There must be both vibrations of the air and an acoustic nerve to have sound, undulations of ether and retinal sensibility to have light, emanations of particles and an olfactory nerve to have fragrance, and external objects and nervous sensibility to have hardness or softness. Vibrations of the air, undulations of ether, emanations of particles, and external objects may all exist in the absence of a living organism; but what are sound and luminousness, fragrance and hardness, but sensations? And, of the external factors mentioned, what do we know, except in connection with the subjective factor? We need not pursue these reflections far, to become convinced of the truth of Tyndall's remark, that "matter is essentially transcendental in its nature." By psychological analysis, our conceptions of matter are reducible to sensation, "the common act of the feeling and the felt"; and this is what Fénelon meant, when he said of matter, "It is a *je ne sais quoi*, which melts within my hands as soon as I press it."

Let no one imagine that these facts give any support to the theory that there is no objective reality and that everything resolves itself into the various states of the conscious subject. The doctrine of the relativity of knowledge, as Kant and Spencer have shown, leads logically to the conclusion, in accord with the universal reason and common sense of mankind, that there is something beyond consciousness that, in co-operation with the organism, produces the sensations of which we are conscious. What is the externality? What can be affirmed of it? We turn to the great philosopher Kant, and he tells us that knowledge of the object unmodified by the subject can never be known, since subject and object co-operate in every act of cognition; and that, "though the existence of an external world is a necessary postulate, its existence is only logically affirmed." "As well might the bird, when feeling the resistance of the air, wish that it were in *vacuo*, thinking that then it might fly with the greatest ease." And Spencer says, "The antithesis of subject and object, never to be transcended while consciousness lasts, renders impossible all knowledge of that Ultimate Reality in which subject and object unite." Mr. Fiske declares that we cannot identify it with mind, "since what we know as Mind is a series of phenomenal manifestations," nor with matter, "since what we know as Matter is a series of phenomenal manifestations. Thus is Materialism included in the same condemnation with Idealism." What is the Ultimate Reality that produces in us coexistent or sequent states of consciousness, that appears to us under the forms and appearances of space, matter, force, time, and motion? Who shall tell?

B. F. UNDERWOOD.

EDITORIAL NOTES.

BY B. F. U.

ALL subscribers of *The Index* who are in arrears on their subscriptions will confer a favor by sending the amounts due to this office with as little delay as possible.

A TORONTO despatch to a Boston paper says that a Frenchman named Paquet, a professed infidel, while denying in a discussion the doctrine of eternal punishment, "was stricken with paralysis the whole of one side from head to foot, including tongue, losing vitality." This is a case of which Joseph Cook can make effective use in support of his favorite doctrine, and one which seems to yield him a good deal of satisfaction,—the eternal punishment of unbelievers.

A LETTER from Whittier was read at a recent Woman Suffrage Convention, in which the poet expressed his views as follows:—

My interest in the cause is unabated, and every movement in the cause has my hearty sympathy. The signs of its ultimate success are increasing in all sections of the country, and I find very little of the bitter opposition to it which existed a few years ago. The active and persistent hostility of a few women in our State has given our legislators, who are indifferent or afraid of compromising themselves with their party, an excuse for fighting against it hitherto. But there are many indications that the question will soon be submitted to the people for decision, and that the people will sustain it.

THE *Presbyterian* conveys to its readers the impression that Dr. Davidson having praised *The Index*, this paper in return indulged in extravagant eulogy of Dr. Davidson. After quoting the words of the distinguished gentleman in regard to *The Index*, the *Presbyterian* adds: "Not to be beaten in the high art of eulogy, *The Index* takes its turn, describes Dr. Davidson as the 'most eminent Biblical scholar in England and the head and front of the Protestant scholars of the world.' Honors are easy." The *Presbyterian* made the above statement knowing that Dr. Davidson's reference to *The Index* and the mention of his high rank as a scholar were given as an extract from a letter, and without any editorial comment whatever. The *Presbyterian's* remark is a distortion of the truth.

IN one of our exchanges, we find the following story:—

A young Irishman visited Rome, and there met a friend and fellow-countryman, who was pursuing the avocation of butcher. The butcher acted as his guide; and this is a part of Pat's story of sight-seeing, as told to his sweetheart upon his return: "The most wonderful thing I saw in Rome was a shtone man." "A shtone man," ejaculated Mary. "Yes," replied Pat, "and they called him the Polly Belvedere. As we were looking at the shtone man, says the butcher to me, says he, 'Pat, you and the Polly Belvedere are very much aloike.' And be that we measured. I was broader than him in the fut, but he was higher than me in the inshtep. I was larger than him around the ankle, but he had me in the calf of the leg. My knee was larger than his, but he was better than me in the thigh. My belly was twice as large around as his, but his brist was twice as large around as mine. Then, again, my neck was much larger than his; but his head was much larger than mine. But, as the butcher said, on the general average, we were just about the same thing."

HERBERT SPENCER thus indicates how the doctrine of the relativity of knowledge necessitates the postulation of an unknowable Reality beyond consciousness:—

If, after finding that the same tepid water may feel warm to one hand and cold to another, it is inferred that warmth is relative to our nature and our own state, the inference is valid, only supposing the activity on which these different sensations are referred is an

activity out of ourselves, which has not been modified by our own activities. When we are taught that a piece of matter, regarded by us as existing externally, cannot be really known, but that we can know only certain impressions produced on us, we are yet by the relativity of our thought compelled to think of a positive cause. The notion of a real existence which generated these impressions becomes nascent. The momentum of thought inevitably carries us beyond conditioned existence to unconditioned existence; and this ever persists in us as the body of a thought to which we can give no shape. . . . At the same time that, by the laws of thought, we are rigorously prevented from forming a conception of absolute existence, we are by the laws of thought prevented from ridding ourselves of the consciousness of absolute existence, this consciousness being, as we see, the obverse of absolute existence.—*First Principles*.

THE only ground on which the restrictions on Sunday amusements can be defended must be that they are religiously wrong,—a motive of legislation which can never be too earnestly protested against. "*Deorum injuriæ Dîs curæ*." It remains to be proved that society or any of its officers holds a commission from on high to avenge any supposed offence to Omnipotence which is not also a wrong to our fellow-creatures. The notion that it is one man's duty that another should be religious was the foundation of all the religious persecution ever perpetrated, and, if admitted, would fully justify them. Though the feeling which breaks out in the repeated attempts to stop railway travelling on Sunday, in the resistance to the opening of museums and the like, has not the cruelty of the old persecutors, the state of mind indicated by it is fundamentally the same. It is a determination not to tolerate others in doing what is permitted by their religion, because it is not permitted by the persecutors' religion. It is a belief that God not only abominates the act of the misbeliever, but will not hold us guiltless if we leave him unmolested.—*John Stuart Mill*.

OUR comments in reply to the *Commonwealth's* ill-natured reference to the Free Religious Association and to some remarks in *The Index* relating to the views of Mr. John Fiske seem to have irritated the editor of that journal, who is in no philosophic mood these days. Worse still, he is a little arrogant where he is not well informed, and seeks to divert attention from the weakness of his own intellectual equipment by the disparagement of others, just as though the methods of philosophy were the methods of ordinary party politics, and as though such tactics could have influence among thinkers. The paragraph to which the *Commonwealth* originally took exception was one in which we pointed out the inconsistency of Mr. Fiske in claiming, as he does in *Cosmic Philosophy*, that we have no right to predicate of the Ultimate Reality morality, purpose, design, will, or intelligence,—which is also the position of Spencer,—and then, in his latest essay, arguing for immortality from the reasonableness and moral character of God. In reply to this, the *Commonwealth* can only deplore our ignorance of Spencer and Fiske, and quote from somebody to the effect that Mr. Fiske's theism has been pronounced from the time of his *Cosmic Philosophy*, etc., evidently not knowing that what Mr. Fiske calls "Cosmic Theism" in the work above named is identical with Spencer's agnosticism, the theory of an Unknowable Reality of which no intellectual or moral qualities can be affirmed. For applying the term "theism" to such a theory, Mr. Fiske has been criticised by some of the best thinkers among those who accept and among those who reject the theory. The *Commonwealth* says we "had better undergo a fresh course of Spencer and of Fiske before venturing to write anything more of either." A fresh course of any good thinker is always beneficial. If the editor of

the *Commonwealth* had ever read the philosophical works of either of these writers, the truth and fairness of our criticism which he made a pretext for a thrust at the Free Religious Association as well as *The Index* would have been obvious to him, as it was to every thinker whom we have heard express an opinion on the subject. His determination to withdraw from the discussion is, under the circumstances, the best thing he can do. Philosophical discussion is not his forte.

OUR free-thought friends across the water do not know what to make of the recent action of the National Liberal League. The editor of the London *Secular Review*, W. Stewart Ross, has this to say on the subject:—

It is a queer affair, this Yankee Liberal League, take it for all in all. It voted \$5,000 to defray its expenses for the year, when it really had no money at all to vote. What it really voted was permission to beg for \$5,000; and its principal, if not its only, work, besides giving a few Cat-and-Ladle lectures, seems to be to tout about and rave and rout for the dollars, two of the "liberal" journals having constituted themselves into alms-boxes for the mendicant friars of Secularism. . . . The "Liberals," too, are amusing, if they were not so bewildering. Their energetic and enthusiastic Secretary has to assure them that they are not, as a body, committed to sending filth through the post-office in spite of Anthony Comstock. But the Secretary is, of course, only the servant of his employers, and has no more power to say "filth" or "no filth" than we have. That power is in the hands of Congress assembled. But Congress assembled said, "Go ye out into all the earth, and beg for \$5,000"; and, beyond this, nobody seems to be quite sure what it said, and all is at sixes and sevens. Free thought, as we understand it, is never to be advanced in this way. A great and exceedingly wonderful people are the Americans: they have the biggest lakes in the world and the biggest—No, we shan't.

The League was never "committed to sending filth through the post-office," but only to a demand for the repeal of certain postal laws against the transmission of indecent literature through the mails. This demand was supported by men like O. B. Frothingham, Elizur Wright, and James Parton, and, as they believed, in the interests of liberty, not to encourage the circulation of filth. The same has been true, as we have always claimed, of the great majority of the adherents of the repeal policy. That this policy was a mistake has been virtually conceded by the leaders of the League. The secretary even announces that the League is no longer committed to it; but this is not true, since the resolutions pledging the League to that policy have never been rescinded. There was nothing wrong in voting to raise money for the work of State secularization, but the present leaders of the League are open to the severest criticism in announcing that the sole object is State secularization and calling upon Christians as well as non-Christians for contributions, and then using the money and machinery of the League for a crusade against Christianity. "A great and exceedingly wonderful people are the Americans," no doubt; but the most prominent leader of the League to-day is not an American, but an Englishman, and until very recently editor of the journal from which the above extract is taken.

CHARITY.

For *The Index*.

Gratitude, like the fragrance of a flower,
Upriseth in the forest of the soul,
When kindly dews benevolence doth shower
Fall lightly on it, in its hours of dole.

Who would not be the one to scatter down
Those tears of human love with lavish hand!
They shine like jewels from a royal crown,
And cause the buds of gladness to expand.

MELBORA CLARK.

MADISON, WIS., 1884.

The Index.

BOSTON, JANUARY 8, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

THE GLORIOUS GOD.

A Discourse given before the First Congregational Society at New Bedford, April 6, 1884.

BY WM. J. POTTER.

"God's glory is a wondrous thing,
Most strange in all its ways,
And, of all things on earth, least like
What men agree to praise."

This little verse was the seed-text from which this discourse grew; and I cannot, perhaps, better introduce my subject than by telling you just how the growth started. The verse is one of five which stand together in our Hymn Book; but those five are selected from a much larger number, and the hymn to which they belong was written by the devout Roman Catholic, Faber. Though the general sentiment of the hymn is one to which our hearts might respond, there are in it certain ways of explaining religious truths (I refer more especially to the whole hymn as Faber wrote it) which would hardly accord with the thought of those of us who are accustomed to join in these Sunday services here. And, in looking over the pages of our book to select hymns for our weekly services, I have sometimes passed by this fine hymn, which for its general sentiment I wanted to take, because this verse in particular seemed to be contrary to my customary teachings. We believe, do we not, in a rational, natural religion, immediately connected with the practical, intelligible, everyday duties and dispositions of mankind,—a religion chiefly synonymous with plain, simple goodness, with good aspirations and good efforts and good conduct, with knowledge of and obedience to the natural laws that are stamped upon, and the uplifting forces that are at work within, the world of matter and the world of man; and such obedience, such good dispositions and good deeds, which, in our way of thinking, are the best manifestation of divine power in humanity, it appears

to us that men in general do "agree to praise," when they clearly see and understand them. This verse, on the contrary, seems to inculcate the idea of religion as something strange and foreign to man's natural experience; as something to come by mysterious and special grace, which the natural reason cannot be expected to comprehend nor even to praise. Its key-thought, apparently, is that old conception of Orthodoxy that God's revelation of himself, not only in history, but to the individual soul, is miraculous,—an interposed visitation by the Holy Spirit for purposes of conversion, and in specially providential ways not to be understood nor judged by human reason. And, very likely, some such thought as this was in Faber's mind when he wrote the verse. But Faber was a true poet. And in every true poet, religious or other, there is a profounder meaning than can be translated by any prose rendering. It is for this reason that many of the old hymns and anthems, which conform verbally to a theology which we discard, may yet do service in the expression of a feeling that goes deeper than theology. And last Sunday, as I read this hymn to you to be sung, choosing it then as I had once or twice before with a silent protest against a portion of it, another possible meaning of this special verse came to me, and therewith the thought-kernel of this discourse,—which I bring you to-day,—over which I have ventured to write the words, "The Glorious God."

And yet, after writing the words there, I shrink from the theme. Shall any one venture to sound the depths of that mystery of infinite being in which we, and this universe and all things in it, live and move and have our being? Shall any finite mind have the audacity to attempt to portray the ways, the attributes, the aims of Infinite Mind? attempt to talk of an existence which, by the very fact that we call it *infinite*, we admit to be boundless, incapable of being described, incapable of being comprehended? Does not the old text meet us, to forbid the essay at the outset,—"*Touching the Almighty, we cannot find him out*"? We can understand how the believer in a miraculous revelation of Deity, the believer in a scheme of theology which is alleged to contain a celestially illuminated chart of God's entire nature and dealings with mankind, should venture to speak of his power and glory as something which man can define and describe. But how can one to whose thought Deity is and must be, by the very necessity of the case, largely hidden, one to whom Infinite Being means literally and actually unbounded and illimitable being, and the unfathomable unknown must ever be more than the known,—how can such a one dare to attempt any expression of such a thought as the glory of God?

But, on the other hand, if we can retain, with the natural exercise of our faculty of reason, anything of the religious sentiment; if we are to define religion as anything more than or different from morality, then it is necessary that there should remain some such thought as this; and, if the thought, then also some possible way of giving it utterance. Words may not utter it fully,—this thought of the possible divine glory: music may often sound its depths deeper than words. Yet words may suggest the interpretation, even though not able to make it complete. And at this day, when positive knowledge is our boast and the tendency is so strong to confine thought to the limits of the world of phenomena; at this day, when we go to the scientists and the cyclopedias to explain all the mysteries of the world-forces, and the theologies in which we were bred are vanishing like the fairy stories of our childhood, and what we once read as history is turning into

uncertain tradition and legend and myth; at this day, when the archaeologists and biologists are following back the trail of unbroken evolution in the history of man and the history of the planet he occupies for vast ages back of the time where we used to put creation, and the words "heredity" and "law" and "force" are applied as labels to whole regions of life formerly thought to be under the direct control of a personal deity; at this day, too, when, on the other hand, what cannot be thus studied and explained, mapped and labelled as positive knowledge, is apt to be put aside as unworthy of consideration among practical men and women,—as a country not only unexplored, but *unexplorable*, not only unknown, but *unknowable*,—amid such tendencies of thought, there is some danger that not only much of the mystery, but much of the beauty, poetry, and power of uplifting sentiment, that have been associated with religious ideas, will also vanish. I think it very necessary, therefore, that those of us who accept the results of the new science and of the new methods of studying man's history on the earth should be ready to set forth, if we can, any truer and grander thought of Deity which may have come to us in lieu of the old theological conceptions which science has displaced.

And we may say, in the first place, that our thought of the divine power and glory meets the test of the verse that is our text in this,—that it is, of all things, "least like" what men in general, thinking of that power and glory, "agree to praise." What is the idea of God held by the vast majority of the people of Christendom? It is the idea of an Almighty Being seated in majesty and magnificence on a throne above the skies, after the pattern of a human sovereign, touched with paternal benignity, but ruling the world from that distant heavenly throne by a double system of laws and special providences. It is of a being who made this universe in the first place either out of his own nature, calling the very atoms of matter into existence, or out of material atoms existing co-eternally with himself; building it thence as a master mechanic fashions a machine, and who then impressed upon it the laws and forces necessary to keep it in operation and peopled it with living creatures, while he retired to his celestial abode to govern it henceforth by these general laws and by occasional startling interventions of supernatural power. It is of a being who, in primitive ages, visited the earth in the form of man, walked upon its surface, talked with its first inhabitants, commanded them what to do and from what to abstain. Aye, it is of a being who was once born on this earth of a human mother, and grew here from babyhood to manhood, and then lived for a brief time a devoted life of goodness, and was put to death on a cross, and ascended again to heaven, where he remains to judge the world of mankind as death shall summon them before him. This is the central conception of Deity believed in by the great majority of the Christian populations of the earth. And this, with its various accessories of creative and sovereign power, of monarchical magnificence, of arbitrary judgment mingled with paternal compassion, of almighty will and all-knowing wisdom, is what the mass of the people in Christian congregations "agree to praise" in their worship. Or go into other religions, the same anthropomorphic idea of God prevails. It is God a great and powerful ruler, a king, at best a sovereign father; God, too, who once lived on the earth in the form of man, or perhaps even lives there to-day, surrounded with power and arrayed in the habiliments of glory.

But the divine glory that we would seek is, of all things on earth, least like what these people

have in mind as God. We do not look for it in the god Jupiter, nor the god Jehovah, nor the god Osiris, nor the god Thor, nor the god Brahma, nor the god Jesus. All these were honest and sincere, but ineffectual attempts to express the inexpressible, to define the undefinable, to personify an existence and power which in its essence must forever remain above all human conceptions of personality. They served their historic time and purpose. They marked some aspect and direction of human thought in its effort to grapple with the problem of the ultimate cause of things. They were reaches after the Divine, approaches toward it, but none of them revealed the fulness of its glory. In all the religions, and in Christendom especially, people have been too much wont to glorify their own metaphysical speculations about Deity, their own mental conceptions of him, to take these as his revealings, and to pass by the actual revelations of divine power going on right around them. What a vast amount of religious energy and devotion, for instance, has been spent in setting forth the glory of the divine nature and work according to the purely metaphysical conception of the triune personality of the Godhead! The assertion may be safely risked that no person ever succeeded in getting a logical, rational idea of this doctrine. Indeed, the last resort of all argument upon it has always been that it is a doctrine not to be understood by reason, but to be accepted by faith. But the time has passed when any considerable number of thoughtful minds, awake to the thought of this new age in which we are living, can be content to look for the divine glory in these metaphysical creeds wherein men have put their own conceptions of Deity; or in any names, however sacred and ancient, which have survived from man's earnest but futile effort to define and personify the power in which and by which and amid which he felt that his own being was embosomed and kept in existence.

"The glorious God,"—where, then, shall man look for the living counterpart, if there be any, of this thought? Where but in the universe—this universe of nature and man—which is the only possible presentation of divine power that comes within our knowledge? This universe is itself the shining garment by which the divine power is made visible. While people have been looking away into the past and trying to keep hold of their belief in God by holding to the creeds and conceptions of him that were framed centuries ago, and saying to themselves and repeating in their churches, "What a glory was then revealed to the world!" lo, here is the same God, existing apparently as he has always existed, working as he has always worked, right in the familiar scenes of nature and human life, close around us every day. It is not that the divine glory is so far off that it is becoming dimmed, but that we miss seeing it because it is so near. Let us lift two or three of the curtains from these hiding-places among the every-day facts of our lives,—just lifting a little the drapery of these very phenomena with which science deals, and in the knowledge of which we have such an advantage over the ancients; and *because* of our knowledge of which it is sometimes boasted that we have no occasion for any God at all this side of that curtain of the absolutely unknowable which can never be lifted at all. If I mistake not, we shall find the glory, "wondrous" and "strange in all its ways," shining all around us, just behind and through the most known and familiar things.

Every year, before the winter has loosed its icy grip upon the earth, you begin to see the animal wonder of a new spring-time. Under sheltering fences or the sunny side of your houses, and close

up to the warm stones of your doorstep, which have been heated all day in the March sun, you may have seen the grass springing up and putting on its dress of living green. It was the first streaks of the dawn of that coming glory of life and color, of leaf and flower and fruit, which in a few months are spread over all this northern zone of earth. It comes so steadily and surely, and we have become so accustomed to its coming year after year, that we do not see the wondrousness of it as we should, were our eyes to behold it for the first time. Then, indeed, we should stand amazed, if not worshipful, before the spectacle of the awakening life and beauty. And you say, too, that you know the cause of it,—that the earth in its annual circuit round the sun turns at this season its northern hemisphere, by reason of the angle between its equator and the ecliptic, more directly to the sun's rays, and hence receives more of the sun's heat. But the process is none the less wonderful, though you may give its reason and even scientifically analyze all the details of it from beginning to end. It is, to begin with, a sufficiently stupendous fact that that luminary in the heavens, ninety-two millions of miles away, should be the yearly incubator of life on this planet. What is the secret power behind that glory? But the process of it, as science unfolds it, is a tale more wonderful than any legends of genii or deities that the old mythological religions taught or stories of fairy spirits that belong to nursery lore. How is that blade of grass at your doorstep linked with the sun? Mechanically, by a gossamer web, as it were, of ether, spread invisibly within our atmosphere and through all the interplanetary and interstellar spaces of the heavens, and acting as the conductor of both light and heat. Heat, you know, is a mode of motion. In the sun, it is the resultant of the constant motion of the sun's constituent matter. This motion is transmitted—transmitted as heat—to the contiguous atoms of the ether, which are set to vibrating, and these hand it to the atoms lying next, and these to the next, and so on, until, precisely as motion is communicated through a whole row of marbles which a boy strikes at one end, the heat of the sun is communicated through the ninety-two million miles of the vibratory waves of the gossamer web of ether, and strikes your doorstep, and touches the dead-looking grass-root in the crevice below it. And, when the sun's rays become sufficiently vertical to make this touch powerful enough, it starts that activity in the root which soon shows itself in the green blade above and harbingers the spring. It sets an energy to work in those rootlets by which they seize from the earth and air just the chemical particles needed to build that green leaf of grass; and these particles, then, are sent upward in the sap by the principle of a suction pump, to be digested and separated by the leaf itself.

And this is an epitome of what the sun is doing by its magic art at every spring-time over all the expanse of the meadows and in every forest, every shrub and tree and bud, all round the globe. Nay, the sun has been scientifically shown to be not only the annual renewer and preserver of the vegetable life of the earth, but the source of all life, animal as well as vegetable, and of all physical power and beauty that are anywhere manifest on this earth. It is Tyndall, remembering the law of the correlation of forces as well as this immediate effect of the sun's heat, who says: "The sun rears the whole vegetable world, and through it the animal; the lilies of the field are his workmanship, the verdure of the meadows, and the cattle upon a thousand hills. He forms the muscle, he urges the blood, he builds the brain. . . . He builds the forest and hews it down, the power which

raised the tree and which wields the axe being one and the same. The clover sprouts and blossoms, and the scythe of the mower swings, by the operation of the same force. The sun digs the ore from our mines; he rolls the iron; he rivets the plates; he boils the water; he draws the train. . . . There is not a hammer raised, a wheel turned, or a shuttle thrown, that is not raised and turned and thrown by the sun." Well may this enthusiastic devotee of science add: "Presented rightly to the mind, the discoveries and generalizations of modern science constitute a poem more sublime than has ever yet been addressed to the intellect and imagination of man. The natural philosopher of to-day may dwell amid conceptions which beggar those of Milton." And to this I may add that, though Milton's conceptions were theological and these are scientific, these are none the less concerned with the Divine. What is behind this glory of multitudinous life that marches over the earth with every spring? Have we reached its primal source in the sun? Nay: the sun is but the shadow of some power older and mightier still. The sun is but one of many millions of suns, each with its family of planets, which it warms and lights and peoples with life, and arms with power. We should have to lift the whole curtain of the starry heavens to behold the revelation of the inconceivable glory of which the sun is but one ray.

Let us lift another of these curtains of phenomenal facts in the domain of positive knowledge. Many of you, I hope, have read, some, perhaps, have heard, that incomparable sermon, by our friend William C. Gannett, on the "Treasures of the Snow,"—one of the four miracles of the year, he calls it. You who have heard it, or you who have read it, know with what exquisite poetic touch he unlocks the snow-flake, and tells what may there be seen under the powerful microscope, or is scientifically inferred from what the microscope discloses. Yet, exquisite in poetic feeling and expression as is his description, the poetry, beauty, and wonder are all in the simple facts themselves. The driest chronicles of science tell them all,—how every tiniest snow-flake is made up of crystals which are put together in upwards of a thousand different varieties of form: in prisms, three-sided and six-sided; in pyramids, and in prisms capped with pyramids; in star-shapes, the lines radiating from a centre of glory, star sometimes within star, and these within a third and a fourth; in prisms capped with stars at both ends; in fern shapes with all the varieties that are found among ferns in the forests. But, through all this mingling of different forms, there is no disorder, no misfit. The lines, the joints, the angles, are all drawn with mathematical precision. No deft fingers of the most skilled and patient workman in China can copy their exactness. And through all the variety there is identity, too. There is one mathematical law that pervades the whole structure. To quote now from my friend: "Snow-nature is bound by a law of sixes. The sides of every prism and pyramid meet at one angle,—that of sixty degrees or its multiples; the rays of every star diverge at that one angle; every vein upon those little fern leaves joins its stem at that one angle or its multiples. The snow stars are all six-rayed, or rarely twelve; the centres all hexagonal. Watch the flakes of a whole winter's storms, climb Chimborazo, go to the pole, or make your mimic snow-storm for yourself inside a chemist's bottle,—never will you find a finished star with five rays or with seven, or with that law of the angles broken. The rays themselves are broken, but never that creative law. Bruised, shattered, huddled together, the snow-flakes reach us; but through all bruise and shatter that law of sixes lies plain upon them.

By that they are born and live and die." Well may my friend add, "Is it not very impressive and full of awe even,—these mathematics carried down to the microscopic measurements,—the grand legislation of the universe laid thus upon its invisible atoms!" Surely, *some* power has its *shechinah*, not only in the majesty of the storm, but in this glory of every single snow-flake that falls at our feet or that melts away unseen in the air.

Shall we lift another curtain on a somewhat different scene? Look, then, at the cell from which comes all animal life. In its first original stage, there is nothing to distinguish whether bird or beast or man is to come from it. *What* shall come depends on some hidden formative principle in itself inherited from its ancestry and upon the environment to which it is to be subjected in its development. Suppose it is to become human. It then draws to itself in time, by a mechanism which man's inventive genius may wonder at, but cannot imitate, the materials for building that most consummate of all nature's structures, the human body. The animal, vegetable, and mineral worlds are drawn upon for tribute to build it. But, beyond all animal structures before it, this human body becomes a *thinker*. Its brain is not simply used instinctively to push its own fortunes in the struggle for a merely animal existence, but it becomes an instrument of conscious reflection upon the very work and purpose of nature itself in bringing it into being. It dares even to assert—this human brain—that it sees nature's aim, understands the intelligence that is impressed on the snow flake and planted in the seed and that struggles through all the graceful or uncouth forms of animal life; and it has the audacity—this human brain—to say further, "I can help complete this plan: I see that mathematics in the snow-flake means the law of justice in mankind; that order in the material universe means morality in human society; that the relation of mutual dependence and helpfulness evident between the forces of nature means brotherhood among men." And thus this human brain, whose pedigree thirty years before we could not distinguish in the cell nor whose future prophesy, becomes, under the laws and forces of its own existence, not only a thinker, but a doer of righteousness. Here it becomes a Plato, there a Washington, and there again a Jesus. And, in hosts of humbler men and women, it manifests itself in deeds of loving-kindness and tender mercies. It is a builder of states, a ruler of nations, a creator of the arts of civilization. It discovers the secrets of nature, learns the management of her forces, educates and transmits its own power, organizes philanthropy for the improvement and preservation of the race to which it belongs. The potent life-forces hidden in that tiny cell have unfolded into a power and glory that may well be called godlike in their character.

Let us draw aside yet another veil in the world of scientific fact, one behind which is promised a near view—almost, indeed, a veritable revelation—of the central mystery of life itself in its most elemental forces. A few years ago, the scientific journals were thrilling with fresh interest over a new discovery. It seemed as if, at last, human research, through the agency of the microscope, were to be rewarded with a sight of the primordial substance in which all organic life had begun, and which is the necessary substratum of all continued vitality. *Protoplasm* was the word coined to name this wonderful and unique form of matter, which appeared to carry in itself the "promise and potency" of all modes of terrestrial life. Let us look for a moment at its nature and habits through the eyes of a man of science. Putting under the lenses of a powerful microscope a section of the leaf of an

aquatic plant peculiarly adapted to disclose the protoplasmic life-current, and, supposing his readers to be gazing at it with him, a scientific professor says: "You behold a series of cells. But through the thin wall of any cell appears a flowing stream. . . . A very river it seems as it rushes on, wave after wave, up from the depths below, across the field of vision and down again, over and over or round and round, in ceaseless rotation. Now, the current catches in its course this little particle, now that, hurling each along, now up, now down, now over, now under, without weariness, without hindrance, hour after hour before us. And now, as the stream goes on so grandly, think, for a moment, what it is at which we gaze. We call it protoplasm; but it is the current of *life*, the 'physical basis of life,'—the common bond which binds in one the whole kingdom of organic things. Think, too, of the antiquity of that stream, of its lineage. The brook that 'goes on forever' is as nothing to it; for here the stream has come flowing down through ages which are to us as eternity ever since life began on earth. The mountains have been hoary with years, and have disappeared beneath the level of the all-producing sea; but this stream is older than they. Continents have grown old, worn out, and been renewed, rebuilt from the debris of this same stream, and life has again flooded those continents; but this stream is older than they. . . . [In the interminable past] the vast procession of life begins, rises before us, spreads away in variety, activity, in beauty, in wonderfulness, incomprehensible." Verily, this seems like lifting the veil in the Hebrew temple, behind which was conceived to be imaged the Eternal *I am*,—the Being that was, and is, and is to be, from everlasting to everlasting.

And so we might go on, lifting the curtains from this familiar life all about us, and of which we are ourselves a part; and on every side, from every nearest or remotest or obscurest corner, there would be revealed to us the same ineffable wonder of activity, of order, of arrangement, of beauty, of power, in the great and in the little. We need not go outside of the sensible universe for the demonstration of a divine glory beyond anything and everything that the theological creeds have ever been able to give us in their conceptions of Almighty Being.

But, though we thus keep within the limits of sensible demonstration, there is something within the revelation at every lifting of the curtain of phenomena which the phenomena themselves do not explain,—something which they suggest, manifest, but do not account for. There is always one secret unrevealed. We see into the glory, we are amazed and awed before it; but we see not the source of it. There is always one question unanswered. Touch nature where we will, follow Science up her roadways and byways in whatever direction we may, we shall find everywhere the wonder, the power, the glory; but behind all curtains that are drawn aside there remains one inner curtain that is never lifted. Science shows us the wondrous material atom containing within itself the potency for all forms of organization and life, but the secret of that *potency* she does not disclose. She takes us to "vital force" as the formative, guiding principle in every living organism; but whence and what the *vital force* she has not yet explained. Even if she prove it to be chemical force, that is but a step farther back. She carries us back to *Force* itself as a primordial element in the origin of things, to *Force* as eternal and imperishable, remaining one and the same amid all the changes and correlations of it in the manifold forces of the universe; but she has not told us how we are to conceive of this mighty

primal energy, in and of what it consists or what the philosophy of its existence. She points us to the infinitesimal nerve-cells of the human brain where this wondrous primal energy, after the civilizing discipline of millions of generations of organic existence, sets up housekeeping as a rational thinker and a doer of righteousness. But how the connection has been established between the nerve-cell and the thought, and whether, with the dissolution of the house, the *housekeeper* also ceases existence, are problems which Science has not solved. She bids us look at the protoplasmic current in its ceaseless flux and reflux, and almost promises there to unlock for us the final mystery of the secret of life. But whence the beginning, what the cause of the protoplasmic current, she has made no revelation. We may look in and see, as behind a glass case, how the work of life goes on; but we see not the secret power that starts it and sustains it. If we touch with a needle the wall of the current at which we have been gazing, thinking to investigate closer, instantly "the charm is broken, the mystic river ceases to flow, the tiny particles settle into unbroken peace." That cell, in fact, on which we gaze is then dead, while all the others remain alive; and so the curtain falls upon the secret unexplained. So, turn whichever way we will, back of the boundless glory that we behold lies the mystery of a power unrevealed.

Shall we say, then, that God is only in the *hidden mystery*? That he is not revealed at all, because the very paths which are lighted for us by the glory lead us finally to barriers beyond which we cannot pass nor see? That, because we cannot know him wholly, he is, therefore, wholly "the Unknowable"? That he is in the infinity beyond that barrier, but not in the finite beauty, order, power, majesty, goodness, love, whose source we have traced up to that line? Nay: by the very discovery brought to us by science, that all force or energy is one and self-persistent, however manifold its forms, our logical intellect may leap that barrier to unite the phenomenal glories on the hither side and the sovereign substance of being unrevealed beyond, in the inseparable links of one all-pervading power and life. Life infinite and life finite are but one life. As one force, one law, bind together and penetrate this common earth which we daily tread and the heavens into whose star-populated depths we gaze, but which we can never wholly fathom, so is this whole universe of our senses bound to and pervaded by the unfathomable sovereignty of being that escapes all tests which our senses can meet or our science devise.

And an added glory comes into the universe of phenomena, because of this very mystery of sovereign being in which it is embosomed. Our world—this little earth—takes on dignity and majesty from the infinity of things, unseen as well as seen, of which it is a part. Imagination, reason, conscience, are alike spurred to finer achievement by the problem of the world's relation to the unseen Infinite; while the heart may rest serenely upon the confidence, than which there can be none surer, that its destiny is linked with the forces which make the very integrity and stability of the universe itself. As to what is in the mystery behind him and in the mystery before him, man need have no fears. It is enough that this present circuit of life in which he shares, and which is flowing out of the mystery of the past toward the mystery of the future, is glorious with intelligence and measured by advances in moral benefit.

I have seen a child in its mother's lap gaze up with a sudden wonderment into the beaming benignity of the mother face and into the loving depths of the mother eyes, as if its infantile mind had just caught some new revelation there and was

trying to comprehend the fulness of its meaning,—perhaps stopping in the midst of a frolic or of pain and crying, with this wondering, searching, upward look, and seeming to be impressed with a sense of a power manifest there that understood all and could do all and was full of good will; then nestling down closer and in quiet into the mother's lap. So we are children still in the lap of our mother Nature. And sometimes we are hushed into a tender awe, it may be in the midst of our pains, or it may be in the midst of our pleasures or our work, as if a mysterious, mightful power were bending over and holding us. We lift our gaze upward to see that we are not only held in the embrace of Law, but that through Law shines the glory of Love; and, at that answer, our hearts are at rest.

CORRESPONDENCE.

"CREATION, EVOLUTION, AND MONAD- OLOGY."

Editors of The Index:—

In *The Index* of Dec. 11, 1884, Thomas Davidson, says: We cannot accept evolution, because (1) "it is not an intelligible theory, and (2) because it is a theory which stultifies the intellect and paralyzes moral action"! When the Romish Church became the happy possessor of a language that was dead to the rest of the world, it became possessed of a power that, rightly wielded, would have blighted the earth and cursed mankind for long ages with the priestly thrall. But, fortunately for that same world, the popes and prelates were so busy in fighting one another or so sunk in debauchery that men got a chance to think; and so we are slowly emerging from the priest-made darkness of the long night that reigned from Hipparchus to Newton, from Pliny to Darwin. Once any religion can enwrap its forms and ceremonies in a strange language, it is safe from the vulgar horde, and is likely to be confined to a sacerdotal class. And so also has it been with science to a great extent. So ponderous have been its terms, so complicated its propositions, that the poor and the needy have been shut out from its sacred halls, till the "common people" have come to speak of "dry science" and to recoil from anything pertaining to science. But, thanks to Charles Darwin and his co-laborers, that is fast passing away; for the doctrine of evolution has done for us of this day what Copernicus, Bruno, Kepler, and Newton did for the long ago.

For more than a thousand years, the astronomical system of Ptolemy and the theology of St. Augustine had sat on the breast of Europe like some hideous nightmare; while the "Infidels" of Moslem faith nursed the homeless child, true science. Astronomy was almost impossible then to any but the chosen few, owing to the doctrine of a flat earth and a complex system of cycles and epicycles that were vainly used to account for planetary and stellar phenomena. But Copernicus dared to doubt; and from him came—crude indeed, but true—a system of astronomy that simplified the starry universe, and made it possible for the simplest of us to understand the position of our little world in the sea of the infinite, and shook the pillars of the priest-raised temple that claimed all mankind as slaves. What Copernicus did for astronomy Darwin did for biology, and not for biology only, but for every science under the sun; for the doctrine of evolution is a true one and a simple one, and applies to every branch of human thought, and has enabled us to reduce all existing phenomena to terms of matter and motion, and has placed it within the power of every honest man to become a student of science, and to know not only himself, not only the world he lives in, but also the worlds that circle around him and the flaming suns that twinkle in the remote depths of the death-cold space that enwraps that little planet on which we are flying on our ceaseless journey.

Too often, though, do we talk about evolution without having grasped its grand significance. And so, when men like Mr. Davidson introduce Greek phrases and German poetry into it, and talk about "spiritual entelechies,"—whatever that means,—we begin to feel that perhaps, after all, there must of

necessity be a sacerdotal class in Darwinism as in Calvinism or Romanism or any other ism; and, when the "conditioned" and the "unconditioned" are dragged in, then we recoil in horror from the unfathomable depths of German metaphysics. But when we find that "creation and evolution" are set down as "two pseudo concepts" that explain nothing, and only add to our darkness, then surely do we seem to have reached the lowest depth; but, when after that we find that "human souls are monads in a high state of evolution," then indeed do our souls yearn for the simple doctrines of the Trinity and the immaculate conception, which are as "milk for babes" compared with this "strong meat" that the good Thomas Davidson provides for us babes in science.

Such views of evolution would indeed produce fatalism, and such fatalism would certainly produce immorality. But, fortunately, evolution is *not* what Thomas Davidson would have us believe; for, to take a simple instance, it is the unfolding of life step by step, and the survival of that fittest form in the struggle for existence which is so real to us all.

Take that lowest form of life that floats in the warm seas to-day, the Sun Slime, almost invisible to the naked eye. It has life, it has sensation; but it has nothing else. It is organless, structureless, formless, yet it lives; and it has come to be, by the same law that causes quartz to crystallize in a hexagon and salt in a cube, that makes water run down hill and the moon to follow round the earth. It is, because it must be. This is Nature's first child, and the glory of watching the process fills the student's heart with joy. For the Power that works in it is "the same yesterday, to-day, and forever," "without variableness, either shadow of turning"; and so the slime speck works to-day as it did in the world's babyhood. In the long ages of life and death in the world of slime spots there came one spot that was harder than its fellows, that endured better; and each tendency to endurance was intensified in fast following generations, till the slime speck learned to build him a little house from the carbonate of lime in the sea. And these tiny builders made houses of wondrous beauty for themselves, and lived and died in such countless hosts that the sea floor for weary leagues was strewn with their casts, or shells; but so tiny were these little shells that D'Orbigny counted four hundred and forty thousand in forty-six grains Troy. And yet for so long a time have they toiled that the ocean bottom was covered thousands of feet in depth with their little shells. And when that which was ocean became dry land, and that which was dry land became ocean, in the changing cycles of the earth's history, of which Plato dreamed in his *Lost Atlantis*, then the compacted shells of the slime spots made solid rock; and the mountains and valleys bore witness to the long ages during which evolution had been selecting, by simple, natural process, those forms best fitted for survival. By the same process that works in every family to-day, where no two children are alike, and by this simple law of variation, there sprang from the slime spot form after form of wondrous beauty: shells as beautiful as the fairy palaces of our child literature; forms as hideous as the goblins with which pious monks wrestled in the long ago; forms far more strange than gorgon or centaur, dragon or satyr. And all these forms are watched by the patient student of to-day; for the old stone books have tongues, and the "revelations" of the rocks are far more wondrous than the "Revelation of St. John the Divine," and the story of Patmos is not nearly so wonderful as the story of the "Nummulitic limestone" of the slime spots. For, when the great Haussman built beautiful Paris, he built with the rocks that were born of the slime spots on the ocean's bottom; and, when in the gray dawn of the world's history the Egyptians reared the mighty Pyramids skyward, they, too, quarried the limestones that were built countless ages before by mother Nature in her first attempts at life. And these Pyramids were built in the time when God "walked in the garden in the cool of the evening"; in the time when Polaris was not our pole star; in the time when the gleaming Southern Cross was visible to the Indians of North America; in the days of the Pharaohs who preceded the ones who compelled Israelitish slaves to make "bricks without straw." And yet these far-off times were only as an hour ago to the history of these tiny builders from whom Nature selected more beautiful, larger, stronger forms to fill earth and sea.

The glory and poetry of all the old schools of earth

are as nothing to the glory that comes in following the track of life on this planet of ours. But, when we apply the same simple law to the stars about us, and see how the nebulous mist grows to a gaseous mass, and that to a flaming sun which gives birth to worlds that circle round it in reflected glory; when we see the suns in all stages of sun life and planets in all stages of planetary life,—some, like our own, all athrob with life; some, like our moon, dead and dry, airless, rainless, verdureless, soundless,—then, indeed, we realize in some faint way what a grand, what a simple, far-reaching law is the law of evolution. And we can join in the anthem that was sung as Charles Darwin was laid to rest in Westminster Abbey, with the kings and queens and noble dead of that old country,—“His body hath been buried in peace, but his name liveth forevermore.”

PETER ANNET.

PROTECTION AND FREE TRADE.

Editors of The Index:—

In *The Index* of November 27, a correspondent, in discussing "Protection vs. Free Trade," supposes a case which naturally suggests a comment or two not found in the communication. He assumes England to have free trade and France a "protective" tariff, and proceeds to show how the French manufacturer may find it to his advantage to sell goods in England for actually less than cost,—a proceeding which would ruin his competitor in the latter country. Your correspondent must of course have had in mind, though he did not formally express it, the fact that, as such a result could only be reached when one country already has a "protective" tariff, the case can be thought of as justifying "protection" only as retaliatory and not as a general system. But is there warrant for even this conclusion? He goes on to suppose this destructive process repeated with every line of goods, until England's industries are entirely ruined. But, in the mean time, what are the French merchants supposed to have been receiving in return for their goods? Nothing at all? Then, by the self-sacrifice of their rivals, have the Englishmen been enabled to live in idleness, with all their wants gratuitously supplied. Your correspondent does not, however, attribute quite so extreme generosity to the wicked Frenchmen, but assumes that they donate to their neighbors only a portion of the value of their products. The Englishmen, then, are still producing and exporting something,—a corollary which contradicts the original assumption that they are being undersold in all lines of goods. Indeed, these exports must have increased to pay for the extra importation; and thus, while some industries have been injured, others must have been proportionately stimulated. It seems to be very easy to lose sight of principles with which we are entirely familiar in ordinary business exchanges, when the application is transferred to international commerce. With reference to the former, no one needs to be reminded that trade can never be one-sided, but that, if we wish to sell, we must also consent to buy. And yet, when the parties to the transaction are States instead of individuals, we are prone to fancy that it will be profitable as well as possible to arrest importation while keeping up exportation. In the case in question, if France is "protected," England has no occasion to bother herself about putting up any mediæval bars: she will be sure to get her "protection" as gratuitously as her other luxuries from her rival across the Channel. More curious still, however, is the other assumption which has already been alluded to, and which underlies much of the "protectionist" reasoning; namely, that a nation inflicts a very serious commercial injury upon her rivals, when she insists upon selling them her products for less than their real value. The conclusion is unavoidable that their impoverishment will be complete when all their wants are supplied gratis.

HENRY DOTY MAXSON.

WHITEWATER, WIS., December, 1884.

A FRIEND in Ohio has sent us a copy of the statute of that State, referred to by Judge Brigham in his decision, mentioned in another column, as to the legality of legal advertisements in Sunday papers. It says (Revised Statutes of Ohio, 1830, Section 7033): "Whoever, being over fourteen years of age, engages in common labor on Sunday (work of necessity and charity excepted), shall, on complaint made ten days thereafter, be fined not more than \$5; but this sec-

tion does not extend to those who conscientiously observe the seventh day of the week as the Sabbath. Nor shall it be construed so as to prevent families emigrating from travelling, watermen from landing their passengers, superintendents or keepers of toll bridges or toll gates from attending the same, or ferryman from conveying travellers over waters." This section has been passed upon by the Ohio Supreme Court in several instances. In *Bloom v. Richards*, 2 Ohio State Reports, p. 387, it is held that "by the phrase, 'common labor,' is meant ordinary manual labor, as contradistinguished from intellectual labor." In *McGatrick v. Wason*, 4 Ohio State Reports, p. 566, it is held that "works of necessity, within the meaning of the act, are not limited to labor for the preservation of life, health, or property from impending danger. The necessity may grow out of, or indeed be incident to, the general course of trade or business, or even be an exigency of a particular trade or business, and yet be within the exception of the act." In this latter holding, Hon. Allen G. Thurman, then the Chief Justice of the court, said, among other things: "We must always keep in mind that it is no part of the object of the act [Sect. 7033, above quoted] to enforce the observance of a religious duty. The act does not to any extent rest upon the ground that it is immoral or irreligious to labor on the Sabbath any more than upon any other day. It simply prescribes a day of rest from motives of public policy, and is a civil regulation; and, as a prohibition, it is founded on principles of policy. Upon the same principles, certain exceptions are made, among which are works of necessity and charity. In saying this, I do not mean to intimate that religion prohibits works of necessity and charity on the Sabbath, but merely to say that the principles upon which our statute rests are wholly secular, and that they are none the less so because they may happen to concur with the dictates of religion. The day of rest prescribed by the statute is the Christian Sabbath; yet so entirely does the act rest upon the ground of public policy that, as was said in *Bloom v. Richards* [cited above], it would be equally constitutional and obligatory, did it name any other day. And it derives none of its force and effect from the fact that the day of rest is Sunday; for, as was said in that case, no power whatever is possessed by the legislature over things spiritual, but only over things temporal; no power whatever to enforce the performance of religious duties simply because they are religious, but only, within the limits of the Constitution, to maintain justice and promote the public welfare." Our Ohio friend adds, "While this view of the law is in fact a futile effort to wring out of it the religious duty which the legislature undoubtedly intended to enjoin, yet it shows the strong liberal bias of our judiciary toward bringing to bear on such questions the dry light (*siccum lumen*) of common sense."

BOOK NOTICES.

LIFE OF MARY WOLLSTONECRAFT. Famous Women Series. By Elizabeth Robins Pennell. Boston: Roberts Brothers. 1884. Price \$1.00.

This is probably the most complete life of a greatly misunderstood woman that has ever yet been written; for though Mrs. Pennell fails to bring forward anything essentially new in the history of this pioneer of Women's Rights, yet she has brought together in compact shape and orderly sequence all the available records which have hitherto appeared in scattered fragments, penned by different writers. The fact that such a biography is in demand nearly a century after the death of its subject is in itself strong testimony to the strength of the impression she made upon her own generation, although she died in her thirty-ninth year.

This biography is as intensely interesting as a romance, of which indeed it has all the dramatic accessories. It is the story of an undisciplined, generous, trusting, high-souled, pure-minded, imprudent, sincere dreamer of dreams which would not come true, though she tried her best to make them do so, and succeeded only in thereby sullying her own fair fame, and in making more worldly-wise people mis-doubt and misjudge all her aims and motives.

Mrs. Pennell, though writing from an entirely sympathetic point of view, has succeeded admirably in drawing, by means of quotations from Mary's own

writings in conjunction with the events of her history, a remarkably just and faithful portraiture of her heroine, showing wherein she was at fault, as well as how hard the lines drawn by fate were for so impulsive a nature as hers. It is a wonderfully courageous, independent, yet warm-hearted character that is shown in this history. The story of her connection with the American, Gilbert Imlay, who so basely deceived and betrayed her, yet whose name would be sunk into the obscurity which it deserves but for its association with hers, is here given with much particularity. It is a story with a very apparent moral; and its obvious lesson is that not the sincerest idealist in the world can afford to defy the garnered wisdom of the world, as shown in its laws built up from ages of experience, by trying to make ideal laws, born of individual longing, work as effectively for happiness. Mary thought herself strong enough in heart and will thus to set at naught those laws whose deeper import she did not understand, and which she despised as being mere forms, not necessary for the ideal manhood and womanhood she believed in; but, sincerely as she believed in that ideal and brave as was the spirit in which she undertook to prove it a possible reality, she found at the last that both sincerity and courage were of no avail pitted against the weaknesses of common humanity. She came out of the unequal combat terribly worsted. And yet her later union with Godwin shows that her faith in man was not quite extinguished by her hard experience. Mrs. Pennell evidently wishes to make herself believe that in this marriage the sorely tried Mary at last found real companionship, and her ideal union realized; but the reader of the strange conjugal correspondence here given must be forgiven a doubt on this subject. A marriage under such singular and unique conditions could not long have continued without disaster of some sort. As it happened, death ended the unusual experiment.

Mary Wollstonecraft's history is particularly interesting as that of an original thinker in regard to the position and possibilities of her sex. She was as ardent in friendship as passionate in love. Her own home experience had been hard, and the woes of her sisters and her friends were felt as deeply as her own. In addition, her experience among the so-called educated classes of women, gained while a governess, opened her eyes to their deficiencies and set her to thinking. Her first impulse in seeing need of any sort was to supply that need. Hence, her *Vindication of the Rights of Woman*, which set the literary world of her day in an uproar of protest against her theories. This, more than any of her more elaborate writings, makes her known to-day. Mrs. Pennell gives a full and interesting account of her literary work, which was considerable for a time when women rarely engaged in such work. In that, too, she may be considered as a pioneer of the enlargement of woman's sphere.

S. A. U.

OUT OF THE WRECK; or, Was it a Victory? By Amanda M. Douglas. Boston: Lee & Shepard. 1885. Price \$1.50.

One or two often unconsidered phases of the woman question are strikingly illustrated in this story, which is that of a gentlewoman by birth and position married to a handsome, selfish, unprincipled, and indolent man, who, in the face of misfortune, seeks solace in dissipation, and sinks into such brutal habits that for the sake of her children she leaves him in his poverty and drunkenness, and launching into business for herself becomes a fashionable and successful milliner in the very midst of the society where she had once queened it as a belle. She educates and cares for her three children, until by a sudden stroke of luck the worthless husband and father becomes possessed of a fortune, when, instead of repairing the evil he had done, he takes from the mother, by process of law, the youngest child and only son, at an age when the mother's guiding hand and head are most needed to enforce a higher moral education than she fears his wealthy and lax-principled father can give. The many-sided views taken by different people upon this case, showing how really unjust yet apparently right seeming inferences can be taken by people of differing experience and varying breadth of moral outlook, are very finely shown in the course of the story, which in a minor way involves two or three love stories as well. There is much that is pathetic and sad as well as romantic in the book; and, fortunately for the feelings of the

reader, death relieves the heroine from her quandary, and the weak, unprincipled hero dies at peace with all, and in a half-hearted sort of way, not out of keeping with his character, repents of his wicked unmanliness just before that event occurs.

S. A. U.

SKETCHING RAMBLES IN HOLLAND. By George H. Boughton, A.R.A. With illustrations by the author and E. A. Abbey.

Little needs to be said of this handsome volume, the contents of which, both text and pictures, have appeared in *Harper's Monthly*, and there been admired and read by the half-million readers of that magazine. Certainly, the pictures gain considerable from being printed on a heavier and finer paper, and even the text is better reading in the larger type. It is Mr. Boughton's first essay in literature, and he gives a very amusing account in his preface of how it devolved upon him. He affirms that it will be his last; but so Benedick affirmed that he would die an old bachelor, not expecting to live till he was married. He has been too successful to be permitted to relapse into a silence so absolute as that from which he emerged. His pictures are a clear case in illustration of the proverbial saying, "The Dutch have taken Holland." His affinity for a low, flat landscape and for the homely Dutch attire has long been strongly marked. The Dutchmen of New Amsterdam have had for him a great attraction. Some of his full-page single figures are in his happiest vein, and the engraving and printing of those on Japanese paper are marvels of the beautiful art of wood-cutting. Mr. Abbey's method is very different from Mr. Boughton's. Each is enjoyable through his difference with the other; but Mr. Abbey's idealism renders his report less trustworthy than Mr. Boughton's. The picture in the book is neither Boughton's nor Abbey's, but Johnson's engraving from a portrait by Rembrandt.

LAST FAIRY TALES. By Edouard Laboulaye. Authorized translation by Mary L. Booth. Illustrated. New York: Harper & Brothers.

This compilation contains all the fairy tales written by Laboulaye, the statesman story-teller, from the publication of his *Fairy Book*, ten or twelve years ago, until his death last year. Nothing which the book contains begins to be so interesting as the fact that it was written by a statesman, deeply engrossed in the affairs of France at a period of great anxiety and important changes in the government,—an empire toppling down, a republic adding strength to strength. What a happy fortune that enabled the statesman to rest himself from graver cares with such delightful play, not ending in the moment of its birth, but having a continuous life and power of blessing little children and even children of a larger growth! This collection of about thirty stories proves that the genius of Laboulaye did not exhaust itself in its first brilliant venture into this field of art. He is an excellent borrower. He is at no pains to make his stories original or to keep them free from the admixture of his own fancy. The science of Fairy Lore he leaves to others. His object is to tell a number of stories that "shall keep children from their play and old men from the chimney corner." He is a master of the art; and his translator, Miss Booth, has seconded his intentions with consummate skill. The illustrations are exactly in the spirit of the text, and we could give to them no higher praise than this.

HANDBOOK OF BLUNDERS: Designed to Prevent 1,000 Common Blunders in Writing and Speaking. By Harlan H. Ballard, A.M., Principal of Lenox Academy, Lenox, Mass. Boston: Lee & Shepard. Price 50 cents.

The compiler of this convenient and useful little book says in his preface that it is not meant to be an exhaustive catalogue of common mistakes in the use of the English language, but is designed "simply to give, in a form convenient for reference, a number of such hints and suggestions as have been found useful in the experience of the school-room. . . . It includes most of those inelegancies and inaccuracies of speech that jar our ears with daily iteration." To all those who desire to correct themselves of such blunders in grammar or rhetoric, this handbook will be of value, giving, as it does, in the fewest possible words clear explanations of the reasons for its corrections, each doubtful word or phrase being easily found under its proper alphabetical arrangement.

H. T. MARSHALL'S

PATENT
ADJUSTABLE
LACE
CONGRESS

Is easily adjusted to fit any instep or ankle at any time, and will not uncomfortably draw the ankle, like ordinary congress. It has the stylish appearance of a lace boot and all the convenience of any congress in putting on or off the foot. Marshall's Pat. Pat'd May 13, 1884, woven in the front strap or stamped on the shank of each shoe. If your dealer does not keep them, send postal for directions how to get them to the Patentee and Manufacturer of Men's, Boys', and Youth's Fine Boots and Shoes. Tennis Shoe for Ladies and Gents a specialty.

BY ALL ODDS THE BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches**, which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars**, which are models of comfort and elegance; its **Palace Drawing Room Cars**, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that it is the best equipped road in the world.

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, and take none other. All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

RELIGIO - PHILOSOPHICAL JOURNAL.

Established in 1865.

A Paper for all who Sincerely and Intelligently Seek Truth without regard to Sect or Party.

The JOURNAL, in the estimation of a large proportion of the leading authorities on Spiritualism, stands pre-eminent as a fearless, independent, judiciously fair advocate of Spiritualism. It has received more general notice, and more frequent and higher commendations from intelligent sources, regardless of sect or party, than any other Spiritualist or liberal paper ever published: the records will confirm this.

The JOURNAL is uncompromisingly committed to the Scientific Method in its treatment of the Phenomena of Spiritualism, being fully assured that this is the only safe ground on which to stand.

The JOURNAL is unsectarian, non-partisan, thoroughly independent, never neutral, wholly free from cliques and clans.

TRACTS.

- No. 1.—**Truths for the Times**, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.
- No. 2.—**Fear of the Living God**, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.
- No. 3.—**Lecture on the Bible**, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.
- No. 4.—**Christian Propagandism**, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extraneous.* Price 10 cents; 12 copies, \$1.00.
- No. 5.—**God in the Constitution**, by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.
- No. 6.—**The Sabbath**, by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.
- No. 7.—**Compulsory Education**, by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.
- No. 8.—**The Present Heaven**, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.
- No. 9.—**The Christian Amendment**, by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.
- No. 10.—**The Impachment of Christianity**, by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*
- No. 11.—**The God of Science**, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.
- No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, \$1.00.
- No. 13.—**On the Vision of Heaven**, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.
- No. 14.—**A Study of Religion: The Name and the Thing**, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.
- No. 15.—**The Battle of Syracuse**. Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

BY B. F. U.

ENCKE's comet, the periodicity of which is now fully established, is slowly brightening as it approaches its perihelion, to which, according to recent observations and calculations, it will return on March 7. It is sixty years since the astronomer

REFERRING to the fact that every day a score of trampled wives refuse to testify to the ruffianly brutalities they receive from husbands under the influence of liquor, the New York *Tribune* cites the case of a poor woman whose eyes were deliberately put out by her husband, and who would not have informed against him, but for the action of her neighbors. The *Tribune* adds: "And what a flood of light is thrown on the lives of a whole class of women by the remark of one of these neighbors, that she did not interfere before, because she thought McCarron 'was only giving his wife an ordinary beating'! Every policeman and justice

THERE is an institution at Denver, Col., called "The Tabernacle of God," which is a home for foundlings. Its managers have relied wholly upon prayer for the cure of the sick. Recently, a child died without medical treatment, which, in the opinion of physicians, would have saved its life. The fanatical keeper of the place, in a communication to a Denver paper, says: "Our home has taken no children but what it has carefully informed all beforehand that our custom was to trust entirely in God. The Dunkards are a class of Christians who believe only in anointing their sick with oil, and committing the result to God. No physicians are employed for the sick. Have we not the same right as they to trust wholly in God? Herbs are not complete ministers of life. They are good supplies of food, but there is a remaining force or power of life which must be supplied directly from God. Why not go to him first, and not leave him to the last, in the knowledge of all things in which he has part?" Undoubtedly, the method here recommended is "according to the Scriptures"; but, in these days, the teachings of the Scriptures are generally disregarded in practical matters, when they are in conflict with common sense. Commenting on this case, the *Chicago Inter-Ocean* judiciously observes: "If men and women of mature minds, capable of entertaining views of their own, see fit to put their trust in supernatural agencies, rejecting material aid, that is their business. But for them to make children the victims of a faith that cannot be defined, and of abstract propositions that cannot be demonstrated, defying the wisdom of experience and repudiating the service of expert skill, amounts to a crime that no religious convictions can excuse, and which no State charter should protect." "The Tabernacle of God" is likely to be closed, and its keeper sent to a lunatic asylum.

THE WORLD'S PROPHETS AND THEIR TEACHING.

A "subscriber," writing very pleasantly of our article on "Christmas," inquires, "In what respect are the teachings of Christ better than or different from those of other incarnate deities that were supposed to have lived before him?" and adds that he would like to hear from us an additional word on this point.

The Christmas article, as we suppose, made it clear that we do not regard Jesus as having any other kind of authority in his teaching than that possessed by other so-called "incarnate deities" or messengers believed to have been sent from heaven. All of them were human and finite, and, therefore, fallible. No one of them could have any monopoly of intellectual or of moral truth; and no one of them can be adjudged as perfect, according to the highest ideal standards of human character. Yet as persons having merely natural relations to their own times and to the race to which they have respectively belonged, and possessing only the authority derived from their superior mental wisdom or remarkable moral insight and power, they have held positions of immense importance in the historical development of mankind; and their characters and teachings are still important, as illustrative of the highest personal influences that have helped to shape the thought and destiny of great masses of human beings. Of course, in Christendom, Jesus has held this position to a greater extent than any other of the world's great teachers, not only because of the common Christian theory of his being a miraculously endowed personage, but because he is the only one of whom, in Christendom generally, there has been much of anything known. But, in latter years, a more hospitable spirit and interest has been developed, at least in certain sections of Christendom, toward other religions; and even the Christian Church is beginning to see that it may learn something of value from and justly render honor to others of the world's prophets besides Jesus. Whatever question there may be concerning the benefit of Christian missions to the pagan peoples whom they have attempted to convert, there can be no doubt that Christian missionaries, if they have been broad-minded and scholarly men, have benefited Christendom by the knowledge they have brought back concerning these pagan peoples' prophets and their teachings.

When, however, these great teachers, who have stood along the ages on the heights of moral illumination, are thus placed together in the line of natural humanity, any comparison of them with one another, as to the amount of good they have done in the world or as to the height of the special pinnacle, intellectual or moral, on which they stood, becomes a matter of minor importance. Such questions may have an interest to the historical artist and to the student of individual psychological development in the various races and faiths of mankind: minute analysis of character always has an interest of this sort. But the practical ethical value for the world to-day of these past prophets does not depend upon this comparative analysis of their work and teachings. As naturally endowed leaders, however high they may have risen in respect to moral insight above the mass of mankind in their own age, they will now be resorted to, not for authoritative moral precepts nor even for examples of conduct to be always followed, but for the stimulus and inspiration which may be found in their general moral clear-sightedness and heroic fidelity to a moral ideal. To use the phrase which Matthew Arnold applied to Emerson, they are now "aiders to those who

would live in the spirit." But exactly to determine their relative rank in this high office is an invidious task, which results in little practical benefit. The local Unitarian Conference which a few years ago thought to save its Christian repute by passing a resolution to the effect that Jesus was the greatest religious teacher and the best man the world has ever known, only drew a broad smile from the Orthodox circles to whose creed it made this vigorously feeble concession.

The truth is, these founders and prophets of the great religions of mankind, though standing together on this high tableland of natural moral superiority, differ widely among themselves in points of character, temperament, and career. One of them may excel on one point, another on another point, and still another may be stronger than both of these on a third point. Which of them excelled all others in the most particulars might be difficult to say. No one of them is complete on every side. Better is it, therefore, to take them for what they each specially represent, and so get the more completely rounded ideal of humanity from them all than it is possible to see in any one of them alone. Could we imagine them to come together in one company, they would certainly find such ample ground for noble intercourse in their common sympathies and aims that we cannot conceive of their falling into disputes concerning their relative rank in the hierarchy of great men. Jesus, the peasant prophet; Buddha, the prophet prince; Confucius, the statesman; Aurelius, the emperor; Socrates, the philosopher; Moses, the political organizer; Zoroaster, the dimly seen but pure ethical teacher,—all proved themselves to possess royal souls, in that, in their very different circumstances and careers, they achieved greatness through the all-mastering sovereignty within them of the moral nature.

WM. J. POTTER.

CARLYLE THE PEASANT.

In all the criticism which has been passed on Carlyle in regard to his conduct toward his wife, there is one point which has not been sufficiently insisted on,—the fact that by ancestry, birth, and education he was a peasant; and this explains all his apparent inconsistencies. Not that the peasant character is inconsistent in itself: it is, on the contrary, remarkably harmonious; but Carlyle, the peasant, was out of his environment. Only those who have resided many years among European people can fully comprehend what a tremendous force on the latent character of the individual the early training and environment exercise.

The devotion to family which so strongly characterizes English, Scotch, Irish, and Continental people, even where the members of the same hate each other and cannot abide together in peace under the same roof, is proof of the truth of this fact. It is an inherited instinct among the peasantry. Down-trodden and wronged in the past, struggling for bread, if families had not clung together, they would have been entirely annihilated: in their union alone was strength. A peasant can hold no long conversation with any one without introducing the topic of his own family, and saying what wonderful people his father, mother, brothers, and sisters are. But his wife,—she is not of his people. He has no inherited instinct to praise her. His feeling, on the contrary, would rather incline to make light of "wife's kin." The peasant is also debarred by caste from comparing himself with many people. Peasant families live more or less to themselves, are suspicious and self-centred, and do not, therefore, acquire the just estimate of themselves which people in the higher classes almost invariably attain to after mixing with the

world. The least evidence of either mental or moral superiority is always exaggerated among them and made more of than the occasion warrants. Carlyle's treatment of his wife is explicable only in the light of his peasant instinct to exalt his own people and cling to them. Jane Welsh was not Jane Carlyle. Her intellect, her capacity, her devotion, or the intellect and capacity of any one else, was not a credit to the Carlyle family: therefore, it was neither his duty nor pleasure to give it much attention. Even his grand intellect was not superior to inherited instinct, and in his character this peasant trait was developed to a remarkable degree. He had no money to spare for his wife's comfort, but could always find some for the use of his own family. If he had had children of his own, this tendency would have been used for their benefit; but the wife's right is always the last one to be considered among the lower classes in Europe. Carlyle would have asked his mother or sisters to oversee the work of the house and, if need were, to bake and scrub: he could see no impropriety in exacting that his wife should do the same. A man must have been educated by his previous surroundings, to live with a high-bred woman, with any comfort, as far as she herself is concerned.

After all, the enigma of the whole matter is not how Carlyle came to treat his wife as he did, but how Jane Welsh could have made up her mind to marry Carlyle. How could a woman born and bred in the old country, keen-witted, high-spirited, and high-bred, marry into the Carlyle family? If she had seen him alone in London, fêted and flattered, it were easy to say; but his own words warned her. She visited his people, she knew his good old peasant mother, his rough brothers, their simple and unceremonious manner of life. Above all, she must have obtained some insight into their limited vision. Yet this brilliant woman was willing to throw in her fate with these people for it was impossible to remain any length of time with Carlyle and his family, and not know for a certainty that their fate was his also. She tempted Providence, and Providence will not be tempted with impunity. In the many years which followed, how could Mrs. Carlyle cope with her peasant husband? Not that he was vulgar, but their point of view was so different. If, when he displeased her, she could have told him so in the concise, forcible English which his mother or sisters would have used, it would have been better for both of them; but the subtlety of language and evenness of manner which a well-bred woman acquires deceived Carlyle. He failed to perceive what Jeffrey, accustomed to associate with gentle-born women, at once was alarmed at,—Mrs. Carlyle's failing health.

Carlyle's so-called repentance only took place when he had arrived at a certain stage of development by associating with people in London. Here, he came in contact with many ladies. He had known Lady Ashburton well for some years, and it had gradually dawned upon his mind that all women were not of the same hardy calibre as his mother was; that it was not possible for all of them to scrub and bake; that what constitutes luxury to one woman is but the bare necessary of life to another; that some of them must be tenderly cared for and lovingly treated, or they will suffer.

Poor Jane Carlyle paid for her "generous mistake" by her life-long unhappiness.

Carlyle's failings and faults toward his wife were those of a peasant; and, in view of the well-known peasant character, it is surprising that he ever awoke to the tragedy in which he was one of the principal actors, and it certainly speaks won-

ders for the nobility of his nature that he repented so bitterly of the part he played in it.

ELLEN M. HENROTIN.

THE NEW RELIGION.

Modern scientific thought has utterly undermined Christian theology. This it has done, not by showing historical inaccuracies in the Bible, or by exposing errors in the logic of its creeds, or by attacks upon it of any such nature, but by establishing the fact of the universality of the reign of law, the inevitableness of the sequences of phenomena. By so doing, science has eliminated the miraculous and the supernatural, so far as they may be defined as the wilful interventions of any being. It has done away with the personality of God as a possible conception; with free will, when conceived of as making man a creative first cause; with sin defined as a desire repugnant to a personal God; or as anything more than a wish whose execution is forbidden by the moral law which man has voluntarily or involuntarily established. And it has taken from us the future life as a fact supernaturally revealed. This fact of the general dissolution of Christian theology has been accepted by many of the thoughtful. Not a few among those who have so accepted it lived in the Christian faith, and enjoyed its promises and its consolations before they found that faith inconsistent with the conclusions which were forced upon them by positive thought. For them, the transition to the state of mind in which the rejection of Christian dogma and the acceptance of antagonistic scientific truths became necessary has been full of pain, and has led often to despondency. From those passing through this time of sorrow and despair, we have prophecies of the coming of a moral or immoral interregnum, should the truths destructive to the reigning theology be generally accepted; and pitious demands that those who have made foolish their old faith should supply them with a new. Are these prophecies reasonable, and are these demands just?

Religious faith has long been regarded as a mental condition or a mental attitude, in which the mind accepts as true that which is supported mainly by the evidence of the intuitions or by the testimony of consciousness. When engaged in an act of faith, the mind is supposed to be free from limitations, or to rise above the limitations which are imposed on it by the laws of logic and the rules of evidence, when it is engaged in an act of belief; and it is further assumed that the mind finds within itself a reason for the conception to which it rises, and a justification for the acceptance by which it holds. This view of faith has been complicated and strengthened by the elements of wonder, reverence, and love, always associated with it. Faith, religious faith, appears to most men as something quite distinct from belief; as importing a mental attitude in which an assumed spiritual sense is brought into action, and peculiar truths are seen, and peculiar sentiments aroused. For instance, the devotional spirit is awakened—such seems the accepted opinion—only in one who holds certain ideas, not as matters of belief, but as matters of faith. And worship, in the same opinion, is only possible when its object is a being, the fact of whose existence and the character of whose attributes are conceptions beyond the domain of what, in contradistinction to faith, is called positive thought.

From the first stages of its development, religion has been a factor in morality. Religious faith has had for one of its elements a conviction that certain results follow certain conduct; the results being pleasant or unpleasant, rewards or punish-

ments, as the conduct conforms or fails to conform to certain religio-moral precepts. In this way, it has always had an influence on the moral life by its appeal to man on his self-regarding side. In its higher forms, by involving as one of its elements the conception of a God, who is but a magnified man, playing the part of a universal benefactor and an ever-present helper, it has naturally enough aroused the desire to please by the proper conduct a being so full of kindness and love. This desire has come rather from man's sympathetic or altruistic than from his selfish or egoistic side, and from it we have the higher moral incentive of love.

The belief in a future life has been closely associated with other conceptions and inspirations said to be given us by faith, and the hope and expectation of immortality do partake largely of the nature of ideas called religious. They rest on slender evidence, are conceptions which greatly arouse the emotions, and which depend much for their acceptance on our proneness to believe what we wish to believe. As a result of this long continued connection of the dogmas of religion with the hope of a future life, it has become difficult to conceive of an adequate reason for belief in immortality outside the sphere of religion. We are told that we can attain the assumedly higher vision, which alone can give us a convincing view of God's being and our immortality, only by yielding ourselves up to the religious feeling, and availing ourselves of its peculiar spiritual insights and supernatural revelations.

Worship with its accompanying emotions of reverence, devotion, and love, the inspirations to morality, or the ground and reason of right conduct and the hope of a future life, have, then, all been associated closely, seemingly of necessity, with religious faith. And this religious faith, in the general conception of it, is a something beyond and above belief. In the Christian theology, it requires, or assumes to require, a certain surrender of the individual will, in order to its acceptance. By its acceptance there comes in a peculiar spiritual exaltation, a clearer spiritual vision, with consequent joy, peace, and moral yearning. Small wonder, then, that to most of those who have been nurtured in the conceptions that the dominant religious faith brings with it, those grand conceptions,—the assurance of immortality, the lofty conception of a loving, personal God, ethical incentives, and inward peace,—small wonder that to those there should come with the rejection of that faith a feeling as if something had gone out of life, as if the hope and end of existence were wanting.

But what is this faith? Is it an attitude of mind different from that of belief, or does it necessitate an attitude of mind different from that which belief necessitates? Is it not possible to gain from our intellectual convictions, has not man always gained from them, comfort, peace, hope, inspiration, ethical impulses, and an aim for existence?

From its very origin, religion has had ever associated with it the element of mystery. In wonder and fear were its beginnings. That a power like the human power, that a will like the human will, that a mind and a personality like the dimly apprehended human mind and personality, were behind all manifestations of force, were the conceptions on which it was founded. They were conceptions depending largely for their origin and acceptance on the fact that there seemed to be no evidence against them, and that they corresponded with the demands of minds not yet cognizant of their own nature. They depended little on the evidence in their favor. Yet to the minds of those

accepting them there was always sufficient evidence for that acceptance. We have no reason to suppose that any occult, non-natural influence from without, or that any non-natural, non-caused influence from within, imposed on man his first religious conceptions or gave him an exalted vision wherewith to see them. From what he saw and from what he felt, he gained certain ideas of the constitution of the world,—ideas not less naturally obtained than his conviction of the warmth of the sunshine, but ideas so little understood, so connected with the mysterious, the powerful, and the sublime, and so related to the acts and needs of his daily life, that they could not but influence his conduct. These elements of mystery, power, and sublimity, have clung always to man's religious conceptions; and to them have been added other elements pertaining to man's emotional side. Thus, as has been said, these have been so engrafted on to religion as now to be considered inseparable from it and incapable of existence except in it,—the devotional spirit, the love of God, and the hope of immortality, with the lofty moral inspirations coming therefrom. Thus, then, it has happened that facts coming within the sphere of religion have been accepted by a certain psychical process called faith; while facts coming within the sphere of positive knowledge have been accepted by the same psychical process under another name, belief. This difference in the terms applied to the same process has been continued; and the consequent confusion of thought has been increased by the fact that religious ideas are concerned mainly with the emotions, and from their origin have been thought to be peculiar dogmas, necessarily joined to the mysterious. But, when examined carefully, these religious ideas are all seen to be founded on simple intellectual convictions. Though the evidence for religious truths may be slight, evidence there has been and evidence there must be, in order to their acceptance. Often, it happens, no doubt, that the apparent lack of opposing evidence and the desire of the believing mind have much to do with the decision to accept this or that creed. But the positive evidence is always present. With the young and the ignorant, it may consist only in the testimony of their friends and spiritual advisers; but to them that is as sufficient proof of the existence of a loving personal God and of his revelation of immortality and of moral law as it is of the simplest historical fact.

Faith is but belief, confused, it is true, with verbal adjuncts and distinctions, but simple belief, plain acceptance, of a seemingly verified fact, nevertheless; and the inspiration of one possessed of this much vaunted and, when lost, much lamented faith comes from what is simply a pure intellectual conception, as truly such as is our belief in the existence of the sun. In making this statement, no account need be taken of any necessary datum of consciousness as to God which the exalted believer may have; for that he shares with all men, and from it can gain no mental or spiritual vision peculiar to himself. The Christian believer accepts, on what is to him sufficient evidence, certain premises, as the personality of God, the fall of man, the Bible's inspiration, the deity of Christ, and other dogmas of like nature. As logical deductions from these dogmas, accepted as facts, come the beliefs and the emotions which we call religious. The feeling of love, for instance, together with the desire to satisfy it by the proper conduct, arises, naturally and of necessity, in the mind of one who is assured that the object of his love is exercising an ever-watchful care over him, and has made the greatest sacrifices for him.

If this be true, that the religious emotions and

the religious conceptions have their origin in simple beliefs, as do all other emotions and all other conceptions, the sad prophecies of those whose faith has left them have little reason, and their complaints that the destroyers of their old religion have given them nothing in its place have little justice. They tell us that, without faith, the world to them is nothing. The answer is that, without belief, the world is nothing to any man. They are to be reminded that they cannot have rejected finally the convictions they formerly held, and are still tormented by the thought of their possible truth, or that they have not accepted finally the convictions making their former ones untenable, and, holding fast to nothing, are tossed on the sea of universal doubt. The New Religion they should demand needs not any element of wonder other than that which the simplest of nature's works inspires; nor any element of faith as distinct from belief in a scientific truth; nor any element of love other than that we must feel for the power behind all things, when we rightly consider man's present and man's past. It need give no moral inspiration except that arising from the conviction of the value to the race of the elevation of the individual, and it need give no higher aim for our existence than that conviction gives. It need supply us with no stronger hope in immortality than that which is grounded on established facts as to our nature, our origin, and our place in the universe.

A group of facts, borne in upon us and made a part of our nature by our unhesitating acceptance of them, gives us all that religion can give, and, in truth, is as much a religion as the superstitions of the savage or the formulated creeds of the civilized. These latter are nought but congeries of statements, more or less reasonable, accepted as true by the believers in the religion which they compose.

What group of facts, it will be asked, will give us the comforts, hopes, and inspirations which it has been thought a religion of mysterious supernaturalism could alone supply? Those facts which, when properly formulated, constitute the doctrine of evolution, will so do.

Let one apprehend the grand order of events of which man is, on this earth, the last best product; let him realize the glorious possibilities lying before us, and the aid even his feeble efforts can give in attaining them, and he can but take up life with the loftiest fervor as a grand religious duty. More than this, an unwavering acceptance of the doctrine of evolution will elevate his character by giving him a new view of the human race and of the individual. His rejection of the dogma that human desires are uncaused, or have their first cause in the heart of the individual, will free his mind from the grievous conception of sin, and will give him a more than Christian—though not a more than Christlike—charity. His belief in our better future will give him hope. His knowledge of the vast progress man has already made will give him joy that he lives in this day and in this hour. And his beliefs as to our nature and origin will give the sublime promise of immortality.

But it may be said that the acceptance of this doctrine gives to many no such thoughts and no such inspirations. Then would I borrow a phrase from the old religion, and say that such are but "almost persuaded," that they do not "fully believe." As with the old religion, so with the new: it gives nothing, if it be not fully accepted. It is in all things so. Our friends even are nothing to us, until we know them to be true; and our knowledge of their truth must not be attempered with suspicions, however faint, would we gain the delights of perfect confidence. How then can he

who distrusts all his convictions hope to gain from any of them either comfort or inspiration? It is a sad mental condition which leads us to say that, our idols once shattered, we have no heart to seek elsewhere that truth which was hid within them.

Let the mourners of a lost faith search their minds, and see if they need not first new knowledge and new wisdom before they can come into new hopes and new aspirations, and can enjoy the religious exaltation which unwavering convictions always bring.

JOHN COTTON DANA.

THE DISABILITIES AND LIMITATIONS OF SEX.

When the system of co-education was first proposed, the wise in their own conceit said, It cannot succeed: the girls will necessarily fall behind their classes. The experiment proved the reverse. Then it was said, The girls may compete with the boys in the rudimental branches; but in philosophy, the languages, the higher mathematics, they must fail. The girls, however, by taking the prizes in these higher branches, soon proved their equal capacity. Compelled to admit the facts, it was then said, If the girls pursue this course of collegiate study, it must be at the risk of a lamentable physical depletion, not only for themselves, but their descendants.

When, however, it was proven that the girls in colleges, with regular employment and intellectual ambition, were more healthy than those in society, and that a larger proportionate number of young men fell behind their classes on account of ill health, then these wise ones, driven from all their supposed strongholds, betook themselves to the realm of speculation, and declaimed on the general "disabilities and limitations" of the feminine element in humanity.

The possibility of any limitations of power in the opposite sex never seems to occur to any one. The sphere of that half of the race is supposed to be boundless, and its capacity illimitable. Those who declaim on the inequalities of sex show themselves as ignorant of the first principles of life as would that philosopher who should undertake to show the comparative power of the positive as against the negative electricity, of the centrifugal as against the centripetal force, of the attraction of the north as against the south end of the magnet.

These great natural forces must be exactly balanced, or the material world would relapse into chaos. Just so the masculine and feminine elements must be exactly balanced, to redeem the moral and social world from the chaos that surrounds us. One might as well talk of separate spheres for the two ends of the magnet as for man and woman: their true place is together everywhere. Having different duties in the same sphere, neither can succeed without the presence and influence of the other. To restore the equilibrium of sex is the first step in social, religious, and political progress. The tendency in past ages has been to exalt the masculine portion of humanity, because, in the infancy of the race, superior physical strength made man more valuable in supplying material resources and in doing the rough work of the world. Hence, those who could fight with wild beasts, hew down mighty forests and rocky mountains, build pyramids and guide the enginery of war, did not appreciate the more refined work of mother, wife, sister, daughter, nor the gentler influences continually flowing out from these, softening the asperities and mitigating the miseries of life.

The tendency of the masculine element is centrifugal, to boundless exploration, to endless change,

to the nomad life. The feminine is the centripetal force, that has made the family, the tribe, the community possible. This element is not necessarily in the form of woman: it predominates as well in the most refined, spiritual, scholarly men; it is the repository of the religious sentiment, the conscience of the race. Its voice sweet and clear has been heard in all ages, above turmoil, conquest, and persecution; but its protests against violence and injustice have been too often unheeded and forgotten.

All the talk we hear about the "limitations of sex" is outside the realm of science and philosophy; but, as women themselves believe in these oft-repeated assertions of their "disabilities," it is well to consider the data on which they rest.

"You must admit," said quite a well-informed woman to me not long since, "that we are handicapped by Nature,—that we have many disabilities, and are very circumscribed in our limitations." "True," I replied, "all living things have their limitations. The fish cannot fly in the air, the bird cannot swim in the river. Sick men and women are alike handicapped by disease and suffering. But every living creature in its normal condition can fulfil its destiny. The healthy, well-developed woman has no 'disabilities.'" "Her dress is certainly one," said a slender being, buried in a velvet-cushioned chair, absorbed in a piece of flimsy embroidery. "Her dress!" I replied. "A woman is not born with petticoats, high heels, lapped ribs, and a dozen hairpins stuck into her scalp. Such disabilities are of her own choosing: they have nothing to do with the normal woman in freedom. Our judges in the Supreme Court of the United States, and our priests and bishops in gown and surplice, could not in such attire run a race, play base ball or cricket, or do any grand and lofty tumbling in a gymnasium, but who would reckon these robes of state as 'the disabilities' of these professions?" "But," said another, "granting what you say on this point, you must admit that motherhood is a disability." "Do you call it a disability," I replied, "to give life to an immortal being?"

The "Magnificat" has been chanted for centuries round the globe. A prominent place is given to this hymn in the vespers of our Churches, both Protestant and Catholic. This song of praise by the Virgin Mother in thankfulness for the Incarnation, and uttered while she was yet the tabernacle of the Son of Righteousness, proclaims motherhood to be woman's chief honor and glory; and yet, in direct contradiction to this dogma of our faith, motherhood is regarded as a "disability," and spoken of as such, perchance, by the very lips that join in the "Magnificat" every Sunday in our temples of worship.

There would be more propriety in enlarging on the "limitations" of the male sex, because man cannot be a mother, than of the sex that possesses that capacity. Surely, maternity, which calls forth some of the most tender sentiments of the human heart and quickens into life all the dormant forces of woman's being, is an added power and development, and not a "limitation."

"But it unfits her," says another pertinacious reasoner, "for much of the world's work." "Yes," I replied; "and it also fits her pre-eminently for much of the world's work. A large share of human legislation would be better done by her because of this deep experience. Every special calling has its special advantages and disadvantages."

The student, the author, and the statesman, have all their limitations. As their profession does not develop the muscular system, they are not fitted to dig for gold and coal in the bowels of the earth, to dive to the ocean depths for lost treasure, or to guide balloons above the clouds. They can-

not rig a vessel, go to mast-head in a storm, make a steam engine, or run up and down a fire escape to save trembling women and children in the hour of danger. They cannot cook their food, mend their clothes, nor with their own hands make a comfortable shelter. Behold their "disabilities and limitations"! Neither could the cook, the tailor, the aeronaut, the fireman, the miner, the diver, fill the position of the student, the author, the statesman. It is only in very exceptional cases that these classes interchange employments. Women have shown themselves capable in emergencies of doing everything that man has ever done in all the higher departments of intellectual achievement in which they have had training, as well as in those employments where physical strength is needed. With proper drill and a dress adapted to the work, there is nothing required of a human being that woman cannot do. The two things that Horace Greeley declared impossible for a woman were to pilot a ship across the sea and sing bass in the choir, yet she has in several instances accomplished both these feats.

In choosing our employments, we must all alike accept the limitations necessarily involved; but there is no reason why custom and public sentiment should handicap its victims with an indefinite number of artificial disabilities that have no foundation in nature. It is impossible to estimate the extent to which civilization has been blocked in all ages by the repression and persecution of the feminine element in humanity.

ELIZABETH CADY STANTON.

A MERITED HONOR.

The veteran abolitionist, Oliver Johnson, was seventy-five years old at the beginning of the New Year. The event was celebrated by a reception in his honor at the home of Dr. and Mrs. Mann, 969 Lexington Avenue, New York City, on the evening of January 6. Many friends of Mr. Johnson were present. Others, as Whittier, Beecher, Curtis, Thomas Stone, Higginson, and many more, sent letters of congratulation and hearty appreciation of the great services of Mr. Johnson in the anti-slavery cause. He was the youngest, and is about the last, of the Garrisonian band. His work has been chiefly with his pen. He was the writer of the abolitionists. But *Index* readers generally must be familiar with his career and his literary work, and there is only need to mention here what concerns the celebration of his seventy-fifth year. The company which assembled on the occasion was composed mainly of Mr. Johnson's personal friends. It was a houseful. Probably another houseful could be gathered together in Philadelphia and Boston. A man does not live seventy-five years of unselfish devotion to a good cause, even in this gilded age, for nothing. The years tell. At first, they seem not to; but, at last, honor and appreciation come in a full flood. Mr. Johnson is reaping the harvest he prepared, that he sowed when the ground was almost unbroken and the sowers few and considered the enemies of mankind. Mr. J. H. Morse was master of the brief ceremonies on the evening of the 6th. He first read portions of eight letters from as many absent friends. He then introduced Mr. J. W. Chadwick, of Brooklyn, who made an address to Mr. Johnson. Following him, Robert Collyer had something to say. Mr. Johnson replied in a speech full of feeling, an admirable expression of his principles and experiences, and delivered in a clear, strong voice, with no sign of age or intellectual decay in it. "I have never," said he, "done so much for the anti-slavery cause as it has done for me." Alluding to the remark of one of the previous speakers regarding the sacrifices made by the early aboli-

tionists, Mr. Johnson said that he was never conscious of having made any sacrifices.

After the speaking, Mr. Johnson received the warm and affectionate greetings of every one present. A.

THE RESTRAINING INFLUENCE OF SUPERSTITION.

A convict in the penitentiary at Joliet, Ill., "a red-headed, ugly-looking convict named Mike Flannery," feigned insanity in order to get to the asylum, and make therefrom his escape. His apparently crazy pranks caused him to be sent to the hospital. Being a Catholic, he was put in a side cell with a convalescent convict of the same faith, who, it was thought, might quiet him. But he soon had his companion in a vise-like embrace, with a knife to his throat. The guard, which was called to the cell, ordered Flannery to get up; but he refused, and threatened that, the moment any one attempted to open the cell door, he would cut his companion's throat from ear to ear. Meanwhile, Flannery had cunningly got behind his companion, so that the officers could not shoot him without shooting both. The persuasive power of the warden had no effect. But Flannery had been to confession a few days previously, and the idea of sending for the priest occurred to the authorities. "This," says the report, "was done; and the priest had the savage on his knees before him praying like a saint." A medical examination proved that the convict was entirely sane, and that his evident object was as stated above.

This is a case such as not only Catholics, but Protestants are accustomed to cite as proof of the moral influence of the Catholic clergy over the ignorant people of their faith. Every such case is to us evidence of the bad influence of priestly teachings. If this man had been imbued with a fear of doing wrong equal to his fear of the priest, if the labor devoted to improving his character and guiding his conduct had been equal to that devoted to indoctrinating him in superstition and making him a credulous devotee, the probability is that he would never have become a convict.

The Catholic Church attaches more importance to belief in theological dogmas and in submission to the priest than to the virtues the practice of which is indispensable to character and all-important in conduct. Flannery is but one of a multitude of criminals, who, although they can deliberately commit any act in the black catalogue of crimes, and are ready to escape, if possible, by any kind of deception or brutality, even murder itself, yet tremble at the sight of a priest, and are afraid not to submit to his word of command. During a riot or a revolt in a prison, the priest is of course efficient in dealing with such men; but it is because *they are, morally and religiously, largely the creatures of the priest* and of demoralizing ecclesiastical dogmas and methods. If the Catholic Church laid as much stress on morality as it does on faith, and did as much to make men intelligent, temperate, and just as it does to make them unquestioning adherents of Catholicism, there would be less fear of the priest and less need of such fear.

We do not say that the Catholic Church is indifferent to morality; but it makes morality secondary, while it gives primary importance to faith. The natural consequence is that its adherents who are criminally disposed are restrained from criminal acts, if at all, chiefly by superstitious fears, not from high moral considerations; and since in the teachings and requirements of the Church faith and reverence for the priest are of first importance, being indispensable to the forgiveness of any and all crimes committed or vices indulged in, we do not find faith any criterion of moral worth or

reverence for the priest any evidence of reverence for the laws of the land or the acknowledged principles and precepts of morality.

As a military officer, we had years ago the command of men some of whom would get drunk, lie, steal, and commit almost every immorality, and yet refuse to eat meat on Friday. This is probably true of the Joliet convict. Superstition, having by a distortion and suppression of the truth furnished the motives of moral conduct, which should have a rational basis, has to be called upon in emergencies to restrain its victims, who know no higher authority than the word of the priest.

If, in an age of rapid transition, men and communities outgrow this superstition faster than they can grow into the new truth, and temporary moral and social disorder results, superficial minds are ready to ascribe the disorder to the "heresy" or "infidelity," as the new truth is sure to be called, not seeing that the moral and social disturbance is due mainly to the mistake of making the dogmas of theology, which are continually changing, the foundation of morality, which has its true basis in the enduring relations of men and in the eternal nature of things. Not the new truth, but the old error, which has led men to believe that morality is dependent upon beliefs which must necessarily lose their force with increasing intelligence, is responsible for the moral disorders such as followed the teachings of Luther and others during the Reformation, marked the French Revolution, and are seen to-day, where the decay of faith is more rapid than the progress of knowledge and the assimilation of the scientific and philosophic thought which is replacing theological teachings.

B. F. UNDERWOOD.

EDITORIAL NOTES.

BY B. F. U.

COL. HIGGINSON has commenced a series of papers on "Women and Men" in *Harper's Bazar*.

A SUBSCRIPTION has been started in this country to aid in the erection in Rome of a bronze statue of the Italian philosopher and martyred free thinker, Giordano Bruno. European Liberals are forwarding their contributions. To this movement, the object of which is to honor the memory of one of the world's great thinkers and brave benefactors, who for his convictions suffered torture and death by fire, American Liberals cannot be indifferent. Mr. T. B. Wakeman, 93 Nassau Street, New York, announces that he will take charge of any sums sent to him for this statue, see that they are acknowledged in the liberal papers, and sent with the names of the donors to the proper committee in Rome, whose receipt will also be published.

THE pretensions and performances of the Salvationists would be amusing only, if they did not sometimes lead to serious consequences. The parade of the Salvation Army at Dover, N.H., frightened horses, and caused one runaway, which resulted in injury to several persons. The owner of the team notified the mayor that he should look to the city for damages. The mayor immediately ordered the city marshal to prevent the Army from marching on the streets any longer with music playing. The captain of the Army, on receiving the order, replied that he took his orders from Heaven, and would not allow any earthly power to dictate to him. He telegraphed to Saco for some of the Army to come up at once to swell the parade that evening. And the Salvationists did parade that evening, and beyond the usual hour, under police protection. The city solicitor had, during the day, given to the mayor the opinion that the city was not liable for damage done by the Army to citizens' property.

A PETITION signed by eight hundred Harvard undergraduates has been sent to the President and Fellows, Board of Overseers, and Faculty of Harvard University, asking that attendance at the morning prayers be made voluntary for all students over twenty-one years of age, and optional with the parents or guardians of students under that age. "This petition is based upon the broad ground that compulsory attendance upon prayers is a religious test imposed upon citizens as a condition precedent to being permitted to enjoy the advantages of an essentially public institution which they are under the practical necessity of resorting to for themselves or their sons, in order to obtain suitable instruction and educational aid in matters of secular learning; that such compulsion is a remnant of ancient encroachments upon civil liberty, and would not now be tolerated in connection with any other kind of public institution within a free republic; and that the youth of the persons whom it immediately affects does not make it any the less tyrannical and unjust."

MR. E. P. POWELL, in exposure of the popular superstition—favored, it seems, by Mr. G. B. Stebbins—that "hazel, currant, or other twigs serve to connect psychic and physical phenomena, or, in plainer English, to help us determine where watersprings are," writes thus to the *Religio-Philosophical Journal*: "Any person well acquainted with land (and water), or any farmer or horticulturist, can inform Mr. Stebbins that the sections of country are rare where water cannot be found by digging in one spot as well as another. I am certain that by digging in my fourteen acres at any point designated, without divining sticks or with them, to find water at a depth of about fifteen feet. This is true of miles square along this range of hills and in the valley below. The true test for the divining rods would be to find a spot where water could not be found. Such spots probably exist. If any one with this magnetic gift will visit me and point out such a spot, I will have the well dug at my expense, if he be correct, provided he will bear the expense if I do get a supply of water by going down twenty feet."

PROF. J. B. TURNER, of Jacksonville, Ill., was given a reception December 8, on the seventy-ninth anniversary of his birthday. Among the letters read from absent friends was one from Dr. Edward Beecher to Prof. Turner's daughter, in which he wrote: "Assure your father that I recall with deep interest the scenes in which we have acted together, and his bold and earnest testimony for all that is good and true, and his labor in the great cause of social and political welfare. Your father and Dr. Sturtevant, and Dr. Post and myself, still survive of the original teachers of the College. If I were present, I would gladly speak on the toast proposed,—'The Old College Campus and the Faculty of Illinois College in its Infancy'; but I must leave it in the regions of imagination." If we mistake not, Prof. Turner succeeded Dr. Beecher as President of the Illinois College; but he is better known in his State as an able writer on subjects pertaining to the development of the country,—agriculture, horticulture, the improvement of stock, industrial reform, education, etc. He is a man profoundly respected for his strong intellect, moral intrepidity, and public spirit. The writer has passed many pleasant and profitable hours with Prof. Turner, and adds his congratulations to those of his numerous other friends, with the hope that his useful life may be prolonged to a hundred years.

PROF. TURNER, who is author of a rather heterodox work presenting his views on religion, has a very high estimate of Jesus as a teacher; but church creeds, and the Bible writers generally, he

does not accept as authority. "When," he writes in an article in the *Jacksonville Daily Journal* of Dec. 28, 1884, "Jewish ecclesiastics conspired to crucify that teacher [Jesus], it was indeed a dark and doleful day. But the hope that, in accord with his own specific and most careful provision, his words would survive him, was a bow of promise, spanning all the lands and all the seas. When Roman ecclesiastics conspired to reduce those words of light and life to the Dead Sea level of some sixty-three Hebrew writers, none of whom ever claimed for himself such pre-eminence, or (with possibly two or three exceptions) ever comprehended either him or his kingdom, or were fitted either by nature, culture, character, or grace to comprehend it, then, indeed, darkness began to close over the earth, and gross darkness over its peoples, till the 'dark ages' left earth no single bow of promise in the skies; and never again to have one till these identical words should be restored to their true place, *sovereign* and *supreme* over all other possible words."

AN intelligent boy sixteen years old, the son of Leland Stanford, a California millionaire, died lately in San Francisco. At the funeral, Grace Church was crowded. The floral decorations cost \$20,000. Programmes of the requiem exercises, richly engraved, were handed by boys to those who passed the church two hours before the services began. Rev. J. P. Newman, of New York, delivered the funeral sermon, which cost \$10,000, and which in its lavish praise of the young man was in keeping with the general display. "Think of him," said the reverend gentleman, referring to the deceased,— "think of him as a rapt listener to the mature conversations of such men as Sir Joseph Hooker, Sir William Jenner, Baron Rothschild, Dr. Schliemann, and Gen. di Cesnola, etc., asking or answering questions. It was the reproduction of Christ among the doctors at the age of twelve. Our youth should read his biography, which will be more fascinating than romance and more edifying than the creations of the imagination. The public school scholar and the college student would be entranced by the epic of his life; and the life of Leland Stanford, Jr., would become as familiar as Fénelon's *Telemachus* or Richmond's *Dairymen's Daughter*. His tomb will be a shrine to which our youth will go on a sacred pilgrimage, and from it they will gather grasses and flowers as mementoes of what he was to them."

THE *Christian Statesman*, in mentioning the Convention of the Free Religious Association, recently held at Florence, Mass., says, "These people who are so zealous for 'freedom' in religion will not admit that a nation is free to believe and obey the teachings of religion." "These people" admit that the adherents of every religion should be free to believe it and to obey its teachings, and that others should be equally free to avow their disbelief in any or all religions; that the government, without disturbing or favoring any religion, should protect equally the believers in and the dissenters from all in their worship or the advocacy of their views, requiring from all obedience only to laws based upon the principles and precepts of natural morality. "These people" do not believe that, because the majority of the people of a country are Catholics, the government has a right to make Catholicism the established religion; nor do they believe that the Christianity of the *Christian Statesman*, with its nonsense about Jesus Christ being the ruler of nations, can, consistently with religious freedom, be recognized by the government of this country as the religion of the State. "These people" believe that all support of theological systems should be voluntary, and that every remaining vestige of the union of Church and State—such as

the exemption of church property from taxation, the judicial oath, legal disabilities on account of religious disbelief, theological teaching in our public schools, laws based upon the idea of the peculiar sacredness of one day over another—should be abolished.

JOHN BRIGHT, in reply to a recent invitation to attend a conference in favor of closing all post-offices and stopping the delivery of letters on Sunday, wrote: "To close all our post-offices on Sundays would, in my view, be, not only an intolerable inconvenience, but a great evil. To continue at least one delivery of letters in the day seems to me needful for the public service, and not unduly interfering with the labor and service of the letter carriers. The post-office is our great means, not only of commercial, but of family communication; and it is with reference to the family that I am most strongly opposed to your views. There are scores of thousands of young men and women in this country who are away from their homes and parents, engaged in cities and towns in the various occupations by which they live. To these, Sunday is to a large extent a day of rest. It is a day on which their thoughts naturally turn to the homes they have left. It is the day on which the letter from the loving but absent father or mother is most frequently received, and it is the day on which the absent son or daughter has the greatest leisure to write to the home circle. I have no fear that you can succeed. If you obtain a momentary success, it must be followed by failure. The one round of the postman in the day is not a heavy burden, not heavier than that borne by great numbers in almost every class in life. It is a great public service, an honorable labor; and it must be compensated for as other services are. There is not a word in the New Testament leaning to your views, so far as they are influenced by religious considerations. The Sabbath was made for man, and not man for the Sabbath."

For The Index.

THE SHAME OF THE TIMES.

'Tis said, "The world has moved: the other day,
In galling chains, the slave his master served,
His spirit, like his body, bound; the sway
Of rulers of the realm, so long preserved
Through blood, held on,—in what a cruel way!
Victims of taunts that had her mate unnerved,
Fared woman! while what multitudes of young,
Left orphans, starved, the wealthy crowd among!"

But what are these base words we hear to-day,
When evils great as those assert their sway:
From countless lips, the paltry "Will it pay?"
The coward cry of those who talk and pray
In due church-form, yet who, let sin array
Herself before fair Zion's gates, away
With cunning low, and boast, as who should say,
"Behold the evils we cured yesterday!"

WESTERLY, R.I.

EVOLUTION.

Be thyself! 'Tis Nature's mandate
Borne abroad on every breeze!
Be thyself! 'Tis the infinite chorus
Ringing forth brave words like these:
"Soul is all! Oh, dare to trust it!
Work its will and sing its song!
Fearlessly in love obey it,
As thy life-bark floats along!
Nature's purpose is unfoldment,
Law the perfect and entire:
Evolution means but selfhood,
Evolution saith, 'Aspire!'"

WOONSOCKET, R.I., Jan. 8, 1885.

H. H. BROWN.

The Index.

BOSTON, JANUARY 15, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

A STUDY OF HEGEL.

BY MRS. ELLEN M. MITCHELL.

With a full knowledge of my inability to treat the subject adequately, I hope to give in the following paper some faint reflection of Hegel's significance in the world of thought. But why study philosophy, I hear some one ask, when the world of to-day is full of practical problems waiting for solution? Why seek to penetrate that realm of mystery which transcends the finite, which it is impossible for the eye to see, for the ear to hear, for the imagination to conceive? Why, except that man is forced to think as well as live and enjoy, that there comes a time when he inquires why he and the world are here, whence they come, whither they go? He demands explanation; and the sciences come to his aid,—astronomy answering his questions regarding the stars, chemistry and physics solving other problems, and so on,—yet all alike pausing on the threshold of what is called the Unknowable, the *why*, the *whence*, the *whither*. Is it impossible, then, for human thought to transcend the objects which exist in space and time? Are we to renounce the study of speculative philosophy, renounce all those inquiries which have occupied the attention of great thinkers in all ages, disregarding their fundamental agreement in essentials, which of itself is one of the strongest proofs that they have read aright the "secret of the universe"? "Whatever is real is rational," says Dr. Caird, "and with all that is rational philosophy claims to deal." What is scientific progress except the discovery of rational laws in the world of matter? What is it but a seeking of intelligence in nature, to which the intelligence in man responds? Reason is the eternal centre and root of things,—reason, thought, or self-consciousness, to use Hegel's explanation. Apply this key to nature, and you behold an evolution in its forms and

processes, from the inorganic up to the organic, and then again up and up to man. "All is explained only when it is converted into thought, only when it is converted into ourselves, only when it is converted into consciousness." We communicate with the outward world through the organs of sense; but the impressions received by this means are confused and unrelated, and do not of themselves constitute knowledge, until they have been referred to the unifying power of thought, the self-conscious ego, presupposed in all experience. For instance, what is it that enables me to apply the common name of rose to this flower, that of heliotrope to another, etc.? So far as regards the report of the senses, the rose I have to-day differs in many respects from the rose I had yesterday. What is it that enables me to compare the separate impressions produced yesterday and to-day, discovering an identity underneath differences which justifies the common name of rose? What is it but thought, the thinking ego, something not given by sense, which remains steady amid the flux of impressions, identifying, relating, and combining them into objects of knowledge? The common name of rose is itself an abstraction, an unreality. There is no rose which is not a particular rose, no plant which is not a particular plant, no man who is not an individual man,—John or James or Henry. Rose, plant, man, are abstractions without any correspondent reality capable of manifesting itself to the senses. The farther we carry this process of generalization, the more abstract our thought becomes. The common name of flower includes both rose and heliotrope; that of plant, flower and vegetable; that of organic being, plant and animal; and, finally, we reach the ultimate abstraction, being, without predicates and without significance, equivalent to nothing. This is the famous paradox at the beginning of Hegel's logic. The two conceptions, Being and Nothing, absolutely identical and absolutely opposed, disappear the one in the other, constituting the Becoming. To illustrate what is meant, take the verb corresponding to Being, remembering that neither verb nor noun is synonymous with Exist and Existence. What do we say, when we say simply *is*? Might we not as well say *is not*? The rose *is*. *Is* what,—existing or non-existing, fragrant or odorless, white or red? Until I say what the rose *is*, I say nothing. More than this, in order to have a clear conception of the rose as a living organism, I must know both what it is and what it is not. Its notion includes negation as well as affirmation. At every stage of its growth, the plant not only is this, that, or the other, but is constantly developing new phases and appearances, putting forth fresh leaves and blossoms or shedding the old ones,—changing, passing away from life to death, from death to life, from affirmation to negation, from negation to affirmation. The seed must lose its individual life in the life of the plant. Leaves must wither and blossoms fade, to sustain the growth of the organism, whose idea can never be reached by abstraction and generalization, by separating the particular parts, disregarding their differences, and observing what they have in common. Abstract the differences of the individual members, and you abstract the life of the organism, which can only realize itself through their diversity and harmony. Thought must rise to a deeper universality than that of abstract generalization, in order to comprehend the ideal unity of the plant, which is a continuous process of affirmation and negation, annulling the previous stage of its history,—as, for instance, the seed, in order to absorb and reaffirm it in leaf and blossom and fruit, and again in seed.

The organic life of reason may be compared to that of the plant. Matter and mind, the world without and the world within, are parts of one harmonious whole, related in their very essence each to the other. Were there no intelligence in nature, no law or order in its processes, no reason corresponding to the reason in man, no relation between matter and mind, how would it be possible to bridge the gulf between the two,—to institute scientific investigation or know anything at all of an object shut up in rigid self-inclusion? Nature is not the antithesis, but the reflection of mind: this is the explanation of the problem. "To him who looks upon the world rationally, the world in its turn presents a rational aspect." But the mind must not isolate itself independently, setting up as truth its individual thoughts and opinions. On the contrary, these must be renounced, in order to attain scientific knowledge. Participation and renunciation are the laws of spiritual being,—participation in the life and consciousness which is universal, renunciation of all that is limiting and particular to the individual. Man cannot separate his single self from the selves of other men, his fellow-beings in the world, any more than he can live a life distinct from the universal life of nature. The individual human being presupposes the family and the state, just as the leaves presuppose the plant. The universal is first, not last, the idea of the organism, explaining, but not explained by its particular members. Isolated from all other human spirits, the individual man is a pure abstraction, an absolute non-entity. I must renounce the thoughts and fancies special to myself as this particular human being, before I can enter the domain of scientific truth. I must lose this single, separate self of mine in the larger self of the family, of the state, of the race, in order to attain spiritual growth and development. The social institutions that surround me, instead of limiting my freedom, enable me to transcend all that is narrow and selfish, to identify myself with other human beings and make their life my own. True, they impose upon me certain duties and obligations, they require me to renounce my private interest for the general good, they demand pain and self-denial; but apart from them, apart from the civil and political organization to which I belong and of which I am a part, this self of mine has no reality, the pulse of my spiritual life ceases to beat.

Renunciation and participation are the principles embodied in human institutions, realized more and more as individual members are penetrated more and more with their divine significance. For it is not enough that I give up my private wishes to benefit others, that I fulfil my social and political obligations, unless I do so freely, spontaneously, converting the external restraint into an inward inclination. This is the supreme spiritual law, the law of love, the self-sacrifice or negation which is the highest spiritual affirmation. It is the soul of Hegel's system, vivifying the abstract reasoning of the *Logic*; explaining the phenomena of nature and its progressive ascent from the lifeless dust of the field through mineral, plant, and animal to man; finding the truth of matter in mind, conscious reason capable of abstracting itself from anything else, of separating the outward objective world from the inner subjective self, of absorbing in its development all that seems to limit its activity, and of winning at last true freedom by the spiritual abnegation of selfish desires and volitions, by absolute surrender to that Universal Reason or Self-consciousness, which is not mine nor yours, but in which all alike have their being. Hegel proves that thought, self-consciousness, is the highest principle in the

world; that it cannot be evolved from material forces, since it is itself their presupposition, tacitly assumed at the outset of scientific investigation. You cannot eliminate the thinking self from your experience and observation of nature or make it a function of matter without making it a function of itself, because matter, force, etc., are abstractions which have no independent existence outside of mind. "Intelligence and will triumph in the struggle for existence," said Dr. Harris, in one of his Concord lectures, "and prove themselves the goal toward which all creation moves."

Nature, according to Hegel, passes through the different stages of the mineral, the vegetable, and the animal world, before the spirit within it reaches complete self-emancipation. The stone, or mineral, is entirely dependent on external conditions, and shows the first trace of subjectivity, or spirit, in the attraction of gravity,—an ideal point of unity. The plant possesses a higher degree of freedom and individuality: it can react on its environment, absorbing a portion of it in the process of nutrition, converting it into vegetable cells through its own self-activity. This is the beginning of life and of spirit in its higher manifestations, compelling the mind to pass from the conception of mechanical force to that of self-causation, self-development; revealing a unity which maintains itself amid continual differences,—the unity of the species, not of the individual. From seed to leaf and flower and fruit and again to seed, this is the process of vegetable life, unexplainable by any theory of physical causation, since here is a cause which lives in its effects, and effects which exist to perpetuate the cause. The animal reaches a higher stage of self-activity than the plant. It has feeling, and is capable of locomotion. It cannot only react on its environment in the process of nutrition, but can reproduce in feeling, or sense-perception, the impression made by that environment upon its soul. But the animal is not the highest term in the series of nature: to feeling and locomotion is added reason, which constitutes the peculiarity of the human soul. The spirit that works through nature first attains true freedom, conscious individuality in man. This is a result which it is impossible for materialistic theories to explain, a transition even more wonderful than that from the inorganic to the organic world. "If thought can in any sense be said to be evolved from organization," says Dr. Caird, "it can only be because the animal organization contains in it implicitly something more than animal, higher than organic relations,—namely, the germ of that perfect return upon itself, which mind in its self-consciousness for the first time explicitly reveals; and so, if you insist on seeing in matter the cause of mind, it is because you have already conceived of matter as more than matter, as containing in it virtually all that mind is."

"But a materialism which starts from a matter which is virtually mental or spiritual ceases to be materialism in anything but the name. What it really means is, not that matter, conceived of as something independent, is the cause of mind, but that mind in the germ is that from which mind springs, that intelligence has its origin in that which is implicitly intelligent. But this is a view of the world which spiritualizes matter rather than materializes mind; for in the whole realm of being, down to the lowest existence in outward nature, it leaves nothing absolutely foreign and heterogeneous to thought, nothing which, either actually or virtually, thought cannot claim as its own." The awakening of the consciousness of self is the emancipation of mind from nature, but mind itself must pass through a process of development before it reaches what Hegel calls

universal or rational self-consciousness. Theoretical mind, or intelligence, the spirit that knows, must pass into practical mind, or will, the spirit that acts. Thought and will are really one: thought is potentially will, will is thought in act. But the will at first as it rises out of nature is little more than an instinct: that which it wills is the satisfaction of animal appetites and desires. Even here, reason asserts itself. Though man may pass, like the animal, from one sensuous gratification to another, he soon compares them mentally, and chooses those which produce most enjoyment. Reflection begins; and reflection, once begun, can only end in reason. But it is the distinctive characteristic of reason to claim a satisfaction antagonistic to that demanded by the appetites and desires of our lower nature. Hence, the inner warfare between what Hegel calls the universal reason and these particular tendencies of the animal nature, both locked up in the human being. This self of mine is the self that yields to passion and condemns passion, that yields to the lower impulses and condemns the lower impulses. The spontaneous appetites and desires of nature are without moral significance. But the spontaneity dies the moment it is made an object of thought, and innocent gratification becomes conscious self-indulgence at the bar of reason. "To have a habit is one thing," says Dr. Stirling, "but to *know* I have a habit is quite another thing." The natural tendencies lose their moral neutrality when related to a self that consciously wills their satisfaction or denial.

Man, like the other animals, receives from nature a variety of desires; but he is able to control and transform them into a rational system, *objectify* them in law, morals, and the state.

This is one of Hegel's distinctions between abstract subjectivity and objectivity. That which is merely mine in my thinking and doing is subjective,—is transient and particular, belonging to me as a perishable natural being. That in which all can share, which all can appropriate, is objective, is permanent and universal, belonging to me as a spiritual being. What is mine subjectively sunders me from my fellow-men, sets me apart as a distinct individual, a nonentity. What is mine objectively unites me to my fellow-men, elevates me to the consciousness of freedom and personality. "Hegel ascends to a standpoint," says Dr. Harris, "wherein are united the two antitheses which lead, respectively, the ancient and the modern worlds of thought,—the antithesis of subjective *vs.* objective, and the other antithesis of the universal *vs.* particular. The constitution of the mind is in reality both subjective and objective."

Man is free, according to Hegel, not because he can do what he likes, but because he must obey the higher principle of his nature, the universal self-consciousness in which his own is rooted. "The perpetually recurring misapprehension of freedom," he says, "consists in regarding that term only in its formal, subjective sense, abstracted from its essential objects and aims. Thus, a constraint placed upon impulse, desire, passion,—pertaining to the particular individual as such,—a limitation of caprice and self-will, is regarded as a fettering of freedom. We should, on the contrary, look upon such limitation as the indispensable proviso of emancipation. Society and the state are the only conditions in which freedom is realized." The state is the absolute might in all judicial and ethical relations, the peculiar work of freedom of mind wherein it deals with its own creations. Above it are placed the spheres of art, philosophy, and religion, which in their essence must be left free, though capable of external culture and encouragement. A state founded merely

upon abstract right was a horror to Hegel, though he recognized its historical justification with the Romans, to whom we owe the development of the abstract freedom of personality, which constitutes the basis of positive law. Abstract right is simply directed to the free will as free will, the abstract person. It includes the idea of property: I have the right to convert this physical object, this acre of ground, into an embodiment of free will, and make it mine. But my right is limited by the rights of others, which I am compelled to respect: our separate wills must be merged into one, and here enters the possibility of conflict between the individual and the universal will. Hence, crimes and trespasses and punishment. "A Crusoe upon a lonely island can live very morally," says Dr. Karl Rosenkranz, in his exposition of Hegel's doctrine; "but right exists for him only potentially, and cannot develop itself actively unless one other person live with him, because only with this other would a recognition of his willing and acting become possible. He might indeed be immoral toward himself, intemperate, unchaste, etc.; but a crime or trespass he could not commit."

The stand-point of abstract right is different from that of morality. Obey the law, says one, whether you agree with it or not, whatever may be your motive: obey the law, says the other, because in obeying it you are obeying the conscience within you, your own highest self. Observance of law may be simply external. It is possible for me to fulfil every legal enactment, and yet be guilty of immorality. Nevertheless, right and morality are essentially one; and we see their interdependence clearly in the relation of crime and its consequences. To punish the criminal is to endow him with free will and consequent moral responsibility. We do not impute blame to or punish the elements for earthquakes, tornadoes, and similar disasters: we recognize the physical necessity by which they are bound, the laws of nature which they are forced to obey. They had nothing to do with making these laws: they are true slaves of matter. Man, too, is a creature of nature, subject to her laws, and so far finite and perishable; but man is likewise spirit. He can convert material forces into instruments of his own intelligence, and can rise into a realm of freedom, realizing objectively in legal ordinances and social institutions the deepest principle of his own inner being,—reason, thought. This is true freedom, rational self-consciousness. The history of the world is the development of this idea. To the Roman conception of abstract right, Christianity added that of subjective morality, chastening the heart and guiding the soul to obedience through inner righteousness and the law of love. If space permitted, I would like to show how Hegel develops his doctrine in the *Philosophy of History*, finding in man as in nature a progressive revelation of the divine spirit, from the first rude sense-perception of the savage to the enlightened insight of the Christian thinker, proving that the human being is free and immortal, with the power of self-determination, the power to annul all that is finite and to realize the infinite within him, imperfectly, it is true, as regards temporal existence, but victoriously as regards the life which is eternal. The subject has been treated in a series of lectures,—unpublished, I believe,—by Dr. William T. Harris, of Concord, to whom I with many others am largely indebted for any knowledge I possess of Hegelian philosophy.

It is strange that Hegel's attitude toward Christianity should ever be mistaken, after his emphatic utterances in the *Philosophy of History, of Art, and of Religion*. He makes Christianity the principle of modern history, and shows how the

Oriental and the classic forms of civilization prepared the way for its appearance. Rome is the iron fate that compels abstract personality to display its nothingness, and reveals to man the discord within his own inner nature. This abstract ego, this self of mine, fixed in its private right, is a contradiction, and must suffer the misery of separation from that universal divine self, in union with which it alone possesses true being. Existence for self simply is separation from God. If I hold to my abstract freedom, I adopt the stand-point of evil. Sin is the discerning of good and evil as separation,—separation of the finite from the infinite self. The recognition of the separation brings with it the power to heal the hurt. Infinite loss becomes infinite gain. The words, "to lose the whole world and gain one's own soul," acquire fresh significance. "The distinction between religion and the world," says Hegel, "is this: that religion is reason in the soul and heart, a temple in which truth and freedom in God are presented to the conceptive faculty. The state, on the other hand, regulated by the selfsame reason, is a temple of human freedom concerned with the perception and volition of a reality, whose purport may itself be called divine. This freedom for the state is preserved and established by religion, since moral rectitude is only the carrying out of that which constitutes the fundamental principle of religion. The process displayed in history is only the manifestation of religion as human reason,—the production of the religious principle which dwells in the heart of man under the form of secular freedom. Thus, the discord between the inner life of the heart and the actual world is removed." Modern civilization, pervaded by the principle of Christianity, differs essentially from that of the Oriental, Greek, and Roman world. Its development is simply a struggle to realize greater freedom and independence for the individual through the mediation of institutions; to elevate all men into a spiritual equality, based not on mere natural distinctions, but on their participation in the common heritage of humanity. Art, like history, is treated by Hegel as a manifestation of divine reason, presented to man through his senses as the beautiful. After realizing in Greek sculpture perfect harmony between spirit and matter, "the unalterable serenity of the immortal gods," it aspires in Christian art toward a higher ideal, which it is unable to express sensuously. Christianity emphasizes the infinite importance of the individual soul, and is a deepening of its internal life. Christian art is therefore a reaction against all that is material and external.

Art is a manifestation of the divine addressed to the senses: religion is a revelation of the divine addressed to the heart. In the very essence of man's nature as a spiritual being there is that which forces him to rise above the finite and transitory, to seek the infinite and unchanging, and to express and realize the latent consciousness of an absolute Being and Life underlying his own temporal existence. This is the true key to the outward history of religion: man's religious experience is an endeavor to renounce all finite ends, and make himself one with the Infinite Spirit which his own presupposes. "It is not what the world is, but what it is *not*," says Dr. Caird, "that first stimulates the mind to feel after a reality above and beyond it." "Our life is but a vapor, that appeareth for a little and then vanishes away." These words express a feeling old as the history of man,—a feeling that compels the mind to seek some abiding rock on which to plant itself amid the changing current. This sense of the transitoriness, the nothingness of the finite,

is a negative that could only present itself to a mind containing implicitly a positive, the conception of something real and permanent underlying these changing appearances. God is identified at first with the life of nature; but, as religious consciousness advances, an attempt is made to transcend this idea, expressed by the Brahmanic thinker in words like these: "A wise man must annihilate all objects of sense, and contemplate continually only the one existence which is like space. Brahma is without dimensions, quality, character, or distinction." Indian thought declares that God is the substance of all things: "I am the light in the sun and moon; I am the brilliancy in flame, the radiance in all shining things, the light in all lights, the sound in air, the fragrance in earth, the eternal seed of all things that exist, the life in all; I am the goodness of the good; I am the beginning, middle, end, the eternal in time, the birth and death of all." But Indian thought affirms also that this world is an empty illusion, an unreality: "There is but One Being, no second."

Christianity, like Brahmanism, sees God in all things, but not in all alike: it is able to distinguish the false from the true, the apparent from the real. The Christian God is not an abstract Infinite like Brahma, but an Infinite, reflected in finite existences, an Infinite revealing to man his own possibilities as a spiritual being. In Christianity, we reach the culminating point of Hegel's system of thought,—Absolute Personality, a Self-conscious and Self-revealing God, who manifests the treasures of his wisdom and goodness in the world of nature, and, creating man in his own image, offers him emancipation from the finite and its contradictions through the mediation of love and self-sacrifice.

For The Index.

AN IMAGINARY CONVERSATION Between George Sand and Frederic Chopin.

George Sand.—There is an existing culte, more powerful and all-pervading than any other because it exists in the nature of man, of which I wonder that more is not thought and spoken: this is the worship of and desire for happiness in and of itself,—a holy happiness, if you will, springing from noblest impulses and purest desires and an equal love for our neighbor with ourselves. To what end do we exist? Does not history seem to show us that we live and struggle and hope, that centuries hence may be born a race of men more richly endowed, more brave, more happy? It is difficult to draw the line between so-called animate and inanimate life. Take the flower world, for instance: it yields us intense delight, it shows us most beautifully the divine in nature, and might teach us that asceticism finds no prototype there. Peace has often been regarded as an attribute of the soul, entirely independent of the well-being of the body; but, from measuring experiences, we know it to be a delightful sensation, only attainable when the whole being is in harmony, when health is in all the members, and the mind is refreshed and invigorated by memories of noble deeds. A condition of happiness for the greatest number seems to require for its fulfilment, on the part of each one, faith, trust, hope, self-abnegation; in fact, every virtue which is the outgrowth of improving conditions for humanity. Whenever we admit to ourselves belief in or love for those who help us or for nature or for the arts, we are strengthened in the degree with which we allow the feeling of admiration to dwell with us,—not checking the rising emotion, but allowing it to increase until we turn as naturally to an object of beauty as a flower to the sun.

Our help in this pursuit is that quality of instinct, ignored by so many, which is ignorantly placed below reason, when we forget that it is reason, and that it would lead us toward that which is right and congenial and away from that which is wrong, would we but listen to its promptings. It may be conscience, that high faculty undermined at times by superstition, which banishes instinct. At all events, it is too

often banished; and conscience, as a baneful adviser, is admitted in its stead. In your music, you find the solace of unlimited expressions of your convictions, of your inmost thoughts, your loves and grievances, which I, of all your friends assembled around the piano this evening, feel that in some mysterious way I have divined. I feel, indeed, almost as if I had committed a theft; for I have learned some things which I feel sure you would hardly have wished to confide in me. I have learned that, although you received us here this evening with your usual hospitality and brightness, there is lurking beneath an unrest which you would gladly banish, and which has found vent only in those weird passages of the mazourka you just now played us; and even there the melancholy was veiled in joyful sounds. Shall I tell you the feeling I detected? Yes? It was a longing for home. Am I not right?

Chopin.—You are quite right, indeed. Yet it was more that, in your freedom from the trammels that fetter most women in your talk with me earlier this evening, you reminded me of my early home and of my mother and of my poor, afflicted country. Of my home, you reminded me in this way,—that you gave a home-like feeling to the little company gathered here; of my mother, you made me feel that many of her ills would have vanished, could she have thought as you do; and of my country, because a very little suggestion can set in motion memories and longings for what I wish for that dear land. But, truly, I am not wishing to be away. Now, my home is here; and I am quite content. It is at times only that I seem to be adrift,—when a great despondency comes over me, my friends seem far away, and the memory of some of those pure days in Poland comes back to contrast with the present and make me ill at ease. Sometimes, too, I feel that, if my early education had been different, I would be freer now.

George Sand.—I believe I can understand your conflicts, your struggles with grief, "that terrible reality which art must strive to reconcile with heaven"; and it is with sorrow I see that one source from which you strive to draw consolation yields a fruitless harvest. Although it may often appear otherwise, our inner lives must, of necessity, be consecutive. Certain acts that seem to stand out by themselves, astonishing us by their apparent irrelevancy, have their roots in some such trivial circumstances as to be passed at the time unnoticed. These trifling acts, which may lead in time to more telling events, may be prompted by motives called forth by customs which are prevalent in our country, and against which, did we allow our reasons full play, we would struggle with all the force of our natures. But this point, of so little moment as to ask for no decision, passes by us in consequence of our defective vision. This custom, to whose power we have submitted ourselves, leads us to a crisis where reason rebels, although powerless, without the most persistent study, to discover where was hidden the seed productive of such mighty results. It is so natural to follow the line of the least resistance. But,—when I find that I am travelling carelessly over the beaten track where it is considered highly estimable to see, and to be seen, when I seat myself by the way to reflect why the throng are hurrying by me and find that the goal they wish to reach is unworthy,—then, with new impulse, I rush into the nearest by-path, attracted by the fragrance of the rich, strong wild flowers, finding a thousand charms and novelties where the high-road yielded only one. What is more, I find, in a close contact with nature, a strength that a communion with men cannot give me. Often, it would have been wiser to have acquainted myself with the laws governing society in other countries: in this way, I might have avoided certain errors into which, struggling by myself, I was led, as well as by my contempt for unworthy limitations. Whenever such a disappointment comes to me as to be forced to believe in human weakness, I seek new strength and hope from the lesson taught by nature.

Chopin.—One secret of life, it seems to me, is that those who would cannot and those who can would not, with the few remarkable exceptions of being; we would wish to make our friends. But Heine and Nourrit are coming toward us, and we must defer this talk until a future time.

C. A. OLCOTT.

ONLY in a world of sincere men is unity possible, and there, in the long run, it is as good as certain. — Carlyle.

CORRESPONDENCE.

"THE RELIGIOUS SIDE OF SPENCER'S PHILOSOPHY."

Editors of The Index:—

When the gentle Buddha Gautama walked the earth,—so say the ancient books,—he taught the people how vain it was to pray, and that

"'Twere better far to ease one beast of pain
Than sit in caves with priests who pray."

And his life was devoted to showing how little good comes from prayer and sacrifice, as commonly understood, and of how little service it was to cry to the gods; for, said he, "Perchance the gods have need of help themselves, being so feeble that when sad lips cry they cannot save." Yet this great and good teacher had scarcely left this earth before his followers had erected altars to him and were bringing sweet floral offerings to his temples. Then soon the prayerless Buddhism became transformed, and scarce exists on the earth to-day in the form instituted by the master.

Judging from the article by your esteemed correspondent, Mr. Henry W. Holland, in last week's *Index*, the same thing will happen to Herbert Spencer; for already, even before he has departed this life, he is called an "idealist." Surely, that is "the most unkindest cut of all." We are used to hear him called an "atheist," "a materialist," "a destroyer of religion," etc.; but to call him an "idealist," and to assert that "the last few months have done not a little to exhibit Mr. Spencer's philosophy in a new light" and that his "views approach much nearer to positive Christianity than to their [Spencer's followers'] own negative philosophy" is surely very startling!

Mr. Spencer has been accused of saying many strange things during the last few months; yet, as he is neither dead nor sleeping, he has been able to defend himself, nor is any man living so well able to do it. Though, as he himself says, "It is a wearisome and profitless business, this of continually going back on the record, now to show that the ideas ascribed to me are not the ideas I expressed, and now to show that the statements my opponent defends are not the statements he originally made." *Popular Science Monthly*, January, 1885, p. 322.

Still, Mr. Spencer is anxious that he shall be clear from these accusations of idealism and dickerings with Christianity; and it seems strange that scholarly men should be found to make such baseless charges.

Mr. Spencer teaches, as clearly as words can teach, that the simplest phenomena, in their ultimate essence, are unknowable. Though, perchance, only the student fully realizes the limits of his own knowledge in this direction, and the man who knows least is under the impression that he knows most; but to such men as Mr. H. W. Holland there comes a loyal recognition of the limits of our knowledge, for I perceive that he is a student, therefore he knows that we know but little. Now, Mr. Spencer has dwelt on this fully, and has gone out boldly to explore the depths of the unknown area that is forever widening with the student's increasing knowledge, and, seeing how futile is the attempt to deal with ultimates, has wisely confined himself to the facts of science; for these ultimates he has demonstrated to be unknowable by the very form of our intelligence. (*First Principles*, Chap. iv., Part 1.) And he has dealt with them boldly and fearlessly; but, as we must speak of the ultimate in the terms of speech we have and must think of it in the terms of thought we have, we are compelled to use terms that have become associated with crude ideas and hideous superstitions; but, for this, Mr. Spencer is not responsible, and he takes more pains than any teacher we ever had to make clear his views concerning those "infinite and eternal" mysteries. He says: "We are obliged to be conscious of a reality behind appearance, and yet can neither bring this consciousness of reality into any shape, nor can bring into any shape its connection with appearance. The forms of our thought, moulded on experiences of phenomena, as well as the connotations of our words formed to express the relations of phenomena, involve us in contradictions when we try to think of that which is beyond phenomena; and yet the existence of that which is beyond phenomena is a necessary datum alike of our thoughts and our words. We have no choice but to accept

a formless consciousness of the inscrutable." *Popular Science Monthly*, January, 1885, p. 319.

It would seem as though the English language were incapable of expressing scholarly views clearly enough for all to understand; for, if any man has taken pains to make his position clear, as regards religion and materialism, that man is Herbert Spencer. Nevertheless, every day some one rises to accuse him of saying what he never said or of meaning what he never meant; and the words of the critic are read where Spencer is never seen. And so the idle Athenians condemn Spencer for what his captious critics have made him say, and accept the interpretations of John Fiske and others less able for the utterances of the man himself; and so, instead of reading Spencer, we read about Spencer. And, when men like Frederic Harrison attack Spencer, they seem to be sound and logical; but when the "old man eloquent" opens out on them, as he best knows how, then do we see the truth like a flash of lightning gleam athwart the creed-cursed atmosphere, and we realize that Spencer is the very opposite of an idealist, as his last article in the *Popular Science Monthly* for January, 1885, should convince every fair-minded man. For Frederic Harrison has formulated the doctrine enunciated by Mr. Holland, and has blankly charged Mr. Spencer with being the founder of the religion of evolution. But Mr. Spencer's reply should forever set at rest all such groundless charges. And I can only ask your correspondent to point out any passages in all Spencer's works that point to a "spiritualistic interpretation of the universe" or to any conception of the cosmos that would bring him into harmony with the churches or creeds of the day? Let me quote Mr. Spencer's closing words to Frederic Harrison, in the current number of the *Popular Science Monthly*: "Instead of assaults on those propositions to which alone I am committed, there have been assaults on various propositions gratuitously attached to them; and then the incongruities evolved have been represented as incongruities for which I am responsible."

"I end by pointing out, as I have pointed out before, that, while the things I have said have not been disproved, the things which have been disproved are things I have not said."

PETER ANNET.

LEGISLATION AND PRAYER.

Editors of The Index:—

The paragraph you copy from the Springfield *Republican* hardly does justice to my proposal to abolish the office of chaplain, and substitute for his hired and perfunctory performances the voluntary prayers of praying legislators themselves, of course without cost to the State. The abolition of chaplaincies, as a measure standing by itself, seems utterly impossible at present, partly, if not mainly, because it is supposed to imply a surrender to the demands of infidelity and to cast opprobrium upon prayer of every sort and kind. My proposition is that those members of our legislatures who sincerely believe in prayer should agree to do their own praying instead of putting it out as a job to be done by a hired official, and paid for out of the public treasury. It strikes me that this would be a reasonable arrangement, infringing no one's conscience and casting no reproach upon religion. It would compromise no principle that I can see to allow such members of a legislative body as sincerely believe in the efficacy of prayer an opportunity to meet in the legislative hall for devotional purposes for half an hour before the daily session. Those members who did not wish to take part in such an exercise would of course be free to absent themselves, and I cannot imagine that they would fear any harm to themselves or the State on this account. There would be no responsible recognition of religion in any form on the part of the State, but only a friendly and wholly uninjurious concession to men of strong religious conviction, or prejudice, if you will. I have no disposition to scoff at such men or their devotions. As a general rule, I believe they are profoundly sincere, and therefore worthy of respect; and, this being so, I think the spectacle of a legislative prayer-meeting under the conditions supposed would be morally healthful. Hypocrites might indeed sometimes seek a covert for knavery in such meetings, but that is no argument against them. How is it possible for any association to prevent the approach of the hypocrite?

For my own part, familiar as I am with the current

arguments against prayer, I am far from being convinced that the exercise is not as wholesome as it is natural. If I were a member of a legislative body, I would vote every time to abolish the office of chaplain; but I should love to attend such a prayer-meeting as that which I have proposed.

Yours respectfully,

OLIVER JOHNSON.

AN APPEAL FOR TRUTH.

Editors of The Index:—

Will you please inform a subscriber concerning the operations of the prohibitory laws in Massachusetts, Maine, and other States, where these laws have been tried to any great extent? I have heard so many contradictory statements about the effect and influence of these laws that I want to know the whole truth, and nothing but the truth, about them. We are likely to have during the year 1885 great contests over the whiskey question in the State of Georgia. Two-thirds of the counties of the State prohibit the sale of liquors in their borders. This whiskey question is one that must be decided by experiment, and the object of this short card is to find out the truth of this matter in those States where prohibition has obtained. If any reader of *The Index* can send me any facts concerning this subject, I will be so thankful for the information. Does prohibition prohibit? Has it done so in Maine, in portions of Massachusetts where prohibition laws operate, in Kansas, in Iowa? Do these laws diminish crime in those States where the experiment has been made? Will *The Index* refer me to any book or any pamphlet or any true statistics (or will any reader of *The Index* who sees this card do the same) where I can get the information I desire? Any paper that will assist me in this inquiry, by copying this card, will have my sincere gratitude.

My whole object in trying to arrive at these facts is philanthropic. I want to do the world all the good I can, while I live in it. I want to know exactly which side of this prohibition question has the actual facts to support it, and also what those facts are. I know all the speculations and the theories. I want the great unanswerable facts,—the "legal tenders." I want them from Massachusetts, Maine, Kansas, Iowa, and every State in which the experiment of prohibition has been made, so that they may be as bodyguards for the truth, which I shall sustain when I arrive at it. I hope and trust that these few lines, as appeals for truth, will not be in vain.

Earnestly yours,

W. T. CHENEY.

ROME, GA., Dec. 24, 1884.

UNIFORMED PIETY.

Editors of The Index:—

It would be more consistent for modern monastics to assume vows of perpetual modesty, in conjunction with those of "celibacy," "poverty," and "obedience" "to church orders"; for one of the chief characteristics of such individuals is this desire or willingness to be marked among their fellow-men by some distinctive dress or badge, which calls attention to their alleged holiness and great charity.

All this is not in accord with their own avowed standard in their religions, surely. The reason why such distinctive marks are undesirable (looking at it in a wholly sentimental way) is that more or less complete protection from assault or insult is thereby afforded the wearers; and if they, as followers of the Christ written of in the modern Bible, seek such immunity from worldly suffering, they are not to be praised or imitated, since they should be ready to suffer everything bad for the sake of a possible bestowal of good on other human beings, needing it at their hands unreservedly.

There seems to be something Pharisee like in this setting one's self apart as better or kinder than others publicly,—and this, too, not at all to decry what of real good such individuals have done; but why cannot they be just as full of good works, dressed as and acting like the every-day people in the lands they may be living in?

This is the mystery attaching to all the salvation armies, priesthoods, brotherhoods, and sisterhoods, etc., in all sects and races, which, to an outsider like the writer, seems so very needless and suggestive of hypocrisy.

JOHN DIXWELL.

Boston, Jan. 5, 1885.

SOME weeks ago, in response to a request of the Secretary of the National Liberal League that we would notice the new programme of that organization as announced in a printed circular which was sent to us, we indicated the inconsistency of calling upon all, Christians as well as non-Christians, for support, with the statement that State secularization was the sole aim and object, and at the same time making the League an antichristian and secularistic organization. The leading League papers, without giving their readers the least idea of our criticism, have referred to it as though it were unreasonable and captious. But now some of those who have been until very recently prominently identified with the League are pointing out the same inconsistency to which we called attention. The following is copied from *Zucifer*, published at Valley Falls, Kansas, and is by "W.," one of the editors of that paper. Will not the *Investigator*, whose motto is "Hear all Sides," copy this, and show wherein it is unfair or unjust: "Mr. S. P. Putnam, speaking for himself and Mr. Watts, refused to accept the challenge of George Chainey for a discussion between the latter and Mr. Watts upon the relative merits of Spiritualism and Materialism. And this after Mr. Watts had frequently taunted Mr. Chainey with an asserted lack of courage to debate. Mr. Putnam gave as his chief reason for refusing to accept Mr. Chainey's challenge the fact that he and Mr. Watts are officers of the League. Mr. Putnam said that they were in the employ of the League, were paid out of its treasury, and hence had no right to use their time in any other work than that of secularization, pure and simple. He said that the League had nothing to do with Spiritualism, with Materialism, or with Christianity, *per se*, that it was devoted to the separation of Church and State, and its officers should do nothing to antagonize any possible adherents to the secularization movement,—therefore, Mr. Watts must not debate with Mr. Chainey. This was a very fair programme, had it been acted upon in good faith. But it has not been. Mr. Watts is eager to discuss with the clergy; and, wherever he goes, the ministers are challenged to debate with him,—to debate with him not merely upon the Church and State issue, but upon subjects at issue between the infidel and agnostic or atheist and the Christian and theist. According to his and Mr. Putnam's theory, he has no right to use time for which he is paid by the League in discussing subjects upon which the League has no opinion; and fair play and common sense confirm Mr. Putnam's statement, that the League has not and should not have any opinion concerning the divinity of the Bible, the existence of a God, or the immortality or mortality of the soul. In the light of their subsequent actions, it is plain that the reason given by Mr. Putnam and Mr. Watts for their refusal to debate with Mr. Chainey was but a pretext. As a staunch Materialist, I must confess that I am not proud of the courage and straightforwardness displayed by these champions of the philosophy which I accept."

BOOK NOTICES.

FARNELL'S FOLLY. By J. T. Trowbridge. Boston: Lee & Shepard. 1885. Price \$1.50.

A new story by Mr. Trowbridge is always welcomed by his many admiring readers. These will find in *Farnell's Folly* continued evidence of his well-known ability to depict in a natural, lively, and graphic manner the differing phases of New England home-life and the characteristics of New England people. That some of the characters in this story are drawn with evident exaggeration does not detract from the general interest of it. If, however, some are superlatively good, none are superlatively bad. There is nothing especially new in the plot, which is that of the financial ruin of many men and women through the wily fraud of a dashing speculator in petroleum and other stocks, as well as the moral ruin wrought by the same personage in the lives and hearts of others. In common with all the stories of Mr. Trowbridge, this work is moral in tendency and pure in tone.

THE BIBLE FOR BEGINNERS. Compiled and arranged by John Page Hopps. The Old Testament. London: Williams & Norgate, Henrietta Street, Covent Garden. 1884.

To those who wish to get the real gist of the sacred book of the Hebrews, free from the long gene-

alogical and chronological chapters, this work of Rev. Mr. Hopps will be found quite a convenience. In the preface, he remarks: "For a long time, I have felt the need of some book that would give, in a shortened form, the actual contents of the Bible,—not edifying extracts merely, but closely connected selections that would fully set forth the letter and the spirit of each separate book. I did not want a book of explanations or moral lessons or inferences or criticisms or the story of the Bible told in some modern person's words. I wanted the Bible itself, in an abbreviated form, but with a few necessary words of explanation, from stage to stage. . . . This book is the result; and, if other parents and teachers feel as I have felt and want what I have wanted, I may hope that it may be useful to others, as I believe it will be to me." In a second volume, the New Testament is to be given in the same abridged form.

WITHIN THE SHADOW. By Dorothy Holroyd. Boston: D. Lothrop & Co. 1884. Price \$1.25.

This is a well-told and deeply interesting story of highest moral tone, which deals mainly with some lovely phases of girl friendship, as exhibited during times of special and cruel trial, such as came into the life of Cecil Chester, the heroine of this story. Of the three leading characters, the chief heroine is one whose years until womanhood were passed in a happy home, with wealthy and cultured parents and surroundings, when the death of the former and consequent loss of the latter bring her into positions where she is suspected of theft and imprisoned. Another is a cultivated girl in poor circumstances, whom a hard fate sends to Japan as a missionary and teacher. The third is the daughter of the prison warden, who makes use of her opportunities to do good among the prisoners in a self-forgetful and unostentatious way. The warmth and sincerity of the friendship of these three are subjected to severe tests during the ordeal undergone by the first. The love stories of the friends play a necessary but subordinate part in the volume.

The January number of the *Popular Science Monthly* is filled with able and interesting articles. In "A Glance at the Jury System," C. H. Stephens makes the defects of the system very evident, and shows by a sketch of its history that it was not established as a bulwark of popular liberty. In "Agnostic Metaphysics," by Frederic Harrison, and "Last Words about Agnosticism," by Herbert Spencer, the religious discussion by these thinkers may be said to be closed; for Mr. Spencer states that he shall say no more. "Influences determining Sex" is an interesting statement by Prof. W. K. Brooks of the results of a curious scientific research. The story of Tyndall's student life, told by himself, under the title "My Schools and Schoolmasters," will be eagerly read. F. A. Fernald contributes an illustrated article on the "Gladiators of the Sea," in which he describes the sword-fish, the saw-fish, and the narwhal. "Studying in Germany," by Horace M. Kennedy, contains valuable information for American students. Sir Auberon Herbert's article on "State Usurpation of Parental Functions" is profitable reading for those who put their trust in reform by act of legislature. J. H. Pooley, M.D., describes that curious affection, "Bloody Sweat"; W. Mattien Williams writes on "Condiments" and "The Cookery of Wine." And "Protective Mimicry in Marine Life," by Dr. W. Breitenbach; "The Advantages of Limited Museums," by O. W. Collet; "The Architecture of Town-houses," by R. W. Edis, F.S.A.; and "Mountain Observatories,"—are all valuable articles. The subject of the portrait and sketch is that eminent chemist, Sir Henry Roscoe. The editor writes on "Harrison and Spencer on Religion," "A Healthy Materialism," and "Politics and Science." The "Miscellany" and "Notes" contain the usual pleasing variety. D. Appleton & Co., New York.

The *Art Amateur* for January, 1885, is very rich in bright and sparkling criticism as well as in practical instruction to artists and amateurs, especially in decorative art. A subscription to this periodical would be an excellent New Year's gift for any young person interested in the decorative arts; for one could not fail, by reading it from month to month and studying the illustrations given, to improve the taste. An interesting account is given of the work of the so-called Associated Artists in New York. This is

rather an ambitious title for the work of a few individuals; but this firm has done a great deal to develop the taste for decorative art, and to improve the manufactures of the country by the demand for rich and beautiful stuffs. It is a great encouragement to women to see how Mrs. Wheeler and her gifted daughter have worked out their own ideas, and made a place for themselves in the great industrial world; and, in so doing, they have opened the way for others whom they have employed. Miss Emmet's designs in this number show great ability. There is now no excuse for poor drawing or slovenly work. We have excellent drawing-schools, where eye and hand may be thoroughly trained; and this training will appear in every design, however seemingly free and careless. The "Art Hints" are very good. They always take a high view of art, and, if read and pondered, will help to disabuse the young student of many foolish notions. We heartily congratulate the publishers of the *Art Amateur* on the constant improvement in their work, and cordially recommend its perusal to our readers as one of the pleasures of the New Year. E. D. C.

The *Atlantic* for January contains the opening chapters of three serial stories: Charles Egbert Craddock's "Prophet of the Great Smoky Mountains," Sarah Orne Jewett's "A Marsh Island," and Mrs. Oliphant's "A Country Gentleman." Oliver Wendell Holmes begins a series of papers, entitled "A New Portfolio"; and the first number is full of the old-time charm, wit, pathos, and other delightful qualities of the genial autocrat. Articles of literary interest are a study of "Childhood in Greek and Roman Literature," by Horace E. Scudder; "Madame Mohl, her Salon and her Friends," by Kathleen O'Meara; and a paper of curious interest by Richard Grant White on "The H Malady in England." Two pictures of New England life—"A Salem Dame-school" and "Winter Days," being selections from Thoreau's *Journal*—are of interest; and these, with a short story by Frank R. Stockton, critiques on Vedder's drawings to Omar Khayyám's *Rubáiyát*, Vernon Lee's "Euphorion," and other notable books, poetry of a Christmas character, and the usual Contributors' Club, complete a number replete with good things. Houghton, Mifflin & Co., Boston.

No. 20, Vol. V., of the *Modern Review* is, like most of the numbers of this periodical, of solid worth. The contents are: "Ezekiel," by Prof. Kuenen; "The Argument from Design in the Organic World," by Dr. W. B. Carpenter; "Modern Quakerism," by Alexander Gordon, M.A.; "Converts to Rome," by R. Rodolph Suffield; "Liberal or Socialist," by Richard A. Armstrong, B.A.; "Prof. Newman's Christianity in its Cradle," by Francis H. Jones, B.A.; "Teachings of the Twelve Apostles: Postscript," by Alexander Gordon, M.A. The "Reviews and Book Notices" are unusually good.

The January number of *St. Nicholas* contains portions of continued stories by Louisa M. Alcott, J. T. Trowbridge, and Hjalmar H. Boyesen; a thought-inspiring poem, entitled "The Child and the Year," by Celia Thaxter; the beginning of a series of "Historic Girls," "Elizabeth of Tudor," by Elbridge S. Brooks, with many other tales, poems, and articles by good writers, in addition to its always sumptuous supply of beautiful illustrations thereof by the best artists. For sale by Cupples & Upham, Old Corner Bookstore.

An interesting feature in the New Orleans Exhibition is the Prang Exhibit, which contains all former prize cards and the frames, with consecutive proofs of a reproduction, which was at the Mechanics' Fair in Boston, and has been sent to the Massachusetts Department at New Orleans by special invitation of the State Commission. The collection of prize designs recently exhibited in New York and Boston by Mr. L. Prang is now, by special invitation, shown in the Art Institute in Chicago; and, in response to a similar request made by the managers of the Museum of Fine Arts at St. Louis, this collection of paintings will be sent to that city later on. Mr. Gaugengig's design in the Prang Prize Exhibition is remarkable for the purity of its tones and the exquisite nicety of finish, reminding of Meissonier's best efforts in this direction. It has, we are informed, met with little appreciation by the critics as to its fitness as a Christmas gift card.

H. T. MARSHALL'S

PATENT
ADJUSTABLE
LACE
CONGRESS

Is easily adjusted to fit any instep or ankle at any time, and will not uncomfortably draw the ankle, like ordinary congress. It has the stylish appearance of a lace boot and all the convenience of any congress in putting on or off the foot. Marshall's Pat. Pat'd May 13, 1884, woven in the front strap or stamped on the shank of each shoe. If your dealer does not keep them, send postal for directions how to get them to the Patentee and Manufacturer of Men's, Boys', and Youth's Fine Boots and Shoes. THE BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travelers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches**, which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars**, which are models of comfort and elegance; its **Palace Drawing Room Cars**, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that it is the best equipped road in the world.

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, and take none other. All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

No. 6.—**The Sabbath**, by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 7.—**Compulsory Education**, by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven**, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—**The Christian Amendment**, by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity**, by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science**, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies \$1.00.

No. 13.—**On the Vision of Heaven**, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing**, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.

No. 15.—**The Battle of Syracuse**. Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

Address THE INDEX,
44 Boylston Street, Boston, Mass.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 insertions, . . .	10c. per line.
" 13 " 25 " . . .	8c. " "
" 26 " 51 " . . .	6c. " "
" 52 " " . . .	5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent. On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the above calculated, will be made.

CURRENT TOPICS.

BY B. F. U.

THE present agitation in several of the States to secure legislation requiring that physiological instruction in temperance principles shall be given in the public schools is a laudable effort to get hold of the alcohol problem at the right end.

REFERRING to those who refrain from exchanging conventional civilities with strangers through a morbid fear that their "position" or "standing" may in some way be lowered by speaking with those who lack the accepted social standards, the *Boston Herald* sensibly says: "The true lady or gentleman, the person of really 'good family,' is never in fear of being compromised or contaminated by speaking to anybody. Sure, without the least consciousness, of their position, they never think that it depends in the least upon whom they speak to or by whom they are addressed. That proud patrician, Wendell Phillips, with his great heart full of all kindness, knew that he could live anywhere, and so chose his residence in most 'unfashionable,' but very convenient, quarters. It is only the shoddyite, social or financial, who seeks to increase his importance by affectations in manners and a show of wealth. A common type of the snob can be put down by snubbing. Those who are beyond this may be left to the untender mercies of the snobs who are above them, and whose recognition they live to seek."

IN a speech recently made in England in behalf of a hospital for the paralyzed and epileptic, Dr. Crichton Browne said: "In the history of civilization, we have had a stone age, a bronze age, and an iron age; and, parallel with these in the history of human development, we have had a bone age, a muscle age, and a nerve age. With the application of iron to the manufacture of machin-

ery and the substitution of steam power for brute strength, the strain of existence was transferred from the muscles to the nerves. The sons of Adam eat bread now, not in the sweat of their faces, but in the fever of their brains; and thews and sinews are of small account in comparison with nimble nerve fibres." The mortality from nervous diseases appears to be advancing rapidly. Apoplexy, neuro-cephalus, and paralysis are, according to Dr. Crichton Browne, carrying off a larger number of victims year by year. They caused 105,189 deaths in the period of five years 1861-65, and 145,503 deaths in the five years 1876-80. Those who deny the existence of over-pressure should at least consider these figures.

THE enterprise of the New York *Herald* produces a special despatch from Rome concerning the doings of the late Plenary Council of the Catholic Church in Baltimore, of which the Springfield *Republican* says: "It contains nothing but what was guessed or rumored on this side the water, as the proceedings are simply under consideration by a committee, and not promulgated by the pope. But there is no doubt the statements are substantially true: that a fixed rule for the regulation of mixed marriages has been adopted; that parochial schools are to be established all over the United States; that a great ecclesiastical university is to be formed; that a national catechism has been drawn up, which shall be obligatory upon all Roman Catholics; that there are to be ecclesiastical tribunals governed by 'civil and canonical' law, in each diocese, for the trial of priests; that priests cannot be removed at the caprice of their bishops, etc. The effect of the determination of the council of course is expected to be the solidifying the power of the Church and the sharper separation of Roman Catholics from their fellow-citizens."

A CORRESPONDENT of the Montreal *Herald* quotes from the *Gazette* of that city that "it is probable that the easy-going, inoffensive, tolerant disposition of the vast mass of Canadians has permitted the skirmishers to establish outposts in the Dominion much more rapidly than in European countries, the United States, or the other colonies," and comments as follows: "Is it an act of very great condescension to 'tolerate' the Salvation Army? Do we not 'tolerate,' sometimes welcome and defend, bank plunderers and other refugees from justice from the other side of the line? Don't we 'tolerate,' and many of us welcome, prize-fighters, who come amongst us to edify and help to educate the criminal classes? Don't we 'tolerate' indecent ten-cent shows, ministering to the depravity of the juveniles, and allow our dead walls and places of prominence in the city to be defiled with beastly illustrations? Don't we 'tolerate' houses of ill-fame and gambling and drinking resorts of every kind? When we consider these, and a host of other similar facts, it must strike many of us as strange that there are any in Montreal, or in Canada, to turn up their noses at the Salvation Army, and to speak of 'tol-

erating' these people, as if it were an act of grace and a wonderful kindness on our part."

IN regard to the faith-cure, the Springfield *Republican* has this to say: "Some of the instances of success strain outside credulity to the vanishing point, in the straightening of limbs crooked from birth, the restoration of a withered arm, and the cure of cancer. Many cures of cancer have been published when the disease cured had no such character in reality, and some in which the seeming cure proved a deceit, and the cancer returned with increased and irresistible virulence, killing its victim without a second respite. This is one class of cases in which no one who knows the nature of a cancer can possibly credit the faith-cure. In rheumatism, neuralgia, dyspepsia, and many other ailments which result from a certain class of causes, and in which hypochondria invariably results and reinforces, these cures are the most frequent. The stories which are sometimes told recall even more than the faith itself the records of the days of the Catacombs, when not only such lesser things were remedied, but even those were restored to life whose heads had been cut off, the head being placed upon the severed trunk, and the prayer of the faithful shortly knitting the two together, so that the Christian victim arose and glorified God. This anastasis has not yet been copied by the faith-curiers, though experiments as desperate have been tried in sundry places, with the result of dreadful failure."

LAST week, the organization of the American Society for Psychical Research was completed at a meeting held in this city, at the rooms of the American Academy of Arts and Sciences. The officers of the society were elected as follows: president, Prof. Simon Newcomb, of Washington; vice-presidents, Prof. G. Stanley Hall of Baltimore, Prof. G. S. Fullerton of Philadelphia, Prof. E. C. Pickering, Dr. H. P. Bowditch, and Dr. C. S. Minot, all of Harvard University; secretary, Mr. N. D. C. Hodges, of Cambridge, Mass.; treasurer, Prof. William Watson. From a report of the proceedings, the following is taken: "In view of the dangers to which the new society is exposed in the systematic investigation of the little known psychical phenomena, great care has been taken to exclude from active control all elements which might turn the energy of the society into a help-mate of any of the vague, unsettled, and sometimes fraudulent enterprises of Spiritualists. A scientific research must be free from all taint of crankiness. Hence, the decision that all persons elected to the society become associates; from among the associates, one hundred members to be elected, who alone have the right to vote. Out of the members again are elected a council of twenty-one, including the officers above named. The remaining members of the present council are: Dr. William James, Prof. George F. Barker, Mr. S. H. Scudder, Dr. C. C. Everett, Mr. Moorfield Storey, Prof. John Trowbridge, Prof. A. Hyatt, Prof. J. M. Peirce, Mr. Coleman Sellers, Major Woodhull, Messrs. C. C. Jackson, T. W. Higginson, and W. H. Pickering."

THE SUN AS A SYMBOL OF DEITY.

An article on the sun's productive energy in the *Century* for December closes thus: "Whoever finds the way to make industrially useful the vast sun-power, now wasted on the deserts of North Africa or the shores of the Red Sea, will effect a greater change in men's affairs than any conqueror in history has done; for he will once more people those waste places with the life that swarmed there in the best days of Carthage and of old Egypt, but under another civilization, where man shall no longer worship the sun as a god, but shall have learned to make it his servant."

These sentences are very suggestive. They are the summing up of certain inferences which the author has been drawing from well attested facts: namely, that the coal-beds of the earth, now the chief supply of mankind for heat used as a mechanical power, will, in a calculable number of years, be exhausted; that solar heat, taken directly from the sun, is already being made available for moving engines of moderate power, and may, with those mechanical improvements which may be reasonably expected, become available where power is wanted on a much larger scale; that it can, in any event, be put to use for the pumping of water from beneath the sand of deserts, so that those vast uninhabitable regions of the earth may be irrigated and in time covered with vegetation, and become the seat of commerce and manufactures and of powerful populations.

Already, it seems as if the sleeping heart of Africa were beginning to wake, or at least as if the wide-awake people of other lands had been made aware of the fact that that dark, mysterious continent is not sunk in so deathly a sleep but that it may hear a resurrection summons from the bugle blast of this nineteenth century civilization. The "Congo Conference," sitting in the capital of the German Empire, is one of the signs of this new order of things. It is not so very long ago that "Congo" was only known in connection with the infamous slave-trade, which its native savage chiefs carried on with the more wicked white agents of the savage side of modern civilization. Now, "Congo" possibly marks the opening in the hitherto impenetrable side of African barbarism, through which the really civilized elements of modern civilization are to be taken up into the interior of that great continent. What may happen in that hemisphere in the next two hundred years, when civilization shall fairly get it in its grasp, none of us can predict. It may be none too bold to conjecture that the old prophecy, under the inspirations of science and art, will be literally fulfilled; that "the parched ground shall become a pool, and the thirsty land springs of water"; that "the wilderness and the solitary place shall be made glad, and the desert rejoice and blossom as the rose"; that, in fine, these countries, which now are a waste desert because of the intensity of the solar heat, will then, by reason of that same heat, become fertile lands, the centre of the world's industrial activities, and the seat of its political empire.

But the train of reflections which the passage above quoted set in motion in our mind was not chiefly with reference to the possible wonderful future of the African continent. It was the last part of the passage that specially set our thoughts to wandering, and wandering not so much to the possible Africa of coming centuries as to peoples of many centuries ago with their strange religious faiths; and thence to the vast revolution in religious faiths which has been and is still going on with the advance of civilization, and which must continue to go on as civilization

continues to progress toward goals to which we can now set no limit and concerning which the wildest dreams of conjecture may be nearer the truth than any calculations which prudent reason may venture to make. Picturing Africa's coming era, the *Century* writer spoke of it as that "civilization where man no longer shall worship the sun as a god, but shall have learned to make it his servant." In these words, even more probably than he was himself aware, he struck the whole range of difference between the superstitious faiths which have ruled mankind in the past, and have by no means yet passed away, and the rational faith which is beginning to dawn, and whose light, we may hope, shall yet irradiate the darkest places of earth.

The sentence brings first to mind the whole realm of nature worship,—that joyous and poetic period of the childhood of religion, when it was the most natural thought which the human mind could have that all the great objects and forces of nature were immediately possessed and animated by a personal spirit akin to the conscious intelligence and will of a human being; a personal spirit that was near to man, close to his earthly wants, that could be entreated, that was pleased and displeased, but in the main was sympathizing and helpful toward human weakness. That the sun, as the most powerful and glorious of nature's objects, should thus have become the centre of great systems of faith and worship was no irrational nor very harmful idolatry. And thence our thought moved forward to the more reflecting but dreary period of anthropomorphic theism, when the personal power that moved the world was pictured as a mighty monarch seated in august grandeur in the skies, of the type of a human sovereign, but raised to infinite power; a being to be approached with awe and trembling, pleased with the praise of words and the ceremonies of worship, capable of being softened by the adulation of worshippers, but capable, too, of fierce wrathfulness, denying all approach save through a celestial intercessor.

But, again, the sentence happily suggested that this conception of Deity, though still we suppose the prevailing conception even in the civilized countries of Christendom, is gradually waning away. In its place is growing that new conception of the productive, sustaining power of the universe which is coming in with science, wherein, though the phrases "personality," "conscious intelligence," "parental oversight" are hardly ventured to be lisped, so careful is science not to generalize beyond the line of all the observed facts, yet supreme emphasis is laid on these facts: that, whatever the eternal, world-vitalizing, and world-impelling energy may be in its own hidden nature, it is a power that is omnipresent; that is intimately near to man; that works in every finite force and form which anywhere exists; that throbs in every living atom, produces and sustains the myriads of living organisms, pulsates in every human heart, gives to the human brain the capacity to think and to see and keep the true and right; and that, therefore, it is a power that is ever and everywhere *spending itself in service*.

It is sometimes complained that science is taking away from man his Deity. It is taking away his false conceptions of Deity. But, though science no longer allows man to regard Deity as a personal monarch seated in sovereign majesty on a throne in the heavens, or even as a personal creator of the world, and though it may not permit the conception of him as a prayer-hearing and praise-loving being in the skies, it is, nevertheless, in this idea of a power eternally exerting itself in service, bringing a grander conception than any it is tak-

ing away. Man may say to-day that he actually *knows* that power which he has been wont to call Deity as a serving power. He knows it as that which appears in him as the very forces and elements of life; as that which is the law and force by which the crystal forms and the stars move and carry their planets; as that which serves to the flower its grace and perfume and to the tree its strength; as that which everywhere, in sun and earth, in atom, beast, and man, is working to make this universe what it is and what it is to be; as that which reaches, for our world, its highest consummation in personal character, forming itself by the law of righteousness and striving to shape human society by a moral ideal. And in the possibilities of this idea is there not ample compensation for all that is gone or is going from the religious creeds of mankind? Which is the nobler and more ennobling conception,—a God enthroned in the heavens to be worshipped or a God that is everywhere serving the earth and the heavens and man and all beings?

The sun has, indeed, been deposed from its throne as a god, but it is none the less supreme power in our solar system. It reigns by serving.

WM. J. POTTER.

INTELLECTUAL AND SOCIAL ARISTOCRACY IN AMERICA.

It is said that Mr. Wasson has been for some years engaged in the preparation of a work on some topic in political philosophy. I therefore read his recent careful articles in *The Index* with the more interest, thinking they might afford, perhaps, some glimpse of his line of thought. Certainly there is no New England thinker with a more peculiarly delicate intuitive-analytical genius, nor any whose opinions command more unfeigned respect in philosophical circles.

There is probably no modern word that contains a richer connotation than "Democracy." It stands for the social trend or tendency of entire groups of nations, in Europe and the two Americas, as well as in Australia and New Zealand. One regrets, therefore, to find Mr. Wasson narrowing the concept to a political sense only. Democracy is surely, first of all, a *social* doctrine and condition. It is an idea born in the hearts of groaning humanity, and dirged with sighs of slave and outcast. Bedded in the past, its purports arching into the infinite future, it is more than a dream and an aspiration: it is a predictable and inevitable phase of human society. Government by count of heads—political equality—is not democracy in the deeper sense, whatever our wretched dictionaries may say. Political democracy is only the index, the expression of social democracy; it is only the surface symptom of a profound organic, secular change. By democracy in this deeper sense, I mean the as yet imperfectly voiced yearning and demand of the human heart for equality of privilege and the abolition of arbitrary social and political distinctions,—the sentiment of the native worth of a human being. It was with this meaning that I used the word when applying it to Sir Walter Scott. The only other existing word, that I know of, which partly covers the idea is "socialism." It is to be hoped that this word may finally be rescued from the use of wild and foolish doctrinaires and appropriated by scholars to express the world-idea of democratic brotherhood.

Socialism, or social democracy, it is superfluous to say, is of quite recent origin. Can Mr. Wasson's fine scholarship enable him to see no difference between the treatment of the humble classes in classical and mediæval times and their treatment by the great humanitarian novelists and historians

of modern times,—Balzac, Scott, Dickens, and Hawthorne, Carlyle and Green?

Contrast the relative prominence and honor given by Homer to his Achilles and Odysseus, on the one hand, and Thersites and Eumæus, on the other, with the relative importance bestowed by Scott on his Waverleys and Wardours, and his Dominie Sampsons and Edie Ochiltrees. In Homer's case, the representatives of the lower class are treated as hinds, slaves with a certain abject and dog-like faithfulness, while the lords are clothed with splendor and glory. But Scott puts his gaberlunzies and poor tutors and gypsies into the very foreground of his stage, and centres nearly all the interest in their lives and fortunes. Scott, then, as contrasted with Homer, Dante, Virgil, Corneille, I call democratic. Ancient authors did introduce humble characters into their works for artistic reasons simply; but modern authors do so from humanitarian sympathy and fellow-feeling and genuine respect. The whole history of aristocracy and democracy is graphically told in the following significant lists of words:—

NOBILITY.—Birth, high descent, gentility, high life, *élite*, fashionable world, peer, lord, grandee, high-dalgo, aristocrat, swell, gentleman, king, prince, baron, title, medal, livery, *scutcheon*.

DEMOCRACY.—Lower classes, common herd, peasantry, great unwashed, mob, rabble, *canaille*, scum, dregs, swinish multitude, *ignoble vulgus*, vermin, riff-raff, tag-rag and bobtail, churl, boor, villain, clodhopper, bog-trotter, bumpkin, lout, underling, menial, groundling (and about twice as many more).

Now, in contrast, note an astonishing fact: for the phrase "middle classes" there exists not a single synonyme in the English language, so recent is the origin of that class. And yet, as I said, our greatest modern writers recognize the existence and reflect in their writings the daily life of the common people. In short, they tacitly acknowledge the rise of a new idea, that of human brotherhood. The idea had its far origin in the brain of Jesus Christ. Crushed for centuries by the pride and haughtiness of feudalism and the papacy, it is only to-day beginning to take root and flourish as a goodly tree: real ethical Christianity is just beginning to be. In the non-political sense, I affirm, with Mr. Wasson, that Carlyle and Burns were the noblest and sincerest of democrats. They were fierce scorers of artificial social distinctions. They were members of the new middle class.

It is to be noted that moderns who lean toward aristocracy are either persons of secluded life, cultured and fastidious scholars, and especially students of classical antiquity,—saturated as that is with the caste feeling and aristocratic arrogance,—or they are persons possessed of wealth. Among those with leanings toward intellectual aristocracy, I would set down such men as Goethe, Landor, Emerson, George Ticknor, Dr. F. H. Hedge, and many New England Transcendentalists. Transcendentalism is sublime egoism. It is spiritual aristocracy.

Verily, there is something in New England Brahminism to be shunned. It is devoid of healthy coarseness of fibre; it is not broadly humanitarian; it smacks of atavism, of the study, of intellectual pride. The measure of a man's greatness, in my estimation, is the breadth of his sympathy. To have a broad and wholesome sympathy with and knowledge of the toiling classes, one must have had a wide range of experience with them; must have suffered, and toiled shoulder to shoulder with them; nay, must still and always correct the megrims and narrowness begotten of solitude by constant and genial association with drivers, grocers, choppers, farmers, common laborers, engineers, clerks. Contempt is generally born of

ignorance. The longer I live, the more I realize the noble sentiment of Browning, that there is no great nor small in human society. The literary solitaire despises the man of action, and the man of action despises the solitaire. But one is about as useful in the scheme of things as the other: if anything, the man of action is a little more so.

As for social aristocracy, I had not realized how portentous its growth had become here in America until I recently read an article in the *Contemporary Review*, by an English lady, who shows, by a comparative study of American fiction, how absorbing an interest centres here around position, wealth, dress, family, and the like. Everybody's observation can furnish plenty of instances of the growth of aristocratic snobbishness among us. I do not know of a single city in the country not dominated by a plutocratic standard. In a few college towns only is there any approach to the democratic ideal,—social standing determined by merit.

Coming now to Mr. Wasson's field proper, that branch of socialism, brotherhood, or social democracy, which deals with government, or organized national activity, I find myself in complete accord with him. It is rather odd that I of all persons should have been singled out as one immersed and drowned in the idea of political democracy,—I who through study of home politics, as well as the works of Carlyle and Ruskin, had sometimes almost come to despair of that system of government.

I hope one may be allowed to see some intellectual and moral worth in some men, and a good deal of intellectual and moral worth in many men, and more of promise in both, and to believe in the abolition of odious arbitrary distinctions, and trust in the (moderately) educative power of the ballot, and yet not be such an unheard-of donkey as to hold to the equality of all men in all things. From an intellectual point of view, it is undeniable that an alarming number of our fellow-beings are simple fools, as we say. Abstractly considered, can anything be more ludicrously absurd than our present system of selecting our rulers? Virginia in 1774, with limited, or freehold, suffrage, could send to the first American Congress her seven best men, including Thomas Jefferson, Patrick Henry, and George Washington. Could New York or Chicago do the same to-day?

Can anything be more absurd than universal suffrage? Universal fools, universal curly-haired Cuffee, universal short-haired Patrick, universal dude and idiot! And yet Cuffee and Pat, when they are thoroughly aroused and fully informed, somehow prove their moral value and discernment by voting almost always for the moralest of two men. And if in most elections, other than Presidential, they allow rings to be put in their noses by other human "Rings" and "Machines," it is only because of their indolence and ignorance, and not from any lack of conscience.

