This, you will observe, does not determine anything with regard to the divine existence. It only determines that the conception of a deity represented in our laws, creeds, customs, is certainly false. The popular notion of a deity is derived from the laws and theology of our time. Were it higher, the people would not tolerate the sanctioning of injustice with the name of God. Out of such prevailing notions, Theism cannot develop a noble idea of God, any more than one can carve a fair statue out of mud. They who individually have a pure and high conception of divine existence can best promote it for the present by clearing out off laws and institutions the current false and mean ideas of a deity, as one jealous of what people believe about him, angry at being ridiculed. A god who can be insulted is no god at all. A god who can be blasphemed is no god at all. People who believe their God can be blasphemed, people who suppose God cares whether men believe in him or not, people who themselves think a Theist morally better than an Atheist, are one and all believing in an idol that has no more existence than Pluto. So long as this is the kind of god established in the forms of Church and State, an exact thinker, who wishes to be understood, will not proclaim himself a Theist. No doubt it was for

this reason that the greatest thinkers of the country, even some who, in a sense of their own, do believe in a God, would not adopt Theism; and no new church could be worth anything that did not draw to itself the unchurched thought and science of the country, as the Salvation Army draws its ignorant enthusiasm.

The majority of people say there can be no religion without definite belief in a personal God. The majority, as usual, is wrong. The Confucian religion has no God, Buddhism—the greatest religion in the world—has no God. The notion that a personal God is necessary to religion grows from the same root as that other superstition, that God needs something at men's hands,—an ignorant notion, as Paul said, at which a God of the universe could only wink. Why does any one demand a personal God? To influence him by prayer? He would be no God, if he did not always do the very best without prompting. To praise him? He would be no God, if he desired praise. Or is a personal God needed that we may believe in a purpose running through evil and sorrow and working to good ends? He would be no God who cannot secure good ends without bad means. A man may have to afflict in order to benefit, because he is finite; but not an infinite and good power. Religion cannot be detached from moral perfection, and therefore it must be detached from the idea of an omnipotent personality. Nature does not declare a morally perfect creator. The very object of religion is to subdue the hardness and redress the evils of nature, which it cannot do while praising the creator of those evils. The believer in a God of revelation does not improve the case, but makes it worse. For the revealed God has all the faults of nature: he is wrathful, vindictive, proud; and it is absurd for religion to try to subdue pride and revenge in a man while worshipping the same in Jahvé. Our excellent friends, the Positivists, have not got out of this vicious circle by deifying (as some of them do) humanity: their brave testimonies against war and every wrong are inconsistent with the worship of humanity, whose ignorance and brutality cause the wars and the wrongs.

Nevertheless, Positivism at least looks in the right direction. Not the mass of humanity, but the excellence of humanity; not the vast predatory multitude, but the best that is in each, the supreme virtue and wisdom and beauty potential in all, flowering in the sages and saviours of the race,—raise in man the sentiment of religion and direct its aim. For this reason, the religions devoted to invisible gods—theistic religions—have always passed away, or else merged themselves in devotion to human personalities, such as Buddha, Jesus, Mohammed, Wesley. Theism is a phase of transition. It is a withdrawal of confidence from the established divinity, the purification of the human mind, as Emerson called it; but religion will develop a new practical and actual incarnation of its spirit in movements corresponding to those which in the far past bear imposing individual names. Buddha, Zoroaster, Christ, were men, but much more were they the figure-heads of great movements, movements of human religion detaching itself from obsolete and obstructive forms. The influence of Goethe, of Comte, of Carlyle, and of Emerson in their several countries shows that in our own democratic age great men may be identified with vast movements of thought, especially in cultured communities. In New England, when Christianity surrendered to slavery, Christ hastened to deliver up his place to Emerson, who took the lowly negro under the wing of his genius, and, for a generation, no religious and emancipated youth in America loved Christ as he loved

Emerson. Amid all this love and enthusiasm, Emerson felt that he was not worthy to tie the shoes of the feet for whose appearance on the mountains he was looking. At length, to his lovers also, he is becoming a forerunner, a voice that cried in a wilderness since grown populous. There is fair reason to believe that the next world-prophet will be born in America, and the home of all races be the cradle of a universal religion.

I once had the hope that the free and humanitarian Church might be organized in London,—great London, metropolis of culture, science, and civilized power. You will remember that Congress of Liberal Thinkers which sat in this building some years ago, animated by that hope. My experience then led to the conviction that England is destined to achieve a different task and fulfil another ideal altogether. The past is so strong in the Old World, its institutions are so established, that free thought is largely absorbed in mere rebellion, denial, criticism, and free religion naturally runs to individualism. We of this South Place Society have tried to be hospitable to all liberal movements: leaders of Secularism, Positivism, Theism, Christian Unitarianism, Brahmoism, Hinduism, have preached and spoken here with perfect freedom. We have seen that they cannot combine. They have as little dealings with each other as the Jews and Samaritans. Their respective organizations are circles of individualism. They are held together in their places as if caught in eddies, where they must go round and round, and never mingle in one great flood. And why? The bed of the flood is already occupied. It is filled by a national Church, whose learning, resources, and social strength are such that it would overpower and carry away any large rival organization. The Church is more liberal than Unitarianism (so I have found it), more independent than the Independents, more active than Wesleyanism. It takes the wind out of their sails. They are steadily reduced in social influence and intellectual power. The Church has already a secularist bishop and a rationalist bishop, and some Unitarian clergymen; and the liberal religious teachers who hold out against its absorbing power will always be the thinkers of strong individuality, and the workers they can draw to their side.

These groups, representing religious Individualism, appear to me of paramount importance. Each has grown where humanity needs an organ. I would say this even of living sects farthest removed from my own beliefs. There are enough of them. England, as a geologist might figure, is a vast formation of fossil sects and superstitions; but their successors survive. Amid the cemetery of their dead ancestral sects move this day nearly one hundred and fifty different denominations. Each is declaring some necessary fact or truth, whether it be with articulate voice or as stones cry out where priests hold their peace. These sects and societies are in one sense scattered fragments; in another, they form a vast aggregate of human sentiment and force. They form together a huge, incongruous Argus, whose hundred and fifty sharp eyes watch the Church sleeplessly, and compel its steady adaptation to the by-ways as well as the highways of humanity.

As one of these societies of individual thinkers, bound together by a common love of certain principles, but by no admitted identity of opinion, we may naturally ask ourselves sometimes what has been our degree of success. In the twenty-one years in which we have worked together, we have grown at a fair rate as to numbers, but not so rapidly, because we have aimed at another kind of growth. If we could only have stayed where we

began,—kept to our prayers and to some kind of theology,—we might have carried with us some worthy people whom we have contributed to other societies. We have not, in this sense, spent up to our income, and so we have grown steadily. But I have had to make severe demands upon this society in the interests of truth, as I conceived it; and it has always responded bravely at whatever cost to popularity or to size. These demands have always been painful to me. Some of the ache of the old wound of parting with Methodism returned so often as I have had to affirm here some fresh conviction that might bring into doubt a hope or a sentiment of my trustful friends, or even drive some from us in our weaker days. But, now that we look back upon it all, it appears to me that we may claim the success of having shown the entire truthfulness of the principle on which this society was founded. We have proved that religious life and growth and fruit are not dependent on any creed or any theology. We have proved that a religious society—an influential church—can exist, can co-operate, can flourish in absolute freedom, without insisting on doctrines deemed fundamental even by many Liberals, and without the prestige of the Christian name.

That is our success, and it is an essentially religious success. People may attribute it to one thing or another. One eminent preacher said that you filled this place because I talked chiefly of politics. I suspect the very little I have ever said about politics was just what you would rather have spared. Another person once reported that you came here to listen to popular songs. The explanations of our admitted vitality and prosperity have been various; but I have ministered to many congregations in my life, and do really know something about this matter. We have kept together and grown in harmony and strength by the development of the religious life,—by which I mean the cultivation of a love and reverence for what is morally good, for rectitude and justice, for the high ideal of life and character, for unselfishness, for the service of mankind. These things are simple. They require neither genius nor learning for their discovery; but, by study, by sympathy, by meditation on them day and night, these simple principles may become our delight. They may open depths of feeling and joy in ourselves. They may raise in us that most pure passion which idealizes life. Behold these sisters of mine around me,—these good women who have gathered here from year to year, in numbers equal to the men. Be sure they would never come here for politics or for sensational speaking. Women are religious by instinct, and they have to train the earliest and tenderest growths of morality and duty in children. When men desert the old temples, women will still repair to them, unless they can find better. And they are right, for spiritual natures can bloom even amid ruins where the memories of beautiful souls still linger. We owe the presence of these women, the earnestness with which they have furthered this society, the grace with which they have invested it, to the religious heart that has been beating here from the time of your fathers; for I did but step in to carry on as well as I could the work begun here sixty years ago by the orator whom I followed to the grave, William Johnson Fox. I never heard him preach, but knew him, and believe his power lay even more in his humanity than in his eloquence. Little as I could hope to fill his place where others had failed or to revive the chapel which seemed about to close, I felt that it was my natural home. I had travelled the same path as that man; had begun as an orthodox preacher setting out to save men

from hell, and had found the hell to be slavery, as he had found it to be cruel corn laws. To the last, his aim was human salvation; and a chapel animated by that spirit was friendly shelter for a Methodist itinerant who had parted with his creed to keep his faith. In 1729, an Oxford student humorously called the Brothers Wesley "Methodists," because they made all their engagements square with their religious duties. That is now the name of the largest Church in America. Method means order adapted to an end. The bones of a body set in a row would be in order. Combined in a skeleton, they would show method. Methodism was a system perfectly adapted to save men from hell, only the particular hell it dreaded was fictitious. None the less does the longing to save constitute the vital breath of religion; and a man is still a Methodist, if he abandon methods that cannot reach the evils of his time for others that can reach them.

There is a legend that, on the flight into Egypt, Mary bore her holy babe on her arm so long that at last her arm failed and fell at her side: whereupon, another arm, a third, started out from her shoulder to sustain the child. In my own youth, parental piety placed in my arms, also, a holy child. That charge was called the human soul; and I was taught that the highest object of life was to save it from the world, the flesh, the devil,—all seeking to destroy it. I bore it on my Methodist arm until that gave way. It gave way because I learned that the human soul was not in any such danger. The child intrusted to me was humanity; and its destroyer in my region was not Satan, but slavery. Methodism was helpless against slavery: therefore, that arm failed, and another grew out. When the weary anti-slavery struggle ended, I saw that my holy burden was still pursued and endangered by superstition, by ignorance and fear. I have still that babe in my arms, and shall try to bear it and defend it wherever I go.

And you also, as a society, have the same high cause, the same holy humanity to bear; and, though to-day one of your arms is giving way, another and a stronger will grow in its place. So long as the spirit that seeks to save men from every evil remains here, you need not fear who goes. Love and truth will put forth new arms to meet new needs. Your heart and your courage will not fail. You can hardly expect a great popular success. That kind of success would most likely mean failure in your higher aim. In the political world, in our own time, we have seen radicalism win a suicidal triumph. The men that used to maintain every high human cause, and hold an unsheathed sword of justice over every government, have now become the government; but what have become of the standards they once bore so bravely? The cause of woman is trampled, and they are silent; unrighteous wars are waged against the weak, and they are silent; slavery is sanctioned by English authority in Soudan, on this jubilee year of emancipation, and they are silent; honest men are denied their rights, are thrown into prison for their opinions, and they are silent. That is a fatal kind of success, and I trust that religious radicalism will never achieve it. It had been a happier triumph for the political reformers to preserve their independence and direct the government from without. I cannot but regard a free religious society as the salt of popular religion. It can only preserve its savor by independence. So long as you can show that love of humanity, of human virtues, and religious earnestness, and remain independent of dogmas; so long as you can show moral enthusiasm and religious culture increased by separation from creeds,—you will exert a powerful

influence on the sectarian and ecclesiastical world. More and more will their creeds melt away; more and more will they buy oil for their lamps where you got yours. They will have to retain their hold on young hearts and aspiring minds by larger measures of liberty and charity, until at last the old system will break down.

I do not suppose that the Church of England will be disestablished, because I believe it will be converted. There are angels hovering around it, Science, Art, the angel of the world: they are struggling with its dismal creeds, shaming its superstitions, and they will humanize it. The religious freedom of this South Place Society is one of the good angels of the Church: even some clergymen have recognized that we are laboring for their redemption from degrading bonds. And so, in the ancient language, to this angel of the Church of England, keeping watch and ward at South Place, I would write: Leave not your first love. As you were born of spiritual freedom, uphold that cause above every spiritual oppression. Let your light be kept trimmed and burning, that wanderers in the dark may find here shelter and sympathy. Be of one mind. Let Christians pause amid their disputes, and say, See how these untheological people love one another. Let them see also how you love them. If they do not love you, it is because they are afraid: they have never been where you are, and tremble at going into what to them is the dark. But we have been where they are: we have been orthodox, or our relatives and teachers have been, and we know how much sweetness and charity may abide with Orthodoxy. So speak your truth with the love that never faileth. And let the angel that has to watch and teach the Church until it be saved from error be assured that he can never influence where he does not understand and where he does not sympathize. It is easy to show the literal absurdity of dogmas and superstitions; not so easy, but much more important, to study their history, to understand them, to comprehend their relation to human development and sentiment. Every superstition is also a poem. Every dogma is a seed cast from some past flower of faith. The only useful denial of a traditional error is to explain it, to discover the truth it distorts, and restore that truth in more than pristine beauty. Men may meet denial with denial; but they will not readily smite the face of Truth, if her beauty appear and her voice be low. In the course of my ministry here, which began when I was still young, I have not always observed these principles: they have grown out of my experience, they have been taught me by my faults and failures and by my little successes; and I give them to you with all good hope, with my grateful love, and with my farewell.

