysis of some thoroughly commonplace, frivolous, and insignificant character, toward which analysis all sciences are levied upon for a contribution of descriptive terms.

These character dissections are well enough in their way, and have their appropriate place, though a subordinate one, in fiction; but it is time to enter protest against these microscopic delineations being mistaken for the highest type, the attained ideal of the literature of romance. It strikes the commonplace reader as strange to find these portraitures of flimsy natures accepted by would-be critics as wonderful in their minute knowledge of character, when he or she, as the case may be, is personally acquainted with people in the daily walks of life whose individualities are much more subtle and their mental idiosyncrasies of finer type and stronger tone than those portrayed in the weak fiction of to-day. Our novel-writers seem much more intent on exhibiting their own personal facility of expression and cultivated art in word-fencing than on writing a novel which shall reproduce the tragical combinations of real life, with the possible moral triumph which may give hint of help to needy and puzzled souls. There is great parade of superficial acquaintance with scientific terms, without any corresponding enlightenment of the unscientific mind, which real science is always eager to give. The wit and humor of the novel of to-day, though doubtless more refined than formerly, are refined to such attenuation that they no longer scintillate across the tired brain or awaken the dulled intellect, but rather jar on such as being senseless, and convey to even bright people a sense of vapidness and inanity.

The highest aim of the fiction writers of to-day, even the most popular, like Howells and James, seems to be toward attenuation, "to gild refined gold, and to paint the lily"; but the ultra-refinement upon which they pride themselves is gained at the cost of strength and force in their delineations. It is as true now as when Young first wrote that—

> "Pygmies on Alps are pygmies still,
> And pyramids are pyramids in vales,"

and the carefully delineated heroes and heroines of our new novelists are most unmistakable pygmies in their characters, as portrayed by their creators.

Another mistake of the novelists of to-day, as also of the majority of their critics, is the affectation exhibited by them of a fine scorn of the hardier, more robust virtues, a sneering, complacent patronizing of common honesty and virtue, which does much toward undermining in young, pliant, and unfixed minds any natural leaning toward a higher ideal of life and character. It has come to be held as the stamp of genuine critical acumen in many literary circles to sneer at the practical virtues which do not need analyzation, the unrefined integrity which refuses for a moment to entertain a thought of financial dishonesty, the uncompromising virtue which never dallies with temptation, and so has no need to call to its aid a series of sophistical reasonings, *pro* and *con*, before it can conquer such temptation. Such critics reserve their sympathies for the heroes and heroines whose tendencies lead them perilously near that dividing line where the feet of heartily honest men and women never stray.

The more heartless the deliberations, *pro* and *con*, of the hero or heroine who longs yet scarcely dares to pass this dividing line, are, the more these critics see to admire in the *finesse* of the author who, after leading his creations so dangerously far in the wrong direction, can yet lead them—though by crooked and devious paths — back to safety and respectability. But these critics, in their applause of the author's skill, do not take into consideration the many readers who may be, through weakness or misfortune, as near in reality to the danger line as these fictitious heroes and heroines; and who, with no guardian novelist to work out impossible combinations of circumstance to insure safety, struck by the sophisms so ingenuously woven from the author's brain to bewilder his hero, may well be forgiven if he feels that, under *his* circumstances, he is not called upon to exhibit the rare virtues of a hero of romance, and so, thanks to our novelist, does not hesitate to cross to the wrong side of the line. This is the sort of lesson which will most likely be the result of such books as Mrs. Burnett's *Through One Administration*, Howells' *Modern Instance*, and James' *Portrait of a Lady*.

It is not only the American writers who are deficient in moral tone and inspiration, but also the authors of other lands. We detect this moral miasma in the works of even Auerbach,—in *On the Heights*,—in Björnstjerne Björnson's *Magnhild*, in the works of Charles Reade, Miss Braddon, Zola, Ouida, and even in the Russian Turgenief's *Smoke*, as well as in Julian Hawthorne's *Garth*, Crawford's *Mr. Isaacs*, Mrs. Burnett's *Through One Administration*, and other American writers' books. The novelist is a powerful teacher, and should ever give us an impetus upward and forward instead of downward and backward; and every one who has the gift of imaginative genius should hold himself or herself morally responsible for the right use of that gift, so that no reader shall arise from the perusal of their works with his moral convictions unsettled because of the glamour of their brilliant sophisms on moral points. Even our very latest writers fail in this respect.

What possible lesson is taught or what inspiration gained from such books as Lathrop's *Newport*, the anonymous *A Newport Aquarelle*, Mrs. Dahlgren's new book, or even *Cape Cod Folks*, which created such a breeze of excitement on its first appearance, in spite of its crudeness of style? The charm of this and many other stories, which have had as brief a day, is in their unhackneyed subjects. The novel-reading public is weary of sameness of plot and treatment, and, longing for a new sensation, is willing to accept anything new that gives promise of strength and originality.

There are not lacking novelists even to-day, however, whose work gives satisfaction in its moral aspect; but these are so few, and among the miasmatic writers are so many of decided ability and genius, that it seems a pity they do not give us of their best. The stories of George W. Cable, the Southern novelist, are of a high, pure tone, their moral inspiration is unmistakable, their originality charming. Mrs. Burnett's *That Lass o' Lowrie's* gave promise of higher work than her later stories have shown. Judge Tourgee's *A Fool's Errand*, the stories of Edward Everett Hale, "H. H.," and many others, have a definite moral or educational purpose in view. What we need to-day in our novels is the highest knowledge and morality, wedded to genuine imaginative genius, which shall strengthen, encourage, and inspire the present generation of readers, instead of as now obfuscating the moral sense and depreciating the value of true knowledge. SARA A. UNDERWOOD.

LIBERAL CONVICTIONS.

Some say there is no excuse for the utterance of liberal views, as they merely destroy faith and give nothing in the place of it. They remove certain restraints and give license to the passions. The atrocities of the French Revolution are the favorite illustration of this argument. Addison says, *Spectator*, No. 186: "A believer may be excused by the most hardened atheist for endeavoring to make him a convert, because he does it with an eye to both their interests. The atheist is inexcusable who tries to gain over a believer, because he does not propose the doing himself, or believe any good by such a conversion. Why will any man be so impertinently officious as to tell me all this (the prospect of a future state) is only fancy and delusion? If it is a dream, let me enjoy it, since it makes me both the happier and better man."

These reasons have opposed all progress in the past. If a building is unsafe, it may be torn down before the plans of the new edifice are wholly completed. If a beacon is false, let it be removed, even before the true light-house can be built. If a belief that God wrote the Bible is untrue, and is moreover debasing to the intellect, let it be overthrown. If it is false that God of his own free will has elected some to everlasting life, and left the vast multitude of his creatures to suffer endless torment in hell, and if these ideas are injurious to both mind and heart, destroy them! The sooner, the better. The abolition of slavery was opposed by good and wise men, because freedom would lead to license. Did this idea stop the anti-slavery party? The event proved the truth of the objection. The ignorant negro became the prey of the politicians who wanted his vote; and, trusting in their promise that the government would give to each man forty acres of land and a mule, he abandoned himself to the license of laziness, which he considered the essence of "freedery," until the inexorable logic of hunger and suffering

Digitized by Google

taught him that true freedom was liberty to work and do right. He soon learned the lesson; and the double production of the South and its good order now prove that freedom is not a curse.

The liberal does propose doing good to the believer. He claims that all error is hurtful, and had better be abandoned. He believes that truth always works for good in the end, and can be safely left to take care of itself. He has not got to build a track for truth to run on. The men, who now are restrained from evil only by servile fear, may "have their fling" when these bonds are removed; but, in the school of experience, they would soon learn the utility of goodness, and be better men when they have learned to do well for higher motives than the dread of hell. If the motive is only the present good of themselves and others, it is a far better one. Goldsmith, in the *Vicar of Wakefield*, says "that virtue which requires to be ever guarded is scarcely worth the sentinel."

But the advanced "higher life Christian," with whom the fear of future punishment is not an influence, but who from love to God delights to do his will, even he need fear no loss in motives: his devotion to *good* may continue, and his life be inspired by the same high enthusiasm. The name of his object of adoration will be only altered by the addition of one letter; and, while retaining all that is desirable in his conception of the first, he will add to it utility and the impossibility of critical detraction. Whoever promotes the *good* blesses the human race: whoever praises *God* flatters an imagined existence, whose receipt of benefit can never be proved.

We, therefore, do not shrink from endeavoring to destroy faith in the dogmas of Christian theology, because we are convinced that belief in the Bible story of creation, which hindered the ideas of Copernicus and Galileo, and has opposed all progress of "earth knowledge" in the past, still prevents the intellectual growth of man, and the improvement of his circumstances by the discovery of the laws regulating the forces of nature. The works of Darwin, Wallace, Tyndall, Huxley, and others, are called "the miserable speculations of infidel scientists," their books will not be read; and, when one is urged to read the writings of the greatest men of our age, it is answered, "Moses and Paul are very great men." The devout and intense Christian pietists of to-day do not dare to read scientific books, lest their faith should be shaken, and these should prove more than a match for the writings of the Holy Ghost. They say: "There is nothing positive about the so-called discoveries of science. Sir John Lubbock now has contradicted Richard Proctor's theory that the earth will grow cold. We will wait until science comes back to Moses, as it is sure to do." Those who remove this barrier to the advance of knowledge are doing *good* service, though accused of not doing God service.

We are convinced that a belief that all the atrocious cruelties of the Hebrew wars, which those barbarous Israelites endeavored to excuse themselves for, by attributing them to the command of God, were really sanctioned and ordered by a being of infinite perfection, is injurious to morals, and has been the warrant for untold butcheries committed during wars waged in the name of God. No one need hesitate to destroy that dogma through fear that the world will grow worse, if its "restraint" is removed.

We are convinced that a belief in all the wonder tales of the Bible, which are paralleled or improved upon in every literature, keeps the mind in a childish condition; and that it is necessary to mental growth that the Hebrew fables and fairy tales should be placed where the myths of all other nations have already been put by intelligent men. Credulity has been slow in dying, but that is all the more reason why the loosening of its puerile "restraint" should be hastened. How can mankind be hurt by believing that Samson and Joshua and Jonah are brethren of Hercules and Agamemnon and Arion?

We are convinced that the sublime or raving utterances of Hebrew prophets are not God's vehicle of communicating the events of the future to this generation, and the belief that it is so leads to a vast waste of intellectual effort in sophistical reasoning and crazy imagination. It has been a curse to the human mind, giving men a low standard of the mind and nature of a God who was anxious to reveal something to them, and could find no better way of doing it than through disgusting symbols and unintelligible rhapsodies. This "restraint" can well be spared, and the reaction from mysticism to light will not make men stumble.

We are convinced that the assertion that the books of the New Testament are the genuine authentic writings of men inspired by the Holy Ghost, and therefore incapable of error, is not only false, but positively injurious; for the evidences are mainly drawn from the obscure, doubtful, garbled, and contradictory writings of fallible and often ignorant and credulous men, called Christian Fathers. The investigation of these evidences is impossible except to a few scholars; and it has made the great body of Christians the intellectual slaves of a hierarchy, who in the past have taken advantage of their power to impose all manner of dogmas and miracles upon the belief of their followers, in the name of the Christian Fathers. God will reveal himself to *me*, when he wants me to know something, and not imperil my reception of "the pure truth" by letting it roll around the cells and garrets of superstition, until prescribed to me by a learned doctor as the real and only genuine remedy; and I must swallow it on his authority, or die eternally. Men will only truly think for themselves when they learn that the evidences of "God's truth" are all around them, not in musty manuscripts, copied, altered, erased, defaced, and "restored," but in the glorious book of nature which admits of no forgery, no erasure, no lie. This "restraint" it is safe to the intellect to remove.

We are convinced that the story of the life of Jesus is largely composed of the traditions of a credulous age; that his resurrection and ascension are mere myths; that the historical evidence of his existence is very meagre, and is entirely opposed to the prominence given to him in the New Testament. The passages chiefly relied upon in the works of contemporary historians to prove his life are now admitted to be forgeries, notably the passage in Josephus. The various Epistles may be genuine or not: the evidence is so conflicting, except for a few of Paul's Epistles, that no one should be asked to let his eternal salvation rest upon them. The writers were fallible men, and their unsupported testimony is not sufficient to prove the miraculous against the experience of the world. It is easier to believe they were mistaken. All that is good for restraint still remains to us, and needs no authority of "inspiration" to enforce it.

We are convinced that it is contrary to all moral ideas to teach that the guilty may be pardoned, because the innocent have suffered. The idea of the sacrifice of life, whether of brute or man, for "the salvation of souls," is a wicked and hurtful notion. It has led to countless atrocities, and still works evil, leading the Pocasset Christian to strike his knife to the heart of his little girl, and probably influencing the assassin of the President in his wicked deed. Jesus was put to death by the Jews on the charge of sedition and blasphemy. He tried to avoid it, but was betrayed by Judas. How this can be made an offering by God of his son for the sins of the world is past comprehension. We have no fear that men will be worse, if they lose the restraint of the idea that God, in all ages, has demanded the blood of the innocent as the condition of forgiveness of the guilty.

We are convinced that the doctrine of hell is an atrocious slander upon the character of God, and is not generally believed by thinking men in its connection with people that they know. An eminent orthodox minister, the head of a theological seminary, lately said to a circle of friends, "I do not believe the doctrine of eternal punishment, and I do not know a man who does." And yet it stands in the creeds, and men profess to believe it! A degraded idea of God is degrading to man, for 'like master, like man." Though it has had some restraining influence in the past, the dread of hell exercises but little restraint now upon thinking men; and, where it acts, it is an unworthy motive, and produces servility. It has been the warrant for torture and massacre all through the ages; for may not men do just a little of what God does a good deal? If the Bible does not teach it, then God's word has misled his people for eighteen centuries; and the Holy Ghost has been "leading into all error," and it is not a safe guide, for the next generation may prove it spoke falsely to us about something else.

We are convinced that the Bible teaching, as to the present and future condition of the world, is utterly subversive of progress, and that all improvement is made in spite of it. Christians do not generally believe it now, because it is so repugnant to modern intelligence; but there it is in the Bible. All Christians used to believe it, and some do still. Things are to wax worse and worse, so that Jesus asks, "When the Son of Man cometh, shall he find faith on the earth?" The world, and all that is therein, shall be burned up. The early Christians, therefore, sought "a city that had foundations," and taught the despising and forsaking of this world. When this restraint is removed, men will become better citizens; and, feeling that they are not working merely to feed the flames of judgment, they will show more enthusiasm about improving the world.

We are convinced that all belief in the miraculous is a drag upon men's efforts, and enfeebling to their minds. Instead of trusting to prayer and ignoring the glorious faculties men possess, this restraint disappearing, each will strive "to do his level best," and feel there is no region into which his mind may not probe, and, proving all things, hold fast only that which he sees for himself is good.

Jesus promised that the Holy Spirit should lead his disciples into all truth, but his followers have differed and quarrelled ever since. He promised that prayer in his name should be answered, but the failures have at least equalled the fulfilments. He led his followers to expect his return to earth during their lifetime, but the hope proved fruitless. This disproves his infallibility.

These are points upon which all readers of the Bible can judge for themselves. We find that many scholars regard these stories as legendary: we may not be learned enough to weigh the evidence of this for ourselves, but, as their conclusion agrees with the internal evidences above mentioned, it appears the most plausible. While a respectable number of learned men on scholarly grounds deny the authenticity and genuineness of the Gospels, we are warranted in rejecting any of the doctrines taught therein which our reason disapproves.

In renouncing the errors of theology, do we give up anything that is valuable in Christianity, or

Digitized by Google

that the moral sense of the world pronounces good? A thousand times no. We throw overboard the pagan rubbish and barbarous superstition that have incrusted the truth, that men have discovered in ages of experience of joy and sorrow, or, in other words, of good and evil. The truth remains to all. Christianity has never had a monopoly of it, and theologians do not control it now. We lose no hold of "love, joy, peace, long-suffering, gentleness, goodness, faith, meekness, temperance"; but we elevate them from the sphere of bondage to that of liberty. ROBERT C. ADAMS.

THE SYSTEM OF AUGUSTE COMTE.

A paper entitled "Anarchy in Modern Politics," in a recent number of the *Popular Science Monthly*, serves to call attention anew to the system of Auguste Comte and to its claims to be a regenerator of society, politically and socially. The writer indulges in the usual Comtean exaggeration of the shortcomings of representative governments, and talks largely of the application of science to politics, but carefully avoids all mention of the manner in which he would apply science so as to cure the state of anarchy which he sees so clearly. M. Comte himself is not so reticent. He does not hesitate to apply his science to every department of social and political life. With the Frenchman's love of symmetry, he regulates everything,—from the kind of prayers to be said at night in order to have good dreams to the highest affairs of State. Representative government in any form was his special detestation. He clapped his hands when Louis Napoleon overturned the Republic, and commenced on the ruins of it his eighteen years of rotten despotism. He proposed to intrust all the temporal powers of the State to two bankers who were to name their successors. The only restraint on their mal-administration of affairs was the advice or remonstrance of the spiritual power,—a body of priests with a Pope at the head of it, for whom ample provision, in power at least, was made. Among other functions, this hierarchy was to have the sole charge of education, to prescribe the subjects to be studied by men of science, and those to be discouraged. Like its prototype, the Romish hierarchy, it was to have charge of the faith and morals of the community. Nominally, it was to have no power to execute its decrees; but, in extreme cases, it was to have the privilege of excommunicating offenders,—a process the terrors and horrors of which were well known to the ancient Church. Everything in social and political life was "systematized" by Comte. There was to be no room for any spontaneous individual action: the thoughts, emotions, and religious feelings of each individual citizen were prescribed for him; and, in order that he might have ample time to attend to social and religious ceremonies, he was relieved from all participation in the affairs of government. All this rigid despotism was in the name of science applied to politics.

Science *is* applied to politics, when all men are held to have equal rights, so long as they respect the rights of one another; when every citizen has a right to a voice in the making of the laws which he is to obey and in the levying and expenditure of the taxes he is called upon to pay. Experience in all ages has shown that irresponsible power is accompanied by injustice and tyranny, and that the only form of government that will do justice to all classes is that in which all classes are represented. In England,—where representative institutions have been in existence longest,—since the extension of the franchise to the mass of the people, the most important reforms have taken place. Some of the worst cases of class privileges and monopolies have been swept away.

The despotic tendency of Comtism is clearly shown in its estimate of Protestantism and in its tone of tenderness and sympathy toward the Roman Catholic Church. The greatest readiness is exhibited to acknowledge the fictitious claims of that Church to have been a benefactor to the race in times past. Protestantism is denounced because of its principle of the right of private judgment and its rebellion against authority. The right of private judgment on any subject was, in 'Comte's' mind, "anarchy,"—a favorite word of his.

The love of power is a strong passion in human nature. The bondage in which the Romish priesthood holds the laity is a subject of envy to those who thirst for domination over their fellow-men. M. Comte was one of those Frenchmen of whom it is said that, "whatever may be the theory in practice, the Frenchman's idea of liberty is the liberty of being master of all the rest." We do not wonder that he should have taken the Roman Catholic Church for his model, or that he predicted the early downfall of representative institutions in England and elsewhere; but it is astonishing that any one on this side of the Atlantic and at this period of the nineteenth century should gravely propose to replace the free representative governments which have radiated from England as from a centre, by an irresponsible bureaucracy, backed by the excommunications of an equally irresponsible priesthood, and that, too, in the name of science. J. G. WHYTE.

A SIGNIFICANT SENTENCE.

The *Banner of Light* last week quoted from a popular expounder of Spiritualism a rather significant sentence, and favored its readers with some quite as significant comments thereon. We reproduce both the quotation and the comments:—

"My position is that *the spirit world sees where mortals do not*, and that, as we must in some measure bow to something, wisdom says, Yield rather to those intelligences whom you know and love, and who have always guided you well, than to men no doubt well disposed, but necessarily ignorant of what the higher powers wish and see how to accomplish.—*W. J. Colville.*"

"Mr. Colville recently put on record before the English spiritualistic public the above trenchant summing-up of the true nature of the feeling which ought to be cherished, in justice to the spirit world and its unseen workers, by those who yet in material life seek to forward the work of the spirit world on the mortal plane. Mr. Colville never gave expression in speaking or in writing to a sentence which was replete with a deeper significance than this. Truly says the [London] *Herald of Progress*, "These are wise and weighty words"; and we would add they have a lesson which can be profitably pondered upon, wherever Spiritualism finds mention among men."

Without inquiring here whether communications are ever received from a spirit world, or whether even a spirit world has any other than an imaginary existence, we desire only to call attention to the fact that there is manifested already a disposition among some of the leading Spiritualists to invest with authoritative importance alleged revelations from the "spirit world and its unseen workers." Unless we misapprehend the import and implications of the words above quoted, they afford a logical basis and a possible beginning of a spiritual hierarchy, alike inimical to freedom of thought and independence of character, and opposed to the scientific spirit and method which pre-eminently distinguish this age. The belief that there are invisible intelligences to whose superior wisdom we should in doubtful matters yield our judgments is a belief similar to, and indeed a part of, those superstitions from which have grown ecclesiastical systems and spiritual despotisms that have cursed the world "from the time whereof the memory of man runneth not to the contrary," and from which the most enlightened nations are not yet wholly emancipated. If intelligences superior to those of earth see "where mortals do not," and it is our duty to "bow" and "yield" to their judgment, there is no logical limit to the rightful authority of the invisibles to communicate, or of our duty to receive from them, anything they choose to give us in regard to what the "higher powers wish and see how to accomplish." What though they communicate to us many things which do not accord with our unenlightened and feeble reason, and which admit not of scientific verification, since "the spirit world sees where mortals do not," and since we must "bow to something," "wisdom says yield" to the superior intelligence and judgment of the spirit world,—"yield to those intelligences whom you know and love, and who have always guided you well."

The mass of mankind are ignorant and undiscriminating, swayed by prejudice and passion, credulous, easily imposed upon and awed by authority: they are trembling slaves before the phantoms conjured up by the imagination, and ready to "bow" before invisible beings and "yield" to any plausible words that come to them from the mysterious darkness they cannot penetrate. They may be told to-day, when no hierarchy has yet been organized, that they may exercise their own judgment as to the character of the invisible intelligence that speaks; but, if they decide it is friendly, they must bow and yield to its authority in whatever is declared to pertain to the interests of the spirit world, which logically includes all human affairs.

Who does not see that from such mischievous teachings, with the general ignorance, credulity, and superstition which abound, on the one hand, and the desire for power and that strange psychological mixture of ambition, dishonesty, and religious hallucination which exist, on the other hand, that there must inevitably come into existence a class of teachers—spiritual priests—whose business will be to interpret the words of the spirits, to decide as to their character, to make known their wishes, to be the "mediums" whereby the spirit, can confer upon common mortals who seek their counsel and influence the inestimable blessings their wisdom enables them to bestow, such as the curing of diseases, communicating information regarding the future or pertaining to what are regarded as the most important affairs of life,—lost treasures, love, marriage, the condition of friends in the spirit world, etc.? A few sample advertisements from our neighbor the *Banner of Light*, from which the sentence and comments given above are copied, are sufficient to show that what on *a priori* grounds we should expect would come from these teachings, even now, constitute no unimportant part of the claims of Spiritualism:—

ASTONISHING OFFER.—Send two three-cent stamps, lock of hair, age, sex, one leading symptom, and your disease will be diagnosed free by independent slate-writing. Address Dr. ——.

EXAMINATIONS BY MRS. ——'S MEDICAL BAND AS FORMERLY.—For medical diagnosis by letter, enclose lock of hair and one dollar. Give the age and sex. Terms for magnetized remedies will be sent with the diagnosis. Address ——.

——, MAGNETIC HEALER, —— will forward his powerful Spirit Magnetized Paper to all suffering from nervous exhaustion and loss of vital power. Terms, two packages for one dollar.

MRS. —— gives a correct diagnosis of disease. Send lock of patient's hair, age, sex, and twenty-five cents. Six questions answered on business affairs, fifty cents.

MRS. ——, test, clairvoyant, business, and healing me-

dium. Six questions by mail, fifty cents and stamp. Whole life-reading, one dollar and two stamps.

——'s powerful Spirit Magnetized Paper performs wonderful cures. Two packages sent by mail on receipt of one dollar.

CONSULT PROF.——, if you are in trouble, if you are diseased, if you wish to marry, if you are living in unhappy married relations, if you wish to consult your spirit friends upon any subject pertaining to practical life. Send lock of hair or handwriting and one dollar. Address ——.

We have no reason to doubt that our spiritualistic contemporary regards the claims of these advertisers as genuine, honest, and valid, even though, in our own opinion, they are all among the most fraudulent or foolish representations ever made by dishonest or ignorant men and women. Some of these and other similar advertisers in spiritualistic papers are leading Spiritualists; and their alleged feats or performances of one kind and another are from time to time referred to as proofs of the existence of spirits and their extraordinary influence among mortals.

Claims like these are the stuff out of which, among ignorant people, are formed dogmas and upon which is founded priestcraft; and belief in them is, in the course of time, liable to develop into the most frightful and debasing superstitions. They belong not simply to what Comte called the theological stage of thought, but to the primary or initial period of the theological stage.

What iniquity or folly has not been perpetrated, and is not now daily perpetrated, by designing or credulous men and women on the alleged authority of spirits? And wherein have spirits—supposing they exist—shown greater knowledge or wisdom than mortals that intelligent people in this world should, against their own reason and judgment, "yield" to them in anything, even in the methods of investigating their claims, when through the "mediums" they control they object to conditions that preclude the possibility of fraud or make the value of the "test" depend wholly upon the veracity of the medium?

When the authority of the gods and ghosts of antiquity is, with the advance of science and the progress of knowledge, fast fading from the minds of men, let not this authority be transferred to "the spirit world and its unseen workers," who communicate through tipping tables and tin horns, and through ignorant mediums claim to be Parkers, Websters, Jeffersons, Paines, Bacons, Newtons, and Socrateses, but give us little else than twaddle.

We do not deny that in Spiritualism is more than we have been able to accept; but, were we a Spiritualist, we should still protest, as many Spiritualists now do, against the tendency observed in some quarters to attach authoritative importance to alleged revelation from a world accessible to the great mass of mankind only through those favored individuals called "mediums."

B. F. UNDERWOOD.

EDITORIAL NOTES.

ALL associations or individuals desiring to arrange for lectures by B. F. Underwood the coming winter are requested to address him at an early date, the earlier the better, to enable him to plan his route systematically.

SEVEN hundred Mormon converts landed in New York one day of last week. Proselytism at the rate this fact indicates will soon make this sect a powerful factor in the history of this country.

DR. OSWALD'S brilliant articles in this journal are attracting wide attention. One of them, we learn from the Dunedin *Echo*, was read Sunday, August 5, before the Free-thought Association of Canterbury, New Zealand.

SAYS the New South Wales *Liberal*: "Certainly, the deification of individuals by some of the 'Free-thought' papers is very nauseating; but we have at all events tried to keep the *Liberal* free from anything of the kind, and we believe with success. Deification of individuals we regard with as great an aversion as deification of gods."

THE meetings of the Appleton Street Chapel, which are held in Paine Hall Sunday afternoons, under the direction of Rev. W. G. Babcock, are well attended; and the exercises are of an interesting character. We noticed in attendance last Sunday a large number of young people, whom Mr. Babcock is peculiarly qualified to entertain and instruct.

"GOOD morning, John," said one of the leading pastors in Scranton to a young friend whom he met on the street the first warm day of the season: "how does your father stand the heat?" The young man made no reply, but went away with a clouded brow. And, when the good pastor learned that the young man's father had died only a week before, he understood why his cordial greeting was met so coldly.—*Exchange.*

A PARODY of the doctrine of evolution, which appeared in the papers some years ago, is printed in the Boston *Herald* of last Monday, as part of a special despatch from Baltimore, and prefaced with the words which precede the "sceptic's prayer," as it is called, as follows:—

Austin Bierbower, a German impostor of this city, constructed parts of a ritual for unbelievers and sceptics which the Free Religious Association and the agnostic congregation of this city might adopt as a satisfactory service. The sceptic's prayer is as follows: "I believe in the chaotic nebula, self-existent evolver of heaven and earth, and in the differentiation of its original homogeneous mass, its first begotten product, which was self-formed into separate worlds, divided into land and water, self-organized into plants and animals, reproduced in like species, further developed into higher orders, and finally refined, rationalized, and perfected in man. He descended from the monkey, ascended to the philosopher, and sitteth down in rites and customs of civilization under the laws of a developing sociology. From thence, he shall come again, by the disintegration of the culminated heterogeneousness, back to the original homogeneousness of chaos. I believe in the wholly unknowable absolute, the wholly uncatholic church, the disunion of the saints, the survival of the fittest, the persistence of force, the dispersion of the body, and in death everlasting."

IN his speech at the banquet given him in this city, Lord Chief Justice Coleridge said:—

You know—forgive my vanity if I say that I know, too—that you bred Benjamin Franklin and Daniel Webster, and Joseph Story and Theodore Parker,—Daniel Webster, whose hand I was privileged as a boy at Eton to press when he was in England as your representative, and whose eloquence I have humbly studied ever since; Story, a household word with every English lawyer; Parker, perhaps, one of your highest and greatest souls. Hawthorne, if you will forgive the expression of a foreigner, is perhaps, taken altogether, almost your foremost man of letters. Longfellow, the delight and darling of two hemispheres; Holmes, the Autocrat of the Breakfast Table, the autocrat, if he chose, of every dinner table, too; but there I am told he is content to play the part of a constitutional sovereign. Emerson, as broad and as strong as one of your long rivers and as pure; Lowell, I am proud to say my own honest friend, your representative at this moment in my own country. Like Garrick in Joseph Reynolds's picture, he excels either in tragedy or comedy, and is delightful whether as Hosea Biglow or as James Russell Lowell, skilled with equal genius to move the hearts of his readers whether to smiles or tears. And Howells, the last of your American invaders who have taken England by storm. These are your glories, these are the men who make your history. These are the men, forgive me for saying, of whom you ought to be proud, if you are not heartily proud.

IN an exchange, we find an amusing story of the baptism of a colored woman who, although a Methodist, became so interested in the immersion of a company of Baptist converts that she ventured close to the water's edge, and in the excitement was seized by the officiating minister, who, it is presumed, thinking she was one of the candidates, soused her into the water before she had time to explain or object. "She came up too much out of breath to speak, and under she went again. After the second dip, she emerged, clawing the air wildly and shouting: 'G'way from here! Don't you chuck me under ag'in, you nigger!' But the clergyman was inexorable, and sent her to the bottom a third time. When finally she had escaped from his clutches and stood dripping on the shore, she shook her fist and exclaimed: 'Oh! I'll fix you! I'll bust the head offen you, you or'nary trash! sousin' me and nearly drownin' me, when you know'd well enough all de time dat I'se a Methodist and been christened by dem dat's your betters, and knows mo' 'bout 'ligion den all de Baptists dat ebber shouted, you mis'able black scum! And me got de rheumatiz enough to set me crazy! I'll see what de law kin do for you! I'll have you 'rested this very day, or my name's not Joanna Johnson, you woolly-headed herrin'! You hear me?' Then Joanna went home to change her clothes, and the ceremony proceeded."