During a recent trip South from Washington to New Orleans, I saw the finest product of representative government that democracy can produce in the shape of the Lower House of Congress: my faith in the future success of our political institutions thereupon received a severe shock. And, when I saw along the railroads the negroes and "white trash" of the Southern States, I laughed. I did not shudder, because I have possessed myself of late of a sort of cheerful apathetic optimism, which assures me of the sanity of nature and the attainment of final success through however many retrogressions and reversions. They told me in the South that the negroes vote like flocks of sheep, and I saw by their faces that it must be so; yet I did not despair of democracy. I observed

the rotten political-moral fibre of Washington City and the vulgarity of the "dirty politician," yet I held to my faith in democracy. I think we shall suffer shipwreck once, twice, and perhaps thrice. But the rule of the people can never be abrogated until it gives place, millenniums hence, to the final ideal state of no rule at all, but only national co-operation. It is because democracy is the nearest possible approach to the ideal state that we are bound to support it, notwithstanding its errors. Perhaps indiscriminate suffrage was inevitable. Nature has a wild, rough way to her ends. It seems to me, however, as if the wiser way would have been to restrict suffrage; to have made the standard or qualification that of intelligence; to have appointed local committees of examination (like those of the civil service, composed of honorable representatives of all political parties), who should examine each man who aspired to vote by a set of simple printed questions on the topics at issue in the election. If totally ignorant, let him be denied the ballot until he learn his political A, B, C. Corruption might attend such a scheme, but so it does all our political administration.

Is there any inconsistency in what has been written? I think not. If there seems to be such, it is because the distinction has not been clearly made between the writer's admiration of the moral and social worth of the masses and his non-admiration of their intellectual power and their manners. To be an enthusiastic social democrat is a different thing from being an enthusiastic political one.

W. S. KENNEDY.

THE PROBLEM OF EXISTENCE.

Is it Solvable?

I.

"If a man die, shall he live again?" This question of an ancient and anonymous writer has been mooted conventionally by every generation of mankind; not, however, in the overt subjunctive sense of its syntax, but with the broader esoteric import of its Scriptural context. According to the more obvious gist of its dual acceptation, it has been answered for all ages beyond controversy. No: never has a living thing been known to die and then come to life again. If sentient beings die as sentient beings, that must be the end of their conscious existence. "There is hope of a tree, if it be cut down, that it will sprout again," but not of a tree whose stump is quite dead. The universal issue of death is decay. To die is to perish forever. But *do human beings die?* What is death to mankind? Is it anything more than a physiological phenomenon? It is cessation of life and sense in the fleshly tabernacle of a person who coincidentally disappears; and this is all that we know thereabout, or that can be known by mere observation. But *there is no evidence that personality ever dies.* Is there any evidence that it survives the dissolution of the only house it has lived in prior to this event, that its egress from its native habitat concurs with its ingress to an eligible state of conscious existence? Is it possible to ascertain whether or not, as many intelligent doubters surmise, physical death is the phenomenal aspect of spiritual birth?

These questions and others of like bearing upon human destiny are answerable only as corollaries from the problem of existence, by the solution of which it is proposed to account for the world of human experience. But that is commonly regarded as an enigma, and held by the majority of thinkers to be inscrutable. If so, then what a pity! for nothing else but its rational solution will set the human heart to rest. Have not the wisest of mankind, of all that have lived for three

thousand years or more, treated it as a problem rather than as a mystery, and so plied their wits to its study? Just so; but who has mastered it? And what is the implication of this item of history, if not that the problem of existence is insolvable?

This implication is merely apparent. It disappears, when the personal failure here adverted to is rationally accounted for. It is also opposed to certain valid reasons for believing that the problem is solvable. The first of these is negative. There is no evidence of its insolubility (apart from the supposititious implication just noted). This is germane to the postulate of "the Unknowable," which itself is unscientific, inasmuch as it is assumed in advance of experience. For no man has lived long enough to have tried all possible means of investigation, nor is any earthly pupil of experience wise enough as yet to discern the terminus of human progress. If Herbert Spencer or any other agnostic would posit the assumption of "the Unknowable" in the region of intuition anterior to experience, then I would deny its legitimacy as being incompatible with certain indubitable elements of instinctive belief, whereby that of his allegation is indefensibly impugned. These will appear in my next argument, which is positive. It is also scientific, being a deduction from universal experience.

My second reason for believing that the problem of existence is solvable is that *all sensible people desire to foreknow the issue of life on earth*. This species of knowledge is not the least of natural wants. There is no example in the domain of Nature of a natural want whose object is either unreal or unattainable, unless this be the only exception. Besides, I cherish an instinctive sense of *right* to know what so intimately concerns, not me alone, but the prospective personal welfare of all mankind,—a right characterized and emphasized by the issues of sympathy as well as self-love, according to the maxim, "*Homo sum: humani nihil a me alienum puto*." Conceptions of the weal of adult manhood, in a clime befitting soulful aspirations, fill the gaze of sublunary hope as the posthumous compensation for human experience in this world of general disappointment; and the longing to verify their objective reality, and thus confute the vulgar taunt upon life's victims,—"*Sic vos non vobis*,"—is sincere and rational and just. My craving for this most available intelligence is thus backed by reason, by conscience, by benevolence,—by all the aspiring aptitudes and ennobling impulses of human nature.

Finally, what is the use of this instinctive longing, to what purpose is it inspired by the Author of our being, unless it be to prompt endeavor to learn (whose sole reward is attainment of the knowledge which we seek), that our education may be consummated, or at least promoted, by the soul-strengthening assurance of immortality? Is it not, therefore, reasonable to think the problem of existence is solvable?

I know the agnostic idea is not that any truth is unknowable *per se*, but that the problem of existence involves what is unknowable to *man* in this world, assuming his possible relation to another world. But the postulate is gratuitous and unwarrantable, even in this restricted sense. To know ourselves immortal is a sublunary want, one to be realized by earthly lovers. I crave this information *now*: I am unwilling to wait for it until I *possibly* reach the world of hope. The implication hereof is that the problem of existence is solvable by those whose wish to solve it is adequately earnest and persistent. The wish to know is the natural gauge of intellectual capacity; and wish is the germ of will, whose fruit is the object of want.

"When this most soulful want is realized,
Life in this world will be more highly prized;
And we shall say, instead of Pope's sad jest,
Man always *is*, since *all are to be*, blest."

I admit the doctrine of "the Unknowable," so far as pertains to the finitude of human cognition. Inasmuch as we know only what we learn by experience, we are unable to *conceive* what we have never *perceived*, and can *perceive* only what is presented to our intellective faculties. For this reason, we ignore the essence of body as well as of spirit, and know as little of the core of selfhood as of the pith of matter. But we instinctively assume the reality of both, as the nucleus respectively of a cluster of attributes which cannot obtain *per se*, either singly or collectively. In like manner, we discover the reality of the Infinite Mind by inference from conscious selfhood as the offspring thereof. We are as ignorant of *how we exist* as of how the Author of our existence *sempersists*. But neither this nor that is what we instinctively care to comprehend. The hungry eater enjoys his dinner without thinking of the process of digestion or of the chemical constituents of food. So we wish to be assured of life after death, with no heartfelt curiosity as to how we are to live and know each other as disembodied spirits. It is not what is inconceivable that we yearn to conceive. It is the *character* of that "Power" whereon depends the fruition of hope that we would know to be *responsible*, as no insentient thing can be,—as that can be only with personal attributes conceived as Wisdom, Benevolence, Constancy, and *voluntary* Power adequate to the functions of our Supernal Parent. It would not make us practically wiser to puncture the ultimate mystery of Being. But to foreknow our destiny as children of God is, of all species of intelligence, the most auspicious, the most available.

To solve the problem of existence is to rend the veil of futurity; to banish the fear of death; to check the sway of priestcraft; to squelch bigotry; to supplant idolatry; to supersede praying for remission of sins, with hungering and thirsting after righteousness; to dissuade religious worshippers from their vain endeavors to propitiate the capricious temper of an arbitrary deity, and inaugurate devotion to reason and conscience, the personal monitors of truth and right, which prompt us to self-government as the only passport to peace here and heaven hereafter.

Think of the annual aggregate of hard-earned money paid to priestly arrogance for the farce of absolution, which would be saved to the worldly weal of every Catholic laborer for a living, who should perchance penetrate his illusion. Nay, think of the more grievous penances which devotees of the cloister would escape by dispelling that religious mystery which purports more of equivocal good or evil than life itself seems worth to them. Think also of the costly ordinances of even Protestant ecclesiasticism; the sectarian dissensions and wrangling controversies of diverse doctors of divinity; the humiliating rites of neophyte soldiers of the cross; the disquieting doubts of old believers in personal predestination or vicarious atonement; their despondent recoils from the prospect of contingency in the purchase of saving grace; the artificial scruples of conscience, constraints of reason, and consequent sacrifices of secular but harmless gratifications to which the votaries of even reformed Christianity are addicted, all for lack of ability to forecast the issues of the life that now is; and say, for humanity's sake, should not the question which so engages the head and heart of human nature be answerable? Should man be left to *guess* about his title to "mansions in the skies," with no permission to *read* it? By

those who heartfully wish to solve the problem of existence *ought* it not to be solvable?

GEORGE STEARNS.

A LITTLE LAW ABOUT RELIGION ON THE WITNESS STAND.

MASS. PUB. ST., c. 169, §§ 17, 18.—"No person of sufficient understanding . . . shall be excluded from giving evidence" [with certain exceptions not material here]; but "the evidence of such person's disbelief in the existence of God may be received to affect his credibility as a witness."

There is a general belief that there is some connection between the use of the oath in court and Christianity, and that, if the appeal to God is discarded, our faith will have received a shock. The historical fact, however, is just the other way. The practice of judicial oaths goes far back of any historical records to the earliest days of the Greeks and Romans, before they had emerged from barbarism. When Christianity appeared, its followers—acting, as they believed, under the direct instructions of Christ—refused to take the oath, and accordingly were allowed to use a more moderate form containing no reference to future punishment, somewhat as the Quakers have been allowed to do in modern times. As civilization decayed and the Roman law was neglected, the oath became more important again, until the appeal to God sometimes usurped the place of evidence altogether. The Church of Rome took especial charge of it, and lent all her weight to making the supernatural reference impressive and final. In lay proceedings, the earliest form of jury was nothing but a group of neighbors, who, without hearing any testimony, decided from what they knew of the parties whether their oaths were to be accepted. The parties brought in their friends and retainers sometimes by the score, not to give any evidence, but simply to swear that they were right; and their oaths settled it. And thus the jury trial, like the ordeal by fire, etc., was essentially an appeal to Heaven. As civilization revived, this method naturally fell into disrepute, and the witnesses were asked for proof of the facts; but the old forms were retained when the old methods were abandoned. Less and less attention, however, was paid to the form, until now both its pagan origin and its character as an appeal to a supernatural arbiter have been forgotten by all but antiquarians; and it is even defended, as if it were a Christian regulation of our modern judicial procedure.

Like a good many other venerable formalities, it has sometimes been a great impediment to justice, by using its religious test to keep facts from the jury: and many States have tried to make it harmless by depriving it of this dangerous power. Twenty-six States and Territories have forbidden the exclusion of evidence on account of religious belief, as follows: Arizona, California, Colorado, District of Columbia, Florida, Georgia, Idaho, Indiana, Iowa, Kansas, Maine, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Montana, Nebraska, Nevada, New York, Ohio, Oregon, Wisconsin, Texas, Utah, Vermont. It will be observed that this list includes all the new Northwestern States and nearly all of those in which codification has recently been attempted.

The list of States which retain the old restriction is shorter: Alabama, Arkansas, Connecticut, Dakota, Delaware, Illinois, Kentucky, Louisiana, Maryland, New Hampshire, New Jersey, North Carolina, Pennsylvania, Rhode Island, South Carolina, Tennessee, Virginia, Washington, West Virginia, Wyoming. The four Territories embraced in it will, in all probability, leave it as soon as their legislation takes shape. If we disregard them, the remainder are all Middle or Southern

The Index.

BOSTON, JANUARY 22, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

EDITORIAL NOTES.

BY B. F. U.

BOSTON THEATRE was packed from floor to ceiling last Sunday evening with an audience to hear Col. Ingersoll.

SUPERSTITION still holds its place in some sections of Christendom with great tenacity. Speaking of the earthquakes in the Spanish peninsula, the *Christian Statesman* says:—

Faith holds that these, like all natural calamities, are part of the moral government of the world, and have their connection with moral as well as with physical law. They are punitive or retributive, having respect to the sins of those who suffer by them. They are warnings to other communities whose guilt is equal or greater, according to our Saviour's words: "Think ye that those eighteen on whom the tower in Siloam fell and slew them were sinners above all the Galileans? I tell you, Nay; but except ye repent, ye shall all likewise perish." They are prophetic tokens of the near approach of great crises in the moral history of the world, and are more frequent at such junctures than at other times.

If earthquakes specially singled out the sinners for destruction, we should have more respect for the *Statesman's* doctrine. But they seem to be a very impartial kind of "government," engulfing saint and sinner, Christian and infidel, together.

MRS. BLACKWELL has, we understand, spent much time and money in the preparation of the paper from her pen which appears in *The Index* this week. She haunted the Astor Library till there was some fear the clerks might tire of hunting up musty old volumes rarely called for, then the same at the Mercantile and Cooper's Institute and at the libraries in sister cities. Her studies for some years past upon Heredity and kindred subjects have succeeded in gathering to her own bookcases many valuable books upon this subject. United States statistics had to be thoroughly studied, and some books from the Washington library. She has hunted the world pretty fairly over in four or five languages, and culled what seemed to be the best and most fair to both

sides of this longevity question. We are all equally concerned in establishing facts, and their bearings can hardly be overstated. The result has been so much more clear and decisive than in the beginning she had dared to hope that she is exceedingly gratified. The fourth table holds immense numbers,—over seven hundred and thirty millions of people tabulated,—literally balanced by sex! We commend her elaborate paper to all students of sociology.

REV. JOSEPH COOK recently preached in the First Presbyterian Church in New Orleans. His sermon called out a letter from Rev. Charles A. Allen, Unitarian, from which the following is an extract:—

You say that Ralph Waldo Emerson's influence is "malarious,"—a man of whom the devout Methodist Father Taylor said that he was the most Christ-like man he ever knew. Emerson's sweet, saintly spirit, and noble Christian spirit, has done more than any other single influence to purify and uplift our American civilization, literature, and social life. His books inspire the best preaching of the age in every denomination, and are eagerly read by the wisest and most influential minds. You say of Emerson that "he grew toward heaven at the end," meaning apparently that he became more like you in creed before he died. But you know perfectly well that this statement, when you made it in Boston, was publicly and emphatically contradicted by Emerson's family and friends, who intimated that the venerable saint had less and less respect for you in his last years. One is reminded of the Methodist Father Taylor's retort, that he would rather go to hell with Emerson than have the company anywhere of certain modern Pharisees. You group Unitarians with free-lovers, and insinuate that they are no better. But you know perfectly well that no people in the North stand higher for personal character than the Unitarians, and that free-love has no more determined enemies than they.

THE PROBLEM.

For *The Index*.

When Time and Toil delay
To hasten a brighter day;
When once impatient Fates
Wait at the outer gates;
And the Soul of Man, fast bound,
Encompassed with darkness round,
Vainly aspires toward light,
Seeks with its feeble might
Itself to utterly free,—
How shall deliverance be?

The Age is old and outworn,
But the Heir hath not been born!
With his mouth at the ear of things,
Time saith: "I will fold my wings:
When the New Day dawns, I shall know.
Through darkness why should I go?"
And the Fates are shamed, and complain:
"Let a Master come again!
We weary of work untaught,
For our efforts come to naught!"

These motionless, under ban,
What hope can there be for Man!

WALTER L. SAWYER.

THERE is seldom a line of glory written upon the earth's face, but a line of suffering runs parallel with it; and they that read the lustrous syllables of the one, and stop not to decipher the spotted and worn inscription of the other, get the least half of the lesson earth can give.—F. W. Faber.

O you who linger on the night of toil
And long for day,
Take heart: the grandest hero is the man
Of whom the world shall say
That from the roadside of defeat he plucked
The flower of success,
Bravely and with a modesty sublime,
Not with blind eagerness.

—W. T. Talbot.

States, with the exception of three from New England. On this point, the United States courts follow in each State the rule of the State in which it is sitting.

If we compare the two groups, we notice at once that the first includes nearly all the progressive States; while, in most of the members of the second group, the standard of culture is low. It is not practicable to compare the morality of the two groups, because in the one which prides itself upon retaining the divine sanction for its legal proceedings, and excluding all facts from its juries that do not come from Christian sources, there is often so little attempt made to punish crimes of a homicidal nature that the criminal statistics are untrustworthy. The statistics of illiteracy, however, are striking. The States which exclude atheistic evidence have an illiterate element of about twenty-four per cent., while the States which set up no religious tests have a percentage of about twelve. In other words, about one-fourth of the first could neither read nor write in 1880; while only half as many, or one-eighth, of the progressive class were in this unfortunate condition.

Of course, we do not argue that the oath has much effect upon culture or crime, but merely that, when a certain stage of mental growth is reached, these restrictions upon the truth are felt to be absurd, and are speedily gotten rid of.

Out of the twenty-six States and Territories forbidding the use of the religious test, eight—District of Columbia, Georgia, Indiana, Iowa, Maine, Massachusetts, Nebraska, Utah—allow the religious opinions of the witness to be inquired into to affect his credibility, permitting the jury to assume that, if a man is not a believer, he is more likely to be a liar. The supposition is so violent that, in the absence of an express statute, such evidence is too remote and inapplicable to be admitted. One or two States, like Oregon, have forbidden any such inquiries by constitutional provision, which prevents any change by statute. One or two States, like Vermont, have passed statutes of a similar tenor; but, apparently, such a statute is merely declaratory, and the law would not be altered by its repeal. In some of the States, the court has held that evidence of admissions of infidelity by the witness should be offered before he can be asked any direct questions about it; but, although there are no contradictory decisions, the practice is not always in accordance with it. But the inquiry is seldom urged before an intelligent jury, because it is apt to prejudice the case with them. It seems odd that Massachusetts should be in this small minority with Georgia and Utah, a minority whose percentage of illiteracy is two per cent. higher than the class it belongs to.

HENRY W. HOLLAND.

"The assumption," says the *Dubuque Times*, "of the right to aid any system of religious belief, either by direct appropriation for its support or by exemption of its property and belongings from taxation, is contrary to the spirit of republican government. When Massachusetts, as was the fact prior to 1833, made every citizen taxable for the support of the Protestant religion, whether he was a Protestant or not, her constitution in this respect bore the distinctive mark of religious despotism. Such a policy in its spirit, if not in its method, is persecuting, no matter upon what theory it is defended. Thus far, however, exemption of church property from taxation has worked no serious injustice nor provoked very serious opposition. But the time is coming when the discussion will become more earnest. The rapid accumulation of property of the most valuable character by church organizations will force the issue."

For The Index.

The Comparative Longevity of the Sexes.

BY MRS. A. B. BLACKWELL.

A new grouping of statistics, the earliest of modern date equally with the latest, proves beyond question that females are endowed with longevity superior to males. Extended tables have been prepared from the census returns of many countries, covering various periods of time; and they uniformly teach the following conclusions:—

1. All ages included, the sexes are about equal in numbers. The old countries have an excess of women, the new of men. Statistics of emigration added to the population of the country migrated from or subtracted from those migrated to confirm this law. So do all aggregates, giving a due proportion of the older and newer States; and the larger the aggregates, the more marked becomes this constant equation.

2. But the sexes are not equal in numbers at the same ages respectively. At all the early ages, males are habitually in excess. At all the late ages, females are habitually in excess; and the larger the aggregates at the same ages, the greater is the numerical inequality. At one probably more or less variable period toward early middle life there must, therefore, be a time when, other things equal, the sexes in any country will be numerically equal at the same age.

3. The younger the age compared, the larger, other things equal, is the relative proportion of males. More boys are born; but the excess diminishes from birth onwards in something like a reg-

ular gradation, until numerical equality at the same age is reached. Then an excess on the female side begins, and increases progressively, but much more rapidly, to the end of life. Hence, at all ages, life has a longer average to the female than to the male. Records of births and of deaths confirm and correct the direct count of numbers in all these particulars.

4. The relative proportion of boys and girls is approximately the same in all countries. A large total excess of males or of females has no effect on these ratios. The ratios of adult males and females at specified ages are directly affected by the proportion of the sexes in the total population.

5. The state of statistical science does not enable us to determine satisfactorily at what age the sexes are equal in numbers. The period lies somewhere between fifteen and thirty-five; but we are obliged to discount an obviously unusual imperfection of the records at about these ages, and varying conditions probably make the time differ slightly in different countries.

6. There are exclusive feminine ailments, chiefly in middle life, which cause death by thousands in every large community. In most countries, also, women are more subject to all that class of diseases which, like consumption, arise oftener from confined, impure air than from great exposure; and these causes of extra feminine mortality, most active in middle life, have become a steady offset to extra male risks incident to business enterprises, wars, dissipations, and hazards in general, which are incurred in the active period of vigorous manhood. Hence, distinctively during a considerable period of middle life there is approximate equality of numbers between the sexes in death

rates and in life ratios. Taking the whole period from fifteen or eighteen to seventy or seventy-five, the sexes are almost balanced in numbers in every country; allowing of course for excess in the total population of one sex over the other.

7. Mortality tables indicate that girls, like boys, bear hereditary taints, and die, in consequence, at any period of life; and yet, as indicated above, that at every period of life the female has the slightly better chance of survival. I did not say it is survival of the fittest. That phrase originated with Mr. Herbert Spencer. Note that the male is not at the greatest disadvantage during his years of greatest exposure. It is in his protected infancy and in sheltered, restful age that his less vitality is conspicuously manifested.

8. The general facts above stated have long been known. Every census teems with them. Life insurance and annuity tables have discounted them, and yet their cumulative significance and mutual relation seem to have escaped attention. The facts have been treated as results probably incidental and temporary, arising from complex, highly variable causes. But the approximate uniformity of returns gathered from most widely variable peoples, half savage and civilized, during a long term of years, points us to constitutional causes beyond the control of ordinary contingencies. Nature's constant method of maintaining a complicated numerical balance is nature working in accordance with established order and law.

But, let the explanations be what they may, the accompanying Tables and Statements, condensed and summarized from a large mass of Tabulated Statistics, will place the main facts alleged beyond question:—

TABLES SHOWING NUMERICAL EQUALITY OF THE SEXES IN THE AGGREGATE, WITH INVERSE INEQUALITY AT THE EARLY AND LATE AGES.

TABLE I. UNITED STATES IN 1880.

	All Classes. United States Census.										Colored, Chinese, Japanese, and Civilized Indians.

tions are due to inaccurate returns and how far to other causes is not easy to determine.

The relative numbers of the sexes at birth vary considerably within certain limits; yet civilized and savage, prolific and unprolific nations maintain similar birth-rates, as a few more figures will indicate:—

	BIRTHS.	
	Male.	Female.
France (1881),	469,181	450,996
Ireland (1882),	64,819	61,021
Madras (1880),	339,301	320,690
Switzerland (1882),	44,319	41,668
Italy (1881),	557,029	524,096
Punjab (1880),	298,229	246,430
Belgium (1879),	89,339	85,302
Austria (1881),	428,922	404,554
Germany (1880),	898,996	849,690
Odsh (1880),	5,860,960	5,546,665

More males than females are still-born, and many more die at every age under five years. Whether there is any people or condition in which, with large enough numbers and a well-sifted count, there are more girls than boys at birth, is doubtful. The years of special fatality to girls vary greatly in different countries and conditions; and comparative death-rates, like other death-rates, vary with the civilization. India not only burned widows and destroyed female infants, but, like the most of Asia, it still is a vast prison to one sex, which in consequence dwindles to a minority. Fiercer tribes, as in Paraguay, slaughter their men in war; but most of these have no census returns. In all civilized countries, emigration is the great disturbing element in the numerical balance of the sexes. Table IV. embraces multitudes of men on foreign soil. Others are in Turkey, Persia, and at all the ends of the earth not tabulated. The Argentine Confederation in 1875 reported 9,130 Italians, 4,030 Spaniards, 3,238 Frenchmen, 10,709 British, 5,860 Swiss, and 4,997 Germans. The unrecorded wanderers may be properly offset by the surplus men of Asia; though India, having nearly a seventh of the entire population of the globe, with 6,000,000 more men than women, is clearly to be counted out from our estimate.

It is not held that nature maintains a numerical balance of the sexes under all conditions, but that the larger number of males at birth, and the greater longevity of females, so far persistently balance each other that equality of numbers in the aggregate is maintained, other things equal, in all of our best civilizations. The table includes the leading countries of the world and the colonies of Great Britain. The dependencies of other nations would not greatly affect the result. Like conditions give similar returns, and the close balance is remarkable.

There are two possible explanations of the facts given in the above summary and in the tables. One is: that the hereditary results of male hardships, hazards, or excesses, transmitted to the same sex only, have been so great that the average of life to that sex has become grievously shortened thereby. The other is: that the feminine constitution, much beyond the male constitution, being differentiated in the two classes of organic functions distinguished as individual and reproductive, together with the earlier limitation of the latter, the female gains thereby a greater reversion of energy toward the close of life, as well as a larger available reserve, which in case of need may be called into vicarious action at all ages. Increased longevity thus resulting, primarily affecting females only, if inherited by both sexes, would tend to the extension of the average life of the race. This result would be parallel to the increase of size and strength to the entire species, superiority in this direction having arisen primarily in the male line of descent.

For one, I cannot find evidence that man has

limited his great heritage, has thrown away his birthright of years for worse than a mess of pottage. What, then, are some of the constitutional causes of the superior longevity of women, and what are nature's methods in securing this result?

All organic existence is fundamentally differentiated in the two classes of functions, the individual and the reproductive, with their corresponding direct and indirect modes of nutrition and growth.

Between these basal divisions organic antagonism arises, because of the common necessity that both systems shall be sustained from the same source of supplies, and because the resulting activities must take opposed directions. But, in the process of evolution, both systems are compelled to mutual adaptations and to many various modes of co-operation for their joint advantage. They are like rival nationalities forced into alliance both offensive and defensive, in league with, but also in ceaseless struggle against, the common environment, which becomes helpful or harmful precisely as they together succeed in adjusting themselves to its helpfulness or in overcoming its harmfulness.

The inevitable, the unpreventable antagonism between these two mutually dependent systems has been recognized, and, as it seems to me, has been pushed into undue prominence by men of science and philosophy, simply because the continuous adaptations and co-operations which also exist have not received from them an equal amount of attention. I think it is quite possible to show you that the active mutual adjustments for mutual benefit have become of such positive advantage to both as to have quite succeeded in annulling, possibly in something more than merely annulling, all of the disadvantages of the direct antagonism. The advantage gained is like that to a ship sailing almost in the eye of the wind. If unmanaged, the wind would blow dead against the ship's progress; but, by steady proper management and constant shifting of the sails, it is made to propel the ship forward, though with some obliqueness of direction, and thus to become a positive advantage. In a closely parallel way, the innate principle of perpetual plastic adaptation, which pertains to all organisms, has succeeded through this very antagonism in forwarding both individual and race interests. With attention too exclusively directed to the benefits which accrue to the race, individual gain may be easily misinterpreted. It is within the domain of these complex adjustments and to the distinctive methods of their co-operation that I invite you to look, in order to find the reason for the superior longevity of women.

Two general laws govern all organic adaptations:

(1) In all orders of organic beings, evolution is always twofold,—individual and reproductive,—with continuous mutual adjustment between the two, with growing differentiation in each, and with corresponding advance in both.

(2) Just in the degree to which characters of whatever kind, acquired by habit or otherwise, have become of a high order, have become of great physical or psychical value or of many and various classes of values, just in that degree these characters, if transmitted to descendants and thus made permanent to the race, have required and have found responsive and corresponding differentiation and advancement in the organism through which and by which such transmission has been effected.

It is notable that this double-phased, doubly responsive progress in the primary and in the dependent systems has been everywhere steadily and obviously maintained along all of the various lines of development. A low structural condition of the general organism is allied to a low struct-

ural condition of the special organism; and a high, widely differentiated, and many featured general organism is always accompanied by a carefully and broadly differentiated reproductive system.

Now, whenever a crystal takes a definite, specific form, we understand that a part of the forces which contribute to this result reside within the material which is crystallized, but, at the same time, that the size and perfection of the crystallization is largely dependent also upon outside forces. In heredity, characters are transmitted both from, and jointly from the paternal and the maternal ancestry. But the mother is also largely the environment. If that is of a low order or inharmonious, the results are unsatisfactory and tend toward dissolution. But if the environment is favorable, if it is highly adapted to foster and carry forward all the many various and often diverse forces which are marvellously grouped, co-operative, and held in growing equipoise, then the result is evolution.

Think of it! If electricity, in addition to being generated by two unlike metals, must be properly stored, properly conducted, and properly applied through a long, complex series of most delicate yet effective contrivances, in order to achieve good and desired work, how much more the requirements of the living human germ in its progress toward its mature royal heritage! The male of all species has acquired advanced size and many new bony and muscular and mental and moral differentiations. But the female of all species, conversely, has acquired in advance or in exclusive right a mechanism and functions most delicate yet instinct with subtle, living forces held in readiness for efficient co-operation, for impersonal, organic benevolence in transmitting gifts to the unborn generations; and, also, she is the embodiment of an associated but unique power, more closely inwrought with her own emotional, intellectual, and moral nature, which is uniquely modified accordingly, and in due time is transmitted to the same sex and, to a large extent, to both sexes. All this means so much in relating her, on the one hand, to all the past of her race through her adaptations to the masculine development and, on the other, to all the future of her race by her privilege to be the final dispenser of every gift of good or evil that, in remembrance of this mighty mediatorship between past and future good, between the endless becoming from one present to an instantly higher present, the lifeless and unconscious uplifted into the living and conscious, I may surely venture to affirm that, whoever has not given the female due credit in the evolution of her race, he it is who has never given this side of the subject due attention.

But by what methods has Nature succeeded in giving this type of pre-eminence in a lesser degree to the females of the lowest ranks of her living kingdom and in a steadily ascending degree upward to the mothers of the human race? The answer is both easy and explicit: Simply through the habitual process of nourishing first and best that part of every organism which has been called most into active exercise.

Through the joint aid of the blood circulation and the nerves, especially of the sympathetic nervous system, Nature always gives her special attention to wherever there are special needs. Now, the growth and exercise of muscle and of its various dependencies are pre-eminently attended to in the male economy. In treating of this part of the subject somewhat fully elsewhere, I venture to call the masculine type the "peripheral" type of adapted organic growth and activities. But the general nutrition of the female is conspicuously

adapted to, perhaps is subordinated to, her special functions. Hers may be properly designated the "central" type of organic growth and activities. Hence, advantage and differentiation with him are largely peripheral. Male evolution, as Mr. Darwin has illustrated, has been everywhere marked by the development of many external appendages. But advantage and differentiation with the female are much more centralized. Her thoughts and feelings and volitions are more closely interwoven than his, and her whole nature is curiously modified by her feminine organization.

Pre-eminent feminine longevity seems to have prevailed ever since the first differentiation of sexual life. In the flower, the centralized sex element must live to nourish its fruit in place, giving to its direct appendages a better chance of survival. Apparently from a like necessity and from continuance of acquired habit, many female insects are much longer-lived than the males. There is some authority for the assertion that superior longevity pertains to the females of some higher animals, of some domestic animals; and there is small reason for supposing that, if the subject had ever been fully investigated and tested, the law would fail among any living species. Each ascending race probably has progressively increased in length of life, and the habit of one sex been inherited by the other, to the advantage of both; but the superior longevity itself appears to have had, primarily, a direct relation to the special feminine functions, while time has but evolved a much more complex adjustment of means to ends.

With our own race, Nature has handed over to the reproductive system of one sex an exceptionally large amount of work to be done, and yet she has exceptionally restricted the time for doing it. Then, in proportion to the amount of energy permanently retained for individual use, she has carefully diminished the size of the organism. Perhaps we should say rather, in view of our explanation of man's superior bulk, she has not increased the size of the organism beyond a due proportion to the amount of energy permanently devoted to individual upholding. It follows that in any and every emergency the two systems, which have been more equally equipped in the feminine than in the masculine economy, can give to each other the more efficient aid and support at all times, and that the secondary can restore to its primary an almost entire reversion of energy in late life.

The two classes of functions are not alike continuously active. Let us recall just here that all kinds and degrees of organic dormancy short of total inactivity chiefly affect certain functions only; while other functions avail themselves of exactly that opportunity for bringing up arrears and making good an advanced position. Thus, simple rest when tired, the rest of sleep, the winter rest of trees, and the hibernation of some animals are only a few of the many forms of dormancy through which all halting energies are enabled to keep within working distance of their numerous co-laborers. Ordinary sleep, a more or less complete dormancy of the senses and the volitions, enables many of the advanced nutritive processes to be more effectually active than is possible in a waking condition. Circulation, respiration, and digestion are retarded; but wearied muscles, overwrought nerves, and exhausted brain are all refreshed during sleep, as they never are when there is free expenditure in all directions.

Independent of cold, darkness, and dryness, in adaptation to which dormant habits have, doubtless in part, arisen, "plants need a season of rest" in direct growth as opportunity and aid to the in-

direct growth of the fruit-buds, because vegetable nutrition is not simple, but double-sided, and the two divisions are not in continuous equal action. The female of the polar bear, like the plant, hibernates, that its offspring may reap the benefit; and the dormant state of the pupa of the insect, with its sleep of the senses, forwards the development of the higher organism by suspending the use of energy in exhausting muscular and sense processes. Subjectively considered, diversity of functions not entirely adapted to work evenly and continuously together are both the occasion and the final cause of all varieties of dormancy. Excessive activity in one direction conduces to corresponding rest elsewhere, till working and resting have become alternate in all organic functions, with adapted but various periodicity in all, simultaneously or successively.

This class of adjustments, efficient in all vital processes, is conspicuously effective in the feminine constitution. Hence, the stronger hold on life which the infant girl has in advantage over the boy. Her little life, like his, hangs suspended by a thread to its pitiless new surroundings; but the thread has two strands of nearly equal size, carefully intertwined throughout and ready to give mutual support, and upon the one strand there is almost no present strain. The boy's life is suspended by a much larger single thread, less thoroughly intertwined with its very much smaller companion strand, which is able to give it almost no efficient support. Hence, four hundred and nineteen boys to only three hundred and eighty-one girls out of every thousand died in the United States in 1880; and similar proportions are maintained habitually among all classes and in all times and countries about which we have information. Vital adjustments become more intimate just in proportion to their complexity and differentiation, because the laws of all growth perpetually lead in this direction. Close adaptation and co-operation within and without everywhere lead to the possibility of survival; hence, the slightly better chance of life at all ages to the female. The habitual longevity is preserved by new growing adjustments. The head wind has become the motive power to propel the ship. The antagonism has become transformed to healthful co-partnership.

In middle life, individual well-being becomes less assured to the woman. Her mental life must, in a great degree, conform itself to existing conditions; and, possibly, the whole tone of her activities, physical and psychical, is lowered and her abilities are depressed. But, when the cycle of special activities is completed and permanent dormancy begins, can there be but one result,—increased vigor to all individual power, physical and psychical? Here, we find the farther explanation of woman's pre-eminent longevity; here, the hope of a renewed and prolonged intellectual strength; here, the compensating advantages for all previous disadvantages. Nature cares no more for the female than for the male: she does care something more for the race than for either singly; and her provision for the young has given appreciable extra advantages to that parent with whom their interests are most closely allied, and the reserve of all such advantages is handed back to her late in life. The largest bud of the walnut bears the female flower; the best nurtured silk-worm grub proves to be the female; in all ranks below fishes, reptiles, and birds, the females are always larger, often much larger, than the male. Then was it scientific to assume that disadvantage begins for the female among the higher races just where broader differentiations and detailed higher adaptations also begin and progress upward to man-

kind? Instead of inferring that woman has been placed at a disadvantage in the race of life, when the subject has been brought into the domain of exact science, as it readily can be in certain directions, it may be found that she has various calculable and definite advantages over man, her now demonstrated superior longevity being one case in point. I find no evidence that, as Prof. Ward suggests in his *Dynamic Sociology*, there is an abnormal feature in the feminine constitution which has been in some sense grafted upon Nature, but subsequently adopted and adapted by her in the best way possible. On the contrary, there seems to be the clearly traceable footsteps of one steady progression upward to the decided and increased advantage of the woman. Whether or not it will be found in time that, all things considered, the male is at a disadvantage as compared with the female of his species, there are not comparative data enough to determine. It seems probable that here, as elsewhere in all the aggregate interests of the sexes, Nature steadily maintains a constant moving equilibrium by diverse adjustments, as she does in maintaining their numerical equality in the aggregate.

Woman has less growth to make, and she has more available power to make it rapidly. She is precocious physically and mentally, and attains an earlier maturity; yet, as we have seen, she does not reach earlier physical decadence. On the contrary, her physical vigor is the more prolonged. Neither has it been found that her psychical powers have fallen below the physical in any unusual degree. In normal conditions, an accession of strength to either means an equal accession to both. The statistics which can establish the prolonged mental vigor of the woman are not abundant; yet, so far as they prove anything, they look strongly in that direction. A large percentage of the few women who have been noted as brain workers have worked easily and well till late in life, and they compare more than favorably in that respect with any equal number of men. Judging from the sustained mental alertness of the women of the last fifty years, some new light may probably be thrown upon that question, even during the lifetime of the existing generation.

CORRESPONDENCE.

A DEFENCE OF THE LATTER DAY SAINTS OF NEW ENGLAND.

Editors of The Index:—

In your paper of Oct. 9, 1884, is an article by Mrs. Ellen E. Dickinson, headed "A Colony of 'Latter Day Saints' on Cape Cod."

There are several misstatements in the article. First, "There are Mormons in many parts of New England, and particularly in Massachusetts there are several communities of these deluded people." How does Mrs. Dickinson know that they are "deluded"? It is quite probable that it is she who is "deluded."

The Latter Day Saints, with branches scattered all over New England, are not now and never were a part of the Utah fraction; and the majority of the members know no more about the practical life of polygamy than Mrs. Dickinson herself.

In the latter part of November, 1865, Elder James W. Gillen reached Fall River as a representative of the church opposed to polygamy. He held several meetings, and some were baptized; and on Dec. 8, 1865, a branch of the church was organized with eight members. From this small beginning, the church has grown in New England to over six hundred members, who live in peace with their neighbors, and do not believe in "free-will affinity," as alleged by Mrs. Dickinson.

Mrs. Dickinson says, "In short, here, as in all localities where the Mormons live or have lived, they demoralize their neighbors; their terrible doctrines permeate the whole moral atmosphere, and . . . it

seems impossible to get rid of the taint." This statement is a perversion of the truth, and is not borne out by the facts. Let her make a tour of Massachusetts and Rhode Island where these people live, and ask those for whom we labor and with whom we do business, and learn how much we "demoralize" the community. Go to New Bedford, where the writer of this article lives; go to Fall River, Boston, Providence, Brockton, North Plymouth, Plainville, and you will find that not many notable ones of earth have believed our statement of the "story of the cross." But, as poverty is not a sin nor a crime, are we to be despised because of this? If we are poor, we can tell the truth and maintain it, and ask no favor from friend or foe but a fair field, and fear no onslaught, whether it comes from press or pulpit.

Will Mrs. Dickinson show where the wives and daughters of our brethren are not as virtuous and pure as any society that Mrs. Dickinson has ever mingled with, and our homes as free from any polluted "taint" as any house in which she ever dwelt or entered? We do not intend to sit idly down, and suffer such insults to pass unnoticed, while public writers uncork their vials of wrath against us. I deny that any person, a member of this church in Dennisport or elsewhere, is living in wedlock contrary to the laws of this State, and that such things are winked at by the officers of this church.

If Mrs. Dickinson has the evidence, let her furnish it; and the case will be attended to. As a church, we teach (and practise what we teach) that a man should have *but one wife* and a woman *but one husband*, and the church has no authority to divorce either man or wife. This matter belongs to the law of the land.

We are prepared to acknowledge that there are "black sheep" among us, as in all churches; but it is not the doctrines that have made them so: it is a perversion of the truth that makes men bad. And, wherever the doctrines, as taught by the Latter Day Saints, have been observed and practised in the letter and spirit, they have made men better citizens, husbands, and fathers, and women better wives and mothers, and children better sons and daughters. Mormonism, as taught and practised in Utah, is the truth perverted; and, so far as I have been able to learn, Joseph Smith is no more responsible for their hellish doctrines than Jesus Christ was for the sordid, devilish, and selfish desire of Judas, who for thirty pieces of glittering silver betrayed his Saviour.

Mrs. Dickinson claims to have had an interview with one Captain Howes. There is, at Dennisport, Captain Loring E. Howes, a member of the church; and she says that he told her "that Elder Pratt translated a Bible for us." In this, she must be mistaken; for Elder Pratt never translated the Bible for the Latter Day Saints. We have a translation of the Bible among us; but Elder Pratt never made it, although he had as much right as any Bible Union or other clergyman to translate it.

We are the only people who claim to have a translation by the revelation of God: all other translations are claimed to be by the wisdom of man.

Joseph Smith, Jr., never attended a conference on the Cape, though there has been a Smith there, and he expects to be there again on the last Saturday in January, 1885; and you are requested to attend, and every facility will be accorded you to learn all you desire to know about this people who "demoralize their neighbors," but you must be careful lest you get the "taint." It seems to be a marvel of surprise to Mrs. Dickinson that children of Latter Day Saints should be educated in the public schools. Is she not aware that the church is thoroughly American on this subject, and is in full sympathy and accord with the school system of our State, and any person who observes the laws of the Latter Day Church will love and cherish the laws of this great republic, no matter upon what soil he was born?

JOHN SMITH.

NEW BEDFORD, MASS., 679 Purchase Street.

THE TEMPERANCE MOVEMENT.

Editors of *The Index*:—

In the last number of *The Index*, Jan. 1, 1885, I read George Kempton's letter in response to a criticism, in a previous issue, of his method of advocating the temperance movement.

I have been an advocate of total abstinence for more than fifty years, and of prohibitory law ever since prohibition has been able to make itself felt

anywhere, and have witnessed the beneficial results of both measures wherever they have had strength to obtain a foothold. But the results have only been partially effective through the length and breadth of the land; and Mr. Kempton's method presents itself to my mind as the most plausible, and, if generally adopted, will prove the most efficient of any plan ever yet conceived. The only surprising fact in the case is that neither Neal Dow nor any of us has heretofore ever thought of it as an instrumentality. The plan is plausible, because every man will look out for his own interest; and, although he may be inclined to indulge his own appetite, he will not be disposed to pay too much for the same gratification of his neighbor in a business way.

Everybody will admit that drunkenness is a great evil, if not a crime. Even the drunkard himself will not deny it, although he may feel too weak to exercise the duty of self-denial. He needs some motive more powerful than an appeal to his moral sense or the personal injury he is inflicting upon himself and family, because the indulgence of an abnormal appetite is too strong for him to resist without a still stronger selfish motive to antagonize it. I never conversed with an habitual drinker, whether moderate or immoderate, who did not assert that his own manhood was his self-protection, and that a man who had not self-control was not worth saving; and so on to destruction they would go, until convinced that ruin was before them. They would then make a struggle, in at least three cases out of five unsuccessfully; the three falling back into their old acquired habit.

Such men require strong measures,—either give up drinking or starve.

It is to be hoped that Mr. Kempton will forward some of his documents to some of the earnest temperance advocates in Maine.

The same *Index* contains an article on hard times, by Mr. Hudson Tuttle; and, although excellently well written, it does not suggest any efficient remedy except "just and harmonious distribution." How is that to be brought about? I leave the question to be answered by those who know.

The *Farmer's Union* contains the following article:—

Viewed from merely an economical standpoint, the consumption of intoxicating liquors is a national evil of such gigantic proportions as few people fully realize. Some interesting statistics, recently gathered, show the amounts expended annually by the people of this country for some staple articles of use to be as follows:—

Bread,	\$505,000,000
Meat,	303,000,000
Sugar and Molasses,	155,000,000
Public Instruction,	85,000,000
Missions,	5,000,000
Intoxicating liquors,	900,000,000

Here the story is told. Hard times, indeed, when the worse than useless expense for intoxicants is about \$100,000,000 more than the expense of the nation for bread and meat. And look at the utterly insignificant expenses for public instruction and for missions. Away with the accursed thing from the face of the earth!

D. S. GRANDIN.

UPPER GLOUCESTER, ME.

P.S.—*The Index* of January 1 quotes from the *Christian Statesman* that Mr. Blaine lost his election for travelling on Sunday. The *Statesman* quotes the prophet Jeremiah as appropriate to the occasion.

Rev. Mr. Jasper, the colored preacher, said, upon Scripture authority, "The sun do move." A New England preacher, addressing his congregation of about equal intelligence, said, "An elegant writer, speaking of Jesus and a great philosopher, said, 'The philosopher died like a philosopher, but Jesus like a god.'"

He did not know the name of the "elegant writer" nor the name of the "philosopher," but had heard the anecdote somewhere. The audience he was addressing swallowed it. As the "elegant writer" was a convert to Christianity from Paganism about the year 200 A.D., he perhaps knew how the mortal pagan gods died.

When a writer to-day quotes Jeremiah and the Jewish law as applicable to our Sunday, and assumes it to be the holy Sabbath of which the prophet spake, we should judge both writer and readers to be about equal in intelligence to the two distinguished preachers above mentioned, and equally competent to teach astronomy and history; or we should judge the writer intentionally to pervert his authority.

D. S. G.

BOOK NOTICES.

THE COMPLETE POETICAL WORKS OF ALFRED LORD TENNYSON, Poet Laureate. Illustrated.

The principal merit of this edition of Tennyson is its completeness up to date, and this within the limits of a single volume of about four hundred pages. Everything is here, the earlier poems and the dramas as well as the idyls and the lyrics of his mid-career. It follows, of course, that the type is rather small; but the fact that there are two columns to a page must be considered. Another advantage of this edition, and a great one, is that it contains the article upon Tennyson by Anne Thackeray Ritchie, which appeared in *Harper's Monthly* about a year ago. It is the nearest approach that we have had to anything like intimate knowledge of one of the most famous and secluded persons of the time, and the spirit of its execution has no taint of the irresponsible interviewer whatsoever. There is a full-length picture of Tennyson on page eight. The frontispiece picture of him is superb.

IN CASE OF ACCIDENT. By Dr. D. A. Sargent. Illustrated. Boston: D. Lothrop & Co. pp. 125.

The contents of this little volume should be read and reread by every one until the plain, practical lessons, which are imparted in its dozen short chapters, be clearly imprinted upon the memory, as in that case they will be almost sure to become the means of saving a life or alleviating much suffering. Under the chapter headings of "The Bones," "The Blood and its Vessels," "The Stomach," "The Heart," "The Brain," "The Lungs," etc., the treatment of possible sudden injuries to any of these parts is explained and directed in a clear, sensible, and concise manner. The illustrations show the proper mode of applying the treatment prescribed.

In the February number of the *North American Review*, Rev. H. W. Beecher discusses the question as to how far ministers may properly go in politics. He shows himself to advantage perhaps all the more, because it is a matter that touches him personally as well as professionally. In the same number of the *Review*, the question, "How shall the President be Elected?" is ably treated by two United States Senators, Dawes and Vance; a college president, F. A. P. Barnard, of Columbia; a New York lawyer, Roger A. Pryor; and a well-known journalist, William Parcell. The substantial agreement of four of them on the same point is significant. Another notable article is "Holmes' Life of Emerson," by George Bancroft; and still another is an essay by Prof. C. A. Young on "Theories regarding the Sun's Corona," which he skillfully brings within popular comprehension. Rev. W. G. T. Shedd defends the foolish dogma "Endless Punishment," and Prof. G. Stanley Hall writes on "New Departures in Education."

THE New Year's number of *Wide Awake* opens with a beautiful full-page illustration of a poem by Margaret Sidney, which will be of greatest interest to the boys and girls of Boston. Both picture and poem are entitled "Midwinter in the Public Garden." A starlight skating scene is the subject of both. Charles Egbert Craddock gives the second instalment of a Tennessee story, "Down the Ravine." Kate Foote has a unique Western story, "Wagon-Tire Camp." Yan Phou Lee, the Chinaman, describes the houses and the home-life of his native land. Rose Kingsley's "The Children of Westminster Abbey" deals with the histories of Edward V. and Richard, Duke of York. Mrs. Jessie Benton Fremont tells about "Washington in Past Days." Sarah W. Whitman gives some thoughts on "Oil Painting." Some of the other writers for this number are E. E. Hale, Susan Coolidge, Edward Abbott, Lizzie W. Champney, Prof. A. B. Palmer, David Ker, and Mary E. Wilkins. A brilliant number. D. Lothrop & Company, Franklin Street.

BEAUTIFUL illustrations grace every page of the January number of *Our Little Ones*. The titles of its delightful stories and poems are as follows: "Christmas Carol," "The Gold Basket," "A Letter from a Christmas Turkey," "A Christmas Problem," "Patty's Plague," "Eyes for the Kitties," "A Grand Surprise," "A Winter Wash-day," "Christmas, 1884," "Dame Gilfin and her Goats," "Five, Six, pick up Sticks," "Weezy's Mouse," "What became of Dimple's Bubble," and a song with music, "The Postman."

Guizot's CELEBRATED ILLUSTRATED HISTORY OF France

REDUCED IN COST from \$33.00 to \$8.00, or comparing contents fairly, from \$49.50 to \$8.00, for the only other American edition of GUIZOT comes down TO *The French Revolution*, only, and is continued to Napoleon III. by MARTIN, and \$49.50 is the published price of the two works. **THIS ILLUSTRATED LIBRARY EDITION** covers from the earliest times to 1848, is written by M. GUIZOT, Prime Minister of France, and completed from his notes by his daughter, Madame GUIZOT DE WITT. It is published in 8 volumes, small octavo, printed from the type shown by these lines, contains the 426 *Illustrations*, mostly full-page, of the imported edition, is bound in tasteful Library style, dark green cloth, beveled boards, gilt tops. Price of the set, only **\$8.00** by express, or, sent *prepaid* for \$9.60.

"There is only **ONE DRAWBACK**. . . it seems more like *getting a present* than making a purchase. Guizot is the most brilliant of French historians, as well as the most to be relied upon. He is the Macaulay of the history of France; his style and treatment are philosophical, didactic, rich in detail, dramatic in arrangement. His narrative is full of emotion, like a quick stream; his characters rise before us as in the flesh; they are men and women, not historic clay figures. It is as charming as any romance, and the interest is permanent. It is a work to keep and read and re-read for years."—*Dominion Churchman*, Toronto, Canada.

"In **ENGLISH**, at least, original or translated, we have **NO WORK** of French history that **CAN APPROACH IT**. We can name no work that gives the complete history,

and gives it from the pen of a master, that can be thought of as a rival to the mammoth production of Guizot. How Mr. Alden can give the eight volumes, and this on good paper, and clear type, including the multitude of illustrations, is a thing we *have CIPHERED over*, but we *fail to understand it*. The first volume gives substantially the beginnings of French history. It is of necessity the dullest of the eight, yet *with Guizot even logarithms would be readable*."—*Christian Leader*, Boston, Mass.

"The **MARVELOUS CHEAPNESS** of these profusely illustrated and handsomely bound volumes must provoke comment everywhere. Each volume is *easily worth \$2.00*, according to the standard of prices asked. This is the only complete American edition of this work, which is Cornell Univ Lib popular history of France."—*Journal*, 21 7th F

In the reproduction of this work the publisher has outdone all previous efforts, and has given us a **MARVEL of EXCELLENCE**, in every respect, at a marvel of cheapness."—*Christian at Work*, New York.

Hundred-Page Catalogue, free, descriptive of the best books of the world, at the lowest prices ever known, together with terms upon which books are sent *for examination before payment*, to any one on application. Address, and make checks, drafts, or money orders, payable to **JOHN B. ALDEN, Publisher, P. O. Box, 1227, 393 Pearl Street, New York.**

COUPON—50 CENTS.

This Coupon, together with \$7.50 in cash, will be received, if sent within 10 days from the date of paper in which it appears (mention name of paper), in full payment for GUIZOT'S FRANCE above described. This small extra inducement is simply to secure your prompt response, and indicate the advertising mediums from which responses come.

Address, and make checks, drafts, or money orders, payable to **JOHN B. ALDEN, Publisher, P. O. Box, 1227, 393 Pearl Street, New York.**

ONE MILLION

COPIES will soon be sold TWENTY YEARS OF CONGRESS—By James G. Blaine. The only history of our Government from 1861 to 1881. Hon. John S. Wise, M. C. from Va., says: "Whoever takes it up, no matter whether he be Mr. Blaine's friend or enemy, will never put it down until he has read the whole." \$2.00 per month to good agents. Apply at once, *The Henry Bill Pub. Co., Norwich, Ct.*

H. T. MARSHALL'S

PATENT
ADJUSTABLE
LACE
CONGRESS

Is easily adjusted to fit any instep or ankle at any time, and will not uncomfortably draw the ankle, like ordinary congress. It has the stylish appearance of any congress in putting on or off the foot. Marshall's Pat. Pat'd May 13, 1884, woven in the front strap or stamped on the shank of each shoe. If your dealer does not keep them, send postal for directions how to get them to the Patentee and Manufacturer of Men's, Boys', and Youth's Fine Boots and Shoes. Tennis Shoe for Ladies and Gents a specialty.
H. T. MARSHALL, BROCKTON, MASS.

THE PATRONAGE of the liberal advertising public is respectfully solicited for *THE INDEX*. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quick advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 insertions, . . . 10c. per line.
" 13 " 25 " . . . 8c. " "
" 26 " 51 " . . . 6c. " "
" 52 " " . . . 5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent. On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the above calculated, will be made.

BY ALL ODDS THE BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travelers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches**, which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars**, which are models of comfort and elegance; its **Palace Drawing Room Cars**, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that it is the best equipped road in the world.

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, and take none other. All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

CURRENT TOPICS.

BY B. F. U.

The London *Enquirer* says, "The result of the Sunday opening of the Keswick Library has been so satisfactory that the committee were encouraged to pass a resolution that, in addition to the hours already used, the library shall be opened every Sunday evening from 8 to 9.30 for the remainder of the winter months."

The National Woman's Suffrage Association held its seventeenth annual convention at Washington, D.C., January 20, 21, and 22. The attendance was large, and the meetings were enthusiastic. Mrs. Stanton presided, and made the opening address. A number of able and eloquent addresses were given by well-known advocates for woman's suffrage.

JENNIE COLLINS appeals to those benevolent people who take satisfaction in helping forward any practical charity to send contributions for the fair to be held at 1031 Washington Street for the benefit of working girls, on February 17. Send to that address. Situations, warm dinners, and advice are furnished to working women by Miss Collins, as far as her means will allow.

RUSSIA allows no more religious than political freedom of speech. The latest "blasphemy" trial of which we have any report from that delectable country is that of a peasant, a member of the Bible-reading sect called Stundists, for preaching against the image worship of the Russian Church. He was sentenced for this crime to imprisonment for three years and nine months and "the loss of his personal rights." Apparently, he had not many to lose.

OUR petition for protecting witnesses from discredit on account of unbelief has been presented with 460 names. That for taxing churches had 956, of which 461 were collected by Mr. Raynal Dodge in Newburyport. Mr. S. R. Urbino collected 150 on each petition in Boston. The thanks of the secularization committee are cordially tendered to these and other workers in the cause. Now is the time for our readers to speak to their friends in the legislature about these pressing reforms.

JAPAN, where we send missionaries to instruct and convert the wretched heathen, is ahead of us

in some reformatory methods; and we cannot help wishing that the proselyting spirit might take possession of its people, so that they would send us missionaries, when we read that in their prisons a large variety of trades are taught, such as tailoring, type-setting, printing, book-binding, shoe-making, porcelain painting, cooking, etc. The prisoners have an allowance of three cents per day and fifty cents a week put to their credit and paid to them on their discharge. A practical philanthropy like this is worth copying by nations which self-righteously congratulate themselves upon their superior culture and advanced civilization.

UPON the complaint of Mr. Joseph Oppenheimer, a free thinker, who objected to his children being compelled to join in religious exercises at school, Joseph Strauss, a school trustee at College Point, Long Island, issued an order that the chanting of the Lord's Prayer at the opening morning exercises be discontinued. Mr. Strauss, who is a Hebrew and is in the dry-goods business, was soon called upon by a committee of women, appointed at an indignation meeting which had been held, who demanded that he should revoke his order; and, when he declined, the excited ladies threatened to withdraw their custom from his store, whereupon he changed his mind and countermanded the order. The next morning, the Lord's Prayer was chanted as usual.

DR. SHEDD, arguing for eternal punishment, says, in the *North American Review*: "A human judge pronounces a theft to be endlessly a theft, and a thief to be endlessly a thief; but he does not sentence the thief to an endless suffering, though he sentences him to a penal suffering. But this objection overlooks the fact that human punishment is only approximate and imperfect, not absolute and perfect, like the Divine. . . . But the divine tribunal, in the last great day, is invariably and exactly just, because it is neither reformatory nor protective. Hell is not a penitentiary. It is righteous retribution, pure and simple, unmodified by considerations either of utility to the criminal or of safety to the universe." Anything more fiendish than this from a professed moral teacher cannot be found in the literature of the world.

In the face of such apparently purposeless and certainly senseless outrages as those perpetrated by the "dynamite fiends" in England, the result of which was damage to the Parliament buildings in London and the wounding and maiming of a dozen or more innocent visitors, some of them women and children, it becomes difficult for the most philosophic humanitarian to solve satisfactorily the problem of human nature. In despotic Russia, where men are under constant governmental surveillance and are deprived of freedom of speech and act, it does not so much surprise us to find dynamite resorted to as a terrorizing argument; but, in a country so intellectually advanced and so politically free as England, it is difficult to imagine a set of beings so ignorantly brutal as to resort to such cruel and foolish methods of demanding that their grievances be adjusted. It is very discouraging to the true friends of Ireland,

like Parnell and his co-laborers, to have all their earnest efforts to obtain the privilege of self-government for that country overthrown by such evidence of unfitness for self-government by those who, doubtless, fancy themselves by some legerdmain of reasoning, working for the same end.

SAYS the *Presbyterian*, "Even the Jews are against Ingersoll." Well, what of it? There is a tradition that they were against Christ when he was attracting large audiences; and they are "against" him now, at least the same as Ingersoll is. We suspect that the more liberal Jews of Jesus' day were in sympathy with him in his reformatory teachings, although incredulous as to his Messianic claims; and we know that the progressive Jews of to-day are in sympathy with Ingersoll in his opposition to the fabulous stories and absurd doctrines of both Judaism and Christianity. The work of Ingersoll will be useful so long as prominent theologians in leading publications defend the infamous and barbarous doctrine of eternal punishment. The tendency of that doctrine is to make men merciless and cruel. Against it and the conception of God associated with it there ought to be nothing but the strongest aversion. The efforts of men like Ingersoll will be needed some years yet to counteract the bad influence of men like Dr. Shedd, who, in the February number of the *North American Review*, with cool satisfaction labors to show that eternal damnation is just, reasonable, and sure to be the fate of a portion of mankind.

It was a fit though sad ending of a brilliant career,—the fall of Col. Fred Burnaby on a battlefield in a foreign land, in a fight between the British troops and the followers of the Mahdi in the Soudan. He was the latest development of the "Admirable Crichton" type of character. He was the son of a clergyman, was of unexceptionable moral character, a fine scholar and accomplished linguist, a loyal, intrepid soldier, a daring explorer, and charming writer. He was the military correspondent of the *London Times* with the army of Don Carlos in Spain, and once travelled on horseback through Turkey to Asia, and all the way from Scutari to Khoi in Persia, returning by Kars, Andahan, Batoum, and Trebizond to Constantinople. He also visited Russia, South America, and Central Africa. He was a member of the Council of the Aeronautic Society of Great Britain, and had made nineteen balloon ascensions. His published works are mainly relations of his adventurous travels, and are written in a refreshingly stirring, graphic, and picturesque style. They comprise *A Ride to Khiva*, *Travels and Adventures in Central Asia*, accompanied by maps and a valuable appendix, and *On Horseback through Asia Minor*. Through these volumes, his name and fame have reached all parts of this country as well as Europe, although he was but forty-three years old at the time of his death. The cable despatches from London bearing news of the excitement caused in England by the report of the battle, say of Col. Burnaby, that "his death was more talked about than the battle itself."

EPISCOPALIAN MEDIEVALISM.

Considerable discussion has been aroused by the recent action of Bishop Potter, of the Episcopal Church, in officially recognizing the monastic "vows of poverty, chastity, and obedience," taken before him by two young preachers of the Episcopal faith, who wish to devote themselves to special work among the poor in New York City. This discussion is naturally more lively in Episcopalian circles than in the greater world outside, and seems likely to revive in that Church the antagonism, which in late years had much diminished, between the Low and High Church parties.

Bishop Lee, the learned and venerable leader of the Low Church party, has written a letter in opposition to Bishop Potter's action, or to any action that would permit the practice of taking such vows, which have so strong a savor of the Papal Church, to become established among Episcopalians. Bishop Potter has replied, defending his act of receiving the vows. He is not, however, to be regarded as belonging to the High Church party himself, and much less as leading it or even as approving by his individual judgment its peculiar doctrines and customs. His proclivities are generally understood to be with the Broad Church section; and, in his official action as a prelate, he appears to be governed by the principle of allowing each section of the Church full and impartial liberty to follow its own convictions. On the one hand, though earnestly petitioned by influential clergymen in his diocese to bring Dr. Heber Newton to ecclesiastical trial for heresy, he contents himself with sending to that heretic a gentle and friendly admonition. Dr. Newton goes on to preach even bolder heresies than any his fellow-clergymen complained of last year, but thus far his bishop steadily refuses to put him on trial. On the other hand, the same bishop permits Rev. Morgan Dix to practise his High Church rites and to preach his antique doctrine about woman's sphere, and receives from these ardent ascetic neophytes of the "Order of the Holy Cross" the Romanish vows of poverty, celibacy, and submission. Here is, certainly, a practical illustration of one form of Broad-Churchism,—the most advanced modern views concerning the Bible and religious history, and the narrowest mediævalism in doctrine and practice, under the canopy of one ecclesiastical organization.

Possibly, this may be a good temporary policy for the Episcopal Church,—a Church that lives by forms rather than by convictions. Its oil and water may thus be made to float amicably together, and a violent rupture be averted. But it is a policy that does not distinguish the value of ideas. It is a policy which says that any idea which has zeal and earnestness behind it is just as good to work by as another. Between ideas, as to their inherent truth, it makes no discrimination. If certain inexperienced minds, with a noble ambition to serve mankind and flaming with a youthful enthusiasm to make the service heroic in its self-sacrifice, stumble, in their gropings through ecclesiastical history, upon an idea which seemed, centuries ago, to be very powerful and to afford a fine field for heroisms, this policy accepts the idea, without criticism, as all right for the modern world, and tells the young men to go to work with it, and consecrate their burning enthusiasm upon its altar. But is there not a larger and higher course to which even a Broad Church bishop should be able to point the young men who come to him with zeal all aflame to devote themselves to the world's good? Should he not be able to show them that, even for the poor, they could do better work by taking certain nineteenth century ideas to work with than they can with any ideas dug up

from the graves of ecclesiastical mediævalism, and that they could carry, too, just as much zeal and genuine self-denial and heroism into the work, when approved by reason and science, as they can into that which is stamped with the old monastic vows?

Nor have the non-Episcopal and even secular journals that have joined in the discussion, so far as we have observed, generally touched the weak point in Bishop Potter's action. The *New York Nation*, for instance, sees no reason for such hostility to the ecclesiastical proceeding as has been aroused, and says, "The practical view of the matter in our day would seem to be that any man who thinks that he can do good work better by taking a vow of some sort of self-denial does well to take it, with whatever solemnities he thinks necessary." It adds, as if it were a valid comparison, that "all ministers, soldiers, and married men, too, are under public vows, and so are a great number of abstainers from alcoholic drinks." The *Nation* thus treats the matter in that semi-humorous, not to say flip-pant, way which it applies to subjects when it is disposed to dismiss them as of little account. And this matter would be of little account, if the young clergymen were only taking a vow similar to that which an inebriate takes when he signs a total-abstinence pledge. But behind these young clergymen's vows are certain erroneous ideas, which, as they have been organized in the Roman Catholic Church, have given to that Church a good deal of its power, indeed, but which have also made that Church the foe of civilization and progress, and keep it to-day several centuries behind the age.

These erroneous ideas are that voluntary mendicancy, assumed as a religious duty, will in some way make real poverty, which is never to be removed, easier to be borne; that celibacy is the specially religious, if not highest, form of chastity; that full-brained men and women, who have come to years of discretion, may rightly submit their entire intellectual activity and conduct to the rule of certain other persons who may happen to be, officially, their ecclesiastical superiors; that religious work is something by itself, apart from the homes, occupations, and social obligations and interests in which the great mass of human beings are naturally and necessarily engaged. There, of course, may be individual cases where marriage may be conscientiously and heroically abstained from as a duty; cases, as in Clara Barton's Society of the Red-Cross, where men and women may put themselves under orders to obey, without question, any emergency summons that may come for philanthropic helpers, without abdicating their own ordinary self-sovereignty; and to set an example of simplicity in the use of and moderation in the desire for material wealth is always a commendable duty. But the Church that puts its sanction upon the erroneous ideas above enumerated as the source of the monastic vows commits a triple crime: it sins against nature's law, it violates the conditions of social order, it tramples upon the sacred rights of reason. A Church so acting blinds its windows to to-day's intelligence, and opens them toward the Dark Ages.

WM. J. POTTER.

GIORDANO BRUNO.

Few men have been so worthy of a statue as Bruno, and I am glad to hear one proposed. This martyr for science was born in 1548 at Nola near Naples, and became a Dominican monk at fifteen, but was forced in 1576, by his doubts about transubstantiation and the trinity, to flee from the cloister and leave Italy. He had been hooted out of Toulouse for attacking Aristotle, and driven from Montpellier for praising Paracelsus, and had

refused a Parisian professorship because he would not go to mass, before he came to Oxford, where we find him defending the Copernican theory in a public discussion on June 10, 1583. He called himself the Awakener of Sleepy Souls, and was eager to instruct women as well as men. During the next two years, he published a series of Italian dialogues, commencing with an argument for the earth's motion, entitled an *Ash Wednesday Symposium*. Other dialogues maintained that the sun, moon, and stars are of the same materials as our earth; that these worlds have inhabitants; and that the First Cause, or Universal Substance, is utterly incomprehensible, so that it may equally well be called material as immaterial, and no system can possibly be a finality. His *Expulsion of the Triumphant Beast* he wrote "to hasten the time when good actions shall no longer be thought destitute of religious merit or blind faith honored as the highest wisdom." Jupiter tells the other gods that they have placed so many records of their wickedness and personifications of vice among the stars that worship is passing out of use. So they agree that Truth, the foundation of all virtues, shall henceforth be the pole-star; while Taurus shall give place to Tolerance, and Capricorn to Intellectual Liberty. Virginity is in danger of being displaced by lawless Love. The Northern Crown is promised to the destroyer of that pernicious sect which teaches that sin is fore-ordained, and that no man can be saved by good works. Riches and Poverty contend in vain for a place among virtues. Indolence is sent to hell; and her appeal to the Golden Age is set aside, because men were then merely animals, and only through labor can they become divine. Aquarius is sent back to earth to say that there never could have been a universal deluge. In derision of the doctrine that two natures are one in Jesus, Chiron, the Centaur, is said to have been perfect man and perfect horse. There is also a daring allusion to him who knew how to walk on the water and work other miracles, and thus was able to make people think that white is black and black white; that human reason is mere folly, and ignorance true wisdom. Nothing is said against natural religion, however; and it is urged that only those laws which promote human welfare are just, and that property ought not to be so unequally distributed that some feast while others starve. In 1585 appeared his *Heroic Enthusiasm*, showing that nothing ennobles the soul like love of scientific and philosophic truth. That same year was published a satire on the expectation of Christians to be saved by credulity, which he derides in a poem I translate from the Italian thus:—

"O saintly Asininity, O pious foolishness!
More mighty thou to lead the soul in paths of righteousness
Than all our pride of intellect, which ne'er can entrance
gain
To heaven. There man's studious toil is all accounted vain;
But there thou buildest palaces in which no scholars dwell.
Ah, what availeth the attempt Dame Nature's ways to tell.
And find out if the stars are flames, or only lands and seas?
The holy Asininity cares not for facts like these.
Her knees are bent; her hands are clasped; she looketh up
to Him
From whom she hopes eternal rest, when Wisdom's crown
is dim."

That same year, he returned to Paris, but was banished in 1586, for placing Copernicus above Aristotle, on Whit-Sunday, May 25. While wandering through Germany, he published his last works,—Latin poems, more theistic than the Italian dialogues, and containing an explanation of the nature of comets and an argument for the rotation of the sun. Ill success among Protestants made him fancy that he might be better off in the shadow of the mother Church. So he ventured to Venice, where a nobleman had asked to be shown

the fanciful way to knowledge invented by Raymond Lully. Perhaps Mocenigo hoped to learn sorcery and alchemy. His dissatisfaction finally led him to betray his teacher and guest to the Inquisition, and Bruno was arrested as he was about to take flight across the Alps. Among the charges at his trial in 1592 were disbelief in the trinity and transubstantiation and assertion of an infinity of worlds. This last view he admitted, as well as having been troubled by doubts ever since he was eighteen; but he professed to be otherwise orthodox, and desirous to reconcile himself with the Church. On June 3, as may still be read in the records of his trial, he offered to recant whatever in his teachings she condemned. This saved him for the time from the stake; but he was kept in the dungeons of the Inquisition, first for a year at Venice, and then for six more at Rome, whither he was removed with his own consent. Impossibility of release seems to have made him desperate; for, at a second trial, December 21, 1599, we find him declaring that he would not recant, and ought not to. On this, his judges condemned him to be burned alive; but he said, "Perhaps you pronounce this doom with greater fear than I receive it." A week was given him to reconsider, but he was firm; and on Thursday, Feb. 17, 1600, he perished in the flames, without uttering even a moan. His last act was to turn away his face from the crucifix. The more clearly we realize how much of error and servility there was three hundred years ago, the more we shall honor Giordano Bruno for showing so much courage and teaching so much truth. His death was simply the penalty for having advanced beyond his age and refused to go back. Nobody reads his books now, but they have become antiquated through the establishment of those ideas for which he died.

F. M. HOLLAND.

CHRISTMAS IN BERLIN.

On Christmas eve, we drove through the finest streets of Berlin to see the Christmas trees. On that evening, when the trees are for the first time lit up, the blinds and curtains of every house are drawn aside, so that wayfarers may witness the merry scenes within. The city is fairly illuminated. Many are the pictures of happy faces surrounding the magical evergreen with its star-like candles, its load of bounties and many-colored mystical fruits. Some of these trees I have had the privilege of examining closely, of others I have had careful descriptions, and am enabled to make a few notes that may interest students of religious archaeology. The Christmas tree when completely decorated, as it is in old-fashioned German homes, represents the whole development of Teutonic religion. The figure of the white-bearded Odin, afterward Father Christmas, formerly perched upon the top, has made way for a Christ-child, very sweet,—in fact, made of sugar; and above this pink babe is a star. But, though Odin has disappeared, his symbols are present. The swine, symbol of luck, Odin's sacred animal, hangs beside the lamb on the tree, the dove nestling near; and the golden cones abound, which, in many a legend, he showers around good children who sit beneath the evergreen wherein he shelters himself during the winter. No German, by the way, ever outlives his sentiment about firs and pines. I once walked with Prof. Weber, of Berlin, through a pine-grove in England; and he was glad as a boy, took off his hat to them, and sang the Tannenbaum folksong, "O pine-tree, O pine-tree, how green are thy leaves!" Every house, however humble, must have one of these Christmas trees, though the demand runs up the price. For nearly two weeks,

the market places and spaces of this city have been lined with these evergreens. In many houses, the scene of the Nativity is shown at the foot of the tree,—Mary and her babe, and Joseph, a cow, and a donkey. Joseph, of course, is slightly snubbed as usual, made suggestively old, and standing aside like the servant rather than the head of the family. If any one will look at the picture of Yggdrasil, the universe-tree whose fruits are stars, in Mallet's *Northern Antiquities*, he will have before him a primitive phase of this enchanted forest which springs up and glows throughout Germany during the Christmas season. The orthodox tree will be found standing through the last twelve days of the year. There is an ancient German belief that these last twelve days are of great potency, each influencing one of the months of the succeeding year. Prof. Weber tells me that the same belief existed in ancient India, and perhaps originated in the twelve days' difference between the lunar and the solar year. The tree-and-serpent worship of ancient India is represented in the Indo-Germanic world by Yggdrasil and the serpent coiled around its root, and probably survives in this Christmas tree. In India, the so-called "idolaters" gather around the Tulasi or other sacred tree, and read their scriptures and prayers. The same is done in some pious families here, which would be surprised if any Hindu guest should write home an account of their tree worship.

Last year, I passed my Christmas among the Buddhists and their temples. Christmas was ushered in with Singhalese tom-toms, as here with bells. In frescos of Buddha's nativity, the tree plays a large part, his mother, Maia, being beneath one when he was born. In the Buddha legend, the whole earth clothed itself with blossoms and fruits when he was born. The Christ legend has had to adapt itself to the old Yule-tide of this cold region. The Nativity is celebrated amid the signs of nature's death; but this indoor efflorescence of living trees with light-blossoms and lustrous fruits makes good the old legend of natural religions, that a Saviour must be cradled in the glory and joy of the earth. It would, however, be an interesting inquiry how far the mystical and inward characteristics of religion in northern countries have been caused by the confusion of the Nativity festival with Yule-tide. The Norse Christian might have been a very different man, had the birthday of Christ been fixed on the summer solstice—day of the Beloved Disciple, who sleeps till his Master come—or even on May day. As it is, he has been compelled to spiritualize the gorgeous solar signs, the magical efflorescence and fruitage, attending the birth of oriental and tropical avatars. I have just heard in Berlin Domkirche a Christmas sermon, by a sufficiently commonplace brother, in whose conventionalisms about the Sun of Righteousness dawning in our hearts, the Dayspring, the fruits of holiness, the deserts of human sorrow and evil blossoming like a rose, there was a poetry of which he was unconscious. The Semitic race, dwelling in a desert, spiritualized to a certain extent the religious imagery and fable picked up by its pedlars in tropical and luxuriant lands; and this may have been one among the causes why it appealed to our Germanic ancestors, after their modification by migration into regions where, amid a desert of snow, they could only dream of

"The land where the citrons bloom
And the orange lights up the leafy gloom,"

and hope to realize it in a paradise beyond the grave. But into the mystical paradise the serpent has entered,—Science, with its fruit that makes man his own god; and one shudders to think of the probable result when these poor people wake

up amid their snows and their pauperism, to find that they have as little hope in another life as in this.

The Christmas tree of Germany has a legendary survival in the Holy Thorn of Glastonbury and the black thorn of St. Patrick in France, both of which are related to the miraculous Apple-tree which, in the fifteenth century, is said to have borne tiny apples at midnight of the Nativity. The change of Christmas day by the new style played the mischief with these Christmas miracles. Like the English king who repudiated the Holy Thorn because it did not come to time on either the old Christmas or the new, the people everywhere began to watch traditional wonders, to see which style they preferred. It was well known, for instance, throughout Germany that, on the anniversary of the moment when Christ was born, all the cattle kneeled in their stalls; but when, merely to criticise the calendar, the beasts were watched, they would not kneel at all, unless in a few remote corners unvisited by the schoolmaster. In England, the Christmas tree has been reduced to the Christmas log, by which the Englishman warms himself, as Peter did while his Lord was on trial, and presently to be denied. The legend of the star and the manger survives in England only so far as it may be made serviceable in rather sordid ways. In Germany, Luther, despite the pretty dream of his visit to the cottage in Bethlehem, cursed the tree of German faith so far as everyday life is concerned; but every Christmas it blossoms and bears fairy fruits like the Nuremberg apple, which, says the chronicle (1430), none ever ventured to eat. It is my own belief that the legend of the birth of Jesus is a myth developed late in the second century, out of the account of Christ's baptism as given in the lost Aramaic gospel. In the fragments of that gospel, the only one written in Christ's own language, he speaks of the Holy Spirit as his "Mother"; the dove descends and enters him, and addresses him in the prophetic way of Simeon; and a heavenly light appears, which afterward became the star. Suffering humanity could not be content with pious poetry: it wanted a realistic scene, and a domestic drama equal to that of Buddha and Maia or of Abraham and Sara. In Germany, the romance of the infancy was further changed: it was adapted to the ancient fairy-lore of the country, in which were combined the splendor of the Teutonic heavens and the homely conditions of the lowly folk. The Virgin Mary has two characters, both strictly German. She is Bertha, the goddess who spins and watches over the spinning housewife or maiden. In folk-song, while Joseph works at his carpentering, Mary spins and Jesus holds the yarn:—

"Maria die konnt spinnen, des freut sie sich,
Josef, der konnt zimmern, des närten sie sich,
Jesus, der konnt haspeln Garn,
Der Reiche wird nun arm."

Then she is Cinderella. These humble garments are thrown aside, this poverty is made rich, the Prince of Heaven selects her for his bride. She is raised to a throne and wears a crown. In the oldest epic of Germany, the *Heliand*, the angel appears to spinning Mary just as the good fairy does to Cinderella. Joseph, after his dream, takes her to the splendid palace (*glänzvolle heim*) of her royal ancestors in Bethlehem. There is an old South German legend that when Joseph and Mary, on the flight to Egypt, sat down to rest under a palm-tree, some man drove them off, and for that was doomed to wander in misery till judgment day. This man acts the part of Cinderella's wicked sisters. This is the wondrous tree that still blossoms every Christmas in Germany. This morning,

I heard a poor Fräulein singing the song of Gottfried von Strassburg:—

"Du Rosenblüt, du Lillenblatt,
Du Königin in der hohen Stadt,"

She is a devout Protestant, and, at any other time than Christmas, would be scandalized by mariolatry. But what is this poor Fräulein, as the ages have made her, but a Cinderella in her corner, passed by without notice by the fashionable world, patiently dreaming of the hour when her good angel-fairy shall appear to say, Come up higher! and give her beauty for ashes?

I cannot help suspecting that the "Reformers" did Germany a doubtful service, when they swept from these altars all images and symbols of Mary. The rudely masculine Jehovah, the god of battles, might better have gone first. The position of the German woman has declined far beneath that which astonished Tacitus and the Romans. There is no other country, claiming to be civilized, where woman is so sat upon. In that respect, Germany is fifty years behind England and America. Not only are colleges and universities closed to her: she cannot get any scientific or classical education or enter any regular school of art. And, now, the clerical party is trying to rob her of the means of self-support by competing with man in the labor market, under the hypocritical pretence of protecting her from overwork.

It is pathetic to witness the signs that appear at Christmas to show how the poor and ignorant hold on to their lowly Christ, their humble Joseph and Mary, with babe and donkey, amid all the barbaric splendors of the imperial military régime that now masters Germany. I am reminded here of a curious superstition I have just met with. My wife presented our landlady, on Christmas eve, with some ornamental grasses, amid which were two peacock feathers. The good lady refused to receive them until the feathers were removed, saying that they were "unlucky." On inquiry, I find that this superstition prevails in certain regions. Where did it come from? There is an old Jewish tradition that a peacock was at the gate of paradise when the devil entered it. By flattering the peacock, he caused it to spread its tail proudly and welcome him into the garden instead of sounding a note of alarm. This fable may have wandered about with the Jews, as it seems to have influenced the Yzedis, or devil-worshippers, who venerate the peacock. At any rate, this ostentatious bird may answer my need just now of a type of the gorgeous military display flaunted about Berlin. The splendid tail folds up a little during the season associated with dreams of peace on earth and good will to men; but, as the proverb says, "when the saint's day is over, farewell the saint." When the twelve days are past, they will hardly influence the twelve months that succeed so much as the superstition supposes. The peacock will strut again. The diplomatists of Christendom will meet again to devise schemes for slicing up Africa among them. The priests will all demonstrate that the favors of Heaven are represented in the pomp and luxury which surround the Kaiser and the princes and their palaces. Decorated officials will say to Joseph and Mary, as the Innkeeper does in the mediæval Mystery, We want no beggars here, but only people with rich clothes and plenty of gold. The poor pilgrims will journey on their way somewhither, but duly return a year hence to be received with carols and dances as they rest beneath the Christmas trees,—rest for a little, then wander on.

I will close—if I may indulge in another phantasy—by mentioning another superstition which shapes itself in my reverie. In some homes, it is believed that when companies surround a Christ-

mas tree, and their shadows are cast by its lights on the wall, some of those shadows may appear headless. Such persons will die during the following year. These fairy trees have, as we know, mystical lights, too. They represent the ancient hopes, visions, affections of humanity. Their annual light is cast upon a crowd of proud Christs, dressed in purple, in armor, in uniform, in priestly robes; but the shadows of these are headless. They are doomed. They will not die in one year or many, but they are doomed. Already, they have died out of the heart of the people; they have become fictitious to the brain of mankind; they perish with all progress. But the human Christ will not perish, and the love that is in him will keep its evergreen of beautiful lights and charities in the homes of the lowly to the last generation.

The finest Christmas tree I have seen was lit up with electric lights. This union of an ancient heathen institution, surviving through the beauty and charity possible to it, with the latest achievement of science, seemed a prophecy of the good time when human faith and sentiment, allied with science, shall work the miracles of which those of tradition are but dreams.

MONCURE D. CONWAY.

THE UNITARIAN CONFERENCE.

The Unitarian Conference held in Philadelphia on the 13th inst., judged aside from its social pleasures, was remarkable for having called forth three excellent papers of a very radical description. From Clifford, from Savage, from Chadwick came true words of the spirit, that were significant in their indication of the advanced position of individual Unitarian thinkers. Boston gave the exposition of evolution, New York the latest affirmative ideas concerning God, and Philadelphia the broad principles by whose behests Church and State must forever remain separated. As merely common essays,—in fact, as merely average Unitarian utterances, playing daintily and longingly with a post-Christian name,—such writings would be little calculated to command attention from strangers; but the truth of this matter is that these, rather than being juiceless and formal in all essential colors, were outgivings of the only Unitarian philosophy that at this day commands respect for consistency.

It is worthy of note that, during the convention, the name of Jesus was in no special way toyed with by those I choose to comment upon. The prayers were said, the addresses were listened to, and no invocations upon a misused fame were once detected. It is true a hymn, or perhaps several hymns, employed made some exclusive reference to Jesus; but these might be credited to slips of thoughtless or more conservative guides. A vice noticeable among Unitarians in general was thus rather better than ordinarily avoided. If this is not a significant advance, it seems to me it must at least be an adherence to a good principle, which of itself is a gain.

It was instructive to watch the auditors. They took the radical ministrations of the speakers with an evident relish. Chadwick's theory of God, which quite baffled me in some aspects, seemed in the end to resolve itself into a simple question of terms. Savage's evolution philosophy was much more docilely accepted than it would have been, had Spencer been there to present it. Clifford's weighty discussion of the relations of States to religions was as free from reactionary sympathy as could have been anything from an unchurched philosopher. There is little from first, second, or third that would provoke appeal in an agnostic. Yet it struck me that the listeners were probably

much more willing to sit under such specifics, when labelled "Unitarian," than they would have been, had simple come-outers So and So claimed attention for them. There is much weight given to the clothes one wears. I acknowledge the gain to be appreciable, even when truth is accepted under imagined disguise; but I think Clifford and Chadwick and Savage would fain have their audiences willing to credit the message they bring for its own rather than its name's sake.

I am not intimately conversant with Unitarian affairs, and therefore do not absolutely speak by the card; but it seems to me that Clifford and Savage administered the strongest dose of liberal thought ever identified with the faith in Philadelphia. And what impresses me felicitously is the fact that the patient almost seemed to enjoy the revivification. To save Unitarianism from its indefinite Christology, which the timid sectarians still hug languishingly, it needs the young brains and thoughts of men coming fresh from new-tilled fields. Clifford with the ideal, and Savage with the scientific, present the two sides of a duplex philosophy; and both are worthy of their aspirations. They are priestly neither in bearing nor dress, thought nor speech; and, because they dare to outrage conventionalities in determining to be men, they and their kind represent whatever there can be of hope in the Unitarian Church. I can freely say this much, because I am not a Unitarian, and care nothing for Unitarianism as such.

Commenting upon Chadwick and Savage as speakers, I need add no word. But I should like to state here, what must be welcome knowledge to *Index* readers, that Clifford—his deep, noble, resonant earnest voice not yet, I feel, put to its best uses—is carving for himself a constituency in Philadelphia worthy of one who obeys his own, and not an ecclesiastical instinct of right. There are limitations to his philosophy which I care not to enlarge upon here, but he preaches the spirit; and, as the spirit is the life, and the life is that circle from which no human soul can stray or be debarred, I defer captious criticism indefinitely. I feel personally thankful to him to-day for having rebuked the muddy pretensions of *Christian Statesmanism* right in its Quaker city retreats.

HORACE L. TRAUBEL.

FLORIDA AND THE FLORIDIAN.

The Spaniards unfurled their flag over this peninsula on the Easter Sunday of their religion, and called it "*Pascua Florida*,"—Easter Sunday. They pursued two fallacies, gold and the fountain of youth. Many a man to-day is lured by the same search. Of gold there is not even the color, save on boughs of the orange tree; and of the few springs and the multitudinous lakes there is not one on whose margin the steps of age even loiter. Florida is climate *et præterea nihil*. When you buy land at \$50 an acre, you pay \$49 for the climate and one dollar an acre for the sand.

Geologically, Florida is rather too young for man. It is barely out of the sea. It is not high enough, and it has not been up long enough to allow the rivers to sculpture its face into features. The water circulation is chiefly under ground. There are but few streams and no valleys. Here and there, a stream breaks up in a spring great enough to float a small steamer.

The geologic structure is not yet determined. The section from Okechobee to the Atlantic, published by Agassiz, is a mere fancy. There is no evidence that the foot of any white man had ever pressed the ground covered by his coral reefs and hammocks. The peninsula from Jupiter Inlet to the Keys is *terra incognita*. Prof. Curtis, in his

botanical studies, has touched its skirts; and members of the coast survey have mapped its shore line. There may be Seminoles here who never saw a white man.

While Florida is geologically young, its flora is old. On the Appalachicola is a little forest of Torreya, or "nutmeg tree." I have seen the same shrub in the lower Yosemite, and it occurs in isolated patches in other parts of California. It occurs, also, in Japan, which may be its fatherland. The geographical distribution of this shrub and its isolation are proof that it is an ancient type. The bold cypress, common here in the swamps, is allied to the Sequoia of California and Glyptostrobus of Japan,—proof that this, too, is ancient. Florida has nearly three hundred species of grass, but not a grass that would fatten a sheep. This is a fact of deep significance. It means that the Floridian cannot have spring lamb or palatable beef, and must take his milk from tin cans.

It was Lewis H. Morgan who showed that the status of an uncivilized people is determined by the food supply of its country. He might have shown that the same law holds for a civilized people with but little commerce. The Floridian impresses you as a man who lives in a state of chronic starvation. Corn bread and turnip tops boiled with pork is the standard dinner. Taste is level with necessity. As the table, so is the house, so the family. The other day I called for shelter, in a rain-storm, at the house of a "cracker." The family, consisting of man, wife, and ten children, sat by an open fire. The hearthstone was Florida sand. The house was not differentiated into kitchen, dining-room, parlor, and chambers. Twelve human beings cooked, ate, slept, smoked, and "dipped" in one room. Such a neighbor, the woman said, pointing over a little lake, "lives this away."

In general, the Floridian lives in pitiful isolation. I called one day at the cabin of Mr. Ladeen. This gentleman is something of an aesthete. It was amusing to see how the disease breaks out in the pine woods. Ladeen was dressed in red pantaloons, and his long beard was frizzed and done up in hair-pins. He sat on a bench in front of the door.

"Good morning, Mr. Ladeen."

"Good mornen'."

"How is your family?"

"I ha'n't got any family."

"Do you live here all alone?"

"Yes."

"And how long have you lived here all alone?"

"About ten years."

"Mr. Ladeen," I said, "I used to read in medieval literature of one Saint Colmar. This gentleman lived forty years with three friends. He had a rooster, a rat, and a mosquito. The cock would crow and wake him. If he slept a little more, the rat would nibble his ear, and start him again. If he fell into another doze, the mosquito would come and bite him on the nose. And so he lived forty years, but I did not know where he lived. He lived in Altamante, Florida."

Ladeen broke out in a somewhat passionate reply: "I don't believe a word of it! I tell you a rooster can't live forty years, neither can a rat nor a mosquito. And, what's more, there never was a man by the name of Colmar in these parts. Me and old man Dan, and Mantanner, and old Mantanner, we're the oldest settlers, and we never heard of such a man as Colmar." In Florida, when a man is slightly crazed, they call him "troubled." Ladeen met Mantanner, and said: "Do you know this professor is troubled? He's got it awful. He tried to make me believe there was a man by the name of Colmar, who lived here forty years, with a pet rat and mosquito. He's got it awful."

Ladeen's wife died ten years ago. As life was ebbing, she turned to a friend, who told the story to me, and said: "I am going. I'm almost gone, but I want to say one thing. I'm dying of starvation—and isolation—and—vexation—and—and"—She was dead.

It passes without saying that among these pine woods little is known of modern thought. I have an intelligent neighbor who is not "to the manner born." The other day, he told me a story which is too good to lose on myself. Another neighbor said to him, "See here, Rogers, they say that Gunning is a dangerous man, and dog-oned if I don't believe it." "Well," said Rogers, to draw him out, "I think so too; but what have you heard?" "I hear," said the little man, "that he's a Darwiner." "Oh," said Rogers, "he's worse than that. He's an evolutionist!" "My God!" said the man; "and does he practise it?" And this man is the son of a Baptist preacher!

Here is another little character sketch which may not be distinctively Floridian. I commend it to lawyers with impecunious clients. I saw a man singing and digging out stumps. He told me he had been, off and on, digging out stumps on that farm for seven years; and he couldn't get his wages till he had dug up about a hundred more stumps. I asked him what his wages were.

"Well," he said, "it's a wife." I told him of Jacob who served seven years for a wife and then got the wrong woman, and hoped that he would be more fortunate than the Jew. "But how is this," I said, "that a man has to serve seven years for a wife in Florida, digging stumps?"

"Now, stranger," he said, "I'll tell you. I was married, and didn't like my wife. I got in love with another woman, and Judge Ano got me a divorce. But he wouldn't give me the papers so I could get married till I had dug up all the stumps from his farm. Well, you see, while love was on, I made the stumps fly. But Jane cooled on me, and I quit diggen'. I fell in love again, and back I came to the stumps. I made 'em whiz! But, darn me, if Susan, too, didn't jilt me. I pulled off on the stumps again. But it seemed a leetle hard to lose so much diggen', and so I hunted up another gal. I've found her this time, sure; and now I'm bound to make the raffle. These stumps'll have to come now."

I said that Florida is climate and nothing more,—a statement which needs many qualifications. Roaches, gnats, mosquitoes, all infestations that afflict man or beast, seem to have learned the advantages of the climate, and to have anticipated man in making Florida their sanitarium. I have never seen an insect here in bad health or low spirits. Mosquitoes have colonized the State. In the India River region, hardly a claimant in the form of a man can get a foothold. Men who have endured the summer there, and tried to work in hammock orange groves, have told me that they had to encase themselves, hands, face, and all, in rubber, and swelter under a sun that would almost boil your blood. Mr. Potter's optimism would be sorely tried in a Florida hammock. But I, too, am something of an optimist; and I must turn to the brighter side of this Pascua Florida.

"Nothing but climate?" Climate is everything. When you do not have it to suit you, make it. You barricade against the north wind, the east wind, nor'easters, nor'-westers, and blinding "blizzards" that blow from the throne of Æolus, the cordilleras of Montana. You live to-day with a thermometer gauge of zero, because of the climate which you have imported in anthracite from the carboniferous age. How fares it with me? I write on the veranda (January 12). A softer sky never bent over Italy. The air is laden with

the perfume of honeysuckles and lemon trees and opopanax and jasmine. To-morrow may bring the trill of the lark and the mocking-bird. I could almost believe that I am living where Lucretius placed the home of the gods, in

"That lucid interspace of world and world,
Where never falls the least faint star of snow, . . .
Nor sound of human sorrow mounts
To mar their sacred, everlasting calm."

Alas, no! We are not yet with the gods, and as many cries of human sorrow rise from the sunny sands of Florida as the frozen steppes of Siberia.

W. D. GUNNING.

THE RIGHTS OF ANIMALS.

"If," writes Rev. F. Denison, in *Our Dumb Animals*, "as has been thought by the wisest of mankind in all the ages, 'animal life is indestructible,'—in other words, that it is not the last of animals when they expire here, since they have minds, and it is inconceivable that minds can perish while matter does not; and if it be true, as is firmly believed on the best of authority, that hereafter men must give a full account for all 'the deeds done in the body,'—then it follows, beyond a question, that some men will endure a serious arraignment for their treatment of animals. Cruelty to innocent, voiceless, sentient creatures is deemed criminal even by the judgment of men. How will it be accounted by Him whose 'tender mercies are over all his works,' and without whose notice 'not a sparrow falleth to the ground'? Let this problem be studied. Christianity is utterly condemnatory of cruelty."

If some of the higher animals had the power of logical thought and of speech, they might argue very ingeniously, if not conclusively, in favor of their own immortality. Addressing man through one of their representatives, they might say:—

We have fundamentally the same natures that you have. We feel pleasure and pain, and are subject to moods; we have affection, jealousy, vanity, and pride; we enjoy the smile of approval from our superiors, and dread their displeasure; we are not devoid of imitation and curiosity. We have some sense of beauty, some imagination, and some power of reasoning. We are not entirely destitute of reverence. We are capable of improvement by education and inheritance. Your philosophers teach that mind is imperishable. Certainly, we have minds, distinct individual minds. Mental as well as bodily characteristics are subject to the law of heredity with us, precisely as they are among human beings. If your minds are immortal, why are not our minds also immortal? Your philosophers refer, in proof of man's immortality, to the fact that his consciousness persists, while the atoms of his brain and body are constantly changing, that memory and identity extend through years, although the body has changed many times, showing that the impressions must be made on something that is not, like the brain, subject to change. This is just as true of us. The atoms come and go; but our identity, as shown in memory reaching back a dozen years and more, persists amid all material fluctuations. Your Darwins and Haeckels have shown what your own observation should have taught you, that you are derived from the lower animals,—the lower animals, we say, because you yourselves are animals. Go far enough back, and your ancestors and ours were the same creatures. Since our origin is the same, must not our nature and destiny be the same? Your bodies have been developed from animal bodies, your minds from animal minds. If, then, your minds are immortal, ours must be; for how could a being who is indestructible and immortal have been evolved from a perishable being? To say that the capacity for im-

mortality was somehow acquired during the process of evolution from apehood to manhood is to make use of an unsupported assumption, opposed to continuity, the primary fact of evolution, in order to enable you to deny *our* immortality and assert your own. There is another consideration we may mention in our behalf. Your theologians say that a future life is necessary to prevent the ultimate defeat of justice, since it often fails here. Think of the millions of animals that have been hunted for sport, beaten, tortured, and wantonly killed,—often, too, by men they were serving with all their strength and the best they knew. Where is the justice of a God who would confer immortality upon all who have found their chief sport in tormenting and destroying animals and give the animals no recompense for their sufferings, extending through long dreary centuries, in the aggregate beyond the power of computation, and in horribleness beyond the power of Hogarth's pencil to describe? Justice requires that we have a future life. Moreover, from the first, man has been surrounded by animals: they have been his companions, and they are indispensable to his happiness. He keeps them now, even when they are of no utility to him; and in the city parks are kept deer, swan, and birds of song for the pleasure of the people. In the past, men were generous enough to believe that we would share with them the future; and, even now, the Indian of the plains

"thinks, admitted to that equal sky,
His faithful dog shall bear him company."

One of your own poets, while speaking our praises, bears testimony to the indispensableness of our presence and our companionship to man's happiness,—an indication that, if man is immortal, we, too, are immortal:—

"I think I could turn and live with animals, they are so placid and self-contained;
I stand and look at them sometimes for an hour at a stretch;

They do not sweat and whine about their condition;
They do not lay awake in the dark and weep for their sins;

They do not make me sick discussing their duty to God;
Not one is dissatisfied,—not one is demented with the mania of owning things;

Not one kneels to another, nor to his kind that lived thousands of years ago."

Thus might the animals make a plea to the rational world, not simply for their own immortality, but for better treatment than they now receive. Abstract morality would treat with justice all beings, without any inquiry as to their origin or destiny; but the highest ground on which Christendom has theoretically recognized the rights of all races of men is that they have a common origin and destiny, and constitute a universal brotherhood. This implies a great advance beyond the condition of the little tribe or community which recognizes no rights to be respected beyond its own jurisdiction and the relations of its own members. The progress is due to a multitude of causes; and the belief that all men have a common origin and a common destiny has probably had but little to do with it, as it certainly affords no ultimate reason for the practice of justice to all men, which we believe has its true reason and basis in the interests and well-being of mankind.

If the great majority of mankind who believe in a future state for themselves could see that the claim of the animal to a future life is nearly, if not indeed quite, as well founded as their own, the result might be a treatment of the poor brutes somewhat better than they now receive. Perhaps the shallow, sentimental ladies who join in the fox hunts at Newport, or the ignorant and brutal drivers who club their horses until they fall from the weight of the load and the force of the blows, might be restrained, if they could realize that the

wronged brutes would appear in ghostly form to reproach them after death. Our knowledge, however, of the hardships and barbarities to which slaves have been subjected, when there has been no question among their masters as to their immortality, of the treatment which the inferior races have received from the powerful nations of Christendom, and of the persecutions that have destroyed millions of lives where the brotherhood of man and immortality have been accepted by all, and of the wars which every now and then drench with blood the fairest spots in Christian lands, make us doubt whether acceptance of the theory that animals are immortal would greatly modify the common treatment of them.

The belief among the mild and contemplative Egyptians that the souls of men after death appear again in animals, and the same doctrine in India, where metempsychosis was most extensively and ingeniously developed, undoubtedly contributed to respect for the rights of animals. Unfortunately, justice to animals had no place in the ethics of the Christian Church, which showed less regard for the brutes than was shown by the pagan teachers of Greece and Rome, whose writings abound in passages inculcating kindness to animals, as do the writings of the Old Testament, which commands, "Thou shalt not muzzle the ox that treadeth out the corn," "Thou shalt not seethe a kid in his mother's milk,"—passages which, among others, show a tenderness toward the brutes we do not find in the New Testament or in the early teachings of the Christian Church. "The fatal vice of theologians," says Mr. Lecky, in his *History of European Morals*, "who have always looked upon others solely through the medium of their own special dogmatic views, has been an obstacle to all advance in this direction. The animal world, being altogether external to the scheme of redemption, was regarded as beyond the range of duty; and the notion of our having any kind of obligation to them has never been inculcated, has never, I believe, been admitted by Catholic theologians. In the popular legends and in the recorded traits of individual amiability, it is curious to observe how constantly those who have sought to inculcate kindness to animals have done so by endeavoring to associate them with something distinctively Christian. . . . That class of amusements, of which the ancient combats of wild beasts form the type, have, no doubt, nearly disappeared from Christendom; and it is possible that the softening power of Christian teaching may have had some indirect influence in abolishing them, but a candid judgment will confess that it has been very little. During the periods and in the countries in which theological influence was supreme, they were unchallenged. They disappeared at last, because a luxurious and industrial civilization involved a refinement of manners; because a fastidious taste recoiled with a sensation of disgust from pleasures that an uncultivated taste would keenly relish; because the drama, at once reflecting and accelerating the change, gave a new form to popular amusements; and because, in consequence of this revolution, the old practices being left to the dregs of the society, they became the occasions of scandalous disorders."

Mr. Lecky states with truth that the inculcation of kindness to animals on a wide scale is "mainly the work of a recent and a secular age." Societies for the prevention of cruelty to animals are supported in the Protestant and free thinking portions of Christendom. But in every community there need to be cultivated sensitiveness to the sufferings of animals, and a public sentiment that will not permit them to be abused.

EDITORIAL NOTES.

BY B. F. U.

COPIES of *The Index* of January 22, containing interesting facts and figures on "The Comparative Longevity of the Sexes," by Mrs. A. B. Blackwell, can be had at this office. Price 7 cents. The paper will be found of great value for reference, since it was prepared with great care and is reliable.

THE taxation of church property has been thoroughly agitated in Newburyport; and it is found that the opposition is very weak, and comes almost wholly from Roman Catholics and Episcopalians. It is thought that, if the case were left to the people of that city, there would be a vote of four to one in favor of it.

W. D. LE SURUR, in the February number of the *North American Review*, thus refers to a passage in Mr. Fiske's late work, which we some weeks ago felt justified in characterizing in *The Index* as a misrepresentation of Herbert Spencer's position:—

On page 117, we read that "the greatest philosopher of modern times, the master and teacher of all who shall study the process of evolution for many a day to come, holds that the conscious soul is not the product of a collocation of material particles, but is in the deepest sense a divine effluence." This, I do not hesitate to say, is a misrepresentation, involuntary no doubt, of Mr. Spencer's position. If there is any meaning in language, it makes Mr. Spencer ascribe a special divinity to mind. Mr. Spencer, however, does nothing of the kind. He holds that there is one unknowable, unconditioned being, and that this manifests itself in the two conditioned forms of mind and matter. The material particles, therefore, can claim, according to his system of thought, just as much divinity of origin as the mind or soul itself. The word "divine," moreover, is not a word to the use of which Mr. Spencer is prone; and I could not readily turn to any passage in which he employs it to express any idea of his own. He speaks, in his recent articles, of "an Infinite and Eternal Energy," but of the mind in particular as "a divine effluence" he does not speak. To say, therefore, so positively that Mr. Spencer regards the mind as "in the deepest sense a divine effluence," and that in distinction to the body, is not fair, to say the least, to the distinguished philosopher to the exposition of whose views Mr. Fiske has devoted his own most serious labors.

AN innocent paragraph in *The Index* of January 8th called out in the *Commonwealth* of the 17th a long article printed as an editorial, made up almost wholly of special pleading, quibbling, misrepresentation, and abuse, such as one would expect only from a third or fourth rate preacher. We are called a "philosophic charlatan,"—words that do not greatly disturb us; for we remember that only four or five years ago Joseph Cook, whom our critic much resembles in wordiness and recklessness of statement, called Herbert Spencer "a charlatan" and Mr. Fiske "the echo of a charlatan." The *Commonwealth* writer says that we are "endeavoring to throw dust in the eyes of the unfortunate readers of *The Index*"; that we are in "a lamentable state of unreason" and in an "unfortunate condition"; that our "condition is well-nigh hopeless; and this because his [our] melancholy 'state of scepticism' seems to be unaccompanied by any pain whatever." The article concludes: "*The Index* is to be commiserated on its opinionless condition. *The Index* is evidently in a position to say with Dickens' 'Mr. Montague Tigg' (who was the original agnostic): 'I reject the superstition of ages, and believe nothing. I don't even believe that I don't believe, curse me if I do.'"

One from the many wild assertions in our critic's reply will show with how little reason or truth he calls in question our statements. He quotes from us the following words, "What Mr.

The Index.

BOSTON, JANUARY 29, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, : : : : : } Editors.
BENJAMIN F. UNDERWOOD, : : : : : }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

THE NEW CIVILIZATION.

BY MRS. IMOGENE C. FALES.

The law of evolution is that process in nature whereby the complex is evolved from the simple, the new from the old. And as higher forms of animal life have been developed from out the lower, so a new and higher form of civilization, one of co-operative action, is being rapidly evolved from out our present competitive civilization. It is almost axiomatic that competition is but the trade phrase of the law of the survival of the fittest, and that all commercial rivalry is but a struggle for existence. Natural selection, despite its many concomitant evils, has been and still is a prime factor in the development of morality and intellect. "Nature, red in tooth and claw with ravine," has still a secret in her keeping.

Through trouble and suffering, she slowly evolves types superior to and independent of that trouble and suffering. The necessities which made possible the quadruped and man were blotted out forever, when these sprang into being. Violence and disorder are stages through which life passes in evolving from one type to another of greater stability and power. The cruelty and horror of a thousand centuries were the conditions precedent of humanity,—conditions once necessarily obeyed, but needful now no longer.

Were the doctrine of evolution really believed in by its professed advocates; if we fully realized that the law by which all things have gradually progressed toward an ever-increasing complexity was still at work, still carrying out its beneficent design, we would be in a position to apply that doctrine to sociologic phenomena, and especially to future social events. But, while accepting the theory of evolution as to the past, most of us are unwilling to recognize it in the social life of man-

kind to-day. We know that type divergence has required innumerable years of inherited tendencies and accumulated variations, and that the same process has obtained in the growth of religious forms and in the passage of society from barbarism to a highly specialized and individualized civilization. But we virtually refuse to believe that the sum total of these evolved tendencies has produced a condition of affairs where social reorganization naturally results, and where new principles are to supersede old ones in social and industrial life, and henceforth govern men and nations. In zoölogy, the appearance of any exception to a dominant type has implied and introduced a new and higher type. In the history of comparative religion, the introduction of a new and higher faith has ever been the evolution of an idea contradictory to the established forms of the institution which it supplemented. And in the history of industrialism, so far as we can judge from its vague and incomplete data, progress has been from the elaboration of the old and organized into the development of the new and at times seemingly sporadic.

The sentiment of love, of justice, of regard for human rights, has grown with the growth of the race. It has influenced thought, expressed itself in literature and art, modified national life, and now demands to infuse itself in all our laws and social institutions, and to transform the nature of our civilization. Increasing intelligence is showing that the interests of mankind are related; that moral qualities are the safeguards of social institutions; that the rights of the individual are the nuclei of national greatness; and that continued social prosperity is impossible, when these fundamental principles are disregarded. From time immemorial, man has warred with man, either with sword and spear or in the hardly less deadly conflict of opposing interests, the strong holding in subjugation and wretchedness the weak and defenceless. At all times and with all people, the struggle has been for liberty and against oppression. The process of transforming the savage state of isolated interests into the civilized one of interdependent action, where the good of one naturally becomes the good of all, has been long and painful; and the process is still far from being complete. Whatever may have been the processes and means of growth, the results are of priceless value. An increasing specialization and interdependence of all the parts of the social organism mark every step of society's advance.

The study of sociology teaches that there is an organic unity of the race, that all human interests are correlated, and that social development is the result of a closer co-ordination of men's activities in all industrial affairs. This fact is pregnant with meaning. It shows that the law of correlated forces is of universal scope and application. Biologically, organic processes of development result from an increasing differentiation of parts and specialization of functions as well as an increasing complexity and refinement of the organism. This same law somewhat differently expressed is equally applicable to sociology. Social progress results from the increasing individualization and co-ordination of mankind and an increased specialization of industrial function and activity. The converse of the law of growth, whether considered with reference to biology or sociology, is that dissolution is always through an arrest of motion and an accompanying disintegration of parts. Hence, in summing up the law of life, we may say that it is the co-ordination of all the forces of the organism, whether individual or aggregate, and that the law of death is the arrest of motion, the dissipation of these forces, and their transformation into other forms of action.

Whenever co-ordination is arrested, then in proportion to the arrest does disintegration result. How is it to-day in social life? Is there such a blending and balancing of business interests that the great wheels of industry move noiselessly and without jar or friction? Do we find the peace, the order, the stability, the rhythmic beauty, which come with the proper adjustment of things? Do we find that the social engine utilizes every foot-pound of the force contained in its members? On the contrary, it is evident that in all business relations more energy is expended upon conflict than upon production and supply; that, in society, the activity lost from the impossibility of its utilization, and from the inefficiency of the modes in which it is employed, outweighs that consumed in the continuance of the race; and that from this accumulated waste and loss, with their accumulated concomitant evils, we are nearing a period of unstable equilibrium and of the gravest menace. It may be seriously questioned if the social mechanism of to-day utilizes one-hundredth part of the work power of its component individuals. Although in nature there is no real waste of force, yet this conservation is attained by a book-keeping account, in which loss in one direction is balanced by gain in another; but, in society, this rule does not apply. The measureless force lost every day through the imperfection, the inefficiency, the rust and friction of the social mechanism, is lost forever to the race. Nay, more: the life-force of the individual, when not utilized, turns and utilizes itself at society's expense. Outside the realm of man's activities there is a perfect correlation of forces and conservation of energy; and in that realm, despite the wanton recklessness of human actions, there is a subtle and constantly occurring metamorphosis, whereby material loss is transmuted into spiritual gain, sorrow into peace and joy, and death itself into life.

Nature, the great economist, suffers nothing to be lost. Her aim is the greatest results with the least possible expenditure of energy; and, although she carries on her work with boundless prodigality, her aim never ceases, her law is inviolable. And the danger which threatens civilization to-day is that the forces of social life, no longer in harmony with man's advancing nature and needs cannot be transmuted into other activities without great expenditure of life. For we are reversing the process of growth, which is a maximum of gain at a minimum of loss, and are reverting to a condition where a minimum of gain is obtained at a maximum of loss,—a condition of waste, of disintegration, of decay and death. The balance between human needs and their supply is being disturbed by the augmenting powers of a highly complex civilization. Laws whereby the energy of the race was conserved and translated into higher forms of action have ceased to be productive of the greatest good, and now work in the interests of the few alone.

There are culminating periods in social life, when out of old conditions new forces are brought into play. These are periods of decomposition and recomposition,—the breaking up of the old and the ushering in of the new. Such a period we are now entering, in the change from a competitive to a co-operative civilization. Although, up to the present time, competition has been the ruling force in life and co-operation has been wholly in abeyance, yet all advance has been through a restriction of the action of the former and an enlargement of the action of the latter, and the conversion of isolated into associated interests. Society has reached a stage where the law of growth is being arrested by industrial competition, and a counter-acting movement is setting in,—that of labor or-

ganization, which is the initial step of a universal system of co-operation.

"This change from competition to combination," says Henry D. Lloyd, in the *North American Review*, "is nothing less than one of those revolutions which march through history with giant strides. When Stephenson said of railroads that where combination was possible competition was impossible, he was unconsciously declaring the law of all industry." Wherever the relations of capital and labor are involved, there is an increasing resistance on the part of labor to the cheapening of its service and the further encroachment of capital. There is also a determination on the part of capital to avail itself of the law of demand and supply, and keep wages down to the lowest figure, irrespective of the well-being of the laborer.

According to statistics from the last census, the average rate of wages for skilled and unskilled labor suffered a reduction of sixteen per cent. in the decade 1870-80. And, at this moment, the financial depression is such as to throw out of employment, it is estimated, more than a million of men; while, throughout the country, the reduction of wages from ten to twenty per cent. is almost universal. In this land of plenty, the limit has already reached many of our trades. The wages of sewing-women, shop-girls, cigar-makers, shoemakers, tailors, diggers, linen workers, cotton spinners, miners, iron, leather, lumber, and paper workers, have been reduced so low that further reduction means despair and death. Wealth, while it is the product of capital and labor, is in a deeper sense indicative solely of labor; for it was primarily in thought and labor that all wealth was developed. Under the competitive system, where the law of demand and supply regulates the rate of wages, the laborer, because of the lack of trade organization, competes with the laborer in order to earn his daily bread; and now that the portals of the world are being opened, and immigration is pouring its vast tide in upon this country, now that machinery is lessening the demand for labor, the problem of the rights of man to life, liberty, and happiness, begins to assume an awful significance. The question is no longer, How can life be properly sustained? it is, What is the minimum of wages to which a human being can adjust himself? The struggle for existence will become harder and harder as the wages of the New World begin to tend toward those of the Old, as inevitably they will, under the combined pressure of immigration and competition.

When our working classes see that we go under the present rate of wages by the substitution of cheaper and equally skilled labor from abroad; when they find the starving hordes from Ireland, Hungary, Italy, China, and Japan, glad to obtain work at any price,—there will be engendered a race and a class hostility of which we little dream.

Unless labor undergoes more thorough and rapid organization, unless there is co-operation between capital and labor, unless government legislates directly in the interests of the people by establishing greater facilities for the proper distribution of those who seek these shores, and by the prohibition of all forms of contract labor, so that the pauper labor of Europe and Asia and the prison labor of our own land shall not compete with honest, native labor, there will be something more than discordant elements in our midst: there will be, sooner or later, a war of races, a war of classes. Republican institutions can only continue to exist, as they faithfully embody the rights of all the people, and not those of a few. The higher classes are wedded to the old caste system of thought,—that there must always prevail the same sharp distinctions that now unhappily characterize social

life. The many have their rights when they can get them, is the tacit assumption which the whole force of our civilization bears out.

Since all value is the result of labor, and since labor is a consumer as well as producer, and since, by reason of insufficiency of wages, it cannot consume what it helps to produce, it follows that the relations of capital and labor involve the well-being of the entire industrial system. Political economy concerns itself with the production and distribution of wealth, as it is under the present wage system; but, as this system is only a temporary phase of social evolution, and is destined to give way to a full and free expression of co-operative principles, there is necessary a new system of political economy, based upon the identity of human interests. We use terms without fully realizing their meaning. In the words "political economy," the natural inference would be that we had brought into play a system of fundamental economic principles upon which all business interests were based, and which naturally tended toward individual, social, and national development. But we simply find a system which has been relatively right, a system adapted to a lower degree of civilization than that which at present obtains: we find a temporary form, expressing temporary conditions. And now that a new phase of life is being evolved there is an imperative need of a new system of social and political economy.

The old order of things is breaking up. Labor and capital, those interacting forces in social growth whose mutual dependence is absolute, are tending day by day toward a state of open hostility. Class distinctions are appearing in this Western World. Poverty, pauperism, vice, and crime are on the increase. Monopoly, the final outcome of competition, is controlling industrial life and absorbing the wealth of our civilization. The competitive system must go on concentrating wealth and power in the hands of the few, to the detriment of the many; it must still further reduce the value of labor; it must decrease consumption, while increasing production; and it must finally bring about an irrepressible conflict between capital and labor. For the cause of over-production is under-consumption, the cause of under-consumption is wealth concentration, and the cause of wealth concentration lies in the wage-system. It lies in obtaining labor at the lowest market rate, selling its product in the highest, and placing to capital that which belongs to labor. It lies in a wrong system of distribution. There is co-operation in production, but not in division of the product. Out of this struggle for existence are arising forces of such a nature as to render a continuance of the present state of affairs for any length of time utterly impossible. The one fact of the organization of labor, which is going on and must continue to go on, since it is the counter-acting movement to the incorporation of wealth, will in time induce a new system of industrial and political economy. More than that.

When, through increasing population and the use of machinery, the supply of labor continues to far exceed demand, and the majority of men can only obtain the means of securing the necessities of life by underselling one another and forcing wages and profits down to the lowest possible point, then the instinct of self-preservation will alone compel complete industrial organization and the introduction of a universal system of co-operation. *The starvation limit of competition is the beginning of the new life of associated interests.* In the long run, nature constrains us to right action. Action and reaction, cause and effect, are as true ethically as they are in the world of matter.

We are rapidly nearing that momentous period when, out of old conditions, a new order of life is being evolved; when a great natural law of conflicting interests is giving way to a higher one of reconciliation and harmony; when the fact of human equality, irrespective of the accident of birth, is manifesting itself; and when the inequalities of nature, which birth, station, and education have entailed, are disappearing before the spread of liberal institutions and democratic ideas.

Liberty is not an accident. It is not the result of man's ingenuity or man's planning. It is part of nature's laws, nature's forces. In the fulness of time, nations ripen into liberty, as the flower, under fostering care, ripens into beauty of bloom. Progress is the road to liberty,—liberty, not for the few, but for all. Liberty is not liberty when it centres in one, and many are held in bondage. It is despotism. It is not liberty, when the many toil that the few may live in selfish ease. It is license, child of power, but not of love. Liberty can only exist when the rights of one are determined by the rights of all. It can only continue to exist when men are sufficiently advanced to become free men. We are apt to forget that growth, despite reactionary periods, is a continuous process, bearing us away from things of the past to higher states and conditions. We are apt to relegate all progress to the past, and deny it to the present, because, living in the very centre of activity, we do not perceive the flow of the current. There is also another reason why we do not place the proper value upon what is happening round about us. We are being taught by the leaders of scientific thought that growth is so imperceptibly slow that it is well-nigh impossible for those who form part of the moving panorama of time to know to what extent and in what direction the forces of nature are moving. They take the length of time required to transform inorganic into organic life, the thousands of years necessary to the deposition of a delta, and argue that the same length of time is necessary for profound and entire sociologic changes. From one point of view, the reasoning is correct. If we reckon from the time when society was simply a mass of warring atoms to where it is to-day, thousands of years have doubtless been required to bring about the change. But there is a fact which the leaders of scientific thought overlook; and that is, that while growth is gradual there are involved in the process critical periods, when new forms of life, albeit germinal, are ushered in. Such a period we are now entering, when old forms and institutions are being sloughed off, in order that new and better ones may take their place. This process will not require thousands or even hundreds of years, because present conditions are the culmination of all that have gone before; and, when we reach a culminating epoch, change is rapid, and, as it were, instantaneous.

The motive power of the world to-day is thought applied to social relations; that of the past, natural forces working without the aid of an enlightened human reason. In this transition from one order of life to another and higher, we can even now see the beginning of better things. We can see it in the efforts being made to reclaim society by caring for the children of outcasts, in individual efforts to found kindergarten and industrial schools, and engraft them upon our present school system. We can see it in an increased moral sentiment that boldly confronts the evils in our midst, and demands that individual rights shall be subordinate to public good. More than all, we can see that the laws governing social growth are moral laws, and that the process of industrial organization will arrest the law of com-

petition, and bring in the higher law of associated interests, of mutual helpfulness, of regard for the rights of others.

Thus, the new civilization of correlated human forces evolves from out the old, and evil becomes a means of good. And if the forces of nature are correlated, if her elemental energy is always the same, if the universal equation of value forever persists, it is because there is in all things an unknown element involved, which forever acts as a regulating determining force, "a Power not ourselves, which makes for righteousness."

"Earth casts off its slough of darkness,
An eclipse of hell and sin,
In each cycle of her being,
As an adder casts its skin.

"Lo, I see long blissful ages,
When these Mammon days are done,
Stretching like a golden evening
On toward the setting sun."

REASONS WHY THE LAW DISCREDITING WITNESSES FOR UNBELIEF SHOULD BE REPEALED.

First. This statute is not one of our time-honored institutions, but merely a compromise passed in 1859.

Second. The testimony of Dr. Currier, of Lexington, against the competency of his patient, Miss Caira Robbins, to make a will, was impeached on account of his opinions about theology at East Cambridge last summer; and the validity of the will was sustained accordingly.

Third. Such treatment of unbelievers is forbidden by the constitution of Oregon, and also in Arizona, California, Colorado, Florida, Idaho, Kansas, Michigan, Minnesota, Mississippi, Missouri, Montana, Nevada, New York, Ohio, Wisconsin, Texas, and Vermont.

Fourth. When, as in the case mentioned, the witness is not directly interested in the suit, discrediting his testimony for unbelief injures not him, but some innocent third party not responsible for his views.

Fifth. To discredit, on account of disbelief, a witness testifying in his own behalf violates the right of every member of society to be protected by it in the enjoyment of his life, liberty, and property.

Sixth. The men who have acknowledged freely that they hold unpopular views are precisely those most likely to tell the truth in court.

Seventh. The whole community is injured by permitting the course of justice to be interrupted by theological controversy. H.

DRAPER, after mentioning that the Christian martyr had in his supreme moment a powerful and unflinching support, believing he was about to "escape from the cruelty of earth to the charity of heaven," led by an invisible hand that would "guide him all the more gently and firmly because of the terror of the flames," adds: "For Bruno there was no such support. The philosophical opinions, for the sake of which he surrendered his life, could give him no consolation. He must fight the last fight alone. Is there not something very grand in the attitude of this solitary man, something which human nature cannot help admiring, as he stands in the gloomy hall before his inexorable judges? No accuser, no witness, no advocate, is present; but the familiars of the Holy Office, clad in black, are stealthily moving about. The tormentors and the rack are in the vaults below. He is simply told that he has brought upon himself strong suspicions of heresy, since he has said that there are other worlds than ours. He is asked if he will recant and abjure his error. He cannot and will not

deny what he knows to be true; and, perhaps,—for he had often done so before,—he tells his judges that they, too, in their hearts are of the same belief. What a contrast between this scene of manly honor, of unshaken firmness, of inflexible adherence to the truth, and that other scene which took place more than fifteen centuries previously by the fireside in the hall of Caiaphas, the high priest, when the cock crew, and the 'Lord turned and looked upon Peter' (Luke xxii., 61)! And yet it is upon Peter that the Church has grounded her right to act as she did to Bruno. But perhaps the day approaches when posterity will offer an expiation for this great ecclesiastical crime, and a statue of Bruno be unveiled under the dome of St. Peter's at Rome."

For *The Index*.

WHERE ARE THE YESTERDAYS GONE?

"Where are the yesterdays gone, papa?" asked my little girl.

As we gain the heights of the Present,
And our eyes o'er the intervals cast,
Below is the sweep of a river,
And beyond the wide plain of the Past.

The Yesterdays there are encamping,
In a line that extends to the wall
Where clouds with the plain intermingle,
And the Night drops her mantle o'er all.

The Yesterdays camping in silence,
As they went their swift way one by one,
While we only thought of days coming,
When the Present was measured and done.

Through the mists they appear as we left them,
And forever and ever will stay,
As changeless and stony as silence,
In the light of the lingering day.

In memory, some smile upon us;
And our souls are aglow with the breath
Of the roses of love and affection,
While some are as bitter as death!

O Yesterdays, how we regret you!
Oh that prayers deep and fervent would bring
Us again all blessings of childhood
And the light of its blossoming spring!

That way we shall pass again never,
By the headland there sets a swift tide:
He who passes it passes forever,
For no bridge spans the gulf to that side.

In a dream, we look in the distance,
Through the mists settling dark on the plain:
The Yesterdays vanish in twilight,
But the Morrows will greet us again.

HUDSON TUTTLE.

CORRESPONDENCE.

CLERICAL MISREPRESENTATION.

Editors of The Index :—

Mr. Underwood has done well to state (January 8), in reply to the claim of the *Christian Statesman* that God has enjoined judicial oath-taking, first the vicious tendencies of that practice, and then the fact that Jesus expressly prohibited it. But I think it is well also to notice the unsoundness of the foundation upon which the editor of the *Statesman* rests his claim. He says, "Here, as at other points, the real question is whether the Bible is true."

Implied in this statement are two false assumptions: one, that the Old and New Testaments make a symmetrical whole, all the parts of both combining to teach one doctrine; the other, that all the injunctions of both parts are binding upon men of the present day. To the persistence of the orthodox church in holding and vindicating these manifestly false doctrines is due very much of the disingenuousness, equivocation, and sophistry which pervade orthodox sermons, tracts, magazines, and newspapers.

In an enumeration of the religions of the world,

Judaism and Christianity are recognized as distinct religions, as much as Buddhism and Islamism. The Christians are constantly trying to "convert" the Jews; and the few cases in which such conversion is effected or pretended are hailed as a triumph by one party, and bitterly denounced as apostasy by the other. And yet our orthodox clergy have the impudence to pretend that the Hebrew and Christian Scriptures, upon which these diverse religions are founded, form a self-consistent and symmetrical whole!

But not only do the Old and New Testaments teach two different religions, so diverse as to be incompatible with each other: each of them shows contradiction of idea and of statement between its own component parts, and that not only in trivial, but in essential matters. Take, for instance, in the Old Testament, the following passage from the first chapter of Isaiah, where Jehovah is represented as addressing the people of Judah:—

"To what purpose is the multitude of your sacrifices unto me? saith the Lord: I am full of the burnt-offerings of rams, and the fat of fed beasts; and I delight not in the blood of bullocks, or of lambs, or of he-goats. When ye come to appear before me, who hath required this at your hand, to tread my courts? Bring no more vain oblations: incense is an abomination unto me; the new moons and sabbaths, the calling of assemblies, I cannot away with: it is iniquity, even the solemn meeting. Your new moons and your appointed feasts my soul hateth!"

This is in express and direct contradiction of the writings ascribed to Moses, by whose mouth the same Jehovah is represented as expressly commanding the observance of new moons and sabbaths, and the calling of assemblies, and the systematic offering of incense and of bloody sacrifices, and as giving explicit and minute directions how and when and by whom all these should be offered, and as announcing that the blood and the smoke and the incense formed a sweet savor in his nostrils. And yet our clergy represent these two as forming parts of a self-consistent and symmetrical whole.

Of the many cases in which different portions of the New Testament contradict each other in matters of fact or doctrine or precept, I will mention the following:—

Paul repeatedly and urgently enjoins industry for self-support: Jesus taught his disciples not to work, not even to plan how their bodily wants might be supplied, but to depend upon God for food, clothing, and shelter.

Paul receives rich men into the Church, if they will be liberal; but Jesus sternly condemned both the acquisition and the retention of wealth, and required the abandonment of all property as the first condition of discipleship.

Paul, in his first letter to the Corinthians, declares that the risen Jesus was seen of above five hundred brethren at once; but the author of the Acts of the Apostles, speaking of a period a little later, computes the number of the disciples as "about an hundred and twenty."

The writings of Paul abound in forcible remonstrances against circumcision and sabbath-keeping and temple sacrifices; yet, in the Acts of the Apostles, he is represented as saying to the chief of the Jews, when he was a prisoner in Rome, "I have committed nothing against the people or customs of our fathers."

The gospel ascribed to Luke represents Jesus as ascending on the night or day next following his resurrection: the Book of Acts declares him to have had interviews and conversations with the apostles for forty days after his rising from the dead.

The gospel ascribed to Luke represents that Jesus, just before ascending into the air, directed his disciples to tarry in Jerusalem, and declares that they did tarry there: the gospel ascribed to Matthew says that he commanded them to go into Galilee, and that they immediately went there.

The gospel ascribed to Luke represents that, immediately after the baptism of Jesus, he spent forty days in the wilderness, being tempted of the devil: the gospel ascribed to John represents that on the third of those days Jesus was at the marriage in Cana.

In spite of these discrepancies and contradictions and many more such, our clergy continue to insist, not only that the books in question are free from inconsistency or disagreement, but that all parts of both are so inspired as to be infallibly correct, and

are binding upon us of the nineteenth century. If we remember that these men are pledged to continue to teach this doctrine, first by their whole clerical education, and then by the creeds of the churches to which they belong, we shall see the need, not only of distrusting their professional representations, but of ceasing to contribute to their support. C. K. W.

BOOK NOTICES.

T. LUCRETII CARI DE RERUM NATURA LIBRI SEX. With an Introduction and Notes to Books I., III., and V. by Francis W. Kelsey, M.A., Professor of Latin in Lake Forest University, Rochester. Boston: John Allyn. 1884.

It is pleasant to find such a book as this latest edition of the immortal Latin poet Lucretius emanating from a young interior city like Rochester, N.Y., hitherto rather famous for spirit-rappings and a mere ordinary American material prosperity than for poetry and philosophy. Prof. Kelsey introduces Lucretius to his readers as a man, as a philosopher, and as a poet in a very satisfactory manner. Like Byron and Shelley, the great modern poets and mouthpieces of free thought and daring speculation in verse, Lucretius was a patrician; and, therefore, he had the courage of his opinions, burning no "incense,"—like his successors, Virgil and Horace,—"kindled at the muse's flame," to any haughty patron. Though highly born and a contemporary of Cicero and Cæsar, with all the opportunities for the attainment of wealth and power which were then open to a member of the Roman aristocracy, Lucretius deliberately preferred a life of contemplation and philosophic asceticism to a political and military career, although he was a Roman to the core, a Roman full of Greek fire, poetry, and speculative genius. The poem of Lucretius, *De Rerum Natura*, like the works of Aristotle, was for a long time hidden from the knowledge of men; but at length it re-emerged into view, never more to be forgotten or neglected. In every generation among scholars there is sure to be a percentage of Lucretian enthusiasts. For though, to borrow the language of Shelley, Lucretius had limed the wings of his swift spirit in the dregs of the sensible world, he yet soared into the empyrean of song. His great poem is full of felicities, beauties and sublimities of expression and thought, which have made it irresistibly attractive to readers of all ages and climes and shades of opinion. The *flammaria moenia mundi* is a Lucretian formula, and the *infant cast weeping upon the shores of life*. He could voice the passion of love in as glowing numbers as Byron, the poet of that passion, who, in one of the final stanzas of *Canto First of Childe Harold*, transplants into English a flower of Lucretius, thus:—

"Love has no gift so grateful as his wings:
How fair, how young, how soft soo'er he seem,
Full from the fount of Joy's delicious springs
Some bitter o'er the flowers its bubbling venom flings,"

which is a fine translation of the original Latin,—

"Medio de fonte leporum

Surgit amari aliquid, quod in ipsis floribus angat."

In an age of luxury and grossest sensualism, among a purely practical, unimaginative, and sensual people, Lucretius was a poet of nature like Wordsworth, and preferred the flowery lap of mother earth and simple fare to high-ceiled palace hall and gorgeous indulgence of appetite. His motto was:—

"No lewdness, narrowing envy, monkey-spite,
No madness of ambition, avarice, none;
No larger feast than under plane or pine
With neighbors laid along the grass to take;
Only such cups as left us friendly warm,
Affirming each his own philosophy,—
Nothing to mar the sober majesties
Of settled, sweet, Epicurean life."

His bride was a life of philosophic tranquillity and reflection. He led such a life, as far as it was possible to live it, in the tempestuous period of civil war and bloodshed in which his existence was cast. But his life was brief, having been terminated, after the Roman fashion, by his own hand, according to tradition. But it was long enough for the production of a strain of mingled reflective thought and poetry, which will charm the world forever.

Prof. Kelsey says: "The poem of Lucretius is a protest against the degrading influence of impure superstition; against the sham and increasing degeneracy of society; against the reckless, mad, ambitious, and ceaseless ferment of political life. In a period grossly material in tastes and enjoyments, when great fort-

unes were being rapidly made and were ever bringing new luxuries in their train, it bids men take refuge and find true happiness in higher things, in pleasures of the soul rather than of the body." For, though Lucretius believed the soul to be mortal, he did not bid his readers eat, drink, and be merry on that account. The age of Lucretius was like ours. As Matthew Arnold says or sings,—

"Well-nigh two thousand years have brought
Their load, and gone away,
Since last on earth there lived and wrought
A world like ours to-day.
Like ours it looked in outward air!
Its head was clear and true,
Sumptuous its clothing, rich its fare,
No pause its action knew.

On that hard Pagan world disgust
And secret loathing fell,
Deep weariness and sated lust
Made human life a hell.
In his cool hall, with haggard eyes,
The Roman noble lay:
He drove abroad in furious guise
Along the Appian Way;
He made a feast, drank fierce and fast,
And crowned his hair with flowers,—
No easier nor no quicker passed
The impracticable hours."

Indeed, Arnold borrowed the above description from Lucretius himself. In fact, subsequent poets and writers, from Virgil down, have been in the habit of helping themselves liberally to the good things of Lucretius, without acknowledgment, even when they have been assailing his doctrines. The universe of Lucretius, like that of Humboldt, was infinite in extent and duration. As Prof. Kelsey says: "The atomic materialism of Lucretius is the current doctrine of the nature of things, and his view of man's development in civilization and the origin of institutions anticipated important modern theories. To-day, with the revival of materialism, the rapid advances in physical science, and the tendency so characteristic of our age to study every conception through its history, Lucretius is receiving marked attention on every hand. Taking the range of literary and scientific works together, we shall find that few ancient writers are so frequently quoted or so often appealed to as he."

The young student of the great philosophic Roman poet, with Prof. Kelsey's edition of the *De Rerum Natura* in his hands, will find himself provided with every possible aid to a thorough understanding of that poem.

RED LETTER STORIES: Swiss Tales from the German of Madame Johanna Spyri. Translated by Lucy Wheelock. Boston: D. Lothrop & Co. Price 60 cents.

Madame Spyri is pronounced by competent critics the best living German writer for children, and all those who have read her delightful *Heidi* will concur in this opinion. The present work consists of two short tales of Swiss mountain life, which bring before us very vividly the every-day life of the Swiss peasantry. The stories are pure, wholesome, and homely in tone and treatment. Though distinctly juvenile reading, the writings of Madame Spyri yet recall vividly the more elaborate works for mature readers of Frederika Bremer, with their realistic portrayal of the delightful home life of her countrymen and women.

LECTURES

ON LEADING REPRESENTATIVE MEN OF OUR TIME,
INCLUDING

EMERSON,
HUXLEY,

CARLYLE,
TYNDALL.

Also, upon the early *Growth and the History of Culture; Evolution of the Arts; Origin of Mythology; The Survival in our Present Civilization; The Aspects and Promise of the Time*, etc., will be given where desired this season by the undersigned.

Address

CHARLES D. B. MILLS,
SYRACUSE, N.Y.

October 20.

SCIENTIFIC LECTURES.

PETER ANNET, of England, who lectured very acceptably before the Parker Memorial Science Class on two Sundays recently, will lecture for societies on Astronomy, Geology, Zoology, and philosophical subjects, within an easy radius of Boston, upon application. For terms, etc., address

PETER ANNET,
P.O. Box 2468, Boston, Mass.

POPULAR BOOKS

Sent by Mail Postpaid at

PUBLISHERS' PRICES.

ANY BOOK in the subjoined List, or any other OBTAINABLE BOOK, that may be desired, will be forwarded as promptly as possible, on receipt of orders accompanied with the cash.

SPECIAL RATES will be made with persons or libraries desiring any large number of books.

Orders are respectfully solicited from all friends of THE INDEX.

SEVEN GREAT MONARCHIES

The SEVEN GREAT MONARCHIES of the Ancient Eastern World: Chaldea; Assyria; Babylon; Media; Persia; Parthia, and the New Persian Empire. By GEORGE RAWLINSON, M. A. In three large 12mo. volumes, of over 2,000 pages, large type, leaded. With all the notes and a greatly improved index, also with the profuse fine illustrations (over 700) and maps of the English edition. Price per set, in fine cloth, gilt tops, reduced from \$18 to \$3.00. Postage 48 cents.

"The books, as books, are **EXCELLENT**. Paper, type, presswork, illustrations, and binding are all good, and the price extraordinarily low."—*Literary World*, Boston.

"These books are a **MARVEL of CHEAPNESS** and excellence. We know of no other work of similar value and extent that is sold in this or any other market for anything like so low a price."—*Examiner*, N. Y.

"A **MASTERPIECE of history**. The reader almost feels that the author has walked hand in hand with the heroes of almost prehistoric periods, so familiar is he with the facts of olden times. When he describes an Assyrian sunset, or a Chaldean home, the reader is led to forget the long centuries that separate these scenes from modern times. The deepest antiquity is imbued with the freshness of a bright and living present, full of realities, shrouded in the gloom of defeat, or made radiant with the glories of some Babylonian king. Remoteness of the times treated of has not obscured the author's work, but has invested it with the elements of romance. When he brings the bloom of health to the cheeks of those who perished 2,400 years before Christ, and analyzes character, describes cities, pictures battles, and sanctions all with the matchless accuracy of a vast erudition, his book leaves a telling impression

on the mind. His reserved knowledge is wonderful, and substantiates the main narrative in excellent annotations and accurate references to original sources of information. It is the greatest historical work of the times."—*Times*, Kansas City, Mo.

"It abounds in **ARTISTIC and SCHOLARLY details**. It contains the studies of a learned lifetime, and the faithful student will rise from its perusal with a mind enriched by a more vivid knowledge of that ancient world whose mysteries the race of scholars has been endeavoring to elucidate."—*Mail*, Toronto.

"This is a new and marvelously cheap edition of a standard work. It is one of a series of historical works Mr. Alden is publishing, in which he seems to have discovered or invented the art of combining standard literature, good type, tasty and strong binding, numerous illustrations, with the lowest prices. Mr. Alden certainly leads the cheap book movement at present. We do not know of any book that can supply the place of Rawlinson."—*Christian Advocate*, Buffalo, N. Y.

COUPON 25 CENTS. This Coupon will be received in lieu of 25 cents cash, toward the price of RAWLINSON'S MONARCHIES (\$3.00) if sent within ten days from date of this paper (mention name of paper). This offer is to secure your **PROMPT** response and indicate the paying advertising medium.

100-PAGE CATALOGUE sent free. The best literature of the world at the lowest prices ever known. Books sent for **EXAMINATION BEFORE PAYMENT** on reasonable evidence of good faith. Address

BY ALL ODDS THE BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travelers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines. Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches**, which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars**, which are models of comfort and elegance; its **Palace Drawing Room Cars**, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that it is the best equipped road in the world.

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, and take none other. All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

CURRENT TOPICS.

BY B. F. U.

SAYS the *Advertiser*: "Congress, as has been said again and again, should act against polygamy the crime, and not against the religion, of which it is an unessential part. There are Mormons in Boston to-day, who are quiet, law-abiding citizens, having no intention of practising polygamy, which they declare is not a part of their religion. Against them, justice has no grievance; but against polygamists, wherever they are, there is imperative need of enforcing criminal law vigorously."

THE *New York Sun*, commenting on Dr. Shedd's article in the *North American Review* in defence of everlasting punishment, observes that "now an argument in favor of the doctrine of hell and of eternal torment for the damned is so great a novelty that a magazine editor who desires to pique curiosity is glad to obtain it for publication. We take unusual interest in this paper, because it is the first square defence of the doctrine of eternal damnation from an orthodox Protestant theologian which we remember to have seen for several years past. Even if the tenet is not directly attacked, it is usually ignored by Protestant ministers as too disagreeable a subject for contemporary Christians."

Thus Cardinal Newman comments upon the clerical pomp and vanities of Oxford: "There are ministers of Christ with large incomes, living in finely furnished houses, with wives and families, and stately butlers, and servants in livery, giving dinners all in the best style, so descending and gracious, waving their hands and mincing their words as if they were the cream of the earth, but without anything to make them clergymen but a black coat and a white tie. And the bishops or deans come with women tucked under their arm; and they can't enter church but a fine powdered man runs first with a cushion for them to sit on, and a warm sheepskin to keep their feet from the stones." And these be the disciples of the de-

spised Nazarene, who had not where to lay his head, who said that his kingdom was not of this world, whose pride, pomp, and glory he despised.

A CORONER's inquest over a little boy who had died in a faith-cure institution at St. Louis showed many children in the same house in a dying condition. "Asbough's place," says the *Springfield Republican*, "had been running two months: nine children had recovered, and many had been taken away as they grew worse. Prayer was the only thing done for the sick. As the attendants moved their hands over them, they would say such pious things as 'The good God please make these sufferers whole,' 'Jesus, our Saviour, take away the germs of disease,' etc. This is not very superior to the superstition unearthed at Reading, Pa., where a physician found a dying child that had been treated by a 'witch doctor,' who had written a prayer in high German and fastened it in a muslin bag around the child's neck, and had left a briar wand to be waved above its bed when it was restless, for the purpose of driving off the witches."

THE *Sentinel Advertiser*, published at Hope Valley, R.I., quotes a paragraph from a recent number of *The Index* respecting the treatment of the Chinese in this country, which it prefaces thus: "It is encouraging to note in these degenerate political times an occasional example of devotion to principles of right and justice, such as built up and animated the Republican party in its earlier and better days." The paragraph, this paper says, "shows the drift of advanced and liberal thought, and is really an 'index' of the path that must be taken by the party of professed and equal rights before that party can ever again hold in the hearts of freedom-loving American people the place it once so worthily and nobly filled." Our protest was against the unjust treatment of the Chinese in this city. The presence of the Chinese in large numbers on the Pacific coast presents a difficult social problem, which requires the wisest statesmanship; but there can be no excuse for not enforcing the law against assaults upon these people, whether in Boston or San Francisco.

GOV. HOADLY, of Ohio, in his annual message, referring to an Act by which the penitentiary of that State was reorganized last year, says: "The Act of 1884 has two objects,—to reform the men and to abolish contract labor. There are those who look upon convicts as hardened criminals, and all efforts at their reform or moral and religious improvement as hopeless. Such is the case, no doubt, with some, perhaps many; but, when we remember how many of the prisoners are mere lads, nearly one-fifth of all being under twenty-one years of age, how many of their crimes were committed while they were intoxicated, and how many of the offences punishable by imprisonment are the result of temper and passion without settled purpose of wrong, we find reason to correct and change this opinion. Besides, as it has long been the settled policy of the State to shorten the terms of imprisonment as a reward for good conduct in the penitentiary, and to restore the convict who has not violated prison rules to full citizen-

ship, any well-directed effort to qualify him for the exercise of this privilege should be welcomed by all good citizens and encouraged by the State." In carrying this Act into force, Gov. Hoadly says thus far "discipline has been maintained, the men have worked well and willingly, hope has assisted fear in promoting good behavior." A night school is attended by five hundred and fifty prisoners. The striped suit is still used for the refractory and disobedient; but the meritorious prisoners wear two kinds of clothing, gray and blue, distinct enough not to facilitate escape. A small portion of their wages is set apart, "ranging in amount relatively to conduct." The primary end of the management has been "to reform rather than to make money." The Governor wisely recommends that the institution be managed upon strictly business principles and not be made the foot-ball of politics, and its experienced force be changed with every change of party government in the State.

A LETTER from Russia says that the jails of that country are "inadequate to the needs of the increasing population." New jails are being built every year; but they are not sufficient for the "accommodation" of the increasing number of prisoners, who in 1882 numbered 95,000 and in 1883 97,337. "In Siberia especially, great suffering is caused by the want of accommodation for the 12,000 convicts distributed over the mining districts, especially as the enormous number of exiles crowd the houses of correction." The majority of the Russian convicts and exiles are, according to all accounts, better men and women than those through whose influence they have been convicted and sentenced; and we are not certain but that it would be fortunate for the people of Russia if a revolution should occur that would send into exile the majority of the present officials, and elevate to power the brave and honest spirits who are now the victims of Russian despotism. But the Russian peasants believe, as they have been taught, that the czar governs by divine right and authority, and that it is their duty to submit to any wrongs rather than resist "the powers that be." Thus, priestcraft supports kingcraft; superstition and spiritual despotism make the people afraid and disinclined to oppose a governmental despotism, which is destroying the intellectual and moral strength of the Russian people. The best men and women, those of genius and courage, are exiled and imprisoned; while the country is cursed by censorship of the press, suppression of freedom of speech, espionage, religious intolerance, rottenness in every department of the government, hypocrisy and obsequiousness among officials, suspicion and distrust not only of those holding positions, but of men of influence generally, and a despotism pervading the government which paralyzes the mind and heart of the nation. Sometimes, a revolution is absolutely necessary to the continuance of the process of evolution; and it looks now as though Russia might have to undergo the experience of a terrible struggle before entering upon a career of development and progress.

EQUAL FREEDOM OF CONSCIENCE BY STATE SECULARIZATION.

A sub-committee of the Free Religious Association has been zealously engaged the last few months in preparations to bring before the Massachusetts Legislature certain measures in the interest of a more equal liberty of conscience than the statutes of the State now allow. They have directed their efforts to two points,—the abolition of the law by which churches are exempted from taxation, and the removal from the statute, with regard to witnesses in court, of the clause by which the testimony of a witness may be discredited on account of his theological opinions. This action of the committee has been taken in pursuance of a resolution passed at the annual meeting of the Association last May, by which it was voted that the Association should more actively endeavor to promote the objects of State secularization.

Heretofore, the Association has contented itself with discussions, on its platform and in its publications, of the various questions which concern the complete secularizing of the State, leaving it to individual members to work in practical ways for the object, according to their respective judgments and opportunities. In this way, James Parton's excellent essay on the Taxation of Church Property, given before a Convention of the Association in New York a number of years ago, and afterward printed in tract form, has been distributed in the legislatures of several States where this subject was coming up for consideration; as have also, to less extent, the more elaborate pamphlets published by the Association on the Sunday laws and the public-school question. One reason, perhaps, why the Association as a body has not more actively engaged in this work has been an apprehension lest the *odium theologicum*, which might easily be aroused in the average legislator's breast against the Association, might serve to hinder the advancement of the objects it was laboring to promote. But this year the Association decided that the time had come for it to adopt in this direction a more active policy; and, naturally, it has made a beginning of such action in the Legislature nearest its own head-quarters.

The question might possibly be raised—indeed, we have heard that it has been raised by a few persons—whether the constitution of the Free Religious Association gives any warrant for it to engage as an organized body in work of this kind. Is not the province of the Association, it is asked, limited to providing a platform for the free and full discussion of all questions pertaining to religion? And, since the Association invites persons to its membership irrespective of their religious beliefs, may it not be possible and probable that among its members may be those who do not believe in the objects covered by the term "State secularization," and whose equal rights of membership will therefore be infringed by the present action of the executive committee of the Association? To these queries, we would reply that, for one, we have never been able to accept that interpretation of the province of the Association which would limit its action to providing a free parliament for the discussion of questions concerning religion. To speak now of nothing else, the Association is committed by its constitution to the advancement of perfect liberty of thought in religion. If the Free Religious Association does not mean this, it means nothing. And, to our mind, the promotion of perfect liberty of thought implies necessarily a good deal more of practical activity than merely to furnish a platform for free discussion. There cannot be perfect liberty of thought, even the

platform for free discussion is imperilled, so long as the State gives its support to or subsidizes certain systems of thought in distinction from other systems of thought. And this is precisely what the State does in this country through the laws which remain on the statute-books favoring certain theological beliefs and imposing disabilities and restrictions on citizens who do not hold such beliefs. Such laws make it easier for people to hold certain opinions which happen to be held by the majority than to hold other opinions which their own reason might dictate. They put a premium upon certain views by granting special privileges to those who adopt them, and they punish those who do not adopt these views by putting upon them peculiar burdens and singling them out for public disfavor.

Here, then, are positive restrictions upon liberty of thought, which are maintained by the power of government. And, if an association which is organized primarily to advance liberty of thought in matters of religion is prevented by its constitution from taking any practical step for the removal of these restrictions, it would be an anomaly indeed! To say nothing of any other practical activities in which the Free Religious Association might legitimately engage as an organized body, it has always seemed to us that to this work of removing existing barriers to that equal freedom of thought which is the proper right of every American citizen it is specially called. What more palpable example of self-stultification could there be than that a society organized on the principle of liberty of thought and for the purpose of advancing liberty of thought should refrain from any active movement for abolishing legal hindrances to liberty of thought, because possibly some persons may have come into it as members who believe in retaining those hindrances? That is, if such a case could possibly exist, the society's action would be controlled by the presence or imagined presence of members who do not believe in the fundamental principle of the society and one of its foremost objects!

The ground is sometimes taken, we are aware, that the principle of liberty of thought is practically won, and that the statutes which in the United States appear to violate this right are only lingering relics of a system of governmental support of religious doctrines which is fast becoming obsolete, and may now be safely left to its own natural decay. There is a measure of truth in this representation. But, on the other hand, there is much error in it. The system of governmental support of certain religious views is not so far dead but that, through statutes growing out of that system, frequent and gross injustice is being done to individual rights of conscience all over the country. Equal freedom of thought and conscience is not established so long as it is possible for the testimony of a witness in court to be discredited and set aside because of his religious beliefs or non-beliefs, as has been recently done in the case of an important witness on the validity of a will in a Massachusetts court and also in the court martial for the trial of Gen. Swain in Washington. In both of these cases, it is possible that actual justice in the decision depended on the excluded testimony. Nor do the conditions of free impartial inquiry in religious matters exist so long as government in any way discriminates among citizens in respect to their religious beliefs,—in effect, subsidizing the beliefs of a portion of the citizens by exempting their churches from taxation, by enforcing their peculiar views of the sacredness of Sunday, and by allowing their theological ideas to be represented in the public schools and in legislative bodies, for whose support all citizens are equally taxed.

We lately saw a description in some Roman Catholic journal of the new Catholic cathedral in Providence. It was proudly claimed to be nearly, if not quite, at the head of all the ecclesiastical structures in the country in respect to architectural elegance and luxury of interior decoration and furnishing. The cost was given; but the figures, which were enormous, we have forgotten. But, whatever it is, it is all exempt from taxation. The city of Providence may be legally called upon to protect it from fire and other damage; but, if we understand the law of Rhode Island, not one cent will be paid to the city for this protection of the costly, luxurious edifice. In the same city is a small Free Religious society which meets in a hall on which taxes have to be paid, because it is regarded as secular property. Thus, the Free Religious folk not only have to pay taxes on their own building, but they have to pay indirectly their proportion of taxes as citizens for the Catholic cathedral because the real owners of it are exempted from taxation. And this is only one illustration of an injustice that is committed in the name of law all over the country. The injustice is not simply that a portion of the citizens are thus compelled to pay indirectly for the support of religious institutions and doctrines which are contrary to their convictions, but it consists also in the fact that the government encourages certain established religious beliefs by placing a bounty upon them, and correspondingly discourages heterodoxy by leaving it to struggle without government aid. The theory of government in this country is equal justice, or fair play, for all faiths and all opinions in respect to religion; but the practice is yet very far from this goal.

WM. J. POTTER.

MENTAL AND MORAL CHARACTERISTICS OF ORTHODOXY.

Many years ago, Dr. Nehemiah Adams, of Boston, after trying to persuade the world that slaveholding was right, undertook the harder task of showing that the infliction of everlasting misery was reasonable. It does not appear that he made many converts to either opinion. But, as the grounds on which he maintained the latter have been seriously impaired by freedom of thought, critical investigation by scholars, and advancing intelligence in the community at large, new effort in that direction has been thought necessary; and the Rev. Dr. W. G. T. Shedd has applied himself to it with alacrity in the *North American Review* for February. For the due performance of this work, he seems to have judged it necessary to assume the reality of the trinity, the incarnation and atonement, the inspiration and infallibility of Scripture, and an understanding, on his own part, of God's character, plans, and purposes, past, present, and future.

Dr. Shedd's theory is that, man having once sinned, God is necessarily obliged to punish, and to punish after this life by strict retributive, having no regard to the reformation of the offender. This penal suffering, he says, can never come to an end, because guilt is the reason for its infliction, and guilt, once incurred, never ceases. Thus, the endlessness of future punishment is implied in the endlessness of guilt.

Dr. Shedd here notices, as an objection that will be made to his theory, that in the human administration of justice some regard is paid to the reformation of the criminal and to the protection of the community from further injury; but he declares that this is owing to the necessary imperfection of human governments, and that the perfect divine system requires only simple retributive (or what is commonly called vengeance).

Assuming that by the considerations above mentioned it is proved that God will, in the future world, inflict endless punishment upon sinners without attempting or desiring their reformation, Dr. Shedd undertakes next to show that this course of action is rational and right. As proof that it is rational and right, he proceeds to assume:

1. That endless punishment is supported by the human conscience; that men believe in hell by reason of their moral sense; and that a guilty conscience expects endless punishment.
2. That punishment must needs be endless, because sin is endless; besides, that in hell the amount of guilt is constantly accumulating, because that, by sinning, the man at length becomes *unable to keep the law*.
3. Punishment must be endless, because sin is an infinite evil; demonstrated such by the incarnation and the atonement.
4. Because the wicked prefer hell to heaven, and
5. Because the most vicious people are most opposed to the idea of endless punishment.

The above Dr. Shedd presents as a rational defence of the doctrine of everlasting punishment, which doctrine, he assumes, "must have a foothold in the human reason, or it could not have maintained itself against all the recoil and opposition which it elicits from the human heart."

An unbiassed reader of Dr. Shedd's article would easily discern his sophistry, his false assumptions, his self-contradictions, and his utter failure to prove either the reasonableness or the reality of endless punishment. But so strong a bias has been established by the common habit of presuming that the clergy are wise as well as good and honest as well as wise, and of accepting their professional assertions without question, that the average reader needs to be reminded of some such considerations as the following:—

Long before Dr. Shedd wrote the article in question, he had so pledged himself to his theological connection to hold the doctrine it sets forth and to stick to it and to bolster it up by every means in his power that he is not to be expected to make any other than a partisan statement of it, or to give a moment's recognition to such facts or such reasons as favor the other side. He is not to be expected, in this matter, to act otherwise than the average lawyer in defending his client.

Pretending to account for the fact that great numbers of men believe the doctrine of endless future punishment, Dr. Shedd disingenuously withholds the true and sufficient reason, and substitutes a false one. He says that this doctrine is supported by the human conscience, and that "it must have a foothold in the human reason, or it could not have maintained itself against all the recoil and opposition which it elicits from the human heart."

Instead of "maintaining itself," this doctrine has been maintained by the persistent and unscrupulous representations of men like Dr. Shedd. Its real "foothold" has been in pulpits, creeds, catechisms, sermons, commentaries, tracts, orthodox newspapers, and revival meetings. All the Catholic clergy and nineteen-twentieths of the Protestant ministry have strenuously exerted themselves to teach this doctrine for centuries. What wonder that their parishioners believe it? It is clerical manipulation, and not reason nor conscience, which upholds this doctrine.

But the most noteworthy feature of Dr. Shedd's article is the deficiency or perversion of moral sense, the disregard of ethical considerations, the apparent unconsciousness of any distinction between right and wrong, which he shows through

its whole course. If he had originally the average amount of reason and conscience, these seem to have been fashioned by his orthodox theology into its own image, so that he remains blissfully unconscious of the utterly diabolical character and course of action which his argument ascribes to the Deity.

He assumes "reason and conscience" to teach what he teaches, but their verdict is plainly in the contrary direction. Reason and conscience condemn the father who deliberately kills his child: if he burns him alive, they consider it an aggravation of his guilt; if by magical arts he succeeded in prolonging his child's life for the purpose of prolonging his suffering, reason and conscience would stamp him as abominable and detestable in character as well as action. What, then, would they say of one who should beget children with the intended purpose so to torture them; of one who, having the power, should make their sufferings endless; of one who should prearrange for millions of such burnt-offerings; of one who should assign and inflict this torture as the appropriate and the just penalty for not believing a doctrine unproved, unreasonable, and incredible?

Reason and conscience justify him who said to such a one as Dr. Shedd, "Your God is my devil." What could Satan himself do worse than what this reverend imputes to God? But he imputes the same fiendishness to Jesus also. He who in this life was the friend of sinners, who came to seek and to save that which was lost, is by and by, according to Dr. Shedd, to approve and inflict the cruelties above hinted at, and to turn a deaf ear to the cries of "the lost," more numerous and more wretched there than in his earthly days. And Dr. Shedd does not realize that, if this were true, the character of Jesus would be far less estimable in heaven than it was on earth. He would not only be changed, but be changed unspeakably for the worse.

But these are not the only instances of Dr. Shedd's insensibility to moral distinctions. He does not suspect the absurdity of satisfying justice by punishing the innocent for the guilty, or of holding a criminal guiltless in consequence of the infliction of the penalty due to him upon an innocent person. He does not suspect the absurdity of making a just God continue endlessly to revenge himself for accumulations of guilt after the offender has "become *unable to keep the law*." He does not suspect the absurdity of calling God's *post mortem* law perfect, because it neither seeks nor desires the reformation of the criminal, and calling the present laws of men imperfect because they propose that work, and take some measures to execute it. He does not recognize the absurdity of grouping together as divinely inspired and infallibly correct all the parts of two different collections of documents, written by different persons in different languages, and in different ages, and not only diverse from one another by mutual discrepancy and self-contradiction, but advocating some the one and some the other of two diverse and incompatible religions. He sees no absurdity in assuming that a wise and just God so constituted man as to make his belief dependent on evidence, and then, in the matter most vitally important to him, required belief irrespective of evidence; nay, worse,—required belief of something which, as intelligence advanced, was shown to be more and more disapproved by evidence. And, finally, Dr. Shedd does not see that proved errors in regard to the authorship, the date, or the contents of one of the Scriptural documents impair, in any manner or degree, the duty of believing its infallible correctness or of obeying its injunctions.

C. K. WHIPPLE.

CARLYLE'S RELIGION.

Such a great moral force and intellectual prodigy as Carlyle cannot possibly become hackneyed or without interest as a topic of discussion. His works in volume almost form a literature of themselves. It is true that his behavior in the presence of the inevitable and ordinary ills of life was not at all that of a philosopher, but of one nervously disposed. Still, inwardly in the sanctum sanctorum of his *me*, or conscious spiritual being, he was sunlike, emitting a steady glow and effulgence. There, he was not weak or querulous; but all was life and light and power and buoyant, electric, magnetic, good humor. Carlyle was a Norseman or Teuton as well by genius as by race. When in his lectures entitled "Heroes and Hero-worship" he treated of the hero as god, it was no Greek or Asiatic deity concerning whom he descanted to his audience, but Odin, the chief of the Norse or Scandinavian pantheon. Froude says that even the Scandinavian gods were nearer to him than were the Hebrew. The Norse mythic fountain, Mimir's well, and the world-tree, Yggdrasil, were more sacred to him than Siloa's Brook or Oriental palm.

He spoke of the Hebrew, Greek, and Latin theologies and mythologies as "old clothes," which were outworn and out of date for us moderns, and especially for men of Norse or Teutonic descent, with their personal purity, individualism, high moral sense, truthfulness, courage, rationalism, and love of reality, fireside, home, and freedom. It was not for such a race, the imperial race of the modern world, to stoop to borrow its theology or theory of human destiny and the universe from slavish, superstitious, treacherous, comparatively unmanly Asiatics, with their utter subservience to social and theological absolutisms. His contempt for the Asiatic character, as well as his entire disbelief in all alleged supernaturalisms, had much to do with his rejection of the Hebrew and Christian theologies, which were yet inbred in his blood, heart, and brains, as it were, by inheritance from generations of devout Presbyterian ancestors of the "Old Mortality" sort of Scott's famous romance. Thus, he used the phraseology of Hebrews and Christians, while he did not pretend to believe in Hebraism or any of the Christian creeds, he regarding their so-called supernatural revelations as myths or fancies of heated brains. To these, we are told, he greatly preferred, with some German writer on the subject, "the old deep Norse Paganism, with its stalwart energy and self-help, with its stoicism, rugged nobleness, and depth, as of very death to any Christianity now going." It was a dictum of his that men can no longer possibly look at the world and life through old Greek, Hebrew, and Latin spectacles, because at last there is a *modern* world, with an altogether changed outlook and environment of institutions, knowledges, and material apparatus for carrying forward every-day life. Thus, he applauds the practical, rough old father of Frederick the Great for confining his son to a study of the French and German languages as living tongues, in which he was to think and speak, while the dead languages of the Greek and Roman past, as studies, were mere mental and moral rubbish.

Carlyle had a constant and haunting sense of the fleetingness, shadowiness, and spectral nature of our mortal lives. He saw men as ghosts walking the streets, and at times his associates and intimates would become spectral to him, the skeleton and death's head, as it were, becoming visible to his morbid and brooding gaze through the tissue and fleshly integuments of their bodies. Death and eternity seemed to be constantly in his

thoughts, and the environing silence of infinite cosmical space, in which our little planet and our little lives with their inane hubbub are floating like mere specks, bubbles, and motes.

In his journal, under date of July 15, 1835, when he was engaged in writing the *History of the French Revolution*, he records how the terrible scenes of the Revolution seized his imagination, haunting him as he walked the streets. London, too, and its giddy whirl of life, that, too, might become as Paris had been. Ah! and what was it all but a pageant passing from darkness to darkness? "The world" (he said at this time) "looks often quite spectral to me. Sometimes, as in Regent Street the other night, quite hideous, discordant, almost infernal. I had been at Mrs. Austin's, heard Sydney Smith, for the first time, guffawing, other persons prating, jargonizing. To me, through those thin cobwebs, Death and Eternity sate glaring!" Thus was Carlyle of an ascetic, melancholic temperament. At one time, he was fond of reading in that great and voluminous literary monument of mediæval superstition of the Benedictines,—namely, the *Acta Sanctorum*. His graphic sketch, in his *Frederick the Great*, of the Prussian Saint Adalbert was a fruit of this reading. This saint flourished in the last years of the tenth century. Carlyle describes him as "a man of genius, one of Heaven's brightest sons born into the muddy darkness of this world; laid hold of by a transcendent Message in the due transcendent degree. He entered Prag (or Prague) as Bishop, not in a carriage and six, but walking barefoot; his contempt for earthly shadows being always extreme."

Curiously enough, Carlyle believed, with the stern old Romans, that, under certain circumstances of personal uselessness and outwornness and subjection to irretrievable calamity and misery, suicide was no criminal desertion of one's post in life, but a justifiable shuffling off of an intolerable and profitless burden of existence.

With Macbeth, he thought in his prevailing mood of mind that

"Life's but a walking shadow; a poor player,
That struts and frets his hour upon the stage,
And then is heard no more: it is a tale
Told by an idiot, full of sound and fury,
Signifying nothing."

He had all his life "the child's heart in the man," so that no amount of experience of the varying aspects of every-day life and the phenomenal world could make them seem common and familiar. He wrote of these things as if he was constantly under a sense of "something far more deeply interfused," of some mystic and eternal Reality which was operating without haste or rest and masquerading under the show of sensible things. Thus was he religious in the old and better sense of the word; and thus did he walk with God, as it were, or the Eternal Power behind the veil of sense. As the sea-shell murmured in the child's ear of its native ocean, so nature, or the sensible world of ear and eye, was full of mystical intimations to him of Deity. By "the silences and immensities," of which he so often wrote and spoke, he meant the stillness and boundlessness of the immeasurable night heavens and of cosmical space. "Old Ocean's gray and melancholy waste," with the everlasting monotone of its surf-beaten strand, sounding like the weary moan of endless effort and duration; the elemental operations of Nature in rural solitudes; the alternations of day and night; the mysterious charm and benediction of moonlight in nocturnal street or lonely valley,—these sights and sounds of nature forever witched him with a feeling of awe and fascination, as the masks and sensible manifestations of hidden Deity. Thus, was the All ever and always to him, in whatever environment he might

be of town or country, "godlike or God." Notwithstanding his sceptical, invincibly rationalistic mood of mind with reference to the creeds of Christendom, Mr. Froude says Carlyle was a determined believer in God and immortality. But he complained, in view of the flood of atheism that was pouring in on mankind in his last days, and which he denominated "The Gospel of Dirt," that God did not manifest himself and vindicate his own existence in a sufficiently palpable manner to stay said tide of atheism. Carlyle was a great admirer of the Athenian Stoic philosopher, Zeno, but was yet no Stoic himself. He was evidently annoyed by Emerson's imperturbable cheerfulness, buoyancy, and sunshininess of manner, as if it indicated a superficial nature. It seemed a demeanor essentially "exotic" to him, which a thoughtful man had no right to wear or assume. He petulantly likened his American friend to a smiling gymnosophist sitting on a flowery bank, while he himself was down in the thick and dust of the battle of life, giving and receiving hard knocks and getting badly bruised, to say nothing of broken bones. As if Emerson, with all his gentleness and sunshine of manner, had not had his share of the world's blows and buffets, as a radical come-outer and antagonist of all popular conventionalisms and beliefs! The difference between him and his self-styled master was that the pupil took his punishment smilingly, while Sartor Resartus made an unmanly ado about it. Carlyle was a prophet and religious teacher, because he had an ever-haunting sense of the eternal Reality which moves this phantasmagorical world from behind the veil of its phenomena, sending ever new generations of living beings, both animal and vegetable, to take the place of those which are constantly perishing, and thus weaving forever the mystic web of life without pause or cessation in the roaring loom of Time. Then, too, for Carlyle, the moral law, inexorable and irrevocable, pervaded the universe of conscious life, vindicating itself at all times and in the lives of all men and generations. Mr. Froude says that Carlyle did not think it possible that educated honest men could much longer believe in historic Christianity. "He had been reading the Bible. Half of it seemed to be inspired truth, half of it human illusion." "The prophet says, 'Thus saith the Lord,' 'In my Father's house are many mansions.' Yes, sir. But how if it be not the Lord, but only you who take your own fancies to be the word of the Lord?" And again, "If you are the Lord, you have a right to say so; but, if you are not, you know no more about the matter than I do." "I spoke to him of what he had himself done. Then, as always, he thought little of it. He thought that scientific accountings for the moral sense were all moonshine. Right and wrong in all things, great and small, had been ruled eternally by the Power which made us." Although his inherited creed had crumbled away in the light of his reason and his profound historical knowledge, still it cropped out to the end of his life in all his talk and writings. For it is not in a single lifetime or in one or two generations that an inveterate religious creed of fourteen or fifteen centuries' persistence can be outgrown. The nations of Southern Europe were pagan for thousands of years. Paganism was a structural outgrowth of their mental and moral nature and environment. Nominally, they have been Christian for many centuries; but, at bottom, they are still pagan, as in primitive times. Carlyle, although he was invincibly rational and sceptical, and although he, by his writings and his own confession, had shaken existing creeds as much as any man "in extricating the kernel of truth from the shell in which it was rotting," still, in his

age-weakness, world-weariness, and loneliness, shrank with aversion and exasperation from the general unbelief which confronted him on all hands in England and on the continent. He could not adjust himself to the new world, which was seriously bent on breaking with the creeds and faiths of the past, and was eagerly accepting the conclusions of science and rational thought. He relucted at the spectacle, and reverted, in his talk at least, to his dead mother's spiritual mood. Like Dame Partington with her mop, he vainly tried, with loud and angry denunciation, to sweep back from his threshold the Atlantic flood of unbelief and democracy which was roaring all around him. To add to his exasperation, cranks of the vulgar, atheistic sort insisted on persecuting him with their pamphlets, which he likened to the yell of hyenas exulting at the fact that the universe was nothing but carrion. The ages of faith were indeed gone, never to return; and Carlyle in his old age could not reconcile himself to the fact. At times, he fairly raved about it, and was like "a geyser in his wrath, throwing up columns of steam, boiling water, and stones." In his journal, under date of Nov. 13, 1869, he writes: "The quantities of potential and even consciously increasing atheism, sprouting out everywhere in these days, is enormous. In every scientific or quasi-scientific periodical, one meets it. By the last American mail, I had two eloquent, determined, and calmly zealous declarations of it. In fact, there is clear prophecy to me that in another fifty years it will be the new religion to the whole tribe of hard-hearted, hard-headed men in the world, who for their time bear practical rule in this world's affairs. Not only all Christian churches, but all Christian religions are nodding towards speedy downfall in this Europe that now is. Figure the residuum: man made chemically out of *Urschleim*, or a certain blubber called protoplasm, virtue, duty, utility an association of ideas, and the corollaries from all that. Man descended from the apes or the shell-fish. France is amazingly advanced in that career. England, America, are making still more passionate speed to come up with her, to pass her, and be the vanguard of progress." Thus, it will be seen that Carlyle belonged to his own earlier day and generation by his heart, if not by his head. The new moral and mental world which was emerging into view alarmed him. That is, like Wordsworth:—

"He grew old in an age he condemned, . . .
And, like the Theban seer,
Died in his enemy's day."