CORRESPONDENCE.

WHY NOT SUPPORT GEN. BUTLER?

Editors of The Index:—

When, after Cleveland's nomination, *The Index* noticed him by saying he was a fit representative of the better elements in his party (or words to that effect), it was only the consciousness of my inability to express properly my thoughts that kept me from writing. Now, when my favorite paper comes out, and in truthful and fitting words tells us how utterly unworthy two of the candidates are, I am compelled to write, whether you print what I write or not. I like *The Index*, its aims and objects, the fairness with which it usually treats questions, and the ability of its writers.

As far as doing a work toward enlightening the mind and uplifting religious thought, I heartily agree with your method. But your treatment of political questions seems to me decidedly unpractical. You

admit the lack of principle in both platforms, but you ignore the fact that there is quite a large third party that claims the attention of the public.

I have often wondered why the fair *Index* was so unfair as it seemed to me against Benjamin F. Butler, while he was Governor of your State. I used to think that you knew more about him than I did. Since he is placed as the most prominent exponent of principles which are dear to me, principles which must be adopted if the nation shall not become one of beggars and millionaires, I have tried to find out all I could in regard to his past life and character. I have read his speeches, and lately saw him and heard him speak. I don't believe Butler is a demi-god. I think there are men with broader and nobler views of life. He shows the lawyer too much. This miserable idea of lawyers, that it is their duty to win any case, leaves its evil effects upon them all, especially if they are able and successful. Butler goes too far for the sake of making a point.

But, to me, the question is, "Shall I sit idle, complaining because no party, no candidate, suits my ideas exactly, or take off my coat and do what I can to lift some party a little higher?" When it comes down to the practical work of voting and influencing voters, work with that party which comes nearest to what I deem right. From what I can learn of Butler and the other candidates, he seems to me by far the best man as regards principles. I think he represents a party of principles and convictions; and I cannot understand why Eastern reformers, after admitting that the other platforms and candidates are unworthy of support, don't support Gen. Butler.

M. SENN.

LEONARDVILLE, KAN.

[In the paragraph to which our correspondent refers, reference was made to the services of Mr. Cleveland as Governor of the State of New York, which services certainly did secure him through the influence of the best elements of his own party, and an influential reform element outside of his party, the nomination for the presidency. Nothing, so far as we know, had been published respecting his private life. We agree with Mr. Senn that Gen. Butler is not a demi-god; but in the East there are many who know him well, and regard him as a demagogue. A millionaire whose vast wealth is largely the accumulation of profits on the labor of men and women in his mills and quarries, he poses before the workingmen of the country as their especial champion in resisting the encroachments of capitalists whom he denounces. Without piety, he pandered, while Governor of this State, to the orthodox element as no other Governor of Massachusetts ever had. A defender of slavery when, in the North, a man's position on this subject was a test of his discernment and moral principle and sensibility, he now talks about his sympathy with the poor and the oppressed, and his always contending for liberty, equality, and justice. Smart he undoubtedly is; but he lacks steadfast devotion to principle and moral stability, as well as mental balance, dignity of character, and other qualities very important in a public man.—B. F. U.]

AGNOSTIC CREEDS.

Editors of The Index:—

I write a few words to correct a grave misapprehension, which is quite current, even in high places. It is often asserted that persons who do not know can have no creed, positive or otherwise. Now, this is an error which should not pass unchallenged. In a very able and interesting essay which appeared in *The Index* last year, entitled "The Creeds of Agnosticism," the different beliefs formulated by agnostics were there handled in a most trenchant and destructive manner. But it was objected that the writer of that article has made a mistake in speaking of "creeds" of persons who neither assert nor deny.

These remarks have come to mind on account of the recent controversy between Mr. Harrison and Herbert Spencer, in which this very point not only was not questioned, but assumed on all sides. It was taken for granted by both that persons who do not know, so to speak, do hold some well-defined and distinct creeds. Mr. Harrison asked, "Has then the agnostic a positive creed?" and answered in the affirmative. He spoke in other places of the creeds of agnosticism being formulated by Mr. Spencer anew. It may be that the "don't know" of the modern agnostic hall can be set against the ancient in-

scription over the Greek temple,—“Know Thyself.” Indeed, it is difficult to see how any one can maintain that agnosticism has not its creeds like other “isms,” although its followers may neither assert nor deny.

A. H. B.

BOOK NOTICES.

REFORMS: Their Difficulties and Possibilities. By the author of *Conflict in Nature and Life*. New York: D. Appleton & Co. Price \$1.00.

This book is supplementary to the larger work mentioned above, published last year, which was an elucidation of the principle that all phenomena are the result of antagonistic forces, and in which he shows that the underlying principle which causes all evolution is not the “persistence of force,” but the “opposition of forces,” which, by their reciprocal interaction and perpetual balances, develop all formations and evolve all life. The following extract from the Introduction to the present work will give the reader an idea of the stand-point from which the author discusses a great variety of questions relating to life and society: “The system of nature is a balance of antagonistic forces. This relation of the forces is a restful equilibrium, but a fluctuating and compensating one, like that of the wave-rocked sea. It is an equilibrium of action and reaction which, in their complicated forms, become great cycles of movement, co-extensive with the entire field of nature and history.” Tracing this principle, which plays so conspicuous a part in all physical and chemical phenomena, and also in physiology, biology, and the evolution of species, the same forms of antagonism are found to pass over into the sphere of mind. “At the bottom of the mental scale there is reflex action, and at the top mental action is conception of properties by contrast,—one feeling antagonizes another. The mind is itself a system of balances, often fluctuating from one extreme to another; and the will is forever the theatre of emotional conflict. And all this antagonism is not incidental and transitory, as usually supposed, but fundamental and ineradicable. . . . Now, if this antagonism prevails in nature and is woven into the constitution of man, we should infer that the society which man forms would embody antagonistic elements in manifold forms of combination and interrelation. We should further infer that every attempt to act on human nature and society should take an account of this ineradicable antagonism in the constitution of things; and the prevailing form in which this antagonism appears in life is in the essential coupling of an evil with a good, of a general evil with every general good. Now, in consequence of this co-operative action of antagonistic forces, there is no such thing as perfection; and any attempt to bring about perfect results will fail. All that can be done is to effect the greatest possible good with the least possible evil. But reformers usually go to work in defiance of this principle. They have panaceas for every moral disease in the world, and are bound that every wrong shall be righted and every evil exterminated, not seeing that, while they gain on one side, they are almost sure to lose on the other.”

This offers one of the most original and profound solutions of the great problems of life, mind, and society that has been attempted; and, in its discussion, the author, in his two books, has embodied a vast amount of thought and erudition as the result of wide and close study. In part first of the supplement, the author makes an application of his principle to the labor question, discussing the relation between labor and capital through various ramifications, and considers the question of monopoly and the various schemes for industrial reform. Part second deals with financial questions, including currency, protection, and monopoly, taxation, business and political centralization, and financial remedies, and the consideration of a people's platform. Part third is devoted to miscellaneous reforms, treating of questions of practical every-day economies; some phases of education, including the education of women; the woman and divorce questions; the temperance question, and various theological, criminal, and political reforms; and finally considers the various issues of the near future. If this principle of the reciprocal action of counter-tending forces, which the author applies to so wide a range of matters of the highest interest, is the true one, its importance in their discussion cannot be overestimated; but there is always room for diverse interpretations when a

principle so broad and universal in its sweep is applied to particular cases of its infinitely complex ramifications.

THE October *Century* closes the twenty-eighth volume of this magazine. Henry Bacon, of the art colony in Paris, writes interestingly of Rosa Bonheur, whose portrait is engraved, together with several views of her studio and dwelling and one of her well-known paintings. Brander Matthews writes a literary criticism of Austin Dobson, whose portrait, after a monochrome by Frederick Watts, is the frontispiece of the number. The other illustrated papers are Dr. Eggleston's article on “Social Conditions in the Colonies”; Prof. Langley's second paper in his series on “The New Astronomy” describes in a popular way “The Surroundings of the Sun,” the text being supplemented with nineteen drawings and diagrams; W. J. Stillman concludes the account of his journey “On the Track of Ulysses.” The fiction of the number embraces a story, “Braxton's New Art,” by William Henry Bishop; and “The Price I paid for a Set of Ruskin,” by Grace Denio Litchfield. In addition are the closing parts of Cable's “Dr. Sevier,” and of Boysen's novelette, “A Problematic Character.” “The Cœur d'Alène Stampede” is a graphic account by Eugene V. Smalley of the growth and decline of the recent mining craze. Washington Gladden contributes a paper to show that the increase of wealth in the world is due to the progress of Christianity, and suggesting means for its employment. The department of “Open Letters” contains, among others, brief papers on “Is Arctic Exploration Worth its Cost?” by Prof. J. E. Nourse; and “The Bombardment of Alexandria,” by Stone Pasha and the Commander of the United States steamship “Galena.” In “Topics of the Time” are editorials on “Battles and Leaders of the Civil War,” “Tips and their Takers,” and “The Danger of Delaying Reforms”; and in “Bric-a-Brac” are aphorisms by Uncle Essek, humorous and society verse, etc.

In the October *Atlantic*, Dr. Weir Mitchell continues his excellent story, “In War Time”; Francis Parkman writes of the “Battle of Lake George”; Elizabeth Robins Pennell discusses the “Relation of Fairies to Religion”; Louise Imogen Guiney praises Leigh Hunt, whom she styles “An English Literary Cousin”; Bradford Torrey describes various “Minor Songsters”; George Houghton has an article entitled “Washington and his Companions viewed Face to Face”; J. Howard Corby furnishes the short story of the number, “Buckshot: A Record.” The classical article of the number is by William Shields Liscomb, on “The Migrations of the Gods”; Margaret Bertha Wright gives an account of a French “Bourgeois Family”; Charles Forster Smith writes of “Southern Colleges and Schools”; Edith M. Thomas contributes a charming short article on “The Solitary Bee”; an anonymous writer, one who wields a practised pen, writes a second article on “The Lakes of Upper Italy.” There are poems by Oliver Wendell Holmes, Celia Thaxter, and Augustus M. Lord.

THE *Revue de Belgique* for August opens with a minute account of the laws just passed in Belgium, providing that religion be henceforth taught in the public schools wherever directed by the majority of the district or commune; that instruction in drawing, singing, and the elements of science cease to form a part of the course; that, in place of the public schools as thus modified, any district may carry on private ones, of course under direction of the priests; and that institutions of this latter sort may be maintained at public cost, against the vote of the majority of the district, if they are asked for by twenty fathers of families. This magazine also contains such a description of the diplomatic relations of Belgium with the Vatican, during this century, as shows the Church of Rome to have had much less tact than is usually supposed.

JEAN ROBIE is unquestionably one of the foremost living flower painters. His pictures excel in their fidelity to nature, the warmth and richness of their coloring, and his subtle rendering of the spirit of the flower. His roses are unrivalled. Like every artist of genius, Robie has been very unwilling to permit the publication of copies of his most cherished works. It is a matter for just congratulation to Americans that he has at last accorded this privilege to one of the most famous art publishers. Mr. Louis Prang

has undertaken to reproduce one of the artist's masterpieces as a satin print. The picture selected is of medium size, and includes roses of various kinds, intermixed with spiræa, and arranged in a deep blue vase, which contrasts charmingly with a crystal bowl in the foreground which reflects, as it seems, every ray of light. The copy is absolutely faithful to the original, and is the most ambitious publication of the kind ever attempted.

THE POET.

For The Index.

Child of Passion and of Pain,
Sounding all the scale of being;
Golden link in Nature's chain,
'Twixt the finite and All-seeing.

Hermes-footed, Argus-eyed,
Warden of Elysian portals;
He to whom the gods confide
Their most precious gifts to mortals.

Sibyl of the mystic book
Syllabled with leaf and flower,
Sounding sea and purling brook,
Star and system, wind and shower.

Dreamer of the dreams that make
Unborn men's philosophies,
Oracle whose word can shake
Kingdoms to far centuries.

Lord of laughter and of tears,
Owner of all lands in fee
By a title that inheres
In his greater gift to see.

Weird enchanter, at whose spell
E'en the dullest ear o'erhears
Strains that ever earthward swell
From the music of the spheres.

Alchemist, within whose brain,
Earth and sea and sky anew
Are transformed and take again
All their pristine virgin hue.

Almoner to what he will—
Flower or field or bird or tree,
Mountain stream or meadow rill—
Of his immortality.

Hebe's gift is his to dower
With perennial grace and youth,
And he shares alone the power,
To stay the hand of change, with Truth.

Hum of bee or song of bird,
Winter's blast or breath of May,
He can capture at a word,
And imprison in his lay.