FROM the Milwaukee *Sentinel*, we learn that in that city, on the 14th, about twenty-five persons met to hear the report of a committee to consider arrangements for the annual meeting of the National Liberal League in Milwaukee, September 20, 21, 22. "Theodore Fritz, chairman of the committee, stated that, so far as the feeling of the liberals in the city had been ascertained, it showed lack of confidence in the National Liberal League, and hence a disinclination to recognize or co-operate with it." Mr. R. C. Spencer introduced the following resolutions, the first of which was adopted:—

WHEREAS the National Liberal League, which is about to meet in Milwaukee, has at previous meetings, by its action on that subject, committed itself unqualifiedly to the repeal of the laws of Congress, excluding from the mails obscene publications and merchandise, and

WHEREAS such action is repugnant to the moral sense of the great mass of Liberals of this country, and has alienated them from the Liberal League, and

WHEREAS the Liberal League has been greatly divided and weakened by introducing into its platform various things not connected with its original design,—namely, "the complete secularization of the State,"—therefore

1. *Resolved*, That the mass of Liberals of Milwaukee disclaim all responsibility for the National Liberal League about to meet in this city.

2. *Resolved*, That, while we accord to the National Liberal League the right to be heard at its meeting in Milwaukee September 20, 21, and 22, we emphatically declare that, as at present constituted and conducted, it represents neither the character, opinions, intelligence, nor numerical strength of American Liberalism.

3. *Resolved*, That the action and general management of the National Liberal League, during the past few years, have resulted in injury to the noble cause of Liberalism in this country by improperly associating it with questions justly obnoxious to the moral sense of the community.

4. *Resolved*, That in tendering the National Liberal League the use of Freie Gemeinde Hall free of charge, and in paying for lighting and care of same during its meeting in Milwaukee, we do so on the same principle we would do it for any other organization coming to our city and wishing to be heard from a free platform.

5. *Resolved*, That a copy of these resolutions be transmitted to the officers of the National Liberal League.

The Index.

BOSTON, SEPTEMBER 20, 1883.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index.*

MAN'S RELATION TO NATURE.

A DISCOURSE.

BY WM. J. POTTER.

For thou shalt be in league with the stones of the field.—*Book of Job.*

So said Eliphaz, the Temanite, to Job, to express his sense of the prosperity and peace that would come to the afflicted man, if he would submit himself unreservedly to the laws of the Almighty. The speech thus put into his mouth was doubtless poetical, yet it hints at a literal truth,—a truth which in our day is just beginning to be understood through the instructions of science,—the truth of man's relation and kinship to nature. And this fine old Hebrew saying, as well as the larger saying of modern science, was brought especially to my memory when, one summer, several years ago, in drives through the country, I overheard a prattling play of my children, in which they called the rocks and stones along the roadside their *cousins*, giving to each some proper personal name, and attributing to them, according to their size, form, and looks, *cousinly* qualities of strength, grace, and virtue. Was it a dim reminiscence of some ancestral condition that thus stirred in their childish minds, according to the theory of man's genealogical descent from nature, and impelled them to recognize cousinship with the stones? Only the fancy of imagination, we say. But who can explain all the strange turns and freaks of imagination? Who shall say what are all the sources of the imaginative faculty, or that imagination creates out of nothing? Francis of Assisi, one of the purest, gentlest, most devoted, and most self-denying of Roman Catholic saints, wrote a remarkable hymn in the thirteenth century, in which this modern scientific doctrine of the kinship between man and nature is stated in devout phraseology. Says this sweet-souled saint:—

Praised be my Lord God with all his creatures, and especially our brother, the Sun, who brings us the day and who brings us the light. Fair is he, and shining with a very great splendor. O Lord, he signifies to us thee.

Praised be my Lord for our sister, the Moon, and for the stars, which he has set clear and lovely in the heavens.

Praised be my Lord for our brother, the Wind, and for air and cloud, calms and all weather, by the which thou upholdest in life all creatures.

Praised be my Lord for our sister Water, who is very serviceable unto us, and precious and clean.

Praised be my Lord for our brother Fire, through whom thou givest us light in the darkness; and he is bright and pleasant, and very mighty and strong.

Praised be my Lord for our mother, the Earth, the which doth sustain and keep us, and bringeth forth divers fruits and flowers of many colors and grass.

So runs this unique hymn in celebration of our relations in nature. Francis was a great ascetic. He abjured all the ordinary pleasures of life, lived in the extremest poverty, kept his body subdued by the merciless lash of a religious will; but in his solitary and silent foot-journeys through the country, in his night-vigils in the open air, in his frequent sleeping on the bare earth, his spirit seems to have found its way to the secrets of nature, and in this close communing to have detected some hidden tie of kinship, so that when he calls the earth, on whose bosom he rested, his mother, and the serenely shining moon that seemed to kiss him to sleep with its rays, and the limpid cool water that refreshed his brow in the morning, his sisters, and the sun and the wind and fire his strong brothers, we feel that the language to him is not merely imagination and poetry, but the simple utterance of a natural relationship which had become to him very real.

Yet, admitting that utterances like these are the work of poetic fancy, what shall we say of the theory of man's kinship to nature which science is now propounding,—the theory not simply of man's descent from the animal races, but that animals are linked back by natural relationship to the vegetable world, and vegetables to minerals, and minerals again through thousands of changing forms to some primal substance whence all things have had their origin? If this theory of evolution be true, then all things in the known universe are linked together by laws of natural kinship. For the whole, from the lowest atom of dust to highest intelligence, there is one creative germ, one lineage, one family. However varied the branches and dissimilar the fruit, all join to one stock, draw existence from one root, and spring from one seed. Planet and star, earth, air, and water, the dust at our feet and the sun over our heads, rock, cloud, jewel, the hardest iron and the lightest gossamer, flower, forest, grass, beast, bird, and man,—all by this theory are members of one family. If this theory be true, it is not, therefore, mere imagination and poetry, but literal fact that not only are the animals our relations, but that we have kindred among the vegetables and minerals, too; a literal fact, as the children played and the monk Francis sang, that the sun and moon and stars and rocks and trees and flowers and grass are our cousins, that there is nothing that glows in the heavens or grows on the earth or is hidden under the earth which may not claim to be our kin. The cousinship may be far removed,—to the thousandth, millionth, billionth generation,—farther back even than our system of notation can follow it; yet science, if it has found the true law, can trace it through all its distant and subtile ramifications with entire confidence.

And even if this theory were not true, even if it were to be shown that there is no transmutation of species in the process of creation, there would still remain, on one side, a relationship between man and material nature. Man's body, at least, even up to its most delicate and vital organs,—to the eye that gives him a picture of the outward world, and to the brain that is the instrument of his thought,—is made of the same substance as that which flames in sun and star or forms the round earth or glitters in the diamond and snow-flake or makes the black coal or exhales in fragrance from the flower. Though the types may have come by special act of creation or by a special spontaneous generation in each case, yet the substance in which the new type appears must acknowledge a common ancestry. Mineral, plant, beast, and man,—we are all, on one side, of "our mother, the earth," whatever separate genealogy we may claim on the other. The cosmogony of the Book of Genesis is at least right on this point, that man's body was made of "the dust of the ground," and that the same dust had previously brought forth "grass, the herb yielding seed, and the fruit-tree yielding fruit after his kind," and "the living creature after his kind, cattle and creeping thing and beast of the earth." All sprang from common dust, from one mother, the earth. And, in whatever way we may suppose the process of creation to have begun and continued, we must suppose that this mother dust was in some way impressed with vital force, or that it had within itself the germ of vitality, whence have sprung the various phenomena of life.

But, again, even if it were not possible to trace any ancestral kinship between man and nature, we should still have to admit that historically, in respect to the development and civilization of man, there has been a close relationship between him and the surrounding conditions of the natural world. There has been, doubtless, on the part of some modern historians a disposition to push this fact of man's dependence on outward nature too far and to make it account for too much in the process of human civilization. Yet certain facts relating to this dependence are beyond dispute. No high order of civilization has ever yet arisen in an extreme tropical climate nor in an extremely cold climate. Man must have some push from nature to impel him to exertion,—must be forced, it would seem, to use his faculties for providing shelter and subsistence, as the first step in educating his faculties. Yet he must not be pushed by so stern a nature that all his strength will be spent on the bare problem of physical shelter and subsistence, so that no power will be left for anything beyond. There is no doubt that difficulties to be resisted and surmounted, up to a certain degree, educate the human faculties, and are therefore civilizing agencies; but the difficulties *may* be so great, so hopelessly insurmountable, that they repress and imprison the human faculties. Then, of course, their influence is against civilization. Therefore, in countries where nature has bestowed great heat of climate and the untilled earth brings forth enough for human subsistence and there is little need of clothing and shelter, man's tendency is to live in the same wild, untilled way in which vegetation around him lives: he is listless and indolent; and civilization, if it comes to such races, it would seem, must come by some contagious contact from without. On the other hand, a severely cold climate, as in the arctic regions, keeps the natives so intent on providing a scanty subsistence and warding off the danger of perishing by freezing that only the lowest form of even physical human life can subsist. These are facts sufficiently familiar, as also that it is in temperate latitudes that civilization has had its history.

And different *degrees* of civilization, differences in the temperament and character of a people even to their religious and social life, may be traced, in part, to the differences of climate and weather amid which they are born and bred. It is no accident, I think, that the northern nations of Europe so soon threw off the papacy after adopting Christianity, nor that the southern have clung so long and tenaciously to the Romish Church. The temperature of Northern Europe begets the spirit of thought, of inquiry, of enterprise, of liberty; and it demands a corresponding form of religion, which has come in Protestantism. Romanism is a religion of forms for the eye, a sensuous, emotional, passional religion; and so it sits easier on the emotional, warm-blooded, more feeling than thinking peoples of southern latitudes. Not that the differences of climate have begotten directly these differences of religious belief and institution, but that temperature has somehow wrought itself into temperament; that differences of latitude, of climate, of surrounding nature generally, have had much to do with making the differences of *character* that exist among races and nations; and, then, these differences of character and temperament express themselves outwardly in different forms of belief and institution. Perhaps some of us here can testify from our own experience as to the subtle influence of climate upon the inner habit of mind. If it has been our fortune to live temporarily in Southern Italy or in our own Florida, we have probably felt a kind of deliciousness in the mere fact of living and breathing, and were quite content with this physical delight, which did not seem, however, wholly physical, but crept over the soul, benumbing the spirit of enterprise, and putting care-wearing, anxious thought to sleep, but begetting a feeling of serenity and trust that all would go well without any effort of ours. After acclimation, probably, something of this listlessness and indolence would be overcome; yet I suspect that the mood which thus creeps into the spirit when one first goes into these delicious southern atmospheres tells at least a part of the secret of the difference between the southern and the northern tempera-

Digitized by Google

ments,—between Italy and Germany to-day, between Louisiana and New England, between Catholicism and Protestantism.

But I spoke above of the influence of "surrounding nature generally." Climate, certainly, is not the sole source of the influence by which nature helps to educate man and to shape his character. The entire physical conformation of a country will have something to do in forming the character of the people who occupy it. A people dwelling in a region of mountains will not be the same as a branch of the same original stock who are dwellers on plains, nor a people whose home is by the ocean have quite the same characteristics as those who occupy the interior, nor those who have a rugged soil to deal with develop in the same way as those who have an easy and fertile soil. It takes long for such influences to make their mark; and we must not expect to find them to much extent as yet, if at all, in our own country, where civilization is of so recent date and emigration from part to part so easy and so common. Yet the *germs* of different characteristics from this source are, some careful observers think, beginning to be apparent in the United States. The Western States have been to a great extent settled from New England; yet the Western man, though of New England stock, is developing into a different character from the New England man. And the different surrounding nature, the broad and generous and fertile prairie with which he has to deal, though not the whole, is probably no inconsiderable cause of this variation.

And not only climate, soil, geographical conformation of country, send shaping influences into human character and help to make the man, but the food that nourishes the body is another of the channels through which nature is directly related to mankind. As from the "dust of the ground" man was first physically created, so is he recreated daily by drawing upon some combination of the original mother earth in the shape of food. And it is no extravagance to say that what the food is determines in no small degree what the mental character shall be, and, indirectly, also what the moral and spiritual character shall be. Physiologists leave no doubt that *variety* as well as good *quality* of food is a necessary element in the progress of civilization. The lower classes in the old countries, the peasants, the hand-laborers, miners, etc., are doubtless kept the more easily in their low condition because their meagre food gives so little nutriment to brain-power. Where one article of food, as potatoes or coarse bread or rice, has become the sole or main staple of subsistence, animalism seems to ensue. There is muscular, but not nervous or brain development; while a variety of food, carefully selected in quality (and *rationally* limited in quantity, too), tends to brain power, to mental culture therefore, and thence indirectly to ethical progress. We shall yet learn that there is a good deal of vital religion in the science of physiology and even in the domestic art of preparing food,—a very vital connection between physical hygiene and moral hygiene.

But this relationship between man and nature can be best illustrated, perhaps, by showing two or three points of parallelism between the two. First, there is a striking similarity between the history of nature and the history of man. Whichever theory we might take of the creation of the universe, whether that of gradual evolution with transmutation of species, or that of the special independent origin of species, it is certainly settled beyond question that the world did not come into existence as we behold it to-day. All the natural sciences agree in this point. It is settled that it took many ages to bring the earth into shape fit for the habitation of man; that it was long in process of preparation before any form of life could exist upon it; and that then, when vegetable and animal life began to appear, it was by a long series of tentative experiments, as it were,—in the meantime, whole species of vegetable and animal creatures coming into existence and passing away,—before a form, a mould, a body, was shaped that could be named *man*. And since the time when life began to appear on the planet, and even since man appeared, there have been changes in the earth's structure, indicating that the forces by which it was framed and shaped are still operative, and that even the earth, which seems to us so solid, is not yet finished. Thus, the creation of nature has a history. It is a process and a progress. Nature is never fixed, as if some will exterior to it had once for all impressed upon it a certain mould; but it has been ever in a state of fluidity, of movement, even as to its most solid portions, subject to some energy, apparently internal, that is constantly shaping and animating it either in mass or in its atoms. And there has been a similar process in the history of man. Man did not come upon this planet as we behold him to-day. He, too, has had a tentative progress, working his way slowly and by many experiments in the science and art of life from the rude conditions in which he began up to this complex of society, civilization, government, religion, with which we to-day are familiar. Even if the legends which represent man as originally created in a civilized state were true, the same legends always declare a fall from that primeval state, so that man's *historical* beginning was at a rude stage of ignorance, out of which he has had to grope by a long series of trials and experiments—a slow process of learning and growth and discipline and culture—to the heights he occupies in this nineteenth century. And the process and progress in nature seem to have been the forerunner of the process and progress in the human world,—the same method and apparently the same inner energy having been continued into the development of mankind that began in the world of matter; and with the same incidental results, too,—that nations, civilizations, literatures, arts, have been lost out of existence in the hazardous struggles of the human world, and are now found as fossils embedded in the strata of human history, just as we find extinct species of plants and animals in the strata of the earth, to show the casualties that have attended the progress of nature.

Again, nature, in her historical course, as also at the present time, seems to be subject to an element of disorder. The material has not appeared immediately plastic to the formative principle. There has been seeming resistance, sometimes violence, shocks by earthquake and volcano, slow but destructive marches of huge ice mountains, overflow of sea and river, subsidence of land, deleterious changes of climatic conditions, generation of poisonous vapors, and germs of deadly disease, and even, as astronomers tell us, sometimes the bursting of a planet. And these material evils that beset the course of nature have their parallel in the moral evils that beset the history of man: in the violent passions and appetites that break out against the law of his better nature and that threaten to overwhelm and destroy the very purpose and intent of his being; in the cruel barbarities and wars to which these passions have given rise, and the injustices and outrages they have perpetrated; in the breaking up and scattering of nations and the apparent dissolution of certain eras of civilization; in the social poison which every form of selfishness generates; and in the deadly germs of moral and spiritual disease which spring from unrestrained lust and avarice to blight a community, and to corrupt the channels of inheritance with curses for posterity. It seems, indeed, if we were to admit man's descent from nature, that it might not be a mere fancy, were we to trace back some of his obstinate and violent moral disorders to nature's disturbing elements. There are men who seem to sum up in themselves all of nature's turbulence; men who are the incarnation of earthquake and volcano, whose passions are the development into the human spirit of nature's storm and thunder and tornado, and whose acts are outbreaks of insensate fury and destruction. Such are the Tamerlanes, the Attilas, the Genghis-Khans of more barbarous epochs, the Philips and Napoleons of later eras. Our ordinary speech is not perhaps wholly figurative, but hints at this distant ancestry, when we speak of angry men's brows as clouds threatening tempest, and of bad hearts as stony, the old ancestral earthiness having come down in these cases in too large proportion, and not having yet become true human flesh, and found the delicate nerve organism that can thrill with a pure moral emotion. Yet it is pleasant to think, on the other hand, that the better features and aspects of nature have their representation in mankind, too; that there are characters that seem to have inherited all the serenity and equilibrium of the stars, or whose faces are full of the sunshine of all summers, or whose deeds are fragrant with the scent of all flowers that have bloomed on the earth.

And another and more important point of parallelism is that there is a healing force stored in nature for the remedying of her disorders, and a like healing force in man. The track of the destroying glaciers has become fertile soil covered with grass and forests. Flood and overflowing tide, though marking their course by death, leave elements of a new life behind them. Lisbon earthquakes and Vesuvius eruptions, though burying landscapes and populations, are soon themselves buried beneath smiling vineyards and new cities. A town has been swept away by earthquake this very summer in the Bay of Naples, and the Island of Java has lost large cities and populations and even tall mountains, which have vanished beneath the sea; but the restorative energy of nature is already at work with its infinite patience to cover the destruction. Nature has her periodic deaths; but the laws of life are stronger than the laws of death, and to every grave of winter comes the spring, which is nature's resurrection. So in man, side by side with his moral disorder, is the healing moral power. There is no wrong which he can commit or suffer, no sin into which he can be tempted, no moral desert into which he can stray, but that capacity is given to redeem himself from it. The recuperative force for restoring to moral and spiritual health is stored in every human being, or in the race at large. Sometimes, it has to come to the individual through the race. But it only needs by the right method to be set into operation. And hence, in nature and man, we have not only this parallelism of process, but of progress in the process toward some improved result. The element of disorder is gradually overcome in the one as in the other. The history of nature, through all its wonderful metamorphoses and mighty movements, and its slightest movements, too, presents a steady development or aim or march toward a goal. So in the history of man: amidst all the trials, confusion, turbulence, civil and social revolutions, mental and moral disorders, to which he has been subject, we can detect, if we take our observation at sufficiently long intervals, that there has been through all an advance, an upward aim, a steady achievement of some higher and better result in thought and knowledge and life.

And this fact of parallelism of development between natural and human forces suggests finally the crowning point of the theme,—the *unity* of this energy, or power, or life that we find so thoroughly pervading both the world of matter and the world of man,—its *unity and its substantial identity*. Nature and man make, indeed, not two worlds, but one. In a large sense, nature includes man. One energy, one life, runs through both. Unity of force, unity of method, unity of aim or end, prove this, as science in various ways is every day doing, and have you not gone a good way toward proving against the allegations of materialism that the universe is pervaded by intelligent mind with an intelligent purpose,—proved, too, that the mental being of man is of the same texture as that which is mind or law in nature, and that he is to find his highest life by discernment of and conscious co-operation with nature's laws and purposes? Says Emerson (whose thought goes through and under most of the problems of our day): "Man is made of the same atoms as the world is: he shares the same impressions, predispositions, and destiny. When his mind is illuminated, when his heart is kind, he throws himself joyfully into the sublime order, and does with knowledge what the stones do by structure;" which, if I may paraphrase, means that the laws of the material universe, the laws of gravity, of chemistry, of geometry, which there in nature are an immediate though unconscious manifestation of the one primal and pervading energy, run up through all ascending forms of nature into the moral and mental consciousness of man. The conscious intellect *gravitates* to truth, *gravitates* to justice, as planet to its sun. Heart attracts heart, as the atoms in chemistry are drawn each to its own. In man, the laws of nature, which out there in material nature are unconscious, become perceptions, sensibilities, and conscious choice; instinct rises into volition; sensation opens into reflection; and the inward impelling energy is crowned as Person, with conscious sovereignty over matter and material forces.

And this unity of man with nature and the natural kinship between them was quaintly sung by "holy George Herbert" two and a half centuries ago, in verse that is familiar, but which is so full of light and sweetness that it can hardly be repeated too often:—

> "Man is all symmetry,
> Full of proportions, one limb to another,
> And to all the world besides.

Digitized by Google

Each part may call the farthest brother;
For head with foot hath private amity,
And both with moons and tides.

"Nothing has got so far
But man hath caught and kept it as his prey;
His eyes dismount the highest star;
He is, in little, all the sphere.
Herbs gladly cure our flesh, because that they
Find their acquaintance there.

"The stars have us to bed:
Night draws the curtain, which the sun withdraws.
Music and light attend our head.
All things unto our flesh are kind,
In their descent and being; to our mind,
In their ascent and cause.

"More servants wait on man
Than he'll take notice of. In every path,
He treads down that which doth befriend him,
When sickness makes him pale and wan.
O mighty love! Man is one world, and hath
Another to attend him."

A POSITIVIST PRAYER TO HUMANITY:

The only Supreme Being Man can ever know: to whom all the Children of Men owe Labor, Love, and Worship.

Thou great and growing god, Humanity, in whose image all other gods were made, and for whose service all other gods exist, we praise and worship thee. Thou art that soul which is substance of nations, reincarnate with fresh generations. Thou art that stream of never-ending life in which all good survives, in which all evil dies. In thee, we live and move and have our being; in thee, we find our strength, our duty, and our hope. Thy hands hold all the promises, and from thee hath descended every good and perfect gift. Thou art, indeed, our providence,—the providence of all men,—and traces of thy friendly power are everywhere. The earth showeth thy handiwork. Even the heavens declare thy glory, for in them is perceived that only which thou hast revealed. Out of rude, grim nature, once a wilderness and waste, thy patient toil hath wrought a home for man, and yet will make a poem and a paradise.

None may oppose thee with impunity. The soul that sinneth it shall die; and that is sin which springs from malice or from ignorance, and mars thy work or hinders it. Death then, defeat, disaster, or disgrace, falls to the lot of him who does thee harm. Thy common foes die off, and leave behind no record of their baseness: others, more eminent in wickedness, escape oblivion, but only to receive a name so infamous and black that none will mention it save with a shudder or a curse. Another class there is no less unworthy—whom Dante dooms to woes eternal in Egyptian darkness never pierced by stars—who live and yet not live; who, though they do no evil, do no good, but, self-immured in selfishness, go through the world indifferent and cold. Oh, may we not be numbered with that class, nor any class which is thy enemy! Thou canst not spare, Humanity, a single smile, a single worthy deed, a single happy thought, or kindly speech, or noble aspiration; and so who are not with thee are against thee. Thou needest all man has to give; for out of man's free offerings, of hand and head and heart, grows up thy mighty life.

How little we can do to make return for all thy blessings! Each year, each day, adds to the debt of gratitude we owe thee, so constantly, so sleeplessly thy empire grows. Compared with that great multitude whom man can never number, those myriad human lives who live in thee forever and who make us what we are, we are as dust and nothingness. And, if we fail to do the little that we can, we wrong them, every one. How slight our struggle is to theirs, who wrought in cold and darkness! Thou hast endowed us with a strength they knew not of, and yet their strength, the sum and substance of their effort. To shield us from temptation and keep us in the right, a wealth of goodness is around us,—on printed page, in custom, art, and choice companionship. Then utterly unworthy must we be, if, by a single act, a single thought, we weaken or undo the noble work our brothers have performed so bravely.

Though we can never praise and honor thee too much for what thy hand and head have done for us, —for thy glorious transformation of this world, and the light of science thou hast shed therein,—yet may we not forget that hand and head are but as servants to the heart. That only is supreme, and that must have our chief attention and our best endeavor. Out of the heart proceed life's issues, out of the heart all goodness flows. Then may we make *our* heart a holy place, sacred to pure thoughts and noble purposes. Forever watchful may we be to check and kill each ill-desire, to drive far off each sinful fancy. So may we never cease, till consciousness have end, to purify this source from which must spring that tributary rill which every servant in thy cause is pledged to give in contribution to the tide of thy great life.

THE DECLINE OF ENTHUSIASM.

This is the age of wealth, material well-being, comfort, and luxury, of realizable aims, of criticism rather than of inspiration and spontaneity. Literature is sicklied o'er with a pale cast of thought. Even the romance or novel has degenerated into a mere thing of psychological analysis, and of unrelenting and minutest exposure of the innermost emotions and sensations of young lovers while at the fever-heat of passion. The spirit of adventure is dead or without a reason for being. There is no enthusiasm, only calculation and economical sagacity. The globe has become man's plaything and park or pleasure-ground wherein, both by sea and land, he takes his pleasure, carrying with him everywhere all the means of Sybaritic ease and enjoyment. Fortunately or unfortunately, we are debarred from incursions into cosmic space by that law of isolation which reigns among the planets and systems of planets, so that we must, perforce, be contented with our own little orb as a field of expatiation. Even when air navigation shall enable us to traverse the region of the respirable atmosphere, our terrestrial bounds will not be much enlarged. But to return to my theme: not only is enthusiasm dormant, but self-denial has ceased to be a virture. Wealth is the universal aim, for the sake of the large opportunities for enjoyment and pleasurable sensations which it affords.

The popular philosophy of to-day is that of Aristippus; or, in other words, a refined hedonism. Who are the heroes and the admirable persons of to-day? A lot of lucky, unscrupulous, and sordid speculators and heapers up of riches, such as Vanderbilt, Jay Gould, *et id omne genus*. Plutarch and his heroes and the lives of the saints are no longer fashionable reading. Such ideals as they afford are not just now attractive. For the high and generous emotions "don't pay" in these days. To be under their domination is to be ridiculous,—namely, poor. For the love of fame, the ambition of great achievements, and high aspirations of all sorts, whether this-worldly or other-worldly, seem to have died out or to have become atrophied.

What is wanted or sought for now is a splendid livelihood, with amplest means. This is the highest aim of the general ambition of to-day. To be sure, a few scientists are actuated and impelled by an enthusiasm for truth; and there is a melodramatic, absurd affectation of piety and other-worldliness,—namely, ritualism and ultramontanism. But it "won't wash." It does not deceive anybody any more than do dyed hair or whiskers. But such exceptional moral phenomena as these do not affect the correctness of the proposition that enthusiasm of the old-fashioned sort is not an appreciable factor in current affairs. Such is the current mood of mankind. It was the mood of Milton's Mammon:—

"The least erected spirit that fell
From heaven; for e'en in heaven his looks and thoughts
Were always downward bent, admiring more
The riches of heaven's pavement, trodden gold,
Than aught divine or holy else enjoyed
In vision beatific."

Meantime, this mood will not last forever. It will have its day and accomplish its work,—a work which was delayed until the present era, and which it was necessary for the race to perform.

But man is, after all, far more an idealist than he is a realist:—

"The Lethe of nature
Can't trance him again,
Whose soul sees the perfect,
Which his eyes seek in vain."

The craving, haunting, insatiable ideal sense lurks in the most practical and sordid of us.

"The desire of the moth for the star,
Of the night for the morrow,
The devotion to something afar
From the sphere of our sorrow,"

is in all of us, and ready to be aroused in an instant by a sudden strain of music or a glimpse of far-off mountains and purple landscape. There is a deep heart of hearts in all of us, and there are high mystical instincts which at times are irrepressible. Thus, when man has conquered the earth, and brought the forces of nature sufficiently under his yoke, he will again become an enthusiast, making his wealth and material well-being stepping-stones and ladders of ascent to something higher and better.

B.

CORRESPONDENCE.

COMMENTS ON DR. OSWALD'S "THE SECRET OF THE EAST, NO. IV."

Editors of The Index:—

It is unfortunate that an able pen and zealous advocate of nature against those virulent prejudices which, in the two spheres of medicine and theology, set her at enmity with her perverse human offspring, should by a fanatical spirit provoke acrid hostility against your liberalizing tendencies. Civil and ecclesiastic history is a medley and a muddle, in which any mind can find any premises it seeks, and draw from them any conclusions. Mr. Oswald confounds Christianity with pessimism, and substantiates this view from the nominal Christianity of certain times and regions; yet he allows that the Hebrews were not pessimists. Who was Jesus but a Hebrew, impassioned with the purest spirit of his race and creed?

Tender illusionist, perhaps: he felt in the bosom of nature and society the love of a Father, where others find only the "struggle for existence." Too conscious of sin and of wrong to be an optimist, yet how can a fountain life of hope and faith be classed with pessimists? Perhaps, in previous numbers of this series which I have not seen, justice has been rendered to his memory.

However defective the teachings of Jesus from an agricultural point of view, he opposed no legitimate industry, but only an indecorous brokerage, probably associated with such usurious loans on mortgages as have discredited the Jews in Germany and Russia. Whether their scurrilous occupation or the sacredness of the temple which they had invaded was the principle of his indignation is, of course, problematical; but it is admitted that he honored in his conduct all the claims of human fellowship, he was truly an apostle of friendship, and measured religion by humanity, the love of the neighbor being his avowed test for the love of the unseen Father. It should also be considered that, in his time, the kindred magian faith had been much corrupted by superstitious practices, which obscured its pristine purity of nature worship; and that, even supposing him unbiassed by the abstractive theology of his Semitic race, he could not renounce it, without losing that influence over the popular mind of Judea which was his proper sphere of social action. Even Paul, more ascetic than Jesus, and who corrupted morality with superstitious pietisms, was still an honest sail-maker, and did not resort to theological metaphysics as a means of livelihood. He may be regarded as a patriotic Hebrew who aimed to extend the influence of his race, and to harmonize it with the powers of his age by the sympathetic doctrines of his adoptive master. In what other sense can we interpret the I. Corinthians xv., 28, and Hebrews vii., 9, 10, and seq., also II. Corinthians ii., 22?

Be this as it may, Jesus was a martyr of liberal thought and sentiment. It was he who, first among radical reformers, protested against Sabbatarian oppression by his works, while declaring the son of man Lord of the Sabbath. Is it fair to interpret this assertion as the self-glorification of one who would not even be called "good," and who ironically evades the cheap compliment of a divine origin imputed to him by some blockhead? In his answer, "Thou sayest it," I do not pretend to fathom the idiosyncrasy of Jesus; nor can I realize that attitude of mind, either in an individual or a race, which can sincerely claim property, whether of territorial privilege or of filial and paternal sentiment, with the

Digitized by Google

unitary principle of force in nature. But the freemasonry of intellect suffices to assure me that Jesus, in speaking of his Father in heaven, meant nothing more nor less than his own intuition of right and his obedience to that inner voice, the "Bathkol" of the Hebrew idiom.

I have often heard a Hebrew citizen of Columbus maintain that the cultured Jew, emerging from Talmudic superstitions, places Jesus higher than the creeds of Christendom, because, while his precepts and actions fulfil the ideal of moral intuition, they dwarf into insignificance those thaumaturgic pretensions of his apostles, of which *he* indeed seems to have been rather ashamed, relying solely on his moral dignity.

In justly estimating Jesus, if on the one side we discard miracles, because nothing less than a similar miracle would suffice to avouch one even to our *senses*, so, on the other side, we forbear to accuse Jesus of imposture or the pretension to miraculous power, but leave the responsibility with the reporters. That Jesus was a magnet—*i.e.*, an attractive and directive character—is fairly evident from the record, and that he performed magnetic cures is highly probable.