And yet he himself had been the mightiest prophet and forerunner of the new time. For consolation, he threw himself back on Pope's "Universal Prayer," as the pious utterance of reverent reason. Like Heine, he reverted to a belief in the historic, personal, anthropomorphic God of Orthodoxy, history, and tradition. Such inconsistency in similar circumstances will mark the careers of many a profound thinker and scientist for a good many years to come, in the weakness of their human nature; for religion is not truth, but a sentiment, a primitive passion and emotion of human nature, an offspring of its weaknesses, hopes, fears, and aspirations. And because it is a sentiment pure and simple, springing outside of the domain of truth and reason, it is useless to argue with it or about it:—

"Still will the old instinct bring back the old names."

It is the attitude of irrational, unscientific, human nature in the presence of the mystery of the universe, and by reason of its own weakness, wretchedness, and perplexity.

In closing a notice of this phase of his nature, the thought will suggest itself that Carlyle was al-

together in too grim earnest with life, or too constantly in a grimly earnest mood. If existence has its dark side, it has its bright, sunny side also. The festal, genial, social emotions are to be cultivated; and he who keeps his bow incessantly bent deprives it at last of its elasticity.

B. W. BALL.

ABOUT A WORD.

It is clear that Mr. Kennedy and I are of one mind, save as we differ about the uses of a word. I am heartily glad to have written anything that should call from him such a definition and declaration of position. What he has said of political democracy cheers and exhilarates me, for I find in it an assurance that our system is coming to be observed by that unbribed, judicial eye whose services it has wanted too long. But now about words. Good words get spoiled, as has happened to "spiritualism" and "socialism." We cannot at once replace them, and cannot very well get on without them. But the mischief is irreparable: a spoiled word can no more be restored to its proper use than an addled egg can be made sound. This is embarrassing, but it is still more so to have in current use and for important purposes a double-faced word. A face may vary in expression without losing its identity, and so a word may have various shades of meaning without prejudice to its proper simplicity. But a word with two faces differing extremely or entirely in character leads to a confusing duplicity of expression that in numbers will make confusion of thought. What is said with one intent is applied to a quite different intent, so that the speaker, however clear in his own mind, can never be quite sure what he is saying to his auditors.

Now, democracy was originally a political term, like monarchy. It meant popular government, the supremacy of the *demos*, *populus*, people. But *demos*, as implicated in this term, even while it retains its strictly political signification, is itself one of the spoiled words. Once, it meant a body of persons or families grown together in an historical and moral unity: now, it means a miscellaneous aggregate of individuals comprised within the limits of a certain territory and living under one government. However, democracy is none the less a political method; that is, a means to such ends as are named in the preamble to the Federal Constitution. And the more strictly it is regarded and judged as such, the more likelihood will there be of getting good out of it. Let it be seen in Bacon's "dry light" as simply a means to an end, and, if it does not work well, men will permit themselves to see the fact, and to inquire why it does not work well. Thus, defects will be supplied, imperfect methods amended, and the best that the system is capable of brought out of it. All this is the more to be desired, since modern democracy is still young. It has a character of its own, quite different from anything that was known in ancient times; and it is still in its green years, with much to learn from experience and much self-correction to undertake. But, at present, we seem under a sort of enchantment. Never was a people so tolerant of shambling inefficiency in its public affairs. Congress does a little good work, with quite as much of inexcusably bad work; but its supreme faculty is that of doing with labor nothing to purpose. It talks, shuffles, plays at party strategy, and huddles up appropriations in the last days or hours of a session. We look on without concern, persuaded that all is well. Why this curious indifference? The secret, as I believe, lies in the fact that democracy is a double-faced word, and that the virtue of the face which really does not belong

to the fact is nevertheless carried over to it to cover all defects and atone for all faults.

The finest characteristic of the modern spirit is its breadth of sympathy, its appreciation of human worth without regard to external conditions. The difference which Mr. Kennedy notes between Homer and Scott in this particular is a real one; and, if I may judge, he does by no means exaggerate its importance. There is nothing else in the modern spirit so large, so generous, so productive and promising as this character, which is also most peculiar to itself. But this character is associated with no political method or opinion. It is as pronounced in Scott, the tory, in Wordsworth, the rigorous conservative, and in Carlyle, the advocate of "one-man power," as in any democrat whatsoever. Goethe was a representative of "intellectual aristocracy"; but where shall we find a more sympathetic appreciation of wholesome, humble life than in his *Hermann and Dorothea*? For this reason, first of all, I do not give the title of democracy to that characteristic of the modern spirit: it declares itself quite independent of political opinion. Why should it have a political title any more than that scientific tendency which is also a characteristic of the modern epoch? Again, Scott draws the figure of Edie Ochiltree, and exhibits worth and dignity of being in a licensed beggar. What reference in this to any *demos*, any body of permanently associated men, or to any *cracy*, any sovereignty, supremacy, or power of rule? I can find none whatever; and, therefore, it seems to me that to apply the term "democracy" here is to make it a double-faced word of the most deceiving sort. The effect is to invest democratic botchwork with a glamour that enchants men and cheats their eyes. Mr. Kennedy cannot be so cheated, but how many can be so and are!

D. A. WASSON.

PREJUDICES OBSTRUCTING THE SCIENTIFIC STUDY OF RELIGION.

This is the title of the lecture which Count Goblet d'Alviella gave as the first of his course on the History of Religions, and which is published in the December number of the *Revue de Belgique*. He begins by showing how sadly those who try to teach what the Old Testament really means, like Colenso, Kuenen, and Lenormant, have been hindered by belief in its infallibility. So the study of the heathen religions has to contend against a bigotry which refuses to hear them spoken of, except for the purpose of making them appear inferior to Christianity. Then, again, there is the philosophic prejudice, for instance, of those followers of Comte, who insist that all religions began with fetichism, though history proves this to be rather a late phase of their development. The philosophers of the last century were no more narrow in asserting that all religions were created by priestcraft than are those recent speculators who think that theology is only astronomy. To say that the gods were only deified men is really not much more unscientific than to lump them all together as solar myths or dawn myths or art myths, according to the fancy of different theorists. All these explanations may be of use when taken together, so that each can correct the others; but no one of them is sufficient by itself. Exclusive devotion to any one science—for instance, philology—is often found to blind specialists to the value of other methods of research. And, finally, there is the irreligious prejudice which sees in mythology and theology nothing but rubbish, which ought to be buried out of sight. Those who work in such a spirit must stir up more prejudice than

they can drive away. August Comte used to say, we can destroy only what we replace. We might also say that we can destroy only what we explain.

This maxim of Count d'Alviella ought to be kept in mind in our contest with that implacable foe of free thought, the Roman Catholic Church. Protestant sects we shall sooner or later find working with us, as a growing party in each one of them would be glad to be now. Everywhere there is progress, except in that Church which boasts herself the same yesterday, to-day, and forever. The same organization which burned John Huss and Giordano Bruno, carried on the crusades and the inquisition, massacred the Albigenes and Huguenots, is fighting against our free schools to-day. In order to hold our own against her, we must keep in mind the foundation on which she rests. All her growth is not to be ascribed to ignorance, for her origin was in a comparatively enlightened age. What did more than anything else to create her was the popular desire for salvation. The wish to win heaven and escape hell has made men and women distrust their own goodness, and long for supernatural help. Jesus sought to satisfy this want by teaching the sufficiency of faith in himself. The early Church insisted on faith in Christ with an earnestness which inevitably expanded it into belief in the established creeds. Those who expected to be saved by faith naturally tried to believe as much as possible; and the more incredible the creed, the more meritorious its acceptance. As the creeds grew in length and value, the preachers who expounded them found it necessary to organize so firmly as to be able to feel sure that only the orthodox faith was taught. Correct belief was thought necessary for salvation, and bishops and popes had to be empowered to tell people what to believe. This preference of faith to reason checked mental culture, and hastened the general intellectual decline during the early Christian centuries. All inward life, even in the form of faith, seemed less important than outward observances. These had been insisted upon by Judaism and all the heathen religions, as means not only of training mankind in morality, but of propitiating God. The early Church found her converts prone to rely on ceremonies; and, one by one, she incorporated the familiar rites with such changes as were needed to adapt them to her own creed. Thus, her preachers became priests, and their power increased rapidly. The people looked to the creeds and ceremonies of the Church to carry them to heaven, and for a time forgave her oppression and corruption for the sake of her fancied aid. They were like sailors out at sea, who hate their officers, but know there is no safety outside of the ship. It was this reliance on the saving efficacy of the Church which delayed the Reformation for centuries, and which has kept it so nearly within the limits it reached in the sixteenth century. Protestantism has only partly met the difficulty, for regard to its church interests has kept it from teaching man his full capacity to save himself. The best way to meet all ecclesiastical usurpation and extortion is to insist on the ability of ordinary men and women, in happy families and honest business, to work out their own salvation. If we live amid favorable social and domestic influences, we have no right to distrust our capacity to fit ourselves for all the requirements of this life or of any other. If we lack inspiration, we must seek it by improving either our own physical and mental condition or those daily influences which make up our home. What the world needs is not the multiplication of churches, but the elevation of business relations as well as of social and family life.

F. M. HOLLAND.

A REPLY TO THE "CATHOLIC REVIEW."

We mentioned recently the case of a convict in the penitentiary at Joliet, Ill., who feigned insanity, in order that he might get to the hospital and effect an escape. Being extremely violent, threatening, if any one dared approach him, to kill a fellow-prisoner, whom he had clutched by the throat and behind whose body he was shrewdly barricading himself, it occurred to the warden that, since this convict was a Catholic, he might submit to a priest; and, accordingly, he sent for one, who came and soon had the fellow on his knees. A medical examination, made subsequently, showed that the convict was in health, and that his insanity was wholly feigned. We cited this case—not unfairly, we thought—to illustrate that men may believe in theological dogmas and have great reverence for the priest, and yet have no regard for law or the precepts of morality. We expressed the opinion that, if the Catholic Church made morality, as it now makes theological belief, primary in its teachings, it would thereby improve the character of its adherents. We admitted that in a riot or a revolt in a prison the priest was often useful, as he was in the case above mentioned, for the reason that the lower class of Catholics, being the victims of superstition, can be restrained only by its imaginary terrors, and, being in their religious education the creatures of the priest, are submissive to him, when moral appeals have no effect whatever upon them.

Our contemporary, the *Catholic Review*, which has an editorial article in reply to our remarks, takes a different view of the subject. It says: "Where force failed, the influence of religion at once told. . . Obviously, a common-sense comment on such an incident, granting the details to be true, is that the chaplain proved an excellent aid in a grave emergency. It goes to emphasize what we constantly insist on, that prisons and reformatories should be thrown open, at stated times and in accordance with discipline, to the clergymen of such denominations as the prisoner may profess or desire to profess. Well, in the instance cited, logical and atheistic Mr. Underwood only sees another example of 'the bad influence of priestly teaching.' The effect of the priest's expostulation on the raving criminal was not due to reverence for God's minister, but wholly and solely to 'superstition.' And our Boston logician goes on to rave in this fashion: 'The Catholic Church attaches more importance to belief in theological dogmas and in submission to the priest than to the virtues the practice of which is indispensable to character and all-important in conduct.' Of course, it would be absurd to ask this logician for his authority for such a statement."

That the Catholic Church is not indifferent to the moral character of its adherents was freely admitted in the article which the *Review* criticises, but we claimed that it attaches primary importance to faith. This is certainly true. Heresy it regards as the most dangerous sin. Members of the Catholic Church are not excommunicated for lying, theft, drunkenness, robbery, or other crimes; but for heresy they are excommunicated. Without theological belief (except in cases of "invincible ignorance"), the Catholic Church teaches that there can be no salvation. With faith and compliance with the requirements of the Church, whatever offences against morality have been committed, salvation is certain. Do not these facts teach that the Catholic Church makes theological faith primary and morality secondary? The convict above referred to had plenty of faith, although destitute of moral character; and there was no lack of "reverence for God's minister," although it was accom-

panied by no reverence for the moral law, showing that his religious training, and possibly that of his ancestors whose traits he has inherited, received more attention than was given to his and their moral education. Of course, so long as faith and reverence for the priest are of primary importance in the education of Catholics, the priest will be a necessity, and often useful in restraining the lower classes from violence, since the very teachings of the Church make the priestly presence and influence the only means by which these classes of its adherents can be reached. But the theological teachings of the Catholic Church are responsible for that type of character, that combination of faith and fear, that strange mixture of servile superstition and moral savagery represented by the Joliet convict.

B. F. UNDERWOOD.

EDITORIAL NOTES.

BY B. F. U.

SEVERAL colored men, having been refused admission to a skating rink in this city, merely because of their color, very properly brought a suit against the proprietor for damages. In the first cases decided, fifty dollars apiece were awarded the complainants. An appeal was made by the defendant to a higher court, but with no prospect of a reversal of the verdict.

In an exchange, we find quoted from O. B. Frothingham the following paragraph, which, in our opinion, is fairly applicable to the great majority of sectarian journals published in this country:

As a rule, "religious" papers are a reproach to journalism, on account of their unfairness and their rancor, their persistency of misrepresentation and the unswerving constancy of their abuse. Political papers have their seasons of suspended hate, but the ill-will of the religious organ toward its opponents is systematic and continuous. . . . It is the fatality of the Christian pretension under all its forms that it renders impossible reasonable judgment of dissent. The editorial, the comment, the record of intelligence, the book review,—all betray the malignant temper.

THE *Journal of Speculative Philosophy* for January, 1884, the latest number but one,—the number for April, 1884, having just been issued,—contains an article by the editor on "Rowland G. Hazard's Works." Dr. Harris does us the honor in this article to quote largely from our notice of Mr. Hazard's latest work, *Man a Creative First Cause*, which appeared in *The Index* of Nov. 8, 1883; and the passages quoted are made the subject of some comments which we have failed to examine in *The Index*, partly because of the purely speculative nature of the subject and partly because of other demands upon our time and space. We may recur to the subject in the near future. We are not strongly impressed with Dr. Harris' reasonings on this subject; but the courteous and generous spirit in which he conducts the discussion must win the respect of all his readers, whether they agree with him or not.

THE Boston *Saturday Gazette*, in a reference to Joseph Cook's last published volume, says: "Here, as in other lectures, Mr. Cook worships at the feet of those who are in accord with him in opinion, and treats those with whom his theories find no favor with lofty scorn and scant courtesy. When he roars, he thinks he is reasoning; and he imagines that, when he strikes an adversary with a bludgeon, he has settled the intellectual point at issue at once. His success is a sensational one in a sensational era. In all his lectures, he has uttered nothing of permanent value that has not been better said by others. He may be looked upon as the apostle of modern bigotry as manifested against intellectual progress, and his theories may be characterized as a mixture of German philosophy

and water. This, his latest book, is a curious jumble of badly digested learning and iron-clad egotism. It will, of course, please his admirers who have learned to regard his words as oracular; but more thoughtful readers, who do not consider a noisy and a wordy statement to be necessarily a truthful and a well-framed argument, will either yawn or smile at the bluster and the conceit of the self-satisfied lecturer."

FROM the *Independent*, we take the following paragraph:—

. . . We point to Christ as the only Saviour, but yet one shrinks from declaring that all those who never heard the name of Jesus are lost. The true state of the case may be given thus: No one can be saved except as he follows Christ, as no one can walk except by the light of the sun. But, as the sun may show one the path before it has become visible above the horizon or when its face is obscured by clouds, so Christ may be followed by those to whose vision his form has never been revealed. As many as are led by the spirit of God, they are the sons of God; and men may be following the mind of Christ, not only in the clear sunlight of orthodox theology, but also in the twilight of nature or beneath the thick clouds of superstition and erroneous opinion. God is love, and he who believes in love believes in God. Christ is the truth and the light; and he who loves and follows truth and light and purity and righteousness loves and follows Christ, though the story of the divine Nazarene has never been unfolded to his eyes.

The doctrine that "he who loves and follows truth and light and purity and righteousness," whether or not he believes in or has ever heard of the gospel story of Jesus, will be among the "saved," must no doubt be expressed in some such phraseology as the above, in order to be acceptable to those who have adopted rational views as to the true basis of character and moral merit, but are still subject, more or less, in their ways of thinking and modes of expression to the influence of a theology to which they can no longer give intellectual assent.

OMAR KHAYYAM.

If the Power which made me had asked my leave,
Before it made, to make me,
I would have said: Think what you do,
And don't, if it's all the same to you.
Why make me for Death to break me?
That is to say, what may be me
Is earth, as again it must be:
What is the use of moulding Man
Who is fated to end as he began?
Poor dust, which can only dust be.

But if I must be, give me so much leave
As to say what my mind discloses:
I would have shaped this clay of mine
Into the pitcher that holds the wine
Or into yon bush of roses.

—R. H. Stoddard.

TO OMAR KHAYYAM.

Omar, in the six hundred years and more
Since thou first gazed upon the flowery shore
Where dwells the prophet near to Allah's throne,
Hast thou yet learned the heavenly Potter's lore?
The why and how he made some vessels fair,
And graceful some, with decoration rare,
While others poor and plain misshapen urns
Came forth from that same hand: did he not care
That they must bear the stamp he gives away,
That no man's art may give or take away
One hump or wrinkle either more or less,—
Great need each human jar should "gently pray"
For patience and an all-abiding grace
To see in each poor form a heavenly face!
Would thou couldst tell us, Omar, who hast seen
The sacred mysteries of that higher place!

ABBIE FRANCES JUDD.

WESTBORO, MASS.

The Index.

BOSTON, FEBRUARY 5, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, : : : : : } Editors.
BENJAMIN F. UNDERWOOD, : : : : : }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

A Study of Primitive Christianity.

BY LEWIS G. JANES.

VII.

THE CHRISTIANITY OF PAUL.

Next to the personality of Jesus, that of Paul is the most interesting and noteworthy in the history of primitive Christianity. Auguste Comte and other students of this history have even assumed for Paul the credit of being the real founder of the Christian religion, regarding the gospel story as a mythical and legendary relation of no historical value. Our previous discussion, however, has prepared us to reject this hasty conclusion, and to assign to Jesus his proper historical position. "In Jesus himself," says Prof. Allen, . . . "there were—besides the indefinable something which resides in personality—at least two elements, one of vast personal force and the other of great historical significance: his intense conception of purely moral truth and of religion as a life, and his equally intense conviction of his calling as the Messiah of the Jews. These were the necessary antecedents of the revolution. . . . But, as soon as the movement widens out beyond the narrow range of a merely personal and local influence, then the life and work of Paul come to be just as essential to any real understanding of it."*

Our only reliable record of the teaching of Paul is found in the genuine Pauline Epistles of the New Testament, which, as we have seen, are the earliest extant Christian writings. The Acts of the Apostles, which in some particulars confirms the testimony of the Epistles, in others distorts or contradicts it, and is therefore of very little historical value in our study of Paul, except as it gives us some information, probably from reliable sources, of his early life and history. The date of its composition is much later than the dates of the Epistles; and its general character is that of a

"tendency writing," the object of which is not so much the dissemination of historical truth as the reconciliation of two conflicting parties, into which, as we shall see hereafter, the early Christian communities came to be divided.

Of the fourteen Epistles attributed to Paul by the current orthodox tradition, all except four—Romans, First and Second Corinthians, and Galatians—have had their authenticity questioned by able critics. There are unquestionably differences in thought traceable in the earlier and later Epistles; and, in the case of Hebrews, these differences are so marked, and are accompanied by such a notable divergence in style and phraseology, that we are justified in concluding that Paul could not have been its author. With this exception, however, and with the exception also of the Epistles to Timothy* and Titus, and perhaps also Ephesians, the internal evidence would appear stronger in favor of their authenticity than in opposition thereto. The differences of thought observable are no greater than might be expected in the mental progress of a man of the wide experience and great mental activity of Paul.†

The Legend of the Resurrection.

Paul is the earliest witness to the prevalence of the legend of the resurrection of Jesus among his disciples and followers.‡ Since Paul bases his Christian belief and teaching upon this phenomenon as an established fact,§ and since Christendom has accepted it as the foundation stone of its spiritual edifice, it becomes necessary, in our further consideration of the evolution of the early Christian faith, to investigate briefly the evidences of this remarkable occurrence, as presented in the writings of the New Testament. The Triple Tradition says nothing of any miraculous appearance of Jesus after death, nor of his ascension to heaven, the concluding verses of Mark being admittedly a spurious addition to or alteration of the original manuscript. In the account of the oldest Gospel,|| the two Marys and Salome, going to the sepulchre at sunrise on the first day of the week, find the heavy stone rolled away from its entrance, and discover "a young man, . . . clothed in a long white garment," sitting within the sepulchre. He informs them that Jesus is risen, and bids them tell Peter and the other disciples that the Master has gone before them into Galilee, where they shall see him as he had promised.

In Matthew,¶ the "young man in a long white garment" has become "an angel of the Lord," whose "countenance was like lightning, and his raiment white as snow." The two Marys go to the sepulchre, and are addressed by the angel; but no mention is made of Salome. Jesus now appears, first to the women, near the sepulchre, and afterward to the eleven disciples in Galilee. The record of his reappearance is very brief; and it is significantly added, "And when they saw him, they worshipped him; but some doubted." This Gospel contains no record of the ascension of Jesus.**

In Luke,†† we find the women, including one

*The Epistle to Timothy is dated "from Laodicea, which is the chiefest city of Phrygia Pacatiana"; but Phrygia was not separated into three divisions, of which Phrygia Pacatiana was one, until the fourth century. See Horne's *Introduction*, ii., 174. The Epistle, however, was of earlier date, though not written by Paul.

†The leading Epistles of Paul were probably written in about the following order: 1, II Thess., about A.D. 52; 2, I Thess., A.D. 53; 3, I Cor., A.D. 57; 4, II Cor., A.D. 57; 5, Gal., A.D. 58; 6, Romans, A.D. 58; 7, Phil., A.D. 62; 8, Col., A.D. 62; 9, Phil., A.D. 63. For a discussion of their authenticity, see Baur, Chadwick (*Bible of To-day*), *Supernatural Religion*, Renan's *Saint Paul*, etc.

‡I. Cor. xv., 3-8; I. Thess. i., 10, etc.

§Ibid., xv., 17.

¶Mark xvi., 1-8.

‡Matt. xxviii.

**On the contrary, the final words, "Lo, I am with you always, even unto the end of the world," would appear to exclude the ascension definitely from the thought of this writer.

††Luke xxiv.

Joanna, not before mentioned, going to the sepulchre as before, but not alone; for "certain others were with them." Instead of a single "young man" or "angel" as in the earlier gospels, we have now "two men in shining garments," who converse, apparently in concert, with the women. Then follows a long and circumstantial account of the appearance of Jesus to the disciples,—not in Galilee, as expressly declared in the earlier Gospels, but at Emmaus near Jerusalem, and afterward in Jerusalem itself. Subsequently, without going to Galilee at all, he parts from them and ascends to heaven from Bethany.

In the Fourth Gospel,* the story is still further altered and exaggerated. Mary Magdalene first discovers the removal of the stone from the sepulchre, and reports it to Peter and John, who run thither in haste. John arrives first, and discovers the sepulchre to be vacant, but with the grave clothes still remaining. In the synoptics, the resurrection is represented as an anticipated event which Jesus himself had prophesied; but here we are informed that Peter and John "as yet knew not the scripture, that he should rise from the dead." The "two men in shining garments" of Luke have here become "two angels in white, the one sitting at the foot and the other at the head of where the body of Jesus had lain." Jesus appears first to Mary and afterward to the disciples, apparently in Jerusalem or the near vicinity, passing mysteriously into their midst, where they sat with closed doors. He shows them his wounded hands and side, and permits doubting Thomas to thrust his finger into the wound. Subsequently, in Galilee, he eats and drinks with the disciples. The Fourth Gospel contains no record of the ascension; but the long and circumstantial account of his reappearances concludes with the remarkable assertion, "There are also many other things that Jesus did, the which if they should be written every one, I suppose that even the world itself could not contain the books that should be written."†

The striking and indisputable evidences thus presented in the gospel narratives of the gradual growth and exaggeration of the legend, together with the evident contradictions of the different writers, even were their personalities known and their reliability as witnesses incontestable, would justify us in relegating the entire story to the region of myth and legend, in which there is no substantial basis of actual fact. All that we can rationally infer from these relations is the probability that the sepulchre of Jesus was visited soon after his burial, and discovered to be empty. We can only conjecture in regard to the actual disposition of the body. It may have been removed by friendly hands to prevent the violation of the burial-place by enemies, or by the Roman authorities to thwart the curiosity of the disciples or the inhabitants of the neighboring city. Renan even suggests the theory of a swoon and subsequent resuscitation,‡ noting the fact that the legs were not broken after the body was taken from the cross, as was the custom with crucified malefactors. This hypothesis, however, hardly appears reasonable.

Though the story of the resurrection is thus seen to have no rational foundation, even in the circumstantial accounts of the gospel writers, there

*John xx., xxi. In the Fourth Gospel, Mary does not recognize Jesus when he addresses her, but supposes him to be the gardener; in Luke, the disciples converse with him a long time before they discover his identity,—most improbable circumstances, tending to discredit the entire story.

†John xxi., 25.

‡So also the author of *Supernatural Religion*, who notes that the body remained upon the cross a much shorter time than usual. The question would then rise, however, what became of Jesus after his resuscitation? The difficulties in answering this question consistently with the prevalent belief in a supernatural resurrection are greater than those involved in the other solution.

*Saint Paul, in *Christian History*, vol. i. By Prof. Joseph Henry Allen.

is abundant evidence that the legend obtained very early credence among the disciples and followers of Jesus. Nor is it in any way remarkable that this should be the case. The immediate followers of Jesus were, in the main, a rude, uneducated people, believing in the possibility of all sorts of miraculous occurrences, and especially impressed with the belief in the general resurrection of the just at the advent of the heavenly kingdom. Profoundly influenced by the life and teachings of the Master, confidently regarding him as the expected Messiah of his people, recovering from the first shock of his tragical removal, and informed that his sepulchre had been visited and found vacant,—confirming this assertion, doubtless, with their own vision,—what could be more natural than that the thought should take possession of them that he had risen, becoming, as Paul declares, the “first-fruits”* of the final resurrection? The thought no sooner occurred than it found utterance: “He is risen! He has triumphed over his enemies. He will come again, sustained by the infinite power of the heavenly Father, and complete his work.” If the synoptical tradition is reliable, they had abundant reason for this expectation in the promises of Jesus himself.† It is quite probable, however, that the language here attributed to him had its origin, or suffered material modification, after the belief in the resurrection as an accomplished fact had been generally received among his followers; growing, doubtless, out of some assurance which he had given of the general resurrection at the anticipated advent of the heavenly kingdom.

Paul's Doctrine of the Resurrection.

Paul's doctrine of the resurrection, unlike that of the Gospels, did not involve the belief in the resuscitation of the physical body. With him, it presupposed no such reanimation of flesh and blood and bones, of gaping wounds and bodily appetites, as is described to us in the gospel stories. “Flesh and blood,” he declared, “cannot inherit the kingdom of God.”‡ A spiritual body possessing form and substance, doubtless, but of an ethereal nature, and without the fleshly weaknesses and appetites of the present life, was to be the habitation of the soul in the life to come. Paul's conception appears to have been, not that Jesus had been restored bodily to life, but that, in spiritual form, he was “raised from the dead”; that is, that he was released from *sheol*, the resting-place of the dead prior to the general resurrection, and had ascended to paradise, the dwelling-place of God and the angels, whence he would soon return to judge the world and inaugurate the heavenly kingdom.

Paul expressly declares that his own vision of the crucified Jesus was of precisely the same character as that of the other apostles.§ He bases his claim to be an apostle, indeed, upon this fact. From his own account of this vision, we readily gather the conclusion that it was an experience entirely subjective in its character. Paul appears to have had a peculiarly susceptible nervous organization, and to have been subject to visions and ecstasies. This, indeed, he admits and describes, saying of one such experience that he knew not “whether he was in the body or out of the body.”|| The testimony of Paul, therefore, which is the earliest and most reliable testimony to the resurrection of Jesus, appears to be based wholly upon a subjective vision, and cannot be held to substantiate the objective fact of his bodily reanimation and reappearance.

The Early Life of Paul.

The great Apostle of Christianity to the Gentiles was born at Tarsus, in Cilicia, a province of Asia Minor, about ten years after the commencement of the Christian era, as usually reckoned, or some fourteen years, probably, after the birth of Jesus. His parents were Pharisaic Jews; and they bestowed upon him the name of Saul, after the first king of united Israel. He was brought up, as he declares, “after the strictest sect of the Pharisees.” His education was doubtless superior to that of any of the immediate disciples of Jesus. Among his teachers was the celebrated Rabbi Gamaliel. His writings give evidence of some acquaintance with the Greek poets, and to a greater and notable degree with the Platonic philosophy as well as with the Hebrew Scriptures. Paul's familiarity with the philosophy of Plato has often been recognized, and has recently been made the subject of an interesting essay by Dr. Alexander Wilder, one of our most indefatigable students of ancient philosophy and the Oriental religions.* An able orthodox scholar, Rev. Dr. Storrs, also recognized this fact, incidentally, in a late address, in which he asserted of Saint Augustine that a passage from Cicero led him to Plato, thence naturally to Paul, and thence to the study of the Christian religion.†

The parents of Saul had acquired the rights and privileges of Roman citizens, either as *libertini*, or emancipated slaves, or for some special service rendered the Roman State. In accordance with a prevalent Jewish custom, which required that every youth should be instructed in some useful art, Saul learned that of tent-making; or rather, probably, the weaving of the coarse cloth called “cilicia,”—from the name of his native province,—of which tents and sails were usually made.

The description of his personal appearance can hardly be better given than in the words of Prof. Allen: “Paul, then, according to the legends, was a man little of stature,—under five feet high, they say,—high-shouldered, beetle-browed, with head bent forward, his beard and hair at middle life of an iron gray; his brow wide, his face thin, his eye deep and somewhat sad; the dark eye, the marked features, we may suppose, of the strong Jewish type. His bodily presence was weak and his speech contemptible,—so his enemies said. That his speech was hesitating and slow, when not aroused, we may believe easily enough. It was so with Demosthenes; it was so with Mahomet, who, next to Paul, has shown the most burning and effective eloquence of the Semitic race, and in whom, like Paul, that barrier of hesitation gave way on occasion to a hot flood of eager and passionate words, that stirred great floods of popular conviction.”‡

His Advocacy of Judaism: Hebrew Proselytes.

Brought up after the strictest tradition of the Hebrew formalists, he doubtless early became a propagandist of his faith, and a vigorous opponent, not merely of alien religions, but more especially of those false brethren of his own religion who had departed from the faith of their fathers. The Jews of this period, already scattered in diverse quarters of the world, had begun to make proselytes from among the heathen peoples who surrounded them, and were thus extending their faith beyond the boundaries of the Hebrew race. These proselytes, when received into full communion, were circumcised and fulfilled all the ceremonial observances enjoined by the law. Others became partial converts, accepting the Hebrew

* *Paul and Plato*, by Prof. Alexander Wilder.
† Rev. Dr. Richard S. Storrs, in address at anniversary of the Union for Christian Work, Brooklyn, N.Y.
‡ *Christian History*, vol. i.

doctrine of the unity of God, abjuring idolatry, and sometimes attending worship at the synagogues, but without consenting to the rite of circumcision or binding themselves to the minute observances of Pharisaic ritualism. These partial converts to Judaism were termed “proselytes of the gate.” Many of them became early converts to the Christian faith, and differences soon arose between them and those followers of Jesus who were also strict observers of the law.

Stephen's Martyrdom: The Conversion of Saul.

Stephen, one of the earliest martyrs of the new religion, was a Greek-speaking Jew,—the leader of the Hellenic or liberal party in the Christian community before Paul's conversion, as opposed to the mass of the Jews and to the stricter sect of Judaizing Christians. Already, we find the germs of a division of the advocates of the new religion into conflicting parties according to their original status as Jews or Pagans,—a breach which, as we shall see hereafter, ultimately widened into an almost fatal schism. Heretofore, the Christians had been popularly and justly regarded merely as a sect of the Jews,—the sect of the fulfilled Messiahship. “Christianity,” says Dean Milman, “as yet was but an extended Judaism: it was preached by Jews, it was addressed to Jews, it was limited, national, exclusive.”* But with the conversion of “proselytes of the gate,” and of heathen who had never adopted the Jewish faith, a new element, and for the time a troublesome one, was introduced into the infant community. Stephen, a leader or representative of this element, accused of violating the law of Moses in favor of the Hellenists, was stoned to death according to the provisions of that law, Saul withholding and consenting to his martyrdom.†

Fanatic though he was, however, there was doubtless something in this scene—in the nobility and heroism of the martyr—which touched the heart and conscience of the Hebrew propagandist. While travelling toward Damascus, soon after, with the purpose of continuing there the work of purifying the religion of his people by the persecution of its enemies, he saw around him a blinding light, beheld a vision of the crucified Jesus, and became conscious of the peculiar subjective experience which led to his conversion. He entered Damascus, no longer the advocate of Pharisaic Judaism, but a disciple of the Prophet of Nazareth.‡

At what time he signalized his change of faith by substituting the Greek name Paul or Paulus for his original Hebrew designation, we are not informed. He probably assumed the new name soon after his conversion, perhaps at the time of his baptism. It has been thought by some that he adopted it from that of Sergius Paulus,§ the Roman pro-consul of Cyprus, a place visited by Paul early in his missionary career. Sergius Paulus was a man of liberal and enlightened mind, a friend and protector of the Christians, though he was never baptized into the new faith. “Paulus,” however, was a sort of “nickname” in use among the Greeks and Greek-speaking Romans, meaning “the little”; and it may have been first applied to Saul in derision, and finally adopted by him in humble recognition of his insignificant size and appearance.

Paul's Missionary Labors: His Relation to the older Apostles.

About three years elapsed after Paul's conversion before he began his remarkable career as a Christian missionary.|| More than half this time was spent in Arabia; the balance, we know not where,—except that he returned, first, to Damas-

* *History of Christianity*. † Acts vii., viii.
‡ Compare Gal. i., 11-16, with the story of Saul's conversion in Acts ix., 1-9.
§ See Acts xiii., 7. || Gal. i., 18.

cus,*—or in what manner he occupied himself. Doubtless, he was to some degree an invalid during this period; and it is probable that he also felt the necessity of acquainting himself further with the doctrines and traditions of the new faith before he appeared as its public advocate. This period of retirement was perhaps in part devoted to solitary meditation, as was the custom with philosophers and the teachers of religion.

The limits of this discussion will not permit us to follow Paul through all the details of his remarkable career as an advocate of Christianity. After this period of retirement, he visited Peter and James at Jerusalem,† but apparently received little encouragement from them in his new labor. It is not remarkable that the older apostles should hesitate to give full credence to the honesty of purpose of their old-time persecutor, especially as they regarded his claim to be an apostle—a claim which he based, not upon their commission, but upon his own alleged communication with the risen Saviour—as a false and indefensible pretence which conflicted with their proper authority as the chosen companions and representatives of Jesus. Paul made another brief visit to Jerusalem fourteen years later‡ for the purpose of declaring his gospel and maintaining the rights of the Grecian and non-Jewish converts. He also met Peter once at Antioch; but, beyond this, he appears to have had little intercourse with the personal followers of Jesus.

CORRESPONDENCE.

A REPLY TO MR. ANNET.

Editors of The Index:—

In *The Index* for January 15, Mr. Peter Annet takes exception to my statement of Herbert Spencer's views and asks for my authority. I thought that the quotations given, which were in Mr. Spencer's own words, made the matter plain; but Mr. Annet's comments show the need of a fuller statement.

He first objects to my saying that Spencer is an idealist, and asserts that "Mr. Spencer is anxious that he shall be clear from these accusations." It would be interesting to know what his authority is for this assertion of Mr. Spencer's wishes, as I do not find any such expression in his published works. Before quoting Mr. Spencer's own printed statement of his views, let me say that I did not use the word "idealism" in the narrow meaning given it by Stewart, of disbelief in the existence of matter. In that sense, Mr. Spencer is not an idealist; and I doubt whether any man of note is. I used the word in the meaning given it by Hamilton and most other modern writers, according to which materialism is the denial that there is anything but matter. Idealism is the assertion that, underlying all material phenomena, is an ideal noumenon, the infinite and absolute creative power; and Positivism is willing neither to assert nor deny the existence of anything beyond matter, leaving the question wholly negative and blank. In this sense of the word, Mr. Spencer's position is very clear. He does not hold that we can comprehend the Infinite Substance. Very few idealists do. But, in his *First Principles*, p. 551, he says: "We saw that the belief in a Power of which no limit in time or space can be conceived is that fundamental element in religion which survives all its changes of form. We saw that all philosophies avowedly or tacitly recognize this same ultimate truth; that, while the relativist rightly repudiates those definite assertions which the absolutist makes respecting existence transcending perception, he is yet at last compelled to unite with him in predicating existence transcending perception." On p. 110, he calls it the Creative Power; and, on p. 109, he does not deny for it personality, but says the choice is "between personality and something higher." In the *Nineteenth Century* for January, 1884, p. 12, he says, "Amid the mysteries which become the more mysterious the more they are thought about, there will remain the one absolute certainty that he [man] is ever in presence of an Infinite and Eternal Energy from which all things proceed." In

the *Nineteenth Century* for July, 1884, p. 5, he says of that philosophy which limits itself to phenomena: "I have in more than one place and in the most emphatic way declined thus to commit intellectual suicide. So far from regarding that which transcends phenomena as the all-nothingness, I regard it as the All-being." In the very passage which Mr. Annet cites to prove the opposite, from Spencer's last essay (reprinted in *Popular Science* for January, 1885), he says, "We are obliged to be conscious of a reality behind appearances," and "the existence of that which is beyond the phenomena is a necessary datum alike of our thoughts and our words." This view Mr. Spencer has often repeated, and it is difficult to see how he could have expressed the fundamental notion of idealism more clearly. It is true that he has attacked some minor idealist notions, but his essential harmony with the idealist basis is none the less clear.

Mr. Annet thinks that I made a wrongful charge against Mr. Spencer of dickerings with Christianity, because I said that his views approach more nearly to it than the negative views of a large part of his followers. It still seems to me that a positive belief in an Infinite Absolute Substance, a psychic and creative Energy, through which and in which all things exist, is a long step in religious belief beyond those who limit themselves to phenomena, and refuse to go beneath them, as very many evolutionists certainly do. In the *July Nineteenth Century*, p. 6, Mr. Spencer says, "Our consciousness of the Absolute is not negative, but positive," and that he brings "science into sympathy with religion"; and, on pp. 24-25: "I held at the outset and continue to hold that this Inscrutable Existence which science in the last resort is compelled to recognize as unreachd by its deepest analyses of matter, motion, thought, and feeling, stands toward our general conception of things in substantially the same relation as does the Creative Power asserted by theology; and . . . this Reality transcending appearance, . . . standing toward the universe and toward ourselves in the same relation as an anthropomorphic creator was supposed to stand, bears a like relation with it, not only to human thought, but to human feeling. . . . And there must ever survive those [sentiments] which are appropriate to a Power that is omnipresent." The whole purpose of Mr. Spencer's first book on the Unknowable was the reconciliation of religion and science on this basis, and he has never departed from it. That a philosophy which is based on the intuition of an Infinite Creative Being concerning whom "our ideas of possible and impossible are irrelevant," a belief which "has a higher warrant than any other whatsoever," is capable of development into a basis for an orthodox creed, is a suggestion of my own, which is warranted, I think, by Mansel's work. Mr. Annet's incredulous inquiry for my authority for attributing to Spencer "a spiritualistic interpretation of the universe" is easily answered. On p. 10 of the *January Nineteenth Century*, and again on p. 5 of the *July* essay, he will see that Mr. Spencer expressly acknowledges "rather a spiritualistic than a materialistic aspect to the universe."

There are one or two minor points that deserve notice. Mr. Annet thinks that I was wrong in saying that the last few months have done not a little to exhibit Spencer's philosophy in a new light. This is not important enough to differ about; and I will only say that the *Nineteenth Century* articles from which I have quoted aroused quite a storm of comment in England, where people are more interested in philosophy than they are here. And not only Mr. Harrison, but Sir James Stephen, Mr. Wilfrid Ward, and a number of anonymous writers, joined in the discussion; without showing, I admit, that these later sayings of Mr. Spencer's are anything more than a natural development of the principles originally laid down by him. Why Mr. Annet should say that "Frederic Harrison has formulated the doctrine enunciated by Mr. Holland," I cannot guess. It is surely the most unaccountable of all the statements in his letter. It is no discredit to follow the lead of so able a writer as Harrison; but, unfortunately, he took a position not only different, but almost irreconcilable with mine. The whole point of his attack was that Spencer's religion of the Unknowable was not a religion at all, while the point of my essay was that it was capable of being developed into a basis for a religious creed. Where Mr. Annet found the resemblance is beyond my comprehension.

One other remark, and I have done. I do not think that I deserved the fling at the end of Mr. Annet's letter, about disproving things which Mr. Spencer did not say; for I did not attempt to disprove anything in that article. I doubt the possibility of disproving idealism or any other great philosophy in a short newspaper article. I simply stated Mr. Spencer's position in his own words.

HENRY W. HOLLAND.

ERRONEOUS STATISTICS CONSIDERED AS A MEANS OF GRACE.

Editors of The Index:—

The *Christian Union* first published, nearly a year ago, a distorted and erroneous mass of false statistics concerning the ratio which the cost of spirituous liquors bears to other articles of consumption. The prohibitionists distributed the erroneous statement broadcast over the country in the late campaign; and, in the form of a paragraph, it appears in the correspondence of *The Index*, as follows:—

The *Farmer's Union* contains the following article:—

Viewed from merely an economical stand-point, the consumption of intoxicating liquors is a national evil of such gigantic proportions as few people fully realize. Some interesting statistics, recently gathered, show the amounts expended annually by the people of this country for some staple articles of use to be as follows:—

Bread.....	\$505,000,000
Meat.....	303,000,000
Sugar and Molasses.....	155,000,000
Public Instruction.....	85,000,000
Missions.....	5,000,000
Intoxicating liquors.....	\$200,000,000

Here the story is told. Hard times, indeed, when the worse than useless expense for intoxicants is about \$100,000,000 more than the expense of the nation for bread and meat. And look at the utterly insignificant expenses for public instruction and for missions. Away with the accursed thing from the face of the earth!

No intemperance is more to be dreaded than the intemperate zeal for righteousness which misrepresents facts and propagates errors, in order to redeem mankind from sin with a more violent jerk than the actual truth is adequate to impart.

The figures concerning meat consumption are, in fact, merely the total product of the meat-packing houses, as it is given in the census, and cover only therefore about one-sixth the actual meat consumption of the country.

The original author of the statement could not call out honestly from the census the mere figures of the meat-packing houses, and not know in his heart that they represent but a small total compared with all the meat supplies furnished by the 76,241 butchers of the United States, to say nothing of the meat supply killed and consumed on the farms on which it is grown, and the poultry and game supplies which never pass through a packing-house. Here, therefore, is a saint who deliberately sets out to pervert facts in the cause of temperance. We have too many such bogus reformers. The figures given as the total annual meat consumption for 51,500,000 people in the above statement are \$303,000,000, or say \$5 per capita per year, or 10 cents per head per week. Whereas, in all cities, the cost of actual meat consumption in a family is about \$1 per head per week, or ten times the sum stated in this reformatory gospel of deceit. The \$303,000,000, therefore, should be multiplied by at least seven or eight, to bring them to the truth. The consumption of bread, groceries, and vegetables combined costs about half or two-thirds as much as the consumption of meat. The two together, therefore, would amount to about \$3,300,000,000 per year, or a third the gross estimated earnings of industry by the census, and about five times the actual expenditure for liquors. As to the figures for liquors, they represent the amount received by the retailers from the consumers of liquors annually to be \$900,000,000. The census shows that the amount which the retailers pay the brewers and distillers annually for these liquors is \$142,122,048. Of course, the difference—namely, \$757,878,952—would be the annual gross profits of the retailers, if the estimated figures given by the "reformers" are true. The total number of persons among whom these profits are distributed is also shown by the census to be as follows:—

Traders and dealers in liquors and wines.....	13,500
Saloon keepers and bar tenders.....	68,461
Hotel keepers.....	32,543

Total..... 114,404

Dividing up the total alleged profits of the retailers

*Gal. 1.

†Gal. 1, 18, 19.

‡Gal. 11, 1.

among these 114,404 persons, we find it furnishes them a gross average salary of \$8,618.67, out of which a very small margin, say of \$618 per annum each, will probably pay their rent of "saloon," taxes, and insurance. This implies that the average pecuniary inducement to become a liquor-seller is far greater than to enter any other kind of business involving so little capital and so few qualifications. Reformers should remember that there are a large number of young and old men in the country who make their choice of occupations largely with reference to the probable profits they will be able to win in them. As human nature is constituted, it may well be doubted whether any very large number of men would be deterred from going into the liquor traffic by showing them that in it the most inferior talents, the very lightest toil, and the humblest talents are rewarded with an average income of \$8,000 per year, or \$160 per week, or \$23 per day,—a compensation far larger than awaits the average physician, lawyer, editor, or clergyman, or even the average merchant, manufacturer, or railroad man. When we consider that the average compensation paid to the 156,007 officers, clerks, and employees of the fifty-four railways reporting to the Illinois Railway Commissioners is only \$525.14 per annum, it will at once be seen what a tempting bait the reformers hold out to young men to keep out of the railway business and go into the liquor business, when they show to them that in the latter the average reward of comparative idleness and safety is sixteen times as great as in the former awaits both incessant industry and constant danger. The figures for public instruction and missions are alone correct. Those for sugar and molasses are near enough for practical and ethical purposes.

VAN BUREN DENSLOW.

CHICAGO, Jan. 24, 1885.

MR. ALLEN PRINGLE writes from Selby, Ontario: "In your last issue, a correspondent, W. T. Cheney, asks for information as to the working of prohibition in places where it has been or is being tried. As one source of the information he desires, I beg to refer your correspondent to an excellent paper on the subject in a late issue of the *Popular Science Monthly*, showing the condition of Maine under prohibition. Not having the numbers of the *Monthly* before me, I cannot say what particular one contains the article. Permit me to add that all who desire to keep up with the science and advanced thought of these progressive times ought to read the *Popular Science Monthly*. Without being dry or technical in matters of science, it is authoritative and yet practical and popular. In giving the results of modern thought in all departments, it is ingenuous and fearless."

BOOK NOTICES.

POEMS OF SIDNEY LANIER. Edited by his Wife, with a Memorial by William Haves Ward. New York: Charles Scribner's Sons. 1884. Price \$2.50.

Our slightly outgrown belief in the beneficial effect of the harsh discipline of adversity and suffering upon mind and character is somewhat revived by what seem to us some of the results of the late unhappy war in this country. A section so rich in natural resources as the South, with a servant race to do all its drudgery offers conditions which at first glance seem to be favorable, by giving leisure and pleasant environments, to intellectual effort and inspiration,—but, on the contrary, the apparent effect was to encourage mental apathy as well as physical indolence, since before the war there was no strong evidence of any distinctly Southern literary genius, inventive faculty, or business talent, none at least so unmistakable as that shown by the less favored North. The war, which once seemed like a very "frowning Providence," now begins to show its "smiling face" of prophecy for the best good possible for the Southern people, and through them for humanity at large, by having made exertion and effort in all directions necessary to continued existence, and thus arousing the dormant intellectual as well as business energies. These thoughts are suggested by the volume of poems by Sidney Lanier. Previous to the war there were but few Southern writers of eminence in the world of letters, and some of these are still writing; but, within the last twenty years, the South has given evidence of its awakening genius in the splendid literary ability, purely Southern in tone, of such novelists as George Cable, Charles Egbert Craddock, Joel Harris, the author of the "Uncle Remus" stories, and such a

poet as Sidney Lanier. For the first time in its history, the South is being faithfully portrayed by its own loving offspring in a manner of which it may well be proud. Lanier, in the passionate, vivid opening poem, "Sunrise," in "The Marshes of Glinn," "Song of the Chattahoochee," "From the Flats," "Tampa Robins," "A Florida Sunday," "Nine from Eight," "Corn," and many others, depicts phases of Southern life and scenery in word paintings that are strong, well-defined, poetic, and unique. In the brief Memoir which prefaces this volume, we read that it was his aim in his dual devotion to music and to poetry to ally one with the other; and he has so far succeeded that many of his poems haunt the reader's brain after reading, like some half-forgotten strain in music. His own life was a poetic tragedy. Gifted, ambitious, brave, high-souled, a patriotic Southern soldier at twenty, for months a prisoner of war, a tender husband, son, brother, and father, held to life by many affectional chains, his life, for the most part, was one long, desperate fight against disease and death. It was, however, a manly, courageous struggle; and, when he found himself at the last vanquished, he yielded to the inevitable with a chivalrous, knightly grace as noble as his resistance had been.

The temptation to quote from this rich storehouse of thought jewels in their rich poetic setting is strong, but must be resisted from lack of space; but the reader will find in the poems "Sunrise," "The Revenge of Hamish," "Corn," "The Symphony," "Acknowledgment," "Remonstrance," "How Love looked for Hell," and "The Psalm of the West," sufficient to repay him for the purchase of the whole volume.

S. A. U.

DADDY DARWIN'S DOVECOT. A Country Tale. By Juliana Horatia Ewing, author of *Jackanapes*, etc. Boston: Roberts Brothers. 1885. Price 35 cts.

The "Daddy Darwin" of this story, though he may be a distant relative of the Darwin,—for the writer explains that Darwin is "an old standard" English name,—has nothing in common with the great naturalist except his love for and observation of the ways of the pigeon family. It is, nevertheless, a very pleasantly told though not exciting story, dealing with the fortunes of an honest and bright-natured English pauper lad, who won the old miser Daddy Darwin's regard, and became heir to his savings and the "dovecot." The charm of the story lies more in the author's way of telling it than in its incidents.

THE STORY HOUR: For Children and Youth. By Susan H. Wixon, author of *Apples of Gold*, *All in a Lifetime*, etc. New York: Truth Seeker Company. Price \$1.25.

This is a collection of between thirty and forty short, pleasant stories of child-life, each "pointing a moral" free from theological bias. All the stories are original, and written by Miss Wixon, who seems to be a true lover of the little ones. These stories are accompanied by nearly one hundred beautiful illustrations, many of them full-page pictures. The book is nicely printed in large, clear type, and is handsomely bound. It is dedicated to the memory of the author's little niece, whose portrait adorns the first page.

PROF. THOMSON, in the February *Popular Science Monthly*, in "The Sight and Hearing of Railway Employés," described the system of tests that has been adopted by the Pennsylvania Railway, which has added vastly to the efficiency of the railway service and the security of passengers. In "The Larger Import of Scientific Education," Major Powell claims preference for such education, because it gives the highest mental culture, is a training in mental integrity and an education in charity. In "Evolution and the Destiny of Man," Mr. W. D. Le Sueur ably reviews Prof. Fiske's book on that subject from the agnostic point of view. Prof. H. P. Armsby, of Wisconsin, contributes a paper carefully defining the conditions essential to make "Field Experiments in Agriculture" successful and instructive. Lucy M. Hall, M.D., offers some observations on the "Physical Training of Girls." Dr. von Pettenkofer writes on "Cholera: Its Home and its Travels." Dr. Cl. T. Campbell presents some interesting figures from the statistics of the Odd Fellows, bearing on the subject of "Sick-rates and Death-rates." Other articles worthy of attention are M. Lucas' curious illustrated paper on "Calculating Machines"; Grant Allen's pungent observations on "Food and Feeding"; Warnford

Locke's practical paper on "Sulphur and its Extraction," with illustrations of apparatus; M. Antoine de Saporta's "Properties and Constitution of Sea Water"; Mattieu Williams' monthly instalment of "The Chemistry of Cookery"; and Mr. Placzek's attempt to solve the problem "Why Birds sing." The portrait and sketch are of Sir David Brewster, whose life as there delineated must have been very happy as well as busy and useful. New York: D. Appleton & Co. 50 cts. a number, \$5 a year.

THE *Atlantic* for February opens with "A Marsh Island." This instalment of the story is a delightful series of pictures of the country and country folk, and in it Miss Jewett is at her very best. Mr. Craddock's "Prophet of the Great Smoky Mountains" is continued. A striking episode also occurs in Mrs. Oliphant's "Country Gentleman"; and, in fact, all three of the *Atlantic* serials which began in January are exceedingly interesting. Among the most important articles of a more solid nature are an account of the revival of interest in antique sculpture after the neglect of the Dark Ages, by William Shields Liscomb, under the title of "The Quest for the Grail of Ancient Art"; a second paper on Madame Mohl's Salon; and a clever article of a semi-critical nature on "Vernon Lee," by Harriet W. Preston. Dr. Holmes' charming papers are continued; and, although he says that "The New Portfolio" is not yet opened, it is hard to see how it could be more delightful, if it were. Bradford Torrey contributes a pleasant paper on "Winter Birds about Boston." "A Sheaf of Sonnets," by Helen Gray Cone, and verses by Edith Thomas and E. R. Sill, complete the poetry of this issue; while a crisp and pungent criticism of "Nathaniel Hawthorne and his Wife," reviews of "Montcalm and Wolfe," and of other volumes, together with the usual Books of the Month and the Contributors' Club, complete an excellent number. Houghton, Mifflin & Co., Boston.

THE February *Wide Awake*, in addition to its numerous beautiful and appropriate illustrations, has stories written by Charles Egbert Craddock, Jane Andrews, Edwin D. Mead, Anna Eichberg, Elbridge S. Brooks, Abbie M. Gannett, and Lizzie W. Champney; poems from Hezekiah Butterworth, Dora Read Goodale, Clara Doty Bates, Eleanor Lewis, Clara Louise Burnham, Abby Morton Diaz, "M. E. B.," C. Copeland, and George MacDonald; and other articles from Yan Phou Lee, the Chinaman, Julian B. Arnold, Margaret Bertha Wright, F. E. Saville, Rose Kingsley, Mrs. Jessie Benton Fremont, Sarah W. Whitman, Harry W. Tyler, Prof. A. B. Palmer, Oscar Fay Adams, and Edward Everett Hale. Published by D. Lothrop & Co., Franklin Street.

FREDERICK W. FREER, whose paintings are fair representations of progressive American art, has designed two ideal heads, brunette and blonde, which have been reproduced on satin by L. Prang & Co., and will be published as valentines. There is a growing tendency to accept, as missives of this kind, genuine art productions in place of the exaggerated representations of Cupid and his victims, which once appealed to popular taste. In the same way, the comic valentines of the past are represented to-day by humorous but artistic productions from the brush of well-known artists, as F. S. Church, Harry Beard, etc.

LECTURES

ON LEADING REPRESENTATIVE MEN OF OUR TIME, INCLUDING

EMERSON, CARLYLE,
HUXLEY, TYNDALL.

Also, upon the early *Growth and the History of Culture; Evolution of the Arts: Origin of Mythology; The Survivals in our Present Civilization; The Aspects and Promise of the Time*, etc., will be given where desired this season by the undersigned.

Address

CHARLES D. B. MILLS,
SYRACUSE, N. Y.

October 20.

SCIENTIFIC LECTURES.

PETER ANNET, of England, who lectured very acceptably before the Parker Memorial Science Class on two Sundays recently, will lecture for societies on Astronomy, Geology, Zoölogy, and philosophical subjects, within an easy radius of Boston, upon application. For terms, etc., address

PETER ANNET,
P. O. Box 2468, Boston, Mass.

POPULAR BOOKS

Sent by Mail Postpaid at

PUBLISHERS' PRICES.

ANY BOOK in the subjoined List, or any other OBTAINABLE BOOK, that may be desired, will be forwarded as promptly as possible, on receipt of orders accompanied with the cash.

SPECIAL RATES will be made with persons or libraries dealing any large number of books.

Orders are respectfully solicited from all friends of THE INDEX.

Guizot's CELEBRATED ILLUSTRATED HISTORY OF France

REDUCED IN COST from \$33.00 to \$8.00, or comparing contents fairly, from \$49.50 to \$8.00, for the only other American edition of GUIZOT comes down to *The French Revolution*, only, and is continued to Napoleon III. by MARTIN, and \$49.50 is the published price of the two works. **THIS ILLUSTRATED LIBRARY EDITION** covers from the earliest times to 1848, is written by M. GUIZOT, Prime Minister of France, and completed from his notes by his daughter, Madame GUIZOT DE WITT. It is published in 8 volumes, small octavo, printed from the type shown by these lines, contains the 426 *Illustrations*, mostly full-page, of the imported edition, is bound in tasteful Library style, dark green cloth, beveled boards, gilt tops. Price of the set, only **\$8.00** by express, or, sent *prepaid* for \$9.60.

"There is only **ONE DRAWBACK**. . . it seems more like *getting a present* than making a purchase. Guizot is the most brilliant of French historians, as well as the most to be relied upon. He is the Macaulay of the history of France; his style and treatment are philosophical, didactic, rich in detail, dramatic in arrangement. His narrative is full of emotion, like a quick stream; his characters rise before us as in the flesh; they are men and women, not historic lay figures. It is as charming as any romance, and the interest is permanent. It is a work to keep and read and re-read for years."—*Dominion Churchman*, Toronto, Canada.

"In **ENGLISH**, at least, original or translated, we have **NO WORK** of French history that **CAN APPROACH IT**. We can name no work that gives the complete history,

and gives it from the pen of a master, that can be thought of as a rival to the mammoth production of Guizot. How Mr. Alden can give the eight volumes, and this on good paper, and clear type, including the multitude of illustrations, is a thing we **have CIPHERED over**, but we *fail to understand it*. The first volume gives substantially the beginnings of French history. It is of necessity the dullest of the eight, yet *with Guizot even logarithms would be readable*."—*Christian Leader*, Boston, Mass.

"The **MARVELOUS CHEAPNESS** of these profusely illustrated and handsomely bound volumes must provoke comment everywhere. Each volume is *easily worth \$2.00*, according to the standard of prices asked. This is the only complete American edition of this work, which is known as the best popular history of France."—*Journal*, Indianapolis, Ind.

"In the reproduction of this work the publisher has outdone all previous efforts, and has given us a **MARVEL of EXCELLENCE**, in every respect, at a marvel of cheapness."—*Christian at Work*, New York.

Hundred-Page Catalogue, free, descriptive of the best books of the world, at the lowest prices ever known, together with terms upon which books are sent for **examination before payment**, to any one on application. Address, and make checks, drafts, or money orders, payable to **JOHN B. ALDEN, Publisher, 393 Pearl Street, New York.**

Coupon—50 CENTS.

This coupon, together with \$7.50 in cash, will be received, if sent within 10 days from the date of paper in which it appears (mention name of paper), in full payment for GUIZOT'S FRANCE above described. This small extra inducement is simply to secure your prompt response, and indicate the advertising mediums from which responses come.

TRACTS.

- No. 1.—**Truths for the Times**, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.
- No. 2.—**Fear of the Living God**, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.
- No. 3.—**Lecture on the Bible**, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.
- No. 4.—**Christian Propagandism**, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extraneous.* Price 10 cents; 12 copies, \$1.00.
- No. 5.—**Ged in the Constitution**, by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.
- No. 6.—**The Sabbath**, by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.
- No. 7.—**Compulsory Education**, by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.
- No. 8.—**The Present Heaven**, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.
- No. 9.—**The Christian Amendment**, by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.
- No. 10.—**The Impeachment of Christianity**, by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*
- No. 11.—**The God of Science**, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.
- No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, \$1.00.
- No. 13.—**On the Vision of Heaven**, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.
- No. 14.—**A Study of Religion: The Name and the Thing**, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.
- No. 15.—**The Battle of Syracuse**. Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

CURRENT TOPICS.

BY B. F. U.

A CONFERENCE on the disestablishment of the Church of England will meet in London next month.

Says the *Springfield Republican*: "Chili has discarded the Roman Catholic religion as the religion of the State, and has announced perfect liberty to all forms of the Christian faith. The oath of the president at his accession to office no longer binds him to the support of the 'Roman Apostolic Catholic Religion.'"

At the recent convention of the Canadian Free Thinkers' Association, now changed to the American Secular Union, held at Toronto, Mr. J. Ick Evans was re-elected president, and Mr. J. A. Risser and R. B. Butland secretaries. The following resolution was unanimously adopted: "That the conduct of the customs collectors at Toronto and Montreal in seizing the works of Thomas Paine and other secular publications is contrary to every principle of free and enlightened government, and calculated to lower the standing of Canada in the eyes of the civilized world as a bigoted and non-progressive community."

PRESIDENT BASCOM, of Wisconsin State University, is the author of an article on Inspiration in the *New Englander* for January, which is criticised severely by orthodox papers. The Presbyterian *Banner* has this to say: "The Christian people of Wisconsin are to be commiserated for having a man at the head of their State institution who proclaims such views with respect to the inspiration of the word of God. But what shall we say of Yale College, where Prof. Ladd, of the theological department, teaches and publishes just about the same thing? It is difficult to see how Christian parents can consistently place their sons under such influence."

ENGLISH papers mention the recent death of Dr. Edward Evans, of London, in his ninety-seventh year. The *Christian Life* (London) says: "He retained an unimpaired memory of events covering a great part of a century; and his kind and

genial manner, and the pleasure he had in imparting information about past times and occurrences, gave very much satisfaction to his many friends. He continued to be a reader—and a learner, as he said—to his very last day." Dr. Evans had been many years deeply interested in political and religious liberalism, and we take pleasure in stating that he was a reader and supporter of *The Index* up to the last weeks of his life.

ON the 3d inst., St. Patrick's Roman Catholic Church at Hartford, Conn., celebrated the feast of St. Blase, the patron of health. "The church," says a report which we find in one of our daily papers, "was packed, it having been announced that those desiring it could have their throats blessed at mass as a preventive of diphtheria, pneumonia, and kindred diseases. Father Hughes and two assistants first knelt in silent prayer, and then requested the people in turn to approach the altar. The priests repeated the invocation to the patron saint, and, with two lighted candles held in the form of a cross, touched the throat of each person, who also repeated the prayer."

COMMENTING on Bishop Potter's letter explaining that the vow administered by him to two young men is the same substantially as that taken by every woman who joins a sisterhood, the *Christian Register* sensibly remarks: "Nevertheless, he totally fails to demonstrate what advantage such vows confer upon two earnest Episcopalians above those enjoyed by hundreds of equally self-denying missionaries who labor among the poor without taking unnatural vows or connecting themselves with an artificial order. So far from celibacy being a help in this work, we believe that a young man of equal ability and earnestness, blessed with a good wife devoted to the same cause, can do far more good among the poor than could any two young men who take the vow of celibacy."

A FRIEND writes from New York: "Prof. Thomas Davidson is inaugurating a series of Sunday afternoon lectures in New York, having for their ultimate aim the formation of a new society or church. It is unnecessary to say that these lectures will deal with problems of the deepest interest to thinkers. As an introduction to the course, Prof. Davidson gave a *résumé* of the influences and experiences which have led to his present convictions, and in his first lecture explained the scope and functions of a church. In the second (delivered last Sunday), he dwelt upon the conflict between science and religion, and pointed out why this antagonism had necessarily existed in the past and appeared so inevitable in the present, and yet how utterly irreconcilable it is with the true spirit of pure religion and pure science."

THE Reorganized Church of Jesus Christ of Latter-Day Saints had a conference at Dennisport, Mass., January 31. Representatives were present from Boston, Brockton, North Plymouth, Plainville, Fall River, and New Bedford, Mass., and Providence and Little Compton, R.I. Their reports showed the church to be "in a healthy state,

with an increase of membership during the year. There were more calls for preachers than could be supplied." Mr. F. A. Potter, of Providence, presided; and there was speaking by elders W. H. Kelley and E. L. Kelley of Kirtland, Ohio, M. H. Bond of Michigan, and John Smith of New Bedford. One of the elders writes: "The speakers manifested much earnestness; and the audiences, which numbered several hundred at each service, appreciated the instruction which was given for their good. Sabbath morning was held a testimony meeting, which was marked by the power and gifts of the Spirit mentioned by Paul in I. Cor. xii. and Eph. iv. The spirit of peace, union, and good will prevailed during the entire conference."

REV. DR. J. P. NEWMAN lately gave a lecture in San Francisco on "The Seven Bibles of the World." He made the surprising statement that all scholars agree as to the Mosaic authorship of the Pentateuch and as to the claim that Moses lived 1500 B.C. He declared that the Hebrew Bible is the oldest of all sacred books, and made a number of astonishingly reckless statements in regard to the date and character of Chinese, Indian, and Egyptian literature. The lecture, which was reported in the San Francisco papers, called out a reply in the *San Francisco Daily Post* from Mr. William Emmett Coleman, who for several years has made the subjects treated a special study. Mr. Coleman showed that Dr. Newman's lecture consisted mainly of perversions of the truth, and that he possessed neither the scholarship nor the fairness to do justice to the subject. He showed by quotations and references that the Mosaic authorship of the Pentateuch has been abandoned by many of the most eminent scholars and theologians; that they generally agree that large portions of it could not have been written by Moses; that the best scholarship of all countries has accepted the Exodus as occurring near 1300 B.C.; that even the orthodox Rawlinson puts it no earlier than 1350; that the Egyptian *Book of the Dead*, or chapters of it, as is known from inscriptions on monuments, were in use fourteen dynasties before Moses, and dates back at least 1200 before the Jewish law-giver. Dr. Newman having said that the oldest Chinese record is 1100 B.C. and that the Chinese had no written language in 1600 B.C., Mr. Coleman quotes from Prof. Legge's latest work that there are Chinese documents written more than 2000 years B.C., and, from another work by the same author, that writing began in China as far back as 5000 years ago. Dr. Newman had even said that the Chinese had no existence 2000 B.C., at which time Abraham was a "prince, a Christian, and a general"! Mr. Coleman's exposure of Dr. Newman's numerous mistakes and misrepresentations was so obvious and complete that the latter attempted a defence. It was extremely weak; but it gave Mr. Coleman an opportunity to go into the subject a little more fully, and to support his criticism by an array of arguments and authorities which do credit to him as a scholar, while they leave the "Rev. Dr." Newman in a most unenviable position before the public whom he had attempted to instruct.

DR. HOLMES' LIMITATION AS EMERSON'S BIOGRAPHER.

Dr. Holmes, of course, has given us a very readable memoir of Emerson. He could scarcely write anything that would not be readable so long as he retains his characteristic wit and mental vivacity. But, if Dr. Holmes' reputation as a literary man had to rest on his artistic skill in writing biography, as shown in this volume, we fear his fame would be short-lived. The book, however, must be judged from the point of view of the series to which it belongs,—the "American Men of Letters" series. Its size for this reason was limited, and its purpose evidently pretty closely confined to delineating Emerson as a man of letters. Looking at the work thus, as the view given by one eminent literary man of America's most eminent literary man, the memoir is full of interest and, in general, may be satisfying. The chapter on Emerson as a poet seems most complete of all. This, it is plain, was written *con amore*. Dr. Holmes does not debar himself, by any such purely technical definitions of poetry as Matthew Arnold fettered himself with, from placing Emerson among the greatest and most inspiring poets.

But, with all its merits as a presentation of the literary career of Emerson, Dr. Holmes' book, since it attempts at least to touch all sides of its subject's character, betrays certain limitations in its author, which not a little mar his work as a general portraiture. Dr. Holmes has so many virtues that he can afford to have it said that he has never shown himself specially interested in social and religious reform. In religious views, he has progressed with the years as a Unitarian, but always as a Unitarian. He has never seen the need of any larger freedom than that denomination has allowed, never felt any constraining impulse of conscience to break over its—in Boston—eminently respectable bounds. So, with regard to social and political questions, Dr. Holmes has always had a safe and reputable regard for the metes and measures of public opinion that may chance at any time to exist. In his own person, he has probably never known the necessity of espousing an unpopular cause for the sake of a sentiment of justice or for securing the righting of a social wrong. On these accounts, Dr. Holmes is incapacitated for fully understanding and appreciating that moral instinct in Emerson's nature which, from the day he left the pulpit because he could no longer conscientiously administer the communion service to the end of his life, led him to take the side of any persecuted truth, of any cause or individual that represented imperilled freedom of thought, of any oppressed minority struggling for their withheld rights. He had that innate moral chivalry which took him without a question to the defence of the weak and the wronged. He was therefore to be found at certain public meetings, and was interested in objects, of which Dr. Holmes knew nothing except by hearsay or by the highly colored reports of a hostile press. This characteristic of Emerson was so marked that any biography of him that treats it slightly is fatally defective.

Yet it is at this point that the special defect in Dr. Holmes' memoir appears. Not acquainted through personal knowledge or sympathy with this side of Emerson's character, he could not do it justice; and hence, in speaking of it at all, he has done, though unwittingly, the distinguished subject of his memoir a great injustice. He has represented Emerson's relation to social and religious reform as too much like his own,—that is, as that of an amiable and humorous critic rather than as an earnest believer and helper. It seems as if, out

of the very love and admiration which Emerson had won from his own heart, Holmes were trying to make his career acceptable to the average opinion of Harvard College and of Beacon Street a generation ago, when Webster was Boston's idol and the anti-slavery cause was still under ban. He thus appears almost as the apologist for what was most heroic in Emerson's character. He speaks of him as "never identified with the abolitionists," passes over very lightly his relation to New England Transcendentalism, and dwells upon the fact that he saw the weaknesses of special reforms and the foibles of many individual reformers, until his sympathy with them is almost lost sight of.

The *New York Nation*, in its review of the book, points out this defect in respect to the anti-slavery agitation and the Transcendental movement, and says, "In both cases there is an obvious lack of personal knowledge, not filled by any assiduous inquiry." And it instances one statement as showing not only a hasty and prejudiced opinion, but unpardonable carelessness about ascertaining the facts. Dr. Holmes says of Emerson's most elaborate address on slavery,—that given at Concord, Aug. 1, 1844,—that it "would not have satisfied the abolitionists." The writer in the *Nation* says that, by going into the Boston Public Library and consulting a file of the *Liberator* for 1844, he would have seen that the other speakers at the meeting "were of the strictest sect of abolitionists," and that they unanimously desired the address for publication; and, further, that Garrison, after editorially mentioning these facts, added, "All who were at the meeting, so far as we have seen, concur in praising the address as a most satisfactory performance." It would seem, then, that "the abolitionists" were satisfied with this address. Wendell Phillips, in particular, it is said, was so much satisfied with it that he kept for years a supply on hand for special distribution.

A similar false coloring of facts, caused by want of sympathy with Emerson's position as a reformer, we notice in Dr. Holmes' brief mention of the address which Emerson made at the meeting when the Free Religious Association was organized. A few sentences, not continuous, from the close of Emerson's remarks upon that occasion are quoted thus: "What I expected to find here was some practical suggestions by which we were to reanimate and reorganize for ourselves the true church, the pure worship. Pure doctrine always bears fruit in pure benefits. It is only by good works, it is only on the basis of active duty, that worship finds expression.—The interests that grow out of a meeting like this should bind us with new strength to the old eternal duties." This extract Dr. Holmes prefaces with the statement that "nothing could be more wholesome in a meeting of creed-killers than these suggestive remarks." Creed-killing is sometimes an excellent thing, as Dr. Holmes himself will bear witness, when Calvinism is in question. But, by this little sentence concerning that large gathering of earnest men and women,—which from any one but a man of Dr. Holmes' genial amiability we should call a slurring sentence,—the impression is thrown out that it was a convention of mere destructives, whom Emerson criticised more than he endorsed. If Dr. Holmes had read the whole story of that meeting, he would have seen that these remarks were in entire keeping with its general spirit and tenor, and that such suggestions and the actions consequent upon them are not unfamiliar to the class of people who assemble at Free Religious conventions. Moreover, between the sentences which Dr. Holmes quoted were others which he omitted, wherein Emerson, after expressing the wish that "the various beneficent

institutions, which are springing up like joyful plants of wholesomeness all over this country, should all be remembered as within the sphere" of the new organization, added the significant sentence, "Almost all of them are represented here." Emerson's opinion, therefore, of this meeting, and of the Free Religious Association which followed it,—of which, contrary to his usual custom, he became at once a member and allowed himself to be elected one of the vice-presidents as long as he lived,—was quite different from the opinion held by Dr. Holmes.

Other illustrations of the want of sympathetic appreciation on the part of Dr. Holmes for some of the distinguishing traits of Emerson's character might be found. The defect is a serious blemish in an otherwise valuable contribution to the *Emerson Biographica*. The life of the Concord philosopher is being written piecemeal. When the complete biographer comes, he will see and show that this serene, scholarly philosopher, so fond of his books and meditations and living so thoroughly in the spirit, was yet one of the leading heroic reformers of this nineteenth century; a man of too large view not to see and note the limitations of special reformers, and too optimistic in his philosophy to feel that the world's salvation depended on carrying one reform; not, indeed, a reformer by profession and vocation; yet coming continually from his study and his books to plead for every cause of human rights and for every advance in liberty for mind or body which have specially marked the middle half of this century; and, more than all, teaching on platform and in book the key-note of all reform, that the order of nature, in mind and in matter, is a greater and diviner revelation and safer guide than any miracle.

WM. J. POTTER.

CARLYLE'S POLITICS.

Carlyle was himself a peasant by birth, but a peasant of an exceptionally and generally intelligent race. Thus it was that in times of business depression he deeply sympathized with the sufferings, privations, and scanty fare of the poor toilers of the class to which he himself belonged by birth; and thus it was that his indignation was profoundly stirred against the rotten and iniquitous social and industrial systems of European countries. He regarded those systems as surely doomed as there is a providential and retributive Justice, which makes itself manifest in the affairs of the world, to the discomfiture and overthrow of injustice and oppression. In his *Past and Present* and *Latter Day Pamphlets*, he denounced the British industrial system of his time as making of the poor laborer a worse slave than were Gurth and Wamba, the born thralls of Saxon thanes in feudal times. For the honest toiler, at whatever kind of labor, he entertained the utmost respect and compassion. *Per contra*, for moneyed and aristocratic do-nothings, his copious vocabulary of contempt and scorn exhausted itself in terms of denunciation. Idleness and uselessness, however gilded and splendidly environed and privileged, could never dazzle him in the least. The famous Latin epitaph in *Sartor Resartus*, which was written by Teufelsdröckh for a deceased Count Zährdarm, Imperial Councillor, Knight of the Golden Fleece, and black vulture, and which recounts how many thousands of partridges the deceased nobleman had shot in the course of his sublunar career, and how many tens of thousand pounds of food of various sorts he and his attendants and servants, two-footed and four-footed, had succeeded in converting into stercoraceous matter, *haud sine*

tumultu, is in the true vein of Swiftian humor and satire. Now, resting from his labor, concludes the epitaph, his works do follow him. If you seek his monument, behold a dunghill.

But, while Carlyle regarded the old aristocratic caste system of Europe as iniquitous and destined to overthrow, he was no believer in democracy, or majority rule, or elective ballot-box politics. While sympathizing with the immense mass of men in their sorrows, privations, and bootless toils, he still regarded them, according to Mr. Froude, as "poor creatures, poor in heart and intellect, incapable of making any progress at all if left to their own devices, though with a natural loyalty, if not distracted into self-conceit, to those who were wiser and better than themselves. He believed that every advance which humanity had made was due to special individuals supremely gifted in mind and character, whom Providence sent among them at favored epochs." Thus, Carlyle agreed in effect with the old Greek philosopher Plato and his pupil Aristotle, who divided mankind into two classes; namely, the naturally wise, intellectual, and rational, on the one hand, and the naturally irrational, anarchic, and foolish, on the other, the latter class of course constituting the immense majority of the race. Thus, the rational few, by the very appointment of Nature, were the rulers of the stupid and semi-bestial many, who were destitute almost entirely of the regulative or imperial faculty of reason, and grovelled downward in slavery to their animal appetites and baser lower propensities. Cicero somewhere compares the *plebs* of Rome to a furious wild beast. By ancient poets and philosophers alike, the masses, the multitude, were designated as profane, ignoble, turbulent, unreasoning, fickle, creatures of impulse, habit, and prejudice, without steadfastness or elevation of purpose. Homer, the primitive poet, calls majority rule bad. And Aristotle says that, as individual despots have their flatterers and parasites, so the multitude, where its will is the law, have demagogues and smooth-tongued orators to eulogize it, while they seek power and pelf at its hands. Modern men of genius, illustrious poets and thinkers, disgusted with the frivolity, fickleness, perversity, sordidness, stupidity, and animalism of the populace, have been equally uncomplimentary to it. Milton was a stern republican in sentiment; but he puts in his *Paradise Regained* the following words into the mouth of the Saviour:—

"What the people but a herd confused,
A miscellaneous rabble, who extol
Things vulgar, and, well weighed, scarce worth the praise?
They praise and they admire they know not what,
And know not whom, but as one leads the other;
And what delight to be by such extolled,
To live upon their tongues and be their talk,
Of whom to be dispraised were no small praise?
His lot who dares, he singularly good."

Shakspeare, through the mouth of Coriolanus, pours contempt upon the many-headed throng. Even our own gentle Emerson, who so hated all oppression even of the lowest of his race, and who was a sturdy champion of self-government, speaks of enormous populations of the illiterate, vulgar sort as resembling "moving cheese," or cheese alive with maggots,—*"the more, the worse."* He calls certain races *"the guano-races."* *"Masses!"* exclaims he: *"the calamity is the masses. I do not wish any shovel-handed, narrow-brained, gin-drinking mass at all."* Again, he says, *"The worst of charity is that the lives you are asked to preserve are not worth preserving."* And Emerson was, like Milton, an ardent republican; but his ideal population was such as existed in New England fifty years ago, when there was an intelligent, homogeneous, well-to-do, independent yeomanry, and no extreme wealth or poverty. But, as for an

ignorant populace and proletariat, he evidently had no respect for it or belief in its fitness for self-government, any more than his friend Carlyle had. But, after all that can be said in derision of the people and in denial of their capacity to govern themselves, are they not the crude, raw material out of which have hitherto sprung the world's ablest, wisest, and best? Carlyle himself was by birth one of the people, and so were Luther and Shakspeare. All the elements of mental and moral greatness, then, exist in a crude, undeveloped state in the masses. The civilization of the Grecian and Roman past was exclusive, a caste civilization purely. Humanity, as a whole, was not taken into account by it. Mankind were divided by it into patricians and plebeians.

Labor, of all kinds, was servile. War and politics were the pursuits of the few, so far as leadership was concerned. Feudalism and the old régime in Europe regarded and treated the masses as they had been treated in the pagan past. At length, in the nineteenth century of the vulgar era, we have a new, modern, *popular* civilization, which is bringing the masses to the front, and accustoming them to the assertion and exercise of their social and political rights as *men*, as beings born upon the high plane of reason, thought, will, and feeling, whatever their material circumstances and perversities may be. It is a new, a great departure; but no step backward will be taken, whatever temporary discouragements may happen to cloud the social and political prospects of the multitude. There is infinite time ahead for the evolution of *"the rascal rabble"* or the lowest of the low at last into rational, thoughtful, self-governing men and women. For, as I have said, current civilization is truly popular. It is a universal light-spreader and knowledge-diffuser. The amelioration of the mental, moral, and material condition of the masses has begun; and it will go on from century to century, until the brutishness, ignorance, and poverty of the past shall have been eliminated from human society everywhere. Time, in the course of thousands and millions of years, has been, as we learn from geology and prehistoric investigation, a miraculous transformer of men and things. With time enough, almost any kind of metamorphosis can be accomplished, physical, social, or political. We as yet stand on the threshold of the historic period. As Emerson truly says, *"Geology, a science of forty or fifty summers, has had the effect to throw an air of novelty and mushroom speed over entire history. The oldest empires,—what we called venerable antiquity,—now that we have true measures of duration, show like creations of yesterday."* Go back far enough, and we find the human race, with all its capabilities of indefinite development, dwelling in caves, hairy, prognathous, repulsive, and anthropoid. So say the evolutionists. While gazing at pictorial representations of the primitive *homo* or cave-dweller, we can hardly see how by any possibility of derivation the noble men and beautiful women of the highest civilizations of the last twenty or thirty centuries could have emanated from such a hideous source. In like manner, a thousand years hence, majority rule may have given place to no rule at all in the absence of the necessity of any repressive government, each man spontaneously respecting every other man's rights. What the few have been and are in mental and moral elevation, all men, in the lapse of thousands of years, may become. Barbarism will then have become extinct; and the more and more deeply contriving brain will have made bone, muscle, and animalism of no account or use. The distance from the present to such a social consummation is not so great as it is from the cave-dwellers to

the best specimens of the best races of to-day. Fifty years ago, the people of New England of that date had solved the problem of social and political equality for an entire community successfully, or with sufficient success to show that it is soluble. Ignorance and extreme poverty were unknown, and there was no proletariat here. We had then become, in fact, an ideal community. But the ignorance and poverty which our ancestors of that date had nearly banished from their limits were soon imported from foreign communities, the mass of whose people are still sunk in the social misery and superstition of the past. Thus, we were put to the task of combing and washing and disciplining the poor of Europe to thrift, intelligence, and the business of self-government. It has proved a thankless job, but it will be accomplished. Meantime, the great West is covered with other and larger New Englands, so that New England civilization, popular education and popular rule, are secure, and becoming ever mightier social forces, though the original New England should be submerged beneath a foreign proletariat.

B. W. BALL.

WOMAN AND SCEPTICISM.

The National Woman's Suffrage Association, which demands full suffrage for women to be guaranteed by enactments of both branches of Congress, held its seventeenth annual convention in Washington, D.C., on the 20th, 21st, and 22d of January. The attendance was large, the interest lively, and the harmony undisturbed, until, near the close of the convention, somebody introduced the following startling and boldly radical resolutions:—

Whereas the dogmas incorporated in religious creeds derived from Judaism, teaching that woman was an afterthought in creation, her sex a misfortune, marriage a condition of subordination, and maternity a curse, are contrary to the law of God as revealed in nature and the precepts of Christ; and

Whereas these dogmas are an insidious poison, sapping the vitality of our civilization, blighting woman, and laying their palsying hand upon humanity,—therefore,

Resolved, That we denounce these dogmas wherever they are enunciated, and we will withdraw our personal support from any organization or person so holding and teaching; and

Resolved, That we call upon the Christian ministry, as leaders of thought, to teach and enforce the fundamental idea of creation,—that man was made in the image of God, male and female, and given equal dominion over the earth, but none over each other. And, further, we invite their co-operation in securing the recognition of the cardinal point of our creed, that in true religion there is neither male nor female, neither bond nor free, but all are one.

"These arraignments," says the Springfield *Republican*, "gave rise to a lively discussion, in which a woman exculpated Judaism from responsibility for the degradation of women. A minister followed suit, and also defended early Christianity; and an Episcopalian layman declared that—until the Church, Catholic, Episcopal, or Methodist, recognized the right of women to be made bishops and to ordain others to the ministry—the work of equality can never be accomplished. This last speaker had found the pulpit a centre of opposition to woman suffrage; and, later, it was arraigned as a stumbling-block in the way of temperance. But, finally, Mrs. Stanton made a rousing speech, not at all calculated to conciliate people in the churches; for she declared that 'every form of religion that has breathed upon this earth has degraded women.'" The discussion of the resolutions was finally laid over, to be taken up at the next annual meeting,—a wise movement, since the knowledge that such discussion is pending will call

the attention of women to the subject, and they will therefore give some study to it, and be better prepared next year either to defend the resolutions or to bring proof of their unwarrantedness.

Though partly based on truth, these resolutions are, it seems to me, rather unfortunately worded; for the implication conveyed in the opening sentence, that Judaism is alone responsible for the dogmas which "teach that woman was an after-thought," etc., cannot, I think, fairly be maintained. Certainly, the dogmas that woman's sex is "a misfortune, marriage a condition of subordination, and maternity a curse," so far as taught in the Bible at all, are as much a part of the teachings of the New Testament as of the Old. It should be remembered, also, that the "fundamental idea," which the resolutions call upon the Christian ministry to "teach" and "enforce," is, unquestionably, "derived from Judaism"; while it is evident that the passage referred to as "the cardinal point of our creed"—i.e., "There is neither Jew nor Greek, there is neither bond nor free, there is neither male nor female; for ye are all one in Christ Jesus"—was only intended to be accepted in a spiritual sense, since the context declares this equality to be true only of those who have been "baptized unto Christ." These words of Paul were never intended to touch the secular relations of Christian society, and were never accepted by Christianity as part of its social system; for, except in this spiritual equality through baptism "unto Christ," the Jew remained a Jew, the Greek remained Greek, the enslaved remained in bondage, and male and female retained their respective characteristics and unequal social position. The implication, therefore, in these resolutions that this passage of Scripture was intended to assert the equal social and political rights of men and women here and now is not true, for such equality is opposed to the direct teachings of the New Testament as well as to those of the Old; and the Christian ministry cannot consistently, so long as they hold to the authority of the Bible, "teach" or "enforce" the idea of woman's equality with man, when the New Testament contains such clear and emphatic statements on the subject as are contained in the following passages and in many others like them:—

For a man indeed ought not to cover his head, forasmuch as he is the image and glory of God; but the woman is the glory of man. For the man is not of the woman, but the woman of the man. Neither was the man created for the woman, but the woman for the man. (I. Cor. xi., 7, 8, 9.)

Wives, submit yourselves unto your husbands, as unto the Lord. For the husband is the head of the wife, even as Christ is the head of the Church; and he is the Saviour of the body. Therefore, as the Church is subject unto Christ, so let the wives be to their own husbands in everything. (Eph. v., 22, 23, 24.)

Let the woman learn in silence with all subjection. But I suffer not a woman to teach nor to usurp authority over the man, but to be in silence. For Adam was first formed, then Eve. And Adam was not deceived; but the woman, being deceived, was in the transgression. Notwithstanding, she shall be saved in child-bearing, if they continue in faith and charity and holiness with sobriety. (I. Tim. ii., 11-15.)

Although the discussion of the resolutions was laid over for a year by the women who introduced them, yet the press and people have continued their discussion ever since. In so far, the result of their introduction has been good. One of the tendencies of this public discussion has been to stir up orthodox circles to more or less vigorous protest against the resolutions and the woman's movement.

On the Sunday following the adjournment of the convention, Rev. W. W. Patton, D.D., Presi-

dent of the Howard University, preached a sermon on "Woman and Scepticism" in a Congregational church in Washington, taking for his text John xix., 25. The suffrage women who were present, and the journalists who reported his sermon, seem, somehow, to have misapprehended him; for they reported him as having "advanced the proposition that, so soon as women depart from their natural sphere, they become atheistical and immoral." He was accused in the Washington papers of having referred in a condemnatory manner to Hypatia, Madame Roland, Mary Wollstonecraft, Frances Wright, Harriet Martineau, Frances Power Cobbe, and George Eliot. But it appears from an explanatory letter, written by him to the *Woman's Journal*, that his hearers wholly misunderstood and misrepresented him; for he declares he did not attack or even mention Woman Suffrage in his discourse. "My position was," he says, "that, when women rush into scepticism, they forsake their best friend and defence,—Jesus Christ and his gospel,—and expose themselves to the most dangerous influences. And this I proved by a multitude of sad facts in the history of the connection of women with scepticism." He declares that he "uttered not a word against the morals of either" Hypatia, Madame Roland, Harriet Martineau, or Frances Power Cobbe. He further says: "The discourse was a defence and glorification of woman in her high moral and religious nature and in her devotion to the gospel, which has so elevated her according to three sceptical witnesses whom I quoted,—to wit, Lecky, Maine, and Renan. Of course, it correspondingly warned her of the dangers arising from sceptical influences."

Although, it seems a little singular that the several distinguished women suffragists present, who listened to this "defence and glorification of woman," should have become so indignant at his utterances that two of them, renowned for the advocacy of the rights of their sex and understood to be always happy to listen to any "defence" of it, felt themselves called upon to express to him personally at the close of the sermon their regret and indignation at his words, yet it seems only fair to believe the Rev. Doctor's own statement.

But I am at a loss to know, since he "uttered not a word against the morals" of those illustrious and gifted benefactresses of our race, to whom he made reference, in what way he made use of their names to illustrate the "multitude of sad facts in the history of the connection of women with scepticism," by which he proved "that, when women rush into scepticism, they forsake their best friend and defence,—Jesus Christ and his gospel."

If Dr. Patton had carefully read the history of those women, he would have known that not one of that noble group whose names he used as illustrative of the evil tendencies of scepticism ever "rushed" into that condition of thought. They were each and all in their youth devoutly religious; and their scepticism was the result of years of intense study, earnest thought, painful investigation, and sincere conviction,—a conviction to which they were as truly devoted as any of those girl-martyrs of whom we read in the early history of the Christian Church were to their faith.

There were no doubt "sad facts" in the story of the lives of some of these women, as there are in the history of all human souls who devote their lives to noble aims and high pursuits. "Sad facts" mark even the lives of the most devout women. If Dr. Patton doubts this, let him read the authentic portions of the lives of the Christian female saints. Are there not "sad facts" to be found in the stories of such religious enthusiasts as Joan

of Arc, of Queen Mary of England, of Mother Ann Lee, of Madame Guyon, and of Catherine de Medici?

Dr. Patton says he quoted from "Lecky, Maine, and Renan" in support of his position, that the gospel has elevated woman. It is doubtless true that these writers give due credit to Christianity in certain of its aspects in its relation to human progress, but it is not probable that these writers claim, as among the causes of woman's progress, the theological teachings of the Bible respecting woman; and I doubt whether the following passages from Lecky and Maine were among those quoted by the reverend gentleman on the occasion of his most notable sermon. Mr. Lecky—in describing the influence of the doctrine of the inferiority of woman, and that through her sin came into the world, which is certainly a part of the New Testament teachings—says:—

Woman was represented as the door of hell, as the mother of all human ills. She should be ashamed of the very thought that she is a woman! She should live in continual penance on account of the curses she had brought upon the world. She should be ashamed of her dress, for it is the memorial of her fall. She should especially be ashamed of her beauty, for it is the most potent instrument of the demon. . . . Women were even forbidden by a provincial council, in the sixth century, on account of their impurity, to receive the eucharist in their naked hands. Their essentially subordinate position was continually maintained.

It is probable that this teaching had its part in determining the principles of legislation concerning the sex. The pagan laws during the Empire had been continually repealing the old disabilities of women; and the legislative movement in their favor continued with unabated force from Constantine to Justinian, and appeared also in some of the early laws of the barbarians. But, in the whole feudal legislation, women were placed in a much lower legal position than in the pagan Empire. In addition to the personal restrictions which grew necessarily out of the Catholic Christian doctrines concerning divorce, and the subordination of the weaker sex, we find numerous and stringent enactments, which rendered it impossible for women to succeed to any considerable amount of property, and which almost reduced them to the alternative of marriage or a nunnery. The complete inferiority of the sex was continually maintained by law; and that generous public opinion which in Rome had frequently revolted against the injustice done to girls, in depriving them of the greater part of the inheritance of their fathers, totally disappeared. Wherever the canon law has been the basis of legislation, we find laws of succession sacrificing the interests of daughters and of wives, and a state of public opinion which has been formed and regulated by these laws; nor was any serious attempt made to abolish them till the close of the last century. The French Revolutionists, though rejecting the proposal of Sleyès and Condorcet to accord political emancipation to women, established at least an equal succession of sons and daughters, and thus initiated a great reformation of both law and opinion, which sooner or later must traverse the world. (Lecky's *Hist. Morals*, vol. ii., pp. 357-359.)

"No society," says Maine, "which preserves any tincture of Christian institutions is likely to restore to married women the personal liberty conferred on them by the middle Roman law." (*Ancient Law*, p. 158.)

SARA A. UNDERWOOD.

THE BROTHERS GRIMM.

This Sunday morning, January 4, the fine hall of the University of Berlin was the scene of an impressive celebration. It is the hundredth anniversary of the birth of Jacob Grimm; and his brother Wilhelm, the hundredth anniversary of whose birth comes next year (February 25), was included in the homage. The noble faces and busts of the Brothers Grimm—partners in one great service, made professors of this university at the same time (1840, by Friedrich Wilhelm IV.)

The Index.

BOSTON, FEBRUARY 12, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

EDITORIAL NOTES.

BY B. F. U.

THE term "sweetness and light" did not originate with Matthew Arnold. Dean Swift, in *The Battle of the Books*, compares the ancient and the modern writers as follows: "The difference is that, instead of dirt and poison, we have rather chosen to fill our hives with honey and wax, thus furnishing mankind with the two noblest of things, which are sweetness and light."—*The Critic*.

R. HEBER NEWTON observes: "Men there are who can admire the plea of reason when urged five hundred years ago, but who now call such a test of truth rationalism; who swear by the heretics of yesterday, and swear at the heretics of to-day; who do homage to the right of private judgment as exercised by Luther, but who would silence it as exercised in our churches to-day."

It is a singular coincidence that Mr. H. G. Atkinson, whose name has again been so prominently brought forward in the recent controversy about the life of Harriet Martineau, died on Sunday, December 8, at Boulogne, where he had resided since the year 1870. He was one of the very earliest contributors to the *National Reformer*, and was a prolific writer for every journal belonging to any shade of advanced free thought. He was a devoted admirer of Bacon, and many years ago was specially prominent for his part in the famous Atkinson-Martineau letters.—*London Inquirer*.

SINCE the *Commonwealth* is pleased to refer to us repeatedly as "the sub-editor of *The Index*," it may be well to state for its information that our position on this paper is not and never has been that of a "sub-editor" in any respect whatever. *The Index* is under a joint editorship, in which the two editors have equal voice and authority in its editorial management; and the individual responsibility of each for what appears in the paper is clearly stated in the prospectus. The abuse of us and *The Index* by the *Commonwealth* is so silly in its spiteful feebleness that it does not rise even

—welcomed the audience from amid their bower of evergreens. The Faculty were present in their robes; and many other distinguished men were present, among them some of exalted position, the Crown Prince being there of course, for he rarely fails to pay homage to literary men. The university choir, composed of students, sang finely.

A fine review, which is to be printed, of the life and labors of the Brothers was read by Prof. Schoerer, who fills the chair of philology, in which he showed that Jacob and Wilhelm were patriarchs of all exact and scientific study in philology and mythology. It was pleasant to see in the audience two more "Brothers Grimm," sons of Wilhelm, the one a Regierungsrath, the other, Herman, professor of literature, well known to the world by his noble works on Michel Angelo, Albert Dürer, and Goethe (whose friend Bettina's daughter, Gisela, he married), and especially dear to Americans for his two beautiful essays on Emerson, the latter written since Emerson's death. Herman Grimm studied English in order to read Emerson, as Emerson studied German in order to read Goethe. Unfortunately, however, he cannot speak the language he has learned to read so well; and, when—twelve years ago—he met Emerson at Florence, he could only listen. He has told me that Emerson remains to him the unique man of his time; and, in my opinion, Herman Grimm is the only European who has ever been able to understand or appreciate the genius or spirit of Emerson. I cannot help feeling that such appreciation of the great New World thinker by a man brought up amid studies of the immemorial and legendary past is in itself a sign of the liberalizing tendencies which lay in the discoveries of the Brothers Grimm. Emerson remarked how many useful hints Goethe, though "a modern of the moderns," had given to the archaeologists; and the converse is equally true,—there are no better promotives of free thought than the explorers of ancient thought, especially as embodied in tradition and mythology. To have shown that the good and evil fairies of folklore are the gods and demons of a mighty religion, diminished in size and performance by relegation to the hut and the nursery, is a discovery by the Brothers, which points out their inevitable fate to the imposing deities and devils of our time who have not yet reached their fairy phase. Grimms' *Fairy Tales* have gone round the world, and with them have been sown seeds of scepticism, little suspected by many of the parents who have presented the charming volume to their little ones.

Which reminds me of a story told by Wilhelm Grimm to a friend, which will be new to your readers. One day, a little girl, bearing a book in her hand, sounded the bell at the door of the Brothers, and asked to see "Mr. Grimm." Wilhelm having seen her, the following colloquy occurred: "Are you the Mr. Grimm who wrote the pretty tales?" "Yes, I and my brother." "And about the clever little tailor who married the princess?" "Yes, certainly." "Well," said the child, producing the book and opening at a certain page, "it stands here that every one who doesn't believe it must pay him a thaler. Now, I don't believe a princess ever married a tailor. I haven't so much as a thaler yet; but I have brought a groschen, and please tell him I hope to get the rest by and by." Whereupon, she laid the silver groschen on the table. Just then, Jacob came up, and the brothers had an interesting interview with the little dame; but they could not persuade her to take back with her the silver groschen.

The tributes which the Brothers received from children were many; and, had each been represented by a silver groschen, the sum would have

been considerable. Interesting as the occasion of this morning was, a better celebration can be easily imagined, wherein multitudes of children should gather to witness representations and tableaux of Grimms' *Fairy Tales*. Unfortunately, among the Christmas pantomimes and spectacles of the Berlin theatres, this season none of the German tales have been included. However, I do not know that this is to be deplored, if the heroes and heroines of our childhood are liable to be paraded in caricature here, as they are in the English pantomimes. At the present moment, in the largest theatre of Berlin, Lucifer is one of the characters in a play called "Sulphurina." He is used as a fairly respectable fairy, working evil. That is one step toward properly placing some figures of popular faith. They can never be understood if they are ridiculed. The mantle of the Brothers Grimm, who treated folklore with as much sympathy as learning, does not appear to have fallen on any one in Germany or elsewhere. They have not even a folklore society, such as that which flourishes in England. But in the coming university of civilization there will be a professor of fairy tales and folklore; and there will be no want of materials at his hand, thanks to the as yet but half-recognized labors of those dear Brothers. It was pleasant to hear the student Männerchor to-day, after the address of the philologist, with their prophetic hymn:—

"Der Samen edler Lehren trägt
Ein Sturmwind Gottes übers Reich der Manen
Auf Lebensflügeln fort und legt
Ihn nieder, wo's die Lehrer selbst nicht ahnen.
"Wer sich dem Dienst der Wahrheit weiht
Dess Werk lebt fort, und wurd' er auch vergessen;
Die Saat bringt Frucht, die er gestreut,
Der Menschheit Erbe wird, was er besessen.
"Doch wenn's durch Gelsteskraft geglickt
Auf neuen Pfad die Leuchte vorzutragen,
Der Irt der Zeiten Strom entrückt,
Es glänzt sein Name noch in späten Tagen."

M. D. CONWAY.

REFERRING to the work of the Commission for the investigation of Spiritualism, appointed under the will of Henry Seybert, who left \$60,000 to establish a chair of mental philosophy, subject to the condition that the phenomena of Spiritualism should be thoroughly examined, the *Springfield Republican* says: "Seybert was a dupe of the Blisses and the Katie King sensation which so abused the confidence of that excellent man, the late Robert Dale Owen; but the exposure of the humbugs to which he had given implicit credence did not shake his faith in the reality of spirit communication, any more than it did that of Mr. Owen. The Commission appointed to carry out his intentions have already been visited by several of the most noted mediums in the country, who have been paid liberally for their services; and the latest of these is Dr. Henry Slade, who has just concluded a series of what are called 'remarkable manifestations' before the Commission. Slade is a very able man in his profession; but he is not always conscientious, as many who have had private sessions with him know. The magician Heller has contracted with the Seybert Commission to duplicate everything Slade has shown them, and to reveal to them after he has done it his whole mode of operation. The inquiry into mediumship will without a doubt bring to light a deal of trickery, which those who believe in the agency of spirits commonly explain by one of two hypotheses: that the medium, when his power is deficient, resorts to trickery to counterfeit the genuine effects; or that malicious spirits interfere to injure the medium's reputation. Perhaps the scientific investigators may be able to distinguish fraud from fact."

to the level of our contempt. A paper whose editorial columns are open to anonymous vindictive assaults upon a journal and an editor by one who makes pretended criticism a mere pretext for gratifying feelings of personal ill-will and revenge is so far below the standard of fair and honorable journalism that it deserves no attention whatever.

We have often seen Henry Ward Beecher classed among those who believe in modern Spiritualism; but it seems from the following, which is taken from one of Mr. Beecher's recent discourses, that he is not a Spiritualist:—

Now, in regard to this question, Do spirits ever revisit this earth? I want to say that I would be happy to believe they did, but I have failed to discover it. The communications I have received, purporting to be from my parents, were of such a weak, milk-and-watery nature that they ought to have been put in an infirmary. I have been at séances perhaps a dozen times in the course of my life, and have seen many things I could not understand, but nothing to convince me that communication with a spirit-world is open to us.

The *Religio-Philosophical Journal*, commenting on this declaration, remarks: "His brothers have been convinced of the truth of spirit intercourse. Charles Beecher has written a book on the subject, in which, on Biblical grounds, he supports his belief in the same. His sisters have arrived at the same conclusion. Mrs. Stowe gladly accepts it, and Mrs. Hooker is an ardent advocate. The Beecher family are a family of Spiritualists; and it is passing strange that, while other members receive satisfactory communications from their spirit friends, to Henry Ward alone they give instructions 'of such a weak, milk-and-watery nature that they ought to be put in an infirmary.'" The *Journal* adds: "At one time, Mr. Beecher inclined to Spiritualism, and his sermons were for a time replete with its philosophy," and intimates that the great preacher is endeavoring to "curry popular favor by denouncing what he knows to be true." Mr. Beecher is an emotional man, whose beliefs are largely determined by his feelings and influenced by his surrounding, and who is subject to variable moods. Supposing it true, as is likely, that Mr. Beecher was at one time "inclined to Spiritualism," it does not follow that in his recent utterances in regard to it he was guilty of the hypocrisy of "denouncing what he knows to be true."

THE *Presbyterian* says, "The Rev. A. N. Alcott, pastor of the Unitarian church in Kalamazoo, has resigned his pastorate and withdrawn from the Unitarian body, because the last session of the State Conference 'declined by a majority vote to recognize either Jesus or Christianity, or even Theism, in a proposed new constitution.'" We are reliably informed by a gentleman who was present at the Conference that Mr. Alcott with two others wanted the Conference to make a distinct and formal declaration of its Christian faith. This the Conference generally was not prepared to do. The discussion came up in connection with the report of a committee which had been appointed at the previous annual meeting to draft a new constitution, and present it for the consideration of the Conference. The chairman of this committee, Mr. Forbush of Detroit, reported a constitution, with two drafts of a preamble differing somewhat from each other in phraseology. One of them stated, generally, the religious and moral purpose of the Conference simply, without naming God, Jesus, or Christianity; while the other defined the religion of Jesus as the love of God and man. The Conference preferred the former draft; but Mr. Alcott, Mr. Sunderland, and a layman were strenuous for the second. When it was found that

these three gentlemen were likely to be much grieved if the Conference insisted that the former draft of the preamble should go into the constitution, all action was suspended, and the subject was by unanimous vote indefinitely postponed. Nothing was done at the meeting to change in any way the organization of the Conference; but our informant says: "It is doubtless true that, if any action had been taken, it would not have been satisfactory to Mr. Alcott. It should be added, however, that not one person who spoke in favor of the first preamble admitted for a moment that it was open to the interpretation which Mr. Alcott put upon it. It was atheistic, antichristian, and anti-Jesus only in the conception of those who can find no religion and morality outside historical Christianity. . . . What we want is to keep all questions open, and not allow a creed of any sort to be imposed upon our Conference."

Who shall decide what Agnosticism is? Mr. Huxley wrote in 1884: "Some twenty years ago or thereabouts, I invented the word 'Agnostic' to denote people who, like myself, confess themselves to be hopelessly ignorant concerning a variety of matters about which metaphysicians and theologians, both orthodox and heterodox, dogmatize with the utmost confidence; and it has been a source of some amusement to me to watch the gradual acceptance of the term and its correlate, 'Agnosticism.' . . . Thus, it will be seen that I have a sort of patent right in 'Agnostic' (it is my trade-mark); and I am entitled to say that I can state authentically what was originally meant by Agnosticism. . . . Agnosticism simply says that we know nothing of what may be beyond phenomena." With this view, Prof. Ernst Haeckel writes, "I believe that my monistic convictions agree in all essential points with that natural philosophy which in England is represented by Agnosticism." It was with this view of the subject, probably, that Mr. Darwin late in life wrote, "I think that generally (and more and more, as I grow older), but not always, an Agnostic would be the more correct description of my state of mind." And certain it is that, when Herbert Spencer maintains, as he does with tiresome repetition through whole pages and chapters of his works, that the Reality underlying phenomena is inscrutable and unknowable, his position is that of an Agnostic. The word "Agnosticism," since it came into use, has been applied both to those who question whether there is any existence beyond phenomena and those who affirm such an existence, but declare that it is unknowable. Thus, Mr. Spencer, in reply to Mr. Harrison, says: "I might enlarge on the fact that, though the name 'Agnosticism' fully expresses the confessed inability to know or conceive the nature of the Power manifested through phenomena, it fails to indicate the confessed ability to recognize the existence of that Power as of all things the most certain. I might make clear the contrast between that Comtean Agnosticism which says that 'Theology and Ontology alike end in the Everlasting No, with which science confronts all their assertions,' and the Agnosticism set forth in *First Principles*, which along with its denials, emphatically utters an Everlasting Yes"; i.e., as to the existence of the Unknowable behind phenomena. The recognition of the Unknowable Mr. Spencer makes the basis of religion. Instead of disclaiming Agnosticism, he complains that Mr. Harrison "was seeking to reduce, as he would say, to a ghostly form that surviving element of religion which, as I had contended, Agnosticism contains." Thus, Mr. Spencer refers to his own philosophy as Agnosticism, while pointing out with his usual discrimination the difference between the "Agnosticism set forth in *First Principles*" and that of Comte.

VII.

THE CHRISTIANITY OF PAUL.

The Two Parties in the Early Church.

In the discussion which arose between Peter and Paul and their respective adherents, in reference to the necessity of submitting to the rites and ordinances of Judaism as a preliminary to Christian baptism, Paul finally announced the principle that the acceptance of the gospel abrogated the necessity for the formal observances required by the law,* and claimed complete freedom for the convert as to the adoption of the rite of circumcision, and other points in dispute between the Judaizing and the Gentile Christians. The "Acts of the Apostles," which evidently perverts the facts of history in the interest of its obvious overmastering purpose, endeavors to convey the impression that compromise and agreement were successfully accomplished during the lifetime of the apostles. The probability is, however, that the conflict continued, and was transmitted to later generations. We have Paul's own declaration, on the occasion of his interview with Peter at Antioch, that he "withstood" him "to his very face."†

The evidences of this conflict in the writings of Paul, and on the opposing side in the Apocalypse and Petrine Epistles, as well as in the writings of Hegisippus and others of the early Fathers of the Church, are very numerous. In the Book of Revelations, the followers of Paul are doubtless denounced under the names of Balaamites and Nicolaites,‡ and are charged with various offences, including the eating of meats offered to idols. Paul himself discouraged the use of such meats when their character and connection with pagan sacrifices were known; but he allows exceptions in certain cases, and doubtless some of his Gentile followers were even more liberal than he was in their disregard of the injunctions of the Jewish law. The author of the Apocalypse, who was probably the Apostle John, doubtless regarded Paul as the instigator of these "false doctrines"; for he expressly excludes him in his enumeration of the twelve apostles,§ and elsewhere commends the church at Ephesus because it could not bear "those who said they were apostles, and were not, but tried them and found them false apostles,"||—an evident allusion to Paul. Heathenism and Judaism were world-wide antipodes in the thought of the writer of the Apocalypse. The former is denounced as the kingdom of Antichrist, and the Gentiles exist only to share the final fate of this arch enemy of the heavenly kingdom.

The early Fathers of the Church generally ignored Paul or discredited his authority. Clement of Rome and Polycarp possibly allude to him, once each, in passages of doubtful authenticity.¶ Papias, who wrote about the middle of the second century, nowhere mentions Paul or any of his followers, though he speaks of the other apostles. Justin Martyr, who must have been acquainted with the labors and writings of Paul, studiously avoids any allusion to him; and Hegisippus refers to him, though not mentioning his name, only to contradict one of his assertions. He quotes against Paul's statement, "Eye hath not seen nor ear heard,

* Rom. vii., 4-6; II. Cor. iii., 6-18; Gal. iii., 22-29; iv., 5, etc.
† Gal. ii., 11.

‡ Rev. ii., 14-20.

§ Rev. ii., 2.

¶ The Epistle of Clement to the Corinthians is adjudged by the author of *Supernatural Religion* and other able critics to be largely interpolated. The passage in Polycarp's Epistle to the Philippians in which Paul's name occurs is found only in a Latin text of doubtful reliability.

neither have entered into the heart of man, the things which God hath prepared for those that love him,"* the seemingly contradictory assertion of Jesus, "Blessed are your eyes, for they see; and your ears, for they hear."† The earlier recognized leaders in the Church appear to have sympathized rather with the Judaizing Christians than with the followers of Paul. In the final result, as we know, there were compromise and reconciliation, and upon essentially Pauline ground; but Paul himself obtained little recognition from the early Church. The Catholic hierarchy appropriated his theology, but traced back its credentials to the name and authority of his antagonist, the Apostle Peter. Of the two parties, the Petrine or Judaizing Christians, early known as the Nazarenes, and afterward as the Ebionites, whose tenets and peculiarities will be further described in a subsequent lecture, were finally absorbed into the great current of orthodox Christian life or died out for want of a further *raison d'être*; ‡ while the extreme Paulinists evolved into the heretical sect of the Marcionites, who, with their Gnostic coadjutors, ultimately succumbed also to the widening and deepening current of Christian Orthodoxy.

The Conclusion of Paul's Labors; his Death.

The missionary labors of Paul extended to all the great capitals of the west,—to Antioch, Ephesus, Athens, Corinth, and Rome, to the barbarian neighborhoods of Lystra, Galatia, and Melita. We hear of him in Cyprus, Salamis, and Paphos, in Pamphylia in Asia Minor, at Iconium, Philippi, and Thessalonica. Everywhere, he found colonies of Jews and proselytes. He taught in their synagogues, converted many, especially of the Hellenic proselytes, and established congregations of the new religion. Often, he met with encouragement; oftener, perhaps, with distrust, abuse, or violent opposition. "Of the Jews," he says, "five times received I forty stripes save one. Thrice was I beaten with rods, once was I stoned, thrice I suffered shipwreck, a day and a night I have been in the deep. In journeyings often, in perils by my own countrymen, in perils in the sea, in perils among false brethren; in weariness and painfulness, in watchings often, in hunger and thirst, in fastings often, in cold and nakedness."§

Charged with stirring up public dissensions, and carried finally to Rome for trial by reason of his appeal to his rights as a Roman citizen, he remained there about three years, and then passed forever from the light of history. The traditions of his subsequent journeyings and labors in Spain, Gaul, and Britain, are, doubtless, wholly unreliable. The probable termination of his stay in Rome nearly approximates to the period of the Christian persecutions, instigated by the infamous Nero. Some have supposed that both Paul and Peter suffered martyrdom in Rome at this time. It is hardly probable, however, that Peter ever visited Rome at all. Tradition declares that Paul suffered death by the sword instead of the ordinary modes of crucifixion or burning,—a privilege to which he would have been entitled by reason of his Roman citizenship. All this, however, is purely conjectural: we really know nothing certainly in regard to the time or manner of his death.||

* I. Cor. ii., 9.

† Matt. xiii., 16.

‡ The growth of a Christian Orthodoxy, based upon the dogmas of the miraculous birth of Jesus and of his practical equality with God, soon put an end to Christian proselyting among the Jews, since these dogmas were abhorrent to and wholly irreconcilable with the principles of Judaism. The sects who rejected these dogmas were denounced as heretics, and ultimately excluded from the Christian communion. Thus was Jesus crucified anew in the person of his own followers, in the name of the ideal Christ.

§ II. Cor. xi., 24-27.

|| See Baur, *History of the Church in the First Three Christian Centuries*; also, Renan, "The Antichrist" (vol. iv. of *The Origins of Christianity*).

The Doctrines of Paul: his Christology.

It remains now for us to consider the character of Paul's teaching, and its influence upon the subsequent development of the Christian faith. In his Christology there is a manifest advance from the earlier tradition of the Synoptical Gospels. "In trying to understand this phase of his opinion," says Prof. Allen, "we must bear in mind that Paul had never known Jesus as a man,—after the flesh, as he phrases it. If he had, we should probably have never known anything of his Christology." In his earlier writings, we have the clear expression of his belief, held in common with the other disciples, that Jesus had "risen from the dead," and ascended to paradise, soon to return and establish his eternal kingdom upon the regenerated earth. "The Lord himself shall descend from heaven with a shout," he says, "with the voice of the archangel, and with the trump of God: and the dead in Christ shall rise first: then we that are alive and remain shall be caught up together with them in the clouds, to meet the Lord in the air; and so shall we ever be with the Lord."*

Paul appears to accept the synoptical doctrine of a final judgment and eternal punishment for the sinner, † though certain passages in his writings have been held by some to suggest the belief in the ultimate salvation of all men. "Jesus," he says, "shall be revealed from heaven, with his mighty angels, in flaming fire, taking vengeance on them that know not God, . . . who shall be punished with everlasting destruction from the presence of the Lord, and from the glory of his power."‡ As the earliest belief in the advent of the heavenly kingdom was gradually dimmed by disappointment and long-waiting for the anticipated catastrophe, Paul's views of Christ become less objective and real, more subjective and mystical. "In the Corinthians," says Allen, "Christ is first of all a spiritual Lord and Chief, 'the head of every man,' soul of a body having many members, the mystic 'rock' of the old Covenant, the source of doctrine and authority." "Even though we have known Christ after the flesh," says the apostle, "yet now know we him no more."§ He is represented as the deliverer, who has "redeemed us from the curse of the law." He is the "second Adam," who gives us life, as the first Adam brought us death.

Later, Paul's thought of Christ becomes still more vague and visionary, retaining scarcely a feature of the man Jesus of the simple narrative of the Synoptical Gospels. He is a type of the divine energy,—a personified idea, similar to the wisdom of the Cabalists and the Apocryphal writers; "the brightness of the Father's glory, and express image of his person"; "in the form of God, though not claiming equality with God"; "image of the invisible, first-born of the whole creation." Here we are on the very verge of the mystic doctrine of the Logos, which subsequently appears in the Fourth Gospel, and finds its exaggerated reflection in the mysticism of the Gnostic schools.

Paul's Doctrine of the Atonement.

Though Paul himself does not expressly teach the doctrine of a sacrificial atonement,—a doctrine which, as we have seen, is wholly absent from the Synoptical Gospels,—we may yet trace the first de-

* I. Thess. iv., 16, 17.

† The punishment, however, is characterized as "eternal destruction" or "eternal death" instead of "eternal fire" or "torment," and may not necessarily indicate a belief in eternal conscious suffering. The "eternal life" on earth in the heavenly kingdom for the righteous appears to be contrasted with the "eternal death" of the wicked. See Romans ii., 5-14; iii., 5-8, 22; vi., 23; viii., 9-14, 20, 30; ix., 14-18, 27, 28; x., 1-18; xi., 13, 14, 20-22; xii., 4, 5; xiv., 10-12; I. Cor. i., 18-27; iii., 12-17; vi., 9-11; ix., 22-27; II. Cor. ii., 15, 16; v., 10; xiii., 5-7; Gal. vi., 8-9; Phil. i., 27-30; iii., 17-21; Col. iii., 12, 25; II. Thess. ii., 8-12.

‡ II. Thess. i., 6-9.

§ II. Cor. v., 16.

cided steps toward its development in his writings. "Paul," says Matthew Arnold, "knows nothing of the sacrificial atonement: what Paul knows of is a *reconciling sacrifice*.* The true substitute for Paul is not the substitute of Christ in men's stead as a victim on the cross to God's offended justice: it is the substitute by which the believer in his own person repeats Christ's dying to sin."† Yet in the language, and doubtless also in the thought of Paul, we cannot fail to note an evident step in the direction of the doctrine of the atonement. In the Epistle to the Hebrews, of which Paul is almost certainly not the author, this doctrine is announced in much plainer terms than we can discover in any of the genuine Pauline Epistles; while it reaches its full development in the Fourth Gospel, wherein Christ appears as a substitute for the paschal lamb, an atoning sacrifice for human sins. The manifest exaggeration of Paul's doctrine of the atonement by both Catholic and Protestant theologians is doubtless a legacy of misunderstanding derived from the misinterpretations of Augustine. Writing in the fourth and fifth centuries of our era and trained in the rigid school of Latin scholasticism, probably neither speaking nor writing the Greek language, he appears to have put his own exact and unyielding dogmatical conceptions in the place of the Oriental and symbolical expressions of the apostle to the Gentiles, thus petrifying symbol into dogma and substituting the rigid distortion of death for the suggestive and flowing life of the original thought.

The Doctrine of Salvation by Faith.

Throughout the later and more important period of its development, the religion of the Hebrews made righteousness the foundation stone of its spiritual edifice. The sense of personal sin, of violation of the law of God, was ever present with the true follower of Judaism. Even the formalities of latter-day Pharisaism did not wholly obscure the strong ethical principle involved in the ancient Hebrew faith and pre-eminently emphasized in the writings of the prophets. With Paul, this sense of "the exceeding sinfulness of sin," this striving after personal righteousness, was probably always present. In it, doubtless, lay the secret of his sudden conversion. In it, also, lay the root of his Christian theology. As a Jew, the escape from sin and its penalties had been possible to him only through strict and rigid obedience to the law. As a Christian, emancipated from the law, he found the means of escape in the acceptance of the doctrine of "salvation by faith."‡

Sin, to Paul, was something more than the negation of good, a mere phase of moral experience: it was an objective reality. It was an actual entity which obtained a lodgement in man, and controlled his actions in antagonism to all that was right,—in antagonism, even, to his own will. "Now, then," he says, "it is no more I that do it, but sin (*ἡμαρτία*) that dwelleth in me."§ Paul had assimilated from the Oriental philosophies that doctrine of the eternal antagonism between matter and God, between body and spirit, which is still more clearly expressed in the mystical dualism of the Fourth Gospel, and reached its highest contemporaneous development in the doctrines of the various Gnostic sects. With this Oriental dualism, he had combined the Hebrew notion of the inheritance of sin from the original transgression of Adam. He had also derived from the Eastern or Greek philosophies the metaphysical conception of the three-fold nature of man, comprising body, soul, and spirit.|| He *entified* or objectified these metaphysical conceptions, and they became to him realities.

|| I. Cor. xv., 35-54, especially verses 40, 44, 45.

The Ethics of Paul: His Doctrine of the Crucifixion.

The ethics of the Gospels were purely ideal and personal, adapted to the perfect society of the ideal kingdom of heaven, aiming to prepare individuals for it by the closest possible approximation to its conditions under the existing social order. The associations of Jesus were limited and personal, and his ethical system bore the impress of these environing limitations. The associations of Paul, on the contrary, were varied and cosmopolitan. His ethics, therefore, were naturally social and organic, less personal and ideal than those of Jesus, and adapted to the existing relations of a more varied and complex society. Nevertheless, his appeal to men, though on a less ideal plane, was essentially direct and personal, based as it was upon his own strong conviction of sin. He did not speak to men as one above them, but as one of them. His conception of Jesus was to him, and through him to others, an inspiration to right living, chiefly because he saw in the Master "a man tempted in all respects like as we are, yet without sin."

Paul's doctrine of "salvation by faith," accordingly, was no hard and fast dogma, as interpreted by the preachers of the orthodox creed. He preached "Christ and him crucified," indeed, as the foundation of his faith; but, when he says, "I am crucified with Christ, nevertheless I live; and the life which I now live in the flesh I live by faith in the Son of God, who loved me and gave himself for me,"* we perceive that he regarded the crucifixion as somewhat more than a personal and objective fact,—as a symbol, rather, of a subjective experience of Jesus which might be repeated in every human soul. Christ, in his conception, as Matthew Arnold has so ably shown, was already "crucified in the flesh" before the final agony of Calvary: he was crucified in the process of putting under foot the temptations of the flesh,—those tendencies to sin with which he was beset, in common with all other men, but which he, unlike all other men, had successfully overcome.

The "faith" advocated by Paul, therefore, was no mere acceptance of irrational dogma, but the surety that by a like process of subjecting the body to the spirit, the lusts of the flesh to the demands of an ideal righteousness, all men, like him, could be "crucified with Christ," and yet live the higher and nobler life of the spiritual man. His conception of spirituality is no mere product of a sublimated mysticism: it is rooted firmly in the ethical principle. It is in this sense of spiritual unity with Christ through triumph over sin that he exultingly exclaims, "The Spirit itself beareth witness with our spirit that we are the children of God, and, if children, then heirs,—heirs of God and joint heirs with Christ,—that, if we suffer with him, we may also be glorified together."†

Paul's Dualism.—Predestination and Election.—The Secret of Jesus.

There is much in Paul's phraseology, doubtless, that gives comfort to the devotees of modern Orthodoxy. The philosophical statement of the Calvinistic doctrine of predestination and election is certainly there.‡ The dualistic conception of the eternal conflict between the flesh and the spirit, the antagonism of God and matter, announced by Paul, is not consistent with a profound philosophy of the universe, or even with an intelligent theism. The God of Paul is less

fatherly and more despotic than the heavenly Father of Jesus. In other respects, however, he approximated closely to the thought of the Nazarene prophet. The "dead works" which he discredited were not alone or chiefly the natural fruits of righteous endeavor, but rather the formal observances of the ceremonial law.* The "faith" that he advocated was faith that the experience and triumph of Jesus were possible, in some degree, to all men; that any man, Jew or Gentile, bond or free, by being crucified with Jesus, by subjecting the selfish and animal impulses of his nature to the moral and spiritual demands of the higher law, as Jesus had done, would be raised with him into the higher life of the spirit. In this belief, which based salvation upon inner motive rather than outer act, consciously or unconsciously he caught the very secret of Jesus, and justified his claim to the title of an apostle.

Paul the Type of Protestantism.—His Relation to Existing Society.

If in our present study we have not discovered the Paul of the Puritan theology, neither, I think, have we found precisely the Paul of Matthew Arnold. If the Christ of Paul is seen to be an ideal Christ rather than the man of Nazareth, so in lesser degree, perhaps, the Paul of Matthew Arnold is an idealized Paul. If the apostle to the Gentiles clothes his philosophy in Orientalisms, as the great critic declares, the philosophy is nevertheless there beneath the garment, and in it the germs of much that is harsh and irrational in the later Christian creeds. As he stands revealed to the rational investigator, Paul is, I think, Mr. Arnold to the contrary notwithstanding, the natural prototype and apostle of Protestantism, even of dissenting Protestantism. The great apostle would have been quite out of place in the fold of a conventional body of believers like the modern Church of England. He protested against the close communion and legal literalism of the Judaizing Christians. He protested against the formal and external righteousness of the ceremonial law. His protests were always "vigorous," if not "rigorous"; and division and sectarianism followed in their wake, as they have followed the late protests of Luther and Calvin.

In the Christianity of Paul, the primitive social communism of the Gospels was already somewhat modified.† We hear less of a community of goods, less of the exaltation of poverty. With a wider social horizon, a less ideal and more practical ethical system than that of Jesus, Paul rendered himself liable to a more exacting and less favorable criticism by the exigent social standards of a later time and a higher civilization. Like Jesus, he uttered no word against the existing institution of slavery. He even recognized its legality and binding force by returning to Philemon the slave Onesimus, though with the qualifying injunction to receive him as a brother in Christ as well as a legal bond-servant.‡ His views of marriage and of woman were ignoble and unsocial, bearing the degrading impress of the Orientalism which gave them birth, and which tinged all his philosophy.§ The pessimistic conception of the existing world, implicit in the thought of Jesus, was explicit in the dualistic philosophy of Paul. Yet, with all his faults and imperfections, Paul as well as Jesus was a man of men.

Under the influence of the great apostle and his co-laborers, Christianity burst the bonds of nationality and race, and became a movement which

aimed at nothing less than the spiritual conquest of the world. The religion of Jesus, as taught by Paul, still contained within it an emphasis and purpose supremely ethical. It retained the doctrine that man is to be judged by motive rather than by act, by inward intention rather than outward and formal observances. In this conception was latent the inevitable and logical sequence of a belief in human equality, ultimating in the reorganization of society under the form of a spiritual democracy; and in the promise of this social revolution lay the secret of the eager acceptance of the new religion by the masses of the toiling poor.

Free from the necessary limitations of the ethnic religions, emancipated from Judaism through the influence of Paul, Christianity contained within itself some of the germs of a universal religion. To what extent these germs were fertilized by contact with a congenial soil and atmosphere, in what manner their growth was thwarted and prevented by the assimilation of incongruous elements from the surrounding Paganism and by their own internal imperfections, it is our purpose to consider hereafter.

CORRESPONDENCE.

HERBERT SPENCER DEFENDED FROM MISCONCEPTIONS.

Editors of The Index:—

Mr. Holland insists that Spencer is an idealist. He says that "idealism is the assertion that, underlying all material phenomena, is an ideal noumenon, the infinite and absolute creative power." Is Mr. Holland quite sure that this definition will include the systems of all the great representatives of idealism? But, without stopping to discuss this point, I may remark that Mr. Spencer does not hold to an ideal noumenon. He maintains that phenomena are the manifestations of a real noumenon, the nature of which is inconceivable and inscrutable. He does not call himself an idealist. He is not classed among idealists. In *Principles of Psychology*, he criticises all the systems of idealism, and endeavors to show their philosophical inadequacy. Out of "crude realism," "hypothetical realism," "absolute idealism," and "scepticism," he constructs a synthetic system which he calls "Transfigured Realism." He finds elements of truth both in realism and idealism. "The adherents of either doctrine," he says, "believing that it is entirely true or entirely false, are averse to a conciliation which requires any sacrifice. Surrender of a part of their doctrine is almost as offensive to their *amour propre* as surrender of the whole, and the proposer of it is censured all round. Recognizing thus the disfavor with which both realists and idealists naturally regard that Transfigured Realism which accepts from each a moiety of his doctrine, but rejects the rest, I scarcely expect that, where they before discovered only incongruities, this new division will show them that there are congruities." (*Principles of Psychology*, preface.)

Mr. Holland endeavors to make rather more of Spencer's use of the word "creative" than he is fairly warranted in doing. Mr. Spencer, in one of his articles, wrote originally "created and sustained" (as he subsequently stated), and substituted for it the more colorless word "proceed," because "the ideas associated with these words might mislead"; because he "wished to avoid those theological implications which Mr. Harrison said were suggested." He afterward complains: "Yet Mr. Harrison speaks of these erased words as though I had finally adopted them, and saddles me with the ordinary connotations. If Mr. Harrison defends himself by quoting my words to the effect that the Inscrutable Existence manifested through phenomena 'stands toward our general conception of things in substantially the same relation as does the Creative Power asserted by theology,' then I point to all my arguments as clearly meaning that, when the attributes and the mode of operation ordinarily ascribed to 'that which lies beyond the sphere of sense' cease to be ascribed, 'that which lies beyond the sphere of sense' will bear the same relation as be-

§ I. Cor. vii., xi.; Col. iii., 18, etc.

fore to that which lies within it, in so far that it will occupy the same relative position in the totality of our consciousness; no assertion being made concerning the mode of connection of the one with the other. Surely, when I had deliberately avoided the word 'create' to express the connection between noumenal cause and the phenomenal effect, because it might suggest the ordinary idea of a creating power separate from the created thing, Mr. Harrison was not justified in basing arguments against me on the assumption that I had used it."

Mr. Holland repeats the unfounded statement made by some other writers in Boston papers of late, that Mr. Spencer holds that the unknown and unknowable cause of phenomena is "psychic" in its nature. Certainly, if one affirms that the Absolute Reality is "psychic," he cannot say consistently that it is unknowable. But the truth is, Mr. Spencer teaches that we can ascribe neither material nor mental attributes to the Unknowable. In *First Principles*, closing paragraph, he says of the reasonings contained in the previous pages: "Their implications are no more materialistic than they are spiritualistic, and no more spiritualistic than they are materialistic. Any argument which is apparently furnished to either hypothesis is neutralized by as good an argument furnished to the other. . . . Though the relation of subject and object renders necessary to us these antithetical conceptions of Spirit and Matter, the one is no less than the other to be regarded as but a sign of the Unknown Reality which underlies both." This position is repeatedly reaffirmed in his later writings, including his late articles in reply to Mr. Harrison.

Mr. Holland does well to mention his authority for attributing to Mr. Spencer "a spiritualistic interpretation of the universe." He refers to an article in the January number of the *Nineteenth Century*, and says that "Mr. Spencer expressly acknowledges rather a spiritualistic than a material aspect to the universe." Now, the fact is, Mr. Spencer, instead of giving "a spiritualistic interpretation of the universe," merely states that the "necessity we are under to think of the external energy in terms of the internal energy gives rather a spiritualistic aspect to the universe; further thought, however [mark this], obliging us to recognize the truth that a conception given in phenomenal manifestations of this ultimate energy can in no wise show us what it is." So, in *Principles of Psychology*, Mr. Spencer argues that the necessity of thinking of mind in terms of matter gives a materialistic aspect to mind. "But we can," he says, "form no notion of a substance of mind absolutely divested of attributes connoted by the word 'substance'; and all such attributes are abstracted from our experiences of material phenomena. . . . See, then, our predicament. We can think of matter only in terms of mind. We can think of mind only in terms of matter. . . . We find the value of x in the terms of y , then we find the value of y in terms of x ; and so on we may continue forever without coming nearer to a solution. The antithesis of subject and object, never to be transcended while consciousness lasts, renders impossible all knowledge of that Ultimate Reality in which subject and object are united."*

In the article on "Religious Retrospect and Prospect," in the *Popular Science Monthly* for January, 1884, Mr. Spencer claims that we cannot logically ascribe intelligence, will, or consciousness to the Absolute; and that all the higher anthropomorphic characters now attributed to the First Cause will be dropped, as the lower ones long have been.

The errors here pointed out have been thoroughly exposed by Mr. Underwood, but since they are repeated it is necessary to expose them again.

Mr. Holland complains that we unfairly confound his criticism of Spencer with that of Harrison's, when "Harrison's point of attack was that the religion of the Unknowable was no religion at all," while the point of his essay was that "it was capable of being developed into a basis of a religious creed." I will reply to this only by a quotation from Harrison: "Ten years ago, I warned Mr. Herbert Spencer that his Religion of the Unknowable was certain to lead him into strange company. 'To invoke the Unknowable,' I said, 'is to reopen the whole range of metaphysics, and the entire apparatus of theology will follow through the breach.'" This is identical with Mr. Holland's claim, which is only a repetition of what Harrison said ten years ago.

PETER ANNET.

READ BETWEEN THE LINES.

Editors of The Index:—

I cannot agree with my friend C. K. W., when, in *The Index* of January 29, he says, "Jesus taught his disciples not to work, not even to plan how their bodily wants might be supplied, but to depend upon God for food, clothing, and shelter." Now take Luke xvi.: herein those opposed to the philosophy of Jesus have taught to the contrary of my friend, and have charged that here is taught too much worldly wisdom. It is, however, a parable, as we are told all his sayings likewise are, and herein is inculcated: "Make unto yourselves friends of the mammon of this world; for, if you have not been faithful herein, who will commit to your trust the true riches?" Now, if we interpret the parable in this chapter literally, its ethics are doubtful; but we must read between the lines, "for without a parable spake he not unto them."

I am a disciple of the Man of Nazareth, and largely because he is the most manly man God has raised up and endowed with the fulness of his spirit. All the wisdom of the ages are to be found in his "sayings." He was "the carpenter's son," not only in relation to his natural father, but he is also in a pre-eminent degree the son of the great Architect of the universe. He spoke to them of "earthly things," and he spoke to them of "heavenly things" (John iii., 12). He taught them to render unto this world those things which are the world's due; and Justin Martyr says that in his day the evidences of his handicraft were still in existence in the shape of ox-yokes, by which he taught worldly and heavenly wisdom!

DAVID NEWPORT.

ABINGTON, PA., 2d mo., 1st, 1885.

DEDICATION SONG.*

I.

There are old-time faiths lingering still all around,
Though their forms are but vain and their creeds are but sound;

There are temples and altars which gather great gain,
Though the God whom their worshippers call on is slain.
But we sing of the time when these remnants of right
Shall be transformed by sunbeams of reason's pure light;
When the priests shall be men and their robes deeds of love,
When from earnest truth-seeking no footstep shall rove.

II.

There are rulers unjust; there are laws that make wrong;
There are men who are kept down by vile hands and strong;
There are tyrants and despots still firm on the throne,
And e'en millions of men from oppression yet groan.
But we sing of the time when oppressions shall cease,
When the object of ruling shall be to bring peace;
When all men shall rejoice in the ruler's strong arm,
For the law's spreading mantle shall cover from harm.

III.

There are poverty's rags; there is crime's gilded robe;
There is vice, taint of blood everywhere on our globe;
The bold robber still prospers; e'en murder succeeds;
And no man can number inhumanity's deeds.
But we sing of the time when no wrong can have birth,
When all want, woe, and crime are quite banished from earth;

And when all men are just and are truthful and wise,
And when only love's spirit shall shine from all eyes.

IV.

There is knowledge enough men from error to free,
What we need is to praise it till all men shall see;
There is justice enough all the world's wrongs to right,
What we need is to test every deed by its light.
So we sing of the time when truth, justice, and love
Shall all dwell here on earth, not be sought for above;
When so firmly enthroned shall they be, and so bright,
That the world shall be governed by sweetness and light.

BEWARE how you allow words to pass for more than they are worth, and bear in mind what altera-

* Sung at the dedication of the new Unitarian church at East Saginaw, Mich., having been written for the occasion by a member of Mr. Rowland Connor's society.

tion is sometimes produced in their current value by the course of time.—*R. Southey*.

WHEN I quit business [of a binder] and took to science as a career, I thought I had left behind me all the petty meanness and small jealousies which hinder man in his moral progress. But I found myself raised into another sphere, only to find poor human nature just the same everywhere,—subject to the same weakness and the same self-seeking, however exalted the intellect.—*Prof. Faraday*.

BOOK NOTICES.

ORIENTAL RELIGIONS AND THEIR RELATIONS TO UNIVERSAL RELIGION: *Persia*. With Introduction by Rev. O. B. Frothingham. Boston: Houghton, Mifflin & Co. 1885. 8vo. Price \$5.00.

Those who know Mr. Johnson's writings will not fail in recognition of the care and labor with which this unfinished book has been edited. Only clear intelligence and unwearied attention, aided by knowledge of Mr. Johnson's methods and of the field in which he worked, could have achieved the publication of this volume. The faithfulness of the editor, Mr. Haskell, must not be forgotten by those to whom he has opened its treasures. And the Introduction by Mr. Frothingham gives us a clear, concise statement of the character and scope of Mr. Johnson's whole work of *Oriental Religions*, of his attitude as a student, his resources as a scholar, his genius for discovering profoundest meanings, his powers as a writer. It shows also the order in which the three great volumes, *India*, *China*, and *Persia*, stand related one to another and to their common subject of Universal Religion.

And by no means uncalled for is Mr. Frothingham's defence of these books against certain objections which, to those who occupy the author's point of view, seem groundless, but which have been urged with some persistency from other positions. One of these objections is that Mr. Johnson's qualification for his task was impaired by his want of first-hand acquaintance with Oriental languages and scriptures.

To this, it is replied that he was fully possessed of the results of Oriental study as gathered by specialists in all departments, and that he had an extraordinary gift of insight, whereby he was able to divine the essence of things often imperfectly made known even through the work of the best scholars. Max Müller, who has criticised Mr. Johnson's "second-hand" knowledge, himself somewhere says that, "when a new science is to be created, the imagination of the poet is wanted even more than the accuracy of the scholar." Much more than, when a new philosophy of religion is to be found. Another objection made is that Mr. Johnson was committed to a theory which was fatal to impartial investigation or conclusions. Mr. Frothingham admits that he had a theory,—as all great writers in such departments must have,—but observes that it "was broad, large, elastic in its character." This, however, does not appear to meet the charge in the most effectual way. In the sense in which it has most commonly been made, it implies that Mr. Johnson brought general facts to the support of a particular theory of his own. Now, such a charge might be justly made against one who, for instance, should compel the facts of universal religion to speak for the claims of a specific faith. But Mr. Johnson reversed this process. Through him, the particular, the special facts of religious history are shown, "in an essentially scientific way, in illustration of universal religious evolution. His "theory," then, was simply the perception that religion is a universal element in the life and history of man, whereof a proper study in its special forms, upon lines of historical development, yields proof of essential identity. A candid study of *Oriental Religions*, with clear perception of the author's point of view, above that of race or sect or specific faith, should show that in no other sense did he entertain a theory. Without a theory in this sense, he could not have written his books at all. Let any one read these three volumes in the spirit of a true student, as he would read the book of nature, "seeking that which is, not that which touches him," and then let him read, for example, an article in the *Nation* of January 8, curtly dismissing them as books which "have the fatal defect of being constructed on a theory." The critic in this case brings nothing to prove his charge. He shows no understanding of Mr. Johnson's position or work. Thus, criticism, in a journal of importance, becomes mere cavilling, and

does nothing to display the riches of this great contribution to the literature of the world.

In the *Persia*, which Mr. Frothingham calls "the masterpiece of the series," Mr. Johnson deals with phases of history and philosophy which peculiarly interested him. Naturally at home as he was in the speculative subtleties of the Hindu mind, he proved himself equally master of the practical utilitarian aspects of Chinese civilization. And here, in old Iran, he found what even more thoroughly kindled his genius and enthusiasm,—a vast historical example of the birth and growth of the moral sense, the beginnings of personality in man, "the advent of the Will as a positive power." As he neared the completion of this volume, he often spoke of the clearness with which he saw, at the culminating point of his studies, the worship of personal will as the common ground of positive faiths. The advance of these, by steps of science, by growth of spiritual perception, and of ethical ideas and experience, to Universal Religion, was the fulfilling of his vision of man's religious evolution. And his study of these aspects of spiritual development in the field of Iranian history lends a new interest to that ancient battle-ground of intellectual and moral forces.

The first chapter, on Symbolism, opens into a realm which never has been explored before with such interpretation of specific facts in the light of universal laws of mind. Symbolism is "mediation between inward and outward, person and performance, man and his environment." Its basis is personality. Its two poles are the will and the act. The Hindu failed to grasp the concrete side of its process. The Chinese did not grasp its abstract side. The Aryan mind seized both, and hence its history is an illustration of the laws of symbolism. This interpretation is the key to the present volume. It admits us to a vast range of exposition and discussion, which changes many old judgments of history upon mythology, philosophy, worship, ideal and practical tendencies. Meanings in the fire-symbol are brought out of transcendent depth and beauty. It grew naturally from the very physical peculiarities of Iran, "the true fire-temple of Nature, bespread with naphtha springs, meteoric lights, and burning mountains. The mystery of the flame brooded over it, and burst from its bosom." And the Persian developed qualities which caught up these suggestions of Nature, and translated the lessons of the earth into meanings of the sky. In the light of Mr. Johnson's interpretation, the whole subject of Avestan Dualism takes on a new appearance. Here, again, the connection between natural phenomena and the mind itself is brought out; and the office of symbolism in this phase of Persian development receives full recognition. The rude strife of powers assumes the dignity and grandeur of a world epos, wherein man plays his part with the vast elemental forces which are past his finding out. This sort of religion made strong, heroic men. It produced no ascetics. Its believers faced the dark problems of the world and the actual difficulties of existence with a courage such as only hand-to-hand encounter with terrible powers can beget or sustain. The influence of Avestan Dualism upon Hebrew thought and Christian theology is traced with fitting illustration and suggestive comparison.

Political forces are dealt with in the same original way as mythological and ethical, with many reversals of long-accepted historical verdicts and many an opening into places where inquiry had not penetrated. The chapter on Babylon, Cyrus, Persia, as a mere summary of political and military facts, is of fascinating interest; and its vindication of the mighty city, "key of history," against Hebrew prophet and Christian seer and the curse of ages, is a rectification of historical lines in that quarter. Babylon, "the prophecy of unity, of culture, of universal religion," educator of Judaism, benefactor of Christianity before its birth!

Alexander the Great, although his worse side is not hidden, yet, as filling the old type of ideal personality, is here no ruthless destroyer, but a deliverer and restorer, opening the way for Aristotle's free thought, for intellectual and religious progress, for new civilizations and broader humanities. From page 440 to the close of the book, more than three hundred pages, the interest is deepened by the study of problems which, in the light of the modern scientific spirit, pervading all of Mr. Johnson's work, are found to have a present practical importance. So is it with the discussion of philosophies, Manichæism

and Gnosticism, and with the treatment of Islam. To Mahomet is given the longest chapter of the book, and one of the grandest. Last of all comes the *Shāh Nāmeh*, or Book of Kings, of which the exposition breaks off abruptly, ending the volume. The Interrupter of all human labors stayed the hand which alone could have completed this work of a scholar than whom none more heroic, more devoted, more sincere has ever toiled in pure love of learning, of truth, of humanity.

It is too much to expect that a work so large as *Oriental Religions*, and so far above the common paths of research and the ordinary modes of interpretation in studies of this kind, will meet with very wide recognition or fair treatment, even among scholars,—until the day when its prophecy shall be fulfilled. Whether the work itself shall contribute directly or not in any great measure to this result, certain it seems that future investigation more and more will follow the lines which it so clearly marks out to the goal of its sublime conclusions,—perception of the essential unity of the spirit of man in the evolution of his nature, his thought, his aspiration, his ethical purpose, his brotherhood, his divine kingdom in this world. J. H. C.

RECORD OF ELLEN WATSON. By Anna Buckland. London, 1884.

I would like to call the attention of those interested in "the study of the religious nature in man" to a little volume, the *Life of Ellen Watson*. This young girl, who died at the early age of twenty-four, was a beautiful example of the results of the higher education and scientific study on a thoroughly womanly and beautiful mind. She was the daughter of a tutor in the University of London, and so was born under academic influences. She was especially attracted to mathematics, in which she took a distinguished rank at college examinations. She was a woman of sensitive and affectionate disposition, and very conscientious. She fulfilled all domestic duties with zeal and delight, and became the teacher of the younger children. So great was her enjoyment of intellectual study, and especially of science, that in her early youth she felt it was quite sufficient to fill her life; and, while she never was flippant or aggressive in her remarks to her friends who urged her to give attention to religious views, she felt no need of them. She seemed to have absorbed the philosophy of evolution into her very nature, not so much to believe it as to live and work by it.

As her whole nature developed, and as the insidious disease which cut short her life made progress, she began to extend her investigations beyond material things into spiritual realms; and her whole soul became filled with religious emotions and ideas. With a rapture of devotion which recalls Madame de Guyon or Madame Adorna, she dwelt on the love of God and of Jesus, and was made rich and happy by this mystic affection.

Surrounded by the atmosphere of the Church of England, her feelings took expression in the rites and symbols of that Church; and she loved its sacraments and communions. One of the papers which she prepared for her classes was on Savonarola, showing the turn of her thoughts.

But the fact that interests us is the evident influence of her intellectual training and scientific studies on the breadth and sanity of her religious life. She recognizes evolution in religious history as in geology; and, while loving her own Church best, she has no word of contempt or condemnation for any other, even beyond Christianity. She is like a true man, whose love for humanity is only broader and deeper because he has found a bride who embodies his ideal and satisfies his heart. Let those who believe that women will not forward the work of free religion, because they are full of religious emotion and affection, study the thoughts of this young woman, to see how she needs only intellectual education to free her from the trammels of superstition. Let those who believe that scientific study blights the religious affections learn here how it deepens and restrains them, but gives them greater breadth of application and health and wisdom in relation to daily life.

E. D. C.

THE February ("Midwinter") number of the *Century*, the first edition of which is one hundred and eighty thousand copies (the largest number of *Centuries* ever published), contains the beginning of a novel by Henry James, entitled "The Bostonians,"

which introduces the reader to a characteristic group of the "strong-minded" of both sexes; Mr. Howells' descriptive papers, entitled "A Florentine Mosaic"; Dr. Beers' paper on "Canada as a Winter Resort," with Sandham's graphic and spirited pictures. Mr. Howells' novel, "The Rise of Silas Lapham," is continued; and Miss Litchfield's "The Knight of the Black Forest" is concluded. The "short story" of the number is a long story by Mark Twain, entitled "Royalty on the Mississippi," which, with Kemble's humorous illustrations, covers twenty-four pages of the magazine. Mr. Stedman writes about Dr. Holmes in his critical series on the American Poets. With this article is printed a full-page engraving of an old daguerreotype of the "Autocrat." Mr. Stillman has a brief illustrated paper on Dutch portraiture. Poems are given by C. W. Stoddard, Henry Tyrrell, Edgar Fawcett, and (in the "Bric-à-Brac" department) by F. D. Sherman and Joel Chandler Harris (Uncle Remus). The illustrations of Gen. Grant's paper on Shiloh are more profuse than those of the other war papers already published. Articles in the same number by Col. Johnston, son of Albert Sidney Johnston, and by Col. Jordan, of Gen. Beauregard's staff, tell the story of the Confederate side of Shiloh. A letter from Gen. Fitz-John Porter describes interestingly the circumstances of the offer of a high Federal command to Gen. A. S. Johnston, who, at the breaking out of the war, was in charge of the department of the Pacific. Gen. Porter declares that the assertion that Gen. Johnston intended to turn over to the secessionists the defences of California, or any part of the regular army, is false and absurd. Sold by Cupples, Upham & Co.

"MIND" for January commences its tenth volume with a series of essays of the most profound interest to thinkers, and fully sustains its well-earned reputation as standing at the head of periodicals devoted to mental and psychological subjects in the English language. C. Mercier concludes his essays on the "Classification of Feelings," based on the principles of natural evolution; and it seems to be the most complete and successful effort in this direction that has yet been made. Prof. William James, of Harvard University, contributes an essay on "The Function of Cognition," in which he takes strong ground against the old metaphysical standpoint of solipsism, and argues for the reality of the objects of our sensations and of our sensible percepts, as "the only realities we ever directly know." There is no writer on psychology who surpasses Prof. James in power of introspective observation, and his conclusions must challenge the attention of all inquirers into the phenomena of our sentient life and experiences. J. Hutchison Stirling continues to argue that "Kant has not answered Hume." Prof. H. Calderhood furnishes "Another View of Green's Last Work," which has been ably criticised in former numbers of *Mind*. J. T. Punnett discourses on "Ethical Alternatives." Extensive critical notices of new works,—by Prof. R. Adamson on Lotze's *Logic*, by T. Whittaker on Thomson's *System of Psychology*, and of works by T. Davidson, James Sully, and D. G. Ritchie are given. Also, notices of most of the new works connected with psychology and mental science, foreign as well as English, besides correspondence and notes of interest.

THE *Freethinkers' Magazine* for January is the best number of this publication that has appeared. It contains a readable paper on "Dr. Hammond vs. Women," by H. H. Gardner; an article on "Religion and Morals," by Hon. R. S. McCormick; an address by Mrs. Clara M. Bisbee on "The Function of an Ethical Society"; and a report of a lecture by T. B. Wakeman on "Liberalism,—its Mission"; an original poem on "Immortality," by W. O. Spencer; an editorial on "A Free Thought School," "Editorial Notes," "Book Reviews," etc. We are pleased to see the marked improvement in the magazine, and to note the promise of further improvement in the future. (H. L. Green, Salamanca, N.Y., editor and publisher.)

A DIRECTORY of writers for the literary press has been compiled by Mr. W. M. Griswold. It contains three hundred and fifty names, by no means a full list; but every printed page is faced by a blank one on which additional entries can be made. The number for 1885 will be more complete. Issued by P. Q. Index, Bangor, Me.

POPULAR BOOKS

Guizot's CELEBRATED ILLUSTRATED HISTORY OF France

REDUCED IN COST from \$33.00 to \$8.00, or comparing contents fairly, from \$49.50 to \$8.00, for the only other American edition of GUIZOT comes down TO *The French Revolution*, only, and is continued to Napoleon III. by MARTIN, and \$49.50 is the published price of the two works. **THIS ILLUSTRATED LIBRARY EDITION** covers from the earliest times to 1848, is written by M. GUIZOT, Prime Minister of France, and completed from his notes by his daughter, Madame GUIZOT DE WITT. It is published in 8 volumes, small octavo, printed from the type shown by these lines, contains the 426 *Illustrations*, mostly full-page, of the imported edition, is bound in tasteful Library style, dark green cloth, beveled boards, gilt tops. Price of the set, only **\$8.00** by express, or, sent *prepaid* for \$9.60.

"There is only **ONE DRAWBACK**. . . it seems more like *getting a present* than making a purchase. Guizot is the most brilliant of French historians, as well as the most to be relied upon. He is the Macaulay of the history of France; his style and treatment are philosophical, didactic, rich in detail, dramatic in arrangement. His narrative is full of emotion, like a quick stream; his characters rise before us as in the flesh; they are men and women, not historiclay figures. It is as charming as any romance, and the interest is permanent. It is a work to keep and read and re-read for years."—*Dominion Churchman*, Toronto, Canada.

"In **ENGLISH**, at least, original or translated, we have **NO WORK** of French history that **CAN APPROACH IT**. We can name no work that gives the complete history,

and gives it from the pen of a master, that can be thought of as a rival to the mammoth production of Guizot. How Mr. Alden can give the eight volumes, and this on good paper, and clear type, including the multitude of illustrations, is a thing we *have CIPHERED over*, but we *fail to understand it*. The first volume gives substantially the beginnings of French history. It is of necessity the dullest of the eight, yet *with Guizot even logarithms would be readable*."—*Christian Leader*, Boston, Mass.

"The **MARVELOUS CHEAPNESS** of these profusely illustrated and handsomely bound volumes must provoke comment everywhere. Each volume is *easily worth \$2.00*, according to the standard of prices asked. This is the only complete American edition of this work, which is known as the best popular history of France."—*Journal*, Indianapolis, Ind.

"In the reproduction of this work the publisher has outdone all previous efforts, and has given us a **MARVEL of EXCELLENCE**, in every respect, at a marvel of cheapness."—*Christian at Work*, New York.

Hundred-Page Catalogue, free, descriptive of the best books of the world, at the low-

est prices ever known, together with terms upon which books are sent **for examination before payment**, to any one on application. Address, and make checks, drafts, or money orders, payable to **JOHN B. ALDEN, Publisher, 393 Pearl Street, New York.**

COUPON—50 CENTS.
This Coupon, together with \$7.50 in cash, will be received, if sent within 10 days from the date of paper in which it appears (mention name of paper), in full payment for GUIZOT'S FRANCE above described. This small extra inducement is simply to secure your prompt response, and indicate the advertising mediums from which responses come.

Frothingham's Sermons.

The sermons are neatly printed in pamphlet form, and our friends who wish to do missionary work for the Liberal cause will find them admirably adapted to that purpose. To such as order them in lots of 25 or more, the price will be reduced to 3 cents. Single copies 5 cents.

ONE MILLION

COPIES will soon be sold TWENTY YEARS OF CONGRESS—By James G. Blaine. The only history of our Government from 1861 to 1881. Hon. John S. Wise, M.C. from Va., says: "Whoever takes it up, no matter whether he be Mr. Blaine's friend or enemy, will never put it down until he has read the whole." \$200 per month to good agents. Apply at once, The Henry Bill Pub. Co., Norwich, Ct.

A beautiful work of 150 pages, Colored Plate, and 1000 illustrations, with descriptions of the best Flowers and Vegetables, prices of Seeds and Plants, and how to grow them. Printed in English and German. Price only 10 cents, which may be deducted from first order.

It tells what you want for the Garden, and how to get it instead of running to the grocery at the last moment to buy whatever seeds happen to be left over, meeting with disappointment after weeks of waiting. BUY ONLY VICK'S SEEDS AT HEADQUARTERS.

JAMES VICK, Rochester, N. Y.

H. T. MARSHALL'S

PATENT
ADJUSTABLE
LACE
CONGRESS

Is easily adjusted to fit any instep or ankle at any time, and will not uncomfortably draw the ankle, like ordinary congress. It has the stylish appearance of a lace boot and all the convenience of any congress in putting on or off the foot. Marshall's Pat. Pat'd May 13, 1884, woven in the front strap or stamped on the shank of each shoe. If your dealer does not keep them, send postal for directions how to get them to the Patentee and Manufacturer of Men's, Boys', and Youth's Fine Boots and Shoes, Tennis Shoe for Ladies and Gents a specialty.

CURRENT TOPICS.

BY B. F. U.

A BAPTIST clergyman down in Maine, says the *New York Herald*, praying for rain in a dry time, said, "We do not presume to advise, O Lord, but only to suggest."

MGR. CAPEL thinks, so the papers report, that the fight in this country is to be between Agnosticism and Catholicism, that the Protestant Church will go one way or the other.

THE *Philadelphia Record* thinks that by the time that R. G. Ingersoll, Henry Ward Beecher, and R. Heber Newton get through with the Westminster Catechism there won't be much left of it.

THE *Rundschau*, a monthly newspaper, published in German by that veteran in the cause of free thought, Fritz Schütz of Carver, Minn., has reached its ninth year. The record of monthly events, at the beginning of each number, is extremely well written; and the contents throughout show rare capacity for looking at passing events from an enlightened stand-point.

SAYS the *Boston Sunday Herald*: "The restrictions placed upon atheists as witnesses in this Commonwealth are relics of barbarism, and we are glad to see that the Senate judiciary committee has reported a bill to remove them. There might be a case in which justice would suffer by excluding the evidence of honest men who are no more likely to lie than their neighbors."

MR. COLVILLE, an inspirational medium, in reply to the question, "How can one become a medium?" says: "Mediums are born, not made. Persons with holy desires may be developed, but they must have a natural desire and talent." Are those who have been "developed" into mediums, then, pre-eminently "persons of holy desires," raised by their aspirations far above the level of ordinary uninspired, undeveloped, and "unmediumistic" humanity?

THE Board of Directors of the Columbia (S.C.) Seminary find difficulty in selecting a professor to lecture upon the relations between science and revelation in the place of Dr. Woodrow. They want a man whose scientific teachings will in no way conflict with the Bible. It is stated that Dr. Woodrow has suggested that Rev. John Jasper, of

"de sun do move" notoriety, and whose theories can be abundantly supported by Scripture citations, is a suitable man to fill the chair now vacant.

MR. JOHN VERITY, of Lynn, active for several years in various reform movements, died last week. His funeral at Paine Hall, where Mr. Verity had long been prominent in the Sunday discussions, was largely attended; and Mr. Horace Seaver gave a discourse, in which he paid an eloquent and touching tribute to the character of the deceased. Mr. Verity was a man whose honesty commanded the respect of all who knew him, and his earnestness and generosity made him many friends.

THE *Evening Traveller* of this city, after mentioning that in Mexico lotteries are sanctioned both by the Church and the government, says, "The principal institution in the City of Mexico is 'The Lottery of Divine Providence'; and the dead walls were lately covered with placards announcing that the anniversary of the appearance of the Holy Virgin to the shepherd, at Guadalupe, would be celebrated by great religious ceremonies, with cock-fights, bull-fights, games of chance, and other attractions."

HOW LONG are the wrongs of unhappy Poland to last? Since the Czar issued his latest edict, a Polish prince thus refers to the condition of his country: "The times are terrible. Our liberty and our land are gone; our language is threatened; our religion is attacked; our bishops forbidden to make visitations; our priests liable to be banished to Siberia any moment, if they hear confession or give absolution without authorization of the police. There is no fear of a Polish revolution. All we ask now is leave to live."

THE *Springfield Republican* will begin early next month publishing a series of short stories by eminent English writers of fiction. The first will be a novelette, entitled "A Rainy Day," by Ouida; and this will be followed by stories by William Black, Mrs. Braddon-Maxwell, Rhoda Broughton, Wilkie Collins, Thomas Hardy, Joseph Hatton, and Mrs. Oliphant. This notable series, which no other paper in New England will have, promises to be a great addition to the attractions of a paper which is now justly regarded as among the best dailies published in this country.

STEPHEN FENNIS, fourteen years old, an orphan, has filed a bill in the circuit court for an injunction restraining the teacher and school directors at Rogers Park, Chicago, Ill., from expelling him from the public school for refusing to take part in the forms of prayer and worship in use there. He states that he and his family are all Catholics, do not believe in the forms of worship used in the school, and that he refuses to take part in them; that, although he has during the service behaved with propriety, on February 5 the teacher ordered him to take his books and leave, and forbade his ever returning until he was willing to take part in the school's prayer and worship.

THE appeal of the Soldier's Home at Chelsea is one to which a generous response should be

made. Last year, the treasurer received from the State \$15,000, from the Grand Army Posts \$1,968, from interest \$1,850, from individuals \$168, and from the sons of veterans \$152. It supports a hundred veterans a year, at a cost of a little more than \$3 a week for each man. Neither its income nor its quarters are adequate. There were, its annual report states, January 1, twenty-five applications for admission on file; and the hospital is insufficient for the accommodation of all the inmates that require treatment. The trustees are arranging for a grand carnival to be held in the Institute Building, Boston, to begin April 7, and to continue ten days, hoping to realize a fund large enough to enable them to make additions to the hospital and provision for the increasing number of sick and disabled veterans who apply for its protection.

SAYS the *Woman's Journal*: "By a unanimous vote of the New York Senate, the Senate Chamber was opened on the evening of last week Thursday for a lecture by Mrs. Elizabeth Cady Stanton, on the disabilities and limitations of sex. A large and attentive audience was present. Mrs. Stanton was introduced by Mrs. Mary Seymour Howell, president of the Political Equality Club of Albany, and accompanied by Mrs. Caroline Gilkie Rogers, of Lansingburg, secretary of the same club. The *Albany Press* says: 'During the evening, this unwonted sight of three ladies occupying the president's desk to preside over and address the occupants of the Senate Chamber was one few who saw it will soon forget. Not one person there, probably, as they listened to the speaker, doubted that she and her associates were every way qualified to take part, not only in the election of legislatures, but in making proper laws for this republic themselves.'"

THE Washington correspondent of the *Congressionalist*, referring to Rev. Dr. Patton's recent discourse in that city on "Woman and Scepticism," says: "At the conclusion of the sermon, I mounted the platform to ask the loan of the discourse. Before the preacher had time to grant the request, two ladies of some national reputation rapidly ascended the platform, one of whom told him that his mother, if he had one, ought to spank him: the other thanked him for the sermon, as proving that the great enemy of the woman's cause was to be found in the ministry." This correspondent says that Dr. Patton did not say any of the things which have been attributed to him, that he "spoke well of Harriet Martineau and highly of Miss Cobbe and not a word of liberty as leading to immorality." What on earth were Mrs. Stanton and Miss Anthony thinking of, when they "ascended the platform," and talked in the manner reported to an unoffending minister, who "hadn't done nuthin'" but praise their sex! But a private letter, from a very prominent and reliable person who was present, alludes to the discourse as "a very unworthy sermon which he [Dr. Patton] is now trying to repudiate. The sophistry and tergiversation of the orthodox pulpit surpass all understanding."

WHICH IS THE HONEST CREED?

Among the various missionary works for advancing liberal ideas which Western Unitarians are doing through the agency of "Unity Office," Chicago, is the regular publication of a series of Tracts called "Unity Mission." The eleventh in number of this series, recently issued, is a collection, with their tunes, of fifty liberal hymns; and a very good collection it is. It will answer a need in many meetings of liberal people, and may even serve as a hymn-book for liberal societies in the days of their small beginnings. But what we wish particularly to refer to now is a statement of Unitarian beliefs printed on one of the pages of the pamphlet's cover. This is headed simply as what "Unitarians Assert"; and above it stand the words which have been adopted by the Western Unitarian Conference as a motto,—"Freedom, Fellowship, and Character in Religion." The statement is as follows:—

Unitarians Assert:

The Naturalness of Religion to the Human Soul;
The Supremacy of Character above Belief in Religion;

The Ultimate Authority of Reason in Matters of Belief;

The Dignity as against the Depravity of Human Nature.

They worship the One-in-All, and name that One "Our Father."

They trust the Universe as Beautiful, Beneficent, Unswerving Order, to know whose laws is Truth, to obey whose laws is Liberty and stronger life.

They revere Jesus as the greatest of the historic Prophets of Religion.

They honor the Bible, and all Bibles, so far as each accords with Reason and Right.

They rejoice in the Hope of Immortality.

They believe that all things work together for good; that no good thing is failure, and no evil thing success; and that no evil can befall a good man, whether he be alive or dead.

And they believe that we ought to join hands and joyfully work to make the good things better and the worse good, deeming nothing good for ourselves that is not good for all.

They trust free thought, and trust it everywhere: they only fear thought bound. Therefore, their beliefs are still growing and widening, as science, history, and life reveal new truth; while their increasing emphasis is still on Ethics and the Great Faith to which Ethics leads,—Faith in the Moral Order of the Universe, Faith in All-ruling Righteousness.

All names that divide "Religion" are to them of comparatively little consequence. Whoever loves truth and lives it is, in a broad sense, of their religious fellowship: whoever loves it and lives it better than themselves is their teacher, whatever Church or age he may belong to. So their Church is wide, their teachers many, and their holy writings large.

Now, this in its substance is a good creed; but is it what "Unitarians assert"? We doubt not that there are some, even many, Unitarians who would be satisfied with this statement of their faith. But would it be accepted as sufficient by the majority of Unitarians? A majority of the ministers of the Western Conference and probably of the churches of that Conference might subscribe to this statement. But these are a comparatively small part of the Unitarian body. The strength of the denomination in America is in New England. Of the 340 churches of the denomination all through the country (counting even the few in Canada), 229 are in New England; and, of the 79 reckoned as belonging to the Western States, a considerable number are little more than missionary posts, and have but small congregations. Can it be reasonably supposed that anything like a majority of the older Unitarian societies in the Eastern and Middle States, or of their ministers, would accept the above assertions as an adequate

representation of their beliefs? Is it true that a majority of Unitarians regard Jesus as only "the greatest of the historic Prophets of Religion"? Do a majority of them, as yet, place all Bibles, of all Religions, together, to be judged alike by the standards of "Reason and Right"? If so, how happens it that the Unitarian churches in which any other Scriptures than the Hebrew and Christian are read in their religious services can be almost counted on one's fingers? Would the majority of Unitarians be content to say that they only rejoice in "the Hope of Immortality"? Do they not affirm a *faith* in it? While individual Unitarians profess to "trust free thought everywhere," has any general representative body of Unitarians ever expressed this trust to the extent of declaring that the limits of their religious fellowship should be as wide as freedom of thought in the search for truth? And can it be a fact that "all names that divide 'Religion' are of comparatively little consequence to Unitarians"? If it be, as the above statement asserts, then why should the National Unitarian Conference and the American Unitarian Association, the two most widely representative bodies of Unitarians that exist in this country, have been so tenacious of the Christian name?

But there is one authoritative statement, and but one that we know of, which ought to settle this question as to what the majority of Unitarians believe. The National Unitarian Conference is a body which represents the churches of the denomination throughout the country. It is a delegate body, consisting of the minister and two appointed laymen from each of the various churches; and almost all of the churches are actually represented in the Conference. Now, the National Conference has a Constitution which states certain doctrinal beliefs and purposes; and these, so long as they stand, must be assumed to express the sentiments of the majority of Unitarians in this country. These statements, omitting the articles which do not concern the point in question, are as follows:—

PREAMBLE.—Whereas the great opportunities and demands for Christian labor and consecration, at this time, increase our sense of the obligations of all disciples of the Lord Jesus Christ to prove their faith by self-denial, and by the devotion of their lives and possessions to the service of God, and the building up of the kingdom of his Son,—

ARTICLE I.—Therefore the Christian churches of the Unitarian faith, here assembled, unite themselves in a common body, to be known as the National Conference of Unitarian and other Christian churches, to the end of energizing and stimulating the denomination with which they are connected to the largest exertions in the cause of Christian faith and work. . . .

ART. IX.—Reaffirming our allegiance to the gospel of Jesus Christ, and desiring to secure the largest unity of the spirit, and the widest practical co-operation, we invite to our fellowship all who wish to be followers of Christ.

ART. X.—While we believe that the Preamble and Articles of our Constitution fairly represent the opinions of the majority of our churches, yet we wish distinctly to put on record our declaration that they are no authoritative test of Unitarianism, and are not intended to exclude from our fellowship any who, while differing from us in belief, are in general sympathy with our purposes and practical aims.

If these articles give an honest representation of Unitarian beliefs, we submit that the statement made on the cover of "Unity Mission, No. 11," needs amendment. Both of them cannot be true of the generality of Unitarians. It will be noticed that Article X. just quoted, which was adopted as late as the session of 1882, and was an attempt to widen the fellowship of the National Conference, expresses the belief that the Preamble and Arti-

cles as they previously stood, "*fairly represent the opinions of the majority of our churches.*" And this was declared by a large and distinctly representative body of the Unitarian denomination, with but a single dissenting voice. It must therefore be regarded as, up to date, the most authoritative utterance that has been made among Unitarians concerning their beliefs.

We have a strong impression, and rejoice in it, that the Unitarians are advancing toward the positions stated in the "Unity" creed. But we cannot believe, in the face of evidence like that just presented, that the majority of them are already there. We fear, therefore, that our Western friends have been a little "too previous" in their declaration of what Unitarians assert. They seem to us to have taken counsel of their own hopes and desires rather than of facts. In a prefatory note concerning the little pamphlet of hymns, they refer to this statement of beliefs on the cover and to some verses of similar purport that follow it as an attempt "to hint in other forms the outlooks and inspirations of Liberal Faith." And this is a correct characterization. If the statement had accordingly been framed as affirmations of a liberal faith, no objections could have been raised. But, as a statement, without qualification or explanation, of what Unitarians affirm, it must, in our opinion, convey to readers not otherwise well acquainted with Unitarian views a very erroneous idea of the real doctrinal position of the majority of the Unitarian body; and very many prominent Unitarians, we are sure, if they are sincere in their habitual utterances and methods, can but feel that the statement does them an injustice. We know, indeed, that of its author it might almost be said that he is the honestest man in the denomination; and that he has applied a pure conscience to this little piece of work, as to everything that he does, cannot be doubted for a moment. Yet would not the statement present an honest front, if it only purported to give what *some* Unitarians assert?

WM. J. POTTER.

ATHEISTS AS WITNESSES.