Where he goes the heavens bend,
Letting all their secrets through;
And the Graces him attend
In a glorious retinue.

Wealth more precious to a land
Are his sayings, manifold,
Than the silks of Samarcand
Or the Indies' mines of gold.

Working up through cycles wide,
Nature finds in him her goal;
All her forces glorified
Come to flower in his soul!

WALTER R. THOMAS.

CHARLES D. B. MILLS

is ready to make engagements with any who may desire for Lectures, during the season from and after the 1st of December next. For list of subjects and terms,

Address

CHARLES D. B. MILLS,
SYRACUSE, N.Y.

JAMES KAY APPLEBEE

is open to accept engagements for the delivery of SUNDAY EVENING LECTURES at towns within reach of Boston by Sunday afternoon trains. For terms and subjects, address JAMES KAY APPLEBEE, Boston, Mass.

MRS. EMILY J. F. NEWHALL'S

School for Girls and Young Ladies will reopen Oct. 1, 1884.

As heretofore, its management will be conducted upon the basis of EDUCATION rather than INSTRUCTION. The proper use of English will be made an especial feature of the daily work. Under the direction of John Storer Cobb, LL.D., from London University, this branch will comprise a thorough study of the English language, as well as Latin and mathematics. The illustrated lectures upon the great tone-masters, the use of the lantern, and attendance at the Art Museum, will be continued. For catalogue, address No. 91 Newbury Street, Boston; or apply between 11 and 1, after September 15.

POPULAR BOOKS

Sent by Mail Postpaid at

PUBLISHERS' PRICES.

ANY BOOK in the subjoined List, or any other OBTAINABLE BOOK, that may be desired, will be forwarded as promptly as possible, on receipt of orders accompanied with the cash.

SPECIAL RATES will be made with persons or libraries desiring any large number of books.

Orders are respectfully solicited from all friends of THE INDEX.

Sawing Made Easy.**MONARCH LIGHTNING SAWING MACHINE**

For logging camps, wood-yards, farmers getting out stove wood, and all sorts of log-cutting—it is unrivaled. Thousands sold yearly. A boy of 16 can saw logs fast and easy. Immense saving of labor and money. Write for elegantly illustrated catalogue in 6 brilliant colors, also brilliantly illuminated poster in 6 colors. All free. Agents Wanted. Big money made quickly.

MONARCH MFG CO., (A) 206 State St., Chicago, Ill.

THE BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches**, which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars**, which are models of comfort and elegance; its **Palace Drawing Room Cars**, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that it is the best equipped road in the world.

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, and take none other. All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

GEN'L PASS. AGENT, C. & N.-W. RY

CHICAGO, ILL.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—Boston Evening Transcript.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price \$3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR's basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

CURRENT TOPICS.

BY B. F. U.

It is stated that Miss Kate Field has obtained a complete copy of the first edition of the Book of Mormon, published at Palmyra, N.Y., in 1830. On the title-page, Joseph Smith is announced as "author and proprietor of the book,"—an announcement omitted in all the later editions of this "word of God."

A PROTESTANT Sunday-school superintendent in Davenport, Ia., having been recently censured for bringing his scholars in a body to pray in a Catholic church, defended himself by saying that there was no Protestant church open in that city on Sunday, the preachers being all on vacation; and that the Catholic church was the only place to which he could conveniently take the children to say their prayers.

In the death of Hans Makart, which occurred on the 3d inst., the world has lost one of its most famous painters and one of the most successful artists of modern times. His picture of "Venice doing Homage to Catharine Comaro" was exhibited at the American Centennial, and was bought by the German government for the museum at Berlin. The best known and good judges say the greatest of his pictures is the "Entry of Charles V. into Antwerp."

ACCORDING to the *Christian Register*, the recent Unitarian Conference at Saratoga was "the best Conference of this body that has ever been held." The attendance was large, the spirit harmonious, and the action marked by unanimity. The harmony and unanimity were secured, it is needless to say, by avoiding all the issues and questions on which the members are divided, and giving consideration to the work of building Unitarian churches and extending the Unitarian faith. No action was taken and no discussion occurred in regard to that portion of the preamble to the Constitution which is offensive to non-Christian Unitarians, like Revs. M. J. Savage, Rowland Connor, J. H. Clifford, and many others we might mention, and which is inconsistent with claims that are made as to the breadth and liberality of the Association. There is no peace worth having which is not based upon justice and right; and that kind of peace, whether it be in the Unitarian Association or in the National Liberal League, is worth fighting for.

THE festival of the Free Religious Association, held in Parker Fraternity Hall Wednesday evening, October 1, was a decided success. Notwithstanding numerous other attractions in the city that evening, the attendance was large, the hall being well filled. Many persons of distinction—thinkers, authors, and reformers—were present, among whom were Dr. W. T. Harris, Edwin D. Mead, Mrs. Lucy Stone, Mrs. E. D. Cheney, and Miss Elizabeth Peabody. A pleasant, off-hand address by Miss Mary F. Eastman was followed by several brief speeches from Mr. W. J. Potter who presided, Mr. F. A. Hinckley, and Mr. J. K. Applebee. The attendance being much larger than was expected, the supply of substantial food was rather scanty; but there was abundance of coffee, tea, and ice-cream. The evening was extremely warm; but the party seemed to be in the best of spirits, and the occasion was one of real social enjoyment. The music furnished by the choir of Parker Fraternity was a feature of the evening. To the efforts of Mrs. Clara M. Bisbee, of the Boston Ethical Society, was the success of the festival largely due.

Does the *Investigator* think that the support of those who have stood aloof from the National Liberal League because of its resolutions and action regarding certain postal laws is now to be secured by praising "The Nine Demands of Liberalism" as a "bond of union," and ignoring the fact that the position of the League, in the respect alluded to, remains unchanged? The former leaders of the League saw that the repeal agitation had kept from the organization the great mass of Liberals, and they proposed a reorganization on the basis of 1876. But the change proposed was not effected at Cassadaga; and the League, by its unrescinded resolutions, adopted and reaffirmed at previous conventions, is still pledged to the repeal policy. If this policy is right, let the *Investigator* defend it, as it has defended it in the past; but the method of avoiding all reference to that,—which is, with the majority of Liberals, an insuperable objection to joining the League,—and, assuming that all reasons for withholding support are now removed, is neither courageous nor fair. Besides, the suppression of the truth in regard to a public movement is a very short-sighted policy.

MR. JOHN S. VERITY, whose name appears often in reports of the Paine Hall liberal meetings, and who for a year or two was one of Mr. Chainey's supporters, says in a recent number of the *Investigator*: "We have now had no less than three ex-ministers, the last two, Mr. Holmes and Mr. Chainey, apparently not more than half-converted; for they both have gone back to dreaming about spirits and their old spirit-land. I can assure you that I am getting tired of helping to hire and support these young converts without satisfactory evidence that they are sound on the main question. It seems that we ought to accept them 'on probation,' and let them take back seats for a while in the future." But Mr. Chainey's views are probably quite as consistent and sound now as they were when, two or three years ago, Sunday

after Sunday he presented in the name of Liberalism the wildest and crudest sort of thought, in the most dogmatic spirit, with charity neither for those whose creeds he professed to have outgrown, nor for those who, with a philosophy he could not comprehend, declined to recognize his loose declamation as an exposition of genuine liberal thought. Let those who put Mr. Chainey forward as an exponent of Liberalism, and who find reason to criticise his utterances now, consider whether they are not quite as reasonable as were his violent harangues of two or three years ago.

THE *Religio-Philosophical Journal* urges the formation in this country of a Psychological Research Society similar to the one in England, for the investigation of phenomena of a mental character believed by many to be explicable only upon the theory that intelligences, once inhabitants of the earth, but now inhabitants of an invisible spiritual realm, manifest themselves under favorable conditions to mundane beings. We should be pleased to see such an organization effected for the thorough study of psychology in general, and for the close, honest, and impartial examination of alleged "spiritual manifestations" in particular. Every week, in the *Religio-Philosophical Journal*, *Banner of Light*, the *Olive Branch*, *Spiritual Offering*, and other spiritualistic papers, may be seen accounts of phenomena which, if genuine, are of profound scientific interest and of vast philosophic import. Investigations extended through a quarter of a century in many cities of the United States have convinced us that a very large proportion of the so-called spiritual manifestations deserve to be characterized as imposture and fraud. That some of the performances which the *Religio-Philosophical Journal* defends, and honestly we believe, as veritable spiritual manifestations, do not belong to this class, we are by no means satisfied. But we should be glad to unite with the editor of the *Journal* and all other honest Spiritualists in bringing the least questioned and the least doubtful phenomena alleged to be spiritual to the test of a rigid scrutiny, with a view to ascertaining the exact value of claims that are boldly made as to matters of fact, and the legitimacy of the conclusions which are by many intelligent and honest minds drawn from these alleged facts. A Psychological Society, if composed of men of acknowledged intelligence and character, might do something to discredit the claims of a host of heartless rascals who now impose upon and systematically swindle the ignorant, the credulous, and the sick by pretending to possess wonderful gifts or to be in direct communication with the spirit world. But the hope of diminishing the business of these charlatans to any considerable extent is in the growth of intelligence and the prevalence of the spirit and the methods of science. The chief value of the Psychological Research Society in this country would consist in collecting facts, assisting intelligent men and women to distinguish between genuine and spurious claims, and enabling them to arrive at just conclusions in regard to questions of a psychical character.

THE UNITARIANS AND WADE COLLEGE.

At their recent National Conference at Saratoga, the Unitarians decided not to attempt to complete Mr. Wade's proposition for the establishment of the proposed new college at Cleveland. The council and the special committee to whom the matter had been referred at the previous Conference reported that, though the college was needed and the plan of it a very noble one, yet the very breadth of the scheme put obstacles in the way of its being successfully carried out by the Unitarians as a denomination. After giving some sketch of the plan, the report, written by Rev. E. E. Hale, says: "But practical difficulties presented themselves at every step, resulting from the double use of language in regard to the Unitarian Church and its purposes. If a gentleman accepted a professorship in Wade College, was the world to understand that he had joined the unpopular little Unitarian communion? If a Catholic clergyman lectured at Wade College, was he to incur the suspicion of heresy? If a Hebrew philanthropist wished to endow a professorship, why should he intrust his funds to a board named by this body? The difficulties suggested by a thousand such questions proved so great that, at the advice of gentlemen most interested in the project, the special committee and the council eventually determined, with very great reluctance, not to press it under the auspices of this Conference."

The report, however, went on to express the interest which Unitarians as individuals would feel in the project, and to promise the readiness of many of them to give it financial assistance, and added the hope that Mr. Wade, now that his scheme should be no longer entangled with the inconveniences attached to any sectarian name, would go forward to establish the institution according to his own generous ideas, calling to his aid without regard to denominational lines those persons who might best further his object.

Resolutions were introduced in accordance with this report of the council and committee, and were unanimously adopted. This, of course, settles the question so far as the Unitarians are concerned. As a body, or denomination, they decline to take the responsibility of the college upon their shoulders. And this, perhaps, is a wise decision. It is certainly wise, if the breadth and usefulness of the college were going to be in any way hampered by the sectarian aspects of Unitarianism. But we cannot help feeling that, if the Unitarian plan of the school had not made the mixing of different theologies so prominent a feature in it, but had placed the special emphasis on sociology, ethics, and the *philosophy* of religion, the "practical difficulties" to which the report refers might not have been so great. Did not the difficulties to which the committee have succumbed arise, to a considerable extent, from the fact that they had not got far enough away from the old idea of a theological seminary? A theological seminary under the care of any sect, however liberal, might well be under suspicion. But a school for advanced learning in religious philosophy, ethics, and sociology, if manned with the best professors and lecturers to be found for these several departments and their branches, regardless of theological beliefs, would have been a powerful instrumentality in breaking down sectarian walls and claims, and in lifting Unitarianism itself consistently toward its profession to be an unsectarian movement. Now, it seems to have let slip a grand opportunity to assert by act its own continental breadth of aim, and sits down too content with being only a provincial sect in the religious world.

But we trust this is not the end of Mr. Wade's generous hopes and plans. The project now reverts to the mind of him who conceived it, and who has, we believe, a deep desire to see it become a reality. Surely, he cannot fail to find some way for realizing his magnificent dream. The need of such a college as that which he has had in mind has been of late newly shown by the excitement produced in the Presbyterian denomination, because one of the professors, Dr. Woodrow, in the Presbyterian Theological Seminary at Columbia, S.C., was discovered to have been teaching the scientific doctrine of evolution in his class-room. The extent of Dr. Woodrow's offending appears to be simply this: he claims that the Bible does not profess to teach scientific theories, and "does not contradict the theory of evolution as regards plants and animals, and *perhaps* not as to man's animal nature." This would not seem to be a very pronounced heretical position, yet it has thrown Southern Presbyterianism into the greatest consternation. The directors of the seminary have had a meeting on the subject, and after a session of two days were able to effect a compromise by passing the following resolution:—

Resolved, That the Board is not prepared to concur in the view expressed by Dr. Woodrow as to the probable method of the creation of Adam's body; yet, in the judgment of the Board, there is nothing in the doctrine of evolution, as defined and limited by him, which appears inconsistent with perfect soundness in faith.