Jesus was doubtless a visionary who, by imprudence, curtailed his useful career as a great moral teacher, in order to become, by the *post-mortem* crucifixion of his memory, no saviour, but an idol; no harmonist, but a war cry among nations, and a pretext of intestine persecutions still more ruinous; a name invoked to sanction the most hideous atrocities, and almost compel reason to admit diabolical supremacy. This divinity of doctrine-mongers fell a victim to that scallawag clerical party in Judea, who sought both to confirm their authority of hypocrisy and to curry favor with Rome by the sacrifice of whatever genius in their circumscription might lift its head above vulgarity. Jesus, by the fatuity of martyrdom, and Rome, by authorizing it, both made false reckoning. The national spirit reacted by a furious insurrection, from which it fell crushed and degraded; while Rome, in burying the Python, sowed its teeth.

That humane and refined spirit of morality, with a somewhat extra-vagrant bias toward charity which pervades the writings of the old rabbi Hillel, and which was no stranger in Judea, Jesus sought to redeem alike from the ceremonial tyranny of the Pharisee and from the egoistic neglect of the Sadducee. Shall we call him pessimist, because, like Buddha, he values above gold the conscience of integrity, or discloses to his elect those spiritual veins of thought and feeling which he calls the "treasures of heaven"? It is well known that the isolation of this heaven, to whose "kingdom" the *goods of the senses were accessory* from our solid earth, was alien to the faith of his Hebrew disciples; and that, while some hoped to realize it during their actual terms of life, those dying in the faith believed in a terrestrial resurrection. With this magian doctrine, probably, all Hebrews had become familiar. Is Jesus a pessimist, because he prefers public lecturing to carpenter's work, or because he may occasionally withdraw from the bustle of the world to meditate in solitude? Then, every great thinker is a pessimist. His communist tendencies, though mild, are obvious. They cannot be confounded with pessimism in their spirit, which is co-operative and charitable; and, however objectionable to sound political economy, they were not sufficiently aggressive to excite opposition. In fact, he founded no community; and it appears from the record that, when something of the kind grew up after his death, a profession of faith by sentimental idlers was not a title to admission. Excellence in any sense, purity of character, elevation of thought, the impenetrability to base motives, the refusal to truckle to hypocrisy, suffice, without attempts at political agitation, to array in animosity against a man those baser powers of conventional authority to which he is a living reproach. The Athenians banish Aristides, because they are tired of hearing him called the Just. Socrates and Jesus are not overt revolutionists, but they stir in men thoughts and feelings too deep to be compatible with shams. Between thought and action lies the bridge of temperament: this crossed, principles will seek their ultimates in form. Therefore, all transcendentalism is or seems dangerous to constituted despotisms. The Sanhedrim, or their galvanized corpse, were shrewd enough to see that spirit powers lay beyond their domains. Such culture as Jesus was giving would inspire their sheep to leap the pen; and, since they were the shepherds of Rome, Rome must look to it.

It was then as an optimist, as one of those restless and enterprising spirits for which the better is ever the enemy of the good and the future of the present, that Jesus was arraigned before the bar of conservative authority. He was feared as a man gaining power, with the tendency to use it in the direction of radical reforms. Christians, when reproached with the errors and crimes that time and space have witnessed in nominal Christendom, use their right of appeal to their master, to his teachings and acts as recorded in the Gospels, against all imputations of pessimism.

Spreading from Asia into Europe, this social epidemic infected Christianity as well as Buddhism with monastic diseases. Islam, with its whirling dervishes and crazy santons, did not quite escape these abstractive superstitions. Indeed, no more pestilent forms of the anti-naturist craze is on record than that described by a Tunisian doctor as existing among a Mohammedan people in the region of the Mountains of the Moon. Extracts from the history in question (if not the whole volume) have doubtless met your eye in the *Popular Science Monthly*; and the writer seems to have obtained credit enough to be translated into English, Spanish, and Italian. A battle-field is mentioned, where the glory of the "nephew of Allah, who is the man in the moon," had been vindicated at the cost of twenty thousand slain; and the whole life of this people, by their intemperance and other bad habits, was reduced to a chronic disease. Whether morbid, mediæval Spiritualism or morbid Roman sensualism were really the worse plague of humanity, it is idle to discuss. In conclusion, let me thank you for the pleasure of reading Mr. Spencer's "agnostic" view of the "Atonement," which, whether it be the wisdom or the wit of professed ignorance, is the subtlest piece of humor that doctrinism has perhaps ever bestowed upon literature.

Cordially yours, M. E. LAZARUS, M.D.

KEEPING YOUNG.

Editors of The Index:—

Several years since there appeared in the (London) *Spectator* an article entitled "The Rule of the Old." It contained some facts which it would be well for all people to study. Generalized from, they enforce a lesson of great importance to human happiness.

The *Spectator* says: "It is, no doubt, a little difficult to say at what age a statesman should fairly be accounted old; for, though most men are elderly at sixty and old at seventy and decidedly aged at eighty, the difference between average lives and picked lives is very great. And statesmen, like judges and generals, are usually picked lives. . . .

"That the old lose energy may be true of the majority of mankind, though even that depends a good deal on the lives they have led, and the wine they have drunk, and the hereditary something which doctors know as the tendency to longevity; but it certainly is not true of the picked lives. Their energy is at least as great as that of the young. Not to go farther back than the memory of this generation, we have seen Radetzky, at eighty-three, conquer Piedmont, and Palmerston, at eighty-one, dictator of England, and Lyndhurst, at eighty-eight, discomfit opponents by his oratory, and King William, at seventy-three, conquer France, and Pio Nono, at seventy-eight, call a council of Christendom to change the Catholic Church from a co-operative aristocracy into a monarchy, and Thiers, at seventy-four, stand forward the one man with energy sufficient to control the parties and revive the energy of defeated France. Lord Beaconsfield began to disturb the world at seventy; and, at seventy, his opponents, by feats of oratory without parallel in English history, sought to call public opinion to arms against the disturber. At seventy, Mr. Gladstone pronounced the speeches which might be made by a whole cabinet; and the first objection raised against each one of them was that it was too vehement, too energetic. And, if want of energy is not the deficiency of old age among picked lives, we scarcely know what is."

To the above facts might be adduced, from general history, others of the same tenor, and even more striking, such as "blind old Dandolo" leading successfully the terrible siege of Constantinople at the age of ninety-seven, and Titian at the same age, with great energy, painting some of the grandest pictures of the world.

The writer in the *Spectator* calls the above "picked lives." Why are they "picked lives"? Why was Lord Lyndhurst, at eighty-eight, filled with a force that made the English House of Lords bow like bulrushes before him, and his whole land thrill with either admiration or hate, and his young and wonderfully beautiful wife proud to ecstasy of her great husband? Why is Gladstone to-day, at an age when our farmers have sunk into quiescent, if not torpid, old men, and our business men are toddling about toward a second childhood, in a renewed career of youthful brilliancy? The reason is that these "picked lives" are the lives of men who are, first, on fire with a great moral purpose. And, secondly, this moral purpose tasks and stimulates their intellects to the last extreme of which they are capable, works them constantly like engines at high pressure. And it is a well-known fact of physiology that intense, if it be only healthy, action of the mind and moral nature keeps human beings young and their lives full of fire. Lyndhurst, for instance, was filled with the fiercest determination, in which he was as unyielding as death, that Toryism should rule the British empire. This was his moral inspiration. And it made his back brain "a furnace seven times heated." To carry out this determination, he had to make a similar furnace of his intellect, his front brain. These were the fires that kept his machinery of life running and clean and bright at an age when such machinery in our usual humdrum existences is rusting, dilapidated, creaking, and mouldering to decay. Exactly similar to Lyndhurst's, in these respects, is the status of the living Gladstone, only that the latter's moral purpose is the triumph of Liberalism, the very opposite of Toryism.

But why must there be "picked lives" in this overwhelmingly important matter? Why should only a few men be so supremely blessed as to drink of the waters of "the Fountain of Perpetual Youth"? The reason is that the majority of people are morally—and I should say unchristianly—cowards. They dare not even hear, much less embrace, any righteous cause that will set their energies on fire and put their intellects to furious work. Their churches tell them they must never hear anything but "sound views," and must also do their best to frown down and freeze out all efforts toward the broaching of "unsound views" everywhere. Now, "sound views" mean views that have become old and prosperous and "eminently respectable" and quiet,—like prosperous and "eminently respectable" old gentlemen, who are obese and lethargic and jog-trot; "views" that keep people "proper" and "genteel" and conventional and regular, and repress the fire and exuberance of life to the standard of approved tameness. For instance, the Baptist church at my elbow has just such a set of "sound views,"—views that for more than a generation, certainly, have utterly failed to stir men and women morally or intellectually, as much as the former are stirred on politics once in a great while, even in the quietest political times, and far less than the latter are often stirred over dress and "pretty things." The result is, in our sound-views-ridden community, that a magnificent old age, like that of Lyndhurst, joining the rich, sweet fruits of long experience to the rollicking character and fire of boyhood, would be a phenomenon that they would account an eccentricity, probably an insanity. In this youth-killing, old-age-producing system, the Baptist church doesn't stand alone in my town. The Congregational and Unitarian churches here and our Temperance Society resolutely frown down every effort to open to the community any but "sound views," which mean views that leave every man's moral and intellectual natures as tame as a baby's pap. But all churches and "eminently respectable" organizations everywhere do just as do the churches and temperance society of my own town. And the result is horrible and most devilishly cruel: one "blind old Dandolo," a vigorous youth at ninety-seven, one Palmerston, making his boyish fire felt all over Europe, and his extravagant youthfulness the fun of the world till above eighty,—one such to ten millions of torpid, cheerless old daddies at sixty.

Suppose my Baptist neighbors could be converted to a belief in Jesus' first beatitude, "Blessed are the beggars in spirit,"—*i.e.*, "Blessed are the beggars for light,"—and then should "beg" of some Free Religionist to come here and give them such "light" as he

Digitized by Google

has to throw into the dark and pestilence-breathing vaults of superstition and ignorance, and then should "beg" of a Quaker to give them such "light" as he has on the subject of baptism, and thus should "beg" from the labor reformer and the Transcendentalist and every other man with unwonted "light." Let this be done, and Still River would be stirred by controversies that would, while they lasted, magnetize back brains and fore brains till our middle-aged and old fellows, who have long been in mournfulness and dejection, as torpid as woodchucks in January, would feel again all of that youthfulness that they had gloomily supposed they had parted with forever,

"And, redolent of joy and youth,
Would breathe a second spring."

Will our race always remain fools? Will they never learn that their most magnificent benefactor is not the smug, respectable doctor of divinity who comes droning out "sound views," but the man of new and unwonted "light,"—and will be "beggars' for that "light"? JOHN B. WILLARD.

STILL RIVER, WORCESTER COUNTY, MASS.

JEFFERSON AND WEBSTER.

There are not in the long line of American statesmen, or what pass for statesmen in their day and generation, two more interesting as well as instructive studies than Jefferson and Webster. Both were leaders of their party; both were eminent for ability and character that gave them a fame almost sure to survive long after the names even of most of their contemporaries shall be forgotten; and both, during their lives, had warmer friends and bitterer enemies than any other men of their time. But here the parallel ends. The contrasts between the men and their careers are far more striking than any similarities. Had Jefferson never lived, the history of the United States would have been another history: had Webster never been born, it is difficult to believe that it would have made the slightest perceptible difference, either one way or the other, in the destiny of his country. Jefferson made politics: politics made Webster. Jefferson led generations: Webster led conventions. The ward politician of to-day, born thirty years *after* Jefferson died, is governed, or professes to be governed, by the principles Jefferson taught: already, barely thirty years after Webster's death, the young politician would be puzzled to answer, if asked, whether Webster ever had any principles that lasted him his own lifetime. Jefferson was not so wedded to public life that he could not find contentment and even happiness in other pursuits; yet his life as a public man was easily and almost uniformly successful, and abundantly satisfactory to himself. To Webster, public life was as the breath of his nostrils, yet all that it gave him was a mockery,—apples that filled his mouth with ashes; for all that he gained never did and never could bring him that which he strove for. Jefferson was almost irreligious, but severe in morals, temperate, continent, strict in money matters, considerate of the rights of men, and not insensible to human wretchedness. Webster was almost pious, but loose in the minor moralities, regardless (if not shameless) as to pecuniary obligations, too fond of wine, heedless of the honor of women, and not in the least anxious to mend the world wherever it seemed to be out of joint. Yet Jefferson was only a man of talent, of an acute and versatile mind, with a special gift of letter-writing, and a peculiar aptness as a political leader, though wanting altogether the power to arouse enthusiasm as a public speaker. But Webster was a man of genius, a statesman, a great orator, the greatest, perhaps, this country has yet known, and of a personal presence which, by almost common consent, was pronounced as "godlike." Some of his orations have a permanent place in American literature; for some few things he did, touching the foreign relations of the country, he will long be remembered and still more for many things that he said on more than one great public question,—sometimes, however, on one side and sometimes on the other, as it happened to influence the fortunes of Daniel Webster. The country, nevertheless, is not much the better nor is it much the worse for anything that he ever did or ever said. But the mark which Jefferson left is wide and deep. Whether in the main it was most for good or evil is still an open and an interesting question, too wide to enter upon here.—*Sydney Howard Gay*, in the Critic.

THE CROWN PRINCESS OF GERMANY.—The Crown Princess of Germany has developed a spirit of liberality and tolerance which is somewhat marked in contrast with the traits of her royal mother of England. She is not afraid to dip into revolutionary literature, and try to find out what the socialists of Germany definitely want. A courtier once expressed his surprise at hearing that her royal highness had been reading some speeches by Hasenclaver and Bebel, the socialist deputies. "Oh," she said, with a bright laugh, "I suppose one may fish for pearls in any waters, but I have not found any"; and, on another occasion, she observed more seriously that she never rejected a new idea, however repulsively clothed, "lest she should turn away an angel unawares." The princess' tolerance has, in truth, bred in her a vigorous antipathy to intolerance in others, which she displayed in a marked way when the court pastor, Adolphus Stöcker, commenced the anti-Semitic agitation by a sermon in which he called attention to the fact that there were forty-five thousand Jews in Berlin, and exclaimed, "Das ist zu viel." The ugly words nearly provoked bloodshed. The Crown Prince was much displeased, and took an early opportunity of reproving the pastor; while the princess, contrary to all court precedent, invited some leading members of the Jewish community to dinner. She also endeavored to combat the anti-Semitic craze with the most effective weapon,—that of ridicule; and this she used to do by relating very merrily the story of a jolter-headed Junker who had rushed out in hot haste from Herr Stöcker's sermon and commenced pummelling the first Jew whom he met in the street. "That's for the affair with Judas, you know," he shouted, as he rained his blows. "Well, but it occurred eighteen centuries ago," screamed the Jew. "No matter! I only heard of it just now," cried the champion of Orthodoxy.

BOOK NOTICES.

IN the *North American Review* for October, Senator N. P. Hill writes of "Gold and Silver as Standards of Value," and maintains that silver should be coined as well as gold for the purpose of preserving uniformity in the value of metallic money, and of preventing such contraction of the volume of money as would produce financial disaster. In "Some Aspects of Democracy in England," A. V. Dicey makes clear to the American reader how it is that, while all the forms of monarchy and aristocracy persist in Britain, the democracy, or, in other words, public opinion, absolutely controls the action of the government. Under the title of "Co-operative Distribution," Dr. R. Heber Newton gives an instructive historical sketch of the rise, progress, and fluctuations of co-operative merchandizing in the United States during the past fifty years. Prof. W. Boyd Dawkins writes of "Early Man in America," whose mode of life and whose implements appear to have been identical with those of the races that contemporaneously inhabited the Mediterranean countries, the Nile basin, and the tropical forests of India. The possibility of "Astronomical Collisions," whether of the fixed stars with one another, or of comets with the sun, the earth, or the other planets, is considered by Prof. C. A. Young. Moncure D. Conway discourses entertainingly upon the "Saint Patrick Myth." Van Buren Denslow, in an article on "Board of Trade Morality," makes a vigorous defence of the practices of the Corn Exchange, and, in particular, replies to the strictures of Mr. Henry D. Lloyd, contained in the *Review* for August. Frederic Harrison contributes an article on "Histories of the French Revolution." Finally, Rev. E. E. Hale presents an inventory of the volume and distribution of "Social Forces in the United States."

THE *Popular Science Monthly* for October abundantly sustains the high character of this publication. The opening article, on "Matter Living and Not Living," by Paul R. Shepman, presents the state of thought in regard to the nature of life. Dr. Bayard then takes a hand in the conflicts of the medical schools, to show that "Homœopathy" is a "Science." Dr. Abraham Jacobi has an elaborate and most interesting article on "The Historical Development of Modern Nursing." "Clothing and the Atmosphere," by Radau; "The Chemistry of Cookery," by Prof. Williams; and "The Alcohol Habit," by Dr. Oswald, in his series on "The Remedies of Nature,"—are papers of great practical worth. Those of more purely scientific interest are "Cyclones and Tornadoes," "The Colors of Flowers," "Vegetating Animals," "How the Earth was Peopled," "The Liver-fluke in Sheep," "The Savings of Science," etc. There are a portrait and biographical sketch of the celebrated hygienist of Munich, Dr. Max von Pettenkofer, and a large mass of criticism and miscellaneous information in the editorial departments.

THE *Atlantic* is the first of the October monthlies to come to hand. Prof. Galton's researches in regard to the facts of heredity furnish Henry W. Holland with the text for an excellent article entitled "Heredity." Elizabeth Robins' study of "Mænadism in Religion" is full of interest and suggestion. William Chauncy Langdon gives the first of a series of "Recollections of Rome during the Italian Revolution." In view of the recent disaster in Java and Ischia, Horace Warner's "Volcano Studies" will be read with interest. William S. Liscomb has an article on "The Mutilation of Ancient Texts." One of the most noteworthy features of this number is an essay from the unpublished manuscripts of Emerson, entitled "Historic Notes of Life and Letters in Massachusetts." Henry James' "En Province" furnishes pleasant reading. And, besides the serials of Messrs. Crawford and Lathrop, there are three short stories and several poems by good writers.

THE *Unitarian Review* for September is a good number. The opening and longest article is on "Christian Affirmations," by Rev. Henry Wilder Foote. Rev. R. P. Stebbins replies negatively to the question "Did Ezra write or amend any portion of the Pentateuch?" "The Pivotal Point in the Issue between Unitarianism and Orthodoxy" is the title of an article by Rev. W. H. Pierson. "Milton and the Commonwealth," by Rev. J. H. Allen, is a vigorous and interesting sketch of the great poet. Rev. James T. Bixby treats of "Priesthoods and Great Masters." The "Editors' Note-Book" is mainly devoted to reminiscences of various ministers. "Things at Home and Abroad" is more than usually bright and interesting.

PERSONAL ITEMS.

PERE HYACINTHE will leave Paris for America, September 27, on a lecture tour.

ROSA BONHEUR is sixty-one years old, and has excellent health. She is an incessant worker.

SOJOURNER TRUTH is still living and in good health at the age of one hundred and eight. She makes her home with one of her daughters in Battle Creek, Mich.

MICHIGAN UNIVERSITY, at the late Commencement, conferred the degree of Ph.D. upon Prof. Amos Emerson Dolbear of Tufts College, inventor of the Dolbear telephone system.

IT is rumored that Capt. Scott-Siddons, whose only claim to reputation was in the fact of his being the husband of the well-known Mary Scott-Siddons, is in an Australian mad-house.

A MONUMENT is to be erected to the memory of Mr. Francis Scott Key, author of "The Star Spangled Banner." He was buried in the cemetery at Frederick, Md.; but his grave has hitherto been strangely neglected.

MISS LYDIA POET, having gone through a regular examination, has been admitted as a lawyer to the bar of Torino, Italy, with eight votes against four. After her admission to the bar, two members of the council (Mr. Spantigati, M.P., and Mr. Chiaves) resigned.

THE trustees of Plymouth Congregational Church in San Francisco agreed to pay Rev. H. W. Beecher $2,400 for his four lectures in that city. Judging by the thin audiences at the first two lectures, the probabilities are that the trustees will lose money. Mr. Beecher is not popular there. His former utterances on the Chinese question alienated the sympathies of the people of the Pacific coast from him; and, in an interview on the same subject, he expressed opinions which will tend to increase his unpopularity. He says that the treatment which the Chinese have received on the coast is shameful and ridiculous, while all the rest of the world is adopting a most liberal and advanced course in the matter of the freedom of persons to go and come without restraint. "Here," he says, "is a little strip of the Western country insisting on a narrow, selfish policy of exclusion, which policy China itself long since abandoned."

MRS. NEWHALL'S SCHOOL

FOR GIRLS AND YOUNG LADIES

Will re-open Oct. 1, 1883. Besides the regular courses in English studies and languages, there will be some work, each week, in the line of the new or "**creative method**" either with **tools upon wood** or in **modeling.** Another special feature will be a course of **lectures** upon the **great tone-masters,** illustrated with piano and voice. As aids to the study of History, Geography, and Art, **the use of the lantern** will be continued, and the **regular visits to the Art Museum.** For catalogues, address the Principal, 91 Newbury Street, *Boston.*

West Newton English and Classical School.

The ninetieth term of this Family and Boarding School for Boys and Girls will begin Wednesday, Sept. 19, 1883. For information and catalogue, address

NATH'L T. ALLEN,
WEST NEWTON, MASS.

The Gospel of Law.

Discourses on Fundamental Church Doctrines

By S. J. STEWART.

"It seems to me admirable both in matter and in manner, and I hope it will have a wide circulation, as it is the kind of book people need."—*John Fiske.*

These discourses, delivered in Bangor, Me., include discussions of the Bible, Miracles, God, Jesus, Prayer, the Devil, Sin and Atonement, Hell and Salvation, Predestination and Scientific Necessity, Morality, Immortality, etc.

12mo. 324 pages. Cloth. $1.25.
For sale at THE INDEX office.

THE PRESENT DAY.

A Monthly Journal discussing Agitating Questions without agitation.

EDITED BY

GEORGE JACOB HOLYOAKE.

The *Present Day* is addressed to all who hold the brave and cheersome faith that life according to Reason is the best religion for the world that is, and the best qualification for the world that may be.

"**False Ideas** may be confuted by argument, but only by True Ideas can they be expelled."—*Cardinal Newman.*

Annual subscription, 2*s.* 6*d.* Single copies, 2*d.* Published by R. H. SQUIRE, 52 Fleet Street, London, E.C.

PUBLICATIONS

OF THE

FREE RELIGIOUS ASSOCIATION.

Freedom and Fellowship in Religion. A volume of ten essays upon speculative and practical problems of religion, by D. A. Wasson, Samuel Longfellow, Samuel Johnson, John Weiss, W. J. Potter, F. E. Abbot, O. B. Frothingham, J. W. Chadwick, T. W. Higginson, and Mrs. E. D. Cheney, and extracts from Addresses by Ralph Waldo Emerson, Lucretia Mott, Robert Dale Owen, Dr. Bartol, Wendell Phillips, Rabbi Wise, Horace Seaver, A. B. Alcott, Lucy Stone, Charles H. Malcom, Julia Ward Howe, and others,—all given on the platform of the Free Religious Association. Price (reduced) $1.50.

Reports of Annual Conventions of Free Religious Association, from 1872 to 1879 inclusive. These contain essays and addresses by the various distinguished men and women who have spoken on the Free Religious platform, together with yearly reports of the Executive Committee. 10 cts. each.

THE SECULAR REVIEW.

A JOURNAL OF

English Liberalism.

CHARLES WATTS, } Editors.
W. STEWART ROSS, }

The representative English Freethought journal. In its columns are impartially discussed all Secular, Social, and Theological questions.

Price, 7 cents single number; $2.75 per year, postpaid.

Subscriptions may be left at THE INDEX office.

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—**The Christian Amendment,** by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents, 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

CURRENT TOPICS.

The Andover *Review*, which is to be the mouthpiece of "progressive Orthodoxy," is to make its first appearance in December.

A despatch to the Boston *Herald* of the 25th says, "The charge of Sabbath-breaking against Mr. D. M. Houser, president of the Globe-Democrat Publishing Company, was dismissed to-day, which action of the court secures the newspaper future immunity from the pains and penalty of the Sunday law."

At the recent Free-thinkers' Congress at Amsterdam, Dr. Louis Büchner spoke in favor of the political and social equality of men and women. Resolutions were adopted condemning in impassioned language the persecution of the Jews, and inviting all free thinkers to unite in opposition to persecution for matters of belief. A motion prevailed to contribute to the fund for the erection of a memorial to Giordano Bruno. The next Congress will be held at Brussels.

The Philadelphia correspondent of the *Commonwealth*, in a letter to that paper, says: "There has been a good word said by Mr. Lex, of the Board of Public Trusts, against the habit of injecting stupid, young, unordained Christian speakers into the Girard College chapel on Sundays. If the bequest of Girard had been well adhered to, neither stupid nor bright preaching would be perpetrated. A plighted faith has been shamelessly broken in the whole matter of the erection of a chapel."

The *Radical Review*, in a paragraph mentioning the adoption at a meeting of Milwaukee Liberals of the resolution "that the mass of Liberals of Milwaukee disclaim all responsibility of the National Liberal League about to meet in this city," remarks: "We agree with the Milwaukee Liberals that the League acted both unwisely and unjustly in committing itself unqualifiedly for repeal, inasmuch as the question is too much a matter of opinion and a side issue without organic connection with the main objects of the League, and as it excludes from membership a great many most excellent men and women."

Prof. Henry M. Parkhurst, in the New York *Herald*, says of the Brooks comet of 1812 that it "will be likely to be visible to the naked eye, with a short tail, for a few weeks about Christmas time. The course of this comet through the heavens will be as follows: It is now very near Eta Draconis, and has reached the limit of its westerly motion. It will move slowly toward the South, curving toward the East, toward the head of Draco, through which it will pass during the forepart of November. By that time, it will be easily visible in a small telescope. Thence, passing south-easterly, it will be north of Lyra early in December. From December 12 to the 22d, it will be passing along the arms of the cross in Cygnus. In January it will enter Pegasus, and before the end of January it will finally sink below our horizon in the tail of Cetus. Its greatest brilliancy will be early in January. During its whole course, it will be visible in the evening,—first in the north-west, at about the elevation of the pole star, gradually sinking toward the horizon as it moves southward, and finally sinking below the south-western horizon."

At the Republican Convention held in this city last week, the prayer was to the Father "in the name of the Son on whose shoulders rests the government of the world." But, if the government of the world rests upon the shoulders of the Son, why appeal to the Father in a case in which the assistance is asked for only in a political campaign in a State which forms but a small part of the world? So far as the influence of prayer may go to determine the election, we suspect the advantage will be with Gov. Butler, owing to his unimpeachable orthodoxy, rare piety, and exuberant zeal for evangelical Christianity, as shown by his speeches and proclamations. Reports of the proceedings of the Democratic Convention held at Springfield this week may show the prayers for Gov. Butler and his party to have been, under his shrewd management, somewhat politic and strategical, making no invidious distinction between the Father and the Son, but recognizing them both as possessing undelegated and equal powers. But, if our audacious Governor believes that the government of the world rests upon the shoulders of the Son, and it shall appear to him that the Son is against him in this campaign, pious as he is known to be, he will probably propose and work for the removal of the Son from office, and declare his willingness to take the world under his own personal management.

The first memorial perhaps erected by white men to an Indian in this country was unveiled in the North Burying Ground, Providence, R.I., last Sunday, in the presence of nearly a thousand people. The monument is to the memory of Canonicus, one of the most distinguished of the Indian sachems, a friend of Roger Williams, after he had been cast out by his own race for advocating the principles of religious freedom, and of the infant colony of Rhode Island, when it was threatened with destruction by the savages who lived in wigwams along the banks of the Narragansett Bay. The ceremonies were performed under the direction of the Rhode Island Historical Society. Ex-Governor Elisha Dyer, who presided, made the opening address, and among other things said: "We transfer to his Honor the Mayor, as the representative of the city of Providence, the care and custody of this memorial 'rock,' which, like him whose memory it commemorates, is, as both were, from nature's God, without the impress of man's agency. When in his official capacity he addresses our people, but more especially our children, he will tell them how good and true was Canonicus to the father of our State in his dreary solitude and exile, and say to them that, if there had been no Canonicus, the light of Rhode Island's history, through Roger Williams, might never have cast its bright and cheering rays upon a then half-enlightened age. In all that Rhode Island is or may be, the key note was, 'What cheer, Netop, what cheer?'"

We copy from the New York *Independent* the following notice, which will be of interest to many of our subscribers: "All surviving abolitionists (and the relatives of those not now living) are urged to attend the celebration whereby the New York Abolition Reunion will observe, on October 2 next, the fiftieth anniversary of the beginning of organized anti-slavery work in the metropolis,—the formation of the City Anti-slavery Society in 1833,—and of the great riot which was raised in the vain hope to check it. Each is also requested to make this celebration known to every other abolitionist whose address or residence is known, and to see that he or she attends, if possible; to give as wide publicity as practicable to the fact that the celebration will be held; and to forward to 55 Liberty Street, New York, at once, all attainable post-office addresses of abolitionists, that invitations may reach all. . . . The only person known to be living who took part in that small but terrible organization fifty years ago is the venerable Elizur Wright, now of Boston. His presence, though not quite certain, is looked for next month. Others who will attend are John Jay, Henry B. Stanton, Oliver Johnson, Sidney Howard Gay, Mrs. Dr. Lozier, and Robert Purvis. A paper by Clarence W. Bowen, grandson of Lewis Tappan, on the anti-slavery labors of Arthur and Lewis Tappan, will be a feature. Albert O. Willcox will give reminiscences of the struggle; and it is hoped that Mr. Gay, who was for some years President of the City Society, will be able to give an account of the fugitive slaves whom he helped to pass through here on their way to Canada. The gathering is to begin at 2 P.M., to enable the Old Guard who cannot now go out in the evening, or who live out of town, full opportunity to attend. The first hour will be a social gathering, and about three o'clock the proceedings will commence. The evening meeting will begin at 7.30, and last about three hours."

STOLEN GOODS AND NOT RECEIVABLE.

Last week's issue of *The Index* contained, without other comment than a remark on its age, the parody on the evolution theory which somebody, several years ago, put into the form of a creed, and which the Boston *Herald* recently printed as a special telegraphic despatch from Baltimore. News must be scarce, when it is thought worth while to receive such a joke over the wires and print it in a metropolitan newspaper. The *Herald's* Baltimore reporter is "smart," of course. He got this quite lengthy despatch in ahead of all other competitors,—at least for this year. But we fear he may have been taken in by the Baltimore "sceptic" to whom he attributes the joke. Since he also calls the "sceptic" a "German impostor,"—whatever that may imply,—he should have been on his guard against accepting him so confidently as the author of the "creed" in question. The reporter offers the opinion that the "creed" would be well adapted as a ritual for an agnostic congregation and for the Free Religious Association, wherein he also shows that he is not well posted.