The statutes of Massachusetts stand almost alone in their method of dealing with this question. While the statute makes atheists competent as witnesses, it points them out as unworthy of the same credit as others, unworthy in the same way as persons convicted of a crime are unworthy.

This statute changed the rule of the common law by which atheists were rendered absolutely incompetent. The reason on which the common-law rule was based probably led to the establishment of the present law in Massachusetts. An investigation of the theory of the former will lead to a better understanding of the latter.

Whatever may have determined some judges, as Lord Coke, for instance, in concluding that infidels, meaning thereby all persons not Christians, were incompetent as witnesses, the celebrated case of Omichund against Barker decided that a belief in a God who would punish perjury was sufficient to render a witness competent. The rule did not require a belief in the established religion, or a belief in what the people of England or the judges or the legislators regarded as the true God. A belief in false gods was quite as good for the purposes of the law of evidence. The reason for this was simply that in the opinion of the judges a person who believed that he was answerable to a Superior Being for the truth of his testimony was less apt to perjure himself than one who was not under the influence of such a belief. Of the sanc-

tions which gave value to an oath, the moral, the natural, and the legal sanctions were present; but the religious sanction was lacking. Logically, if the position taken was correct, the absence of this fourth sanction would merely tend to lessen the credibility of the witness. But certain circumstances, which we now regard as affecting the credibility of a witness, under the common law went to his competency. Interest in the result of the suit was thus one ground of incompetency, disbelief in a God was another. Now, the Massachusetts statutes have changed the common-law rule in the same way in both these cases.

It will be noticed that theological questions do not enter into this reasoning; for, to the Christian, the worshipper of false gods must be as abhorrent as one who is not convinced of the existence of a Supreme Being. This was the view of Lord Coke. He approached the question from a theological stand-point. To him, all persons not Christians were infidels and equally incompetent. But his view was distinctly declared to be erroneous in the leading case already referred to. The law which admitted the fire worshipper while excluding the agnostic (he is an atheist for the purposes of this question) cannot rest on a theological foundation. It is well to bear this in mind; for many who are inclined to admit the logical correctness of the position of those who oppose the present law are yet fearful of a change, dreading lest they should be endangering all religion and encouraging atheism.

The objections to the present statute are very numerous. The reasoning on which the rule rests is essentially false. The laws of evidence in regard to credibility are based on the ordinary experience of mankind, and they are framed with the purpose of aiding the jury in arriving at the truth. But the law allowing a witness's religious belief to be given in evidence to affect his credibility is not only at variance with our daily experience, but tends to mislead the jury.

It is certainly our experience that men will act so as to favor their interests, even at a sacrifice of their honor; and it is therefore proper that the interest of a witness should be shown in evidence. There are few men who would give the same credit to a convicted felon as they would to a man who had never violated the laws; and this, therefore, is a proper matter for the jury to consider. But who will say that, in the affairs of every-day life, he will be governed by the religious beliefs of a man as to the credit he will give him? If a man is told something that he does not wish to believe, he is very apt to consider whether his informant has not reasons for lying. If the matter is of sufficient importance, and he has no other source of information, he may try to learn something of the character of his informant; but is there one man in ten thousand who would ever think of inquiring into the religious propensities of his informant? Men intrust their substance and their honor to the keeping of those whose life gives promise of honest action, without ever thinking of probing their religious beliefs; but, when these same men are put on the witness-stand, they are asked to discredit them.

But why, it will be asked, should the evidence of disbelief have any effect on the jury, if their ordinary experience has taught them to trust and believe atheists equally with other men? The answer brings us to the second objection to the rule as a rule of evidence. Men are affected by such evidence, not because it appeals to their reason, but because it appeals to their prejudices. Can anything have a stronger tendency to warp the judgment of the average juror than an appeal to his religious prejudices? A case in point occurred

not very long ago. The will of an old lady was contested on the ground of mental weakness. The family physician, a man whose character is beyond suspicion, testified positively to her incapacity. But this physician, trusted and honored by all his neighbors, by those who knew him best, was shown to have no belief in a God. A skilful appeal to the jury was successful in utterly discrediting the witness, and the will stands to-day. Is a statute which can thus defeat the ends of justice a wise one? Does it accord with the well-considered principles of the law of evidence?

But, granting that the rule is sound as far as the principles of evidence involved are concerned, the objections to the law are none the less strong. It is decidedly wrong and incompatible with our institutions to raise in a court of law theological questions. Imagine a case in which the most important witnesses on each side of a great litigation are atheists. It will be necessary to examine most minutely into the exact belief of the witnesses, so that the jury can determine properly to which side the less credit should be given. It may be found advisable to bring experts to testify to the difference between an agnostic of one type and an agnostic of another; and, in the resulting strife and squabbles, the law and religion equally will be brought into disrepute. The mere possibility of a jury becoming a theological tribunal under this statute ought to be sufficient to condemn it.

Another objection not unworthy of consideration is that the present law does not reach the right persons. Confessedly, an honest atheist should not be discredited; while the fiercest opponents of the present law are willing to admit that a dishonest atheist should stand on the same footing as any one else who is dishonest. Now, a man's religious beliefs can only be determined by his own utterances. Society generally has thrown sufficient obloquy on atheism to deter most men from expressing their religious views, if they tend in that direction; and, if a person is in the slightest degree dishonest, it is a matter of absolute impossibility to show against his will that he is an atheist. He therefore cannot, frame your laws as you will, be discredited for his atheism. But the honest atheist—who not only openly in the face of the world lays himself open to the social stigma, but in court, notwithstanding the statute, admits his belief—is discredited before a jury of intelligent men. The statute fails utterly of its real object, while offering an inducement to men to conceal their opinions, if it does not actually bring about that result in many cases.

The statute is a flagrant violation, not only of the spirit of the Bill of Rights, but of its very words, "No subject shall be hurt, molested, or restrained in his person, liberty, or estate for his religious profession or sentiments." The Supreme Court of Massachusetts, which declared by a liberal construction that the Bill of Rights prohibited slavery in Massachusetts, could hardly fail to see the violation of the constitution which the present statute brings about. While, perhaps, the exclusion of atheists may have been constitutional as being a rule of the common law in force in Massachusetts at the time of the adoption of the Bill of Rights, and not abrogated by that instrument, the present law can find no warrant from such a view. It introduced a principle as foreign to the common law as it is to justice. In a case where a party to the action appears as a witness, the life, liberty, and estate of the witness may depend entirely on the religious prejudice of the jury. It must frequently be a question with a person accused of a crime, who is an atheist, whether it will not endanger his position more to have his atheism put in evidence than to give an explanation which,

under ordinary circumstances, might lead to his acquittal.* From this point of view, the law is one of the most outrageous ones which has ever disgraced the statute-book. No one, who for a moment considers what it means to the person interested, can hesitate to decide what should be the fate of the law.

At the side of this objection, the objection taken to the form of the present statute, in itself sufficiently weighty, appears insignificant. The statute points to the atheist with the same finger of scorn with which it marks the convicted felon. It puts Huxley and Spencer at the side of Pomeroy and Guiteau in point of decredibility!

If the statute was intended to punish atheists for their belief, it is a most flagrant injustice as well as unconstitutional; and, if that be its purpose, it fails utterly to carry it out, for the injury is most likely to fall on third persons. The proper course to take is simply to strike the objectionable clause from the statute-book. No substitution would seem desirable. Even the rule that the religious belief of a witness shall not be put in evidence is objectionable, for such evidence is quite necessary occasionally to determine the weight to be given to testimony. Such would be the case, for instance, where church property was in controversy.

The great majority of our States as well as Great Britain have shown the way to this much-needed reform. Not one of the States which has admitted the testimony of atheists unquestioned has ever retraced its steps. Massachusetts still lags behind, unfaithful to her traditions; but the belief seems justified that she will soon step over to the majority.

H. W. MACK.

THE PROBLEM OF EXISTENCE.

Its Apparent Insolvability.

II.

The perception that the objective compass of this problem outreaches the domain of experience insinuates the belief that it cannot be solved, and this belief is favored by the further consideration that all attempts to solve it hitherto have seemed rather to aggravate the mystery of its subject. Nevertheless, there is an opposite belief, of dominant prestige, obtaining as it does upon evidence adduced in the preceding section of this essay, yet admitting of confirmation by the discovery that the non-solution of the problem heretofore is due to other and weightier reasons than are predicable of its inherent reconditeness. The most obtrusive of these reasons is the historic fact that no would-be expounder of the problem has hit upon the proper method, every essayist to this end having been either exclusively scientific or mainly metaphysical. But the problem is not amenable to science, as will by and by appear. Let us first see its repugnance to metaphysics. The reader may not have wasted time enough to have learned what that is, and so I will describe it here.

Metaphysics may be defined as the subject-matter of speculation as to the purport of consciousness, whether the components of its objective counterpart are real or imaginary. It thus questions the trustworthiness of our intellectual faculties and postulates the uncertainty of all intelligence, as well as the possible unreality of existence itself. It is antagonistic to both science and philosophy,

*Suppose an innocent man is accused of a crime. Circumstances point against him. He goes on the stand, tells a straightforward story, and the jury are convinced of his innocence. Then the prosecuting attorney shows the atheism of the witness,—the accused,—succeeds in his dextrous appeal to the jury, not only in discrediting the witness, but in arousing the feelings of the jury against a man so abandoned as to be an atheist, and a conviction is more likely to follow than the proper verdict of "Not guilty."

tending as it does to skepticism and intellectual embarrassment, based also as it is upon unwarrantable assumption such as makes the pith of the following assertions: That none of the senses conveys any intimation of the existing physical world (Mansel); that we cannot be properly said to see any distant body, such as the sun (*ibid.*); that the presented object of sight is inverted (Berkeley); that time and space are fabrics of intuition (Kant); that what we call matter is a group of qualities which have no existence apart from our minds (Fiske); that we are conscious of nothing but mental states (Hume); that pure being is pure nothing (Hegel); that there is no substance but a cluster of attributes without a nucleus (Cousin); that there may be a world wherein two and two do not make four (Mill); that whether there is or is not a real corresponding to our fiction (*sic*) of pure space cannot be answered (Lewes); and so on.

If all achievements of speculation were as valueless as these, I should say it ought to be suppressed. But such products of its misuse are pertinent to metaphysics, whose theme is always some *inutile quodlibet*, such as "How can the one be many, or the many one?" In other words, "How can a variety of attributes constitute a single object?" a question which Mansel says "has puzzled the metaphysicians of all ages," but which no person of good sense, well-employed, deems worthy of a moment's consideration. Why? Because it has nothing to do with the art of living well, and no bearing upon the problem of existence or *what we live for*. Besides, speculation upon such finical conceits involves a loss of time and waste of talent, since it ends just where it begins, as appears from the experiments of Mansel himself, who, in the end of his dabbling with the obfuscating merits of his subject, concludes thus: "There still remains the question, Do things as they are resemble things as they appear to us? [an exceedingly important question, but alas!] a question which we cannot answer, either in the affirmative or in the negative." But the impotence of speculation in this case is chargeable not to its use, but to its abuse. It is metaphysical speculation that shows itself here as it does elsewhere to be dogmatic, quizzical, and preposterous. No wonder that such a method of pseudo-inquiry should have proved abortive. But many an earnest investigator has failed in past times to solve the problem of existence for another reason.

2. Because, in those times science was undeveloped, though science itself is incompetent for this work. It is important to the purpose of this discussion to keep in view the truth that the problem of existence is not scientific, but philosophic; that is to say, it pertains not to existence only, but to that *and* the cause and use of existence. Were it otherwise, were the problem merely scientific, it would be pertinent to inquire why, since the modern advance of science, its method has either not been employed or else has failed in its application to the problem. But this question is forestalled by discernment of the need of science to tutor the animus of investigation preparatory to the birth of philosophy; it being requisite for intellectual success, in whatever direction the bent of inquiry propends, to ply the norm of science (which was not before Bacon) as that of intelligence in general, to discard assumption, and argue nothing but upon data of experience, which, in fact, is no other than common sense rationalized or complemented by reason. And is not the age of reason just now dawning? The ancient but obsolescent sway of metaphysics is explicable on the same principle as that of other antiquated systems of thought or categories of speculation, such as alchemy and astrology, whose relation to science is

precisely that of metaphysics to philosophy. And this reflection is suggestive of another general reason why the problem of existence has not as yet been solved, with no implication that it is insolvable, namely,—

3. Because it is a problem of philosophy, and philosophy is yet to be born. For not only are the proceeds of philosophy adjunctive to those of science, but philosophy itself is in a manner the offspring of science. Science is first in order of development; and, without it, philosophy would never obtain. This does not supersede that, but follows it, not only as a broader and deeper ken of Nature, but as the rational apperception of Nature's antecedent and consequent. Inasmuch as mundane existence, the objective matter of science, is the fulcrum of supermundane verities, science is the parent of philosophy. Nevertheless, in another and more obvious sense, philosophy is the educator of science. The arena of science is sensible experience, the objective world of sight: that of philosophy is subjective, the world of insight. Science is definite knowledge of natural phenomena and of the order in which they may occur. Philosophy is qualitative knowledge of the cause and use of existence as deduced from the synthetic science of extant existence itself. The arena of science is narrower than that of philosophy; otherwise, the two are partly identical. Each is built upon truisms or elements of natural faith, of which the scope of philosophy embraces some that science ignores. Yet the consensus of science and philosophy is perfect. Neither can abnegate an item of truth which the other affiliates. What science grasps in detail, philosophy compasses only in general terms. The one collates facts, the other digests principles. Apart from these specifications of difference, science and philosophy resemble each other; conviction, the gist of intellection, being one and the same for all grades of intelligence.

These reflections verge to the foregone conclusion. Science and philosophy are issues of human development. The problem of existence is incidental to the growth of human intelligence. Human intelligence is the outcome of human experience. The capacity for experience relevant to rational development is progressive, a thing of evolution. Man was for ages capable of thinking and bound to think at random. Hence metaphysics, astrology, alchemy, and all forms of superstition. His science, though more shapely than centuries ago, is still immature and fragmentary; and what philosophy may be he only conjectures. When science becomes synthetic, and philosophy having obtained a footing grows conscious of its forte, the problem of existence will not remain long unsolved. Failure to solve it hitherto is imputable to the same negative cause as that which formerly postponed the development of science and still postpones that of philosophy.

The first step toward the solution of any problem is to formulate it. But the problem of existence is as yet unwritten, and but vaguely conceived as an equivocal sentiment concerning the personal destiny of mankind, expressible in dubious terms of belief or unbelief. It is in this sense that I have employed the phrase so far; though, in my own mind, the question has assumed a definite form which I am about to announce for what I conceive to be the problem's true formula, the want of which, or the want of an equivalent of which, has been the prime cause of failure to solve it.

The prescriptive sentiment whence the problem emerges is compassed by three words,—*What, Whence, Wherefore?* Carlyle noted it as dual, with express regard to human nature or the collective

apparition of mankind, who to his mental vision "emerge from the inane, haste stormfully across the Earth, then plunge again into the inane.... But whence? O heaven, whither? Sense knows not; faith knows not; only that it is through Mystery to Mystery, from God and to God." Thus, many a thinker has overlooked the fact that problems are amenable only to reason. Prof. Diman, who made the same unwritten problem the gist of his lectures on the *Theistic Argument*, framed his conception of it with three predicaments of selfhood, thus: "What can I know? What ought I to do? and For what may I hope?—Whence am I? For what was I made? Whither am I going?" My version of the same conventional inquest, though objectively broader, is also triune by logical analysis.

It is impossible to ascertain how much I am indebted to other probers of its subject for my ability to translate the terms of its partial explanation as given above, and the following original statement is made with less assurance of its adequateness than of its probable fitness to suggest a better. In the spirit of this avowal, the reader's candid criticism is coveted. What is the problem of existence, if not this?—

To find the rational purport of mundane existence regarded as the process of natural causation,—

1. As to the intrinsic character of its Supernal Agent;

2. As to the ulterior use thereof as predetermined by the purpose of its Inaugurator and Conductor;

3. As to the occult spiritual nature and consequent superhuman destiny of mankind, viewed as corollaries from the Cause and Use thereof.

GEORGE STEARNS.

AN OPEN LETTER TO ARCHBISHOP LYNCH.*

Sir,—I have read your circular of May 9, addressed to the Catholic clergy of Toronto and published in the daily papers, animadverting on the Free Thought Association of this city, and on free thinkers generally, and warning your people to avoid all contact with them, their lectures, and their writings. Since you have stated that "this society of free thinkers from time to time bring from the United States lecturers to blaspheme God, his holy religion, and to turn into ridicule all the mysteries of our faith," and since I am the only person this society has ever brought from the United States to speak from its platform, I am guilty, I trust, of no discourtesy in addressing you this open letter in reply to some of the strange assumptions and fallacies contained in your circular.

That circular indicates, no doubt, the present attitude of the leaders of your Church to free thought and their disposition and spirit toward free thinkers. Its opposition to the right of private judgment, its intolerance of dissent, its insistence on unquestioning belief in the dogmas of the Church, and unhesitating submission to your authority, is in entire harmony with the ecclesiastical despotism which you represent.

Because the members of the Toronto Free Thought Association exercise the right of thinking for themselves as individuals rather than in herds, and coming to conclusions such as reason and common sense compel them to accept instead of bowing down to men like themselves and slavishly adopting creeds written for them before they were born, you attempt to make the public believe that "those people claim the right also of acting as well as thinking as they please." Free thinkers are not so superficial as to think that belief is a

* Reprinted by Request from the Toronto Graphic of May, 1880.

matter of choice, and that they can "believe as they please." They claim only the right to believe as evidence forces them to believe, and the right to utter and advocate their beliefs on religion as freely as any other subject. They claim to do as they please only when they please to do right; and, while they do not recognize the authority of priest, bishop, archbishop, or pope, they acknowledge those great principles of right and duty held in common by the civilized world, and are ever ready to submit to the authority of the social reason in all social concerns, as expressed by the laws and through the courts and tribunals of the land, claiming, of course, the right to work, by discussion and agitation, for the abrogation of bad laws as well as the emancipation of the mind from enslaving superstitions. You speak of free thinkers as "disbelieving in the Ten Commandments," but will hardly succeed in convincing intelligent readers that there is a class in this community who would favor the abolition of laws against murder, theft, adultery, etc. So much of the moral code as is included in the so-called Ten Commandments is a part of the free thinker's as well as the Christian's belief and standard. Because I do not believe that these commandments were given to the world by a direct revelation,—especially when I know that nations like Egypt flourished long before the alleged date of Moses, and understood the principles of justice and right ages before the date of the oldest book of the Bible,—it does not follow that I reject moral principles involved in these "commandments."

True to the policy and traditions of your Church, you seek to prejudice the people against free thinkers by comparing them or rather identifying them with the Nihilists of Russia, when you know, or ought to know, that Nihilism is a *political* movement, whether wise or unwise, against the despotic and corrupt government of Russia, and that its adherents are of various religious beliefs,—Jews, free thinkers, and Christians. The word "Nihilist," as used by these political workers, has no reference whatever to that with which you connect it,—*"nothing after this life, reward or punishment."* But you think, if free thought were to prevail, it would render a country uninhabitable. Since, however, you gave no reason for this notion, it may be passed with the remark that it is but natural that men who have lived their entire lives with no higher motives than fear of hell and hope of a crown of glory as incentives to duty should think the earth would become a pandemonium, if these beliefs should be outgrown.

There is as little disposition to vice and crime among free thinkers as among Christians, even Christians of the "holy" Catholic Church. Free thinkers are now numerous in all the advanced nations of Christendom, and yet I challenge you to prove that they are more addicted to wrongdoing than the devotees of your own faith. The men and women who figure in the police courts of this city, those who fill the jails and penitentiaries, those who expiate their crimes on the gallows, after confessing to a priest and receiving the assurance of pardon and salvation through a great bankrupt scheme, called the atonement, are not free thinkers. The men who spend their time in low dens, who engage in prize fights, who get up riots at Montreal and Toronto, are not free thinkers.

You say that "persons who do not believe in God, in his Son Jesus Christ, or the Bible, cannot take an oath on it, and consequently cannot testify in court, or act as jurymen, magistrates, members of parliament, or in any capacity in a Christian country where an oath is required." I wish to inform you, however, that the laws of enlightened

countries are being modified, and disqualifications on account of religious belief are being removed. By the *Evidence Amendment Act* of 1869, in England an atheist is allowed to affirm (instead of swearing) on the pains and penalties of perjury. The Constitution of the United States says, "Congress shall make no laws respecting the establishment of religion"; and it requires no religious belief as a qualification for office. In the State of Massachusetts, an atheist can testify in any court of justice; and the same is true of Illinois and several other States of the Union.

But, sir, if your Church were in the ascendancy in England or the United States, this gradual removal of disabilities and increasing toleration would give way to a renewal of the persecution, not only of free thinkers, but all Protestants; such persecution as has deluged the earth with blood in the past; such as led to the extermination of the Albigenes; such as led to the expatriation of the Moriscos, the unfortunate remnant of the Moorish nation that your predecessors robbed and murdered; such as led to the expulsion of the Jews from Spain, and afterwards from Portugal; such as led to the massacre of St. Bartholomew (which was celebrated by Gregory XIII. by a solemn procession); such as the destruction of fifty thousand lives in the Netherlands, when the ferocity of the Church was shown by the circumstance that, "upon Feb. 16, 1568, a sentence of the Holy Office condemned all the inhabitants of the Netherlands to death as heretics." "From this universal doom," says Motley, "only a few persons specially named were excepted. A proclamation of the king, dated ten days later, confirmed this decree of the Inquisition and ordered it carried into instant execution. . . . Three millions of people, men, women, and children, were sentenced to the scaffold in three lines." (*Dutch Republic*, vol. ii., p. 55.)

You foolishly observe that the "lies and sophistry of those wicked men" (such as the Toronto Free Thought Association brings to Canada from that benighted region, the United States) "have been exposed and answered by the most learned men of all ages." *Mirabile dictu*. You have said it; and, since you are an archbishop of an infallible Church, it must be so, and to dispute your statement is, no doubt, in your estimation, to blaspheme God, his holy religion, and to turn into ridicule all the "mysteries of our faith." Darwin, Huxley, Tyndall, Colenso, Renan, and Newman may as well stop publishing the results of their study and researches; for the whole thing has been answered by "the learned men of all ages," and it is nonsense to pay attention to their views or arguments! But, seriously, since you say the arguments of the free thinkers have been answered triumphantly, it is evident that you have no doubt that you can answer them. And now I suggest that you, or some person you may designate, meet a representative of the Free Thought Association of Toronto in this city in public debate, and let the people judge whether your claims and representation are true or false. Until you do this, many intelligent persons, judging you by your circular, will continue to doubt, not simply whether you can refute the arguments of the free thinkers, but whether you are sufficiently acquainted with modern free thought even to state its principles accurately.

You warn your people, especially young men, to avoid us and our lectures and writings. Thus it is that you, representing the spirit of the Nazarene (?), encourage charity and fraternity among men! In my lectures, I encourage men and women to become familiar with the various schools and phases of thought, with all the arguments for and against them, and to make character and conduct, not belief, a test of moral worth. Our motto is,

"In things that can be demonstrated, unity; in things that admit of doubt, free diversity; in all things, charity."

Your comparison of the works of free thinkers with obscene literature is in keeping with the general character of your circular. The most obscene book I ever read was written for the Roman Catholic priesthood, with the sanction and indorsement of your Church. Long after men of your order and spirit, and their circulars against the progressive tendencies of the age shall have been forgotten, the names of the free thinkers, whom you by implication slander and insult,—Humboldt, Haeckel, Spencer, Mill, Buckle, Victor Hugo, George Eliot, Harriet Martineau, Emerson, Parker,—will be respected and honored by the masses as they now are by the cultivated and thoughtful of all nations and climes.

Assuming the authority and arrogating to yourself the prerogative of a God, you not only forbid your people reading the works of advanced thinkers of the age and attending lectures in exposition and defence of their views, but declare that, if they do, they commit a grievous sin, "the absolution of which we reserve to ourselves." A thief, a forger, a robber, a murderer perhaps, any "common sinner" on whom the Church looks with comparative lenity, may be absolved by a priest; but the sin of listening to a free-thought lecture is one the absolution of which the great archbishop reserves to himself! It is a sad commentary on the intelligence of a people that it can be influenced and deceived by such assumptions of authority and such threats as these. After reading your remarkable letter, I can easily believe the story of the bandit who murdered a traveller, taking his money, clothes, and the lunch he had in his pocket, all but the *meat*, which he threw away, as the day on which the murder was committed was Friday.

Yours truly,

B. F. UNDERWOOD.

TAXATION OF CHURCH PROPERTY.

The Committee of the Massachusetts Legislature on Taxation gave a hearing last Thursday forenoon to petitioners for repeal of the law exempting church property from taxation. The first speaker was Mr. R. P. Halliwell, who claimed that all corporations ought to bear their proportionate part of the burden of government. The value of church property exempt from taxation in Massachusetts exceeds in value by over \$6,000,000 that of all scientific, charitable, and agricultural associations. The exemption is in effect a subsidy. It involves a direct tax on the people for the support of religion, and is a clear violation of the principle and spirit of religious freedom. No property, the speaker thought, should be exempt, except the property of the State. He was opposed to any discrimination or compromise in this matter. Mr. F. M. Holland said that the petition had been signed by 1,060 citizens, including several clergymen, though but little effort had been made to obtain signatures. Of these names, 461 were collected in Newburyport by a gentleman who wrote, "If the case were left to the people, I think there would be a vote of four to one in favor of it." A letter was read from Dr. Stebbins, of San Francisco, saying of the taxation of all property there the past twenty years, "I do not think that the law has any effect to hinder the churches in any work or influence for the human welfare." Mr. Holland read also a concise argument for taxation, drawn up by Rev. J. S. Bush, an Episcopal clergyman of Concord, Mass., formerly of San Francisco. One of the committee, interrupting Mr. Holland, inquired, "Who do you think are

the best citizens, those who attend churches or those who do not?" "Well," said Mr. Holland, "in Concord where I live, I think the average of the non-church goers is a little the best." Rev. William I. Gill said he was in favor of taxing church property on broad, statesman-like principles. Every institution not controlled by the State and for State purposes should be taxed for the public good. Men and women who believe that churches and religion are good should show their belief by supporting them; and, in most cases, the taxation of church property would make but the difference of a few hundred dollars each year. If churches could not support themselves under a system of taxation, they ought to go out of existence. He was in favor of a general law taxing all church property on grounds of justice and in the interests of the public good. B. F. Underwood said that the exemption of church property from taxation originated when the Church was a department of the State, and was consistent with the ancient order of things, but is now an anomaly where there is no State religion. What is the difference in principle between compelling a man to support any one church and compelling him to support them all? Exemption cannot be maintained on the ground that the influence of the churches is good; for so is the influence of mercantile, manufacturing, and industrial enterprises, which are all taxed none the less. Exemption cannot be maintained on the ground that churches yield no income, supposing it true; for the government never exempts depreciated stocks or wild lands, because the owner derives no income from them. Rev. F. Frothingham made the concluding speech, in which he said that this was a simple case of justice, and the attitude of equal justice to all is the theory of the State. Suppose, in a large community, one institution acquires property to the extent of millions of dollars, and holds that property exempt from taxation: that particular body is at a great advantage, the rest of the community has to pay a very much higher rate of taxation. Such a case is not a mere supposition. A serious injustice results in such cases; and the principle is the same, whether the religious body is large or small, rich or poor. As a minister, he could see how desirable it would be to have some small churches exempted; but, after all, there is the principle at stake, and he was bound to stand for principle and right. He admitted, in reply to a question from Mr. Cummings of the committee, that there is a possibility of bringing religion into politics, through Protestant assessors valuing Catholic churches high and Catholic assessors valuing Protestant churches high. The speaker, on the other hand, thought this a minor evil compared with the great principle at stake. He thought the taxation of churches would prevent the building of such costly churches, in which the poor can have no part and are practically excluded from worshipping. u.

Mr. W. G. BABCOCK thinks that Washington's Birthday may well be associated with the happiness of children; and his society has provided an entertainment for them at Odd Fellows' Hall, Monday forenoon, next.

FRANG & Co. evidently desire that St. Valentine's Day shall be celebrated in good style. Some of their chromo cards carrying flower groups or single flowers are hardly to be distinguished from the real drawings. Among the designs are some pretty bird subjects nesting and mating among blossoms. Assisted by well-known artists, Prang & Co. have served up their work in a variety of styles; and, it is needless to say, it is most artistically done.

The Index.

BOSTON, FEBRUARY 19, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, : : : : : } Editors.
BENJAMIN F. UNDERWOOD, : : : : : }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

THE APOTHEOSIS OF HUMANITY.

Address delivered December 28 at Chickering Hall before the Society of Ethical Culture of New York.

BY W. L. SHELTON.

"Thou art smitten, thou God, thou art smitten, thy death is upon thee, O Lord;
And the love-song of Earth as thou diest resounds through the wind of her wings,
Glory to man in the highest, for man is the master of things!"

We are told of a sanctuary in the city of Paris that was altogether unlike the sanctuaries of the churches: indeed, had we been able to visit it ourselves, I presume we should not have thought of it as a place of religious devotion at all. And yet, to the one who worshipped there, that spot was probably as sacred as any altar would be to the suppliants in the churches. It was in that secluded sanctuary, by the dim light of the early morning, already before the mass of people had arisen for the labors of the day, that a man was kneeling in the attitude of prayer. It was an old man, we would have said, at an age when sentiment has begun to wither in the heart, when the interests of life begin to grow cold, materialistic, and indifferent, save now and then when a thought of the grave and its beyond suddenly blows up the flame of life into momentary agitation at a time when it was almost extinct; but there was no sign of withering decay just now on that old man's face. On the contrary, it wore an expression, as it is said, of "rapt and mystical expansion"; for he was praying. All the ecstasy of religious devotion was aroused in his soul, and still the character of his prayer must have been something very different from what we are familiar with. Most of us who have grown up in associations with churches and temples think only of prayer as the language of devotion to a personal God; but this man could not have been praying to such a God, for he did

not believe in one. Those of you who are familiar with the vagaries of Oriental mysticism may perhaps be reminded of the Sufi saints of Persia, and you may think that he supposed himself in rapt communion with some great spirit of the universe. But he did not believe in any metaphysical spirit of the universe. On the contrary, he had a profound contempt for all metaphysical entities, as he called them. Those of you who have studied the peculiarities of the Catholic Church in Europe may presume that he was in devotion to the glorified saints of immortal personality; but that was not possible, as he did not believe in a personal immortality. Hence, the canonized saints of the Church could have no meaning to him. But he was praying, nevertheless. Another thought, another conviction, lay at the basis of his worship. It was not to a personal God, not to any great spirit of the universe, not to any canonized saint of the Church, but to humanity that he was praying. Humanity was the great and supreme spirit at whose altar he was rendering up his religious devotion. Am I not right, when I say that no sanctuary had been the scene of such a strange and novel worship? But it had its meaning, nevertheless. This man was no erratic visionary. Who would dare smile at genius? And this man had genius,—not only genius, but enormous mental capacity and a vast extent of knowledge. By the scope of his study, he had swept the whole domain of science and philosophy. He it was whose knowledge had been so complete that he was able to gather up the facts which had been discovered by the ages, and out of that nebulous mass of material to construct a complete and systematic science of the sciences, a regularly co-ordinated hierarchy of knowledge. I would like, if I had time, to give you an account in detail of his great theory of development. I will, however, try just to sketch it for you in outline, though you must pardon me if it be a little abstract and condensed: it will require but a moment.

He claimed to have discovered three phases through which all knowledge and history must pass. His manner of naming them was a little unfortunate and misleading. He called them the theological, the metaphysical, and the positive stages of knowledge. The theological stage dates back from the earliest eras of primitive thought, and comes down, alas! even to our century. It represents that habit of mind which is always inclined to put a personal will back of all phenomena in the world. Its grossest form, of course, is African fetichism,—the worship of sticks and stones and amulets, as though they had a human will of their own; but it is the very same character of mind that ascends to the lofty theory of monotheism, and assumes a providential dispensation in arbitrary control of all nature. Gradually, the human mind has been weaning itself from such an unscientific notion, as though, indeed, any will could interfere with the great law of cause and effect. But, as the chain of causation must have some explanation, we have a new metaphysical epoch, when men attribute all physical activity to some mysterious entities, quiddities, chemical affinities, vital forces, spiritual personalities, etc. The crude use of our modern term of electricity is an illustration of the same thing, as though giving a name to something unexplainable was an explanation of it. Any one can see that such phrases are only mental abstractions, synonyms for an unknowable. There are no such things as essences, quiddities, vital forces, and the like. Such an epoch of thought can only be a transitional one; hence must arise out of this metaphysical stage the last and final epoch of human knowledge. Ultimate

knowledge we have discovered to be an illusion. We do not know God, we do not know nature, we do not know causes. We are only conscious of a series of evanescent changes in the world. Whence they come, as to the spirit that moves them, to what they are tending, we can know nothing. We will only study that of which we have any positive knowledge, and we can only have such a knowledge of these sequences of changes. They alone must constitute the material of our science and philosophy, and thus we have the positive stage of human thought.

These were the three phases which he claimed to be the three laws of human evolution. By the great extent of his knowledge, he was able to trace out these stages in our human history, and copiously to illustrate every point in the course of the evolution. I have no intention of discussing the truth of this new theory of development. It is doubtful, indeed, whether the great synthesis would stand the test of an elaborate criticism. I only wish to bring out before you the basis of his new theory of religion, for it may be that we shall discover that this religion has a deeper significance in our own lives than we would at first suspect. This philosopher believed that this last and final epoch was approaching, to this all knowledge was tending. He felt, I think, that he alone of all men was emancipated from theology and metaphysics. He stood out alone in advance of the world as the sole representative of that stage of thought that was to prevail throughout all the future existence of our race. Was he not justified, then, in his own mind in presuming to revise the theories of religious thought as well, to construct a new religion of positivism, that should be appropriate to this stage of development to which humanity was approaching? The religious outcome of such a philosophy was plain. If it be true that science can only teach us of the passing movements of unknowable phenomena, then knowledge of them as such can have no purpose in itself. We really can have no actual knowledge of them. We study these transitory phases only so far as they can become serviceable to our own convenience. We ourselves become the sole aim and purpose of knowledge. Religion must be based on a knowledge of something; and, hence, the horizon of ourselves becomes the horizon of knowledge,—nay, of religion itself. We become the very basis and purpose of our own religion. It is not a religion of God and not a religion of nature, but a religion of humanity. And now can you appreciate what I mean, when I say that the man whom I have been telling you of was praying to humanity,—on his knees, with his eyes closed, in an attitude of supreme devotion? Of course, he had modified the conception of worship and prayer. The humanity that he was praying to was no mental abstraction. It comprehended all the dead, the living, and those who shall live in time to come. All the souls who struggled to be good and true went to make up that humanity. "The living are always and necessarily under the government of the dead," was his saying. He was not praying in the sense of petitioning for his daily bread. Prayer to him was a kind of subjective devotion, an effusion of gratitude and love to the dead and the living for what they have been to us, an aspiration to that humanity that should awaken in us a sense of union with that humanity and a devotion to its cause. He had arranged also upon this basis an entire system of public worship. This new religion was to have its sacraments and its feast days, its Bibles and its music, its rituals and its ceremonies. Nothing was to be wanting to make it complete. Everything was designed to glorify humanity in our hearts. Public devotion

and private worship had the cause of humanity as its only basis of religion. That cause was all the God that was left to us. It must be our God.

I know that such a scheme of religion must appear very novel and strange. And yet, in spite of that novelty and strangeness, there is something pleasing and attractive about it. We feel somehow that it is a religion of ourselves, for our hearts are touched by it. It does appeal to our sympathy, for we do love our race, and we do wish to see that race join hands in aspiration toward something higher; but there is a mistake in it, nevertheless. It does appeal to our sympathies, but it does not satisfy the natural sense of religion: there is something wanting there. And yet I am convinced that this man has touched the core of the religious spirit of the nineteenth century. Men as a rule do not have a definite sense of the religious spirit which actuates them, and so they may not recognize in this new religion anything akin to their own convictions. There is much about it that is weird and curious, I know. He made the mistake of swathing it in a mass of ceremonial paraphernalia, which even his own disciples do not accept; but the spirit of it is just the same. I would like to unsweat this strange new birth to-day, and to tell you its significance,—not as a scheme of religion, you understand, but as a religious spirit that is in various ways, widely, though half unconsciously, actuating the minds of men at the present time. We could wish that that spirit would manifest itself in as pure and noble a way as this new scheme of religion would have led us to expect. But we shall meet with it in very different aspects, when we come to study it in the world; for the life in the world makes sad havoc of the systems of religion. But I shall endeavor to give you a picture of it just as it actually exists.

I believe that the religious spirit of the nineteenth century is an apotheosis of man. I take the phrase, as you know, from the custom in ancient Rome of consecrating their emperors into gods. It was very natural of course, as a reaction from the dogma of monotheism, which had crushed the human mind for ages beneath a wheel of abject awe and fear, that, when once the human spirit should set itself free, it would assert itself with an emphasis that could not be mistaken,—humanity would make itself the basis of its own religion, and man would become his own God. The revolution did come. The pent-up personality of man threw off its submission to the myth of a personal will that was outside and above it: it laughed the gods to scorn, and avowed its own sovereignty before the assembled universe. Shall I give you a picture of the curious revolution in religion which thus took place? The throne of the Almighty had become vacant: who then should ascend that throne and assume that august position? The multitude stood waiting and watching. And, while the cloud was about the throne and the smoke of the incense was arising on every side, behold a new form was seen to make itself visible within that cloud. The multitude exultingly recognizes a reflection of itself upon that throne of Heaven. It is the figure of a glorified humanity. The trumpets sound, the cloud clears away, the incense rises, and the multitude falls down in adoration. And then they lift up their voice in their hymn of praise: "All power, dominion, and majesty be given unto thee, O humanity, in heaven and upon earth: we praise thee, we glorify thee, we acknowledge thee to be our God!" And thus humanity has its new religion. Do you think that I am giving you a caricature of religion? I tell you it is the heart of a great mass of the civilized world that I am holding up to your judgment. Of course,

they will not acknowledge it. One almost hesitates to put it into language. We scarcely know whether to call it puerile or blasphemous, but that it is a truthful picture I do most assuredly believe. There are of course, as I have already intimated, very different aspects to such an apotheosis. Systems of theological faiths may have their origin in the cells of monks or in the studies of philosophers; but the religious spirit of an age will be born of the life of the people in the world, and will look very different from the elaborate creeds and rituals of the churches. I want to show you two such different aspects, and to leave you to judge of their mistake as a basis of religion.

On the one hand, we have a curious apotheosis of our human power and greatness. We have done so much in manipulating the forces of nature by our own unaided effort, we have made such new discoveries as to our supreme position in the universe, that we have actually been thrown into awe at our own majesty. It is not the God-man of Christian theocracy, but the man-God of modern democracy. The feeling is a prevalent one throughout our daily life. You may think you know at least where this new conviction does not exist. You may tell me of churches and temples that will be thronged to-day by a multitude of men and women who have come together to bow in reverential devotion before a will that is outside and above them. I tell you I do not trust in their reverential devotion. When they approach their churches with liveried teams and in royal array, when they walk up to the altar clad in jewels and magnificent apparel, think you they have a definite sense that they have come to bow in reverence before the majesty of their God? Do you remember the way that the prophet Micah summarized the pure religion of Jehovah? "To do justice, to love mercy, and to walk humbly before thy God." No: it is with a self-conscious spirit that they approach their altars; it is with a self-conscious spirit that they pray: it is this spirit of self-consciousness that constitutes the basis of their religion. Here and there, it is true, there will be some genuine worshippers of their Jehovah. And where they are is holy ground. But their number is becoming very few. The Church does not seek so much the glory of God as the security of its personal power, for the glory of their God is on the decline. Its maxim has become, Listen to me; but the early Church would have said, Listen to God. And so even the Church has come to set up an apotheosis of itself on earth.

The real spirit of this exaltation of our own majesty would seek its legitimate basis upon the new discoveries of science. It is true that science does appear to give a specious justification to this sense of our human superiority. They have begun to construe nature not as a number of fragmentary processes, but as a unit of evolving forces; and thus they have elaborated the great new law of evolution. Providence has been thrown out of the régime, and man was left to gravitate to his natural position in the hierarchy. The friends of theology had been afraid that this new law would affect the superior position of man in nature. But science would seem to have done just the contrary. The scheme of evolution appears to close with the development of man,—the last, the highest, the most complete effort of nature in all its phases of development. We stand at the top of nature, we alone are supreme. What a stimulus to our self-admiration! What a ground for our self-apotheosis! We forget, however, that we are judging of the universe from our own stand-point. In the same way, the tiny crystal that makes up the granite of our mountains, the microscopic coral insect that builds the islands of the Pacific, might as

sume in their consciousness, if they had one, that they stood at the top of evolution. What do they know of man? And what, I ask, does man know of that great extent of life that may lie altogether outside of his sphere of relations? If we stand so much above the crystal and the polyp that at least we can know what we do not know, why, then let that superiority display itself by our humility. We have to remember that, if there is a sublimity in the consciousness of power, there is also sublimity in the consciousness of weakness.

But the greatest stimulus to this apotheosis of human greatness does not come so much from the decay of the Church as from the new discoveries of science. It is not our position in nature, but our power over nature, that leads us to magnify ourselves. This it is that makes this aspect of our apotheosis so congenial to America. We have accomplished so much in a single century! We span the rivers with our bridges, we thread our continent with railways, we girdle the oceans with our telegraphs, we handle the forces of nature almost as though we held the reins of the universe itself. In weight of mass, complexity of detail, unity of design, we seem to outdo nature itself. It is the spirit of the self-made man and the man-made earth; but what about the forces we use? Have they no claim to recognition? Whence comes the material with which you construct your machines? What is the electricity with which you girdle the oceans? Whose is the steam by which you thread the continent? Did you make them, that in your pride of power you claim this universal sovereignty? Before you put yourself in comparison with nature, let me give you some illustrations of what that nature means. Do you think that we can have any notion of the extent of space, when we spread our power over its surface? Ask the astronomer what he knows about space. He has undertaken to gauge the star depths, to measure the shape and extent of the universe itself; and, to some extent, he has succeeded. He has found that these millions of stars to which our sun belongs lie in a great flat disk or plane, with our planetary system somewhere near the centre. And, in order to make us appreciate the distance across that universe of stars, he thinks of the time it would take a ray of light to sweep from our sun to the outmost boundary. A ray of light starting from our sun at the centre and moving at the rate of nearly two hundred thousand miles a second, leaping from planet to planet, and from sun to sun,—hours, days, weeks, months, years, and centuries, even to a thousand years, still it would not be at that boundary. And then another thousand, and another and another and another, all the time moving at the rate of two hundred thousand miles a second, in vain would it be seeking the outmost limits. And then, as though to stun us with our own insignificance, he turns and tells us that even this universe of stars is only one of the islands in the ocean of space. But do you think that we have even a conception of a point of space? The mathematician has taken a single drop of water: he has accurately calculated the number of separate atoms in that minute bit of space. And then, to give us a sense of that number, he thinks of each one of those atoms magnified to the size of a small pebble stone, when that one drop of water, with its mass of pebble stones, would equal the size of the solid globe of earth itself. But do you think that we can have a measure in our lives of a moment of time? Again, the scientist comes in. He has caught the sound of an insect's wing by an apparatus of his own: he has counted the number of separate vibrations in a single second, and he discovered them to be something like ten thou-

sand. And, of those ten thousand vibrations in every second, he assumes that that living organism must be conscious of every one. I have not given you these illustrations for the sake of showing you what science can do, but that we may have a true sense of our material insignificance. It was a curious piece of credulity that ever led us to an apotheosis of our material power and greatness. For the sake of truth,—yes, for the sake of religion,—I say, give up this self-conscious spirit that is so weak and vain, put aside this sense of our human superiority that is so crude and unauthorized, humble this sense of our human majesty that is so unwise. We but mock ourselves with such a puerile presumption. We can have no basis for religion in such an apotheosis of ourselves.

There is, however, another and very different aspect to this apotheosis of humanity. We have not simply an exaltation of our power into an apotheosis of ourselves, which is one phase, but we have also a consecration of our moral personality into a real religion of humanity; and that is a very different phase. We recognize the beauty and worth of such a religion: it is to its spirit that we must attribute the glorious humanitarian movements in the cause of justice and a true equality which have been arising in our century. Do you realize what it means,—that assertion of a moral personality? It is that doctrine of a man within the man, that the leaders of our new moral movements have been teaching so plainly,—the notion of moral personality in every one of us, which has a dignity and a worth and a purpose of its own, however stupendous and overwhelming the outside forces may be. We feel that we have a right to that personality, that we ought to live it out, even though it be against the universe itself. Before Deity itself, if such there be, we would assert that right and that duty. There is no vanity in such a consciousness of our moral worth: we would not be men, if we did not have it. I can tell you, indeed, of one expression of it in the language of poetry, which seems even to come from a disciple of a supernatural religion. I refer to the "In Memoriam" of Alfred Tennyson. It is when the heart is wrung with grief for one that is dead that it begins to realize the worth of the friend we have lost. We have then a dawning sense of what it is to be a man. I doubt, indeed, whether those who have not their dead to mourn for can ever have a full sense of the worth of a human soul. And Tennyson, in his great love and agony at the thought of his dead friend standing before the final judgment seat, and liable to condemnation, ventures to raise his voice, and to remind the Almighty himself what justice was; and he was right. No religion can ever shake our faith in the positive worth of our moral personality as individuals. Whatever may be our material insignificance before the universe at large, within our own sphere we still have a right to ourselves and our own nature, and a duty to ourselves to live that nature out.

But a religion of humanity includes more than that: it tells us not simply of a moral personality in ourselves as individuals, but of a moral unity in our race as well. It has lifted the religious aspect from the individual to the race. It conceives not of you and me simply, but of a spirit of humanity that lives in you and in me, and gives a unity to our race and a universality to our religion. It is that beautiful notion of a universal brotherhood. It may appear surprising to some, when I say that this is essentially a pagan conception, but, though pagan, profoundly religious nevertheless. It is true that Christianity did teach such a doctrine, but it contradicted its own teaching by pro-

claiming a doctrine of everlasting doom for a great portion of our race. One-half in heaven and one-half in hell, with a great gulf between them, and still all were brothers! Neither Judaism nor Christianity has ever been able to teach a scientific conception of our mutual moral relations as a race. "Personal salvation" has always been their watchword. It is true they have wrought nobly for the salvation of humanity; but they have done it not so much on the ground of our human fellowship as because we were creatures of one Creator, and that Creator willed it. The aspect is changed. By no command of any majesty, by no power that is laid upon us from without, do we strive after one another's moral salvation. There is no such a thing as a working out of our moral aim by ourselves as isolated individuals. The great writer whom I have told you about at the beginning expressed it very plainly, when he said, "Man is an abstraction: there is nothing real but humanity." Some one of us perhaps may think that he is moving on alone to the height of his moral aspirations; but, at the close, he will find that the movements of the race will have pushed that height onward, and he will find himself beneath another pole than he anticipated.

There is something glorious, nevertheless, in this sense of a universal fellowship. It is due, indeed, chiefly to a religion of humanity that for the first time we have been able to put this unity of our race upon a scientific basis. It was true, as the positivist said, not to the living only do we stand connected, but we are bound also by a law of continuity with the dead. Not to ourselves only, but to the ones who have gone before us, do we owe all that we have and are. As a race, we hang together not simply by a sense of fellowship, but by the regularity of law. The movements of our race appear to be evolving upward by an invariable law of their own, just as the movements of nature go on by their own law of evolution. I know, at first, it does seem as though there had been something almost merciless in the encroachments of law upon the domain of arbitrary will. Only a few centuries ago, and somehow it was thought that the heavens themselves had something capricious about them. But the law of their movements was accurately discovered; and Newton could have said, if he had wished, Give me the law of gravitation, and I will construct the scheme of the heavens as well as the Creator. Chemical phenomena were supposed subject to arbitrary transmutations, if only men could discover the secret of the process, until finally it was discovered there were no transmutations, and the romance of alchemy under the new theory of atoms became the science of chemistry. But these bones and sinews, these moving organisms, they must be above all law: they act only by vital forces, as it was said. But the scientist said, No: give me the plan of a single living cellule, and I will construct all physical life. And then finally came the thunderbolt into our own lives,—science and philosophy combined. And they have startled the civilized world by saying, Give us the laws of our spiritual life and its physical environment, and we will construct all society; and it looks as though they could do it, too. They have gone back into history; they have taken up its stages one by one; they have studied all the phases of each separate stage; they have seen how those phases combine to give a new stage with its new phases; they have caught the processes of the changes, until they have discovered that history, too, is not a creation, but a growth. One society grows out of another, one age grows out of another, the chain of causation runs through them all; and so we have an evolution in history as well.

And does all this make us afraid? Have we lost our freedom, and are we sunk in the mire of an outside force? We forget that we are the agents of that evolution. It is the laws of our own nature that we are carrying out, and not the laws of something that is outside of us. It would be the stream of our own acts and our own nature that we would be afraid to follow. It is not something that is outside of us that explains us. The laws of astronomy cannot explain the facts of chemistry; atoms and molecules cannot explain physical life; the living cell cannot explain our spiritual soul-life. We may have the crystal life and the cell-life: we have also the soul-life, and that is our own. Let us welcome, then, this new discovery of science. We learn that we, too, are not fragments of moral forces, as it was formerly supposed, but that we belong to a unit of moral evolution which is going on throughout the race. No longer strangers and pilgrims, moving up and down in an unknown world like fleeting spectres dancing in the wind, but a great phalanx of living men moving on to a given goal by the law of their own natures and by the submission of their own wills,—such would be the conception of this new scientific basis of religion. We throw ourselves into this stream of tendency, we accept its end as our end, its law as our law: we have become one with our race, and the religion of humanity has achieved its end.

But a religion of humanity stops right there, and there lies its mistake. It builds a great dome about the unity of our race, with its pillars resting upon time and its arches within a boundary of space, and then it exclaims, Within this temple of humanity must be the basis of all religion and the seat of all worship! I believe that is a mistake. We speak of a personality within that belongs to ourselves, and that continues the same in spite of the changes in our lives; and we say it is the very same I which began with us in the cradle and goes down with us to the grave. We think of the race to which we belong. We speak of its unity; and we say, It is the very same race which began with the first origin of soul and goes down to its grave in eternity. But what, I ask, about that universal life to which our race belongs, and which has no birth and no grave at all? There lies the defect of a religion of humanity. It does not take into account the thought of a something outside of ourselves. There is a Life beyond our life, a Power outside of our power, a Majesty above all human majesty. I am not teaching any doctrine of theism, for I do not myself believe in any personal God; but I do most assuredly believe that we make a mistake in making a God out of humanity. If you will worship, reserve your worship for something outside of yourselves. Acknowledge the dignity and worth of an existence which is not comprised in you, but in which you may be comprised. I do not propose to define that existence. It is only the fact of that existence that I wish to emphasize. I do not intend to-day to give you any new theory of religion. I am only suggesting the first thought that must lie at the basis of all religion. About a century and a half ago, just after the French monarchy had been at the pinnacle of its glory, the great King Louis XIV. lay dead. No monarch in history had been so worshipped and adored. Majesty itself could not ask for greater adulation. He had become the very type of greatness to his people; and, when they had come together at the Sainte Chappelle to pay the last respects to his glory, Massillon, the funeral orator, with the robes of the Church about him, raised his voice above the remains of their adored Louis the Great, and exclaimed, "My brothers, God alone is great." To-day, amid the dying

creeds and smitten gods, we venture to raise our voice and say, The universe and its law alone is great. That is the single thought that I wish to leave with you to-day,—the thought that there is a something besides humanity, a life and a law, we may call it, that is larger, more extensive, and more complete than anything we can think of in ourselves. There is a yearning in almost every human heart after something that men call God, and yet we have no knowledge of such an existence. And shall the human heart go a-begging for its religion, seeking through the wide wastes of thought and finding nothing? I tell you, No! I point you to something more genuine and real than anything which the dreams of mythology can give. Instead of a God that is outside of nature and of us, I point you to a universal life to which we and nature all belong. Instead of a command that comes upon us from without, I point you to a law and a process that is going on within. This universal life is not as the clay to an outside potter. The potter and the clay are one. I bid you look at the universal life that is going on all about you,—the flowers at your feet, the stars overhead, the crystal, the polyp, and the living soul,—and ask yourself whether they may not have a common life and a common law. Study these things of earth as well as the things of heaven: they, too, have their worth, for they belong to our existence. Every new fact discovered, every new law established, adds another verse of truth and another psalm of praise to the great tomes of the world's Bibles. We shall approach nearer and nearer and nearer to that life and that law to which we all belong, and which must give us the basis of our religion.

The poet from whose hymn of man I have read you selections to-day was wrong, then, I believe. It may be true that the God of our fathers is smitten, and his throne may be vacant; but it is not true that we have any claim to assume that position. Thou, too, O man, art smitten! Thy death may be upon thee as well. When that time shall come which has been mentioned by the prophet,—“when all the host of heaven shall be dissolved, and the heavens shall be rolled together as a scroll, when their host shall fall down as a leaf falleth from the vine and a fig falleth from the fig-tree,”—then, too, our spiritual dust may fall away into the general dissolution. But it will not be wasted. Out of that dust may arise new existences as much transcending us as we transcend the clod at our feet. They, too, will sing their *Gloria in Excelsis*. Lift up your heads then, ye gates, be ye lifted up, ye everlasting doors; and the King of glory shall come in. Who is that King of glory? Not the Lord, the Lord that was so strong and mighty, and not the humanity now so great in its Titanic majesty, but the Universe with its law, the Life of all lives, the Source of all power,—that universal Life must be our King of glory. Glorify humanity, if you will, make all of it that you can. Work for humanity,—work for humanity with every bone and sinew. The time is short, the work is great, and it must be done. Though it be for an hour, that one hour may be of unspeakable worth. Only do not make an apotheosis of it. The religion of the future, when it arises, must arise on universal foundations. God may have been a chimera, man may have only the life of an hour; but religion at least must have its foundation upon truth, and its spirit must reach out into eternity.

In opinions look not always back:
Your wake is nothing, mind the coming track;
Leave what you've done for what you have to do;
Don't be "consistent," but be simply true.

—O. W. Holmes.

CORRESPONDENCE.

"FREEDOM OF WORSHIP BILL" IN NEW YORK.

Editors of The Index:—

The usual orthodox bigotry, though somewhat more intelligent, is exhibited by the *Independent* in its consideration of a misnamed "Freedom of Worship Bill" introduced in the New York legislature a month ago. Similar bills have been before the legislature for years, but have never become laws. Last week, a second bill even "more favorable" to Roman Catholics and "more objectionable" to the *Independent* was introduced. The *Independent* of February 5 says of this bill: "Not only must sectarian services be allowed in public reformatories where now are taught only those doctrines common to all Christians; but, if the managers thought it desirable to have a Roman Catholic chaplain, they could not select him themselves, but must open their doors and provide 'the use of a proper room' for 'any clergyman' whom Cardinal McCloskey or 'other proper authority' might designate. The bill is absurd as well as sectarian; but, nevertheless, there is great danger that it will be made a law."

I pointed out to the *Independent* that it inconsistently desired the State to teach "doctrines common to all Christians," and that those "common to all Christians" were not common to all civilians; but, as it has seen fit not to publish my criticism, I offer the letter to the public through *The Index*.

A. L. L.

State Taxation: Shall it be for Sectarian or for Secular Purposes?

Editor of the Independent:—

Sir,—In the *Independent* of January 22, which was handed me by a friend, I find an editorial article entitled "A Sectarian Bill at Albany." Your criticism of this measure is wise and broad, but it does not go deep enough. You overlook the significant fact that *Christianity is itself a religious sect*, and, as a sect, falls under your condemnation of sectarian sacraments in public institutions. And you are inconsistent in urging Catholics to acquiesce in purely Christian sacraments, telling them that the "Lord's Prayer" and the "Ten Commandments" are no more Protestant than they are Catholic, and that, therefore, they have no right to protest. The Romanist justly demands that, if Christian sacraments, such as you have mentioned, be administered at all, they receive the authoritative interpretation and sanction of his Church. These ceremonies are considered valuable mainly because of their supposed sacramental character. You, however, in effect maintain that the Catholic subject should not see these doctrines through the eyes of his Church, but through his own eyes, which is a Protestant mode of procedure. And you further inconsistently and unrighteously demand that the public, which is composed of many sects of religion besides the Christian, should all acquiesce in Christian sacraments, ceremonies, or worship!

To restate what seems to me your glaring inconsistency, you would not be satisfied with the State establishment of Jewish sacraments for public institutions; and yet you expect secularists—and not merely Romanists—to be satisfied with the obtrusion of ceremonies that are clearly Christian.

All true secularists object to the obtrusion of any sectarian sacraments—Christian, Mormon, Jewish, or other—on State subjects or democratic citizens. Let the Church "mind her own affairs," and the State "will attend its proper cares."

The benighted ones in reformatories, penitentiaries, etc., may properly be enlightened by the State concerning secular, and not sectarian, needs, interests, privileges, rights, duties, laws, etc.; and such enlightenment would of itself tend to the altruistic development of their spiritual life, without the fear of fire or the cant of creeds. The care of the State is enlightened discipline, not ecclesiastical doctrine.

But this will never suit the sectarian spirit. The *Christian Statesman*, the organ of the sectarianization of this government, demands that the Constitution of the United States be changed so as to make this nation unequivocally Christian and the Bible the source of laws. I know not what stand you take concerning this demand, but I do know that the position you took in your criticism of the "Freedom of

Worship Bill" is the same in principle as this demand. You want *Christian* worship and services,—not Protestant nor Romanist, it is true, but still "Christian."

The taxation of citizens for the employment at present of chaplains in the army, navy, legislature, and various public institutions; the indirect taxation of citizens for church property; the churches, as has been well said, pharisaically shaking the publican (tax-collector) from their skirts by shirking the taxation of their vast amount of real estate; the violation of the rights of non-Christian children in our public schools by the sacramental reading of the Christian Bible and the singing or chanting of Christian hymns,—all this is a monstrous injustice to the equal rights of all. So does the State, whose ideal is a national secularism, still patronize the loyalty of a sect and pauperize the liberty of the soul.

The Church's aggressive sectarian spirit even sways our courts of justice into unjust discrimination in regard to the credibility of witnesses. One may be a non-Christian, and may believe that natural law is not God's *fiat*, but his faith to truth (everlasting faithfulness), and that such faith by man may be shown in the righteous life; yet, though he hold to this belief, and from this belief have a strong conviction that his own untruthfulness would render him spiritually destitute, and that such a classification among the destitute is a darker death than an orthodox hell can possibly be, he would still, in consequence of such noble belief, be dishonored or disbelieved in many of our courts of justice, while the veriest hypocrite, believing in the validity of *future* justice, would be honored and believed!

In short, a man may have the best character,—may ever in his undertakings be swayed by true faith, and never by fear; may be unable to subscribe to the delusion of post-mundane punishment; may be willing to give his testimony under the pains and penalties of perjury, and his evidence may be of the utmost importance to justice,—yet the Church, beckoning to the State, directs that his testimony be excluded, thus laying a heavy tax on his credit as a witness. Behold sectarianism and secularism face to face!

ALBERT L. LEUBUSCHER.

WATER MILLS, SUFFOLK CO., N.Y., Jan. 28, 1885.

BOOK NOTICES.

HARRIET MARTINEAU. "Famous Women" Series. By Mrs. F. Fenwick Miller. Boston: Roberts Brothers. Price \$1.00.

This is the tenth volume in this popular series. It is somewhat remarkable that so many of the famous women thus far selected as the subjects of these biographies are women whose views on religious matters were and are considered decidedly heterodox, among them being George Eliot, George Sand, Mary Wollstonecraft, Margaret Fuller, and Harriet Martineau; while the next issue will be the Life of Madame Roland. The reading world, while not yet ready to indorse the broad theological conclusions of these thinkers, cannot refuse to acknowledge their resplendent genius in other departments of investigation and thought.

The present volume has already shared the fate of several of the recent biographies of the distinguished dead, and has been well advertised by the public contradiction of more or less important points in the relation by the living friends of the dead genius. One of Mrs. Miller's chief concerns in writing this life seems to have been to redeem the character of Harriet Martineau from the appearance of hardness and unamiability with which her own autobiography impresses the reader. In her faithful endeavors to do this, she felt obliged to give her impressions, gained from reading family and personal letters of Miss Martineau, and from familiar converse with relatives and other friends who knew her heroine intimately, that the repression forced upon her by a mother's sternness, and her favorite brother's lack of sympathy with and even coldness toward her in later years, were dominating causes of much that seemed, but was not, harsh and stern in her nature. Naturally, that brother, still living, with other near relatives, is resenting this imputation on the memory of one upon whose character even Mrs. Miller does not attempt to cast a reflection, save that she was lacking in sympathy with the work and appreciation of the worth of her talented daughter. Other representations, made in all honesty by Mrs. Miller in regard to Miss Marti-

neau's relations toward other members of her family, are also denied and explained by those whom they most concern. But with these matters the public, who of the Martineau family knew and cared only for Harriet and her most distinguished brother, is not particularly interested. It is, however, something worth while to know that Mrs. Miller's more softened portraiture of her in this volume is confessed to be, even by these indignant relatives, nearer like the real Harriet Martineau than is shown in the self-portrayal in the autobiography. The reason for the acrid spirit manifest in that Mrs. Miller explains by showing under what peculiar and unhappy circumstances it was written.

Among those circumstances were the facts that it was written hastily immediately after the skillful physicians, whom she had consulted in regard to her failing health, had given it as their opinion that death was imminent; and at the time, hurrying to complete it before it was too late (although she lived more than twenty years thereafter), she was in a sensitive state of mind, caused, among other things, by the following circumstances, as related by Mrs. Miller:—

"The announcement in the press that her illness was fatal revived the discussion of her infidelity, and brought down upon her a whole avalanche of signed and anonymous letters, of little tracts, awe-inspiring hymns, and manuals of divinity. The letters were controversial, admonishing, minatory, or entreating; but, whatever their character, they were all agreed upon one point,—namely, that her unbelief in Christianity was a frightful sin of which she had been guilty. They all agreed in supposing that it was within her own volition to resume her previous faith, and that she would not only go to eternal perdition, if she did not put on again her old beliefs, but that she would richly deserve to do so for her wilful wickedness. . . . Conscious as she was of the purity of her motives in uttering her philosophical opinions, she found herself suddenly spoken to by a multitude, whom she could not but know were mentally and morally incapable of judging her, as a sinner worthy of their pity and reprobation. Knowing that she had long been a teacher in advance of the mass of society in knowledge and power of thought, here were a crowd of people talking to her in the tones which they might have adopted toward some ignorant inmate of a prison. What wonder that her wounded self-esteem seemed for a little while to pass into vanity, when she had to remind the world, from which such insults were pouring in, of all that she had done for its instruction in the past! What wonder that the strength which was summed up to bear with fortitude this species of modern martyrdom seemed to give a tone of coldness and hardness to writing of so personal a kind!"

Mrs. Miller, however, succeeds in this volume in showing us an altogether different side to her character,—a home-loving, neighborly, bright-natured, tender-hearted, witty, lovable, and altogether womanly woman, as well as the clear thinker, the philosophical reasoner, and comprehensive writer whom we already knew.

It is interesting to note in the order of her earlier writing the natural bent of her sympathies and the progressive development of her intellectual powers. Her first published essay, written for the *Monthly Repository* in 1822, under a masculine signature, was one in behalf of her own sex, on the subject of "Female Writers of Practical Divinity"; and all through her life she was a consistent and earnest pleader for the rights of woman. The first published volume was a religious work, entitled *Devotional Exercises*. After these two subjects of womanhood and religion came her studies of political economy, embodied in the short stories in tract-form which first made her famous. Except in the development of the softer and more domestic phases of Miss Martineau's character, there is not much that is essentially new in this work; but this in itself was a work well worth doing, and it has been well done by Mrs. Miller. S. A. U.

EDGAR ALLAN POE. "American Men of Letters" Series. By George E. Woodberry. Boston: Houghton, Mifflin & Co. 1885. Price \$1.25.

There is nothing very inspiring in this biography. One closes it with a sense of pain. It is the calm, unsparing record of an undisciplined, unbalanced, sorrowful life. Mr. Woodberry is an excellent biographer, since he "nothing extenuates nor sets down aught in malice," but goes to work conscientiously to

describe an anomalous character in the details of his business and social relations in the most just but prosaic manner.

To the student of the laws of heredity, the trivial details of Poe's many shortcomings, as shown in this volume, can only elicit a sigh of pity and regret for the poor victim of an unbalanced inherited nature. His parents were poverty-stricken actors, who died in comparative youth. Poe's adoption by a wealthy family, who were more proud of his talents and childish beauty than careful to curb his worst tendencies, did him no good, except in giving him an education which made his poems of a higher character than they would otherwise have been.

It would enhance the value of his poems, not to know so well the true character of the poet. He seems to have been one of the most erratic of geniuses. He deliberately threw away every chance of success open to him. Mr. Allan, his adoptive father, forgave his eccentric, ungrateful, and costly waywardness over and over again; but Poe seems to have been a born Bohemian, and was never contented to "let well enough alone."

The one bright rift in his self-ruined life was his attachment to his aunt and mother-in-law, Mrs. Clem, and her daughter Virginia, his cousin and child-wife. But even this attachment was abnormal, and it seems to us in the recital was abnormally returned. That a young man, finely educated, reared amid wealth, luxury, and culture, should deliberately and for an apparent whim ruin all his best prospects in life, outrage the feelings of his benefactors, rush into the hard life of a soldier, then, leaving this by dishonorable methods, find his best satisfaction as the *protégé* of a poor aunt, whose dainty, thirteen-year-old daughter he is permitted, strangely enough, to marry when he was twice her age, sounds, in its truth, as strangely weird a romance as any of those he wrote. And stranger still it is to learn that in both mother and daughter, his aunt and his wife, he found his most adoring admirers. This fact is the strongest evidence the book affords in his praise. Selfish, unreliable, ungrateful, and erratic, it seems almost incredible that he could ever have kept any friends; and yet he had many. In a rhapsodical sort of letter addressed to his whilom friend, James Russell Lowell, Poe pretty accurately sums up his own character: "My life," he writes, "has been whim, impulse, passion, a longing for solitude, a scorn of all things present in an earnest desire for the future." Even to the last sad days of his life, his nature remained unchanged; and with a prosperous career still open to him, with the hope of a brilliant woman's love and care made possible for him, he died the death of a drunkard in a city hospital, among strangers, with no friend near.

Mr. Woodberry's analysis of Poe's literary merit is a careful and honest one. He gives him praise and blame in an impartial manner. He accuses him, however, of perhaps unconscious imitation of the greater poets and repetition of his own thoughts. A considerable portion of the book is devoted to this critical analysis. S. A. U.

In the *Art Amateur* for February, the eye is first attracted by some very pleasing designs. They are a cluster of asters for a dessert plate, a very graceful bunch of wisteria for a panel or tile, a quaint little squirrel nibbling his nut for a blotter or brass work, and humorous designs for doilies of the signs of the Zodiac. Besides these are many ecclesiastical designs and jewellers' patterns. Those who remember the singular picture of Joan of Arc, lately exhibited at the Art Museum, will be interested in the short sketch of the painter, Bastine Le Page, who died last December. He was a man of exemplary life and an earnest artist, although he lacked the higher qualities of creative imagination. Another biographical sketch is of Janson Chelminski, a Russian Pole, who has acquired reputation for his life-like pictures of huntsmen and horses. He has come to this country to reside, attracted by the free life of the "Western plainsmen and Indians." Let us hope that he will preserve for us the most picturesque features of a form of life which will soon pass away. Margaret Bertha Wright is a little satirical and severe in her dashing criticism of "Women's Work in American Art Galleries," but this is far better than indiscriminate praise or contemptuous silence. The engravings from Chelminski's "Clase" and from George Wharton Edwards' water-colors are very spirited. E. D. C.

Prescott's History.

HISTORY of the REIGN of FERDINAND and ISABELLA, the Catholic. By WILLIAM H. PRESCOTT. Corresponding Member of the French Institute, Member of the Royal Academy of History at Madrid, etc.

Illustrated Library Edition, in two volumes, small octavo, including portrait and other illustrations. Long Primer type, fine heavy paper, fine cloth, gilt tops. Price per set, \$3.00, postage 28 cts.

Popular Edition, from the same plates as the above, the two volumes bound in one, uniform in size and equivalent in quality to the Carlton editions of Irving, etc. Price, \$1.25, postage 15 cts.

"At the price, considering the quality of the work, the books are marvelously cheap."—*Morning Herald*, Rochester, N. Y.

"Previous editions of this work have exhausted its praises and the volumes are too well-known to need an extended review."—*Pioneer Press*, St. Paul, Minn.

"His work is as entertaining as the tales of Sir Walter Scott. It is the marvelous cheapness of publication and quality of the mechanical work that attract notice."—*The Midland*, St. Louis, Mo.

"Mr. Prescott's work is one of the most successful historical productions of our time. In a word, he has, in every respect, made a most valuable addition to our historical literature."—*Edinburgh Review*.

"Prescott's works themselves need no commendation now. This is one of the most romantic of histories. This edition is compact, in large type, neatly bound, and cheap."—*Presbyterian Journal*, Philadelphia, Pa.

"One of the very finest histories of modern times, written by an author of rare felicity of diction, fervor of imagination, accuracy of statement, and exquisite beauty of style. Every one who reads at all should read Prescott."—*Presbyterian*, Philadelphia, Pa.

"do not dismiss the book without observing that it is one of the most valuable contributions that have been made to history; that it is the only one that gives us a faithful and sufficient record so momentous as the latter half of the fifteenth century."—*Methodist Recorder*, Richmond, Va.

"The history needs no words of praise; it has long been considered a standard history of the times of which the author writes. How Mr. Alden can print and bind such books at such a price is a wonder. If this does not induce hundreds to read it now who never read it before, it will be a wonder."—*Southern Churchman*, Richmond, Va.

"This standard work of the celebrated historian is too well-known to need any word of commendation here. Mr. Alden has rendered an important service to the reading public in bringing it out in its present form. The edition is really an excellent one. It has numerous illustrations, and all the author's valuable notes. It is fit to appear in any library. And yet these two handsome volumes are sold at the exceedingly low price of \$2. Surely the publisher cannot fail to find an extensive sale for this valuable work at such a low price."—*Methodist Recorder*, Pittsburgh, Pa.

COUPON 25 CENTS. This Coupon will be received in lieu of 25 cents cash, toward the price of Prescott's History, if sent within ten days from date of this paper (mention name of paper). This offer is to secure your PROMPT response and indicate the paying advertising medium.

Wonder-Books

ILLUSTRATED
HISTORY,
Poetry, Classics.

WONDER-BOOKS in no trifling sense, but the best literature of the world presented in excellent and attractive form, at prices so low as to excite universal "wonder."

LIBRARY of STANDARD HISTORY. Containing in one volume, imperial octavo, good type, with numerous fine illustrations, the whole richly bound in fine cloth, ornamented, the following celebrated works, unabridged:

GREEN'S Larger HISTORY of the ENGLISH PEOPLE.

CARLYLE'S HISTORY of the FRENCH REVOLUTION.

CREASY'S Fifteen DECISIVE BATTLES of the WORLD.

SCHILLER'S HISTORY of the THIRTY YEARS' WAR.

HARPER & BROTHERS' lowest price for these four great works is \$14.50; my price is \$2.50; postage 40 cents extra.

"A wonder-book in more senses than one. The idea of putting a work like this at only \$2.50 per copy, seems preposterous; and yet there is wisdom in it, for everybody will want it, and it will thus be the means of advertising and introducing the numerous other valuable books which the publisher is putting forward."—*Christian at Work*, New York City.

"It is truly a marvel of skill and a triumph of modern mechanical art that such a noble volume can be furnished at so small a cost. Whether we admire its large proportions, beautiful binding, fair page, excellent paper, numerous and striking illustrations, numbering nearly 100—all are first-class."—*Christian Cynosure*, Chicago, Ill.

LIBRARY of STANDARD POETS, containing in one imperial octavo handsomely bound volume, of about 1,100 pages, Bourgeois and Brevier type, leaded, the following works, unabridged:

Scott's Complete Poetical and Dramatic Works.

Complete Poetical Works of Robert Burns.

Complete Poetical Works of Thomas Moore.

Equally good editions of these are not elsewhere obtainable for less than \$4.50; my price \$2.00; postage 34 cents.

LIBRARY of CLASSIC PROSE. In one imperial octavo volume of about 900 pages, handsome type, and fine cloth binding, ornamented, the following famous essays and works:

Macaulay's Essays on Milton.

John Stuart Mill On Liberty.

P. G. Hamerton's The Intellectual Life.

Herbert Spencer on Education.

Great Thoughts from Greek Authors.

Great Thoughts from Latin Authors.

Complete Essays by Lord Bacon.

Complete "Letters of Junius."

Irving's Rip Van Winkle and Other Sketches.

Washington's Farewell and Other Addresses.

Macaulay's Life of Frederick the Great.

The above cannot be obtained from any other publishing house for less than \$10; my price is \$1.75; postage 30 cents.

"This is indeed a wonder-book, in the amount and valuable quality of its contents. The wonder is how such a book, which is a library in itself, can be sold at such a price."—*Methodist Recorder*, Pittsburgh, Pa.

"Your 'Historical Wonder-Book' IS a wonder—a wonder how an imperial octavo volume of over 1,000 pages, with many illustrations, clear type, fine paper, handsomely bound, containing four standard historical works of great value, can be sold for \$2.50."—BENSON J. LOSSING, LL.D., the Historian.

COUPON 25 CENTS. This Coupon will be received in lieu of 25 cents cash, toward the price of either of above works, if sent within ten days from date of this paper (mention name of paper). This offer is to secure your PROMPT response and indicate the paying advertising medium.

100-PAGE CATALOGUE sent free. The best literature of the world at the lowest prices ever known. Books sent for **EXAMINATION BEFORE PAYMENT** on reasonable evidence of good faith. Address

Excellent unmounted copies of all these will be sent by mail on receipt of \$2.40; or any one or more at 20 cts. each (with Catalogue when desired). Address

W. H. SHERMAN,
455 Jackson Street, Milwaukee, Wis.

RELIGIO - PHILOSOPHICAL JOURNAL.

Established in 1865.

A Paper for all who Sincerely and Intelligently Seek Truth without regard to Sect or Party.

The JOURNAL, in the estimation of a large proportion of the leading authorities on Spiritualism, stands pre-eminent as a fearless, independent, judicially fair advocate of Spiritualism. It has received more general notice, and more frequent and higher commendations from intelligent sources, regardless of sect or party, than any other Spiritualist or liberal paper ever published: the records will confirm this.

The JOURNAL is uncompromisingly committed to the Scientific Method in its treatment of the Phenomena of Spiritualism, being fully assured that this is the only safe ground on which to stand.

The JOURNAL is unsectarian, non-partisan, thoroughly independent, never neutral, wholly free from cliques and clans.

CURRENT TOPICS.

BY B. F. U.

"MRS. ELIZABETH CADY STANTON," says one of our city dailies, "is a woman who stubbornly refuses to grow old, at least in her intellect. Age does not wither the freshness of her wit, nor custom stale the infinite variety of her satire and her logic."

THE bill to protect witnesses from discredit on account of unbelief was rejected by the Senate of Massachusetts on Tuesday, February 17, the vote being 10 to 24. It was openly declared that atheists should not stand equal with Christians before the law.

JOSEPH COOK says of Washington, "Remember that on one occasion, while engaged in a private room in prayer, he was interrupted by a pounding at the door. He seized his sword and drove it through the panel. That is an indication of his indignation against lawlessness."

A CORRESPONDENT of the *Transcript*, in the following paragraph, probably expressed the thought which occurred to many as they read the report of one of Mr. Cook's recent lectures in this city: "Your suggestion that Rev. Joseph Cook seems to have taken 'all knowledge for his province' calls to mind the saying of Josh Billings, 'that it is better not to know so much than to know so much that is not so.' He had better let the tariff alone, and stick to bioplasm, probation after death, and kindred subjects, where he is sometimes interesting, if not always instructive; but, when he attempts to deal with great social and economic questions, he gets sadly mixed. The other Monday, he gave us in the same lecture a blast upon the horrors of Socialism, and a little later on advocated the taxing of the people at large by 'protection' for the express purpose of enabling the laboring man to own a comfortable house, etc. Now, if this be not Socialism, pure and simple, will the reverend gentleman point out the distinction?"

THE Catholics and the Lutherans, generally, are opposed to our public school system. They both prefer to maintain separate schools, in which their children can be trained in "the true faith." These two sects are the only two in this country that do not generally patronize the public schools. The greater number of their members born here are

educated in their denominational schools. Those who have come from European countries have received religious instruction according to their faith. Yet there is no evidence that the Catholics and the Lutherans are more correct in their lives than members of other sects whose education has been received in our common schools. Inspector Ries, of the Milwaukee House of Correction, has just published a report, on the suggestive figures contained in which the *Milwaukee Sentinel* comments as follows: "In the statistics of the report, the religious antecedents of the prisoners committed during the past year are given. From these, it appears that 1,415 out of the total of 1,616 prisoners had been instructed in some form of Christian faith, while 202 had no religion. Of those who had received religious training, there were 877 Catholics, 347 Lutherans, and 191 of all other creeds. It is safe to assume that most of the Catholics and Lutherans, if they ever attended schools, attended those in which their religion was taught. Of the prisoners, 1,224 were of Catholic or Lutheran antecedents and 191 of Protestant antecedents. There is no such disparity in numbers between the aggregate Catholic and Lutheran population of the city and that of the other denominations. The figures, therefore, do not sustain the indictment brought against our 'godless schools.' The principles of morality and the sentiments of religion are best taught at home. If they are not implanted there, Bible readings and drill in catechisms will have small influence in moulding the character of the young."

THE *Boston Post* has interviewed a large number of Boston clergymen on the taxation of church property, and found them almost unanimous against it. Rev. Dr. Rufus Ellis said: "It would be an act of injustice to the people who built these churches, many of them possessed of but moderate means, to increase their burdens, which would be all the larger in proportion to the amount they had given, or, in other words, according to the value and beauty of the church built." The injustice of taxing those who did not build and do not believe in the theological teachings of their churches Mr. Ellis fails to see. Dr. Bartol said that churches should be put in the same category with schools. To quote his own words: "If school-houses are not taxed, then churches should not be taxed. It should be remembered that, while churches are property in the sense of costing money and occupying land that costs money, still they are occupied only one-seventh of the time; and they should not be put on the same ground as houses and shops which are occupied constantly. It is evident also that those who are urging on this measure to tax church property, while they are perfectly honest, fall in with a class of agnostics and those who think religion of no value." "Rev. Dr. Miner also strongly opposed church taxation." These men represent "liberal Christianity"! When clergymen of ability and learning, like those mentioned, put themselves in opposition to a reform the justice of which is so obvious as that for taxing church property, we see

illustrated the bad influence of theology in narrowing the mind, distorting its conceptions of right, and making the representatives of this theology the enemies, when they should be the friends, of reform. But we are glad to know that there are among even the orthodox ministers men who have such a clear perception and strong sense of justice that they rise above the influence of traditional theological teachings; and unite with those from whom they differ widely on other subjects in asking that church property be taxed for the protection it receives from the State, and that compulsory support of the churches be thereby abolished.

THE National Woman Suffrage Association of Massachusetts held its third annual convention at Meionaon Hall, in this city, on the evening of February 18 and the afternoon and evening of February 19. Miss Susan B. Anthony was the principal speaker; and, although she had only a few days before celebrated her sixty-fifth birthday, there was no intimation in the ringing tones of her voice, her elastic step, and erect, dignified carriage that father Time had been any more successful than the more tangible of males in subduing her independent and defiant spirit. The sessions were all well attended; and the speaking, generally, was of a high order of merit and in good taste. On the evening of Wednesday, the 18th, the opening address was by the president of the Association, Mrs. H. R. Shattuck, on "What Woman Suffrage Means." This was followed by an address on "What Young Women Ought to Do," from Miss Mara L. Pratt, a bright young lady from Malden. A. H. Grimke, editor of the *Boston Hub*, read a fine paper on "Fundamental Justice our Best Medicine." The session closed with a short but vigorous speech from Miss Anthony. The speakers and subjects Thursday afternoon were as follows: Dr. Salome Merritt, on "Why I wish to vote"; Mrs. H. H. Robinson, on "Different Methods of promoting Suffrage Ideas"; and "An Appeal to the Indifferent among Women," by Mrs. S. A. Underwood. The secretary, Miss H. M. Todd, gave a detailed report of the work of the Association during the past year in circulating various forms of suffrage petitions, printing and distributing suffrage literature, and holding meetings in localities where the subject was new or little understood. A series of strong resolutions was read and adopted. At the last session, held on Thursday evening, Mrs. Martha Sewall Curtis, of Burlington, had for her subject "Some Objections Answered." After an amusing recitation by Miss Fannie Worcester, Miss Anthony gave her lecture on "Bread and the Ballot,"—a lecture full of significant facts in the history of the elective franchise and unanswerable argument for woman suffrage, to which the audience listened with profound interest and with frequent manifestation of enthusiastic approval. On Friday evening, Miss Anthony was tendered a reception at the Parker House, where over two hundred admirers of this strong, brave woman paid their respects to her.

TEMPERAMENT.

There is a habit of speaking of temperament as if it were a power which determined character and career and which it were vain to attempt to resist. Indeed, what with the inner constraining power of temperament and the outward power of environment,—words that have obtained so large use in modern discussions about human nature,—it sometimes seems as if there were no room left in man for the lever of a personal exertion. Temperament takes the prize, if the character and destiny be good; and temperament, too, is made the scapegoat to carry off the burden of individual sins, if the career turn an evil way.

But what is temperament? It is the peculiar grain of the mental stuff with which human beings start in life, and which commonly persists in retaining its special characteristics through all life's changes. It is not talent nor genius nor moral power. In itself, it is neither moral nor immoral. But it is the special way in which talent or genius or moral power may display themselves; a certain bent or method—or, perhaps, only aroma—that becomes manifest in the development of character or in any kind of intellectual or moral activity.

And the difference of temperament among people is a fact of great moment to human society. It insures variety of character and service fitted to the various needs of mankind. It binds the individual members of society together by ties of mutual affection and aid much more strongly than could be the case if characters were shaped more by one mould. It inures in manifold ways both to the benefit and pleasure of humanity. It is one of the vital elements of progress. It marks the latest and most consummate form of that differentiation in organism and faculty which has characterized the advance of life on the earth from its crudest beginnings to the present day. And this indicates the good side in the fact of temperament,—the place it fills in the legitimate development of character and the way in which it serves human advantage.

But temperament has also its evil side. It is made a cover and defence for moral wrong. Intemperance, lustful passion, miserliness, acerbity of temper, dishonesty,—for these and kindred vices, excuse is often sought on the ground of temperament. And there is no doubt that temperament does very frequently open a gateway to temptation. Hereditary predispositions to vicious ways of life may lurk within certain brain-cells, which retain the conformation and force of ancestral transgression. *Flaws* are thus found in the very texture and grain of the mental nature; and, in the stress and strain of life's experience, these flaws mark the weak spots where come the moral crevices and fractures. The highly sensitive temperament, too, which is imaginative and capable of being wrought up to great exaltation, has its corresponding seasons of ebb and depression. It then craves artificial stimulus, and is open to the solicitations which, yielded to, lead to the various forms of sensual intoxication and intemperance. Temperament is even made to bear the burden of unhappy marriages. Where the old marriage love has been neglectfully allowed to decay or when under the license of lawless passion a new love has usurped its place, temperament comes into court with its specious but hell-born plea of "incompatibility." If the courts had never allowed this vicious plea, thousands of married pairs whose homes and happiness have been wrecked would have never discovered their "incompatibility," or, having discovered, would have mended and overcome it.

But, aside from these great evils to which cer-

tain temperaments are exposed, there are other evils even more common and hardly less deleterious, which are often excused on account of temperament. Whenever temperament is very marked and strong, it may take care of itself. It finds and makes a career, and determines many personal actions, with no troublesome conflicts and questionings as to what one may be best fitted for in life and as to what things, therefore, are to be done and what left undone at the present time. But the great majority of people have no such marked and decided temperament as this. So far as temperament is concerned, they may fit themselves to do one thing about as well as another. There is a question of ability behind temperament. For most people, temperament will never choose their career in life. And for all such persons, whatever course in life they take, there are certain common interests and duties belonging to average humanity which will add to their own success and to their power of serving others, and which it much behooves them not to neglect, but to take up in spite of any temporary disinclination. Persons, indeed, of this class are in constant danger of mistaking a selfish and passing inclination for an irresistible bias of temperament; and temperament of this moderate cast is thus made an apology for a good deal of self-indulgence, for permitting the formation of many pernicious habits, for not a little of self-conceit and self-delusion over one's calling in life, and for that dilatoriness, not to say indolence, which, in waiting for some great thing to turn up, misses the daily little and constant callings to duty from which the lives of most people must be built. Through this mistake of mere inclination for temperament, young persons sometimes lose opportunities which they can never recover, or are led to take steps which they must ever afterward regret. Unless one has a temperament so strongly set in a certain direction that it takes him thither and finds his vocation whether he will or not, let him be on his guard how he follows the voice of temperament in lieu of the voice of reason and conscience.

It should be said, moreover, that there is one power in man which always has a legitimate throne above temperament,—the power, namely, of *moral personality*. This should be the controlling structural force in every human being. Temperament, genius, masterful talent, sometimes assumes this sovereignty; but, when this happens, it is always a usurpation, never a legitimate enthronement. Whatever the temperament may be, and however great the gifts and brilliant the opportunities that may go with it, all these things are only the materials out of which character and life are to be formed. They do not exempt their possessor from obligation to the moral law any more than he is exempt, whose temperament bears no distinctive mark, and who may have only one small talent with which to do life's work. Temperamental moral eccentricities and vices may possibly be overlooked in view of virtues that may go hand in hand with them, and on this ground may sometimes be condoned; but they are never to be petted or justified. They are only to be regarded as moral ills to be resisted or, at best, as calamities to be pitied. There are certain fundamental principles of virtue that have a right to authority over all minds, and never legitimately intermit their sway. No sane person can have a bias of temperament so strong nor eccentricity of genius so peculiar that he can justly set up a claim not to be judged by the common standards of honesty, temperance, veracity, faithful payment of debts, unselfish courtesy, kindness, and purity. We may admire the fine intellectual work and welcome the service of persons who may fail in respect to some

of these virtues, but we cannot admire their characters; nor can we believe that they reach such possibilities of achievement as might be theirs, were their natures thoroughly governed by moral law.

WM. J. POTTER.

ROWLAND G. HAZARD.

It is noteworthy that the last two numbers of the *Journal of Speculative Philosophy* (January and April, 1884) both contain articles of exceptional interest and weight upon a remarkable American thinker, who has only in these latest years received that full recognition which the intrinsic importance of his thought deserves,—Rowland G. Hazard. The first of these articles is a general review of Dr. Hazard's works, with liberal extracts from the same, by Dr. Harris, the editor of the *Journal*. The second article, entitled "The Moral Creativeness of Man," is by Francis E. Abbot, whose too infrequent words in this time are always sure of the interest of readers of *The Index*, and is especially notable for the extremely high tribute which it pays to Dr. Hazard. Whether its terms be regarded as superlative or not, Dr. Abbot is certainly right in assigning Dr. Hazard a very high place as a thinker of acuteness, originality, and power; and his article has an exceptional value for its clear grasp and forcible statement of that doctrine of the freedom of the mind in willing, with which Dr. Hazard's speculation, so far as important in the history of philosophy, has been entirely concerned.

The question of the freedom of the will is perhaps the most important question in the philosophy of our time, forming a natural and necessary point of convergence and divergence for almost every problem with which we have to deal. Hence, it was very much a thing of course for so acute and direct a thinker as Dr. Hazard to choose this field for his part in the perennial Protean contest between mechanism and spirit. "To the Anglo-Saxon mind," says Dr. Harris, "the question of self-determination, so important to the philosopher, takes the form of the possibility of the freedom of the will." "It is a noteworthy fact," says Dr. Abbot, "that the only two Americans who have thus far greatly distinguished themselves by a powerful originality in the field of speculative philosophy—Jonathan Edwards and Rowland G. Hazard—have both busied themselves in the main with the same great problem of necessity or freedom in volition." Dr. Abbot proceeds to an interesting discussion of the close connection of ethics and politics, and says: "This problem of necessity or freedom in volition is the speculative side of the great practical struggle which has given to America its special significance in the history of mankind,—the struggle to realize the ideal of constitutional liberty in political institutions, to reconcile individual freedom with national unity in a great political society founded on the legal recognition of equal individual rights. This is essentially an ethical conception, and one of the highest order. Edwards defended the doctrine of necessity in ethics, out of devotion to the theological doctrine of the unlimited Divine sovereignty, which from time immemorial has been the foundation of political absolutism 'by the grace of God'; Dr. Hazard defends the doctrine of freedom in ethics, out of devotion to the modern doctrine of the limited self-sovereignty of man, which is the only possible foundation of instituted political freedom. Freedom in ethics is the thought-side of freedom in politics; the latter logically presupposes the former. It is apparent, then, that Dr. Hazard's philosophy is rooted in the soil, and interprets his country to the world; while that of Edwards was

rooted in Calvinism, and, if politically realized, would have made his country an impossibility. . . . It is from this consideration of the profound identity of ethics and politics, and from the entire confluence of his ethical speculations with the deepest currents of American thought, feeling, and life, that we regard Dr. Hazard, notwithstanding the eminence of his great Puritan predecessor, as having laid the first foundations of a distinctively American philosophy."

"Dr. Hazard's essential position," says Dr. Abbot, "is that freedom is the essential prerequisite of man's moral creativeness. Whatever opinion," he continues, "may be held on subordinate points, this central position must remain impregnable so long as man's moral consciousness survives; that is, so long as he is conscious of being in any degree the creator of his own moral character and action. The theory of evolution cannot possibly expunge this fact from his consciousness, or destroy the indestructible connection between morality and freedom. Neither mechanical philosophy, nor mechanical psychology, can ever become scientifically established, as true to all the facts of Nature, until it has succeeded in reconciling the two irreconcilable concepts of morality and mechanism. Be the prevalent opinion of the day what it may, far-seeing philosophers will continue to regard it as a mere ephemeral fashion of the time, until it shall have effected a genuine rational synthesis of all known facts, moral no less than mechanical; and there is no fact more certain than the fact that man is, in no merely mechanical sense, the real author of his own action."

The principle of the indissoluble connection of morality and freedom has seldom been more sharply stated than by Dr. Abbot, in the pages of this brief article. The speculative tendency most boldly represented, perhaps, by La Mettrie and the last-century Frenchmen, which has asserted itself very widely in our own time, "appears superficial," he says, "to all who can distinguish between the spirit of the age and the spirit of the ages." "That is no scientific explanation which begins by denying the fact to be explained; and no ethical system has any claim to be considered scientific, if it begins by denying or ignoring the only ethical quality in human action."

Dr. Abbot finds every denial of moral freedom to rest on a misstatement of the law of cause and effect. His discussion of this point, with his conclusion that the term *motive* has no proper place in the discussion of freedom, being irremediably a "question-begging epithet," is one of the most interesting parts of his essay. It is chiefly upon this line that Dr. Harris' few remarks proceed. "The critic that objects to Dr. Hazard's solution of the problem of free will," he says, "must do so on the ground of the general impossibility of self-activity or self-movement. It seems strange that a thinker can admit derived movement or activity, and yet deny self-movement and self-activity. He admits derivation, but denies the existence of a source of derivation. There is something which is moved, and a chain of moved bodies which receive and transmit motion, but no energy that originates motion. This is, in fact, the denial of causality." A very common fallacy of the fatalist Dr. Harris exposes in the following terse paragraph: "There are two kinds of necessity,—the logical and the fatalistic. The necessity involved in a definition is a logical necessity: 'A self-determined must be free.' A fatalistic necessity is involved where something is made to be what it is by the action of something else. . . . 'This thing is determined by the totality of conditions existing in its environment.' By the fallacy known as *quaternio terminorum*, or *ambiguous middle*, the fol-

lowing refutation of the possibility of freedom may be made: (1) A self-determined being must be free; (2) but, if it must be free, it is necessitated, and (3), therefore, is not free. The refutation of this may be easily accomplished by continuing the argument thus: (4) But, since it is not free, it is evident that it was not necessitated to be free; and, therefore (5), in spite of (2) and (3), it is free. The necessity in (1) is a logical one, and in (2) and (3) a fatalistic necessity. The reasoning assumes the identity of the two, because of the use of an ambiguous word." More important in this connection, however, than Dr. Harris' comments in the article here referred to, is his discussion of freedom in the ninth chapter of his little *Outlines of Philosophy*, where there is also explicit reference to Dr. Hazard's argument.

Dr. Abbot gives special prominence to the relation of the doctrine of freedom to the philosophy of evolution. "Darwin," he says, "has permanently changed the whole course of human thought in these matters. That the theory of evolution has come to stay, and to constitute the foundation of all future theories of the universe, can be doubted by no one who knows the irresistible strength of the facts and arguments by which it is established. But whether evolution itself is to receive finally a mechanical or teleological interpretation is an issue not yet decided. Herbert Spencer and Ernst Haeckel, with a boldness, cogency and consistency far superior to Spencer's, advocate the mechanical view of evolution; but multitudes of keen and thoughtful minds are coming to see that this view overlooks numerous facts of the highest importance that refuse to be ignored or crowded out of sight. Unquestionably the ancient teleology, as represented by Paley, is outgrown by the modern mind, largely for the very reason that it exhibits so fragmentary, artificial and mechanical a character, and rests wholly on the old dualism of natural and supernatural; while the monistic teleology, latent in the very concept of evolution itself, has not as yet been anywhere adequately developed. Meanwhile the necessity of a deeper philosophical reading of the facts which pertain to man's moral nature is slowly but surely becoming felt more profoundly every year." "The problem of the evolution philosophy is to show how, out of elements which apparently comprised only the impersonal, the non-moral, the unfree, personality and morality and freedom have gradually arisen. The mechanical theory of evolution virtually argues that this evolution has not taken place at all, and that, since the original elements manifest only mechanical or efficient causes, the ultimate product also must be mechanical only; while the ethical theory of evolution argues that, since personality and morality and freedom are patent in the ultimate product, they must have been latent in the original elements, as immanent cosmic purpose, end, or final cause."

While Dr. Abbot's particular statement of the position of Herbert Spencer as that of a mechanical interpreter of evolution seems to us inexact, he is certainly most exact in his perception that the problem now set for the evolution philosophy is that of the development of an adequate teleological statement, a sound and satisfying metaphysic. While this is on its way, perhaps indeed as the best means of helping it on its way, it will be well for us to remember that the conception of evolution is a great many years older than Spencer and Darwin, and to keep ourselves familiar with Goethe and Hegel. Is it not possible that their pages point the way to the reconciliation which we seek better than the pages of many later men? And does not our own Emerson throw a flood of light toward the point where evolution shall be clearly

found to comport with freedom? Dr. Abbot denies to Emerson the name of philosopher,—not of course by way of disparagement, but by way of definition. We think the definition would also exclude Parmenides, Socrates, and the Stoics, and we find a unity in the thought of Emerson such as Dr. Abbot does not seem to find; but, by whatever name, the thought of Emerson illuminates nothing more than this great present problem of our evolution philosophy.

"And it is safe to say," with Dr. Abbot, "that mechanical psychology will never permanently establish itself as scientifically true until it has first reckoned with Dr. Hazard—first understood, and then on the same high plane satisfactorily offset, the weighty moral considerations adduced in support of his position." Dr. Abbot observes that it is not the object of his essay to analyze or criticize Dr. Hazard's writings, but simply to call attention to them, in the hope that thoughtful readers may procure and study them. Our own object is simply to call attention to these two valuable introductions to Dr. Hazard's writings; written from a stand-point which we deem so good and so essential, in the hope thus most effectually to promote the study of the books themselves, and a severer reflection upon the question of the mind's freedom.

EDWIN D. MEAD.

DYNAMITE AND ANTI-DYNAMITE.

Like all gospels, dynamite has its friends and enemies. Recent events have opened a pathway, disclosing on one side applause and on the other distaste. Sentiment has its word, brutality puts in a remark, and nonchalance passes by both with a shrug of the shoulders and a grim smile. Through the fogs of newspaper commonplace and the philosophy of formalists, however, I believe we may discern facts not so far duly noted, and which may well command attention and thought.

The London explosions were followed by a common cry of horror, whose force was expended not only in Europe, but here. Was this an utterance of fear or humanity? Expressed in various terms, the indignation was of one purport. We should be interested in knowing from what motive the world spoke. Dynamite has rapidly grown into power as an element of discord. There are some who choose it as an instrument of reform. By what instincts this is accepted and by what opposing feelings it is condemned, it is quite important for us to know.

So far as the world is concerned, time is convincing it that brute force must naturally become less and less an element potent to settle the problems of human welfare. Even Benjamin Tucker, who for consistency's sake indorses the recent actions of dynamiters, condemns the factor of force in the abstract. The battles of the intellect have an assurance of settlement which can be possessed by no merely animal expression of passion and hatred. Men consult more about war before inviting it than they have customarily done in the past. Death has stricter account to give of its sacrificial bullets. And all such growth is natural and right. It leads on and away from the gospel of hate. It shows a respect for society, which society in its turn will deserve. It defers somewhat to the general voice, where the general voice is most likely to be strong. It comes of the spirit that admits fallibility, that concedes a possible error of the individual, and gives the collective social force opportunity to correct and revise, if it can. Now, do not think that I write of a surrender. I speak rather of a victory. The individual becomes not less, but more than under obsolete

dispensations. The single soul certainly gains a vast fund of power with the burial of its arrogance. We still will stand on our instincts, but we have opened the windows, and in inviting the sunshine have offered ourselves for judgment upon the ground of our nobility of mental and moral organization rather than the lifting power of an arm.

This might lead on to endless statement, which is not, however, necessary. Put truth with truth, who care to and are not too hurried, and grieve not at the offspring! I think this a sharp point just here: we believe in the soul—the efflorescence of the body—preferably to the elements that convene to its existence. That is, we would rather convince than kill a foe, rather capture by wit than lasso, rather convert a man than murder him, rather invite a heaven than translate combatants to a metaphorical hell. What, in the face of this reflection, comes of the horror of the world that a faction of reformers of more or less pure intentions choose an instrument of treachery and death? I should conclude that, in so far as this indignation is free and consistent in its impulses, it stands for a gracious human growth, but that, where it results from calculation, formalism, or revenge, it is rather a voice of hypocrisy than humanity in essential tone and strength. The present consensus of public opinion partakes evidently of a mixed motive power. What that confusion dictates it is not hard to discover.

Position and display always command a sympathy, much of it instinctive, that does not inquire as to rights and wrongs. The fellow on top can justify himself where weakness would stand dumb. I have no doubt much of the condolence with official Britain is the thoughtless outstreaming of blind and unquestioning deference. Indeed, it is remarkable that even men who have emancipated themselves from the church, and never would grant the simplest claims in that sphere, save after rigid examination, are quiescent and faithful to every demand of the State.

The world, it may be said, condemns dynamite. I do not object. With any others I could discountenance brutality. But, before irate Irishmen are hanged for their offences, would it not be well to question them? It is wise not to bury secrets. In this current conflict on the islands over the sea there are two sides. The British government is not guiltless. If Irish agitators are sometimes cruel, they are made so by an instigating element of like kind. True enough, England's crimes are "legal." The murders committed in law's name have the poor solace of that fact. Yet before the moral eye there is no severed code,—one thing for a deed under cover and another for the same deed in open day. Wrong cannot be so juggled away.

Let us condemn dynamite. None could more heartily do it than I. But let us hate, loathe, despise, too, the crimes wrought in a pure name to bring that name to dishonor. If we can grieve over untimely deaths in London, let us not less sorrow for the thousands hounded to the grave in unhappy Ireland, and for the Egyptian resistants who maintain a noble fight against one among the greatest and gravest of political crimes. And, when we pass resolutions indignantly over the one thing, let us not hesitate to pass them over the other. If we are blind and see but the convenient half of truth, let us, in virtue's cause, at least show that good grace to decency, which would make us pause, the rather to say no word of any crime on the calendar than utter a partial sentence. I know the common way, the forgetfulness of formalists, the hardness of brokerage philosophies; but I appeal from them to the spiritual trust that sees through their hollowness to the sub-

stance of virtue. Nothing is more vexing or more sad than the proneness of men to accept the mandates and principles of power without inquiring for its warrant. Do Irishmen murder for love of murder? Is there ever effect without cause? I do not believe it. And yet the accent is so placed upon all comments as to imply that in the Irish difficulty there is a question without a response.

Peace is well. But let us have peace both ways. We are much too apt to close the English eye and keep the Irish eye wide open. The pictures dancing before the vision then become faint and without reason. To explain dynamite, we must find the secret of the present condition of the people who use it. To understand England's gentle spirit, it is necessary to read the history of Egypt as made since 1880. When dynamite is denounced as an instrument of diabolical warfare, which indeed it is, let the denunciation be formulated double, with one blow for the tempter and another for the tempted. As long as we are not prepared to follow our arguments, it is dangerous for us to toy with them at all. If we mean anything by a condemnation of the acts of Westminster and the Tower, we mean more than singly we can make of the event. If we honestly are haters of the iniquitous warfare in London, we must up in arms against the brutal force hacking at Ireland and Egypt. We should not be deceived by a noise. The subtle evil that plays its game in Tonquin and the Soudan is not so startling in its developments as the London concussions; but it is vastly more dangerous in its ultimate effects, and has not for its frenzy the excuse of invitation which might be urged for the acts of Irish irrecconcilables. The whole game of violence is bad; but it is one freely indulged, though often, as we have seen, under disguises. To-day, the major part of those who condole with England over her restive subjects are betrayed by want of studious reflection.

Senator Riddleberger was the only man in the United States Senate who would not vote sympathies to Great Britain. There are respects—that is, so far as it is in line with what I have written—in which I value that vote as a gem. It seems to me unparalleled impudence to formulate resolutions against illegal crime, when legal crime is considered either just or something upon which we have, as a nation, no right to express an opinion. If senators were persuaded to resolve wordy hate for France's policy in China, the country would rise instinctively to protest. Why not produce one protest as reasonably as the other? Wars, such as England and France now have on their hands, are as treacherous and blood-thirsty as the dynamite hypocrisy, played off in dim corners to the pain of innocent victims. Yet the London Times, which defends every exercise of perfidy, is so assured of its ground that it can call the Egyptians "murderers" for having done all things possible to worry the English army introduced to oppress them. This seems to me an almost hopeless phase of hardened impudence. Yet it strikingly illustrates how warped is current conservative thought, and how dangerously it is ready to infect us, if we do not scan its invitations closely.

So, before the sun goes down, let us turn these matters over once more. Revised judgments quite often conceal a truth. In the interests of peace and brotherhood, life requires of us something higher than the formalistic tribute. His is not always the most thankful heart who most stately says his grace before meals. His is not always the prophetic voice who speaks through numbers, and covers most pages of print. In the last corner of a friendly paper, I once found a few words

from Parker which outweighed the reading of months. Perhaps, down in our hearts,—deep below the region of echoes,—some stray but eager thought even now lies ready to answer, when instincts pure enough appeal. Irishmen, Englishmen, Frenchmen,—they are one to me; and I would love them by one standard, not by three. But I have it not in my soul such stirring days as these to embitter myself against one crime and let others go scot free.

HORACE L. TRAUBEL.

"THE BIBLES OF HUMANITY."

A remarkable work by a remarkable man is now in course of publication in this country. The title of the book is *Les Bibles et les Initiateurs Religieux de l'Humanité* ("The Bibles and Religious Apostles of Humanity"); and its author is M. Louis Leblois, pastor of the Temple-Neuf at Strasbourg. Both the work and the writer deserve at least a cursory notice in the United States, where all that pertains to liberal religion is sure of a general and hearty welcome. Let us first speak of the author.

M. Louis Leblois, who is to-day nearly sixty years old, is one of the most widely read and scholarly clergymen of the Reformed Church of Europe. In America, he would be called an advanced Unitarian. Here, he is simply a Protestant, except when he is dubbed "heretic" by some hyper-orthodox ecclesiastic. At college, M. Leblois pursued with ardor the mathematical sciences, with the intention of entering the Paris Polytechnic School, the celebrated State military institution for the education of engineers; but, while still a student, his logical mind and deeply religious nature were struck by the discord between science and religion, which then characterized the Protestant world, and he soon abandoned mathematics for theology.

In 1853, M. Leblois was installed as pastor of the Temple-Neuf at Strasbourg, where, in spite of opposition and persecution, he has ever since remained. When he arrived at the Alsacian capital, Pietism, transplanted from Berlin, was beginning to take root there. M. Leblois immediately entered the lists in opposition to the new form of Christianity, and in 1854 preached a bold sermon, in which he declared against the divinity of Christ, and pronounced in favor of the Unitarianism of Parker and Channing. The Protestants of Strasbourg were thunderstruck. The next day, M. Leblois was summoned to appear before the Directory, the governing body of the Protestant Church of Alsace, and requested to resign his charge. He flatly refused. "You may turn me out, but I will never resign," was his response. This the Directory had not the authority to do, and it let the matter drop officially.

But this was only the beginning of M. Leblois' troubles. War was declared on the "heretic," the "iconoclast," and the "accomplice of Satan," as he was styled in the scores of anonymous letters showered upon him. Many people cut him in the streets. Theological students were forbidden to enter his house. If he appeared at a reunion of clergymen, the room was immediately deserted. To such a point was this persecution carried that a body of devoted followers gradually formed for his protection. The Freemasons took him up; Catholics and Jews flocked to his church; his sermons were printed and scattered abroad; and, finally, after fifteen years of patient waiting and brave, indefatigable struggling, the minister and his doctrines were tolerated at Strasbourg.

One of M. Leblois' disciples, who took an active part in this long battle against bigotry, writes me as follows: "There is one thing which the the-

ologians will never pardon in M. Leblois,—the precision of his thought and the truthfulness of his language. He can never bring himself—and this was the chief source of his strength during his protracted fight at Strasbourg—to move in obscurity, to be contented with mere words, to employ the conventional and traditional phraseology in order to express modern ideas, which, because they are modern, must throw off the forms of the past. He holds that the religious idea is modified by time and progresses with humanity. He refuses to try to dress up our new beliefs *à la mode* of the Jews, the Greeks, or the Latins, in order not to shock a few old-fashioned people. He will never be pardoned for saying and repeating that every religious system has a scientific basis, that the only way of getting a better knowledge of God is through science, and that an acquaintance with physical laws alone throws light on the laws which govern the moral world. Why is he ever bothering us with his eternal science? What relation can there be between the domain of intelligence and sentiment? For thirty years, M. Leblois has heard these questions ringing in his ears; and, in the work now passing through the press, he responds to them with a clear and decisive answer."

Writing to me a few months ago, M. Leblois said: "The history of the Reformation at Strasbourg explains the possibility for a minister of our Church to publish so radical a work as mine without shocking anybody. I believe, however, that I am faithful to the true tradition, not only of the Reformed Church of the Strasbourg, but of the Christian Church of the Middle Ages. The Church practised, during the whole period of the Middle Ages, the principle of the union between science and religion. Since the sixteenth century, the Church has abandoned its own tradition by breaking with science. Hence, that afflicting divorce existing to-day between religious doctrines and scientific doctrines."

It may be well to glance for a moment at this history of the Reformation at Strasbourg, not only because of the light which it throws on the book under consideration, but also because of the interest which the subject itself possesses.

It is generally believed that the Reformation in Europe sprang from Luther, that he was the author of the grand movement. The truth is that Luther was simply the most conspicuous of the reformers of the sixteenth century, and that his genius and dramatic struggles gave to his name a widespread *éclat*. But there were reformers before him and independent of him. As early as 1512, Geiler, of Kayserberg, preached in the Strasbourg cathedral on the necessity of reform at a moment when Luther was still a fervent Catholic. The Alsacian capital was then a free city, which had long been distinguished for its spirit of independence and courage.

Its own bishops had, without intending to do so, alienated the city from Catholicism. Often, in their disputes with the municipality, they were forced to have recourse to excommunication, in order to carry their point. During the periods when Strasbourg was under the ban, its population perceived that the sun shone none the less brightly, the harvest ripened as of old, and that all things moved on in their accustomed course. Hence, the opinion became general that communion with Rome was not indispensable to the happiness and prosperity of the commonwealth. Strasbourg, therefore, was one of the first cities of Europe to proclaim the principles of the Reformation.

These early Strasbourg reformers were Matthien, Zell, Wolfgang Capito, and Martin Bucer. They introduced changes into the doctrines and forms of

worship of the Church, quite independently of Luther, which explains the reason why the Wittenberg reformer entertained an antipathy against the good people of Strasbourg which he could not hide, and which burst forth on several occasions.

In 1530, when the Emperor Charles V. convoked the evangelists at Augsburg, representatives of the principal religious bodies outside of Rome responded to the imperial summons. The Lutherans went supported by powerful German princes. The Strasbourg delegates—called Oberländer, or Highlanders—appeared, accompanied by those from the allied cities of Constance, Memmingen, and Lindau. The third body was composed of the followers of Zwingli, and was the most radical of the three. The first division—the Lutherans—was the strongest numerically; and their confession of faith was alone read and promulgated, and their form of worship was alone tolerated. The delegates of Strasbourg, threatened with extermination, consented, for reasons of policy, to sign the Lutheran confession, but without renouncing their own. From that day to this, the Protestant Church of Strasbourg has been styled officially the "Church of the Confession of Augsburg," while its ministers have always shown themselves to be quite independent of that faith.

The liberal character of this Church is further explained by the influence exerted at Strasbourg by the French Revolution. Toward the close of the eighteenth century, the doors of Protestant and Catholic places of worship were shut in this city, by the imperative orders of the Jacobins of Paris. But, when they were opened again after the Reign of Terror, Strasbourg Protestantism found itself well supplied with clergymen of superior talent, animated by the large and progressive spirit of the new era, who threw aside the last vestiges of the old forms of the sixteenth century, and began to work a soil favorable to the growth of modern ideas and to the union of religion and science.

Some of these clergymen spoke in their pulpits of the results of the investigations in the special field of theological science; but the first of them to proclaim the necessity of bringing into harmony religion and the science of the universe was M. Louis Leblois. On April 24, 1853, M. Leblois said, in his installation sermon: "It is beautiful to show that religion and science—religion which reveals God to us, science which reveals his works to us—are not two mortal enemies, but two eternal sisters, and that, instead of pitting one against the other in a struggle discreditable and fatal to their respective interests, they ought to unite in a sublime alliance, and lend each other powerful aid." On this same occasion, M. Leblois announced the following principle: "Every religious system is based on a mundane system. If the foundation is wrong, the edifice is not solid. A knowledge of the true constitution of the universe and of its laws is, therefore, necessary, in order to establish a firm religious superstructure." Untrammelled by the belief that Mosaicism and Christianity constitute a special and exclusive revelation, M. Leblois turned his attention to every form of human religion, and has studied carefully and impartially, during over thirty years, every system of divine worship.

After what has just been written concerning the author's life and views and the peculiar character of Alsacian Protestantism, little remains to be said about the work under consideration. It is easy to imagine the spirit pervading the volumes, and to guess what the conclusion must be. I shall therefore examine much more rapidly the volumes than I have already done in the case of the author and the centre in which he moves.

The first part of the work treats of the traditional method of religious instruction in countries where the Christian Church is dominant. The author goes back to the source of Christianity, to the teachings of Jesus. He dwells successively on the origin of Catholicism, the birth of dogmas, the transformation of Catholicism into the papal Church, the Renaissance and the Reformation, and, finally, on the grand scientific discoveries made, in spite of the opposition of official dogma, from Copernicus to Darwin. The second part recounts the discovery of the sacred literatures of the peoples outside of Christianity. It makes known the lives of the men of courage and genius who have played an important rôle in this resurrection of a religious world so long ignored, and passes in review the different bibles which serve as the basis of the faith of the nations that have not come under the influence of Christianity. These two parts have already been published in three large octavo volumes, and the manuscript of the rest of the work is in the printer's hands.*

The third part will consist of a series of extracts from the sacred writings just mentioned, and will constitute a sort of *résumé* of the Bible of humanity. The fourth part will be devoted to a study of the origin of the sacred books, and the fifth to an examination of the Koran, the sacred writings of the Israelites, and the New Testament. The sixth part will go deep into the difficult questions of the origin of written characters, language, morality in the human family, and especially of the origin of gods, religion, literature, and art in the Aryan branch. In the seventh part, the reader will see pass before him the grand figures of the apostles of religion. Those giants first appear enveloped in a mythical and legendary nimbus, from which they slowly emerge, and show themselves in their historic simplicity and in the wonderful grandeur of their human form. The work will close with a consideration of the perils of the hour. The author, opposed to all violent measures, will point out the way prescribed by the laws of the universe for the accomplishment, without shock or revolutionary outburst, by a slow but sure action, of the moral, intellectual, and religious regeneration of society.

THEODORE STANTON.

PARIS, January, 1885.

OF James Carlyle, brother of Thomas, it is said that he is taciturn, unsociable, contemptuous toward almost everybody, and has much of the nature of the philosopher of Craigenputtock. The following is related of him. To a visitor recently, he said, speaking of a school inspection they had just made: "Ye make a terrible to-do about eddication nooadays by what was the case when I was young. Tae day at the schule when I was nine years old, my teacher was hearin' me say my catachers, and I said 'he believes' instead o' 'he believeth.' He knocked me doon and pu'd my legs and bangit me on the desks; and I ran out an' lay at the fit o' a hedge among dokens and nettles for three hale days."

PHILLIPS BROOKS, in a recent address to students, "discriminated," says the *Congregationalist*, "between toleration and tolerance, of which he defined several kinds: *e.g.*, the tolerance of indifference, careless as to what another believes; of policy, for the avoidance of dispute; of hopelessness, despairing of change in others; of respect, that duly regards others' honest opinions; and the genuine tolerance that comes of firm faith in the truth, that heartily assents to another's disagreement with one's self till convinced by the clear light of reason."

* They may be obtained from the publisher, Fischbacher, 33 Rue de Seine, Paris.

EDITORIAL NOTES.

BY B. F. U.

THE *Rise of Intellectual Liberty from Thales to Copernicus*, by Frederic May Holland, a volume of four hundred and fifty-eight pages, has just been issued by Henry Holt & Co. A notice of the work will appear in *The Index* next week.

THERE is something to be said on both sides of the question of exempting church property from taxation; but the weight of the logical argument is against the exemption, which is a relic of the union of Church and State. A compromise exempting churches up to a certain value would probably satisfy the present demand for a change. —*Boston Sunday Herald*.

MESSRS. HARPER have brought out a cheap edition of George Eliot's *Life*, by Mr. Cross, in their Franklin Square Library. *Selected Poems of Michelangelo Buonarroti*, edited by Mrs. Ednah Dean Cheney, is in the press of Lee & Shepard. *Mind Reading and Beyond*, by Wm. A. Hovey, announced by Messrs. Lee & Shepard, is based on the reports of the London Society for Psychical Research. —*The Critic*.

"VICK'S FLORAL GUIDE" leads the van, and as usual needs no commendation, its solid merit having long ago given it a firm place in popular affection. The number contains the usual lists of new seedlings in both vegetables and flowers, and with its bright flower frontispiece is quite worthy a prominent place on the sitting-room table; while the illustrated Magazine has long been a faithful guide in all matters relating to the garden. James Vick, Rochester, N.Y., will send the *Floral Guide* to any address for ten cents, which, if seeds are afterwards purchased, may be deducted from the order.

At a recent meeting of the Boston Liberal Club, the following resolutions were adopted:—

Resolved, That the Boston Liberal Club deploras with enduring sorrow the sudden death of its worthy member, John S. Verity, whose memory we must cherish as a faithful and genial friend, an earnest and honest thinker, and whose ability as a pleasing and ready debater always enlivened our debates; and whose untiring passion for reform, and constant efforts for human good, entitle him to the lasting gratitude of mankind.

Resolved, That in the death of our long-timed friend and member, Mr. John S. Verity, the Boston Liberal Club is placed under a double sorrow, he having been not only a most honest, pleasing, and ready debater, but also what is of still more importance, a deeply earnest friend of that humanity which it is our aim to benefit by means of the public discussions which we constantly maintain.

THE *Independent Pulpit*, a liberal monthly, edited by Mr. J. D. Shaw, formerly an orthodox minister, and published at Waco, Texas, contains interesting articles, and is evidently doing a good work. We take from its columns the following paragraph: "In arguing the merits of a religion, it is common for champions to refer triumphantly to certain great men who believed in their theory. There is no merit in such an argument, from the fact that the great men of this world, as well as the small, have been distributed among all beliefs and disbeliefs. Some of the greatest men the world ever produced were pagans, as Solon, Socrates, Aristotle, and Marcus Aurelius. Every denomination of Christianity has been patronized by great men, such as Newton, Lardner, and Macaulay. The Jews point with pride to Josephus, Spinoza, and Beaconsfield; the Spiritualists, to Zöllner, Wallace, Crooks, and Morgan; while every form of unbelief has had its proportion of the great, such as Bruno, Descartes, Hume, Gibbon, Humboldt, Jefferson, Darwin, Haeckel, Tyndall, Huxley, and

a host of others. The great of earth are as ignorant of any other life as are the small."

At Damrosch's funeral in his opera house, New York, on the 18th, Felix Adler, one of the speakers, said:—

The name of Dr. Damrosch is intimately connected with this place. When I entered the house, I fancied I must see him in his accustomed place. When I heard the solemn music to which we have just listened, it seemed to me as if I could see the apparition of your dead conductor wielding his baton over your heads, as he was wont to do, and guiding the harmonies of sound which you have just rendered in his honor. The soul of Damrosch allied itself to the Damrosch idea of music. It was his idea. He clung to his ideal as a lover to his bride. At last, his favorite idea rose in the public eye, and he stood where he could grasp the wreath of success. I shall lay three wreaths upon the dead. The first shall be the wreath of success. For years, he struggled and fought against hardship with an indomitable will. The second is the white, pure silver wreath of gratitude. The last wreath is the evergreen wreath of fame. He introduced us to a kind of music which has relation to deep spiritual facts, music which seeks for us in the longings of the modern age, and which makes us acquainted with our age and brings us into contact with vital reality. He was a true and faithful priest. There is an earthly immortality for those who have faithfully spent their lives in elevating their brothers to higher and better spheres. To this immortality we dedicate the name and fame of Leopold Damrosch.

A FRIEND asks us to explain briefly the difference between Mr. Spencer's and Mr. Harrison's philosophy. They agree mainly in their philosophy. Mr. Harrison (who is an acknowledged Agnostic) says: "I habitually speak of him [Spencer] as the only living Englishman who can fairly lay claim to the name of philosopher. Nay, he is, I believe, the only man in Europe now living who has constructed a real system of philosophy. Very much in that philosophy I willingly adopt; as a philosophical theory, I accept his idea of the Unknowable." But Mr. Harrison thinks Mr. Spencer in error in regarding the Unknowable as the true basis of religion: "Hence," he says, "if I admit with him that philosophy points to an unknowable and inconceivable Reality behind phenomena, I insist that to ordinary men and women an unknowable and inconceivable Reality is practically an Unreality. The Everlasting Yes which the evolutionist metaphysician is conscious of, but cannot conceive, is in effect on the public a mere Everlasting No; and a religion which begins and ends with the mystery of the Unknowable is not religion at all, but a mere logician's formula." Mr. Harrison claims that religion must have its basis and object in the region of the known—in Humanity, since that "is the grandest object of reverence within the region of the real and the known."

THE *Catholic Review* publishes an address to the students of the College of the Sacred Heart, Prairie du Chien, Wis., by Rev. James Conway, S.J., on "Dangerous Literature." The answer to the question, "What books and publications are forbidden?" says this priest and Jesuit, "may be freely formulated thus: *All those that are against faith and morals*. These are condemned alike by the laws of good taste, by the law of nature, by the law of God, and the laws of the Church, and cannot be read without sin, unless when lawful permission is given, in the absence of danger, for useful purposes. Now, firstly, *what books are against faith?* To this question, I answer: In the first place, all books or publications teaching infidelity, —denying the existence of God, for instance, or the immortality of the soul, or the existence of future reward or punishment, or the divinity of the Christian religion. Such are, for instance, the works of Bob Ingersoll. Secondly, publications

that teach any heresy professedly, that deny or call in question any dogma of the faith or teaching of the Church, or either openly or covertly attack the Church herself in her constitution, power, or prerogatives. Thirdly, any book or publication on religion written by a heretic or non-Catholic, —for example, a Protestant or Methodist catechism, prayer-book, or tract; for such from their very nature must be hostile to the Church, and teach errors and heresies *ex professo*. Lastly, scientific works propounding false theories that openly conflict with the teaching of Revelation, such as Darwinism and the kindred theories of evolution, that place man on the same level with the ape, having the same origin, the same end and destiny as the beasts of the forest. The books contained in these four classes are prohibited alike by the law of nature, in case of danger, and by the law of the Church, in all cases; and, if they are books of any volume, they cannot be knowingly read, kept, or printed by any one without his incurring the pain of excommunication. Nor does the Church give permission to read them in particular cases, but for very grave reasons and in the absence of all danger."

OTHER scientific works, though written by heretics and containing incidental errors against faith, may be read, "unless they are nominally prohibited by the Church." "If the secular newspaper contains but an occasional passing remark against the Church, we must feel very grateful to it, as long as the watchword is *Ecrasez l'infâme*. But, if it makes a point to abuse the Church, we are forbidden in honor and in conscience to read or patronize it." The question, "What books or publications are against morals?" is answered by referring to publications like Peck's works and Peck's *Sun*, "illustrations representing notably naked figures," "the narration of obscene facts and the like," "sentimental and sensational" books and papers, "a godless, agnostic, and impious press." These works "against morals" are condemned; but it is not said of them as it is of those "against faith" that "they cannot be knowingly read, kept, or printed by any one without his incurring the pain of excommunication."

OUR BELONGINGS.

'Tis but a little time that we possess
This earthly life or honors. Let us learn,
Therefore, that Heaven hath given nought to us
To hold in ownership so absolute
That we may guiltlessly employ our powers
To selfish ends. This marvellous frame of flesh
And blood which we are wont to call ourselves
We do but borrow. In a few short years,
Nature puts forth her strong, relentless hand,
And strips us even to the last poor shred;
For we are hers, and not a passing hour
But Death's pale finger points to open graves,
And warns us she will have her own again.
Then why should we so crave and toil to drain
The little streams that make our neighbor's wealth,
And heap and gather, till the wasteful flow
Pours through the channel of our narrow lives,
A thousand-fold surpassing every need?
Thank God for death! that swift, resistless flood,
That sweeps away all barriers, and restores
To common levels and necessities
The sweet and beautiful amenities
That pomp or greed its little hour withheld.
Thank God for death! the stern, impartial judge
Whose firm behest no earthly power can stay,
No art can foil, nor wealth nor cunning buy.
Aye, as we stand above the honored graves
Of men who died for liberty and right,
Mourning our heroes, loving and beloved,
We may not pay the tribute of a sigh,
When the strong hand that pushed the weak aside
For love of rule, and not of humankind,
Palsies and falls to common dust again.
'Tis the world's gain; and men with tearless eyes
Shall turn and go about their daily tasks,
Whispering silently, Thank God for death!

PROVIDENCE, R.I.

C. APLIN

The Index.

BOSTON, FEBRUARY 26, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion; to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

MASSACHUSETTS SABBATH LAWS.

BY HENRY W. HOLLAND.

There is a good deal to be said on both sides of the question as to the best manner of observing the Sabbath; but, besides this, there is an important question as to whether, if we concede that the Orthodox principles are wise, our laws are adapted to further them. Assuming that the motive is a good one, what methods do we use to execute it? While a large portion of the community is unprepared for any change in the general principle, nearly every intelligent person will agree that the law ought to be sensible in its character and free from obsolete provisions, and so clear and certain that well-meaning citizens can find out what it is and act up to it. The legal principle *ignorantia ejus neminem excusat* is necessary, although sometimes harsh; but its application makes it all the more important that the law, with which every one is presumed to be acquainted, should be intelligible and consistent in its injunctions and certain in its operations.

Provisions that serve only as a cover to fraud or a means of malicious attack are particularly out of place in a law intended to honor the Lord. A statute that is obsolete has always a bad effect, for it shakes that respect for law in which democratic government is founded. But a law that is almost unknown, and yet can be occasionally revived for a mischievous purpose, is dangerous. The present state of our Sunday laws is well worth examination from this point of view; and we will, therefore, state it here, assuming for the purposes of the essay that the general intention of preventing both work and sport on the Sabbath is a wise ground for legislation.

The general provisions are of long standing; and there has not been any marked amelioration of late years, with one incongruous exception, to be noticed later. The drastic provision of authorizing

the tithing men to stop strangers in the streets and send them home or to jail, if they were travelling unnecessarily or idling, was a brief experiment; and, when ministers were stopped on the way to exchange with each other, it was felt to be too severe, and was abandoned. But it was in quite recent times that the provisions against travelling and working were extended to Sunday evening (1844). On the whole, the law threatens many more people with punishment now than it ever did before.

The first provisions that I will refer to are those relating to Saturday evening. Many persons are ignorant that there are any, but they are not to be overlooked. After sunset, on the last day of the week, whoever is present at any game, sport, play, or public diversion except sacred concerts or licensed places of amusement, is subject to a fine. We notice that it is the lookers-on only who are liable, and that the persons who get up the entertainment are safe, if they only keep out of sight. The manager who directs it without being personally present is not to be blamed, while the spectators are criminals.

We notice also that it is not certain whether the games, sports, and plays which are not to be visited on Saturday evening must be public or not. The grammatical construction is distinctly in favor of applying the limiting adjective "public" only to the last word "diversion," and holding that all private games are illegal; but it is very doubtful whether the court would not take a narrower view, and refuse to give such an offensive inquisitorial construction to the law. As it stands, it is uncertain whether the game of whist at home or the private theatrical is forbidden or not. It does appear to be clear, however, that while one might safely go to the Boylston Museum, where no respectable person would like to be recognized, the door of the prisoner's dock is open for him if he delays at a base-ball game after sunset, or goes to a public ball, or looks in at a game of billiards at Parker's, or drops in at one of those halls to which working-men are invited for a game of whist or chess. Now here is a law of doubtful meaning, but which in its most reasonable interpretation is uniformly disregarded. The only result of keeping it on the statute-book is to enable some clever rascal to use the machinery of the law to injure a rival or to get an enemy fined for doing what no one sees any harm in.

There is another provision about Saturday evening, of the same general character, though not so sweeping. Hotel keepers are forbidden to allow any one to drink and spend time at their places, unless he is a traveller, stranger, or lodger. A man may pass his evening in a strange bar-room, but not in his own town. It is uncertain whether the liquor drunk must be intoxicating, and there would have to be an appeal to the Supreme Court to settle it. The statute, of course, is to be strictly construed; and, therefore, it seems to follow that, while a man who hires a room at a hotel, but takes his meals elsewhere has the right to loiter at the bar on Saturday evening, a man who comes there regularly for his meals cannot safely take his glass of ale with a lingering supper, unless he also takes a room. The court has adopted such a wide latitude of construction that one cannot be quite certain of this, still less of what the word "stranger" means. If it denotes strangers to the landlord (as the word "lodger" means lodger at the landlord's), then the landlord must entertain men whom he does not know, but not those whom he knows and has learned to trust, which seems absurd. On the other hand, if it means a stranger to the town, then the landlord's liability depends upon the dwelling-place of the guest, which he has no

means of finding out, but is, nevertheless, responsible for. And, while he is a law-breaker, the guest goes free. The ignorant man is subject to fine, but the man is blameless who knew the facts and did the act for allowing which the other is to be punished. This statute, like the preceding, is seldom now enforced, but its mischievous character is plain enough. It hardly seems likely that any intelligent person can think that these two provisions have any effect in keeping the following day holy. If it is necessary to devote the seventh evening to preparation for the following day, then some argument might be made for closing all theatres and bar-rooms; but the restrictions that we have would be simply silly, if it were not that they give a dangerous chance for spite.

Taking up now the laws for Sunday there are certain provisions with regard to administration of the laws which require only a brief mention. The court cannot sit, and no civil process is to be served, though bail may issue to relieve an arrested man. The jurisdiction of constables is extended, and rude or indecent behavior in church is punished. Also, the date for payment of notes or discharge of prisoners is set for the day before. These do not require any comment. It is uncertain whether the verdict of a jury on that day is good or not.

The rule that contracts made on that day will not be enforced has been applied in a great variety of cases. And it has even been carried to the mischievous extreme of refusing to allow a man to recover for goods sold and delivered on that day and retained afterwards (*Myers v. Meinrath*, 101 Mass. 366), and also actions for deceit perpetrated on that day (*Robeson v. French*, 12 Met. 24). So that fraud is permitted on a day consecrated to the Lord, which is not tolerated on any other. It is safe to say that on both these points the law is not up to the morality of the community. It is not likely that the statute of 1884 affects this.

The remaining statutes deal with keeping an open shop, doing any work or business, travelling, public houses, theatres, dancing and playing games, hunting and fishing and gambling. A fine is imposed on every one who keeps open his shop, warehouse or workhouse; and the place is open in the eye of the law, if persons have access to it, even if the doors are closed. (*Commonw. v. Lynch*, 8 Gray, 384.) Under the ruling in *Commonw. v. Collins*, 2 Cush., 556, which accepts the grammatical construction of the statute, neither necessity nor charity would be an excuse for the opening; but the court held that the opening would not be unlawful, unless it were for the "purpose of work or the transaction of business." Ten years later, in 1858 (*Commonw. v. Harrison*, 11 Gray, 308), the court took the opposite view, and said that necessity or charity would be an excuse; but there was no discussion, the prior case was not alluded to, and the decision of this point was not material, as the instructions were sufficiently favorable to the excepting party anyway. This point is, therefore, uncertain. No doubt, a lawyer may open his office and draw a will; but the barber who opens on Sunday morning is a criminal, although the man who patronizes him is unblamed, if he will only take the simple precaution of not paying. The horse-car office with its counter of papers and ancient candies is illegal. Under the strict letter of the law, apothecary shops should be closed, though it is not improbable that the court would refuse to give so severe a construction. As to restaurants, it seems clear that, if they receive their friends or regular customers, it is at their peril. In *Commonw. v. Pickering*, 8 Pick. 234, a victualer was punished; and, although the statute under which this occurred is not now in force, that case

shows that there is nothing in the nature of the supply of food to the hungry to avoid such a penalty. It is to be noted that Jews, Seventh-day Baptists, and others who conscientiously observe another day of rest, and are therefore permitted to do business, travel, or work on the first day, are, nevertheless, forbidden to keep open shop then. (*Commonw. v. Harrison*, 122 Mass. 40.)

The most sweeping section is that which forbids the doing any work or business except of necessity or charity. The extent of the exception has been much discussed under the section forbidding travel, to which we shall presently refer. We will only say here that hoeing corn and gathering seaweed are forbidden, even if the crop would probably otherwise be lost or injured. (*Commonw. v. Josselyn*, 97 Mass. 411, and *Commonw. v. Sampson*, 97 Mass. 407.) Getting in hay before a threatened storm is therefore illegal, though it seems that cattle may be fed. The druggist who sells cigars or soda, the newsboy with his morning paper, the milk-man, the barber, the horse-car conductor, the steamer-hand, all are breakers of the law. They have no claim for the goods or labor which they wrongfully sell, and it is to the credit of our community that the protection which the law affords to fraud is so seldom availed of.

The section forbidding travel on the Lord's day except from necessity or charity has been a fertile subject of litigation. Not that there are many reported cases of punishment of the traveller. The amusing account in the life of the Puritan Robert Pike two centuries ago is the only one we call to mind. He had attended both services and closed the day with prayer; and, as soon as the fall of the sun allowed, he had to start on urgent business for the Merrimack (the day then ending at sunset). Unluckily, as he passed the house of a neighbor who had a grudge against him, the deceptive clouds broke away, and a gleam of level light showed that he had started a few minutes too soon, and profaned the Lord's day; and neither his age nor his high standing could save him from punishment. In recent days, it has seldom or never been directly enforced; but it has, nevertheless, been an efficient shield to unscrupulous defendants, who have made use of it to avoid paying for injuries for which they were justly liable. Fortunately, this crying evil has at last been partially cured by the statute of 1884, providing that the law should no longer be abused in this way; but Sunday travel is still forbidden, and the evil is aggravated by the doubtful character of the judicial decisions. No one knows now just what this necessity or charity is. At an early date, the court engaged in a well-meant attempt to mitigate the severity of the law by construing it to mean not actual necessity, but "moral fitness or propriety" (*Commons v. Knox*, 6 Mass. 76), and holding that the court was to decide what this moral fitness or propriety was, and declare it to the jury, sitting apparently as a sort of spiritual council and court of law combined. The law, as it stood, was so unreasonable that the temptation to improve it was overwhelming. When ministers were arrested for travelling to exchange with brother ministers, the professional fellow-feeling of the court was aroused; and it tried to do its best, not to ameliorate the law,—for in many respects our construction of it is more severe than that of other States,—but to make it tolerable. It is true that the wording of the statute is plain and without a particle of authority to the court for its anomalous venture into the field of ethics, and the results of the excursion have not been so happy as to invite a further excursion. The bench was not constructed with a view to instructing us in the moral proprieties; and, with all due respect to that able and

honored body, it must be said that it is not fitted to perform that function, and that it would have done better to enforce the law as it stood, and leave its modification to the legislature. To show the confusion under which we now labor, we will cite a few decisions. A man may go to a funeral, but he must not make a detour to call on the way home. (*Davis v. Somerville*, 128 Mass. 594.) He may visit a friend if he is sick (*Doyle v. Lynn & Boston R.R.*, 118 Mass. 195), but he may not go after a letter to tell him about meeting a sick sister (*Bucher v. Fitchburg R.R.*, 131 Mass. 156). He may take a walk within his town for air or exercise (*Hamilton v. Boston*, 14 Allen, 475), but he is not to sail out in his yacht (*Wallace v. Merrimack River Nav. Co.*, 134 Mass. 95). He may send his carriage for his cook (*Crosman v. Lynn*, 121 Mass. 301), but he must not carry meat to market men (*Jones v. Andover*, 10 Allen, 18). He may carry the mails (*Commonw. v. Knox, supra*) or mend the road (*Flagg v. Millbury*, 4 Cush. 243), but he cannot help a friend by clearing out a pit which will save stopping a mill (*McGrath v. Merwin*, 112 Mass. 467). He may go to a Spiritualist camp-meeting (*Feital v. Middlesex R.R.*, 109 Mass. 398), but not to an Orthodox one, unless he means to go to the services (*Lyons v. Desotelle*, 124 Mass. 387). And if, when he is travelling illegally, a dog frightens his horse, he can recover (*White v. Lang*, 128 Mass. 598), but not if the injury comes from another horse (*Lyons v. Desotelle, supra*). It is not possible for the mind untrained in legal principle to get a clear idea of the law from these cases. This, however, is true: that every one of the thousands of excursionists who seek a breath of fresh air beyond the stifling city walls in summer is a criminal. He should avail himself of his privilege of spending his time in a strange bar-room within the city, and not forget that every horse-car conductor or driver, every employé on a way train or omnibus or depot hack or boat, is a wrong-doer like himself.

Then there are two statutes relating to hotel keepers who allow drinking and idling on their premises, reminding one of the time when officers went round to be sure that there were no loafers in church time. These statutes have the ambiguities pointed out above in the somewhat similar Saturday evening law, with the additional difficulty that the second is in part in conflict with and no doubt repealed by the first; but, in the absence of a supreme court decision, it would be unwise to attempt to say just what the law is. The wording is apparently broad enough to cover any one who gives a cup of tea to a friend, but it hardly seems likely that the court would accept this construction.

The provision against games and theatres forbids every one, no matter how young, from taking part in any sport, game, or play, public or private, Scriptural or profane, a provision which reminds one of the old Puritan punishment for the children who laughed or looked out of the window on that day. No one must be present at any dancing, private or public, or any public diversion, the fine being less if it is in the evening.

Also there is a provision against discharging firearms in the pursuit of game, but not forbidding hunting with an air-gun or bow-gun; and there is a prohibition against attempting to fish. The legislature evidently thought less of our ability with the line than the shot-gun, and forbids even the essay in the piscatorial sport. There is also a statute against gambling.

It is to be remembered that these are not antiquated and musty laws. The ruling against a social call was in 1880, that against sailing was in 1883, and that against horse-car conductors in 1883. And the court still assumes the power to decide,

from its own conscience, as to what moral propriety requires for that day.

We will close with an extract from the diary of Mr. Solomon Smith, covering twenty-four hours:—

Sunday.—Got up and went to the barber's right after breakfast. Came home and tied up some vines, and put up some more hooks for the boarders' hats. After church, went round to Sally's on the way home, and played cat's-cradle with my grandchildren. After dinner, Neighbor Sharp came round for a cigar; and I opened the shop, got him one. Had some words about the price, and he did not like it. Sally's husband came round to tea with three of the boys, and I took them all to see the stereopticon pictures of Jerusalem, at the vestry.

Monday.—Met Sharp, and asked to settle for the cigar. He said he owed me nothing, and had made seven complaints against me for violating six statutes, and fines would not exceed \$415 and costs. Didn't believe him. Asked Judge Jones. Sent Sharp the rest of the box of cigars. Mem., look out for Sharp next Sunday.

For The Index.

THOMPSON'S PSYCHOLOGY.*

Mind Substance and the Summum Bonum.

These books are in many ways a surprise. They come from London; yet they were written in New York, and are thoroughly American. They are interesting, yet they treat of the most dry and difficult questions of philosophy and science. They are learned and exhaustive, yet were the recreations of one of the busy practitioners of that "jealous profession," the law.

These books come to us over the water, evidently for the reason that no American publisher would venture before the American public with them. Thus, our author, like his great "kinsman," Count Rumford, finds his introduction to his thinking countrymen from a foreign land. The following dedication, therefore, to that great scientist of the last century, may be an interesting admonition:—

These Volumes are inscribed by a Kinsman of a Later Generation to the Illustrious Memory of

SIR BENJAMIN THOMPSON,
COUNT RUMFORD,

a great Prophet, a Philosopher, Statesman, and Benefactor of Mankind, who while living was not without Honor save in his own Country, and upon whom dead that Praise, justly due to a Merit almost unrivalled among American Men of Science, has been tardily and incompletely bestowed, both by his own Family and his Countrymen at large.

That we may escape any similar charge of ingratitude, we must carefully consider the real story the author has tried to tell. In a word, it is the audacious attempt of modern science to explain that *microcosm*,—that conscious, inward "spiritual" world of man, much as his "kinsman" and Newton and their compeers have explained the *macrocosm*, that great unconscious, external, material world around man. In modern psychology, thought has turned upon itself its own *ego*, and demands, What art thou, and whence, and whither? The answers to these questions, on the scientific method, must of course deal with the most complex and difficult of subjects. But what can be more interesting or important than such answers? They only can give the scientific solution of our nature and existence.

This solution the author gives in these two large volumes of ten parts (seventy-five chapters), of which this is the plan and order of treatment:—

1. The relation and place of the *ego* in the order of the sciences and the methods of investigation.
2. Generally, what the states of consciousness are and the postulates of psychology.
3. The material conditions of the *ego* and its states of consciousness.
4. The genesis of states of consciousness.
5. The factors of the development of states of consciousness.
6. The general development of states of consciousness.
7. The cognitive integrations, or mind and its operations (logics).

* *A System of Psychology*. By Daniel Greenleaf Thompson. In two volumes. 8vo. 600 pages; each. London: Longmans, Green & Co. Price 30s.

8. The integrations of feeling, or pleasures and pains (aesthetics).

9. Volitional and ultimate integrations, or the will in relation to the *Summum Bonum* and the objects and duty of life (conetics).

10. Disintegration and dissolution of states of consciousness, or death and the connection of the mind and body.

It must strike every one that this is the outline of a mighty undertaking,—not of this author only, but of scientists who have been accumulating their researches for three centuries. What Milton attempted in lofty theosophical poetry, our scientist ventures now in plain but elegant prose, with no inspiration but the love of truth, and no revelation but the facts and laws of man's inward and outward world. With these only, science solves the nature, lot, and fate of man, and leaves us to become reconciled to its, at first, crushing conclusions as best we can.

It is well to note, too, in this connection that these volumes are laid before our American public at a very appropriate time in the progress of our scientific philosophy. Abroad, this line of thought took new impulse from Auguste Comte, and was nobly continued in England by Mill, Bain, Lewes, and Herbert Spencer. With us, the story has been worthily taken up by John Fiske in his *Cosmic Philosophy* and by Lester F. Ward in his *Dynamic Sociology*. We need to give no higher tribute to this psychology than to say that it is a becoming sequel to those great works in its subject and mode of treatment, and should stand in our libraries with them as the completion of an American course of scientific philosophy. For, as the two volumes of Fiske are more especially an exposition of the cosmos and organic world, and as Ward's two volumes are devoted to the sociology of mankind, so now these two volumes come as the capstone of our scientific speculation, with its explanation of the individual man, and his relations and duties in those cosmic and social worlds. In placing this work by the side of those just named, ordinary criticism of it is rendered unnecessary. It is recognized as a standard work at once.

We would like to follow its story of the *ego* from birth to the grave. Interesting questions are suggested by each of its ten grand divisions. The whole world of the sciences is classified, so that its influence on the *ego* can be estimated. The origin and progress of consciousness in the lower animals from protozoa to man is a fine epitome of the story of evolution. The notion of innate ideas and their solution, and so of space and time, of the reasoning processes, and, finally, the display of the emotions, illustrated by snatches of the finest poetry in the language,—these topics and more tempt us at every step. But, as to them all, the limits of our space forbid even a word.

Mind Substance.

Some intimation must be given, however, of the answers to the main questions, "Whence" the consciousness *ego*, and "whither"?

The answers to these questions are given at the end of this work, so that we are tempted to read it backwards, as we often do law reports and novels, in order to get the latest and most important advices first. The question, Whence our consciousness? is in a philosophic sense preliminary to the whole discussion, but is disposed of in the last chapter, "On the Connection of Mind and Body"; while the object of life, or "whither," is settled in the preceding chapters on the "*Summum Bonum*" and "Ends" of life. On the interesting question how consciousness arises there are two prominent hypotheses:—

1. The *monistic*, or strictly scientific, to the effect that consciousness and the *ego* arise as the correlate of the changes in the world about it, of which it is a resultant part.

2. The *dualistic*, to the effect (in our author's words) "that consciousness is only the flowering of mind, and that below consciousness there is an unconscious mind substance, out of which consciousness is evolved. . . . Hence, matter is everywhere correlated with its atoms, atoms of mind substance having laws exactly parallel to and counterparts of material laws," etc. (pp. 586, 587.) We thus have "mind-stuff and matter-stuff" as the inevitable dualism of existence and of consciousness.

The last surprise about this work is that it is written throughout thoroughly on the monistic, correlate, scientific hypothesis, and yet at the close the author gives his casting vote to the unscientific, metaphysical, theological dualism. This conclusion can-

not but cause deep regret to some of his scientific friends. If the "mind-stuff" of Count Rumford, the father of the law of correlation, could come to voice again,—and why may it not, if this hypothesis be true?—might it not strike his young kinsman in this wise? "Do you mean to tell me that you account for a headache by an ache-stuff? Nonsense! Let us have no more fifth wheels to the scientific coach. When I proved by the boring of cannon in water that so much motion was the equivalent and correlate of so much heat, I put the clew in your hand by which you should trace every change in the world to its correlates. These correlate changes are the only mind-stuff or mind substance you need." The *ego*, or mind, is a continuous process of centring and reacting processes, and not at all a stuff, gas, substance, spirit, entity, or any kind of hypothetical *quasi*-matter. Take those words out of scientific psychology as I took 'caloric' out of natural philosophy. Let us have no more of this bogus, transcendental *materialism*, instead of the good honest 'modes of motion' I pointed out to you."

It would seem that our author, instead of following the law of his great kinsman, had been beguiled by the unfortunate similar hypothesis at the close of the first volume of Herbert Spencer's *Psychology*, of which he has here given us an echo, instead of some original work of his own. But, most fortunately, his work is written on the correlate theory. He says (pp. 588, 589): "I shall adopt the doctrine of concomitance and correspondence, . . . and continue to speak of mental states as caused by physical states and the converse. For working purposes the statement is sufficient, for scientific it is really susceptible of explanation, possibly it may turn out to be exactly true, after all."

It does seem that, if our author had experimented on the lower organisms, and seen how natural and simple the life contraction and reaction really are in them, he would have been able to appreciate the complexity of higher organisms. The trouble is that, instead of beginning with the rudiments in comparative psychology and working up, we are, by Mr. Spencer and others, treated to illustrations from things entirely disparate, in order to appreciate its highest and most delicate and complex reflex actions. Thus, the common illustrations from the "governor" of the steam-engine, and from piano or other music, are quite misleading. If the piano music could condense on a second series of reflex wires so as to move the keys again, or affect the outside world, or recall and repeat the music again without restriking the keys, the illustration would suggest the reflex process or correlate theory as much clearer than any music or mind entity. Music was once a goddess or entity, now we know it as our mode of feeling air changes or vibrations. In time, we shall recognize consciousness and mind as the continuous change within our systems called sensation answering to the world changes without.

Nor must we expect too much of any scientific explanation. The *dictum* of Prof. Tyndall, in his celebrated Belfast address, to the effect that no molecular or nerve change is conceivable as sensation, has been accepted far beyond its true bearing. No change resembles or is conceivable as its correlate, until it so appears. It is not conceivable that oxygen and hydrogen gases will chemically combine as water, so different from both. Nor would so much motion *a priori* correlate as the entirely different heat, light, or electricity; but it does. So, in the organic world, the fact controls the contractility of protoplasm; and its reflex action, sensation, and life are seen to be the correlates of changes of nutrition and environment. The mind entity is as superfluous as the music, motion, or heat entity. The *ego*, with all its wonderful consciousness and play of faculties, rises and falls with its word-tide of nutrition, support, and changes, physical, chemical, mental, emotional, social, and other, for some seventy years. It then ceases, because these processes of change can no longer correlate in and through the defective organism. If there be a mind substance or entity, then it should certainly appear. But as in law, so in science, "concerning not appearing and not existing the reasoning is the same."

Would that our author had waited until he was sure that the correlate hypothesis was not "exactly true" before giving his vote against it! For this stuff hypothesis, if not true, is not good. For, if mind is an entity, by the law of correlation it is indestructible

in its elements and their changes, and the unseen spirit or entity world has an undoubted reality. If science has not closed this back door, all the ghost advocates are upon us, from the pope at Rome to the dollar medium who evokes our last departed. Science and civilization will be at the mercy not only of "cosmic theism," but of revelations, materializations, and inspirations, ancient and modern, without let or hindrance. Nothing can stand against these superstitions but the law of correlation as attested by modern science, from the changes and laws of the stars through all the world up to the consciousness of man. If this mind and conscious *ego* of man is not a correlate of its and our world, science, and especially its psychology, is but the shallow amusement of a few hours or years; while the realm of the immortal ghosts is infinite and eternal, and may justly dominate the life of man, which is but a conscious moment made possible only by the "divine effluence" of its eternal substance. Where is there not an "inspired" fanatic ready to be a St. Paul, and declare this unknown God and "unknowable" world to us? If there is a scientific method, let us pray scientists to stand by its fundamental law in theory as well as in practice,—at least in their books.

The *Summum Bonum*.

Next to the question of the origin of the *ego* follows in general interest that of its end, object, and destiny. This question our author meets fairly, and disposes of bravely and consistently on the scientific basis only. He finds that man, by nature, condition, and heredity, is moved by three classes of impulses,—egoistic, ego-altruistic, and altruistic. The object and end of life is to attain its highest satisfaction or happiness, as Epicurus plainly meant. This is shown to be impossible without regard to and proportionate exercise of each of these three classes of impulses or motives by which human actions are determined. But man is a social animal to such an extent that his existence, much less his happiness, is impossible without subordinating his chief good, or *summum bonum*, to the chief good of the human race itself. Therefore, the individual's comfort, happiness, and final "blessedness" can be attained only by laying the chief emphasis of life upon the altruistic sentiments and impulses. The egoistic and ego-altruistic sentiments and impulses are to be strengthened as the basis of the highest altruistic motives, but subordinated to them. This has been the moral law heretofore taught by sociologists, but the facts which our author brings to its support from the psychological analysis of the individual *only* throws new and reconciliatory light upon the whole subject. The Epicureans, Stoics, and religionists of all faiths are for the first time presented in a way to show the moral and social value of the part truths which they have disproportionately emphasized to the exclusion of some equally necessary part of human nature.

Nor less clearly are we shown that altruism with its blessedness is not always to be regarded as an infallible receipt for happiness. It may be blind, until the conscience is educated to see clearly how it may be wisely and safely pursued. Often, indeed, the devotion to family, State, or country, or some subordinate social body or integration, may eclipse the higher relation to the race itself; but, in the end, this higher relation must and does, by natural law of selection, subordinate all other social and moral relations, which are but its parts. Thus, the *summum bonum* of the individual is always harmonized with the scientific and social *summum bonum*, which is that of the race or human society at large in its continuity and solidarity. The individual is the blossoming of the race; and in and for it he must live, if he lives happily or worthily.

Yet "it does not follow that to seek as an end the highest happiness of the greatest number, or the chief good of the race, is always the surest way to secure the individual's chief good. It does appear, however, that to hold up as a principal end the happiness of some others is a most certain means to the individual of attaining his *summum bonum*. How wide the circle of altruistic regards should be for the individual's happiness must be determined by circumstances." (p. 560.) The author proceeds to show, as most reformers have found, that obloquy and death are the rewards of those who push altruism beyond the sympathies of one's neighbors, yet that such rewards doubtless bring to higher natures the highest satisfaction and happiness of their lives. Here, as in

so many other respects, the golden mean is the wiser course for the average man; yet he adds: "In the education of individuals, it is proper to inculcate as a principal end of volition and action the greatest happiness of the greatest number. Each man *ought* to make it a principal end; for the obligation indicated by the word 'ought' arises from the social condition of mankind, and has no meaning except with reference to a man's connection with other sentient beings than the ego. . . . If, then, a person ought with respect to other sentient beings to make the ideal of highest general happiness a principal end, and can be made to take his greatest pleasure in doing what he *ought*, he has followed the best means to achieve his individual *summum bonum*." (p. 561.)

How this conclusion is wisely modified and illustrated space compels us to leave to the reader to pursue in the work itself, where Epicurus and Zeno, Cicero and St. Paul, are brought under the range of a moral law which enables us to love and appreciate not only them, but their counterparts in our modern and even in our daily life.

T. B. WAKEMAN.

NEW YORK, Feb. 8, 1885.

WHEN Herbert Spencer denies that his system is identical with materialism, there are persons who declare that his philosophy must be spiritualistic. When, in correction of this error, he denies that his philosophy is spiritualistic, there are those just as ready to assert that he is a materialist. But slight acquaintance with Mr. Spencer's views would enable all who are capable of understanding his main thought to see that, as he himself says, his reasonings "afford no support to either of the antagonist hypotheses respecting the ultimate nature of things. Their implications are no more materialistic than they are spiritualistic, and no more spiritualistic than they are materialistic." Whatever be the truth or error of Mr. Spencer's positions, they ought to be understood and fairly stated before they are criticised. Some years ago, in reply to a writer who had represented him as "working out a materialistic system," he wrote: "He knows that I have repeatedly and emphatically asserted that our conceptions of matter and motion are but symbols of an Unknowable Reality; that this Reality cannot be that which we symbolize it to be; and that as manifested beyond consciousness under the forms of Matter and Motion it is the same as that which in consciousness is manifested as Feeling and Thought. Yet he continues to describe me as reducing everything to dead mechanism. If his statement . . . has any meaning at all, it means that there exists some 'force operating *ab extra*,' some 'external power,' distinguished by him as 'mechanical,' which is NOT included in that immanent force of which the universe is a manifestation; though whence it comes he does not tell us. This conception he speaks of as though it were mine, making it seem that I ascribe the moulding of organisms to the action of this 'mechanical,' 'external power,' which is distinct from the Inscrutable Cause of things. Yet he either knows or has ample means of knowing that I deny every such second cause: indeed, he has himself classed me as an opponent of dualism. I recognize no force within the organism or without the organism but the variously conditioned modes of the universal immanent force; and the whole process of organic evolution is everywhere attributed by me to the co-operation of its variously conditioned modes, internal and external."

To EVERY form of being is assigned
An active principle: howe'er removed
From sense and observation, it subsists
In all things, in all natures,—in the stars
Of azure heaven, the unending clouds,
In flower and tree, in every pebbly stone
That paves the brooks, the stationary rocks,
The moving waters, and the invisible air.
Whate'er exists hath properties that spread
Beyond itself, communicating good,
A simple blessing, or with evil mixed;
Spirit that knows no insulated spot,
No chasm, no solitude; from link to link
It circulates, the soul of all the worlds.

—Wordsworth.

Our great want in social life is a deep and wide sympathy. This is it which enables us to see with another's vision and to appreciate another's instincts.
—Selected.

EVERY failure is a step to success; every detection of what is false directs us toward the true; every trial exhausts some tempting form of error. Not only so, but scarcely any attempt is entirely a failure; scarcely any theory, the result of steady thought, is altogether false; no tempting form of error is without some latent charm derived from truth.—*Whewell*.

BOOK NOTICES.

CUSTOM AND MYTH. By Andrew Lang, M.A., late Fellow of Merton College, Oxford. New York: Harper & Brothers.

Mr. Lang is a poet of no mean ability. As a poet, he has done some delicate work, and at least one daring thing,—his *Helen of Troy*. His *Ballades and Verses Vain* were a kind of poetry, as Emerson has written, "fit to put round frosted cake." His sonnet on the *Odyssey* is perhaps his best work as a poet. He has written literary essays that exhibit candor and a nice appreciation of what is good in literature and art. But we had not thought of him as a scholar except in a particular line,—the epics of Homer, of which he has made admirable prose translations, sharing with others the burden and the honor of the task. He had one helper on the *Odyssey*, two upon the *Iliad*. His *Custom and Myth* proves him to have been a careful student of folk-lore and kindred matters through a wide range of literature and observation. The object of his discussion is to show that a relation of cause and effect exists between the first and second terms of his title; that myth has to a great extent its origin in the customs of primitive and savage peoples. He dedicates his book to Mr. E. B. Tylor, the author of *Primitive Culture*; and his intellectual sympathies are with his methods and results to a much greater extent than those of Prof. Max Müller, who furnishes him with his objective oftener than any other writer. Müller is for Mr. Lang the most distinguished representative of the wrong method of procedure in the study of mythology. Philological mythology is often, he affirms and proves, discredited by the divergences and contradictions of its friends. Certainly, in many cases he makes good his point against the philological explanations of Müller and his school. And he is equally successful in his suggestions of the probable origin of various myths from various customs, and attempts to poetize or explain them by those for whom their original force was lost. There are fourteen chapters in his book besides the Introduction, which sets forth the general doctrine of the succeeding study. This doctrine is further elaborated in the first chapter, "The Method of Folk-lore." Then come in separate chapters several particular illustrations: "The Bull-roarer"; "Cupid and Psyche," in which the survival of a rule of barbarous etiquette is clearly shown; "A Far Travelled Tale," arguing that separate philological invention is less likely than wide dissemination from a common source; "Apollo and the Mouse" and "Star Myths," both suggesting survivals of savagery as a better explanation than "the disease of language." Other interesting chapters are on "The Finnish Kalevala," "The Divining Rod," "Hottentot Mythology." Two of the most elaborate are reviews of Müller's doctrine of "Fetichism and the Infinite," of the views of Maine and McLennan in regard to primitive marriage, promiscuity, polyandry, and so on. Mr. Lang concludes that McLennan is more nearly in the right than Maine. If he does nothing more in this interesting volume, he discourages a too hasty acceptance of philological explanations, and inclines us to allow more to the survival of custom and the development of similar myths by similar conditions and the unific operation of the primitive and savage mind.

CONGRESSIONAL GOVERNMENT. A Study of American Politics. By Woodrow Wilson, Fellow in History, Johns Hopkins University. Boston: Houghton, Mifflin & Co. 1885. pp. 333. Price \$1.25.

In this volume, we have half a dozen essays, the object of which is to point out the most characteristic practical features of our system of government, and to show wherein it differs most essentially from the other governments of the world. It is, the author shows, our legislative and administrative machinery, and not simply our federal system or the principles of our Constitution, which makes our government essentially unlike all others. The most striking contrast in modern politics is shown to be, not between a monarchy and a republican government like ours,

but between Congressional and Parliamentary governments, between a "committee government" and one by a responsible cabinet ministry, between "administration by semi-independent executive agents who obey the dictation of a legislature to which they are not responsible and administration by executive agents who are the accredited leaders and accountable servants of a legislature virtually supreme in all things." The defects of our national system, many or all of which have been pointed out by previous writers, are here restated. Many facts given in the history of Congressional legislation and the contrast between the two types of government referred to above are presented in a manner which makes our system, regarded by so many among us the most perfect ever devised, appear far inferior to a government by a responsible cabinet ministry.

THE January number of the *Revue de Belgique* shows from letters, hitherto unpublished, by John Stuart Mill, how keen an interest he took in the problem of reconciling individual ownership of land with the general welfare. Shortly before his death, he spoke with warm sympathy of the socialistic authors, though he was not satisfied with their results. The Belgian economist who has preserved these facts, M. de Laveleye, tells also how he urged, as objections to female suffrage, not only the risk of impairing domestic harmony, but the subjection of Roman Catholic women to the priests. Mr. Mill replied from Avignon, September, 1869, in a letter which may be translated thus: "I am convinced that family life has nothing to fear from the perfect political and civic equality of the sexes. This life is so necessary to humanity that it can be in no danger of destruction; and it must, I think, gain like all other social relations by depending on the harmony of will of both partners instead of the arbitrary power of one. There would doubtless be some danger from clerical influence, if female suffrage could be established to-day; but there is little chance of that. And is it not mainly because women have no voice in politics nor in the management of business that men abandon them to the influence of priests, with the idea that this will open an avenue for their natural sensibility without doing any particular mischief, and will, moreover, favor conjugal fidelity? This is a short-sighted plan, and would not be followed longer, if women had rights, which, when exercised ignorantly, imperil very serious and vital interests."

THE *Popular Science Monthly* for March is a very readable number. The first paper is on "Science in Politics," by Frank Wigglesworth Clark. What our government owes to science and its increasing dependence on scientific methods are strongly set forth, with some valuable suggestions concerning improvements which might be expected from a larger infusion of the scientific element in the government service. "The Darwinian Theory of Instinct," by George J. Romanes, F.R.S., is an able presentation of Darwin's views, and the present drift of scientific opinion on this subject. Dr. Frank H. Hamilton gives us an estimate of the value of "Medical Expert Testimony"; "How Fungi live in Winter," by Dr. B. D. Halsted; the second of Dr. von Pettenkofer's valuable papers on "Cholera"; "A Project in Industrial Education," by Mr. Franklin Haven North; "The Painless Extinction of Life," by Dr. B. W. Richardson; "The Accurate Measurement of Time," by Theodore B. Willson; "English Experience with Cancer," by Dr. H. P. Dunn,—are among the other interesting articles in this number.

In the March number of the *North American Review*, Murat Halstead, of the *Cincinnati Commercial Gazette*, contributes an article on "The Revival of Sectionalism." In the same number, Archdeacon Farrar presents his views on "Future Retribution," and Prof. N. K. Davis discusses "The Moral Aspects of Vivisection" in a way that brings together briefly nearly everything that any person of note has said on the subject. Max Müller describes the astonishing ideas of the Buddhists on the subject of charity, and George John Romanes opens up a great subject with an article on "Mind in Men and Animals." The other articles are one by President Gilman on Titles, one by Judge John A. Jameson on "Speculation in Politics," and one by John W. Johnston on "Railway Land-grants."

POPULAR BOOKS

American Authors

"THE LITERARY REVOLUTION" does not confine its publications to the works of Foreign or Ancient authors, but includes many of the most excellent and famous *American Classics*, as the following titles certify.

AMERICAN FICTION.

These are the now justly celebrated "Caxton Editions," unabridged, large type, excellent paper and press work, very tasteful cloth binding—no handsomer editions ever before issued at less than three to five times the cost.

PROSE TALES OF EDGAR A. POE. In one handsome large 12mo. volume of 712 pages, Long Primer type. Price, \$1.00.

COOPER'S LEATHER STOCKING TALES. Six large 12mo. Volumes, bound in three, aggregating about 2,400 pages, Long Primer type. The set contains: *THE DEERSLAYER*, *PATHFINDER*, *LAST OF THE MOHICANS*, *THE PIONEERS*, *THE PRAIRIE*, *THE SPY*. Price, \$2.50.

WORKS OF WASHINGTON IRVING. Complete (except life of Washington, which will soon appear) in six beautiful volumes, large type, over 5,000 pages. Price, \$4.00.

Also Library Edition, in nine volumes, fine cloth, gilt tops, \$6.00.

AMERICAN POETS.

These editions are *not* unabridged (except Poe and Willis), but include all on which copyright has expired—of course, all those earlier writings which gave the authors their world-wide fame. All in large type and fine cloth binding.

POEMS BY H. W. LONGFELLOW. In one 12mo. volume of 269 pages, Small Pica type, leaded. Price, 40 cents.

POEMS BY JOHN G. WHITTIER. In one 12mo. volume of 319 pages, Small Pica type, leaded. Price, 40 cents.

POEMS BY WILLIAM CULLEN BRYANT. In one 12mo. volume, 347 pages, Small Pica type, leaded. Price, 40 cents.

POETICAL WORKS OF EDGAR A. POE. Complete in one handsome 12mo. volume. Cloth, 40 cts.; gilt edges, ornamented, 60 cents.

POETICAL WORKS OF N. P. WILLIS. Complete in one handsome 12mo. volume. Cloth, 40 cts.; gilt edges, ornamented, 60 cts.

ESSAYS—HUMOR, Etc.

Unabridged, large type, tasteful cloth binding—always and every way satisfactory to purchasers.

ESSAYS OF RALPH WALDO EMERSON. Large 12mo., 326 pages, Small Pica type, leaded. Price, 40 cents.

HAWTHORNE'S TWICE TOLD TALES. In one large 12mo. volume, Small Pica type, leaded. Price, 40 cents.

HAWTHORNE'S GRANDFATHER'S CHAIR. In one large 12mo. volume, Small Pica type, leaded. Price, 40 cents.

THE WIDOW BEDOTT PAPERS. By Frances M. Whitcher. One handsome 12mo. volume, Long Primer type. Price, 40 cents.

GREENWOOD JUVENILES. Nine delightful volumes by GRACE GREENWOOD. One new, the others formerly published by TICKNOR & FIELDS at 75 cents to \$1.25 each. Price of the set, \$3 00.

BIOGRAPHY—PATRIOTISM.

EMINENT AMERICANS. Brief Biographies of Statesmen, Patriots, Orators, and others. By BENSON J. LASSING, LL.D. With over 100 portraits. Large 12mo., cloth. Price, 70 cents.

CYCLOPEDIA OF EMINENT CHRISTIANS. By John Frost, LL.D. Small octavo, 672 pages, Small Pica type, leaded. With portraits. Fine cloth. Price, 80 cents.

ACHIEVEMENTS OF CELEBRATED MEN. By James Parton. Large octavo, 839 pages, Small Pica type. Cloth, \$1.40.

AMERICAN PATRIOTISM. Famous Orations and Patriotic Papers, from Washington to Lincoln. Large 12mo., cloth, 65 cents.

FROM PRESS AND PEOPLE.

The following are characteristic of thousands of quotations which might be made from paper and letters of correspondents.

"I am absolutely amazed at the cheapness and real excellence of your books."—REV. DR. SHEPHERD, Santa Rosa, Cal.

"The books are marvels of excellence and elegance combined."—PRES. D. S. GREGORY, Lake Forest University, Ill.

"There is only one drawback. It seems more like getting a present than making a purchase."—Churchman, Toronto.

"The books as books are excellent. Paper, type, press work, and binding are all good."—Literary World, Boston.

Postage.—Books by mail cost 20 per cent. extra to prepay.

COUPON. This Coupon will be received in lieu of 25 cents cash, toward the price of above costing not less than \$2.00, if sent within 10 days from date of this paper (give name of paper). This offer is to secure your PROMPT response and indicate the paying advertising mediums.

100-PAGE CATALOGUE sent free. The best literature of the world at the lowest prices ever known. Books sent for EXAMINATION BEFORE PAYMENT on reasonable evidence of good faith. Address

JOHN B. ALDEN, Publisher.

393 Pearl Street, New York.

P. O. Box 127.

THE

"FREIDENKER."

Freedom, Culture, and Prosperity for all!

(Organ of the Freethinkers of North America, of the Union of Radicals, and the North American Turnerbund.)

Editor, C. Hermann Beppe.

TERMS, PER ANNUM, IN ADVANCE:
UNITED STATES AND CANADA:

Freidenker.....\$2.50
Turnerische Ausgabe des Freidenker
(Amerikanische Turnzeitung)..... 3.00

EUROPE:
Freidenker.....\$3.00
Turnerische Ausgabe des Freidenker
(Amerikanische Turnzeitung)..... 3.50

Sample copies sent, on application, free of charge.

In this weekly, which is now in the thirtieth year of its existence, political, social, and religious matters are discussed with a view to general enlightenment and progress. The *Amerikanische Turnzeitung* is especially devoted to the discussion of topics pertaining to physical culture and matters of interest to lovers of the gymnastical art.

Since Jan. 1, 1885, the *Freidenker* has been enlarged, thus furnishing considerably more reading matter, while the PRICE REMAINS THE SAME AS BEFORE.

For the convenience of those of our readers who are chiefly interested in matters relating to gymnastics, the *Freidenker* and its former supplement, the *Turnzeitung*, have been consolidated into one paper, called *Amerikanische Turnzeitung*, with the sub-heading "Turnerische Ausgabe des Freidenker."