But a minority of the directors, three in number, could not allow this mild compromise to pass without a protest; and they accordingly put themselves on record in this curious theological statement:—

Evolution is an unproved hypothesis, and the Seminary is not a place for such teaching. The theory that Adam's body was formed by the natural law of evolution, while Eve's was created by a supernatural act of God, is contrary to our Confession of Faith. The advocacy of views which have received neither the indorsement of the Board nor that of the Synods having control of the Seminary, which have not been established by science, which have no authority from the Word of God, which tend to unsettle the received interpretation of many passages of Scripture, and to destroy the confidence of the Church in her doctrinal standards, which have already produced so much evil, which will injure the Seminary and may rend our Church, ought not to be allowed.

Nor does the matter stop here. It now must go to the four synods of South Carolina, Georgia, Alabama, and Florida, which have charge of the seminary, and perhaps to the General Assembly of the whole denomination, before a final decision is reached. And, meantime, Presbyterian theological students must remain in a state of harassing uncertainty as to whether Adam and Eve were created by the same or a different process! The need of a school in which preachers should be trained in accordance with nineteenth century ideas could not be more forcibly illustrated than by this discussion over the fossil theology that is still taught as essential truth in nearly all theological seminaries.

WM. J. POTTER.

THE PERPETUITY OF LIFE.

I.

In the eventful course of the dispute between the so-called religious and scientific parties, regarding the ultimate nature and origin of the principle of life, two theories are presented for our consideration. One of these, advancing with the trumpet-blast of pretended divine authority, claims to give an authentic account of a miraculous creation of all that breathes within the universe, through the fiat of an almighty and infinite power: the other,

more modest, by faithful experiment and logical speculation attempts to establish a tracing of the rising path upon which the dead matter of the inorganic world is supposed to have ascended, and perhaps still to ascend, to the ranks of living organizations. And nothing seems more positive to the sincere champions of these two theories than that the one view to which they adhere must eventually obtain universal undisputed acceptance. That another, third, explanation is possible appears but rarely to enter the philosophic mind. And yet we may well venture to ask, Whence and where arises this logical necessity of organic life having originated at all? Why should we be compelled to hold to, and seek for, its *first birth*? Why may we not with equal reason assume the organic world to have constituted the ultimate and primeval form of all existence, from which the inorganic descended by a *first originating death*? Or why should not both these forms have been and be eternal?

The proposition of the perpetuity of life might have been before this advanced to a careful consideration, had it not been evident that the earth we now inhabit has even until cosmogenetically recent times been subject to climatic conditions which appear incontrovertibly to negate the existence of organized beings. For epochs, the duration of which is scarcely imaginable, this globe of ours must have

Round the sun's celestial glory,
Off his ether-beaten coast,
Traced in light self-glowing story
'Mong a flaming planet-host!

And, surely, the physical conditions of such a planetary system must have excluded all traces of the life with which we are now acquainted. Earlier still, and for even vaster periods, an enormous nebulous mass is believed to have occupied the earth's orbit, or in undivided union with the sun represented its substance, a rotating immensity of vapor, in the midst of which

"In vain the foot might seek for restful ground,
The ear in vain await the footfall's sound!"

And to suppose that such conditions could have supported any form of life appears a manifest absurdity. And yet is this absurdity so manifest? Upon superficial consideration, yes, after a careful and searching examination into the range of possibilities, *No!*

The total range of variation in the conditions which environ terrestrial life is a narrow one. And, as the continuity of organic races undoubtedly depends upon their capability of adapting themselves to the vicissitudes of their environment, it is plainly evident that any exceptionally excessive change must be fraught with the greatest danger to organic existence.

But to illustrate this range in detail. The extremes of natural atmospheric pressure to which human life is at any one place subjected are marked by that experienced on the Andean tablelands of Quito (about one-half atmosphere, or fifteen inches barometric scale) and that to which the Arab camping on the Dead Sea shores is exposed (over one atmosphere: I cannot give the exact figures). The ultimate temperatures which have been observed on the earth's surface are said to be about seventy-five degrees below and one hundred and twenty degrees above zero. As to the range of light effects, they are subject to the limitations on the one side by the deep night of caves, on the other by the blinding glare of the sun's unveiled noon-day face. Acoustic experiences are limited below by the still death of polar nights, above by the near crash of thunder and volcanic explosions. Electrical conditions range between the delightful peace of a calm spring day

and the swift destruction of the lightning. Magnetic variations affect us but slightly: only the scientist marks the upper limit by bending with wrapt attention over the restless needle. Finally, in the range of action of mechanical forces, we may drowsily watch the motes dancing in the summer sunbeam: the upper extremity of their intensity was written across the earth's brow in the late convulsive terrors of Java.

Chemically considered, the life of all organic forms may be defined as a process of combustion necessitating a more or less continuous essay at the assimilation of foods, the material by which this process is sustained, and a corresponding excretion of wastes. For the undomesticated citizens of the animal and vegetal worlds, the range of tentative foods is limited to their natural occurrence. For civilized man and his organic dependents, it is co-extensive with that of the substances known to chemistry. Only a comparatively small number of these can, however, be without difficulty assimilated: a vast majority are either absolutely undigestible, or so active as to make the mere attempt at their assimilation dangerous or even fatal.

As well known, the animal organism is not able to assimilate any but a very few of the unprepared inorganic forms of natural matter, and is therefore constitutionally compelled daily to purchase its own existence at the price of destructive attacks upon the life of other organizations. Most plants can live on inorganic food alone; yet the instances of specific vegetal parasitism, not only on other plants, but even on animals, are numerous, not to forget those remarkable cases of animal-eating plants now so well established. Murder thus everywhere attends upon the track of life, and the contact of living forms is fraught with manifold dangers.

The extremes of all terrestrial environing conditions are localized in place, or at least in time, generally in both.

The above-mentioned extremes of atmospheric pressure are nowhere found occurring at the same point of the earth's surface. The temperature of seventy-five degrees below zero is only claimed for the rigors of an arctic winter; the fierce heat of one hundred degrees above, only for the summers of arid deserts and the inland regions of tropical continents. Never do the extremes of temperature at any one place occur near together in time. Not in the same day nor the same season nor yet in any one year. The gloom of the darkest night is never immediately succeeded by the glare of the brightest day. Thunder-storms are scarcely known in some localities of the earth's surface, in others they are extremely frequent. The forked lightning does not strike from an unelectrified atmosphere. Large portions of the globe are never affected by earthquakes worth mentioning; and, even in volcanic countries, the more violent disturbances are of rare occurrence, and usually preceded by minor alarms.

The dangers to life arising from indiscriminate assimilative attempts upon unselected material have been referred to. The plant is much less liable to evil effects from this source than the animal. Nor is the organism of the latter at all times and in every locality exposed to the entire range of the vicissitudes of doubtful assimilation. The composition of the atmosphere at any one place varies but little in the course of even lengthy periods. The constitution of the water obtained from any one source is almost constant. And not only by this fact, but also by the development of its senses and instinct, the animal is protected against the evil consequences resulting from a misselection of food.

The special dangers arising from the contact of organic forms are likewise much localized in place and time. The musk-ox of Greenland is not compelled to defend his life against the attacks of the tiger, nor is the scanty summer vegetation of his home cropped by the antelope. The pleasant country homes of New England are not now infested by the labyrinthodon, nor are the bathers of Swampscott in our day at all likely to be snapped up by a stray ichthyosaurus.

Taking all this into simultaneous consideration, it becomes evident that, if we would arrive at correct conclusions in regard to this problem of the perpetuity of life, it is not so much to the higher or lower extremes of environing conditions, nor even yet to the gulf between these, but rather to the extent of the earth's surface which is at any one time affected, and to the length of the periods within which they are likely alternately to appear or prevail, to which we must look for a solution.

There can be no doubt that all geographically extensive and very sudden changes of such extremity as to much exceed the range to which any organism has been accustomed to accommodate itself within like periods of time must be very dangerous, if not fatal, to it.

To begin with the effects of sudden changes in atmospheric pressures. The evil consequences of too rapid ascents of very high mountains are well known. A great increase in the number of respirations and pulse-beats, fainting fits, and bleeding from capillaries, has been observed. In the cases where artificially increased pressures had to be borne, still more serious consequences have resulted, extending to the manifestation of the pathological novelty of the "caisson disease," and in some instances, I believe, even to the loss of life. What dangers the extremes of arctic winter and tropical summer temperatures entail upon the unacclimatized organism, nearly every one is familiar with. But imagine these conditions suddenly much exceeded or transposed in place, what would be the consequences of such interchange to the inhabitants of those regions? Possibly, absolute extinction. The entire annual range of temperature in the city of New York is between about eighteen degrees below and one hundred degrees above zero. But the transition between these extremes, should they both ever really occur in any one year, is a very gradual one, occupying at least five months in its completion. Even then, the extremes are most dangerous to health and life. What, however, if this transition should eventuate in a much shorter period? What if it could take place in any one month of the year or in any single day; what if it occurred within one hour, minute, or second? The effect upon the organic constitution heretofore unaccustomed to such sudden and extreme changes could hardly fail to be disastrous.

That a general volcanic outburst of great violence, involving the entire surface of our globe, would extinguish the life which now inhabits it, is reasonably sure. A convulsion of our sun proportionate in intensity to that which was lately witnessed in one of the distant stars might even reconvert the entire planetary system into a vast gaseous mass rotating upon its axis.

To pass over matters of minor importance to the consideration of the possible effect produced upon organisms by any very sudden change in the chemical composition of the materials presented for assimilation, this would undoubtedly in many cases prove disastrous. Whether the tentative food were comparatively unassimilable and therefore inductive of starvation, or excessive and unequal in its action upon the different functional systems of the organism and therefore poisonous, death would in both cases result. In the latter case, the ques-

tion—like that of the dangers arising from the action of physical (meteoric) agents—would be mainly one of concentration of quantity in time. The therapist recognizes this fact, and speaks as freely of the "toxic" (poisonous) action of tartaric or citric acid, common constituents of our fruits, as he does of the like action of prussic acid or strychnine. The difference is only in the relative quantities, the introduction of which within a given time will prove deleterious to the life of the organism. Ten grains of morphine gradually administered in daily portions of a quarter of a grain are harmless: the entire quantity given in one dose would be, in most cases, fatal to a human being.

Savage men manage to hold their own against the wild beasts by which they are surrounded, only because the multiplication of the latter does not keep pace with the development of the defensive and offensive powers of the former. A very sudden onset of strong hordes of lions and tigers upon a feeble savage settlement might very readily put an end to its existence.

CHARLES FROEBEL.

GREAT CITIES AND GREAT LITERATURE.

During a late visit to Manahatta, the "city of hurried and sparkling tides," I was led to note down certain reflections which I am now moved to shape into some sort of a literary horoscope. I looked at the frettings and carvings of the new architecture: the iron portcullis on Broad street; the noble sachem faces of the Mutual Life building on Nassau Street; the great terra-cotta ship prows, with ropes and anchors, of the cornice corners of the Pennsylvania Railroad Company's Romanesque building; the vast Karnak bridge of the East River; the swift movement upward, sideways, lengthwise, downward (elevators, elevated railways, and ferries), the dashing ambulance wagon, the meteor fire-engine, the weather bulletins, and far-speaking wires. I was shown over the wonderfully luxurious and tasteful rooms of the Century Company in Union Square. So far, so good. Here are the splendid enterprise and the new art instinct that befit such a city by the sea,—the emporium of a continent.

But there were certain *indicia* (straws, tokens) symptomatic of internal derangement. The general rudeness and loud, not to say brazen, tone of street manners; the poor public libraries, with their extreme suspicion of strangers; and, most significant of all, there on the great bridge, in the full stream of passers-by, a group of silly-looking policemen chaffing and bantering with, and being chaffed and bantered by, a triad of abandoned young girls,—women of the town.

With an ungraceful hiatus and a cutting dead of the major premise, I leap to my interrogatory conclusion.

Will the Attic salt of provincial genius thrown in amidst the cockney putrefaction of the modern steam-Babylons—London, Paris, Berlin, New York—suffice to sweeten the civic intellect to the point required for the production of immortal art, the higher literature? If there is any salvation for them, it must of course come from the country. There never was yet in the world a *great* literary genius who was not country-bred, or at least familiar with rural life. A pure cit can no more write immortal books than a cellar-grown potato-vine can make good potatoes or a parlor orange-tree produce good oranges. But the real question is not whether a country-bred genius like Carlyle can wear out a miserable existence in a modern steam-and-brick Babylon, and produce a number of dyspeptic books, but whether the conditions of life in said Babylons are not become such as to forbid the growth of schools of literary activity,

such as those of London two or three hundred years ago, or those of Edinburgh, Paris, and Athens, when those cities as yet partook of the half rural features of country towns, and knew not the nerve-shattering yell of steam and the dun canopy of smoke and soot, not to speak of democratic unrest and dynamite ethics? In other words, from what quarter are we to look for a revival of objective art, the literature of joy, the spontaneous laughter of the genius soul,—a new Aristophanes, Molière, Chaucer, Scott? The air is black with "literature of the prison-house." Of morbid analysis of vice we have a surfeit. Of the dragée and bonbon primer-literature let us see no more, for goodness' sake. In New York, we have a high-finish illustrated literature (admirable surely), and finical drawing-room belles-lettres of the Henry James and Howells type, but no creations like those of the Boston Transcendental School,—Emerson, Hawthorne, Thoreau. In short, nothing really great and immortal in art, with the exception of the writings of one man, and he famous chiefly abroad.