With regard to the alleged adaptation of this parody to the agnostic mood of mind, we have here nothing special to say. Doubtless, an agnostic might enjoy such an *extravaganza*, without admitting that it exactly hit him. But, with regard to its application to the Free Religious Association, the reporter is entirely off the track. And, since a leading Boston journal has thought its reporter's opinion on this point of sufficient importance to print, it is, perhaps, worth while to take the occasion to say again, what has been said over and over again for many years, that the Free Religious Association is a body without any creed whatever. It no more holds the creed of agnosticism than it holds the creed of Calvinism. Some of its members may, individually, be agnostics; but as many or more of them would certainly not take that name as representing their views. Not a few of them are connected with religious denominations, and hold, it may be presumed, the views of their respective denominations, and hence are of different creeds. No inconsiderable portion of them have come to their present position through the transcendental movement, and are still intuitionalists; while others believe that science is gradually preparing the way for formulating a valid system even of religious beliefs. Some of them are Christians, and others decline that name. Some of them are ex-Jews, and some would call themselves Jews without the *ex*. Theists, pantheists, and perhaps atheists, or those who might so designate themselves, have their representatives in the Association. It is evident that a body so constituted cannot have any common creed; and it would be just as inaccurate and just as impossible to affix upon them an agnostic creed as any other. Individually, they may hold convictions on religious questions which they deem it important to urge; but, as an organization, they subscribe their names to no form of belief or of non-belief. So far, then, as the Free Religious Association is concerned, the stolen or, at least, second-hand goods, in which the *Herald* reporter has been dealing, are in any case not receivable.

If it be asked how such a body can have any coherence, the reply is ready: It is united, not by dogmas, but by certain objects and principles. First of all, it proclaims practical morality, or public and private righteousness, as paramount over all theological dogmas. Secondly, it affirms that there may be a fellowship in spirit and aim, or a working together for personal and social welfare, among those who hold different views of theology. Thirdly, it declares that the scientific method of investigation should be applied to the religious nature and history of mankind, as to all other departments of man's historical development, to the end of eliciting perfect truth. And finally, in order to put the principle of individual liberty of inquiry and opinion beyond the possibility of a question, it cordially invites to membership all who assent to these objects and aims, and distinctly asserts that its membership shall be limited by no religious name, nor by any speculative opinions or beliefs whatever. This statement of principles and objects, which is taken with only slight verbal expansion from the constitution of the Free Religious Association, should surely be intelligible to the American mind; and for an association so organized there are abundant room and work in American communities.

These principles and objects, indeed, are slowly coming to the front in the religious world, and are beginning to shape the policy of influential churches and denominations. The power of ancient dogmas (however well defined in the formulas of creeds) to regenerate mankind is falling under suspicion. The efficacy of rational efforts applied directly to eradicating the ills of mankind and the conditions out of which the evils spring is already beginning to be felt among common-sense people as a tangible reality. When such practical objects as these shall have become paramount in religious bodies, speculative discussions and creed-makings will cease to divide people. Even the churches will by and by discover that creeds are not necessary for promoting truth in any of its forms. They are, in fact, and always have been, a mischievous obstacle to its progress. The office which they serve is to maintain dogmatic assumptions in authority in the place of truth. But, when the real verities come, in religion as elsewhere, this office is vacated, and seen to be useless as well as harmful. No scientific association thinks it necessary to decree that Harvey's theory of the blood is true, or that the earth moves round the sun. So, when the eternal verities of mental and moral science are discovered, there is no need of a decree from church or synod, that they be believed. Truth has its own methods for permanently enforcing itself upon the human intellect, and the church creed is not one of them.

WM. J. POTTER.

SWEDISH LIBERAL PUBLICATIONS.

In the essay on "Viktor Rydberg on Liberal Thought in Sweden," printed in *The Index* for August 2, I gave some account of those representatives of independent thought and rational faith in Sweden, known as the society of Truth-Seekers, and of their organ, the *Truth-Seeker*, or, as it is called in the Swedish language, *Sanningsökaren*, a monthly magazine published in Stockholm by Victor Pfeiff, now in the seventh year of its existence. The double number, 4–5, of the *Truth-Seeker* for the present year lies before me at present, and brings with it the thought that a summary of its contents will serve to give an idea of the general character of this fearless little periodical that, in its search for truth, seeks to promote the interests of true progress, to investigate all the agitations of the spirit of the age, to hold fast to what seems good and protest against the evil, to endeavor to unite the most exalted ideal with the practical needs of every-day life, to pave the way for perfect freedom in politics and religion for men and for women.

The first article in the number under consideration is a concise and wonderfully clear exposition of the Hegelian philosophy, with the causes of its origin and wide-spread influence. To thinkers, who had been oppressed by the contemplation of an ideal past and future represented as far purer and better than the present could possibly be, there was an inexpressible charm in Hegel's theory that what actually existed was that alone which ought to exist, and that in the reality about us was mirrored the essence of that divine thought, a spark of which was implanted in every human breast, and which was the controlling power in a universe whose every part was essential to the harmony of the whole. In short, as the writer, who simply signs himself "L. H. Aa.," plainly shows, Hegel satisfied a profound need of his time, and this was the secret of his power. Misty as Hegel's teachings may appear, absolutely absurd as they seemed to John Stuart Mill, they certainly paved the way for enlarged views of life and practical dealings with the problems of existence, and thus were a preparation for the work of a Mill and a Spencer.

The *Truth-Seeker* rarely fails to contain some translation from the columns of *The Index*, and next in order comes the valuable essay by R. C. Adams on "Human Religion." It is admirably translated, and displays that fine appreciation of the thought of the original that has characterized all previous translations. This is followed by a word from Denmark, in two articles, from the pen of Fredrik Bajer, that celebrated Danish statesman who is so ardent a Republican that he does not hesitate to predict the speedy blending of the Scandinavian countries into the "United States of the North," so true a liberal that he makes it his life-work to hasten the reign of freedom in every sense of the word. The first heading is "Responsibility." Who has reponsibility? For what? Toward whom? Mr. Bajer asks. Exhaustive answers to these questions would fill folios, he tells the reader; and so he confines himself to a few indications. There is no responsibility without power, no power without responsibility. They attract each other as do the electric poles. Any unnatural, violent separation of the two leads to certain revolution. The new-born infant and the helpless invalid alone being without power are free from responsibility. The prime duty of education is to foster a sense of responsibility in every child, to regulate public affairs in such a way that he who holds the greatest power is made to feel the greatest responsibility is the main duty of the legislator. In the high song of Odin, the Hávamál of the Elder Edda, we are told that property dies, kindred die, soon we ourselves shall die, but the fair fame never dies of him who has earned it (see R. B. Anderson's *Norse Mythology*, p. 143), and also that a judgment on one dead never dies. These sayings Mr. Bajer applies in showing how judgment must inevitably fall on a dead king who has been declared free from responsibility during his lifetime on the plea "a king can do no wrong." But for what are we responsible? For our time, our riches, our talents, our knowledge, our words, —in short, for everything with which we can exercise influence. To whom? To God, to ourselves, to our neighbors; and thus we are led to the close relationship between charity, or love of humanity, and responsibility, neither of which can possibly exist without the other: the first attracts us, the last compels us, to do good. In fact, these twin brothers are the guardian angels of mankind,—the one appealing to our emotions, the other to our understanding, the torch of charity warms, that of responsibility sheds light. Nearly akin to Mr. Bajer's first article is his second, on "Politics and Religion," called forth by the wise utterance of Victor Pfeiff, editor of the *Truth-Seeker*, that the politics of a country prove whether its religion be a healthy or an unhealthy one. A magazine

Digitized by Google

devoted to the interests of true, rational religion cannot exclude politics from its pages. To be sure, a religion based on superstition can be kept apart from the practical affairs of every-day life; but a religion whose key-note is "Love one another," not merely because it is written in the Bible, but because it is divinely implanted in the human breast, must pervade every province of life. The bond of union, then, between politics and religion, is love. Every political movement not actuated by this leads backward instead of forward; and, if we would estimate the worth of any political movement, we need only ask if it be dictated by love or hatred. The word in the Danish language signifying peace is derived from an old Norse root that means love. Wherever there is true love there must be peace: all disputes between nations must be settled by arbitration, which would eventually lead to a universal republic. Such is the thought of Fredrik Bajer.

Then come two fantasies by Saxon, a frequent contributor, one based on the evils of marriage without love, one entitled "Harmony," and intended to show that the harmonious blending of understanding and knowledge is essential to the well-being of the rational faith. Saxon writes extremely poetic prose. "The Significance of Evolution for Monotheism," written by Isidor Flodström, also a frequent contributor to the *Truth-Seeker*, is the next article, and in it great stress is laid on the enlarged views of a God, a great First Cause. The mind must gain that has learned to consider the development of life in its ever-growing complexity and the moral law that is interwoven with the human existence. Before the creation was understood in its full grandeur and dignity, before it was known that everything in this world was relative and that every phenomenon was but a link in the great chain of events, uneducated man looked for a special creator, as well as a special act of creation for each phenomenon; but, now, the views of mankind have become enlarged, until it seems as natural for the enlightened human being of the nineteenth century to give up the old exploded theory of man's creation as it has been to put aside the notion of the creation of the world in six literal days.

An able account follows, of a proposition that was brought forward in the Norwegian Storthing, or parliament, last spring, to accord increased privileges to the dissenters from the Church of State. According to the now prevailing law, a marriage between dissenters, who decline the services of a Lutheran or authorized priest, is only legal when a notary public officiates at the ceremony. The proposed law would legalize marriages performed by dissenting ministers, or heads of religious societies. It would relieve dissenters from the present obligation to report every marriage, birth, or death to the priest of the Church of State, would render them eligible to all public offices and all positions in schools or colleges, except such as are connected with religious teachings, and would remove compulsory training, in the doctrines of the State Church, from the children of dissenters. One member suggested granting these privileges to Christian dissenters alone; while there was one who courageously maintained that the said privileges were the due of all good citizens, whatever their faith might be. The bill fell through, sixty-three votes being cast against it to fifty in its favor (one member was absent); but, as the writer says, it will be brought up again, for the day has come when the defenders of religious oppression more and more fear the light, when many have courage to speak noble words in behalf of liberty. The time is near at hand when the rights of the individual shall be recognized, when freedom of conscience, freedom of thought, freedom of speech, and tolerance shall be the "four foundation pillars of the earth." The concluding article reports a series of papers on the free thinkers of the day, that has been running through a prominent church publication, and whose main object is to misrepresent the position and actions of the Truth-Seekers and other independent thinkers. In addition to many misstatements, the theologically logical conclusion is drawn by the writer of these papers that, as all atheists are free thinkers, so all free thinkers must be atheists.

Among American Scandinavian periodicals, we find *Upplysningeno Tidehvarf*, the *Age of Enlightenment*, a Swedish weekly published in Grove City, Minn., and devoted to the culture of free thought, the investigation of the religious systems of our times, and the discussion of religious and social questions in general. One of the most interesting editorials in the issue at hand is on the antichrist, giving a review of the different traditions that have been afloat in the world on this theme, and calling upon the reader to admit that whoever comprehends what the religion of Jesus is (a religion of love), and what the religion of the Church has been (a power that in the name of love upholds egotism), can scarce doubt that the Church itself has been the true antichrist. The great movement among the Scandinavians in the direction of breaking the bonds of ecclesiastic tyranny is the noble mission of the poet preacher, Kristofer Janson, of which more later.

From Chicago comes a journal in the Bohemian language, unfortunatel. an unknown tongue to me. Through a kindly Catholic priest, I learn that its name, *Duch Casu*, means The Spirit of the Times. There is passing through its columns a translation of the Life of Christ, by Strauss; and, judging from the headings and general appearance, the editors present to their readers many other good things. Finding that the paper was devoted to the interests of free thought, the worthy priest naturally enough declared it to be no religious journal, yet to me, just as naturally, it seems to be one of the encouraging signs of the times. Each new indication of the growth of the world's thought should be hailed with joy by every friend of enlightenment and progress.

AUBER FORESTIER.

ASGARD, MADISON, WIS., Sept. 12, 1883.

ETHICS OF THE SOIL.

If control of fire be the seal of supremacy over the brute beast, agriculture is that of the progressive over the brutal man. No other tenure holds upon the soil. Those who evade its duties cannot share its rights.

The Turk has been reproached as a conquering robber only camped in Europe. What are we? Let conquest slide. Between the white man and the red man lies not the great issue? To the soil, all men are responsible. It is the crime of the *skinner* that nature will punish beyond the third or the fourth generation of atheist farmers.

Amid the floating population of a thousand arts, whose flaunting banners scientists upbear, while political economy sings the pæans of luxury triumphant, of wealth feeding poverty by the manufacture of gewgaws, stands rooted in the soil the peasant proprietor, the yeoman, or his ghost, rising from the past at the clarion voice of revolutions. Wise legislation protects against the shiftlessness of individuals the family homestead.

Limited to the basis of decent subsistence by personal industry, but strong within such limitation, let the *wave note* dash powerless against this rock. Let no title of purchase, no territorial grant, hold against the indefeasible right of the laborer to the soil his own hands till. If he work ignorantly, wastefully, enlighten him or his children by the practical education of farm schools. If his parcellary industry cannot cope with obstacles, such as morasses or deserts oppose to his efforts, send engineers to his aid, and teach him the disciplines of associative effort. Let the industrial army recruit its ranks among the deserters, the young men seduced from their paternal farms by the lottery prizes of shopkeeping.

America is going to the devil, just because the shop is devouring the farm. In our more enterprising North, it is chiefly of talent that commerce despoils agriculture. In the victimized South, not content with the Minotaur's tribute, commerce fishes for the farm itself, baiting her hook with coffee bags, bacon, and calicoes, or dipping it up in the net of her mortgages.* Whether incapacity or extravagance lie at the root of this evil, can we rationally ask *law* to protect those who will not protect themselves? Is it not better that landed property should change hands from those who are less able than those who are more able to profit by it? But such is not the case. The merchant keeps his capital and talent for his traffic: he substitutes for the ousted proprietor only some wretched tenant. No mawkish sensibility, nor even tenderness for undeserved mishap, is here in question. Let the individual suffer for his faults, let his family partake the fatalities of misery, but let them *not forfeit the means of redemption.* No wrong to the merchant can accrue from the absolute inalienability of small farms. Let him either take his liens on other values or suspend treacherous credits. For genuine love of the soil, source of agricultural virtues, proprietorship is the *sine qua non.* The extension of the sense of *personality* into the results of skilled labor on one's homestead is the *primum mobile* of patriotism, the *ultima ratio* of social worth, the nuclear cell of State organisms. Deprived of this egoist substratum, the superstructures of altruist morality tumble into ruins about us. The love of the neighbor is trampled beneath the lust of the dollar in the struggle for existence, and the fittest who survive are the usurers.

The principle of *homestead exemption* has been grafted upon our legislation, but it lacks the vitality of seedling trees.

It does not enforce honesty toward the soil, and it complicates the relations between farmer and merchant, without effectively protecting anybody.

The inalienable homestead is no communistic agrarianism: it is but the policy of protecting the industrious and thrifty members of a family in *self-support.*

If their *chief* offend against the legalized morals of property, let legislation devise ways and means of vindicating them and of punishing him, without breaking up his family and burdening society with its wrecks, thus recruiting for the regiments of paupers, thieves, and prostitutes.

The areas of reservation necessary to a rational economy vary with soils and sites in a ratio greater than one hundred to one. They are generally too large under our present legislation to oppose adequate restrictions against *skinning the soil.* The same family, which, if confined to ten acres of arable land, will improve this, stop the wash by banks and ditches, and restore its fertility

* The usual rate of credit extended from merchants to farmers in Northern Alabama, where my farm lies, is twenty-five one hundredths per annum. Much trade is carried on thus by mortgages. In this city of Columbus, the terms are still harder on factory operatives, whose pay, in default of competition, is very low. The factory affords all supplies, and has a banking institution which loans money at twenty per cent. per month. Quite recently, a laborer who had a month's pay due him within a few days was obliged to borrow from his employers at this rate, in order to bury his child decently.

Digitized by Google

by manurial values, will recklessly skin and deteriorate, field by field, the soil of one hundred and fifty or of eighty or even of forty acres. The inalienable minimum should then be much smaller, while contiguous reserves may meet the wants of children over twelve years old, as soon as they have creditably passed examination before a board of agricultural censors, and can show results of independent culture on one acre. Similar tests, upon a larger scale, should measure the capacity of purchasers who, at first only renting land from the State or large proprietors, should be held to give a good account of their management to the agricultural board of censors before they are permitted to purchase. On the other hand, our actual system is vitiated by the *wave note*. There really is no inalienable property in land.

It is well that the wife's consent must be obtained to validate a mortgage; but this is too easily obtained, whether by the husband's authority or by the wife's thriftlessness. Besides, her opposition breeds domestic troubles. Even the consent of all the family would fail to substantiate the policy of alienation. In particular cases, such questions may be submitted to local arbitration, and sales or exchanges of homesteads be permitted by a county court or by the local land office, with sanction of the governor, after time has elapsed sufficient for all objections to be heard, on the part of either family,—sellers or buyers. Inalienable property in the soil, limited in its personal claims by the *needs*, in its social allowance by the *means*, of its cultivation, conciliates the democratic with the aristocratic principle.

The farmer or gardener is the pivot of a thousand subordinate factors in the animal, the plant, and the inorganic series.

This garden or field displays the order of privilege. Domestication with culture is the domain of the elect few, among plants and animals, retrenched within the last outstanding bulwarks of the feudal epoch. All constituted governments are more or less parasitic and rapacious. We cannot help that, and must pay tribute to them. Republics, like the custom-house, are but cunning devices by which labor is induced to lie quiet, while fanned by the wings of its vampires. But, if government land offices are, in one point of view, an abusive means of collecting internal revenue, the lion's share of which they devour, they are necessary as distributive agents and checks on individual rapacity. They may be competent appraisers; and a boundary may be fixed to their discretion by raising the tax on every area beyond the local minimum,—say of five acres,—not only by the addition of so much per acre, but by a ratio corresponding to the enlargement of landed estates. So that, if five acres pay a tax of fifty cents, ten acres may pay $2, twenty acres $10, forty acres $40, etc. Such ratios should increase more unequally in fertile soils, near markets, etc., up to the point when the tax would be practically inhibitory to cumulative purchase by absorbing the profits of labor. The title of certain governments to certain tracts of land is a matter of fact; and, as governments are men just as selfish as others, they are not likely to renounce this source of revenue. But, as they are wasteful, they are poor, and ready to sell at low prices, seldom endeavoring to cultivate, even by tenants. The State is invested with inhibitory power against speculation in lands; but public opinion only can compel to its exercise, and such public opinion is an active force only when thoroughly in earnest and inspired with a virtuous indignation. Already, a tremendous railroad landed aristocracy has been created by governmental favoritism, and financial feudalism in America is dancing a *chassez croisez* with the democratic spirit in Europe, beginning with Great Britain. A government that is fit to be trusted in anything is fit to decide and to enforce its decision through local officers about the areas of land in different sections which may properly be allowed to individual or corporative ownership. A machine so cumbrous as the United States government has for its supreme reason of existence, real or *illusory*, that of keeping peace among the States and of preventing foreign invasion by armed force. While actually granting away immense tracts to despotic corporations and encouraging Indians to indolence, diversified with murder of beasts and oppression of squaws, it has at least declared theoretically against speculation in land, and proclaimed, with its forcible feebleness, honest intentions.

The ethical point now most urgent is to compel, by the adjustment of taxes, speculating land owners to sell, at United States prices, to real settlers all estates exceeding in area the verdict of the local land office for each region or site. No more, on this subject than on others, can legislation rise above the level of moral sentiment or intelligent interest in the legislators and their functionaries, based upon average public opinion. We cannot lift ourselves up by our own ears.

While intimately persuaded of the desirability of inaugurating a more stable *régime* in the tenure of land, I am perfectly aware that a healthier public opinion on this point remains to be created, and that a candidate sailing under the banner of the inalienable homestead would have little chance of success in the South. In the more enlightened and refined sphere of other States, its chances may be better; and, somewhere, such ideas ought to seek their publication and initiative.

M. E. LAZARUS, M.D.

CHARLES H. CODMAN.

Charles H. Codman, one of the Executive Committee of the Free Religious Association, died in Boston the 18th inst., from the effects of inhaling the fumes of nitric acid the preceding day.

It is with an inexpressible sadness of heart that I make the above announcement to the members and friends of the Association. In all its history, I may safely say, it never enlisted the approval of a man who more thoroughly embodied its highest ideal of the religious life than he. Broad in his mental grasp, he saw that, outside as well as inside Christianity, the Eternal had never been without a witness among men. Strong in his affectional nature, his sympathies went out to every form of sorrow and suffering. Intensely practical in all his ways, he always saw the thing needing to be done, and did it.

Crushed as are those of us nearest him by the terrible suddenness of this affliction, which came like a lightning stroke from a clear sky, we are not less overwhelmed by a sense of the public loss. He was not a noisy man; but, somehow, he always carried on his shoulders more than his share of the world's work. I could personally testify, if indeed it were not presumptuous to think testimony needed, to this fact, which he would be the last to admit, but which so many knew.

He was the advocate of temperance, actually giving one hand to the fallen, while with the other he cast a ballot to remove the immediate cause of his fall. On one occasion, he left some friends upon the street quite abruptly to go with a woman who had turned to him a pleading face. In explaining it afterward, he said, in a modest, matter-of-fact way, he followed her into a grog-shop where her husband, whose weakness he understood, was in danger, took him to the cars and accompanied him home. This was only one little incident in a life full of such service. He was the advocate of greater purity in politics: some of us remember gratefully to-day that in years past we have stood side by side with him in struggles for caucus reform. He was so thoroughly in earnest in the woman suffrage movement that it seems as if one of its very pillars had fallen. No low thought of womankind ever entered his mind. No disability ever hung over rich or poor woman, which he did not feel as a thorn in his own flesh. Always to be depended on when the cause of equal educational, industrial, political rights irrespective of sex was in question, that is the verdict. And his support was such as but few ever give.

"His strength was as the strength of ten,
Because his heart is pure."

He cherished—oh, how deeply!—the dream which filled the atmosphere he breathed as a boy at Brook Farm. "Give us something on co-operation," he was always saying; and, when you had done it, his invariable greeting would be: "That was good, good! We must get such thoughts before the people." Sometimes, he would drop for a brief moment the other cares of a busy career, and write something himself. Many will remember his paper on the Brook Farm experience, which had a value he would never recognize. He was full of the spirit of the golden rule. He saw, as with prophetic eyes, the good time coming, when it should be applied to all human industry. And his whole heart was in the work of our Association. No one did more, either by council or by actual effort, to make our last festival a success than did he. He was a warm advocate of cultivating the social nature, he believed in festivals of radicals for that very reason, that so they might always represent that wholeness of life which was his own.

His friends will say, are saying universally to-day, We cannot think of a fault this man had. And yet there was nothing negative about him, as is so often the case with those of whom that can be said. He was positive, aggressive, always, but affirmatively, practically so. He was a man of entire integrity, true, honest, pure-minded in all his ways.

The tears come unbidden as I write, and I feel how inadequate are all my poor words. This dear friend and co-worker has passed from mortal vision to the unseen world. We still tarry to continue the tasks which were so near his heart. His voice will no longer cheer us, his hand no longer grasp ours, but the memory of such a life of unostentatious holiness will always be an inspiration. May we prove ourselves worthy the blessing of such an example! F. A. H.

THE VATICAN LIBRARY THROWN OPEN.

The sealed doors of the Vatican Library are to be thrown open at last to students of all sects, and great is the rejoicing among scholars thereat. The apparently learned editor of the New York *Sun*, who long since shook the dust of Rome and Geneva from his feet and now revels in the dreams of Swedenborg, thinks that it will have the effect of causing a large part of the world's history to be rewritten, including, of course, church history, and says also, "It is evidently the conviction of Leo XIII. that the Catholic Church has nothing to fear," etc.

To Swedenborg, Rome was very Babylon indeed; and, in his *Apocalypsis Revelata*, he proves it, as well as it can be proved, with most wonderful ingenuity. It is difficult to conceive of a modern disciple free from suspicion of a hidden motive, or that Rome could possibly have any other than that of perpetuating itself, and in a laudatory column

Digitized by Google

imputing the most generous and noble impulses and "an enlightened and courageous spirit." The *Sun* is nothing, if not theological; and, as a former editorial wound up with the startling assertion, "The paternal theory must now be abandoned," I judge there must be diversity of council in the *Sun* office, or its theological head is "all at sea." He is no doubt aware how little really accurate ecclesiastical knowledge we have of that most interesting of all periods, the first two centuries of the Christian era, and also how slight is the proof of the existence of our canonical Gospels before the last quarter of the second century.

Besides the canonical and apocryphal books now extant, there are sixty-eight books mentioned by Christian Fathers of the first four centuries, which are not now known to be in existence. The Councils that accepted our four Gospels and seventeen Epistles, and made what we call the New Testament, rejected more than fifty other Gospels and more than one hundred other Epistles. More than fifty other books, written by more than twenty noted persons in the second century, which would have thrown a flood of light upon that period and upon our New Testament, have *mysteriously disappeared* (*vide* Westbrook *et al.*).

Now, in view of the fact that Jesuitical influence is at present dominant at the Vatican, is it at all likely, is it at all probable, that any documents related to the history of the early Church—if any such there are—or any derogatory to the Roman Church and its pretensions will be allowed to see the light? Is the Jesuit of to-day an improvement on his ancestor? Does not the end with him still justify the means? Is there a reformed *Societas Jesu*? Since when, and what a wondrous evolution that would be! With what great interest an infidel world will await developments, and wish, perhaps, that a Garibaldi had ere this forced the doors.

J. F. M.

EDITORIAL NOTES.

ALL associations or individuals desiring to arrange for lectures by B. F. Underwood the coming winter are requested to address him at an early date, the earlier the better, to enable him to plan his route systematically.

R. C. ADAMS writes: "I am much pleased with Mrs. Underwood's article on Novels. It shows good judgment. I hope some novelist will soon do to Orthodoxy what Mrs. Stowe did to slavery. The best liberal romance I have read is Savage's *Bluffton*, but the great champion has not appeared yet."

THE *Unitarian Herald* of England quotes from this journal a portion of Mr. Towne's recent criticism of Darwinism, and concludes its comments thus: "That life is simply electrified oxygen is a hypothesis which would open up a great mystery in electricity or in oxygen, or in both. In fact, all the mystery would still remain."

WORK has been commenced in the building of a new and improved crematory at the University of Pennsylvania, Philadelphia. The furnace will be constructed of iron and fire-brick. The crematory chamber in which the body is placed will be six feet six inches in length in the clear, and two feet high by three feet in width. There will be a furnace at each end of the chamber. The opening to the chamber will be at one side, and the aperture where the body is put into the chamber will be protected by an iron sliding door weighing four hundred pounds. The flames from the furnace will pass over the body in opposite directions, and retreat underneath the crematory chamber into an escape flue. It will take six hours to consume a body into ashes.—*Religio-Philosophical Journal.*

MRS. SARAH K. BOLTON writes from Stockholm, to the *Congregationalist:* "I visited some of the banks where women act as cashiers and fill other responsible positions, a comparatively new field of labor. The officials told me that the women had fewer temptations than men, and for this reason were more honest. They were found to be quick, accurate, and faithful. I saw women going up steep ladders, each carrying two hods of mortar fastened to a frame on their shoulders. Asking why this was permitted, I was told that 'women work for thirty-seven cents a day, while men get sixty, and men have to leave often for a drop of brandy, while women do not.' The women come at six, make the mortar and bring the tools for the men to begin work at seven. The latter leave their work usually at seven in the evening, while the women work an hour later to put aside the tools and clean up after them."

ARE not the *Christian Statesman* and the *Christian Intelligencer* getting silly in their complaints about Sabbath-breaking? Here is the latest from the former journal: "The action of Chief Justice Waite and Lord Coleridge, Chief Justice of England, in desecration of the Sabbath, has been already noticed in these columns. The party went to Manhattan Beach, dined upon the piazza of the hotel, while English and American airs were played by Gilmore's band, and then returned to New York. The *Christian Intelligencer* justly says: 'This example will fill God-fearing hearts with regret and sorrow. The action of these gentlemen is the more pernicious because they are set for the maintenance of righteous laws, and are expected to be a mighty bulwark against the advance of practices morally injurious. The Sabbath desecrators at Coney Island have not often received such encouragement and justification.'"

MR. CHARLES D. B. MILLS, of Syracuse, N.Y., is open to engagements to lecture during the fall, and winter of 1883–84 on the following subjects: 1. "Characteristics that mark our own Age and Time"; 2. "The Law of Human Growth and Development"; 3. "Evolution in the Primitive Arts and Early Civilization"; 4. "The Effect which the Industrial Advances of the Present are to have upon Society"; 5. "The Impress of Past upon Present, as seen in the Survivals"; 6. "The Origin, Nature, and Effects of Mythology"; 7. "Our Nursery Tales, Saws, Proverbs, etc.,—their Origin and History"; 8. "The Function of Symbolism in Mythic Representations, Art, etc." Besides the above, he has lectures upon leading Representative Names of our Time,—Carlyle, Emerson, Tyndall, and others; also upon The Early Aryan Civilization,—Ancestral to Greek, Roman, and our own,—which he will give when desired. He will be pleased to make engagements with lyceums, clubs and schools.

THE following sentence is from Mr. Holyoake's paper, the *Present Day:* "Col. Ingersoll says what may be usefully repeated in England; namely, 'Every foolish and immodest thing should be expunged from the Bible.'" Col. Ingersoll has said many wise and witty things, but there is neither wit nor wisdom in the above; and we wonder that the sentence is approvingly quoted by so discriminating a man as Mr. Holyoake. Would he have "every foolish and immodest thing" expunged from the Greek and Roman authors, from the writings of Shakspere, Milton, Voltaire, Burns, and other great geniuses whose works are not free from offences to good taste? Is it not more sensible to have the works preserved as they appeared, even with the blemishes which help to explain their author's peculiarities as well as those of their age, than to have coarse or foolish passages expunged? Is it not better to cultivate a robust morality that will not be injured by a few lines or pages of foolish writing than to mutilate the great masterpieces of literature?

THAT most curious patron of missions, King Mtesa, of Uganda, is dead. He was one of the most religious of African monarchs. In his religious views, he was "everything by turns and nothing long." First, he was a worshipper of false gods. Then, some Protestant missionaries converted him. After a while, he drove them away, and became a Roman Catholic. Then, he took a whim to threaten to cut the Catholic missionaries' heads off. At one time, the Baptists had him; and, at another time, he was so near becoming a member of the Church of England that his decision hung on the answer to his application to Queen Victoria to be allowed to marry one of her daughters. Even though he offered to slay all his other wives if this application should be granted, Queen Victoria refused him. Then, he shut down on the English missionaries and drove them away. Among his other religious experiences was a short term of high enthusiasm in the Mohammedan faith. Some Arabs, who happened to journey through his dominions, found him a ready convert to their views. It is believed that this potentate died in the faith of his forefathers.—*New York Sun.*

A COURSE of twelve lectures will be given by Mr. James Kay Applebee at Parker Memorial, commencing Sunday evening, October 7, and continuing each week until completion. Course tickets at one dollar each can be obtained at Oliver Ditson & Co's., 451 Washington Street, and at the doors. The following is a list of the subjects and dates: "Charles Dickens as a Sentimentalist and Humorist," Oct. 7; "Shakspere's Merchant of Venice: A Sermon in Religious Courtesy and Charity," Oct. 14; "John Bunyan, Tinker and Teacher, Preacher and Pilgrim," Oct. 21; "Illustrations of Humbug and Humbugs, from the writings of Charles Dickens," Oct. 28; "Shakspere's Hamlet: A Drama of Destiny," Nov. 4; "John Wesley: The Man and his Work," Nov. 11; "Types of Womanhood: From the Writings of Charles Dickens," Nov. 18; "Shakspere's Othello: A Drama of Faith," Nov. 25; "Oliver Goldsmith: A Biographical and Literary Review," Dec. 2; "Thomas Hood, Poet and Punster," Dec. 9; "Shakspere's Macbeth: A Drama of Conscience," Dec. 16; "Types of Nature's Nobility; or, The Deeds of Unheroic People: From the Writings of Dickens," Dec. 23.