This paper contains more reading matter than furnished by both the *Freidenker* and *Turnzeitung* heretofore. In making these changes, the publishers have incurred great expense; and we therefore solicit the hearty co-operation of all friends of the cause in securing for the *Freidenker* and the *Amerikanische Turnzeitung* a wider circulation.

We also publish

"Erziehungsblätter,"

fuer Schule und Haus.

A Liberal German Educational Monthly.
(Organ of the German-American Teachers' Association.)

Editor:

MAXIMILIAN GROSSMANN, Milwaukee, Wis.

Associate Editors:

H. H. FICK, Chicago, Ill.

H. SCHUMMERT, Chicago, Ill.

16 large quarto pages, with four-page cover.
Terms: \$2.12 per annum, in advance.

"Freidenker-Almanach"

FOR THE YEAR 1885.

The almanac, which is now in the eighth year of its existence, is devoted to the propagation of free-thought principles. Price 25 cents.

"Amerikanischer Turnerkalender"

FOR THE YEAR 1885.

This annual, which is now published for the sixth time, is principally intended to promote the culture of gymnastics, and is pervaded by a thoroughly liberal spirit. Price 25 cents.

Orders for all kinds of books promptly filled. Radical and Freethought Publications a specialty.

Address all orders to

FREIDENKER PUBLISHING CO.,

470 East Water St.,

MILWAUKEE, WIS.

H. T. MARSHALL'S

PATENT
ADJUSTABLE
LACE
CONGRESS

is easily adjusted to fit any instep or ankle at any time, and will not uncomfortably draw the ankle, like ordinary congress. It has the stylish appearance of a lace boot and all the convenience of any congress in putting on or off the foot. Marshall's Pat. Pat'd May 13, 1884, woven in the front strap or stamped on the shank of each shoe. If your dealer does not keep them, send postal for directions how to get them to the Patentee and Manufacturer of Men's, Boys', and Youth's Fine Boots and Shoes. Tennis Shoe for Ladies and Gents a specialty.
H. T. MARSHALL,
BROCKTON, MASS.

THE
COLEGROVE BOOK CO.,
135 Wabash Ave., Chicago.

WHOLESALE AND RETAIL
Booksellers and Stationers.

Catalogues of new and standard books will be sent to any address without charge. Illustrated list of works of American authors sent on receipt of 4 cents in stamps.

N.B.—The prices quoted in the catalogues which we send out are the PUBLISHERS' RETAIL PRICES. These, unless marked net, are subject to a uniform discount of TWENTY PER CENT. to individual buyers. Special terms are offered to the trade and to public libraries. Any book in print will be sent by mail on receipt of the net price, with enough added to cover postage, at the rate of one cent for each two ounces. The postage on an ordinary 16mo book is about ten cents, and other sizes in proportion. Orders by mail are especially solicited, and will receive prompt and careful attention. Liberal books a specialty, our store being the Western agency for the publications of GEO. H. ELLIS and the AMERICAN UNITARIAN ASSOCIATION.

RELIGIO - PHILOSOPHICAL JOURNAL.

Established in 1865.

A Paper for all who Sincerely and
Intelligently Seek Truth with-
out regard to Sect or Party.

The JOURNAL, in the estimation of a large proportion of the leading authorities on Spiritualism, stands pre-eminent as a fearless, independent, judiciously fair advocate of Spiritualism. It has received more general notice, and more frequent and higher commendations from intelligent sources, regardless of sect or party, than any other Spiritualist or liberal paper ever published: the records will confirm this.

The JOURNAL is uncompromisingly committed to the Scientific Method in its treatment of the Phenomena of Spiritualism, being fully assured that this is the only safe ground on which to stand.

The JOURNAL is unsectarian, non-partisan, thoroughly independent, never neutral, wholly free from cliques and clans.

TERMS OF SUBSCRIPTION.

THE PRESENT DAY.

A JOURNAL DISCUSSING THE PRINCIPLES
AND METHODS OF MOVEMENTS.

Edited by GEORGE JACOB HOLYOAKE.

"CROWN PUBLISHING CO.,"

267 Strand, London W.C., England.

2,000

PHOTOGRAPHS OF WORKS OF THE OLD MASTERS.

Large Copies only 20 cents each.

The following examples are from the so-called "Twelve Great Pictures of the World." The Last Supper, LEONARDO DA VINCI; The Last Judgment, MICHAEL ANGELO; Descent from the Cross, VOLTERRA; Assumption of the Virgin, TITIAN; The Transfiguration, RAPHAEL; Sistine Madonna, RAPHAEL; Holy Night, CORREGGIO; Aurora, GUIDO; Beatrice Cenci, GUIDO; Last Communion of St. Jerome, DOMENICHINO; Descent from the Cross, RUBENS; The Immaculate Conception, MURILLO.

Excellent unmounted copies of all these will be sent by mail on receipt of \$2.40; or any one or more at 20 cts. each (with Catalogue when desired). Address

W. H. SHERMAN,

455 Jackson Street, Milwaukee, Wis.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price \$3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR's basis of action, and the best exertions of its manage will always be used to render it a free and independent journal devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

JOSIAH P. MENDUM,
PAINE MEMORIAL BUILDING,
Appleton St., Boston, Mass.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quick advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions, . . . 10c. per line.
" 13 " 25 " . . . 8c. " "
" 26 " 51 " . . . 6c. " "
" 52 " " . . . 5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent. On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the above calculated, will be made.

BY B. F. U.

PROF. SIMON NEWCOMB, after careful investigation of the performances of Lulu Hurst, the Georgia wonder, says that they are simply very clever feats of muscular exertion, and not due to any occult powers.

LAST Sunday, Mr. F. M. Holland, in a lecture at Paine Hall, made a vigorous and timely protest against "governmental outrages against atheists and agnostics," in the form of disabilities imposed upon them on account of their opinions in several States of the Union, Massachusetts included.

"It was," as an exchange says, "very small business on the part of the Harvard Club at Washington to exclude educated graduates from a dinner because of their color. They set up a standard unknown to their Alma Mater or to the great republic of letters, and we presume the men responsible for it are not of large calibre."

THE war on the roller rinks is being prosecuted in various directions and evidently from different motives. The clergy are not alone in denouncing roller skating. It is announced that "the saloon keepers in the upper Michigan peninsula have resolved to boycott all stockholders of rinks on the ground that roller skating is having a ruinous effect on the business of grog-selling."

JOHN LEE, a murderer in England, after three bungling and unsuccessful attempts to hang him, is to be sent to penal servitude for life. To his sister, he writes with apparent sincerity: "It was the Lord's will that I should not die yesterday. It was not the fault of any one that everything was not done to carry out orders, but it was the Lord's hand that would not let the law be carried out. I was at the brink of death three times. I hope the next time I go to the scaffold I shall pass from this life to the home above. I am tired of this world. I have been dead to it three times. I believe what has occurred was a miracle worked by the Lord."

IN reply to a statement of Rev. James Martineau that he was conscious of no unfairness in his

review of the *Atkinson Letters*—which review was one of the causes of the alienation of his sister Harriet—Mrs. Fenwick Miller points out that, among other unkind things the brother wrote in his review, he accused his sister of having "prostrated herself at the feet" of Mr. Atkinson, and "laying down at his bidding her early faith in moral obligation," etc. Mrs. Miller gives the public to understand that she has in her possession further written proofs of Dr. Martineau's unkindness to his sister, which she has withheld from the public out of tender consideration for one whom she holds in the highest regard. If these personal matters must be made a subject of public controversy, let the whole truth appear, in justice to the living and the dead.

SAYS the *Boston Transcript*: "Massachusetts legislators have again in their wisdom decided that the law which prevents an atheist from testifying in the courts shall continue upon our statute-books. However, if an atheist falsely states that he does believe in God, his testimony is then as good as any man's. The theological test is a relic and survival from other times than these. But that is just the reason assigned by those who voted against the repealing bill,—the timorous conservatism of human nature. Senator Naphen of Suffolk, for instance, opposed the bill, saying that the law is based upon old principles of the State, that it has existed for many years, notwithstanding various attempts to repeal it. The bill was advocated by Messrs. Andrew of Suffolk, Joyner of Berkshire, and Marden and Scott of Middlesex, they arguing that the law as at present existing was apt to cause a miscarriage of justice. In a few years, the yeas and nays will be curious reading."

IN a thoughtful address before the Liberal Union Club in this city last Saturday evening, Mr. William Lloyd Garrison said: "I shall never forget Mr. Phillips' pungent allusion at Abington to 'this God-forsaken town, with four orthodox churches and no anti-slavery society.' The time-serving nature of the popular churches, thus revealed by the touchstone of slavery, did not change with its abolition. The ministers, after the accomplished fact, discovered that as 'God had turned abolitionist,' to use Dr. Putnam's phrase, it was no disgrace for them to throw up their caps and appropriate the honor for the Church. Antagonizing bitterly every important reform in history, the Church claims each when successful, and enrolls among its saints the martyrs that it put to death. But slavery is gone. Has the nature of the Church therefore changed? Test it with the reforms of to-day. It is, with noble exceptions, still prostrate across the path of progress. How can we expect it to be otherwise? By its constitution, it must represent the sentiment of the community. The pews direct, the preacher obeys."

THE *Boston Herald*, referring to Prof. William Everett's recent address delivered before the New York Free Trade Club, says: "Every true Massachusetts man has the making of a mugwump in

him. He took in independence with his mother's milk and his father's admonitions." Whatever may be said of "every true Massachusetts man," it is certain that the majority of the people born and bred in this State are just like those of other States, governed in their beliefs and actions by tradition and custom. Every "true" New York man or Iowa or Kansas man has as much independence probably as a "true Massachusetts man." We may here remark that, if leading Boston papers and speakers would discuss events and topics of national interest more from a national point of view, and not as though Massachusetts were the United States, and Boston the capital of the Union, they would show more breadth and liberality than they now evince, and their influence would serve to counteract the impression which has obtained in the Middle and Western States, that Boston is provincial, exclusive, and conceited,—an impression which is certainly not true in regard to the mass of the people of this city.

PROF. V. B. DENSLOW, in a recent lecture before the Philosophical Society of Chicago on "The Distribution of Wealth," took the ground that inequality in the distribution of wealth was necessary to its greatest production and its greatest enjoyment. If it were not, he said, for the vast sterile wastes in Colorado, there would be no rains in Illinois. In the social world, the law was the same. If wealth were equally distributed or if all persons were rich, this condition would at once destroy labor, which was the necessity of poverty. Manufactures would cease, commerce would die, and the wheels of society stop. It would mean famine and pestilence, not happiness. To make wealth universal was to annihilate it. An equal distribution of wealth in America would give each person \$1,000; but what could he do with it, if values had been scattered to the winds and production stopped? Wealth had no meaning without want. We would be reduced to the condition of the bushmen of Africa. The unequal distribution of wealth was the great and only promoter of civilization. Man's soul swung like a pendulum with wealth as its action and want as its spring. When the socialist said that labor produced all wealth, he started with an error of fact, since it was his wealth and the wealth of others that gave incentive to and produced that labor. Prof. Denslow claimed that capital and labor were cheaper from the large capitalists than from the small, and thought that when capital was concentrated in the hands of large capitalists it was to the advantage of the masses. Organized capital was like an organized army, and was to the advantage of the whole. Without captains and generals, the army was a mob. The capitalist was the leader of the great world of commerce which spread its arms from zone to zone, and was the great civilizer of the world. Without doubt there is a great deal of truth in Prof. Denslow's statements; yet a fairer distribution of the products of labor than we now have is, we believe, demanded by justice to the workers and by the best interests of society.

CONGRESS AND ITS SHORTCOMINGS.

The present Congress will have come to its constitutional end when this article reaches its readers. A new President will also have been installed in office. For the first time since the 4th of March, 1861, the Democratic party is to try its hand in the executive administration of national affairs. What that administration is to be, how it is to affect the country, we have no intention here to prognosticate. It would not be surprising if, before its term is finished, the party which has elected it should be broken into factions by some of its measures, and parties should be formed on new lines by the time of the next Presidential campaign. But our concern in this article is not with the administration, but with Congress. Congress is, or should be, the chief power in this country, because it represents the people.

But does Congress represent the people? Theoretically, of course, it does. Yet it is a singular fact that, leaving out of view the class of professional politicians, the great body of the steady-going, law-abiding citizens appear to be better satisfied when Congress is not in session than when it is. This remark we believe would, at least, hold true of any time within the last ten or twelve years. And a similar remark is true, to a large extent, with regard to State legislatures. The people themselves do not seem to have any large amount of confidence in the men whom they have chosen to legislate for them at Washington or in their State capitals. How often has it been said, particularly in business circles, in the last dozen years, "We shall breathe easier when Congress adjourns"! People are more anxious and nervous about what their legislators will do than about what they will not do. There is a tendency, more especially in the States, to excessive legislation; a disposition to interfere by law with matters that had better be left to take care of themselves. And in Congress there has been of late so much of ignorant, careless, and partisan legislation that no thoughtful citizen can feel entirely easy while Congress is sitting. The best measures are apt to fail, the poorest seem likely to succeed. It is the poorest measures that usually have the strongest lobbies working for them. Good and upright men are naturally averse to avail themselves of the lobby influence to secure such legislation as they see to be needed, though sometimes they are pushed to it or else must see such legislation fail. Recent Congresses, of whichever party, appear to have had a fatal facility for doing the things which ought not to be done and leaving undone the things which ought to be done.

That the present Congress, whose remaining days, as we write, are very few, can be exempted from this judgment is not probable. It can hardly do more now than pass the necessary appropriation bills. The country will be fortunate, indeed, if it does not pass any of the vicious measures which are apt to be rushed upon the statute-book in the last hours of a session. The disturbed industrial and business interests of the country have hoped for some wise measures of tariff and revenue reform, but Congress has not been wise enough to furnish any relief. Not even has the carefully framed Bankruptcy Bill been permitted to become a law. Possibly the coinage of silver dollars may be suspended, because of the avowed desire of the President-elect that this question should be settled by this Congress, though at this writing such a happy piece of legislation does not seem probable. The wisest financiers in the country, boards of trades, bankers and merchants of the highest standing, have been representing to Congress that there is inevitable financial peril

ahead, if the government shall be compelled to continue the coinage of silver into dollars worth eighty-five cents each, which nobody wants for circulation, and which can only be locked up in the treasury vaults until the drainage of gold from the country shall force their outflow upon the people; yet the weighty argument has had little apparent effect upon the people's representatives, and compulsory coinage of the false dollars is likely to be continued, unless by some good fortune, in the last hurried days of legislation, wisdom and vigilance shall get the advantage over the ignorance, obstinacy, and self-interest that stand by the silver coinage act.

Another measure which ought to have passed this Congress is one with regard to Indian affairs, known as the Coke Bill. This bill is a judicious act enabling the Indians to hold land in severalty and otherwise providing for their civilization. If adopted and justly administered, it would go far toward permanently solving the Indian problem in this country. The bill is both just and humane. It passed the Senate at the previous session, and it has been indorsed by the National Indian Rights Association as a good measure. Its enactment has been urgently pressed upon the House by petitions and by a committee representing the above Association. But it has not even been reported to the House, and there is no chance of its having passed. Justice to the Indian must again wait, as it has waited from the foundation of the government.

One reason why needed legislation is so slow in getting through Congress is that the two Houses have no joint system in bringing forward their legislative business. The business in each House is introduced in a miscellaneous, slipshod way, and then is controlled by technical rules, by which the most important measures are often deferred to the least important. And not a Congress, probably, passes, but that each of the Houses spends much time and work over a bill which, when adopted there, goes to the other chamber, only to lie on the table or sleep in a committee-room. The labor of weeks may thus be lost in one or the other or even in both Houses at every Congressional session. Again and again have measures, which at some time or other have passed both Houses, failed to become laws, because they did not pass both Houses in the same Congress. No corporation or society, that values time or money, would do business in that fashion. A joint committee of both Houses, intrusted with arranging, in a general way, the order of legislative business for both chambers, with a view of accomplishing it, and in cases of conflict having precedence over any other committee, would seem to be a parliamentary labor-saving invention for Congress to adopt.

WM. J. POTTER.

THE CLERGY AND THE WOMAN'S CAUSE.

Rev. David Swing has an article in the *Weekly Magazine* of February 21, published in Chicago, headed "Rev. Patton and Miss Anthony." The "Rev. Patton" has occupied a larger space in the press of the country, for the last month, than either his mental calibre or his sermon on "Woman and Scepticism" really merits; but, in order to answer one or two points in Mr. Swing's criticisms, I must add another column to his notoriety. After showing the fallacy of the "Rev. Patton's" positions both in fact and logic, Mr. Swing says:—

Dr. Patton's argument is, however, fully equalled in weakness by the reply of the woman in the case,—that the pulpit is the enemy of woman's cause. Perhaps it is an enemy of woman's suffrage, but so also is the bar, so also the average editor, so the college

the university, the average politician, and the historians and philosophers and architects, sculptors and painters. The opposition by the clergy does not come from the fact that they are preachers, but from the fact that they are men. To hit at the preachers is easy, because their heads are easily visible, and are within easy reach of the Stanton or Anthony shillalah. "The preachers are against us": yes, so are the merchants and the lawyers. Dr. Patton and his female opponents should review their early studies in geometry, and relearn what the proposition is, and when the talk is on the point to be demonstrated.

The overpowering influence of the priesthood over woman cannot be disposed of by any such clerical sophistry. Everybody knows by the terms of history and every-day life that those who play on the religious sentiments of mankind have a transcendent power that no other order of men possess. The priesthood have not only the magnetic power of all men over women, but the added influence of "divine inspiration." Behind all their precepts and persuasions stands the never to be questioned authority of "Thus saith the Lord," and a special revelation.

No class of men have such power to pervert the religious sentiments, and oppress mankind with gloomy superstitions through life and an undefined dread of the unknown after death. They play on the deepest and tenderest chords of the human soul,—on its love and faith, its hopes and fears for time and eternity. In all the most eventful scenes of life, we invoke their presence: at the cradle, the marriage altar, and the grave, they whisper words of comfort and benediction. In our joys and sorrows, when the heart is most receptive to influence, they are ever with us. They have the power to roll off the mountains of superstition that oppress mankind in our day and generation, and let in the sunshine of liberty and truth; and they have the power to block woman's way to justice and freedom, and they are using it as the priesthood always have, to hold her in bondage.

Our point is, as self-styled teachers of God's word, as expounders of his will, as interpreters of his law and gospel, "our worst enemies are in the pulpit," because they base their opposition on such intangible speculations as God's purpose and manner in creating woman.

Again, woman's equality in the church, the college, and the court, is quite as important as at the ballot-box; and, as life is not long enough to give half a century to fighting our enemies separately, we think it good policy to send a bombshell into every hostile camp.

We need no better proof of the invidious influence of the Church than Dr. Patton's sermon and the article of David Swing before me, who further says:—

It is universal all over the West that female advocates of female suffrage have put their cause back of late years more than they have urged it forward. It is at least strange how few of the most powerful women of the land advocate the new cause. Why should we men be eager to grant a boon to women which so few of them want, and which many noble women would look upon, not as a boon, but as a personal misfortune? Are these mothers, wives, and daughters not fully awakened?

Is the reverend gentleman ignorant of the facts of history, or is it his policy to belittle the events of his day? Washington Territory has recently secured woman suffrage by a vote of her people; and the women there are now voting, holding office, and doing jury duty. Some of the ablest and most cultivated women in the nation are the advocates of the measure. A bill in favor of woman suffrage recently passed the assembly in Dakota by a large majority. When the law in Illinois, the State in which Mr. Swing resides, first made women eligible to all school offices, it was

prophesied that it would be a dead letter, as women would not accept office. This law went into effect July 1, 1873. In November of that year there were thirty-four women candidates in thirty counties for superintendents of schools, of whom eleven were elected,—this in four months after the law went into force. Many facts in this line might be multiplied. But, if the apathy and indifference of the women were established, would that exonerate holy men from doing their duty? We might ask these gentlemen, Why send Bibles and missionaries to the heathen? They do not desire either. Why did we establish free schools for children? They would all have preferred to play in the sunshine on the highway than to read and write and study geography and grammar the long summer days in school. The indifference of women who do not understand the genius of our free institutions and the dignity involved in the right of self-government has nothing whatever to do with the question. The fact they do not want to vote, if true, is the strongest argument for their enfranchisement. We would recommend the Rev. David Swing "to review his early studies" in logic.

As to the "Rev. Patton's" sermon, it was a cruel libel of grand representative women, living and dead,—a sermon he cannot explain away, and which he is unwilling to see in print. I understood it was asked for publication; but he refused, while misrepresenting its spirit and purpose in the *Woman's Journal*.

I heard the sermon, and gave the speaker undivided attention. Its purpose was to show that woman's sphere in religion was faith, not research and investigation, at the foot of the cross, not on the mount of observation. He said she was no theologian; her tendency, being controlled by her emotions, was to extremes, even in religion, oft-times fanatical. And, to warn us against launching our barks on the sea of reason, he gave us the example of many distinguished women, who had assumed the responsibility of doing some thinking and investigating for themselves as to the authority of the Church and its priesthood, as to social ethics, morality, mathematics, and political economy; and, without any exception, they all came to a sad end. Hypatia, Mary Wollstonecraft, Frances Wright, George Eliot, Harriet Martineau, and Frances Power Cobbe were each in turn held up in his metaphysical tweezers, as so many terrible examples, for the women of his congregation to crush every pulsation of liberty in their own souls, and to cultivate a blind faith in whatever their pastors tell them. In closing, he mentioned Victoria Woodhull as the representative of similar ideas in our country. Let us congratulate her in being considered worthy to be classified with so noble a galaxy of great women, while expressing our surprise that he should have forgotten Lucretia Mott, whose beautiful face adorns Howard University, which I had the pleasure of presenting in person to Dr. Patton, and which he received at my hands with an appropriate speech, on which occasion he made no mention of her latitudinarian ideas in religion, nor the slightest objection to having the lovely Hicksite Quakeress as one of the presiding deities in that institution.

ELIZABETH CADY STANTON.

THE PROBLEM OF EXISTENCE.

III.

How to Solve It.

This problem admits of being solved by one method only; and that is the process of investigation, which in time must appropriate the term *Philosophy*. For the two are related as question and answer. Philosophy is the problem's solution, and this is to be effected by discovering the rudiments

of that. These are brought to light by experience of course, but not alone by experience of the ordinary kind. It is only that extra-ordinary species of experience, which consists with profound meditation and reasoning upon data of extrospective and introspective observation, that reveals the rudiments of philosophy. To know how to engage successfully in this work is to know coincidentally how to solve the problem of existence. What, then, are the conditions of either?

1. We must learn to be rigidly scientific, wary of mistaking belief for knowledge, accepting experience as the only guide to intelligence, and seeking conviction as the only test of truth.

2. We must learn to distinguish consciousness from natural faith. These are very often confounded by reputable speakers and writers. Yet, as concepts, they are neither identical nor coincident, but as disparate as any instance of antecedent and consequent. Natural faith is the substratum of knowledge, that which makes cognition possible. It is complex, and its components are individually instinctive. Of these, sentient beings are primarily unconscious, and become conscious, not collectively, but consecutively, in the order of intellectual development. Accordingly, the elements of natural faith are conceivable as either implicit or explicit,—in the one case being acted upon instinctively, as if apprehended, and in the other cognized as truisms. It is thus, and only thus, that an element of natural faith is transformed to an element of consciousness. To be conscious of a truth is to know it, and this identifies the pith of consciousness with that of general intelligence.

Natural faith is the base of intelligence, and the elements thereof are as distinct and numerous as the intellective faculties which they qualify and make effective. These and those are one and the same for all grades of mentality, except that, in effect of the consecutive order of their development, those of puerile and unrationalized minds are comparatively few and relevant to sensuous perception only, whereas those of mature minds embrace such as are requisite to paramount rationality. Natural faith is the substratum of consciousness, which consists of the data of experience, this being made possible by that. The elements of natural faith are instinctively cherished and acted upon in advance of their recognition as objects of perception, which ensues from that degree of intellectual development which instigates introspection, whence follow, as the fruit of inquisitive thought, the aptitudes for philosophic insight.

3. We must become conscious of those elements of natural faith which connote the correlation of Cause and Use as the antecedent and consequent of existence as a unit. This implies a degree and bent of intellectual development which is not predicable of all, even expert thinkers, except as a future attainment. It does not suffice to recognize the truism that there can be no effect without an adequate cause, so long as its implication conceptibly applies only to such fragmentary exemplifications of existence as are made known to us by the senses. It is only when that truism is coupled with the recondite conception,—firstly, that no existing thing in the domain of nature is isolated; secondly, that each is somehow indissolubly bound to all; and, thirdly, that each, in all cases, virtually conspires with many to realize some special purpose, which purpose is relevant to an ulterior purpose to be realized by virtue of the conspiring relevance thereto of several groups of existing things, and so on to the confines of existence, as if to some possible finale of co-operating agencies,—it is only thus that the unitotality of existing things is

apprehended as a multiplex effect, a stupendous complication of means to a single end, which must have been foreseen and predetermined by a single purposing agent. The first part of this trine conception is germane to the truism that self-support is as impossible as self-creation; the second implies the passive predicament of all existing things; while the third identifies the use of existence with the paramount subservience of all to each, as the eligible compensation for the subservience of each to all.

4. We must learn to distinguish *cause* from the *means* of causation, and to recognize its supremacy as well as its priority to effect. The dictum of science, *causa aequat effectum*, is true only with an accommodated sense of its subjective term. It is only the phenomenal antecedent and consequent pertaining to the *process* of natural causation that are equal to each other, and the correlation of these merely simulates that of cause and effect. In truth, cause is more expressly named the *causal agent of causation*, which latter term embraces only the means or implements whereby the *purpose of the agent* is realized in the name of effect. The flying bullet which wounded Garfield was no part of the motive agency which caused his death. That was exclusively personal; though in all cases connatural causation is resolvable into a series of voluntary acts, each of which depends upon the special design of some sentient actor, to be realized only by the intervention of means altogether insentient and partly fortuitous. These are the components of causation, whereas those of cause are the consecutive volitions requisite to the achievement of a preconceived purpose.

Without the discrimination here propounded, it is impossible to solve the problem of existence, since it is the only demarkation between cause and effect which assigns pre-eminence to the former. It is only by regarding the one sentient and the other insentient, the one active and the other passive, that the supremacy of cause becomes conspicuous. Otherwise considered, their correlation appears to be merely that of antecedent and consequent. This shows the predicament of pantheists, who inevitably confound the Cause of existence with existence itself. But to apprehend them as disparate entities, the one active and the other passive, the one personal and the other impersonal, is prerequisite to a practical conception of what the problem should compass.

The indiscriminate notion of a cause which precludes ability to solve this problem was avowedly cherished by Sir William Hamilton, who thus stated it: "By cause, I mean everything without which the effect could not be realized." But Mark Hopkins wrote with more sagacity, "Without a foundation, a house cannot be; but the foundation is no part of the cause of a house."

5. We must learn to distinguish the products of causation from things of necessity. This is a proximate first principle of philosophy. Whoever fails to recognize it, or to make the discrimination on which its recognition depends, will fail to apprehend the gist of the problem's solution. For what is existence? Does the word comprise all that is? Is it synonymous with the word *being*? So lexicographers define it; and, in the diction of most authors, the two words appear as convertible. But, if there be not a category of *being* beyond existence, where shall we look for the cause of existence? and how shall we evade the solecism of something "which existed before existence,"*—that is, before anything existed? For my part, I know of no other way but to limit the meaning and application of the one word to the products of natural causation, or *things made to be*, in distinc-

*The Theistic Argument, p. 83.

tion from things that must be. And to this classification of all realities we are prone by nature; for do we not know instinctively *what* things are of necessity, and that whatever is not of necessity is *made* to be? In this way, and only in this way, we get rid of the conceit of *self-existence*, which is absurd. Thus time and space are conceived to be of necessity: we cannot imagine their nullity. The same is true of all discrete principles, dialectically styled necessary truths. Whatever is of necessity is eternal, ubiquitous, immutable; whereas, whatever is made to be is temporal, local, and mutable. It is all-important to distinguish these two categories of *being*, which word legitimately comprises all that *is*, in the largest sense of the verb. For the nonce here obtrusive, we must have two appropriate symbols. To supply this want, why not restrict the application of the word *exist* and its derivatives to things *made* to be, and to denote things of necessity coin a new word, say *sempersist* (stand-ever-the-same)? Some such expedient is necessary to insure the discrimination here propounded, without which the Cause of existence must be regarded as itself existing, so that the domain of existence is unlimited: in which case, the conception of causation is nullified by the ideal coalescence of cause and effect, while the conceit of self-existence replaces the postulate of an overt process conducted by an occult agent to an occult issue, the overt process alone being cognized and symbolized as *existence*. Without this postulate, the problem of existence is insolvable.

6. We must learn to distinguish MIND from mentality by other epithets than *finite* and *infinite*. In all my course of reading, I have not met with a single instance of this discrimination. But to regard finite mind as of the same essence as the Infinite Mind is to confound cause and effect. The one is *made* to be, and therefore temporal: whereas, the other is of necessity, and therefore eternal. Mentality is the higher predicament of *instinct*, and as such the offspring of MIND. Instinct is a thing of Nature, the directive agent of natural causation, as force is the operative agent thereof. Both are due to the perpetual volition of the Infinite Mind. But force is primordial to instinct in the process of evolution, *alias* natural causation, though instinct is superlatively complementary of the functions of force. There are two predicaments of force, static and motoric; also two predicaments of instinct, vital and mental. As static force (the base of matter as well as of the ether) is primordial to motoric force; and as vital instinct is primordial to mental instinct as its base, so materiality is primordial to mentality, and finite mind, so called, is as much a product of Creative Power as is matter. Mentality is inconceivable otherwise than as an *impress* of the Infinite Mind, which can neither obtain nor subsist without a body, either material or spiritual. But this conception is important only as tending to enforce the distinction of mentality from Mind, which are correlated as type and antitype.

7. We must identify the Cause of existence with the Infinite Mind, conceived as personal. There is no agent of connatural causation apart from mentality, and connatural causation is the analogue of natural causation. Every agent of connatural causation is voluntary, and volition is not imputable to any other than sentient agents. Therefore, the Cause of existence can be no other than the Infinite Mind. Again, mentality is the superlative part of Nature, the sole mundane habitat of utility, that for which all material things exist, the soul of personality, wherein culminate the noblest attributes of being—intelligence, sympathy, volition, responsibility—as the indispensable means of rectitude and happiness. The In-

finite Mind is thus idealized as the antitype of humanity, the conceptual synthesis of whose perfected attributes typifies the Cause of existence as the *Supreme Person*; though, in reality, human personality is the proper antitype of the Infinite Mind.

If the Cause of existence be not Mind, it must be something superior to Mind. If it be not wise, it must be more than wise. If impersonal, it must be more than personal in a sense that is inconceivable, or infinitely wiser and worthier than the Supreme Person is conceived to be. But to name the Author of our selfhood and Ancestor of human personality "Our heavenly Father" is to employ the best symbol at our command, as connoting what cannot be less relevant to human destiny than hope implies.

8. We must learn to deduce the attributes of the Infinite Mind, and thence the certainty of hope's fruition, from those of its finite analogue, the human mind. Is there any reason for supposing that our moral nature is factitious, that ethical truth is less independent of time and place than mathematical truth? I know that certain theological speculators—like Jonathan Edwards, for instance—have argued that, if God should command us to hate instead of love one another, it would become our duty to act accordingly. But the faith of such thinkers is anything but natural faith. Even atheists, who have no regard for the supposititious will of any deity, cherish a sense of duty to do as they would be done by, and are commonly as good neighbors as their ecclesiastical opponents. None but superficial thinkers and non-thinkers have ever believed that it would be useless to love one another, if the ten commandments of Moses and the later precepts of Jesus had never been given. God commands us through our rational and moral faculties *to do right*, because that is the only way to be happy; and the wish to be happy is instinctive, because he wants us to be happy,—for *instinct is the indubitable word of God* to each of his children. And does not the Supreme Person also want to be happy? Verily, his wants are unbounded and absolute. And can he be happy without doing right? Nay: he has less license in this respect than we, since he is too wise to err; and, were he not too good to do wrong, he must be infinitely wretched. His happiness can be only proportionate to his delight in that of his climbing children.

Thus we forecast human destiny, not merely as germane to the personality of the Infinite Mind, but as the inevitable sequence of the anthropoidal attributes thereof. If our immortality is necessary to the happiness of our heavenly Father, is not the problem of existence solved by this conception, or is not this the key to its solution? It surely is the latter, but discernment of this truth must follow the discernment of the solution of the problem by the rational process indicated above. Few have leisure for this work; and, of those who have, few are disposed to prosecute it. Therefore, over and above the foregoing directions as to *how* the problem may be solved, an earnest desire to solve it must dominate all predilections for other pursuits.

GEORGE STEARNS.

BURNABY THE HERO.

Through the agency of the Press Bureau or individual enterprise, the portrait of Lieutenant-Colonel Burnaby and an exciting narrative of his adventures have appeared in almost every paper in English-speaking countries. The most fulsome praise is lavished on him, as the "heroic soldier," an "honor to human nature," and his example presented "as a source of inspiration to ardent and generous youth." This latter is exactly what is most to be feared. Of all examples, his should be the

last a right-thinking, moral youth ought to choose. As to his endurance, activity, energy, and adroit expediency, there can be no question. He travelled far and in wild paths, and gave a racy, superficial account of superficial observations. He scented war afar, and hurried to the carnage. He was a volunteer and went to Africa for the purpose of fighting, went for the love of carnage. He had no grievance to redress: the people he drew his sword to destroy had done him no wrong. Even his nation, England, complained of no wrong. There was not the least excuse offered for the war, there was no necessity for a battle, and yet this lauded hero put his revolvers in his belt, and sharpened his sword to go out as one of this band of red-handed robbers and assassins to kill a free people, fighting for their homes. He was found after the terrible battle on the burning plains, "his hand grasping the throat of the Arab whose spear had given him his death wound." Can a more revolting picture be imagined than this of two men, one reared in Europe in the concentrated light of nineteen centuries of Christianity, the other in Asia under the rule of another faith, meeting in the hell of battle, and, like wild and furious beasts, rushing at each other, with bloodshot eyes and demonic curses on their distorted lips; thrusting with spear, gashing with sword; at last clenching in the final throes of death and choking the life out of each other? There they lie on the reeking sand, under the burning sun, glaring in its light, with protruding eyes, their lips drawn from their gleaming teeth, and their distorted features purple black with hate,—marks of ferocity which death itself cannot efface!

And this is the hero! This the example the press holds up for imitation of aspiring youth! Where is Christian faith or moral perception? Such unthinking adulation is the cause of immeasurable harm. It lowers the standard of moral excellence, and places before the youthful mind a wrong and vicious standard. He possessed courage, but so do the brigand and assassin. Heroism he had not, for the hero immolates himself for a great and noble cause. Byron enlisting for the liberty of Greece is in contrast to Burnaby volunteering to butcher Arabs contesting for the freedom of their desert.

HUDSON TUTTLE.

To WHAT is called personal magnetism, he [Washington] could have had little pretension. A vein of dignified reserve, which Houdon and Stuart have rightly made his peculiar characteristic in marble and on canvas, repressed all familiarities with him. His magnetism was that of merit,—superior, surpassing merit,—the merit of spotless integrity, of recognized ability, and of unwearied willingness to spend and be spent in the service of his country. That was sufficient to attract irresistibly to his support, not only the great mass of the people, but the wisest and best of his contemporaries in all quarters of the Union; and from them he selected, with signal discrimination, such advisers and counsellors, in war and in peace, as have never surrounded any other American leader. No jealousy of their abilities and accomplishments ever ruffled his breast; and with them he achieved our independence, organized our constitutional government, and stamped his name indelibly on the age in which he lived as the Age of Washington.—R. C. Winthrop.

THE Cologne *Zeitung* says of Jacob Grimm, the great collector and writer of folk-tales, "He descended into the deep mine of German nationality, German language, and German folk-lore, and what he saw there he taught himself and his people to love; namely, German depth of feeling and German power of intellect."

The Index.

BOSTON, MARCH 5, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, : : : : : } Editors.
BENJAMIN F. UNDERWOOD, : : : : : }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

EDITORIAL NOTES.

BY B. F. U.

GEORGE ELIOT wrote to a lady friend in 1852:—

My brightest spot, next to the love of old friends, is the deliciously calm, new friendship that Herbert Spencer gives me. We see each other every day, and have such a delightful camaraderie in everything.

MR. C. D. B. MILLS lectured at Council Bluffs, Iowa, March 3, and Omaha, Neb., the 4th. He is announced to speak at Hastings, Neb., the 6th; at Lincoln, Neb., the 7th; Omaha, the 8th; Topeka, Kan., the 10th, 12th, and 14th.

WE are indebted to some friend for copies of the *Daily Moon*, Battle Creek, Mich., containing sermons delivered in that city by Rev. Reed Stuart, which are marked by more than ordinary ability and boldness. Their influence in the community in stimulating thought and in acquainting the people with rational and radical religious views must be decidedly good.

REFERRING to the movement in this State for the taxation of church property, the orthodox *Congregationalist* has this to say:—

The taxation of church property is up again at the State House. The very poor and the very rich would suffer most, were all church buildings to be taxed. The usual arguments are being advanced, and a strong case can be made out on each side. We should anticipate no harm to real Christianity, were the new move to be carried.

At a meeting of the Woman State Suffrage Association of New York, Mrs. Elizabeth Cady Stanton said: "The worst objectors to woman suffrage are fashionable women. At Newport, I saw ladies dancing with low-neck, short-sleeved dresses; and, at the breakfast table next day, they said they were shocked to read that there had been a woman suffrage meeting in Newport. They were shocked at the notion of a woman getting on a platform to talk. I told them it was a matter of taste; that I would rather do it than put on a low-necked and short-sleeved dress and dance in the arms of a man. 'But the names of the women who spoke are in the paper,' objected one of the ladies. 'Well,' I said, 'so are the names of the ladies who danced; and those whose names were not printed were not at all pleased.'"

THE Washington correspondent of the Chicago Tribune writes:—

Speaker Carlisle said the other day that he believed the time would come when the form of an oath would be done away with in the courts. This expression of opinion was brought out in a general conversation upon the subject of the rejection of the testimony of an agnostic in the Swaim court-martial. Mr. Carlisle said that, under the present methods of taking testimony, the evidence of a most worthless character who took the oath would be taken against that of the most scrupulous and high-minded man who from his very sense of truth could not say that he knew that there was a God. He thinks that there never was a case tried in any court where there was not perjury of some kind on both sides. He never yet has, in all his legal experience, seen evidence that the oath alone restrains a man from making misstatements in his own interests. He would have each man give evidence without any preliminary form, and then it would stand according to the character of the witness. Each witness would be upon his honor. There would be no trouble in providing penalties for giving false evidence as there is now. The oath is a mere empty form with the majority of men, and should be dropped.

A FRIEND sends to us the following: "A grandmother said to a little boy, some ten or twelve years old, 'I think baby loves me better since I carry cookies in my pocket for him.' 'Oh, no,' indignantly replied the boy, 'we don't love you for the good things you make us.' 'I'm glad of that,' replied grandmamma; 'for I like heart love better than stomach love.' 'O grandmamma,' said the boy, 'people used to think we loved with the heart; but we're wiser now.' 'Indeed,' asked the grandmother, willing to learn, 'what do we think we love with now?' 'Why,' said the boy, 'we're wiser now, and—we don't know.'" When the mind comes to see that a statement once accepted as an explanation of a phenomenon is untrue, and admits that it "don't know" what the real cause is, it is in a condition more favorable to the discovery of the truth than when it was content with a false explanation. The above story was probably sent us to illustrate what Huxley says: "Agnosticism is the essence of science, whether ancient or modern. It simply means that a man shall not say he knows or believes that which he has no scientific grounds for professing to believe."

AMONG the passages of memorable eloquence in Robert C. Winthrop's recent oration on Washington is the following reference to the unfinished monument as it stood during our Civil War:—

That truncated shaft, with its untidy surroundings, looked only like an insult to the memory of Washington. It symbolized nothing but an ungrateful country, not destined—as, God be thanked, it still was—to growth and grandeur and imperishable glory, but doomed to premature decay, to discord, strife, and ultimate disunion. Its very presence was calculated to discourage many hearts from other things as well as from itself. It was an abomination of desolation standing where it ought not. All that followed of confusion and contention in our country's history seemed foreshadowed and prefigured in that humiliating spectacle, and one could almost read on its sides in letters of blood: "Divided! Weighed in the balance! Found wanting!" And well might that crude and undigested mass have stood so forever, or until the hand of man or the operation of the elements should have crushed and crumbled it into dust, if our Union had then perished. An unfinished, fragmentary, crumbling monument to Washington would have been a fit emblem of a divided and ruined country. Washington himself would not have had it finished. He would have desired no tribute, however imposing, from either half of a divided republic. He would have turned with abhorrence from being thought the Father of anything less than One Country, with one Constitution and one Destiny.

THE *Religio-Philosophical Journal* says in regard to Thomas Paine: "It is just as well to know

where a man belongs, especially when he is misunderstood and wrongly placed. . . . Thomas Paine was a spiritual thinker with no sympathy or unity with materialism. He would have defended the right of free opinion for the atheist, but was not himself atheistic. Let his own words decide this matter. He wrote the *Age of Reason* to counteract the atheistic tendencies of the French Revolution, and said,—

I believe in one God and no more, and I hope for happiness beyond this life.

Of immortality, he wrote as follows:—

The consciousness of existence is the only conceivable idea we can have of another life, and the continuance of that consciousness is immortality. This consciousness, or the knowing that we exist, is not necessarily confined to the same form nor to the same matter, even in this life. We have not always the same form nor in any case the same matter that composed our bodies twenty years ago. Limbs may be lost and the full consciousness remains. . . . Who can say by what exceeding fine action of fine matter a thought is produced in what we call the mind, and yet, when produced, as I now produce the thought I am writing, it is capable of becoming immortal, and is the only production of man that has that capacity? Statues of brass or marble will perish, and statues made in imitation of them are not the same. But reprint a thought a thousand times over, carve it in wood or engrave it on stone, that thought is identically and eternally the same, unaffected by any change of matter. If the thing produced has in itself the capacity to become immortal, it is more than a token that the power that produced it, which is the self-same thing as our consciousness of existence, is immortal also."

HON. ROBERT C. WINTHROP, in his noble eulogy of the life and character of George Washington, which was read before the President and Congress of the United States, referred to Washington as "believing in Christ." What proof is there that Washington believed in Christ as a superhuman being? Jefferson, in his Journal of 1800, wrote: "Rush [Dr. Rush] observes he [Washington] never did say a word on the subject in any of his public papers, except in his valedictory letter to the Governors of the States, when he resigned his commission in the army, wherein he speaks of the 'benign influence of the Christian religion.' I know that Gouverneur Morris, who pretended to be in his secrets and believed himself to be so, has often told me that Gen. Washington believed no more in that system [Christianity] than he himself did." Rev. Dr. Wilson, in a sermon delivered at Albany more than fifty years ago, declared that Dr. Abercrombie, rector of the church Washington attended when the Congress sat at Philadelphia, had told him Washington was a Deist. In a conversation subsequently with Robert Dale Owen, Dr. Wilson said, "Dr. Abercrombie's emphatic expression was, for I well remember the words, 'Sir, Washington was a Deist.' Now," continued Dr. Wilson, "I have diligently perused every line that Washington ever gave to the public, and I do not find one expression in which he pledges himself as a professor of Christianity. I think any man who will candidly do as I have done will come to the conclusion that he was a Deist, and nothing more." Washington died without having around him any clergymen, without praying, without a word about Christ, without any allusion to the Bible, or any expression implying that he was either cheered by the promises or disturbed by the threats of Christianity. If Paine had made no direct attacks on revealed religion, he, too, would have been canonized among the Christian saints. Lincoln has been already, although there are hundreds living, including those who knew him intimately, who declare that he had no belief in the Bible as a divine revelation.

For The Index.

LIMITATIONS OF REFORM.*

BY HON. GEORGE F. TALBOT.

PART I.

Bayard Taylor thus interprets the purpose of his most elaborate and ambitious poem, "Prince Deukalion": "The central design, the germinal cause of the poem is to picture forth the struggle of man to reach the *highest, justest, happiest, and hence most perfect condition of human life on this planet.*"

Whether or not our individual consciousness survives the shock of death and is able to find a place for itself in the enlarged activities of an immortal life; whether we are amenable to the commands of a sovereign and intelligent personal Will, the Author and End of the creation, or to an underlying law of nature, whose last word is uttered by the concurring voice of the human reason and conscience,—and this, broadly stated, is the great debate which theology has opened,—it cannot be doubted that the prime concern of man is to better himself, to improve his surroundings, in order that their balance of influence shall result in the perfection of himself; to keep right along in that grand sweep of things, which, like the majestic march of the sun and all his planets toward some unknown goal of space, of which the astronomers tell us, carries mankind along from his humble and bestial beginnings toward a consummation of glory and power of which he can now have no adequate idea.

Is the Infinite Energy Unconscious?

Hartmann, the latest exponent of philosophic atheism, contends that the underlying cause of all phenomena, sentient and material, is itself unconscious. In three volumes, recently translated into English and published in this country by Macmillan & Co., entitled *The Philosophy of the Unconscious*, he elaborates his system. He shows how purposive action, without consciousness of purpose, is at work everywhere in the vital processes of nature, in the instincts of sentient brutes, and in the dominant passions and appetites of men. He concludes that what we call God is Will and Idea, existing in an unconscious state, coming to consciousness only in the minds of men.

Reverent Spirit of Modern Atheism.

This is one more attempt to get some clew to the mystery that surrounds our lives, to reconcile with a Creator, whom we are required to think of as almighty, wise, and good, a creation that in its inadequate and defective results seems not altogether wise and, in its complication with suffering and sin, not wholly good. Indeed, the modern atheism is quite another spirit from the atheism of the eighteenth century,—unless, as is not improbable, *that* has been unfairly cried down and traduced,—since it is reverent and tender where *that* was profane and scoffing. The older atheism looked upon God as the great schoolmaster, whose stern tuition and discipline it plotted to throw off, in order to abandon itself to riot and self-indulgence. It was a protest against a scheme of providence, which, when chided with the misery and injustice and favoritism that obviously characterized it, had no reply but this: *Shall the thing formed say to him that formed it, Why hast thou made me thus?* When this form of atheism prevailed, the best known definition of virtue, that which was taught as indisputable ethics in our schools, was,

"Virtue is doing the will of God for the sake of everlasting happiness."

The scepticism of to-day thinks that when "*the thing formed*" is not a potter's pan, nor even a cunning self-acting machine, but a conscious will capable of exercising moral judgment upon conduct, its own or another's, it *may* ask, not impudently, but sadly and earnestly, *Why hast thou made me thus?* It is not so anxious for personal everlasting happiness, and is even capable of the nobleness of choosing to be blotted out of the book of life, if so be some assured good might come to the race of man.

Effort of Man to perfect himself hitherto Unconscious.

Leaving this debate unadjusted, it is obvious that, whether the cause of all phenomena be or be not unconscious, the effort of men hitherto to perfect themselves, which I have ventured to define as the sum of all virtue, has been mainly an unconscious one.

"Dragons of the prime,
That tore each other in their slime,"

did not enter upon their internecine warfare for the distinct object of trying it out in fair fight which dragon was the fitter to survive. Our remote progenitor, the chimpanzee, who with his forepaw first grasped the limb of a tree and swung himself out of the reach of the huge cat that was about to devour him, found out next day that he could grasp a broken limb, lying upon the ground, and brandish it as a club. Thenceforward, the forepaw begins to develop into a hand, and the monkey to play with it, just as a human baby tests, by fumbling and grasping, the powers latent in his pudgy little fist. But, though to manage this new-discovered tool of a hand, the apish brain grew toward the capacities of a Newton or a Humboldt, there was *no purpose* in the ape, or in the race of apes, to enter upon and prosecute this career of intelligence. It is only poetry that asserts that the earth consciously waited and expected the birth and growth of its intelligent progeny, and says of man:—

"Ere he was born, I dreamed that he might be,
And through long ages of imperfect life
Waited for him."

The theologians are right when they tell us, if it is necessary to assume that there was a plan, a proposed result, to be accomplished in the ordering of nature, that plan and purpose was in something outside of nature. The fish did not *intend* to make himself a reptile, a bird, a mammal: the general movement of living organisms from lower to higher forms was not a self-predetermined movement of the organisms. If it is necessary to presuppose a purpose, and if a purpose implies choice, will, intelligence, there must be a personality above creation to account for the evolution of creation.

Here, I surmise, is just where Hartmann evades the sweep of an irresistible inference,—by denying at the outset consciousness, and so personality, to the ultimate energy, that is the cause of all phenomena.

But his speculations are aside from the leading thoughts which this essay is to elaborate. What I have wished to say is that, although self-improvement is the one great end of man's life,—the *raison d'être* of his having the privilege of living,—self-improvement is a task that he has for the most part wrought at hitherto without having purposed it.

This is not only true of all the earlier progress of life through the bestial and primitive human states: it is true of civilized man up to the present time. Not yet, nor for ages yet, has or will mankind, as an organized whole, set for itself the task

to make the conditions of human life on this planet as high, just, and happy as they can be made. It may account for the prevalent tone of sadness that so largely characterizes the poetry of our age, and gives to philosophy its pessimistic aspects, that, just at this crisis, the very progress of civilization seems rather to check and counteract those salutary workings of nature which insured the survival of the fittest. That tender sentiment, the inspiration of Christianity, which has impelled us to reform rather than punish criminals, to give drunkards the best chance to perpetuate their uncontrollable appetites, to insure the permanence of poverty by guaranteeing to it a maintenance, has operated to check those salutary laws which, when men were less controlled by humane sentiments, tended to thin out and slough off the criminal, the vicious, and the imbecile classes.

Hitherto, it cannot be said that society (and by society I mean the human race acting under organization, with its maximum associated power) has even proposed to try how far it may ameliorate the conditions of human life. A few poets have dreamed of a better future, a few philosophers have speculated as to its conditions and laws, a few philanthropists have spent their lives in promoting some specific reform,—like the abolition of slavery, the disuse of alcoholic stimulants, the substitution of a high for a lower religious *cultus*,—but their efforts have been periodical, local, and partial, the treatment oftenest by inadequate palliatives of the *symptoms* rather than the eradication of the *diseases* of society.

The savage life expended itself in defence against enemies, in alimentation, and in reproduction. To the mere maintenance of the human race, these functions were so necessary that nature did not dare trust their performance to the will and choice of men, for fear they might in some dangerous caprice omit or neglect them. So it implanted them in instincts too fierce to be resisted. How much is our civilized condition advanced beyond these primitive concerns? The main care of our modern life is how to get a living. We go to our bank, our office, our counting-room, our farm, driven by the same instinct that compels the savage to take his bow and arrow and sally out to provide for his dinner. On the plains, such buffaloes are born as the fierce instinct of reproduction, checked only by the rage of a stronger one, provides. Is the same instinct, decked with delicate sentiment and sanctioned by religion, any more within rational control among modern men? To a large extent, we have been able to say that only the healthiest, most symmetrical, most serviceable domestic animals shall be born. We take just such children as undisciplined nature gives us, and cannot know whether they are geniuses or little fiends.

The State, as yet too corrupt to be trusted with all the functions which it might and ought to perform, not yet daring to undertake what one day it will,—every work which associated men can do more wisely and effectually than individual man,—what has it done, what is it doing, but imposing a few checks in the way of making the struggle for life a little fairer for the weak, and punishing some of the criminals, with no thought of eradicating crime?

When society shall become aware of the task it has to do, when it shall have equipped itself with a State which shall also be the Church, and shall set itself *consciously* rather than *instinctively* with *purpose* and with enlightened plan to co-operate with that beneficent design in nature or in the mind of God, then, and not till then, shall we find what are the limitations of reform, what are the en-

* The substance of this essay was read before the Fraternity Club of Portland, Me., Dec. 15, 1884.

vvironments incident to human life itself, to which we must learn to adjust ourselves, as the permanent conditions of a finite existence.

Four Cardinal Evils of Human Life.

It will give definiteness and precision to our speculations, if we consider what are the cardinal evils of human life, and how far they may be removed or ameliorated. Nearly all of them may be comprehended in this classification,—IGNORANCE, CRIME, SICKNESS, and POVERTY. Could some New Year's day dawn upon the world, and find that these enemies of human happiness, during the night,

"Had folded their tents like the Arabs,
And as silently stolen away,"

there would not be much in our earthly fortune to deplore, and a career of it reasonably long might be one for which we ought to be thankful to the supernal powers.

Problem of Education.

The first of all necessities is knowledge. Before beginning to do anything, we must diagnose our malady, and understand what remedies, what method of treatment, will be most likely to alleviate and cure it. And really this seems to be the specific thing which, in any concerted way, the world is beginning to do. The problem of education, not only the higher education of scholars and men of genius, not education for the rulers, the priesthood, the teachers, but such general enlightenment and cultivation for all men as shall make them comprehend the responsibilities of living, the equivalent which they ought to render for the privilege of enjoying the universal bounty of nature,—this is what nearly all the governments of civilized States are now devoting themselves to study.

Here, in this country, we differ as to our revenue system, as to what methods of finance will tend to the most just distribution of the products of labor: we are not in accord as to measures of repression and of police, and are keeping up with a slow mitigation modes of punishment in use two or three thousand years, with a general suspicion that their effect in suppressing crime is nearly zero; but all schemes of educating the masses are popular, and command the votes and taxes of the citizen. The original, characteristic legislation of all the States is legislation to expand and make more efficient our system of common schools. The national government is seeking to share in the same work, with a strong popular assent that overrides old theories of constitutional limitations. We hated slavery, because it shut from millions of laborers the avenues of intelligence; and, for the barbarism that makes imbeciles of the freedmen, we confidently prescribe the spelling-book as an infallible remedy. The same matter of popular education is largely occupying the governments of Britain, of France, of Germany, of Belgium, and of Italy. The first thing the man emancipated from slavery, from despotism, from feudalism, asks for, is a book.

I am aware that education alone will not bring any of the results which enthusiastic reformers hope from it. I know how discouraging are the statistics which have been arranged to show that simultaneously with our expanded education have grown the cunning and desperation of our criminals, and that the mere increase of knowledge has little or no tendency to diminish the volume of crime. We may admit the fact without being discouraged, without abating in the least our energy to make education, even intellectual education simply, more thorough and more universal.

The first thing the skilful physician does is

carefully to explore the diseased part with all the natural and sometimes with all the artificial light he can throw upon it. This part of the treatment is not remedial or painless, but it is the necessary beginning of all cure. Before society will resolutely set itself to combat the evils that infest and degrade and make it wretched, it must thoroughly comprehend those evils and how best to be rid of them. The first effects may not be encouraging. Rough surgery aggravates pain: the devil, about to be cast out, first throws down and tears his victim.

We may then conjecture the civilized races of men as occupied, during the centuries lying nearest our own time in the future, in the task of perfecting their education. Man has been hitherto a poor, forlorn, helpless, suffering, and pathetically sad creature, because he was a savage and did not know how to get either the most happiness or the most good out of his life. He will be happier when he is wiser and more civilized,—more civilized in that culture which comes latest, *his moral nature*.

The era of investigation, of speculation, of polemical debate lies immediately before us, in which we shall study and settle the laws of life, get some appreciation which we are far from having now, of the true science of government, the just laws of labor and distribution, and of the rights on the one hand, and, of what has hitherto been little considered, the imperative duties of individual men on the other hand. Inasmuch as men are led by their fundamental principles and by their ideals more than by their interests, we must pray that the succession of great thinkers, great poets, great saviors shall not fail in the world, who impose upon the reverent wills of men, through their docile faith, salutary truths they would never discover by investigation or arrive at by however prolonged a disputation.

When we consider the great *pushes forward* the world has received from such men as Zoroaster, Sakya Muni, Confucius, Moses, Socrates, Jesus, and Paul, how largely our hopes for the future must rest upon the assurance that the succession of such incarnations is to be kept up! When our reverent admiration is at its height, we are ready to attribute the whole product of our civilization to the genius of a dozen lonely, divinely inspired men. Hitherto, the light on the pathway of humanity has been an after gleam from regions of the heavens "where it is always afternoon." May we not expect that the next great illumination shall burst out of the west, before and not behind the Berkeley course of empire; and that the next savior shall come to us, not so much wisely sad at the impotence of man and the failure of life as buoyant with the hopes and omnipotent with the intelligence of the coming better race?

Problem of Crime.

All governments have proposed as an object of punitive legislation the suppression of crime; but no government, and almost no man, has dreamed of realizing such a consummation. We have accommodated ourselves to the culprits, as we have to the weakling and invalids, as a permanent feature of human society. More than eighteen centuries since, an ideal reformer characterized the state of the then world as one wherein moth and rust corrupt and thieves break through and steal. The depredations committed upon property by fellow-men were as destructive as those committed by insect pests and by natural decay. It is just as descriptive of the modern world. What avails our civilization, with its enhanced power, its sound knowledge? Our nights are tormented with fears, just as were those of our forest-haunting Scythian

ancestors. It is no longer the witch and the boggy that we are afraid of: we can sleep through quite a racket, if we suspect it was made by a ghost or a devil, and not by some miscreant, armed with a revolver, prowling after our spoons and our watches. What have we gained over the first settlers of Maine, who slept with ears open to the stealthy tread of the Indians lying in wait with tomahawk and scalping-knife? We are more alarmed lest some boy, who went to school with us, and used to steal our playthings and toys, grown to be a burglar, shall enter our house to-night, as he did our next neighbor's house last night. Every morning, in any civilized community, discovers some theft, some depredation, some nuisance, for which daylight did not afford the impunity, and shows that, among the fellow-men we meet and accost in the street, a certain percentage are criminals, and follow their vocations, unchecked by all the repressive influence of law, and by the stronger power of public opinion. No doubt our fears exaggerate the number of these; but when we aggregate them with the great army of culprits, whom our various grades of courts have certificated by sentences that require the keys of jails to be turned against them, it becomes a formidable class of public enemies.

And we hardly expect it to diminish. We build jails and prisons with the expectation that our posterity will need them as certainly as they will need school houses, more certainly than they will need churches.

Reform of Criminals not attempted.

Our remedies against crime have hitherto been palliatives merely. While a man is locked up in jail and fed and lodged at the general charge, he will have no motive for stealing, and stealing will not be possible; but we dismiss him at the jail door with an *au revoir*, and are sure to see him come back. The slight and unorganized efforts made to reform thieves are voluntary and extra-governmental.

Is crime, therefore, to be succumbed to as a permanent condition of human society? Let us consider how far the evil is remediable. Undoubtedly, a congenital feebleness of the moral sense characterizes all habitual criminals, and any improved external surroundings would leave that defect unremedied. But strong natural tendency is no excuse for evil doing. We have the germs and impulses to all crimes in ourselves, and may say truthfully with the author of *Pilgrim's Progress*, when he saw a felon on his way to the gallows, "There (but for the grace of God) goes John Bunyan."

But society in this case will be benefited by a repentance that stops short of a complete reform; and the moralist will be content with a state of things that raises the thief above stealing, and allows a base hereditary instinct slowly to perish for want of opportunity to gratify itself.

It takes three elements to constitute a thief,—a deficient appreciation of the rights of property, an enfeebled moral sense, and a temptation and opportunity to steal. If either element be lacking, the thief gets spoiled as a thief in the making. Many men, in whom the first two requisites are complete, for want of temptation live eminently successful lives as traders, speculators, and monopolists. It were best if all people were honest from *character and principle*; but society is benefited if property is secure, because the over-acquisitive find means of appropriating less shameful, if not less harmful than larceny.

Of the efforts of society to make the criminal virtuous,—hitherto but little tried,—and to make it more inconvenient for him to commit crime,—the method now in vogue,—it may be said, *This ought*

ye to have done, and not to have left the other undone. We may continue to disgrace, to punish, to restrain the thief, for this on the whole makes property more safe; and, though it does not make the thief honest, it deprives him of the opportunity to steal, and it is by thwarting and denying evil propensities that we starve them out, and finally render them abortive. So it becomes pertinent to consider what other agencies than fines and imprisonments may be efficacious in keeping men congenitally inclined to be criminals from becoming criminals in fact.

Suppression of Crime Possible.

Many men are kept from vicious and hurtful practices by finding for them legitimate careers, where they can safely exercise their peculiar talents and make their qualities serviceable. The sagacious schoolmistress manages to repress the big, mischievous boy, whom she has not the courage to flog, by changing his seat or imposing upon him some office of waiter or janitor. The moving breaks up his associations, and deprives him of the little public that applauded his monkey tricks; and the office piques his pride, and employs his surplus activity.

The first settlers of Australia, formerly New South Wales, were felons deported in annual throngs to relieve the plethora of English jails. What an ancestry for a chivalric and virtuous people to celebrate the anniversary of! We have never heard that the present inhabitants of that distant colony are in any way behind their fellow Englishmen of the Cape, or of Canada, or even of Old and New England. A large percentage of the first settlers of Virginia were thieves and prostitutes gathered from the slums of London. Their descendants have taken no mean part in the drama of American politics; nor has Virginia been behind, in morality and intelligence, South Carolina, into whose colonization entered a considerable element of virtuous and pious Huguenots. Texas and California, in their turn "the paradise of rascals," under the responsibility of self-government, with the self-respect that comes with prosperity and good fortune, have sobered into orderly communities where law is respected and the decencies and courtesies of civil order are maintained.

A thorough shaking up, a new deal of the chances of fortune, very often breaks up chronic habits of criminality, and, giving the criminal new hopes and new confidence, starts him upon a life of uprightness. For the listless and apathetic country clown, the bustle and ambition of the city; for the too cunning and aggressive schemer of the city, the quiet and plenty of rural country life,—seem to afford changes salutary to good morals. It will some day come to be considered that the man who has committed some overt offence against society has thereby, to a certain extent, forfeited his right to direct his own conduct. He is to be taken in hand by society as a danger, and as a subject of reformatory experimentation. Well men are allowed to lodge where they please or can,—in a house, a hotel, a camp, or under the sky; but a man with the small-pox we are very careful to provide a lodging for, where, if he may still take harm to himself, he shall not harm us. So the criminal, who has once stood in the docks, must understand that he is under surveillance, not necessarily to be imprisoned or punished, but to be *cared* for, lest his malady break out in some form of injury to other men. But this treatment, to be effectual, implies larger functions on the part of the State and a more inquisitorial oversight of private conduct than our present ideas and our present public opinion will tolerate, and can best be considered in reference to some other cardinal evil of the human condition.

Sickness.—How far is it Remediable.

How far may intelligent and united effort relieve human life of sickness? From this term "sickness" ought to be excluded the natural feebleness of the extremes of infancy and of old age, and the disability which immediately precedes and follows the great demand which parturition makes upon the strength of mothers; and it ought to include all congenital and accidental maiming, all deprivation of the normal activity of the senses or the muscles, whether the result of disease or of accident, and all mental derangement, from pronounced insanity or idiocy to all abnormal and eccentric tendencies to anger, jealousy, sensuality, self-esteem, or melancholy. When our great civil war began to make most searching demands for able-bodied men to brave the peril of military service, we were dismayed to find how many men, with tolerable appetites and average ability to enjoy life, were hopeless invalids. Neither was it all fraud and cowardice. I suspect, if men were set to study their real complaints, a vast number, perhaps the majority, might truthfully report that they were far from being exactly suited to be "*food for powder*." How grand is the spectacle of a great teeming nation like ours, with its laughing maidens and golden youth, with its splendid march of conquest across a virgin continent! But uncover our houses and look in upon the diseases that ravage our communities, the pains, the weaknesses, the vague symptoms that periodically threaten our lives, and see how many of our infirmities we are bravely covering up under a cheerful politeness and self-control. Taking account of all our ailments of mind and body, is it not true of us, perhaps the most favored people on the globe, that sickness is the rule, and good health the exception of our condition?

What England loses from Sickness.

A distinguished English physician, Sir James Paget, in an address delivered last June at the International Health Exhibition in London, from tables of aid rendered by the friendly or benevolent societies of England to their invalid members, concluded that each person enumerated in the British census of 1881, if a female, is sick nine and a third days of each year, and if a male nine and three-tenths days. The statistics of sickness (in times of peace) among the army and navy show a considerably higher proportion of illness. England and Wales, he says, in consequence of sickness lose every year 20,000,000 weeks' work. Reckoned at \$5 dollars per week, here is an annual loss of \$100,000,000 to those two countries. More than half of this loss falls upon the domestic, agricultural, and industrial classes, with an annual cost to them for sickness of \$55,000,000. Computing now that the same persons in the United States—that is, between fifteen and sixty-five—would number 30,000,000, and that their earnings per man would be the same,—for, if the rate of wages in America be slightly higher, the number of youths and women not employed in labor is also larger,—we have an annual loss to this country of \$200,000,000 from sickness, and to the industrial class of \$110,000,000.

Sir James cites one disease common to both countries, typhoid fever, which destroys among persons in the working time of life in England and Wales 4,000 persons in a year. Its mortality is about fifteen per cent., so that, if 4,000 die of it, about 23,000 recover. Of these, the average length of illness is about ten weeks. So that from one disease alone, and that preventable, we have an annual loss of 230,000 weeks' work, or more than \$1,000,000, without reckoning what is lost with those who die. The same, he says, may be

said of nearly all the diseases that are most prominent in the bills of mortality.

But these figures represent the illness of the strongest and soundest of the population in their working age, between fifteen and sixty-five. "The mortality in England for 1882, among children under fifteen, was nearly a quarter of a million. What have they cost? If you say only \$40 apiece, here is a loss of more than \$10,000,000 incurred every year. But they cost much more than this, and much more still is lost by the loss of work they might have lived to do."

I have not looked over our own census or the annual State reports of vital statistics to compare them with these English data; but the rates of sickness and mortality among all civilized people are so nearly alike that any one carefully prepared table will serve as a fair representation of the sanitary condition of any one community or of the civilized world. The modifications due to climate, national habits, unequal supplies of food, and to the prevalence of epidemics,—all tend in the long run to equalize themselves.

How much of this is Preventable.

The learned English surgeon, in the course of his address, asks, "Are not these things the inevitable consequences of conditions in which we choose or are compelled to live?" and replies: "No, certainly, they are not. No one who lives among the sick can doubt that a very large portion of the sickness which he sees might have been prevented, or can doubt that, in every succeeding generation, a larger portion still may be averted, if only men will strive that it may be so." "Let me," he says, "enumerate some of the chief sources of the waste, as they may appear to one's self in practice."

"Of the infectious fevers, small-pox might be rendered nearly harmless by complete and careful vaccination. Typhus, typhoid, and scarlet fevers, and measles might, with proper guards against infection, be confined within very narrow limits. So probably might whooping-cough and diphtheria. Of the diseases due to bad food and mere filth, to intemperance and immorality, in so far as these are self-induced, they might, by self-control and virtue, be excluded. And, with these, scrofula, rickets, scurvy, and all the wide-spread defects related to them, might be greatly diminished. It can only be a guess, but I am sure it is not a reckless one, if I say that of all the losses of work of which I have spoken, of all the millions of weeks sadly spent and sadly wasted, a *fourth part* might have been saved, and that henceforth, if people will have it so, a still larger proportion may be saved."

Improved Sanitary Condition of England.

Sir James thinks what may be done is best set forth by what has been done. I give his facts, without stopping to quote his language.

The average death-rate in England during the last eight years has been less than in the previous eight years, in the proportion of two deaths for every 1,000 persons living. The average number of deaths has been 50,000 less in the last than in the preceding years. The largest gains of life have been in the diminution of the deaths from fever and in the deaths of children under fifteen years old,—the very classes upon which sanitary measures would have most influence.

The annual number of deaths from typhus, typhoid, and the unnamed fevers have been 11,000 less than twenty years ago; and of children under five years old, 22,000 less; and of children between five and fifteen, 8,000 less; and this, too, simultaneously with an increase of population. Computing the diminished number of deaths among the work-

ing classes, he infers that the country has gained a clear annual saving of 185,000 weeks, or nearly \$1,000,000, by the abatement of fevers alone. In a paper read in 1883 at the Statistical Society, Mr. Noel Humphreys showed that, if the English death-rate should continue at the low average of the five years 1876-1880, the mean duration of male life in that country would be increased by two years, and of female life by three and four-tenths years, as compared with the English life tables.

This increase of life Sir James Paget reckons as an addition of more than four per cent. to the annual value of all the industry, mental and material, of the country. He goes on to say: "Any one who has studied the source of disease during the last thirty years can tell where and how it has diminished. There is less from intemperance, less from immorality. We have better, cheaper, and more various food, far more and cheaper clothing, far more and healthier recreations. We have, on the whole, better houses and better drains, better water and air, and better ways of using them. The care and skill with which the sick are treated in hospitals and infirmaries, and even in private houses, are far greater than they were; the improvement and extension of nursing are more than can be described; the care which the rich bestow upon the poor, whom they visit in their own homes, is every day saving life and health; and even more effectual than any of these is the work done by the medical officers of health and the sanitary authorities, now active and influential in every part of the kingdom."

Great Advance of Medical Science.

I appreciate the enormous development of all the sciences in this age. I am conscious of how much the new mechanical inventions, the discovery of new chemical agencies, new properties, and new forces, are adding daily to the power and enlarging the beneficent agency of man; but it seems to me the advance of the medical science, especially the better knowledge of the deleterious germs that constitute the insidious and invisible virus that are the prolific seeds of many of the infectious diseases, and the discovery and application of anæsthetics to relieve painful processes of nature, and to make safe and painless the most daring feats of reparative surgery, has been more marked and more salutary in lessening the great aggregate misery of human life than any other knowledge or agency. I know the stale jest repeated in every circle where a physician is present, that medicine causes more deaths than it prevents. I remember in what conspicuous cases the best medical science applied to has failed to detect the real nature of some deeply hidden malady; and how five of the most eminent surgeons in America probed and tortured the martyred President in an orifice among his throbbing nerves made by themselves, and not by the assassin's bullet—all the while quietly lodging somewhere else! But what of that? Are not all the great lawsuits which end in the pecuniary ruin of one, sometimes of both the litigants, cases in which the losing side has been assured by his lawyer that he had a good *betting* case? The clergyman does not forfeit either his praise or his pay, because his preaching has not made us virtuous or even pious. With all his shortcomings of omniscient knowledge and almighty skill, the studious, enthusiastic, and assiduous physician is better worthy our honor and reward than most of the skilled laborers that arrogate for themselves the highest social seats and the most liberal stipends.

A Healthy Man, a Healthy People.

I cannot leave my accomplished and titled physi-

cian, who has furnished so large a part of my discourse, without quoting his definition of health. He says:—

"A pattern healthy man is one who lives long and vigorously; who, in every part of his life, wherever and whatever it may be, does the largest amount of the best work that he can, and, when he dies, leaves a healthy offspring; and we may regard that as the healthiest nation which produces for the longest time, and in proportion to its population, the largest number of such men as this." "We want," he says, "more ambition for health. I should like to see a personal ambition for renown in health as keen as that for bravery or for beauty, or for success in our athletic games and field sports. I wish there were such an ambition for the most perfect national health as there is for national renown in war or in art or commerce." Again, he says:—

"It is a union of strength with a comparative indifference to the external conditions of life, and a ready self-adjustment to their changes, which is a distinctive characteristic of the best health. He should not be deemed thoroughly healthy who is made better or worse, more or less fit for work, by every change of weather or food, nor he who, in order that he may do his work, is bound to exact rules of living. It is good to observe rules, and to some they are absolutely necessary; but it is better to need none but those of moderation, and, observing these, to be able and willing to work hard on the widest variations of food, air, clothing, and all the other sustenances of life."

For my own part, I can but second this stimulus of a wise and salutary personal and national ambition. I hope the time will come, I believe it will very soon come, when a man will be as ashamed to be sick as to be drunk, and when he will resent the imputation of having dyspepsia as much as he would the imputation of having the itch.

But, with all his improved hygiene, temperance, good nursing, and public sanitary preventives, what does our philanthropic physician expect to accomplish in the way of arresting the miseries caused by disease? He tells us that he expects to reduce the volume of sickness *one-fourth*, "and, if people will have it so, a still larger proportion:" would he say *one-third*? But there is the ugly other two-thirds! Carlyle is credited with the story that, when the cook called up the well-grown chickens with delusive corn, and said she would give them the choice of how they would be killed, whether by beheading, stunning, or garroting, and when one smart rooster interposed by asking, What makes you kill us at all? she crushed him by replying, *Oh, but you wander from the point*. Would it be an impertinent wandering from the point, if I, a prospective victim of cholera, cancer, small-pox, or typhus, or some other fever, should ask, *Why have these horrors at all?*

And here comes in the two methods of combating disease hinted at by Sir James Paget: one is to quarantine them and fence them out by rigid prevention; the other is to give them rope, and make every constitution so robust as to set them at defiance. After all, it is not certain that all diseases are not symptomatic of some general weakness, that men take diseases because they are weak, and nature appoints that method of getting rid of them, and that, if all known diseases were starved out by absolutely secluding even the puniest children from exposure to them, Nature would soon invent some other agency to rid herself of those unfit to survive.

Two young men imperfectly clad take a long drive in a chill afternoon, and one returns with ruddy cheeks and a better appetite, the other with ruddy cheeks and the seeds of pneumonia. The

late Capt. Rackleff, who lived in this city six months after his one-hundredth birthday, told me that he had been exposed on ship-board to yellow fever and other infectious disorders, had stooped above sick men and breathed their breath, had washed and prepared them for their watery burial after their death, but never incurred any disorder. The scarlet fever, the plague, diphtheria, and other epidemics discriminate and turn aside mysteriously from persons of all ages exposed to them. The active cause of Asiatic cholera, said Dr. Koch, is an animal germ, a microbe. *Fudge*, said Dr. Kein, *show me your microbe, and I will eat him*. And he did—with impunity. So, that the thing to do is to make the human body safe amid surrounding conditions of disease; and, to do this, we must begin further back, and be willing to undertake more heroic preventives. The human race will never attain the condition of health which is best defined in the terse language of Horace: a sound mind in a sound body, till it has learned how to breed healthy children. We have interposed a wise control over the procreation of horses, cattle, swine, sheep. We have neither found how nor dared apply the same intelligence to the procreation of men.

IN MEMORIAM.

Died in Philadelphia, on the 3d inst., THEOPHILUS L. SICKELS, a man of very superior intellectual and moral worth. His death is not only a severe loss to the circle of his immediate friends and the neighborhood of his home, it is a grave public calamity.

In his profession, that of civil engineer, Mr. Sickels had won eminent place. He executed, some years ago, important commissions abroad for the government in connection with his profession. He was the engineer, I think, who laid out the line, and had charge of the building of the Union Pacific Railroad; afterward, of important railroads in Colorado; subsequently, constructed the iron bridge over the Missouri River at Omaha, an admirable feat of engineering skill; and at the time of his death, as for some years past, he was consulting engineer for the Union Pacific Railroad.

He was in all ways a man of most noble impulses, thoroughly free and progressive in thought, giving of his means liberally not only, but often munificently, for the diffusion of the best ideas in the secular and religious life. Of the Longwood Yearly Meeting of Progressive Friends he was a member and a most staunch and indefatigable supporter. It is not too much to say that of late years, certainly, this meeting has, in some ways, been much more indebted to him than to any other person.

Called by business engagements latterly to spend large portions of his time in New York,—his home was at Kennett Square, Pa.,—he connected himself with the society of Dr. Adler; and to this, too, he yielded a generous and ever interested support. Modest and unassuming, shrinking instinctively from any putting of himself forward, he was at the same time of very positive and pronounced convictions, ready on occasion to own and avow them, and at whatever personal cost to honor. Thoroughly sweet-spirited, magnanimous, he was also one of the most independent, courageous, upstanding of men. Altogether, I think I have never had the privilege to know a more attractive, winsome, loving, and quickening nature than was his. Our country, our world even, has few such to lose. In their departure, we are all deeply bereft.

Bereft, but not orphaned. The essential of the history still remains. The great qualities of character in our dear friend that shone in his life so resplendent, that were himself, abide to raise, cheer, and inspire. The steadfast, indomitable courage and hope shall be our re-enforcement of strength, kindling perpetually to a grander faith and nobler doing. There is no end to their healing, uplifting power. Arjuna, says the Hindu poet, "follows the path unknown to mortals, where no golden sun nor silver moon divides the time; but the mighty hosts of men shine with the splendor of their own virtue, in a light which we that are afar off think to be the tremulous fires of stars."

For *The Index*.

THE RUINS OF LIEBENSTEIN.

Many years have passed away
O'er the keep of Liebenstein:
Now, its tower of mossy gray
Doth the ivy close entwine,
And upon its ruined walls
Oft the timid lizard crawls.

Ere the busy day is done,
While o'erlooks the ruddy sun,
Many a prying traveller
Wanders curious here and there.
But when lengthened shadows fall
Backward from its gleaming wall,
And the night succeeds the day
As the curtain ends the play,
Then the peasant stealing home
From his love-tryst in the gloom
Cometh nigh with many a fear,
For he seemeth oft to hear,
Borne upon the winds of night
Voices not for mortal ear:
Now despairing shrieks of woe;
Then the tones of sudden fright;
And sometimes whispers, soft and low,—
Lovers' vows of long ago.

'Tis but fancy. Ne'er the dead
Walk these halls with silent tread;
Neither tortured captives' groans
Nor laughing maidens, merry tones
E'er disturb the quiet night,
In this castle on the height.
Silence reigns within its gloom,
Mute the dungeon as the tomb.
Yet I fancy, could it speak
And this ruin silence break,
Not in pride 'twould seek to tell
Of the sieges it befell,
Of the grandeur it hath known,
Of the splendors that are gone,
But faintly as a dying moan
Thus would speak the lips of stone:

"O River of Humanity,
Flowing to the silent sea,
Wave by wave ye pass me by,
Live and love, forget and die;
And your life and love, they seem
As an unremembered dream.

"Ah! the secrets that I keep
Of the mortals long asleep!
Mysteries of sin and crime,
Never to be told in time,
Guilty deeds that here were done
That ne'er knew the prying sun;
Cherished hopes and saddening fears,
Happy smiles and bitter tears;
Love that swiftly didst entwine
Hearts that once beat true as thine;
Whispered vows that here were spoken,
Promises that soon were broken;
Kisses that did sweet impress
Lips that now are nothingness;
Friendship that would outlast death,
Yet was blasted by a breath,—
All have vanished! All have gone!
What remains? These walls of stone.

"Dream not, then, your love will stay:
Life and love have but their day;
Death holds all things in his power;
Love he gives the briefest hour.
I am ruins! Yet for me
Time doth wait. I am; and ye,—
Graves shall cover thee and thine
While stand the towers of Liebenstein."

A. L.

THURINGIA, GERMANY, September, 1884.

CORRESPONDENCE.

TEMPERANCE STATISTICS.

Editors of *The Index*.—

My attention has been called to the article of V. B. Denslow, of Chicago, in your issue of February 5, in which he protests against the misrepresentation of facts or statistics used in furtherance of the cause of temperance. If the *Christian Union* or any other paper intentionally published "false statistics" in the interests of either morality or religion, I should unite in condemning it, as I do not believe in "doing evil that good may come of it." I have not the data at command by which to judge of the correctness of Mr. Denslow's estimate of the total annual cost for meats consumed in this country, but think it probable an error was made in the comparative total orig-

inally printed. I will leave that, however, for the papers publishing the same to investigate, and admit or deny as the truth may require.

The balance of Mr. Denslow's article relates to the total sales of liquors used in comparison with the totals for bread, meat, etc., namely \$300,000,000 annually, which the writer appears to consider exaggerated, by assuming that the profits thereon are divided among only 114,404 proprietors and bar-tenders, giving an average of \$8,000 per year to each, and rendering the business by inference too inviting for the "estimated figures given" to be correct. In reply, I believe the total of the drink-bill of the nation is not less than \$1,000,000,000, and that the number of persons engaged in the selling of the liquors (not including manufacturers) is not less than 600,000 instead of 114,404.

(1) By the Internal Revenue report of 1883, the number of retail liquor-dealers paying tax to the general government were 195,869. No one denies that probably thousands of dealers evade the tax or live on "cross-roads" where the tax gatherer does not find them, and we may safely claim that 200,000 does not more than cover all the retailers of alcoholic drinks in the country. These saloons must have on the average thirty patrons each, giving a total of 6,000,000 customers, over one-tenth of our population. These patrons spend, we believe, an average of fifty cents per day, \$3.00 per week or \$150 per year for liquors, making a total of \$1,000,000,000. The *Chicago Tribune* admits that the amount thus spent in the United States is not less than \$900,000,000, and the *New York Tribune* puts it at \$850,000,000 per year. Both the "Beer Brewers' Congress" and the "Association of Liquor Dealers" report larger average sales per saloon than \$5,000; and these figures, with 200,000 saloons, produce the total of \$1,000,000,000. To this amount should be added another \$1,000,000,000 for the indirect cost or "consequential damages," but the mental anguish and loss of happiness resultant from the sale and use of the stimulants cannot be estimated.

(2) The number of persons besides the landlords to share the gross profits of the business I estimate as follows: 200,000 saloons, with an average of three males or females to each, giving the 600,000 mentioned, who ought to be employed in better business for their own good as well as the good of mankind.

The number of dealers, etc., taken from "the census" by Mr. Denslow, is as far from the facts as the "1,101 saloon-keepers" entered as in Boston by the United States Census of 1880, when there were probably 3,500, if not over 4,000, as at present.

Let us increase the total sales of substantial food as much as the truth will permit; and, if more bread and meat were used to prevent and remove the feeling of faintness at the stomach or "internal goneness," there would be less demand for alcoholic drinks, and the above alarming total might be largely reduced. But, while our nation continues cursed with so many thousands of licensed and unlicensed drinking saloons, let us not endeavor to hide or disbelieve the appalling facts, but keep in mind that the yearly excess of receipts over disbursements of our general government are equal to the total revenue of the nation from liquor manufacturers and dealers (\$91,000,000), showing that the whole liquor traffic might be abolished, and the receipts be sufficient to meet all the necessary expenditures of the national government.

GEO. KEMPTON.

SHARON, MASS., Feb. 12, 1885.

THE TESTIMONY OF ATHEISTS.—The facts of daily life, as observed by everybody, show that there is no perceptible difference in the matter of truth-telling between people who say they do not believe in the existence of a God and those who say they do. A declaration of this belief is in fact so easy, and does a man so much good with his neighbors, that nearly all liars make it as a matter of course. A man needs to be very honest and truthful to deny the existence of God; and, as a general rule, the testimony of such men is apt to be as reliable as that of professed believers. The principle that religious belief has nothing to do and ought to have nothing to do with a man's credibility as a witness is now acknowledged in the jurisprudence of most civilized countries, including twenty-eight States of this Union. But the Massachusetts Senate rejected it sternly by twenty-four to ten, after a luminous debate. One senator held that a man who "denied under the genial sun-

light his belief in the Author of that radiance" ought to be punished for it in some way. Another senator opposed putting the man who denied the existence of a God "on an equality with the man who devoutly acknowledged it." The object of a court of law in examining witnesses is to find out the truth about a particular transaction, and not to discourage infidelity. No man conducts his business or his social life on the assumption that atheists are untruthful or dishonest; and to administer justice so as to deprive him of important testimony in his favor, on such a theory, is monstrous as well as barbarous.—*The Nation*.

FROM one of Lillian Whiting's very interesting Boston letters to the *Chicago Inter-Ocean* is taken the following paragraph referring to Dr. W. T. Harris and other exponents of speculative philosophy: "Philosophy can bake no bread; but she can procure for us God, freedom, and immortality." These words from Novalis are a condensed expression of the faith of a certain cult of Boston, which is destined to exercise a great influence in the world of philosophic thought. Of this school, Prof. William T. Harris, LL.D., is the founder and the acknowledged leader. Never was a movement, whose importance is widely recognized among select circles, more quiet. Lectures, papers, conversations,—intellectual excursions of the finest quality,—are constantly being given in private parlors to an audience fit, though few; but no mention of them is invited, and, while there is the most generous and hospitable spirit prevailing, the audience simply consists of those who, through a range of intellectual affinities, gravitate to the gatherings. Eighteen years ago, Prof. Harris established the *Journal of Speculative Philosophy*, of which he has always remained the editor, and, in the estimation of its clientele, its most important and valuable contributor. The magazine was simply a materialized expression of the thought that sought a means of utterance. It originated in St. Louis. There, in a city whose population is largely made up of a foreign and miscellaneous element, where the average intellectual life of the community is not high, a little band of thinkers were drawn together, who formed the nucleus of what is now a recognized school of thought. The names of the leaders have become familiar in Boston now as those of the choicest lecturers and exponents of speculative philosophy; but at that time the little group of six or eight met, talked, wrote, and read their papers, published them and perhaps read them again, with no larger response. Prof. Harris was the superintendent of the public schools of St. Louis; O. J. Snider, an instructor in the high school. In later years, a brilliant and gifted woman, whose kindergarten work has made an era in American education, came to the group. Louis Soldan and Mr. Kroeger, both eminent German translators, were attracted to the *Journal of Speculative Philosophy* as a means of expression. Four numbers, often issued at very irregular intervals, made up a volume. The magazine is now published by D. Appleton & Co. in New York and by Trübner & Co. in London. It has a special circulation in Germany. It still appears at irregular intervals, the current number being dated April, 1884."

JESUS AND THEISM.—Rev. Charles Voysey thus defends his position as a non-Christian theist in a letter to the *London Inquirer*: "In so far as Jesus said anything true or did anything good, Theism is not opposed to Christ. In so far as he proclaimed pure theistic truth, we are entirely on his side. What we oppose are doctrines attributed to him in the Gospels which we believe to be false; namely, his pretensions claims to equality with God, his intercession and mediation, his threats of eternal perdition and claims of excessive loyalty to himself. We also stand opposed to those Christians who believe Jesus to be God, and to those Unitarian Christians who, while believing him to be only a man, place him in a position infinitely above all other men, and where they would think it foolish or impious to place any one else. . . . Your correspondent asks me where did I get my thought of God as a benign Father from, if not from Jesus. Let me tell him that I never found out that I had a loving Father until I gave up my belief in Christ and chucked away the New Testament as a spiritual guide. And the same natural but holy guides—namely, conscience and love, which led me to the Father—led me also still further to criticise the portrait of Jesus in the Gospels. We are painfully aware of the difficulties as we are of the grandeur of

our task. No one can set himself deliberately to force his way against wind and tide without foreknowing the effort it will cost or perceiving the repeated discouragements which lie in wait to obstruct his progress. But we are comforted and strengthened by the conviction that we have reason and truth and religion on our side, and that the day must come at last when the 'swollen talk about Jesus'—as the great Channing is alleged to have termed it—will be effectually silenced."

BOOK NOTICES.

THE RELIGIOUS ASPECT OF PHILOSOPHY. A Critique of the Basis of Conduct and Faith. By Josiah Royce, Ph.D., instructor of Philosophy in Harvard College. Boston: Houghton, Mifflin & Co. 1885. pp. 484. Price \$2.00.

This work is an attempt to sketch the basis of a philosophical system, and to apply its principles to religious problems. The author states in the preface that, "as he has no present connection with any visible body, and no sort of desire for any such connection, he cannot be expected to write an apology for a popular creed"; yet that his aim is a positive aim, and he hopes "to come to some peaceful understanding with his fellows touching the ultimate meaning and value and foundation of this noteworthy custom so widely prevalent among us, the custom of having a religion." Touching the nature of religion, he says that strength and moral value and elevation of feeling are not enough to make it religious. Belief in the supernatural, in God, "need not be religious belief." Religion has to do with action. But it says, "not merely *do* and *feel*, but also *believe*." It must therefore have a theoretical element, a statement of doctrine. To quote the author: "These three elements then go to constitute any religion. A religion must teach some moral code, must in some way inspire a strong feeling of devotion to that code, and in so doing must show something in the nature of things that answers to the code, or that serves to re-enforce the feeling." Thus defined, religion is necessarily related to philosophy; for both have to do with the fundamental Kantian problems: *What do I know? What ought I to do?*

The nature of moral distinctions, involving the consideration of the priority of ideals in religious philosophy, the fundamental difficulty about all ideals, and altruism and egoism, are discussed through several chapters with much acuteness and subtlety of thought, and with the freest criticism of writers of the experience school of ethics. The facts of life show a conflict of wills. Moral insight, the author argues, consists in realizing their true nature, and involves the will to harmonize them and to demand an end of the conflict. "Get and keep the moral insight as an experience, and do all that thou canst to extend among men this experience." "Act out in each case what the moral insight bids thee do." "Having made thyself, in so far as thou art able, one with all the conflicting wills before thee, act out the resulting universal will as it then arises in thee." In the ideal state of humanity, "the separate men will not know or care whether they separately are happy, for they shall have no longer individual wills, but the Universal Will shall work in and through them, as the one will of two lovers finds itself in the united life of these twain, so that neither of them asks, as lover, whether this is his perfection or the other that he experiences."

Our author's system is, of course, thoroughly idealistic. It recognizes no external world, to the relations of which man must adjust himself; and the only strife it admits is "the conflict of wills." Neither does this system recognize an "infinite creative Power outside of his products." The "concept of producing an external thing involves of necessity a relation to a Law above both producer and product, which determines the conditions under which there can be a product at all." If it be said God created the conditions of any particular creation, still the same difficulty would arise as to the conditions of that creation, and so on *ad infinitum*. The teleology that seeks "a world-manufacturer, and cannot discover him," is treated almost contemptuously. Even if the design argument proved an intelligent Power, it would still fail, it is claimed, to prove that he has moral attributes. The supposed external world is either dumb or given to dark and doubtful speeches. Let the student cease to expect to find a proof of God among the "dead facts of science," and seek the Eternal, not

in experience, but in thought. Not that above all evil powers is there some good power mightier than they, but rather that in all the powers "dwells the higher spirit that does not so much create as constitute them what they are, and so include them all." "No power is it to be resisted, no plan-maker to be foiled by fallen angels, nothing finite, nothing striving, seeking, losing, alluring, growing weary: the All-Enfolder it is, and we know its name. Not Heart nor Love, though these also are in it and of it: Thought it is, and all things are for Thought, and in it we live and move." As our thoughts at any moment combine several fragmentary thoughts into unity, so the Universal Thought combines into a unity of thought all the thoughts that have been or will be or that are possible. This Universal Thought our author "for convenience" calls God.

What we have present in us when we do good is an element of divine existence. In the choice against evil is the essence of goodness. But, in God, the evil impulse of man forms a part of a total good will, and partial moral evil is universal good. The imperfection of the finite is but the fragment of the infinite Whole in which is no imperfection.

"We know nothing," says Prof. Royce, "about individual immortality, nothing about any endless future progress of our species, nothing about the certainty that what men call from without goodness must empirically triumph just here in this little world about us. All that is dark. . . . Whatever happens to our poor selves, we know that the Whole is perfect."

From this outline, the reader will be able to form some idea of Prof. Royce's positions and reasonings. For his thought, he claims but a very moderate degree of originality. Yet he has put together parts of several idealistic systems in a manner to make his own doctrine somewhat independent and unique. The work is stronger in its criticisms of what is rejected, however, than in its support of the positions affirmed. Idealism, in one form or another, will always have a charm for a class of thinkers; but it is not likely ever to weaken general confidence in an objective world or to interrupt the march of science which depends upon observation and experience, and upon that objective order which is affirmed by common sense and, in our opinion, also by the highest philosophy. This work, by repeating with clearness and force a statement of the difficulties of theism on the theory of an external world, in which nearly all people believe, and by making the author's belief in Universal Mind dependent upon subjective idealism, which is constantly contradicted by the common sense and practical reason of mankind, must tend, we think, in its influence on general readers, to scepticism and agnosticism.

B. F. U.

WOMAN SUFFRAGE DEFENDED BY IRREFUTABLE ARGUMENTS: and all Objections to Woman's Enfranchisement carefully examined and completely answered. By D. P. Livermore. Boston: Lee & Shepard. pp. 222. Paper covers. Price 50 cts.

The family quarrels, estrangements, and divisions which, according to its opponents, are liable to be engendered by woman suffrage, do not seem to crop out very largely as yet in that movement, judging from the attitude, so far as known, of the male relatives of leading women suffragists. Mrs. Stanton's lawyer husband has entered no protest against her advocacy of the rights of her sex; and her son, the author of *The Woman Question in Europe*, has given us in that work one of the most telling, thorough, and admirable contributions to the literature of that question we have yet had, and in so doing has placed himself forever on record as a chivalrous champion of woman's cause and as a thinker in sympathy with his distinguished mother's views. John Stuart Mill, his wife, and Helen Taylor, his step-daughter, were all earnest agitators of the question; Henry Fawcett, the blind Postmaster-General of England, was no less ardent in his advocacy of it than Millicent Garrett Fawcett, his brilliant wife; Charles Stewart Parnell stands equally pledged with his mother, Mrs. Delia Parnell, to a belief in equal suffrage; Richard Cobden's ideas find expression in the efforts of his daughter Jane toward securing this right for her sex; the name of Lord as well as of Lady Amberley is quoted in support of suffrage for women; brave Wendell Phillips' efforts to secure it were indorsed by his wife; Lucretia and James Mott were at one on this as on all other questions of justice, and their son-in-law still carries on their good work in this direction; Henry Blackwell's earnestness in behalf of

woman's enfranchisement is no less marked than that of Lucy Stone and their daughter; and, among the many instances which could be cited of marital unanimity in regard to the justice of woman's demand for political self-representation, this volume from the husband of one of the most popular platform speakers on the question is specially noteworthy, as well for its implied prophecy that the discussion of the subject in families is not likely to cause much division in sentiment between husbands and wives as for its strong, logical, earnest, and elaborate refutation of the arguments brought forward by the opponents of the movement. The scope of Mr. Livermore's work may be inferred from the sub-headings of the book, which indicate the different points of view from which the question is considered, in the following order: "Suffrage a Natural Right," "Suffrage a Political Privilege," "Appeal to our Legislators," "Mrs. Clara T. Leonard Answered," "Mrs. Kate Gannett Wells Answered," "Prominent Objection Refuted," "The Question for Statesmen," "Hon. George G. Crocker Answered," "Hon. Mr. Williams Answered," "Hon. L. P. Poland's Objections Answered," and "Good Results." Mr. Livermore quotes freely and pertinently from distinguished writers on the question, making the work valuable for those desirous of information on the subject. S. A. U.

SHADOWS: Being a Familiar Presentation of Thoughts and Experiences in Spiritual Matters. By John Wetherbee. Boston: Colby & Rich. pp. 287.

Mr. Wetherbee, in this book, relates his personal experiences with (so-called) spiritual phenomena in a pleasant, chatty way, at considerable length and with some repetition, as though his work on the book was a labor of love which he was loath to leave. If these "Shadows" are not so definite in shape as to convince the sceptical reader of the reality of that spiritual intercourse in which the author of this book apparently firmly believes, such reader will at least find food for thought in the manner in which these "manifestations" are said to have taken place, in the general weakness of the matter brought to light through them, and the candid way in which they are discussed by the writer. Mr. Wetherbee seems to be very fond of poetry; and the pages of his book are garnished with frequent quotations from favorite authors, with an occasional original poem added. The book is dedicated to the author's wife.

The Century is becoming of late quite a war magazine; and, in the March number, we find four profusely illustrated articles on the American Civil War.—"The First Fight with Ironclads," by John Taylor Wood, "In the Monitor Turret," by S. D. Greene, "Watching the Merrimac," by R. E. Colston, and "Recollections of a Private," by Warren Lee Goss. Several subjects are treated in "Memoranda of the Civil War," notably the conduct of "Gen. R. S. Ewell at Bull Run." In "Topics of the Times," the *Century's* war series is discussed; and "The Blue and the Gray" forms the subject of one of the "Open Letters." In addition, the article by R. E. Colston, on "The Land of the False Prophet," will be read with much interest, in view of recent events in the war in the Soudan; and C. F. Goodrich has something to say in regard to "The Bombardment of Alexandria." This new departure on the part of the *Century* seems to be a profitable one, since it has largely increased its subscription list, and one hundred and ninety thousand copies were struck off in the first edition of this number. The literary excellence of the magazine is not, however, allowed to be impaired; and contributions by Howells, James, Stedman, O. B. Frothingham, and others, make it one of the most interesting numbers ever issued. A very fine portrait of Daniel Webster, engraved by T. Johnson, adorns the frontispiece page; and Stephen M. Allen gives "Some Reminiscences" of the great statesman. For sale by Cupples, Upham & Co.

MR. E. T. DEWING, whose "Study for a Symbolical Figure," in the New York Water Color Exhibition, has been unanimously accorded the place of honor, was among the artists who contributed to the Prang Prize Exhibition. Mr. Dewing is, in the truest sense, an idealist; and his works have in them just that element of the poetic which appeals rather to the cultivated few than the universal public. It is in the reproduction of such ideal creations that lithography vindicates its claim to rank as a fine art.

Orders from the Trade solicited.

GUIZOT'S HISTORY OF FRANCE.

With 426 Fine illustrations. Eight beautiful volumes. small octavo, cloth, gilt tops. Price reduced from \$49.50 to \$8.00, postage \$1.20.

THE BEST.

"This is the only complete American edition of this work, which is known as the best popular history of France."—*Journal, Indianapolis, Ind.*

MACAULAY'S Peer

"Guizot is the Macaulay of the history of France. His narrative is full of emotion, like a quick stream; his characters rise before us as in the flesh; they are men and women, not historic lay figures. It is as charming as any romance. There is only one drawback . . . it seems more like getting a present than making a purchase."—*Dominion Churchman, Toronto.*

CIPHERED OVER.

"From the pen of a master. How Mr. Alden can give the eight volumes, and this on good paper, and clear type, including the multitude of illustrations, is a thing we have ciphered over, but we fail to understand it."—*Christian Leader, Boston.*

100-PAGE CATALOGUE sent free. The best literature of the world at the lowest prices ever known. Books sent for EXAMINATION BEFORE PAYMENT

2,000

PHOTOGRAPHS OF WORKS OF THE OLD MASTERS.

Large Copies only 20 cents each.

The following examples are from the so-called "Twelve Great Pictures of the World." The Last Supper, LEONARDO DA VINCI; The Last Judgment, MICHAEL ANGELO; Descent from the Cross, VOLTERRA; Assumption of the Virgin, TITIAN; The Transfiguration, RAPHAEL; Sistine Madonna, RAPHAEL; Holy Night, CORREGGIO; Aurora, GUIDO; Beatrice Cenci, GUIDO; Last Communion of St. Jerome, DOMENICINO; Descent from the Cross, RUBENS; The Immaculate Conception, MURILLO.

Excellent unmounted copies of all these will be sent by mail on receipt of \$2.40; or any one or more at 20 cts. each (with Catalogue when desired). Address

W. H. SHERMAN,
455 Jackson Street, Milwaukee, Wis.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price \$3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR's basis of action, and the best exertions of its managers will always be used to render it a free and independent journal devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

JOSIAH P. MEMORIUM,
PAINE MEMORIAL BUILDING,
Appleton St., Boston, Mass.

Frothingham's Sermons.

The sermons are neatly printed in pamphlet form, and our friends who wish to do missionary work for the Liberal cause will find them admirably adapted to that purpose. To such as order them in lots of 25 or more, the price will be reduced to 3 cents. Single copies 5 cents.

BY B. F. U.

THE *Evening Record* of this city refers to the Irishman who having tormented a bull was tossed over the fence by the impatient animal, whereupon he picked himself up, rejoicing that he had "had his fun first or he should have missed it entirely." The *Record* thinks that "a large number of the hilarious Democrats now in Washington will be in a condition to sympathize with Patrick, when President Cleveland begins to put in his work."

REFERRING to the series of lectures now closed at the Old South Church in this city, in defence of Free Trade, the Springfield *Republican* says, "The most forcible and telling lecture in the whole series on the tariff was that of Gen. M. M. Trumbull, of Chicago." Gen. Trumbull is an Englishman and a "self made man." He came to this country years ago, and worked as a day laborer with a shovel and wheelbarrow, went West, and at the beginning of the War of the Rebellion enlisted as a private, and soon rose to the rank of general. He is the author of two works which were noticed very favorably in *The Index* some months ago.

GEN. FRANCIS A. WALKER, President of the Institute of Technology, in a lecture before the Lowell Institute, said that in treating of the laws of population the doctrine of Malthus, that population when unchecked, tends to increase beyond the means of subsistence, must be accepted with implicit faith. The great Irish migration, caused by the famine in Ireland in 1846, brought to this country a class of people who had been previously in the depths of bitter poverty. Under the influence of unaccustomed abundance of all kinds, the temptation to raise large families was irresistible, and the birth-rate rapidly increased. Yet, in succeeding censuses, the normal rate of growth of population was not increased, was even, in fact, decreased, proving that the number of deaths must have been correspondingly large. The great forces now acting to prevent over-population are, he said,

an unequal distribution of males and females in different parts of the country; the growth of celibacy; the procrastination of marriage, the average marrying age for males being 26.5 years and for females 23.9 years, and the diminution of procreating force due to immoral practices. Gen. Walker stated that, from various considerations, including the influence of the civil war in increasing the death-rate, it is highly probable that the population of the United States in 1900 will fall a little below 80,000,000.

A CORRESPONDENT of the Chicago *Inter-Ocean* writing from Jacksonville, Fla., in a report of an interview with Gen. F. E. Spinner, the "watch dog," as he was termed, of the United States Treasury, represents him as extremely severe in his criticism of the orthodox clergy and the creeds they preach and profess to believe. To this criticism, the general added the following remark: "When quite a young man, I was arraigned for my infidelity in church doctrines and faith in woman's rights, as long ago as Fanny Wright was agitating the question. There has never been any reason why women should not have the ballot. They are better than men; and their influence should be felt in politics, that morals may be improved." The letter says that he is greatly beloved, especially by the young people; and illustrations of his goodness and generosity are given. The account concludes thus: "The dear old man has gone more than a decade over the time allotted mortals, and yet he is as vigorous in health and mental strength as while being intrusted with and writing the crooked autograph upon the government greenbacks. He is spending the late autumn of his life here in Florida among his books and pictures, surrounded by millions of wonderful shells which have been gathered from all oceans. He has presented to the Smithsonian Institution many specimens of this rare collection. Chief Justice Waite has lately been spending many pleasant hours in the general's sanctum, where they have recalled memories of their Washington life."

SOME weeks ago, we quoted a few sentences from Rev. Dr. Shedd's article in the *North American Review* in defence of eternal punishment, and added, "Anything more fiendish than this from a professed moral teacher cannot be found in the literature of the world." Replying to this in the New York *Observer*, Dr. Shedd says: "I will leave it to any intelligent reader whether there is anything in my whole article more terrible than the words which Jesus Christ says he will address to a certain class of men who will stand upon his left hand on the day of judgment: 'Depart from me, ye cursed, into everlasting fire, prepared for the devil and his angels.' . . . The alleged 'fiendishness' of the dogma clings, if to any one, to the Redeemer of sinners and the Judge of the world." We think our characterization of Dr. Shedd's teachings needs no qualification. Whether they are more "terrible" than the above-quoted words ascribed to Jesus is to us a question of no great importance; and, certainly, the truth and justice of our statement do not depend upon the way it is answered. Neither

age nor the authority of a name can make a cruel and degrading superstition wise and just teaching. We here reproduce the language of Dr. Shedd on which our comment was based: "A human judge pronounces a theft to be endlessly a theft, and a thief to be endlessly a thief; but he does not sentence the thief to an endless suffering, though he sentences him to a penal suffering. But this objection overlooks the fact that human punishment is only approximate and imperfect, not absolute and perfect, like the Divine. . . . But the divine tribunal, in the last great day, is invariably and exactly just, because it is neither reformatory nor protective. Hell is not a penitentiary. It is righteous retribution, pure and simple, unmodified by considerations either of utility to the criminal or of safety to the universe."

THE Boston *Sunday Herald* says that the new school of healing, called "mind cure," "faith cure," and "Christian science," is "spreading like wild fire through the selectest circles of Boston and vicinity." These "selectest circles" we will say, for the information of those who live at a distance from this city, do not include the scientific class, nor the recognized intellectual class, nor the practically influential class of the city, but are composed mainly of superficial people, whose minds are filled with mysticism and superstition, among whom, of course, are families of wealth and fashion and what passes under the name of "culture," but who are not essentially different from the mass of men and women who mistake emotion for inspiration, fancy for fact, surmises for science, and the glimmerings of their undisciplined minds and unregulated feelings for "the light that never was on sea or land." Of the "craze" referred to, the *Herald* says that "it has the essential mark of all fanaticism, the contemptuous turning away from reasoned truths and abandoning the mind to wild dreams. Wrapped up in no end of metaphysical jargon, its dogmas have just the kind of imposing sound that produces an impression on people ignorant of philosophy. . . . But Boston and vicinity are nothing, if not intellectual; and to find out suddenly what a stupendous thing mind is, and how it can evolve at will sound lungs, supple joints, electric nerves, and free secretions, and carry them around everywhere as pure mental images, to the eternal discomfiture of materialistic doctors, surgeons, and medical schools,—all this is so exhilarating a discovery for a people justly priding itself on intellect that it must reasonably be expected for a time to turn many heads a trifle topsy-turvy. And yet it might humble Boston a trifle to read a little in the history of the dark ages, and see how completely out of sight the Athens of America has been beaten on this same course by people making no claim to anything but ignorance, excitability, and superstition." Facts as to the reaction of the mind on the body are of course undisputable, and are recognized by all competent physicians in the treatment of the sick; but, with the faith and mind curers, a few grains of truth are mixed with whole bushels of chaff.

VOLUNTARY RELIGION.

In the United States, the voluntary system of supporting religion has been theoretically adopted. On the principle of impartial justice toward all creeds and faiths and of equal respect for the consciences of all citizens, this is the only practicable course. The system, in vogue in some countries, of raising money by general taxation for the support of religion, and then equitably dividing it among the churches of different beliefs, is only a half measure of justice. Not all forms of belief are so organized as to receive State aid under such a system. Nor does this method respect the consciences of a large class of citizens who do not believe in any kind of religious forms or institutions. The only complete measure of justice is that which has been attempted in this country, whereby the State gives up all control of and responsibility for the institutions of religion, and commits them entirely to the consciences and hands of citizens, to be managed by the latter in their individual capacity. This principle is not consistently carried out in all respects; but it is the theory and, in its main feature, the practice of this country with regard to the relation between Church and State.

Yet this has not always been the practice of the country. In the early colonial days, State and Church were closely united. Especially was this the case in New England, where State and Church were at first essentially one. But the principle of religious freedom began to take root here and there, and it grew with the country's growth; and, when the national Constitution was formed, this principle was fully and grandly recognized in that instrument. It has taken time, however, for the several States to adopt the principle and to adapt their laws and practices to it. There are many persons still living who remember when the parish in New England was coterminous with the town, and the town meeting was expected to keep the meeting-house (to call it a church was deemed heretical) in repair as a part of the town's property, and to provide for the salary of the minister in the regular levy of taxes upon the town's inhabitants. And when this custom was abolished by a change in the State laws, and the denominations were left to maintain their ministers and churches in their own way, there was a good deal of alarm felt lest the interests of religion would suffer. But the change proved to be no detriment to the churches, but rather a help. It is now admitted by all who have considered the matter that the voluntary system of support for the churches, so far from weakening them, was the means of putting new life into them. It aroused individual zeal and effort. The system is an acknowledged success. The institutions of religion are nowhere on a securer foundation financially than in this country.

Notwithstanding this fact, whenever it is proposed that this voluntary system for religion shall be adopted and trusted wholly, there are many timid folk who start up with the warning that religion would be imperilled. Such people do not appear to have much confidence in the power of religion to maintain itself in the world. If it be complained that it is inconsistent with the voluntary system, and unjust to many citizens, that the State should continue indirectly to subsidize the religious denominations by exempting church buildings from taxation and otherwise giving aid to certain forms of faith, the cry is raised that the churches would be enfeebled by the withdrawal of such aid, and that at least this much of encouragement and support is owed to the churches from the State because of the moral education which

the churches impart to the State's citizens. If Harvard College makes a move, as it is now doing, for the abolition of its rule of compulsory attendance by the students at daily prayers and Sunday services, it is charged that the college is working in the interest of irreligion and infidelity. If an attempt is made to amend the statute so as to prevent the credibility of a witness in court from being impeached because of his atheistic or agnostic beliefs, there will appear, as recently in the enlightened Senate of Massachusetts, some sapient senator with the argument that a man who can "deny under the genial sunlight his belief in the Author of that radiance" ought to be punished for such denial, and that it is unsafe for the State to put the man who "denies the existence of a God on an equality with the man who devoutly acknowledges it."

Can it be possible, then, that religion in itself is so weak that it cannot hold its ground in the judgment and among the institutions of mankind without being thus artificially bolstered up by the authority of the State? Is the argument for the existence of the churches so feeble that they cannot make good their cause in the court of human reason? If so, then hardly will the State's indorsement save them. But, as matter of fact, there is no evidence to show that the interests of religion would suffer in the least, were this indirect support which it now receives from the State to be withdrawn. Equal justice to all classes of citizens requires that this should be done; and it, surely, must be always among the interests of religion to do justly. Cannot the appeal for religion to the human mind and heart be made so strong that the believers in it will take care of it without asking any help from unbelievers? Is it not even possible that religion should be so presented to young men in college that it should appear to them both rationally and morally obligatory? If not, is it at all likely that their forced attendance on religious services will conduce to this end? And, as to the claim that the State owes a debt to the Church because the Church is a moral educator of society, even if the ground of this claim were to be admitted as a fact,—for some persons would question it,—the argument, if applied as a general principle of taxation, would lead to such a multitude of exemptions from the assessors' books that it would certainly break down of its own weight in practice.

The *Congregationalist*, conservative orthodox, referring to the petitions before the Massachusetts Legislature for the taxation of church property, does not apprehend any "harm to real Christianity, were the new move to be carried." It thinks that "the very poor and the very rich would suffer most, were all church buildings to be taxed." But it might be no detriment to "the very poor," if some of their religious societies, which are struggling with poverty and beggary, should be taxed out of existence, and compelled to consolidate with other societies. Frequently there is no difference of belief that stands in the way of such consolidation. And, if "the very rich" should have to curtail some of their ecclesiastical luxuries, it might happen that neither they nor religion would "suffer" any essential loss. The Roman Catholic Church in this country is not very rich except in zeal and numbers, but it manages to get a great deal of money and to build very costly edifices. The cathedral, for instance, which is in process of erection in the city of Providence, is described in a Catholic journal as follows:—

The new cathedral of Providence will be the most beautiful church in America. A little short in length, owing to the nature of the site, it finds compensation in its increased breadth. This irregularity

of dimensions, no doubt, increased the difficulties that the architect had to meet. Most, if not all, its glory will be from within. Mgr. Hendricken told the architect to take a *carte blanche* as to interior decoration. Anything that talent or taste could suggest or that money could buy for the glory of God's house and altar he promised to supply. How that promise was fulfilled may be known by all who remember that, when the completed church is consecrated three years hence, there will not be a dollar of debt on it. Yet nothing costly or beautiful has been withheld, whether rich marbles, painted windows, or clustering columns of precious stones. The quarries of the New World, the furnaces and the ateliers of the Old, have been searched for every product of nature and art that makes a home of the Eucharistic God worthy of its Lord.

There can be no question that any denomination that is rich enough to build so luxurious a church as this is abundantly able to take care of itself without any kind of subsidy from the State. One might suppose that it would even be proud to pay its just quota of taxes to the State for the possession of such an elegant property in honor of its "Eucharistic God." According to the New Testament story, "its Lord" was born while his mother and her husband were dutifully going up to the city of Bethlehem "to be taxed"; and there is good reason to believe that "its Lord" himself, though born in a manger and remaining poor after he grew to man's estate, yet faithfully paid his small tax-bill. And now that he has become the "Eucharistic God," and has been presented with such an expensive and magnificent dwelling, we cannot believe that the simple but firm integrity of his nature has been so corrupted by the unaccustomed grandeur that he would not still prefer that his costly "home" should share with the other homes in Providence the pecuniary burdens of that city.

WM. J. POTTER.

"OPPOSITIONS OF SCIENCE."

There are oppositions of science which are real enough. They are to superstition and the fears that follow in its train. They are to supernatural religion and the doctrines which, if they have not a supernatural support, have none whatever. They are to ignorance of natural laws and the inconveniences and miseries that such ignorance entails. But there are other oppositions of science which are quite imaginary. Thus, it has been conceived that there is an opposition between Science and the Beautiful in nature and in art. But there is no such opposition. Science is theoretical and practical. As theoretical, it is a revelation of the Beautiful in natural forms and forces. Other things being equal, the beauty of Nature is incomparably greater for the man of scientific knowledge than for the man who comes to Nature without this preparation for the best enjoyment of her graces and her gifts. True, there are men whose scientific knowledge is considerable, if not remarkable, for whom the beauty of the natural world, whether in its major or its minor aspects, is a thing which they do not regard. But for the impression that, if they had less of science, they would have more of beauty, there is not a particle of warrant. "We live by admiration," Wordsworth said. But we do not all live by admiration in the same measure. Some are born responsive to the touch of beauty,—some, but not all. Those who are favored by the bias of their constitution can never, I am sure, suffer the smallest diminution of their love of beauty, or of their enjoyment of the beautiful in nature, by the increase of their scientific knowledge. Indeed, such knowledge opens for them innumerable doors, inviting them to feasts of beauty, of which, otherwise, they would have been in total ignorance. I do not

believe that men of science, as a class, are deficient in their sense of natural beauty. Next to the artists and the poets, I am inclined to think they have the liveliest sense of it. Those who have least would probably have less, if they had not been drawn into the paths of scientific study and research. And how is it with those who are professional devotees of beauty, the artists and the poets? The scientific spirit has been so much diffused of late that every artist has been obliged to take it into his account. That the love of natural beauty has not been diminished by the advance of science, there are two witnesses whose evidence is so important and complete that it requires no confirmation: one is the fact that a century which has been pre-eminently the century of science has been pre-eminently the century of landscape painting; the other is that this same century has been pre-eminently the century of nature poetry, the century of which, in the sphere of poetry, Wordsworth will be, for coming generations, the representative man. True, there is danger that the individual at once in love with science and with art may attempt to carry matter over from the one into the other before it has attained æsthetic transformation. We have had many instances in literature of this defect. Objection was made to George Eliot's scientific illustrations in the first story that she ever wrote, and in her subsequent writings there are many passages in which her scientific data lack something of complete assimilation. But how many more in which the power and beauty never could have been without the scientific data!

I have passed, almost unconsciously, from the consideration of science as related to the love of natural beauty to the consideration of science in its relation to the products of artistic inspiration. Now, in a general way, the periods of scientific energy have been equally the periods of creative art. When Rembrandt painted Dr. Tulp delivering an anatomical lecture, he not only painted his most famous picture, but he registered the fact that to the Dutch who had taken Holland from the Spaniard and the sea anatomical science was an engrossing interest as well as art. If he was not himself eager to learn of Dr. Tulp all that he had to teach, his spirit was very different from Michel Angelo's and Leonardo's. These mighty ones imagined that, other things being equal, the best anatomist would make the best painter or sculptor. In their own work, they proved that Science was the handmaid of the Beautiful. To Turner's lack of science must be charged the fleeting quality of his creations. He did *not*, like Mr. Opie, mix his colors "with brains, sir"; and, consequently, they are already fallen from their first estate.

Here is a fact by which we may effect an easy passage from the consideration of theoretical to the consideration of practical science as affecting natural and human beauty. Practical science is industrial skill. It is the railroad and the telegraph, it is the power-loom, and the printing-press. It is the multiplex device by which the natural force of man is multiplied a hundred-fold. It would not be difficult to enumerate examples of the operation of this practical science that would be exceedingly depressing. It has the defects of its qualities, and they are many and profound. But, if we could balance the account, I doubt not we should find that the amount of beauty in the world had been mightily increased by the application of science to the industrial arts and to the means of travel and communication. The poetry of Shakspeare is the most beautiful effect that ever has proceeded from the creative genius of mankind. But consider, now, the millions of readers that have enjoyed the fruit of Shakspeare's mind,

where only hundreds could have done so but for the printing-press and the steam-engine working together in divine accord. Here is a service of beauty that offsets the persistent reduplication of architectural forms, the multiplication of chromos, the ruin which the railroad makes, spoiling the river's bank, tearing away the bases of the hills. Moreover, the reduplicated architectural forms, once well designed, are not so bad for those of us for whom artistic handicraft is an impossible expense; the chromos soon become a weariness, and are replaced by more genuine reproductions; Nature adopts the railway into her economy of beauty, making the cloven ledges gay with flowers, and touching the receding locomotive's long, low-lying cloud of trailing smoke with the same hues with which she makes her mornings and her evenings beautiful.

Another opposition of science, which is "falsely so called," is its relation to religion. To much that calls itself religion, science is unquestionably opposed. It is opposed to much that is connected with religion, and is conceived to be a vital part of it by many excellent people. But, in the course of time, a great many things which have been regarded as essential to religion have been stripped away, and religion has become all the more manifest and beautiful thereby. "If there are no witches, then there is no God," said the most learned men of Richard Baxter's time, and Baxter with the rest. Witches have gone to their own place, and have been followed there by various doctrines and ideas which had hardly more to recommend them to the rational mind. And are we, then, really becoming less religious? Mr. Philip Gilbert Hamerton, in his new book on *Human Intercourse*, confesses that we are. The ground of his confession is that the sense of Universal Law is becoming rapidly more general and more strong, and that naturally and inevitably, at the same time, the sense of Personal Interference is getting to be less and less general and impressive. The situation is undoubtedly as he represents it, but that his inference is valid I am obliged to doubt and to deny. The most deeply religious persons I have ever known have been most averse to the doctrine of an interfering Deity, most filled and satisfied with the doctrine of an invariable law? Are such religions upon false pretences? I trow not. For, certainly, no sentiment is more religious than a noble confidence, a perfect trust. This is the sentiment that naturally correlates itself with the persuasion of invariable law. The demand for providential interference is an imputation of defect. God is not omnipresent by the canons of this creed. But, for those who have attained to the conception of universal law which science has made possible, the world is full of Deity. Invariable law is but the scientific way of saying Everlasting Faithfulness. "But there can be no religion without mystery." And does the mystery lessen as the knowledge grows? "The more thou searchest, the more thou shalt wonder,"—not only at the vast unknown which lies beyond each new horizon, but at the known whose mighty harmonies shake the responsive heart with awe and gladness as the old mystery of ignorance could never shake the savage breast with awe and fear.

JOHN W. CHADWICK.

THE DAWN OF LIFE.

In the Peabody Museum at New Haven may be seen a fossil bone of most enormous proportions, which once formed the femur of an *Atlantasaurus*. This bone is over six feet in length; and a very simple calculation shows that, if the thigh bone were six feet long, the Saurian itself must have been about thirty feet in height and a hundred

feet in length. It is perhaps fortunate that this ungainly brute has been gathered to his fathers with most of his near relations, for they would seem sadly out of harmony with our Western civilization of to-day; yet once their home was in the Western country. The stone books of geology—Genesis in the original—tell us that these monsters, in one shape or other, have existed in nearly all latitudes at different times; for the bones of fossil Saurians and Mammalia have been found from the sterile hills of Patagonia to the frozen steppes of Siberia, and we can only wonder *why* such giant forms have passed away and given place to smaller. But the laws by which we are governed teach us—if we will learn—that the form surviving is ever the fittest form: so we may lay the flattering unction to our souls that the fittest, the noblest (?) form the world has yet seen is man, although that seems an unjustifiable aspersion on the character of the departed Saurians. Geology also teaches us that, before the age of great mammals, there was a time when mammals did not exist, and great reptiles held sway. In the famous *Archeopteryx*, we see the mammal gradually changing into the bird; we see the reptile with feathers, the bird with teeth, a hybrid that gives reality to early Grecian myths, and a charm to the study of geology such as fairy lore had for the child mind in the long ago. Before the Reptilian Age, the Amphibian had left its weird

"Footprints on the sands of time";

and our own book of Genesis startles us with revelations of hideous forms that once haunted the shores of great lakes and inland seas. Yet, before the age of Amphibia, we touch upon a time when the fish was king, and wondrous forms filled the sea. Then we go back step by step, lower and still lower in the scale of life, till the fishes have disappeared, and we have only mollusks and lowly, creeping, slimy things, which can scarcely be said to live. Here we pause, and ask if life really began in the water, if Eden were aqueous. Thereupon, Science, which answers, "Aye," leads to our searching for the "primordial germ" that has troubled so many people in the past, and is bound to trouble many more in the days to come; for man, in his pride, objects to being directed to a remote cellular ancestry that antedates human reason and earthly pride by untold æons. Yet this same proud man has been evolved by simpler process from a single cell in forty weeks, but he objects to the evolution of the race from a single cell through countless ages. Nevertheless, the day is coming on apace when man will value truth more than birth and right more than creed; for the laws of evolution are ever tending toward the one end, and that the survival of the fittest. So we may reasonably suppose that the fittest, in this case, will be the best; and, though the day of triumph may be far off, yet it must come, and come it will

"For a' that, an' a' that."

The earliest form of life—if we may use the word "life" in such relation—may be found to-day, as of old, in the quiet waters of the sea; and, if we only know how to ask questions, mother Nature will show us her first children, her first attempt at life, and, if we use the microscope rightly and seek for truth in loving faith, we will realize what one of our sweet singers sang:—

"No grain of sand
But moves a bright and million peopled land,
And hath its Edens and its Eves, I deem."

This "dry science" opens to us a wonder-world that touches all life with a new glory, and lends a charm to what was once "common and unclean."

Taking a gauze net and a microscope to the sea-shore, we can soon fish from out the clear water a

tiny speck of slime, invisible to all eyes save the student's. Placing it under our powerful lens, we find that the speck moves, that it has life, that it absorbs the oxygen from the water, gives off carbonic acid, and soon makes the drop of water foul. After patiently watching this little speck, we see that there project from its formless centre tiny threads, microscopic fishing-lines that it protrudes and withdraws at its own sweet will. As we watch, we see it absorb particles of living matter still smaller than itself, and, although it has no mouth, no lungs, no nerves, no organs of any sort, it lives: it has life, and preys on even smaller forms of life. So here we have life, in a sense, without organism; here we have the beginning of all life. Yet, in its ultimate analysis, we know not how far this tiny speck has reached through the corridors of time for its progenitor: so, in this first child of nature, we have as great a mystery as in the gathering together of fiery circling suns or the birth of their attendant worlds. These tiny slime spots live, move, absorb food, and learn by slow degrees, as well as by infinitely slight changes, to adapt themselves to new or changing conditions.

Truly, few things are more interesting than to watch the processes of reproduction by division; and, by following this outward and upward, we see in this poor, shapeless, microscopic slime speck the source of countless forms of life, just as one finds the tiny rivulet in the Cordilleras to be the source of a mighty river, on which all the navies of the world might lose one another.

It would be a fascinating study to watch the various forms assumed by this first child of our common mother, with their wondrous divergence from the remote parental type; but we will fasten to one that seems to have adopted the simplest form, and has tarried with us even unto this day.

The first great advance step of the little jellied body was to secrete the carbonate of lime that abounds in the sea, and to build himself a home. From this branch of the family sprang our Mollusca and countless diverse forms; but our special builders learned to form little colonies, then to weave all their little threads together, and to make a sort of silken palace. But, after other forms of life developed, these gelatinous masses formed tempting mouthfuls, as though they were easily digested despite their somewhat stringy construction; so mother Nature—or shall we say instructive necessity?—taught this branch of the family the art of secreting not only carbonate of lime, but also silica; and, with these minerals, they built most wonderful shapes, such as tridents, crosses, anchors, and exquisitely beautiful forms for which we have no names, and these were used in their palaces of thread. Some really were for anchors, and fastened a house to a rock. Many were for weapons of defence, others offence, to catch and kill the microscopic victims of slime hunger; besides the other spicules which seemed devoted to strengthening the mass of slime. Thus, one way and another, this family learned to build for itself a home that was not grateful food to its enemies; and, growing so thread-like and stringy, naturally it went out of fashion as an article of diet in the fish world. Therefore, the slime builders were comparatively free to build, develop, and evolve. Some learned to secrete lime to such an extent that they built islands of lime, which in later days formed harbors for the ships of men, who called them "coral reefs"; others used flint or silica to such an extent that they became the flint sponges. In short, all sorts of fashions were evolved; for these dwellers in the sea multiplied so rapidly that the slightest variation was soon emphasized, and new varieties and species branched out, as Ernst Haeckel has so well shown.

Few people can form any idea of the powers of reproduction in the lower forms of life. It has been calculated that the young of an isolated *Daphnia* would number, at the end of sixty days, 1,291,370,075. Now, the *Daphnia* cannot be more prolific than its lower relations; but, admitting the above figures to be too high by half a dozen, there would still be an enormous margin on which to calculate in the matter of variation, even if the lower forms were no more prolific. Hence, it is not strange that the slime builders branched into many and various channels.

We left our little builders in a silken palace with columns of glass and lime. These little forms also secrete a horny substance that has scarcely a counterpart in any other family, and here we find the first definite attempt at building a body; for we have the slime for the flesh, the earthy secretions for bone, and the keratode for nails. But it took patient Nature a long, long time to weave the different forms from out this shadowy type,—to teach the spider to weave its web from the same silken floss, to teach the silk-worm to make its cocoon from the same soft thread, to form the scattered spicules into bones, to gather from the mass a backbone and a definite form. But it has all been done, and, maybe, well done. Even Helmholtz found fault with the eye; and carping critics are forever finding fault with stomachs, or livers, or legs, or something else. Despite all, it seems as if nature had made a very fair article out of very poor material; and, if it be not the best that is possible, let us hope that there is a better condition of life to come!

When man first examined this silken, slimy plant animal, it was a source of no little wonder; but, so soon as the silken framework was found suitable for a bath sponge, the wonder was lost in the greed for gain, and the poor sponge was sadly neglected until recent years, when its wonders were disclosed, notwithstanding few people recognize them.

One of the strange things about the sponge was the number of little amœbæ, or slime specks, that seemed to adhere to the sponge body. The microscope soon showed that these were young sponges, and it was not long before Dr. Bowerbank and other patient students traced their mode of birth and development. This little amœboid is really a capsule, having within it a mass of tiny cells all fastened to one another like the sections of a mulberry; and, when the capsule breaks and the little mass is ejected from the parent mass by one of the large orifices, it swims off, a free swimming animal. As each of the little cells has a tiny thread, or cilium, which it vibrates violently, and the mass being pear-shaped, it goes sailing gayly through the water, maybe, for several days, until it finds an anchorage. Thereupon, it settles down to the stern business of life, which in all times seems chiefly to have consisted of making a living.

The little free swimmer may have caught a glimpse of our sun by day or our stars by night; yet it could have been only a glimpse, inasmuch as it had little time to spare for observation. The tiny, cellular slime spot settles on a stone or any convenient place. One settled on a crab's back and grew to a great size, yet the crab never seemed troubled about his strange burden; but, as a rule, they settle on stones. Then the cilia disappear from the outside and begin work inside, and by constant whip-like motion produce a current that flows in through microscopic holes into a larger central hole, which has a vent, at what is now the upper end of the gelatinous mass. This current brings in animalculæ for food; and some of the cells are differentiated into builders, while others are weavers. So we have the very first les-

son mother Nature gave her children in the division of labor,—a lesson that each succeeding tribe has to a great extent to learn for itself.

On examining a sponge, it will be found full of small holes, each one of which will be found to lead to a larger one, and all the larger ones lead ultimately to the great faecal orifice; and the domestic economy of the sponge animal, *Zoöphyte*, is clear. Some ciliated cells simply produce the food-bearing, oxygen-laden current; others weave the silken floss that makes the house; others, again, seem to secrete the earthy parts that support the mass. But all toil, and over the silken mass is spread the slime animal, which has no sense, yet builds so well; which has no organs, yet lives; which has blessed us with this "house not made with hands," so common in our bath-rooms, unfortunately so little understood.

Some of the slime builders raise coarse houses with many and large orifices. These use sand and other things in building; and their houses are almost valueless to man, or at best furnish the "five-cent-store" sponges, which hold only a little water and are harsh to the touch. While other builders have learned that the compact, silken mass is quite as good a protection as the harsh, sandy mass, and have given to commerce the soft, silky, Turkey sponge. So expensive is it that men have attempted to cultivate sponges. In Dalmatia, a living sponge is cut into small pieces, each piece is fastened to a stake under water, and in three years a large spherical sponge is the result.

Many are the wonders to be found in this one lowly family; but we may only point out one other, and that is the faculty of making glass that these slime spots have developed. There is a legend that, once upon a time, a man made a ball of flexible glass, but he was put to death for his pains, as it seemed impious to fly in the face of Nature. Nevertheless, of late years it is certain that men have striven persistently to learn the secret of making flexible glass. Is it not startling to find that our poor slimy little relative has been in possession of this art for untold generations?

In the deep waters of the Philippine Islands and in the neighboring seas may be found that most exquisite of all sea forms known as Venus' Basket, or *Euplectella speciosa*, a cornucopia-shaped basket, sometimes twelve inches long and an inch and a half in diameter at its largest end, formed of threads of purest glass, the whole forming a palace as wonderful as ever was built by the genii of the lamp at Aladdin's command. This is the dwelling-place and business house of our humble relation; and the glimpse we get of the harmonious adaptation of means to ends in this work hints of miracles that are all about us, and gives force to the words of the camel-driver of Mecca, who, when his followers asked for a miracle, said,—and there is a Sinaitic tone in the reply for us in this nineteenth century,—"Open your eyes."

Pitiful at times is the ignorance of the "open miracle" that is all about us; and it is only when we truly know what life is, and whither life doth go, that we are able to regulate the affairs of life. To teach men how to live, while yet ignorant of the simplest principles of life,

"Were all as well to bid a cloud to stand
Or hold a running river with the hand."

PETER ANNET.

CHARLES EGBERT CRADDOCK.

An item in the evening papers on the day of President Cleveland's inauguration was, to one reader at least, of more thrilling interest than any or all reports of the events of that day in Washington, to the description of which the columns of

the evening newspapers were mainly devoted,—of more interest even than the carefully read inaugural address of the new President. The item ran in this wise:—

Last evening, Dr. Holmes and Mr. Howells received a genuine surprise at the hands of the editor of the *Atlantic*. Mr. Aldrich invited these gentlemen to dine with him, to meet Charles Egbert Craddock, the author of *In the Tennessee Mountains, Where the Battle was Fought*, and the remarkable novel now publishing in the *Atlantic*. The surprise lay in the fact that Charles Egbert Craddock is a pseudonym which for the past six years has veiled the identity of a very brilliant woman,—Miss Mary N. Murfree, of St. Louis.

The delighted reader of this item was a woman not remarkably enthusiastic by nature, and now past the age of youthful enthusiasm; yet glad tears came to her eyes, and for one insanely absurd moment she longed to clasp the hands and hold to her heart the fragile creature who had thus scored a most signal victory for her sex. Only the evening before this public announcement was made, this reader, glancing over the new chapters of "The Prophet of the Great Smoky Mountains," in the *March Atlantic*, was struck anew with the intellectual power in that serial, and read aloud for the benefit of those not usually interested in "stories" some of the strong, descriptive passages, with admiring wonder at the original genius and the breadth of thought displayed by this new Southern writer, "Charles Egbert Craddock."

But, after that first tumultuous moment of delighted enthusiasm over the dramatic surprise given by a woman to our foremost critics and *littérateurs*, none of whom had ever dreamed that this pseudonym veiled a feminine personality, there came a sigh of sadness from the woman's heart because of the implied suggestiveness of this *dénouement*. No other incident could more strongly reveal or more sharply define the reality of the mark of intellectual inferiority placed by man on woman, whose sex alone is deemed sufficient excuse to cripple her intellectual energies and belittle her achievements.

For at least the fourth time in the history of literature has a woman won, by pure force of genius, a high place in literature under the disguise of a masculine *nom de plume*.—"George Sand," "George Eliot," "Currer Bell," and "Charles Egbert Craddock," these names have concealed for a time the feminine identity of Aurora Dudevant, Mary Ann Evans, Charlotte Brontë, and Mary N. Murfree.

What a comment on manly chivalry does this disguise, on the part of four brilliant women writers, make! Each seems to have felt her genius, known her power, and understood fully the stigma attached to sex, and to have said to herself, either consciously or unconsciously: "Since I desire 'no favors,' only 'a fair field,' there is at least one way open to me. As a woman, I shall be placed at a disadvantage. Under a masculine *nom de plume*, I shall be judged on my own merits." Acting on this impression, all these women won favor as male writers before declaring themselves of the pariah sex. There are records of many lesser lights among women writers who have resorted to the expedient of concealing their sex under male signatures, but I have so far failed in my efforts to find one male writer who thought it necessary to conceal his identity under a female signature. This fact speaks volumes in favor of Women's Rights.

We have had a nameless "Junius," whose identity is at last pretty surely divined. We have had various masculine writers who, for a brief season, have masqueraded under fictitious male *noms de plume*; but these few are more than offset by the

comparatively young woman, who from childhood has been "unable to use her feet," but who is now "much better," and "can get around with slight assistance," yet who for six years concealed her identity, and who managed so shrewdly that even her publisher, Mr. Aldrich, until the morning of the 4th of March, thought his talented contributor the man indicated by the signature written in so bold a hand as "Charles Egbert Craddock," whose style and force of thought gave no indication to critics of the sex of the writer. Never was more signal victory won by woman than the revelations of the last week show us was gained by Miss Mary N. Murfree, alias "Charles Egbert Craddock."

SARA A. UNDERWOOD.

EDITORIAL NOTES.

BY B. F. U.

The Rise of Intellectual Liberty, by F. M. Holland, is for sale at *The Index* office. Price \$3.50.

A "CONSTELLATION OF FAIR ASTRONOMERS" will be the subject of an address by Mrs. Sara A. Underwood before the Science Class at Parker Memorial, next Sunday, at 12.20 P.M.

MR. CHARLES H. KERR, editor of *Unity*, is preparing a volume of poems selected from those which have appeared in that paper from Ella Wheeler Wilcox, Hattie Tyng Griswold, Abbie M. Gannett, W. C. Gannett, Frederic L. Hosmer, J. T. Sunderland, J. V. Blake, and others. The price of the book will be \$1.25. To those ordering copies in advance, it will be \$1.00.

MR. WILLIAM LLOYD GARRISON concluded his recent address before the Liberal Union Club of this city, as follows: "The wine cup and its associations and the degradation of the tobacco habit I dread for my children more than the fear of hell; and if I can teach them to make character, and not abstract belief, determine their friendships, I shall not worry about their intellectual speculations."

SAYS the *Nation*: Nothing has been more clearly laid down by Catholic theologians than that it is the duty of the civil power to suppress heresy; and, whenever the civil power has been won over to this view, they have insisted on its either extirpating heretics wholly, or obliging them to live without public worship, or obliging them to conduct their worship under considerable restrictions as to publicity and locality. In fact, the policy of the Church in every country has been to get from the government all the intolerance of other creeds which she could, but to accept the inevitable diminutions in the amount of this intolerance. The equality of all creeds before the law she only accepts in countries in which there is no chance of anything else, but this toleration was denounced so late as 1864 by Pius IX. in the Syllabus as a damnable error. In Rome, public Protestant worship was never permitted within the walls until the downfall of the temporal power, and was never permitted anywhere in the papal States without many restrictions. Within the past year, Leo XIII. has complained bitterly of the freedom of worship now enjoyed within the city, as an insult to the Papacy and a hindrance to him in the discharge of his high functions."

ACCORDING to statistics published in a religious contemporary concerning foreign missionary work, the Baptists are far more successful than other Protestant denominations in securing heathen converts, of whom they have credited to them 113,263; while those connected with missionary stations under the charge of Presbyterians, Congregationalists, Methodists, Campbellites, and

Episcopalians, all combined, number only 78,744. This is not all. The Baptists make converts at a much cheaper rate than the other denominations. During the year, the average cost per convert has been by the Congregationalists \$248.14, by the Campbellites \$72.88, by the Episcopalians \$592.03, by the Methodists \$117.91, by the Presbyterians \$234.91, by the Baptists \$37.05. The total number of Baptist converts for the year is 11,891: the total number of heathen converts to the other denominations named is 8,732. The paper which gives these statistics remarks that one dollar given by American Baptists to foreign missions accomplishes as much as six dollars given by other denominations. If the figures given above are correct and the conversions made by the Baptists are as genuine and permanent as the others, the facility and cheapness with which they make converts are a strong argument in favor of the other denominations uniting with them and adopting their methods. Sectarian rivalry should be dropped, if the eternal interests of millions of souls depend upon Christian missionary labors.

DEAN (OR CANON) WILBERFORCE, having stated that "an atheistic lecturer in America, named Frothingham, had recanted and returned to Christianity," he was informed that there was no such lecturer, and that, if Rev. O. B. Frothingham was intended, that gentleman was and always had been a theist. Wilberforce writes to his corrector: "I much prefer my sources of information with regard to Dr. Frothingham to yours. It is, however, of little consequence, inasmuch as I am constantly coming into contact with cases of a similar nature." The *London Reformer* quotes the above extract, and says: "Dean Wilberforce ought at least to understand that the words we have italicized clearly show that in his view one precise untruth matters little or nothing, even when detected, if he has 'similar cases' to back it with. What would Dean Wilberforce say, if we charged him with being a pervert to Rome, and, when he indignantly denied, coolly answered: 'It is, however, of little consequence, inasmuch as we are constantly coming into contact with cases of clerical perverts'?" The *London Inquirer* adds: "The *National Reformer* is quite right. Mr.—not Dr.—Frothingham has always been a theist; and he has never returned to any form of supernatural Christianity, while he has deplored the failure of the movement at New York of which he was the very able leader. By the way, the *Reformer* is slightly in error on one point. We suppose that Canon—not 'Dean'—Wilberforce, of Southampton, is referred to."

THE END.

For *The Index*.

[From the French of SULLY-PRUDHOMME.]

Wouldst thou aid me when the shadows
Of my last earth day shall come,
Let sweet harmonies surround me,
Bear my spirit to its home.

I am tired of words, and weary
Of perplexing thoughts they bring;
Sick of counsels dull and dreary,
Filled with subtle reasoning.

There are sounds which soothe and lie not,
Which I need not comprehend,
Only hear and feel their richness
As I near the journey's end:

Let me plunge my soul within them,
Let them ease my latest breath
As I pass from sleep to dreaming,
And from pleasant dreams to death.

WESTBORO, MASS.

ABBIE FRANCES JUDD.

The Index.

BOSTON, MARCH 12, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

LIMITATIONS OF REFORM.*

BY HON. GEORGE F. TALBOT.

PART II.

PROBLEM OF HEALTH.

Sound Germs and a Sound Progeny.

Inveterate habits, rooted social, ethical, and religious ideas, fenced in by passionate prejudices, time-honored customs, and hardly repealable laws, insure for the caprices and dominant appetites of men such a scope as leaves the result of their operations their hap-hazard chances of good or evil fortune. We imprison the thief and we point the fixed finger of shame at the prostitute; but, when they come together in the holy bonds of matrimony, the minister of religion pronounces it an ordinance of God, and society stands helpless before the teeming swarms of vicious progeny that are to be the fruit of such a marriage.

Nearly all the cases of insanity and of alcoholism, the outbreak of which inflict such unspeakable suffering upon our domestic life, are due to hereditary taint. Is it too extravagant a hope to cherish that the time may come when increased intelligence and a more sensitive moral feeling will deter from marriage those who have inherited a scrofulous constitution, an uncontrollable appetite for alcohol, insanity, causeless and excessive melancholy, or liability to furious paroxysms of anger? Is it past the ingenuity of man to insure that of such unpromising parentage the children of the future *shall not be born*?

But this is not enough. There are no absolutely healthy families. No blood is entirely pure. Go far enough back in the ancestry of the soundest of us, and you will find all the ills, mental and physical, to which flesh is heir. Unless we can induce or compel the apparently sound whom we permit to marry to observe the laws of life in procreation, the weakness that will result will show itself in some reversion to a more or less ancient type of physical or moral disease.

* The substance of this essay was read before the Fraternity Club of Portland, Me., Dec. 15, 1884.

Nature is willing to help, does help, man in his effort to better himself. That is to say,—to state what seems to be one of the vital laws: Healthy parents who do not observe the most favorable conditions for procreation will produce healthy offspring. Unhealthy parents, carefully observing the most favorable conditions for procreation, will produce healthy offspring. In the former case there will be sound children deriving vigor from parents in spite of slight violations of the laws of life. In the latter case there will be sound children, because the parents, though not themselves sound, carried forward their progeny one degree by carefully observing the laws of life. But, if only healthy parents produce the children of a people, and that, too, with a strict compliance with the conditions of procreation, the result will be a steady improvement in the quality of the human race, and the slow breeding out of physical and moral corruption.

We keep up the average health, slightly improve it now, though the few healthy parents do not observe the laws of life, and though the parentage is largely itself unhealthy, because half the human race perishes before it attains the age of ten years. That is to say, nature comes along and looks at our puny progeny, and, saying: Misbegotten things! blots them out with diphtheria, scarlatina, and cholera infantum.

In the earlier stages of human life, by ruthlessly destroying all the weaklings nature insured the increasing vigor of the human animal. When man got his large brain, the most intelligent became more than a match for the most strong, and the best intellect had the best chance to survive. Now, at last, that our moral faculties are coming to dominate our intellectual, as these once dominated the physical, our very humanity and sympathy, the tenderness with which we cherish and try to cure and perpetuate not only the feeble-minded, but the vicious-hearted, will tend to arrest the evolution of humanity, unless an intelligent will takes the place of a blind force in insuring the survival of the fittest.

In what specific direction the reforming agency can be applied, I confess we have neither the requisite knowledge nor courage yet to indicate. The vaguest cautions and hints of anything like dictation or interference are so passionately resented as an infringement of personal liberty, a vulgar exposure of mysteries that all the instincts of living creatures try to keep concealed, that the reformers who venture upon this line of reform will be likely to encounter a fiery martyrdom, compared with which that of all their forerunners was but the comfortable warmth of sunshine. Take the human generations as they come, we are virtually told, without asking how they came or who begot them. Commit to the indiscriminated mass of new-comers the destinies of your country and of the world. If you ask where they arrived from, the pulpit will tell you, from God; and the nurses, if you are more curious, that the doctor brought them in his saddle-bags.

This much may be said without indelicacy or offence. For the married, the law of procreation is plainly enough that, to avoid the keen anguish which attends the putting of the little white faces of our infants in their coffins, the bitter anxieties and disappointments which chronic invalidism, developing itself in our grown-up children causes, the grave responsibilities of incipient parentage should not be ventured upon when either party to it was suffering any serious ill-health or mental aberration, anxiety or depression, nor until the physical organization had been brought to its normal vigor by previous continence.

I glance for a moment at practices, the inven-

tion of refined sensuality in France, and that have spread, if suspicion be not misled, to our own moral and cultivated society. I mean those artificial devices which permit the inter-association of the sexes without their incurring the pain, the expense, or the responsibilities of parentage. Mr. Bradlaugh and Mrs. Besant published some years ago in England a little practical treatise, designed to instruct poor artisans, whose domestic relations gave them all the hope and happiness they had, to mitigate the gloom of a life of poverty, toil, and care, how they might secure the solace of wedlock and at the same time avoid the necessity of casting upon the world a progeny of helpless creatures to be more wretched than themselves. It was for publishing this book, and not for his atheism, which is certainly by no means a rare faith or *non-faith* among the educated classes and members of Parliament in England, that Mr. Bradlaugh has been so mercilessly persecuted. I never saw the book. I dare say it is pernicious in its influence, because not the classes for whom it was written, but the fashionable, the well-to-do, the intelligent, the very classes that ought to be parents, will be most likely to read it and practise its lessons.

The writers, who are benevolent and earnest, not vicious or patrons of vice, and their many virtuous friends, insist that there was a benevolent and salutary purpose at the bottom of this book; and I am ready to believe that.

This much may, at least, be said. It is a beginning, even if a bad and dangerous beginning, of an attempt to bring a natural human instinct, most momentous and consequential in its fruits, under the domain of reason and conscience. It may be a hopeless task to undertake to surmount and repress such a powerful passion as that which brings on the association of the sexes. We may forbid and deny marriage, and nature leaps over the restraint. If we can separate parentage from marriage, and, while permitting the latter to all that may be naturally inclined, so guard the other as to allow society to take the least injury by the birth of such persons as will be injurious to it, a better race is one of the possibilities of the future.

Poverty,—can it be abolished?

The last cardinal evil in the Pandora's box of human miseries is poverty. Let us enlarge our definition of poverty, and consider it as any privation of wealth, sustenance, means of legitimate gratification or culture, induced by laws or usages of acquisition or distribution not completely just or beneficent. It comes last on our catalogue, because it seems probable that it is the last chronic disability of the human condition which society will find out how, or be able to relieve.

The Actual and the Ideal Government.

I say society and not government, because we have been schooled to consider government as an institution of limited powers, confined to the narrow functions of enacting and enforcing the laws, defending the people against internal disturbance and external invasion, and prescribing some of the more general rules that shall regulate commercial exchanges. The historic governments are in such bad repute, they are so disgraced by tyranny and extortion on the one hand, and imbecility and inefficiency to arrest or mitigate any of the chronic evils of mankind on the other hand, that we have been occupied now for some centuries, and shall be for centuries to come, with the effort to restrict the agency of government, and assert the principle of individualism and personal rights. Our favorite saying has been, *That is the best government which governs the least*; and the word that represents the dominant political science is *laissez faire*, which is roughly rendered in the

English maxim, *Every one for himself, and the devil take the hindmost*. Especially for the last century, since our grandfathers made Boston harbor a tea-pot, and steeped in it a decoction that has exhilarated, if not inebriated, the nations, has this bellowing for rights been the loudest noise that has vexed the welkin, shrilling in these last years with the swelling treble of mustering womanhood. It is the note of revolution and doom that startles all the established conventionalities and sanctities of France, Italy, and Germany. Give us our rights! cry the paper caps and blouses; and neither constitutional monarchy nor the sober pattern of the republicanism of Jefferson and Thiers and Gambetta has any satisfactions for the large demand. The fierce democracy has the ablest ministry and the strongest man in England waiting to learn and docile to do its behest. This rage must blow itself out, and happy will the world be if it takes only the twentieth century to do it. But about that time look out for some plain-spoken prophet, upon whose shoulders the bear-skin mantle of Carlyle shall have fallen, who will confront the noisy mob with words like these: *Your rights!* do I gather that much articulate sound in the inarticulate and deafening clamor of your roaring? When you get your rights, the first and last of them, what will any of you be likely to do with them but act out in some more conspicuous position the selfish and sordid puppy and blatherskite that you are? If, on your first advent to the world, you had been roughly taken by throat, and asked, in thunder tones, by what warrant and on whose presumption you had intruded yourself upon the sanctities, the solemn responsibilities, and the soul-trying labors that make human life something other than a fool's holiday, what answer could you have given? Do you know, have you ever thought, what life in this nineteenth century, in all the essential good of which you will share with millionnaires and kings, costs in the blood of battle-fields, the torture of roasting martyrs, the toil of myriads of human bodies bent under burdens, the precious thoughts of sages and poets, inventors and scholars? What equivalent are you ready to render for the privilege of entering upon the fruition of all this work and suffering? Do you appear on the scene to continue the labors of such as these, to take up their task where they laid it down, and push it on to the consummation? Your rights! You will get them in just measure,—the right to be scourged by your vices, balked and defeated in all your selfish schemes, cheated with vanities, finding all the sweet things you have schemed and fought for turned to ashes in your mouth, until you are glad to creep into your graves, and beg oblivion to hide your petty lives. One still, small voice of a right-minded, sane, considerate man, asking to know what his duties are, what he could do for his race and for the world to pay for his seventy years' tenancy of it, would be to my ears a more musical and more hopeful note than all this chorus of Bashan bellowings for rights.

But this is an act of the human drama to be put upon the stage and acted out in its order, with not a little lawlessness, crime, suffering, and discontent as an accompaniment, until men shall find what helpless paupers they are, and how much the comfort of their existence depends upon having the best wisdom of the clearest minds to guide them, and the strong arms of associated effort to defend and uplift them.

The Republic, Democratic and Social.

To the ordinary mind, the word "socialism" brings no idea but some form of having all things in common, as did the primitive Christians, and of an equal division of estates. I am not aware that

the word ever had any such significance. Socialism is something quite different as advocated by Marx, Lassalle, and the socialistic philosophers of Germany, France, and England. *Socialism, the Republic, Democratic and Social*, is that form of society which brings into play as much as possible the power of associated human action, which does by and through the government whatever united and co-operative mankind can do more economically, more easily, more perfectly, and more justly than the individual can do. It undertakes to find for every man a function, a work, a service in the order of the world, and to insure him a reasonable compensation for doing it. It mitigates and, in the long run, will give a truce to the struggle for life. It lifts the burden that has lain like an incubus for so many ages upon the human heart, growing heavier with every generation, aggravated rather than alleviated by every invention by which the processes of labor have been rendered easier,—a burden that has driven uncounted thousands to despair and suicide, and has given to human life the sadness that finds its expression in poetry and in history,—the universal care *how to get a living*. It substitutes co-operation for competition, and its holy scripture is, *Thou shalt love thy neighbor as thyself*, and not, *Am I my brother's keeper?*

Socialistic Tendencies of Modern Governments.

No thoughtful person can fail to notice the marked socialistic tendencies of all modern governments. The pauper laws that for nearly a century have been established in England and in nearly all, if not all, the United States, are purely socialistic. The law says to the poor, Do the best you can to earn your maintenance and that of your family, but do not despair: we guarantee you and them sufficient wholesome food, comfortable clothing and lodging, medical treatment and nursing as long as you live, and pledge to this expenditure all the property in the State, public and private. All the solid men of Boston hold their property subject to this prior mortgage: whether they get any income from their large estates depends every year upon the amount of pauperism to be relieved. If the wants of the poor require all their property, the law has placed no limit to the possible burdens of taxation, which may be so heavy as to reduce them to the poverty which they are compelled to relieve. Could there be any more palpable taking of the property of the rich and distributing it among the poor?

Equally socialistic are our school laws, which make the same requisitions upon all private property for the education of the children alike of taxpayers and non-tax-payers, of citizens and of aliens; and yet no laws are so firmly based upon the popular assent, and no taxes are voted with such alacrity, as those which support the common schools.

Laws regulating the hours of labor, the employment of children in factories, sanitary regulations, the creation of state and municipal boards of health, ordinances regulating river and coast fisheries, and for the preservation of game and birds, are indications of the socialistic tendency of modern legislation.

The post-office is an institution belonging to a socialistic government. Considering how admirably and cheaply it is conducted, and, with its immense force of employés appointed under partisan practices of administration, how little just cause of offence it has given, should we be willing to go back to private enterprise for the carriage of our letters? Would private enterprise deliver a letter to a friend in San Francisco and his reply at our door at a cost to both correspondents of four cents? Is there any reason in the nature of things why, if government ought to carry our

business messages by letter, it ought not, as well, to carry our business messages by telegraph? or why, if it is legitimate to bring us our newspapers, it would not be legitimate to bring us our merchandise and our food? The parcels post, so successfully established in England and partially in this country, shows how much better and more economically expressage can be done by the government than by private corporations. In many countries, the State owns and manages the railways; and, if the United States should offer to capitalize all the railway stocks of the country, and pay the amount to the holders in moderate annuities, terminable with life, would not they gladly accept such a compensation rather than be exposed to the fluctuations in value and income of the last two years? Would not the public be as well served as they are now, if the railroads were let to the highest bidder under the security of bonds for a term of years, just as the carriage of the mails is let, the lessee to keep the track in repair, and to be liable for all losses and injuries caused by his carelessness or neglect?

The systematizing and regulating of insurance and of banking, and the oversight of them by officers created and paid by the State, show that these are considered to a certain extent matters of government and amenable to its control. The scope of legislation and the conclusions which follow the principles laid down by our highest courts, recognizing the fact that railroads, though built by private capital and owned by private corporations, are public ways, and as such can be controlled by the legislature as to what business they shall do and what compensation they shall receive for doing it, seem seriously to impair the integrity of the property rights of stockholders in these kinds of estates. It seems to lie within the sound discretion of legislators to say whether, after paying special taxes, keeping their road-bed and stock in repair, and paying for all injuries to persons and property, the investment of the shareholders shall yield them a moderate income or subject them to an annual charge. The land laws of Ireland, advocated and enacted by some of the most conservative statesmen of Great Britain, and proposed for application to Scotland and England, seem to be based upon the idea that a title in fee-simple to land, hitherto held to be something inviolable, is, after all, a qualified title, subject to the government's right of eminent domain. The principle of the paramount right of the government to appropriate estates, when needed for public defences, for convenient roads, for sites for school-houses and other public buildings, or to lessen or destroy the value of such estates by undermining them by an incessant taxation, shows that there is in the minds of the most conservative men no real respect for the inviolability of landed titles. Should the private ownership of land in such a country as Ireland, for instance, threaten the depopulation or the pauperization of the island, then government might reclaim the land with just compensation to its owners, and reconvey or release it on conditions that would make human existence more tolerable.

On the other hand, there are steps toward a surrender to government of many functions and employments now under private management. The association of merchants, of bankers, of producers of iron, coal, and grain, of lawyers and physicians, and agreements among them as to prices that shall prevail, rates of wages and hour of labor that shall obtain, and all other trades-unions that restrict and suspend the rule of free competition, as well as the counter-combination of working men to reduce the length of a day's work, fix a minimum of wages, or otherwise control the free

competition of workers, are the beginnings of an effort to substitute order and law for mutual strife and chaos. The moment men lose faith in free competition and begin to check it by *regulation*, even if the regulation is something which they agree upon and impose, their action becomes essentially *governmental*. All regulation, all law,—and a trades-union agreement or oath is that,—is the function of government; and, when government regulates business, it is *socialistic*. It will be a slight forward movement for government to make officers of the State the commissioners or committees voluntarily created by the guilds of trade, profession, or industry, and embody their trade regulations into statute laws.

The Purification of Government.

This evident socialistic tendency may be checked. It may meet some scientific limit which shall preserve free competition and individual liberty of action. I confess I do not see where such scientific limitation is; and it seems to me that the tendency is more likely to go on, until men shall have learned to do together—that is, through the agency of government—whatever functions they can perform more economically, perfectly, and justly than they can individually.

But, before this can be thought of otherwise than with apprehension, we must have pure government, and not only that, but government must have been so long pure, under whatever administration had the power to get possession of it, as to allay all just suspicion of its integrity which years of misrule and corruption have excited. Before we trust our deposits to the bank that has failed or our books to the clerk that has robbed us, we require a long probation of honesty.

So that the thing first to do—the order of the day, as they say in the French Assembly—is to establish a government that we can trust; and, until that is done, all other reforms are to be postponed. The civil service reformers and their allies, the *mugwumps*, whether their special measures will be efficacious or not, are laboring on that part of the highway of progress where the car of civilization, laden with all the hopes of mankind, is just now mired and stuck.

This is, however, a far-reaching speculation; and we may as well follow it until, in the remote future, it lands us in conditions, where all the activities of production and of exchange, all provision for the public health, the public education, the public amusement, shall be the ordering of the State. Under this *régime*, society not only educates the children, all the children that belong to it, but after graduating them at its schools assigns to all who desire it a career according to their capacities and ambitions,—so many to the lowest clerkships in trade, so many to the charge of machinery employed in production, so many to the different departments of agriculture and stock-raising, and so many to further study and training to prepare them for the more responsible employments, as teachers, editors, authors, artists, physicians, chemists, engineers, architects, lawyers, judges, and legislators. It will be the organization of human industry, which is now so chaotic, so wasteful, so precarious.

Before the State can handle the Problem of Poverty it must regulate Births.

If we should give the race of rats access to all our stores of food, destroying our traps and *whistling off* the cats, and open to every rodent a career of unlimited bread and cheese for himself and his progeny, how long would it be before the rats would be in force to eat us?

The human animal has not powers of reproduc-

tion to vie with the rats; and yet if mankind were relieved of their chronic apprehension of poverty, if an office and a salary awaited every child that was reared,—especially if early marriages became a usage, as they inevitably would under such a society,—the number of candidates would speedily exhaust all the places, and the great surplus army of men to be detailed to till the ground would soon raise such a surplus of food that it would not pay to harvest it.

See what checks restrain the prodigality of human reproduction. Few sensible men dare place themselves under obligations to support a family until there is a reasonable prospect of some just and honorable provision for its maintenance. If the consideration does not influence the passions of young men, it does influence the cooler judgment of young women; and it is sure to be considered by parents and friends, whose influence is always potent. So that, as our business grows more complicated and the chances of fortune more precarious, marriage gets postponed to the wise years when more and more find how much easier and wiser it is to forego it altogether. But, with all these checks, the contribution to population in nearly all civilized States seems to be in excess of the demands of nature, in excess of the means to provide for them by nearly one hundred per cent.; for what are these diseases of infancy that destroy half the human race before they are ten years old but Nature's interference with redundant births? What if we should find out how to isolate or destroy whooping-cough, measles, and scarlatina? What safeguard have we against new disorders that would take their place?

So that if as now, where the care of supporting children is thrown primarily upon fathers, the fathers must be left to say how many children they will have, when government assumes the obligation to take care of all comers, it must have the power to say how many and who shall come.

When the best wisdom of the race, expressing and enforcing itself in government, shall be able to stand at the entrance frontier of human life, and say who shall pass, it will have the key to open for mankind the better era, the good time coming of the popular thought, the Republic of which Plato speculated, the Utopia of Thomas More, the Arcadia of Sir Philip Sidney, the kingdom of heaven of Jesus of Nazareth, the new Jerusalem coming down from heaven adorned as a bride for her husband of the Apocalyptic vision. With the abolition of poverty by keeping the numbers of the human race balanced to the supply of the means of subsistence produced in greatest abundance and justly distributed, it will solve at the same time the problem of sickness and of crime by bringing in a progeny in whom the primeval taint of lust and passion, of insanity and sickness, has been reduced to its minimum.

It is necessary, however, to stipulate that for the accomplishment of his high destiny man needs the hope and patience of God. The world-bettering went on in those early ages, when there was no sympathetic heart of man to long for it, no helping hand of man to aid it. If there be not at the heart of the universe some principle or power of good, how vain are human toils, sacrifices, and prayers! It is the faith of democracy that the good purpose we have found in the bosom of nature expresses itself also in the mind of man, the consummate product of nature.

The thing to do is patiently to bear the ills of our condition that are irremediable, and to contribute our brief strength to lessen or remove such as are the result of our ignorance or misdoing. Not by dynamite or the dagger, not by revolution or secession, not necessarily by forming a new

party or propagating a new faith, but by watching the trend of things toward good, and by aiding with voice and vote the specific reform, that the apparently blind, but really guided impulse of the time has made opportune and feasible, shall we best bring nearer the poet's dream "*of the highest, justest, happiest, and so most perfect condition of human life on this planet.*"

For The Index.

STATEMENT OF BEING.*

BY DAVID TAYLOR.

Being, we may say, is truth, reality; it is whatever is, as contradistinguished from whatever is not. Being includes within itself all that is, all that has a real and permanent existence. Indeed, there is no existence which is not permanent. That which is ordinarily regarded as existence is not being in any proper sense of the word, for it is here one moment and gone in another. The constantly changing phenomena of nature are illustrations of this assertion: they are shadows, appearances, manifestations of realities, of forces which we never see, but which are abiding, unchangeable, indestructible, and eternal. The perceptive faculties, the five senses, do not lay hold of truth or being: they have to do with phenomena only, and consequently never enable the individual to see more than the surface of things, the shadow of a reality which is invisible, impalpable, incapable of being weighed, immeasurable, immaterial, and therefore absolutely free from the limitations, contingencies, fluctuations, and uncertainties of what we call matter.

To illustrate just what I mean by the term *Being*, take for example a house. Whether constructed of stone or wood or of any material whatsoever, it is a phenomenon; it is the appearance of something that affects our senses in a certain manner. We see that it has form, size, and color, and, so far as we can imagine ourselves weighing the house, that it has another quality; namely, density or weight. Now, it is evident that these qualities which make up the phenomenon, house, are not self-caused, but are the embodiments of ideas originally conceived in some mind or minds before the house itself was built. And as there would be no house for us to see, if we excluded from our thought the qualities, form and size, color and density; as the very conception of the house would vanish immediately and simultaneously with the removal of these qualities from our minds; and as the action of air, heat, etc., is gradually causing all of them to disappear, and that in course of time the house will no longer be even a phenomenon,—in the final analysis we see the only thing that can properly be regarded as being, as reality, is the mind which contrived the house, and of which the latter is but the shadow, and that, like all shadows, it changes, passes away, while the substance, the absolute cause, from its very nature continues to be.

This fact of being may be illustrated still further. If we transport ourselves in thought to some forest scenery, we shall behold on every hand beautiful proofs of returning spring; we shall see the trees beginning to bud and display a life which, as far as appearances went, did not reside in any one of them two or three months ago. Each tree is a phenomenon, a covering of the reality, the force, the mysterious principle within, which is continually shaping the tree, which is ever determining the manner in which our senses shall be affected. Here, too, as in the case of the house, we find ourselves in closest contact with mind. We see that each tree has form and size, color and weight. By and by, however, we observe first one tree and then another prostrate on the ground, and in a few years that all traces of them have disappeared. But we do not think on this account that the vegetable principle, the life principle, of the tree has been annihilated. Indeed, if we reason correctly from the data presented by our senses, we shall infer that this principle cannot itself pass out of existence, however many of its manifestations may do so. For to suppose that the principle, the absolute cause of a phenomenon could become a non-entity together with the phenomenon itself, or at any subsequent time, would be equivalent to supposing a place where nothing exists,—a thing most absurd and unthinkable. It is as impossible to think such a

* A paper read before the "Highland School of Metaphysics," 7 Mt. Pleasant Place, Boston.

thing as it is to think of an absolute beginning,—a time when a principle was not. We, then, think of being as entirely free from the limitations of time. A little reflection will also force us to a similar conclusion as to space. If being is all that is, if it is the reality which lies behind all phenomena, and if it is the indispensable condition of the latter, it must be co-extensive with phenomena; that is to say, it must be unlimited as to space. For to assert that a part of the universe is devoid of being would be tantamount to saying that being is not where being is, or that a thing can be real and unreal at one and the same time.

With this view of being, what becomes of the physical or material world? It becomes to those who rise to the comprehension or apprehension of being as the most shadowy world of which they can think. Instead of being the most real, it is seen to be in itself the most unreal; and being, the world of spirit, the metaphysical world, is beheld to be the most substantial, as in fact the only real world we know. The qualities cohesion and repulsion, attraction and affinity, form and size, color and weight, are discovered to be nothing more than modes in which our senses are affected by reality. Hence, the various forms under which being presents itself to us. It presents itself in God as the absolute spirit, the absolutely true, good, and beautiful, of which Being man and woman are the highest embodiments or reflections; in the vast and mighty ocean as force; in the mineral world as cohesion and disintegration; in the variegated foliage of the forest trees as vegetable life; in the lower animals as sensation; and in man as mind.

CORRESPONDENCE.

"MISTAKES OF SPIRITUALISM."

Editors of *The Index* :—

One of my Spiritualist friends wants me to define what I mean by the "mistakes of Spiritualism,"—a term used in a former communication to you. If you have space to spare, I will now mention some of those mistakes.

Spiritualists hold that mind can and does exist independently of the body,—a belief common indeed to all forms of orthodox Christianity; that the mind is created independently of the senses, which are only the avenues for manifesting itself and communicating with the external world. But the truth is the senses are component parts, and are the essential means of creating the mind, just as the piano strings are the essential means of creating piano music. Without the senses there would be no mind: without the wires there would be no piano music; the quality of the music depending on the musician guiding the notes, the quality of mind depending on the environment, the social surroundings, education, etc., guiding the senses, feelings, emotions, etc. It has indeed been clearly demonstrated that mind is a combination of sensations primarily, and gradually becoming more complex in ascending from its lower forms in animal life up to man, man being by no means the only creature possessing "mind." These sensations are developed by the action of chemical and mechanical laws, sight, taste, smell, hearing, touch being all excited by the mechanical contact of matter with the retina, the tongue, the nasal organ, the ear, and the hand, just as music is called forth by the action of mechanical force on the piano strings. Without these sensations there could be no memory, no reflection, no reason, no feeling,—in short, no mind. Simply because there would be nothing to remember, nothing to reason upon.

They hold that individual "intuition" is a reliable safeguard in the investigation of truth. But all experience shows that individual intuitions differ according to mental development. The intuitions of the primitive and uncultivated lead them to gratify every impulse of their animal nature; but gradually, after generations of sad experience, these intuitions become changed, and the developed civilized man intuitively knows that he should control such impulses that lead to suffering and misery. The scientific method has also abundantly shown that individual conviction, whether based on intuition or on logical reasoning, is not always reliable, but requires to be tested by the consent of other competent minds, individual conviction, however sincere and earnest, being so apt to see only "one side of the shield."

They hold that "clairvoyance," or clear seeing, is a mental process possessed only by so-called mediums while under the control of spirits. But it is really a passive condition of mind in which the medium allows himself to remain, closing the eyes to shut out disturbing influences and allowing the current of ideas to have uninterrupted sway. During this passive condition, all the known facts connected with the subject examined are called up by the laws of association and reviewed by the clairvoyant; and a judgment is then passed, which may be "clearly seen," if the facts known to the medium are sufficient to form a "clear" judgment. But, if such facts are not known, a clear view is not obtained, and the "conditions" are said to be unfavorable.

The well-known fact that mental action is in a great measure automatic—that thoughts, feelings, and emotions are constantly excited in the mind, independently of the will—is mistaken for communications from the spirit world, instead of being the result of the individual's own surroundings, educational, social, and organic. No one can stop the circulation of these thoughts and feelings even for a few moments, any more than he can stop the circulation of his blood, the quality or character of such ideas and feelings depending upon the individual's environment. All he can do is to turn the current into some particular channel, if he has an object in view; and, even then, his turning the current is always done by some strong motive excited independently of his will.