Remembering that contrasts of character and manners, the lights and shadows furnished by strongly accentuated types and by romantic scenery and traditions, are the materials eagerly seized upon by the creative artist, one would infer that such regions as Mexico and our own Pacific coast would be likely to be the source of great literature in the future. If, too, we may regard the age of steam as likely to be of short duration, and the era of swift electric or other agreeable locomotion by land or air as its successor (with consequent diffusion of urban population over vaster areas of rural landscape), we may then say that the problem of literary production will be easy of solution, so far as regards the necessary external conditions.

In fine, it is pretty clear that the literature of joy will appear simultaneously with the satisfactory settlement of the crucial social questions of the time. The great artist is not a pure optimist like Emerson, nor a pure pessimist like Carlyle, but one like Walter Scott, in whom the elements are so kindly mingled that the productions of his mind are as healthful and joyful as a sky-canopied meadow full of clover and bees,—joyful in the main, yet checkered with tragedy. But such an artist cannot sing or paint or write amid smoke, steam, dirt, atheism, rascality, and universal discontent. Away to the mountains, then, you who feel the creative tingle in your finger-ends. Sweetness and strength come out of the hills and the sea.

W. S. KENNEDY.

OUR PERSONALITY.

II.

I, for one, unhesitatingly believe in your existence outside my mind, and in your power to affect my being in sundry very efficient and momentous ways. In the same manner, I believe, as indeed we are all naturally convinced, that what is so definitely signalized in the different feelings constituting the perception of my hand subsists in truth as an extra-mental existent, forming part of my permanent being and capable of arousing in various specific ways its perceptual realization within my own consciousness and that of others. Quite evidently, that which in the medium of my feelings is signalized, and I in consequence call my hand, does not then and there come into actual being, does not suddenly start into existence just when I or any one else are perceiving it, but abides a steadfast complex of powers, ever ready under certain conditions to make its existence and present state mentally known to us.

Now, it is a further fact, strongly in favor of

extra-mental World-Realism, that within our immediate feeling we are only aware of our actual surface of contact with the outside world, and not of any of the rest of our massive and compound organization. All structural collocations and vital activities below the skin subsist and are sustained by extra-mental powers, normally unfelt and unperceived by us. So entirely is our consciousness representative of our relational life only, of our predetermined intercourse with an outside environment, affecting our sensory surface.

Without touching, seeing, or moving, we feel the external facing of our body; and we know, through specific modulations of this outspread self-feeling, what part of our body it is we are recognizing in a certain place,—that it is, for instance, the left foot and not the right hand which is occupying this or that position, the forefinger and not the thumb we are pointing. This distinctly specified self-feeling constitutes the sensitive medium for our entire perceptual and volitional intercommunication with the rest of the world.

Outside powers possess the efficiency specifically to modify this self-feeling emanating from the sensory surface. You place your hand in mine; and, by a stroke of magic, it is no longer my own hand I am feeling, but yours. Nothing has actually happened to me save a slight specific modification of my own surface-sensibility; yet I am positively aware of the presence of a clearly recognized existent, not forming part of myself. Thus, solely by means of the subtle play of definite sensorial modifications, outside existents stand perceptually revealed to us.

If, in touching your hand, only my feeling of it actually existed, and there were no real hand of yours to verify and to correspond with this feeling, would I not be the dupe of a most wanton delusion? My feeling of your hand! manifestly presupposes the extra-mental existence of your hand, which means that my subjective or individual feeling arises in pre-established harmony with your objective nature, with your nature outside my mind. In this way, our mental states are, indeed, dependent on non-mental nature for verification. All specific modifications of our sensory organs and all compulsory perceptions arising in consequence are thus indicative of a realm of external powers to which they correspond by dint of an organically preconcerted concordance.

Perceptual mind is altogether moulded on the foreign powers which appear to us as the outside world, and has therefore no meaning save in relation to those outside powers. Conceptual mind, in its turn, is significative of those perceptual realizations, and has no value but in reference to them. And—as we are all well aware—the natural and genuine field of exertion for our will, its objects of desire and aversion, lie likewise in the world of foreign existents outside our individual mind. Thus, not only our bodily organization, but our entire mental constitution, is fashioned in correspondence to a complex world external to our own being. It forms, in fact, the conscious realization of the outside influences which are complementary to our unifying and focussing individuality, and the conscious realization also of the manifold influences which this individuality is itself capable of exerting on the other existents. Instead, then, of being—as idealistically surmised—self-sufficient, autonomous persons, we are in verity wholly dependent for our thought and action on definitely organized relations to the rest of the universe.

We have already seen that we recognize immediately only the surface of our body. This subjective feeling we find corroborated by the objective senses, chiefly by sight and touch, which teach us that that which we subjectively feel has, like

other extra-mental existents, an independent reality capable of definitely stimulating our sensory organs. Our corporeal being in its entirety consists, however, of vastly more than is revealed by those surface sensations. Our objective senses discover not only a wondrously specified and attuned sensory surface, but a solid body marvellously organized through and through, and forming part of the world surrounding it.

Anatomical, physiological, and pathological evidence tends to prove that what we call the nervous system of this body is the true seat of consciousness; that, in fact, mental states are in some way a function of our brain. To understand how this can be, we have to recognize that, if, for instance, you were watching my brain while I was experiencing some mental state, this, my mental state, would certainly not be the function or effect of the peculiar perceptual realization within your mind. It is therefore absurd to try to puzzle out how the merely perceptual molecular motion of a merely perceptual brain, within your or any observer's consciousness, can possibly produce the mental state within my consciousness. The utter impossibility of such a causal connection has staggered scientific thinkers ever since the question was raised. They did not fully comprehend that what they were calling a brain and its molecular motion were really only their own perceptual realizations of a non-mental existent and activity, forming part of the veritable subject experiencing the mental states, which were thus occurring in strict correspondence to the functions perceived or conceived by them. The non-mental and, as such, wholly unknowable existent, which compels within your mind the perception of a brain in definite molecular activity, compels at the same time in me, the perceived subject, the entirely different mental state of which I am conscious. My mental state is an immediate effect of the functional activity; your mental state, its roundabout effect, involving foreign media and your own realizing being as effective conditions of your perceptual representation. This is the simple explanation of this hitherto incomprehensible concomitance, connection, or interdependence of mental states with brain motion.

The entity which we perceive as our bodily organization belongs clearly to the permanent world of extra-mental existents, and not to the ever-changing and transitory world of mental phenomena. At first sight, this our permanent being appears to be a self-rounded individuality, having only pre-organized mechanical relations to the outside world. But just as we found the innermost structure of our mind to be an expression of manifold deep-seated connections with the outside world, so also shall we find on close scrutiny our whole organization, in its innermost molecular composition and in all its textural collocations, to be the expression of such specific connections.

Our ectodermic economy, the least vital part of our being, has the office of preparing and elaborating for organic assimilation raw material appropriated from the outside world; a function resting on a complete range of specific chemical relations between the organism and its environment, beginning at the primordial atom and ending in the highest specified protoplasm. Our ectodermic life, emanating from the intimate composition and texture of what perceptually appears to us as our nervous and muscular systems, consists in the realization of the manifold complex fulfilments implied in the individual and generic relations of our being to the rest of the world.

Our body then, not less than our mind, is all through the result of organized interactions between ourselves and a universe of outside existents.

What, indeed, would our personality with all its mental and bodily faculties signify and avail, if there did not subsist a real outside world, ready to unlock its relational potentialities and to actualize them by genuine fulfillments?

The impression still prevails that our bodily organization is pre-eminently and lamentably frail and perishable, and therefore only of secondary importance to our personality. In truth, this very organization is the most substantial and steadily enduring reality in the whole known universe. Not the earth, the sun, and the stars do maintain so faithfully the identity of their infinitely less delicate and complicated form and texture.

Here is a skull ever so many thousand years old, and even experts can hardly detect any distinctive difference between that prehistoric relic and skulls of people living to-day. No one would, however, maintain that the world of thought realized by the possessor of that skull was likewise essentially like the world of thought realized in our own time, the thought of savagery equivalent to the thought of culture. In unbroken sequence, the organized wealth, the bodily and mental adaptations of such prehistoric beings, have been bequeathed to us; and generation after generation has added its mite toward the subtle and intricate additional development which distinguishes our life from theirs, our medium of culture from their medium of savagery, our realizing thought from their realizing thought.

Indeed, this vital organization of ours turns out to be the most marvellous, the strangest possible hyper-material, hyper-mental, hyper-individual kind of reality within existence. Its exhaustively comprehensive potentiality is transmitted with all but unerring precision in the compass of a microscopical gemmule, gradually unfolding beyond all consciousness, under constant change of material, into a complete reproduction of our many-sided organic efficiency. Here, for once, enduring identity or permanent substantiality is not sustained by the indestructibility of the material composing the body, for all such material only transiently subserves the organic purposes of the living and lasting form; nor is our fitful and fragmentary consciousness at all concerned in the never-flagging vital activity, whose toil alone maintains intact the high-wrought possessions of life; nor does the continual stream of perishing individualities sweep away with it the generically acquired and consolidated wealth of organization.

Now just consider a moment whether much of this unaccountably inherited wealth goes really to make us something quite apart from all former life, apart from the actual world into which we are born, apart also from the organic life of the future, of whose kindling spark we are the natural bearer.

To understand our true mission and veritable import in the sphere to which we belong, we need only once fully realize that our seemingly independent personality is in truth the present embodiment of all the laboriously secured acquisitions of an endless train of previous vital exertion.

Who knows of a more transcendent and all-comprising trust than the one thus confided to the care of those who are now actually carrying on the sacred and mystic rites of life?

Yea, full of ineffable awe is our moment of actual existence, uplifted from the dark, unfathomable abyss of sunken ages into the intense glow of sentient life, sustained and hallowed there by the perpetual powers that within the glory of an everlasting Now are progressively fulfilling the inscrutable destiny of creation.

EDMUND MONTGOMERY.

HEMPSTEAD, TEX.

EDITORIAL NOTES.

BY B. F. U.

THE subject of the tenth volume in the "Famous Women Series" will be Mary Wollstonecraft. The author will be Mrs. Elizabeth Robins Pennell.

OSGOOD & Co. will soon publish a volume called *The Genius and Character of Emerson*, which has been compiled from the papers read before the Concord School of Philosophy last summer.

MRS. ELIZABETH CADY STANTON, among others, writes, expressing great interest in the experience of Mr. Moncure D. Conway and admiration of his "Apologia," printed in *The Index* of last week.

GEORGE BANCROFT, the historian, celebrated his eighty-fourth birthday anniversary at Newport last Friday. From England, Germany, France, and other countries came congratulations, many of them by cable.

REFERRING to the festival of the Free Religious Association in this city last week, the Boston *Evening Traveller* says: "The Parker Fraternity Hall was beautiful in its decorations of flowers and greenery, and the busts of Theodore Parker, Wendell Phillips, and other great men looked down upon the gathering. It was a brilliant and distinguished company that assembled there."

A VERMONT subscriber writes: "I suppose I ought to join your Free Religious Association; that is, if joining will amount to anything in my isolated condition. I belonged to a fire company once, and made a very good member. I can think of no better recommendation which might not be disputed." The Free Religious Association appreciates the importance of extinguishing fires, and has contributed somewhat to this important and useful work.

JEAN ROBIE, the Belgian flower painter, writes as easily as he paints, judging from portions of his travels in Ceylon and British India which have been published in the *Indépendance Belge*. As a colorist, he is exceedingly able; and his flower-pieces have an enduring charm. They are not easily reproduced, so subtly are they rendered; but quite a successful effort has been made to reproduce one of his latest works by color printing on satin, which, as a publication, is unique and suitable either for an easel picture, panel decoration, or for framing.

MR. EDWIN D. MEAD informs us that he will lecture only in New England during the coming season. He will repeat the courses upon "America in the American Poets," "The Pilgrim Fathers," and "Emerson," which he delivered last winter in the West, and will give the following single lectures: "Carlyle and Emerson"; "Emerson the American"; "Whittier's Poetry of America"; "Lowell's Poetry of America"; "Puritanism"; "New England in England"; "Our Debt to Holland"; "The British Parliament"; "Lessing's *Nathan the Wise*, or the Gospel of Toleration." His address is 73 Pinckney Street, Boston.

"SINCE," observes the Chicago *Inter-Ocean*, "the new order of things has produced such a radical change from the old that purse-proud ignoramus count it infamy if their daughters marry a man instead of a money-bag or an addle-pate, it may be as well that the shifting toward a social balance should take the form of a passion for coachmen and butchers. It strikes the extreme in a way that will make the medium acceptable. Sensible girls want men rather than fops; and, since they are denied the society of admirable young men in the middle and honored walks of life, it is not unnatural that they should turn kindly toward the only real men it is their fortune to know, the family servants. Better a coachman than a dude any

day; for they will, in the majority of cases, make better husbands and fathers."