IN the Montreal *Gazette*, we find the following: "The Boston *Index* takes the *Christian Statesman* to task for its outcry against the existing custom of bathing on the Sabbath at the watering-places. According to the *Christian Statesman*, the authorities ought to put a ban on such Sabbath-breaking; and it adduces as an example proper to be followed the action of the established, free, and united Presbyterian congregations at Aberdeen, which prevented a joint memorial to the council of that place against the desecration of the Sabbath by bathing in the Dee. In the memorial, the practice was described as 'highly offensive and detrimental to good morals.' 'Can we not,' says the *Christian Statesman*, 'have similar action at Cape May, Long Branch, Saratoga, and the many other resorts?' *The Index*, on the contrary, regards bathing even on Sunday as healthful and not immoral, and reminds the *Christian Statesman* of

Digitized by Google

the injunction implied in the oft-quoted and much debated text which says that 'cleanliness is next to godliness.' Of course, a good deal depends on the manner in which the bathing is conducted." Very true. If the bathing is conducted in a manner that calls for the interference of the authorities, whether on Sunday or other days, let observance of the rules of decency be enforced; but the *Christian Statesman* would put a stop to the custom of bathing at the watering-places on Sunday, however conducted, because it regards it as a "desecration of the Sabbath." It is to this Puritanical view that we object.

THE *Catholic Review* says: "The Boston *Index*, a journal of cultivated infidelity, has many interesting and some rather wild writers. Their articles we read, so far as they interest us." The *Review* thinks this journal represents Boston culture, but that this city "does not know what its culture really is. From Emerson to Ingersoll, from Ingersoll to Joe Smith, from Joe Smith to Brigham Young, from Brigham Young to the devil, is only the straddle of a pigmy. We compassionately omit even a remote hint at the noble army of Boston women who are, by the force of New England culture, prepared in advance to take up and hail with acclamation any doctrine that would lead them by the shortest route to the last-mentioned representative of Boston culture, to him who was 'a liar from the beginning.' Yes, take it all in all, we read *The Index* as the highest and truest exposition of Boston thought and culture in the general sense." Is not our esteemed contemporary a little inconsistent? Only a few weeks ago, it conveyed the idea, if we mistake not, that Sullivan the slugger was a representative, and the demonstration in honor of him at the opening of his rum shop was an expression of Boston culture. Since Sullivan is of Catholic parentage, education, and faith, and the crowd that surged in and out of his saloon were for the most part of the same faith, there is evidently a "missing link" in the reasoning by which our esteemed contemporary has reached the conclusion that there is an intimate connection between Sullivan and his crowd, with their Catholic faith, and "cultivated infidelity," "Boston thought and culture," and *The Index*. Is not the *Review's* logic rather "wild"?

POETRY.

For *The Index*.

RENUNCIATION.

Renounce thyself! The thrill along the nerve
That heeds the call, nor will from duty swerve,
Upholds some latent pressure, though unknown,
That keeps the universal melody in tone.
Poets have died and left their song unsung;
Heroes, whose grand achievements might have rung
Adown the steeps of time, ignobly die,
For lack of field, beneath judicial eye;
Heroic blood, heroic shape, cast in heroic mould,
Now stand at brake, the helm of steamer hold;
Self-sacrificing heroes man the ship;
Self-sacrificing heroes crush the grip
Of railway-brake,—men for each other die,
Vicarious in suffering give the lie
To selfishness, and all along the mart
Have reared the symbol of a human heart.
Sublime above all craft, above all creed,
Man feels his sovereign right to every need,—
Right to his plot of earth and sunshine meed:
If God there be, the only God to-day
Asserts through duty an eternal sway:
She whose stern finger points the onward road
Bears on her brow the semblance of a God.

ELIZABETH OAKES SMITH.

BLUE POINT, L.I, Sept. 1, 1883.

The Index.

BOSTON, SEPTEMBER 27, 1883.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index*.

Superficial Expositions of Objective Reality.

BY WILLIAM I. GILL.

VI.

Mr. J. H. Fowler's essay on "Mind Expression in Evolution" (in *The Index* of Aug. 9, 1883) is so able as to entitle its errors to elaborate correction; and a direct debate on questionable points is the short cut to a general attainment of the truth. I will therefore stop to take some of his statements and subject them to criticism, because they affect the whole world of thought, and exhibit the vague and erroneous and inconsistent mental habit which in these days has a wide prevalence, even in the high places of science and philosophy.

Mr. Fowler's prime error is very common and twofold, and consists in the assumption that whatever is external to our organism is *non-ego*, and that this doctrine is necessary to evolution and to the main principle which he wishes to expound. These errors he shares in common with Spencer and all his followers. I have already given them considerable refutation, but a little more in this connection may be of service.

In the first place, it is wrong to suppose that evolution, or mind expression in evolution, depends on any theory of sense perception or psychology. That may be true; and I doubt not it is, whether we explain evolution subjectively or objectively: only, I think that the most thorough analysis makes a demand for a subjective treatment, in order to secure entire consistency in the process and results. At all events, when we have for our declared object simply to show that evolution is mainly or wholly an expression of mind, it would be every way better for us not to entangle ourselves with any theory of opposing philosophies or psychologies which are or may be held different by evolutionists. If Mr. Herbert Spencer had not pronounced himself here, he would have been less vulnerable; and so would Mr. Fowler. If it should eventually turn out that there is a philosophical realism in what they assail as idealism, their labor is so far in vain, and all their work has a false coloring on it. I yield to no man on the score of the extent of evolution; but I claim that this can be consistently maintained only on the basis of a realism which is generally stigmatized as idealism, and that the opposers of this doctrine overlook admitted facts and contradict themselves. In further justification of this statement, let us look at Mr. Fowler's preliminary attempt to prove objective evolution.

He asks: "Can I go out of myself to a limiting cause of my own sensations? Common sense answers, Yes. Practically, this affirmation holds good against all negations of philosophy. Instantly and irresistibly, my eyelids close at the approach of a stick. So close the shells of a living oyster. Sensing pressure, the unhatched chick pecks and bursts the binding shell; then, in sense of want, guided by sight and smell, gathers nourishment, and fails not to interpret rightly sounds of friendly call or warning. Thus is reality environed and recognized by reality."

This performs the self-contradictory feat of making sensation transcend sensation; for every thing here adduced as being a reality beyond sensation, and affecting or causing or limiting sensation, is itself nothing else than sensation in every case. The stick and its motion, as well as the action of the eyelids, are simply sensations; and the two classes of sensations are related to each as causes and effects. All we know of the oyster and its shells and actions are nothing but another set of sensations lexically related to each other. The same is true of the egg and its hatching chick and all its action and experience, and the mother hen with its friendly call or warning. If there is anywhere a living thing answering to the sensations we call oysters, the stick which it fears is a mode of its own consciousness or subjective state. If there is anywhere a living thing which answers to our sensations which we call the chick, that shell which it pecks and the mother's call and the mother herself, so far as known to it, are only its own subjective states; and the same is true of the food it eats. "Thus is reality environed and recognized by reality," not as *non-ego* and *ego*, but as two great classes of the modes of the *ego*,—our subjective states, which are all we know. Beyond these experiential phenomena, we know nothing, and all comparisons made by us must be made between the forms and changes of these, the only known or definitely conceivable realities. And all these are *ego*.

I understand all this to be expressed by Helmholtz in the following passage from his *Psychologische Optik* (p. 443), and quoted, I believe, within a year in the *Princeton Review*: "I hold that to speak of our ideas of things as having any other than a practical validity is absolutely meaningless. They can be nothing but symbols, natural signs [relative to each other], which we learn to use for the regulation of our movements and actions. Only when we have learned to read these symbols aright are we able with their aid to direct our actions so that they shall have the desired result; that is, that the expected *new sensation shall arise*" (new sensations or other experiences being all we can find and all we should seek, each guiding to others by their sematic force, which grows out of their uniformity). Mr. Helmholtz adds: "That no comparison between ideas of things and things in themselves is in point of fact possible, all schools agree. But we insist that any other comparison is unthinkable and meaningless [unless between phenomena or subjective states]. This latter is the vital point which one must see, in order to escape from the labyrinth of conflicting opinions." I have read between the lines, because of the general indisposition to stop and take it all in.

I assent to the affirmation that "a sense of objective reality is clearly implied by the behavior of every organic being." But objective reality is not, therefore, non-egoistic reality. Whether it is so in fact should be determined by scientific analysis, and the science of modern psychology has determined that it is not; and its opposers are only those who appeal to "*common sense*," which is mere assumption, and generally an ignorant and false prejudgment. "Whether vegetable or animal, every individual responds to heat and light. Each senses environment as objective reality, and therefrom selects material with which to build up its own structure and secure internal economy and external harmony." But, so far as known to us or to any subject, all this is only so many changes in the forms and relations of subjective phenomena or egoistic states. It is a change of the inorganic into the organic, which is balanced by the opposite change of the organic into the inorganic, but no more. Both the organic and inorganic are egoistic or subjective states. Hence, "the recognition of a primitive, simple sense of objective reality, common to all organic beings," would here be of no avail.

Digitized by Google

No matter how it originates, it is egoistic. We gain nothing by ingenious inventions concerning the *modus operandi*. If the material used in building up the organic structure were our own, for instance, known and admitted to be *non-ego*, and if it became *ego* by being organically assimilated and transformed, that were a theory sufficiently clear and simple. But the universe is not so simple a thing as that, or else it is ultimately much simpler; for psychology steps in, and says that this theory contradicts fundamental facts, and that all known plurality is an ultimate egoistic unity, whether organic or inorganic.

We have a fine distinction drawn for us in the following sentence: "*In* states of consciousness, not *as* states of consciousness, I trace my being back, step by step, through successive stages of evolution, to the time when there could have been no state of consciousness." This is important, if true; and true it will appear to all objective evolutionists. But we ought to be informed when that time is reached when there could be no state of consciousness. That information cannot be had. No such time or place or condition can be proved. The possible states of consciousness we cannot *a priori* know. That is the prerogative of Omniscience. For aught we can tell there are unknown and unimaginable states of consciousness of some beings which are related to the moon or to Jupiter or the sun analogous to our relations to the earth. We know nothing about that one way or another. The pre-conditions and possibilities of consciousness are not questions either of science or philosophy. We can, however, trace the development of *organic* consciousness back to a pre-organic world, which is not a pre-conscious state, because it is only a complexus of sensations or states of consciousness. An unconscious state we can never know. The supposition contradicts itself: because, if unconscious, it is unknown; and, if known, it is conscious. Directly, we can never get beyond ourselves. This is surely positive and final. Our experience can never transcend ourselves, else it were not experience, which is a state of consciousness. We cannot therefore transcend the present directly, since all experience is present; and the past is only an extinct experience, which may be symbolized by a present experience. While it is true that we know nothing except *in* states of consciousness, it is equally true that we know nothing except *as* states of consciousness, when we "know ourselves" well. The distinction is plausible, but superficial. The pre-scientific mind does not recognize the phenomena of sight and touch beyond the organism "as states of consciousness," but the psychologically scientific man does; and the one class will, and the other class will not, trace the historic development of phenomena "*as* states of consciousness." And it is the latter class which can trace their own being back the farthest and most consecutively and thoroughly, because that being is commensurate and coeval with the universe.

On the other hand, with those who make the extra organs to be non-egoistic, the case is entirely altered. With them there is a constantly recurring break in the historic continuity; and all individualities are being continually annihilated, and new ones formed out of a common substance into which the old individualities are reduced or dissolved. On that theory, *my* being cannot be traced back beyond my birth or the pre-natal organic condition in the fœtus; for that was the beginning of my being as an individual. My parents were not I, and their parents were not they, and so on back to the primordial cell and protoplasm. On this theory, it is, therefore, not true, as asserted, that in the psychical element of the primordial cell "I find my identity, which has never been lost, and which to-day constitutes my personality." That element is either common to the world or it belongs only to that individual cell, and not to me as a whole and specialized individual. That primal cell has been comminuted into utter destruction and fashioned into other forms a countless number of times before any cell became a part of my organism, and only those cells which are or were parts of my organism are or were parts of my being as an individual, unless this individual extends beyond the organism and existed before the organism, as philosophical realism affirms. These cells also being in a continual flux of generation and extinction, there is no fixity to my individuality, if it is only composed of these cells.

Now, consider all these cells and all the world to be—as they are—sensations, as I do, then we have at once the absolute unity of my individuality and personality with all the past, and all its forms and cells, of all of which I am the constant and abiding substance and force; and it is I that has undergone all the changes which are indicated as the successive changes of the world. And there are as many such world-changes as there are individuals like me.

We are also informed that "we cannot conceive of mind in space as matter, nor can we conceive of mind under the guise of dynamics. Mind is not a force, but a force cognizer and director. It is not matter or form, but a cognizer and director of these. Mind is the organizing reality, the architect of nature. . . . It is that which becomes intelligible in nature and intelligent in man." When men speak of inability, it would sometimes be well if they spoke only for themselves instead of speaking for all the race. For one, I can never acknowledge the inability here confessed by this writer. To me, it is perfectly easy to conceive of mind under the guise of dynamics; and this small feat I am constantly performing, because I always conceive all dynamics as modes of mind. If mind were not a force, how could it be a cognizer and director of force, or the organizer of reality and architect of nature? Further, if it is "that which becomes intelligible in nature," it must be extended in nature as if identified with matter. The discrimination of mind and matter, except as modes of the same one reality, is impossible, because, so far as known or knowable, they are both subjective states or modes of the mind, the intelligible and intelligent in man.

"*Matter, force, space, and time,*" says Mr. Fowler, "are cognized as external. Feeling and thought are in the mind as states or actions. Matter and force cannot be conceived as in the mind as states of consciousness or as phenomenal or real mind elements. The identity may be asserted, but cannot be conceived. We cannot think matter, force, space, and time, being in the mind. . . . Space cannot be abolished or conceived as absent. Time is necessary succession: we cannot conceive of it stopping; but my consciousness, every and all consciousness, may cease. Matter, force, space, time, continue. They may be symbolized in thought and feeling, but not identified with them." If matter, force, space, and time are known, known directly in experience, they are not external to the mind, are nothing else than modes of the mind or states of consciousness. Their identity with mind, so far from being inconceivable, is a logical necessity, because the denial is self-contradictory, affirming that experience is something more than experience or a subjective state. If they are not thus directly known or knowable, they are not phenomena at all, and they do not come within the range of scientific discussion. The unphenomenal is a mental void, and all special assertions concerning it are void. Positivism only is scientific, and positivism only can be the *basis* of philosophy.

The *known* matter, force, space, and time—and it is only the *known* we can discuss—cannot be abolished so long as consciousness exists, since they are modes of consciousness; but, for the same reason, they would perish with the extinction of consciousness; and if, therefore, the extinction of the latter can be conceived, the extinction of the former is conceivable.

To say of these four terms or things that "they may be symbolized in thought and feeling, but not identified with them," implies that they are not directly known. But, if they transcend all phenomena and are unconscious, how are they to be symbolized? How shall we know that any alleged symbol is a real one and not an unmeaning invention? How shall the phenomenal and conscious symbolize the unconscious and unphenomenal? To these questions there is no answer. Legitimate and scientific symbolism is only of the possible phenomenal. One phenomenon may be a symbol for others, and indicate the law of their occurence and recurrence.

If matter, force, space, and time are only symbolized and not known, they are surely unknowable. If we do not know them now, we never shall. It is surely very evident that we have never made any progress here, and that there is no law by which we can. Their relation to our consciousness is a fixed fact. It does not come within the law of evolution, which is good only for phenomena. If, therefore, they are unknown, they are unknowable; and the unknowable is rightly, by Mr. Fowler himself, ruled out of the sphere of science and philosophy, in the following language: "The unknowable,—a name of power to conjure by, of strength to support a weak position, but, as an ally in philosophy, cowardly and treacherous. What cannot be known or conceived should not be relied upon."

If there are other beings besides me, real beings, conscious or phenomenal, they are conceivable; and they may be symbolized so far as they are conceived to resemble anything known or conceived by me, and no further. Experience and the analogies of experience and the logical consequences which these involve are all that science or philosophy can ever justly admit. Let us learn to be more sparing in our assertions. Let a genuine but broad positism rule science and lay the basis of philosophy.

The doctrine of Relation is always admitted to be of primal importance, but the correctness of our doctrine on the subject is equally important. On this point, Mr. Fowler delivers himself as follows: "Nothing is sufficient unto itself. Subjective reality implies objective reality: the two are related by phenomena and knowing. Everything is conditioned by all things. Sensation must have object as well as subject, and we deny our perception of the outward realities at our peril. The distrust of our senses is mental insanity, and leads to physical destruction." It is a striking fact in the history of thought (in all departments), and often quite discouraging, that errors, and even blunders which have been often corrected, continue to be repeated, and that with all the assumption and aspect of an important truth well said or argued.

Now, while it is obvious that no individual phenomenon is sufficient to itself and must be conceived as one of two counterparts, as subject or object, neither of which can be alone, this is not true of the knowable or conceivable universe taken as a whole. This may be sufficient unto itself and, as a whole, absolute, unrelated. This is the theory of the world held by all non-theistic evolutionists. Relation is only between parts of a whole. The relation between all the phenomena of sense has never been doubted. The only question is as to whether all the related phenomena are all *ego* or not. Now, as they all belong to one universe, they all belong to one individual, if the individual constitutes the universe; and that he does is the unformulated doctrine of modern psychological science, which affirms that all phenomena are egoistic. Here, there is no distrust of the senses, but only an explanation of them; and all phenomena, subjective and objective (so called), are fully admitted in their mutual relations and the relations of all to the *ego* as their grand central source and cause and conscious subject. This is ultimate and all-comprehensive. Nothing more remains to be said; and no possible peril can its abettors incur, except the frown of "common sense" and the laugh of fools.

For *The Index*.

A HUNDRED DAYS ABROAD.

BY GEORGE JACOB HOLYOAKE.

CHAPTER III.

In the United States and Canada.

At length, the bright days came to an end, during which we were the guests of Mrs. Thompson at Manhattan; and we accepted the invitation of Colonel Robert G. Ingersoll—sent to me when in Europe—to spend ten days with him at Long Beach, where the white sands stretch out miles before you, appearing in the sunshine or moonlight like a desert of snow, bounded by the dark waves in the distance. The long line of handsome tents, which, far apart, disport along the shore, appear at first to the stranger like arctic dwellings, and you expect to find Esquimaux under them. We have no hotels in England at all to compare with those of Manhattan or Long Beach in extent, spaciousness, and freshness of their clean wood compartments. They are not houses: they are halls,—not one hall, but a series of halls. They are not mansions: they are settlements, capable of accommodating a larger population than is to be found in many well-known English villages, with a tradition of a thousand years behind them. The contrast between America and Holland impresses itself upon the traveller. The houses of the Dutch are generally hardly bigger than a pouncet-box; and you expect to see them inhabited by Aztecs, while the churches of Rotterdam and Haarlem, for instance, are loftier than St. Paul's, and appear as large as the Nottingham or Great Yarmouth market-places. The minister has a sounding board over his head, and his floating con-

Digitized by Google

gregation seem so far from him that he must feel as though he were addressing the people in the next parish. Whereas, in the regions devoted to gayety in America, the churches are but of ordinary dimensions; while their hotels appear as though they would accommodate all the worshippers of Holland. They have churches at the watering-places; but they seem, in comparison to the hotel, hardly larger than a sentry-box.

Nearer the sea than the hotel, Colonel Ingersoll has a house. His family and household, including his butler, coachman, and other colored servants from Washington, were there, which made his home complete, pleasant, and convenient to visitors. Though he had still on hand the duties of chief counsel in the famous State trial of Dorsey and others, then about to be decided, his radiancy of manner was quite undimmed. We found that the American press had not exaggerated the tenderness and grace of domesticity of Mrs. Ingersoll and her daughters. Not less striking were the knowledge and interest with which they discussed questions speculative, moral, and political. Mr. C. P. Farrell, publisher, of New York Avenue, Washington (to whom a wise bold book is a gem which he examines like a connoisseur and values like a collector), Mrs. Farrell, near relatives of our host, and their parents, were there; as also Mrs. and Miss Mamie Ingersoll, the daughter of the late Eben Ingersoll (at whose grave the Colonel pronounced a memorable oration), adding not less to the vivacity of the days we spent at Long Beach. Music of famous quality was one of the luxuries of that agreeable seaside. The programme which daily announced the music to be performed upon the immense terraces which formed part of the far-extending hotel there was adorned by a beautiful, wingless angel, of proportions which meant at least a stature of twelve feet, blowing a trumpet in the air. Among the music-loving guests were the Baron and Baroness von Hesse. The baron had had important experience in founding communities and settlements. He told me that all colony planters, do what they will, and sacrifice their means as much as they may, come to be regarded sooner or later as speculators or imposters, and to be called fools or thieves. Every man who expects to make a fortune without discomfort, or acquire competence without capacity, thrift, or industry, ascribes his ill success to him who brought him there. If a man becomes ill from any cause, whether incidental to the season, to ignorant exposure, or unwise living, he considers the founder of the colony answerable for his malady. Colony planters may display great qualities, make wise selections of places, and do great good, as the second generation are found to own; but to the great pioneer, who founded it, profit rarely comes, and gratitude from those immediately served yet more rarely.

Mr. Dorsey, whom Colonel Ingersoll personally knew, and in whose integrity he had entire belief, was, with other persons connected with the Star Route affair, commonly regarded as guilty of the charges made against them. However, public impressions in America are not always infallible. The spoils of office, which are liable to change hands at every presidential election, breeds so many professional competitors for them, that every public man supposed to profit by any great enterprise which he has matured is considered to come into possession of his gain by predatory skill. Colonel Ingersoll, who makes it a rule—as unusual as it is creditable—never to appear in a case which he does not believe to be just, became the defender of Mr. Dorsey, and had to contend against the whole influence of the government. Great as was his reputation for personal integrity, he was subjected to quite a campaign of calumny. He put it to me thus: "Should I not be base, if I refused to defend a man whom I believed to be innocent because the public thought him guilty? In defending Mr. Dorsey in the present state of public opinion, I am myself suspected of some criminal complicity with his alleged guilt, or of appearing in the case only from considerations of professional advantage. But I should be really criminal in my own mind, and in the eyes of every honest and discerning man who knows the facts, if I allowed an innocent man to suffer, when it was in my power to save him." I agreed with the intrepid advocate, who ultimately had the satisfaction of obtaining a verdict in favor of his client.

The forensic and platform brilliance by which our host is distinguished is hereditary in the Ingersoll family. One of his ancestors held a post under the crown in the days of George III., which preceded independence; and one of his duties, if I remember rightly, was that of receiver of stamps. On proceeding to the city where he dwelt, an excited crowd intercepted him to get from him those believed to be in his possession, and prevent their issue. The mob was not quite sure what they wanted to be at, or what it was safe to do, but still they "felt like killing him"; and, had he not been a man of courage and wit, they would have ended by doing it. As a pretext for further action, they began by requiring him to give a cheer for "Adams and Liberty," believing he would never comply. He was riding on a white horse, when he promptly stood up in the stirrups, and in a hearty way, with a loud, sonorous voice, did what was required. He then cried out, "Fellow-citizens, I now understand a passage in Revelations which was never clear to me before,—'Behold a man rode on a white horse, and Hell and Death followed after him.'" His drollery saved him from the Puritan infuriates, who were familiar with the Scripture and astounded at the ready application of the passage to themselves; and he was allowed to pass without further molestation.

In the restaurants of Coney Island, we found a popular dish to be "Jumbo Clam Bake," named after the famous elephant then recently imported from England. We sent him a bun on our arrival; for the great creature lived near us when he was in Regent's Park, in London. It was a satisfaction to find the huge friend whom we had known growing in stature and in favor, and regarded as a king of beasts in the land of wonder to which he had come.

Mr. Bright has an honest repugnance to disproportionate estimate of himself or his services. A man of sense is aware that men will in the end estimate him at his value, which the majority, in the long run, discern pretty accurately; and anything said of him which exceeds the truth is not praise, but disservice, since it disposes persons, conscious of the exaggeration, to distrust any true measure of merit in one overlauded. Real praise, therefore, is a far more difficult art than that of censure. Admiration may come from any one who is charmed, but praise can only be given by equals. The quality a man possesses is more easily discovered by his praise than his censure: by the nature of his praise, he betrays the taste and attainment of his own mind. Blame may be given without any ideal of excellence in the mind, but praise implies its possession.

When Ouless was painting Mr. Bright, he, observing very few things in the studio beyond an easel, a maul stick, and some pigment of paint, said, "You do business, Mr. Ouless, on a very small capital." Mr. Bright being an artist in oratory, none know better than he that a painter's capital is his skill. The orator does business on the platform with less sign of capital than the painter, for there is nothing to be seen but himself. My townsmen in Birmingham, wanting a photograph of Mr. Bright at full length for a sculptor to refer to in working on a marble statue, induced Mr. Bright to sit to Mayall, who produced, with his accustomed aptness, a work of art. Though of almost life size, it has no exaggeration. Seeing my interest in it, Mr. Mayall gave me a copy of it, which framed in a strong case with movable lid, in which the portrait could be seen at will, yet calculated to bear without risk a sea voyage, I took to America. Mr. Millais has painted Mr. Gladstone in a manner worthy of descending to posterity, who will see the great Premier as this age has known him. But his portrait of Mr. Bright is a very different thing. Excepting that it would sell for more, I would for all purposes of pleasure and reality have Mayall's portrait. It is the great orator just as we have seen him in his day of power on the platform, or as the House of Commons has seen him when the cry goes through the corridors, "Bright's up." The attitude is his, unaffected and resolute. His lips are compressed, as they are when the inspiration of passion is on him. His look is daring and defiant, with the sense of conscious power. Age has changed his physical aspect; and he will no more appear the same, though his fire is not yet abated. It could only be to oblige his constituents that he recalled that platform expression before the camera. Mr. Wendell Phillips said to me in 1879, "Ask Mr. Bright if he will ever come to see his friends in America," and there is no one whom Mr. Bright would feel more honor in meeting than Phillips.

I put the question to Mr. Bright one day in the House of Commons. "Tell Mr. Phillips," he said, "that the people of America will never see me." "Then," I said, "they shall see you in the portrait I will take them." On my arrival, I presented it to my friend Mr. Charlton, of Chicago, who has real honor for Mr. Bright, who has more means than any other man of enabling all who desire it to see it. Mr. Smalley, of the New York *Tribune*, had given a description of the portrait in one of his letters; and great interest arose thereby. The editors of *Harper's Magazine* were desirous of engraving the portrait. I answered that, as I had given it to Mr. Charlton, it was his property, and the decision rested with him. The editor of the *Century* also expressed a wish to engrave it; and, on learning that they had already written to Mr. G. W. Smalley, of London, to furnish a paper on Mr. Bright, to accompany the engraving, I declined a proposal that I should write one myself. Mr. Smalley had published a small volume, in which the character of Mr. Bright as an orator and politician was delineated with more judgment, force, and truth than by any other writer whom I have read. With personal knowledge of the great orators of Europe as well as America, he has an eye of more precision for English characteristics than an English writer could have. The engraving, I believe, has been made to the satisfaction of the *Century*, who have given us so many fine portraits in their magazine; and it may appear now any month.

Some unexpected events occurred before matters reached that stage. On arriving at the customs house, at New York, the officers very courteously accepted my assurance that I had no dutiable article with me save the portrait of Mr. Bright,—a slight examination of our travelling trunks being deemed sufficient. They did not dispute my word that the great case I had with me was what I declared it to be,—a portrait of Mr. Bright; but they wished to see it themselves as a matter of interest. To do this, it was necessary to send for a carpenter to unscrew it. They were delighted with it, and were the first persons who saw it in America. Indeed, every officer with scruples about tariffs soon gathered round it. It was necessary for me to state its value. I said it had two values; and I would declare both, as I could not tell which they meant. The mere production of a photograph so large as that would be, probably, £10, when the camera was at hand and others could be produced; but, as it was the only copy that could be exported, I should not sell it, if that was my object, for less than £50. But my intention was to present it to a citizen of the States, and for the gratification of the American public, to whom it would be shown. So the import duty was fixed nominally at six dollars, the chief officer saying the customs laws obliged them to make some charge, but that, if I represented to the authorities of Chicago that I intended to make a gift of it, they would, no doubt, repay me the duty. I said I should not give them that trouble, as I willingly paid the six dollars. The officers of the customs would, I have no doubt, have admitted it free, had it been within their discretion.

Afterward, I had a more curious experience with the authorities of customs. The Mayor of Brighton, Alderman W. H. Hallett, who had promoted during his third mayoralty the first Congress of Health held in England, had caused to be published a handsome volume containing all the papers and three fine portraits of Edwin Chadwick, C.B., the chief originator of sanitary science, Dr. W. B. Richardson, who was president of the Congress, and the Mayor, which was added by the desire of others. The volume contained papers of matters important in the household and not less so in cities; and, in the cities of America, such information is often needed. The design was to give a volume to a hundred or more cities, and also documents of scientific interest relating to Brighton, likely to be useful in the coast cities of the United States. In paying the freight, I was informed that there was also a demand of a hundred dollars for custom duties. Protection is a good thing, I am aware, and many people need to be protected from evils known and unknown; but I was surprised to find that an intelligent country like America thought it necessary to be protected from information acquired at much cost by others, and unobtainable in that form by themselves. When it was represented that the volumes were to be given away, the customs authorities caused me to be informed that, if I would write to the various institutes in view, and obtain letters from the secretaries testifying they were will-

Digitized by Google

ing to receive such books, and desiring copies to be forwarded, the duty would be remitted. If I remember rightly, the customs went further, and informed me that, if I would then send them the names and addresses, they would themselves direct and forward the books, which I suppose meant that they would frank them free of cost to me, which was quite a courteous offer to make. In answer, I explained that the reason of the books being consigned to me was that the difficulty was great in England to find out what institution might profit by them or care for them in America, and it was thought that during my travels in the States I should find institutions willing to have them, and could distribute them. This I was willing to do; but to ascertain that in New York it would be necessary to take chambers and employ two or three clerks to ascertain all the cities having sanitary associations, or institutions having interest in sanitary matters, and correspond with them and keep open the office till the necessary letters were collected, might have detained me in New York a month, and cost £100. Therefore, I said that, on the whole, they had better serve the Brighton books as they did the tea in Boston Harbor at an earlier date, —empty the bale into the sea,—when books, like bread, cast upon the waters, might be found after many days and do somebody good. It was then suggested by the authorities that the matter should stand over, and that, as I was going to Washington, I might see the Commissioner of Customs, and find out whether it was in their power to distribute the books free of duty.