General abstract truths are mistaken for a special clairvoyant diagnosis of an individual case. *E.g.*, a short time ago, a clairvoyant stated that the subject examined was suffering from indigestion, or from liver complaint, the simple fact being that scarcely any one is free from these complaints! Another medium stated that the subject examined had a relative who had been hurt at some time in his life, either in the back or the hip or the foot, the simple fact being that scarcely any one lives who has not had a relative who was once hurt in the back or hip, etc. The many mistakes of Spiritualism can only be explained by the facts recently brought to light by psychology and the science of the nervous system; and it is to be hoped that the movement lately advocated for forming a psychological society for collecting and investigating such facts will be successful.

J. E. SUTTON.

WALDENA, FLA.

Editors of *The Index* :—

The letter, in a recent number of *The Index*, from a correspondent in Liberal, Mo., encourages me to tell of another liberal settlement which is just springing into life in this favored land of flowers. This new town is Waldena (pronounced Wal-de-na), and is but a few miles from the famous and beautiful Ocala. Marion County, in which it is situated, is considered one of the richest in the State, and rivals, if it does not surpass, Orange County in the production of the golden staple of Florida. Oranges of superior size and flavor are produced in the immediate neighborhood of Waldena, and the whole country is extremely well adapted to their culture. The town is intended especially as a home for those interested in hygienic and liberal reform, and all deeds are given with a proviso against the manufacture and sale of tobacco and alcoholic drinks. The town site contains about one square mile. It also has within its borders three small lakes, gem-like in the midst of an emerald setting of saw-palmetto and moss-draped, long-leaved pine. The founder of the settlement is Mr. Samuel Blodgett, a New Englander, a man of sterling character and thoroughly liberal and progressive. Of the climatic and scenic charms of Florida, nothing need here be said. They are too well known to need description. As a member of Mr. Blodgett's colony, I sincerely hope that some of my fellow-members of the Free Religious Association, who desire a semi-tropical home in the "sunny South," will become settlers in our new town. We would fain have it become a new Concord. I will gladly send circulars and any desired information to all who apply. As we have no separate post-office as yet, apply to

J. WM. LLOYD.

GRAHAMVILLE, FLA.

I would never choose to withdraw myself from the labor and common burden of the world, but I do choose to withdraw myself from the push and the

scramble for money and position. Any man is at liberty to call me a fool, and say that mankind are benefited by the push and the scramble in the long run. But I care for the people who live now, and will not be living when the long run comes. As it is, I prefer going shares with the unlucky.—*Felix Holt*.

MANY politicians are in the habit of laying it down as a self-evident proposition that no people should be free till they are fit to use their freedom. The maxim is worthy of the fool in the old story, who resolved not to go into the water till he had learned to swim.—*Macaulay*.

It is much easier to find a score of men wise enough to discover the truth than to find one intrepid enough, in the face of opposition, to stand up for it.—*Unknown*.

It's faith in something and enthusiasm for something that makes a life worth looking at.—*O. W. Holmes*.

BOOK NOTICES.

THE RISE OF INTELLECTUAL LIBERTY FROM THALES TO COPERNICUS. By Frederic May Holland, author of *The Reign of the Stoics*, *Stories from Robert Browning*, etc. New York: Henry Holt & Co. 1885. pp. 458. Price \$3.50.

Mr. Holland has made a valuable contribution to historical literature and done important service to the cause of rational thought by giving a connected and comprehensive history of Intellectual Liberty during twenty-two centuries,—from the time of the founder of the Ionic school of philosophy and of Grecian astronomy, 600 B.C., to the age of Copernicus and Servetus. Its conquests over classic polytheism, its persecution by Roman emperors and by the Christian Church, its revival in the latter part of the Middle Ages and rapid growth during the Renaissance and Reformation, are all clearly set forth, the facts being arranged in their historic relations and their connection with other events, and their bearing on liberty and activity of thought briefly pointed out in each chapter of the interesting and instructive narrative.

How the innovators from Ionia taught with but little disturbance until Anaxagoras and Alcibiades were driven from Athens; how this persecution inflicted irreparable injury upon the State; how Socrates died a victim of intolerance, and Plato perpetuated his spirit, and other thinkers went still farther than he in imitation of the great Athenian; how Aristotle strengthened the foundations of philosophy, and he and his disciples were banished for political rather than religious heresies,—are the main points of the opening chapter of the work. The author then proceeds to outline the systems of Pyrrho, the Stoics, and the Epicureans, and to show that the religion of Rome was attacked simultaneously by philosophy, science, foreign superstition, and civil war, until, in the time of Lucretius, free thinking was less opposed in Rome and freedom of speech less restricted there than at any previous time anywhere except at Athens, where tolerance prevailed for seven hundred years after Epicurus opened his famous garden.

Nearly a hundred pages are devoted to showing the unavailing efforts of the emperors from Augustus to Marcus Aurelius to protect the religion of the empire from the influence of foreign faiths and domestic unbeliefs, the partially successful efforts of Tiberius, Caligula, Nero, and Domitian to crush out freedom of thought, and its brilliant vindication by Seneca, Tacitus, Juvenal, Dion Chrysostom, Epictetus, Lucian, and others. Mr. Holland thinks that the prospects of rationalism would not have been worse in Lucian's day than in those of Lucretius, "if the diminution of mental activity had not opened the way for the triumph of a new form of superstition and intolerance, while the decline of martial vigor, under the pressure of tyranny, threatened the empire with ultimate conquest by barbarians, whose ignorance made it certain that they would support religion against philosophy."

Mr. Holland claims that no ancient Christian of "unblemished Orthodoxy" "showed himself so friendly to female independence as the sceptical Seneca, Plutarch, Pliny, Hadrian, and Antoninus Pius. Clement, who on account of his liberality lost his place on the list of saints, urged that women have as much right as men to study philosophy; and he praised Miriam, Sappho, Theano, Aspasia, and Leontium." "These names, with those of Portia, Livia, Agrippina,

the Arrias, Fannia, Sulpicia, Zenobia, and Hypatia, show that more female ability had been developed before the establishment of Christianity than can be found afterward for centuries."

Christianity, during this reactionary age, our author holds, did very little to encourage intellectual activity or to save political liberty, which was fast disappearing. "The subjection of women to men, citizens to sovereigns, laity to clergy, and reason to faith, was insured by the organization of the Christian hierarchy; and those early champions of liberty in the Church, the Gnostics, were cast forth as heretics at the very time that constitutional freedom, literary activity, and mental independence were revived by those philosophic emperors who reigned nearly to the close of the second century, and while rationalism still retained a popularity evident in the impunity with which Lucian made the gods ridiculous forever." Short-lived was the more enlightened form of Christianity which appeared early in the third century at Alexandria, where Clement endeavored to do justice to pagan philosophy and to recognize woman's capacity, and where Origen protested unsuccessfully against endless misery and other superstitious doctrines. The more rationalistic forms of philosophy vanished, and only the conquest of the Western Empire by hordes of illiterate barbarians was needed to consummate the extinction of intellectual liberty. A thousand years was to elapse before a disposition to cultivate science should reappear, and then to be rewarded by the imprisonment of Roger Bacon twenty-four years. "These ten centuries," says our author, "from about 450 to 1450, were as truly Christian as any others before or since. Certainly, there has never been a time when Christianity was so little interfered with by heathenism, worldliness, or unbelief." Mr. Holland then aims to show that the Church used her power to preserve order and obedience, but in so doing opposed political freedom and mental progress. Freedom of thought found her a natural enemy. She confined education to the priests. To kings and emperors, not to bishops and popes, we owe the great universities like Bologna and Padua; and, for popular education, we have to look to Moslem lands. The Christian Church consecrated beggary, and discouraged the industrial virtues.

The revival of ancient learning, the invention of printing, and the activity in literature, art, and commerce which followed, together with the notorious worldliness and profligacy of the popes, temporarily subverting their authority in Italy at the beginning of the sixteenth century, made that country too irreligious to be the cradle of the Reformation. Mr. Holland thinks it is difficult to decide whether intellectual liberty, up to the middle of the sixteenth century, was more indebted to the mysticism which arose in Germany and Holland out of the Bible and Tauler or to the rationalism which sprang from the revival of the classic philosophy. A great obstacle to progress was the failure of either the Renaissance or the Reformation to do more than substitute the authority of ancient for mediæval literature. "Every path to greater knowledge was blocked up by some old book."

There has been a general connection, Mr. Holland maintains, of intellectual culture with political and religious liberty, which flourished together at Athens, were suppressed together at Rome, struggled together against mediæval bondage, and made their influence felt in the sixteenth century as they had not before for ages. He takes exception to Wendell Phillips' statement, that "almost all the great truths relating to society were not the result of scholarly meditation." Plato, Aristotle, Tacitus, Averroes, Rienzi, and many other scholars, are mentioned as persons to whom was due all that was known about social rights in the sixteenth century. "Still," it is admitted, "Mr. Phillips was more than half right; for most of the members of his own class have always been conservative. So-called education has commonly been perverted into teaching pupils to take for granted the authority of teachers and text-books. The really liberal education of looking at facts directly and independently has scarcely been inaugurated." However, during the period covered by this volume, the friends of progress were mainly among the educated class; while the illiterate class, except when moved by some great wrong, were invariably conservative.

Mr. Holland has done his work well. It shows broad and varied scholarship, great industry in col-

lecting material, and skill in its arrangement; while it is written in a style that is invariably clear, direct, and strong. The book contains a list of important works in English, German, French, and Italian, as well as in ancient languages, which were consulted in preparing this valuable history, together with a chronology and an index. The author hopes before long to publish another volume, extending the history as far as the French Revolution.

B. F. U.

A SOLUTION OF THE MORMON PROBLEM. By John Codman, author of *The Mormon Country, The Round Trip, Free Ships*, etc. New York: G. P. Putnam's Sons. Price 25 cts. 1885.

Mr. Codman maintains that Mormonism with all its extravagances enforces the doctrines of Christianity; that polygamy, forming no part of its original canonical teachings, is no essential part of the system; and that the way to solve the Mormon problem is to sustain the anti-polygamous Mormons, the members of the "Reorganized Church of Jesus Christ of the Latter Day Saints," who number, in this country and in Europe, about 18,000, and encourage them to do missionary work in Utah. "Would you," he asks, "sweep away, were it possible, the original and harmless heresy of Joseph Smith, and thus deprive a whole people of a religion which still in all respects but one may be as acceptable to God as any professed by yourselves,—a religion, at any rate, which produces industry, sobriety, and brotherly love in this life, and in death the hope of a happy immortality? or will you let Mormonism survive after the poison of polygamy is purged from it?" A letter is given from Joseph Smith, son of the prophet and president of the "Reorganized Church," etc., who says, "If part of the money expended by government and in other churches could be employed by us in maintaining a few efficient men to labor in the Territory, we could probably make better returns *pro rata* than have been realized to the government so far."

THE Art Amateur for March.—Montezuma has some very good things this month, especially a story of John Luck and the Duke of Athol. Why does he break up a subject into paragraphs, when there is no real change in the matter? It serves only to confuse and weary the reader. The description of Mr. Walters' collection in Baltimore is extremely tempting; the sculpture of animals by Mr. Barye would alone be worth a journey to that attractive city. The illustrations in this number are not so attractive as usual. The delicate beauty of a water color is hardly reproduced in the woodcuts, although there are suggestions of much pathos and tenderness in "The Sick Child" and "Nodding on Post." We could well dispense with such subjects as "The Engaged" and "Threads of Gold" in original or copy. Greta writes a lively letter from Boston, which is hopeful of good things. The concluding number of the paper on Wood Engraving is very interesting. This important art has won great victories in our time. It is curious to see how one thing aids another. It was thought that the photographic processes would destroy the engraver's profession; but it has become his ally and assistant, and engraving has improved as rapidly in its processes as the demand for it has increased. There is much elaborate direction for needlework, for those who care for this art.

E. D. C.

THE Unitarian Review for March contains an article from the able pen of Mr. Edwin Mead, on "The Sabbath Question Once More," in which the writer endeavors to show that President Seelye's argument for the Sabbath is unsound. His task was an easy one. We regret that the essay could not appear in a publication read mainly by those who believe in the sacredness of the Sabbath. Mr. Mead has strong words of praise for the institution of the Sabbath, but he wants its observance placed upon the solid grounds of utility and man's constitution rather than trusted to the debatable appeal to Scripture authority." We presume Mr. Mead is in favor simply of Sunday as a day of rest and recreation and of worship for those who wish to use it in that manner, and is opposed to all "Sabbath laws" which compel religious observance of the day or forbid on that day any act, because of the assumed religious character of the day,—laws such as Mr. Holland showed recently, in *The Index*, disgrace the statute-books of Massachusetts. The other articles in this number are "William Henry Channing," by James Freeman Clarke; "A Story of Some French

Liberal Protestants," by Rev. A. P. Putnam, D.D.; "Some Old Records," by Rev. W. H. Pierson; and "John Ruskin, Economist," by Rev. D. Munro Wilson. The "Editor's Note-book" and "Review of Current Literature" are unusually readable, and add to the interest and value of the number.

In the March number of the *Atlantic Monthly*, Dr. Holmes definitely opens his "New Portfolio," which is exceedingly engaging. Besides the three serials by Mrs. Oliphant, Miss Jewett, and Mr. Craddock, there are several papers which are of value to thoughtful readers. The chief of these, a sketch by Clara Barnes Martin, called "The Mother of Turgeneff," gives a curious account of the early influences which surrounded the great novelist, and a strikingly vivid, but not altogether pleasing picture of Russian home life fifty years ago. Two scholarly articles, "Time in Shakspeare's Comedies," by Henry A. Clapp, and "The Consolidation of the Colonies," by Brooks Adams, an almost painfully realistic story by Bishop, called "The Brown-stone Boy," and a delightful Mexican travel paper, with the grateful title of "A Plunge into Summer," by Sylvester Baxter, complete the longer articles of the number. The continuation of the papers on Madame Mohl must not be forgotten. There are, besides, poems, careful book reviews, and short notices, together with the Contributors' Club. Houghton, Mifflin & Co., Boston.

THE Catholic World for March opens with a paper on "Carlyle as Prophet," Part I., by Rev. A. F. Hewitt; "On Christian Childhood," translation from Chateaubriand, by H. T. Henry; "Ireland's Argument," by James Redpath; "Common Sense versus Scepticism," by A. T. Marshall; "Stray Leaves from English History, A.D. 1570-95," by S. Hubert Burke; "A Fashionable Event," by Richard Power; "The Historical Value of Family Names," by C. M. O'Keefe; "Daybreak," by A. M. Baker; "Solitary Island," Part III., chapter 1, by Rev. J. Talbot Smith; "Beatification asked for American Servants of God," by R. H. Clarke, LL.D.; "St. John the Evangelist," by George Rothsay; "Katharine," chapters 26-28, by E. G. Martin; "The Dedication of the Church of St. Paul the Apostle in New York," by Daniel Paul; "Heaven in Recent Fiction," by Agnes Repplier; new publications.

THE English Illustrated Magazine for January and February abounds in illustrations, and contains very interesting and valuable reading matter, including serial stories by Wilkie Collins, W. E. Norris, and Hugh Conway, author of *Called Back*. "Shakspeare's Country" is described by Rose Kingsley, with many illustrations from drawings by Alfred Parsons. In the February number is a description and history of Naworth Castle, situated on the Scottish border, of great historical interest, also profusely illustrated. Continued through both numbers is a most interesting and valuable essay on the Drama and its present outlook, by H. A. Jones. The price of this beautifully printed and engraved magazine is only fifteen cents. Published by Macmillan & Co., New York.

MR. ALFRED H. GUERNSEY, who for a number of years was editor of *Harper's Magazine* and, later, one of the office editors of Appleton's *Cyclopedia*, is now associated with *The Library Magazine*, John B. Alden, publisher, New York. An article from his pen in the February number, on "Constitution and Migration of our Population," is a good example of how a skillful writer can transform the dry pages of a census report, and make them brilliant with interest and instruction. Benson J. Lossing, LL.D., writes in the March number on the question of "Secret or Open Sessions of the Senate." He wields a graceful pen, and what he has to say upon a subject of such interest and importance will deservedly attract attention.

THE contents of the March number of the *Andover Review* are "Optimism," by Mark Hopkins, D.D., LL.D.; "Reformation Theology," II., by Prof. E. V. Gerhart; "The Man, Thomas Carlyle, at Last," by Hon. D. H. Chamberlain; "The New Psychology," II., by G. Stanley Hall, Ph.D.; "The Early Life of Tholuck," by J. H. W. Stuckenberg, D.D.; editorials on "The Crusade against Common Schools," "The Confidence of the Dead," and "Gen. Gordon at Khartoum"; "Theological and Religious Intelligence," and book notices.

Battle of the Books

The WATERLOO of *The LITERARY Revolution* was supposed to have been met about three years ago. The merry millionaire-publisher laughed and said "I told you so," and dreamed of the return of old-time prices—\$8.00 for books the Revolution had given for 50 cents. There was a hard battle, but it proved to be a **BUNKER HILL** instead of a "Waterloo." Disaster was transformed to victory. To-day the Revolution has a larger catalogue (100 pages, crowded) of better books at lower prices than ever before. The few titles here named are only specimens. **FRANCE** Guizot's Celebrated Illustrated History of France we have reduced in price, from \$49.50 to as low as \$5.00. We publish two editions, one in eight volumes, small octavo, with 426 fine illustrations, price, \$8.00; the other in eight volumes, 12mo., with 64 illustrations, price, \$5.00—this *The Christian at Work* pronounces "A marvel of excellence in every respect, at a marvel of cheapness." **SPAIN** Prescott's Great Work, History of the Reign of Ferdinand and Isabella, we issue in two elegant volumes, small octavo, illustrated, price \$2.00, also in one volume, 12mo., price, \$1.25. A timely and excellent work, reduced in cost from \$15.00 to \$1.00, is Kenrick's History of Ancient Egypt under the Pharaohs. Also, the Life of **EGYPT** Chinese Gordon, by Forbes, price, 50 cents. We also publish in five charming Elzevir volumes price only \$1.75, Green's Larger

ENGLAND History of the English People. Many will prefer this edition to Harper's published at \$10.00. We also issue Hume's England, six large octavo volumes, library style, gilt tops, price \$6.00, and the same bound in three vols., half Russia for \$4.50. We have, too, Macaulay's England, three vols., small 12mo. for \$1.60, and Dickens's Child's History of England, price 45 cents. Germany is represented by Schiller's History of The Thirty Years' War, Elzevir edition, price 40 cents, and by Yonge's Young Folks' History of Germany, price 45 cents. One of the greatest historical works published in **BABYLON** is Rawlinson's Seven Great Monarchies of the Ancient Eastern World. This we have reduced in cost from \$18 to \$3.00, though ours is really a better edition than the one sold at the higher price. It is in three vols., large 12mo., cloth, gilt tops, containing over 700 illustrations and maps. Gibbons' **ROME** with Milman's Notes we issue in five small 12mo., for \$2.25. These represent only a portion of our Historical publications. There are Grote's Greece, 4 vols., \$2.70, Carlyle's French Revolution, 2 vols., 80 cents, and others. Every department of standard literature finely represented. To know what *The Literary Revolution* is doing you need to see its immense catalogue and read the enthusiastic words of its patrons—but better than all, see the books themselves.

Books ordered by mail require 20 per cent. of list price extra for prepayment of charges.

COUPON This Coupon will be received in lieu of 10 cents cash, toward the price of any book above named, if sent within 10 days from date of this paper (give name of paper). This offer is to secure your PROMPT response and indicate the paying advertising medium.

on reasonable evidence of good faith. Address JOHN B. ALDEN, Publisher, 393 Pearl Street, New York.

H. T. MARSHALL'S
PATENT
ADJUSTABLE
LACE
CONGRESS

Is easily adjusted to fit any instep or ankle at any time, and will not uncomfortably draw the ankle, like ordinary congress. It has the stylish appearance of a lace boot and all the convenience of any congress in putting on or off the foot. Marshall's Pat. Pat'd May 13, 1884, woven in the front strap or stamped on the shank of each shoe. If your dealer does not keep them, send postal for directions how to get them to the Patentee and Manufacturer of Men's, Boys', and Youth's Fine Boots and Shoes. Tennis Shoe for Ladies and Gents a specialty.

WHOLESALE AND RETAIL
Booksellers and Stationers.

Catalogues of new and standard books will be sent to any address without charge. Illustrated list of works of American authors sent on receipt of 4 cents in stamps.

N.B.—The prices quoted in the catalogues which we send out are the PUBLISHERS' RETAIL PRICES. These, unless marked net, are subject to a uniform discount of TWENTY PER CENT. to individual buyers. Special terms are offered to the trade and to public libraries. Any book in print will be sent by mail on receipt of the net price, with enough added to cover postage, at the rate of one cent for each two ounces. The postage on an ordinary 16mo book is about ten cents, and other sizes in proportion. Orders by mail are especially solicited, and will receive prompt and careful attention. Liberal books a specialty, our store being the Western agency for the publications of GEO. H. ELLIS and the AMERICAN UNITARIAN ASSOCIATION.

RELIGIO - PHILOSOPHICAL JOURNAL.
Established in 1865.

A Paper for all who Sincerely and Intelligently Seek Truth without regard to Sect or Party.

The JOURNAL, in the estimation of a large proportion of the leading authorities on Spiritualism, stands pre-eminent as a fearless, independent, judiciously fair advocate of Spiritualism. It has received more general notice, and more frequent and higher commendation from intelligent sources, regardless of party, than any other Spiritualist publication ever published; the

The JOURNAL is uncompromisingly committed to the scientific method in its treatment of the phenomena of Spiritualism, being fully assured that this is the only safe ground on which to stand.

The JOURNAL is unsectarian, non-partisan, thoroughly independent, never neutral, wholly free from cliques and clans.

THE
"FREIDENKER."

Freedom, Culture, and Prosperity for all!

(Organ of the Freethinkers of North America, of the Union of Radicals, and the North American Turnerbund.)

Editor, C. Hermann Boppe.

TERMS, PER ANNUM, IN ADVANCE:

UNITED STATES AND CANADA:

Freidenker..... \$2.50
Turnerische Ausgabe des Freidenker (Amerikanische Turnzeitung)..... 3.00

EUROPE:

Freidenker..... \$3.00
Turnerische Ausgabe des Freidenker (Amerikanische Turnzeitung)..... 3.50
Sample copies sent, on application, free of charge.

In this weekly, which is now in the thirteenth year of its existence, political, social, and religious matters are discussed with a view to general enlightenment and progress. The Amerikanische Turnzeitung is especially devoted to the discussion of topics pertaining to physical culture and matters of interest to lovers of the gymnastical art.

Since Jan. 1, 1885, the Freidenker has been enlarged, thus furnishing CONSIDERABLY MORE READING MATTER, while the PRICE REMAINS THE SAME AS BEFORE.

For the convenience of those of our readers who are chiefly interested in matters relating to gymnastics, the Freidenker and its former supplement, the Turnzeitung, have been consolidated into one paper, called Amerikanische Turnzeitung, with the sub-heading, "Turnerische Ausgabe des Freidenker."

This paper contains more reading matter than furnished by both the Freidenker and Turnzeitung heretofore. In making these changes, the publishers have incurred great expense; and we therefore solicit the hearty co-operation of all friends of the cause in securing for the Freidenker and the Amerikanische Turnzeitung a wider circulation.

We also publish

"Erziehungsblaetter,"

fuer Schule und Haus.

A Liberal German Educational Monthly.
(Organ of the German-American Teachers' Association.)

CURRENT TOPICS.

BY B. F. U.

LECKY, the historian, it is stated, stands a fair chance of being elected Principal of the Edinburgh University as successor to Sir Alexander Grant.

THE University of Cairo, Egypt, said to be three hundred years older than Oxford, has ten thousand students, who are being educated for missionaries of the Moslem faith.

A WELL-KNOWN Methodist minister writes us: "I approve of your characterization of Dr. Shedd's recent language in the *North American Review*. To say that God's judgment is 'neither reformatory nor protective,' and that it is 'unmodified by considerations either of utility to the criminal or of safety to the universe,' is, in my judgment, a blasphemy which outranks everything in infidel literature."

REV. JOSEPH COOK's platform last Monday was occupied by himself, who read five letters written, at his request, in reply to the question, "Why do you personally believe the Christian Religion to be a Divine Revelation?" forming "a symposium on Christian evidence," he said; Mrs. Eddy, of "Christian Science" and faith-cure notoriety, who claimed to possess a peculiar power, not merely magnetic or derived from spirits, but the direct working of the Divine Mind within her; and Anthony Comstock, who talked on his favorite theme, obscenity,—a curious combination, indeed. Mr. Cook evidently sees the necessity of this sensational method of attracting attention to sustain interest in "the Monday Lectureship." He is not without ability of a certain kind, but has so many of the characteristics of a humbug that they very much lessen the force of his utterances when he talks sensibly, as he sometimes does.

THE *Catholic Mirror*—quoting from the testimony of a witness before a committee of the Massachusetts legislature as to licentiousness, intemperance, and poverty in Boston—declares that "this, then, is the final result of that stainless Puritanism which boasted of being so much better than the rest of the world," and concludes that "the only stable basis for a true life is the creed of the

Catholic Church." Puritanism, past and present, has sins enough of its own to answer for without being held responsible for all the ignorance and vice of multitudes who know nothing about Puritanism, who are not of Puritan descent, and who were reared under the influences and are now adherents of the Roman Catholic Church. An exchange justly observes: "Boston is not overwhelmingly Puritan or Protestant in its population. Its population is becoming foreign and Catholic. The arch-diocese of Boston—which includes Essex, Middlesex, Suffolk, Norfolk, and Plymouth Counties—reports a Catholic population of three hundred and twenty thousand, the bulk of which, it will hardly be denied, is in Boston. It is not the Puritans who monopolize the liquor business." What is Catholicism doing to counteract, in this city and State, the evil effects of political and ecclesiastical despotism entailed upon us by large additions to our population by immigration from priest-ridden Catholic countries?

THE Fast Day proclamation of Gov. Robinson is about as Scriptural, though not so evangelical as Gov. Butler's and less poetical than Gov. Long's. The spirit of the proclamation expressed in the request that the people supplicate God that "our beloved Commonwealth, reared and perfected by the fathers, may stand before the world the highest ideal in human government of justice, equality, and freedom for all," will have the approval of all good men and women. But of what use are appeals to God, such as our Governor recommends, so long as the people of the State continue to elect to the legislature men of low average intelligence, many of them small politicians, who oppose and defeat important reformatory measures designed and required to help realize the idea of "justice, equality, and freedom for all"? Although he issues this proclamation in accordance with an established custom, the Governor himself probably sees as clearly as anybody that large intelligence, breadth and liberality of thought, political knowledge, moral courage, and sterling honesty are the qualities most needed now in the legislature of Massachusetts. In their absence, no amount of "fasting and prayer" can "secure justice, equality, and freedom for all"; while their presence would, in a few years, lead to important reforms in the government of the State, and go far toward "securing justice, equality, and freedom for all," even though no days of fasting and prayer should be appointed or observed. Indeed, "one of the requirements of justice, equality, and freedom for all" is that such proclamations as that of Gov. Robinson be discontinued. In appointing "a day of fasting, humiliation, and prayer," calling upon the people of Massachusetts to acknowledge theological dogmas and observe theological practices, the Governor has violated the fundamental principles of secular government, in which only "justice, equality, and freedom for all" are possible. The "highest ideal in human government" will never be reached until the people are left free to follow their own convictions in religious matters without any interference of the State, and the officers

elected by the people be required to confine their official acts and utterances to the legitimate affairs of secular government.

In the list of one hundred and fifty names signed to a remonstrance presented to the Massachusetts legislature against "any further extension of suffrage to woman," we notice the following, which are among the best known: Francis Parkman, LL.D., Thomas Bailey Aldrich, Rev. Brooke Herford, Rev. O. B. Frothingham; Charles W. Eliot, President of Harvard College; John Fiske, Rev. Andrew P. Peabody, Rev. E. H. Hall, Rev. F. H. Hedge; Rt. Rev. B. H. Paddock, Bishop of Massachusetts; Rev. J. B. Bodfish, Chancellor Cathedral of Holy Cross; Hon. Charles R. Codman. Mr. Garrison's remarks in regard to this parade of names will be found in another column. On the same occasion, Mr. Blackwell said: "America will not be saved by eminent names. But I will recall a few of our dead heroes whose memory Massachusetts honors, who within twenty-five years have expressed their faith in suffrage for women, and who will outweigh a hundred such lists as are laid before you by the remonstrants: William Lloyd Garrison, Wendell Phillips, Theodore Parker, Francis Jackson, Charles F. Hovey, Samuel G. Howe, Ralph Waldo Emerson, Henry W. Longfellow, John Pierpont, Stephen S. Foster, Charles Sumner, Henry Wilson, Samuel Bowles, William S. Robinson, Bishop Gilbert Haven, Rev. Jacob Manning, D.D., William Whiting, Franklin Williams, Judge Isaac Ames, Oakes Ames, Amasa Walker, William Henry Channing. Are such men as these likely to have been mistaken?" To this list might have been added hundreds of distinguished names on the side of woman, and among them the following: W. H. Seward, Salmon P. Chase, Joshua R. Giddings, Benjamin F. Wade, Matthew H. Carpenter, Henry B. Anthony, Carl Schurz, George W. Julian; Governors Claflin, Washburn, Talbot, Banks, Long, and Butler, of Massachusetts; Disraeli, Henry Fawcett, Jacob Bright; Parnell, the Irish leader; Sir John Macdonald, the Canadian Premier; Sir Charles Dilke, Marquis of Salisbury; and Sir Stafford Northcote; John Stuart Mill, Prof. Huxley, Dr. Louis Buchner, Prof. Asa Gray, William T. Harris, Rowland G. Hazard; Prof. Cairns, of England; Chancellor Eliot of Washington University, St. Louis; Prof. Bascom of the University of Wisconsin; Prof. Moses Coit Tyler, of Ann Arbor; Judge E. P. Hurlburt, author of *Human Rights*; Judge R. C. Pitman, of Massachusetts; Judge J. C. Underwood, of Virginia; F. D. Maurice, Thomas Starr King, Samuel Johnson; Bishop Simpson; Revs. Edwin H. Chapin, Henry Ward Beecher, Robert Collyer, Samuel J. May, Phillips Brooks, James Freeman Clarke, H. W. Thomas, and M. J. Savage; Canon Kingsley, Edwin Arnold, Victor Hugo, Björnsterne Björnson, Whittier, T. W. Higginson, George William Curtis, James T. Fields, Henry George, George Jacob Holyoake, Gerrit Smith, Frederick Douglass, and Oliver Johnson, and—but the limits of our space compel us to leave the list only just begun.

UNITARIAN CREEDS.

A month ago, in an article entitled "Which is the Honest Creed?" we quoted certain affirmations of belief which had been printed at *Unity* Office, Chicago, on the cover of tracts, without qualification, as what "Unitarians Assert"; and we put by the side of them the doctrinal portions of the Constitution of the National Unitarian Conference. The two statements did not appear to us to harmonize; and we, therefore, raised the question whether both of them could be regarded as correctly presenting the beliefs of the main body of Unitarians. As we hoped, our question has called forth a reply from Mr. William C. Gannett, who—we trust we divulge no secret that needs to be kept—is the author in chief of the Western affirmations. Mr. Gannett sends his reply, through *Unity*, in the form of an "Open Letter"; and from its columns we very gladly transfer the letter to our own, as really our property. (*Unity* readers, by the way, who do not see *The Index*, have seen only one side of the discussion.) It is so rare, in these later days, that we get anything from Mr. Gannett's pen that we congratulate ourselves on having secured this word from him even in this roundabout way, and though he comes, in part, as our critic. His letter follows:

A Letter to Mr. Potter about Certain Unitarian Affirmations.

Dear Mr. Potter,—I am glad you raised the question in your *Index* editorial (February 19) whether the "Unitarian Affirmations," printed in our little five-cent hymn-book, were true for most Unitarians; and I think your main point well made. It would be fairer to say in some way that that Statement of Faith represents many, rather than all, Unitarians; and, if the others concerned in making it agree, some such word shall go into future copies, perhaps into those already printed. But the others may not feel any need to qualify it.

It is so taken for granted in the Unitarian family that none can try to make an authoritative statement of belief for others without thereby ceasing to be Unitarian, that one easily overlooks the importance of saying this each time he sets forth the Faith to strangers.

But I must add something. I do not think that "creed" nearly so unfair to the majority of Unitarians as you imply: the unfairness that I feel concerns a minority. For I believe not only that very many East as well as West would hail those Affirmations as a noble wording of their noblest faiths, but that a real majority of us would accept them as a *minimum* statement; i.e., as one not wholly satisfactory and adequate, one they would themselves draw up, but as one that states nothing they do not believe, and that does state the central and most vital parts of what they do believe. "*Minimum*," as essences are *minima*.

For instance, as to the five points you select for special criticism,—Jesus, Bible, Immortality, Free Thought, Names that divide "Religion,"—on three of these I should answer to your query *yes*, where you are expecting *no*. I think that the majority of Unitarians to-day do "regard Jesus as only the greatest of the historic Prophets of Religion,"—though, you know, the word "only" is your own, it is not in the Affirmations, which aimed to be as little negative and limitative as possible; and that the old and now misleading titles "Lord" and "Son of God" cover no more than *that* to most of those who still use the titles, and even to most of those who degrade them into shibboleths. But that prophetic ranking still leaves honest room for differing degrees of appreciation. I think the majority do "place all bibles of all religions together, to be judged alike by the standards of

Reason and Right"; but this leaves room for valuing the Hebrew and Christian bible either below or above the other historic bibles. It is poor logic and poor taste and faint-heartedness, but not real misbelief about the bibles, that makes so many ministers read but one—one book from all literature!—at their church services. And I think that to the majority of us "all names that divide 'Religion' are of comparatively little consequence,"—though the adverb, I see, a little blurs the meaning here, which was, "All names that divide 'Religion' are to them of little consequence compared with *it*." Many emphasize and over-emphasize the names "Christian" and "Unitarian," but I think the majority of even these would thoughtfully allow that "Religion" is still the greater word, as in itself covering most of all they value most.

As to Immortality, probably most of us, as you hint, would call their "hope" a "faith." I could hardly tell, for myself, which is the exacter word to express the sort of trust. You know the American Unitarian Association published Chadwick's sermon, "The Immortal Hope,"—its only tract, I think, directly on the subject. "In that hope we rejoice," our affirmation safely said.

And as to Free Thought, of which we said that "Unitarians trust it, they trust it everywhere, they only fear thought bound," the question by which you seek to test the truth of that strong statement includes other bearings, it seems to me, than simply those which our words involve. That is the one sentence, however, about whose truth I felt a little doubt,—it is so very strong; but I have a good deal less doubt that most Unitarians would claim it to be wholly true. You ask, "Has any general representative body of Unitarians ever expressed this trust to the extent of declaring that the limits of their religious fellowship should be as wide as freedom of thought in the search for truth?" I know of none that has expressed it in those set terms; but as coupled with two other emphases, if possible still more important,—the spirit of Love, and the attempt to right the wrong in self and in society,—I think it is implied in the motto of our Western Unitarian Conference, "Freedom, Fellowship, and Character in Religion," and still more specifically in the constitutions of several of our Western State Conferences.

But, as you well know, few of us are wholly logical in such matters as you ask about in your editorial; and the lack of logic isn't mainly lack of "honesty." Instead of saying with you, of the beliefs represented by the Preamble, etc., of the National Conference, and those affirmed in our little hymn-book, "Both of these statements cannot be true of the generality of Unitarians," I suspect the precise opposite is the fact: that both statements are true of the generality, and they do not feel their inconsistency.

If Unitarians believed more mightily what they do believe, the proportions of emphasis would alter for them: the great things would ring out great, and the small things would ring out small! "O ye of little faith!" keeps coming into mind. Not "pale negations," as Emerson put it, but *pale affirmations* describes us. Truly, we have our great ideas; but, if our great ideas had us, we should know that we could put no wind behind them so strong as would arise by saying, each and all, and all together, that our one Supreme Idea is "Ethics, and the Great Faith to which Ethics leads,—Faith in the Moral Order of the Universe, Faith in All-ruling Righteousness." Then all other ideas and names—God, Immortality, Jesus, Bible, and the rest—would find their own due places and proportions of importance. Then, for the first time, we might be able to make outsiders understand "what Unitarianism is." Then, in the National Confer-

ence, "Article X." would become the Preamble: at present, the pyramid is standing on its apex, with its broad base in the air. And then it might be even possible to put forth in National Conference a "Statement of Unitarian Faith," the "Unitarian Affirmations"; for we should frankly say, Within that Supreme Idea for which we stand, all counting it supreme, we freely differ about this and that which others make supreme, some of us believing more, some less,—and we could tell the range. The world would listen in amaze; and we should be "atheists" for fifty years, and then in that sign should begin to conquer.

Truly yours,

W. C. GANNETT.

Since Mr. Gannett concedes our "main point" to have been "well made," there is little occasion to add anything further to the discussion. With regard, however, to his argument that the "Affirmations" fairly represent the views of a majority of the Unitarian body,—at least, that a majority could unite in them as "*a minimum statement*,"—we wish to say that it seems to us to rest too much on individual impressions to have very much weight. On looking steadily at certain phases of modern Unitarianism, we, too, might easily believe that such a broad statement as this is not merely a prophecy, but a fact; that it fairly represents Unitarian beliefs even to-day. These phases are specially conspicuous in the limits of the Western Conference, and yet are not wholly there. The recent announcement that the American Unitarian Association is to publish a selected volume of sermons of Theodore Parker, and the actual publication, already, by the Unitarian Sunday School Society in Boston of Edward H. Hall's book on the Gospels, which does not differ essentially from Parker's view of the Gospels, are promising pieces of blue sky in other quarters. Many other signs of the denomination's progress in the last twenty years are apparent. But, as we pointed out in the previous article, the Western Conference includes only a small minority of the Unitarian churches of the country. And the publication of the Parker volume and of Mr. Hall's Sunday-school manual only means, probably, that such views have a right to official recognition within the denomination, and not that the majority of Unitarians are ready to accept them. When we heard, as recently happened, a Unitarian conference—not an irresponsible choir in a corner, but a whole conference—singing the old hymn,—

"All hail the power of Jesus' name!
Let angels prostrate fall;
Bring forth the royal diadem,
And crown him Lord of all!"

we could not help feeling that, to the large body of Unitarians, Jesus is still somewhat more than one in the natural line of humanity's prophets, though the greatest. These impressions from individual observations, however, on one side or the other, cannot be regarded as such trustworthy evidence of the position of the denomination as is that almost unanimous vote by which, in 1882, the National Conference, a strictly representative body, declared that its Constitution and Preamble "fairly represent the opinions of the majority of our churches." Nor can we so readily believe, as Mr. Gannett seems to do, that to this majority, who tenaciously cling to the titles of "Lord" and "Son of God" for Jesus, these titles are only metaphors, meaning simply that in a natural group of great men, such as Zoroaster, Confucius, Sakya-Muni, Socrates, Jesus, Mohammed, Jesus is greatest.

But, however this may be, in his closing paragraph, Mr. Gannett puts in noble words a noble aspiration. We wish that, in pursuance of it, he would go to the next National Conference, and

make the effort to persuade it to rescind its Preamble and the whole mosaic of Articles growing therefrom, and to adopt in their stead the simple affirmation that it is a union of churches and societies whose "Supreme Idea is Ethics and the Great Faith to which Ethics leads,—Faith in the Moral Order of the Universe, Faith in All-ruling Righteousness." Should such an effort meet with success, it would solve the riddle of Unitarian creeds.

WM. J. POTTER.

CHURCH CUSTOM vs. BIBLE DOCTRINE.

The inspiration of the Bible, by which is meant the absolute correctness of all its statements, whether of fact or doctrine, is one of the points most strenuously and most frequently insisted on by the orthodox clergy. Nevertheless, strange to say, some of their habitual assumptions, declarations, and courses of action are in direct contradiction of things asserted or things enjoined in that idolized book. For instance:—

1. Rev. Dr. Austin Phelps, writing in the *Congregationalist* of February 5 on the duty of solemnity of demeanor in the house of worship, talks of the "sacredness of the house of God," and calls it "the house where God dwells," seeming utterly unconscious of the fact that his infallible Bible declares that God dwelleth not in temples made with hands.

2. It is everywhere assumed by the orthodox clergy that "the age of miracles is past." But the last chapter of Mark's Gospel gives us the express declaration of Jesus, in his last meeting with his apostles, that miracles are to continue without limitation of time, and to be performed, not by the apostles only, but by any believer. These are his words as reported by Mark: "These signs shall follow them that believe: in my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and, if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

Moreover, explicit injunctions in regard to the treatment of sick Christians are given in the inspired Epistle of James, in the words following, "Is any sick among you? let him call for the elders of the church; and let them pray over him, anointing him with oil in the name of the Lord; and the prayer of faith shall save the sick, and the Lord shall raise him up."

No promises in the New Testament are more distinct, no injunctions more explicit, than those above quoted; yet the orthodox clergy ignore and disregard them. They neither repeat and enforce these inspired commands in preaching or private exhortation, nor attempt themselves to perform the miracles in question when members of their families or of their flocks fall sick. Instead of this, they do, and recommend to others to do, the very thing discountenanced by both Old and New Testaments; namely, "seeking not to the Lord, but to the physician," one who makes no pretence of inspiration. Nay, more, when some obscure sect or some individual with faith like a grain of mustard-seed follows the Scriptural injunction, and proves faith by corresponding works, these reverend gentlemen join the unregenerate world in denouncing them as superstitious and criminal.

3. I will mention, finally, a case of divergence between clerical teaching and Biblical command still more peculiar and noteworthy than the above. On the subject of Sabbath keeping, the two parts of the infallible Bible teach two doctrines so diverse as to be incompatible with each other,—the Old Testament enjoining observance of the seventh day of the week by rest, and the New Testament allowing Christians to observe or not observe a Sabbath at their pleasure. The orthodox clergy,

really disregarding both these teachings of Scripture, have manufactured a claim that the first day of the week must be sacredly observed by worship, pretending this duty to be enjoined by the Bible, though nothing like it is found in either Testament.

It is a curious matter for inquiry, and one in which, from year to year, more and more people are interested. Why do the reverend clergy thus openly violate the rule which they pretend to follow, which they emphasize as the right rule for their parishioners to follow, and which they insist upon most strenuously when cases arise of individual disloyalty to their creed and customs? The answer is that the church creed and the church custom have practically, though not avowedly, become their rule of action. When we remember that this creed and these customs have been formed under the guidance of the clergy, it might even be said by their choice and will, and when we notice that the violations of Scriptural rule in question are of a sort to increase the influence and strengthen the authoritative position of the clergy, there seems good reason to believe that the answer above given is the correct one.

It is exceedingly important to the average minister that a fair proportion of his congregation should regularly attend his Sunday services. Since scarcely one in ten of the clergy of any denomination has eloquence or other attractiveness enough to draw hearers as a popular lecturer or a popular singer draws them, the average congregation will be apt to dwindle, unless some powerful influence is brought to bear, and kept in active operation, to draw or drive them into their pews. The unattractive average minister does not have to invent or to search for such a motive power. An energetic one exists, ready shaped to his hand, formed for the very purpose in question by his early clerical predecessors. In fact, he himself and all those whom he wishes to gain as hearers have been brought up from their childhood to believe that Sunday is "God's day," that the parish meeting-house is "God's house," that he who stands in the pulpit is "God's ambassador," that the book from which he reads is "God's word," and that to listen to him on that day and in that place is the divinely appointed duty of the people. To insist on these points, then, with appropriate solemnity in the pulpit, in the prayer-meeting, in the Young Men's Christian Association, in the publications of the American Tract Society, and in the weekly papers self-styled "religious," is the obvious (not to say the only practicable) method of filling the pews, and keeping the credit of being "God's ambassador," an authoritative guide of the people in matters moral and spiritual. No novel assumption needs to be made, no new attitude of authority taken: all the claims above mentioned are as old as the Westminster Catechism, which the writer, in his childhood, was obliged to commit to memory, and repeat every Sunday afternoon, and which since that time has been over and over again reprinted, with its dishonest array of "Scripture proofs," by ministers who saw that their fraternity needed such help. In fact, Mr. Worldly-wise-man himself could devise no instrumentality better fitted than this to accomplish its purpose. If the young children of a parish are taught to receive as axiomatic truths, and fasten firmly in their memories, the notions that Sunday is God's day, that the meeting-house is God's house, and that the man who has been hired to preach there at that time is God's ambassador, a great step will have been taken toward the quiescence of the parish for thirty years more under its old creed and its old customs. And, if this policy is skillfully followed up in the denominational paper

(say the *Congregationalist*) by commendation of the writers who support these notions, and depreciation of those who show reasons for questioning them, and persistent exclusion of such reasons from its own columns, and hints that such critical investigation as that of Rev. Heber Newton in this country and of Rev. Dr. Samuel Davidson in England comes perilously near to infidelity, then the probability is strong that the pews will be filled and the pulpit sustained for another generation.

It would seem that the orthodox clergy ought either to conform their language and conduct to the teaching of the Bible, or to justify their divergence from portions of that teaching by candidly admitting the human origin of the books, the numerous errors, both of fact and of doctrine, incorporated in them, and the need of discriminating, as Heber Newton has done, between the right and the wrong uses of them. Until our ministers do one or the other of these things, whether they should be called dishonest or not, it is quite certain that they are untrustworthy.

C. K. WHIPPLE.

PRINCE BISMARCK AND HIS KALEIDOSCOPE.

The member of the German Parliament who conducts a stranger into the gallery is careful to inform him that the present quarters are temporary. Germany will soon have a splendid environment for its legislators. Since the timely French milliards came by the remorseless roulette of war, Berlin has been steadily transformed. The city which Goethe ridiculed and Heine hated has now become a world-city. Not only is it the best-governed city in Europe, but it is becoming one of the most beautiful; yet here and there a fragment of provincial Berlin remains, and one of these is the big Quakerish room where the Reichstag meets. Its ugliness is not altogether unpleasant, however, when one discovers that it is comfortable, well-lighted, and of excellent acoustic qualities. When one has taken his seat in the gallery, and has spread out before him the plan of the assembly, so that every seat can be noted at a glance and the name and politics of its holder known, he perceives that, if in one sense the room is without decoration, in another it is highly variegated. There are ten political groups, each distinguished on the map by a color: the German Liberal party, numbering 60, scarlet; the National Liberals, 49, green; the Social-Democrats, 24, red; the Centre, 106, slate; the People's party, 7, sage; the Alsace-Lorraine members, 15, purple; the German Conservatives, 76, indigo; the German Imperialists, 28, rose; the Poles, 16, light blue; those belonging to no party, 8, yellow. From the seat of the Speaker,—who works hard, by the way, and on no salary,—the parties ray out, beginning with the leaders, among whom one is glad to see on the Left Prof. Virchow, just entered on the seat of the Jew-baiting court preacher. By his side is the large, red-haired Bamberger, whom the Conservatives dread. In front is thick-set Dr. Windhorst in clerical dress, beside a Frankenstein who is not easily raised. Among the leaders is Moltke, unchanged in appearance since I saw him on the battle-field in France,—still, as a lady next me graphically describes him, a "Death in uniform." One sees a large number of good heads in this assembly; one hears more terse and fluent speaking than in the English House of Commons, with far less noise in the way of assent or dissent. But there is no doubt that Prince Bismarck was correct in describing it the other day as "a kaleidoscopic assembly," however doubtful may have been the wisdom of his course in disregarding its will on that account. The result has already suggested

that it would be wiser to study Goethe's famous Science of Colors, and try by the like method to classify these political hues and shades of his kaleidoscope, so as to discover the secret of their unity and the law of their harmony.

Prince Bismarck has recently expelled several correspondents of foreign journals from Berlin, with the natural result of placing an iron collar around the necks of those who remain. From a political point of view, letters for publication sent from the German capital have been so reduced in value that it is well enough to advise my reader that I am writing out my Berlin notes on a bank of the Neva. When I had an interview with the German Chancellor just before the battle of Gravelotte, he told me that, if I would be safe, I must keep near the king; and I found it good advice, although his Majesty is now portrayed at that battle with bombs bursting around him. But now, in order to be safe, a voracious writer must keep a frontier between himself and the Emperor. Such is Bismarck's latest notification.

On Tuesday and Friday last, January 8 and 9, I sat in the gallery of the Reichstag and listened to two debates which have supplied Europe with matter of discussion. The subjects before the Parliament in each case concerned national expenditure. In such matters, the German empire has inherited the ideas of economy belonging to Prussian traditions. Somebody once said that Prussia had starved itself into a great country. The Reichstag still jealously watches every mark of the national treasury. The first day's debate related to some small domestic economies, and the warmth with which they were discussed reminded me of a play which I saw in Berlin fifteen years ago. This play was called, I think, "The Muttonburgers," and showed the magnates of a remote village in council beneath the scales of justice,—iron scales held by a plaster ballet-dancer, whose eyes were bandaged with a handkerchief,—the subject being some village improvement for which three hundred thalers were demanded. The councillors disputed as hotly as if the amount had been three millions, and I think they came to blows. In this Reichstag debate also, they finally came to blows—in a metaphorical way. But I perceived that it was not really the money that was causing the excitement. Prince Bismarck has so repeatedly disregarded the will of the "kaleidoscopic assembly" in everything subject to the imperial prerogative that he has left that body no weapon wherewith to strike him, save its indisputable authority over the national purse-strings. Its refusal of five thousand dollars, to enable him to employ an assistant in the Foreign Office, was the Legislature's resentment for the degree to which he has lowered it. And now a discussion on the estimates for the Interior suddenly broke out into a tempestuous altercation about the new colonial policy of the government. A Social-Democrat spoke bitterly of the effort of the government to get rid of its children instead of providing occupation for them at home, and a Radical ascribed the enormous increase of emigration to the protective tariff. Then Prince Bismarck arose,—he had to say something,—and uttered the paradox that increasing emigration is a sign of increasing prosperity. This nonsense may be attributable to the fact that the debate was sprung upon the Chancellor. This being the first day after the holidays, it was not supposed that anything so important would be brought forward. The colonial debate was set down for the following day. Prince Bismarck, having suffered himself to be surprised into a speech, was speedily floored by a man he particularly detests,—Herr Richter. This man—a striking figure, in two senses, of the Extreme Left—

owed the Prince a personal blow for having recently said (as he has often said to critics, when they became personal) that he refrained from replying to him (Richter) as he deserved, for the sake of good breeding. But, on this occasion, he could reserve it, being able, with the utmost politeness, to illustrate Bismarck's new theory of emigration resulting from prosperity by pointing to the notoriously poor districts of Germany, which chiefly supply the emigrant ship, and to Ireland. Finally, he raised a laugh on the Prince by asking, "If emigration is a sign of the nation's prosperity, what will become of us when the climax of prosperity is reached?" Bismarck diverted attention from his discomfiture by announcing that the duties on corn are to be raised. "Dear bread and more emigration," was Richter's comment, with the applause of his party. "We now know the bribe to be offered the farmers at the next election. We take up the gauntlet you throw down, Herr Reichskanzler!" "I object to being apostrophized in this unceremonious way," exclaimed Bismarck, with warmth, "and must request Herr Richter to observe parliamentary etiquette more carefully."

On the following day, the Reichstag was fairly full at the hour of meeting,—one o'clock: and the buzz of conversation before the president sounded his bell was rather louder than on the previous day. No sound drew attention to Bismarck when he entered, not even yesterday, when the assembly first convened after the Christmas adjournment. The House of Commons would have rung with applause at Gladstone's entrance after a vacation. It was rarely that Bismarck, when speaking, elicited a "bravo," even from his own wing of the Reichstag. The first matter mentioned was the appointment of a Governor for newly annexed Kammeroon, and the salary to be paid him. I could not quite gather how that was disposed of, or who is to be the unhappy man sent out there. Kammeroon is a desert, and they who go there to remain may abandon hope. Once, when Lord Palmerston had appointed somebody to a post in a malarious region, the official asked, "What is the pension on retirement?" Palmerston bluntly answered, "That question has never arisen." It is not likely to arise in several of these new German annexes, certainly not in Kammeroon. The Reichstag did not seem inclined to stint the heroic Governor so long as he may last. But, on the main question of the day, the opposition made a stand, and by a majority of seven defeated Bismarck again. The proposition was to add 50,000 marks (\$12,500) to the 100,000 (\$25,000) annually devoted to the scientific exploration of Africa. This demand had been submitted by the government to the Budget Committee, which reported unfavorably on it through Dr. Von Bunsen, who opened the subject in a neat and clear speech. Bismarck desired the Reichstag to decree the increase, his opponents to recommit the matter to the Committee, which was eventually done. The majority did not appear disinclined to give the money, and it will probably be voted; but there was a determination to wrangle for a time over the new colonial policy of the government, and that was achieved. The famous Catholic leader, Dr. Windhorst, spoke three times, and proved himself a formidable opponent. He did not object to exploration or to colonization or to paying money; but he thought the places the government was selecting for colonies were poor, barren, and destined to prove useless. In Windhorst's speeches, and in many others of the long debate, there was plainly perceptible a suspicion that Bismarck was appealing to German vanity instead of securing real advantages; that he wished the astonished world to

echo his "What a great man am I!" but without pulling out any real plums from the world-pie. A humorous turn was given to the debate by Herr Hartwig, of Dresden, who said that he was glad to vote for the additional money. He thought colonization a capital thing,—it might take off a good many people whom they would all be glad to get rid of at home. Then it would open markets for German products. There were, for instance, many varieties of colored paper made in Berlin which the Japanese bought to cut into strips, and lay on the tombs of their dead. It is to be hoped that, among the Africans, tribes may be found with a similar fondness for decorating graves with Berlin colored papers. Hartwig put the Reichstag into a good humor, but Richter again rubbed the government with teasing till he had to be called to order.

During the larger part of the discussion, Prince Bismarck did not seem to be paying any attention to what was said, but was fumbling over some large printed documents, on which he every now and then wrote something with a pen or pencil whose handle was a foot long. But, while Hartwig was speaking, I observed that he was shaking with laughter; and once, when he rose to reply to a sharp speech, he shook slightly with another kind of excitement. He does not speak very well. He has stiffness without repose, and often clears his throat audibly. His only gesture is a rapid, nervous, and continuous movement of the right hand or fist in a small circle. With his stately ways and his military costume, it is impossible not to think of the peacock train. On the other hand, it must be said that he is handsome, his snow-white hair and moustache having softened his face since it appeared on the battle-fields; and there is a certain *bonhomie* about his countenance which contrasts curiously with the "lean and hungry face of ever-silent Moltke." ("Would he were fatter!") What Bismarck says is interesting enough,—the Reichstag listens breathlessly to his every word; but, when one comes to think over it, he finds the speech interesting mainly because Bismarck uttered it. "I am not an individual, but an event," he once said. Even so these speeches of his which I heard were not individual: they contained no ideas,—except that absurd one about prosperity shown by emigration,—but they were impressive, because everybody felt that Europe was listening, that every word was an event. He is an imposing person: when he enters, all the hundreds of necks are bent over the gallery; but he is not loved in Germany.

He was careful, by the way, in the last speech I heard to say something friendly toward America; but it did not strike me as candid,—perhaps, because it is certain that one of his main reasons for working up the colonial fever is his desire to keep Germans from emigrating to America. There the products of their labor are out of his reach, their sons cannot be claimed for military service, and all they send back is a progressive influence, a republican inspiration,—not agreeable to a monarchy resting on faith in its divine right. There is some reason to suspect that Bismarck's amenities toward America just now cover an ulterior purpose connected with the gathering together of predatory powers about the helpless form of Africa. There was a kind of sanction in the presence among them of the American eagle, which has a reputation for never stooping from the heights of freedom and equality. All signs portend, however, that the Congo Conference is about to establish in Africa a group of embryonic monarchies, a miniature Europe armed to the teeth, and with as little right as if the joint establishment were to be in Mexico. The American

Minister at Berlin has no apprehension of this kind, but there are other Americans of diplomatic experience who have.

MONCURE D. CONWAY.

THE CONCEPTION OF LIFE.

I.

In one of the first chapters of his *Principles of Biology*, Mr. Herbert Spencer has arrived at what appears to me the most complete definition of life until now formulated. And yet, while conceding to this definition, representing life as the result of a "continuous adjustment of internal relations to external relations," the value which it justly deserves, I cannot rest fully satisfied with it. For not only does this definition appear to include the processes of death as well as those of life, but, even assuming that this "continuous adjustment" of internal to external relations is to be understood to take place under the influence of a power inhering and proceeding from within the living organism (a qualification which the definition does not state), it still seems to me plainly evident that the continuous mere "adjustment" of relations, while possibly sufficing to maintain intact any life already existing, can in no wise tend to increase, but must rather incline to diminish, its quantity. That life might be increased quantitatively, it would be necessary that the sum total of the changes at any time taking place in the internal relations of the living being should not only be adequate to, but that it should be in excess of, the hostile demands of the sum total of all simultaneously eventuating changes in the environment.

As the comparatively perfect co-ordination of its so heterogeneous constituent materials and actions would seem to indicate, the organized living being is to be considered as a *chemical and dynamical plexus of multiform modes of matter and motion*; and what is commonly understood by "vital force" is but the fact of the *con-inertia of the plexus*. But what, we must here further ask, is the true nature of the secret force by which this unity and con-inertia of the plexus of life is established and maintained?

There was a time when science did not venture to propose a solution for any of the problems of life. But, in the course of the current century, science has fashioned the lens of a new thesis of extraordinary power. Viewing the organic world in the light of its focus, we have accustomed ourselves to regard the specific differences of its countless forms, and their relative advance toward an undefined but none the less real standard of ideal perfection, as the inevitable result of a never-ending competitive strife for the necessitous objects of desire,—food, safety, and reproduction,—an unceasing struggle for existence, in which the fittest must survive, the unfittest become extinct. But, passing strange, it seems to me that the extension of this law to the eternal conflict between the abstract forces of life and death themselves has been either unaccountably overlooked or realized only with a force entirely incommensurate with the importance of this wider meaning of the struggle.

Materially the union of the plexus of life is maintained by the assimilation of foods, dynamically by that of forces acting upon the living being from without. But, in the course of this process, instead of the internal relations of the living being adjusting themselves to the external relations of its environment, it is rather the latter which accommodate themselves to the former. And, in so doing, they lose their external character; they become the loyal subjects of the autocratic power of the form; they submit themselves to the sway of life, of which they henceforth are a part. Assimilation, in the true philosophic sense of that

word, is the most perfect mode of conquest of environment matter and force by the environed being of which the latter is capable. It is the complete conversion of hostile powers of nature into a loyal allied host.

The cannibal engages in a personal contest of strength with his antagonist, kills him, cooks him, and eats him. But having thus

"Mong social pleasures, round the roast,
Consumed his enemy on toast,"

the assimilated muscles of the latter are employed to maintain or possibly even increase his own strength, and are thus pressed into service as willing allies against the still living friends of his well-digested, late political opponent. In a more advanced state of civilization, such as that of certain species of ants, the conquered forces of the enemy are only in part consumed as food. Another portion is deliberately set apart and trained to the office of intelligent slave-cohorts, always ready, should the political exigencies of their masters demand it, to be hurled against the very state and nation to whom their allegiance is, by birth, legitimately due. In a civilization still more advanced, cannibalism entirely disappears, and only the enslavement of prisoners of war remains. Finally, even this enslavement is eliminated; and, in our day, we rely solely on the force of the annexation of conquered territory to accomplish the complete subjection, the political assimilation of its inhabitants. Digestion in the stomach of the personal conqueror has developed into digestion in the stomach of the social conqueror.

Whenever food is assimilated, it takes upon itself the structure of the tissues into the composition of which it enters. Whenever force (or motion) is assimilated, it accommodates itself to the rhythm of the dynamic plexus. All that is assimilated serves to sustain and extend the power of form of the organism by which it has been taken up. This power of form (*morphocratism*), be it considered in its elements or its totality, constitutes the essential central power in life.

To what extent this power of form is a ruling power is best seen by the examination of another phase of its activity, that of reproduction and inheritance (heredity). When we consider one of those cases in which a son appears physically and mentally to resemble the father only, and take into account the minuteness of the spermatozoon by which this form has been conveyed, we may well be struck dumb with wonder at its vast power. Without entering here into the details of a calculation, the weight of a human spermatozoon may be roughly estimated at one two-thousand-millionth of a grain. Taking the weight of the adult son to be in round figures one million grains (about 143 lbs.), it would thus appear that, in this hypothetical case, this mass of matter has been brought under the complete morphocratic sway of a particle of possibly less than one-two-thousand-billionth ($\frac{1}{2000000000000}$) of the former's weight! But, wheresoever the manifestations of power may be concentrated, there it is also that its source should be sought for. And for this reason it is in the power of form to impress itself upon any matter with which it may come in contact,—the principle of *morphocratism*,—that we seek for the essence of life.

In one of the opening chapters of the book already referred to, the author very properly states, in language which I cannot now exactly recall, but to the effect that the logical standard by which the value of any definition is to be estimated should be that it shall not only include the greatest possible extent of the domain of fact sought to be defined, but that it must also exclude the greatest possible extent of the territory foreign

to the former's sovereignty. And, measured by this standard, how will our location of the essence of life be judged?

That this definite location is correct for all forms of undisputed animal or vegetal citizenship seems to me so clear as scarcely to need further elucidation. But, we must ask, is this essential principle of the morphocratic power confined to the organic world exclusively, or does it likewise invade inorganic existence? Does it hold only in the realm of life, and not in that of death as well?

The only phenomenon of inorganic nature in which the morphocratic power makes itself strongly manifest is that of crystallization. Any, no matter how minute, crystalline particle placed in a concentrated solution of the same substance will attract and assimilate other particles which adjust themselves in harmony with its individual and specific form. The crystal so generated feeds itself, and, if the solution is from time to time replaced, may be made to grow indefinitely.

Thus, it would at first sight appear as though our location of the essence of life in the morphocratic power were at fault, as though a line of distinction between life and death could not by its logical aid be drawn. But, before we hastily conclude to regard our efforts in this direction to have been in vain, it will be well to recall the dignity of our purpose, to define *things*, and not mere *words*. While it is true that the word "life," in its popular sense, is only applied to organic forms, is it not possible that it is this restriction of the word which is improper rather than our philosophic conception of the reality before us? Unquestionably, the crystal and the human being are swayed by the same innate central power. But the former "lives" as truly as the latter. *Life manifests itself in two modes, the organic and the inorganic*. Their correspondence and essential unity have been pointed out: marked differences are still to be noted.

In the first place, it is to be remarked that, with but few exceptions, more apparent than real, the crystal can assimilate to its own form only particles of the same or similar composition; while the power of the organic form is capable of binding together the most dissimilar materials to the absolute service of its dynamic unity. In the second place, it is to be noted that every point of the concentrated solution of a crystallizable salt is equally capable of becoming an independent centre of crystalline assimilation. *The morphocratism of the crystal (crystallocratism) is homogeneous and molecular, that of the organic form heterogeneous and molar, in character. The continuity of the life of the organism is due to the molar, that of the inorganic form to the molecular, con-inertia of its dynamic plexus.*

CHARLES FROEBEL.

EDITORIAL NOTES.

BY B. F. U.

"THE RISE OF INTELLECTUAL LIBERTY," by Frederic May Holland, is for sale at this office. Price \$3.50.

MR. PETER ANNET (from whose pen we gave last week a fine article on "The Dawn of Life") is prepared to deliver scientific lectures, upon application, from places within a hundred miles of this city. His lectures aim to popularize science, and have awakened much interest wherever given. Mr. Annet's address is P.O. Box 2468, Boston, Mass.

In his "interlude," on March 2, Rev. Joseph Cook, speaking of the testimony of atheists in courts of justice, making a distinction between atheists and agnostics, said:—

But, if a man be a real atheist, I do not care to do

business with him. I do not want him at my family table. I do not want my property and life put at his disposal, by his testimony as a witness before any court. [Applause.] In the recent debate on this topic before the Massachusetts Legislature, I confess I should have voted unhesitatingly with the majority, who, as I think, have wisely excluded the testimony of real atheists from admission to courts of justice.

Of course, Mr. Cook would have voted with the majority. We may know with reasonable certainty, in advance of any utterance by him, about where he stands on a question involving the rights of free thinkers. Notwithstanding his indorsement of the action of the Massachusetts Legislature in refusing to repeal a most unjust law, we believe with the *Boston Transcript* that "in a few years the yeas and nays will be curious reading." As the *Nation* observes: "No man conducts his business or his social life on the assumption that atheists are untruthful or dishonest; and to administer justice so as to deprive him of important testimony in his favor, on such a theory, is monstrous as well as barbarous." Of the same purport is the following from the *Christian Register*: "The assumption that a man who is an agnostic or an atheist is therefore incapable of telling the truth in a court of justice is one of those legal outrages which the laws of Massachusetts still perpetuate. Any such witness in her courts may have his testimony discredited. It is time that this relic of superstition was abolished; and Massachusetts, which has done so much for the development of civil liberty, should have been the first to remove it."

It is stated that Rev. Dr. J. P. Newman has been summoned to New York to act as "spiritual adviser" to Gen. Grant,—not at his instance, but to gratify some of his pious relatives and friends. According to published reports, he has never been concerned about his condition after death; and "there is no reason to suppose that the nearness of death has made any change, though his wife is very solicitous that he should arouse to mental activity on the subject. 'He does not, apparently, bother himself about the life hereafter,' says one trustworthy informant, 'seemingly, being willing to take his chance with the millions who have gone before him, in the same frame of mind.'" Although Gen. Grant in health and strength, has been, and even now is indifferent to theological matters, it is not to be supposed that a man so distinguished and honored will be permitted to die without furnishing, consciously or unconsciously, in word or act, some kind of a basis for the claim that he died believing and trusting in Christ. A mind enfeebled by sickness has always been regarded by the orthodox clergy as peculiarly favorable for the discernment of truth and the reception of grace. Littré, the distinguished Positivist, when reduced by age and illness to actual imbecility, importuned by his wife and urged by priests, consented to receive the sacrament. Some of Littré's friends affirmed that the dying man did not even know what was said or done. Yet news was flashed all over Christendom that the great "infidel" had fallen asleep in the true faith of the Roman Catholic Church. Dr. George Beard, when he died two or three years ago, was made by an attendant the subject of what had the appearance of being a pious fraud; and Joseph Cook, and hundreds of other preachers on his authority, declared that the agnostic died a believer in Jesus Christ, until relatives and friends of the family were compelled, in the interests of truth, to publish a correction. With these facts in mind, we need not expect that any man of fame, greatly honored by the people, who has lived simply unconcerned about religious matters, will be allowed by the

clergy to die without saying or doing something which will enable them to associate his name with the faith they represent.

At the monthly meeting of the Unitarian Club at the Hotel Vendome, on the evening of the 11th inst., Hon. Leverett Saltonstall, who presided, in a speech introductory to the general after-dinner speaking, said that the Unitarian Church was not a proselyting body, that it recognized the members of all the rival sects, the Roman Catholic included, as members of one brotherhood, and, respecting their main tenet, it had no disposition to disrupt the several organizations to which they hold allegiance. But he suggested the query whether it was not the duty of the Unitarian Church to seek to proselyte "those who are of no church, who by profession, at least, know no religion, and the number of which seems to be steadily increasing." Rev. E. E. Hale maintained that the Unitarian Church should stand for reform and progress, and strive "to bring in the kingdom of God in the particular community where it is situated," and in so doing it would be likely to gain to its membership "those who, having withdrawn from the other churches, now occupy a neutral or indifferent position." The idea of adding to the membership of the Unitarians from those who are now outside of all churches is one to which the leaders of that denomination are likely in the future to give considerable thought.

From those who after religious experience in orthodox churches have withdrawn from them, and now "occupy a neutral or indifferent position," Unitarianism is not, we think, likely to receive any large or valuable accessions. Indeed, additions of "neutral or indifferent" people are more liable to be an element of weakness than of strength. There is nothing in the uncertain creed of Unitarianism that can renew the enthusiasm or revive on a new basis the religious belief of those who have outgrown the positive faith in which they were reared and have become indifferent to religious matters. Such will generally, from business or social considerations, remain silent members of the orthodox churches, or at least will be likely to avoid identifying themselves with heterodox organizations. Those reared in the orthodox churches who become earnestly opposed to theological teachings prefer to browse in freedom outside of all religious organizations. Only, perhaps, after years of isolation, when they have become dissatisfied with the results of an intense individualism and the predominance of the critical and destructive spirit among the majority of Liberals, when they have come to see the great need of united effort in encouraging and strengthening the highest moral convictions, and are strongly influenced by the long repressed demands of their social nature, do they turn to the most liberal society they can find, and work with it and for it. In the West, the Unitarian societies are composed in part—and, in some places, mainly—of Agnostics and other free thinkers, who are attracted to them by the social and moral advantages which they afford, and because they stand for the best liberal thought in the communities in which they live. Not a few of the ministers of these societies are themselves Agnostics, and they are all men of broad and radical thought. Now, perhaps, it is from the liberal class to which we have referred that the speakers at the meeting of the Unitarian Club really expect to obtain the largest accessions. With this object in view, possibly the National Unitarian Conference will yet see the importance of modifying its constitution, so that not only non-Christians, but Agnostics can be members on equal terms with theistic and Christian Unitarians, like Mr. Hale.

AMONG the most careful and interested readers of *The Index*, from the time it was started at Toledo, is a lady living in Providence, R.I., Mrs. Susan F. Fillmore, who was born at Plymouth, Vt., March 12, 1795. When she was in her fourteenth year, her parents removed to New York, where she was sent to an academy at Plattsburg, and where she boarded in the family of Dr. Oliver Davidson, the father of the two precocious Davidson sisters. It was while she was a member of this family that the elder sister, Lucretia, then five years old, made her first attempt at poetical composition in some verses entitled "An Elegy on the Death of a Robin," which were "printed" in capital letters, since she had not learned to write. This poem was found among her playthings by her mother, and Mrs. Fillmore assisted Mrs. Davidson in deciphering it. Later, Mrs. Fillmore was principal of the female department of an academy in Chester, Vt. She was married in 1823. Pressing domestic duties and cares have not prevented her taking a deep interest in philosophical discussion and in all social and moral movements. She was a life member of the Female Anti-slavery Society in Boston, and is an ardent woman suffragist. At the age of ninety, she reads without glasses, and the best literature of the day. Dr. Fillmore, her son, informs us that the philosophical articles from the pen of Mr. W. I. Gill, which have been very difficult reading for some of our subscribers, are those which she has read with the profoundest interest and admiration. She has written a number of poems. To show the breadth of thought and strength of expression of this non-agenarian, we give below a few verses from a poem entitled "A Matron," written in her ninetyeth year:—

Earth's primal races, tribes and nations,
Doubtless, their rude minds perplexed
By pondering the self-same questions
That the modern brain hath vexed.
For of the wondrous cause of nature,
Of primeval light and life,
Each had its own ideal picture
With incongruous fancies rife.
But, from to-day's clear light of science
And philosophy's broad sway,
We trust results worthy reliance
Pristine whims will sweep away.
For not in lore of by-gone ages
Do we find life's problems solved;
Nor yet by late truth-seeking sages
Are grave questions all resolved.
All things have come by evolution,
Say scientists, by laws of force.
This of our query's no solution:
Whence came laws, shaping their course?
Whence sentient life? Is Philosophy
Sure how its first seed was sowed;
Though wise Darwin, like simple Topsy
(By long searching), "suspects we grewed."
Science discloses second causes,
Nor does the first overlook,
But pronounces the Cause of causes
"Unknowable,"—a sealed book.
Is there no science of perception?
Are there no laws of mind,
Of thought, of consciousness, reflection?
Are we intuitively blind?
Though finite mind may never measure
The boundless Infinite,
Yet grand conceptions it may treasure,
Surpassing visual sight.
That a human God has been provided
Seems a preposterous dream,
The question by reason decided
Can admit but *One Supreme*.
Thanks, light has shone on old traditions,
Exposing myths by saints believed;
While science's lucid expositions
Of theories new are wide received.
Yet the great absorbing life-questions—
Its source, design, duration—
Are unsettled, open to suggestions
And doubtful speculation.

The Index.

BOSTON, MARCH 19, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, BENJAMIN F. UNDERWOOD, : : : : : } Editors.

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

EMERSON: THE PATRIOT.*

BY JOHN W. CHADWICK.

As compared with those who have preceded me in this course of essays, I am at a serious disadvantage. They have brought to you the freshness of their leisured inspiration; but I can only bring the too familiar product of my habitual employment, and at a season when I should be glad to lay the weary pen aside. My theme, moreover, in its general aspect, is one to which I revert so often that it would not surprise me if some of you should say to me of Emerson as Voltaire of Jesus, "Let me never hear that man's name again!" Indeed, the painfulness of my situation reminds me of a story of the old age of George III. For his weariness and feeble-mindedness, his physicians prescribed an hour's reading every day by one of Queen Charlotte's ladies in waiting, a young and very charming person. The senescent king had come to reckon a good deal upon this entertainment; and one day at the appointed hour, hearing a step along the corridor, he was in a state of most agreeable anticipation. But, alas! the step grew ominously heavy; and, finally, the Queen herself appeared, with book in hand. Thereupon, the king ejaculated, "Nobody but old Charlotte!" and bestowed himself to make good the saying of the playwright French, "Sleep is an opinion." For you to-night there is nobody but old Charlotte in the place of the young and charming readers you have heretofore enjoyed; and, if you follow the example of the king, the parallel will be complete. I shall be sorry, but I shall not be surprised.

The literary side of Emerson as a poet, a scholar, a philosopher, a student of nature, of ethics, of religion, is made evident in one or more of his essays dealing specifically with poetry, scholarship, nature, ethics, or religion; but we have no

lecture or essay from his hand dealing specifically with patriotism and the patriot. Best remembered of anything of his upon this head is the quotation, to which he has given a much wider currency than it had before his day, "Patriotism is the last refuge of a scoundrel"; and, for the correction of this estimation by his own, we must look at many of his essays and read aright the meaning of his personal career.

It would have been very strange if Emerson had not been a patriot, an American, in his blood and bones. His family roots went down into the soil the entire depth of the English occupation. One of his sixty-two grandfathers, at the seventh remove, was Peter Bulkeley, the original founder of Concord in 1635. "If any one would know what Mr. Peter Bulkeley was," says Cotton Mather, "let him read his Judicious and Savory Treatise of the Gospel Covenant, which has passed through several editions with much acceptance among the people of God." He was the first minister of the Concord church as well as the original settler of the town. His son's daughter married Joseph Emerson, a son of Thomas Emerson, who gathered the first church in Ipswich. Genealogically, then, our Emerson was an American of the seventh generation. Moreover, his ancestors of his own name and many others were Americans of the Americans. They were Congregational ministers; and no other class was so thoroughly identified with the colonial enterprise, so jealous of its rights, so forward to demand its independence of the crown. Five of Emerson's six American ancestors of his own name were ministers. Edward, the missing link, was "some time deacon of the church in Newbury." Emerson's grandfather was minister of the Concord church in Revolutionary times, and he was much given to preaching politics. The Concord fight was simply one of the "applications" of his word of prophecy. The Sunday following the fight, he preached to seven hundred soldiers in the village church, his trumpet giving no uncertain sound. Nothing would satisfy him but to join the army at Ticonderoga, where he sickened before long, and died upon his journey home. Emerson's father had been born in Concord a few years before (in 1769), and Emerson himself was born into the Concord tradition as perfectly as if he had been born upon its sacred soil. But he was born into the Boston tradition also. It was a Boston boy that wrote the Boston Hymn. With such an ancestry, with such associations clinging to his heart, the man was under bonds to be American. So help him God, he could no otherwise. Nothing he ever said, nothing he ever did, was un-American, or betrayed a doubt of the substantial merit of our institutions and their ultimate transcendence of all special limitations. "Here is the home of man," he said; "here is the promise of a new and more excellent social state than history has recorded."

It would not be difficult to discover in his writings here and there expressions which, if taken by themselves, would go far to convict him of an Americanism that was narrow and provincial. His praise of Whittier was that he had never been to Europe. "Travelling is a fool's paradise," he said. "The soul is no traveller." A declaration of American independence could be made out from his writings more thorough than that of Jefferson; more thorough, if possible, than Horace Greeley's,—a declaration of isolation. He would have us not only raise our own cereals and manufacture our own fabrics, and so on: he would have us raise our own literature, manufacture our own arts and sciences, ethics and religion. But the distinction between literature and dogma must be made in Emerson as well as in the older Scriptures. He

dipped his pen in the blackest ink, he tells us, because he was not afraid of falling into his ink-pot. He was not afraid of exaggerating, too much for the impression that he wished to make, the subserenity of our manners and ideas to the European models. He could be just and even kind in dealing with a foreign civilization, when it served his turn. His *English Traits* is a volume that an Englishman must like to read, it has so much of hearty commendation in it mixed with a little blame. Against the French he had a kind of spite, and liked to tell a story to their disadvantage, the story of a duel in the dark. The parties were an Englishman and a Frenchman. The Englishman, not wishing to injure his antagonist, felt his way round to the fireplace, and fired up the flue. Down came the Frenchman, to their mutual surprise! As a typical story, reflecting on the courage of the French, this is as false as possible. But Emerson's admiration of Montaigne and many other Frenchmen was so immense that he corrected his eccentricity in no small degree, and closer acquaintance with the French people would have made him a warm admirer. Their industry, their frugality, their hold upon the soil, would have counted largely in his estimation. Much of the seeming disrespect of Emerson for European customs, manners, laws, was but the expression of his abiding faith in the superiority of soul to circumstance. For the same reason that he was a good American, he would have been a good Englishman or Frenchman or German, if he had been to the English, French, or German manner born. The comparative indifference of places was a favorite article of his creed. He would have the passion for America cast out the passion for Europe, not so much because Europe is an inferior development as because it is not *our* development. He would have America fresh, original, her new garments, like his own forester's, of colors borrowed from the immediate wood and soil,—no harlequin pattern, taking here a patch and there a patch from a decaying past. It was because he loved America so much, because he wished her to have a life, a civilization, a religion of her own, that he sometimes brought a railing accusation against her monkey tricks, her apish mimicry of European customs, manners, arts. "This mendicant America, this curious, peering, itinerant, imitative America, studious of Greece and Rome, of England and Germany, will take off its dusty shoes," he said, "will take off its glazed traveller's cap, and sit at home with repose and deep joy on its face. The world has no such landscape, the æons of history no such hour, the future no equal second opportunity. Now let poets sing! now let arts unfold!"

In the general sweep of his discourse, Emerson is pretty certain to correct whatever aberration he may be guilty of at one point of his orbit or another. Did he announce himself as a discoverer with no past at his back, and would he recommend this personal ideal to the national intellect and taste and to the national conscience? Nevertheless, from first to last, he was a royal borrower, as Dr. Holmes has arithmetically shown, as every reader of him knows; and he did not deny his debt. But all the gold and silver coin that his argosies came heavy-laden with from Europe and from farthest Ind he converted into bullion and reminted every shilling with the stamp of his own individual genius. So, doubtless, in the last analysis, he would have had America enrich herself with the most various plunder of antiquity and foreign parts, if only such *impedimenta* might not, like Atalanta's golden apples, be a hindrance to her in the race; if only they might suggest to her the possibility of nobler manners, purer laws.

*One of a number of essays read in Brooklyn, N.Y., by members of an association connected with the Second Unitarian Church, and now studying various aspects of Emerson's life and thought. Each essay is followed by a discussion.

But Emerson's Americanism was something more than a specific illustration of his general doctrine of the indifference of places. It was a criticism upon this doctrine. It was a deduction from it. His passion for America was in good measure the exponent of his faith that, in this fresh, new world, man has a better opportunity than anywhere in Europe to free himself from the paralyzing spell of old associations, habits, laws, and creeds, and achieve an original relation to the universe. Where do I find the proofs of this relation of his patriotism to his fundamental message to mankind? "Anywhere," as Thoreau said of the Indian arrow-heads. It is not so much here or there in his writings as it is everywhere.

It was as a stupendous possibility that America was a delight to Emerson's imagination, and a satisfaction to his heart. He was no devil's attorney. He never undertook to prove that all her geese were swans; that all her crudities were virtues; that the defects of her excellences were also excellent. Indeed, there has not been a sterner critic of her imperfections and exaggerations. When he begins, "This great, intelligent"—the Fourth of July orators fancy he is become as one of them. But no. The total characterization is, "This great, intelligent, *sensual, avaricious, America*." Our democratic system does not stand in his scheme of values for any absolute and final good. But it has obvious advantages. "The lodging of the power in the people . . . has the effect of holding things closer to common sense; for a court, an aristocracy, which must always be a small minority, can more easily run into follies than a republic, which has too many observers—each with a vote in his hand—to allow its head to be turned by any kind of nonsense, since hunger, thirst, cold, the cries of children, debt, are always holding the masses hard to the essential duties." Carlyle objected to the popular vote that it made Judas count as much as Jesus in the determination of affairs. If Emerson had little patience for such idiocy as this, perceiving that men like planets have their attractions in proportion to their bulk, and that one powerful man will drag along a hundred or a thousand voters in his train; if he saw certain positive advantages in an extended suffrage, saw that it is a safety-valve for popular passions, that they mix with it like nitro-glycerine with clay, losing thereby something of their explosive energy; if he also saw that popular votes are bonds that the more educated give to educate and elevate the less,—nevertheless, in spite of these perceptions, he was not unaware of dangers lurking in the system, as such, nor of various practical illustrations. Our oily politicians did not take him in their cunning snare. Lobbying and being lobbied, "We feel toward them," he says, "as the minister about the Cape Cod farm. In the old time when the minister was still invited, in the spring, to make a prayer for the blessing of a piece of land, the good pastor, being brought to the spot, stopped short,—'No, this land does not want a prayer: it wants manure.'" These politicians are past praying for.

"'Tis virtue which they want; and, wanting it,
Honor no garment to their backs can fit."

"We have seen the great party of property and education in the country," he says, "drivelling and huckstering away for views of party fear or advantage every principle of humanity and the dearest hopes of mankind; the trustees of power only energetic when mischief could be done, imbecile as corpses when evil was to be prevented." This in 1878, his theme "The Fortune of the Republic." But this address was a mosaic, manufactured out of parts of many earlier notes and writings, so that I am inclined to think that the Whig party is

to be understood, and not the Republican; but it may be that he was sterner with the latter than I think.

There are many counts in his indictment of our party politics. "We do not choose our own candidate," he says, "no, nor any other man's first choice, but only the available candidate whom, perhaps, no man loves. . . . The country is governed in bar-rooms and in the mind of bar-rooms." Meantime, the better classes do not what they might to counteract the evil tendencies. "They stay away from the polls, saying that one vote can do no good! Or they take another step and say, One vote can do no harm! and vote for something which they do not approve because their party or set votes for it."

Emerson saw so much and more of limitation and defect in our political system; but he did not despair of the republic,—no, not for an hour. To Matthew Arnold's confidence in "the remnant," the moral and enlightened few, he added an equal confidence in "numbers,"—not as numbers, but as men, whose fundamental instincts are for justice and the common weal. Not only this, but he was impelled to the conclusion that there is a sanity in the constitution of the body politic which corrects the selfishness and folly of the selfish politician. "In our popular politics, you may note," he says, "that each aspirant who rises above the crowd, however at first making his obedient apprenticeship in party tactics, if he have sagacity, soon learns that it is by no means by obeying the vulgar weathercock of his party, the resentments, the fears and whims of it, that real power is gained; but that he must often face and resist the party, and abide by his resistance and put them in fear, and the only title to their permanent respect and to a larger following is to see for himself what is the real public interest, and to stand for that." In confirmation of this view are the statistics of Mr. Parton, to the effect that no one eagerly aspiring to the Presidential office ever succeeded in obtaining it. His statistics are now twenty-five years old, but the course of history has not diminished their validity. It has increased their volume and momentum many-fold.

I must not trench on the domain allotted to the essayist who will speak in this course of Emerson's cosmopolitan sympathies; but I am obliged to say that his Americanism was not of the sort which looks for our salvation to the industrial barbarism of other nations or to the exclusion of their manufactures from our markets, if haply our consumers may be compelled to buy our own of an inferior quality at a much higher price. He had been a Whig before the surrender of the party to the pro-slavery conspirators; but there is no evidence that he was at any time an admirer or defender of the "American system," as maintained by Henry Clay. The Kantian dictum, "Law fit to be law universal," had, he thought, as strict an application here as to any sphere of moral action. He was unable to perceive, as many have been always, that we have not here a moral question, a question of justice. He fancied that in large industrial affairs, as well as in those of the individual, the method of self-reliance is productive of the best results; that the protective system everywhere is a premium upon inefficiency. For our infant industries, he would have prescribed as in the quatrains which, like a herald's trumpet, announces that his essay upon "Self-reliance" is at hand:—

"Cast the bantling on the rocks,
Suckle him with the she-wolf's teat;
Wintered with the hawk and fox,
Power and speed be hands and feet."

But, even if Emerson had been persuaded that the protective system was better for us than the sys-

tem of commercial freedom, he would not have considered this a final recommendation. He did not believe that it was good for us. But, however this might be, "We want," he said in 1878, "men of original perception and original action, who can open their eyes wider than to a nationality,—namely, to considerations of benefit to the human race,—can act in the interest of civilization; men of elastic, men of moral mind, who can live in the moment and take a step forward." And, again, "I wish to see America not like the old powers of the earth, grasping, exclusive, and narrow, but a benefactor, such as no country ever was, hospitable to all nations, legislating for all nationalities. Nations were made to help each other as much as families were; and all advancement is by ideas, and not by brute force or mechanic force. . . . The right patriotism consists in the delight which springs from contributing our peculiar and legitimate advantages to the benefit of humanity." This is the nearest approach to a definition of patriotism that he ever made, and it is worth remembering.

It was impossible that Emerson should make the blunder, which is made so often, of confounding the nation with the government, or with the form of government. In our own form of government he had generous faith, less in its practical efficiency. He saw with infinite regret that the career of politics had lost much of the attractiveness for the ablest men which it had at the beginning of the century. He also saw what many failed to see,—that the men are more to blame for this than are the politics. These are avoided, because they have not millions in them. They are degraded by those who, once engaged in them, are impatient of their small legitimate returns, and endeavor to convert them into a kind of brokerage for speculative stocks. But the government, at any given time, legislative, judicial, and executive, is only the roughest metre of the national health. As a people, we are better than our politics. Emerson's doctrine of Individualism did not forsake him here. His patriotism was much more than admiration of our political system, much more than satisfaction with its practical workings, which were seldom to his mind. It was devotion to our national worth, and he saw that this is co-extensive with the number of intelligent and moral individuals upon the soil. He said many things to this effect, and once he put the charcoal under such enormous pressure that this diamond stanza was the significant result:—

"When the State is social worth,
When the State-house is the hearth,
Then the perfect State is come,
The Republican at home."

For thirty years, the touch-stone of all touch-stones for the testing of patriotism in America was the anti-slavery crusade. I do not mean that patriotism was impossible for men who did not enlist in this, or did so tardily, or, having once enlisted, fell away. The Union-saving sentiment of 1850 and before and after was intensely patriotic. And from its womb came the compromise measures of that year,—the Fugitive Slave Law a single incident of their pervasive wickedness. Love for the Union was a passion of those times,—a passion which the Free-soilers and the Abolitionists might laugh to scorn, but it was as genuine as their own. There were those to whom the Union seemed so vast a good that, if it could be preserved only by making slavery perpetual and giving it the freedom of the continent, they thought the price was not to be withheld. There were those who thought that it could not be preserved in any other way. And these were patriots; but so, too, were they who thought that to preserve the Union for any length of time with slavery was an impossible

thing. Here was an atmosphere that loosened every joint, that made every grain of mortar a repellent particle. And so, if these had loved the Union above all other things, they would have said that slavery must go. But there were other patriots for whom the Union was not worth preserving, if slavery must be preserved along with it. And Emerson was one of these, well-nigh from the beginning of the anti-slavery crusade in 1831. That the Union could be preserved and slavery along with it, he had not a particle of faith; but this was a consideration by the way. The main consideration was that slavery was an injustice not to be endured. He was the truest patriot who would rather that his country should cease to be among the nations than that she should suck her vampire substance from the vitals of the slave.

It was the habit of Emerson to travel only on stop-over tickets on the various lines of social and political reform which made such a bewildering network of the period of his earlier manhood. Through tickets did not suit his individual mind. He could never make himself a partisan of any reform, an apologist for all its methods. He could never so far identify himself with any as to abandon his vocation, which he distinctly apprehended as that of the thinker and the scholar, and give all his time and talent for the advancement of a special end. Nevertheless, there was hardly any one who was not specially and officially connected with the Abolitionists whom they regarded as their friend and fellow-laborer so much as he. His church, so long as he remained a settled preacher, was freely offered to Samuel J. May and even to Garrison himself for the advancement of his principles; and it was used by May and others. To appreciate such action, we must remember that a little later Dr. Channing's society would not allow anti-slavery notices to be read from his pulpit, and refused his personal request for the use of the church for the funeral services of Charles Follen, the saint among the Abolitionists *par excellence*. In the Transcendental Club, he stood up for Garrison when others cried him down. When his brother Charles said that he would rather see Boston in ashes than that Harriet Martineau should be gagged, Emerson said his Amen by making her his guest. Miss Martineau was never over-generous with her praise of those who did not take the abolition side; but, in 1855, she wrote of Emerson in her Autobiography, "He is now and long has been completely identified with the Abolitionists in conviction and sentiment, though it is out of his way to join himself to their organization." In 1844, his address in Concord on the anniversary of Emancipation in the West Indies identified him with the Abolitionists as completely as anything could do, except a formal agency of their society. Dr. Holmes says in his Life of Emerson, "This discourse would not have satisfied the Abolitionists." But Mr. Higginson has proved conclusively that it *did* satisfy them by quoting the *ipsissima verba* of Garrison to this effect. "The first of August was," he says, "their day; . . . and nobody else celebrated it. As to the Concord meeting, they had tried in vain to obtain any church for it." They finally obtained the town hall. "The other speakers of the day were of the straightest sect of Abolitionists, Frederick Douglass, Samuel J. May, etc." They printed Emerson's address; and Wendell Phillips used to circulate it freely among "the upper-crust scoffers," as he called some of the Boston gentry to whom the sting of Garrison's invective was worse than what it stung. But some of Emerson's words in this address are strong enough for Garrison. "I am heartsick," he said, "when I

read how the slaves came into slavery and how they are kept there; for language must be raked, the secrets of the slaughter house and infamous holes must be ransacked, to tell what negro slavery has been." And he complained that "names which should be the alarms of liberty and the watchwords of truth are mixed up with all the rotten rabble of selfish and tyranny." From first to last, we have had much complaint of Emerson's incomprehensibility. "My gals understand him," said the redoubtable Jeremiah Mason, "but I can't." But, if that giant of the New Hampshire bar, with whom Daniel Webster studied, had heard any of Emerson's political speeches, he would have had little difficulty in understanding him. Not Wenham ice is clearer than his thought on these occasions. It were easy to convince one's self from reading his political addresses that, if he had chosen politics for his profession, he might have been one of the greatest orators of his generation. There are passages in these addresses that have a Websterian solidity and strength. Thus, in the anti-slavery address of 1844, referring to the imprisonment and sale of free Northern negroes in the South, he said: "Gentlemen, I thought the deck of a Massachusetts ship was as much the territory of Massachusetts as the floor on which we stand. It should be as sacred as the temple of God. The poorest fishing smack that floats under the shadow of an iceberg in the northern seas or hunts the whale in the Southern Ocean should be encompassed by her laws with comfort and protection as much as within the arms of Cape Ann and Cape Cod. And this kidnapping is suffered within our own land and federation, whilst the fourth article of the Constitution of the United States ordains, in terms, that 'the citizens of each State shall be entitled to all privileges and immunities of citizens in the several States.' If such a damnable outrage can be committed on the person of a citizen with impunity, let the Governor break the broad seal of the State; he bears the sword in vain. The Governor of Massachusetts is a trifle; the State House in Boston is a play-house; the General Court is a dishonored body, if they make laws which they cannot execute. The great-hearted Puritans have left no posterity."

Emerson's sympathy with the abolition party did not involve his satisfaction with all the methods of their propaganda. The voting Abolitionists appealed to his habitual common sense as the non-voting Abolitionists did not. When the Liberty party of 1840 and 1844 had developed into the Free-soil party of 1848 and 1852, Emerson conceived that here was a practical instrumentality with which he could ally himself without falling from his abolition grace. The fall of 1851 actually discovered him upon the stump in Massachusetts, for John G. Palfrey, the Free-soil candidate for Governor. His Cambridge speech was pronounced excellent by the Southern law students of the University; that is to say, they hissed it frequently. Webster was held aloft as an example of what poison slavery could inject into the noblest minds. He pictured him as the leading horse straining at Slavery's horrid car, engirt with sickening abominations. Emerson's admiration of Webster had been great, and his disappointment on account of his course in 1850 was immense. In 1854, he gave a lecture in New York on the Fugitive Slave Law, in which he spoke of Webster for a quarter of an hour. Some of his hearers must have said at the seventh or eighth minute, "Did we come here to hear a eulogy on Daniel Webster?" But, as Emerson went on, they found that they had not. "I remember his appearance at Bunker's Hill," he said. "There was the

monument, and here was Webster." The praise was said, then came the condemnation: this with the rest, "that, with a general ability that impresses all the world, there is not a single general remark, not an observation on life and manners, not an aphorism that can pass into literature from his writings." The opening words of this address are a sufficient exposition of the general attitude of Emerson with reference to questions of reform in politics and social life. "I do not often speak," he said, "to public questions: they are odious and hurtful, and it seems like meddling or leaving your work. I have my own spirits in prison; spirits in deeper prisons, whom no man visits, if I do not. And then I see what havoc it makes with any good mind, a dissipated philanthropy. The one thing not to be forgiven to intellectual persons is not to know their own task." He spoke, he said, for scholars; but there were passages which carpenters and hod-carriers could understand. "If slavery is good, then lying, theft, arson, homicide, each and all are good, and to be maintained by Union Societies. . . . These things show that no forms, neither constitutions, nor laws, nor covenants, nor churches, nor Bibles, are of any use in themselves. The devil nestles comfortably into them all. There is no help but in the head and heart and hamstrings of a man." His relation to the Abolitionists is declared in the concluding passage: "I respect the Anti-slavery Society. It has foretold all that has befallen, fact for fact, years ago; and no man laid it to heart. It seemed, as the Turks say, 'Fate makes that a man should not believe his own eyes.' But the Fugitive Slave Law did much to unglue the eyes of men, and now the Nebraska Bill leaves us staring. The Anti-slavery Society will add many members this year. The Whig party will join it. The Democrats will join it. I doubt not at last the slave States will join it. But, be that sooner or later, and whoever comes or stays away, I hope we have reached the end of our unbelief, have come to a belief that there is a divine providence in the world which will not save us but through our own co-operation."

On the 22d of May, 1856, Charles Sumner was struck down in the Senate Chamber by a cowardly assassin. On the 26th there was an indignation meeting in Concord, at which Emerson spoke to certain resolutions. His essay on "The Superlative" is known to you. He objected to the superlative. But how is this for the comparative or positive degree? "Life and life are incommensurate. The whole State of South Carolina does not now offer one or any number of persons who are to be weighed for a moment in the scale with such a person as the meanest of them all has now struck down."

Emerson was a man of peace. His lecture upon War proves that he had no vulgar admiration for this aspect of historic evolution. But, from the first, he saw that there are wars and wars, even as there are deacons and deacons. "When the cannon is aimed by ideas, when men with religious convictions are behind it, when men die for what they live for, and the main-spring that works daily urges them to hazard all, then the cannon articulates its explosions with the voice of a man; then the rifle seconds the cannon, and the fowling-piece the rifle, and the women make the cartridges, and all shoot at one mark; then gods join in the combat, then poets are born, and the better code at last records the victory." With these perceptions, he does not surprise us by his "Speech on Affairs in Kansas,"—his demand for clothing, food, and rifles to be sent to the New England settlers there. Of the Squatter Sovereignty and other cant of 1856, he said, "They call it otto of rose and lavender: I call it bilge water." And does

not the closing passage justify my claim that, when speaking on great public occasions, to great political questions, our Transcendentalist became as clear as sunshine, as concrete as granite or as iron? "Fellow-citizens, in these times full of the fate of the Republic, I think the towns should hold town meetings, and resolve themselves into committees of safety, go into permanent sessions, adjourning from week to week, from month to month. I wish we could send the sergeant of arms to stop every man who is about to leave the country. Send home every one who is abroad, lest they should find no country to return to. Come home, and stay at home, while there is yet a country to save. When it is lost, it will be time enough then, for any who are luckless enough to remain alive, to gather up their clothes, and depart for some land where freedom exists."

In 1859, while John Brown had still two or three weeks remaining ere he should make, in the high phrase of Emerson, "the gallows glorious, like the cross," Emerson demanded in Tremont Temple, "Is that the kind of man the gallows was built for?" "It were bold to affirm that there is in Virginia's broad commonwealth at this moment another citizen as worthy to live and as deserving of all public and private honor as this poor citizen." "All gentlemen of course are on his side," he said in Salem; "for the arch-Abolitionist, older than Brown and older than the Shenandoah Mountains, is Love, whose other name is Justice, which was before Alfred, before Lysurgus, before slavery, and will be after it."

From the beginning of the war, the hope of Emerson was ardent that it would not end till this word of his own prophecy had been fulfilled. In January, 1862, he lectured upon "Civilization" in Washington at the Smithsonian Institute. Lincoln and several of his cabinet were auditors. The *gravamen* of his lecture was a plea for immediate emancipation. "It is like free trade," he said,—“certainly the interest of nations, but by no means the interest of certain towns and districts, which tariff feeds fat; and the eager interest of the few overpowers the apathetic, general conviction of the many.” "Emancipation is a principle: everything else is an intrigue. . . . Better the war should more dangerously threaten us,—should threaten fracture of what is still whole, and punish us with burned capitals and slaughtered regiments, and so exasperate the people to energy, exasperate our nationality." Whether Lincoln, with whom Emerson talked the matter over the next day, was much affected by his public or his private utterance we may not know; but eight months later came the preliminary emancipation proclamation, the herald of that final good which makes the 1st of January, 1863, the finest day in all our annals, one of the finest in the annals of the human race. I must repeat the boast I made at your last meeting,—that I heard in Music Hall the address which signalized the joy of Emerson in the September proclamation. It was the most impressive utterance that ever fell upon my ears, upon my heart. Let me illuminate my page with the few words that I remember best: "It was well to delay the steamers at the wharves until this edict should be put on board. It will be an insurance to the ship as it goes plunging through the sea with glad tidings to all people. Happy are the young who find the pestilence cleansed out of the earth, leaving open to them an honest career; happy the old who see Nature purified before they depart! Do not let the dying die. Hold them back to this world till you have charged their ear and heart with this message to other spiritual societies, announcing the melioration of our planet."

There are other witnesses to the patriotic element in Emerson's life and writings that I should like to call, but there are gentlemen "in waiting" from whose reading of this matter my own is keeping you too long. I should like to speak of his address in April, 1865, when Abraham Lincoln died, his perfect characterization of the man; and of his Harvard Commemoration Speech; and of that in Concord at the dedication of the Soldiers' Monument. The heroisms and sacrifices of the war gave Emerson a new assurance of the worth of the American population. "Ah! young brothers, all honor and gratitude to you," he said. "You manly defenders, liberty's and humanity's body guard! We shall not again disparage America, now that we have seen what men it will bear. We see, we thank you for it,—a new era, worth to mankind all the treasure and all the lives it has cost; yes, worth to the world the lives of all this generation of American men, if they had been demanded!"

And I should also like to show you how the patriotic element in Emerson's thought and feeling voiced itself in his poetry. As the political occasion, the patriotic impulse, always brought some clarifying genius to his prose, so did they to his verse. He was never quite so lyrical, never quite so eloquent and resounding in his verse at any other time as when his country was his theme. I note with interest that the first scrap of poetry coming from his pen of which I am aware, written in 1820, when he was seventeen years old, in Mrs. Dr. Farley's album, had this inspiration. It would have been more original, if Bishop Berkeley's "Course of Empire" had not been written about a century before; but it had at least one original line, the second of these two,—

"And to the West shall empire come,
And in our mountains stall her steeds."

It was a patriotic impulse that begot the Concord Hymn in 1836,—a hymn to which Matthew Arnold concedes that wholeness of tissue, that perfectness of every word and line, for which Emerson is not generally remarkable. Here was indeed a shot heard round the world. It was another patriotic impulse that begot the Concord Ode of 1857, with its opening stanza of surpassing beauty,—

"Oh, tenderly the haughty day
Fills his blue urn with fire;
One morn is in the mighty heaven,
And one in our desire."

The "Boston Hymn," written to celebrate the final edict of Emancipation, is a rugged piece of verse. But here and there it reminds us of the traveller on the Western railway: the train was running so smoothly that he thought it must be off the track. The "Voluntaries," which appeared a little later, was a much more complete and beautiful expression of his sentiment and thought. "It is in this poem," says Dr. Holmes, "that we find the lines which, a moment after they were written, seemed to have been carved on marble for a thousand years,"—

"So nigh is grandeur to our dust,
So near is God to man,
When Duty whispers low, *Thou must,*
The youth replies, *I can.*"

And it is in this poem that those other lines occur, to me as beautiful and dear, which, from the moment when I first agreed to read to you this essay, I have said in my heart should be its golden ending:

"Stainless soldier on the walls,
Knowing this,—and knows no more,—
Whoever fights, whoever falls,
Justice conquers evermore;
And he who battles on her side,
God, though he were ten times slain,
Crowns him victor glorified,
Victor over death and pain,
Forever."

WILLIAM LLOYD GARRISON'S REPLY TO THE "REMONSTRANTS."

Remonstrants against "any further extension of suffrage to woman" had a hearing on the 2d inst. before a committee of the Massachusetts Legislature, at the State House. After they had concluded their argument, which consisted partly in referring the committee to a list of names signed to a remonstrance against female suffrage, Mr. William Lloyd Garrison, son of the distinguished abolitionist, called upon to make some remarks in reply, responded in a brief but most effective speech, from which we give the following:—

"We are not overawed by the imposing list of names arrayed against us, representing, though they do, the prejudice of men high in social, mercantile, and professional life. We acknowledge their eminent respectability. But we beg to remind you that no movement in behalf of human progress ever yet failed to encounter similar opposition. No student of history can show us where the great reforms that mark the eras of civilization had the scholarly and wealthy classes on their side, save in the hour of triumph. I beg to offer you an illustration to the point. Thirty-five years ago next month, within the easy memory of many now present, a list of Boston's most honored names appeared in the *Daily Advertiser* to overawe the reformers of that day. The occasion was Mr. Webster's infamous 7th of March speech, which fastened the Fugitive Slave Bill upon the country and made Massachusetts the hunting-ground of the kidnapper.

"Shakspeare says:—

"In law, what plea so tainted and corrupt
But, being season'd with a gracious voice,
Obscures the show of evil? In religion,
What damned error but some sober brow
Will bless it and approve it with a text,
Hiding the grossness with fair ornament?"

"And, in that day of disgrace for our Commonwealth and her great senator, the overwhelming weight of these distinguished citizens of Boston was thrown into the scale of slavery. They rallied to the support of Mr. Webster in a public address of thanks. As in the remonstrants' petition, I can point you to the names of the president and the Greek professor of Harvard, of the venerated colleague and successor of Channing (whose successor is among the remonstrants), of the illustrious historian of Ferdinand and Isabella (paralleled by the remonstrating signature of Boston's historian of to-day, the palliator of the cruel expatriation of the Acadians), of others, famous at that time in law, in trade, in scholarship, and in religion. How crushing the demonstration seemed against the handful of men and women with no acknowledged influence or reputation, at whom it was aimed! I need not remind you that the Fugitive Slave law is no more, and that Boston is now building monuments and statues to the men whom that address was to annihilate. Nor need I add that the descendants of the signers are too filial to parade that roll of shame. It may be that a quarter of a century hence, when women are enfranchised, the descendants of our remonstrants will remember to forget the protest of to-day. We are not disturbed that the president of Harvard College labors for our defeat. Perhaps his instinct recognizes the movement that is yet to revolutionize and regenerate the venerable university which he controls. Many noble women have added to its endowments, but its doors are too narrow to admit the sex. It is a sufficient commentary to say that the question of college morality prevents many parents from trusting their boys to the temptations which the educational conditions of Cambridge present to-day. Who doubts that the dangers will be lessened when the sisters take their rightful places at their brothers' side? We acknowledge only encouragement at the hostile consideration we have aroused. It demonstrates that our movement has passed the epoch of contempt, and is deemed important enough to justify this opposition. It is too late. Over or through these genteel barriers, the goal will be reached. As long as the Legislature of Massachusetts continues to assemble and equal suffrage is refused, so long shall we continue to sit at your gates with our petitions, invoking for our sacred cause, in the famous words of Abraham Lincoln, 'the considerate judgment of mankind and the gracious favor of Almighty God.'"

CORRESPONDENCE.

A CHINESE QUESTION.

Editors of The Index:—

A case of exceptional interest, upon which it would seem that fair-minded people could look but in one way, and yet which has raised much excitement and dispute in San Francisco, is now passing through the California courts. Its decision is of much importance for the Chinese in California; and it is gratifying to know that the legal decisions, thus far, are all in favor of what is manifestly the side of right and justice, and that there is little doubt that these decisions will be sustained by the higher courts. The case concerns a Chinese child, named Mamie Tape, who was born in San Francisco, where her parents have lived for fifteen years. It is admitted that her father is a householder and tax-payer. It is admitted that Mamie Tape is a child of good habits, good character, and good health; that her playmates are the American children in her neighborhood, that she is dressed like white children of her station in life, that the language used by the family in their home is the English language. She applied to the principal of the Spring Valley Primary School, Miss Jennie M. A. Hurley, to be enrolled as a pupil in that school, being the school nearest her residence; and, though the accommodations are ample and the school is not full, she was denied admission, solely because she was of Chinese descent. And the principal of the school seems to be sustained in her position by Mr. Moulder, the superintendent of the public schools of the city and county of San Francisco.

The attorneys for Mamie Tape in this interesting case, which is likely to become a much quoted precedent, are William F. Gibson and Sheldon G. Kellogg; and we have received a printed copy of the "points and authorities" with which they appeal to the Supreme Court of the State. It is a pamphlet of considerable size, and the points are argued with unusual thoroughness and acuteness. The positions taken, and, it seems to us, fully sustained, are that Mamie Tape is a citizen, both of the United States and the State of California; that she is entitled to admission to this particular school, both under the Constitution and the laws of California; that, even if she had been born in China, she would still be entitled to admission to the public schools, under Article 6 of the Burlingame Treaty, which provides that Chinese subjects visiting or residing in the United States, like citizens of the United States residing in China, "shall enjoy the same privileges, immunities, and exemptions, in respect to travel or residence, as may there be enjoyed by the citizens or subjects of the most favored nation"; and, finally, that denial of the child's admission to the public schools by the State would be in clear contravention of the Fourteenth Amendment to the Constitution of the United States.

"In the court below," conclude the attorneys for the child, "counsel for appellants attempted to justify the exclusion of Mamie Tape as an exercise of the police power of the State. The police power of a State cannot, as we have seen, be directed against a race as a race, but is used against particular person or practices, in the interests of the public health and public morals. By the allegations of the petition, Mamie Tape is unobjectionable as to health and morals, and the sole reason for denying her application is on the ground of race, or color.

"Any consideration of policy may be out of place in a strictly legal argument. We will, however, say that this child and her parents are permanently in the State. It is for the interest of the State that she shall be educated. To deny to persons within our boundaries educational advantages is only to increase ignorance and crime. The question under consideration has no connection whatever with the policy of the restriction of Chinese immigration.

"Is it not strange that this little girl, who conforms and whose parents conform so fully to the requirements of Christian and American civilization, is denied admission to our schools? When the Thirteenth, Fourteenth, and Fifteenth Amendments to the Constitution were adopted, it was universally believed that equality of right before the law for all American citizens had been secured, and that once and for all time all discriminations on account of race or color had been prohibited. Long before these Amendments, the wisest and most enlightened of our citizens believed such dis-

criminations to be impolitic and unjust. By their adoption, our country placed herself in full harmony with the spirit of the age. Shall California, the freest, the most liberal, and in many respects the most enlightened of American commonwealths, now give the signal for retreat? In the light of her laws, in the light of the Fourteenth Amendment, which she helped to adopt, in the light of her liberal and educated public sentiment, shall she not rather march forward in the plain path of wise policy and eternal justice?"

E. D. M.

OLD THEOLOGY.*

Editors of The Index:—

The author of this volume regards mankind as living in a kind of waking dream, or material, temporal state away from God; that matter is produced by the soul through its material thought; and that God alone is Substance, compared with whom the soul of man is shadow. Just as darkness must always represent the absence of light, so matter represents the absence of spirit; and the material universe is regarded not as the creation of God, but as a product of the spiritual life which God created.

Although the ideas of the author are diametrically opposed to the philosophy of Locke, who considers all matter to be substance, Dr. Arens would certainly agree with Locke in what the latter says with regard to prejudices and opposition to new doctrines: namely, "He that is strongly of any opinion must suppose . . . that his persuasion is built upon good grounds, and that his assent is no greater than what the evidence of the truth he holds forces him to. . . . Now if, after all his profession, he cannot bear any opposition to his opinion, if he cannot give a patient hearing, much less examine and weigh the arguments on the other side, does he not plainly confess it is prejudice that governs him?"

"The imputation of novelty is a terrible charge among those who judge of men's heads, as they do of their perukes, by the fashion, and allow none to be right but the received doctrines. Truth scarce ever yet carried it by vote anywhere at its first appearance: new opinions are always suspected, and usually opposed, without any other reason but because they are not already common."

Now, although one would scarcely look for "novelty" in *Old Theology*, yet, according to the writer, the original science has been so long in disuse that it is quite new to the present generation. Therefore, we may expect to find it encountering opposition, either in the form of argument, ridicule, or indifference. Dr. Arens justly says that, if one man calls five and five fifteen, while another stoutly maintains that their sum is only twelve, both cannot be right. In fact, neither is. So, likewise, when one religious teacher says, "This is the way!" and another in direct opposition cries, "Lo, here!" and yet another, "Lo, there!" surely not more than one is right, and possibly all are wrong.

The author presents his understanding of immortal truth in contradiction to the existing opinions and beliefs regarding it, and invites the attention of the thinking world. He does not claim to be the originator of this doctrine, which he says Jesus and the apostles preached and applied to the casting out of devils and to the healing of the sick, and of which there have been advocates from that time to the present. He merely stands as the more advanced exponent of an eternal truth that he is confident will revolutionize the world. He is a firm believer in the authenticity of Scripture, but holds that its spiritual truths are necessarily clad in a material garb, and that men in general recognize the latter only,—pay regard to the "letter that killeth," and do not discern the "Spirit that giveth life" on account of their materiality, since spiritual things must be spiritually discerned. Objections are anticipated, and to the doubter he says: "I can demonstrate my interpretation." "How?" "By healing the sick." And, in confirmation of his statement, he gives several pages of testimonials from invalids restored to health without medicine and independent of faith on their part, but simply through *Old Theology*, or the understanding of God which the healer himself possesses.

The book expounds an essentially new philosophy

* *Old Theology in its Application to the Healing of the Sick, the Redemption of Man from the Bondage of Sin and Death, and his Restoration to an Everlasting Life.* Vol. I. By E. J. Arens. Boston: Alfred Mudge & Son, printers. 1884.

—or theology—as we have said, and furnishes very entertaining reading; and, while it has yet to win a recognized place in the world of metaphysics, it is evidently the work of an honest, earnest, conscientious worker.

D. O. S. LOWELL.

BOOK NOTICES.

How Success is Won. "Little Biographies," Third Series. By Mrs. Sarah K. Bolton. Boston: D. Lothrop & Co., Franklin and Hawley Streets. pp. 245. Price \$1.00.

The men selected by Mrs. Bolton as examples of "how success is won" are Peter Cooper, John B. Gough, John G. Whittier, John Wanamaker, Henry M. Stanley, Johns Hopkins, William M. Hunt, Elias Howe, Alexander H. Stephens, Thomas A. Edison, Dr. William T. G. Morton, and Rev. J. H. Vincent, twelve in number, comprising the pursuits of manufacturers, lecturers, poets, artists, merchants, explorers, inventors, statesmen, discoverers, and preachers. Each brief biography is accompanied by an excellent portrait of its subject. The author has the knack of bringing into prominence briefly all the salient points in the characters portrayed, and by a few rapid strokes of her pen gives her readers a forceful and recognizable summary of the social and domestic qualities of each of her representative successful men. No reading can be more helpful to the young than biographies like these, which do not tire by their length, and which, written in a lively and interesting style, are sure to arrest the attention and awaken the ambition of even the least thoughtful of her young readers.

ALDORNE, and Two Other Pennsylvanian Idyls. Together with Minor Poems. By Howard Worcester Gilbert. Boston: Index Association. 1885.

Of the poems in this book of one hundred and forty pages, the first three are of considerable length, and consist of romantic tales of Pennsylvania life, entitled respectively "Aldorne," "Mary Craven," and "Wyndham." Mr. Gilbert, whose name is familiar to the readers of *The Index* through his occasional contributions both in poetry and prose, seems to be an ardent and genuine lover of Nature in all her aspects. There is wafted through all his poems the breezy odor of simple, natural, and delightful out-of-door life. Many of the minor poems celebrate the beauty and rehearse the virtues of such well-known flowers as the daisy, trailing arbutus, fringed gentian, Jack-in-the-pulpit, and sweet-scented life-everlasting. There are also poems "To a Sky-lark," "To a Hermit-thrush," and "To a Robin." The author's sympathy with free and rational thought is evidenced in his poems on Charles C. Burleigh, Parker Pillsbury, and Charles F. Hovey. The finest poems of the volume, in our opinion, are "Niagara" and "Isis."

Who would not "be a child again," if such rich treasures of literature and knowledge were open to him as are open to the children of this generation in *Wide Awake*, and also in other magazines devoted to teaching "the young idea how to shoot"? The March number of *Wide Awake* shows no falling off from previous issues in the quantity or quality of its illustrations, stories, poems, or instructive articles. Rev. E. E. Hale, Sarah W. Whitman, Mrs. Jessie Benton Fremont, Rose Kingsley, Ernest Ingersoll, Susan Coolidge, Yan Phou Lee, and Charles Egbert Cradock are among the contributors for this month.

In view of the recent inauguration of President Cleveland, the handsome frontispiece picture in the *St. Nicholas* for March of "The Inauguration of President Garfield" is very interesting. Edmond Alton, in his series of papers "Among the Law-makers," gives an interesting description of this event. One of the most interesting of the articles is Lieut. Fred. Schwatka's "Children of the Cold," which has eight illustrations descriptive of Eskimo child-life. J. T. Trowbridge, E. P. Roe, and Celia Thaxter have contributed to this number. Sold by Cupples & Upham, Old Corner Bookstore.

MORE of us do harm by groping along the pavement with blind hands for the beggar's brass coin than do folly by clutching at the stars "from the misty mountain-top." And, if the would-be stargazers catch nothing, they keep at least clean fingers.—Elizabeth B. Browning.

Guizot's

Also a **CHEAPER EDITION**, just issued, in 8 volumes, large 12mo., with 64 Fine Illustrations, otherwise the same contents as the other edition. Paper, press-work and binding all first-class. Bound in fine cloth; price of the set, **\$5.00**; postage 60 cents.

This is the only complete American edition of this magnificent work, which is known as the best popular history of France. The **\$36.00** cost of the imported edition, with substantially the same illustrations is **Reduced to \$5.00** \$36.00, and the cost of the only other American edition (which is incomplete, coming down to, and *NOT* including even the French Revolution, and of course not the wars of Napoleon) is at the time of this announcement \$33.00, while *THIS* is commonly considered the *BEST* for the library.

"The matchless brilliancy of Guizot's style, his graphic descriptions of men and events, his painstaking minuteness of detail, the lucidity and ease of his style and the admirable philosophic reflections, all combine to render it worthy of the description it bears as the most popular history of France. It is as fascinating as a novel, and as life-like as a theatrical representation of the events and personages it describes. How the set can be sold for that price remains, after much reflection, a mystery, for the work is not sham work, it is well done; altogether it is a marvel of cheapness. Mr. Alden has done much for the cause of good literature, but nothing better than this."—*Daily Times*, Buffalo, N. Y.

"It is far the best history of France that has been written. It is a wonder of cheapness."—*Christian Advocate*, Richmond, Va.

"What Victor Hugo is in fiction, Cousin in philosophy, Guizot is in history. Among Frenchmen he had but few peers."—*Christian Leader*, Boston, Mass.

"Such a history, by such a writer, and at such a price, should gain readers by the thousand."—*Churchman*, Richmond, Va.

COUPON 25 CENTS. This Coupon will be received in lieu of 25 cents cash, toward the price of either work above named, if sent within 10 days from date of this paper (give name of paper). This offer is to secure your **PROMPT** response and indicate the paying advertising mediums.

on reasonable evidence of good faith. Address **JOHN R. ALDEN, Publisher, 293 Pearl Street, New York.**

CELEBRATED HISTORY of FRANCE, from the Earliest Times to 1848. By M. GUIZOT, Prime Minister of France, continued from his notes, by his daughter, MME. GUIZOT DE WITT. Complete in 8 vols., small octavo, large type, bound in fine cloth, beveled boards, gilt tops. Per set, **\$8.00**; postage \$1.20.

426 Fine Illustrations

France

"In style of cover, firmness of binding, quality of letter-press, affluence of illustration, and lowness of price, this edition of one of the noblest historical works in existence, is one of the most remarkable publications now offered to the public."—*Star*, Dover, N. H.

Seven Great Monarchies

Of the Ancient Eastern World. By GEO. RAWLINSON. Chaldaea, Assyria, Babylon, Media, Persia, Parthia, and New Persian Empire. In three large 12mo. volumes, large type, with notes, index, and over 700 illustrations and maps, bound in fine cloth, gilt tops. Price reduced from \$18.00, to **\$3.00**; postage 42 cents extra.

"No better specimens of book-publishing could be desired than the volumes of Rawlinson and Guizot which Mr. Alden has issued."—*The Mail*, Toronto, Canada.

"Then there is Guizot's admirable and fascinating 'History of France,' in eight nicely made and well illustrated volumes, with good print and gilt tops. But, in our judgment, the best bargain of all is his three-volume edition of Rawlinson's notable work, 'The Seven Great Monarchies.' Professor Rawlinson has no equal as a historian of the ancient Eastern Empires to which he here introduces us. We stand far back at the beginnings of history, and those strange Oriental peoples, and their habits and customs, their lives and deeds, transpire before our very eyes. At his magical touch the dead arise and recount the story of their time. These books are full of illustrations which illumine the text. They are well-made, thick books, on good paper, with good maps, and gilt tops. Once, these volumes,—the same text, maps, and illustrations—sold for \$18."—*Golden Rule*, Boston.

TRACTS.

- No. 1.—*Truths for the Times*, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.
 - No. 2.—*Fear of the Living God*, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.
 - No. 3.—*Lecture on the Bible*, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.
 - No. 4.—*Christian Propagandism*, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extractions.* Price 10 cents; 12 copies, \$1.00.
 - No. 5.—*"God in the Constitution,"* by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.
 - No. 6.—*"The Sabbath,"* by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.
 - No. 7.—*"Compulsory Education,"* by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.
 - No. 8.—*The Present Heaven*, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.
 - No. 9.—*The Christian Amendment*, by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Rangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.
 - No. 10.—*The Impeachment of Christianity*, by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*
 - No. 11.—*The God of Science*, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.
 - No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, \$1.00.
 - No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, of England, analyses the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.
 - No. 14.—*A Study of Religion: The Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.
 - No. 15.—*The Battle of Syracuse.* Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

H. T. MARSHALL'S PATENT ADJUSTABLE LACE CONGRESS

Is easily adjusted to fit any instep or ankle at any time, and will not uncomfortably draw the ankle, like ordinary congress. It has the stylish appearance of a lace boot and all the convenience of any congress in putting on or off the foot. Marshall's Pat. Pat'd May 13, 1884, woven in the front strap or stamped on the Shank of each shoe. If your dealer does not keep them, send postal for directions how to get them to the Patentee and Manufacturer of Men's, Boys', and Youth's Fine Boots and Shoes. Tennis Shoe for Ladies and Gents a specialty.
H. T. MARSHALL,
BROCKTON, MASS.

2,000 PHOTOGRAPHS OF WORKS OF THE OLD MASTERS.

Large Copies only 20 cents each.

The following examples are from the so-called "Twelve Great Pictures of the World." The Last Supper, LEONARDO DA VINCI; The Last Judgment, MICHAEL ANGELO; Descent from the Cross, VOLTERRA; Assumption of the Virgin, TITIAN; The Transfiguration, RAPHAEL; Sistine Madonna, RAPHAEL; Holy Night, CORREGGIO; Aurora, GUIDO; Beatrice Cenci, GUIDO; Last Communion of St. Jerome, DOMENICHINO; Descent from the Cross, RUBENS; The Immaculate Conception, MURILLO.
Excellent unmounted copies of all these will be sent by mail on receipt of \$2.40; or any one or more at 20 cts. each (with Catalogue when desired). Address
W. H. SHERMAN,
455 Jackson Street, Milwaukee, Wis.

CURRENT TOPICS.

BY B. F. U.

MR. ROWLAND CONNOR, we see by a Michigan paper, is having large audiences in his new church at East Saginaw, and the interest in his able and radical discourses is very marked.

THE Kansas and Nebraska papers make very favorable mention, and some of them give good abstract reports, of the lectures of Mr. C. D. B. Mills, who has spoken recently at Omaha, Topeka, Lawrence, Lincoln, and other places in the States mentioned.

THE *Catholic Review* says that "it is fourteen hundred years since Patrick preached Christ, not from the lore of books, but 'from the signs of divinity laid bare' to him by Christ Himself. Could fable and dream have lasted so long? Could aught but truth survive such trials and so many centuries?" How about Buddha and the movement he initiated several centuries before "Patrick preached Christ" and before "Christ Himself" preached? Our contemporary would do well, too, to give a thought to Mohammed and the religion he founded, with its 200,000,000 adherents. "Could fable and dream have lasted so long?"

We were pleased to receive last week the *Radical Review* of March 15, the only number issued since Nov. 8, 1884; but we regret that there is no prospect of the continued publication of this able and honest journal. The Liberals of the country should not have allowed one of their best papers to be reduced to a financial condition compelling it to suspend publication. Mr. and Mrs. Schumm have kept the character of the *Radical Review* high; and their good service to the liberal cause is appreciated, and will be gratefully remembered by many friends. The editors say that there is just a possibility that some action may be taken to place the paper on a solid basis, and thus secure its regular publication. We hope this possibility will soon become a probability, and that the probability will rapidly develop into a certainty.

THE petition that Harvard undergraduates over twenty-one years of age be permitted to exercise their option as to attending morning prayers at the college, and that those under that age be governed by the option of their parents, has been rejected by the Corporation. A yearly extension is given to the elective system in the choice of studies, but no choice of time and place of prayer can be allowed! This compulsory attendance on morning prayer is in principle the same as compulsory participation in religious exercises. Its requirement indicates narrowness and illiberality on the part of the Harvard authorities. Their course is not one that will inspire the students with reverence, nor will it increase confidence in the duty and utility of praying. The injustice of the rule and the humiliation of submitting to it will rather tend to make them regard prayers with contempt. Referring to the rejection of the petition, the *Nation* remarks: "The President and Fellows unluckily do not give their reasons; but the only creditable reasons must be either the belief that God is pleased with the presence in a chapel or church of unwilling, irritated, and irreverent worshippers, brought thither by the fear of temporal punishment, and does not mind the set against all religion which such a process is very apt to give young men, or the belief that a man is benefited by being present in any place in which prayers are being offered, no matter in what state of mind he may be, and no matter what agency has brought him there. But neither of these reasons is modern, or, if we may make a bull, rational."

WE have received—from the author, it is presumed—a copy of a circular issued at Chicago "To Tramps, the Unemployed, the Disinherited, and the Miserable." It is by a woman, and certainly the most revolutionary and sanguinary document that has reached this office. It is written from a moral stand-point far below that of "tramps"; and, since it cannot command their respect, it is not likely to influence those of a class who, whatever outrages they commit, never attempt to justify them on moral grounds. We quote the concluding portion of the circular: "Stroll you down the avenues of the rich, and look through the magnificent plate windows into their voluptuous homes, and here you will discover the *very identical robbers* who have despoiled you and yours. Then let your tragedy be enacted *here!* Awaken them from their wanton sports at your expense! Send forth your petition, and let them read it by the red glare of destruction. Thus, when you cast 'one long, lingering look behind,' you can be assured that you have spoken to these robbers in the only language which they have ever been able to understand; for they have never yet deigned to notice any petition from their slaves that they were not *compelled* to read by the red glare bursting from the cannons' mouths, or that was not handed to them upon the point of the sword. You need no organization, when you make up your mind to present this kind of petition. In fact, an organization would be a detriment to you; but, each of you hungry tramps who read these lines,

avail yourselves of those little methods of warfare which science has placed in the hands of the poor man, and you will become a power in this or any other land. *Learn the use of explosives!*" How the destruction of life and property would revive business, increase the demand for labor, and raise wages, the circular does not state. Its writer does not seem to understand even that the security of life and property is one of the primary conditions of civilization, and that, in proportion as this is imperilled, we return to a state in which industrial pursuits are impossible, in which might is the rule of right, and war is the chief business of life. The social contrasts presented by the extremes of wealth and luxury, on the one hand, and of poverty and wretchedness, on the other, are indeed painful to contemplate. How to secure a more equitable distribution of labor's products, and to equalize the opportunities for success in life, are problems worthy the serious thought they are receiving from many of the broadest and best thinkers; but these are problems to be solved by thought, not by explosions of dynamite. And the needed reforms must come by agitation, education, and the exercise of the franchise, the methods of civilization, and not by individuals, each acting as judge and executioner, condemning and killing men because they are rich, and destroying property because they themselves have none.

THE movement for the disestablishment of the English Church, which aims, not merely to prevent the Church receiving further State recognition, but to disendow it of some of its accumulation from past public and private bequests, is fast gaining strength. The cost of education presses heavily upon the people; and they listen with approval to the proposition that some of the large estates which have been accumulated by the Church be thrown into a common educational fund, the interest and revenue therefrom to be applied to the cost of national education. The advocates of disendowment point to statements like the following from Lord Chief Justice Coleridge: "If men give property to the Church, and the Church takes it, the property is given and taken subject to State control, on State terms, upon conditions laid down from time to time by the State, and liable to be altered by the power which has laid them down. If men dispute or deny this, and talk of the sacredness of church property and of the sacrilege of State interference with the conditions on which it is held, I do not understand the construction of such minds." This measure is likely to have the support of the working classes. Says the *Ottawa Free Press*: "Those who know how officious the rural clergy of the State Church were in frowning down and seeking to stamp out the farm laborers' movement when started by Joseph Arch, and who remember also that a bishop of the State Church publicly declared that Arch ought to be ducked in a horse pond, will not be surprised if the newly enfranchised farm laborers should revenge themselves in the manner suggested by disestablishing and disendowing the State Church." The ultimate success of this movement is reasonably certain.

A REVIVED DEBATE.

An interesting and vigorous discussion has been going on in recent numbers of the *Christian Register* between Mr. F. E. Abbot on one side and the editor and James Freeman Clarke on the other, with regard to the theological significance of the Preamble and Constitution of the National Unitarian Conference. The discussion arose from a criticism which the editor of the *Register* made against a portion of Mr. Abbot's address on "The Intellectual System of Liberalism," printed in *The Index* of January 1, the present year. The *Register* article in general was highly appreciative and eulogistic of the address, but took exception to its statements that "the organic idea of Christianity is that the human race is to be governed by a divinely appointed Christ or king," and that the Roman Catholic Church has been the one specially logical form of the Christian system. As against these statements, it pointed to the practical brotherhood and democratic character of the primitive Christian churches, and to the republican organization of New England Congregationalism as a new recognition of the primitive type of a Christian church.

To this criticism, Mr. Abbot replied (*Christian Register*, February 5) that he was looking on "Christianity as a whole," and not at "two or three isolated facts" merely; that "whoever views Christianity as one vast organism of strictly historical growth, as a natural product of historical forces which has developed in strict accordance with the laws of all historical evolution, will find it impossible to view Catholicism otherwise than as the historical maturity of the primitive Christian Church, and New England Congregationalism as a very small and exceptional fact in the history of the Christian Church in its organic totality." But, as showing how all forms of Christianity, even when not so strictly logical as Catholicism, and though professedly liberal, do yet adhere to the germinal idea of "the royalty of Jesus," Mr. Abbot went on to quote from the Preamble to the Constitution of the National Unitarian Conference, to prove that the advanced Unitarian denomination had planted itself on that same idea. This, as he says, made the very gist of the discussion at the Syracuse session of the Conference, when an attempt, which he himself led, to amend the Preamble in the interest of a broader statement failed; and, by the consequent retention of the confession of the "Lordship and Kingship" of Jesus, he and others were excluded from the Conference. In this part of his reply, he referred to some recent public statements of Mr. Clarke (who was also one of the foremost in that debate), which implied that the Conference had never taken any action that excluded its heretics, that it allowed them full liberty, and that it was the mission of Unitarianism to show the reconciliation of Christianity with absolute freedom of thought. Mr. Abbot, on the contrary, points to the Syracuse Conference as excluding a number of its members, because it "adopted the royalty of Jesus as its basis of union."

In the same number of the *Register*, the editor makes an elaborate and scholarly reply to Mr. Abbot's article, devoting himself mainly to maintaining the thesis that the Catholic Church, especially of the Middle Ages, is a corruption of Christianity, and that the organic idea of the Christian religion, as shown in the primitive Christian organizations, and in the growth of Protestantism, has never naturally developed into a despotic monarchy, but rather into democracy and brotherhood. As to the assertion that the National Unitarian Conference has based itself on the idea of

"the royalty of Jesus," he is disposed, remembering how far from anything monarchical Unitarianism is in its organizations, to laugh at it, and declares the use, in the much discussed Preamble of the phrases, "the Lord Jesus Christ" and "the Kingdom of His Son," to be "simply, purely, metaphorical."

There the debate rested until the *Register's* issue of February 19. In that number, the three disputants appear together. Dr. Clarke replies to Mr. Abbot's criticism of his statements. Mr. Abbot replies to the *Register's* elaborate editorial defence of its first article. The *Register* replies again to Mr. Abbot's reply.

The main point in Dr. Clarke's article is that Mr. Abbot and his friends were not excluded by any action of the Conference, but excluded themselves from its fellowship by a wrong interpretation of its action. Speaking for the majority, he says, "We were sorry that he felt obliged to part company with us, and we saw no good reason why he and his friends should leave our body." In support of this view, he urges that "the clause in question was not adopted with the purpose of excluding heretics, but of expressing loyalty to Jesus as leader and teacher"; that "the object of the Preamble was to say distinctly, but simply, 'We claim to be Christians and followers of Christ'"; that there are many senses in which Jesus may be called king, and that the Conference left each member free to elect his own sense for that appellation; and that it was also distinctly affirmed that "those to whom the phrase was repugnant were not bound by it." (As regards the Syracuse Conference, Dr. Clarke is mistaken as to there having been any such affirmation made by the Conference.)

In his reply to the *Register*, Mr. Abbot asks the question whether the Preamble, after all, is only a metaphor, and urges, with earnest feeling as well as good reason, that it cannot be possible that all this long and persistent debate, this sundering of cherished ties and breaking of fellowships, originated in a simple difference of judgment on a mere matter of rhetoric. In further elucidation of his views, he argues that the royalty of Jesus, though it may not, in all Christian sects, have a visible representative head, as in the Roman Catholic Church, yet is, nevertheless, recognized in all; that "allegiance to Jesus as Lord and King always has been, and is still, the universally accepted test of membership in the Christian Church"; and that the theological phrases in the Preamble were a form of this habitual recognition, or what Dr. Hedge calls the Christian Confession,—that is, "the confession of Christ as divinely human Master and Head."

The *Register's* rejoinder to Mr. Abbot insists that the chief issue between them grew out of the assertion of the latter, that "the organic law of Christianity is monarchical" and its most logical form of development "despotism," and claims that Mr. Abbot's admission that many Christian churches have existed under democratic forms of government materially affects the accuracy of this assertion. As to the phrases of royalty applied to Jesus, the *Register* defends itself for calling them metaphorical, and classes them with various other titles given to Jesus in the New Testament, as "Lamb of God," "Chief Corner-stone," "Saviour," "High Priest," etc.,—with reference to all which it says that "it was inevitable that the moral and spiritual pre-eminence of Jesus should be recognized and expressed in redundant language." The important distinction which Mr. Abbot had made between a "visible monarchical head" and "an invisible monarchical head"—invisible, but still conceived as having

royal authority, which is the common Christian conception concerning Jesus—the *Register* passes by; expresses, without hesitation, its own preference to describe Jesus by such simple terms as friend, helper, brother, rather than by resorting to epithets of royalty; declares its entire acceptance of "that lofty ideal of Christianity" which was contained in Mr. Abbot's rejected amendment at Syracuse, and thus gracefully retires from the discussion.

We may here add that, while we have never been able to adopt Mr. Abbot's view, at least with such rigidity as he does, that the Roman Catholic Church is the one specially legitimate and logical product of the Christianity of the Gospels, we yet think him entirely right in maintaining that the application of terms of royalty to Jesus has much more than a metaphorical meaning. They are a confession of Jesus as the Messiah, and were meant to accord to him a position of supernaturally kingly authority.

In the *Register* of March 12, Mr. Abbot returns to the field with new vigor in a rejoinder to Dr. Clarke. He attacks his antagonist in front, on the flank, and in the rear, with merciless persistency. No abstract can give an idea of the logical strength of this article. It must be read. Suffice it to say that he sets out by asking Dr. Clarke, "Is it true, as you maintain, that one who does not believe in the Royalty of Jesus can innocently retain membership in a conference which professes in the forefront of its constitution to make that doctrine the very foundation and *raison d'être* of its existence?" He then goes on to say that it is not with him a question, as Dr. Clarke had implied, of accepting the doctrine of the Kingship of Jesus in some sense, as he himself might elect, but that he rejects it in every sense. To quote his own emphatic words, he says, "I reject that creed, absolutely and unconditionally, in every sense that can be put upon or tortured into the words." He adds that this is "from no want of rational reverence for the character of Jesus," but because "the soul's supreme allegiance of right belongs to that impersonal, eternal, universal, and uncreated LAW OF HOLINESS which every man names, consciously or unconsciously, when he calls God himself 'a holy being.'" Inquiring if it can indeed be possible that Dr. Clarke should see "no good reason" why he (Abbot) should have left the Conference, he proceeds to awaken Dr. Clarke's perception of the situation by an imaginary case. He asks Dr. Clarke to imagine himself invited to a great council of "all Christian churches," and that he accepts in good faith, but finds, when the council organizes, that it has put into its articles of organization a stiff Trinitarian creed. Protesting in vain against such a creed in the organic act of the council, would not Dr. Clarke, as an honest man, then feel compelled to withdraw from the council? And would he not, in that case, honestly say that it was the action of the council that excluded him? Having thrust home this pointed question, Mr. Abbot assails successively the positions Dr. Clarke had taken to show that he (Abbot) had not been excluded from the National Conference by its action, and easily shows their weakness, and finally closes with this other question, "Do you now tell me, in view of this whole letter, that I have a moral right to be a member of the National Unitarian Conference?"

To this question, Mr. Abbot requested a public reply. The reply came from Dr. Clarke in the *Register* of the following week (March 19), and is so brief that we can give it entire. It is as follows:—

After carefully reading Mr. Abbot's letter in the last number of the *Register*, I am obliged to admit

that he did right in withdrawing from the Conference. His hostility to the platform of that body, which I had supposed to be chiefly formal and logical, I now find, from his recent statements, was more profound in its character. I see that, with his views, he could not honestly be a member of the Unitarian denomination, nor indeed of any Christian body.

Dr. Clarke thus candidly and honorably surrenders. But what, then, becomes of his claim, made in his address at the Unitarian Club, and so constantly repeated by Unitarians, that "the mission of Unitarianism is to show men that the gospel of Christ is on the side of the freest thought"? "We have allowed," said Dr. Clarke, "our heretics to think and say all they wished [and he meant, presumably, without their being obliged to go outside to do it]; and we are now prepared to go to work together." But here is Mr. Abbot, who, he admits, was obliged as an honest man to withdraw from the National Conference because of his "views." Now, how could that be possible,—why should his "views" be any bar to his membership,—if the mission of Unitarianism were really to reconcile Christianity with "the freest thought," and the National Conference were true to that mission?

WM. J. POTTER.

THE NEGRO IN GEORGIA.

A lawyer in Georgia, who once travelled all over the State as a Baptist missionary, but who has now adopted such advanced views as he finds very few Southerners willing to express, writes thus: "Whiskey is the greatest curse to the negro race imaginable. We can never expect to better their condition while they can get whiskey. They spend all their earnings for it; and, when they can't get it any other way, they steal. The whiskey men control them almost absolutely. . . . When you make the comparison of the two races, when you look at them in their true relations, when you remember that the negro race are so illiterate and degraded as a race, when you reflect that they are almost universally our menial servants and but recently our slaves, when you see their low grade of intelligence, when you see their utter incapacity for the suffrage or for any office or test of public responsibility,—when you keep all these facts in mind, and then imagine an attempt to put them (the negroes) above the white population who have the intelligence, the property, etc., of the South, or at least, if not above, equal to the whites,—then, putting these two facts together, you would see philosophically what a state of feeling would be generated in the breasts of the whites against them. The greatest harm ever done the negroes of the South was the attempt to fasten upon the white people the 'Civil Rights Law,' or, in other words, the attempt to make the negroes the social equals of the whites. At the time, it created a feeling of bitterness against the negro in the Southern heart that would never have existed, if that question had been let alone to adjust itself in the process of time, as all such questions must do. . . . Legislation can never substitute statutory laws in the place of the uniform action and force of natural social laws. The problem is best let alone, and then only will it work out itself in a satisfactory and wise manner. Every attempt made to disturb the action and evolution of a natural social law will but result in failure, and will frustrate the end aimed at. No legislation in the world can transform a people's menial servants to their social equals. Nor can legislation force the superior order or class of population to mix or mingle in any manner with the inferior class. Only when, through the slow process of evolution, the inferior becomes in reality equal to the superior, will the

latter socially recognize in the former, or suffer in any manner a violation of these relations. Of course, the white population of the South desire to accord to the negroes all their political rights; and we do all in our power to that end. I know of no exception to this statement. I have never known a negro voter deprived of his political rights. If it has ever been done in Georgia, I do not know of it. . . . I but voice the sentiment of the whole South, when I say that the universal desire down here is that all sectional strife should cease, and that sectional memories and hate and bitterness be buried, where they belong, in the tombs of all past blunders. We realize that the interests and prosperity and well-being of all our people are interacting, interdependent, and correlated. The progress of one part of our country is dependent upon that of the other, and to this fact we all give our hearty acquiescence. We are always more than willing to meet our Northern brethren on half-way ground."

These general sentiments are such as I must re-echo cordially. I don't know that we have a right, as a nation, to claim any more for the negro at the South than that he should have full enjoyment of all his rights of person and property, including education and the suffrage. It is to protect such rights that government exists. If the negro, as a race, is ignorant and degraded, there is all the more need that he should have special protection against oppression. Such cases as that of a colored man being imprisoned for several years, I think in Mississippi, for marrying a white woman, might properly receive notice in Congress. Nor should the people of any State have permitted a colored clergyman to be cruelly beaten with impunity for taking a seat among whites in a railroad car. It belongs, of course, to the Southerners themselves to right such wrongs; and it is quite likely that they are less willing to do so than they would be if no laws in advance of public opinion had been inflicted upon them. Here, at the North, however, the Civil Rights Law is not in advance of public sentiment. If there is any feeling against it, it is among people who are behind the age. Our political freedom, industrial prosperity, and moral safety all depend on our recognizing each other as born free and equal. We cannot afford to suffer any social distinctions to be made on account of birth and race. Of course, gentlemen and ladies will associate with each other rather than with menials. But gentlemen and ladies at the North ask no questions about each other's color, and take no note of complexions, but only of habits and tastes, in deciding who is within their own circle. It is pleasant to remember that we have many colored gentlemen and ladies who are in every way worthy of the name. Let us, here at the North, do our best to treat them as such, and in due time the South must follow our example.

F. M. HOLLAND.

MYTHOLOGY.

IX.

Resuming now the thread of inquiry that has been for unavoidable reasons interrupted, I feel impelled again to say that the researches of to-day are showing more and more clearly how deeply the element of mythology is present—in many instances active—in all the departments of our thought and life.

The proverbs, as is now known, are many of them traceable to mythologic origin. This is a field that lies yet to be explored. Very little has thus far been done to possess it. "To lock the stable after the cow (or horse) is stolen" carries

such reference, and the original meaning is hinted in some relations of the old Vedic and other mythology. "To let the cat out of the bag" is an expression that has like origin, and bears to the belief in the witch, originally night, or a sinister sprite of the darkness, then its representative the black cat,—a belief by no means yet extinct even among ourselves. "Devil take the hindmost" has a clear ancestry in a known myth. The old German, also Slavonic and Italian proverb, "Even the black cow yields white milk," referring to the birth of the alba, or the milky light from the dark night, is of course thus of mythologic origin; and the expression that "cow's milk is poison to the serpent," a proverb current in India, and I think also found in the Western world, is probably from the same source. Darkness, or night, was the throttling serpent, widely so described in the Eastern mythologies; and the dawn of day is fatal to that. It often requires considerable study to get the genesis, growth, and varying fortunes of a proverb; and this, once ascertained, will illustrate frequently an important chapter of history.

The expression, "the moon made of green cheese," carries us to an old myth or legend of the wolf, at the instance of the fox, attempting to fish the moon, whose image he sees, from the water; and even our familiar game of blind man's buff seems to carry back to the same mythic ancestry, the original story being that of the sun looking amid darkness for his lost bride.

The characters of Shakspeare, several of them we can see,—notably, Hamlet and King Lear,—go back to the same source. The prototype of Lear and Cordelia appears in the old Hindu epic, the Mahabharata; and here the conception was originally mythic, describing the devotion of the young dawn, or sun, to the old father. In this epic, the youngest son Puru, for his self-surrender in taking on the old age, out of regard to his father, for the latter's deliverance, is finally made heir of the kingdom. The two elder, having each refused, when besought, to do this, are expelled from it. Probably the nature myth out of which the relation in each case grew was common to the original Aryan ancestry; and we find it in part now in the variants given by distant peoples, each working it out on its own soil independently.

The tale of Romeo and Juliet we have in an Oriental form in the Tuti-Nameh, Persian; and this seems plainly to have come from a primeval nature myth. The beautiful girl and the lover, separated by whatever hard fate here, are united in death: the evening aurora and the sun expire together, and are one in the world of the shades. The same thing is re-enacted in the loves and tragic end of Pyramos and Thysbe.

Cinderella is very old, and shines bright in the most ancient stories. The tale is told, with not essential variations, almost all over the world. The original, or what approaches to it, we find in the Rig-Veda. Mitras, who is the sun, follows the beautiful young maiden, who is the first of them who walk afoot, yet herself without footsteps, and whose shining slipper he finds,—slipper that no other foot on earth or in sky can fit. Other features have been filled in by the story-teller, as the ill-disposed step-mother, the moon, and the envious sisters, the clouds. The drudging in the kitchen, sitting in the ashes, etc., come in very naturally. She appears exceedingly beautiful only when she finds herself in the prince's ball-room, or in church, in candle-light, and near the prince: the aurora takes on her beauty when the sun is near. The human mind seems always to have affected such a tale, and it has its unfaded charm for us still. "Every fresh addition," says Mr. Cox, "made to our stores of popular tradition does but bring

before us new phases of those old forms, of which mankind, we may boldly say, *will never grow weary.*"

King Rene's daughter we have in the tale preserved to us in one of the old Hindu hymns of the young girl, the Aurora, blind, but restored to sight by the grace of a wise one who was Indra himself, and became enamoured of her. The milk-pail of Perrette, apparently, has come to us from that cup of abundance, of innumerable legends, and that miraculous pipkin of Persian tale, found by the wood-cutter. It gave exhaustless supply to its possessor, and reminds of the Holy Grail, which indeed is really its successor and representative. We approximate here certainly, if we do not reach the original of that far-travelled story of the milk-maid,—story which we all read in our spelling-books in the early childhood. From that, doubtless, was born the wholesome proverb, "Count not your chickens before they are hatched."

The wood-cutter invites his acquaintances to his house for a banquet from the marvellous stores of that pipkin; but, as the guests were gathered for the feast, he becomes too giddy to contain himself. He puts the vessel upon his head, and begins to dance. Down came pipkin, and was broken to fragments, all the wealth vanished, and he waked up a wiser, though a much poorer man.

The legend of the Lady Godiva and her ride naked through the streets of Coventry,—laid in the eleventh century,—we find in one of the Calmuc and Mongol tales, these confessedly of Hindu origin. In this case, the story is plainly mythic. The lady is the king's daughter, Light of the Sun is her name, whom no one must behold, walking out as she does on the fifteenth of the month. The king orders all doors and windows to be closed, all eyes turned within, and death is the penalty of the first disobedience. The Vedic poets frequently represent the Dawn as appearing nude, unveiled, as she ascends the skies.

A minister of the king, Ssaran by name (moon), peeps out from a balcony. The girl makes signs to him to join her, which he does. They are both arraigned before the king, but, through some intrigue and deception practised upon him, are both acquitted. Thus, we have the original of Peeping Tom of Coventry, or his equivalent, in this Ssaran.

The Wooden Horse, which was so dire a calamity to the Trojans, and has so exercised the imagination of every school-boy in Greek since, finds its interpretation in mythology. It forms, as Max Müller says, "an essential part of a mythological cycle," and fits in well with other features of the story. It, or its equivalent, is very frequently employed to hint the concealment or disguise, sometimes in wood, then again in the skin of some animal, under which the warrior entered the domain of his enemies, and rose up against and vanquished them.

The whole narrative of the Trojan conflict—whatever of historical incident may in time have come to intermingle there—is essentially mythic, and is told in not widely differing form in all the great epics of the world. Sigurd, through nameless peril, must rescue the imprisoned Brunhild; Rama must storm Ravana's castle, and recover the stolen Sita; Wainamoinen must visit Pohjola and obtain the mystic sampo; and with all this hold the numberless tales of "Sleeping Beauties," "Snow-white Maidens," etc., that are to be rescued by some hero from the power of the monster who keeps them imprisoned. "Blue-beard" gives us in part one of the variants.

Reference has been made to the *cat*. This creature has long played a leading witch-role both in the Eastern and the Western world. It was an ancient superstition that, as witches, they come and suck the blood of children. The appearance

of a black cat on the cradle of a child, or upon the bed of a sick man, is thought, in Germany and elsewhere in Europe, a premonition of death. If it is seen upon a grave, it tells that the soul of the departed has passed under the devil's power. In Shakspeare's "Macbeth," when the witches are to prepare their evil enchantments, the first witch commences with repeating the words,—

"Thrice the brinded cat hath mewed."

The belief that the cat will, if near, suck the child's breath away in his sleep, and thus take his life, I remember as generally held in the neighborhood of my own childhood; and the most sedulous care was taken to avoid exposure in that way. It is, I find, widely current in Europe also. It is a superstition purely of mythologic origin, a notion, as Mr. Dyer says, "without a particle of truth."

The subject literally has no end. The farther we go, the more the horizon enlarges, and new fields open to view. Many of the proverbs not only, but numbers of the fables, animal fables, have their source in mythology. Examples in point are the fable of the wolf and the lamb,—another of the old spelling-book stories; the elephant (or the lion) and the mouse; the goat, the little kids, and the wolf; the cat metamorphosed, etc. The Arabian Nights' entertainments, certainly many of them, are of the same ancestry.

For myself, I own that I read with new interest, heightened gratification, the old nursery melodies, household tales, and the stately epics also, as I learn what they have come of, and what meaning in many instances they originally carried. The thorough preservation they have in their main features had, amid all this wide diffusion over the globe, and through immemorial ages, borne down mostly by oral transmission alone, opens to us a new chapter of human history, and shows afresh the oneness of our race.

The inquiry why the human mind should so universally gravitate in this direction, seem inevitably to incline or even be compelled to pragmatize and to personalize all that has come to it in thought, would carry us to one of the most pregnant, far-reaching, and fruitful of questions. It would go to the very sources of religion, the foundation principles, the beginnings of our mental life. I cannot open it here. Can only say that the savage must have a god he can see. He cannot believe in, cannot conceive of any reality that may not be cognized by the senses. The myths, starting as sensuous conceptions, became more and more pragmatized, realistic; and we mark this in all the stages along through the mythology proper, then in the legends and tales.

This tendency, or bias we may say, so pronounced in the child-mind, and evinced so clearly in all the rude races, is in us all in a degree, and holds with wonderful tenacity and strength. From it come the marked sensuous type of our religions and the numberless fairy and elf tales of our nurseries.

CHARLES D. B. MILLS.

THE CHURCH AND MORALITY.

The Church is the recognized and established moral institution. It is as well equipped for its work as any other institution, governmental, educational, social, economic. We have the same right to hold it responsible for results as to require a reckoning from any other institution intrusted with a specific duty. If something should happen to bring suddenly to the knowledge of a community the fact that a considerable number of their children are grossly ignorant, they would turn at once to the public schools for an explanation. "How is this?" would be the inquiry. "We have established schools for the education of our chil-

dren, yet our children are ignorant." And the conclusion would be, "There must be something radically wrong with the schools." It would be a very poor reply to such a charge for the teacher to answer that the fault is in the children, not in the instruction; that it is owing to their intellectual depravity, and consequent failure to understand his instruction, which is all-sufficient, if they would only avail themselves of it. This would not do. People know that children are capable of education, and that no particular lot of them are essentially different from all others. All are ignorant, if untaught or poorly taught: all are reasonably intelligent, if well taught. If the teacher's methods do not reach a pupil's case, he modifies them till they do. Thus, no such case as I have supposed ever occurs, simply because education has come to be based upon principles, and conducted by methods universally applicable. May we not infer from opposite results in morals an opposite condition in the Church?

The average town spends as much money on its churches as its public schools. The churches employ constantly several active, intelligent, cultured men of the highest degree of moral fitness for their work, besides scores of volunteer workers in the sabbath schools. *Does the community reap any adequate harvest of moral strength and purity from this bounteous sowing?* is a question whose importance cannot be overstated. It is the vital question of practical morals. Is the Church improving morals as much as it ought with the means at hand? Why is it that most middle-aged business men are monuments of stupidity, and neglect all healthy mental and social tonics? Whose business was it to cultivate the better qualities in them? They don't go to church. But *why* don't they? If the Church has never thought that the answer to this last question might lie within itself, it is time that it should begin to investigate when a large number of the young people naturally under its care and naturally susceptible to moral teaching go radically wrong. There is not a business or professional man or young man or boy, but has been time and time again to church services. Why do they not continue? Why does not the teaching of the Church take hold upon their lives and form their characters? It will not do any better than in the case of the school to say the trouble is in them. Of course, the trouble is in them and their surrounding temptations; but this is just exactly what the Church is intended to meet and correct.

Just to the extent that it fails to do this is it a failure as a moral institution. The trouble with a sick man is in the man; but it is the doctor's business to understand the disorder, and apply an effective remedy. He will not be universally successful, but is generally so; and his rules are of general application. Everybody believes in doctors, in schools, in laws, spite of some failures in each. How is it with the Church? A majority of the people are not church members. A majority of the church members are not active and consistent. There must be reasons for this, and the only rational thing to do is to look into the Church for them, just as you would examine the stock and business methods of a merchant to see why he has few customers while others have many.

In the first place, the Church does not devote its teaching energy to practical morals. It teaches religion, and there has grown up a distinction in the public mind between religion and morals. People do not seem to have any idea that their going to church on Sunday has any reference to their conduct during the week. Religion and the morals connected with it have become a Sunday

affair, to be put on and off with our best suit of clothes. How many people go to church with the definite design of being made more honest and truthful by that particular service? Ask the average church member what he is in the house of God for, and he will answer you, To worship. To worship, indeed! while perhaps his own son is carousing in some saloon or brothel. He ought to be there for the purpose of sustaining and improving a great moral helper for himself, his children, and the community. The Church is not an end. It is only a means to the moral improvement of the race. Its object is to make people better. It should devote its energies to this end by direct practical methods, and modify its methods to suit the exigencies of particular cases. It should not only teach morals, but should enforce its precepts by requiring a strict account of conduct from its members, and measuring its success by the moral tone of the entire community, not by the length of a revival-forced church roll.

Second, the Church sets up false standards of morality. It places great emphasis upon trivial things, and ignores the most important. How many of the sermons which you have heard upon personal righteousness were devoted almost entirely to the study of the Scriptures, attendance upon divine services, faithfulness at the prayer-meeting, giving freely to the Lord! As if these things were either good or bad in themselves, or were the principal things of life instead of mere incidentals; as if there were no such virtues as justice, fair dealing, honesty, candor, kindness, self-sacrifice, devotion to principle, and helpfulness to mankind to be talked about! Such discourses usually contain a passing reference to keeping yourself unspotted from the world, which is always applied very definitely to attending dances and the theatre and to social card-playing,—things sometimes good and sometimes bad; and, as pleasurable is the only unvarying quality in them, the natural conclusion of the young is that these amusements are condemned because they are pleasant,—an absurdity against which they rebel, and which very much lessens the effect of all preaching upon them. If the Church paid more attention to taking the real spots out of the world and less to the theory of keeping itself away from these imaginary contaminations, both it and the world would be much purer.

Third, the Church does not make morality the test of its privileges or approval. There is not an orthodox church in the land that will admit a man to membership on the basis of his moral character. There is not such a church that would make the slightest distinction between the vilest old black-leg, steeped in sin, and an innocent young girl, as candidates for membership. If both professed conversion, they would be admitted alike, and probably be placed side by side to receive the hand of fellowship. If either faltered in faith, that one would be rejected, regardless of character. Of course, we all know the theological explanation of this damaging fact. But the majority do not believe the explanation, and even those who do, or think they do, often lose sight of it; and everybody sees the fact and is influenced by it to the detriment of morals. Such a practice on the part of an institution holding the position the Church does tends to destroy all moral distinctions. The very corner-stone of Christian doctrine—that is, that there is a means of escape from the consequences of immorality, that something else can be made to take the place of right living, that, indeed, righteousness may, under certain conditions (when it exists without belief in the doctrines of the Church, and thus tends to discredit those doctrines), become a damning sin—is necessarily demoral-

izing. The saving fact is that very few people really believe it. Yet its advocacy by the Church greatly diminishes the moral power of that organization.

Fourth, the Church has erected an artificial barrier which effectually shuts out from its influences, and from an opportunity of working through its agencies, a very large and daily increasing class of the intelligent, active, and morally inclined. We refer to its belief tests of membership. It is this self-imposed, artificial limitation that, more than all other defects, cripples the Church's moral influence. It is by this limitation, more than anything else, that it becomes responsible for a low moral tone in a country so abundantly supplied with churches as this. Here, in large degree, is the answer to those vital questions: Why do people not attend church? Why do church influences not reach more people and all more effectively? Why do men become callous and stupid for lack of intellectual and moral tonics? Leaving out of account the vicious, whom we may assume to avoid moral influences because of depravity, there are more well-inclined people out of the Church than in it, for the census shows less than one-fourth of the adult population of this country to be communicants of Protestant churches; and certainly not half the people are so vicious as not to be at some time in life easily within the reach of proper moral influences. But even well-inclined people must have moral stimulants. We all need the help of sympathy and association, the enthusiasm of public meetings, the magnetism of a crowd. It is weakness, of course; but it is human weakness that we all share. Most people enter the Church from just this feeling. When their own good impulses are powerfully aroused, they are drawn by simple fellowship toward people of like motives. It is this that gives the Church most of its real power for good, a power which is great and which I by no means wish to underrate. People are greatly benefited by their church relations. The simple act of meeting two or three times a week for a good purpose makes people better, regardless of the peculiar form of organization. The same people would belong to the Church, if it did not hold a single one of its present doctrines; and, if it were not for the belief barrier, all but the positively vicious would belong to the Church, thus more than doubling its moral power. It is not necessary to argue these questions of doctrine. The plain, undeniable fact is that hundreds and thousands of people as capable of moral elevation as the average church member are kept out of the churches and forced into a deteriorating moral and intellectual inaction, simply because they cannot believe the doctrines which the Church says they must accept in order to become members. Is the Church not responsible for the consequences of this locking out? And who can tell how much the moral callousness among young men and business men is due to this very cause? Certain it is that, if they were in church on Sunday, they would not be gambling. It is equally certain that, if they found fellowship with those engaged in improving and refining enterprises, they would not seek it in debauching clubs. It is true that the very men most apt to reject the crucial doctrines of the Church are most active, energetic, and restless. Their social nature will assert itself. If it is debarred from the higher forms of exercise, it will find lower.

F. B. TAYLOR.

MEDICAL LEGISLATION.

How shall society effectually protect its members from the impositions and dangers of charlatans and frauds who, without any knowledge of

the human system or of the rudiments of medical science or any other science, engage in medical practice and live by preying upon the credulous and the sick? If the sale of poisons may be regulated by law, the prescription of them by persons who are unacquainted with their nature and their effects when used as medicine may, with no less justice, be prohibited. How is this to be done?

A common reply is that we must have a stringent law against the practice of medicine by quacks. There are difficulties surrounding the subject which many who thus reply do not see. Where shall the line be drawn between quacks and physicians who are not quacks? Only a few years ago, the "regulars" denounced the homœopaths and all other physicians not of the allopathic school as quacks; and many now regard all such as quacks. But homœopathy has gained many friends, and grown into respectability the past few years; and it has become an authorized school of medicine. Many of the homœopaths now readily join the allopaths in attempts to prevent the practice of medicine by quacks. Possibly some of the new schools not yet "authorized" possess more truth than any of those now recognized in the law of the State.

Medicine is not an exact science. It commenced in quackery,—empiricism,—and the first application of all remedies and all first cures by the use of such remedies are necessarily empirical or experimental; for no logical sequence between a disease and its specific has ever been discovered. Since all new modes of cure must begin as experiments, it is to be expected that valuable additions to medical science will from time to time be made by quacks or those who are outside of all recognized schools of medicine. Physicians generally do a large amount of guessing and experimenting in the treatment of the sick; and, when they speak with the greatest confidence as to the results of their remedies, they are often doubtful whether their pills and powders will benefit or injure their patients. This is true of all the schools of medicine. Considering these facts, the State cannot wisely decide between them. The people should be left to judge for themselves as to their respective merits.

Some go further and insist that, if even the most ignorant charlatans find people who believe in them and are willing to put themselves under their treatment, society, represented by the State, has no right to interfere. But the health of the people is a matter of public concern of the utmost importance; and to guard it, as far as possible, against the danger of ignorant and unscrupulous medical practice, by legislation, would seem to be as much a right and duty as to guard against a multitude of other evils, which, left unchecked by law, all admit would injure the health and peace of any community. If protective legislation is ever justifiable, there should be a law in every State against the practice of surgery and against prescribing medicine professionally by persons who have no knowledge of the human frame and who cannot administer medicine without danger to the health and life of those whom they treat.

If there are favored individuals who possess, as they claim, special endowments or arts unknown to the medical profession, still some knowledge of anatomy, physiology, and hygiene, and of the medicinal qualities of the remedies they use, would do them no harm; while the requirement of such qualifications, in all who practise medicine, would help to protect society from the results of ignorance and unscrupulousness in a profession in which ability, scientific knowledge, and high moral character are of inestimable importance to the public. To a board of examiners, composed of educated

physicians of the various schools of medicine and of other members selected from outside of the medical profession, should, we think, be intrusted the examination of all practitioners. As for the persons known as faith-cure and mind-cure doctors, Christian scientists, clairvoyant doctors, etc., there is certainly no call for any *special* legislation in regard to them. There should be the fullest liberty compatible with public safety in teaching and applying methods of cure, as in teaching religious doctrines and practising religious observances. This does not imply, however, the right of ignoramuses to take the title of a learned profession and to kill people or destroy their health under the pretence of professional medical treatment.

B. F. UNDERWOOD.

EDITORIAL NOTES.

BY B. F. U.

A CORRESPONDENT writes that Prof. Thomas Davidson has been requested to repeat in Brooklyn the course of lectures he has given in New York, and adds: "His philosophic teachings are marked by remarkable clearness of thought, definiteness of expression, and unanswerable logic. Those who differ from him are compelled to acknowledge his learning and keen ability, while those who agree with him find in his lectures renewed hope and strength for the battle of life."

THE following paragraph is from the *Paris Morning News* of February 27: "Mr. and Mrs. Theodore Stanton gave a reception at their apartments in the Rue Chaillot yesterday evening to Mr. and Mrs. Moncure Conway, who have lately arrived in Paris from London. Among the many guests present, including those just named, were Mme. Adam, editor and proprietor of the *Nouvelle Revue*; Dr. Chapman, of the *Westminster Review*; Mr. Haynie, of the *Boston Herald*; Mr. Edward King, of the *Boston Journal*; Theodore Tilton; Mr. Fernando Jones, of the *Chicago Times*; M. Bartholdi; Mrs. Crawford, of *London Truth*; Mr. and Mrs. Henry Bacon, Consul-General Walker, and Miss Conway."

LOUIS PRANG & Co. deserve to be ranked among our national benefactors. The fashion of distributing artistic picture cards on holidays as tokens of friendship—which they, by their fine work, have done much to encourage—is an important factor in awakening the people to a love and appreciation of the beautiful. Our lack of belief in the theological dogmas associated with Easter holidays does not restrain our admiration of the happy designs and the daintiness of finish displayed in the new Easter cards issued by the firm named. The fertility of imagination, coupled with appropriateness of design, which the enterprise of this firm has developed among well-known artists, in a field by no means new, is, indeed, wonderful. Spring flowers, children, the chrysalis and butterfly, the egg and bird, the lamb and cross, with various other Easter emblems of immortality, sacrifice, and joy, are brought into these beautiful cards in the most ingenious and charming manner; and they are in a variety of shapes, from the plain, cheap, tiny card-board to the highly finished silk-fringed, perfumed, hand-painted, satin centred, or plush-bordered picture. Among the artists who contribute to these designs are a number of women. The names of Miss Fidelia Bridges, Mrs. E. F. Fisher, Mrs. O. E. Whiting, Miss L. B. Comins, Miss V. Gerson, Miss A. Hinds, and Miss Helen W. Emery, appear with those of Messrs. W. Hamilton Gibson, Walter Satterlee, T. S. Matthews, Thad. Welch, and A. T. Tait. These

cards are in idea and style thoroughly American,—a characteristic which distinguishes these publications from those of other firms.

SAYS the *Chicago Inter-Ocean*: "At a spiritualistic séance in Philadelphia a few nights ago, a lady who had entered the cabinet came out flushed with joy over the kisses she had received from friends in the spirit world; and the séance from that hour was a pronounced success until a sceptical old bachelor entered the cabinet, and returned to the audience waving a long wooden paddle with a canton-flannel cushion on the end, which he declared was the kisser. To their credit be it said, the ladies who had been in the cabinet met this charge with righteous indignation, and informed the sceptic and the audience that they had been kissed too many times to be deceived by a butter paddle with a canton-flannel cushion. They knew the genuine article, even though they could not see the kisser; only the lips of another human could create that blissful sensation which they had experienced in the cabinet." Notwithstanding this evidence, the *Inter-Ocean* says, it was demonstrated beyond doubt that the medium had introduced "a fraudulent kisser" in the cabinet, and practised deception, showing that it is as possible to market adulterated kisses as it is to sell oleomargarine for butter. Legislation, it is thought, is needed, "that will prevent adulteration which threatens not only to unsettle the market value of these tender salutes, but to destroy even one of the strongest pillars in our social structure." "If a canton-flannel cushion on a butter-paddle in a darkened room is able to produce the sensation of love's salute, then our girls will bid good-by to courting in the parlor, and have no use for beaux except as escorts to the theatre, the confectioner, or the ice-cream and oyster parlor."

AMONG the objections that the *Boston Sunday Herald* urges against woman suffrage is the following: "Each city, State, and national election proves that there is an enormous number of men, frequently the well-to-do and intelligent, who do not care to take the trouble to come to the polls; and, judging by the opposition from women that female suffrage encounters, the proportion of non-voters would be much larger among the women than it has thus far been among the men. Certainly, the lack of interest exhibited by women in the matter of electing candidates to the school board is not an encouraging sign." A sufficient reply to this is the following from Mr. H. B. Blackwell's remarks, concluding the argument of the petitioners for woman suffrage before a committee of the Massachusetts legislature, at a hearing given March 9: "It is said that only a few thousand women vote for school committee. The wonder is that any woman votes under such restrictions. She must make personal application to be assessed. She must pay a voluntary tax, unless already taxed. She must render a sworn statement of her property for taxation. That women should do all this, year after year, merely to vote for school committee, is, I say it advisedly, the noblest instance of civic public spirit on record. In special elections, under vastly more favorable conditions, men refuse to vote. On the question of parks in Boston, a few years ago, involving an annual expenditure of millions of dollars, less than one-seventh of our voters voted, and less than one in eleven voted in their favor."

It is stated that James Gorman, of Dublin, a liquor-dealer, who died recently and left \$1,500,000 to various Catholic churches, said to Cardinal McCabe, some time previous to his death, that, since he had derived his fortune from the hard earnings of the poor, he felt that he was their trustee, and that he

should return this money to them. The amount of wretchedness and crime for which this large fortune, made in the liquor business, stands, must be enormous; but we doubt whether it is equal to the evil that will result, directly and indirectly, from the expenditure of the money in supporting superstition which is to-day and has been for centuries Ireland's greatest curse. We are not unmindful of the many good personal qualities the Catholic clergy of Ireland possess, nor of the influence they exert on the side of social order; but the system they represent makes the safety of life and property, wherever it is believed, depend upon their presence, and upon submission to their influence, which, however, may be at any time used, as it often is, to obstruct progress, defeat justice, or even to persecute and destroy heretics. Money, therefore, given to support the Roman Catholic faith in Ireland perpetuates an influence which is hostile to independence and liberty of thought,—development of character among the people and social progress. Doubtless, the intentions of the above-named wealthy liquor-dealer, in leaving money to the Catholic Church, were good. But, if he had been educated morally as he was educated in the dogmas of his Church, he would have kept out of a business that entailed ruin upon thousands; and, if he had not been a creature of the priestly system under which he lived, he would never have given money, derived from the earnings of the poor, to support and strengthen a superstition which keeps the people poor,—and not only poor, but ignorant, and in a condition which is sufficiently indicated by the enormous fortune accumulated by one man in the rum business, and derived from the small earnings of the people.