AT the meeting of the Parker Memorial Science Class, held Sunday, October 5, the following resolutions were adopted:—

Whereas intelligence has been received that Miss M. A. Hardaker died at Canton, N.Y., Sept. 9, 1884, therefore,—

Resolved, That the Parker Memorial Science Class has learned with profound sorrow of this sad event, which deprives it of a gifted and accomplished member to whom it is largely indebted for the work it has achieved.

Resolved, That in the death of Miss Hardaker we recognize the loss of a woman of rare intellectual powers and varied attainments, of great moral courage and frankness of speech, of a self-reliant, independent spirit, a kindly nature, and a genial and cheerful disposition, and of a member who, although her life to all earthly vision has gone out, has left with us the fragrance of a memory and an influence that remind us perpetually of her devotion to truth, and inspire us to emulate her interest and zeal in promoting the objects of this Class.

Resolved, That the next meeting of the Class, Sunday, October 12, be a memorial meeting with reference to the life and death of the deceased, and that members be invited to speak in *memoriam* on that occasion.

THE *Truth-Seeker* says: "In making comments upon the proceedings of the National Liberal League, the editor of *The Index* makes a point that only forty-eight delegates presented credentials, and leaves the reader to infer that the Congress was very small." It further states that some delegates came late, of whose attendance the secretary made no record, and that the call was so broad that "many not delegates were present and lent their influence to the organization." What we stated in regard to the number of delegates present was stated on the authority of the *Truth-Seeker*. We did not say "only forty-eight delegates presented credentials," but, "According to the report we find printed in the *Truth-Seeker* there were present at the Congress forty-eight authorized delegates, several of whom were proxies." Since the secretary failed to keep a list of the additional delegates, and the editor of the *Truth-Seeker* who was present made no mention of them, it will be seen that the implied charge of unfairness against *The Index* is groundless. The fact is that in *The Index* was printed the fairest, fullest, and best account of the proceedings of the Congress that has yet appeared, as we can prove by the testimony of the most prominent members of the League who were present. Our report stated that the attendance was about three hundred. The *Truth-Seeker's* statement, above quoted, is in keeping with the dishonest suppression in its report of a portion of the proceedings, in order to gain the adherence of those who have stood aloof from the League on account of its repeal policy. It was well understood at the Congress that the *Truth-Seeker* would become the virtual organ of the League; and its editor, doubtless with the concurrence and advice of the new leaders, decided to suppress all that was said and done, showing that the League adhered to its position in regard to postal laws against obscenity,—a position which makes it still impossible for those who do not sympathize with the repeal folly, however strongly devoted to State secularization, to become members without stultifying themselves. The hostility manifested during the proceedings to every Liberal who had persistently opposed the policy of repeal was most bitter, and if, as private letters inform us and as we believe, "the better element was in favor of carrying out the programme which had been announced," still the programme was not carried out; and the action of the Congress was largely influenced by unworthy characters known to be such by the former leaders of the League.

The Index.

BOSTON, OCTOBER 9, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

THE ABSOLUTE AND LOCAL EGO.

BY WM. ICRIN GILL.

X.

Long we dwell on the ego, and it is necessary; for, in more senses than one, this is the pivot on which everything turns. Till the ego is well determined and defined, no further progress can be made or intelligently attempted. We can never know when we leave the ego till we know what the ego is; and only after such knowledge is attained can we begin to understand the conditions on which a philosophical transit from the ego is possible.

The Absolute Ego.

It was the absolute ego which was expounded in the last chapter; and this ego will be understood by very few for a long time, I fear, fit subject deemed by most for amusement instead of philosophical investigation.

The absolute ego readily emerges from an analysis of phenomena, all of which are found to be only subjective states, whatever their form or action or relations; and the ego is simply their common subject, that of which they are the conscious modes. The ego must at least be commensurate with its own states or modes; and, therefore, it cannot be less than co-extensive with the known universe forever. All time, all space, and all their contents and changes are one with their subject; and their subject is the one absolute ego. Thus, I and all that ever have been known, is known, or ever can be known by me are one, the only difference being that between the subject and its modes; and these are the same substance or force, for the modes are the subject or substance or force itself existing in said modes. This we will consider as having been sufficiently expounded and supported; that is, for all whom any amount of exposition and evidence could benefit. This is what we call spiritual monism. On this theory there is no possible discrimination of the ego from the non-ego within the bounds of the universe, because the ego includes all that universe. The absolute ego is all the knowable, and the non-ego is all the unknowable. This is precise and final.

This ego includes the whole deity of pantheism, which identifies God and the universe, from which I exclude God and all else except myself. Spinoza's deity is extension and thought, a duality which con-

stitutes the universe in all its forces, forms, and activities; and all this I expound as constituting my own exclusive individuality.

One of the most notable of recent thinkers is Lotze, and he also identifies the world with God; though he does not say but that God transcends the world, and (however inconsistent) he sometimes seems to think of man as different from the world. On the other hand, our exposition allows of no such line of discrimination between God and man or between the world and man. The universal substance of the world which he pronounces to be God I call man and my own sole individuality, because it is certain that the known ego and the known world are one. If there is a God and any other being besides myself, they are purely extra-mundane. As says Emerson (Essays, First Series, p. 245), "The art of seeing and the thing seen, the seer and the spectacle, the subject and object, are one." But that does not include God and all beings, as he imagines, but only one man, the observing ego.

Against this absolute ego, sole individuality of the universe and constituting the universe, the empty shells and dried skins of effete metaphysics will be freely thrown; and we must brush them aside. One of these is the assertion that the ego can become conscious only through interaction with the non-ego. Not a particle of proof has ever been offered of this dogma, which is worth as much as the poorest of dogmas in other departments of human invention; and I take it for what it is worth. It has arisen from a confusion (very obvious in Fichte) of the absolute with the local or organic ego. The latter is evolved from the external world and changes by interaction with it, which is ego, to the organic ego.

But the absolute ego includes the world and the organism, and its diversity of modes operate on each other or relative to each other. It is objectively conscious of itself in its consciousness of these diversified modes, which are itself; and it needs nothing else as a condition of its conscious action. We may, if we will, call these diversities parts, and sometimes that will be convenient in practice; and they are parts proper only in the sense that they are not wholes, but necessary constituents of One, the Grand Totality, which some call the Unknowable, some call God, and which I call Ego, which some think is unconscious, but which I know to be conscious, if it is I. All agree, however, in making this great Being a simple unitary force, with a possible infinity of modal diversity. Even those who attempt to deny it, and who, therefore, use the vaguest possible term to describe it, are obliged to come to this at last, allowing an ultimate "potential substratum, out of which issued the divisions and separations, the heterogeneity which constituted the properties and qualities on which all conscious experience depends." This I grant; and, on the other hand, it must be also granted that this "heterogeneity" is the same potency and essential reality as the "potential substratum." So that here, also, we have diversity as the modal unfoldings of the Abiding Unity, which is my doctrine; and this opposition to it is a mere logomachy. Fichte himself affirmed this kind of a simple unitary force, working and manifesting itself in infinite diversity, only he strangely mistook it for the non-ego, contrary to his idealism.

The Local Ego.

There is a special and elliptic form of the ego which we will designate as the local ego. This is limited, because local, in distinction from being everywhere. The absolute ego is virtually omnipresent: this is limited and localized, though it may not be agreed as to what are its exact boundaries. This local ego is variously conceived, and all the disputes among psychologists concerning the ego have been about the local ego. It was necessary to discriminate such an ego from the non-ego, because the non-ego is supposed to be known, and indefinitely vaster than the ego. But this necessary task has not been satisfactorily performed; and the local ego has assumed different aspects to the mind, according to the method of performing this task.

The Local Ego defined as Transphenomenal, and all Phenomena as Non-ego.

Some philosophers have pronounced all phenomena to be non-egoistic; and the ego they have considered to be a transphenomenal subject and agent, lexically connected with organic phenomena. This is the method of the pre-scientific mind, and of the initial

stages of scientific inquiry; and this method often shoots far onward, into the era of cultivated thought. It is the source of Plato's doctrine of superhuman ideas as the regnant principles of the human mind; for those ideas are not described as modes of the human mind, but as external to the mind, though intimately connected with it, as divine glories at which it gazes with a charmed reverence. The doctrine of the non-egoistic nature of all phenomena finds distinct utterance even in so recent a writer as Bishop Berkeley, who was Platonic in his spirit and style, though he was an ardent nominalist. In the first paragraph of his *Principles of Human Knowledge*, Berkeley describes ideas as follows: "It is evident to any one who takes a survey of the objects of human knowledge that they are either ideas actually imprinted on the senses or else such as are perceived by attending to the passions and operations of the mind, or lastly ideas formed by the help of memory and imagination." It is clear that he uses the term idea with the same breadth of meaning as Descartes and Locke, to denote all phenomena, whether sensible or supersensible. In the next paragraph, contrary to the theory of Descartes and Locke, perhaps unconsciously, he says the ego is something besides these, as a different thing from them. "But, besides all that endless variety of ideas or objects of knowledge, there is likewise something which knows or perceives, and exercises divers operations, as willing, imagining, or remembering about them. This perceiving, active being is what I call *mind, spirit, soul, or myself*. By which words I do not denote any one of my ideas, but a thing entirely distinct from them." This is clear and distinct verbally. The non-ego, according to this, is immediately known, and that with indubitable certainty, because it constitutes the phenomena of sense and consciousness. Whenever the mind acts or is conscious, the non-ego is then present as a known object. This is the most simple and easy method that could be invented of transcending the ego. The non-ego is of two kinds, sensation and reflection; and the former, according to Berkeley, is created by God, and the latter by the human mind, or ego.

This theory, in the first place, is antiquated by modern psychology, which makes all phenomena to be modes of the ego, and one with it. In the second place, the distinction between ego and non-ego is merely verbal, an intellectual void. The ego, rendered absolutely unphenomenal, is therefore unknowable and inconceivable. So that it cannot be discriminated from or identified with anything whatsoever. On the other hand, if all phenomena are non-ego, most or all of our mental processes, so called, lose their significance. All pronouns, personal and possessive, are nullified. Thought, feeling, volition, are neither states nor qualities nor acts of the mind or spirit; and we have no means of knowing that they represent our mind or spirit, or sustain any relation to it. All principles are destroyed, and all intellectual guides and indicators are obliterated; and it is utterly gratuitous to talk of the mind or ego forming and compounding ideas of reflection by the help of memory and imagination, or any other way. Every assertion whatsoever concerning its nature and action and relations is utterly unwarrantable. In the third place, its explanation of the origin and existence of sensible phenomena by referring them to the creative will of God is a vast and needless leap, however pious. A philosopher will spare himself such an effort, if he can find an easier explanation; and this explanation is found in the subjectivity of all phenomena. But it may be also found in Berkeley's own doctrine of the ego. If it is unphenomenal and the author of the ideas of reflection, it may be the author of the ideas of sensation. The only objection he brings against the subjective origin of the sensible work is that it is involuntary. He assumes that it is different from us, because against or irrespective of our volition, forgetting that he has already defined volition as non-egoistic: so that to be different from it is not to be different from the ego.

The Local Ego conceived as Super-sensible and Sensible Phenomena as Non-ego.

The next method to be noticed is that which defines the sensible phenomena only as non-ego, and affirms that all the phenomena of interior consciousness are egoistic. This is the old dualism of matter and spirit in its purity. On this theory, the non-ego is composed of our organism and all sensible objects beyond it;

and then all that is identified with the remaining forms of experience are ego, spirit. We are conscious of various experiences which have in them no element of extension or motion or any recognized form of matter or sense. These are all egoistic and spiritual, and modes of the ego, which pronounces itself a spirit in distinction from matter; and it is also conscious of perceiving sensible phenomena as external to itself and non-egoistic.

This sensible non-ego has been considered by many others as only a series of images flashed upon us by God, a series of divine acts, a multifarious form of the divine energy. But that involves vast theistic assumptions, and such a creed should wait on proof or some reasonable evidence. It is more simple and ulterior to say with common dualists that matter is a solid, forceful reality of many varying forms or modes, which, according to its nature and internal relations and its various external relations, operates upon itself and upon us.

As the personal ego is thus contradistinguished from matter, it is free from all the elements of mutability which are characteristic of all the organic forms of matter; and its immortal capability and independence are thus disclosed as possible and highly probable. We hence see also that it cannot be evolved from any previous condition of matter.

This is a fair picture; but, like all pictures, it shows only one side. It is dualism in its most unsophisticated form of philosophic creation. A lunatic said he had two sides to his head, a potato side and a brain side; and that he was sane or insane according as he spoke from one side or the other of his unfortunate cephalic dualism. We have seen one side: now let us see the other. This other shows all human action, utterance, and history a mere dead force. The soul of things is fled. Man has left the stage, and mere puppets play in his place and name. All men, so called, and all their motion and action and speech, as known to each other and to history, are only the motions of organic matter, never of real men and human beings. All the play of domestic and social or public life and interest, all the inventions and discoveries of physical science, all physical work, pleasures, pains, battles, sieges, wounds, healing, nursing, are nothing essentially human, only the various play of material elements. War, murder, death, birth, marriage, kisses, tears, laughter, groans, and songs have all lost their chief, their human significance and importance. Where before we had seen the flow and eddyings of a vast and varied tide of human beings, now wallowing in vice or reeking with blood and crime, now flashing with the coruscations of bright genius, now gleaming in the loveliness of beauty, or shining in the loftier power and charm of pure goodness, we now see nothing but so many automatic motions of matter as distinguished from spirit, non-human, unconscious. It may be said that these phenomena are symbols of human realities. But, as a system of symbolism, it is not less ghastly than the Ancient Mariner's company of dead shipmates working at the ropes, without the associated relief or explanation of angelic agency.