CHAPTER IV.

Singular Law against Gifts.

Some unexpected events occurred before matters reached that stage. On arriving at the Customs House at New York, the officers very courteously accepted my assurance that I had no dutiable article with me, save the portrait of Mr. Bright, a slight examination of our travelling trunks being deemed sufficient. They did not dispute my word that the great case I had with me was what I declared it to be, a portrait of Mr. Bright; but they wished to see it themselves as a matter of interest. To do this, it was necessary to send for a carpenter to unscrew it. They were delighted with it, and were the first persons who saw it in America. Indeed, every officer with scruples about tariffs soon gathered round it. It was necessary for me to state its value. I said it had two values; and I would declare both, as I could not tell which they meant. The mere production of a photograph so large as that would be, probably, £10, when the camera was at hand and others could be produced; but, as it was the only copy that could be exported, I should not sell it, if that was my object, for less than £50. But my intention was to present it to a citizen of the States, and for the gratification of the American public, to whom it would be shown. So the import duty was fixed nominally at six dollars, the chief officer saying the customs laws obliged them to make some charge, but that, if I represented to the authorities of Chicago that I intended to make a gift of it, they would no doubt repay me the duty. I said I would not give them that trouble, as I willingly paid the six dollars. The officers of the customs would, I have no doubt, have admitted it free, had it been within their discretion.

Afterward, I had more curious experience with the authorities of customs. The Mayor of Brighton (Alderman W. H. Hallett), who had promoted during his third mayoralty the first Congress of Health held in England, had caused to be published a handsome volume containing all the papers and three fine portraits of Edwin Chadwick, C.B., the chief originator of sanitary science, Dr. W. B. Richardson, who was president of the Congress, and the Mayor, which was added by the desire of others. The volume contained papers of matters important in the household and not less so in cities; and in the cities of America such information is often needed. The design was to give a volume to a hundred or more cities, and also documents of scientific interest relating to Brighton, likely to be useful in the coast cities of the United States. In paying the freight, I was informed that there was also a demand of a hundred dollars for custom duties. Protection is a good thing I am aware, and many people need to be protected from evils known and unknown; but I was surprised to find that an intelligent country like America thought it necessary to be protected from information acquired at much cost by others, and unobtainable in that form by themselves. When it was represented that the volumes were to be given away, the customs authorities caused me to be informed that, if I would write to the various institutes in view, and obtain letters from the secretaries testifying they were willing to receive such books, and desiring copies to be forwarded, the duty would be remitted. If I remember rightly, the customs went further, and informed me that, if I would then send them the names and addresses, they would themselves direct and forward the books, which I suppose meant that they would frank them free of cost to me,—which was quite a courteous offer to make. In answer, I explained that the reason of the books being consigned to me was that the difficulty was great in England to find out what institution might profit by them or care for them in America; and it was thought that during my travels in the States I should find institutions willing to have them, and could distribute them. This I was willing to do; but, to ascertain that in New York, it would be necessary to take chambers and employ two or three clerks to ascertain all the cities having sanitary associations, or institutes having interest in sanitary matters, and correspond with them and keep open the office till the necessary letters were collected, which might have detained me in New York a month and cost £100. Therefore, I said, on the whole, they had better serve the Brighton books as they did the tea in Boston Harbor at an earlier date,—empty the bale into the sea,—when books, like bread, cast upon the waters, might be found after many days, and do somebody good. It was then suggested by the authorities that the matter should stand over, and that, as I was going to Washington, I might see the Commissioner of Customs, and find out whether it was in their power to distribute the books free of duty.

When at Washington, Gen. Mussey kindly undertook to accompany me to the Commissioner of Customs, who very readily paid attention to the matter, but came to the conclusion he had no power to authorize the remission of the duty upon the gift books I had imported, and reminded me that I must be aware that he was bound by the terms of the statute he had to administer. If it were otherwise, he should have been very glad to authorize the distribution of the books. I answered that I wished nothing that the statutes of the realm (or the republic, if that was the right term) did not warrant, but I should like to see the statute. This he readily produced, and gave me at my request a copy of that portion which concerned the question in hand, which was as follows :—

United States Customs Tariff: Chapter III., section 5. Books, maps, and charts specially imported, not more than two copies in any one invoice, in good faith for the use of any society incorporated or established for philosophical, literary, or religious purposes, or for the encouragement of the fine arts, or for the use or by the order of any college, academy, school, or seminary of learning in the United States.

Upon hearing this clause read, I remarked to the Commissioner that nothing save a minor present could be made to America, and that only by an intrepid and wealthy donor prepared to take infinite trouble to make his gift. The man who drew that clause must have been under the impression that the United States was so ill-regarded a country that no one would ever think of giving anything to it, or that it was so opulent and self-satisfied as to be above receiving any present, however useful or well intended. Mr. Evarts has written one of those graceful letters, in which he excels, inviting Mr. Bright to visit America. Yet you have no provision in your statutes whereby you can admit his portrait, unless the importer pays a penalty at the custom house for his temerity in making the offer of it. I have experience that, by a law of courtesy and respect, higher than that of the tariff, you will admit his portrait to be landed upon your shores; while, under this law now read to me, it would require a procedure as complicated as that necessary to run a railway to get it transmitted duty free to its destined owner.

At this point, the Commissioner was good enough to suggest that I should make a declaration in writing as to the nature of the Health Congress Volume, describing its actual nature, that no sale was sought, and no profit of any kind contemplated on my part, or on that of the donor of the work. It was then arranged that the question should be specially considered. The Commissioner was sensible of the kindness of the Mayor of Brighton in making such a gift to the American cities. The required declarations being duly made and subscribed, Gen. Mussey, whose suggestiveness had oft been equal to greater emergencies, asked the Commissioner whether it was not within his knowledge that the Smithsonian Institution had a charter by which it was empowered to receive consignments of books for literary and scientific purposes. It was at once apparent that the general had "struck oil"; and it was arranged that we should visit President Spencer F. Baird, of that famous institution, and consult him. We crossed on our way Hooker's quarter, if I remember rightly the name which the district acquired when occupied by an army of defence. The proceedings in that quarter were described to me as being such that they caused Satan himself to perspire, who had mainly to attend to them in the days of their encampment there. We beguiled ourselves in Hooker's Land with discussing affairs of administration, and through the forest in which the great institution is situated, until we found it impossible to keep our ideas straight. Our principles were dried and curled up before we arrived at the mighty building. Its increase, since I last saw it, its spacious and splendid appointments, were a wonder to me. The British Museum and South Kensington rolled into one would not more astonish a visitor. The reading-room at South Kensington contains nothing, generally, one wants to read: that at the Washington Institute contains piles of newspapers issued the same morning, so that, when detained there on business, you found it quite a human place to be in. Prof. Baird had not arrived, but was on his way there, and on that day he was on his way several hours; but, by aid of the telephone, we could always ascertain at what point, and by what business he was diverted from arriving. When an interview became possible, he explained that the Institute did possess a charter under which any consignment could be made to them free of duty. I understood him to say that they received a bale of goods a day from Europe, that the vessels bring them free, the railways transmit them free, and the government admit them duty free: so somebody does give America something, and they get it. Upon asking Prof. Baird how a person found out the way of addressing him, he answered that they had an agent, Mr. Westley, of 28 Essex Street, Temple Bar, London, when I said that I had lived nine years opposite his door, and that since I had left home I had travelled six thousand miles to Prof. Baird's chambers to discover that what I wanted was on the opposite side of my own street, and that a very narrow street, too. I afterward mentioned to Mr. Frelinghuysen that, if they would publish a guide book with only that one fact in it, it would save us a great deal of trouble in Europe. Before leaving England, I had made inquiries of persons officially connected with America, and it never occurred to them to refer me to Mr. Westley, of Essex Street. I had seen a notice on his door that he was agent to the Smithsonian Institute, which I took to mean that he collected their debts. The existence of the charter, the knowledge of which was so important to me, I believe, is yet unknown to Mr. Westley; for, when I spoke to him of it, he displayed no knowledge of it. I believe it is entirely an American secret, and one remarkably well kept. One function of the Smithsonian Institute, to which I know nothing similar in England, is that the president undertakes to receive gifts intended as aids to civic intelligence, and to find out where they would be useful, and forward them. This the professor kindly undertook to do for me, and so I made the consignment of the reports of the Brighton Congress of Health to him.

Before these inquiries were completed in Washington, we had begun to turn our footsteps Canadawards, where, having the advantage of consulting Mr. Charlton, I was enabled to go in a bee-line to the person or place I sought.

There are several San Antonios in America. The most famous is one in Texas, which is a town. When the late Mr. White, M.P. for Brighton, was travelling in the West, he heard, one evening in the hotel, a glowing account of a beautiful San Antonio River. The way to it was difficult to traverse, but it seemed worth the risk to behold a sight described as so enchanting. Mrs. White relates that they went the next day. They were appalled at the hills they had

Digitized by Google

to surmount, and the ravines and channels they had to cross. Masses of lava and boulder lay in their way. The strong-limbed and sagacious horses spread themselves out, dragged them gallantly over the rocks, and climbed over the mounds, giving the occupants of the carriage the opportunity of falling out whichever way they pleased. They went on for hours and for miles: the higher they climbed and the further they went, the less they saw of San Antonio. At length, they gave up the pursuit, glad if they should reach their hotel again without broken bones. At dinner, they met again the persons who had allured them by their description of the journey. "We never got to the river," said Mr. White. "Neither did we," answered his informant: "we told you of our adventure, and of the prospect held out to us; and we were glad that you should go on the same expedition, with the hope that you might discover it." Both explorers came to the conclusion that there was no river, and that its existence was a pure myth of the carriage driver of that quarter. The non-existence of San Antonio was never likely to be disproved, since it was pretty certain that every traveller would give up the search, intimidated by the perils of the way. As some authors are said to deserve the gratitude of mankind more for the passages they have blotted than for those they have retained, so, in some parts of the continent of America, more demands are made upon the admiration of the traveller for the beauties which he has never discovered than for those which he has seen. It is prudent, therefore, in the enterprising visitor, to make sure beforehand of the existence of scenes which he is invited to inspect.

CORRESPONDENCE.

A WORD ON CAPITAL PUNISHMENT WITH BENEFIT OF THE CLERGY.

Editors of The Index:—

The difficulty suggested by Mr. Powell may be explained or at least illuminated by the old law book of Ireland called the *Senchus Mov*. This is a poematic digest of ancient law. One of its stories, as related by Maine, is as follows: Odhran, the charioteer of St. Patrick,—so says the preface,—had been killed; and the question arose whether Nuada, the slayer, should die, or whether the saint was bound by his own principles to unconditional forgiveness. St. Patrick did not decide the point himself. He chose to go according to the judgment of the royal poet of the Men of Erin, Dubhthach Mac na Lugair, who blessed the mouth of Dubhthach. By the poem which then flowed out of the arbitrator's mouth, it is decreed that Nuada is to die; but he must thereafter be immediately, by St. Patrick's intercession, admitted to Paradise.

The commentator adds: What is understood by this decision revealed by God through Dubhthach is this,—a middle ground between forgiveness and retaliation. For, before Patrick, retaliation prevailed in Erin, and Patrick brought forgiveness; that is, Nuada was put to death, but Patrick obtained heaven for him. At present, he adds, as there is no one among us capable of bestowing heaven, we do not put any one to death for an accidental crime, but allow it to be commuted by a fine; and, for an intentional crime, we set a man on the sea in a boat.

This delightful piety is to be commended to the man of this generation: if you can't give heaven, don't say anything about it, only don't kill your man. But, if you kill your man, by all means do your best to get him into heaven. Meanwhile, over the way is dying a poor wretch who has killed nobody, only himself; and the parson does not worry over his not going to Paradise. Query: if he were dying in public, would more pains be taken to give him a good send off? The exact relation between capital punishment and heaven is not yet determined. X.

UNDER the title "The New Astronomy" will appear, in the coming volume of the *Century*, several popular articles by Prof. S. P. Langley, describing, with many illustrations, the most interesting of the recent discoveries in the sun and stars, and introducing (what to many readers will be new) the consideration of our own physical relations to the heavenly bodies, as shown by the study of celestial physics.

MISCELLANEOUS.

"THIS IS THE FINGER OF GOD" is the title of an article in the *Christian Statesman*, in which that journal mentions the terrible convulsions in Java, the earthquake at Ischia, the cholera in India and Egypt, together with accidents, fires, tornadoes, floods, and shipwrecks, and says regretfully that "most journals studiously avoid the slightest intimation—many, indeed, strenuously deny—that these calamities have any connection with the sins of men or contain any moral lesson for those who survive." The *Christian Statesman* would not, of course, have us believe that great disturbances like these in the Indian Archipelago and the Bay of Naples resulted from the sins of men by natural causation. Its notion seems to be that God becomes angry with the people because of their sins, and deliberately destroys men, women, and children by an immediate, arbitrary exercise of his power.

THE *Unitarian Herald*, an English journal, says: "In a letter to *The Index*, on the subject of the Parliamentary Oath, Mr. G. J. Holyoake again expresses his opinion that the oath should not be taken by any one who does not believe in all its terms. At the same time, he thinks that an Agnostic or Atheist, who takes the oath, 'is not much worse than the Unitarian, who takes it while he does not believe in an avenging Deity.' *The Index* is very fond of a dig at Unitarianism, but surely Mr. Holyoake has gone out of his way in this slightly sinister comparison. The Unitarian—if he is one of the majority of Unitarians—may not believe in an 'avenging' Deity,—that is, in a Deity who takes everlasting vengeance on the sinner; but the Unitarian believes that he ought to be and shall be punished, if he does wrong. Whatever theory he has about it, he believes that to violate a promise should bring and will bring evil consequences,—as Mr. Holyoake, no doubt, firmly believes for himself. If the Unitarian further believes that all events are under a Divine Providence, the Christian oath (when not in a Trinitarian form) seems perfectly open to his acceptance. Probably most Unitarians would, for other reasons, dispense with the oath. Having said so much, we commend to all Freethinkers Mr. Holyoake's appeal to their noblest sentiment, when he adds: 'As I think a Freethinker should have a higher morality than a Christian, he should be scrupulous and of perfectly good faith. If this excellence is pointed out, many will try to attain to it; but, if it is never insisted upon, it will be thought of no consequence.'" Of course all Unitarians hold, as Mr. Holyoake does, that the violation of a promise "will bring evil consequences." But an implication of the Christian oath, it seems to us, is that whoever utters falsehood under oath will be punished in a manner or to an extent that he is not likely to be punished, if he simply speaks falsely when not under oath. The *Unitarian Herald* does us injustice, when it says, "*The Index* is very fond of a dig at Unitarianism." As to Unitarian *doctrine*, we are very careful in referring to it, since Unitarians are not agreed on this point, some claiming that it includes all the teachings of the New Testament rightly interpreted and accepts Jesus as a superhuman being and as a Saviour; while others, like Mr. Savage, claim it is broader than Christianity, and can consistently claim for adherents all honest seekers after truth. We feel at liberty always to express our views on what we see in their papers or on the proceedings of their conventions, and to point out in the interests of truth and for their own good what we conceive to be errors and inconsistencies; but Unitarianism never, even in this respect, receives a "dig" from *The Index*, except when it is deserved, and not always then. For Unitarians, as a class, we have great respect, and Unitarianism we regard as the most liberalized, and in its influence, the most liberalizing of any of the Christian sects.

BOOK NOTICES.

GOD AND THE STATE. By Michael Bakounine, founder of Nihilism and Apostle of Anarchy, with a Preface by Carlo Cafiero and Elisée Reclus. Translated from the French by Benjamin R. Tucker, editor of *Liberty*. Boston: Benjamin R. Tucker, publisher, 1883.

Michael Bakounine was a Russian gentleman related by marriage to the nobility, but all his sympathies were with the common people; and he was one of the first to join those who believed the existing order of things should be destroyed and replaced by an order in which, as Bakounine was fond of saying, "Human justice will be substituted for divine justice." He was sincere, earnest, and courageous, and suffered imprisonment and exile. His influence was felt among the students of Russia, the insurgents of Dresden, his brother exiles in Siberia, and in France, Switzerland, and Italy. His name is held in esteem by the revolutionists, and the translation of this little work shows that he is not without admirers in this country. The pamphlet, we are told, is but a "fragment of a letter or report." It is atheistic and materialistic, and attempts to show that about all the evils of society have resulted from, and been perpetuated by, belief in God. It points out a number of theological absurdities, and contains some good reflections, which, although neither original nor profound, are expressed with clearness and force. The work is fragmentary in matter and revolutionary in thought and spirit. It is no new contribution to thought. Indeed, much of the thought is obsolete among the great thinkers of all lands; and the reasoning, when the most confident in tone, is often the most superficial. Here is a sample of the author's logic: "If God is, man is a slave: now, man can and must be free, then God does not exist." An acquaintance with evolution, as now taught by English and German thinkers, and especially with psychology and sociology, would have enabled the writer to correct many of his errors and to see the unscientific and unphilosophic character of many of the statements advanced by him as truisms. Thinkers far more radical than he, in the true sense of the word, will find much to criticise in his thought, while they will admire his humanitarian spirit and his sincere devotion to what he thought true and right.

THE STORY OF THEODORE PARKER. By Frances E. Cooke. With an Introduction by Grace A. Oliver. Boston: Cupples, Upham & Co., Old Corner Bookstore.

This is the first book of a series to be issued by this firm entitled "The Lives of the Great and Good." This is a reprint from an English edition which was duly noticed in these columns; but this American edition is enriched by an excellent "Introduction" by Mrs. Oliver, almost equal in length and interest to the main portion of the book. This "Introduction" makes the book fitted for old and young readers alike, as Mrs. Cooke's "Story" is told in a manner calculated to attract and charm the young, while Mrs. Oliver's "Introduction" is more fitted for the thoughtful consideration of their elders.

THE *Century* for October is an excellent number. We can only mention a few of its attractions, among which the bright, original serial by an anonymous author, "The Bread-winners," is by no means the least. Edmund C. Stedman gives us a poet's estimate of a poet in his article on Longfellow, which is prefaced by a frontispiece and new portrait of the elder poet. Attention is called to the coming celebration of the four hundredth centennial of Martin Luther's birth, on the 10th of November next, by a sketch of his life and work, entitled "Martin Luther after Four Hundred Years," written by George P. Fisher, and accompanied by a copy of a portrait of the great reformer, a wood-cut engraved by Lucas Cranach in 1546. H. H. gives us, in "Out-door Industries in Southern California," one of her ever-charming sketches of travel. R. G. White writes in his usual wide-awake vein of "Old New York and its Houses," to which the illustrations by Mary Hallock Foote and members of the New York Architectural League give additional interest. Austin Dobson has a profusely illustrated article on "The Pupils of Thomas Bewick." Howells' "A Woman's Reason" is concluded in a satisfactory manner in this number. The poems are by L. Frank Tooker, Roger Riordan, Charlotte Fiske Bates, Edna Dale, Walter Carey, Mary E. Wilkins, J. Bouchman, and Richard A. Jackson.

THE *Art Amateur* for September is a bright, entertaining number, although it possesses no one long article of great general interest. The first two pages consist of lively gossip and personalities about painters and pictures and the tricks of picture-dealers. M. Dumas, it seems, bought a signed Corot, which proves to be the work of a much less noted painter, M. Trouillebert; and this gives occasion to narrate

Digitized by Google

many instances of similar mistakes and impositions. The money value of a picture will always depend largely on the reputation of the painter; but the real lover of art may continue to enjoy a picture which he has chosen for its own merit, in spite of any frauds of the dealers. The woodcuts of the pictures in the Munich and Amsterdam expositions do not give us a very high idea of the merit of the originals. The charm of color and expression is of course lost, and there seems to be little originality of design or composition which survives in the reproduction. The articles on sculpture, etching, wood-work, and china-painting, furnish much valuable information to amateur designers, while decorative art has its usual attention.

THE opening chapters of seven series of articles in the third annual course of the Chautauqua Young Folks' Reading Union will be given in the October *Wide Awake*. *Wide Awake* is the official organ of the C. Y. F. R. U. "In Case of Accident," a series of twelve lucid, practical talks about emergencies and how to meet them, is by Dr. D. A. Sargent, of Harvard College Gymnasium. The third series of "Little Biographies" will embody the universally desired knowledge of "How Success is Won," and will be written by Mrs. Sarah K. Bolton, recently of the *Congregationalist* editorial staff. These biographies will be welcomed for their freshness, the twelve representative men chosen being successful men of our own time and country. "Tales of the Pathfinders," by Arthur Gilman, M.A., will give, under the vivid light of to-day, the traditions and romantic history of the earliest Atlantic voyages and New World discoveries and conquests.

THE September number of *Macmillan's Magazine* is a particularly good one, as the following list of its table of contents will show: "The 'Why' and the 'How' of Land Nationalization," by Alfred R. Wallace; "Trouting in England and America"; "In the Heart of the Vosges"; "The Emperor Julian's View of Christianity"; "On a Neglected Book," an article which calls attention to some of the fine thoughts in Dr. Johnson's *Rambler*; "Some Personal Recollections of Madame Mohl," a delightful biographical sketch which introduces some well-known names. Of fiction, this number gives three chapters of Mrs. Oliphant's "The Wizard's Son," and the conclusion of Julian Hawthorne's "Fortune's Fool."

PERSONAL ITEMS.

THE health of Herbert Spencer is improving. He has resumed work, and nearly completed the third volume of his book on Sociology.

REV. MINOT J. SAVAGE writes from Rome, latter part of August, that it is his intention to sail from Liverpool by the "Baltic," September 22.

IN one of his recent sermons, Rev. Mr. Talmage, of Brooklyn, urged his hearers to "crowd to God's Grand Central Depot, and be ready for the word, 'All aboard for heaven!'"

JOHN PAYNE COLLIER, the philologist and bibliographer, well known for his Shaksperian researches, died in London on Tuesday, September 18, at the advanced age of ninety-four.

KERSEY GRAVES, a well-known Spiritualist, author of a work entitled *Sixteen Crucified Saviours* and of several other works, died at his home near Richmond, Ind., September 4. He was esteemed by those who knew him for his estimable qualities.

THE friends of Principal Dawson, of Montreal, have presented him with a purse of $5,000, to enable him to take a year's rest in Europe. The money was subscribed as a compliment for the great services he has rendered to the cause of science and to the University and the city of Montreal.

THE New York correspondent of the *Sunday Herald* of this city says: "Mr. Oscar Wilde sailed from New York last week, and no one knew anything about it until they saw his name among the list of the 'Arizona's' passengers. Thus ends the career in America of this literary mountebank. Frauds are bound to find their level, if we only have the patience to wait."

JUNIUS BRUTUS BOOTH—the well-known actor, eldest son of Junius Brutus Booth, brother to John Wilkes and Edwin Booth, and the husband of Agnes Booth, all of whom have been or are distinguished in their profession, the stage—died at his home at Manchester-by-the-Sea, on Monday, the 17th inst., aged sixty-one years. Mr. Booth was a man of genial nature, and a favorite with all who knew him.

SAYS the New York *Sun*: "Rev. Dr. Samuel Buel, one of the clergymen who presented Rev. R. Heber Newton for heresy, said last evening: 'I have nothing more to do with the presentation of Mr. Newton. Bishop Potter has not acted in the matter, and I do not believe that he will do so. The canons of the Church allow him to drop the whole affair. I think he has dropped it, and that nothing will ever be done about it.'"

SAYS the *Radical Review*: "Mr. William M. Salter, the leader of the Society for Ethical Culture, has returned from Colorado, where he has been spending the summer in study and recreation. He is now prepared to begin his work with renewed vigor, and looks hopefully forward to a year fruitful of good results. Mr. Salter's popularity increased with every lecture last year, and so we may hope that he will address large audiences this year."

MR. D. A. WASSON, referring to his essay on a chapter of Herbert Spencer's writings (an abstract of which was read by a friend at the Concord School last summer), in a letter to the junior editor of this journal, writes: "If I ever print the criticism, you shall have a copy. It will give you no pleasure; but, upon my word, I see not how, after reading it, you should differ from me with regard to the chapter treated, whatever your estimate of Spencer's philosophy in general."

CHARLES H. CODMAN died at his residence in Dorchester on the 18th, from the effect of inhaling the fumes of nitric acid at his store the day previous, when a carboy was accidentally broken. He was fifty-four years old. Mr. Codman was one of the most philanthropic of men, and in him the great reforms of the day had a devoted friend and generous supporter. Temperance, woman suffrage, co-operation, political reform, liberal religious thought,—in all these he was deeply interested, and for them he labored earnestly and effectively. Personally, he was a most genial and sympathetic man, widely known and universally respected and beloved. He was an officer of the Free Religious Association, and a friend of and occasional contributor to *The Index*. He leaves a wife and a son, who have in their bereavement the heartfelt sympathy of a large number who heard with deep sorrow of his sudden and unexpected death. In another column is a deserved tribute to the deceased, from the pen of one who knew him intimately.

THE Republican daily papers of Boston were extremely anxious to know how Wendell Phillips stood politically this year. They even went so far as to state that he had abandoned Butler, and to affirm that he would probably support the Republican party in Massachusetts this fall. Mr. Phillips wrote a letter from which we quote a few sentences to show that the use of vigorous English is not with him among "the lost arts," whatever may be thought of his political or personal preferences: "But, at present, there can be only two political parties. The Republican is one. I distrust and despise the Republicans as hypocrites and time-servers, as double dealers, as soulless carrion masquerading in the grave-clothes of their honored predecessors. They have no right to seek their candidate among high-minded and honorable men. Let them choose a fitting leader from among the Tewksbury Marshes, those peddlers of poor men's bones. The movement which upholds Butler is the protest of earnest men against all this, including within it many very evil elements. This movement is supported by some of the best and most earnest men in the State. Its success will grind to powder the dead weight that strangles and chokes us, as the anti-slavery rising buried the Whig relics beyond resurrection. Such success will give the living hearts and honest men of the State room and chance for a movement to recognize women, protect labor, redeem the cities from rum, and give us a currency that will help and serve business, instead of cramping and undermining it, as bank monopoly and this hybrid currency do now. Consequently, I have not changed my views about Butler, but think he certainly ought to be re-elected, probably will be re-elected, and that he may safely challenge comparison as to career and conduct with any prominent political character in the State."

Black-eyed Peas.

To every reader of *The Index* who will send me their Post-office address and ten cents in stamps, I will send a package containing one hundred of these Peas. Two crops can be made in a year in the South. They sell at from $2 to $3 per bushel, and are the finest table pea that is raised,—very tender and easily cooked.

ALEXANDER KING,
Crockett, Texas.

The Basis of the Ethical Movement.

Why Unitarianism does not Satisfy us.

Two Lectures before the Society for Ethical Culture, of Chicago, by W. M. SALTER.

Price 10 cts. each. For sale at INDEX office and GEO. H. ELLIS, 141 Franklin St.

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—**The Christian Amendment,** by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents, 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

THE QUAKER INVASION OF MASSACHUSETTS. By R. P. HALLOWELL.

1 vol., 16mo. $1.25.

Mr. Hallowell has made an exhaustive study of the persecution of the Quakers by the authorities of the Massachusetts Bay Colony, and in this book he tells the pitiful story very clearly, correcting many inaccuracies in the histories which have generally been accepted as authentic.

*** *For sale by all booksellers. Sent by mail, postpaid, on receipt of price, by the Publishers,*

HOUGHTON, MIFFLIN & CO., Boston.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

CURRENT TOPICS.

THE National Liberal League, at its recent convention at Milwaukee, made a new departure, which will be the subject of some comments in the next number of *The Index*.

WE have received a circular, signed by C. B. Hoffman, President, and Annie L. Diggs, Secretary, of the Kansas Liberal Union, stating that the annual meeting of that association will be held in Forrest Park, Ottawa, Kan., on Saturday and Sunday, October 6 and 7. The circular says: "Liberals are earnestly solicited to attend, as important business affecting the interests of Liberalism in the West will come before the meeting. Representative Liberals from various parts of the State will be present. Good speakers are engaged, and a pleasant reunion is anticipated."

THE Liberal Association of New South Wales is formed upon the following basis: 1. The universal Brotherhood of Man. 2. The inherent right of all individuals to hold, practise, and proclaim any opinions, on all subjects whatsoever, which their conscientious convictions may demand; always provided that this is done in such a manner as may induce no breach of the public peace, or interfere in any way with the like liberty of others. 3. The duty of every individual to conserve and maintain this liberty. 4. The supreme authority of demonstrated fact,—fidelity to knowledge. 5. Aspiration after the highest morality. 6. Respect for known worth. 7. The sanctity of truth. 8. The emancipation of woman. 9. The right of every one to the product of his own labor. 10. Complete secularization of the State.

WE have received from the secretary of the Montreal Free Thought Pioneer Club a catalogue of the books contained in its library, nearly a thousand in number, including the best works on scientific, philosophic, and historic subjects. The club has a reading-room, open daily until 10.30 P.M., well supplied with leading liberal and scientific periodicals. It invites "the co-operation of all those who are in sympathy with the object of the organization, which is 'to facilitate the association of those who have at heart and hold dear that absolute freedom of thought and expression which is the natural right of every rational being; to encourage the study of man in all his relations; and to seek to realize the truth in life, and so to aid in those movements that tend most to the improvement of the individual and of society, and to the unity and freedom of mankind.'"

THE New York *Sun* says that the "vice of the prayer-meeting is that it is the great nursery of cant and hypocrisy. If it was held only when men were really in a state of religious exultation, the case might be different, though even then it would be used by religious humbugs. Ordinarily, however, it induces men to say what they do not in truth mean, and to declare that they have feelings to which they are strangers. It hardens them in cant. They vulgarize and profane the deepest and tenderest language of religion by uttering it in a mechanical and perfunctory way. Of late years, in this country and in England, it seems, the prayer-meeting is pretty generally neglected by church members in the Puritan denominations. It is a declining institution; and it is well for genuine religion that the prayer-meeting should decline and die out, unless it should be actually required to express the real and true religious fervor of those who attend it."

THE Bangor daily *Commercial* says of Mr. S. J. Stewart, the former minister of the Unitarian church in that city, that he has commenced the study of law, and intends to devote the remainder of his life to this profession. It adds: "He believes as much as ever in the cause he has advocated, but feels that the suffering of a man who to-day advocates liberal ideas in the Church boldly is too great for his further endurance. He prefers to place himself in a position where his liberal opinions and political independence will not furnish an excuse for personal enmity, and where he can be judged and defend himself by the same standards of morality as other men. Besides, he has always had a profound interest in the study and principles of law, for the practice of which he is eminently fitted by his keen, logical mind and rare analytical and argumentative powers. We predict that Mr. Stewart will attain to eminence in his new chosen profession."

FREDERICK DOUGLASS said to his colored brethren at Louisville last week: "Parties are made for men, and not men for parties. My hat was made for my head, not my head for my hat. If parties do right, stand by them; but, if they do not uphold the principles laid down in their platforms, down with them. Follow no party blindly. If the Republican party cannot stand a demand for justice and fair play, it ought to go down. If the six million negroes, with one million votes of these men to lean on, and millions of white men at their backs whose hearts are responsive to the claims of humanity, have not enough wisdom and spirit to organize and combine to defend themselves from outrage and oppression, it is no time to expect that the Republican or any other party will combine for them or care for them. This stamping out of the black Republicans of the South has been done in the face of the Republican party. This convention should implore Congress for the restoration of justice and for the abolition of this most detestable state of affairs." Although a Republican, Mr. Douglass cannot be justly charged with servility to any party.