OUR MISSION FIELD.

We send a missionary host
Across the breadth of ocean wave,
To Christianize the eastern world
And fit the Hindu for the grave.

They leave our cities, hot with vice
And cursed with want, disease, and shame,
Where cruelty abides with sin
And crime is shielded by a name.

We have the wretched of all lands
Within our populous domain:
Here is the field to work, and build
Philanthropy's enduring fane.

The Buddhist scorns to rob the poor,
Or stain with foul deceit his soul;
His appetites and his desires
Are held in disciplined control;

His simple creed is built on love,
Of endless hell he hath no fears:
Why feign to teach him ethic lore
That he hath conned two thousand years?

JULIA CLARK-CHASE.

WRECKS.

Oh, not alone the beating wave
Flings broken treasure on the sands,—
Cargoes no mortal power could save
For aching eyes, for empty hands.

Some day, in quiet inland ways,
'Neath shining skies, 'mid lavish bloom,
We start in bitter, swift amaze,
While slowly knells our hour of doom.

O drowning hands, that wreathe and wring!
The shores are far, the seas are deep:
Fate floats no spar where ye may cling,
Love comes not near your folded sleep.

Yet Love, remembering, dries her tears,
And, thankful, dreams on what has been.
But wrecks of wasted, aimless years
Bow down the heart, like weight of sin.

HELEN T. CLARK.

NORTHUMBERLAND, PA., March, 1885.
—Springfield Republican.

The Index.

BOSTON, MARCH 26, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion; to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

Transcendentalism and Evolution.

BY EDMUND MONTGOMERY.

I.

"Dust thou art, and unto dust shalt thou return," "of the earth, earthy," a creature of the day only, with no rightful hope and trust in the lasting fruitfulness of well-guided exertion, no sound exultation in an inward communion with a realm of enduring subsistence and truth. Thy life? A mere sequence of sorry drudgery, fraught with the paltry burden of individual pains and gratifications, connected with no transcendent destiny, no sempiternal fulfilment.

So forlorn a condition, would it not be the veritable "sting of death"? Yea, and of life, too, of life quite especially,—surely not worth its living trouble, if indeed we are merely the visible things now present, accumulating, decaying, vanishing dust-heaps.

But has not in all ages the confutation of just this crushing dust-sentence, the zealous protest against the sense-apparent annihilation of life-acquisitions, been to most of us the very nearest concern of heart and mind? Has not its eager and abundant overthrow in word and deed formed the true joy and pride of all human effort? Myths and temples, epics and sepulchral monuments, the eternalizing symbolism of religion and the typifying realizations of art, the set toil for impersonal ends and the ready sacrifice of life and all for conviction's sake and for the welfare of what survives,—all this life-glorifying pæan, ascending to divine heights, triumphantly disclaims human dust-destination.

From time immemorial, with the dawn of every civilization, it has been the invariable practice, indeed the intuitive bent of our kind, to reject the direct significance of earthly occurrences and their promptings to action, infusing into them more and more of transcendent meaning and permanent effi-

ciency. To primitive man, it evidently all implied something vastly different from what immediately appears. His gathered throng of living memories and nurtured fancies arose everywhere to haunt with weird transcendency the actual presence. Behind, within, and around every manifestation of nature, animated powers seemed to disport themselves at will, and to govern with love or hatred the capricious current of events. Thus, an unseen world of spontaneous potency was made to teem in unrestrained infinitude, holding predominant sway over our narrow habitation and the ominous tide of changeable incidents therein. Peopled all through with overpowering, awe-inspiring agents, it was they who were believed and felt to actuate all occurrences here below, to manifest themselves in the characteristics of each live or lifeless thing, and to rule at pleasure the dark lot of dependent and groping man.

Take heed, unwary stranger, thou art treading on holy ground in the presence of a mighty God. The being now before thee is not simply and really an individual of common bovine extraction, as thou irreverently seemest to apprehend. It is Apis, the life of Ptah, the great God of Memphis, the supreme Artificer and Opener of darkness. Behold his dwelling-place, this vast and gorgeous temple, in whose gigantic pillared courts is entertained by a host of ministering attendants the present Bull-Apis, and where lie enshrined in stupendous sarcophagi the long array of his successive incorporations.

This is not truly Massachusetts Bay, nor our friend Nai-iu-tchai, whom but last summer we met amidst household performances in arid Zuni-land. It is the senior priest of the Holy Order of the Bow, adorned with the mystic insignia of his divine office, who has made a long and venture-some pilgrimage to the "Waters of the World of Day," in order to greet the beloved Mother of his tribe, and to carry away with him some of the sacred substance and virtue of the "Ocean of Sunrise," the birthplace of the spirit-guided clouds and blessed rain. And these are not mere feathers, as some of our scientists might deem, consisting of so and so many grains of horny substance, presently to be cast into an eight per cent. solution of sodium chloride. They are sacred plumes, consecrated at the ancient home of the Zuni Fathers by the priest of the Sun, and now to be sacrificed to the Gods of the Ocean, "the Priest-god makers of the roads of life."

To us illustrious measurers and calculators, to whom everything is becoming so plain and certain, it must seem amazing how, from sunrise to sunrise, and from birth to death, these primitive people are devoutly moving among solemn symbols of perpetual powers, fearfully and confidently intrusting to them the welfare of their little run of life.

We who have circumnavigated the globe, have weighed and analyzed sun and stars, and have traced from primordial elements the formation of our planet and all that thereon dwelleth,—we can discern no such prepotent volitional influences prevailing over the rigorous mechanism of nature.

Yet, for all that, is not the present moment of our own exalted personal existence—just like that ghost-haunted one of the fetish-worshipping savage—only an insignificantly dwindling instant in the accumulated immensity of the sight-withdrawn Past? Has not the steady passage into the Unseen of all that is not just here present, of all that is now no more, of all in verity that has ever been, save this one lapsing moment of realizing consciousness; has not the yearning and striving of our own former selves, the life and death of our dear and revered ones, the hallowed demise of forefathers, the achievements of the heroes of our race,

—has not all this foregone wealth availed abundantly to enrich the possessions of that which overlies the present visible instant?

Within the unremitting rush of all-consuming time, behold the wondrous halo of abiding forms!—a mystic perpetuity of dwindling things, sustaining in growing splendor the perennial *nunc stans* of being, and in its heart of hearts drawing all to a magic focus, the realizing mind of man. However frail and transitory his own individual life,—into his present moment of actual consciousness crowd in irrepressible tide all the slowly secured treasures of bygone ages, and overwhelm his sense with transcendent emotion.

No wonder that distant influences from the illimitable domain of the ingathered Past, from the boundless range of the visibly Absent, are everywhere so generally believed to rule the destiny of manifest existence. In some way, it still all remains with us. Not wholly do our dead vanish from our reach. The virtue of their being abides in our midst in helpful presence and growing awe. Buried ancestors become living gods to actual men. In supplication these kneel, adoringly offering sacrifice to the "makers of their roads of life," invoking their puissant aid in the sore need of temporal distress. Fortified, they rise to their immediate task, strong in the strength of their immortal helpers.

Thus, also, the glory of departed life becomes a fruitful power in the birth of future existence. And we, the ripest fruit of the ages,—can we consciously endure to live on and on, in the sense-bounded, self-concerned isolation of the one poor moment of apperception through which our individual being is just passing? Surely, we also, by some realizing means, desire to maintain a close and closer communion between whatever bit of life and experience the fleeting hours may bring and that vast concentration of transcendent might whence all transitoriness flows,—if not through libations and burnt offerings, through chalice and wafer, through sacraments and canonicals, then through the devotion of our will to the undying aims of creation.

The seers of the inner world have clearly discerned that the phantasmal semblance filling this momentary focus of time, this actual Now of ours, is ever emblematic of the presence of a supernal and unfading reality. Yea, the ecstatic, soul-sounding mystics of all ages and races have felt that we, who even now are realizing living and enduring truth, are therewith also truly one with the creative power.

Where is Zeus and Athenæ, Ares and Hermes? where all the Homeric gods, ruling with immortal fervor the mortal strife of men? where their sacred fanes, reflecting in beauty and splendor the consecrated genius of the most gifted race of beings that ever scorned the dust-derivation of human existence?

Forgetful of every contention, save that of glory, all Hellas hastened in national exultation to the hallowed abode of the Olympian Zeus, there, under the immediate presence of the ancient godhead of their fathers, to offer, in devotional humility and lofty emulation, the proficiencies of undivorced body and mind, assiduously and cumulatively matured during centuries of systematic training and life-long personal exertion.

Alas! vanished altogether from among us have the lightsome grace and competency of Hellenic life, vanished most of the sense of natural worthiness and bodily efficiency that animated and fostered it.

With us, the gladness of the ever-glorious triumph of life over dust is weighted down by a too massive consciousness of the Stygian throng. The

unbuoyed preponderance of an ill-embodied mind sinks us into the doleful abyss of personal cares. Would not, O Preserver of all fruitful life-acquisitions, O Sustainer of the joyous, life-giving concord in which we have our being,—would not a more perfect incorporation of high-wrought life lead us rather to rejoice in our common abundance of generic gifts than thus despondingly to mourn individual deficiencies?

As it is, "our sweetest songs are those that tell of saddest thought." But how touching, amid the modern gloom of self-concerned consciousness, to trace the wondrously vivifying influence of the least little infusion of that nature-moulded spirit of ancient Greece, as from time to time it found its way into the stagnating obfuscation of the hierarchical despotism, which for more than a thousand years absolutely governed the conduct and thought of our race!

If the fall of Hellenic life left cold and meaningless the marble consolidations and conspicuous solemnities of the gods and their worship, its glow did not altogether depart from the reasoned thought of its free-pondering sages. How soul-stirring that nature-fathoming thought must have been, when livingly imparted to an eager youth in academy and lyceum! How mutely and precariously deposited afterward in destructible libraries on mouldering parchment! But, for all that, it managed to diffuse itself, a quickening life-current, through the withering ages of mediæval obscurantism, so that now our own creed-bound abhorers of nature find themselves and all their pursuits, even to gospel-preaching, discordantly impregnated with its nature-affirming spirit,—a religion of life infusing itself into a religion of death, the *memento mori* skull and dry bones of Orthodoxy reinvesting themselves, by dint of free thought, with their natural inheritance of living beauty and human aspiration.

This revivification, this veritable renaissance, is due, above all, to the enthusiasm-kindling thought of Plato, the divine. His reality-idealizing world-conception—engendered, faithful to Diotima's teaching, like the fruits of true love in lofty passion for visible and intellectual beauty—has outlived all authoritatively established religious beliefs and observances of antiquity, and has for many a century been threatening to assimilate or to supplant the specific anti-humanitarian doctrines of Christianity. Surely, if truth be that which is unperishingly real, and the recognition of which admits us mentally to participate in enduring reality, then a great deal of such truth must undoubtedly be contained in a system of thought that has stood the test of more than two thousand years of zealous contestation, and has victoriously survived solely by dint of intrinsic virtue, and by no means through any artificial fostering from king or priest. Consider only the number of poets, philosophers, and reforming divines who have drawn their inspiration from the Platonic way of thinking. And what is this Transcendentalism, so widely prevalent in our own day among serious and ardent truth-seekers, but Platonism resuscitated, Platonism neo-platonically overwrought?

So steady a turn of mind and source of enlightenment must surely have its origin in the very constitution of our understanding and in its inwoven relations to the universe at large. It will be well, therefore, to try to expose somewhat the natural conditions that favor this irrepressible world-conception, inevitably leading to one of the only two ultimate resting-places of hyper-phenomenal contemplation,—Transcendentalism.

The most fundamental distinction detectable in our sundry endeavors to form a conception of this

mystic world of ours is that which to ancient philosophers presented itself on the one side as the perpetual flux in nature, on the other side as the permanent repose in thought. To our senses, objects and occurrences are constantly shifting and changing. Our reason, on the contrary, finds all things and events linked together in immutable order. To our senses, the things of this world seem phenomena in time; time itself from moment to moment, lapsing into that which is no more. Reason discerns, as the reality underlying this phenomenal play, an ever identically abiding presence in mind, unaffected by the changeful and perishing manifestations of sense.

Early in the development of Greek thinking, this salient contrast of world-apprehension was detected and consistently followed up. Already Heraclitus (500 B.C.) understood that the senses perceive only the manifold and changeable, while to reason the universal and immutable are cognizable. "That," says Heraclitus, "is universal in which all rational beings concur; and this it is which constitutes objective truth." As ground of the common consent of reason in objective truth, he—like so many after him—discerned a divine or universal intelligence. This profound intuition, giving expression to the strange incongruity naturally subsisting between the varying play of sense-apparent particulars and the constancy and repose of what is intelligibly and universally apprehended, a century later germinated and grew into the ever memorable Platonic system.

Multifarious trials since have proved that the consistent outcome of the sense-philosophy must necessarily be material or mental Atomism, views by no means unfamiliar to the last two centuries. The consistent outcome of the intelligence-philosophy was, is, and ever will be transcendental Idealism, such as is rapidly spreading among philosophers of the present generation. These two modes of world-interpretation, either by means of sense-composition or by means of thought-inclusion, indicate the main bearings or—as has hitherto seemed—the opposites poles of human mentality: the one pointing toward the external, sense-manifested universe as the real object to be recognized; the other toward the intelligible inner world of universal comprehension. Sensationalism one way, rationalism the other.

When we, then, historically trace how this fundamental antithesis of sense and reason was furthermore construed by the Eleatic sages, we arrive at the very fount and origin of Occidental Transcendentalism. The great thinkers of the school of Xenophanes of Elea found themselves unable to realize in thought how a thing now existing could possibly produce any other thing not yet existing, or how anything actually existing could owe its being to something now passed into non-existence. They could not understand the process of the becoming of veritable reality. Led by many subtle and penetrating considerations regarding the unsubstantial consistency of sense-phenomena, they came to the conclusion that true reality can be found only in an all-embracing, eternal, and immutable unity conceived by reason. In this crowning conclusion of rationalism, God and the world necessarily coalesced into a single, absolute substance. Thinking and being became identical.

Now, it is clear that any system whatever, which makes reason and reality, thinking and being, identical, has consistently to profess the pantheistic creed. If the unitary and unchangeable world of truth realized in thought is as such the veritable, supreme, and sole reality, then everything thought of—which means everything in the world—must necessarily form part of the eternal substance, intelligence, reality, or whatever name we may give

to this sole birthplace and substratum of all existence: *ἐν καὶ πάν*.

Adherents of the identity philosophy among us, our Hegelians, neo-Kantians, Transcendentalists, or by whatever name they go, ought to understand and not shrink from distinctly avowing that they have to be uncompromisingly ranged among pantheists. By no consistent effort of thought can they establish any legitimate conformity with the fundamental assumption of the orthodox creed,—a created world external to God's personality, or in substance unidentical with it. Transcendentalism, whether its organ be pure reason or intellectual intuition, is and will ever remain essentially pantheistic.

For the sake of the all-important results of human conduct, it is time that we should abstain from indulging our sympathizing faculties in the pleasantly versatile or over-considerate advocacy of ambiguities involved in whatever kind of eclecticism. A Transcendentalist cannot consistently sympathize with theistic tenets; and the sooner this is fully understood, the better for us.

The validity of Theism in contradistinction to Pantheism turns chiefly on the amount of efficiency granted as actually inhering in our individual thought. If thinking is held to be identical with being, it must be in itself all-efficient; and then Pantheism is the inevitable consequence. If, on the other hand, we attribute to realizing thought not a constitutive, but only a representative character, which we unavoidably do by *personally* separating the nature and being of the thinking subject from the nature and being of the supreme intelligence, in which alone truth is believed to dwell,—if we thus start from the conception of two distinct and totally different individualities,—we unfailingly get entangled in a Theism in which human reason is intrinsically powerless, so far as its spontaneous grasp of universal truth is concerned.

Either our understanding merely passively reflects what it must always receive from an independent and higher source or it is itself a direct source of efficiency, participating by dint of its own nature in that power which in its adequate exertion constitutes supreme reality. Either our intelligence is in essence one with universal intelligence, and then we can reach truth by a power belonging to our own nature, or our intelligence is separated from universal intelligence by a total difference of personality; and then we can receive truth only passively as a free gift from on high.

Surely, this very obvious distinction is also a most momentous one. Let us remember it on all suitable occasions, never confusedly mixing up rationalistically derived truth with supernaturally imparted revelation, which latter kind of enunciation must perforce constitute the foundation of every consistent theistic creed.

In connection with these evident logical considerations and as directly bearing on our present religious perplexities, it is highly instructive to notice how the great Augustine, who laid the first systematic groundwork of the Roman Catholic faith, commenced his career by enthusiastically and inadvertently promulgating the rationalistic view, but ended it, as a dutiful son of the Church, by rigorously professing in orthodox "retractations" the utmost logical consequences of the passive reception on our part of all divine influence.

The doctrine of the substantial emanation of the human soul and being from the Deity, and their striving for reidentification, as taught by some of the Gnostics, had been rejected by the Church. So Augustine could not well start from this basis, so generally built upon by the Alexandrian philosophers. But to him, in his younger days, truth was,

nevertheless, the recognition, by dint of intrinsic human faculties, of "the necessary, the unchangeable, and the eternal." Augustine, at that time, believed that the only way to penetrate the mysteries of the soul consisted in a "diligent attendance to the facts of self-consciousness." He says, moreover, "Reason, constituting the eternal identity, alone gives being."

Who can fail to discern how closely this way of thinking is related to the Transcendentalism of our day? But it is certain now, as it was then, that no rationalistic thinking after the manner of Plato, and no intellectual intuition as indulged in by Plotinus and his followers, can possibly reconcile the disclosures of natural reason with those of supernatural revelation; can in any way lead to the understanding of an optional creation of the world from nothing, and, further on, to the sinful and banished soul of man finding, through any effort originated and sustained by efficiencies of its own, the far-removed divine truth exclusively inherent in God's personality.

Therefore, after having fully realized the incompatibility of rationalism and supernaturalism, Augustine—consistent thinker as he was—did not refrain from giving emphatic expression to the insuperable distance forever separating such thinkers as reason on the strength of their own consciousness from orthodox Churchmen, from all indeed who rely on genuine theistic premises, always necessarily consisting in supernaturally imparted truth. He maintained, unequivocally, that man is powerless in himself to conceive truth and to act rightly. Without the least merit on our part, God reveals his truth to whom he pleases; and our passive soul through immediate divine influence receives its directions for action as authoritative commandments. Some of us, and this without any eligible qualification whatever, are destined to enjoy eternal bliss, others to suffer eternal damnation. God's grace is everything. Our human reason and striving avail us nothing.

This creed is certainly logical without the least opening for doubt or practical error, provided only we have as advisers a heavenly accredited order of recipients through which the divine ordinances are legitimately communicated to us. Who can deny that St. Augustine proved himself a resolute thinker by following so unflinchingly the bent of his theistic tenets to the bitter end?

The Church, having sanctioned the premises, felt—in this case at all events—compelled to adopt, doctrinally, at least, also the conclusions. Would it not be strangely interesting exactly to learn the general and personal motives of those who thus solemnly voted for the total abdication of human intelligence? Were they perchance some such reverent and conscientious considerations as those so lucidly and ingenuously laid before us by John Henry Newman, in his *Apologia pro Vita Sua*? Well, then, all ye who are still remaining within the pale of churchdom, and have kept alive the import and courage of your leading opinions, go and follow the illustrious example of him who sacrificed his great mind, heart, and life to the logical consequences of supernatural revelation. Where he is you also must land, or eke out your existence on a shoreless ocean of doubt. Awaiting in celibacy, within a cloister, your release from temporality and removal to eternal life by God's infinite mercy, and grace; believing without hesitancy, following with implicit obedience even the most irrational and rigorous injunctions of your holy Church,—this is the correct attitude of true believers.

Guidance by direct infusion of free and unmerited grace is altogether incompatible with guidance by our own natural consciousness, and inter-

pretation by human reason of a divine revelation, recorded in holy Scriptures, quite incompatible with the supernatural origin and meaning of such inspired Writ, which admits only of exposition by an infallible Church ever supernaturally directed, and mediating between heaven and earth through the instrumentality of a priesthood, sacramentally ordained.

The alternative is clear,—either rational elucidation of our own consciousness or direct inspiration from above. These two modes of insight are wholly exclusive of each other. Truth is either natural and inherent or supernatural and imparted. We have to trust one or the other source of enlightenment, and not persist in vacillating between the two. Shall we never cease confusing the solemn aims of existence by considerations of expediency or cowardly prevarication? Shall we again and again fight out among ourselves the same old battles, long ago lost or won for all who sincerely desire to accept the issues? Let us frankly and with our whole heart join whatever side has gained our conviction.

The Church, of course, here also, as with asceticism, knew very well how practically to compromise between its theological maxims and its popular ministrations, between unmerited grace and the moral promptings of natural life, between the passive awaiting of the divine influence and its solicitation by offerings. But the history of human thinking has established as an incontrovertible truth, and reason understands distinctly, that the decrees of a being, into whose spontaneous intelligence we possess no natural insight, have to be supernaturally disclosed; and that, on the other hand, a reality or truth, of whose essence we naturally partake by force of our own intelligence, must be in natural agreement with the realizing power in us.

The genius of such philosophico-religious harmonizers as Schelling, Hegel, and Coleridge can just as little suffice to bring into conformity the conclusions of rational consciousness with the doctrinal revelations upon which Churchmen have to rely as the interpretative ingenuity of theological scientists has availed to work out a concordance between cosmological and geological facts and the primitive guesses of the Book of Genesis.

However much we may sympathize with the veneration shown to time-honored traditions, however much we may feelingly appreciate the zealous effort of sincere believers to interpret nature in the light of a faith guided by supernatural inspiration, we, in the fulness of our historical and philosophical insight,—in order to avoid further hopeless confusion,—have once for all to make quite clear to ourselves that such of us as ground their faith on the verdict of their own consciousness cannot possibly blend creeds with those who depend on authoritative directions imparted by a will or intelligence having its subsistence outside human nature and vision.

Rationalism, in its struggle for the right of self-determination, had, with indomitable perseverance and innumerable sacrifices, bit by bit, to wrestle its independence from an implacable foe,—a foe at first all-powerful, and then only very gradually succumbing to the reign of intrinsically guided reason. But rationalism, after so many centuries of wrangling with the legitimate guardian of supernatural injunctions, ought by this time to realize that the essence of its disagreement with the Catholic Church does not lie in the contested truths as such, but in the radical difference of the organ and method through which they respectively attempt to arrive at what is really true.

When we go to probe still deeper the foundation of these irreconcilable diversities of creed, we find

that they ultimately rest on a difference in the conception of what constitutes a genuine personality. Taking its stand on the assumption of a supernatural personality, to which our own human personality is in no way connaturally related, Roman Catholicism occupies an impregnable position. A personality is an autonomous being whose consciousness is its own inclusive possession, shared as such by no other personality,—a being realizing by force of its own indwelling capacities the significance of mere signs reaching it from outside. Human intelligence can thus spontaneously understand only what is in true agreement with its own natural proclivity. It cannot, by dint of self-inherent efficiency, understand revealing signs, emanating from the incommensurable and incomprehensible constitution of a supernatural personality. There is no mental communion between different personalities, save through signs intelligible by means of congruity of nature. Therefore, it needs a standing miracle to render humanly comprehensible such signs as may come to us from a sphere inscrutably transcending our own nature.

It is eminently enlightening to realize that the doctrines of any faith, however intuitively that faith may have been evolved, become gradually elaborated in logical keeping with the fundamental conception of such faith. We have before us, in our own selves, a human personality, apparently self-rounded and autonomous. How is it connected with being in general? This is the great enigma. The nature of an individuated personality and its relation to universal existence and truth form the manifest mystery, giving rise to our principal religious and philosophical perplexities. The sundry ways of apprehending this original enigma draw with them whole systems of logically consistent doctrines.

Within the scope of our own Christian development, the history of heresies and the scholastic philosophy bear ample witness to the correctness of the above assertion. It was Roscelin who, in the eleventh century, first drew general attention to this common root of all dissent. He, of course, got well damned for his pains, and richly deserved it; for his impertinent speculations on personality threatened to overthrow one of the chief dogmas of the orthodox creed. He recognized, namely, that a diversity of persons logically and naturally excludes their unity of substance. He argued: if the three persons of the Trinity are only one divine being or substance, then all that happens to one of the persons must also happen to the divine being or substance itself. If, however, anything can occur to one of the persons and not to the others, then they are three separate beings and not One. It is not here the place to point out the awkward implications of this reasoning, when applied to church doctrines. Suffice it to say that even Anselm, the chief adversary of Roscelin, was induced by its relevancy to concede: "*Tres deus vera posse dici, si usus admitteret.*"

In defence of his Church, the illustrious Abelard, like many before and after him, endeavored to explain by force of reason the relation of various autonomous personalities to one including substance. In this unifying attempt, reason has always signally failed, because it did not possess adequate intuitive or experiential premises to work upon. Evolution, or rather vital organization and its functions, as will be shown further on, are alone competent to furnish a clew to this great and ancient riddle. The co-inherence of different attributes, properties, affections, or functions in one and the same subject throws no light on the assumed inclusion or participation of divers personalities in one single substance. For, as

ready explained in the twelfth century by the profound Richard a Sancto Victore, "the Deity and his attributes, as composing an *individual substance*, cannot possibly be shared by any other personality, cannot as such yield any part of its own nature to other beings." We see that even in the Dark Ages not everything seemed possible to those who were bold enough to follow the light of natural reason.

In philosophy proper, the same consideration—also started anew by troublesome Roscelin—gave rise to the famous contest between realism and nominalism, which may be said to have its root in Plato and Aristotle respectively, and which has lasted ever since. Taking the sundry separate things we are naturally perceiving to be individual substances, it follows, in accordance with the same reasoning as applied to the three persons of the Trinity, that general ideas, or so-called concepts, including many such individuals, can have no substantial reality, but must be mere words or names. The individual trees, for instance, are the real existents, the "tree in general" a mere collective name conventionally and conveniently established by ourselves. Analogically, then, there would be, in actual existence, many individual men, but nothing real corresponding to what is called—Humanity (!?).

Now, every one will feel that, while it is easy to common sense to accede to the proposition that, for example, only individual stones or chairs are real, and not our idea of a universal stone or chair, it becomes a very different and far more perplexing question when we consider what it is that gives unity to an organic species, and thus also to humanity at large, as distinguished from the mere coexistence and sequence of the separate individual lives of which it seems composed.

As it is one and the same realizing organ—namely, our own mind—by which, in both instances, the general conception is formed, is it not highly probable that the difference so distinctly felt as regards its objective reality,—the reality of the general entity *stone*, and that of the general entity *humanity*,—that this difference must lie principally in the vital and social properties which distinguish a natural man from a natural mineral, and not in any mysterious efficiency of the mental operation by which the general conceptions are framed?

As stated before, the relation of the realizing individual to universal or super-individual existence and truth forms the central puzzle of our world-conception. The emotional apprehension of this relation constitutes the fundamental intuition of religion, and determines, in its sundry variations, the deviation in the aims of life and the strife engendering diversity of creeds.

We will next consider how Transcendentalism, and then how Evolution, attempts to deal with the problem.

CORRESPONDENCE.

THE DISTRIBUTION OF WEALTH.

Editors of The Index:—

In your issue of March 5, Prof. V. B. Denslow is credited with the expression of some ideas relative to the distribution of wealth from which I most emphatically dissent. That such ideas were current I was aware, but always imagined that, in a democratic community, their propagation would be prosecuted in secret, out of regard for public opinion. Prof. Denslow, however, on some subjects, is no mean authority, so that his errors in regard to this matter are the more likely to mislead.

My mode of life, conforming as it does to daily manual work, ill befits me to cope with a professor in a war of words. I would, however, question a few of

his assertions, in the hope that others may be led to think twice before accepting them. "To make wealth universal," says the professor, would be "to annihilate it." Again, "An equal distribution of wealth in America would give each person \$1,000; but what could he do with it, if [italics mine] values had been scattered to the winds and production stopped?" That "if" was put in well there. Supposing that each person had \$1,000: would the value of a cord of maple on a cold day be less? would hunger be no more felt? or does the professor maintain that the possession of equality of wealth would bring for each individual an infinite similarity of wealth? Otherwise, how would values be scattered or productions cease?

Given an equal distribution of wealth, and, according to the professor's words, "manufactures would cease, commerce would die, and the wheels of society stop," and more in a similar strain. That is to say, a man having a surplus of butter, but no fire-wood, would not care about exchanging with a neighbor having a surplus of fuel, but no butter, because, forsooth, their possessions in the total were equal! Perhaps he will tell us next that, if the wealth of Michigan should equal that of Ohio, Ohio would no longer need lumber or Michigan need wool.

It may be that, where Prof. Denslow resides, it is customary for men to retire from active interests upon the acquirement of a thousand dollars or so. Now, here, in Northern Michigan, it is not that way. It happened that my employer set a man helping me in the most simple yet most laborious part of my work, who has several thousand dollars bringing good interest, and is owner of a comfortable home. Other men among us have as many millions as this man has thousands, who lack no incentive to action.

"The unequal distribution of wealth is the great and only promoter of civilization": thus saith the professor! We have wealth in this country, no doubt; and of its unequal distribution there is no question,—we can all agree on that point. And yet, with the wealth and the wonderful, energizing element of unequal distribution, manufactures, commerce, and "the wheels of society" creak dismally in their rusty old bearings, and gaunt poverty stalks—But I forbear. I will simply state that our elevators are crammed with wheat; there are miles of docks piled high with lumber, and warehouses packed full of an almost infinite variety of products sufficient for the present need of all: yet the unequal distribution has destroyed the power to purchase of so large a portion of the people that commerce, manufactures, and the wheels of society seem greatly out of joint.

"Organized capital," says the professor, "is to the advantage of the whole." In my humble opinion, from what I can see, read, and hear, organized capital aims to impoverish the toiling masses by dictating and diminishing wages. Truly, in their eyes, as the professor says, "wealth has no meaning without want"; but what means want without means to supply it? Destroy the purchasing power of the masses, and what will you do with the product of labor? Pile it up, and preach of over-production! Quote Malthus, and croak about the spread of socialistic ideas! The fable of the killing of the goose that laid the golden eggs may serve to illustrate the kind of spectacle we would see presented, were "all the world a stage" and Prof. Denslow stage manager.

Respectfully,

F. HARMER.

MANISTEE, MICH., March 11, 1885.

THE NEW RELIGION.

Friend Editors:—

"The New Religion," proposed by John Cotton Dana in the last number of *The Index*, from which wonder and faith are proposed to be eliminated, has called forth in my mind a feeling of wonder that any sensible man could indite anything so absurd as the following: "We need not any element of wonder other than that which the simplest of nature's works inspires, nor any element of faith as distinct from belief in a scientific truth." What the "simplest" of nature's works are we are left to infer. I suppose the movements of the heavenly bodies, as are conceived by what is known as Kepler's laws, would not come under the category of the "simplest of nature's works." And yet it was a knowledge of these three great laws of planetary motion which led Kepler to exclaim, "O God, I think thy thoughts after thee!"

Will the new religion allow of the idea,—the sublime? I suppose that this savors too much of "the element of mystery" to suit the view of our essayist. Or that Alcyon, the brightest star in the Pleiads, is the centre of the stellar universe, around which our sun and stars revolve? This would be too grand a thought to suit the disciples of the New Religion, as they must be "inspired" only by "the simplest of nature's works." Neither would it do, I suppose, to speak of the wondrous elasticity of the ethereal wave which binds all space. Or that the brightest hues of sunset are caused by kindred units of sodium mingling into one.

Nothing of the supernatural, of course, is to be allowed in the New Religion; and yet all that is desirable in our civilization is *above* nature. Man has to keep nature under all the time to raise in New England the "simplest" crop of corn or beans, just as "the seed of the kingdom" will not produce "some thirty, some sixty, and some one hundred," except upon "the good ground." Thorns must not be allowed to choke it; and "the rocky places, where they had not much earth" (understanding), must have more "depthness of earth." * What a poor, little, miserable, simple, *unesthetic* science it is which makes man the mere servant of his limitations? I see that R. G. Ingersoll received some \$3,000 the other night in New York for making sport of the Bible mainly. And yet in that same book it is written in Exodus xxiii.: "Behold, I send an *angel* before thee to keep thee in the way, and bring thee into the place which I have prepared." Now, we Friends have faith in the teachings of this *angel*: thus, we learn, not so much from our limitations (doubts), as from the *IDEAL* which the Eternal has throned in man "as observer and guardian of his life."† And the faith in which we believe consists in fidelity and fealty to the divine witness for God in the soul.

The difference between divine faith and the mere belief inspired by science or speculation is thus alluded to by Isaac Pennington, some two hundred and forty years ago: "There is a faith which is of man's self, and a faith which is the gift of God, or a power of believing which is found in the nature of fallen man, and a power of believing which is given from above. . . . If man's knowledge, religion, and worship proceed from and stand in the faith which is of man, they cannot please God nor conduce to the salvation of the soul." Thus, we teach that man cannot know the Eternal by the theoretic or speculative reason, but, as Kant taught, by the practical reason; i.e., the universal reason, or the inward light in the inner self. And this faith we hold to be something more than mere scientific truth.

I was under the impression that science had relinquished its search after the Infinite when it assumed the name Agnostic, which name was not assumed willingly, but in consequence of its failure to discover the Ultimate in a single grain of sand or a single drop of water.

How clear it is that everything is known by itself and not by another! Thus, the Eternal is known by himself and not by another, knowledge concerning him being different from all other forms of knowledge: "God hath not been seen at any time: the only begotten of the Father, he hath revealed him." Now, it requires "depth of ground" to understand such sayings as these, as we know nothing except through revelation, each object in nature being revealed by itself and not by another. Just so the Supreme Mind reveals himself through the sentiment of faith, hope, and love; and this sentiment does not belong to the category of speculative or scientific reason. The knowledge of God "cometh not by observation." He seems very distant to those who seek thus to attain a knowledge respecting him; but he is very near, says the Yaga Vedas, "to those who feel a wish to know him." And, till this wish is *begotten* in the mind, man is but a wanderer and an alien upon the face of the earth.

DAVID NEWPORT.

ABINGTON, PA., 1 mo. 16, 1885.

REV. WILLIAM I. GILL writes: "Mr. Charles Froebel, in *The Index* of March 19, explains the large attendance in the churches on Sundays so steadily by saying that they have been taught that Sunday is God's day peculiarly, in which they must worship him for the salvation of their soul. Now, I know no

* Matt. xiii., 8.

† Seneca.

minister who teaches any difference in days,—only that a seventh day for bodily rest and spiritual culture accords with Scripture and reason, whether it be the first, last, or middle day of the week; but they prefer the first, because it is well established and associated with the resurrection of Christ. They do not understand that any day is enjoined, but that it is profitable, nay, if well improved, necessary to our higher spiritual welfare. There are a few narrow exceptions to this, no doubt; but this is the general notion. This, therefore, does not explain, as Mr. Froebel thinks, the secret of Sabbath congregations in Christian churches."

BOOK NOTICES.

THE SECRET OF DEATH. (From the Sanskrit.) With Some Collected Poems. By Edwin Arnold, author of *The Light of Asia*, and *Other Poems*. Boston: Roberts Brothers. 1885. Price \$1.00.

This is "the author's only authorized American edition" of these poems. There is a tripartite poetic dedication: first, "To America," which begins thus:—

"Thou new Great Britain! famous, free, and bright!
West of thy West sleepeth my ancient East;
Our sunsets make thy noons! Day time and night
Meet in sweet morning promise on thy breast."

The "Dedication" proper is "To my Daughter"; the third, entitled "Introduction," is addressed to his wife. The poem, "The Secret of Death," from which the volume takes its name, purports to be a conversation held between an Englishman and a Brahmin priest, who explains a Sanskrit manuscript, which the former endeavors to read. Mr. Arnold, better than any other English-writing poet, seems to have caught the subtle meaning of the Buddhist faith, and has given us a most beautiful interpretation of it. The majority of his American readers will be those ignorant of the Sanskrit, ignorant also of the dogmas and tenets taught by Buddhism. To such, the question will naturally be suggested whether Mr. Arnold only faithfully reports, in language suited to the solemn import of deep thoughted, far-reaching Buddhist religion, the genuine utterances of its exponents, or whether he does not unconsciously enrich and idealize that faith through the medium of his own exalted poetic conception of the lessons taught by it. As represented by him, Buddhism as a religious philosophy, contains much in exquisite harmony with the most advanced thought of this age.

Though the dialogue scarcely seems to us the best form in which philosophic truth can best be taught, yet the naturalness of the conversation is admirably preserved, and is a means of adding brilliance to the thought and strength to the moral of the lesson enforced. The frequent interpolation of the original Sanskrit text, while it gives an air of reality to the poem, will, we fear, be considered by the general reader a drawback to the sense of the lesson sought to be imparted, and to the perfect enjoyment of reading this fine poem, which gives us grand thoughts set in jewel words. Those who remember Emerson's "If the red slayer think he slays" will be interested in Mr. Arnold's version of the same Buddhist thought, part of which version we here give:—

"If he that slayeth thinks, 'I slay'; if he
Whom he doth slay thinks, 'I am slain'—then both
Know not aright! That which was life in each
Cannot be slain, nor slay!"

The Untouched soul,
Greater than all the worlds [because the worlds
By it subsist], smaller than subtleties
Of things minutest, last of ultimates,
Sits in the hollow heart of all that lives."

Of the other poems of this volume (over forty in number), though they are very unequal in merit, the poorest is well worth perusal. They are written in all sorts of moods and all kinds of measure. Those written for "occasions" have least poetic worth, but many of the shorter spontaneous poems show the hand of the true poet. There is such a musical barbaric jingle in poems like "The Rajah's Ride," "A Bihari Mill-song," and the "Song of the Serpent-charmers," that we are fain to believe these to be veritable transcripts of some native poems; and yet they are matched so well in spirit and vigor by other poems on far different subjects in the volume that we feel inclined to credit Mr. Arnold with all the

good things he presents us as translations from varied sources, and think him correct in saying:—

"Fond fancies, past the telling,
Come o'er me, idly spelling
The mystic meaning dwelling
In what these Hindus taught:

"So fast they rise, and faster,
That I bid them overmaster
Slow study; and far past her
Carry my willing thought."

S. A. U.

SONGS IN ALL SEASONS. By James B. Kenyon. Boston: Cupples, Upham & Co. 1885. Price \$1.00.

This pretty volume contains some sixty poems, all readable, none tiresome, the poetic expression more than passable in all, but none of them possible to be counted among the poems that will survive this generation. The best that can be said of them is that they are rhythmic, sweet, sensuous, and sentimental. They are not strong; but so few poems are strong that the weakness of these is not discreditable, since they have "an excuse for being" as a transcript of common poetic feeling, and will be read with much pleasure by many. Mr. Kenyon seems to be a lover of nature in all her varied phases. His poems are strongly marked by this predilection, and he is at his best when he becomes her interpreter. Among the best of these poems may be named "The Wanderer" and "The Tyrian's Memory."

The April number of the *North American Review* contains most interesting articles. Mr. Charles Dudley Warner, in the opening paper,—"A Study of Prison Management,"—gives a condensed and extremely readable account of what has been done at the Elmira Reformatory in the moral education of men intrusted to its charge. The statement that eighty per cent. of the inmates are sent out reformed and become good citizens speaks volumes for the methods of the institution. The article is a valuable contribution to the psychological study of criminal life. Chief Justice T. F. Hargis has a paper on "The Law's Delay." Robert Buchanan writes on "Free Thought in America," of which he gives no proof in this article of possessing much information. It is devoted partly to Ingersoll, whom it abuses, but mainly to Frothingham, whom it alternately criticises and patronizingly praises. The article has literary merits, and some of its criticisms are just; but, as a whole, it is superficial, and is no contribution to our knowledge of "Free Thought in America." Mr. A. R. Spofford, in "Characteristics of Persian Poetry," shows that the poetry of the Persians, "for descriptive power, for ideality, for lofty imagination, and for magnificence of diction, is worthy of a high place in the world's literature." "The Agricultural Crisis in England," by William E. Bear, is a very clear discussion of questions important to Americans as well as to Englishmen. The other articles are "How to Reform Spelling," by Prof. T. W. Hunt, and "The Army of the Discontented," by T. V. Powderly. The new department of "Comments" in this number, consisting of brief criticisms, by different writers, of articles that have appeared in the *Review*, is an interesting feature.

The *Popular Science Monthly* for April opens with "The Character and Discipline of Political Economy," by Prof. Laurence Laughlin. In a first paper on "The Nervous System and Consciousness," Prof. W. R. Benedict, with the aid of illustrations, describes the structure of the nervous system, and lays the foundation for a discussion of its relations to consciousness. Mr. George Iles, in "A Chapter in Fire Insurance," sketches a scientific scheme of insurance as it is illustrated in the "mutual" plan adopted by a number of New England factories, in which the first point aimed at, and with an attained measure of success, is the prevention of conflagrations. Dr. Franz Boas, a German arctic explorer, furnishes an interesting sketch of life on Cumberland Sound, and of the Esquimaux who visit or dwell upon its shores, with some of their superstitions. The Count Goblet d'Alviella, of the University of Brussels, discusses "The Religious Value of the Unknowable." Judge Gorham D. Williams suggests, in the matter of "Liquor Legislation," a new departure, by which society can take better care of itself. Mr. Allen Pringle has a well-written and instructive article on "Apiculture." Other articles are those of Dr. von Pettenkofer on the modes of

propagation of cholera; of Mr. Fernald, on "Aristotle as a Zoölogist," dealing chiefly with his mistakes; of Charles Morris, on the "Structure and Division of the Organic Cell"; of Mr. Edis, on the "Internal Arrangement of Town Houses"; and Mattieu Williams' "Chemistry of Cookery" paper on "The Wear and Tear of the Body." A portrait and a sketch are given of Prof. John Trowbridge, of Harvard University. New York: D. Appleton & Co.

We are in receipt of the February and March numbers of the *Library Magazine*, John B. Alden, 393 Pearl Street, New York, publisher. This excellent magazine—which, following the lead of *Littell's Living Age* and the *Eclectic Magazine*, makes a specialty of reprints of the best thought of the age—is a marvel of cheapness, being published monthly, at the nominal price of \$1.50 per year. Among the writers and articles presented in these two numbers, we have only space to call attention to the following: "Samuel Johnson," by Edmund Gosse; "Shakspeare's Country," by Rose Kingsley; "John Vanderlyn and Theodosia Burr," from the *New York Times*; "Co-operation in England," by Thomas Hughes; "The Savage," by Max Müller; "Two Sun-like Planets," by Richard A. Proctor; "Secret or Open Sessions of the Senate," by Benson J. Lossing; "A Word More about America," by Matthew Arnold; "Imperial Federation," by W. E. Forster, M.P.; "Dublin Castle," by Justin McCarthy; "The American Audience," by Henry Irving; "A Shattered Monument," by W. Mattieu Williams; and "The Disabilities and Limitations of Sex," by Elizabeth Cady Stanton, which we notice is credited to the *New York Independent*, although it appeared originally as a contribution to *The Index*.

In the *Atlantic Monthly* for April, a good number, the serials by Craddock, Mrs. Oliphant, and Miss Jewett are continued, and Dr. Holmes adds the attraction of a poem, called "The Old Song," to his instalment of "The New Portfolio." The papers on Madame Mohl are also continued; and an essay on "Time in Shakspeare's Plays," by Henry A. Clapp, forms a pendant to a former article on "Time in Shakspeare's Comedies." A delightful paper entitled "George Frederick Handel: 1685-1835," by John S. Dwight; "Political Economy and the Civil War," a study by J. Laurence Laughlin; a story called "Fate Dominant," by F. R. Stockton; "An Unclassified Philosopher," a sketch; and a paper on the Sparrow, by Olive Thorne Miller,—are the other attractions of the number. The poetry comprises "Fiammetta," by Helen Gray Cone; "Cressid," by Nora Perry; "The Strange Guest," by Edith M. Thomas; and "Easter Lilies," by John B. Tabb. There are also reviews of recent poetry by Browning, Tennyson, and Swinburne, and of Gosse's edition of Gray's Works, together with the usual Contributors' Club and Books of the Month. Houghton, Mifflin & Co., Boston.

THE RISE OF INTELLECTUAL LIBERTY FROM THALES TO COPERNICUS.

By FREDERICK MAY HOLLAND,

Author of *The Reign of the Stoics*. Price \$3.50.

The author of this book has chosen a magnificent subject; and, although it is formidable in extent and much of it involved in obscurity, and all of it complicated with great questions of history and human progress, he has yet been able to throw much new light upon that liberalization of thought which went very unsteadily forward during twenty-two hundred years, before the great modern movement of the development for intellectual liberty. The work is a delineation of tendencies, a series of sketches of the great minds who at different times and under varied circumstances, and with unequal effect, have struck for independence of thought, a presentation of the counterforces that have antagonized intellectual liberty, and an account of the working of all those larger agencies which have in different degrees hindered or promoted freedom and independence of thought. Without having subjected the work to critical scrutiny, we are much impressed by the evidence it shows of extensive and conscientious labor, the freshness and interest of its chief subject-matter, the untrammelled treatment of the subject, and the vigor of the portrayal of that long and agonizing conflict with bigotry and intolerance, religious and political, public and private, which is the price of our modern liberty of thinking.—*Popular Science Monthly*.

The volume shows remarkable research, keen powers of analysis and comparison, close reasoning, and fairness of judgment. It will be found an invaluable help to the student, who will be glad to learn that the author contemplates a second volume, which will bring the subject down to the time of the French Revolution.—*Boston Transcript*

CURRENT TOPICS.

BY B. F. U.

THE *Freidenker* for March 22 charges the *Socialist* of New York with inconsistency in sometimes declaring that the emancipation of the lower classes should be carried on by distribution of the most advanced books and pamphlets without recourse to violence, and sometimes asserting that the socialistic democrats have always been of opinion that their ends were to be attained by revolution, and not by continual agitation. The *Freidenker's* own preference is, of course, for peaceful measures.

FRANCOIS XAVIER BEAUDRY, the wickedest man in Montreal, died last week. His fortune, estimated at more than two millions, was built up by leasing houses for immoral purposes. Up to a few days before his death, he personally collected his exorbitant rents, from door to door. At the advance of mortality, he made his peace with the Church, and willed \$350,000 for an orphanage. His funeral at Notre Dame was all that the utmost ritual of Rome could make it. What would be said if the Montreal Freethought Club had honored such a man after his death?

A BOSTON correspondent of the *Western Chronicle*, published at Kentville, Nova Scotia, after referring to the architectural, intellectual, and social contrasts seen in this city, says: "Living almost between these two extremes (the light and beauty of Commonwealth Avenue overshadowed by the horror and blackness of North and Richmond Streets) is a class that surprises a stranger more than any other in Boston,—a class of sharpers, known as mediums, clairvoyants, seers, and fortune-tellers; and the number of this class is one of the saddest commentaries on our boasted civilization. For not only are they numerous, but they are flourishing; and their wealth is derived from the credulity of a half-educated people. And to think that there is such a class, right under the shadow of Bunker Hill, in the most cultured city in America, is one of the most discouraging signs of the times. But so large is the business, and so far and deeply does it ramify, that it better be left for another paper."

LAST week, funeral services were held, in this city, over the deceased pugilist, "Joe" Goss. Rev. Henry H. Haynes, of St. Paul's Episcopal Church, who conducted the services, said that he had been the spiritual adviser of the deceased, who in the last hours of his life "took no interest in any conversation except that relating to his spiritual welfare; and, upon this subject, he sometimes discoursed in an eloquent manner." The reverend gentleman spoke very confidently of his soul's salvation. A large crowd attended, including many pugilists and sporting men. The floral emblems were unusually elaborate. The most expensive tribute, sent by the champion bruiser, Sullivan, was a floral "gates ajar" five feet high and three feet wide. One Patsy Shepard's tribute was a wreath and cross entwined. Another was a belt, eighteen inches in diameter and five inches high, emblem of the dead prize fighter's career in the ring. Thus, the symbols of piety and pugilism, of salvation and slugging, decorated the coffin, to the great satisfaction, evidently, of the admirers of the deceased.

IN a letter to one of our American journals, Theodore Stanton says: "At the inauguration, last autumn, of the George Sand statue, M. de Lesseps spoke as follows: 'I have read George Sand in every country of the universe, but this did not stop me from reading her last night. In her honor, I have named one of my ten children Solange. M. Arsène Houssaye has said that the French Academy ought to have given George Sand a seat in its midst. If a woman were to enter the Academy, in ten years there would only be women there,—no men would be wanted!' M. de Lesseps is soon to be admitted into this exclusive body, which has counted among its members such poets as Corneille and Racine, such statesmen as Colbert and Thiers, such ecclesiastics as Bossuet and Dupanloup, such lawyers as Montesquieu and Dufaure, such philosophers as Voltaire and Cousin, such naturalists as Buffon and Cuvier, such orators as Roger-Collard and Berryer, such historians as Guizot and Henri Martin. And I do not think his name will be out of place in such a brilliant list of world-famed celebrities. Ferdinand de Lesseps is, indeed, worthy of a seat in this noble company, even though it frowned upon George Sand."

THE Boston *Sunday Herald*, in a sensible editorial on "The Devil as a Schoolmaster," protests against the stimulating, forcing process in our public schools which separates the bright from the dull scholars in the class room, giving incentives to the former when they do not need them, and discouraging the latter, to their injury. The method is declared, and justly, we believe, to be "demoralizing both to teachers and pupils. And, in fact, the whole bent of our education at the present time, so far as it relates to the moral nature of our youth, is to destroy the principles of virtue and character on which a sound education should be based. The bright pupils work from wrong motives, the dull pupils are made to

hate and envy the bright ones, and the true ends of education are lost sight of in the evil passions that are constantly engendered. Everybody knows that in perhaps a majority of cases the tables are turned when the public school is exchanged for the engagements and activities of later life. Then the blockheads of the public school begin to emerge to their rightful place; and the talent or genius that the system of the public school did nothing to develop, but everything to discourage, begins to take its rightful place in the world. Why cannot education, even in its beginning, be conducted on its own merits, and for ends which are closely related to good morals? Why must envy, strife, and emulation be stirred up in the little hearts that need all that is pure from the start, to help them to buffet the evil that is in the world?"

OF those ordinarily discharged from State prisons, sixty per cent. have to be imprisoned again for criminal acts. In connection with this fact, Charles Dudley Warner's statement, in the April number of the *North American Review*,—that of those who enter through the door of crime the Reformatory at Elmira, under the superintendence of Z. R. Brockway, and are discharged, eighty per cent. are reformed or passed out of the criminal class, and made law-abiding citizens, leaving but twenty per cent. in the condition of permanent criminals,—is very suggestive. The leading feature of this Reformatory is compulsory education. Only those who have been before convicted are received there. The term of confinement is made to depend upon the conduct of the convict. He is subjected to the most thorough examination as to physical, mental, and moral characteristics, capacity, and acquirements. The system of marks of merit is precise and inexorable, demanding not only good behavior, but industry, thoroughness, and faithfulness as indispensable conditions of first a parole and afterwards of a complete discharge from the institution. The measures employed are both repressive and preventive. The discipline is of that vigorous and wholesome character which tends to develop what has been neglected in the early training. All the severities and hardships of the State prison are reserved for those who refuse the milder treatment; but mitigation of punishment, parole, and final discharge are kept before the worst class even, and the moral forces which belong to the family, the school, and the workshop are constantly brought to bear upon all. The effect of this system upon the criminal's appearance and conduct is said to be remarkable. "The old convict heaviness and hopeless inertness of flesh are gone,—gone, with the depressing hang-dog look. We see here the well-known criminal type of head, but the expression of face is altogether changed: stupidity and hopelessness have given way to intelligence and ambition." Do not the results of this experiment warrant the opinion that the same methods, introduced into the general management of State prisons, would be a great improvement on the barbarous methods now employed?

THE CHURCHES AS PHILANTHROPIC SOCIETIES.

The last twenty or twenty-five years have been working an important change in the activities of the churches, especially those of the evangelical type, which Liberalism is not sufficiently apt to recognize. Philanthropic and charitable objects are engaging their attention much more than formerly. Of course, they hold to their creeds, though sometimes, to-day, in a very relaxed form; and these give the staple of, or at least color to, the ordinary teachings of the pulpits. But the pulpit word does not hold the relative importance in a completely equipped church organization which once it did. It has been quite the habit for those of radical beliefs, in respect to religion, to charge that the evangelical churches are so absorbed in teaching irrational dogmas, and in saving souls by the ecclesiastical fashion for the future world, that they pass by unheeded the crying distresses of this world, and give little or no attention to the works of humanity. And there was a time when this charge was essentially just. There are churches, doubtless, of which it would still be true. But, as a general charge against the churches, it would be true no longer. Perhaps the sting of the charge has, to some extent, gone home to the conscience of the churches, and aroused them to a quicker sense of their duties and opportunities. There has been, in any event, a great reform in their methods. Here, for instance, is a clipping which shows what a single church in the city of New York is doing:—

The Church of the Holy Communion, New York, sets an example worthy of all imitation as a working church. It has 900 communicants on its roll. These keep in operation a baby shelter; an industrial school, registering 354 names; an employment society, furnishing work to 60 poor women each week; a workmen's club, whose membership numbers 203, whose income last year was over \$1,300, and which has in connection a literary club and a relief association; a special club for boys; a home for aged women, which had last year 14 inmates, and provides this year for 20; a shelter for respectable girls, which has never less than 30 inmates; a summer home at Hastings-on-the-Hudson, where last summer more than 100 persons were entertained; and a coal fund, by means of which poor people are able to obtain coal at greatly reduced rates. It may readily be conceived that a church whose members thus devote their energies to works of practical philanthropy is not likely to have either time or inclination for the numerous "entertainments" which seem the best expedient most modern churches are able to devise for promoting social intercourse and good will.

The church here named—which, presumably, is of the Episcopalian order—has, doubtless, exceptional financial resources, and must have an unusual supply of zealous, working members. Not all churches could maintain so many and expensive benevolent enterprises, even if they had the desire to do it; though desire and zeal, it should be added, are also great financiers, and frequently accomplish wonders in solving pecuniary problems. But, though this church may be an exception in the amount of philanthropic work it is doing, it is by no means very exceptional in the fact of doing such kinds of work. The prominent churches in large cities, and to some extent in the smaller cities and towns, are turning their attention more and more to similar objects of philanthropy. We saw only this last week, by the side of another church in New York than the one named above, a substantial building, inscribed "Boys' Club." These boys' clubs we understand to be intended for boys who have no home advantages, and not as an additional luxury, and a possibly dangerous one, for the sons of pew-proprietors. Trinity Church, in New York, supports a number of excel-

lent charitable organizations. So, too, does the church of the same name in Boston. Other churches in Boston might easily be mentioned that are also engaged in praiseworthy benevolent and educational enterprises. Perhaps none of them does all that it might do and ought to do of such work. But they are beginning to do it, and some of them are doing a good deal of it. And credit should be given to the churches for having come so largely to recognize philanthropy as one of the proper objects of their existence.

The criticism is sometimes made that, when evangelical churches take up these charitable enterprises, they do it with an ecclesiastical aim, and give to all their work a peculiar ecclesiastical flavor, which makes it distasteful, and sometimes repulsive, to self-respecting and liberal minds. In cases where there is good ground for this criticism, and especially for the latter half of it, it does, indeed, detract much from the merit of such enterprises regarded in the light of pure benevolence. When persons discover that they are made the objects of charity for the glory of some church, or that sectarian zealots are taking advantage of their needs to hoodwink their souls into accepting doctrines and rituals which might not otherwise attract them, there is something in every manly nature that revolts from being thus operated upon. A healthful mental stomach, even in a poor man, will naturally turn against a creed which it is attempted to sugar-coat with charity. The wounded soldier in hospital who threw from him with an oath a toothsome cracker, into which some Christian missionary society had had the words baked, "Come to Jesus," showed a kind of robust heroism, not unlike that with which he had faced the bullets in battle. Yet it is greatly to be doubted whether there is nearly so much ground for this criticism as there once was. Many churches, Orthodox as well as Unitarian, are now doing excellent benevolent work without, apparently, any other thought than the humanity of doing it. With regard to some of the charitable enterprises maintained by the church whose good works are described in the foregoing extract, it is difficult to see how any sectarian motive or bias could enter into them.

And, indeed, if it has really come to be a fact that the churches see that a wise expediency demands that they shall devote their energies less exclusively than once to instruction in dogmas and shall give more attention to philanthropic objects, this should be cause for rejoicing rather than criticism. It is one of the fruits of the general progress of liberal views; and it behooves Liberalism, at least, thankfully to acknowledge the spread of its own ideas. Here is a foregleam of what the churches might become, and what some day they, perhaps, will largely become, if, emancipated from bondage to authoritative creeds, they should be put to the service of human needs as centres of philanthropic and humane activity. And, meantime, it also behooves the Liberalism that is outside of all churches to ask whether it is itself keeping pace with the churches in organizations for philanthropic work.

WM. J. POTTER.

THE CONCEPTION OF LIFE.

II.

All questions of life are so closely linked with those of death—the problems of their essential nature, origin, extinction, and measure, are so intimately involved—that their independent solution appears practically impossible.

The logical necessity of extending the definition of the essential nature of life to the inclusion of inorganic (crystalline) as well as organic individ-

uality has been indicated by the results of the preceding discussion, and the question of a common law or standard of measure for estimating the relative quantities of their life and death now demands our first attention. As we have seen, in both cases, that of the organic and that of the inorganic individualities, a material and dynamic plexus is con-inertially active in opposition to, and for the subjection of, the chaos of matter, motion, and force by which the living form is surrounded, thwarted, and assailed. In the ratios of the contending powers, it is, therefore, that we must look for the standard of measure.

Mr. Herbert Spencer has stated that the amount of "life varies as the degree of the correspondence" (between life and its environment). Before venturing to discuss either the correctness or the completeness of this statement, it will be necessary to call attention to the fact that the terms "life" and "death" admit of a twofold interpretation, either as designations of states (or rather as the assertion and negation, respectively, of one state, that of life) or as names of antagonistic processes more properly termed "living" and "dying." As Mr. Spencer has defined life as a "continuous adjustment," it appears plain that it is in the sense of a process that he desires to have it considered.

It is true that "states" and "processes" are mutually convertible conceptions. By the "integration of time and force," a "state" may become a "process"; by the "differentiation of force and time," a "process" may be converted into a "state." But, notwithstanding this fact, it will be well to keep the two meanings of "life" and "death" carefully separated, if we would arrive at a correct standard of measure for their respective quantities.

Taking life and death in the sense of states, and bearing in view that the essence of life has been sought and found, in a preceding chapter of this essay, to be located in the existence of a power, inhering in all living forms (morphocratic power), to bring extraneous modes of matter, motion, and force into absolute subjection to its sway, it necessarily follows that the state of death—which is but a negation of that of life—consists in the absence of this power from the matter held as "dead."

Considering life and death as processes, the longer we dwell upon their problem, the stronger grows the conviction that they are in reality but abstractions, never singly exercising exclusive authority over the domain of any individual material mass. Only that which is absolutely devoid of individuality is truly dead. But such absolute death is a state, and not a process. Every true individual is simultaneously living and dying. All existence is but an eternal struggle for supremacy between the forces of the form and those of its surroundings. The "correspondence" or "continuous adjustment" of internal relations to external relations must hold for all material masses, dead as well as living. But so also must the continuous adjustment of external relations to those which are internal. Each set of relations contends for the mastery over the other. The vicissitudes of the battle mark the amplitude of the complex wave of life (birth, evolution) and death (dissolution, involution). For these reasons, I hold that Mr. Spencer's statement that the amount of "life varies as the degree of correspondence" requires modification.

To begin with a rough statement, it may be said that *the quantity of the process of life (living) anywhere eventuating varies directly as the domination of the forces of the living forms (morphocratic sway) over the forces of the forms' environment, and, further, as a correlative or reciprocal conception, that the quantity of the process of death (dying) any-*

where eventuating varies directly as the subjection of the forces of the living forms (*morphocratic enslavement*) to the forces of the forms' environment.

But these definitions are by no means complete. All of the forces pertaining to the living form are not effective in maintaining or extending its sway over those of the environment, nor are all the latter's forces active in resisting the inroads of the morphocratic power. Much of the force of life is lost to the struggle through internal interference, a fact unobservable in the crystal, made plainly manifest in the diseases to which the individuals of the animal and vegetal worlds are liable, and emerging into the focus of general recognition in the competitive struggles which agitate the molecules (individuals) and masses (classes, parties, nations, and races) of the social organism. For this reason, the dominating power of the forces of the form, as well as the effective power of the forces of the environment, should be stated to consist in their "net" quantity or algebraic sum.

The process of life having been ascribed to a domination of its forces over those of the environment, that of death to a subjection of the same forces, the relation of the two processes can be still better represented as a ratio between the algebraic sums of the two sets of forces. Thus, the law of the relative quantity of life and death may be again formulated.

The relative quantities of the processes of life (living) and death (dying) anywhere simultaneously eventuating vary directly as the ratio between the algebraic sum of the forces of the living forms and the algebraic sum of the forces of the environment.

There remains still to be noted the element of time. The rate at which the absolute subjection of the external relations and forces of the environment to the internal relations of the living being is accomplished measures the velocity of its life, the rate at which the reverse process completes itself records the speed of its dying.

In exploring the domain of the inorganic world for manifestations of the morphocratic power of life, we found its representative in the crystal. But, while the crystal is always composed of like or at least similar molecular forms of matter, the organic individual is constructed of materials differing widely in chemical composition.

Yet, even in the inorganic world we meet with certain apparently crystalline forms, which are not always of homogeneous composition, but frequently, in the heterogeneity of their molecular constituents, appear to be closely analogous to the living forms of the organic world. These peculiar agglomerations are known to scientists under the name of "pseudomorphs" (literally, "false forms"), because their outlines never represent a crystalline form proper to their constituents, but always imitate that of some other foreign substance. They are produced either by the gradual alteration of a crystal resting in its rocky bed or by the refilling of an empty crystal-mould, from which the legitimate inhabitant has been previously, by some destroying agency, removed. In considering the relations which such "pseudomorphs" bear to the law of life, it must always be borne in mind that the forces to the action of which they owe their existence, and which preserve their unity, are not inherent, but exherent and foreign; not impulsive, but compulsive, forces. The pseudomorph is not the representative of a higher and more complex mode of inorganic life, but rather of its subjection and death.

In the state of death, all matter is in a condition of "pseudomorphism" essentially passive. In the living state, it is a *eumorphism*, active and victorious. All life being due to the manifestations of morpho-

cratic power, all death is but a manifestation of *morphopathic weakness*.

All living, inorganic as well as organic, forms arise under the conquering influence of *impulsive forces* inhering in the form itself. All dead forms originate through the action of the *compulsive forces* of the environment. All life is a *liberation*, all death an *enslavement*, of matter.

Life being a process of liberation, its meaning to the sentient, conscious being is that of liberty to obey the commands of its own desires, volitions, impulses, purposes, and motives. Its antithesis, the compulsion of death, is hated and feared as the consummate absolute denial of this most sacred of all inalienable rights. And so also every advance toward greater liberty of feeling, thought, and action, is treasured by humanity as a priceless gain, all relapse into tyranny and enslavement mourned as an irreparable loss, to its collective life and existence.

But, as it is the character of the intelligent being's desires, volitions, impulses, purposes, and motives which cites it before the supreme judgment seat of morality, so it is here that we cross the sacred threshold of the temple, whence from its holiest of holies emanate the forces of ethics, charged to execute the decrees of the good, the free, and the beautiful.

For we hold this truth to be self-evident,—that it is not for its actions, but for its desires and purposes, that the rational being is morally responsible. And only the free being is owner "to the manor born" of its desires and purposes; only in a state of liberty is morality possible.

CHARLES FROEBEL.

REPUBLICAN QUEENS ABDICATE THEIR THRONES.

In the whole history of the woman suffrage movement, we have had no fact that illustrates the degradation of our sex in so pronounced and unmistakable a manner as that body of Massachusetts "Remonstrants" who have recently appeared before their legislature, pleading that the women of that State should not be enfranchised. In other words, that the experiment of self-government, being tried for the first time by a great nation, might not be completed; that the grand liberal ideas of the equality of the human family, for which their ancestors struggled, suffered, and died, might never be realized, at least for one-half the race; that the rights, privileges, and immunities of citizenship might be confined to the male line, whether foreign or native, black or white, washed or unwashed, learned or unlearned, drunk or sober, a condition of subjection to such rulers being supposed to be more in harmony with woman's natural delicacy and refinement than the responsibility of governing herself.

What should we have thought of the slaves from the Southern plantations going before Congress, accompanied by their white masters, when the Fourteenth Amendment was under consideration, to plead their own lack of strength and morality against their enfranchisement? Why, we should simply have said the system of slavery has destroyed their self-respect, utterly demoralized them. And this is all that can be said in extenuation of the action of these Massachusetts "Remonstrants." What a pity for their own purposes that they slumbered and slept so far into the nineteenth century! If they had been awake to their high duties fifty years ago, they might have preserved intact the old common law of England, which enabled husbands to protect their wives' property and children so absolutely that the women had no cumbering cares and responsibilities in spending money, keeping accounts, or in the ownership of babies,—no

recognized natural rights of person, property, or children. They might have prevented their State legislature from unsettling these ancient ideas by modifying their statutes in regard to the relations of husband and wife, and preserved that time-honored belief of a perfect union in which they twain are one, and that one the husband.

They might have so moulded public opinion as to save young women from the dangers of college life, from the trades and professions, from the courts, the hospitals, the pulpit, the editor's chair, and all reformatory organizations, and encompassed them round about with the sacred influences of home; concentrating their hopes and ambitions on the innocent spinning-wheel, the plum pudding, the darning-needle, that they might have never wandered outside the prescribed sphere in which the Pilgrim mothers so beautifully exemplified all the Christian graces. But, unfortunately, the "Remonstrants" waited too long effectually to block the wheels of progress. Other women more active and far-seeing than themselves struck the death blow at all these old forms of slavery in 1848, when New York passed the Married Woman's Property Bill, and recognized the wife's individual existence. They created a public sentiment in favor of the independent personal and property rights of women, and aroused in Eve's daughters a desire to explore the worlds that lay beyond their paradise.

And now—with school suffrage in twelve States of the Union, and full suffrage in three Territories; with woman's political status a subject for continuous debate in Congress and State legislatures; with municipal suffrage conceded in the whole British Empire and Parliamentary suffrage in the Isle of Man—it is as vain for the little band of "Remonstrants" to block this grand movement as it was for Dame Partington to check the inflowing tide of the mighty ocean. The spirit of the age and existing facts are all against them; and what a pitiful manifestation of womanhood this movement is!

I cannot recall a single case in all history, of a woman, when heir to a throne, voluntarily surrendering her royal position. But we read of many a queen who fought bravely for her rightful inheritance, and, in the face of prolonged struggle, chose death even rather than to see her crown on the brow of another. Suppose, when the day approached for Victoria to be crowned Queen of England, she had gone before the House of Commons or Lords, and asked to be relieved from the responsibilities of government, on the ground that she had not the moral stamina nor intellectual ability for the position; that her natural delicacy and refinement shrank from the publicity; that she was looking forward to the all-absorbing duties of home life, to love and courtship, to husband, children, and to that "indirect influence" on society, religion, and politics, so much more powerful for good than direct action can be for woman. Suppose, with a tremulous voice, and a few stray tears in her blue eyes, and her head drooping on one side, she had said she knew nothing of the science of government; that a crown did not befit a woman's head; that, in case of war, she could not fight, and hence she could not reign, as there must be force behind the throne; that she had not strength even to wave her country's flag, and much less to hold the sceptre of power over so vast an empire. What would the members of Parliament have thought in listening to such superlative nonsense. What would the nations of the earth have said? All alike would have stood aghast, and said, That girl must be demented: the blood of the House of Hanover has evidently run out.

But, instead of this pitiful spectacle, she pre-

pared herself by study and reflection for the exalted position she was called to fill; and, when the hour for her coronation arrived, though but a girl of seventeen, she marched down the broad aisles of Westminster Abbey, surrounded by representatives of Church and State, foreign diplomats, lords and ladies, with a grace and dignity becoming the grandeur of the occasion. And at the altar she took the oath "to support the civil laws, customs, and statutes, the laws of God, the Protestant reformed religion, the Church of England, and promised security for the Church of Scotland," the Archbishop of Canterbury administering the oath, and placing the crown, worn by a long line of kings, upon her brow. Thus, with becoming self-respect, she accepted her honors; and the nation gloried in their youthful queen.

Neither did the burdens of government destroy her domestic affections. She no doubt enjoyed the attentions of Prince Albert as a lover, was as faithful to him as a wife, as devoted to her children, as observant of the rules of social etiquette, as any unknown beauty in the most remote corner of the British Isles. The Massachusetts Remonstrants cannot fill the whole round of human duties better than Queen Victoria has done. And yet, if they had been in England at that time, in their present state of mind, they would have implored Parliament to pass a bill confining the succession to the male line, and adopt the Salic law of their wise neighbors over the Channel,—a law which worked so admirably in France in depriving women of all royal prerogatives and all rights in landed estates that it was introduced into Spain by the Bourbon Philip V. in 1713, but abolished by Ferdinand VII. in 1830, in favor of his daughter Isabella. And now, in 1885, women of age and experience, of ordinary intelligence, in the State of Massachusetts, under the very shadow of Bunker Hill and Faneuil Hall, propose to resurrect the old ideas in government, repudiated by a Spanish king over half a century ago!

Why, it was enough to make Ferdinand VII. turn in his grave, if his spirit was permitted to witness that demoralizing scene in the capitol at Boston!

All the petty arguments of the "Remonstrants" about "home," "morality," "weakness," "influence," "whispering in the ears of husbands and legislators," so admirably disposed of by the Rev. D. P. Livermore in his review, have no special significance; but their assertion that suffrage is not a natural right is a fatal admission for any citizen of a republic. The right of the people to a voice in the government has long been conceded, as a principle of equity, in both England and France; and their legislation is steadily in that direction. The declarations of our American statesmen are clear and concise. And our legislation, too, is reflecting the liberal ideas that "no just government can be formed without the consent of the governed"; "that to tax a man's property without his consent is to deprive him of every civil right"; "that they who have no voice in the laws under which they live are in a condition of slavery."

According to the spirit of our institutions, our Declaration of Rights, the principles laid down in our Constitution, the American people were all declared sovereigns July 4, 1776,—the crown of citizenship was theoretically placed on the head of every native-born man and woman of legal age, and the ballot in the hand of every member of the State, binding all alike to labor for the success of the republic. The fact that men wrested these rights from women—rights some of them had exercised under every colonial government, as well as in the mother country, from time immemorial—does in no way vitiate their title. Every citizen

has a natural right to exercise under government whatever power is necessary to protect his person and property against all aggressions, and a voice in the laws and law-makers is the only way this can be accomplished. Again, the right of suffrage is the only mark of distinction in this country between the different classes. Those who can vote are the privileged classes,—the aristocracy, the nobility, the sovereigns.

Those who cannot form a heterogeneous mass, a singular compound of the disreputable and the unfortunate, occupying the same political status with the youth, virtue, and intelligence of the nation. These are the idiots, lunatics, criminals, foreigners not naturalized, rebels, minors, and women. But time can restore to all these classes except women the honors of citizenship. The foreigner can get his naturalization papers, the minor can reach his majority, the criminal can be pardoned, the lunatic can become sane, even the idiot by a fracture of the skull can be restored to common sense, and vote. Those engaged in the late war are already part of the ruling power in government. But there is no possible transformation, known to either science or accident, by which a woman can become a male idiot, lunatic, criminal, foreigner, or minor. Hence, she does not properly belong in this category. Disfranchisement is evidently considered a punishment, a degradation, properly inflicted on criminal and incompetent classes; but by no possibility can it be made to appear that it is to woman's honor and glory that she is denied the right of suffrage. "The highest earthly desire of a ripened mind," says Thomas Arnold, "is the desire of taking an active share in the great work of the government."

ELIZABETH CADY STANTON.

THE TWO PROBLEMS.

The great, the underlying problems which have agitated, which have convulsed the races of man during all the ages of recorded history are two: Production is one, Distribution is the other.

The first great problem of civilization is how to produce wealth,—how to cultivate, how to work, how to manufacture, how to make that, how to perfect this. The second great problem of civilization is how to distribute wealth,—how to move the products grown, how to exchange the articles made: how are we to transport the coal from the deep, dark hole, where it is of no use, to the iron furnace where it is greatly needed? how are we to exchange this extra pair of shoes, which we do not want, for that surplus barrel of flour at the mill, which our family must have, or die? These, then, are the two, the great, the basic, the underlying problems, upon the intelligent solution of which our civilization, our very existence, depend.

The first problem treats of labor, of force, of machinery: it utilizes inventions, applies chemistry, and advances science. The second problem contains the questions of wages, of transportations, of exchanges, of ethics, and of the ways and the means of payments. In the first problem, the question is how to occupy labor, how to employ force, how to apply invention, how to utilize discovery, and how to diversify and perfect our finished articles of manufacture. In the second problem, the question is, how are we to distribute the wages, the burdens, the taxes, the necessities, the conveniences, the luxuries of our labors, of our fields, of our workshops?

From the intelligent employment of force results national power. Force represents the first problem; and, if solved alone, it will form an ill-constituted grandeur, a barbaric confederation, a government of privileged and incorporated classes, such as we have in these United States to-day,—a gov-

ernment in which all the material elements are combined, a government into which no moral principle enters. From the intelligent distribution of services results individual happiness. Distribution represents the second problem; and, upon the happy and prosperous homes of an educated people, a great nation can be formed. By intelligent distribution, we must not understand *equal* distribution, but *equitable* distribution. The highest equality is equity. With equity, we will have justice and good fellowship, we will have the strong and educated having a care for the weak and the uneducated, we will have co-operation in the place of competition, we will have interdependent common-interests in the place of independent special-privileges; and we will have a high plane of intellectual, wholesome, vigorous life instead of the low, depraved, diseased, criminal existence through which we now struggle.

The solving of this, the second great problem of civilization, without at the same time solving the first great problem, would be fraught with disaster no less gory than history has painted in our own and ancient times in connection with the solution of the first great problem. The two great problems of civilization must be solved together, to be well solved. There have been and there are several nations which have measurably solved the first of the great problems of civilization. There have been possibly two nations—Peru, under the Incas (every child born was given by the State a homestead), and Venice under the Doges (from 1171 to 1797, they exchanged their services by means of "credits" and "debits" upon the books of their bank, *free from interest*; and these "credits" were at a premium over the world-renowned "gold ducats")—which have started upon the correct solution of the second; but there never has been a nation, ancient or modern, which has solved the first and the second problems together. Hence it is that the world has always been, and is, filled with contentions and confusions, with wars and suicides, with miseries and crimes.

The United States, England, France, Belgium, and Germany have measurably solved the first great problem of civilization. As producers and as manufacturers, they are a success. Their vegetables, cereals, fruits, breadstuffs, meats, and articles of finished workmanship are wonderful in growth, in make, and in abundance; and grand and beautiful are their steam-cars and ocean ships, their electric telegraphs, cables, telephones, and motors, their canals, tunnels, and bridges, their tramways, their water supplies, their gas-works, their buildings, their inventions, and their sciences. But these countries have only yet learned the A, B, C, to the solution of the second great problem of civilization. They are all bad, they are wretched distributors. They push the solution of the first problem without regard to the solution of the second problem; and this leads their people inevitably to the two extremes,—monstrous opulence on the one side, monstrous misery upon the other; all the enjoyments to the few, all the privations to the many; all the privileges, all the offices, all the emoluments, all the honors, all the luxuries to the cunning, to the designing, to the insignificant tricksters and middle-men; all the burdens, all the taxes, all the dishonors, all the disadvantages to the producing, to the unincorporated people.

The mission of the Sociologic Society of New York and Brooklyn cities is to force upon the consideration of our people of every class the vital issues underlying the second great problem of civilization; and to urge, through co-operative organization in industries and exchanges, the application of equity in the affairs of mankind, at the same time that our home industries are protected, diver-

sified, and perfected, that we as a people may progress to a high plane of intellectuality, and that we as individuals may have some security, peace, and happiness on this earth's surface in this our own generation.

The ways and means by which this result may be accomplished, under the conditions which surround us, is by incorporating earnest, industrious, and responsible men and women into bodies which will be organized to protect the members and to advance the purposes desired against antagonistic bodies. Non-incorporated persons cannot long stand up against incorporated classes enjoying special privileges. All efforts, no matter how well intentioned, will be futile in carrying into practical application co-operative ideas, if the persons so moving do not act as a body corporate. There are giants to be met. Man or woman unincorporated is but a dwarf. Corporations stand in the path, turn where we will, be our purpose what it may; and hence, to be recognized, we must be strong, and able to hold our own. Organization must meet organization, force must encounter force; and, then, those who have philosophy and humanity as the basis of their society will triumph. Constructive methods will advance, and destructive bodies will have no place on this planet.

"Faith, Hope, and Charity," has been the motto of those people who have but partially solved the first problem of civilization.

"Fraternity, Interdependence, and Equity," should be the motto of those persons who will solve, at one and the same time, the first and the second problems of civilization; and may God be with the right!

ALBERT K. OWEN.

MORAL MONSTERS.

An old physician, being asked how early a child's education might be safely begun, was silent for a brief time, and then replied, "I should begin twenty years before his birth by educating his mother." If he had said, "I should begin fifty years before his birth by educating both his grandmothers and both his grandfathers," he would have touched the problem more vitally, and still have been generations away from the starting-point.

The question of heredity being multiform in its phases, we cannot hope that it will soon become an "exact" science. If it were, we might have proportional problems resembling those in our school-books: "If a certain number of men working for a certain number of days can dig a trench so many feet long and wide and deep, how many men working for a different number of days will be required to dig a trench of such and such dimensions?" An uncomplicated problem in heredity might thus be formulated: "If two individuals, possessing unitedly 17 per cent. of common sense and 183 per cent. of folly and obstinacy, produce an offspring with .08½ per cent. of common sense, and 91½ per cent. of folly and obstinacy, how many generations of such pairs will be necessary to reduce the percentage of common sense to a vanishing fraction, with nine ciphers *plus* for a numerator and ten ciphers *plus* for a denominator?"

If the civilization of nations and individuals be "accumulated force," the inherited increments of progress, surely the folly, crimes, and wretchedness of nations or individuals at any given moment must be accumulated and intensified degeneracies of the past. There comes a day when the latter condition culminates in a mighty social lesion, which no surgeon or body of surgeons is skilful enough to counteract.

On the other hand, in a nation of beauty-worshippers, the worship being fostered by external

influences of sea and sky and mountain, we have a galaxy of sculptors, painters, and poets. While Athens bowed its knee to the ideal, it was scarcely possible that a human being should be born within Athenian walls totally destitute of this ideal, and of the craving to carve, paint, or poetize it into expression. Conversely, again, when poor French peasants and artisans, with their wives, were compelled to toil in rags and bitterness, the babes were moulded in hatred and defiance from the earliest moment of their intra-uterine existence, and the result was—carnage!

Moral monsters are, however, entitled to a grim sort of respect, enforcing and illustrating as they do the inexorable truths of science. In the *Popular Science Monthly* for November, 1876, Dr. Seguin, in an article on "Pre-natal and Infantile Culture," makes the remarkable assertion that experienced physicians, when their hands receive a new-born infant, can recognize on its features the dominant states of mind and traits of character manifested by the mother during the period before its birth. What a granite index of that which she had supposed to be written in sand! What a fearful responsibility, not alone for the mothers, but for the fathers as well, whose reflex influence is so powerful in determining the disposition of the tiny new comer! "Nature makes no leaps." The weary road to perfection is beset by brambles, quicksands, and howling beasts; but, when the House Beautiful is built on this earth, and its shining inmates typify the purification of humanity, there will be no need of essays on heredity, for "moral monsters" will have become extinct.

HELEN T. CLARK.

EDITORIAL NOTES.

BY B. F. U.

MRS. BISBEE'S Society for Ethical Culture will in future be held in the Parker Memorial parlors, at 3.30 P.M.

THE next annual convention of the New York Free Thinkers' Association is to be held at Albany, September 11, 12, and 13.

THE enterprising publisher, John B. Alden, has issued a new edition of Burke's famous work, *The Sublime and Beautiful*, in a rather novel form, large 16mo, fine cloth, gilt tops. Price 50 cts.

HOUGHTON, MIFFLIN & Co. are about issuing another edition of *Harriet Martineau's Autobiography*, as edited and supplemented by Mrs. Maria W. Chapman, in two volumes, crown octavo, at a reduced price.

THE method of reasoning in certain circles in these days reminds us of the speculations of the negro metaphysician:—

"S'pose that I was you, and s'pose that you was me, And s'pose we was all somebody else, I wonder who we should be."

THE *Catholic Review* says that "Catholic universities have always recognized the equality and even the intellectual supremacy of women, when it existed." In proof of this statement, our contemporary mentions that the University of Notre Dame has decided this year to give its Laetare Medal to a Miss Starr, "the author of *Patron Saints, Pilgrims and Shrines*, and other equally meritorious writings."

A NEWSPAPER correspondent writes thus of Senator Evarts, of New York: "His eloquence is surprising. The sentences he makes are almost interminable; and the reporters say it is a matter of utter impossibility to write them out *verbatim*, in the hope that people will understand them. They read nonsensically; but, as they fall from the

speaker's lips, they are powerful, moving, and impressive. It is not at all an unusual thing for Mr. Evarts to speak a sentence of three hundred words in length, and they do say he sometimes goes for half a column without a break of any kind. Judge Fullerton says, in point of fact, that in Mr. Evarts' eight days' speech in the Beecher trial there were only two sentences. But Judge Fullerton is a joker, and likes to poke fun at folks whenever he has a chance."

A NEW YORK correspondent of the *Boston Herald*, after a conversation with Rev. J. P. Newman, who is said to be devoting himself to the special work of "converting" Gen. Grant, writes that he infers "Grant has not yet been stirred from his position of trusting to the goodness of God for his future, without trying to form explicit doctrines or to excite himself to any fervor. Family prayers are now held by Dr. Newman,—a thing never before practised by the Grants,—and he attempts at every seemly opportunity to turn the conversation into religious channels; but it cannot be said that Grant evinces any other sentiment than profound gravity. He talks readily about his physical plight and the nearness of the end, but is not at all responsive to the clergyman's labor on behalf of his soul." As yet, Gen. Grant is clearly in the possession of his reason.

IN reply to those who declare in defence of endless torment that the sinner will forever choose to remain bad, and thereby forever deserve punishment, the *Christian Register* remarks that "the assumption that souls may go on through eternity making evil choices robs hell of much of its punitive character. That which a man eternally persists in choosing must be in some way eternally congenial to him. Hell thus becomes a congenial place for congenial evil spirits instead of the uncongenial abode which Orthodoxy has so often painted." It would seem that in a few billions of centuries even those who are now "sinners" must become pretty well acclimated and otherwise adjusted to their environment. Adjustment to environment means happiness. Perfect adjustment to environment makes suffering impossible. Since among rational beings harmony with their environment is promoted by overcoming evil, by obeying all the laws of their being, may we not infer—if we are to reason on this subject at all—that the harmony necessary to their undecaying and endless existence will involve high moral development in the future? If in hell there is the same freedom of choice that there is here, and all those condemned by the orthodox theology for their views are, or are to be, permanently located there, it is in all probability not only "a congenial place," but a liberal and progressive community, with intellectual and social attractions which must appeal powerfully to independent spirits living outside, who may learn of its advantages.

SPELL-BOUND. For The Index.

Black, dolorous boughs, that wave with shuddering sigh,
As Dantean spirits of the underworld
Locked in their weird tree-prisons hopeless cry,
By winds of moaning whirled,—

Do vain regret and bitter memories hide,
Like human heart-throbs, in your leadless limbs?
Do cruel sweeping winds your woe deride,
As the wan daylight dims?

Not hopeless yet! For, yet a little while,
Till green leaves clothe your writhing arms with grace,
To voice of birds and summer's full-fraught smile
Your grieving shall give place.

NORTHUMBERLAND, PA.

H. T. C.

The Index.

BOSTON, APRIL 2, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

Transcendentalism and Evolution.

BY EDMUND MONTGOMERY.

II.

"Transcendentalists," then, are those who seek for universal truth and moral guidance, not in authoritative precepts, but in the intuitions of their own consciousness. Emerson, a typical representative of this mode of thinking, and surely himself a lofty eidolon of archetypal humanity, boldly asserts: "The faith that stands on authority is no faith. The reliance on authority measures the decline of religion, the withdrawal of the soul."

Be heedful then not to withdraw your soul. Let it pierce through the outer garment of fleeting semblances, this delusive veil of Maya, till with steady vision it reaches the eternal form, indissolubly abiding. Or turn your gaze away altogether from external happenings to the infinite vistas of your own inward knowledge, and there you shall find God and his truth; for, in the moment of veritable knowing, you and he are one. Only in direct communion with living consciousness can be discerned the enduring reality and significance of all the phantasmal play with which here in life we are hurried through time. It is unity with the eternally identical, with the changeless, timeless completion of being, that our soul, transcendently soaring, aims to realize. "I would enter into that eternal unity which was mine before all time," is the rapturous yearning everywhere echoed and re-echoed these thousands of years, whether resounding from Buddhistic, Christian, or Mohammedan lands.

But it is evident there are two very different ways of transcendently questioning the intuitions of self-consciousness and of attempting identification of individual thought with universal being.

The mystics teach that the essence and true

reality of conscious phenomena can be beheld in archetypal perfection by self-evident intellectual intuition, either through immediate recognition within sense-manifestations or through inward vision, like realization.

The rationalists, on the other hand, endeavor dialectically to assign to mental facts their proper place, as logically related to each other in all-comprising intelligence. And this they attempt either deductively, by starting from an assumed totality; or inductively, through systematic unification of the manifold of our logical consciousness.

The former impassioned seers seek, through direct ecstatic apperception, to bring into actual view the eternally One, phenomenally blurred to our common consciousness by the rippling changes of time or hidden far inwardly in the unconscious depths of our soul. The latter, more sober thinkers, strive through ratiocinative operations to merge into the final quietude of the all-identical unity of apperception the restless manifold, felt and thought in our individual and transient moods.

In any case, what gives rise to Transcendentalism is the intuition that this phenomenal show in time is somehow symbolical of an enduring reality, or rather that, if we could penetrate to the very heart of things, we should overcome the illusion of time and severalty, and discover eternal unity within an identical and universal being.

The real philosophical question underlying this belief of Transcendentalism is no other than how the perishable manifold of sense can possibly be reconciled with the permanent and unitary world of reason; how the One coincides with the Many, and the Many with the One.

By no dialectic artifice can the atomistic philosophy convince us that we, and the rest of the universe, consist of a mere sum of successive moments and coexistent particulars. Indeed, it is clear that even then there would have to be presupposed some enduring and identical agent, drawing the sum of all these units, and thus combining the loose aggregate into a coherent totality. Fancy for a moment nothing but a rope of sand, or a kinetic rush of atoms, without any identifying vision to give even phenomenal consistency to the display. But to allow even only that much or little of existence to sensible phenomena would be already transgressing all legitimate bounds of concession for time and space, the very media in which the assumed units are supposed to disport themselves, are most certainly mental and not extraneous existents, are states of consciousness within ourselves, not extra-conscious media containing outwardly extended things.

The truth now generally recognized as a matter of course is that everything we become cognizant of appears and occurs within our own individual and unitary consciousness, and is, therefore, *as such* of necessity a mental fact, and not a reality of any other kind. And, as all mental facts are found to form together one logically consistent system of thought, it seems to follow that veritable reality or being can exist nowhere but within the enduring and identical world of thought. If thought constitutes reality, reality must be of the nature of thought.

Plato, endowed with all the nature-nurtured adequacy of Athenian life, felt reluctant to adopt this extreme logical outcome of the rationalistic doctrine. He could not bring himself to see nothing but illusion in sense-manifestations, and true reality solely in the immutable and permanent entity recognized by reason. The objects appearing to sense were to him imperfect, but actually existing copies of eternal archetypes. Through their sensible apprehension and through contemplation of what identically dwells in their multi-

plicity and diversity, the awakened soul finds itself reminded of the transcendent completeness and unity of a realm of eternal ideas, which it recognizes as the veritable home of all its higher aspirations.

In a less poetic way, Kant, who had long and earnestly occupied himself with natural science, felt not only practically repelled by pure idealism, but contracted an insuperable aversion to it. He could hardly believe that Leibnitz had been in earnest when maintaining that the flow of conscious sense-phenomena runs its inward, ideal course in correspondence, but without any efficient interaction, with the world subsisting outside individual apperception; nor did he ever understand that Hume meant by "impression" only vivid sensation without external stimulation. Never was his own conviction shaken that the material upon which we exert our thought is given to sense from outside, that sense-appearances are compelled by foreign powers specifically affecting us.

Taking, then, Plato and Kant as our guides, or rather questioning nature directly, we find that, in order to solve the problem of world-cognition in a comprehensive manner, it should be clearly made out how external things or powers so affect our sensibility as to arouse in our mind representative appearances or percepts, and how each of us is individually competent to combine and to interpret this fragmentary and variable sense-experience, so that it will be found to constitute in its essence the recognition of universal or super-individual being and truth. How am I, diminutive particle, cast into this remote recess of the vast universe, enabled to perceive its illimitable expanse and the endless diversity of its changeful composition, and how amid this boundless display of phantasmagorical mutations am I permitted to conceive the law that binds it all in eternal congruity and unity? How can I, limited and circumscribed individuality, within the compass of my own solitary consciousness, reflect and recognize a perduring cosmos effectively subsisting in extra-conscious independence of myself?

Under the stress of the logical and scientific difficulties surrounding this problem of cognition, the principal aim of Transcendentalism has ever been to eliminate entirely everything non-mental that may be found intervening between the recognizing soul and the recognized truth. Either it attempts to conceive this visible world of ours as a direct manifestation to our soul of divine reality and being,—

"And the ear of man cannot hear, and the eye of man cannot see;
But, if we could see and hear, this Vision—were it not He?"

or it labors to prove that the whole phenomenal play, making up our sensible world, has no external reality at all, but is in truth an imperfect reproduction within our individual mind of a reality eternally abiding as the thought of a universal consciousness. "This solid world is but an air-image: our *me* is the only reality, and all is godlike or God." (Carlyle.)

It is this purely intrinsic form of Transcendentalism which, at present, is becoming more and more dominant at our seats of learning. Leaning directly on Kant's profound and imposing system of transcendental idealism, it urges itself upon us with strictly scientific pretensions.

In English philosophy, pure idealism has long been indigenous; but it thrived mostly as a nominalistic, sense-originated growth. The transformation which it had to undergo in order to become transcendental consisted principally in the shifting of the constitutive power from sense to thought, from the Many to the One. Hitherto,

single sensations and their reproductions in memory had been believed to arrange themselves by dint of a power of their own into the orderly succession and solidified co-existence of our conscious world. On closer examination, it became, however, clear that no unifying and systematizing force could possibly dwell in a number of ever-dissolving sensations; that some persistent power must be coercing the vast throng of particular, shifting, and dwindling feelings into the one steadfast combination, which we are perceiving as the consistent world of sense, and which we, moreover, recognize as the solidary, systematic, and general universe of reason.

Of what nature, then, is this unifying power, and where does it reside? This, in truth, is the cardinal question. Kant, true to his rationalistic training, sought to prove that all combination of conscious facts is affected solely by our understanding, and not in any way within the domain of sense or elsewhere in nature. In keeping with its own indwelling capacities, intelligence—according to this view—combines and consolidates the fluctuating manifold of sense. It is our understanding that produces the orderly system of things, which we call Nature. "*Der Verstand macht aller erst Natur.*"

Kant, believing firmly that all sense-matter is given to us from without, was thus forced to look upon sensible appearances as mere uncombined material, falling passively and at random into our receptive forms of sensibility, time, and space, from where they are gathered up and systematized by the one active principle in nature, our combining intelligence.

This position, which to justify and to defend is the main purpose of the *Critique of Pure Reason*, has proved untenable. Appearances within time and space, or so-called percepts, are found to be themselves marvellously compound. They are evidently synthesized through and through. No elementary, uncombined particle, no sense-atom, can be detected in them. If intelligence is really the sole combining power within us, it certainly must have already exerted its influence on these sensible appearances also. We find nothing utterly unfashioned or out of place in consciousness. Even our most elementary sensations form part of a system of feelings in which they occupy distinct positions. Moreover, all sensible phenomena are in time; and, as time itself is in a perpetual flux, it is clear that our understanding, in order to distinguish even mere sensations, and much more in order to perceive distinct sense-figurations, must necessarily have exerted its assumed staying, consolidating, and classifying power on the desultory contents of time. Thus, the most elementary facts of consciousness, as well as the most complex, turn out to be products of the formative power in us. We have, then, in all earnest, to concede that Kant was wrong. There is, indeed, no sense-material given to us from without; for nothing is realized in consciousness that is not already through and through the work of combination intrinsically effected by capacities inhering in ourselves.

These transcendental considerations render further obvious that the combining power, generally called understanding, intelligence, thought, or reason, cannot itself be of the nature of its multifarious conscious products. The mental facts, which alone are actually realized, are themselves fragmentary and evanescent. The active agent, which combines them into permanent and consistent order, must evidently be some all-comprising entity, not itself subject to the temporal mutations of its mental affections. What, then, we ask again, is the nature of this shaping and systematizing energy or agent, not sharing the evanescent

nature of the phenomena making up our consciousness?

And here it is that Transcendentalism takes its plunge into the unknowable abyss of what it calls spirituality, losing itself completely in that trans-ethereal waste whence there is no return to the solid things of this life. For it is quite clear that, if the combining and recognizing agent within us possesses a spiritual constitution, and if—as we have seen—there is nothing whatever uncombined and unrecognized in consciousness, then, unavoidably, the entire contents of consciousness are spiritually fashioned, are through and through of spiritual origin and formation. The argument runs thus: We are aware of nothing in the world but the phenomena making up our consciousness. These phenomena are the work of our intelligence, which is a spiritual principle. Consequently, the whole world, as known to us, is the work of the spiritual energy put forth by this same intelligence, which is our veritable and sole being.

This, expressed in a few words, is actually the fundamental and—granting the reality of its combining agent—the logically justified conclusion of Transcendentalism,—a conclusion by which, with one bold sweep, it rids itself of all material and also of all mental hindrances. You admit the constitutive power of spiritual intelligence, and Transcendentalism is impregnable when it asserts: There is no matter given to consciousness from without. Everything in consciousness is undeniably of mental or ideal consistency. Therefore, the assumption of a world outside consciousness is nothing but a mental fiction. Furthermore, all mental phenomena making up our consciousness are, as such, of a fragmentary and evanescent nature. Our intelligence, however, apperceives and recognizes a unitary, steadfast, and permanent world of reality. Therefore, all veritable reality rests and has its being in the spiritual power of intelligence.

Vain and unprofitable must ever remain all attempts to refute thorough-going Spiritualism, so long as the purely representative, symbolic, and phenomenal constitution of our entire compound mental presence, indeed of the whole make-up of mental realization, is not recognized in philosophy. You call the unknown activity giving rise to the mental presence "intelligence," meaning thereby something spiritual at work among the actual mental phenomena *as such*, constituting it thus a self-acting, reality-originating principle; and you find yourself inevitably delivered over to the utmost consequences of the identity philosophy. For it is irrefragably certain that, whatever is giving permanent and consistent unity to the multifarious contents of consciousness, that is and must be the constitutive principle or power of that nature found within our consciousness.

By short cuts, Transcendentalism reduces everything in nature to spiritual incomprehensibility. It first denies the existence of anything external arousing with orderly compulsion our perceptual realizations; and, then, it endows with all requisite powers of origination and combination an arbitrarily invented principle, nowhere verifiable in nature, assigning to its inscrutable activity the entire creation of whatever consciously happens to us. Because the combination and systematic recognition of the mental phenomena within us necessitate a unifying and identically abiding agent or subject, Transcendentalism believes it has in all earnest discovered the inferred entity by simply giving an empty name—a mere *flatus vocis*, as Roscelin would say—to this utter void in its comprehension of human nature. And, moreover, as something not altogether fictitious, not altogether of mere personal import, must surely be meant by the world revealed to us in individual

consciousness, it interprets our sundry transitory spurts of knowledge as feeble attempts to recognize an eternal and universal reality, which for this very purpose it has likewise to assume as spiritually existent.

In this reality-volatilizing creed, we sympathetically greet the aspiration that seeks to soar above the dust-destiny of human existence, and to connect it effectively with universal being and truth. But we find ourselves far too profoundly involved in the exigencies and vicissitudes of this flesh and blood life to surrender ourselves to a faith so blind, ineffective, and ungrounded.

To Transcendentalism, thinking and being are identical. True thinking is identical with eternal being. Thus, recognition of truth can signify nothing but identification with the one supreme intelligence which alone is veritable reality and truth.

And this is indeed the ethical outcome of the creed which is now taking possession of the mind and heart of our most aspiring youth. "I would enter into the eternal unity that was mine before all time." (Eckhardt.) Thinking the truth which constitutes eternal reality, I desire to become reunited with Him from whom originally my being flowed. I yearn to lay at rest this present phantasmal strife called "human existence." Through devotional contemplation, I hope at last to overcome the grievous estrangement that now diversifies me from the One and All, to gain readmission forevermore into the all-embracing quietude of sempiternal being.

Consistent rationalistic Transcendentalism is of necessity hostile to the fulfilments of nature, to the aims of vital being. Its ethics do not consistently yield rules of action, but rules of restraint from action, leading like all supernatural codes to unmitigated asceticism. Its end is knowing, not doing. Its will-power can be rightly exerted only in ideal recognition of eternal reality, not in ideal transformation of actual reality. The object of its striving must ever be diametrically opposed to that of natural evolution. Evolution points to a life-affirming, life-exalting faith. Transcendentalism involves total life-negation, extrication from all temporality.

The central riddle of philosophy and the chief impulse to religion are undoubtedly comprised in the mysterious relation subsisting between the realizing individual and universal being and truth.

It devolves, therefore, on any of our attempts at world-interpretation to frame a scientifically warranted conception as to how our self-centred individuality, within its little span of temporal life, can possibly embody the vast universe of super-individual reality, and truly recognize it.

Being forced, in any case, to assume an enduring subject, preserving its systematized experience somewhere beyond the fitful gleams of consciousness, and accomplishing the manifest unification and identification of transient phenomena, we saw Transcendentalism dissipate this whole weighty problem into thin air by fancifully imputing all requisite efficiency to an empty name, to a mere breath, *flatus vocis*, or so-called spirit.

And, furthermore, to impart universal significance to mental phenomena, to distinguish objective truth from mere subjective fiction, we are in our philosophizing, all of us, legitimately led to hypostatize some permanently abiding reality beyond our own individual consciousness. Rationalistic Transcendentalism complies with this general desideratum of knowledge by deifying and elaborating into an Absolute the all-efficient constitutive activity which it places behind our mental focus under the name of intelligence.

It is certain that the facts of our consciousness presuppose first an identical subject who compre-

hends them, and then a permanent reality to which they refer. To Transcendentalism, the identical subject is individual spirit; the permanent reality, universal spirit.

Now, it is quite obvious that to us in common life, so far as we are at all conscious, the actual bearer of this consciousness appears to be our living, organic individuality. Speculative thought may find it rather puzzling or altogether incomprehensible how any efficient interaction can possibly obtain between what we call body and what we call mind; but our unsophisticated sense of life makes us naturally feel as if we were but one, single, indiscerptible individuality. And we may safely assert that whoever has thoughtfully studied the astounding vital endowments of the human frame will readily admit that they manifest a no less marvellous entity than any which imagination can invent as an extra mental bearer of natural occurrences. Why, then, should not organized vitality, in its interaction with the world at large, be competent to give unity and general significance to the desultory mental phenomena displaying themselves within our personality? The only legitimate question that can here be raised is whether the facts of vitality and organization really justify such an interpretation.

Confronted, however, as we are at the outset by the pure idealism of the transcendental view, we find ourselves, first of all, obliged to explain why we venture at all to assume the extra-mental reality of our living organization; why we take our living body, which from time to time we are in various ways perceiving to be an enduring entity, existing independently of this its realization in our own perceptual consciousness or in that of other beings. In common with mankind in general, and following moreover the example of all natural science, we infer extra-mental or hyper-mental reality not in the centre of our consciousness as arrogated by Transcendentalism, but beyond its periphery as naturally revealed. We assume, namely, that the sensible affections of our mind resulting in perceptual manifestations are compelled by powers arousing our sensibility from without; and that these percepts, in the definite diversity of their composition, are representing symbolically the specific characteristics and relations of the foreign existences awakening them. Consequently, objective truth, in contradistinction to subjective fiction, signifies to us the congruity of our remembered experience or imagined visions, not to unchangeable spiritual reality, but to perceptual facts and occurrences that can be actually compelled by outside powers.

Our own living organization becomes, in all reality, conscious to us as a complex of specifically aroused perceptions. In reliance then on our fundamental supposition, without which all science would at once become chaotic and all action merely fancied, we trust that an extra-mental reality is actually and definitely signalized by these perceptions. Fortified by this foremost and firmest of all natural beliefs, we enter upon the diligent study and interpretation of whatever perceptual experience we can possibly gather with regard to it.

In this way, we have likewise and unavoidably to lean on a transcendental conjecture, on one that goes beyond mere mental phenomena. But the surmised complementary reality, supposed to influence our mind and to impart truth to its manifestations, we place in the direction of the senses, not in the direction of reason; believing in a peripheral, not in a central bearing of knowledge; striving for recognition of sensible relations, and for realization of our ideals in a perceptual medium, not for recognition of eternal relations and

consequent extrication from all perceptual experience and fulfilment. We are the children of whatever with toil and victory is sustaining and uplifting this natural creation: not outcasts from the heart of all-sufficient spirituality; not alienated evil doers, lost in the tangled estrangement that with blinded sight and temporal strife is differentiating this troublous and transient pageant-world of consciousness from sempiternal reality and repose.

After long wandering among mental spectres and phantasmal aims, we may with this one decisive, realistic move consider ourselves at last effectively delivered from the visionary spell of pure subjectivity. No longer do we find ourselves shut up in mental seclusion with an incessant flow of ever-vanishing phenomena, meaning nothing beyond themselves save unintelligible spiritual relations and truths, but have before us as permanent realities, not only our own natural being, but that also of our fellow-creatures and of other appearing existences, forming together a vast universe of most manifoldly interdependent influences. And all this extra-mental subsistence makes itself distinctly known within our perceptual consciousness with an abundance of minutest and persistent characteristics, calling forth our activity to deeds of lasting and fruitful natural import.

In this our naturalistic view of steady, non-mental powers underlying mental phenomena, we are, however, not reduced to the bare statement of accomplished results. We can, moreover, trace the conditions ministering to these results. And, in a general way, we can also trace the course of development, which has gradually brought them about. Trusting our perceptual manifestations, we may conclude that our individuality is encompassed by a world of which it forms part, and to whose specific configurations and happenings it is in ever so many ways related. Our organization, connatural with the rest of things, has evidently been developed through and through in interaction with all that surrounds and affects it. We find its sensitive surface, in a most exquisite and specific manner, responsively attuned to the sundry external influences infringing on it. And thus we come to understand that outside material is not really given as such to sense, but that sense is, nevertheless, accurately signalizing, by means of its own intrinsic affections, the specific nature of the outside influences,—a nature recognized by dint of connatural origin and development. Furthermore, we find that, consumed by such functional activity, a portion of the vital substance becomes disintegrated and eventually dissipated as kindred stuff into the same aerial ocean in which we move and breathe. And we find, in compensation of such vital expenditure, that the functionally relinquished material is accurately replaced through assimilation of nutriment, derived from the common store of nature.

The individual, thus essentially and manifoldly related to the rest of the visible world, is, however, not a mere congeries of such relations, but an autonomous and unitary being, in whose peculiar individuality, in conformity with its own organic nature, these relations are gradually inwrought through constant interaction with the influencing powers. Its myriads of specified relational or sensory elements, answering to most subtle cosmical as well as to most intricate planetary influences, all belong to one and the same realizing subject. This thoroughly organized subject, as the result of endless vital toil, possesses in its lastly evolved, highest texture the one endowment of nature most intimately known to each of us; namely, the feeling of much of its own living

activity, and especially of that part of it which is dependent on its interaction with outside powers. This self-feeling is the function of our organism as a permanent, extra-mental existent, and does not in reality reside in what consciously and casually appears to us as nerve-textures. It has not its true being in our mental perception as such, but in the complex of non-mental powers that compel this definite perception. It is this feeling of one's own living activity and its sundry definitely attuned modifications that composes the realizing medium of all extraneous influences and their import to the welfare of our being. In this unitary and general sensibility of the organic individual, the outer influences effect with increasing distinctiveness the specific representation of their sundry characteristics and combinations. And it is in strict proportion to this filling of our indiscerptible sensibility with the consciousness of specified feelings, of more and more intricate relations to the outside world, that our intelligence is found to develop, and to realize the abiding and necessary interdependence of that which in transient and casual flashes perceptually appears to us.

The outside world, upon our delicately attuned surface-mosaic, plays the definite rhythm by which alone it makes its presence known to us. What thereupon survenes within the reacting individual, induced by such merely superficial stimulation, is wholly the product of vitality and organization; but vitality and organization previously influenced out and out in its molecular constitution, in its structural collocations, and consequently also in its entire functional response, by the incessant surface-play with these same outside influences. It is through this perpetual interaction with outside powers that vital activity is kept going, and that its developmental specifications are effected. Through centralization of more and more completely elaborated and specifically reacting functions, the elementary sensations awaken more and more compound relational effects, resulting in the whole vital stir of our one moment of conscious realization,—the all-containing mental presence.

But, it will rightly be urged by Transcendentalism, even granting that through surface-specifications and centralizing unifications the sensibility of the organic individual becomes representative of its natural relations to the world of which it forms part, yet in order to know itself as a permanent being not completely dis severed into a succession of sensations, or into a sequence of even the most complex moments of consciousness, in order also to recognize the permanency of the outside influences affecting it, and its own power to transform such influences in conformity with its own steady purpose,—in order to accomplish all this, it must possess that self-identity which has hitherto resisted all philosophical and scientific elucidation.

It is indeed easy enough to assert that such an identity is implied in every fact of consciousness. But does it enlighten us in the least to be told that, as such identity can be neither of material nor of mental consistency, it must therefore necessarily be something quite different from either matter or mind, which wholly unknown something, for want of a better name, we will agree figuratively to call "spirit"?

If the matrix in which our entire past experience is preserved beyond consciousness, and from which, in consequence, our mental phenomena issue forth in due order, imbued with all the transcendental excellency which personal identity can impart; if this matrix is a spiritual entity, then we are completely debarred from any insight into the conditions and processes that underlie consciousness and its cognition. Under such a supposition, one has to fancy something inscrutable, whose

whole activity consists in experiencing self-originated changes, but which, nevertheless, remains itself identical, or ever unchangeably the same.

The most consummate dialectic skill and imaginative shuffling of data, carried on for so many centuries by our greatest thinkers, have failed to afford the least clew to this vexatious puzzle of speculative philosophy.

Now, as the assumption of a spiritual constitution underlying the facts of personal identity is a mere conjecture, ventured amid our speculative perplexity in elucidation of the results of such identity manifest among our mental phenomena; and as the conjecture advanced under these circumstances has proved powerless to explain, in any degree, the facts for whose explanation it was made,—we are surely justified in bringing forward another supposition, the merit of which we are quite willing to see likewise judged by the enlightenment that may be received from it.

We have here assumed that what we are all in search of—namely, the subject having as affection of its own the all-revealing mental presence—is in verity that existent which perceptually appears to us as our natural individuality. Everything we can learn concerning the development of vitality and organization, and concerning their behavior from beginning to end, in health and disease, seems to corroborate this view. And, if we can further detect some organic process which will account for the permanent identity of this subject being preserved amid the multifarious changes experienced by it, we shall have accomplished a good deal more in elucidation of personal identity than has ever been done by the spiritual hypothesis.

The outside influences affect the organism by specifically disintegrating the surface upon which they act, and the process thus initiated spreads centripetally within the structures of the organic individual. The vital reaction then consists in a reintegration of the structures thus deteriorated. This reintegration or restitution of the organic individual in response and in opposition to outside encroachment constitutes the fundamental activity of life. A living individual is one that maintains through structural repair its own identity amid incessant discerption by the infringing influences of its environment. Life consists essentially in this rhythmic pulsation, produced by the disintegrating effects from outside being met by identity-restoring integration from within. Preservation of individual identity amid inflicted modifications is involved in the very stir that produces and sustains life, or rather that is life itself.

And, when we further consider that the identity which is preserved intact by such vital activity is not like other things of this world the product of its own time, but brings with it into its present existence the slowly elaborated and accumulated vital results of countless bygone ages, we may come to understand with what store of endowed wealth the organic being is capable of encountering the momentary occurrences of its individual life. Thus, it happens that its vital reaction is incommensurate to any kind of mechanical effect. The laws of mechanical causation are totally inapplicable to its living response. In this instance, most decidedly, *Causa non aequat effectum*. Here, the effect, the reaction, is transcendental, teleological, having its root in adaptations established long ago, and reaching with its stimulated activity far beyond the present.

Moreover, the organic individual is in possession of spontaneity, of an intrinsically originating outflow of purposive action, in which its whole generic capacity is brought to bear upon its surroundings. Thus, its so-called motives have no analogy

with external stimuli, such as are compelling reflex actions or definite perceptions. They are in verity intrinsic predeterminations from out the transcendental and unitary depths of organic being, designedly influencing and transmuting outside existence.

If then, after much study and mature deliberation, it will be found that what we are capable of perceptually ascertaining with regard to organic processes throws much light on personal identity and kindred problems, it will still remain unintelligible to many how an organic individual, even when admitted to be vitally capable of preserving its own identity, can come to be the bearer of super-individual truth; how the facts of its own isolated consciousness can represent universally valid experience.

In the probing of this final and supreme problem of knowledge, the recent disclosures of organic evolution point out the way to a natural solution. They have no doubt that faculties acquired, as well as such originally possessed by parents, are transmitted to their offspring. Now, this being so, it is in the highest degree marvellous and awe-inspiring to contemplate how very little of specific individuality or distinctive personality there can actually dwell in each of us; how our whole being is all but completely the product and exponent of generic gifts, bequeathed to us by our ancestry. Thus, though enclosed in the visible limits of circumscribed individuality, our nature is almost wholly of hyper-individual import. You and I are radically, essentially One,—not, indeed, by dint of the conscious play separately at work within each of us, for the mental phenomena arising in the hidden recesses of our wholly secluded inner life can, as such, in no way be shared or apperceived by any other person. You and I can therefore not be one by the substantial unity of anything mental, whatever rationalistic Transcendentalism may assert to the contrary. That which makes us truly one lies far beyond the ken of all mentality. We are, in reality and not only figuratively, one being, one flesh and blood, one substantial reality, by means of our most specific community of inherited organization, amounting to all but perfect identity of nature. Therefore, and therefore only, the truth realized by me in conformity with my natural surroundings is also the truth realized by you. Indeed, the truth universally realizable by all beings sharing the same organization.

Organic identity is not material, but transcendental. In our own personality, it is not due to any identity of component elements entering into the constitution of our body; for these component elements are, during vital activity, continually thrown out and replaced by new ones. Likewise, the generic identity and substantial unity of the multitude of individualities composing Humanity are states of being not in any way dependent on the material identity of the substance composing the sundry human bodies, but altogether dependent on identity of organization, on sameness of molecular constitution and structural arrangement; an essentially constructive power holding complete sway over its building material, a hyper-individual, all-efficient, rejuvenescent power, rigorously bequeathed to all of us ready-made, and not arising in the course of our separate, individual development.

In the rise of time, after endless preparatory upheavals, vitality, through ages upon ages of never-flagging perseverance, under most sifting trials of competency, has succeeded in triumphantly establishing, within the actual presence of an individualized form, the life-won results of all terrestrial and cosmical interaction. The living being, steeped in a wild commotion of clashing elements amid a

vast tumult of insentiently blending and parting influences, sustains itself an organized consolidation of every essential relation. Most manifoldly attuned, most harmoniously unified, it realizes within the phenomenal repose of its delicately quivering sensibility the grand intrinsic concord of progressively speeding nature. Truly, the organized result of vital exertion, seemingly so frail and perishable, is, nevertheless, the only self-preserving and controlling reality in a universe of restless and obliterating change. Let the unremitting toil of vitality suspend but one moment its stupendous, its all-conserving, all-revealing activity, and where would remain the sense and beauty of our world?

It is this mighty, ever-renovating pulse of life, with its time-conquering, eternalizing beat, that actually originates and quickens the perduring configuration of our transitory bodies, coercing into typical and world-responsive order the stray and lapsing stuff of which they visibly seem composed. With all ties of blood-relationship to the very core of his existence, the present human being is heir of foregone achievements here below; bearer of the whole organized wealth of creation, livingly wrought in evermore complex and significant involution and ascension, and—notwithstanding the inexorable decline of all individual life—artfully extricated in faithful rejuvenescence and renewed zeal from the ghastly pyre of immolating time.

And, this present embodiment of all the fruit of victorious life, we, now here, are sole links to futurity, sole reliance of forthcoming ages. To our safe keeping and undefiled transmittance are intrusted the precious pain-wrought acquisitions of our race. Shall we then for any visionary hankering after individual bliss forsake the world-wide vital mission ingrained in every fibre of our mystic frame? Shall we, as called upon by "Transcendentalism," for the dream of an incommensurable self-beatitude or spiritual quiescence desert the creative task allotted to us by whatever is underlying nature and all its unaccountable growth,—the task here among our fellow-beings, under joy and anguish, to work out the higher life of that all-comprising organization of which we are veritable impersonations?

THE following lines to Mr. William J. Potter, on the twenty-fifth anniversary of his ministry in New Bedford, are here copied "unbeknownst" to him:—

Of Quaker blood and Pilgrim stock,
Firm in the truth as Plymouth Rock,
A tender shepherd of his flock;
His soul full fed by inner light,—
A burning lamp in error's night,
Shining, with added years, more bright.

In silent majesty, he met
The bigot's scorn, the friends' regret,
In faith and duty firmly set:
He knew that truth would win at last,
The walls of error low be cast
By reason's steady bugle blast.

On life's serene, high table-land,
This calm, strong prophet took his stand,
Truth's universe at his command.
In all God's works, he found no flaw,
No print or sign of broken law,—
Order divine inspiring awe.

Through good report and ill, his word,
By pen and speech incessant heard,
A million hearts have grandly stirred.
Free thought, free speech, free truth he sought,
And felt no victory dearly bought
Which freedom gave to fettered thought.
My brother, you have grandly wrought!

A. J. RICH.

FALL RIVER, MASS., Dec. 28, 1884.

Lo! as hid seed shoots after rainless years,
So good and evil, pains and pleasures, hates
And loves, and all dead deeds come forth again,
Bearing bright leaves or dark, sweet fruit or sour.
—"The Light of Asia."

CORRESPONDENCE.

THE RIGHTS OF LABOR.

Editors of The Index:—

There is no doubt that working men and women are often liable to color their logic with their feelings, when they try to trace out the reasons that produce misery among them as a class, and cause their labor to occupy a degraded position as compared with that of capital. Nevertheless, when Prof. Denslow says, as reported of him in the last issue of *The Index*, that inequality in the distribution of wealth is necessary to its greatest production and its greatest enjoyment, he states a truth that is only one-sided in its application.

If wealth unequally distributed is necessary to its greater production, then greater production means more unequal distribution supplemented by greater inequality in its common enjoyment. Wealth is the product of labor, either directly from labor or indirectly through capital. Yet capital wants it all. Being organized, it trades upon the necessities of unorganized labor. In its action, it projects itself far beyond the sphere of its natural and just functions. The earnings of the laborer go into the pockets of the capitalist. The capitalist groans as he doles out to the laborer that portion necessary for the maintenance of his animal existence. The capitalist enjoys life, plus its comforts and luxuries. The laborer has life, minus the rightful enjoyments of those things which the products of his labor give another. The laborer sows, the capitalist reaps. The capitalist has the harvest, the laborer the gleanings. More than this for the laborer would produce shrinkage in monopolized wealth; and such shrinkage, bringing about a more equitable distribution of labor's products, would, according to Prof. Denslow's version of the gospel of Capitalism, stop all trade, all commerce, all business. Organized capital can do no more for the world than can organized labor representing itself.

One noting the sharp contrasts between the rich and the poor, as presented by our large cities where such contrasts are most striking, must surely believe there is something wrong in existing social conditions, or be a firm believer in the doctrine of pessimism. Greed is the mainspring of capital's action, and arrogance has now become one of its principal characteristics. The laborer now has no rights which the general run of capitalists feels bound to respect. Go through any of our workshops to-day and ask gray-headed mechanics if there exists now among American workmen that manly independence and dignity which existed among them fifty years ago. They will tell you, No! In its place there has developed among hundreds and thousands of workingmen, from motives of expediency and personal policy, a cringing servility toward employers, that is simply disgusting,—the result of a false class distinction which capital has created. And this class distinction threatens to become as clearly and as sharply defined as any that ever existed in the monarchical countries of Europe. No workingman, having average intelligence, can help but notice that the tide of current events is setting stronger and stronger against him. He realizes that the centralization of wealth in the hands of a few means a greater poverty among the poor. Capital is telling him that he ought to be satisfied so long as he is allowed the privilege of barely being able to meet the living expenses of himself and family. The inevitable tendency of such a state of things is to lower the moral and intellectual standard of the masses, and to bring about social conditions that must necessarily be out of harmony with those simple principles of right and justice which are the only basis upon which transactions between man and man should be conducted.

GEO. H. HADLEY.

HOPE VALLEY, R.I., March 8, 1885.

HINDRANCES TO CHRISTIANITY IN CHINA.—Wong Ching Foo thus summarizes in the *Christian Advocate* the causes which, in his opinion, have prevented success of Christian missionary labors in China: "The mistakes which have aborted the attempts to Christianize China are manifold. Their number is too great to do more than call the roll; and a weary, pitiable roll it must be to the Christian, an exasperating one to the Chinese: 1. Assaults and robberies by the Christian

powers: Russia's repeated direct attempts upon Chosan and Ho-Thao, and attempts by emissaries upon Thsiang-Hai, Min-yet, and Thibet; England's seizing Hong Kong, and, with France, forcing opium on the Chinese at a cost of fifty thousand lives; France's latest war on Ton-Quin, Tai-wan, and Foo-Chow; Germany and Russia's helping the Tae-Ping and other rebels; the hoodlum law of the United States, and the persecution of innocent Chinese; the creation and extension of the coolie slavery by nearly all the great powers combined. 2. The diplomacy, armies, navies, and wars of the European nations. 3. Trade iniquities, such as adulteration, falsification, forgery, false invoices, and bogus insurance, against which the Chinese merchants and government have frequently, but vainly protested. 4. The sending out of comparatively uncultured missionaries to a race with whom culture is the chief fact in life. 5. The employment of missionaries, books, etc., using a Chinese that occasions ridicule, and conveys few or no ideas. 6. The underpayment of missionaries in a land where a man's salary is universally considered the measure of his value. 7. The fanaticism and intolerance displayed by nearly all the sects of Christianity each toward all the others. 8. The ambition of the Roman and Greek Catholic Churches to acquire land for ecclesiastical purposes in a country where each particle of territory must be utilized to sustain life. 9. The immoral tone of our newspapers, social conversation, and books, and the universal profanity and drunkenness of the Anglo-Saxon race. 10. The neglect of missionaries to form schools, and to show the sanitary, scientific, social, and pecuniary advantages of Christian civilization. 11. The harsh treatment of the Chinese, especially in the United States."

BOSTON UNITARIANISM.—From a letter in the *Religio-Philosophical Journal* from a Boston correspondent, "Grapho," we take the following: "The Arlington Street Church was for a time in a rather critical condition, but under the labors of Brooke Herford it has gained its vitality. James Freeman Clarke has a prosperous society. The church of Edward Everett Hale is in a fair condition, though needing the infusion of a little young blood into the pulpit to give it the highest vitality. Minot J. Savage has a full congregation, and seems to be gaining strength yearly. Rufus Ellis, of the First Church, H. W. Foote, of King's Chapel, and Brooke Herford, of the Arlington Street Church, represent the most conservative element of Boston Unitarianism, while Minot Savage is in the van of the liberals. The most liberal of the Unitarians, however, retain traces of the old theology. They seem to be reaching out for the new with one hand, yet keeping a firm hold upon the old with the other. They have discarded the most obnoxious features of Orthodoxy, but the forms which they retain savor of the past. That which is suggested by their forms is inconsistent with what is uttered in their sermons. They do not believe that God can be influenced by petitions, yet they offer up what they call a prayer. This is mere form, and their manner shows it. They deliver excellent prayers, as far as rhetoric is concerned, and one often feels like applauding; but their spiritual potency is about the same as that of an apostrophe to the law of gravitation. They lack earnestness. The speaker knows his prayer will not be answered, and he doubts whether it is heard even outside the walls of his church. Much Unitarianism is an attempt to put new wine into old bottles, and the bottles already begin to leak. One cannot jump half way down a precipice. Unitarians have jumped off the orthodox precipice, but many want to stop before they get to the bottom. Nothing would frighten some Unitarian ministers of this city so much as a plain, blunt statement of their belief and its logical consequences; laying aside all euphony, and showing that they practically hold the Bible in no higher estimation than other books, Jesus in no higher authority than other good men, and that they really repudiate all supernatural authority, and accept the reason of man as the highest criterion of truth and duty." Still, "Grapho" thinks, "the general movement of New England Unitarianism is forward."

PHILIP GILBERT HAMERTON, having complained in a recent number of the *Publisher's Weekly* that a "New York pirate" had got hold of his work, *An Intellectual Life*, and added that a copyright law "would be a benefit to all honest men, including American authors, who would be spared part of the rivalry produced by flooding the States with cheap pirated reprints," Mr.

John B. Alden, the publisher referred to, has addressed to Mr. Hamerton an open letter, from which we extract the following:—

Of course, it warms the blood a little of an honest man to have another honest man call him a knave. When discussion gets to that point, argument is cut off. . . . I am, and long have been, heartily in favor of giving authors the control of their productions upon *their own terms*, within the limits of the bounds of common sense. It would hardly be practicable for us to pay copyright to Homer, and it may be an open question as to when Macaulay's heirs should cease to receive their tax. There is, of course, some limit. Honest "doctors disagree" as to points of equity, expediency, and the best methods of bringing a happy future out of the evil present. The laws of this country (and I believe the same is true of all countries) are not as you and other authors desire they should be. . . . Where is the common sense of characterizing me as a "pirate," because I multiply copies of your book from the copy I bought and paid for, more than in applying the same term to one who reads the book aloud to a dozen friends, who consequently do not buy it, or more than applying it to you for appropriating the language and thoughts of the patriarch Job in one of your books without giving him any payment. You give "credit," doubtless, to the authors whom you quote; but you give them no pay. I give you credit, but no "pay" beyond the copy I buy, *thou art able to secure a change in the present unsatisfactory laws*. . . . I do not pretend to be the reader's especial champion; but I do look at the question of the "intellectual life" for them from their stand-point as well as from that of the author. And it is amazing to me that an author of your high character,—intellectual, humane, and Christian (whose inspiring words, "The humblest subscriber to a mechanics' institute has easier access to sound learning than had either Solomon or Aristotle," I have placed before millions of readers),—that you should seem to take no pleasure in the fact that the best literature of the world has by my efforts been placed within the reach of millions to whom it was before unattainable; that I give to you an appreciative audience (far more appreciative than you find among your wealthy patrons) among tens of thousands, who, without my efforts, would never have known you.

BOOK NOTICES.

DEVELOPMENT OF ENGLISH LITERATURE AND LANGUAGE. By Alfred H. Welsh, A.M. Chicago: S. C. Griggs & Co. 1882. In two volumes.

These two large and handsome volumes, written by a Western man and published in the "Queen City of West," give evidence that not only "empire," but scholarship "westward takes its way." The author of this work, in his somewhat extended "prologue," states that his "supreme anxiety has been to produce not a brilliant but a useful book." We think he has in a measure accomplished both results. He writes from a decidedly progressive and scientific standpoint. To give our readers an idea of the breadth and scope of this work, we quote somewhat at length from the "prologue," or introductory chapter, which begins thus: "A nation's literature is the outcome of its whole life. To consider it apart from the antecedents and environments which form the national genius were to misapprehend its nature and its bearing. Its growth in kind and degree is determined by four capital agencies: Race, or hereditary dispositions; Surroundings, or physical and social condition; Epoch, or spirit of the age; Person, or reactionary and expressive force. . . . A history of English literature requires therefore a description of English soil and climate, of English thought and English character as they exist when first the English people come upon the arena of history, of the growth of that character and that thought as they are colored by the foreign infusion of Celt, Roman, Dane, and Norman. . . . Nor can any man understand the American mind who fails to appreciate its connection with English history, ancient and modern. . . . I have aimed at the golden mean,—a judicious union of facts and philosophy, of narrative and reflection, of objective description and subjective meditation." This literary history is divided by the author into periods, which he names according to what in his view are the predominating characteristics; and the history of each period is prefaced by a sketch of its politics, the state of society, poetry, religion, the drama, the novel, the periodical, history, theology, ethics, science, and philosophy. The leading authors of each period are discussed under the classified headings of Biography, Writings, Style, Rank, Character, and Influence.

From the beginning of the Christian era to the thirteenth century, he includes the "Formative" period of English literature, with Cædmon, Bede,

Alfred, and Roger Bacon as its representative authors. The other "periods" are the "Initiative," with Mandeville, Wiclif, and Chaucer as representatives, Caxton alone represents the "Retrogressive" period. More, Sidney, Hooker, Raleigh, Spenser, and Shakspere lead in the "First Creative" period. Ben Jonson, Lord Bacon, and Milton are the leaders of the "Philosophic" period. The "First Transition" period owes most to Bunyan and Dryden. The "Critical" period is marked by the advent of such writers as Steele, Addison, De Foe, Swift, Pope, Richardson, Fielding, Hume, and Samuel Johnson. The "Second Transition" period gave us Gibbon, Goldsmith, Burns, and Cowper; and the "Second Creative," Scott, Wordsworth, and Byron. To-day he entitles the "Diffusive" period, and cites, as its leaders in literature, Dickens, Carlyle, George Eliot, Tennyson, Hawthorne, Longfellow, and Emerson. The names mentioned do not by any means include all those whose lives and writings are reviewed in these two volumes. Each biographical sketch is accompanied by characteristic extracts from the writings of the subject.

The general tone of the work is broad and liberal, the style terse and bright. There is a very complete index, and also a list of the authorities consulted by the author. This list comprises about one hundred and fifty standard and reliable works and writers. On the whole, the book is a very valuable addition to our national literature. We give part of the closing paragraph of the concluding chapter as a specimen of the author's spirit, style, and thought: "Who knows where we are in the duration and development of the race? In the cradle still, or in opening manhood? By the same divine law of evolution, we, too, in turn shall be outstripped. . . . The latest civilization will be a suggestion of new and higher possibilities. The golden ages are before us. On, ever on, toward the flying Perfect!"

S. A. U.

MIND-READING AND BEYOND. By William A. Hovey. Boston: Lee & Shepard. 1885. pp. 201. Price \$1.25.

There are few people who are not more or less, directly or indirectly, interested in the different phases of the subject treated in this volume; and, to many minds, it has an extraordinary fascination from the mystery in which it is involved. To the unthinking, that fascination comes merely from the mystery which seems to them to partake of the miraculous and supernatural, and so panders to their love of the marvellous. To the thoughtful and investigating mind, the attraction is also because of the mystery which opens possibilities of scientific discovery. It is in this spirit that the author of this volume approaches his subject. "It will naturally be asked," he says, "What good is expected to grow out of the study of these so-called 'occult' phenomena? The general answer is that nothing but good can come out of the study of nature. It is something to free men's minds from delusion as to the supernatural." The main portion of the book is devoted to a republication, in a condensed form, of the records of the experiments of a committee appointed by the London Society for Psychical Research to investigate the phenomena of so-called "mind-reading." Mr. Hovey seems inclined to believe that these experiments have thrown considerable light on a subject involved in much doubt and mystery. He quotes Prof. Henry Sidgwick, of Trinity College, England, the president of the Society for Psychical Research, as declaring that, "considering the importance of the questions still in dispute, as compared with other scientific problems on which years of patient and unbroken investigation have been employed, it may be said that no proportionate amount of labor has yet been devoted to these problems." The author sensibly says, "Until we have exhausted the possibilities of Nature and have discovered all of Nature's laws,—as yet we know but few of them,—let us be content to believe that our failure to understand a thing does not necessarily involve the inability of natural law to account for it."

Mr. Hovey is himself so deeply interested in this psychic research that he concludes the last chapter by asking those readers "who have within their knowledge well authenticated cases of the occurrence of any of these phenomena, if they find it agreeable and convenient," to communicate them to him. He would prefer the real names and addresses of such parties, though that is not a necessary condition. "What is absolutely essential is that the facts be attested by the full name and address of one or more persons who know them of their own knowledge."

Any such communication will reach him, if sent to the care of his publishers, Lee & Shepard, of this city.
S. A. U.

PARADISE FOUND. The Cradle of the Human Race at the North Pole. A Study of the Prehistoric World. By William F. Warren, S.T.D., LL.D., President of Boston University, Corporate Member of the American Oriental Society, author of *Anfangsgründe der Logik, Einleitung in die Systematische Theologie, The True Key to Ancient Cosmology and Mythical Geography*, etc. Boston: Houghton, Mifflin & Co. pp. 503. Price \$2.00.

We have no reason to doubt the statement of the author that this volume "is a thoroughly serious and sincere attempt to present what is to the author's mind the true and final solution of one of the greatest and most fascinating of all problems connected with the history of mankind." The problem is, Where was the Garden of Eden? That a man who can add to his name "LL.D.," and who is "President of Boston University," should regard this as "one of the greatest and most fascinating of all problems connected with the history of mankind," although it may seem strange to some, will surprise none who know what kind of men are at the head of many of our institutions of learning. Dr. Warren thinks that the primitive Eden was at the North Pole. Could some new Columbus penetrate to the polar region, our author believes "he could but hurriedly kneel amid a frozen desolation, and dumb with a nameless awe, let fall a few hot tears above the buried and desolated hearthstone of humanity's earliest and loveliest home." The author shows literary culture and a smattering of science; but his book proves nothing, and is no contribution to the world's knowledge. That the earth was peopled and stocked with animals and plants from arctic regions may possibly be true, but, in the present state of science, the theory does not admit of proof; and, as for the fabled Garden of Eden, the evidence against its existence at any time or in any locality is strong in proportion to the evidence in favor of the theory of evolution. Dr. Warren has gleaned passages here and there from some men of science to give a scientific cast to his theory; but, while they indicate his ingenuity, they do not show that his views are sustained by the authors whom he quotes. The book contains some fallacies which no reader who has a fair acquaintance with geology, paleontology, zoology, and ethnology can fail to see, some acknowledged facts, numerous literary embellishments, and a multitude of assumptions which at present admit neither of proof nor of disproof.

B. F. U.

ADMIRAL DAVID D. PORTER in the April *Century* contributes to the war series a striking paper on "The Opening of the Lower Mississippi." Accompanying the article are portraits of Admiral Faragut, Admiral Porter, Capt. Theodorus Bailey, Gen. Butler, who was in command of the land forces, Gen. Lovell, the Confederate commander, and other leading participants in the conflict. Besides the portraits there are maps, plans, and pictures of incidents. George W. Cable, in a brief article, gives a spirited description, from personal observation, of "New Orleans before the Capture." Theodore Roosevelt contributes a paper on "Phases of State Legislation," in which he reveals the methods of the lobby and the perils which beset legislators. A reply to Mr. Cable's recent paper on "The Freedman's Case in Equity" is contributed by Henry W. Grady, who writes under the title "In Plain Black and White." Another article of political interest is a discussion of the causes and probable disappearance of "The Solid South," by Edward P. Clark; and in "Topics of the Time" are editorials entitled "Practical Politics," "Not the American Way," "The Attempt to Save Niagara," and "The Difference between a Painting and a Pound of Sugar," the last with reference to the movement for free art. "A Florentine Mosaic," Mr. Howells' second illustrated paper on Florence, is the opening article in the magazine, a reproduction of Mr. Pennell's etching of the Ponte Vecchio being the frontispiece. Eugene V. Smalley describes his journey "From Puget Sound to the Upper Columbia." Dr. Edward Eggleston's "Colonists at Home" is one of the most popular of his series on life in the Colonies. The fiction of the number includes the sixth part of "The Rise of Silas Lapham," by Mr. Howells; the third part of "The Bostonians," by Henry James; and a humorous short story by Col. Richard Malcolm Johnston, entitled "The Mediations of Mr. Archie Kittrell," accompanied by character sketches by

E. W. Kemble. The poetry is contributed by Mrs. Helen Jackson (H. H.), Mrs. Louise Chandler Moulton, Anne R. Aldrich, and C. H. Crandall; and, in "Bric-à-Brac," by Frank D. Sherman, Miss Alice Trumbull Learned, Margaret Vandegrift, and others. —Cupples, Upham & Co.

THE April number of the *St. Nicholas* opens with a frontispiece illustration by W. St. John Harper of "The Gilded Boy," a true story of a Florentine pageant in 1492. In the "Historic Girls" series, E. S. Brooks tells the story of the girlhood of "Zenobia of Palmyra," as based on information recently brought to light by Eastern scholars, which is timely, in so far as it shows a prototype of the events of to-day,—a mighty European power humbled and held at bay by the Arabs of many centuries ago. Coming to more modern days, there is a sketch of Bach, which forms the first of a series of brief biographies, by Agatha Tunis, of the great musicians "From Bach to Wagner." Lieut. Schwatka tells, in "Children of the Cold," of some of the popular games of the Eskimo; while Charles Barnard, in "The Boys' Club," relates how some little New York savages, that have been caught and tamed, amuse themselves in a fine clubhouse. Another "Ready for Business" paper discusses the chances for young men in the field of practical chemistry; and E. P. Roe, in "Driven Back to Eden," contributes some sound advice to young tillers of the soil. "Among the Law-makers" contains an amusing chapter on the pranks of the Senate-pages, ushered in by April Fool's Day; and J. T. Trowbridge's serial, "His One Fault," goes brightly on. Of the many other features of the number, a few are: a beautiful double-page picture called "Easter Morning"; the story of mining camp pussy, entitled "The Conscientious Cat"; a poem by Celia Thaxter; one by Margaret Johnston, illustrated by Jessie McDermott; and another, called "Who's Afraid in the Dark?" with a full-page picture by R. B. Birch. Many readers will be interested in the announcement of the names of the winners in the prize-story contest for girls.

THE *Revue de Belgique* for February opens by picturing the first fire of youth in its struggle against conservative influences. Then comes the conclusion of "Le Curé Jadouille," a story showing how much good may be done by a good-natured and worldly-minded priest. But, next, we have an account of the war now going on in Belgium for the public schools against the blighting tyranny of Roman Catholicism. The notice of the Russian novelist, Feodor Mikhailovitch Dostolevsky, is followed by the last of a curious series of articles, telling how the loss of a nose or a lip may be repaired by grafting on another. What is probably an unintentional, but not an altogether unnecessary appendix to these last statements is furnished by a lively narrative about who the devil of a haunted house turned out to be in reality.

THE RISE OF INTELLECTUAL LIBERTY FROM THALES TO COPERNICUS.

By FREDERICK MAY HOLLAND,

Author of *The Reign of the Stoics*. Price \$3.50.

The author of this book has chosen a magnificent subject; and, although it is formidable in extent and much of it involved in obscurity, and all of it complicated with great questions of history and human progress, he has yet been able to throw much new light upon that liberalization of thought which went very unsteadily forward during twenty-two hundred years, before the great modern movement of the development for intellectual liberty. The work is a delineation of tendencies, a series of sketches of the great minds who at different times and under varied circumstances, and with unequal effect, have struck for independence of thought, a presentation of the counter-forces that have antagonized intellectual liberty, and an account of the working of all those larger agencies which have in different degrees hindered or promoted freedom and independence of thought. Without having subjected the work to critical scrutiny, we are much impressed by the evidence it shows of extensive and conscientious labor, the freshness and interest of its chief subject-matter, the untrammelled treatment of the subject, and the vigor of the portrayal of that long and agonizing conflict with bigotry and intolerance, religious and political, public and private, which is the price of our modern liberty of thinking.—*Popular Science Monthly*.

The volume shows remarkable research, keen powers of analysis and comparison, close reasoning, and fairness of judgment. It will be found an invaluable help to the student, who will be glad to learn that the author contemplates a second volume, which will bring the subject down to the time of the French Revolution.—*Boston Transcript*.

For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

Pirates, AUTHORS, and CHEAP BOOKS.

The following extract from a letter from the well-known Author and Artist PHILIP GILBERT HAMERTON appeared in a recent number of the New York Publishers' Weekly:

"I saw by the advertisements in American periodicals that a New York pirate had got hold of 'An Intellectual Life.' We sadly need a copyright law. It would be a benefit to all honest men, including American authors, who would be spared part of the rivalry produced by flooding the States with cheap pirated reprints. Yours very truly, P. G. HAMERTON."

To which I beg leave to reply as follows:

DEAR SIR.—The above note evidently refers to me, as I am the one publisher who has reprinted the work referred to at a low price. Of course it warms the blood, a little, of an honest man, to have another honest man call him a knave. When discussion gets to that point, argument is cut off. I will, however, make a few points on my side of the case.

First.—I am, and long have been, heartily in favor of giving authors the control of their productions upon *their own terms*, within the limits of the bounds of common sense—it would hardly be practicable for us to pay copyright to Homer, and it may be an open question as to when Macaulay's heirs should cease to receive their tax; there is, of course, some limit; honest "doctors disagree" as to points of equity, expediency, and the best methods of bringing a happy future out of the evil present.

Second.—The laws of this country (and I believe the same is true of all countries) are not as you and other authors desire they should be. Evidently, too, it is quite as useless for authors to expect to get what they want without a *CHANGE in the laws*, as to hope to reach the result by calling publishers bad names. Where is the common sense of characterizing me as a "pirate" because I multiply (within the bounds of law and of custom since the time of Cadmus) copies of your book from the copy I bought and paid for, more than in applying the same term to one who reads the book aloud to a dozen friends, who consequently do not buy it—or more than applying it to YOU for appropriating the language and thoughts of the patriarch Job in one of your books without giving him any payment—you give "credit," doubtless, to the authors whom you quote, but you give them no pay,—I give YOU credit, but no "pay" beyond the copy I buy, till we are able to secure a change in the present unsatisfactory laws.

Third.—General Grant once said, "The best way to get rid of a bad law is to enforce it;" that is my theory, and I shall continue to practice upon it; I expect to aid in securing to you by "enforcement" of the legitimate consequences of the present laws, what authors would never get by whining or growling. Some people give to my methods the credit of being, possibly, the largest single influence which is working in this country to bring about the much desired change in the laws.

Fourth.—While authors certainly have their "rights," readers have some rights also. When I was a boy under fourteen years of age the good literature accessible to me was limited, nearly, to Murray's English Reader, and Josephus' Works. I do not pretend to be the reader's especial champion, but I DO look at the question of the "intellectual life" for them from their standpoint as well as from that of the author—and it is amazing to me that

an author of your high character, intellectual, humane and Christian (whose inspiring words "The humblest subscriber to a mechanics' institute has easier access to sound learning than had either Solomon or Aristotle," I have placed before millions of readers)—that you should seem to take no pleasure in the fact that the best literature of the world has by my efforts been placed within the reach of millions to whom it was before unattainable; that I give to YOU an appreciative audience (far more appreciative than you find among your wealthy patrons) among tens of thousands, who without my efforts would never have known you. I say readers have rights as well as authors; what they are I will not discuss; I say, simply, let the laws be changed as authors demand; while Homer, Shakespeare, Milton, and Lamb are free to readers, any "monopoly" which living authors can secure upon their own writings will not seriously hurt readers—and, furthermore, folly in law-making, if foolish changes should be made, would be likely soon to work its own cure, in this age of the printing press.

Finally.—Hamerton's "Intellectual Life" ought to sell by the hundred thousand—ought to sell a hundred where it has sold one by the methods of your approved publishers; when the "good time coming" is here, and authors can make their own terms with publishers and the public, perhaps you will give me a little credit and thanks for the *LARGER* audience you will then have because of my present "piracy." Respectfully, JOHN B. ALDEN.

SOME "Pirate" PRIZES,

In which the book-loving public are joyfully sharing. — 100-page descriptive *Catalogue* sent free to any applicant.

HAMERTON'S "THE INTELLECTUAL LIFE." Price reduced from \$2.00 to 50 cents in cloth binding, \$1.00 in Russia, gilt edges.

GUIZOT'S HISTORY OF FRANCE. 8 vols., 436 illustrations. Reduced from \$36.00 to \$8.00—cheaper edition, \$5.00.

RAWLINSON'S SEVEN GREAT MONARCHIES. Reduced from \$18 to \$3.00—in 3 vols., over 700 illustrations.

IRVING'S WORKS. In six large volumes, price \$4.00—better edition than sold three years ago for \$25.

PRESCOTT'S GREAT WORK, Ferdinand and Isabella, reduced from \$4.50 to \$2.00—in our fine illustrated edition in 2 vols.; cheap edition, 1 vol., \$1.25.

GEORGE ELIOT'S WORKS, complete in 5 vols., elegant cloth binding, price only \$3.75.

SCOTT'S WAVERLEY NOVELS, complete in 12 vols., illustrated, only \$7.00—printed from same plates as edition sold three years ago for \$30.00.

Books by Mail require 20 per cent. extra to prepay. Mention this paper.

RELIGIO - PHILOSOPHICAL JOURNAL.

Established in 1865.

A Paper for all who Sincerely and Intelligently Seek Truth without regard to Sect or Party.

The JOURNAL, in the estimation of a large proportion of the leading authorities on Spiritualism, stands pre-eminent as a fearless, independent, judicious fair advocate of Spiritualism. It has received more general notice, and more frequent and higher commendations from intelligent sources, regardless of sect or party, than any other Spiritualist or liberal paper ever published: the records will confirm this.

The JOURNAL is uncompromisingly committed to the Scientific Method in its treatment of the Phenomena of Spiritualism, being fully assured that this is the only safe ground on which to stand.

The JOURNAL is unsectarian, non-partisan, thoroughly independent, never neutral, wholly free from cliques and clans.

CURRENT TOPICS.

BY B. F. U.

It is often remarked that Fast Day, in this State, which was observed last Thursday in the usual manner, should be called feast day. The Boston Transcript, in an editorial entitled "A Venerable Imposture," observes: "As the day, however, has drifted far away from its original purposes, as none but the hungry fast, and as very few go to the church compared with the thousands that pack the theatre, why not cordially and freely acknowledge the change, and proclaim it a holiday, instead of calling it a holy day, long after it has ceased to be such? Far be it from us to deprecate these pleasant gatherings, these joyous feasts, this day of merriment subdued in sympathy with the gray season. That the right of the New Englander to a resting-day between two trying seasons is well established ought to go unchallenged. But why call this resting-day what it is not, what it never will be again? Why officially adjure people who are determined to feast to fast? Custom has made it a day of feasting and amusement, as custom made it a day of fasting and meditation. Why not candidly and frankly acknowledge the change, of which every one is conscious?"

We had the pleasure a few evenings ago of addressing in Providence, R.I., at the residence of Mr. James Eddy of that city, a Herbert Spencer Class, on Spencer's *Principles of Psychology*. The Class had just finished a study of this work extending through many months, having before devoted about a year to *First Principles* and *Principles of Biology*. The usual exercises of the Class consist in reading several pages of Spencer, to which the members are supposed to have given some attention previously, and discussing informally the views and reasonings of the author. The most subtle philosophic thinkers of the Class, which includes some of the best minds of the city, it is admitted, are women, who, at the meetings we have attended, have shown ability to follow Mr. Spencer in his most profound reasonings and his most abstruse thought. At a time when ignorance, a desire to gain the influence of a great name in support of theological assumption, or policy, or all

combined, lead to frequent misrepresentations of Spencer's thought, it is gratifying to know that there are a number of societies in this country making his views a subject of careful study.

THE *Freidenker* of March 29 calls attention to the discussion now going on among European Freemasons as to continuing the qualification of belief in a personal God. The Grand Orient of France abolished this test in 1877, and, in consequence, is refused fellowship by the English Grand Lodge, presided over by the orthodox and immaculate Prince of Wales. The protests of the French Freemasons—that their position does not imply that they are atheists, but simply that they are in favor of liberty and fraternity, unlimited by theological belief, in their order—do not seem to have had any effect in securing them the recognition of the "regular" Grand Lodges. The whole correspondence will soon be published. In this country, some of the Grand Lodges have decided that belief in Christianity, the Bible, or a future state, is not a necessary qualification for admission to the order. But none of them have gone so far as to recommend even the removal of the test which has been a subject of discussion among European masons. It might be well to form some Masonic Lodges in the United States under charters obtained from the Grand Orient of France. "Old landmarks," when they become obstructions to progress, should be removed. Masonry should abolish its religious tests, open its doors to women, modify its ritual, and become in every respect a modern institution.

THE *Christian Statesman* is now troubled because Gen. Grant is unconcerned about his soul, "and is making no serious preparation for the great change which is before him." "The prayers of Christian people," it says, "ought to ascend continually to God in his behalf." Two questions are suggested: Is a man's eternal future determined by his character as manifested in word and deed through a lifetime or by the state of mind induced by external influences during the bodily and mental debility preceding death? Does the intervention of God in "behalf" of a creature he has made, and whose every thought and motive he understands, depend upon "the prayers of Christian people"? The *Christian Statesman* seems to think that Gen. Grant is too great and good a man to be damned, and that God, uninfluenced by "the prayers of Christian people," does not think him good enough to be saved. Hence, the need of numerous and oft-repeated petitions to the Almighty in behalf of the great leader of our armies, whose sufferings during these last days of his life have aroused the sympathies of the nation whose soldiers he led to victory and honor. Fortunately, the number who can be satisfied to think of the Eternal Source of phenomena as an anthropomorphic being of barbarous or semi-civilized moral characteristics is "growing small by degrees and beautifully less."

SEVERAL churches in Montreal have paid their assessments for the improvement of Dominion Square. Against the churches which have refused to pay, the municipality has commenced legal pro-

ceedings to recover the amounts claimed. One of the churches, it is stated, will base its defence upon the capitulation of Canada to Great Britain, the articles of which required the conquerors to observe certain terms toward the conquered. It is, on the other hand, denied that these articles of capitulation can have the effect of a perpetual concordat, and abridge the liberties of the people in whose behalf they were made. We should here state that churches and parsonages and benevolent institutions are exempt from annual taxation by the charter of the city of Montreal, granted by the legislature of the Province of Quebec. The assessment for Dominion Square is for a special improvement that is levied on that particular locality, and not on the whole city; and it is therefore thought that the exemption does not apply. The question of repeal of exemption has already been brought up in the city council; and, a mayor of liberal views having recently been elected, such questions have a better chance now than formerly of receiving consideration. The religious exemptions in Montreal are equal to a tax of 60 cents per head of the entire population, or say \$3 a family. The total property exempted under this head is valued at about eight millions, on which the taxes would be, at 12 cents per \$1,000, \$96,000.

IN one of his recent sermons, Mr. Beecher said: "I am profoundly religious in my views and in what is needed for men. If I forbear and withhold, it is to carry people with me little by little,—not breaking away from old beliefs so suddenly that they fall into the gulf of infidelity, but laying plans here and there, so as to help their developments. It is said that I am not orthodox. If I am thankful for anything, it is for that, if the confession of faith is Orthodoxy." Mr. Beecher's sermons, although in many respects very able, do not indicate that he has any well-defined, consistent, and carefully reasoned system of philosophy or religion; but he has caught glimpses of modern rationalistic thought, and he has lost faith in much of the theology in which he was reared. He appears to the best advantage, when he does not attempt to define his position, which involves incongruities too obvious to escape the attention of any thinker, be he orthodox or heterodox. If Mr. Beecher should state frankly and fully his beliefs, no harm would result, except possibly to himself; and that would be more apparent than real. When ministers talk as Mr. Beecher does, the more intelligent people distrust their sincerity, and attach but little value to their statements of belief. The tendency of such a course is to encourage the bad practice of talking and writing as much to conceal as to express thought, and to make men extremely cautious and timid, and in expression ambiguous and half-hearted, when the clear and courageous statement of conviction is the highest duty, and is demanded by the best interests of all. Mr. Beecher is more transparent and frank, in our opinion, than the majority of those of his cloth; and his utterances from time to time, in different moods, indicate sufficiently to intelligent readers what his real opinions are.

FREEDOM OF WORSHIP FOR YOUNG CRIMINALS.

The Roman Catholic Church is renewing its effort in the New York Legislature to secure the passage of what is called the Freedom of Worship Bill. The special design of the bill is to open the House of Refuge on Randall's Island—a State institution for the penal discipline and reformation of wayward youth—to Catholic ceremonies of worship, and particularly the Mass: though the proposed legislation will cover all reformatory and penal institutions which are under the care of the State. For a dozen years or more, the Catholics have been vigorously working for this object. The fact that a very large number of the children who are sent to the Randall's Island House of Refuge are of Catholic parentage makes the Catholic priesthood very zealous to secure the passage of this Act. And the chances for their success seem better than ever before. The Senate will pass, if it has not already passed, the measure. The governor, it is known, favors it. And the popular branch of the legislature, it is thought, will not venture to offend the large Catholic vote of the State.

Not all Catholics, however, favor the bill. The Catholic Church is represented on the Board of Managers of the House of Refuge, and yet the Board energetically opposes the bill. *Per contra*, it is claimed in Catholic journals, and probably with truth, that the Catholic members of the Board are not fair representatives of the Catholic Church. But, however this may be, all parties and all journals in the State are engaging in the discussion; and the discussion is waxing warm and acrimonious.

As is usual in such debates, the Catholics make their plea on the ground of freedom of conscience. Though they do not as Catholics believe in freedom of conscience, yet, in seeking to carry a point for their Church, they never hesitate to avail themselves of any establishment of this principle which has been made by their Protestant opponents. Thus, in this contest, they plant themselves on the religious freedom clause of the New York State constitution, which is as follows: "The free exercise and enjoyment of religious profession and worship, without discrimination or preference, shall forever be allowed in this State to all mankind." This, certainly, is plain and emphatic language. Nothing further could be asked for as a constitutional guarantee of religious liberty to all citizens alike. But, still, the question might arise whether such a provision for freedom of worship was meant to cover the law-breaking class of population that has to be shut up in prison, any more than a similar constitutional provision with regard to personal liberty was meant to cover them. The law-breaking class forfeits in many ways the constitutional rights which are guaranteed to all law-abiding citizens. Even in this matter of religion, it is evident that the *free exercise* of individual belief is not and cannot be granted to persons who are in prison, even though they may be marshalled into a room to hear a clergyman who is of their own sect. To enjoy the "free exercise" of worship, one must be free to choose his own clergyman and place of worship, as well as the sect and creed. And there are obvious reasons why this kind of "free exercise and enjoyment of religious profession and worship" cannot be accorded to imprisoned criminals; nor is it probable that freedom of conscience to this extent was contemplated in the State Bill of Rights.

But, in answering the Catholic argument, the opponents of the Freedom of Worship Bill are heavily handicapped by their own inconsistency.

The ground on which they should place themselves, and on which they do try to place themselves, is that of the principle of the separation of Church and State. They should say that, in guaranteeing equal liberty to all religious sects and to all beliefs about religion, the State itself knows no sect and recognizes no special form of religious belief. On no other ground can equal liberty of conscience be granted to all citizens. In order to leave to individual citizens the perfectly "free exercise and enjoyment of religious profession and worship," the State can have no religion. Consequently, when any class of citizens, by their conduct, forfeit their individual liberty in any such way that the State has to take care of them, they can make no claim that the State shall provide for their religious wants. If the free exercise of their own religious preferences has gone, that is a part of the penalty of their crime, just as their imprisonment deprives them of the exercise of their personal preferences as to where they will reside and their mode of daily life. Intellectual, moral, and industrial training the State can give in its penal institutions; but it has, on the American principle of government, no religion that it can teach to the inmates of such institutions. And the managers of the House of Refuge, in resisting the Freedom of Worship Bill, have endeavored to set forth this principle. In addition to the arguments that a large majority of the inmates have been reformed under the present management, and that the new bill would interfere with discipline, and introduce the spirit, methods, and controversies of religious proselytism, they declare with emphasis that "State money should not be given to sectarian institutions," and that "the separation of Church and State, of matters ecclesiastical and secular, of religion and politics, is to be the ruling principle of this country: this is American doctrine."

But, unfortunately, the managers of the institution have violated this American principle and doctrine in their own practice. They claim and say in so many words that "the institution has always been non-sectarian; that no dogma or sectarian creed has been taught or favored by it"; that the Sunday teaching consists of "those general moral truths on which all sects and all creeds are agreed." But, in a manual used in the Sunday service and approved by the managers, the dogmas of the Incarnation, of the Deity of Christ, and of Redemption through his blood, are explicitly taught. The manual contains such sentences as these: "O Lord, the Lamb of God, Son of the Father, that takest away the sins of the world, have mercy upon us"; "Thou art the King of Glory, O Christ. Thou art the everlasting Son of the Father. When thou tookest upon thee to deliver man, thou didst humble thyself to be born of a virgin"; "Most merciful God, we draw near unto thee in the name of thy Son, Jesus Christ, trusting in thy promise to hear us for his sake, and asking thy favor only through the merit which is in his blood." What must be the ethical philosophy of persons who claim that sentences like these contain only "those general moral truths on which all sects and all creeds are agreed"? Or, if their ethical philosophy is straight, then what must we say of their ethical practice, when they declare that "no dogma or sectarian creed has been taught" in the institution? The fact clearly is that the Orthodox Protestant creed is taught to the inmates of the House of Refuge at present; and the Catholics, as well as Jews, Unitarians, and free thinkers of various sorts, have a valid complaint against the institution as sectarian. The Catholics, doubtless, are most sensitive to this unfairness, because of the large number of Catho-

lic children that are sent there, and because of their belief in the necessity of their own Church to salvation. But the unfairness is a general one, and the proper remedy is a bill that shall ignore the creeds of all the sects in the management of such institutions.

Well does Dr. Felix Adler, from whose admirable discourse on the topic most of the above facts have been drawn, make an appeal that the State see to it that the institution shall provide for the moral, industrial, and mental discipline of its unfortunate inmates, on the ground that this is both the most equitable and the most important thing to do. The inmates are children, mostly between nine and fifteen years of age, none being over seventeen,—children who are precocious in crime or vagrants from the streets. "In the name of Reason," he asks, "do these children need to be initiated into the higher mysteries of your religions? Do they require the finishing touch which it is said religion gives to character? Are they ready for that? Do they require to be initiated into dogmatic subtleties? Shall we not rather say that what these children require is to learn the A, B, C, of morality? That what these children, who have learned to handle the shot-gun and have not learned to respect their neighbors' property, require to be taught are the elementary truths of morality? That what they need to have impressed upon them are the commandments,—Thou shalt not kill, Thou shalt not steal, Thou shalt not bear false witness, Thou shalt not lie? And these are indeed the genuine non-sectarian teachings. In regard to these, all the sects and all the creeds of Asia, Europe, and America are agreed; and this kind of non-sectarian teaching the State should indeed supply to its wards."

WM. J. POTTER.

LITERARY BIOGRAPHY.

The great interest which the publication of the lives of Carlyle and George Eliot has excited is a significant fact. It shows that the public has reached such a stage of general intellectual progress that it is now almost to the full as curious in reference to the lives and careers of great writers, or men of the closet and pen, as it is about the lives of statesmen, men of the sword, and other men of action, with whose words and deeds the papers fill their columns from day to day. And the enormousness and cheapness of the issue of the two literary biographies above named indicate that the demand for them is a popular one,—the demand of a vast reading public. A speaker recently, at a meeting held in the city of Portland for the purpose of taking steps for the erection of a bronze statue of the poet Longfellow in that his native city, talked as though famous writers, such as popular poets and novelists, were more likely to be overlooked in the matter of monumental commemoration than were public men of the political and military class. But, at this time of day, the remark is not true. Such American literary men as Longfellow and Whittier and Hawthorne are far less likely to be overlooked than Americans famous in other ways; for the above three writers exercise a dominion over the hearts and souls of their countrymen in the privacy of their homes, and are thus in no danger of losing their meed of public recognition and commemoration in any of the forms which such recognition is accustomed to take. But it is not unusual in these days for public men to combine in their persons the statesman and literary man both,—e.g., Gladstone and the late Lord Beaconsfield. Carlyle and George Eliot's influence, throughout the English-speaking world in both hemispheres, was not limited by their

lives. Their influence, now that they are dead, goes on widening and deepening; for it is a subtle, spiritual influence, to whose pervasiveness time and space can oppose no barriers. The world of to-day, through the diffusion of knowledge, education, and ideas through every stratum of society, is becoming more and more susceptible to such an influence, while it is less and less moved by the noise and parade of the politician and warrior. In other words, the world of to-day is becoming more and more a reading, reflective, rational, intelligent world, which is capable of intellectual enjoyment and that exquisite pleasure which is derived from a perusal of the works of great thinkers, scientists, and imaginative writers. Forty or fifty years ago, the world was in another and lower mood. Then, the life of the Corsican bully and military despot, Napoleon I., was in everybody's hands. But now, even in France, his exploits and career excite detestation and contempt. Wellington and Nelson were idolized by their countrymen during their lives; but Shakspeare, Scott, Byron, Dickens, Thackeray, Shelley, Wordsworth, George Eliot, and Carlyle will continue to be idolized throughout the English-speaking world in *saecula saeculorum*.

These great writers will be haunting presences and potencies, wherever the language which was the vehicle of their genius is read and spoken. It is a sign of the wonderful progress of the world during the current century, which is now hastening so fast to a close, that great writers like the above are beginning to be generally or popularly recognized as mightier with their pens than warriors with their swords, as ministering a greater and purer and more civilizing delight than any other class of men by their power to stir the minds, not only of their contemporaries, but of all succeeding generations, to noble thoughts and emotions. As a rule, it is safe to say that great scholars, thinkers, scientists, and imaginative writers are less sordid and selfish than great statesmen, militarists, and politicians. Their ambitions and aims are less of the earth earthy. They are the servants of an exacting ideal nature, which has a tendency to keep them above sordidness and selfishness. It is true that they are apt to be eccentric and peculiar. It is true, also, that such writers as Byron, Scott, Dickens, and George Eliot made enormous sums of money in the exercise of their genius. But money was not their primal aim or object, as it is the aim of ordinary men in ordinary business. Their pecuniary success was due to the fact that they lived and wrote at a time when there was a vast reading public, which was enthralled by the spell of their genius. Even Carlyle, who disdained to prostitute his genius to money-making, and preferred to starve rather than do so, found himself at last with more money than he had any use for. Meantime, the reading public is growing vaster and vaster.

But we are told that there is a lack observable of literary genius. But, now, even mediocrity writes well. The poet laureate of England, who is himself very fastidious in the matter of style, exclaimed on some occasion, "How well everybody writes now!" There may be temporarily a deficit of genius, but during the first three-quarters of the current century there was a plethora of it in Great Britain and on the continent. A period of literary mediocrity, therefore, is just now in order. But all things indicate that in the next century there will be another new departure of thought, another flowering of the human mind. "The English Men of Letters" series has been republished in this country in the cheapest possible form, so that he who runs and has a few dimes in his pocket may purchase and read the entire series. It makes its readers intimately acquainted with

the chief English poets, reflective thinkers, historians, critics, novelists, essayists, and great writers of all kinds and periods. Such an acquaintance must lead multitudes of large-brained young men throughout the length and breadth of the country to devote themselves to an intellectual life with the best possible results to the American literature of the near future. Although the "American Men of Letters" series, which is in process of publication, deals not with authors of so much renown and significance as the English series, still it shows that we are not without great literary names, even thus early in our history. But the chief point of interest in regard to the publication of both series is that there should be such a general demand for the details of lives of men of the closet and pen. In this fact is distinct evidence of an immense advance of the world from animalism to intellectualism. The phenomenon of genius as to its origin and conditions is inexplicable. It arises in all ranks and environments of life. George Eliot was the daughter of a self-educated farmer, she being thus of as humble origin as her great contemporary, Carlyle. Voltaire was born in a well-to-do family of respectable mediocrity, without intellectual tastes or antecedents. Byron had Norman blood in his veins, mingled with the blood of whilom Scotch kings. But, though noble, his ancestors never gave any evidence of uncommon mental power. Thus it is difficult to account for a case of genius. It appears when and where it is to be least expected, and never leaves any posterity or successor. It is calculated that the English-speaking world now contains a population of over one hundred millions; and, through the diffusion of popular education over that world in both hemispheres, it is a world of readers, who furnish an unlimited market for the works of popular writers.

But, apropos of literary biography, it cannot be denied that too many writers of it seem to be disposed to minister to a morbid as well as a legitimate curiosity on the part of their readers, and to let the light of a too glaring publicity shine upon details and matters with which the public has no business, but which belong rather to the columns of a psychological journal than to the pages of a biography. Men of genius are also men like the rest of us, and from the very fact of their marvellous intellectual and imaginative power are apt to be fearfully and abnormally as well as exceptionally organized, and to have an unusual share of eccentricities and peculiarities. But the sun itself, the source of all terrestrial life, light, warmth, and beauty, is found to be darkened by spots, when telescopically inspected. What then? It is none the less the fountain-light of all our seeing. Genius, too, under a jealous and malignant scrutiny, is found not to be without specks and blemishes. "Is it not odious," asks George Eliot, "that as soon as a (literary) man is dead his desk is raked, and every insignificant memorandum, which he never meant for the public, is printed for the gossiping amusement of people too idle to reread his books?" Writers of genius are apt to be morbidly sensitive, and to be formed of far too penetrable stuff for their own personal comfort. They give the world the best of themselves. What business, then, has the world with their infirmities,—with their unguarded utterances and querulousness, with the outbreaks of their sensitive nerves, and that melancholia and those fits of depression which seem to be constitutional with such exceptional personalities? Carlyle's readers find untold pleasure, enlightenment, amusement, and mental stimulus in the various works which he left as a legacy to posterity, of history, biography, and criticism. The influence of these works

has effected a revolution in literature and men's thoughts. What necessity was there, then, for what may be called an indecent exposure of his private and domestic life and foibles as a nervous hypochondriac? His morbidness was his personal misfortune, with which his readers are not concerned. When Byron lay dead at Missolonghi in Western Greece, his acquaintance and associate Trelawney made haste to solve the mystery of his lameness and bodily deformity. He tells his readers how he sent the poet's valet out of the chamber of death for a glass of water, which of course was a pretext. "On his leaving the room," he writes, "to confirm or remove my doubts as to the cause of his lameness, I uncovered the pilgrim's feet, and was answered,—the great mystery was solved. Both his feet were clubbed, and his legs withered to the knee,—the form and features of an Apollo with the feet and legs of a Satyr!" Later along, Mrs. Harriet Beecher Stowe—in order, apparently, to make herself "a blot upon a remembered name"—undertook to make out a case against Byron of still more revolting, because moral deformity; but she failed ignominiously. In view of these facts, Tennyson's indignation is warranted where he says:—

"For now the poet cannot die,
Nor leave his music as of old,
But round him, ere he scarce be cold,
Begin the scandal and the cry;
Proclaim the faults he would not show;
Break lock and seal; betray the trust;
Keep nothing sacred; 'tis but just
The many-headed beast should know.
Ah, shameless! for he did but sing
A song that pleased us from its worth.
No public life was his on earth;
No blazoned statesman he, nor king;
He gave the people of his best;
His worst he kept, his best he gave.
My Shakspeare's curse on clown and knave
Who will not let his ashes rest."

B. W. BALL.

BENEFICIAL OR INJURIOUS?

A Sunday paper of New York City, giving the benefit of charitable construction to those who oppose and malign it, uses the following language: "The question for thoughtful persons about all religious organizations is whether membership of them tends to make people better or worse. No sane person can maintain that this question admits of more than one answer in regard to the churches."

Unless Mr. Robert Ingersoll and all his admirers are to be presumed insane, the opinion above stated is erroneous; for they would certainly answer the question differently from the editor of the Sunday paper. And a third answer also is possible; since experience and observation alike constrain me to believe that honest, faithful membership in an orthodox church really tends to make men worse in some respects, while it makes them better in others. I specify orthodox churches for three reasons: first, because I am better acquainted with them; next, because all the churches not orthodox form a minority numerically insignificant; and, finally, because this minority shows but a small proportion of the evil tendencies in question.

The good tendencies of membership in an orthodox church are manifest and unmistakable. Conscientiousness, in this new relation, is constantly appealed to and stimulated. The moral obligation to resist temptation, to avoid all known sin, and to recognize and perform all known duty, is kept prominently before the mind of the new member; and his pastor and brethren are ever ready with such sympathy, encouragement, warning, or admonition as they judge him to need. Then, by joining them, he has allied himself to an eminently respectable and creditable class of people, per-

haps the best part of the community in which he lives,—a fact in itself tending strongly to secure him against the commission of unpopular sins. The church member is far less likely to steal or to get drunk than the average outsider. Even, among outsiders, their knowledge of his church relation will be a strong and perpetual bond to good behavior on his part. Thus, piety, to a certain extent, comes in aid of morality; and the church member is likely to be, in some respects, a better man than the outsider.