The further and popular allegation that these bodies are really alive, conscious, and purposeful, being animated by spirits which use them as their several instruments, is good, if admitted; but it furnishes a reason for its own rejection. For, if a finite spirit can give life and conscious energy and purpose, much more may the Infinite Spirit do the same for all these forms; and, for aught we can see to the contrary, the evolution of this result may be, under certain conditions, a necessity from nature's intrinsic force. And, as this is the more simple and scientific hypothesis, it is to be preferred, so that we are bound to dispense with the hypothesis of finite spirits distinct from matter, and step at once on to the more solid and sensible foundation of materialism, pure and simple.

This theory is utterly without proof or evidence at any point; and it is everywhere inconceivable, because it is either a mental void or a self-contradiction. As we know of no mental phenomena dissociated from matter, so we have no evidence that they are not at the bottom the same. There are different classes of phenomena, but this is no proof that they have not the same subject and substance. It is also too late in the day to pronounce all sensible phenomena to be non-ego. So far as the ego is connected with the organism, it is identified with the organism. We always say "me" and "my" concerning bodily forms, feelings, and motions, and that they are ego-

istic is as well proved as that any of our mental states are.

The Local Ego defined as Organic and the Non-ego as Extra-organic, which gives us the Physiological Ego.

This brings us to the physiological ego of the material monists, who hold that mind and matter are one, and differ only in their aspects or phases; that the organism is the ego, which changes as changes the organism, and which therefore begins and ends its existence with the animated organism. This theory is burdened with the contradiction of consciousness affirming personal unity and sameness all through life, while its individual substance is not the same. The me of yesterday is not the me of to-day, while consciousness affirms that it is. No one ever attempted in a criminal court to prove an alibi on the ground that the crime imputed to him was committed a long time ago, though on this theory he has abundant right to do so. The spontaneous as well as the reflective action of consciousness repudiates the theory; and all human institutions are based on that repudiation, for they all assume the continued personal sameness through all organic changes. Without this, society could not exist, and life itself would be impossible. To say that the ego, or conscious unity, is the organic unity, which at any moment prevails, is only to say that this ego is forever changing, never the same; because this is the case, not only with the material particles of the organization, but also with the form and action of the organic structure in many of its functions and faculties. On this theory, it is true that we may say "I"; but it must always be of as well as in the present only. It is I who write this word, but it is not the same "I" who wrote some of the earlier pages. Yet my consciousness affirms that it was the same "I" who wrote at the far distant times, thus contradicting the theory. In all this, it is like the antiquated French sensism.

On the other hand, it is very clear that there is a relation of responsibility between successive periods of the same community. A nation may be saddled with a duty to-day, because of an act of the nation generations or centuries ago. This is constantly seen in the action of its internal economy. It is exemplified very constantly in the application of common and statute law; and we all easily see how certain actions of parents may devolve obligations on their heirs for generations, and one administration of government devolves obligations on another, though the latter may be of very different political views. But it is only by mental confusion that any one can imagine, as some have done, that these facts favor the doctrine of physiological egoism. The communication of responsibility is not limited either to the same individuality or organic connection, but only by power and circumstance. The story of the "Good Samaritan" suffices to show that responsibility is derived from opportunity and power in given circumstances, no matter who is responsible for the situation. An action of one generation devolves duties on another generation, not because the latter generation is morally responsible for the first, but because each and all are under obligation always to do the best they can with their powers and opportunities. Our relations to each other, whether individual or corporate, affect our obligations, not because we are parts of a common and organic individuality, but because of our personal individuality in relation to others. Each is responsible for his own action in all connections, and that collectively constitutes the action of the whole.

On the physical side, there is found in the modern discoveries, by the microscope, of germ-cells a strong argument in favor of a bold utterance to the effect that personality is but the abiding expression of an organic combination whose constituents are always changing. The organism is made up of an indefinite number of microscopic cells, each of which is alive, an organism in itself, and gifted, like the general organism into which it enters, with the power of procreation or self-multiplication, and that by three (or four) different methods. According to this, there is a combination of a vast number of individualities in each organism, and our personal individuality is their combined and organized expression and representative; and that its continuity and responsibility are analogous to that of a municipality or a nation, which in its corporate capacity is represented by its legislature, its executive, and its judiciary. Com-

munities are held responsible, though always changing, and in this they are like our organic individuality; and they, too, are organic individuals, only they are more complex organisms than that of our body. To escape this result, a result which was claimed before these cells were discovered, dualism was invented, according to which the organism is not the ego or a constituent of it, that the ego is a spirit in contradistinction from matter, spirit being alleged to be one and simple and continuous, and that the individuality of communities is only figurative.

Sensism can defend itself against dualism by showing the radical, logical inconsistencies of the latter. Yet the latter possesses a vast and manifest advantage in its appeal alike to reason and consciousness in support of its fundamental position that the ego is substantively one and the same through all organic or other changes. This is infinitely more sublime than its opposite, and it is in perfect accord with all mental and moral phenomena; while its opposite is not. However much we may explain and evade, it still remains clear that responsibility belongs only to agents; and these are responsible only for their own action, not for any action which is attributed to them hypothetically merely because of certain organic associations. Two animals of different species have been organically spliced together, so that they shared the same blood and organic life; and what fed or poisoned either fed or poisoned both. Men might be treated in the same way; and nature did this for the Siamese twins. A good man and a bad man might thus be conjoined, retaining their separate and opposite moral consciousness and character, which are always wholly and absolutely individualistic. In the community, each is responsible only for himself; and, if he suffers from others, that is not a moral consequence relative to himself, is not a moral punishment to him. On the assumption of this perduring, substantive individualism, all thought and all action proceed; and no analogies or arguments can change or obscure it. Here, sensism of every form is baffled and beaten into hopeless defeat.

But though dualism is irrefutable in its affirmation of an ego which remains absolutely the same unit all the way through the progression of the hours and years with their multifarious metamorphoses; yet it has a weak point which it cannot protect,—its denial of the unity of body and mind. Here, the physiological psychologists occupy an impregnable position. Their arguments against dualism are conclusive, and they ought to be repeated till they become universally effective. There is a law of invariable relations between certain conditions of brain and certain forms of consciousness, and these connections are historic and evolutionary. This ego, therefore, is not strictly constant, but variable. It constitutes the aggregate of conscious states existing at any given time. Hence, also, it has all the extension which belongs to organic phenomena. This individuality is an inconstant field of life, of special form and development, a definable portion of the larger life of universal nature, a portion which is transient, as all the various forms of this universal nature are transient. This ego is therefore susceptible of disintegration in various forms and degrees, and to the utmost; and with the signs of such operations we are painfully familiar in bodily diseases, in mental derangement, and in some forms of vice and crime. Since this ego is composed of all organic forms and forces and motions, with the brain as the central organ of bodily synthesis, sympathy, and synergy, it follows that the disorganization of the cerebral centre is the dissolution of this ego, so far as the dissolution of the physiological unity extends.

On physiological grounds (which are also ultimately psychological grounds), Dr. Maudsley is rigidly just and scientific in using the following language: "The consciousness of self, the unity of the ego, is a consequence, not a cause; the expression of a full harmonious function of the aggregate of differentiated mind centres, not a mysterious metaphysical entity lying behind function and inspiring and guiding it; a subjective synthesis or unity, based on the objective synthesis or unity of the organism. As such, it may be obscured, deranged, divided, apparently transformed. For each breach of the unity of the united centres is a breach of it: subtract any one centre from the intimate physiological co-operation, the self is *pro tanto* weakened or mutilated; obstruct or derange the conducting function of the associating bonds between the various centres, so that they are dissociated or

disunited, the self loses in corresponding degree its sense of continuity and unity; stimulate one or two centres or groups of centres to a morbid hypertrophy, so that they absorb to them most of the mental nourishment and keep up a predominant and almost exclusive function, the personality appears to be transformed; strip off a whole layer of the highest centres, . . . you reduce man to the condition of one of the higher animals; take away all the supreme centres, you bring him simply to the state of a sentient creature; remove the centres of sense, you reduce him to a bare vegetative existence, when, like a cabbage, he has an objective, but no subjective ego. (*Body and Will*, Part Third, Sec. 6.)

To this theory considered as "the conclusion of the whole matter," a fatal objection is presented by one of our modern sciences, the science of optics, whose long and undisputed deliverances on this subject Mr. Maudsley and all physiological egoists here overlook. Optics teaches that the objects of sight are never the same as those of touch: so that the tangible and visible organism are not only dissimilar, but numerically different. It follows that there are at least two physiological egos; and there is no unity or community between them, unless we go back to an extra-physiological and extra or supra organic reality and agent, which is common to both of these organisms, and to all phenomena; and this agent is our absolute Ego. Thus, this physiological egoism is broken utterly asunder; and it can find no rational or logical and scientific bond until it abuts on our basis and adopts our doctrine of an absolute and universal Ego as well as the sub-doctrine of a local and physiological ego, as one of the generic classes of the modes of the great and absolute Ego.

This narrow conclusion of pure organicism is the prevailing view of modern science working on the physiological side of our nature. It is modern sensism, and it coincides with a very early, if not primitive, notion of man. Indeed, it shows the still common and popular line of demarkation between the ego and non-ego; and, in spite of themselves, it invades all isms and theories. But a faithful and progressive conformity to this method leads us to far loftier heights and broader and grander vistas than material monism can ever attain. It leads us to the discovery of an Ego which is infinitely more glorious than the organic or physiological ego. The same style of investigation and argument which identifies the organic soul and body or proves the organism to be ego compels us to identify both these and all extra-organic phenomena with a super-organic ego, commensurate with them all in duration, in spatial extension, power and variability,—a modal variability,—while itself remains the same, the same substance or force. While the organism is ego, it is not the whole of ego. All the known, including the organism as a very small fraction, is ego; and the physiological ego is not discriminated, as is supposed, from the non-ego, but only from certain other forms of the general or absolute Ego, and so the degeneration and dissolution of the physiological ego is only a small modal change in the absolute or total Ego.

The Pantheistic Ego.

Here creeps in pantheism. If there is an ego general and an ego local, and as many local egos as animated organisms, and if these constitute all the knowable universe, what is this but to say, with Spinoza, that the universe is one being and substance, with many special forms of conscious, personal beings of limited power and duration perpetually evolving from it and then again relapsing into it? It will be very natural and easy for some to state my doctrine in this way, and draw the inference contained in this interrogation. For we are seldom duly careful or competent to understand an unwelcome system or theory and its logical issues. Therefore, I so state it now by anticipation, to prevent such perversion. The terms above italicized are incorrect. I have affirmed only one known ego, local or general. The many local personalities are only apparent. I, who affirm my personality in connection with my organism, affirm that other organic forms are not persons, but only symbols of persons and modes of myself: so that I recognize but one being in all the universe, myself, who am the conscious subject of all the knowable. So that the absolute and universal being of this theory is an entirely different conception from the unconscious and impersonal universal absolute existence of those philosophies which have

been considered pantheistic or pantheistic. This existence as expounded thus far in Philosophical Realism is simply and solely my own conscious individual self, multifarious and ever-changing in its conscious states. It is always and forever absolutely alone, knowing itself only, and evolving only into new forms of its conscious self without end, but never more than one consciousness or conscious subject.

Now, the question arises whether I am the only reality. On this question there will be no serious debate, so that we may consider it settled as soon as raised. We all believe in the existence of other beings. On what grounds? In experiential knowledge, I am shut up to myself, which includes the whole universe. How can this be scientifically transcended? This is the great question for us to answer, now that we have thoroughly defined the ego.

CORRESPONDENCE.

A COLONY OF "LATTER-DAY SAINTS" ON CAPE COD.

Editors of The Index:—

Brigham Young was busy in his endeavors to make converts to Mormonism in Boston and its vicinity at the time that Joseph Smith—the so-called Mormon prophet—and his brother Hyrum were shot by an infuriated mob at Carthage, Ill., in the year 1843. He suddenly left the field of his labors for the West as rapidly as the slower methods of travel of that day would carry him to accomplish his own particular and far-reaching projects. Smith and Rigdon, it is said, were jealous of Brigham's growing influence with the Mormons at Nauvoo; and he had been exiled from that beautiful and surprising city under the guise of missionary work in a portion of our country that required the services of an adroit and intelligent manager.

It is certain that his purposes in this direction were successful to a moderate extent, and that he sowed seeds of Mormonism in this Commonwealth, before his departure for the West, that have developed slowly but surely into the doctrines that he taught so long ago. There are Mormons in many parts of New England, and particularly in Massachusetts there are several communities of these deluded people. So little is published in the newspapers concerning them that they come and go unnoticed; and, indeed, few persons comparatively are aware of their existence in the Eastern States.