RELIGION seems to be in a promising condition at Paine Hall. The Boston Liberal Club ("infidel") advertised a few Sundays ago a "sermon by the president" on "The Efficacy of Prayer," and said to the public, "Bring your Bibles." The Church of the Divine Homo, Mr. F. S. Cabot, President, and John Storer Cobb, "Prolocutor," held its first meeting in Paine Hall, Sunday, September 16, at which prayer was offered by one of the managers, who, the President of the Liberal Club, and "the congregation," says the *Investigator*, "as if catching his influence, sang 'Old Hundred' and the 'Sweet By and By.'" Some of those whom their orthodox neighbors have hitherto regarded as hardened and hopeless in their "infidelity" joined in the singing, and one or two, who a few years ago were lively Methodists, seemed to warm up to the work in the genuine revival spirit. One could hardly help looking for the mourners' benches. But Rev. W. G. Babcock, the Liberal Unitarian minister and pastor of the Appleton Street Chapel (also in Paine Hall), still holds out against the influences that seem to dominate at that place, although he continues to have a simple religious service.

THE distinguished apostle of the Brahmo Somaj of India, Babu Protap Chunder Mozoomdar, who is on a brief visit to this country, is receiving cordial hospitality among the Unitarians of Boston and vicinity, and wherever he has spoken has charmed his audiences both by his rare eloquence and his evident moral earnestness. It would, perhaps, be a good thing if the tide of missionary zeal were to turn from Hindostan to the United States, if that old country can send hither such preachers and exemplars of righteousness as Mr. Mozoomdar evidently is. He is a pronounced theist, and emphasizes the emotional element in religion more than seems to us healthful; yet a broad spirit of human fellowship and brotherhood pervades his utterances, and we gladly join in welcoming to our shores such a representative of Hindu ability and character. There is another branch of the Brahmo Somaj which Mr. Mozoomdar does not represent, and which, as keeping rationalism more in the front, seems to us to hold a needed place in the reformatory movements of India; but this division in the reform movement there does not prevent our cordially recognizing the ability and devotedness of this eloquent apostle of Hindu Theism.

PLEASURE AND PAIN IN THE ECONOMY OF LIFE.

Readers of John Stuart Mill's posthumously published essays on Religion are not likely to forget his indictment of nature for its cruelties. The indictment, however severe, is a valid enough argument against the method of those theological writers who are in the habit of culling out only the good things from nature, in order to prove the existence of an all-benevolent as well as all-powerful personal Being, who created the universe just as he wished it to be. But the thoughtful reader, when he has had time to catch his breath after getting through with Mill's terrific charge, will see that the philosopher's indictment against nature is quite as one-sided as is the theologian's plea for uniform evidences of benevolent design. With that more scientific theory of nature which regards it as the evolution of the forces and phenomena of life, it is seen that pleasure and pain mingle together as essential agents in the process of development,—the pain being no less necessary than the pleasure, but the pleasure always holding the dominant control.

In all living beings there is an instinctive clinging to life. Despite whatever hardship may attach to its particular form of life, every living creature normally tends to do those things which will continue its life, and to shun those things which will destroy it. What does this instinct mean but that life is nature's intent, her specially cherished and supreme object? This object she insures, whatever else has to be sacrificed; and this she accomplishes in spite of the everywhere active and apparently strong forces of dissolution and death. But how does she accomplish this object? By making pleasure one of its most essential conditions. By the great law that the things which conduce to life, which create life, which preserve life, shall be pleasurable things. The keynote of life has been thus attuned to the sense of joy. It has become so, if not necessarily by design, at least by the very necessities of progressive development. Did not the actual pleasures of life exceed the pains, we can hardly conceive how the universe of conscious life could be kept in existence. So all-dominant is this law in the natural process of evolution and creation that conscious life and joy may almost be used as interchangeable terms. Where the forces of life are in fullest, most unobstructed, and most harmonious action, there is the most genuine delight. Where the forces of life are hindered, diminished, and thrown into jar and chafing against each other, there is pain and misery. Pain is the signal that life is menaced. Pleasure is the motive-power that sets the forces of conscious life into activity, as it is also the result of their free and normal action. It is the attendant thrill of satisfaction as the life-powers proceed, in their various ways, freely and triumphantly to their legitimate achievements. Stop that thrill of satisfaction, put pain and torture in its place, and the wheels of life must erelong cease to go their rounds. Wordsworth showed the philosophic as well as poetic instinct when he made his immortal Ode on Immortality to ring with the tones of joy and even of jollity.

In the brute creation, in spite of the fierce conflicts and struggles for existence, it would seem that pleasure more abounds than pain. In general, the pain is brief, while the joy is more continuous. The birds in our gardens bitterly cry out their distress when an enemy threatens their young; but most of the time they are singing pæans of delight, or are uttering their joy of being by the activity and grace of their movements. Evidently, the lower animal races in general like to live. They have not yet discovered the human art of suicide for ridding themselves of any of their burdens. And the human races that come nearest to the brute animals have the same strong physical adhesion to life. Life seems good to them, notwithstanding all its conflicts and pains. To the civilized man, their lot may not seem an enviable one; but, fortunately for their happiness, they have not been trained to appreciate any higher lot, nor has there yet been developed in them susceptibility for the things that would be most pleasurable to the man of culture.

So, too, in reckoning up the pleasures and pains among different classes of people in civilized society, it is not a proper measurement to judge all alike by the standard of the classes of highest enlightenment and of the most favorable outward condition. There are thousands of people in every large city who appear to have little in their lives worth living for, so poor and burdened are they physically, so poverty-stricken in their mental condition. Yet even these people cling for the most part to their poor lives with a tenacity that is pathetic in its trust; a tenacity that perhaps gives assurance that, even in their lowliness and degradation, they find some joy which may be invisible to eyes that look more loftily, and which, if it have power to spring up under such narrow conditions, may be destined to grow in time to something worthier of human quest. But at present, if their intellects are dull to the pleasures that would most satisfy the cultured mind, they are happily dull also to very much of the deprivation and hardship which such a mind sees in their lot. It is not the ignorant and outwardly most wretched classes of humanity that furnish the most suicides or who make loudest complaint of life as an intolerable burden. They accept life as it has come to them, and, apparently, manage to extract some enjoyment from its hard necessities. It is not these who even entertain the question whether "to be or not to be"; for, since they already are, they prefer to be. It is only the cultured and superfine-brained Hamlets who put to themselves that question, or only those behind whose ambitious dreams of life performance halts and hobbles, too timid and nerveless to reach the goal of desire. But even they who in cowardly fashion run away from the battle of life by putting an end to their own lives, including the lunatic and the temporarily deranged, make only an incalculably small fraction of the whole human race. The vastly greater number find life, with all its cares and burdens and sorrows, sufficiently enjoyable to endure.

And, in balancing the pleasures and pains of human life, it must be remembered, too, that pain is apt to make more noise than joy, that evil is generally more manifest and demonstrative than goodness. The sighs and groans of one heavily burdened heart will make themselves heard, while a hundred hearts around may be quietly enjoying life's good gifts, yet so much as a matter of course that they give no special expression of it. The horrible deed of one wicked man in drenching a home in blood is blazoned through all the newspapers of the country. But there are no telegraph wires that reach into the heart of the hundreds of thousands of virtuous and peaceful homes whose inmates have not gone astray. The heavily burdened heart, when its burden becomes too grievous, instinctively utters its cry of distress, in order that it may attract the sympathy which shall bring the needed relief. The joy-filled heart goes on its way singing to itself, because it needs no sympathy nor help. Hence there may be counted, in human life, more sighs than songs,—not, however, because there are more, but because, for a purpose, nature meant that the sighs should make themselves more heard.

WM. J. POTTER.

OPPRESSION OF WOMEN.

I do not mean disfranchisement, or restrictions on co-education, or exclusion from any profession, or low wages, or ecclesiastical tyranny. Money is power; and there is no liberty for those who are forbidden to spend freely what is really theirs. Yet this is just the position of most women, even in families which are wealthy, enlightened, and in other respects liberal. In the village which was the home of Emerson, and has drunk deeply of his gospel of liberty, the leading ladies in the churches advocate holding fairs and festivals, on the ground that the women have no money of their own to give for any purpose. I know a very sensible and economical lady who was never suffered by her husband, though he was a man of wealth, to have any money to spend, but was merely permitted to buy what she wanted on credit, under a liability of being closely questioned about the reason for her purchases. Even wives who have inherited money sometimes find they cannot get hold of it except by coaxing or teasing their husbands. Nothing is commoner than for a woman to be obliged to explain why she wants more money, and to tell how she has spent what she had last. Girls usually have to tease their mothers into coaxing their fathers. One of the richest members of a society to which I once preached gave his son five dollars to spend at one of our church festivals, but let his grown-up daughter go there without a cent of money, even to pay the entrance-fee. Many men keep their wives and daughters, either intentionally or thoughtlessly, in such a state of pecuniary dependence as is simply slavery. It has been said that the only way a woman can get any money of her own is to become a widow. There is no doubt that many girls hurry into teaching, acting, authorship, or domestic service, simply in order to have money of their own, which they can spend without being questioned annoyingly. Of course, it is well for the members of a family to consult each other about expenditures of importance; but for a man to limit and question his wife to an extent he would not endure himself is tyranny. The relation of husband and wife is slavery, unless both parties enjoy equal liberty in spending the common income without interference. Nothing less is required, either by the marriage covenant, "With all my worldly goods I thee endow," or by the moral law, which declares that no relationship is really virtuous which does not give both parties all the liberty they are able to use. Some restrictions may properly be imposed on children for their own good, and the interest of the whole family may require that the extravagance or carelessness of some members be closely checked; but regulations of this kind should not be enforced simply in the line of sex, or the wife and daughter subjected to any restraint not considered equally proper, in corresponding circumstances, for the husband or son. The only way to learn to spend money wisely is to have a regular supply sufficient for reasonable wants, and full liberty of expending it. Then, all extravagance is promptly punished. The girls or boys who spend too much of their allowance to-day will not have enough to spend to-morrow, and will have the best possible instruction in economy. But people who can get money only by spending what they have and teasing for more are under strong temptation to spend as fast as possible. Many a wife is kept in such ignorance of her husband's resources that she never knows whether she is economical or extravagant. The result is that, if she should become a widow, she would not know how to use her property, or perhaps even how to keep it.

Many a girl has expensive and toilsome instruc-

Digitized by Google

tion in everything except in what she needs most of all to know; that is, how to adapt her plans and wishes to her income. This she cannot begin to do, until she knows what her income really is. The only plan by which the members of a large family can live in such freedom from oppression as is necessary to pure love is that of fixed allowances or shares in the joint income. Two people, of course, can dispense with such formality, and yet have equal liberty in using their common wealth, provided that each is thoughtful for the other's interests and prompt in anticipating the other's wants. The one thing necessary is constant recognition of equal rights. Such recognition cannot be made general, until public opinion is greatly enlightened; and this can be done only by agitation. Legislation, of course, can do nothing; nor can the suffrage, except in so far as it makes women more independent. What is needed is agitation aimed directly at this specific abuse; and I am sure that some who read these words will speak and write powerfully for freedom.

F. M. HOLLAND.

ANTHROPOMORPHISM.

All the religions are of course anthropomorphic. They make man the centre, aim, and crown of things. All things are for his use and behoof. Nature sympathizes with him. The sun is darkened at the death of a great man. The earth opens and swallows up wicked and dissolute cities, or refuses to produce food by way of punishing wicked populations. Above all, a man-like supernatural being created the world and rules it. So that man, through his "Father in the heavens," is filially related to the Almighty Power which upholds the universe. Thus, the religions are all agreed in making man the highest and most highly related creature in the world. He exercises dominion over the lower animals, and tames those which are tamable to his use. Meantime, contact with wild nature, with the ocean in a storm, with a miasmatic atmosphere, with lions and other powerful beasts of prey, with floods, hurricanes, cyclones, and torrid heats, and with earthquakes, shows that nature is not under human control; that is, under the control of a personal, manlike creator, who is exorable and listens to human cries for help in danger. Man is destroyed by all of the above terrible phenomena and demonstrations of nature, in spite of his supplications, vows, and tears.

Thus is the claim of theology, that man is central, and that the world was made by a manlike Creator, who listens to prayer, refuted by experiences of the uselessness of prayer on the part of those who are so unfortunate as to breathe deadly malarious atmospheres, to fall into the clutches of powerful beasts of prey, or to be the victims of floods, earthquakes, and cyclones. Experience shows us that the operations of nature are not conformed to human convenience, that nature is utterly careless of human life or happiness.

Science tells us that there was a *Natura Rerum* before the evolution of man; that is, a nature existing without man. Thus does science deal with the delusions and illusions of mythology and theology, remorselessly perforating them and causing them to collapse. Christian theology or mythology represents that, among the incalculable billions and trillions of human beings who have been born into this life, there was once on a time a man born who was of alleged miraculous, supernatural origin, the Saviour of his kind, although the human race had existed for untold ages before his birth, without any hope of salvation of course, in the absence of a so-called Saviour. The name of this exceptional man was Christ; and he was surrounded by twelve exceptional personalities called apostles, selected by him from the poorer and more ignorant part of his countrymen to propagate his terms of salvation among mankind at large. Christ and his Father, or *The* Father by way of emphasis; and Christ's *Virgin-Mother* Mary, so called; and a purely spiritual personality, the Holy Ghost; and the aforesaid apostles, Matthew, Mark, Luke, John, etc., who were twelve in number, with sundry angels called Michael, Raphael, etc., constitute what may be called the Christian pantheon, whom theology represents as ruling the universe, and of course the human race, whose fortunes here and in the theological hereafter are in their hands to make or mar, according to their sovereign pleasure.

Such is the theological scheme of the government of the universe, of that infinity of worlds and infinite space which science discloses to the modern mind. The whole conception is purely human and anthropomorphic in all its features. The Christian pantheon is evidently an outgrowth of unscientific human nature, and of the human imagination anxious to explain the mystery of existence, and of the universe, and of life and death in human terms, and in the interest of human nature. In the countries of the Old World, where kings and priests have always been in the ascendant as the earthly vicegerents of the personages of the Christian pantheon, art has bodied forth all of them with brush and chisel, so that, visible as their images are everywhere in and on the churches and in wayside chapels and other places, God, Christ, the Virgin Mary, each of the twelve apostles, and the other leading theological personalities, seem to constitute a part of the population, wherever you go.

Then, again, there is the enemy Satan. He is *human*, too, in form. Thus has Christianity, like the ethnic religions which preceded it, tried to humanize the world, and to make man supreme and of supreme importance. Thus has man in all primitive times spun out of his own entrails, as it were, a gorgeous and intricate web wherein he can house himself, and make himself feel at home on the bosom of infinite nature. It has been a natural, a human method of procedure. But, when one is quite or almost alone on the summit of an Alpine range of mountains, or out on the surface of the ocean far away from shore, or in the solitude of a boundless forest or sand plain, alone beneath the unfathomable sky, and isolated from cultivated areas of land and cities and villages, he feels his littleness, his helplessness, striking to his heart, as it were.

The theological scheme of life and salvation looks petty and human, indeed. He fails to find the supreme personalities of theology reigning in the desert and oceanic or mountain solitude. He has no confidence that, if he falls into peril under such circumstances, and is without human help, he will experience any at the hands of Greek Hebrew, or Christian pantheon, by supplicating the persons of those pantheons for assistance. Nature evidently knows nothing of man's gods or supernatural personalities. And, in fact, their existence is purely in the realm of the human imagination. Meantime, they have answered a purpose in the past. They have made unscientific man feel at home in the mysterious universe where he unaccountably found himself, made him feel as if he were not a stranger or friendless orphan here. We have a kindness, then, for "the fair humanities of old religion," though we have outgrown them, and are forced to get along without them. As for the Religion of Humanity, which deifies the aggregated best men of all ages and countries, that does not profess to be anything else than a human religion. Meantime,

> "The All-enfolder,
> The All-upholder,
> Enfolds, upholds He not
> Thee, me, Himself?
> Upsprings not heaven's blue arch high o'er thee?
> Underneath thee does not earth stand fast?
> Seest thou not, nightly climbing,
> Tenderly glancing, eternal stars? . . .
> Through brain and bosom
> Throngs not all life to thee,
> Weaving in everlasting mystery
> Obscurely, clearly, on all sides of thee? . . .
> Name is but sound and smoke
> Beclouding Heaven's warm glow."

By the word "name" in the above often quoted passage from Goethe's *Faust*, the great German poet means all the theological creeds which attempt to define the universe in the narrow terms of human nature. Modern science has taught us that Cosmos cannot be so defined. The universe and the animating principle of it elude definition. In every atom of matter, in the heart and brain of every sentient creature, that principle is working. The star-sown arch above us is visible eternity.

> "Through brain and bosom
> Throngs not all life to thee,
> Weaving in everlasting mystery
> Obscurely, clearly, on all sides of thee?
> Fill with it, to its utmost, thy breast,
> And in the consciousness when thou art wholly blest.
> Then call it what thou wilt,
> Joy! Heart! Love! God!
> I have no name to give it!
> All comes at last to feeling."

B. W. BALL.

THEISM AND EVOLUTION.

"Did matter come by evolution? And, if evolution created matter, who created evolution? . . . Even evolution must have had a beginning, and so it is not remarkable that men should look beyond evolution and see God."—*New York Star.*

It is not a little wonderful the assurance with which theists talk and write about "the creation" of matter, "the creation of evolution," as though everything were a device, and there could be no doubt of it. One would suppose from the dogmatic, even flippant manner and tone which they assume, and in which they treat the whole subject of evolution, that they must have been present and witnessed the operation of creating matter out of nothing. "If belief in God is a gross superstition, it is not good to destroy it," says the writer above quoted. "To deprive the world of its gross superstitions is not commendable; for, to most men, their superstitions are the greatest joys they know." This is about a fair sample of the way in which very many theists, and theologians especially, are given to treating serious investigations after larger knowledge and more radical truths. The fear that truth may undermine some precious feeling, or overthrow some pet notion or long-cherished tradition, is wide-spread and firmly rooted. The habit of looking at a subject from one side or in one way seems to incapacitate men for seeing it in any new or other way, or from any impartial point of view.

It is no more difficult, and less irrational, to think of matter, the ultimate atom of force, as having always existed, as eternal, than it is to think of a self-existent person creating it. We simply know somewhat of the nature and action of force in its concrete manifestation in matter as existing and indestructible, but we do not know anything of force or matter apart from each other; and to talk of mind existing before matter and outside of it is to talk of what we do not know.

We have no ground upon which to say that matter comes of evolution or was ever created; and we may just as well assume that evolution is one of the

Digitized by Google

processes of eternal, inherent, everlasting energy in matter, which is forever changing the forms of matter, both organic and inorganic, in conformity to fixed relationships, as to assume that some man-like being, too great to be comprehensible, has miraculously and toy-like made the world that is, and that has been, and that science shows has come by natural, impersonal causes. It is not rational to say that a God made a part of the universe and nature the other part; and, if God made all, then did he not make the earthquake? Did he not send the pestilence and the cyclone? Does he not even now cause unspeakable suffering and misery? But every intelligent person knows that natural forces, chemical or mechanical, are not personal, but, like electricity or steam, come from the combination of certain elements in which they may have been silently stored for ages.

The idea of a miraculous artificer intervening to correct or repair his blundering, imperfect machinery is too puerile and unphilosophical to be entertained by intelligent minds, and would not be, were it not for the force of tradition and habit. The evolutionary view which science gives is not only adequate and consistent with most of the facts of existence and human experience, but it is a noble and inspiring view, and is destined to assert its claims with all intelligent men and women.

"It takes away our God and our religion," say the theists, "and we cannot tolerate it." It is "freethinkers' twaddle." We must have a God, they insist, something to worship. Judging from the language of the writer in the *Star*, it does not matter greatly what, if it be even "a golden calf." And why not? Men generally worship that which is most like themselves. Religion comes of sentiment and feeling, not of knowledge; and the objects of worship throughout the globe are as various as are the characters of nations and peoples.

It is not difficult to ridicule the great fact of evolution and please the popular prejudice by opprobrious epithets; but the time is coming, I trust, and is not far off, when it will not be considered a sin to hold and teach the non-miraculous origin of all things.

A. N. A.

UNITARIAN MINISTERS WITH LIBERAL IDEAS.

Says the Springfield *Republican:* "Rev. S. J. Stewart, the liberal pastor, who has recently left the Bangor Unitarian church, will read law with ex-Chief Justice Appleton, and expects to practise in Bangor. The 'sufferings' of a minister with liberal ideas were too much for him."

The "sufferings" of many "a minister with liberal ideas" who has tried to remain in the Unitarian Church and, at the same time, to give his best thought to the public, have been "too much for him." This was true of Emerson and Parker, of Weiss, Wasson, and Higginson, of Weston and Miln, among many who have withdrawn from the Unitarian denomination. It is true of a number of young men now in the Unitarian ministry, who will be forced either to abandon their profession or to keep their most radical thought to themselves and their intimate friends. It would be true of other young men of ability and learning, like Mead, Salter, and Robinson, if, after preparing themselves for the Unitarian ministry, they had continued to occupy Unitarian pulpits when they found the limitations imposed upon them such as they could submit to only by suppressing honest convictions and sacrificing independence and self-respect.

Unitarians have helped in no small degree to destroy faith in the barbarous orthodox theology, and to diffuse with more rational views a more tolerant spirit; but it is questionable whether Unitarianism to-day is doing more to advance than to check liberal thought. The influence of the conservative or unprogressive element seems to be practically predominant, and "divinity schools" instead of schools of science are still regarded as of great importance, while assent, however formal and heartless, is generally given to old theological beliefs, methods, and phraseology. A sort of nibbling criticism around the corners of the old theological structures is permissible; but the Unitarian minister who attempts more than this, unless his personality or peculiar position makes it prudent to tolerate him, is likely to provoke such opposition as will sooner or later drive him from the ministry. If he would present the best modern scientific and philosophic thought, he must modify and qualify its claims, and jumble them together with the assumptions or fancies of theology and obscure them with rhetorical embellishments, to make the discourse in its teaching and language so colorless and vague as to be above, beyond, or beneath criticism.

The result is that many able, independent, and honest young men are kept out of the Unitarian pulpit; while not a few who speak from the desks of Unitarian churches go no farther in speaking their thoughts than they think is compatible with their own personal interests. There are Unitarian ministers who have no belief in the inspiration of the Bible or the superhuman character of Jesus, who have no belief even in a future state and regard it as an unsolved problem whether there is an intelligent Deity, and yet who take texts from the Bible and preach from them as though they regarded them as inspired and authoritative, refer to Jesus as the "Saviour of the world" and pray for favors "for Christ's sake," conveying the impression in prayer, sermon, and benediction that they have a childlike faith in the divine authority of the Bible, in salvation through Christ, the efficacy of prayer, etc.

In periods of transitions like the present, we can overlook confusion of thought in undisciplined thinkers and inconsistencies of belief in minds without settled convictions; but the class to whom we here refer occupy the position they do from no such reasons, but either because they lack the courage to break away from old associations and to avow and defend their real views, or because they are more in love with their salaries and the attractions of a minister's life than with truth and fidelity to their convictions. It is true that the experience of those ministers who have left the pulpit and come out as independent advocates of liberal thought has not been of so pleasant a character as to offer encouragement to others who, having outgrown the teachings of their Church, would, with a fair prospect of support, be glad to advocate more advanced views than they can in their present position.

But that is not a very high morality which will permit a man to preach what he does not believe, or suppress what he does believe and thinks the people should know, through fear of losing a position and a salary.

Unitarians have the right to insist upon the importance of certain theological doctrines, and to require assent thereto as a condition of fellowship; but since they, as a denomination, lack the breadth and liberality to allow entire freedom and independence of thought in their ministry, they should no longer pretend to welcome on equal terms all honest thinkers. Unitarianism is to blame for insincerity in its pulpits only so far, of course, as it directly and indirectly encourages this insincerity. That this is done, we are satisfied, and we regret to say, to a considerable extent.

B. F. UNDERWOOD.

EDITORIAL NOTES.

ALL associations or individuals desiring to arrange for lectures by B. F. Underwood the coming winter are requested to address him at an early date, the earlier the better, to enable him to plan his route systematically.

IN the next number of *The Index* will be printed the first of a series of articles from the pen of Capt. Robert C. Adams, entitled "Travels in Faith."

ONE of the most singular sentences, say the papers, ever imposed was by Judge Krekel of the United States District Court in Missouri recently. An illiterate prisoner was sentenced to jail until he could learn to read and write, and another offender was sentenced until he could teach the former the art. In a little over three weeks, the prisoner appeared, able to write a fair letter at dictation; and both men were discharged. Judge Krekel, we believe, is a freethinker.—*Radical Review.*

MR. WILLIAM DAWSON, of Winterton, says the *Echo*, cattle dealer and local preacher, has suddenly left this country for Spain, and creditors to the extent of about £40,000 are making anxious inquiries concerning him. The day before he disappeared, Mr. Dawson preached a powerful sermon from the text, "Sorrowing most of all for the words which he spake, that they should see his face no more; and they accompanied him unto the ship." This indicates a great faculty of humor under discouraging circumstances.—*London Christian Life.*

ANOTHER Congregational minister has fallen into heresy. The Rev. Charles W. Park, a nephew of Prof. Park of Andover, has avowed his belief in a "future probation for all men," and his rejection of infant baptism. As is usual with "advanced" thinkers, he has doubts respecting the "Bible." Congregationalism is evidently rapidly disintegrating. Many of the best minds, under the name of "New Orthodoxy," are going half way (or further) to meet German rationalism, while the faithful are withdrawing to safer folds. —*The New Church Life.*

THE following is an extract from a letter from Stockholm, printed in the *Congregationalist:* "At the ancient stone fountain, known as the Blood Bath, where Charles XI. of Denmark had fifty nobles put to death, thereby hoping to increase his power, this touching story was told me. A beautiful boy, who had seen his father's head cut off and the blood dripping, said in childish accents to the executioner, 'When you cut mine off, please don't get my collar dirty; for mamma will whip me when I get home.' The man's heart was moved, and he secreted the child and sent him home; but the ungracious king had him beheaded for such womanish tenderness."

IT is noticed that, when Mr. Anderson's bill to prohibit the cruel sport of pigeon-shooting was brought into the Upper House, the Bishops to a man—or probably we should say to a Bishop—absented themselves from the discussion, one gentleman in lawn sleeves who was actually present walking out of the House. A correspondent of the *Daily News* makes the caustic remark: "If it be true, as Coleridge says, that—

> 'He prayeth well who loveth well
> Both man and bird and beast;
> He prayeth best who loveth best
> All things both great and small,'

the Bill to prohibit pigeon-shooting,—is calculated to inspire misgivings in regard to the praying power of the whole bench of Bishops."—*London Inquirer.*

SAYS the *Canadian Baptist*: "*Man may hope to find peace with God only by blood.* Account for the phenomenon as we may, this is the unanimous testimony of mankind. And, surely, he cannot be regarded a man very wise in head or very noble in heart who will venture to treat with indifference or frivolity or scorn the solemn Voice that issues from all the holy places of the mighty past, who will curtly dismiss as mere superstition that long, low wail of moral distress, that deep and awful cry for peace with Heaven, which rises from the human heart of all antiquity." This "solemn Voice" is the voice of revenge, sanctified by age; and "that deep and awful cry for peace with Heaven" through blood is fundamentally the cry of the savage who hopes to turn away the wrath of the conqueror by putting to death those who have offended him. The sacrifice of man to God had its origin in the sacrifice of man to man; and from this, in the course of time, was developed the unreasonable and debasing doctrine of the atonement, which, because traces of it are found in the belief and practice of pagan nations of antiquity, as well as among the Jews, the *Canadian Baptist* thinks is a holy and divine doctrine.

THE Chicago *Tribune* says of professional bruisers, like Sullivan and Slade, that they do not work nearly so hard as the men who get $3 and $4 a day, and they accomplish nothing of any value; but the despair of the situation is that the employers of these men, the persons who pay them at the rate of a thousand dollars a minute for doing nothing, are very largely the same persons who talk so much about the rights and dignities of labor, and are inflamed against capitalists for making huge incomes. "At the same time, they will help these two sluggers to pile up several thousand dollars for doing nothing but punch each other's heads, and will patronize Mr. Sullivan, who has the most profitable corner in the country and one not likely to be broken." The *Radical Review*, commenting upon the above, very pertinently observes:—

It is a melancholy fact that the overpaid labor of the most despicable nature receives much of its patronage from the country's underpaid, honorable labor. But that is only a further comment on the degrading influence of poverty, and the very best justification for the complaints of those "who talk so much of the rights and dignities of labor." From one point of view, the situation becomes still more despairing, when we consider that it is not the ignorant mob alone that delights in these exhibitions of brutalized humanity, but that the sons of the rich, whose tastes ought to attract them to sports of a far different nature, furnish a large contingent of both spectators and funds. This is not the only illustration of the fact that excessive wealth is as inimical to the highest development of humanity as excessive poverty.

IN a recent sermon on "Poverty and the Gospel," Henry Ward Beecher, among other things, said:—

A tendency of our times is toward infidelity among laboring men, particularly so among mechanics. In other words, the first result of a more intelligent education and a more prosperous condition of things among the laboring classes is to repudiate churches. Of course there are a good many exceptions, and in some communities this will apply much less than in other parts. I have noticed that the working-men who come from Great Britain to this side are, to a very large extent, infidel. I notice this too in our socialistic movements, and in all the questions of political economy. The laboring classes who think are tending to think themselves away from the house of God, from Sunday, and are substituting arrangements of their own. It is fatal.

These words lead the *Investigator* to remark as follows: "It is a very heavy tax for a laboring man to pay to attend a church, more especially if he has a wife and children and his wages are small. Such men cannot afford the expense of church-going, and they act wisely in staying at home on Sunday, and making it a day of healthy recreation; or, if they prefer, they can read useful books, which are far more instructive than sermons.... Mr. Beecher, with a salary of $20,000 per year, pretends to be very anxious that the laboring classes should attend the 'house of God.' ... He may talk of 'mansions in the skies,' but what poor men want are comfortable 'mansions' here; and no man is their true friend who points them to heaven, but neglects them on earth. As for 'the house of God,' if he has got any, it is probably not a church, but a happy home where honest and industrious men and women enjoy a life worth living. The home, and not the church, is the infidel motto."