The reader can hardly fail to observe that, in the paragraph next preceding, I have used many qualifying phrases; but truth imperatively requires every one of them. The clergy and their advocates will think it a very insufficient concession on my part that church membership is adverse to *unpopular* sins; but facts show that church piety and church respectability often have been, and often are still, the active promoters of popular sins. In many cases (not in all), they take their place with the majority of those whom they stigmatize as "worldly," in direct opposition to the claims of right and justice. It was respectable and creditable piety which persecuted Quakers and Baptists at Plymouth and Boston, and hung witches in Salem. It was respectable and creditable piety which in the South resolutely upheld slavery, and in the North vehemently opposed interference with slavery. It was respectable and creditable piety which, by vote of Park Street Church in Boston, robbed a colored man of his pew there, and placed a constable at its door to prevent him and his family from entering it. It was respectable and creditable piety which inserted in the pew-deeds of Baron Stow's Baptist church in Boston a provision that they should not be sold or leased to any colored person.

Will it be said, These are matters of ancient date, obsolete customs, by past-errors? I reply, The church creeds and church principles remain the same: such amelioration as has occurred is due far more to civilization under the guidance of outsiders than to church influence. And church influence at the present day shows many instances of direct opposition to right and justice.

Respectable and creditable piety is now, as it has been for many years, under the name of *The National Reform Association*, urging an amendment to the Constitution of the United States, the adoption of which would seriously impair the civil and political rights of millions of its citizens. It is respectable and creditable piety which now, in the Young Men's Christian Associations, divides its membership into superior and inferior classes, the orthodox church members to govern, the rest to be governed. It is respectable and creditable piety which perpetuates in our civil and criminal courts an unjust discrimination against persons who deny, because they disbelieve, a certain article of the orthodox creed. It is respectable and creditable piety which has always urged the subordination of women to men, which persecuted and maligned Abby Kelley and Lucy Stone for vindicating, in calm and decorous language, the rights of their sex as human beings, which for the last half century has steadily resisted every movement in behalf of those rights, and which now offers the most effective opposition to woman's just claim to be allowed to exercise the right of suffrage. It is respectable and creditable piety which now keeps the Public Library closed on Sunday, which resisted as long as possible even the opening of its reading-room on that day, which tries to check the publication and circulation of Sunday newspapers, which vigorously opposes every effort to furnish innocent and useful recreation on Sundays to the classes whose only leisure is on that day.

It is respectable and creditable piety, led by the orthodox clergy, which opposes Sunday excursions, Sunday concerts, and the opening of Museums of Art, Science, and Natural History on Sunday, as vehemently as it opposes dram-drinking and cock-fighting.

As to the beneficial influence of church-membership, I have conceded that it emphasizes, cultivates, and stimulates conscientiousness. But here we must keep in mind the important fact that conscience among church members is enormously mis-educated and perverted by the clergy. They enjoin faithfulness and promptitude in the performance of duties; but the practices which they dignify with this name are largely manufactured duties, having their origin in church custom rather than in either true religion or morality. The new church member soon finds that what is chiefly expected of him in this relation is devoutness of manner and speech, punctual attendance on Sunday worship and at church meeting and prayer-meeting, readiness to go through the form of audible prayer when he is called upon in the gatherings last mentioned, and co-operation in such measures of proselytism as the church, directed by the pastor, may from time to time institute. If he is the head of a household, it is also expected that he will have his children baptized, and that he will establish family prayer and "grace" at meals. As long as the church member is punctual in these observances, there will be little scrutiny by his "brethren" as to whether he performs any other duties.

The clergy are expected not only to enjoin duties, but to denounce sins; and this latter work is a very important one. But a considerable proportion of the things they stigmatize under this name are manufactured sins, violations of church rule and custom, but not at all of true religion or morality. For instance, they vehemently declaim against what they call "Sabbath-breaking," though, according to the decision of that "fourth commandment," which they call divinely inspired and authoritative, they themselves are and always have been Sabbath-breakers. They represent it as sinful not to attend the ceremonial observances which they call "divine worship," and which they represent as divinely ordained, though there is not the slightest evidence that God either enjoined them or desires them. They represent as sins Sunday recreations of all sorts, the innocent and salutary quite as much as the injurious. And they specially stigmatize the sin of *not believing*, even when, of the matters in question, some have never been proved and others are manifestly proved erroneous.

But the miseducation and perversion of conscience by the clergy are also flagrant in regard to what *should* be believed. Their church members must not only assent to the dogmas of the creed on joining the church, but must continue to accept them as true, irrespective of any new light which personal scrutiny or advancing intelligence in the community may throw upon them.

Take the dogma of Biblical inspiration, which is an element of the creeds of all the orthodox churches. Although neither Old Testament nor New Testament claims for itself either inspiration or infallibility; although the two religions, the record of which is contained in these two books, are so diverse that Jews must be converted to become Christians, and when so converted are stigmatized as apostates by their circumcised relatives; although the books which have been bound together under the name of "The Bible" have been confessedly written by many different persons in different centuries and in different languages, and although they prove their human

origin by direct oppositions of statement both in regard to fact and doctrine,—in spite of these facts, the clergy insist that their church members must believe this heterogeneous collection, unitary in scope and purpose, inspired of God, and infallibly correct in every part. Moreover, they absurdly claim that whatever is declared by any one of these parts is declared by the Bible,—a doctrine as irrational as to say that the Public Library teaches whatever any writer in any one of its books teaches. Nevertheless, Biblical inspiration being affirmed by the creed, the minister who has accepted that creed holds himself bound to maintain it and insist upon it. He does this in the pulpit, in the prayer-meeting, in the "revival," in the ministerial conference, in his paper when he is an editor, and in the publications of the American Tract Society, which he praises and helps to circulate. And, since his engagement with the Church is to continue to do this as long as he holds his ministry, his experience will probably be either a sealing of his mind against newly discovered truth which contradicts the creed or a deliberate suppression of such truth in his communications with his people and the public.

When we see the virulence with which an expression of dissent from old sectarian doctrine is pursued by the former "brethren" of the dissenter, and when we realize that this loss of friends is likely also to involve loss of occupation and pecuniary support, it will not seem strange that some doubters lack courage to express their doubts, and that many such maintain the disingenuous silence which enables them to keep their pulpits for every one who takes the risk of honestly declaring his new conviction. Most of the dissenters from old sectarian dogma content themselves with keeping silence in regard to the matter; but many are found (among ministers holding editorial positions) who sedulously misrepresent the new doctrine and those who hold it, and bolster up the old with false assumption and sophistry. What is certain is that candor is not to be expected from a clergyman in regard to matters wherein church creed and church custom have dictated what he shall say.

We conclude, then, that church membership, though yielding some beneficial results, exercises some decidedly injurious ones, among which is to be reckoned a tendency to miseducate the mind concerning truth and the conscience concerning right, in those numerous cases in which church rule and church custom are adverse to truth and right.

C. K. WHIPPLE.

HUMILITY AS A FACTOR IN THOUGHT.

In the act of thinking, the value of courage, of decision, of clearness, of depth, of logical coherence, is very obvious. These go far to constitute ability of mind. Also, accuracy, scope, analytical faculty, synthetical power, generalizing sagacity, ingenuity, and quickness in inventing hypotheses, vivid imagination, delicate and close observation,—these qualities are obvious to every one as present, operative, and influential in all high and strong thinking. But, perhaps, humility as a factor in thought is too much overlooked: whereas, in truth, it seems to be one of the most important of all elements in sound and effective thinking. Humility should not be taken to signify a mean or even necessarily a low estimate of ourselves. Charles Dickens held it one of the causes of his success that never did he either underrate or affect to underrate the value or excellence of his work. When Beethoven was reminded by a friend of having varied in one of his works from certain rules laid down by the harmonists, and was told

that, according to scientific method, the passage he had written was not allowable, the great composer answered, both thoughtfully and loftily, "I allow it." This kind of high belief in one's self, of assertion of individuality, of consciousness of power, of decision of character, is necessary to all the highest flights of human work, whether in art or in thought. Indeed, what distinction can there be in such a connection between art and thought? Sidney Lanier declared that the greatest poetic work must be founded deep in reflection. The fine arts, whether poetical, plastic, pictorial, or musical, are simply so many different expressions of thought; and, if the art work is great, it is great simply by being adequate expression of great thought. Timidity will never venture enough to accomplish any grand work; and that delusive semblance of humility which weakens individuality, which makes us shrink into ourselves and tremble before a difference from the common level either of action or of thought, affects badly both thinking and the expression of thinking. Real humility is simply a form of truth. It is an attempt at a true estimate of ourselves; for if we wish above all things to arrive at a true knowledge of ourselves, and to set ourselves in the rank where we ought to be, this is the same thing as to set the truth above ourselves and to keep the eye upon reality. Such a wish, moreover, and such an effort will be impossible without a careful comparison of ourselves with an ideal. This ideal may be a dream of our own mind or a generalization from characters that we meet or hear of; or, indeed, some person may stir us to that depth that he becomes for us an ideal. But, however created in us, the comparison therewith which true humility will make will give us lowly thoughts of ourselves and lofty thoughts of the possible glories of mind and of character.

Now, this humility is a powerful factor in correct and wide thinking. It exists therein in the form of a pervading and protecting consciousness of our liability to error. It needs but little sight to see that he who is afraid of erring will be the less liable to err unawares, and that he who considers beforehand where the dangers lie will avoid them better.

The opposite of this humility is a kind of pride which is, perhaps, as destructive to high thinking as any other mental fault; namely, the claim of infallibility. Sometimes, this is made directly and boldly, as a Romanist claims infallibility for his Church, and as the Protestant for the Scriptures, or for his own interpretation of the Scriptures and the creed evolved therefrom. But, when not thus boldly made, the claim of infallibility may be an insidious virus in a man's own mind, vitiating all his thinking. Boldness without preceding patience and care, self-confidence without self-examination, assurance without a spirit of deference, decision without veneration, are all forms of the spirit and claim of infallibility, and destructive of that cautious, long, painstaking, conscientious, and reverent process of mind which true thinking is.

The chief influence and value of humility in thought may be gathered under three heads:—

1. Humility preserves a learning, inquiring, teachable spirit. This does not mean merely a spirit that waits to be instructed or that is timid, fearful of itself, uncertain in its aim. It means a quality of mind which asks simply one question,—namely, What is truth?—and uses the processes of thought only to answer that question. The infallible, self-confident spirit is the direct opposite of this. It assumes something to be true, and then uses the processes of thought to find ways of maintaining the assumption. These two states of mind differ, as Hamilton might express it, "by the whole

diameter of being."... It is impossible to exaggerate the virus in thinking, the vitiation of mind, the incompetence, the incorrectness, the contraction of horizon which the education may produce wherein the mind has been trained from early youth not to investigate what the truth is, but to find means for maintaining a given doctrine to be truth. I describe here, in fact, two directly opposite systems of education, each one of which is actual and has examples among our schools. The school which says to its pupils, "Divest yourselves of all absolute assumption and investigate," will turn out a thinker as to mind and a courageous man as to moral fibre. The school which begins with declaring a thesis that may not be questioned, and trains its pupils to find means of fencing in that thesis from attack, will produce men who are instances of erudition and of ingenuity, but seldom of wide mind, of whole thinking, of powerful grasp, or of the finest moral balance.

2. Humility creates also patience and caution,—willingness to wait, to go slowly, to think for a long time, to gather a great array of facts whereby to test a theory before the theory is boldly uttered. Humility will make us sensible of our natural bias, always earnest to discover any cause of bias in ourselves, to eliminate it as far as may be, and to estimate its possible unconscious effect. Regarding all kinds and every source of error, humility will make us alive and cautious.

3. A humble disposition also—that is to say, one that loves the truth first and ourselves second—will make us always willing to retract; and not only willing when we have found ourselves wrong, but the better able to discover our error. Many are the thinkers whose inordinate pride of thought makes them hold out long after they suspect indeed that their position is overturned; and still more numerous those who are so vain, so confident, so eager, so self-satisfied that, when once they have uttered themselves, they seem unable to become conscious of any error, however plainly it may be shown.

Let any one, therefore, who will think clearly, widely, and productively,—who wishes, that is to say, to increase the sum of human well-being by the action of his mind,—balance his courage, his decision, and his assertion with the humility which will make every step a careful one, and will arrest him, whatever his rate of progress, to listen carefully to any one, and thankfully too, who wishes to tell him of an error in his course.

J. V. BLAKE.

LINGERING INTOLERANCE.

This is a day of boasted freedom. In this country especially, it is claimed that intelligence is allowed a very free course, and never feels restriction or repression except where it is perverse or cranky, as in the case of a few extreme radicals or atheists. Surely, this is enough. Why should the *vox populi* be needlessly interrupted by their small discord? And what need of much ado and the formation of Free Religious Associations for the enlargement of the sphere and power of such a class? So plead the "wise men" of our times, the men who are in the majority and in the seats of privilege.

That has always been the plea of intolerance in power, wherever it has felt obliged to rise and explain. Why should the cranky Baptist or the crazy Quaker obtrude into the sacred enclosures of New England, where godly peoples had set up good strong palings to keep out the sin and folly of the common world? And why should the fanatical Methodists, with their Arminian theology, come at a later date to demand equal ecclesiastical privileges with "the orthodox," who had

made the State laws only for their own communion, and fundamentally outlawed all other communions? It is not very strange if the children of those Pharisees, inheriting some of the exclusive privileges of their fathers, should inherit something of their exclusive spirit, and oppose with all the remnants of their unjust power the freedom of those who wish to be independent even in matters where all the old religions have agreed. Therefore, make all men support the Church by indirect taxation, deny to atheists the right of legal testimony in courts of law, and compel studious men at college to waste time daily in mock prayers, and deny to women, as well as idiots, paupers, and criminals, the elective franchise.

Most of those who take this course profess to be Christians. Let them read, then, Christ's memorable and lofty words: "It hath been said by them of olden time, . . . but I say unto you"—do just the reverse. He teaches that the olden time often shows what to shun rather than what to follow. He there utters a principle which is to be good to the world's end and to all eternity. The horizon must ever advance with the traveller, and widen with his elevation.

It is indeed hard to change laws which have been once established, and have wrought themselves into the frame of society. But that does not affect the principle of obligation. He who favors the continuance of laws which are irrational and unjust is himself irrational and unjust, whatever be his professions or pleas; and, when it is in his power in these days to change and will not, he hardly deserves to rank with his less favored, but equally wise fathers. Here, we describe the recent action of "the ancient and honorable" men of Harvard College, who have resolved afresh to force attendance on daily public prayers. Read the fifty-eighth chapter of Isaiah, and then say whether God wants hollow forms in the name of worship. Surely, if he does not want it, who should force it on him under the pretext of homage? Such enforcement will react in favor of unbelief and positive irreligion, so that there can be no plea on the score of benefit to the coerced. And from every cause, religiously, morally, personally, there will be an ultimate reaction against an institution which cannot rid itself of the taint of bigotry.

WILLIAM I. GILL.

WORKINGMEN AND CHURCH-GOING.

That the number of workingmen in this country who do not attend and who feel no interest in the Protestant churches is large, and rapidly increasing, is a fact beyond dispute. It is not uncommon to see in the religious papers sermons and articles which imply that nearly all the troubles among workingmen, including the present strained relations between capital and labor, are due to "infidelity," and that the panacea for all these ills is church-going. It is assumed that the restraints and consolations of Christianity and regular church attendance must be relied upon to solve the labor problem, or at least to make men contented with their condition. The *Nation* pertinently observes that the "restraints" of religion, by which is meant the motives drawn from belief in punishment and rewards after death, are not those on which the modern pulpit places great stress. "The exhortation no longer is, Restrain passion and limit indulgence and shun lawlessness or you will be everlastingly damned in the world to come; but rather, Do these things, or you will waste and wreck this life. Conduct is put in the light of a present social duty. It is the day of the gospel of the 'secular life.' All this seems to us a great gain. It tends to make church-teaching a

much more practical and vital thing. Yet it tends just as surely to make the gain which it is supposed would result if workingmen were regular church-goers extremely problematical. There might be a 'restraint' in their being told, if they believed it, that, unless they were patient and submissive here, they would never attain eternal happiness; but, when preaching is so largely made a matter of the present life, there does not seem to be a strong likelihood that it would make them more contented with their lot, while they felt it to be one of hardship or injustice."

The *Nation* notes the fact also that contentment with a condition of poverty is not the general characteristic of Christians, for the very good reason, it might have added, that they do not believe in the New Testament doctrine as to the blessedness of poverty. "The great mass of American Protestants are found in the middle and wealthy classes. Workingmen do not see in them a placid satisfaction with straitened circumstances, but, rather, fully as much desire and striving for the good things of life as the man of the world exhibits. It is singularly opposed to the tendencies of human nature to suppose that a workingman who has to fight for a bare existence would be made meekly content, if he were only in the habit of sitting in the gallery of a church once or twice a week, and looking down upon a collection of the prosperous and wealthy." Intelligent workingmen are not likely to regard as their friends and helpers any class of men who assume that they ought to be contented with their lot so long as it admits of improvement, and the clergy are not likely to attract them to the churches by talking about the "restraints" and "consolations" of religion. An intelligent interest in the practical solution of problems now claiming their attention, and a sympathetic co-operation with them to elevate their condition, are likely to be more effective with workingmen than efforts merely to make them swell the numbers of the churches, in which membership is no proof of either intellectual or moral superiority over men and women who do not belong to the churches.

B. F. U.

EDITORIAL NOTES.

BY B. F. U.

SAYS Monroe's *Iron-Clad Age*: "When religion ceases to be an emotion, and becomes good behavior and gentle, kind words and works, the world will begin to receive some benefit from it."

WE congratulate Mr. Mendum, the proprietor, and Mr. Seaver, the editor, of the *Boston Investigator*, on the commencement with its issue next week of the fifty-fifth volume of that journal, and of the forty-eighth year of its present management.

LAST Sunday, Prof. Dolbeare, before the Parker Memorial Science Class, gave a most lucid exposition of what is known to scientific men respecting "Some Forms of Energy." The lecture was one of the best of the season. Next Sunday, Mr. Peter Annet will address the class on "The Missing Link."

THE Secularization Committee of the Free Religious Association have concluded to ask the next General Court of Massachusetts to make a law providing that nothing in the Sunday statutes shall be brought up to defeat any actions either for damages, for fraud committed on that day, or for the value of goods sold and delivered on Sunday and retained by the buyer.

AS WITH certain other woman's rights once debated hotly,—rights of property, of occupation, of education, and the like,—the decisive act of citi-

zenship will by and by be seen to belong to that neutral ground which lies between the realms of sex. Womanhood and motherhood will yet be arguments for voting, as manhood and fatherhood are to-day; and the scorn will be for those whose "refinement" shirks the duty, and for the mannishness which would bar out a woman as a "woman" from the right. But, before much can be said successfully about the "right," a great deal more must be said about the "duty."—*W. C. Gannett, in Unity.*

MR. S. B. WESTON, the co-worker with Prof. Adler, has commenced a course of lectures at the hall, north-east corner Eighteenth and Chestnut Streets, Philadelphia. The lecture last Sunday was on "The Need of an Ethical Religion." The other subjects will be as follows: "Why Liberal Christianity does not Satisfy us?" April 12; "The Success and Failure of Liberalism," April 19; "The Meaning of a Society for Ethical Culture," April 26. Mr. W. M. Salter will speak May 3, on the subject, "Is there a Higher Law?" Prof. Adler will give the closing lecture of the course, the date and subject to be announced hereafter. The lectures commence at 11 A.M. They are free, and all are invited to attend.

JUDGE T. C. RUSSELL, in a discussion before the Chicago Philosophical Society, at the close of a lecture by Mr. Cahill in defence of the Roman Catholic Church, said, as reported by the *Religio-Philosophical Journal*:—

According to my observation and my knowledge of history, no church or religious organization has been otherwise than antagonistic to new ideas in just precisely the same way and in just the same measure, according to their power, as this Church has been. I can tell you of a case in this city where within a year, in a leading church by a leading theologian, there has been as utterly ridiculous and hostile criticism of the doctrine of evolution as there is to be found within the limits of the Roman Catholic Church,—criticism which showed that the man who made it had never read and could never have read *The Origin of Species*, or any other book which was a faithful exposition of that doctrine. It is in the nature of religious institutions to be conservative. It is a cardinal principle that they are repositories of truths not taught by human reason, but delivered to them. They do not go through the world seeking new knowledge. They teach the knowledge that is reposed in them.

A SUBSCRIBER sends us the following, which he says is going the rounds of the press, and asks us to copy it and comment on it: "Some inquisitive gentleman from Athens asks the *Atlanta Constitution* if Ingersoll's wife is an infidel. The *Constitution's* answer is: 'As Mrs. Ingersoll is not a public character, we do not like to answer such a question. Newspaper paragraphs occasionally state that Ingersoll's views are shared by his family. We do not believe it. It takes the strongest kind of testimony to convince us that a man is an infidel; and, in the case of a woman, it would take the most overwhelming proof. It is not a woman's nature and constitution to be an infidel. Men may drift away for a time from the true faith; but women, with their clearer intuitions, will hold fast to the only hope that makes life worth living. No: we do not believe that Ingersoll's wife is an infidel; and, if we knew her to be one, the fact would never be published to the world through our agency.' " In the dedication of one of his books to his wife, Col. Ingersoll refers to her as "a woman without superstition." Mrs. Ingersoll, whom we know to be a most estimable as well as an intelligent and thoughtful woman, has "the true faith"—faith in truth, justice, and humanity—in as large a degree, perhaps, as it is possessed by the Christian ladies of Atlanta, and of no "hope that makes life worth living" is she desti-

tute; but, since she is not a believer in Buddhism, Judaism, Christianity, Mohammedanism, Mormonism, or any other alleged supernaturalistic system of religion, she is what the *Atlanta Constitution* means by the term "infidel,"—a term applicable in the same sense to Harriet Martineau and George Eliot as well as to Humboldt and Darwin, a term which for centuries has been used as a weapon against the most advanced and the bravest and best minds, but which to-day instead of carrying odium with it (except among religious zealots) conveys rather the idea of independence of thought, fidelity to conviction, and sterling worth in the persons to whom it is applied. Our Southern contemporary does not seem to know this. Further comment seems to be unnecessary.

MORE than a year ago, Rev. Edward C. Towne gave to the public a statement reflecting severely on the character of George Henry Lewes. He claimed that he had unquestionable evidence that Lewes was an immoral man; that he had cheated George Eliot into a union with him by deception and falsehood, and had, by his conduct, made her life miserable. Our admiration of Lewes as a thinker, and the high opinion of his moral as well as his intellectual worth which his writings had forced upon us, made us utterly incredulous as to Mr. Towne's statements. In *The Index*, we said: "No proof whatever is given to substantiate these statements, which are opposed to the testimony of those who were intimately acquainted with Mr. Lewes and George Eliot; and they seem to be the repetition by Mr. Towne of some mischievous or idle gossip he heard in England. Such statements wholly unsupported, in regard to a great thinker and scholar, made years after he is dead, will not be readily believed by fair-minded men and women, and are likely to do more injury to those who make them than to the persons concerning whom they are made." The *Presbyterian*, among other journals, having reprinted Mr. Towne's statements and made them the basis of criticisms on "infidelity," we remarked, "Since Mr. Lewes was a free thinker, it was not to be expected that the *Presbyterian*, before copying this stuff, would consider whether, by repeating it, it would not be circulating falsehood and slander in regard to the dead." Subsequently, Rev. E. C. Towne, in an address before the Liberal Union Club of this city, repeated his calumnies, which were reported in the daily papers, copied far and wide, and read with avidity by thousands too willing to believe evil of a distinguished free thinker. The recently published work, *George Eliot's Life related in her Letters and Journals*, edited by Mr. Cross, not only shows conclusively the utter falsity of Mr. Towne's statements regarding George Henry Lewes and George Eliot, but proves beyond doubt that Mr. Lewes was a most faithful and affectionate husband, and that, through the twenty-five years of his union with George Eliot, his noble qualities of head and heart commanded the purest and profoundest love of his gifted companion. The only thing for Mr. Towne now to do is to retract his statements, and apologize to the public for his assault upon the noble dead.

Poor indeed thou must be, if around thee
Thou no ray of light and joy canst throw;
If no silken cord of love hath bound thee
To some little world, through weal or woe;
If no dear eyes thy tender love can brighten,
No fond voices answer to thine own;
If no brother's sorrow thou canst lighten
By daily sympathy and gentle tone.
Daily struggling, though enclosed and lonely,
Every day a rich reward will give:
Thou wilt find by hearty striving only,
And truly loving, thou canst truly live!

—Unknown.

The Index.

BOSTON, APRIL 9, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, : : : : : } Editors.
BENJAMIN F. UNDERWOOD, : : : : : }

No WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

The Foes of the French Republic.

BY THEODORE STANTON.

The Third Republic celebrated in September its fifteenth anniversary,—a long existence for a government in this country, where, during the past century, none has lasted more than eighteen years, while the average duration has been scarcely twelve. A sort of general law, says the *Paris Temps*, derived from these calculations, shows that the fifteenth is a critical year for a French government, and that its fate is decided during this period. "This is doubtless due to the fact," the writer goes on to say, "that, at the end of this term, a new generation comes upon the scene, with other recollections of the past and other objects of enthusiasm or hatred, with experiences and wants quite different from those of its predecessors. Up to the present day, it has always been this fresh wave of popular life that has swept away, almost at the same time, the monarchical and hereditary régimes that have tried to take root in France." Therefore, it may be interesting at this moment to examine the existing political situation in France, in order to determine whether the Third Republic will probably pass safely through this critical climacteric of the transition from adolescence to manhood.

Let us, then, consider the outspoken and implacable foes of the Republic. I find them broken up into three factions, each of which is divided into two groups, as follows:—

- I. The Monarchists, subdivided into (1) the Orléanists, (2) the Pure Legitimists.
- II. The Bonapartists, subdivided into (1) the Jeromists, (2) the Victorians.
- III. The Catholics, subdivided into (1) the Ultramontanes, (2) the Liberals.

The hostility of the factions to each other is surpassed only by that of each of their own

groups, but all are united in their dislike of the Republic. Let us take up the first division, the Monarchists.

The death of the uncompromising Count de Chambord a year ago last summer was considered by many to be a calamity to the Republic; for his old-fashioned hobbies of divine right, the white flag, and the temporal authority of Rome, which modern France, born of 1789, would never accept, had now given way to the nineteenth century opinions of the Count de Paris, who does not scorn parliamentary government, the tricolor, universal suffrage, and Montalembert's "free Church in a free State." But scarcely had the exile of Frohsdorf been laid at rest by the side of his uncle at Grätz, when it became evident, on the one hand, that the want of union among the Monarchists and, on the other, that the new pretender's temperamental phlegm, or his conscientious regard for legality, or his fear of banishment,—probably all three,—balanced, if not outbalanced, the advantages which the Monarchical party had gained by the Count de Chambord's death.

It was scarcely to be expected that the friends of Henry V., separated from the Orleans princes by the past, by tradition, by tendencies, and by a long estrangement, would, without a murmur, accept the new chief. Signs of recalcitration soon showed themselves. In the autumn of 1883, the confidant and secretary of the Count de Chambord, Count Maurice d'Andigné,* announced in the public prints that he would not make obeisance to the Count de Paris; and, last summer, a number of Pure Legitimists, as they may be called, with M. d'Andigné at their head, broke openly with the Neo-Royalists,—the Orléanists,—and declared that the House of Anjou, and not the House of Orleans, had inherited the rights and honors of the House of Bourbon. M. d'Andigné holds that neither the expressed wishes of the Count de Chambord nor the laws of legitimacy designate the Count de Paris as heir to the throne of the Capets. He asserts that the Orleans princes were not called to Frohsdorf in July, 1883, but that they went of their own accord, and that the famous last interview between the two cousins was, on the part of Henry V., the forgiving act of a Christian, not that of a king embracing his successor. In regard to the rights of heirship, M. d'Andigné said, at a public meeting held in Paris last July: "If it were not for the treaty of Utrecht, the incontestable heir of the Count de Chambord would be the head of the House of Anjou.† Now, are the renunciations annexed to the treaty of Utrecht valid? No."

The importance which attaches to the conduct of M. d'Andigné and his handful of followers does not lie in what did or did not occur at the death-bed scene in the Château of Frohsdorf, nor in the interpretation to be placed on certain clauses of a compact made over a hundred and fifty years ago: it is worthy of attention on account of the sidelight which it throws on the political, religious, and social opinions held by the Count de Paris. These "bolters" object, at bottom, to the grandson of Louis Philippe, not because he may have been distasteful to the Count de Chambord, nor because the House of Anjou may have better claims than the House of Orleans to the throne of France, but simply because the Count de Paris accepts the

* Since these lines were written, the Count has died.

† Don Carlos, of Spain, whose wife is the sister of the late Count de Chambord. His son, the Infante Jaime, a boy of fourteen, is often spoken of by the Pure Legitimists as a pretender in prospect. The republican newspapers have nicknamed these princes the *Blancs d'Espagne* as a pendant, perhaps, to the sobriquet bestowed on the Orleans princes of the Blancs d'Eu (referring to the Château d'Eu where the Count de Paris resides). Whiting is the English equivalent of *blanc d'Espagne*, and *blanc d'œufs* (Eu) means the white of eggs; hence the wit.

results of the Revolution. The opposition of the Pure Legitimists means, therefore, that the Neo-Royalists are practical politicians.

The main strength of the Count de Paris lies exactly here: he stands ready to be the king of modern France. Another source of his power and, at the same time, of his weakness is the well-known fact that he will not employ force in order to obtain the crown. When the country calls him, he will come forward. Like the Count de Chambord, he will not snatch the sceptre from the hands of a reluctant people; but, unlike his old-school cousin, he will respond to the *vox populi*, and not wait in vain for the *vox dei*.

A few days after the Count de Chambord's death, the following significant lines appeared in the *Soleil*, the organ of the Orleans princes, over the signature of the distinguished journalist and Liberal Monarchist, M. Hervé: "The Count de Paris is the representative of hereditary right. But he must also be the representative of popular right. He will then be doubly legitimate. In a country like England, where monarchy exists, the tacit consent of the nation is sufficient. But, in a country where monarchy has been overthrown, there must be, in order to restore it, a manifestation of the national will. So long as no such manifestation occurs, there will be an heir to the throne, but no king."

It is now more than a year and a half since these lines were written, and the Count de Paris has neither said nor done anything that contradicts them. But this patient and law-abiding policy of waiting upon events does not meet with the approval of all Monarchists; and, on this account, it is a source of weakness. M. André Barbès, one of the fuglemen of the party, called upon the Count de Paris the other day "to act or abdicate." Politicians ply the count with questions as to who his advisers will be when he is king, for they have seen an ominous statement that Conservative Republicans are to be called to the ministry. Ultramontane ecclesiastics, in their turn, press the royal candidate to state what his relations with Rome will be; for they fear lest he look with a too favorable eye on M. de Falloux and the Liberal Catholics. But the Count preserves politic silence; and, notwithstanding the defection of M. d'Andigné and his out-and-out followers, notwithstanding the murmurs of the bolder element of the party, and notwithstanding the pretender's strict abstention from interference with the natural working of the present régime, he is unquestionably the most formidable danger that menaces the Republic.

Although the Bonapartists have, during the last ten years, been steadily losing ground, until they have reached to-day a most miserable state of disintegration, yet they are vainly striving to make up by noise and audacity what they lack in numbers and popularity. The chief cause of their decline and impotence is the want of a worthy and able leader, or rather it is the presence of two unworthy, weak, and, what is still worse, mutually hostile leaders,—Prince Napoleon and his eldest son, Prince Victor.

Prince Napoleon, on the whole, has the better claim on the support of the Imperialists; but his public career has been so full of absurdities and contradictions that he inspires neither confidence nor enthusiasm. Many Frenchmen who still cherish the moribund Napoleonic Legend cannot forget that, under the July Monarchy, this degenerate prince was compelled to leave France on account of his intrigues with the democrats; that during the Revolution of 1848 he declared it "the duty of every good citizen to unite with the Repub-

licans"; that in the Legislative Assembly he was one of the leaders of the Mountain; that in 1875 his organ pronounced "the republican form the most compatible with the principle of universal suffrage"; that in 1876, when a candidate in Ajaccio for the Chamber, he published over his own name these words: "The form of government is not in question: it exists; I accept it freely"; and that, when elected, he sat among, and he voted with, the famous 363 who, under the leadership of Thiers in 1877, defeated the monarchical machinations of the Broglis-Fourtou cabinet, and definitively founded the Republic.

Nor is the prince more palatable to ecclesiastics than to politicians. Rome long ago placed him under its ban. The faithful still remember his set speech delivered in the Chamber of Deputies in 1876; for it was a violent attack, from beginning to end, on the clerical party, and contained such unpardonable expressions as this,—"Semez du Jésuit, vous récolterez du révolté." Nor can good Catholics forget how, in 1880, he applauded M. Jules Ferry's decrees against the unauthorized religious orders, so that when the renegade prince came forward, three years later, as the champion of the Church, in the silly placard which occasioned his arrest and imprisonment, they felt that he was adding insult to injury. A free thinker under the Empire and an outspoken foe of Clericalism under the Republic cannot hope for much support among the Catholics of France.

Military men recollect that, as a soldier of the Second Empire, Prince Napoleon was always in command of the reserves which never got into action; that, according to popular belief, he deserted his post in the Crimean war; and that he shunned the Duke d'Aumale's challenge called forth by an attack in the Senate on the Orleans princes. Among the officers of the French army, Prince Napoleon is still simply Plon Plon.*

A prince who entertains such views of politics, religion, and glory, cannot hope for royal honors in a country like France. But as if his republicanism, his free thinking, and his cowardice were not enough to destroy him and his party, his enemies determined to set his children against their father, quite forgetting the Scriptural adage that a house divided against itself cannot stand. M. Paul de Cassagnac, who leads this onslaught on the domestic felicity of the unfortunate prince, employs language which is more suited to Billingsgate than to the columns of a Parisian daily. "He treats me like a scoundrel and assassin," Prince Napoleon might say to his friends, in the words of Paul Louis Courrier; "but don't be moved by it: in his mouth, these expressions simply mean that we are not of the same opinion."

The prince's eldest son, Victor, a boy fresh from college, has been prevailed upon, after a disgraceful series of deceptions, to denounce the policy of his father, to quit the paternal roof, and to set up a small establishment of his own with funds furnished him in a secret and questionable manner. Prince Victor has not only lied to his father and equivocated to the public, he has not only turned his back on his home and accepted money from persons in no way related to his family, but he has openly proclaimed himself a candidate for the imperial purple, in direct opposition to his father's claims. In a word, both as a private individual and as a public character, he is the declared enemy

of Prince Napoleon. And Bonapartism, already condemned on account of the infirmities of the father, is now irretrievably lost and dragged in the mire by the reprehensible conduct of the son.

A curious parallel may be drawn between the Monarchists and the Bonapartists of the Third Republic. It is evident that Jeromism is the Orleanism of the Empire, just as Pure Legitimacy is the Victorism of royalty. The Pure Legitimists have not yet succeeded in obtaining a leader, which was the case with the anti-Jeromists until a short time ago. But, as a prominent Republican organ cruelly remarked the other day, money will be able to secure the one just as it secured the other. Prince Napoleon and the Count de Paris stand for Parliamentary Government and Liberal Catholicism, while Prince Victor and the Pure Legitimists represent clericalism and the principle *L'état, c'est moi*. The country, if it should decide to abandon its present form of government and should be left to choose freely a new régime, would turn unquestionably to Orleanism, or to that kind of imperialism personified by Prince Napoleon. But, as the prince is utterly unacceptable for reasons peculiar to himself and foreign to his creed, and as Bonapartism, in whatever shape, is still, and with good cause, distasteful to a vast majority of Frenchmen, it is undoubtedly the Count de Paris who would reap the benefit of a change.

And lastly, among the declared foes of the Republic, we have the Catholics, by which I mean more particularly the whole body of ecclesiastics from the top to the bottom of the hierarchy; for, with very rare exceptions, the priests are the most uncompromising opponents of the political "powers that be." Their opposition is peculiarly pernicious, because of the influence they exert over the women and children of France. The astonishing revolution of public opinion in favor of the secondary instruction of girls which has marked the past five years of the Third Republic, and the less admirable reform known as the secularization of primary instruction, have their *raison d'être* in the effort of Republicans to checkmate the power exercised over their wives and children by the Catholic priesthood. The average French democrat of to-day might exclaim with Abbé Raynal in the last century, "*Je voudrais, avec le boyau du dernier des prêtres, étrangler le dernier des rois.*"

The divisions among the Catholics who, as we have already seen, are separated into two hostile camps, do not materially weaken the common cause, as in the case of the Monarchists and the Bonapartists; for the schism is not based so much on persons and principles as on dogmas and tenets. The Ultramontanes, who are in a large majority, do not acquiesce in the conquests of modern France. The Syllabus is their creed, and Pius IX. their ideal pope; the old régime their model form of government, and Henry V. their model king. If they accept, for the most part, the Count de Paris as the successor of the Count de Chambord, it is not without revulsion and without a strong hope of bringing him over, and, if necessary, of forcing him over to their own way of thinking when once the crown shall have been placed upon his head.

The so-called Liberal Catholics are stanch Orleanists in politics. As laymen, they are little else than free thinkers that go to mass simply for form's sake; and, as ecclesiastics, they cling to the forlorn hope of conciliating Rome with the new society born of the Revolution. They oppose the Syllabus and Ultramontanism, because they know that a monarchy based on such principles cannot hope to stand, even if it could be once set up. They hold that the Count of Paris rejects these

impossibilities; and they believe that, if he comes to the throne, Parliament, Monarchy, and Church will move on together in unbroken harmony. Perhaps there is some ground for this optimism. But, however this may be, the religious doctrines of the Liberal Catholics undoubtedly find favor at the Château d'Eu.

The French Catholics, therefore,—whether Liberals or Ultramontanes, whether "*habiles*" or "*incurables*," as the two factions have been happily dubbed,—must be classed among the most formidable and indefatigable enemies of the Republic. They are doubly dangerous; for, while they do not leave a stone unturned in their effort to destroy the present government, they are united almost to a man in supporting its strongest rival, the Count de Paris. Nor must it be forgotten that, notwithstanding the anti-clerical propaganda and legislation of the past decade, Rome is still very strongly intrenched in this country. Just as in Belgium, where the Catholic party boldly seized upon the government a few months ago, so here the wily priests and their long-headed secular backers are continually working for this same end. Macaulay's famous picture of the traveller from New Zealand standing on a broken arch of London Bridge and sketching the ruins of St. Paul's finds its justification in the France of to-day as truly as in the glorious epoch of the massacre of St. Bartholomew and the revocation of the edict of Nantes; and the cry of Gambetta, "*Le cléricalisme, c'est l'ennemi*," is still heard ringing throughout the length and breadth of the Third Republic.

PARIS, March, 1885.

CORRESPONDENCE.

CURIOUS CRITICISMS ON SPIRITUALISM.

Editors of The Index:—

Your number of March 12 contains an article headed "Mistakes of Spiritualism," from a correspondent who says he has thus been called out by "one of his Spiritualist friends." Though the writer is personally unknown to me, I am also one of his Spiritualist friends, in the sense that I have only the most kindly feelings toward him, unmodified by my wide dissent from his views. My sincere desire is to serve him; for what higher interest can either of us have than the truth?

I, too, have been requested by a valued friend, firm in the Spiritualistic faith and of a much larger experience than my own, to reply to these strictures. But I have hesitated: partly because it seemed quite possible that the critic's friend had made his request in order that he might furnish a reply, and partly—for I must be frank, though friendly—because the statements and reasonings of the article seem to me to be such as would disturb no intelligent Spiritualist by their force nor greatly mortify any opponent of that belief.

Perhaps it would have been better, had our critic entitled his communication "Mistakes of Some Spiritualists"; as Spiritualism, like Free Thought, Unitarianism, and even Orthodoxy, so called, embraces some variety of views. Yet, with the exception of the first count in his indictment, I know of no Spiritualist who ought to plead "guilty."

The first and, indeed, the grand "mistake" that is charged is that "Spiritualists hold that mind can and does exist independently of the body." Undoubtedly, every Spiritualist holds this opinion, and deems it a fundamental one. If it can be overthrown, the whole philosophy of Spiritualism falls to the ground. But "if" is often a very important word. Pray, how is this grand doctrine to be overthrown? Surely, not by saying with our critic, "it is a belief common to all forms of orthodox Christianity," unless it is assumed or proved that orthodox Christianity holds no truth whatever. But this is held, not only by all forms of Christianity, orthodox or not, but by nearly every known form of religion, and I may add philosophy, the world over and in all ages. Probably no belief has been more widely or more persistently held. This does not, indeed, prove its truth; but it, at least,

*The fifth volume of the suppressed *Mémoires du Comte Horace de Viel-Castel* contains many slurs on the prowess of Prince Napoleon during the wars of the Second Empire. On the eve of the Italian campaign occurs this entry in the count's journal: "Friday, May 6, 1859. A play on words apropos of Jerome Napoleon is now going the rounds. On dit that the object of the war is defined by the council of generals.—Randon, Plon Plon, Vaillant" (*Rendons Plon Plon vaillant*) Randon and Vaillant were French marshals at the time of the breaking out of the war of 1859.

furnishes a strong presumption of it, and one too strong to be met simply with flat denial or with such unsustained assertions as these: that "without the senses there would be no mind," that "it has been clearly demonstrated that mind is a combination of sensations primarily," and that "without these sensations there could be no memory, no reflection, no reason, no feeling,—in short, no mind." These brave statements, our critic should be aware, are not admitted truths to great numbers of able thinkers. So far from being "clearly demonstrated," the most eminent names can be quoted against them. Possibly, this would weigh little with him, and as little the reasonings by which they are supported. For, to many,—excellent minds, too,—metaphysical reasonings are often very elusive and unsatisfactory, as under the forms of imperfect definition and logic many a fallacy has lain hidden. So, waiving all such argument for the present, I am glad that, as a Spiritualist, I can step outside the domain of obscure metaphysics on this matter, and offer to the critic a proof he can in no reasonable way escape. I offer to his "senses"—and here not insinuating that these are all the mind he would acknowledge himself to possess—the absolute physical proof that "mind can and does exist independently of the body." Of this proof, any one may avail himself who will take the requisite pains. And of it tens of thousands of acute observers have availed themselves, and to their complete conviction. No fact of science is more certain to the great body of those who have carefully explored the subject. And, before the evidence thus presented to them, all speculative argument, on one side or the other, seems weak indeed. With this evidence, our critic, who is to be presumed an honest man, must be simply unacquainted. But he should not forget that it has revolutionized the opinions of great numbers once of his way of thinking, and among them eminent scholars and scientists.

The second charge against Spiritualists is that "they hold that individual intuition is a reliable safeguard in the investigation of truth."

That Spiritualists differ from other people in their views of the authority of "intuition" I have never seen reason to believe. A genuine intuition, whether individual or not, must be authoritative with every one; for it is properly a direct knowledge or perception. But every one should be careful that what he calls an intuition is really such. Our confident opinions are not necessarily intuitions; and that our critic has a vague and, indeed, an erroneous idea of what an intuition is appears from his own illustration of it. He says:—

"The intuitions of the primitive and uncultivated lead them to gratify every impulse of their animal nature; but gradually, after generations of sad experience, these intuitions become changed, and the developed civilized man intuitively knows that he should control such impulses that lead to suffering and misery."

The instinctive appetites of the primitive and uncultivated and the judgments of the developed civilized man derived from sad experience are neither of them intuitions. Far enough are they from anything of the kind.

When our author adds that "individual conviction is not always reliable, but requires to be tested by the consent of other competent minds," he speaks a plain and well-known truth, hardly requiring "the scientific method," as he suggests, that it may be "abundantly shown." But that Spiritualists are less willing than other people that their individual convictions should be thus tested seems to me far from true. On the contrary, I speak confidently for all of them, when I say there is nothing we more desire than that our individual convictions should be tested by the consent or dissent of other competent minds who have adequately explored the subject. We are constantly inviting this. And we are as constantly surprised and disappointed that we are answered only by the mere prejudgments of theoretic reasoners or of very inexperienced investigators. Attempts to explode Spiritualism after the manner of our critic are much too common to be desirable.

The third mistake charged is that Spiritualists "hold that clairvoyance, or clear seeing, is a mental process possessed only by so-called mediums while under the control of spirits." In this, our friend is utterly misinformed. Not only do Spiritualists, as a body, hold no such view, but I know of no one of them who holds it. Clairvoyance is recognized by

them as a fact abundantly proved; but it is as a gift or spiritual faculty based in some peculiarity of one's organization, not as "possessed only under the control of spirits." Our writer must pardon the suggestion that he ought to study his subject more before he writes upon it again. And I beg leave to commend to him the fourth chapter of a very accessible book, Sargent's *Scientific Basis of Spiritualism*. Indeed, the entire book, if attentively read, and then followed by faithful direct investigation, would save him from such a travesty of clairvoyance as he gives in professed explanation of it.

The next paragraph of our author's criticism is intended, I presume, to tell us that, because "mental action is in a great measure automatic,"—whatever that may mean,—our involuntary thoughts and feelings are "mistaken for communications from the spirit world." What it *does* tell us is—as any one can see by referring to it—a very different thing; namely, that "the well-known fact that mental action is in a great measure automatic is mistaken for communications from the spirit world"! Passing by, however, this error of grammar as a mere oversight, and conceding the involuntary character of many of our thoughts and feelings, how does it appear that these "are mistaken for communications from the spirit world"? That in some cases this mistake *might* be made by careless or incompetent investigators is possible enough. But this is not what our critic means to say. He means that they are so, and not sometimes, but always, in every case; that is, if he means to say anything to the purpose. To say less than this is to say nothing.

The final item charged as among the "Mistakes of Spiritualism" is that "general abstract truths are mistaken for a special clairvoyant diagnosis of an individual case." As an illustration of these "abstract (?) truths," thus mistaken, the following is given: "e.g., a short time ago, a clairvoyant stated that the subject examined was suffering from indigestion or from liver complaint, the simple fact being that scarcely any one is free from these complaints! Another medium stated that the subject examined had a relative who had been hurt at some time in his life, either in the back or the hip or the foot, the simple fact being that scarcely any one lives who has not had a relative who was once hurt in the back or hip, etc."

And these silly specimens of professed clairvoyant revelations we are expected to take as samples of the whole! No: when such idiocy is imputed to "Spiritualism" or to Spiritualists in any great number, we shall be excused for some plainness of speech; and we shall say that such an acute detection of the whole imposture or such a profound solution of a great mystery—just as one chooses to regard it—may be quite satisfactory to some people who suppose they have intelligence. But whether it is the more complimentary to the understandings of some myriads of Spiritualists to be found in every civilized nation under heaven—many of them highly trained minds and practised investigators for years—or to that of the critic himself must be left with the reader to decide.

One thing at least, I trust, has been made plain. Our critic is not prepared to arraign Spiritualism on its "mistakes." He needs more study than he has given to it. Perhaps he has been unfortunate in his attempts at investigation. Some seem to be, and they are entitled to the benefit of this defence. But he may be none the less sure that "other competent minds" have reached truths in this search which they are at present compelled to regard as impregnable and, moreover, of the highest value.

JOSEPH D. HULL.

3 COPELAND PLACE, BOSTON.

DYNAMITE AND ANTI-DYNAMITE.

Editors of *The Index*:—

Your correspondent who writes under the above caption scarcely defines his purpose, unless he wishes us to admit that even the dynamiter has a defence which entitles him to a hearing in court and an open debate, or, if not in court, at least in *The Index*. He tells us more than once that we are not to deem him a dynamiter. What, then, is he trying to persuade us? After a careful perusal, the article seems neither more nor less than an effort to claim for the dynamiter a status among free thinkers, ignoring entirely the difference between free thought and free action or free treason, and implying that *The Index* must

yield its columns for some dynamiter to prove that wholesale assassination of rulers and governments may sometimes be justifiable, when one man or a few are of opinion that they have wrongs to avenge, and that therefore, under terror of dynamiters, it behooves us to be careful how we make severe criminal laws.

How would the readers of *The Index* tolerate in its columns cool ethical discussions between dynamiters and anti-dynamiters, assassins and anti-assassins, burglars and anti-burglars? The burden of this article seems compressible into a short paragraph: "I do not excuse or justify the agrarian excesses the Irish are perpetrating; but you must bear in mind the great fact, 'the wrongs of Ireland,' so universally known and believed to have been perpetrated and persisted in for ages by the monstrous, tyrannical government of England, and that, if the Irish have committed crime, their tyrannical masters have goaded them into it, and the cure is conciliating laws."

The writer thrusts upon us the wrongs of Ireland as the pope would a dogma of the faith, not to be questioned: indeed his Holiness did precisely the same thing in noticing the agrarian crimes after the Phoenix Park murders by telling his good Catholics that Ireland was suffering under unjust land laws. Now, your correspondent could not prepare a more desirable article for *The Index* than one which specifies these wrongs. He need not go back to the heptarchy. Let him begin with the reign of Queen Anne, when there were great wrongs to be dealt with by legislation; let him specify what English legislation has done since that time to benefit the condition of the Irish, and, above all, what exceptional legislation to benefit England and exclude Ireland; and then, after proving the "wrong of Ireland," he will leave the question open whether any *provocation* could justify or palliate the most atrocious and savage crimes known to human experience.

There can be no denial that we are at length brought face to face with the greatest paradox presented in jurisprudence. It is by no means a new question: it would be difficult to say when it was not more or less discussed; but now we must dispose of it decidedly, or fall back into primitive barbarism, individual brute force and brute will. Where shall we derive the power to define and punish crime, without restricting free speech, free discussion, and free press, and at the same time maintain loyalty to our social compact or charter of rights conceded by barbarism to the majority,—namely, the power to make and enforce *all laws* decreed necessary for securing the greatest enjoyment and happiness to the whole, not even excepting the right of restricting free speech and free discussion? But now comes the paradox. Every citizen is assumed to be committed to implicit obedience, and to be an assenting party to the laws enacted by the majority. If we are to assume that the social compact guarantees to every individual the right of absolute free speech and free discussion, what shall we say to the ruffian who, under pretext of an ethical discussion of individual right to avenge his own wrongs by murder and assassination, holds forth at the street corner to make converts, and claims the right to educate his children as thieves and cut-throats? Concede this, and we admit that a social compact is utterly irreconcilable with the largest liberty and free discussion; and, in default of a social compact, we must revert to anarchy and brute force. But here steps in to help us out of our dilemma a right reverend sage, exultingly exclaiming, Have we not often enough predicted and warned you of this outcome of your impious rejection of divine revelation and divine guidance, of presumptuously relying on your finite judgment in presence of God's vicegerent? There is no denying that a well-authenticated deputy-god would seem a simple and welcome solution of all our social problems; but how shall we recognize divinity in a ruler who lets slip upon us a pack of his trained ferocious bloodhounds that in one city alone and in one night tear and murder some seventy thousand people, who only entertained doubts of his credentials! Did this atrocious policy of the deputy-god make one convert to his impudent and preposterous claims? No! But it precipitated the grand revolt: the religious world divided into Catholic and Protestant. But did it explode and annihilate the doctrine of coercing opinion by murder and torture? By no means: it established only the Bible as the rule of faith, and to doubt the Bible was still to incur the penalties of rack and thumb-screw. The kirk session in Scotland ri-

valled the inquisition of Spain. Calvin burnt Servetus, Rome burnt Bruno and Vanini.

Can we wonder that, when this monstrous deputy-god was beaten down on his knees, his conquerors were in no hurry to remove his disabilities, and set him at liberty to begin his diabolical work anew? But we may well wonder to find him within the next century denouncing *religious intolerance* as the great factor in the "wrongs of Ireland," and claiming for his true believers equal status in the councils of the nation,—the right to depose sovereigns and absolve subjects from their allegiance; while, by the canons of his Holy Church, it is now no murder to kill a heretic, and with the *Bull unum sanctum* claiming the supremacy of the spiritual sword.

Catholic Emancipation was the magnanimous resolve by which England hoped to conciliate her Irish subjects. With deputy-god beaten down on his knees, she hoped to disarm his brute forces by releasing them from all disabilities, by the offer of fellowship, brotherhood, and equal voice in the councils of the nation, without even a stipulation for the withdrawal and abandonment of the impudent and insulting claims which amounted to an allegiance to the deputy-god as superior to the sovereign of the nation.

This important stipulation was waived on the assumption that public sentiment had become too enlightened to permit these absurd pretensions to manifest themselves in action,—that they may be safely left to become a dead letter, never to be revived; and Catholic Emancipation was regarded as the panacea for curing all Irish discontent. But then followed the claim for repeal of the Union, clamored for by the "great liberator" always on the verge of treason; and then follows the great Vatican Council, in which the deputy-god reiterates all his impudent pretensions, and declares himself infallible and the only authority on faith and morals. Does anybody ask when we may hope to see Ireland pacified by concessions, without agitators, and wrongs to revenge by agrarian crime? The answer is, When a Catholic archbishop is installed in the See of Canterbury. Are we asked to look to Ireland for advanced intelligence and public sentiment? What is the war-cry of its agitators? "Down with landlordism." Why not raise that cry here or in England? "Ireland for the Irish," and why not America for the redskins? "The Irish nation,"—in plain English, the life of the British Empire! When the mouthpiece of these groaning and suffering Irish is interrogated, What legislation do you want? these are the vague responses: English statesmen are terrorized, agrarian crimes multiply, and, in despair, they devise concessions, the first of which is a surrender of the great principle underlying all free government,—the absolute ownership of property,—a first step in despotism; and they judged rightly in deeming despotism congenial to Irishmen, who can never be governed too much. No free government in this enlightened age would have dared interfere with owners to dictate the terms of a bargain or lease; yet this was done as a concession to Irish ideas of justice. And how was it responded to? The agitators wanted no concessions that may bring peace. They had secured by the emancipation concession a large force in Parliament, and their first use of it was a demonstration to obstruct all legislation and lock its wheels. After the unstatesmanlike and fatal concession in the Land Act, we need no further evidence of the willingness of England to pacify Ireland by almost any desperate measure; and what has this done to give a hope or glimpse of finality in concession? Already, we have a new item of "the wrongs of Ireland." The odious Crimes Act must be abolished, and the Parliament House with its members and half of London must be blown up by dynamite before the courts have time to try the first criminal! Is England so paralyzed that she hesitates to strike the assassin whose knife is at her throat? For the last fifty years, all England's legislation to affect Ireland has been characterized by concession and conciliation. The disestablishment of the Church, a just measure, did nothing for the poor man and laborer; the poor laws, the grants for education, the franchise extension, have brought concession no nearer finality and peace. Home rule, the Irish Republic, and the Irish kingdom are all in full view,—and no doubt the great popular agitator as president or king,—are now, in the programme of concession, the future of Ireland. If common sense could take root in Ireland, it would be seen at once that, if the great agitator has a pro-

gramme of legislation to quiet Ireland, he should show it. Legislation can be done in Westminster Hall as well as in Dublin Castle. A doctor called in, who refuses to show his prescription, is unhesitatingly pronounced a quack. If this great "Sydrophel" had anything better to propose than the humbug of "Down with the landlords!" Ireland for the Irish, and home rule, he well knows that English statesmen would welcome him to their councils, and that the highest honors of a great statesman would cheerfully be accorded to the pacificator of Ireland; but such honors conferred on him, he knows too well, would be only putting the lion's skin on the fox, and his tail would betray him.

There are certain obstructions to the pacification of Ireland; and, until they can be removed, such task seems utterly hopeless.

1. It will require two generations of secular education before the average Irishman can understand liberty, and ceases to cry out for despotic rule. The deputy-god will oppose secular instruction [with all his brute forces to the bitter end.

2. Ireland contains tens of thousands of acres producing less than half its capability under improved cultivation. The starving population have not capital to make improvements, and will not suffer them to be made by those who have, on peril of assassination. There is plenty of water power and cheap labor, that, with the help of capital, may in a few years convert Ireland into a rich and prosperous country; but, with its agitators and agrarianism, none but an idiot will risk his capital or his life in the hopeless experiment. The English government have voted money to move the redundant population to less crowded districts and to assist emigration. This was denounced by the divine and infallible authorities as another tyrannical scheme: it would relieve distress, and therefore deplete the ranks of the anarchist army. What, then, is to be done with Thugs, dynamiters, and assassins avowedly deliberating on the furtherance of their purposes? The only answer possible is, Stamp them out. We have reached a crisis when the whole civilized world must fearlessly affix boundaries to the largest liberty. Special courts should be instituted, with power summarily to suppress treasonable conspiracies and dynamiters and assassins, who should always have in view the probable end,—a drum-head court-martial,—a cord and the nearest lamp-post. We cannot afford to have a third President assassinated, nor to have the whole Congress and Capitol blown up. In applying this sharp remedy, cases of injustice or error could scarcely fail to occur; but what individual disciple of humanity would pause for a moment to estimate his own risk of such contingency, in face of the fact that the dynamiter has become a deputy-god, who, without aid of queen or duke could perpetrate his St. Bartholomew massacre by implements carried in his pocket. Let every town and district forthwith organize its Law and Order Society, every member being solemnly pledged to pursue to the death the dynamiter or assassin, whether the proposed victim be foreign or native. Let humanitarianism show its force, and dynamiters will be few.

OCTOGENARIAN.

THE TOWER BUILDINGS OF BROOKLYN.

Editors of The Index:—

Perhaps your attention has long ago been called to the wonderful blocks of buildings erected on Hicks, Warren, and Baltic Streets in Brooklyn, N.Y., for the benefit of the laboring classes. In recently visiting them, I was filled with envy that Brooklyn had got so far ahead of Boston in this matter. These great "Tower Buildings," of Alfred T. White, look more like enormous castles than tenement houses. The excellence of their planning and management surpasses one's expectation. They are, undoubtedly, the ideal tenement houses. Modelled upon the finest specimens of the kind in London and other English cities, they are lacking in nothing essential to the comfort of family life. Any mechanic can be happy in such homes. Winding up a perfectly fire-proof brick staircase (the houses are of brick throughout), with slate steps, you emerge at every landing on an outside balcony, admitting plenty of light and air. Each suite of rooms is entirely cut off from every other, and has its own private hall running back from the lobby. All the rooms have direct sunlight, either from the street or the great inner court. Sitting-room and living-room have fireplaces and mantels. The

tiny little kitchen contains window, ash-flue extending down into the cellar, a sink, stationary wash-tub, and a water-closet with separate outside window. All refuse must be burned. The halls and sidewalks are as clean as those on Beacon Street. The people are contented. The rooms are never empty, the tenants of the various buildings being eleven hundred in number. You see clean imitation lace curtains at the windows, and iron crestings or railings form a place for flower-pots. Sewerage and ventilation are nearly perfect. Flags fly from the high towers, once a week a band of music plays in the courts, hot and cold baths are provided. All rents must be paid in advance, or the tenant receives notice to quit. A reduction of ten cents a week is made for those paying four weeks in advance; and those who keep all the rules, hold their rooms one year, and pay promptly in advance during that year, receive, at the year's end, a dividend of from five to ten dollars, according to the value of the rooms they occupy. In these great hives of separate homes, fifteen nationalities were in one year represented. No chance for quarrelling when partition walls are deadened; and you never need see your next-door neighbor, unless you meet him on the stairs. A pamphlet, with plans, has been published, giving detailed information about these Brooklyn buildings. And I say this: that, if there is a Boston capitalist who wants to make seven per cent. on his investment (the Brooklyn Company clear this net), let him study, not that pamphlet merely, but the buildings themselves. If Boston were once fully aroused upon the subject of improved dwellings for the poor, how long would such rookeries as that on Lincoln Street offend the sight?

I did not say anything about the cottages of the Brooklyn Company: rows of trim little houses with flower balconies, immaculate front steps, front doors of curled maple, delicate curtains, and a green park extending the whole length of the "Place" (Warren Place), with a fountain in its midst. A comfortable, healthful, six-room house, costing \$1,000, rents for \$18 a month! While, of the tenement rooms, prices range from only \$1.55 to \$2.75 a week for two, three, and four room suites, each with scullery. And this in the heart of Brooklyn. Prices could be put almost as low for similar buildings in New York.

W. S. KENNEDY.

THE BOSTON SOCIETY FOR ETHICAL CULTURE.

Editors of The Index:—

The anniversary of the Boston Society for Ethical Culture proved an occasion of rare interest. After simple opening exercises, Mrs. Bisbee defined the principles of the society and its attitude before the world, and Boston in particular.

Mr. F. M. Holland, of Concord, spoke impressively of the work to be done outside the churches, of Boston's need in this direction, and of the advantage of the Utilitarian School of Ethics (for which Mrs. Bisbee stands) over and above the Kantian basis represented elsewhere. He referred particularly to the practical hymns sung by the children (as well as adults) of the society, also to the method of instruction by flower-symbolizing of every-day virtues. He liked the society's silent meditation, which is substituted for vain-glorious appeal to deity: and he concluded that a work so great as that attempted by the society must grow slowly, but he felt that it must come, so surely as truth must prevail. The next speaker was Mr. A. H. Grimke, who paid a touching tribute to man, speaking of the consecration each one owes to his true self, once found. Mr. Walter Wright spoke feelingly of Mrs. Bisbee's endeavors to purify the lives of individuals, and urged all to proclaim the society's work. Dr. John Perrins made a fitting comparison between the eclecticism for which he stands in medicine and that which Mrs. Bisbee represents in ethics. Miss Cora Scott Pond spoke warmly of her sympathy with the work. Rev. Annie Shaw said she was a good Methodist (a preacher of long standing). Still, with all her disbelief in Free Religious thought, she could not remember when she had felt herself so happily restored as now, with Mrs. Bisbee's people, to the "old class-meeting." Rev. James Sallaway said he was a good Unitarian, yet he felt there were those whom only the Roman Catholic Church could serve; and, though he could not understand the agnostic, he was sure, on the same principle, that there were many in the city of Boston whom no one but Mrs. Bisbee could reach. Mr.

Peter Annet gave an interesting talk on the old church ways, concluding that science to-day begins to add to its force affection, so that the Boston Ethical Society, founded as it is on "reverent free thought and personal friendship," meets a want long felt. Mr. John Orvis represented what he called the "Spiritual Philosophy," and he spoke of the vast need of woman's work in moral education. He hoped that the cultus of the society would amount to incorporation of truth into the life. Rev. William G. Babcock said that, as father of Mrs. Bisbee, he considered himself, in a sense, the "father of the movement." He thought that knowledge and encouragement to live according to the highest standards of morality make ethical societies a necessity of our times. "Churches have all they can attend to in other directions. How to live rightly is of infinitely greater importance than what death can do to us." Other friends of the cause who intended to be present or who have expressed sympathy are William Lloyd Garrison, Jr., Frank Garrison, Elizur Wright, Benjamin F. and Sara A. Underwood, Dr. Sara E. Brown, Georgiana Davis, Isabella B. Hooker, Susan H. Wixon, Revs. J. K. Applebee and Minot J. Savage, and John Storer Cobb. Altogether, the meeting was one destined to give powerful impetus to the movement in behalf of "Ethical Culture" and free thought.

SUPERNATURAL GOODNESS.

Editors of *The Index* :—

In conversation recently with a circle of intelligent friends on the changed and ever-changing conditions of mankind in their relations of social intercourse, activity, and growth, and the ways and means whereby these conditions may be, and are, changed for the better, I was met with the claim of religion: that natural agencies and the enlightened methods of science and education were not adequate; that supernatural power and aid must be invoked, something above and beyond Nature being requisite to the attainment of a right moral state of society and the individual.

I am not unaware that it is the general belief that some invisible personal agency, or agents, supplement the natural forces and works of man; that, while acting in a consciousness of freedom and selfhood, we are yet but the willing instruments or unconscious figures of a hidden agent, who keeps us barbarians or makes us civilized men at his pleasure; and that no goodness is worth having which is not the product or work of this supernatural agent.

Every child is made familiar with the church phraseology of the "Holy Ghost" and "divine revelation"; and so ingrained into the popular mind, indeed, is this religious superstition that any doubt or question in regard to it is held to be a sin. Nevertheless, I must ask, Is it true that what we understand and speak of under the term "Nature" is a delusion? or even that in physical and material matters there is law, a fixed order, but that moral goodness is an exceptional commodity, to be procured only by prayer or credulity, bought and sold by priestly arts, by church authority, or withheld except from the favored few?

I know of no evidence, saving tradition and imagination, that moral goodness is exceptional, is not attainable and susceptible of perpetuation, in the natural way and order, like any other quality or attainment of human character and life. How is it, then, that intelligent people are still deluding themselves and others with the notion that by beating their gods, or by some other equally irrational means, they are going to win some special gift, some unnatural holy ghost? I cannot help thinking that it is simply a relic of primitive ages, when men worshipped the ghosts of their ancestors, believing that all the affairs of the world, physical as well as moral, were controlled by ghosts.

It is perhaps true that the belief in the presence and action of disembodied spirits, like the worship of the dead, operates sometimes as a moral force to restrain from evil or incite to good action; but even this is within the realm of Nature, is conformable to law, not in contravention of it. And, even admitting that such beliefs have a moral effect, is it therefore true that they are superior, that they should be treated as supernatural, as importing something better than Nature, to be perpetuated as a *sine qua non* in modern life and progress?

I cannot help thinking that the whole Old and New Testament conception of a miracle-working agency, interrupting, correcting, contradicting Nature, is a delusion. What though it be claimed that the God of Nature and the God of the Bible are one? It can only be maintained by discarding three-fourths of the book or unjustly distorting its language. The truth is that the belief in ghosts is well-nigh universal; and the Bible would be a miracle indeed, if it reflected the truths of modern science rather than the current early beliefs which it really does reflect.

Pious people are often claiming that as supernatural and miraculous which is simply and obviously natural. The establishment of Sunday-schools for the training of children in moral precepts as well as doctrinal belief is an admission that moral education is really taking the place of the old orthodox scheme of a supernatural "change of heart." Every effort to make men better by natural agency is a movement away from Orthodoxy,—away from a state of miracle-working, wonder-believing childhood. It does not require much insight to see that men are believing less and less in miracles as they know more of Nature and the regularity of Nature's ways.

A. N. ADAMS.

For *The Index*.

WHAT KNOW WE?

What do we know of death? We seem to be.
We seem to joy and sorrow, love and hate,
And learn from other lives that mix with ours
Some lessons that come early, some too late.

We wisely work experiment with matter crude,
We closely search, and find those common laws
That govern change and action, life and growth,
As traced to great result from potent cause.

But what shall visit us when life is done
We know no more than summer flowers or birds;
And, when we speak of life that follows death,
Our grave conjectures are but idle words.

MEDORA CLARK.

MADISON, WIS.

BOOK NOTICES.

FRER GEDANKEN ZUR BEURTHEILUNG DER KIRCHE UND IHRER GESCHICHTE. By Jonas Justus. Stuttgart. 1884. 128 pp.

In the first chapter of this work, the writer considers the origin and development of the religion of Christ. The rapid spread of the newly arisen ideas he ascribes to the teachings of the equality of men and universal brotherliness on the one side, and the shrewd adaptation of the church dogmas to the current paganism on the other. The next two chapters relate to the papal history. The papacy is regarded as a loathsome caricature of the religion of Jesus. The persecutions of so-called heretics are dealt with in a comprehensive manner. The inquisition ("holy officium"), the trials for witchcraft, etc., in their long and dismal train, here pass once more the tribunal of analytic history. But Martin Luther, too, whose merits are briefly acknowledged, is severely censured. He is made responsible for delivering the cause of the Reformation into the hands of monarchs, and thus creating that "Caesaro-papism" as it to-day characterizes the Protestant countries of Europe with all the gloom of a sham theocracy. Nevertheless, can we say, rejoins the writer, that the German and Swiss reformation sprang from purely religious wants; while the avarice and corruption of the throne gave birth to the English Church, which is as far from the ideal church as its founder from the ideal man. Later on, the Jesuits and general history of recent times in regard to religious movements are treated; but especially the last chapter adopts in a more satisfactory form the idea often mentioned in the work of the impracticability of a return to original Christianity, which in fact only lived in the utterances of its supposed founder, and more conspicuously in the refined philosophy of St. Paul. Another universal blunder is the supposed necessity of a uniform church, which, being in contradiction to the nature of man, shall lead to the disintegration of the Catholic Church as much as all endeavors to recur to an imaginary arch-type of a church are in themselves self-destructive. The Free Religious congregations the author thinks the only rational manifestations of that ideal religion as it was advocated by

the Alexandrian *theologi* before the Romish dogmatists dared to define by vote the *regula fides* of the Church. If Christ himself discarded the narrow theocratic Judaism of his surroundings, and appealed to the more healthy paganism for a divinely reorganized humanity, why then will Christians first become Jews,—that is, imbibe the narrow ideas of special revelation, special legislation, and special salvation? True religion remains here on earth, administers to the ethical wants of humanity, and teaches men their actual value and vocation. Therefore, the true friend of religion should neither press for a return to the arch-church nor ponder over the invention of a new religion, since both are in themselves irrational conceptions, but look forward to the rise of the "free church," whose members shall place their ambition in the "right conduct, not in the right faith." "This Church," the writer concludes, "shall, through the fulfilment of man's historical evolution, coincide with the free State."

F. W. O.

BREAD PILLS: A Study of Mind-cure. What It Is and How to Do It. By C. M. Barrows. Boston: Deland & Barta. Price 35 cts.

This is a very sensible book on, at present, a very popular subject, which the author treats in a thoughtful, respectful, and common-sense manner. The results of his observations and investigations of the subject are comprehensively summarized in a quotation given by him:—

"The best receipt for health, say what they will,
Is never to suppose we shall be ill.
Most of the evils we poor mortals know
From doctors and the imagination flow."

THE *Freethinkers' Magazine* for March reprints from *The Index* Mr. F. M. Holland's address at the Florence Convention, on Secularization. There is also a poem to Robert G. Ingersoll, and a number of short articles, protesting against the Nicaragua Treaty, criticising Heber Newton's consistency, defending the morality of infidels, and urging the erection of a Freethought School with a building to cost \$25,000. The question of location is left to a committee, whose members for Massachusetts are G. N. Hill, president of the Ingersoll Secular Society, and F. M. Holland. The memory of John S. Verity is duly honored; and there is a timely quotation, under the head "Fasting and Prayer," from the letter of Thomas Jefferson, beginning thus: "I consider the government of the United States as interdicted by the Constitution from meddling with religious institutions."

THE *Andover Review* for April contains the first of a series of "Sermons to Workingmen," by Dr. Newman Smyth, with an introduction by Prof. Tucker. The other articles are "The Moral Purpose of the Later American Novel," by Prof. Charles F. Richardson; "Co-operative Creation," by Rev. F. H. Johnson; "Bach and Händel," by Prof. Blodgett; and editorials on "The Crusade against Common Schools,—School or Scholar," "The 'Vagueness' of a Defensive Orthodoxy," and "The West African Conference"; "Historical Criticism,—Ancient Religions, the Deities of Ancient Egypt," by Rev. Lysander Dickerman, and "Book Notices." Boston: Houghton, Mifflin & Co.

"WIDE AWAKE" for April has short stories by Rose Terry Cooke, Ellen Olney Kirk, Helen E. Sweet, and Charlotte S. Fursdon, an English writer. Interesting instalments are given of the continued stories by Charles Egbert Craddock, E. S. Brooks, and Lizzie W. Champney. Mary Hartwell Catherwood writes of "Gipsies"; Mrs. Fremont gives a delightful "souvenir" of Dolly Madison and Mrs. Alexander Hamilton. Yan Phou Lee gives an interesting account of some Chinese girls. There are more than half a dozen poems by well-known writers; and the illustrations are, as usual with this excellent magazine, numerous and beautiful.

"PANSY" and *Baby-Land* for April, from the publishers of *Wide Awake*, are both received, and found brimming with amusement and instruction for the babies, and little ones outside of babyhood. *Pansy* is especially rich in the following instructive articles: "A Story Book of Science"; "That Old Bell!"; "Thin Slices of American History"; "Nicknames of States"; "Alfred the Great"; "Our Alphabet of Great Men"; and "Ancient Roman Houses and Customs."

Pirate SONG of VICTORY

The literary "pirate" question which we have recently been called upon to discuss recalls to mind the "Parnassus Dream" which a "Literary Revolution" friend sent us some time ago. It bears repeating, and has an appropriate ring to its melody in these days of new and glorious victories.

Cheap Choice Books

DESCRIPTIVE CATALOGUE, ONE HUNDRED PAGES, sent free on request. Books sent for examination before payment on evidence of good faith. Following are representative works:

- GUIZOT'S HISTORY OF FRANCE.** 8 vols., 426 illustrations. Reduced from \$36.00 to \$8.00—cheaper edition, \$5.00.

- BACON'S ESSAYS,** complete. Paper, 15 cents; cloth, 25 cents.
- COOPER'S LEATHER STOCKING TALES and The Spy.** 6 vols. bound in 3; fine cloth, price, \$2.50.
- PROSE TALES OF EDGAR A. POE.** 1 volume, fine cloth, price, \$1.00.
- WORKS OF BULWER-LYTTON,** complete in 13 volumes, fine cloth, library style, gilt tops, price, \$9.00.
- LONGFELLOW'S PROSE WORKS.** 1 volume, fine cloth, price, 65 cents.
- RUSKIN'S CHOICE WORKS.** 3 vols. in one, half Russia, price, 50 cents.
- GRACE GREENWOOD'S NEW BOOK,** Stories for Home Folks, Young and Old. Price, 50 cents.
- CHINESE GORDON,** by Archibald Forbes. Cloth, price, 50 cents.
- ANCIENT CLASSICS for English Readers.** 27 volumes bound in 9, half Russia, price, \$5.00.

Books by Mail require 20 per cent. extra to prepay. Mention this paper.

JOHN B. ALDEN, Publisher,

P. O. Box 1227.

393 Pearl Street, New York.

I slept where the moon, serenely bright,
Shone full in my face through a summer night
I dreamt I was in a Land of Light,
With Fielding and Moore and Shelley
And White.
And Shakespeare and Milton—a goodly
With Addison, Dryden, and others, quite
Too numerous to mention;
And there the worthies, one and all,
Whom we the "classical authors" call,
Beneath the shade of Parnassus tall,
On Pegasus Place, in Helicon Hall,
Were holding a big convention.

Virgil was sitting beside Voltaire,
Boccaccio chatting with Dumas, pere,
And Pope curled up in the corner there,
While old Sam Johnson was in the chair,
Wall-eyed and grim, with carotid hair,
And he said, "Of course you're all aware
Of the latest literary advances;
The publishers seem to be going to
smash
Beneath the great 'economy' lash,
For John B. Alden is cutting a dash
Exceedingly reckless and awfully rash,
In selling for almost nothing for cash,
And ruining regular prices!"

"I hold in my hand a letter from four
American publishers who feel sore,
And they speak for a score, or possibly
more,
Who live by traffic in printed lore.
I read: 'We pray from this earthly
shore
Ye authors of old attend us!
O, give us a lift in this hour of need.
For the publishing business is going to
seed;
That man Alden is making with speed
As many books as the folks can read,
And selling disgracefully low, indeed;
It cheapens your fame—for you we
plead!—
Ye talented ghosts, defend us!'"

"What word shall we send to this
earthly band?"
Then Scott, with an "Elzevir" in hand,
Arose (amid cries of "Take the Stand!")
And said, "This scheme will possess the
land;
No good is the Harper or Scribner brand
While Alden shows that he can com-
mand
The brains of sage and scholar:
A shilling for Pope—good binding on;
The same for the poems of Tennyson;
Ten cents for your Pilgrim's Progress,
John;
For the Ulick, thirty cents; and Don
Quixote for half a dollar!"

Then Chaucer said, "I am rather old,
But I am mighty glad this day to be told
How cheap my Canterbury Tales are
sold.
And the poets and wits of the Queen
Steele the bright and De Foe the bold,
Berkeley the sober and Swift the scold,
From the time of Sir Walter Raleigh;
Shakespeare's works, and Smollett's
and Sterne's,
Bacon, Bellingbrooke, Byron and Burns;
And Babbington Lord Macaulay."

Charles Dickens said, "T'would be fool-
ish to let
Good luck of mortals cause regret:
For the price of a theatre-ticket they get
Milman's Gibbon—the perfect set—
Dante and Virgil, two shillings net,
For a dollar Adam Smith's Debt,
And Mill on the Laws of Nations;
And I see by this wondrous circular
Sent up by J. B. A. that for [War,
Three cents you get the Seven Years'
For a dime King Henry of Navarre,
And for thrice the price of a good cigar
Will Shakespeare's inspirations."

Then Goldsmith rose and expressed it
thus:
"It is simply a case of de gustibus,
But I see no reason for all this fuss,
For publishers never did much for us,
While needy, summer and winter;
Therefore, confound it, I hold this view:
The high-price houses are doubtless
blue,
But unto the man our thanks are due
Who sends our thoughts each palace
through,
And into the humblest cottage too,
For the many are always more than the
few.
And the people are more than the
Printer!"

A slight shade rose—'twas Edgar Poe—
Who said, "I've been talking here with
De Foe."
We agree, and the ancients have told us so,
That who makes two printed leaves to
show
Where only one did formerly grow
Is as good a man as we want to know;
And this letter here, from the realms
below,
Reveals its earthly animus:
I move it be not received!" About
A thousand voices removed all doubt,
Ben Johnson and Halleck and Hood
spoke out.
Kit North and Irving and Father Prout,
Midst arm of cheers & a mighty shout,
And the motion pass'd—unanimous!

THE "FREIDENKER."

Freedom, Culture, and Prosperity for all!
(Organ of the Freethinkers of North Amer-
ica, of the Union of Radicals, and the
North American Turnerbund.)

Editor, C. Hermann Beppe.

TERMS, PER ANNUM, IN ADVANCE:
UNITED STATES AND CANADA:

Freidenker..... \$2.50
Turnerische Ausgabe des Freidenker
(Amerikanische Turnzeitung)..... 3.00
EUROPE:
Freidenker..... \$3.00
Turnerische Ausgabe des Freidenker
(Amerikanische Turnzeitung)..... 3.50
Sample copies sent, on application, free of
charge.

In this weekly, which is now in the thir-
teenth year of its existence, political, social,
and religious matters are discussed with a
view to general enlightenment and progress.
The *Amerikanische Turnzeitung* is especially
devoted to the discussion of topics pertain-
ing to physical culture and matters of in-
terest to lovers of the gymnastical art.
Since Jan. 1, 1885, the *Freidenker* has been
enlarged, thus furnishing considerably
MORE READING MATTER, while the PRICE
REMAINS THE SAME AS BEFORE.
For the convenience of those of our read-
ers who are chiefly interested in matters
relating to gymnastics, the *Freidenker* and
its former supplement, the *Turnzeitung*,
have been consolidated into one paper,
called *Amerikanische Turnzeitung*, with the
sub-heading "Turnerische Ausgabe des
Freidenker."

This paper contains more reading matter
than furnished by both the *Freidenker* and
Turnzeitung heretofore. In making these
changes, the publishers have incurred great
expense; and we therefore solicit the hearty
co-operation of all friends of the cause in
securing for the *Freidenker* and the *Ameri-
kanische Turnzeitung* a wider circulation.

We also publish

"Erziehungsblaetter,"

fuer Schule und Haus.

WHOLESALE AND RETAIL Booksellers and Stationers.

Catalogues of new and standard books
will be sent to any address without charge.
Illustrated list of works of American authors
sent on receipt of 4 cents in stamps.

N.B.—The prices quoted in the catalogues
which we send out are the PUBLISHERS' RE-
TAIL PRICES. These, unless marked net, are
subject to a uniform discount of TWENTY
PER CENT. to individual buyers. Special
terms are offered to the trade and to public
libraries. Any book in print will be sent by
mail on receipt of the net price, with enough
added to cover postage, at the rate of one
cent for each two ounces. The postage on
an ordinary 16mo book is about ten cents,
and other sizes in proportion. Orders by
mail are especially solicited, and will receive
prompt and careful attention. Liberal books
a specialty, our store being the Western
agency for the publications of GEO. H.
ELLIS and the AMERICAN UNITARIAN ASSO-
CIATION.

**THEODORE PARKER'S LAST
SERMON.** Subject, "What Reli-
gion may do for a Man." Delivered Jan. 2,
1859; printed in pamphlet form at the time,
and for many years out of print; not in-
cluded in any American edition of the au-
thor's works. Republished by THE COLE-
GROVE BOOK CO., 135 Wabash Ave., Chicago,
Ill. Price 5 cts.; 10 copies, 25 cts., postpaid.

**WHY GOD'S CHOSEN ARE A
MINORITY OF THE MI-
NORITY.** A sermon by Rev. C. Van Nor-
den, of the North Congregational Church,
Springfield, Mass. Published by THE COLE-
GROVE BOOK CO., 135 Wabash Ave., Chicago,
Ill. Price 5 cts.; 10 copies, 25 cts., postpaid.

**THE JESUS OF HISTORY AND
THE JESUS OF ROMANCE.**
A sermon by Dr. E. G. Hirsch, Rabbi of
Sinai Congregation, Chicago. Published by

BY B. F. U.

ONE of the traits of the character of the critical scholar, Richard Grant White, who died last week, was his kindness to young authors who needed sympathy and encouragement.

HON. CHARLES W. SLACK, editor of the *Commonwealth*, who died last Saturday, was a man of many public and private virtues, whose death is mourned by a large number of friends in this city and State.

SOME idea of the annoyances Gen. Grant is subjected to by the preacher Newman, "encouraged by women of the family," may be inferred from a remark of ex-Senator Chaffee, who is one of the inmates of Gen. Grant's house. "He ought," said the ex-Senator the other day, "to be let alone on that subject; for he has his own notions well settled, and Newman can't alter them. It is a shame to pester him."

VISITORS to Montreal during its winter carnival may have noticed beside the ice-palace the vast unfinished St. Peter's Cathedral. It has been decided by the Roman Catholic Bishop to resume its construction; and a band of priests will soon begin their task of collecting more money from their flocks, chiefly the poorest class, in the city. Verily, these followers of the lamb carry shears in their hands.

CERTAIN articles in the newspapers, referring to the will of Mrs. Eddy by which she left money for the use of Mrs. Lucy Stone and Miss Susan B. Anthony, contain the statement that "the heirs" of the deceased have sought to have declared null and void the bequests referred to above. In justice to all concerned, it should be said that the will was disputed only by the guardian of the grandson of Mrs. Eddy, the other heirs, the nearest related, having done all they could to have the will sustained.

DR. JEFFERSON CHURCH, one of the oldest physicians in Western Massachusetts, died last week in Springfield, Mass., at the age of eighty-

two. Although in active professional practice, he found time in the old days of slavery to give much time to the abolition movement. His home often contained one or more fugitive slaves waiting for an opportunity to escape to Canada or elsewhere. He was a warm friend and supporter of Garrison, John Brown, Phillips, and others who were prominently identified with the anti-slavery movement.

A WELL-KNOWN English writer, in a letter from London, writes: "I have been so busy of late that I have had no opportunity for anything but political work, the political situation here being of so absorbing a kind. . . . Still, I do not by any means lose interest in *The Index* and its work. I hope you flourish, and spread the light which is needed both in England and America. Things here are generally in a very bad way. The time is out of joint,—unjust war and heavy taxation and social distress and continued depression, spite of the optimistic predictions that were made some time ago. My own impression is that things will be worse before they are better. No one here is in a very happy or hopeful frame of mind."

THE Boston *Sunday Courier*, commenting on Mr. Wendte's statement that many abstain from church-going because they are afraid of being robbed of their pleasures and dissipations, remarks: "If people who stay away from church felt anything so definite as a fear of being 'robbed' of their pleasures and dissipations' by church-going, the seats would not long remain vacant. The state of things against which the Church has to contend is far more dangerous than this. It is an absolute indifference to theology and all that it implies; it is a perfect confidence that the clergy are as a rule so steeped in fustian and absolute conceits about 'fleshy minds,' 'ethical impulses,' and all the rest of it, as to be utterly out of sympathy with practical life and human concerns. The Church has clung to the idea of the enmity of the natural man until that individual, after passing through the various stages of irritation, impatience, and tolerance, has come to be absolutely indifferent."

AT the annual meeting of the Florence Free Congregational Society, Mr. and Mrs. Spencer stated that they should not be candidates for re-election to the office of resident speakers of the society. There has been for some time a difference of opinion as to the wisdom of having any resident speaker, and Mr. and Mrs. Spencer's declination of further service beyond their present term was not unexpected. The Executive Committee, in their annual report, say: "This declination necessitates deliberation and action, on the part of the society, as to what method of carrying on its works shall be adopted, at the close of Mr. and Mrs. Spencer's term of service; whether the society will continue its present course of having a resident speaker, who shall supply the desk for the whole year; or whether it will return to the original plan of employing a resident speaker who shall occupy the desk a part of the year, and a variety of speakers be employed during the remaining portion of the time; or whether some other

plan shall be chosen." Mr. Spencer's views during the past year have undergone some modification, and it is stated that he will return to the Unitarian ministry.

REV. JAMES FREEMAN CLARKE in the *Christian Register* says: "I am obliged to admit that he [Mr. Francis E. Abbot] did right in withdrawing from the Conference. I see that, with his views, he could not honestly be a member of the Unitarian denomination, nor, indeed, of any Christian body." Mr. Abbot replies that he understands this to be a confession of "the essentially exclusive nature of the Unitarian Preamble-creed." Mr. Clarke says in response that, while Mr. Abbot was excluded by the Preamble from his *own* "point of view," he was *not* excluded from his [Mr. Clarke's] "point of view." Mr. Abbot replies that there is "a universal moral law to which all individual 'points of view' should be carefully and consistently conformed," and asks whether it is not incumbent on every Unitarian "to interpret the Preamble according to the clear and evident intent of its language as scrupulously as upright judges interpret the laws they administer, and thereby to accept as decisive of its meaning the Conference's own 'point of view.'" Mr. Clarke says that, from his "point of view," the Preamble "expresses not a dogma to be believed, but a work to be done. It means that we unite as Christians to carry on all good work." Mr. Abbot reminds Mr. Clarke that, if the Preamble had said only that, he should not have offered his substitute at Syracuse; for that is exactly what the substitute proposed and "exactly what the Conference on Dr. Clarke's own recommendation voted down." To defeat Mr. Abbot's substitute, he declared that a repeal of the confession of allegiance to Jesus as "Lord and King," when it had been adopted, would seem like "hauling down the flag." "I submit," says Mr. Abbot, "that the individual point of view which permits such tactics as these—which, from dread of being refused the Christian name by other Christian sects, at one time insists on the confession of the 'Royalty of Jesus,' but which, from dread of being accused of illiberality by the outside liberals, at another time wholly omits that confession and puts forward in its stead a purpose of 'carrying on all good work,—is neither reasonable nor right." In regard to his leaving the Unitarian communion, Mr. Abbot says: "The sharp alternatives were—hypocrisy or exclusion; and they are so still for every Unitarian minister who cannot in good faith profess allegiance to Jesus as his 'Lord and King.' Nothing but unmanly quibbling can make those alternatives other than they are." "You will go your way," he concludes, "I mine: I would gladly go with you, if the terms of your fellowship were still what they were; but I will walk alone till I walk into my grave, before I will accept the terms of your fellowship as they are. The freedom of thought I must have will brook no Preamble-creed. And so God bless you, and farewell." On both logical and moral grounds, Mr. Abbot has clearly the best of the controversy.

THE MORMON PROBLEM.

The Edmunds law for the suppression of polygamy in Utah appears to be working more effectively than it was at first supposed possible. Convictions of prominent polygamous members of the Mormon Church, it is found, can be obtained under it; and government officials are alert in arresting offenders and bringing them to trial. The consequence is that many of the leading members of the Church are temporarily leaving the Territory or keeping in concealment, in order to escape the prosecuting officers. The whole Church is greatly disturbed by the aspect of things, and it is reported that even the question of migrating beyond the limits of the United States has been mooted. But it is hardly probable that this course will be taken. The population of the Church is now too numerous and wide-spread, and too deeply rooted in Utah, to make migration a feasible solution of the difficulties of the situation. It is doubtful whether the Mormon elders, great as is their authority, could enforce such a measure upon the membership of the Church as a whole. A revolt might ensue; and, as it would be in the interest of civil order against an ecclesiastical command, the recusants would have the support of the United States authorities, and, so choosing, might easily maintain their ground against the authority of the Church.

A more probable resort, indeed, than to this desperate expedient of migration would be an official decree from the Church itself declaring polygamy to be no longer a constituent part of the Mormon religion. It is even rumored—though it is to be feared on little evidence—that at a general Conference of the Church to be held the present month such a declaration will actually be issued. The wish is probably father to the thought. Yet there is said to be a growing party in the Church, and particularly among the younger members, opposed to polygamy. And it is a possible thing, perhaps, that the elders may be wise enough, looking not only at present difficulties, but at the future of their Church, to solve the whole problem by proclaiming the abolition of polygamy. Since it is not claimed that polygamy is authorized by the Book of Mormon, but was established by a supplementary revelation, another supplementary "revelation" may appear, disestablishing the custom without any disturbance of the foundations of the Church. This would seem a comparatively easy solution of the Mormon problem, and is a consummation devoutly to be wished. Polygamy abolished, by a law made unalterable in a State constitution under forfeiture of State autonomy, the controversy between the United States and the Mormon Church would be effectually settled. The United States government has nothing to say about the faith and religious customs of the Mormons except on the point of polygamy, where United States law is violated. Remove that, and the Mormon Church will be as free as any other form of faith to maintain its creed, practise its worship, and develop its ideas of industrial economy, in which it has had such marked success, according to its own wisdom and pleasure.

The recent decision of the United States Supreme Court, though in the special suit brought before it, favoring the Mormons, contains an important general decision adverse to their claims, which may have weight with them in the present disturbed state of affairs. The court decided that the test-oath with regard to polygamy which the Commissioners had required as a qualification for voting was illegal; but they so decided on the ground that no such authority had been given

them in the law of Congress by which they were appointed. The general plea, however, of the Mormon counsel, that Congress had no right to disfranchise citizens of Territories, the court disallowed. It declared the political rights of the people in Utah, as in other Territories, to be "franchises which they hold as privileges in the legislative discretion of the Congress of the United States." This puts it in the power of Congress to give the Commissioners the authority to establish the test-oath as well as to do other things to carry out the intent of the present law. The Mormons, therefore, must be more discouraged than cheered by the Supreme Court's decision.

Apropos of the Mormon problem, it may here be said that a new emigration society has been organized in Massachusetts for the purpose of sending a class of settlers to Utah, who would help to free the Territory from polygamy. The most prominent directors in this new society were also prominent in the Kansas emigration society, which did such effective work, nearly thirty years ago, to make Kansas a free State. The wise energy which characterized that work and the success attending it may be significant of one of the ways by which the solution of the Mormon problem is to be found.

WM. J. POTTER.

"MODERN PAINTERS."

The first volume of Ruskin's *Modern Painters* was received by the anonymous art-witlings of the early part of this century with scorn, merriment, and astonishment. *Blackwood's Magazine*, the genius-killer,—"Blackguard's Magazine," Mr. Swinburne calls it,—took the field with a long sardonical-earnest review: "We at first thought the book [it said] to be an ironical satire on modern painters, and determined to defend them, it seemed so preposterous to affirm that modern painters were superior to all the ancient masters in landscape. . . . He knows nothing of the masters whom he maligns. . . . In condemning them all, he is like the unfortunate gentleman in an establishment of 'unsound opinions,' who gravely said, 'The world and I differed in opinion; but they were too many for me, and put me here.'" *Blackwood's* then proceeds, very strangely, to devote eighteen closely printed, double-column pages to a review of this utterly worthless and very funny book, and closes with the opinion that landscape painters would gain little by the volume, unless it were some mortification at being so sillily lauded; and that lovers of art would stand little chance of being 'Turnerized' by the "Oxford Graduate's" palpably fulsome, nonsensical praise. All of which sounds very amusing in the present day, as is so often the case with the crushing lucubrations of mighty critical prophets, when read some years after the dust has grown thick upon them. It were hard to discover a more hopelessly imbecile and spiteful collection of reviews than the articles on Ruskin in the *Athenæum*, *Blackwood's*, and the *Quarterlies* of London, which have appeared simultaneously with the issue of each of his volumes. The "criticism" is the very calenture of petty envy, and overleaps itself by the grossness of its malignity.*

*"I came by surprise, the other day, on a cuttle-fish in a pool at low tide. On being touched with the point of my umbrella, he first filled the pool with ink, and then finding himself still touched, in the darkness, lost his temper, and attacked the umbrella with much psyche, or anima, hugging it tightly with all his eight arms, and making efforts, like an impetuous baby with a coral, to get it into his mouth. On my offering him a finger instead, he sucked that with two or three of his arms, with an apparently malignant satisfaction, and, on being shaken off, retired with an air of frantic misanthropy into the cloud of his ink. Now, it seems to me not a little instructive to reflect how entirely useless such a manifestation of a superior being was to his cuttle-fish mind; and how fortunate it was for his fellow-octopods that he had no command of pens as well as ink, nor any disposition to write on the nature of umbrellas or of men."—*Ruskin, in the Contemporary Review*, 1871.

Modern Painters is a work which, according to its author, was written not for fame nor money nor conscience' sake, but of necessity, for the sake of righting an injustice. "It is a book," says Leslie Stephen, "which, in spite of incoherence and utter absence of concentration, has done more than any other of its kind to stimulate thought and disperse antiquated fallacies." It is Ruskin's greatest work by far. And the wealth of thought is not to be mastered by an indolent or hasty reader. The work is a life-treasure, a great storehouse of truth, portions of it so severe in treatment and so suggestive and original as to require repeated readings and ponderings before the full import is revealed.

More particularly, the five volumes of *Modern Painters* may be described as a discussion (with many digressions) of the truths of landscape painting, with continual reference to Turner as the master, and continual reprehension of such artists as Claude, Gaspar Poussin, Salvator, Cuyp, Berghem, Paul Potter, and the two Teniers.* As incidental and ancillary to the main theme there is necessarily a large amount of valuable nature-study at first hand, and analytical examinations of eminent poets and other great authors. One may say that the spinal ideas of the whole work are embodied in the two phrases, "What is Truth?" and "What is Beauty?" The first volume discusses the truths of power, beauty, and relation of color, chiaro-oscuro, clouds, mountains, water, and vegetation. Volume second treats of ideas of beauty, and partakes of the nature of an introduction to the rest of the work; namely, volumes three, four, and five, which, while treating of style, invention, classical and mediæval landscape, and the beauty of mountains, leaves, and clouds, are yet full, every page of them, of thorough investigations into the truth of the things taken into consideration. (The author of the work says he can never be sure of the petals of beauty, unless he feels in his hand the strong stem of truth.) The painstaking accuracy of Ruskin makes the study of his greatest work an education for young scholars. A work to the making of which went the expenditure of a fortune and seventeen years of toil and travel is one that impliedly bears on every page a rebuke of slovenly or hasty writers. How many purely literary workers are there who would give, as Ruskin did, a week or two of hard walking to determine some geological problem that must then be dismissed in an unnoticed sentence? Or how many other scientists are there who would omit entirely, as he did, all discussion of the sea from their study of nature, because they could obtain from mathematicians no satisfactory explanation of the curves of waves?

Organically as well as chronologically, *Modern Painters* is divided broadly into two main portions: the first comprises volumes one and two; the second begins with volume third, written after ten years of preparatory labor.

Students who attack the five volumes of *Modern Painters* for the first time are not to understand that all parts of the work are of even merit. It is an unevenly written and diffuse conglomeration of thoughts, and the clew of logic often hard to follow. As for the first two volumes, all but artists had better skip them altogether, and begin with volume three. Volumes one and two are condemned, in large measure, by their own author, who is engaged in the task of recasting them; for not only are many parts of them (as he says) "written in a narrow enthusiasm, and the substance of

*The title of the work, as originally designed by Mr. Ruskin, was to have been "Turner and the Ancients"; but, by the advice of friends, he reluctantly adopted the present title, and added references to other modern landscape painters.

their metaphysical and religious speculation justifiable only on the ground of their absolute honesty,"* but occasionally the art teachings are unsound. In the preface to *Frondees Agrestes*, Prof. Ruskin gives other reasons for not republishing in its entirety volume one of *Modern Painters*; namely, that some portions of it are rendered unnecessary, owing to the established fame of Turner, other portions having always been useless in the praise of excellence which the public will never give the labor necessary to discern.

By the time the second volume of *Modern Painters* appeared, Turner himself had given its author his thanks, and came, in honor of the father and mother, to keep the birthday of their son.

In preparation for the third and succeeding volumes of his great work, Ruskin determined to make exhaustive studies in a wide range of correlated subjects,—painting, architecture, geology, mineralogy, and botany, as well as the biographies of artists and the history of their times. For ten years, he toiled in the picture galleries of Europe, and alone amid the Alps of Switzerland and the meadows of England, going from city to city and castle to castle, sparing no expense, seeing, collecting, systematizing, planning works in every department of art, literature, and natural history, and gathering a body of notes that it would take three or four lifetimes to utilize. During this decade of years, 1846–1856, appeared the *Seven Lamps of Architecture* and the *Stones of Venice*. At its close was published the third volume of *Modern Painters*, which no more resembles its predecessors than *Lear* is like *King Henry VI*. Ruskin is now a mature man, and treats art, literature, and life with the broad scope and the firm touch of one who is master of his craft. Volume three is the best of the five, and discusses themes of more popular interest than the others. The reader should understand that the topics of the whole work are arranged with a view to convenience of reference rather than in any formal system, so that the hesitating student may confidently take up any volume of the five, and find it a separate treatise, or group of treatises, of entirely independent connection and interest.

W. S. KENNEDY.

"THE NAPANEE" (ONT.) "TOWN HALL CASE."

I have been requested to furnish a general and accurate account of the now historico-legal "Napanee Town Hall Case" for the columns of the *Index*, as such an account has never yet, I believe, been furnished your readers.

In the autumn of 1874, having been for some years previously, with pen and otherwise, preparing the minds of friends and neighbors somewhat for the reception of new light on Secular questions and broader views of mental liberty and freedom of speech, I addressed an invitation to Mr. B. F. Underwood of Massachusetts (U.S.) to come to Napanee and give a course of lectures on the liberal questions of the day. Mr. Underwood, who was then occupying most of his time in the lecture field, and whom I regarded as the ablest exponent of Secularism or Scientific Materialism then on the platform in America, readily consented to come over the lake, make our acquaintance, and inaugurate liberal lectures in Canada. Having arranged with Mr. U. for a course of three lectures for the 15th, 16th, and 17th of September (1874), with the hearty co-operation and assistance of a few staunch friends I proceeded to make the necessary arrangements. I leased the Napanee Town

Hall from the Mayor for the three evenings mentioned, taking the precaution to make a written contract with him and to pay for the same in advance. I then issued advertisements in the local papers and by posted bills announcing the lectures, the subjects of which were to be as follows:—first night, "Evolution vs. Creation"; second night, "What Liberalism offers as a Substitute for Christianity"; third night, "Fallacies and Assumptions of Theologians regarding the Bible and Christianity." The clergy were invited and were promised ample opportunity to reply after each lecture. But no sooner were our advertisements issued than the bigots of the town were up in arms to prevent the lectures. The town Council, in total disregard of the mayor's contract, voted that the town hall should be shut against us. The mayor, who was the leading lawyer of the town, was, *ex officio*, chairman of the Council; and he at once advised me of the adverse decision, and urged that I try and procure another hall to avoid trouble and further conflict between him and the rest of the Council, promising, however, to open the town hall for us in case we failed in securing another suitable place for the lectures. Meanwhile we circulated a petition through the town asking the Council to reconsider their prohibitory resolution and peaceably give us the use of the hall according to contract. This petition was signed by a majority of the leading business and professional men of Napanee and was duly presented to the Council by the mayor himself. A counter petition from the Y. M. C. As., but poorly supported, was also presented. The majority of the Council, however, remained incorrigible, ignored our petition, and re-affirmed their first resolution that we should not occupy the hall for our lectures. Failing to get another suitable hall the mayor, at this juncture, reiterated his promise to order the hall opened to us when the evening arrived for lecture. I then addressed a letter to the Council and the public through the local papers (two of which were against the bigoted action of the Council and one in their favor), advising them that we would firmly adhere to our contract with the mayor and that the lectures would certainly come off as announced. By this time the excitement not only in the town but throughout the surrounding country was at fever heat, and the general feeling, especially in the town, was against the narrow and pusillanimous action of the town Council. At length the memorable evening for the first lecture arrived, and long before the hour of opening a dense throng of hundreds from town and country filled the market square in front of the town hall. Mr. Underwood had arrived during the day in good order and ready to diffuse the new light of Science and Secularism to all and sundry who cared to hear. As the time for opening approached, the police of the town accompanied by a squad of the Council, and under its direction, took possession of the entrance to the hall completely barricading the door. The interest now became intense. No prohibitory, municipal, legislative, or parliamentary election ever awakened such interest or produced such excitement in the town of Napanee before. The hour for opening having arrived we made our way through the throng to the hall door, and exhibiting our written contract with the mayor for the use of the hall that and the succeeding two nights I demanded admittance thereto. The mayor, who had given orders to the janitor to open the hall, was not present to contend further with the Council and constabulary. Our demand for admittance was met with a dogged refusal; and after some parley I distinctly informed this fossil obstruction to our way that if

they persisted in excluding us I would prosecute them for damages. This failing to raise the blockade we retired in good order, albeit the indignant crowd, had they received one word of encouragement from us, would have "run" that medieval blockade in less time than it takes to write this sentence; but we counselled moderation and advised the incensed crowd to desist and we would try law instead of brute force. We then proceeded straight to Music Hall—the best in the town—where an entertainment was in progress, and opened negotiations with the manager of a theatrical company who had the hall leased for the whole week. In consideration of \$125.00 cash, which we paid him, he agreed to step down and out and relinquish the hall to us for the three following nights. The crowd had assembled in the street in front of Mr. Underwood's hotel and in response Mr. U. appeared upon the balcony and addressed them briefly, announcing that we had secured Music Hall and that the lectures would come off there the following three evenings, which elicited hearty cheers.

The next day, anticipating disturbance and trouble at night from our bitter and cowardly opponents, about a dozen of us quietly got ourselves sworn in as "special constables" so that we could deal with the cowardly fanatics as they deserved in case they showed their teeth. When the hour for the lecture came the large hall was packed—all eager with expectation and interest as to what might happen, with a score or two there determined to disturb and break up the meeting. The lecturer proceeded, and after we had ejected four or five of these red-hot religionists who could not keep quiet, the rest, considering discretion their best card under the circumstances, either stalked out or remained peaceable.

Barring this disturbance by a few, this first lecture was listened to attentively; but was received for the most part in stoical silence without the outward expression of either approval or disapproval. The physiognomical observer of faces, however, could see that a majority were more than interested—they were pleased,—the braced-up rigidity for the occasion was seen to be surely relaxing under the courteous bearing and cogent reasoning of the lecturer. They feared to applaud the unpopular "infidel," but evidently relished the substantial intellectual food he offered them. At the conclusion, however, led by the few warm friends of the lecturer, there was a good round of applause.

Thus ended the first free thought lecture ever given in Canada. Everybody now breathed easier, and the popular pulse was rapidly sinking to the normal standard. The second evening the hall was again full of a better class of people, including a few ladies, and nearly all listened attentively and respectfully without interruption. The last night also witnessed an increasingly large and still higher-class audience of intelligent and deeply interested listeners, including quite a sprinkling of ladies; and it had already become apparent that the "infidel lecturer" had, by his gentlemanly demeanor, scholarship and forensic ability, already, in great measure, disarmed malice and made a generally good impression. A few no doubt still thirsted for the godless lecturer's blood and for ours as well; but with the great majority of the hundreds who for the first time heard their traditional beliefs brought in question and their cherished dogmas refuted, the bitter animosity was obviously vanishing. An interesting and amusing episode occurred the second evening. At the conclusion of the lecture, in response to an invitation from the platform to any person, especially the clergy, who wished to reply, a Methodist min-

*From preface to the 1873 edition of *Modern Painters* (limited to one thousand copies, and certified by Mr. Ruskin's own signature).

ister near the door came to his feet, and with a great profusion of grotesque gesticulation and inflated flourish opened a very animated fusillade of personal squibs and irrelevant shots at the proverbial "man of straw." Mr. Underwood, in rejoinder, so dexterously pricked the gas-bag, and the collapse was so complete, that the audience could not withhold a rousing cheer for the agnostic polemic. Thus did this initial course of Liberal lectures in Canada finally turn out eminently successful. Considering the bitterness of the struggle—fierce and bitter on one side but firm and uncompromising on the other—it is a marvel that no blood was spilled. A few liberal friends were present at the lectures from a distance to cheer and encourage our own little band by their presence and sympathy.

We bade Mr. Underwood a warm good-by, being determined to soon again renew the acquaintance so pleasantly and profitably begun (though in the midst of battle), which we soon after did in another course of five lectures.

Our next step now was to carry out our promise to the "fossil blockade" to prosecute them for damages. We accordingly entered an action against the town of Napanee for \$300.00 damages for violation of contract. This case (*Pringle vs. The Town of Napanee*) which lingered in the Canadian Courts for four years, with varying verdicts, was finally decided against us on the strength of an old English statute which, though practically quite obsolete, yet, unfortunately, still remained unrepealed on the statute books. I have not space here to follow in detail the long course of litigation, which has assumed an historical as well as legal importance in the Law Reports of this country. But although we were technically defeated in the courts, we assuredly achieved a great secular and moral victory. The case, being unique, awakened interest throughout the whole country, as far east even as New Brunswick where the matter was discussed in the press. The judges who tried the case from time to time, especially the High-Court Judges, were unmistakably in sympathy with our side of the case. Our cause they felt to be just, but they were obliged to administer the law as they found it and decide against us. I quote below briefly from two of the judgments of the High Courts:—

"If the lecturer used arguments which he in good faith believed to be legitimate and well-founded, if he indulged in no malicious attacks upon sacred persons or subjects, if there were no malicious or wilful attempts springing from pure wickedness to mislead the minds of hearers and lessen their reverence for God and Christianity, I should not, but for the expressions used by the learned Judge of the Exchequer, have thought that a lecturer was committing an act *per se* unlawful. However erroneous the opinions of Underwood may be, there is no ground upon the evidence of imputing to him any wicked or malicious motives. There is no reason to doubt that he was advocating doctrines which he himself, however mistakenly, believes."

Further as to Plaintiff:—"The evidence satisfied me that the plaintiff made every reasonable exertion to get another hall, and that the only one suitable for his purpose which he could procure was Music Hall, and that he could not get it for a lower sum than one hundred and twenty-five dollars. I find that he acted reasonably and fairly."

At the final hearing of the case before Chief Justice Harrison and Justice Armour, the latter remarked that "if Christianity were true there could no possible harm be done by discussing its doctrines, and in this age we were standing upon

the threshold of great discoveries in Nature, and that it would never do to muzzle those people who were engaged in such investigations, because their discoveries did not agree exactly with the preconceived notions of some so-called religionists."

From the above extracts it is very easy to see what the verdict of judges so liberal and enlightened would have been in the Napanee Town Hall Case had they not been tied down to old laws of which they did not approve.

ALLEN PRINGLE.

SELBY, LENNOX CO. ONT.

OUR KITH AND KIN.

There is a story widely current among men to-day that a little Hebrew, of mean appearance, but dauntless zeal, once stood on Mars' Hill, and declared to unbelieving Greeks that God "Hath made of one blood all nations of men for to dwell on all the face of the earth." That such a statement should have been received with scorn by the Greeks goes almost without saying, because they could not conceive of their cultured nation being of the same blood as the "outer barbarians." So the "apostle to the Gentiles" found but little favor with the worshippers of the "unknown God." Yet the teachings of Paul in that day were scarcely more abhorrent to the cultured than are the teachings of science to-day to the "orthodox"; for, while the proselyting Hebrew simply taught the brotherhood of man and the fatherhood of his God, science to-day teaches the universal kinship of all organic life, and says, in words that cannot be mistaken, that time hath woven in one loom all forms of life on the bosom of mother earth, whence all came, and to whom all must return.

How all life is related in an endless chain is one of the most fascinating studies any one can pursue; for it opens the most unexpected relationships, and reveals wonders such as ancient folk-lore never touched.

Take, for instance, the common red clover. No one would suppose for an instant that human sympathy and the love of poor people for the animal world had anything to do with its growth. Yet science teaches us that this is so; for the red clover is fertilized by the humble-bee, which, having a longer proboscis than the hive-bee, can reach down to where the nectar lies buried in the male clover's heart; after which it flies to another clover, a female, bearing on its wings and body the pollen of the male, which is thus transferred to the other. And the clover obeys the law of increase, so that cattle grow fat, and farmers' hearts are gladdened thereby.

The fertility or sterility of the red clover depends then upon the numbers of the humble-bees, and their number is regulated by the number of field mice; for the mice are fond of honey, and prey on the stores of the bee. Therefore, if mice increased inordinately, the bees would infallibly perish, and with them the red clover, as the fertilization of the clover by the wind or by other insects would prove a very uncertain matter, and its chances for life would be small.

Now, the number of mice in any cultivated district depends upon the number of cats kept in that locality; for the number of mice is inversely proportioned to the number of cats. The more cats, the fewer mice; the fewer cats, the more mice, the fewer bees; the less clover. That is a simple proposition, and it is an equally simple one that the number of cats in a community is regulated by the sympathies of the people: for, if people are small-souled and penurious, cats are reduced to a minimum; but, if children are numerous and hearts are tender, there is sure to be plenty of cats, and so the red clover is compar-

atively safe. And the case seems very clear that the perpetuation of the clover and the moral sentiments of the community are related to each other by a very simple chain of cause and effect. Hence, we begin to realize, as we think of it, that not only are men and nations related to each other, but all life on the globe form "Parts of one stupendous whole."

In whatever direction one turns, this same relationship appears; and I remember the surprise with which some simple, kindly friends of mine saw a bat's wing, as it seemed, for the first time, though, in reality, they had known and dreaded bats all their lives. It was on Falkner's Island, a little four-acre oasis in Long Island Sound, where I was passing the sunny summer days, with the wonders of sea and sky, of air and rocky islet, to fill the flying hours. I had caught a bat; and, after ending its savage misery, I proceeded to spread it out, and open its mysteries to my friends. And with what voiceless surprise they saw that it had *five fingers* on its hand!—that the thin membrane of which its wings were composed was spread out over its elongated fingers; and so much of human plan and purpose, so much of visible relationship was there in this hideous visitor that there was something "uncanny" in it, especially to people who had been born and bred where the Mosaic cosmogony had to be accepted under dreadful penalties,—for the Pentateuch explains nothing, while it tells everything.

But, if the wing of a bat were a mystery, how much greater the mystery when we discover that the fin of a porpoise, the flapper of a seal, the leg of a horse, and the arm of a man are all built on the same plan,—that the five fingers and five toes seem to have belonged to a vast army of our most distant kin; and we feel a sense of awe creeping over us, as this relationship becomes clearer and clearer, as it ever does, through patient study. The five fingers of the porpoise are only revealed when the knife has cleared away the black skin. The five toes of the horse have been reduced to one great toe, with its armature of toe-nail, which we call the hoof; yet the rudiments of the earlier form still linger in the bones of our existing horse, and the occasional birth of a three-toed horse shows only a reversion to an early type, which we could readily accept, even if Prof. Marsh had never found the fossil bones of the three-toed *hippus* that once roamed our own land, long ages before the Spaniard brought our modern species to repopulate the western plains with wild horses!

Strange are the revelations of science, and passing strange that they have come to dwell with only a small class; yet every man and woman should be scientific in their thinking, and seek for the cause of every effect, and the effect of every cause, that come into their daily lives. We have come to associate science with retorts and crucibles, microscopes and telescopes; with "Lang neb-bit words" and high sounding jargon, which make us fear its very name, even though it is ever calling us to come up higher. But a knowledge of the relationship of life to life through the endless chain that reaches into the infinite would make us better men and women; and as we watch, in our daily lives, the affection of a dog for his master, the jealousy of a parrot of its mistress, the overbearing tyranny of an English sparrow to its poor rivals in the struggle for existence, and the grim savagery of a child torturing flies in a sunny home, we would learn to trace our relationship so far that we would be kind to every living thing that shares with us the breath of life. Then, a scientific knowledge will set us free from the vile superstitions that have cursed the

world for weary centuries; and we will come to realize the deep truth hidden in the words of the Christ of India, centuries before the babe of Bethlehem had been born:—

"Pity and need
Make all flesh kin. There is no caste in blood,
Which runneth of one hue, nor caste in tears,
Which trickle salt with all."

PETER ANNET.

MR. SAVAGE ON MAN AND ANIMALS.

In a recent sermon on "Evolution and Immortality," Rev. M. J. Savage says that there are those who "tell us that, when once we have granted the fact that man is derived by natural descent from animal forms, we are found logically to accept one of two positions,—either that all the animals are also immortal in their nature, or else that man who is naturally derived from them is not." Mr. Savage does not think that there is any logical necessity for this alternative, because man differs from animals, he says, in one "significant particular." "Man has developed a conscious personality, which we look on as the essence of that which we call soul; and there is not, so far as I am aware, any proof that any animal, however sagacious, however highly developed, has ever attained anything even approaching to this."

We do not see how man can be derived from the animals and yet have any quality or characteristic which "no animal ever attained anything even approaching to." If the conscious personality has been "developed" from the lowest psychical conditions, it is the product of innumerable modifications of pre-existing forms and modes of intelligence. If in the animal there is and was nothing approaching to conscious personality, then the change from the animal to the man was no development at all, but a leap from one to another mode of being, involving the appearance of a creature having an essential element not possessed by the animals and not the product of progressive changes in animal life. But this idea is inconsistent with the theory of natural descent and with that principle of continuity which is fundamental in evolution. We do not think that the logic of those who say that, if man is derived from the animals, the animals are immortal or else man is not, is touched by Mr. Savage's statement. Only upon the hypothesis that all life is immortal, it seems to us, is there any possible reconciliation between the doctrine of natural descent and the doctrine of immortality.

There is, so far as we can see, no logical connection between the fact of self-consciousness and the doctrine of immortality. Are we warranted in assuming that the animals have nothing approaching self-consciousness? "Can we feel sure," Mr. Darwin asks, "that an old dog with an excellent memory and some power of imagination, as shown by his dreams, never reflects on his past pleasures in the chase? And this would be a form of self-consciousness. On the other hand, as Büchner has remarked, how little can the hard-worked wife of a degraded Australian savage, who uses hardly any abstract words and cannot count above four, exert her self-consciousness or reflect on the nature of her own existence! That animals retain their mental individuality is unquestionable. When my voice awakened a train of old associations in the mind of the above-mentioned dog, he must have retained his mental individuality, although every atom of his brain had probably undergone change more than once during the interval of five years. This dog might have brought forward the argument lately advanced to crush all evolutionists, and said, 'I abide amid all mental moods and all material changes.'"

Mr. Savage says that he has no prejudice against

the doctrine of the natural immortality of animals; and his generous and kindly nature prompts him to declare that it would be a great delight if he "could hold that faith of the simple Indian, as Alexander Pope pictures him, dreaming of that far-off future when 'his faithful dog shall bear him company.'" He adds: "I have known many a dog, many a horse, that seemed to me, if goodness and service and merit are to come into this discussion, to deserve continued existence much more than many a man I have known. And, if I could have my choice as to future company, I would gladly leave out some of the men I have met, and take some of the animals in their place." Evidently, Mr. Savage's heart is right: it is his logic only that is at fault, else he would not, while holding that man has been developed from animals, assume that there is an essential quality in the former to which nothing attained by the latter even approaches, and at the same time admit that in goodness and service and merit and companionable qualities some animals are superior to some men, and that he would prefer them for "future company."

"This pleasing hope, this fond desire, this longing after immortality," will probably never be extinguished from the mind and heart of man, and it may have a solid basis; but no good can result from adducing in its support arguments which are without substantial foundation in fact or reason.

B. F. UNDERWOOD.

EDITORIAL NOTES.

BY B. F. U.

"SCIENCE," says a writer in *Knowledge*, "regards the whole of Nature as an open 'secret.' To aid in exploring its arcana and unravelling its intricacies, all her sons are invited. The intervention of priest or high priest is superfluous. No *sanctum sanctorum* is acknowledged, with entrance granted only to a favored few. All workers are welcome, and none who honestly labor are sent empty away."

OF Hon. Charles W. Slack, the Boston collector of internal revenue, who died of pneumonia last Saturday, at the age of sixty, the *Springfield Republican* says:—

After graduating from the Eliot School in Boston, young Slack became a thorough printer through eight years' service on the *Boston Journal*, then went into the job printing business, and in 1864 began to publish the weekly *Commonwealth* newspaper, which had been established two years before. The *Commonwealth* used to have a considerable audience, and when edited by Moncure D. Conway was a powerful sheet; but its circulation has not been great of late years, and it represented a type of politics that is fading away. Mr. Slack did good work in the early days of the abolition movement, and his service in politics was well rewarded. For three years from 1861, he was assistant cashier in the Boston custom-house, and in 1869 was made collector of internal revenue, a place worth \$4,500 a year. He was efficient as an official, and also as a partisan in the *Commonwealth* and outside of its columns. As a man, he was courteous and agreeable, holding many friends. The change in the national administration had an interesting and mollifying effect upon Collector Slack's extreme views, and his charity was large enough to recognize the good things which President Cleveland has been doing. Collector Slack leaves a widow, daughter, and son, the latter an internal revenue weigher and gauger.

"THE liberalists who stand outside of the Church," says the *Christian Register*, "are constantly inveighing against its existence; but the Church may well ask, What better fruit have you

to offer?" Liberals generally may answer: What we "inveigh against" is theological creeds, which are an insult to human reason, and the expenditure of time, money, and misdirected moral enthusiasm in supporting them, when they retard progress in a thousand ways. We do not "inveigh against" the moral teachings of the Church, which, however, did not originate with and are not the exclusive possession of the Church, and which do not justify or excuse her in perpetuating error. The benevolent and charitable work of the Church is commendable, but not more so than that of uneclesiastical and untheological organizations devoted to humane and philanthropic objects. Liberals generally are disinclined to unite simply on the basis of their dissent from church creeds, and hence general organization among them on a large scale is hardly practicable. But is it presumed that they do less for practical moral reform than the same number in the Church? Because, for instance, they do not as a sect carry on philanthropic work, is it any reason for doubting that they do their part of this work through organizations formed for this purpose or privately? Does not the Church even derive a large part of the money it uses for philanthropic purposes from those who are outside of the churches, and many of whom are Liberals? Liberals may continue to criticise church creeds and to show their preference for modern rational thought, working at the same time for reforms which the Church opposes, and still not be behind the members of the Church in practical, humanitarian work, even though they do not choose to become a sect.

MR. FRANCES E. ABBOT, it is safe to say, will not, because he cannot accept the terms of fellowship offered by the Unitarian Conference, have to "walk alone." Giving Unitarians full credit for being advanced in thought beyond other Christian sects and for doing needed and valuable work, still we must remember that the membership of Unitarianism is not large, and that the Liberals included in its fellowship are but few compared with those who are not and never have been connected with any Unitarian church, are in no way committed to any theological creed, and are yet bound together in a fellowship of thought and spirit, without articles of agreement or any written "terms" whatever. This large and increasing class of liberal thinkers is composed of seceders from all the sects, and of men and women who have never belonged to any of them. Without any general organization, their influence is profound and far-reaching; and they are modifying and shaping the thought of the civilized world. Conspicuous among them are the names of Humboldt and Haeckel, of Mill and Lewes, of Darwin and Spencer, of Harriet Martineau, George Eliot, George Sand, Lydia Maria Child, Frances Power Cobbe, and Elizabeth Cady Stanton, of Parker and Emerson, of Wasson and Higginson, of Ingersoll and Bradlaugh,—persons who, whatever their differences of views and methods, all recognize the authority of reason over theological creeds, and contribute to the advancement of intellectual freedom. In these days, no liberal thinker need "walk alone." If he wishes social intercourse in addition to that afforded by society in general, he may find it in scientific, literary, reform or merely social clubs and associations in almost every community. Even though excluded from the churches by their absurd creeds and silly ceremonies, outside of them he may commune with the great minds of the world, and find companionship among independent spirits and opportunities for usefulness by unsectarian methods. No soldier in the grand army of progress can "walk alone," or help feeling the elbow touch of brave and noble comrades.

The Index.

BOSTON, APRIL 16, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, BENJAMIN F. UNDERWOOD, : : : : : } Editors.

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

A Study of Primitive Christianity.

BY LEWIS G. JANES.

VIII.

THE CHURCH IN THE APOSTOLIC AGE.

Duration and General Characteristics of the Period.

The apostolic period in the history of the Christian Church is commonly reckoned to extend from the death of Jesus to the end of the first Christian century.* During the early portion of this period, as we have seen, a new element was introduced into the Christian faith,—the element of universalism, as distinguished from the narrower Hebraism of the Judaizing followers of Peter and the original Galilean apostles. Doubtless, this feature may be shown to have a natural relationship and correspondence with much that had been latent in the thought of Jesus; but, if the propagation of the new doctrine had been left entirely with his personal followers and disciples, it is doubtful whether Christianity would ever have become more than an insignificant Jewish sect, which would have ceased to exist when the popular expectation of the immediate coming of the heavenly kingdom had succumbed to the chill of weary waiting and successive disappointments.

The history of the growing faith, from the time of Paul to its final secular triumph and recognition by Constantine, is the history of the continued conflict and final reconciliation of its Pauline and Judaistic elements; of the rise of Gnosticism and the conflict with this and other so-called "heresies";† of the development of its Christology

*The necessary limitations of these papers will prevent a strictly chronological treatment of the history of the early Church. It will be our aim, however, to deviate from this method only when the requirements of a concise topical consideration of certain branches of our subject render such deviations inevitable.

†The word "heresy" (Gr. *αἵρεσις*) had originally no opprobrious signification, but meant simply the "choice" or "accepted belief" of an opposing controversialist. In or Greek philosophical writings, it was sometimes used to designate a philosophical principle or a particular sect or school of philosophy.

and dogmatic theology, culminating in the deification of Jesus; and of the evolution of the forms and ceremonies which ultimately constituted the ritual and sacraments of the Christian Church. Unless the circumstances and consequences of the conflict between the Hebrew and the Hellenic or Gentile parties are kept constantly in mind, the student of this intermediate phase of the development of the new religion will miss much of the significance of the leading features in its history. The mediation between these two parties was finally effected through the influence of the Alexandrian philosophy of Philo, the original purpose of which, in its ante-Christian phases, as we have seen, was to demonstrate the harmony of Platonism and Orientalism with the Mosaic law.* It was, therefore, the natural mediator between these diverse elements in Christianity. The documentary evidences of this reconciliation are found in the Acts of the Apostles, the tendency of which is toward a modified Paulinism, in the non-Pauline Epistle to the Hebrews, in the Epistle of Barnabas, preserved to us among the so-called apocryphal writings, and other documents of like character. The chief witness on behalf of Paulinism is the great apostle himself, as represented in his authentic writings. The opposite side of the controversy is presented in the Epistle of James and the Apocalypse; in the writings generally of the early Fathers of the Church, and particularly in the pseudo-Clementine Homilies, to which we shall have occasion to refer hereafter. The final triumph of the Alexandrian mediation is attested by the reception of the Logos epic as authoritative scripture in the latter part of the second century.

Early Rites and Ceremonies: Baptism.

With the final accomplishment of the reconciliation through the deification of Jesus, the rites and sacraments of the Church, which had gradually taken form after the subversion of the more marked Judaizing features of apostolic Christianity, were elevated into greater prominence. It is our purpose now to trace the natural origin and development of some of these ceremonies. The rite of baptism early came to be regarded as the chief symbol and sacrament of the Christian faith, assuming an importance and significance akin to circumcision in the ordinances of Judaism. Baptism was probably adopted by the Jews from Persian or Chaldean sources,† and was administered by such pre-Christian sects as the Essenes and the disciples of John. In its original Jewish form, it differed little, save in its symbolical signification, from an ordinary bath. It was intended both to secure bodily cleanliness and to symbolize at the same time the removal of the stains of sin from the soul. Among the Jews and early Christians of Palestine, those submitting to this rite came down to some convenient place by the side of the Jordan River, sometimes singly, but oftener in families, and having completely disrobed, as is not unfrequently the public and promiscuous custom in Eastern countries, even at the present day, they plunged into the river, and entirely submerged themselves in its waters.

In its earliest Christian phase, baptism was only administered as a sign of voluntary repentance and admission to the membership of the Christian community. It was not administered to children or to those of any age who were born into the new faith. With the decline of Judaistic tendencies among the early Christians, however, baptism came to be deemed an essential symbol of the Christian religion, and was therefore thencefor-

*See Lecture II.

†The name "Sabæan," often applied to the ancient Persians and Chaldeans, means, simply, "the immerser" or "the washer"; and ceremonial ablution was an important rite of the Zoroastrian and Magian religions.

ward administered to all adult believers in connection with a public profession of their faith. The earliest baptismal formula in use among the Palestinian Christians was, "I immerse you into the name of the Lord Jesus." The familiar trinitarian recognition of the "Father, Son, and Holy Spirit" did not come into use before the second century. The Greek word (*βαπτίζω*), which the translators of the New Testament have appropriated without translating, means simply and uniformly "to immerse." This was unquestionably the original form of the rite. In localities where the facilities for complete immersion were wanting, however, there seems to have been an occasional substitution, at a very early day, of the shower-bath,—not a mere sprinkling, as in later times, but the use of a sufficient quantity of water to envelop the entire person.* In its earliest Christian phase, baptism appears to have been regarded as a symbol not only of spiritual purification, but also of the resurrection. The sins of the flesh were washed away, the "carnal body" was buried beneath the waters, and rose from them into the new life of the spiritual man. As Christianity assimilated Gentile converts, and advanced westward to cooler climates, and especially to Rome, where the people were familiar with the ceremony of *lustration*, the rite lost more and more its primitive character. At last, the idea of physical cleanliness remained wholly in abeyance; and it retained only its spiritual and symbolical signification. It was not, however, until long after the Christianization of the Roman Empire that "sprinkling" was generally substituted for immersion.†

Subsequent to the early part of the second century, after the organization of the Christian congregations had been perfected, and the three orders of deacons, presbyters, and bishops were fully recognized, the rite of baptism could be administered only by the bishop or presiding elder of the church. Usually there was but one place for baptism in each town or city, and that was never in a church. There was but one time for the administration of the rite in every year,—the period between Easter and Pentecost. Baptism was always administered at midnight, and never in public. In an outer chamber, the converts, of either sex, disrobed to but a single garment, and, turning toward the region of the sunset, uttered together a defiance of the evil one, saying, "I renounce thee, Satan, and all thy works, all thy pomp, and all thy service." They then turned toward the east, and by the utterance of an appropriate verbal formula recognized the essential doctrines of the Christian faith. Passing into an inner chamber, in the presence of a deacon or deaconess, the entire company disrobed completely, and stood up naked to be questioned by the bishop. Satisfactory answers having been given, their bare limbs and bodies were rubbed with oil from head to foot. They then plunged into the water, were again anointed after emerging from it, were clothed in white gowns symbolical of their purification, and received the "kiss of peace" from the bishop and a taste of milk and honey. They afterwards recognized their new communion by repeating for the first time the Lord's Prayer.‡

*See the Teaching of the Twelve Apostles, where this form of the rite is expressly authorized. It is noteworthy, however, that the substitute is not called "baptism" (immersion), but simply "pouring."

†In a like manner, the sacrificial rite among the Zoroastrians degenerated into a mere symbolical presentation of a single hair of a heifer in the presence of the sacred flame instead of the immolation of the entire animal. The Eastern Church still recognizes immersion as the proper form of the baptismal ceremony.

‡For this account of the origin and earliest form of the baptismal ceremony, reliance has been placed, in the main, upon the interesting testimony of Dean Stanley in *Christian Institutions*. Care has been taken, however, to make comparison with other reliable authorities.

Many of the leading features of this ceremonial were evidently of Eastern and probably of Persian origin. Our modern sticklers for "immersion" would hardly advocate the adoption of the original custom in its entirety. With the lapse of time, many changes have affected the administration of this rite. A magical efficacy came to be assigned to it at an early day; and even infants were regarded as doomed to eternal misery, if dying unbaptized. To forestall this doom, the rite was sometimes administered to them with most unseemly haste. At the present time, instead of the complete bath, we have usually the substitute of sprinkling with a few drops of water. Instead of anointing the entire body with oil, we have the application of a few drops only, as in the Catholic ceremonial, or the total disuse of unction, as in nearly all the Protestant sects. Instead of the bishop alone, any clergyman may administer the rite. Instead of making adults the only recipients of it, as in the earliest times, it is now usually administered in childhood. In regard to this and to other ritualistic observances, however, we of the liberal faith will doubtless agree that letter and form profit little, and that a custom which has come to be regarded as a magical rite rather than a natural symbol of spiritual purification is better honored in the breach than in the observance.

Religious Services: The Lord's Day.

The earliest Christian congregations had no church-buildings or houses devoted exclusively to religious assemblies. Meetings for worship were commonly held in private dwellings. The usual and most convenient room for the assembly was the *triclinium*, or large dining-hall, found in nearly every house of the Roman period. Around this room were arranged cushions or low divans, upon which the worshippers sat or reclined during the reading of the Scriptures—the Old Testament only—and the formal address or exhortation. A raised seat at one end of the room, the *cathedra*, or chair, was occupied by the reader or minister. The custom of meeting on the "Lord's day," or first day of the week, for religious services and social converse, is of early origin, dating from the apostolic period. At this time, however, the day had acquired none of the peculiar sanctity attaching to the Jewish Sabbath, and was never, as in later times, confounded with it. The seventh day was still observed, according to the mandates of the law, by the Jewish Christians. The earliest Christian writers outside the limited circle of the Nazarenes, who compare the two days, regard the Lord's day, not as a continuance of the Sabbath, but as an institution of an essentially different character. Christianity, according to their view, abrogated the Hebrew commandments. Owing to its principle of universalism, it regarded all places as alike sacred and all days as alike holy and dedicated to the service of God. Ignatius of Antioch contrasted the Lord's day with the Sabbath as something done away with. Justin Martyr says that Christianity requires, not one particular Sabbath, but a perpetual Sabbath. The Christians were regarded as atheists by their enemies, because they had no temples, no images, no altars, no festivals, no holy days. The nature of their baptismal ceremony and the privacy of their meetings threw an air of secrecy and concealment around their religion, which caused it to be viewed with distrust and suspicion by intelligent adherents of the older faiths.

The Agape, or "Love Feast,"—Forerunner of the Eucharist.

In the same room, the *triclinium*, after sunset, the congregation again gathered, reclining as

before around the sides of the room, to partake of the agape, or "love feast."* This prototype of the sacrament of the eucharist† was originally merely a commemorative social meal of a communal character, to which each contributed a portion of food as to a picnic. Bread and wine were essential elements in this pleasant social repast; but other articles of food, particularly fish, which accompanied bread in the ancient meal as commonly as cheese or butter does with us, were usually present. The poor, who were unable to contribute to the repast, were always welcome to partake with the others. This common meal was doubtless a survival of the simple communism of Jesus and the apostles. In the "paschal feast" or "last supper" of the Master with his disciples, which this repast was intended to commemorate, the wine was doubtless served in large bowls, and mixed with water, as was the universal custom of the time. The bread was the unleavened bread of the passover, and fish and perhaps other simple articles of food were doubtless present.

At the conclusion of the "love feast" as well as at the breaking up of the earlier meetings, the company parted, exchanging the "kiss of peace." In some congregations, this interchange of salutations was confined to those of the same sex; in others, no distinction was observed. We have numerous evidences in the New Testament Epistles and writings of the Fathers that these social repasts, at first held daily, not unfrequently became scenes of boisterous revelry and undue license.‡ These abuses brought upon the churches the condemnation of the apostles, and doubtless operated to lessen the frequency of the communal meals, which ultimately degenerated into the monthly celebration of the eucharist. With the common acceptance of the conception of Christ as the paschal lamb,—the sacrifice substituted for the offering of the Jewish passover,—a conception which, though suggested by Paul, we first find fully developed in the Fourth Gospel, the commemorative repast took on a new and more solemn character. From the Oriental and symbolical expressions of Jesus,—*"This is my body," "This is my blood,"*—the bald literalism of the scholastic theologians subsequently developed the dogmas of transubstantiation and consubstantiation, giving rise to that notable metaphysical controversy which in after generations distracted and divided the Christian Church. As in the case of baptism, we have in the modern ceremony of the communion an instance of degeneration, transfiguration, and survival, accompanied by the assumption of a magical efficacy as pertaining to the rite, which leaves it with but little resemblance either in form or idea to the primitive custom of the apostolic age.

Origin of the Priesthood: Clerical Orders.

"In the first beginning of Christianity," says Dean Stanley, "there was no such institution as the clergy." The earliest Christian communities were not organized with any view to permanence. Believing in the near approach of the revolution which would substitute a new and divine social order for that then existing, the converts came together naturally for mutual sympathy and encouragement, with few of the formalities of an established religious organization. The *ecclesia*,§ or church, was thus in its earliest form merely a communal assembly of believers. Such was the essential character of the apostolic community at

Jerusalem, and of the earliest churches founded by Paul and his co-laborers. Their simple religious ceremonies were probably patterned upon those of the Jewish synagogue, but were originally less formal and elaborate than the synagogue services.

In these primitive assemblies, the apostles and immediate followers of Jesus at first had a certain natural pre-eminence. As time passed, and the need for a complete organization became imperative, the older members of the various communities came to be looked up to for counsel and instruction. Each congregation finally had its council of presbyters* or elders, and these in turn chose one of their number as a presiding officer. In the earliest writings of the Fathers, the terms *πρεσβύτερος*, "elder," and *ἐπίσκοπος*,† "bishop," were used interchangeably, and indicated no division of offices or functions. The term *διάκονος*, or deacon,‡ was also used originally in precisely the same manner as were "elder" and "bishop." As found in the New Testament and earliest writings of the Fathers, these terms nowhere denote the division of the clergy into distinct orders, as in later times. Nothing like the modern episcopacy existed before the second century.

"The deacons," says Dean Stanley, "were the most original of these institutions, being invented, as it were, for the special emergency of the church at Jerusalem. The presbyters were the 'sheikhs' or elders,—those who by seniority had reached the first rank,—as in the Jewish synagogue. The bishops were the same, viewed under another aspect,—the 'inspectors,' the 'auditors,' of the Greek churches."§ The church organization is thus seen to have been in its inception purely "congregational," or democratic, recognizing no pretended authority of a priestly or magical character, such as is involved in the dogma of the apostolic succession. Early in the second century, the *ἐπίσκοπος*, or bishop, was elevated above the elders and deacons, and concentrated many of their former functions into his own office and person. "He alone could baptize, consecrate, confirm, ordain, marry, preach, absolve."|| There thus happened in the Christian communities what would occur in a club or society which should hand over the entire management of its affairs to a committee, which in turn should abdicate in favor of its chairman, so that he could say, "I, in my own person, am the association."

Before the conversion of the Roman Empire, bishops, presbyters, and deacons were chosen by a show of hands by the entire congregation. This, however, was largely a formality,—a survival of the primitive democracy of the earliest communities, the choice having previously been agreed upon by the council of elders. The entire proceeding was not unlike that of a ward caucus or political convention in our American cities. After being thus chosen, the bishops were ordained, either by the ceremony of breathing, which symbolized the transmission of the *πνεῦμα*, or Holy Spirit, as in the African churches; or by lifting up the hands in the Oriental form of benediction, as in the Eastern or Asiatic churches; or by touching the dead hand of the predecessor in office, as in the Armenian church; or by the transmission of relics or the staff of office, as in the early Celtic churches; or by the imposition of hands, as in the Roman and later Protestant churches of

* Gr. *πρεσβύτερος*, "elder."

† Literally, an overseer or watcher.

‡ Literally, a servant: from *δια* and *κόνις*, one who is dusty from running, or one who has to do with dust and dirt.

§ *Christian Institutions*,—by Arthur Penrhyn Stanley, Dean of Westminster,—which see for an interesting account of the development of ecclesiastical ceremonies and sacraments.

* Gr. *ἀγάπη*. † Gr. *εὐχαριστία*, "thanksgiving."

‡ I. Cor. xi., 20-24.

§ Gr. *ἐκκλησία*, "the called," "the elect." In Athens, this term was applied to an assembly of citizens or freemen, summoned by the crier, for consultation upon matters of public import.

the West. All these practices imply the survival of superstitions and fetichistic notions which originated in the primitive barbarism and ignorance of prehistoric times.

Growth of the Hierarchy. Importations from Paganism.

The limits of this discussion will not permit us to trace in detail the subsequent development and later modifications of the Christian hierarchy. With the establishment and temporal recognition of the Catholic Church came the fiction of apostolic succession, and the ultimate transfer to the Bishop of Rome of the title and paraphernalia of the emperor as *Pontifex Maximus*. The occasion of the papal establishment in the West was the retirement of the emperors to Constantinople, which ultimately involved the division of the Empire and the practical abdication on the part of the emperors of their assumed pontifical authority over the Roman Church. In the East, the powers which inhered in the emperor as *Pontifex Maximus* were transmitted to the imperial house of Russia, whose Czar, or *Cæsar*, is still the recognized head of the Oriental Church.

Many of the forms and paraphernalia of the Church are inheritances from the cultus and State ceremonials of pagan Rome. The cathedral, or church of the bishop, derives its name from the *cathedra*, or simple chair, at the head of the *triclinium*, or Roman dining-hall, where the presiding elders of the earliest congregations were seated. The *sella gestatoria*, in which the pope is borne aloft in religious processions, is the ancient palanquin of Roman nobles and princes. The red slippers which he wears are the *campagnes*, or red shoes, of the emperor. "The kiss," says Dean Stanley, "which the faithful impress upon those shoes is the descendant of the kiss first imprinted upon the foot of the Emperor Caligula, who imported it from Persia. The fans which go before him are the *punkahs* of the Eastern emperors, borrowed from Persia."* Christianity and heathendom are brought into startling and significant proximity in these inherited customs. On one side of the mate to the obelisk now standing in our Central Park—which eighteen hundred years ago was transported from Egypt to the Monte Citorio in Rome—is its original dedication by the *Pontifex Maximus*, Augustus Cæsar, to the sun; on the other, its re-dedication by the *Pontifex Maximus*, Pius VI., to Christ,—faithful type and symbol of the Church, in whose ritual and creed are mingled the inherited customs and traditions of the Aryan and the Semite, of pagan Rome and the simple ethical monotheism of Judea. Error and truth are both so firmly graven upon the ecclesiastical superstructure that they together testify to its natural growth out of the mind and heart of man.

CORRESPONDENCE.

MEDICAL JURISPRUDENCE.

Editors of The Index:—

Somewhat crude ideas prevail on this subject. Many people suppose that the legislation asked for is a sort of protective tariff in the interest of regular physicians; while the truth is that it is an effort to shield the ignorant and unwary from being grossly imposed on by swindlers. Quacks manufacture patients for real physicians at least as often as they take them away. It is the illiterate patient, who not only loses his money, but his health, that needs pro-

tection. For the educated fools who prefer quacks, nobody proposes to legislate. Let them drink the bitter draught they pour out for themselves with their eyes open, suffer and die: legislation cannot help them.

The battle is really between two parties; namely, those who believe in *laissez faire* and those who think that government—good government—should be to some extent paternal. "Every one for himself, and the devil take the hindmost," is the first party's motto. "Each for all, and all for each," might serve for the second party. I think that the tendency of modern thought and action leans toward the paternal way. Even the "hang-as-they-grow" people are almost ashamed to repeat Cain's question nowadays, and prefer to pose as keepers of their brethren—after a certain fashion!

Mr. Underwood's article in a recent number of *The Index*, saving a few misconceptions, states the case fairly. I merely wish to allude to these, and supplement his sound arguments.

Regular physicians are not allopaths any more than they are homœopaths. This is a misnomer intentionally propagated by Hahnemann's disciples, who, having attached a tail to their own name, would like to see one fastened on ours. Homœopaths call themselves by that name, often put it on their signs and cards; but allopathist is only a silly nickname, repudiated by those to whom it is applied. Regular physicians do not confine themselves to any limited method, but are free to employ all agencies likely to help their patients. So that, instead of its being "the old school" in a fossilized sense, it is really the most progressive of all schools. Where did either chloral and cocaine come from? Not from any of the hide-bound medical sects, but from this same "old school."

Then, again, the word "respectable" is very elastic. Carlyle says that in Scotland it means a man who keeps a gig (a two-wheeled open buggy). Here, we draw the line at the poor-house, and not always even there. It is a notorious fact that many of the grossest charlatans have had hosts of "respectable" patrons. Even the "Christian Scientists"—and hopeless idiocy could scarcely sink lower than that—are patronized by many well-to-do persons, ordinarily reckoned "respectable." If we wish to judge wisely, I think we will need a better standard than "respectability" to judge by.

The question is one of law. It may not be amiss to ask, Do lawyers allow ignorant and incompetent persons to practise in their courts? By no means. The candidate for admission to the bar must first study law, and then pass a careful examination before being allowed to practise the profession. Those who oppose a like procedure in medicine must surely believe that one's goods and chattels are of more importance than his health or life.

As the law stands at present, any man, without preliminary training, can assume the rôle of physician. He has only to hire a room and get a sign painted. More than one journeyman shoemaker in my neighborhood have transformed themselves into physicians by this very easy process. If a landsman, ignorant about our coast, should offer himself as a pilot to a foreign vessel, we would call it swindling. A quack does the same thing. We ask government to make all kinds of swindling unprofitable as far as it can.

Leaving out of question the havoc played with life and limb by bogus practitioners, two palpably evil results follow the present system: First, any tin-sign "doctor," along with a confederate of the same stamp, can sign a certificate of insanity, and send a perfectly sane man or woman to the lunatic asylum. In Massachusetts, we have the safeguard of an examination before certain judges (Judge of Probate, etc.) before committal. But every one conversant with such business knows that the main dependence is placed on the medical certificate. The safeguards against unjust incarceration should be increased, not diminished. Second, any unscrupulous rascal, with the aid of a tin sign, may pass himself off as a physician, and sell prescriptions for liquor, to be procured at any drug-store. *This has actually happened*, and is one easy way to circumvent the prohibitory law.

All that we ask is that a person shall demonstrate his or her competence before being allowed to practise medicine, and this is no more than the civil-service rules require of clerks and day-laborers.

SYMINGTON BROWN.

PROTECTION AND FREE TRADE.

Editors of The Index:—

My attention has just now been called to some comments made by a correspondent in *The Index* of Jan. 8, 1885, on a case stated by me, involving "Protection and Free Trade," made so long ago as Nov. 27, 1884. I am very sorry to say I do not see *The Index* regularly. That case was this:—

"Assume that England has free trade, France a protective tariff, that both make any one class of goods; assume that a Frenchman makes and can sell in his home market two, and only two, thousand pieces of the goods at a given price; that, if he makes three thousand pieces, he can make each of the three thousand pieces at a lower price—say two points—than when he makes only two thousand: his selling price at home remaining the same, he will gain four thousand more on that home trade merely by making the larger amount, the pieces cost¹g him that much less.

"Assume that he sends the last thousand pieces to London, and, to make a quick sale, sells them at a loss of three points on each piece. He will lose three thousand points on this part of his trade; but, on both points taken together, he gains one thousand points. And so continuously, and on a calculation of that profit, he repeats that operation. His neighbors do the same, and all in every country in the same trade follow suit. It is easy to see that the English merchant is satisfied with this state of affairs; for he gets his goods for less than cost, less than any one anywhere can make and sell all his product for. The English working-man must compete against all these goods sent and sold, as we have assumed, at a calculated and intended loss balanced into a gain, on the whole, as we have set forth above.

"Ordinarily, the English maker must also lose, and lose till he is ruined by this mere trick of trade, this hopeless, unjust, fatal competition, or give up his trade, and turn to another to be attacked and ruined in like manner in that.

"Any device to countervail this trick of trade, blameless as the world goes, any adjustment to modify this particular kind of competition in the interest of fair play for working-men, would seem to lie very near the foundation of every just government and of the success of every humane religion.

"This a tariff might do by making the Frenchman pay to the English government more on each piece than he could possibly gain by this unwholesome 'free trade' with the English merchant. . . . This situation has nothing in common with mediæval tariffs: it is purely a product of modern commercialism, modern free trade."

On this case, your correspondent of Jan. 8, 1885, makes comment as follows:—

1. "Your correspondent must of course have had in mind, though he did not formally express it, the fact that, as such a result could only be reached when one country already has a protective tariff, the case can be thought of as justifying protection only as *retaliatory*, and not as a general system."

Reply.—The main fact seems conceded here that such a result as I have pointed out *could be reached* when one of two competing countries has a protective tariff. If that is conceded, then, as we cannot control the tariff regulation of any country but our own, it would seem the part of good sense to protect our working-men from just "the hopeless, unjust, fatal competition" that I have pointed out in the case stated. It is not retaliation at all. The tariff is only a means of making impossible a course of unwholesome trade that ruins working-men, and through them injures the country at large; while the party that sells a portion of his goods at a loss makes money out of the whole trade as set forth.

But the result pointed out in my first article is reached just as surely, just as ruinously, when one of two nations has a practical monopoly in trade growing out of any other conditions than a tariff law. Suppose England and the United States are both free-trade countries. England has a practical monopoly of a great trade other than that with the United States: it grows out of her whole commercial and colonial policy, her subsidized, untaxed steamship lines, her established business relations all over the world, her domestic policy favoring the lowest prices for labor, the cheapest product, her large accumulations of capital seeking investments at relatively low rates. All these and more she has; and they consti-

* *Christian Institutions*. I have found Dean Stanley to be the most unbiased and independent historian of the early Church, and am mainly indebted to him for the facts herein presented, though care has been taken to substantiate his statements by comparison with other writers on church history and with primitive documents now extant.

tute such commanding, practical advantages as against the United States as to produce a monopoly in many lines of trade with countries other than the United States practically as firm, close, and reliable as the tariff gives to France in the other illustration, so that, although in this illustration her monopoly of markets is produced in a different way from that by tariff law, the advantages she gains from it—from this *practical* monopoly—are just the same in kind and are just as great in amount as if her monopoly were created by tariff law itself. Of course, the same results of "hopeless, unjust, fatal competition" can be inflicted in this case, and in the same way, as in the other illustration.

The working-men of the United States in any trade exposed to that competition need the same remedy as those exposed to it in the other illustration: that remedy is a tariff law.

The other comments do not reach the case stated, and are therefore not pertinent to our present issue. But, as they occasionally do service in free-trade reasoning, a word or two may be useful.

2. It is stated, as if it were an absurd position held by protectionists, that "a nation inflicts very serious commercial injury upon her rivals when she insists upon selling them her products for less than their real value. The conclusion is unavoidable that their impoverishment will be complete when all their wants are supplied gratis."

An illustration here will illustrate. A fisherman drops his hook, baited with a worm, among a school of fishes. He is evidently doing a "losing" trade: he is supplying a morsel of food gratis to the fish that swallows it; but "the impoverishment" of that fish is generally "complete" when he is laid out at that fisherman's feet. The fish, took in the short cheap benefits of free trade and its *gratuities*: he finally came, like other victims of free trade, to the substantial *business* for which "his wants were all supplied gratis." Again:—

3. "No one needs to be reminded that trade can never be one-sided,—that, if you wish to sell, you must consent to buy."

If my commentator had reversed this statement, it would have been quite lucid and full of common sense: if you wish to *buy*, you must sometimes consent to *sell* to have something to buy with. It is true that, if you sell, some one must buy.

Perhaps he means, in a large way, that the principle announced is true of nations; that modern trade, being essentially barter, a nation selling its products must buy the products they make from the same parties to whom it sells; that, if we wish to sell our corn and wheat and cotton to Great Britain, we must buy of Great Britain her cotton and woollen goods, her hardware and pottery.

This concrete statement of the general principle announced exposes its fallacy without farther remark or illustration. We should plainly be able to sell our cotton and corn to Great Britain, even though we made every thread of our own cotton and woollen goods, all our hardware and pottery, without buying from any one a single cent's worth of either.

Of course, if Great Britain should become so poor as not to be able to buy our goods at all, we should not be able to sell them to her; but that is not exactly a contingency about which we need to trouble ourselves just yet.

There is nothing essential left of our commentator's claims, so far as is now perceived. A slight tone of superior wisdom and condescension floats like a perfume through the commentary; but, as this seems inseparable from all advocacy and defence of free-trade dogmas, we let that pass.

JOSEPH SHELDON.

PRAYING AND SWEARING.

Editors of The Index:—

Referring to Mr. Whipple's very just and seasonable article in *The Index* of March 19, entitled "Church Custom vs. Bible Doctrine," please allow me (not that I suppose I have found anything new) to mention two other important points in which established Christian usage broadly violates, deliberate, peremptory, and unqualified teachings of the Christian Redeemer.

1. *Public Prayer*.—Jesus enjoined with the most careful particularity that prayer should be secret. Yet the universal Christian practice is to pray publicly, and in companies; that is, representatively. Not only, however, is public prayer a violation of an

express command of Jesus, but representative prayer is a complete absurdity psychologically, on the Christian hypothesis.

2. *Taking Oaths*.—Jesus prohibited swearing even more thoroughly than public praying. He used specifications which show that he meant to prohibit every sort of summons or appeal to a divine being to witness or sanction any human assertion; and that he meant to enjoin, instead, telling the truth. Yet official oaths are universal. And, as if to show in this case also how psychologically correct were the views of Jesus, the practice which he forbid has punished his disobedient constituency by permeating Christendom with a moral dry rot of respectable perjury. Oaths in courts, oaths in custom-houses, oaths by office-holders, are violated so extensively that it is a question whether perjury is not more nearly the rule than the exception. Ask any lawyer whether the oaths of witnesses make their testimony more credible. "Custom-house oaths" are a disgraceful proverb.

Christian churches which permit such a state of things cannot prosper with a real spiritual prosperity. They may make a good deal of money.

F. B. PERKINS.

SAN FRANCISCO, March 27, 1885.

WALTER S. PALMER, in the *North American Review* for April, criticises Rev. Dr. Shedd's article on endless punishment. He says: "The reverend gentleman handles his brief well; and, if he fails to convince me that everlasting damnation is a cheerful creed, quite reconcilable with human ideas of the goodness of God, it is not from any want of talent as, literally, a devil's advocate. At the same time, I think he has a very bad case, unless, as I suspect, he is a sly humorist, and really means, in his dry way, to express sympathy for the other side. I am reminded of a famous dictum of Frederic the Great, uttered when this very question was fluttering the ecclesiastical dove-cotes,—'Let those who believe in eternal damnation,' he said, 'be eternally damned, as they hope and believe; but, in the mean time, let them leave other more charitable people alone.' I quite agree with Dr. Shedd that God is eternal justice, but on what possible ground does our finite reason presume to fathom the ways in which that eternal justice is to work? How is the Conditioned to postulate the conduct of the Unconditioned, to show where finite sin ends and infinite retribution begins? . . . The God of his imagining is, to my thinking, something monstrous beyond measure; and to talk of eternal mercy in such a connection is, I feel, little short of blasphemy. The wrath of the Lord may be likened to a sword, but never to an instrument of endless torture. But I am quite certain that Dr. Shedd does not realize the full extent of his argument, that he is the victim of his own solitary blunder in logic. He has tried to define the indefinable, to postulate what is inconceivable; and, in so doing, he has invested the divine Father with the attributes of a human Rhadamanthus. . . . All Dr. Shedd's cleverness will not free him from the folly of having taken a brief for the devil, and thrown discredit on the tenderest and deepest intuitions of human nature."

BOOK NOTICES.

THE RELIGION OF PHILOSOPHY, or the Unification of Knowledge: A Comparison of the Chief Philosophical and Religious Systems of the World, made with a view to reducing the categories of thought, or the most general terms of existence, to a single principle, thereby establishing a true conception of God. By Raymond G. Perrin. New York: G. P. Putnam's Sons. London: Williams & Norgate. 1885. pp. 566. Price \$4.00.

This work is one of the most original of recent attempts to unify all knowledge, and therefore all life and phenomena, under one ultimate or universal principle. In its elucidation, the author ranges through all the principal systems of philosophy, giving a sketch of their progenitors, and reviewing and criticising them from the stand-point furnished by the principle which he conceives as embracing all the phenomena of both mind and matter. It is written in an excellent, straightforward style, and shows extensive culture and research, which, together with the lucid manner in which the author applies his principle to the explanation of widely varying phenomena, render it a most interesting work.

The first part, under the title of "The Scope of Language," treats of the evolution of all the various

philosophical systems from that of Thales in ancient Greece to that of Sir William Hamilton among the moderns; and the analyses of their various theories, from the stand-point of the author, are singularly concise, clear, and just. In the chapter on the German philosophers, he shows that Idealism not only gives rise to the greatest logical inconsistencies, but that it is demoralizing in the extreme in its effects upon society. Its direct influence is seen in the tendency toward the enthronement of human attributes and qualities as God-inspired feelings, such as love or virtue. "The idealization of virtue or self-abnegation, the theory that virtue is an *absolute* principle moving in a foreign universe of sin, an *a priori*, God-inspired intuition, instead of the natural development of a well-ordered life, the result of pure examples and good habits, leads to all those extravagances of conduct which vary from asceticism and other forms of moral austerity to all the more general and lower grades of hypocrisy. Lastly, the idealization of the faculty of reasoning (mind) gives rise to the greatest logical extravagances, from the Dialectics of Plato and the absolute scepticism of the academicians to those forms of Idealism known as the *a priori* philosophy of Kant and his followers, the influence of which still remains in modern agnosticism."

The second part is devoted wholly to the philosophic systems of Herbert Spencer and George H. Lewes, under the title of "The Nature of Perception," which principle the author avers "underlies and must explain the whole fabric of ontological science." In his review of Spencer's system, while according him due merit and characterizing his expositions in high terms of praise, he subjects the fundamental principles of his theory of knowledge and his doctrine of an ultimate "Unknowable" to a most close and searching criticism. The theory of perception and of knowledge advocated in this work, as distinguished from that of Mill and Spencer, is simply that the ultimate fact is motion; that its aspects are Space and Time, which are inferences drawn from the ultimate fact of motion; and that to follow out the process of thought from these first inferences to the combinations of which all knowledge is built up is to establish the nature of perception. "Intellectual activity is akin to universal activity, a *form of motion*. Consciousness, thought, reason, perception, knowledge, are but different names for different aspects of this activity. The prime factors in this activity are the subject and object, the creature and its environment; and, in this dual aspect of the phenomenon of knowledge, we have that contrast, comparison, expression of difference or primordial relation from which the great structure of the mind is built up, to which contrast we trace the origin of all thought, and by which we explain Perception."

The author makes a masterly analysis of Spencer's treatment of the process of reasoning, and shows how it is vitiated by his assumption of ultimate concepts irreducible in thought. Rules, which Spencer calls intuitions, and defines as undecomposable mental acts, are shown to be mental procedures that are so rapid as to appear to be undecomposable. The principle of perception explains every possible intuition. Mr. Spencer's works generally, the author finds "a masterly picture of the related stages of progression from the simplest to the most complex type of organic life," and for his *Sociology* he has unstinted praise, regarding the first volume as "one of the most interesting literary productions of the century," and as being "the romance of human life viewed from the most commanding position which thought affords."

The third division of this work, under the head of "The Religion of Philosophy," is devoted to a critical consideration of the various great systems of religious belief which have appeared in the world. As in philosophy, so in religion, the author finds that the idea of an unknowable mystery vitiates the whole of them, and degrades them into superstitions, but that this belief in mystery is only the negative side in all these religions. Its positive side is morality in its widest sense, including right thought as well as right action. Hence, the real nature of the religion of each nation is to be estimated by the rectitude of its action and thought. Divine means the highest or most general: hence, God means the Universal Principle. All religions express the attitude of man to the Universal Principle. All that is of value in the various religious beliefs consists in universal impersonal principles of thought and action. In this view, the author unites religion and philosophy, and furnishes a crite-

tion by which to judge of the real worth of all the different religions that have been developed in the world's history. The zenith of human knowledge is our appreciation of the divine or most general. "The religion of philosophy acknowledges no mystery: it advances a conception of God which declares all mystery to be a species of immorality, an impediment to the appreciation of divine unity. It ranks the superstition of the lowest races with the belief in an unknowable entertained by so many enlightened minds of the present day, and finds in both conceptions the same principle of irreligion."

The final chapter of this section of the work is upon the religion of Christ, in which some of the doctrines attributed to him are subjected to rational criticism. The principles of knowledge have nothing to do with the disputes which have arisen between all the different sects of Christians. The tale of blood and misery that has followed them proclaims their inhumanity. Even to feel interested in the themes of these disputes requires a party spirit entirely outside of those principles of knowledge which are of such vital concern and importance to humanity. "The initial error of Christianity, its conception of God, is clearly a product of the Hebrew life and religion. Through this medium, the superstitions of prehistoric times have been disseminated throughout our civilization; and we have the terrible consciousness of not only inheriting the conceptions of savages, but of regarding them as divine."

The two closing chapters are upon the science of morality, and are an appeal to the women of America. In the former, an inquiry into the great problem of the influence of religious beliefs upon conduct is instituted, and a plain but eloquent arraignment of some of the hideous vices and corruptions of social life in our Christian civilization is made. In considering the problem of morality, a just conception of God is the only key to its solution. "If we imagine God to be a person, we are bound to attribute to him personal motives, a divine will; and, in the exercise of this will, we are compelled to recognize a special providence. These beliefs at once throw the question of morality into hopeless confusion, and raise insuperable difficulties to any understanding of conduct." The belief in a personal God implies a contradiction in terms,—a fact which, in itself, is certainly a sufficient condemnation. To postulate a "divine will" as a guide for action confuses the whole question of conduct. Who is to interpret this divine will? Who is to find language for it? Is it those who think so poorly that they are still lisping the earliest superstitions of our race? Will is a complex derivative or relative fact, the function of certain conditions. God is the ultimate fact. Is it not clear, therefore, that the "will of God" is a contradiction in terms, an impossibility? What can be more immoral than to build our ideas of duty and self-control upon so illogical a foundation?"

From the foregoing account, some idea may be gleaned of the scope of this extraordinary work. In the opinion of the reviewer, it is one of the most important contributions from the press of recent times, and deals in a masterly manner with the great problems and questions of such vital importance which are agitating thinking minds of the present day. If, as the author avers, the controlling and governing influences of our social, mental, and moral condition are survivals of beliefs born in the grossest ignorance of savagery and barbarism, the sooner the intelligent portion of the community realize this fact, the better for society, especially when we bear in mind that many of our leading institutions of learning, that seek to lead and control the thought of the people, are engaged in teaching and interpreting these survivals of ignorance and barbarism as a basis for a knowledge which is as destitute of any use or benefit to the real needs and wants of humanity of the present day as would be the wooden and stone idols of ancient races.

F. S.

MAN'S BIRTHRIGHT; or, The Higher Law of Property. By Edward H. G. Clark. New York: G. P. Putnam's Sons. 1885. pp. 133. Price 75 cts.

This writer thinks he has "arrived at a logical and well-founded solution of the vexed questions concerning the rightful ownership of the earth's surface and of property depending upon what Aristotle calls 'Nature's bounty.'" His theory is that mankind in the aggregate are the rightful possessors of all the material resources of the world, that the unconscious elements of the universe exist solely and exclusively

for the benefit of the conscious, and, therefore, that the common ownership by men of whatever has a merely material existence is clearly an indisputable, natural right. Mr. Clark holds with Henry George that land is of right common property, and that, since the earth's surface derives its chief value from the presence of population, no one man can rightfully absorb from it the wealth his neighbors mostly contribute to it; but he objects to the outcome of George's theory, for the virtual confiscation of land, and imposing upon it the whole burden of taxation, would "rob good faith and honest toil just as surely as if he should take a farmer's coat from his back or the watch out of his pocket."

In order to secure a division of the land to be held according to ability and industry to utilize it, Mr. Clark would have recourse to a "natural rent,"—a birthright and death-rate tax due mankind yearly for the use of their estate from individual sub-owners holding special distributions of it. Statistics show, the author says, that two in every hundred die annually. Two per cent. of a country's wealth thus falls back into the common estate every year. If the effects of every citizen at death should be seized by their sovereign owner, mankind, all present individual property would revert to the general store in fifty years. But such a reversion is undesirable, since it would only necessitate a redistribution of the property into individual hands, to make it yield its full value to any one. Since two per cent. of the earth's wealth reverts from one generation to another every year, that amount is the natural interest on the estate, and should be levied and collected in the form of a tax as the share of the sovereign owner. This is Mr. Clark's "higher law of property," under which property may be bought, sold, or bequeathed as it is now, but with the certainty, sooner or later, of lapsing into the hands of those most capable of utilizing it; and, "so long as this rent is paid, it will be of no consequence who holds the property."

This author's main disagreement with Henry George is in recognizing no essential difference between land and its unworked products and the result of human labor and skill applied to the raw material of nature. He does not think it right not to tax "a palace, but the plot under it," not to "tax a line of steamships, but their wharf," not to tax "a lump of gold, but the hole in the ground out of which it was dug." Mr. Clark points out that the labor of modern civilization, the value of which arises from the quantity and quality of production, is dependent for its worth not less than land upon the presence of the people with their needs and desires. He would therefore have all wealth taxed equally and in a direct manner, as above indicated.

The leading ideas of the work are credited to David Reeves Smith, author of *Ownership and Sovereignty*. Mr. Clark writes apparently with the greatest confidence that he has found a solution of the problem of the regulation and the distribution of wealth, and without doubt there is force in his main propositions; but they are not likely to be received with favor by those who possess much or little property at present, and, whatever results might accrue in time from carrying out these ideas as far as practicable, they suggest no immediate settlement or palliation of existing difficulties.

THE ART AMATEUR for April gives us as its chief attraction a biographical sketch of Daniel Ridgway Knight, and claims for him a high rank as a faithful, earnest, and original artist. He belongs to an old Quaker family in Philadelphia, and is now about forty-three years old. He has studied in France under Charles Gleyre, and in the School of Fine Arts, where he took many prizes, and afterward travelled in Italy. Returning to America during the War of the Rebellion, he saw some scenes which have furnished him with subjects for pictures, one of which represented "Union Refugees gathered in a Barn." He did not continue in this line of work, however, but married and returned to France to live, making his home at the old town of Poissy, on the Seine. There he studied with the famous Meissonier, and began to paint in the open air, studying landscape and cloud and sky effects, and the picturesque peasants about him. The illustrations from his genre pictures show his skill in drawing, his eye for picturesque effects, and his power of expressing the lighter and sunnier phases of country life; but they have nothing of the austere dignity and moral power of

the creations of Jean François Millet, with whom he is compared. We cannot but wish that he had remained in America and taken part in the agitating life of the last twenty years, when he might have been the painter of a life of work as true and earnest, if less grave and sombre than the labor of France before the republic. There is also a notice of the sculpture of Theodore Baur, but the only illustration given of it does not command our interest: the vague mixture of the native Indian and the classic Bacchus is as confusing as it is disagreeable. Decorative art gets its full share of attention, as usual.

E. D. C.

THE March number of the *Bay State Monthly* gives interesting biographical sketches with fine portraits of the members of the publishing firm of Lee & Shepard of this city. A sketch of the life of "Hon. Rodney Wallace" is accompanied by a steel-plate portrait of the subject. Atherton P. Mason contributes an historical sketch of Fitchburg, which is profusely illustrated. The other articles are "Major-Gen. Lew Wallace at Shiloh," by Gen. H. B. Carrington; "The Past and Future of Gold," by David M. Balfour; "Reuben Tracy's Vacation Trips," by Elizabeth P. Gould; "Elizabeth: A Romance of Colonial Days," by Francis C. Sparhawk; and poems by Mrs. Caroline A. Mason and W. C. Sturte. Boston: J. N. McClintock & Co., 31 Milk Street.

Among the most interesting articles of the April number of *St. Nicholas*, we may mention "The Conscientious Cat," a story of the mining regions by Agnes A. Sandham; "Zenobia of Palmyra," by E. S. Brooks; Chapters 10 and 11 of "Among the Law-makers," by Edmund Alton, which graphically describe "the pages as law-makers," and fun-makers as well. "Back Again," a poem by Celia Thaxter, expresses the possible sentiments of the returning birds of spring time. The serials by J. T. Trowbridge and E. P. Roe deepen in interest. "The Gilded Boy" and "Easter Morning" claim precedence among the many beautiful illustrations. Sold by Cupples, Upham & Co.

THE *Unitarian Review* for April contains the following articles: "The Apostle Paul," by Rev. A. P. Peabody, D.D.; "American Sonnets," by John W. Chadwick; "The Sabbath Question Once More," by Edwin D. Mead; "Nature's Pronoun,—'He' or 'It,'" by Rev. W. C. Gaunett; "Christian Hermeneutics and Hebrew Literature," by Prof. E. P. Evans. The "Review of Current Literature" gives reviews of nine recent works, with mention of others.

"OUR LITTLE ONES" for April, in addition to its many fine pictures, pretty poems, and nice stories, gives the following instructive articles: "The Mole's Queer House," "Three Babies on a Tree," "About Japan," and "The Wise Little Woodpecker."

THE RISE OF INTELLECTUAL LIBERTY FROM THALES TO COPERNICUS.

By FREDERICK MAY HOLLAND,

Author of *The Reign of the Stoics*. Price \$3.50.

The author of this book has chosen a magnificent subject; and, although it is formidable in extent and much of it involved in obscurity, and all of it complicated with great questions of history and human progress, he has yet been able to throw much new light upon that liberalization of thought which went very unsteadily forward during twenty-two hundred years, before the great modern movement of the development for intellectual liberty. The work is a delineation of tendencies, a series of sketches of the great minds who at different times and under varied circumstances, and with unequal effect, have struck for independence of thought, a presentation of the counterforces that have antagonized intellectual liberty, and an account of the working of all those larger agencies which have in different degrees hindered or promoted freedom and independence of thought. Without having subjected the work to critical scrutiny, we are much impressed by the evidence it shows of extensive and conscientious labor, the freshness and interest of its chief subject-matter, the untrammelled treatment of the subject, and the vigor of the portrayal of that long and agonizing conflict with bigotry and intolerance, religious and political, public and private, which is the price of our modern liberty of thinking.—*Popular Science Monthly*.

The volume shows remarkable research, keen powers of analysis and comparison, close reasoning, and fairness of judgment. It will be found an invaluable help to the student, who will be glad to learn that the author contemplates a second volume, which will bring the subject down to the time of the French Revolution.—*Boston Transcript*.