WHAT was said by us in the address which we gave by invitation in this city some months ago, before the Evangelical Alliance, in regard to the absurdity of the attempt to make the word "day" in the first chapter of Genesis mean an *age*, and which, it will be remembered, was disputed in a vigorous speech by Prof. Paul A. Chadbourne, finds corroboration in the following extract from an address by Rev. Samuel T. Spear, D.D., at a recent meeting of clergymen at Saratoga:—

You have an example of the first method in the attempt to make the word "day," as occurring in the first chapter of Genesis, mean an *age* or a geological period. This overlooks the fact that the "day," here mentioned, is described as the first, the second, the third day, and so on, and also the fact that it is described in its parts as having a morning and an evening, and the still further fact that in the Fourth Commandment this same "day" is spoken of as a day in a week consisting of seven days, each of which was twenty-four hours in length, and the still further fact that the Jews for whom the record in Genesis and Exodus was originally made, not being geologists, would understand the term "day," as thus described, to mean a natural day of twenty-four hours. They could give to it no other meaning; and no man would give to it any other meaning, unless led to do so in order to meet a supposed difficulty. The fact that the term is sometimes used for an indefinite period does not make it in this use, with this description and in these connections, anything but a natural day of twenty-four hours. To force another meaning into it is to give it a meaning which it does not bear; and, moreover, when this meaning is forced into it, the supposed difficulty created by geology is by no means removed. I have a way of disposing of this difficulty that satisfies my mind, but which I cannot pause to detail; yet that way does not consist in placing a new, unnatural, and false meaning upon the term "day," as it occurs in the first chapter of Genesis and in the Fourth Commandment.

THE editor of the *Religio-Philosophical Journal* has been investigating the so-called Russell law passed by the legislature of Ohio at its last session, which was recently denounced by our neighbor, the *Banner of Light*, under the caption, "The Conflict Begun," as a theological assault upon the rights of Spiritualists and upon civil liberty. The *Journal* thinks there has been "hasty denunciation and ill-considered criticism in some Spiritualist quarters," in proof of which it quotes from a letter written by a Spiritualist, saying, "The law (we have come to the conclusion) is good in a way," and publishes a letter from Hon. E. O. Eshelby, comptroller of Cincinnati, said to be the instigator of the Russell bill, "a gentleman of broad, liberal views with nothing of the religious bigot in his nature," who writes:—

Your letter of inquiry, under date of May 24, is at hand; and, in reply, I would say that there are a number of parties in the city, who have (from the best information obtainable), under the name of mediums, clairvoyants, etc., been engaged in disreputable and immoral practices. The Russell law is, and was so intended by its framers, to apply to the above parties, *and to them only, and not to those legitimately engaged in disseminating the doctrine of Spiritualism, or in pursuit of knowledge concerning continuity of life beyond the grave.* To an unprejudiced and impartial observer, it would seem that no person or set of persons is more interested than the true and honest believers in Spiritualism in suppressing impostors. By so doing, they deprive sceptics and unbelievers of potent arguments furnished daily by so-called mediums, etc. A parallel case may be cited under the section taxing employment or intelligence offices. What is more worthy or commendable in its objects than an employment office, when honestly carried on. It secures employment for the poor. May I ask, Are they all conducted that way? But yesterday, two poor, ignorant country girls, only a day or two in the city, applied at an intelligence office on Elm Street for employment, and were sent to a house of prostitution, the character of which they did not discover for some hours, and were finally rescued by the police. As to this class, the law shall be enforced to the letter, and with all the power that I can command.

The law is so worded, it seems, as to apply only to the city of Cincinnati, and yet to avoid special legislation. But since Section 36 reads, "Astrologers, fortune-tellers, clairvoyants, mediums, seers, etc., shall pay a license of three hundred dollars per annum," it is not strange that it was thought to be directed against mediums generally in Cincinnati, and indeed in Ohio; as but few would be likely to know that Cincinnati was the only city in the State "of the first grade of the first class." The *Journal* thinks that the letter of the law is "likely to work hardship to honest mediums, and should be changed to meet the spirit in which it was framed, as set forth by Comptroller Eshelby." The greatest difficulty will be, we apprehend, as the *Journal* in the same article intimates, in drawing the dividing line between "honest mediums" and "quacks and tricksters."

DAYS AND THOUGHTS.

The thoughts of yesterday to-day
Are dim, as though the eve and night
Had darkened all the glowing way
Of mind; and, lo! this morning's light
Is shed for other thoughts that come,
And strike the yester-thinking dumb.

Thus, deedless days pass into Time,
Like breath repassing into Space:
Of heights our thoughts at morn would climb,
At night there's not a step to trace;
And stars, like ghosts of days, approach
To haunt us in our self-reproach.

Some thoughts are like a passing brood
Of heavy-bo lied birds that wing
Along the groundway of our mood,
But ne'er to skyward freedom spring,
Till through oppression they return,
And teach a freedom they discern.

And other thoughts like leafage fall,
And leave the tree of life bereft:
Then comes the night to be the pall
For one sad leaf of thought that's left
To fade between the earth and moon,
To fall, unknown, before the noon.

Oh, days and thoughts! I would I ran
Apace with both: no idle rest;
No halting like a wearied man
With haltless fervor in his breast;
No holding back, while thoughts run on
Till out of thinking they have gone!

The Index.

BOSTON, OCTOBER 4, 1883.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

THE RELIGIONS OF THE EAST.

A Review of the Work of the Association for Moral and Spiritual Education, Brooklyn, N.Y., Season 1882-1883.
Read at a Regular Meeting of the Association, June 15, 1883.

BY LEWIS G. JANES.

EXPLANATORY NOTE.—Some of the objects of this Association, as affirmed in its Constitution, are:—

1. The discovery, so far as possible, of a rational expression of the natural ethics and religion of the human soul.
2. The cultivation of the moral and spiritual natures of its members.

In the furtherance of these objects, the Association has devoted its time during the past season to the study of the leading Oriental religions. The meetings were held weekly, from the middle of October to the middle of June. Two preliminary evenings were spent in considering the Origin of the Religious Idea and Fetichism, five evenings were devoted to Confucianism and Tăoism, six to Brahmanism and the Vedic and Puranic literature, six to Buddhism and its sacred writings, three to Zoroastrianism and the Avesta, five to the Religions of Egypt, one to a cursory examination of the Assyrian, Chaldean, and Phœnician religions, and three to the Hebrew religion.

In addition, one evening was spent in listening to a very interesting and instructive lecture, by Prof. Charles D. B. Mills, on "Our Early Home and Ancestry"; and two were devoted to the consideration of papers on "The Religions of Egypt, as related to Judaism and Christianity," and "The Relation of the Persian and Chaldean Religions to the Hebrew," by Lewis G. Janes. At one of the regular meetings, Mr. Amrita Lal Roy, an educated Hindu gentleman of high caste, gave an interesting account of the customs and religion of his people at the present day.

Essay.

In looking back upon our course of study during the season now closing, I may say assuredly that it has been one of exceeding interest and profit to us all. If there were any among us who were at first inclined to regard these studies as unprofitable, because bearing no direct and evident relation to the practical affairs of our every-day life, I think I may fairly assume that such objections have vanished in the light of our investigations. Surely, it is evident that a just and thorough comprehension of our social relations and their obligations requires a fundamental knowledge of man, which is impossible without some true understanding of the past out of which he has grown as well as of the present in which he now dwells. Especially is this of the utmost import in the study of religion, which has constituted so large an element of his past as it does of his present history.

We may believe, with Matthew Arnold, that "conduct is three-fourths of life." Nevertheless, in our own day as well as in past ages, we find the sanctions of morality so inextricably involved with religion that it is impossible to understand the one without having some knowledge of the other. I think, too, we are now prepared to assent to the statement of Max Müller that "he who knows only one religion knows none." There is nothing so potent as the scientific study of religions to break down the barriers of sectarianism. The world has now for us a wider horizon. Whatever may be our theories of the origin of man, whether we believe him to have sprung from a single primitive pair or from stocks as numerous as the races which now dwell upon the earth, we must grant that all men are in some sort brothers,—that the most diverse races are bound together by a common nature and by mutual ideas, interests, and obligations.

Let us try to gather up the thread of our recent studies, and refresh in our memories some of their more obvious lessons.

In Confucianism, the State religion of the Chinese, we discovered a cultus eminently moral in its character; a system of practical ethics adapted to the organization and government of the State. In the teachings of the Master concerning man's relation to the Unseen Power and to a future life,* we found an undoubted recognition of this Power as an intelligent, personal force, and of the existence of spiritual beings; yet the general attitude of Confucius toward these great religious ideas was that which, in our modern phrase, we should characterize as agnostic. No distinct and well-defined statement of a philosophy of the universe was discovered in the sacred writings of the Confucianists. In fact, the entire teachings of the Master may well be regarded as in the nature of a system of political economy, one of the recognized elements of which was the orderly worship of heaven and the reverence of departed ancestors. In the latter custom, so deeply involved in the life and mental habit of the masses of the people, Confucianism finds common ground with its contemporary religions Tăoism and Chinese Buddhism, and strikes its roots deep into the substratum of ancient superstition, out of which all these different forms of religion have gradually been evolved.

Herein, too, as well as in its worship of heaven and general Sabaistic tendencies, it crosses the boundaries of the Chinese Empire, and acknowledges a common ancestry with the religion of the ancient Turanian peoples of Akkadia, from whom the Semitic nations of Chaldea and Assyria derived an important part of their religious customs, cosmological notions, and legendary lore. Through Chaldea and Assyria, China thus indirectly touches the religion of the Hebrews, who also drew some of the material for their sacred literature from this primitive Akkadian source; and, through the Hebrews, all the Aryan peoples now owning the name of Christians, a portion of whose religious inheritance is the Jewish Old Testament. Marvellous, indeed, are the revelations of this science of comparative religion, breaking down all barriers between the races, and preaching always the sacred evangel of the Brotherhood of Man!

In Tăoism, we discovered a religion based nominally upon the mystical and philosophical treatises of Lăo-tsse, but actually, as at present constituted, bearing very little relation thereto. Its ethics, in so far as they can be judged by the text of the Tăo-te-King, the sacred scripture recognized by this sect, compare favorably with the moral teachings of the Five King and the Four Shu. Even more than these religious writings of Confucius and his disciples does it embody the doctrine of the forgiveness of injuries and the duty of overcoming evil with good. But, among its present professors, Tăoism appears to be scarcely more than a mass of primitive superstitions, involving the worship of the dead, a crude system of demonology, and a blind confidence in the efficacy of priestly magic and enchantments.

Compared with the religion of Confucius, Tăoism represents the survival of a more primitive phase of religious development, and is professed by a more ignorant and degraded class of people. If we can derive any instructive lesson from this marked divergence of these two religious faiths, existing, as they have for so many centuries, side by side among the Chinese, it would appear to be that a teaching in the main mystical and metaphysical, above the comprehension of the masses of the people, is comparatively inadequate and impotent to modify the superstitious tendencies of a race, while a doctrine in the main ethical and practical is relatively much more efficacious in this direction.

In Brahmanism—the religion of the Vedas—and its later developments, we discovered the nearest approach to the creed of the undivided Aryan people, our own far-away ancestry. The interesting lecture of Prof. Mills, happily supplementing our own independent investigations, enabled us to form a vivid picture of the main features of the primitive system of nature-worship which prevailed in the old Aryan homestead, among the highlands of Central Asia. Doubtless, this picture has been somewhat idealized by writers like Prof. Max Müller and others, who have covered over its ruder and more barbarous features with the softer pigment of their own loftier ethical and more refined spiritual natures. To put one's self in another's place is always difficult, and it is especially hard for the cultivated man of to-day to reconstruct in imagination a picture of the persons and environments of his prehistoric ancestors.

The life of our earliest Aryan forefathers was not wholly idyllic. Even native Hindu scholars, like the learned Babu Rajendralala Mitra,* find evidences in their sacred writings of the existence of the rite of human sacrifice during and prior to the earliest Vedic period; and there are not wanting proofs, also, of the very early custom of idol-worship combined with the reverence of the forces of nature. In the sacred Sraddha festivals, in memory of the deceased ancestors, which formed a part of the ancient Vedic ceremonial, and have endured until quite recently in every Hindu household,† we find undoubted evidence of the existence of ancestor-worship among the Aryan peoples as well as among the Turanians.

But the religion of the Hindus is chiefly noteworthy, and interesting for the development, among the learned and priestly classes, of the most remarkable philosophical systems which have found a place anywhere in the great religions of the world,—systems so profound and far-reaching in their thought, so mystical and idealistic in their tendencies, that the later European schools of speculative philosophy have scarcely done more than to reproduce Hindu metaphysics in the garb of a more modern terminology. Nor was there wanting in India the natural and inevitable reaction from the refined subtleties of metaphysical idealism toward a more rational system of thought, as exemplified in the Sankhya philosophy of Kapila and his followers, and which, in another direction, gave rise to the metaphysical agnosticism underlying the philosophy of Buddhism.

In connection with these metaphysical tendencies, so strongly manifested in Brahminism, we have to note a co-ordinate inclination to physical inertia, counterbalancing the intense activity of the speculative faculties, and, in part, perhaps due to it, though climatic influences and political conditions are, no doubt, in some degree accountable for both. Nor is the ethical tendency of Brahminism as pronounced or noteworthy as that of Confucianism. Though the finest moral precepts are not wanting in the Vedic and Puranic literature, the minds of the learned classes appear to have been mainly absorbed in metaphysical speculation and religious formalism rather than in efforts to establish just and equitable social conditions. The mass of the uneducated people, on the contrary, unable to grasp the refinements of metaphysical speculation, and unfed by systematic instruction in practical righteousness, gave themselves up to the grossest idolatry, its rites being often cruel and immoral.

The system of caste, which arose, probably, out of a natural and praiseworthy desire to prevent social antagonism, and relieve the stress and strain of com-

petition, by confining the different occupations, professions, and trades within certain well-defined limits, is a curious illustration of the natural effect of the make-shift policy of treating social problems, which follows from that complete divorce of religion and philosophy from the practical life of a people, so characteristic of the Hindus. While it has temporarily served its purpose, in preventing the frictions and antagonisms which grow out of a free competition in labor, it has most surely operated to intensify social distinctions, and to deprive the uneducated classes of the close sympathy and active help which, in other communities, they might have received from the more intelligent and moral, and thus strongly favored and strengthened the habit of physical and ethical inertia which prevails among the low caste Hindus.

Both the Hindus and the Chinese permit a wide latitude in speculative opinions, provided there is a general conformity to social customs and superficial religious observances. This phenomenon in the social and religious life of the East is not unlike the similar habit which characterizes certain of our Christian sects in Europe and America. Viewed superficially, it appears to be in marked and favorable contrast with the intolerance of Roman Catholicism and the bigotry of Puritanism, which make individual salvation depend upon the acceptance of certain intellectual dogmas, and, in defence thereof, lighted the fires of the Inquisition, and erected the gallows for the Quaker. The virtue of this Eastern toleration is, however, at best only negative. Its necessary accompaniment of adherence to social and religious forms, out of which all vital significance has long since departed, whether among Christians or Hindus, appears to foster a habit of mental insincerity, and to occasion a lack of that absolute frankness and truthfulness which is alone consistent with perfect social and religious liberty.

The religion of India, springing from the simple nature-worship of the Aryan forefathers, allied to the more archaic ancestor-worship which prevails among all primitive races,—developing, on the one hand, the subtle metaphysics of the Brahmanical schools, and, on the other, the gross idolatries of the common people,—gave rise by a natural and humane reaction to Buddhism. Buddhism, like Confucianism, must be regarded not as a faith entirely distinct from its predecessors, but as the reform of an older religion. Its attitude toward the theistic and animistic dogmas of the older cultus, as would naturally result from the reaction which gave birth to the reform movement, was, however, if we may accept the conclusions of the most recent and reliable students of this religion, originally either agnostic or directly antagonistic.* As it spread beyond the boundaries of the Sangha, the scholarly community of monks who gathered around its founder and were his earliest representatives and successors, and attracted to itself the masses of the people, especially when it overstepped the confines of its birthplace, and made converts in other lands, it largely lost these peculiar agnostic or atheistic characteristics, and assimilated somewhat of the crude animistic notions which form the substratum of all religious beliefs.

The animus of its founder was pre-eminently ethical; and this element occupies a much larger space in its sacred writings than it does in the Vedic and Puranic literature. The personality of Gotama the Buddha, as we see it through the legendary halo with which succeeding generations have largely obscured it, is a most noble and impressive one, worthy in every respect to be placed by the side of the Prophet of Nazareth, as entitled to the regard and admiration of mankind. His religion, like that of Jesus, notwithstanding marked differences of faith and belief, may well be defined, in the fine phrase of Matthew Arnold, as "morality touched by emotion." "Never will I seek private, individual salvation: never will I enter into Nirvana alone." This was the noble determination of the founder of Buddhism, which caused the new faith to burst the bonds of locality, and become a universal or missionary religion in contradistinction to all the other faiths which have been the object of our studies for the season.

Buddhism was the earliest of all the missionary religions; and it has thus far had but two successors and rivals, Christianity and Mohammedanism. It holds its pessimistic view of the existing world and of natural human society in common with these later missionary faiths; yet, as would naturally be presumed from the character of the social conditions which gave it birth and the peoples among whom it spread, this tendency is more marked and positive in Buddhism than in either Christianity or Mohammedanism. The Nirvana, the *summum bonum* of Buddhistic aspiration, is a condition so utterly dissimilar to all known states of being that ordinary language seems hardly competent to describe or explain it. In the intent of its founder, it appears indistinguishable from the complete dissolution of the individual and the annihilation of personal consciousness; though it is claimed by some writers that there is an esoteric doctrine professed by an inner circle of adepts, which is not inconsistent with personal continuance.*

Christianity, though it regards present social conditions as wholly corrupt and irremediable by natural means, holds on, nevertheless, to a popular faith in the possibility of a higher life, and rebuilds its ideal kingdom of heaven out of the elements of the old universe, glorified and rendered immortal through the sacrificial atonement of its founder. The dark background of eternal despair against which this picture of the ideal paradise is limned, however, is an unworthy substitute for the restful *sheol* of the early Hebrew faith, or for the destruction of individual consciousness in the Nirvana of Buddhism. It is questionable, after all, whether the latter faith, though the more pessimistic of the two, is not also the more humane and unselfish.

The religion of Zoroaster and the ancient Persians was likewise a reform; not, indeed, of Brahmanism, but of that more primitive faith which the ancestors of both Persians and Hindus held in common. It had its roots in the same system of animistic nature-worship, ancestor-worship, and Sabaism out of which the Vedic religion sprung. It owed the impulse which led to its differentiation from the ancient faith, probably, to the earlier conversion of its followers from nomadic habits, and their adoption of fixed habitations and agricultural pursuits. Its leading characteristic was that of an *ethical monotheism*. A natural result of the continued development of its ethical features appears in its dualistic doctrines, which are more prominent in the later than in the earlier phases of its growth. Like Buddhism, it was originally a non-idolatrous religion; though, like it, subsequently it also retained and developed survivals of the idolatrous system of nature-worship, out of which it sprung. In Buddhism, the gods had shrunken to shadowy, mortal beings, having little influence upon the lives and happiness of mankind. In Zoroastrianism, they had become subordinate creatures, amĕsha-spentas, angels or daevas, the messengers and servants of Ahurâ-Mazda or Angro-Mainyûsh. Though not a missionary religion, the influence of the Persian theology, eschatology, and ethics, was transferred, in a large measure, to other faiths and foreign lands: to the religion of Egypt and Mohammedanism; to Judaism, through Babylon, and thence to Christianity, the great missionary religion of the western world. So everywhere appears the working of the wonderful law of evolution, "the survival of the fittest," justifying the fine intuition of Emerson,—

> "One accent of the Holy Ghost
> A heedless world hath never lost."

We also discovered evidences of the foundation of the more venerable faith of Egypt in nature-worship and ancestor-worship, survivals of which are observable in the worship of the living king in the earliest periods of Egyptian history, in the traditions which represented the gods as dwelling on earth, in the forms of men, and in the offerings, sacrifices, and oblations to the dead, which appear to have been customary even before a distinct belief in an eternal, conscious existence for all had arisen. In this religion also, we distinguished a lofty ethical teaching, which doubtless expressed itself in the daily life of the people, and constituted the chief element of permanence in this wonderful nation of antiquity. Evidences of growth, change, evolution, are not wanting in the records of the religion of Egypt; and the influence of other faiths, particularly that of Zoroastrian dualism after the Persian conquest, is noticeable.

The peculiar mysticism of the Egyptian religion penetrated its theology, and influenced the development of its doctrine of the future life. It was transmitted to the Neo-Platonic philosophy of the Alexandrian schools, born on Egyptian soil, and thence communicated to the early Christian theologians, penetrating the doctrines of the new religion, which largely took form in Alexandria. Out of the commingling of the religion of Egypt with that of Persia, and later with certain phases of the Greek philosophy, probably grew the gloomy and barbarous doctrine of eternal punishment, the subsequent evil inheritance of Christianity. In no other pre-Christian religion do we find any distinct enunciation of this doctrine. The remnant of the ancient Egyptian people, who survived the ordeal of foreign domination, and preserved their ancestral language and many of the traditions of their race, became early converts to Christianity; and all that was vital in the older faith was apparently assimilated by the new.

The three extra-Hebrew Semitic religions—the Assyrian, Chaldean, and Phœnician—we likewise find to be based essentially on animistic nature-worship, which appears not only in their earlier phases, but also survives in their latest form, the worship of the heavenly bodies. Much of their religion, including the leading features of its cosmogony and legendary lore, appears to have been drawn from the earlier cultus of the Akkadians, a people of alien race, related to the progenitors of the Chinese, and also to the Huns, Samoyeds, Turks, and Finns. The influence of these Semitic religions is traceable in the later magism of the Medes and Persians, in the early legends and cosmogony of the Hebrews; and, through Phœnicia and Asia Minor, it passed over into Europe, and helped to develop the mythologies of Greece and Rome.

The earliest Hebrew faith inherited much of the superstition and crude conceptions inherent in the nature-worship common to its sister Semitic religions. The contact with Egypt, however, and the successful effort to escape from Egyptian bondage, the subsequent growth of the scattered tribes into a nation under the supposed leadership of Yahweh, their tribal god, early gave their religion a tendency toward monotheism. Their first great leader, Moses, perhaps deriving his primary impulse from Egyptian sources, bestowed upon his religion a more pronounced ethical character than we find exhibited by the other Semitic faiths. Both these tendencies were greatly strengthened by the teaching and example of the prophets of Yahweh, and subsequently by contact with the ethical monotheism of the Persians; so that the Hebrews finally outgrew the polytheistic features of their earliest faith, and became a nation of priests of the one God whose highest service was the doing of righteousness. The monotheism of the Hebrews was freer from dualistic taint than that of their Aryan contemporaries, the disciples of Zoroaster. Through Jesus of Nazareth, the legitimate successor of their earlier prophets and inheritor of the purest traditions of his ancestral faith, they transmitted this principle of ethical monotheism to Christianity. More or less contaminated by foreign and incongruous intermixtures of dogma and ceremonial, it has been handed down from generation to generation, until we have received it as a part of our inheritance.

And now let us ask ourselves whether our studies have thrown any light upon the important problems of the nature, origin, and probable future of religion. In considering the origin of religion from the rational stand-point, it is evident that any religion possessing a sacred literature must have passed through long eras of development, growth, and change, before its canonical books are written and recognized as authoritative. To ascertain from them its origin and history, it is necessary, therefore, to "read between the lines," to know something of the relative age of the sacred writings, to trace in their different strata the characteristic survivals of the periods which gave them birth, and by rational analysis and comparison to derive such hints and suggestions as we may of that prehistoric era out of which the religion originally sprung.

Wherever our studies have rendered us any certain and reliable testimony, we have found the religions of the earliest literary periods to have been comparatively simple and crude, unburdened by the more elaborate developments of ecclesiasticism; though evidences are not wanting of the very early existence of established priesthoods, who are often the authors and conservators of the sacred literatures. Confucianism, Buddhism, and Zoroastrianism were reformations of earlier faiths, and therefore bear less di-

rectly upon this branch of our inquiry. We may nevertheless seek through them for testimonies in regard to the more primitive forms of religion which they measurably superseded.

In every instance, I believe, the more archaic religious types present the easily recognizable characteristics of animistic nature-worship,—the reverence of the forces and phenomena of nature, regarded as personified or inhabited and ruled by some individual spirit, ghost, or demon. To placate or appease these spirits or personified natural forces, to control them by priestly charms or the repetition of magical formulæ, to win their favor and assistance and appease their anger by sacrifices and prayers, this was everywhere the effort of man in the earliest historical period, the records of which are preserved in the oldest sacred literatures of the world.

Endeavoring to ascertain the source and genesis of this phenomena, we find the earliest and most universal religious custom among all the oldest and least developed races of mankind to have been the rendering of sacrificial offerings, obeisance, and worship to the spirits of their deceased ancestors, particularly their chiefs, kings, and patriarchs,—those who had been their rulers during life. To the *pitris*, or fathers, the Hindus keep the sacred Sraddha festivals.* Every Chinese household has its altar, and renders its offerings to the deceased ancestors.† The Egyptians first worshipped the living king, and their gods were represented as having originally dwelt on earth in human form. The worship of ancestral spirits is among the earliest recorded customs of the Assyrians, Chaldeans, and Phœnicians;‡ and the Hebrews, in whose sacred writings we find, probably, less direct evidence of the existence of this peculiar form of worship than in any other ancient scriptures, nevertheless present evident survivals of a prehistoric worship of the dead in their regulations in regard to mourning for the deceased and the funeral ceremonials, as well as in the decidedly anthropomorphic character of the deity in the earliest period. It has been said of the Hebrew patriarchs, as described in the legends of the Peutateuch, that they had advanced half-way on the road to deification, when this tendency was interrupted by the monotheistic teachings of the eighth century prophets; and they were embalmed in the sacred literature, with the semi-mythical characteristics which we find there affixed to them.

There would appear, therefore, to be much evidence in favor of the theory that religion, worship, the belief in the gods, grew out of ANIMISM,—the tendency universal among primitive and ignorant races, and perhaps held by them in common with the higher animals,§ to endow all moving objects, all natural phenomena,—the heavenly bodies, the winds, meteoric stones, remarkable trees, anything manifesting force or acting in such a manner as to attract the attention,—with life and personality. That which primitive man perceived and felt within himself he naturally reflected upon all other beings, and upon external nature, predicating of it sentience and volition.

The first being to whom sacrifices, offerings, and prayers would naturally be rendered would be *the living ruler*, the patriarch, king, protector, or father of the family. And, when his breath or spirit left the body, he would naturally continue to receive somewhat of this homage, either as the ancestral spirit or as the animating power of some fetich. So general is this custom of ancestor-worship among all the early races of mankind that even Prof. Max Müller, who has been regarded as the advocate of quite a different theory of the origin of religion, designates it as "the most universal of primitive superstitions." ‖ That man originated in barbarism, without education, without arts, without sciences, without ethical or religious culture, is no longer a theory of closet students, but a demonstrated fact. That the earliest form of his religion should arise out of superstition and fear is, therefore, in no way improbable. It is what we would naturally expect. If, then, we may consider ancestor-worship to be the first characteristic manifestation of the religious faculty, we may nevertheless trace in it the promise of the tenderest thought of God to which Christians have yet attained; for, in a very literal sense, man invoked his earliest deity under the name of "Our Father."

All polytheistic religions present evidences of the gradual growth of their pantheons, yet we do not seem to be justified in inferring from this fact that the earliest forms of religion were in any proper sense monotheistic. On the contrary, we have found that even the Hebrew religion, so long regarded as an exception to the acknowledged general rule, grew out of a primitive polytheism. The same conclusion is true also of the Zoroastrian monotheism. Survivals of customs originating in polytheism and fetichism are preserved in the ceremonials and literature of all religions. "Gods many and lords many" were recognized by all the earlier races of mankind. Even when man acknowledged personal allegiance solely to his family fetich or tribal deity, he nevertheless recognized the existence and power of the gods of other families and alien tribes. Primitive man saw everything concretely. The faculties of abstraction and generalization whereby he arrived finally at the conception of the Divine Unity were only developed in his nature after a long educational experience through contact and conflict with his physical and social environment. But, having acquired the faculty of viewing phenomena abstractly, his religion naturally developed in the direction of a true monotheism, which was finally attained by the educated classes—the priests, philosophers, and scholars—not only in Persia and Palestine, but also in Egypt, in India, in Greece, and in Rome. The polytheistic deities came to be regarded as different manifestations of one Supreme Power; and idolatry, except to the ignorant, was reduced to an elaborate system of mystical symbolism.

It may even be affirmed that a people like the Hebrews, whose religion never developed into a rich and full polytheistic system,—who arrived at monotheism, as we may say, prematurely,—lost in breadth and liberality of culture what they may have gained in the devoutness and intensity of their religious natures. A certain narrowness and bigotry appear to accompany what may be termed the premature development of monotheism, which is measurably avoided when the conception of the Divine Unity has been attained through philosophical reasoning and the scientific investigation of natural phenomena in the midst of a prevailing, inherited, and fully developed polytheistic system.

Concerning the nature of religion, there appears to be but one rational conclusion from our investigations. It is neither, in its essential element, the invention of priests nor the subterfuge and support of kingcraft, as certain crude reasoners would assume; nor yet the miraculous gift of the gods, as is declared with equal assumption by the theologians. It is a natural and spontaneous product of human nature,—man's universal and inevitable recognition of power above and beyond him on which he depends for life, prosperity, and happiness. From the lowest form of ancestor-worship and fetichism to the loftiest conception of the Divine Unity, religion has been the manifestation of man's dependence upon the Power not himself, revealed in the universe; and of his efforts to win from it something not now his own, to broaden and strengthen his own nature, and recreate it in the image of his ideal.

To primitive man, the ideal and the actual are one: the god is exactly what he conceives him to be. His conception is naturally anthropomorphic: he makes his god in his own image. Only with growing culture, advancing liberality, and deepening spirituality does man come to recognize the truth that the actual infinitely transcends even the loftiest ideal conceptions, and that the "Power not ourselves" must be regarded alike from the highest philosophical and profoundest religious stand-point as the Unknowable. The finite mind can *apprehend*, but cannot *comprehend*, the infinite. It is known only *partially*, through its manifestations. In the recognition of this truth, the ancient Hebrew prophet and the modern philosopher clasp hands across the centuries, reverently regarding it as the assurance that religion is no ephemeral product of man's puerile fears, but that its foundations are steadfast and eternal.

What, then, is to be the future of religion? Neither, I think, its elimination from the life and regard of mankind, as some radical thinkers appear to believe, nor the universal triumph and control of any of the special forms under which the religious sentiment is now manifested upon the earth. Of the three great missionary religions, neither Buddhism nor Mohammedanism nor Christianity is making noteworthy progress toward world-wide supremacy. The first long ago lost its foothold on its native soil; though, doubtless, its influence is still felt in modification of the ancient faith of India. Evidences of tendencies working toward its disintegration are not wanting in China, Japan, and Thibet, where, in modified forms, it still has its largest following. Mohammedanism is making many converts among the barbarous tribes of Asia and Africa, and no thoughtful humanitarian can withhold his "God-speed" from its efforts in this direction; but it is relaxing its grasp upon the freer soil of Europe, which is equally a cause for thanksgiving. It is the most immobile and dogmatic of all the great religions, and therefore unfitted to become the faith of a living, progressive, intelligent society.

Christianity has failed to regenerate the Eastern peoples,—failed even where Mohammedanism has been relatively successful. Though more plastic and mobile than any of its rivals, it can hardly hope to win its coveted position as the great world-religion. Christianity, also, has its limitations; and before the truths it embodies, in common mainly with other faiths, can unite the world in one brotherhood, it must drop its conceit of infallibility and some of its distinguishing dogmas, among which, if I mistake not, must be all those which give a distinctive meaning to the Christian name.