At Dennisport, a fishing village down on Cape Cod, there is a flourishing colony of the "Latter-Day Saints."

It was in the early spring-time that the writer made a pilgrimage to this locality to "see what we could see" of these particular Mormons. The excursion can be easily made in a day from Boston by taking an early train on the Cape Cod Branch of the Old Colony Railroad.

The journey from Buzzard's Bay is a continuous progress through scenery of the most pleasing character,—picturesque without being grand, and suggestive of thrift, peace, and plenty everywhere, if the old-fashioned dwellings, as well as the new ones, surrounded by luxuriant gardens and orchards, the pretty lakes, the quaint villages, and evidences of barter, can give the idea of a population living in the midst of an abundance of this world's comforts.

A resident of one of the numerous villages on the route, returning to his "native heath," was ready to give information regarding the "Saints." He had seen car-loads of Mormons going to their yearly conference at West Harwich, and had heard they "hailed" from Boston, Providence, Fall River, and more distant places. He described them as "a jolly crowd."

Leaving the railway at the West Harwich station, it is but a short drive to Dennisport, two miles distant. The Jehu of the one conveyance to the village instantly assumed a mysterious expression of countenance when we asked the most direct way to the place where the Mormons reside. He "guessed likely he knew"; and, with increased gravity, said very slowly, "We don't call them Mormons down here, they're 'Saints'; and I'll take you to see them. Yes, I'll tell you all I know about them. It ain't much, but you're welcome to it."

West Harwich is a lively little town, and wonder-

fully respectable in appearance, with its pretty houses and gardens redolent of countless perfumes of flowers, its churches and public buildings, including a town hall.

It is less than a mile from the hotel in Harwich to the Mormon settlement, and a stranger would see no outward evidences of the peculiarities of its residents to distinguish it from any other New England village of moderate size. Two or three roadways are closely lined with small frame houses painted white and having no suggestions of ornamentation. They are most of them close to the road, and very few of the tiny front yards graced with shrub or flower. Green paper window curtains seemed to be the rule; and all were let down, as though the women folks were in the back part of the domiciles, and possibly at work. Driving slowly past all these houses, it seemed remarkable not to see the face of a single female or a child; and yet the morning was a most inviting one to be out doors.

Our driver informed us that as nearly as he could tell there are about five hundred persons in the village. A plain, square, white-painted structure was pointed out as "the meeting-house"; but there is no school-house, the Mormon children attending the free school in Harwich with the other children of the vicinity. A lovely roadway, bordered with larches and shrubs and wayside flowers, leads down to the "Port," perhaps half a mile from the village. Here, a picture that would have delighted the eyes of marine artists met our vision. A long wharf extends out into the ocean, on which are packing-houses, etc., for the curing and packing of fish. Several fishing-smacks were lying beside the wharf, which seemed outlined against the clear blue sky and blue ocean with peculiar distinctness. The rough garb of the men at work here and there added to the picturesque effect. Some low sheds close to the beach are used as shelters; and in one of these, as there was a stiff breeze blowing, our team was driven, and we started on foot to find Captain Howes, one of the most prominent of the "Saints." He was in a small boat just going out "for a catch," but at once came in shore when our driver screamed to him over the water that "some people from ever so far had come to see him." The captain was just fitting for such surroundings,—tanned, weather-beaten, lithe, strong, and keen of visage.

"Yes," he said, "he was always ready and willing to talk of his religion. We are Mormons of the kind called 'Latter-Day Saints.'"

"You admit this?"

"Certainly," he replied; "but we do not believe in plurality."

"Do you mean polygamy?"

"That is just what I mean. The Mormons separated at the time of Joseph Smith's death, and some of them went off to their destruction in Utah with Brigham Young. We don't countenance them. Our leader is Joseph Smith, Jr., of Plano, Ill."

"Then you think the elder Joe Smith founded the Mormon religion?"

"Yes, we believe he was a true prophet."

"But he originated in Central New York; and there are many people still living who remember him as he appeared when he was a lad, his irregular life, and the true origin of Mormonism after he had pretended to find some golden plates in a hill near Palmyra."

"Yes, I've heard about those gold plates; but I don't know much about them," said the captain, somewhat disturbed.

"Have you heard of Sidney Rigdon, Smith's associate, friend, and assistant in the Mormon scheme?"

"No, I've never heard of him." And then, as though anxious to hurry through an interview that was getting to be annoying, he went on of his own volition to define the articles of the Mormon faith: "We believe in immersion as the true baptism, because Christ was baptized in the river Jordan; we believe no one will be eternally lost, although they will suffer for the sins done in this body; and we think Christ is coming in person to reign over us."

"What is your form of worship?"

"Well [and this seemed to be a vexing question], we have a Bible that Elder Pratt translated for us: it's a good deal like the King James Bible, only things are explained like, made clear to us. We sing and pray just like other folks; and we have Sunday meetings, and Sunday-school, and week-day meetings."

"Is not your religion a mixture of a good many religions?"

"Yes," he replied, "and the best of them, all put together." (This, with a smile of inward satisfaction.) "And the Book of Mormon, what of that?" "Oh, that is the history of Mormon." "Have you read it?" "No, I haven't: I never saw it." "Who wrote it?" "I don't know. Smith said he found it."

The captain said further that he had always resided at Dennisport; that he was converted by an elder, a Mormon missionary; that Joe Smith, Jr., has attended some of the Mormon conferences which are held in West Harwich yearly, in Ocean Hall, their own church being too small for the accommodation of the Saints in attendance, residents in New England, who are colonized at Providence, Fall River, Boston, New Hampshire, and elsewhere. He pronounced these conferences as *very interesting*. "I wish I had more time to tell you of our people," said the fisherman, "but our Elder can give you further particulars." There was just the suspicion of twinkle in the captain's steel blue eyes, as he gave the address, and turned to pursue his calling. The elder was at home, but reported to be ill. We fancied the excuse was made for the occasion, and to evade awkward inquiries.

"It's too bad," said the driver: "he could ha' told you all about the Saints."

Some less cautious persons were communicative as to their neighbors of Dennisport. One resident of Harwich said: "You see, they've lived here so long, we don't think of them as Mormons. We trade with them, but we don't mix with them socially."

An intelligent woman remarked: "I suppose they are honest enough in their business dealings, but I don't want to meet them or go near them. The truth is, they are under a social ban."

Another person informed us that all the men belonging to the colony of Saints are fishermen, hard-working fellows. The yearly conference is their great holiday; and "the Gentiles" (as the Mormons call other people besides themselves) attend these meetings with evident pleasure, also.

A young woman belonging to Harwich described the conferences as "well worth attending, good speaking from real smart men, and good singing, too." The same person admitted that it is generally known in the vicinity that, while the Mormons do not profess to believe in polygamy, they have their free-will as to an "affinity." Marriages are frequently broken in this way. "I cannot see the harm," said she: "people cannot help loving each other, if they are married." A male relative joining in this conversation said: "Well, they generally come back, if they do go away. One woman was gone to Utah twenty years with a Mormon; and she's come back, and is living with her family here." Other cases were mentioned of a like character; and, on our expressions of surprise at such a condition of affairs in old Massachusetts, both the woman and the man talked lightly of it, one of them concluding with, "Oh, if you lived here, you would not think so much of such doings." In short, here, as in all the localities where the Mormons live, or have lived, they demoralize their neighbors: their terrible doctrines permeate the whole moral atmosphere, and, as a clergyman in Northern Ohio, where the Mormons made their first settlement, once remarked, "It seems impossible to get rid of the taint."

As quietly and as unostentatiously as our visit had been made, and, so far as we knew, without the slightest premonition to them, it was obvious that its purpose was quickly known; and that, while the neighbors of "the folk" at Dennisport professed a willingness to tell us all they knew of the Mormons, in reality they communicated as little as they could decently. As an astute old "Cape Codder" said: "We don't like to offend the Saints. They have some black sheep among them of course, like any other religious society. Generally, they behave well enough. They don't drink,—at least, they are, as a rule, temperate; and we think people ought to be allowed to have any kind of faith they choose, so long as it don't hurt anybody."

ELLEN E. DICKINSON.

MR. BLAINE'S HONESTY DEFENDED.

Editors of The Index:—

Observing that you do not ignore the Presidential question, I ask space for a few words on the subject. As a Republican, I was opposed to the nomination of Mr. Blaine on moral grounds, believing that there

was room for doubt of his official integrity. That doubt has been removed from my mind by the arguments adduced to prove his corruption and by reading the so-called "Mulligan Letters," which have convinced me that, so far as the transactions are concerned to which they relate, what Mr. Blaine did and intended was legitimate and honest. It is quite evident, to my mind, that the construction put upon certain words extracted from the letters is not only not warranted by the letters as a whole, but is inconsistent with known facts.

It seems to me that any person conversant with business affairs and the rules by which they are governed, who will read the "Mulligan Letters" in a plain business light, must see that no corruption was practised or could have been intended by Mr. Blaine in his efforts as agent for Messrs. Caldwell and Fisher to place among his friends in Maine a limited amount of the bonds of the Little Rock and Fort Smith Railway Company. When Mr. Blaine wrote to Fisher that he saw "various channels in which he could be useful" in the matter, and that he should "be no dead head," the time had passed when he could officially aid him. This is, I believe, an indisputable fact of history.*

The rule of construction applied by Mr. Schurz and others of his class to the letters is absurd, and unworthy of a man of his standing and intelligence. Mr. Schurz appeals first to our higher moral sense, and lays down broad ethical propositions which all accept as true. He then charges Mr. Blaine with corruption in office, and attempts to convict him by his (Blaine's) own words from the "Mulligan Letters," which he construes upon an assumption of guilt, in utter disregard of the contents of the letters as a whole, the facts of the transaction, and the capacity, moral and legal, in which Mr. Blaine was acting. I am therefore forced to the conclusion that Mr. Schurz, and not Mr. Blaine, is immoral; or, if not immoral, that he is incompetent to judge of the case, and hence not entitled to attention. Concerning the privacy exercised by Mr. Blaine in placing the bonds, the letters indicate that he was governed by the wishes of his principal, Mr. Fisher, who for reasons of his own preferred to avoid publicity. Privacy in private business not only does not imply dishonesty and corruption, but is usual, proper, and is protected by law and established principles of right. Mr. Blaine had the courage to maintain this right in the teeth of his enemies,—a right which belongs to all.

Your correspondent, Prof. Allen, alleges that "Mr. Blaine's nomination was forced by the worst elements of the party," etc. This is, I think, untrue, unless the great mass, the rank and file of the Republican party,—they who have sustained it and gained its grandest victories,—are its "worst elements." That Mr. Blaine was clearly the choice of the great majority of the Republican party of the country is, it seems to me, unquestionable. That this great majority is honest and patriotic Prof. Allen will not deny. They are the men who believed in Abraham Lincoln and Garfield, and elected them. When Prof. Allen penned that sweeping assertion, he had in his mind's eye, I apprehend, a certain ex-political boss of our State, who is at war with the head of the institution with which Prof. Allen is connected. The professor may so magnify the proportions of the said ex-boss as entirely to obscure the grand army of plain honest Republicans with hard horse sense who are able to read business letters in a business light, who have not acquired those arts which distort language into corrupt meaning where no fact or intent of corruption exists, and who hence believe in the integrity of James G. Blaine.

Grant, if you please, what Prof. Allen claims, that Mr. Cleveland was nominated by the best elements of the Democratic party against Tammany and Butler, does that prove him adequate or his party worthy to rule the country? I think not. Twenty-five years of defeat and discipline with the general increase of intelligence have done much, it is hoped, to improve the Democratic party. Its leaders and its rank and file have been dragged along in the rear of our civilization, which it has stubbornly opposed at every step; and that is still its temper. Present indications are that another quarter of a century will scarcely bring

* The letters and facts of the transaction show that what Mr. Blaine did and intended to do was in no sense connected with his official duties, but that it was purely private and personal, and done in a regular and business-like way.

that party to a condition that will qualify it to direct the course of the government.

But sentiments of political prudery and prejudice should not decide questions of national welfare. The balanced mind should weigh against one another all the considerations on every side. When this is done, I believe that the people will accept Republican rule and James G. Blaine as most likely to preserve all that the country has gained, and to achieve what is most desirable in the future for national reform and progress.

R. C. SPENCER.

MILWAUKEE, Sept. 30, 1884.

THE PRESIDENTIAL ELECTION: IS THE CHOICE STILL OPEN?

Editors of The Index:—

I am obliged to confess surprise at the conclusion to which you come in the editorial upon "Public and Private Morality." It seems to me that your argument ought not logically to lead you to the conclusion that neither Mr. Blaine nor Mr. Cleveland should be supported for the Presidency.

In considering the question of a choice between the two candidates, it must be borne in mind that, when once a nomination has been made, the question passes out of the hands of the members of the party, and a reconsideration of the action of the convention becomes practically impossible.

If the Democratic Convention had acted with as full a public knowledge of the flaw in its candidate's life as the Republican Convention had of the corruption of its candidate, the cases would have been parallel; and conscientious men would have been justified in refusing to vote for either. As a matter of fact, however, the nomination of Grover Cleveland was made at the instance of the Independents themselves; and yet you say that these men should "reconsider their position, declare their distinctive platform, and name their separate candidates." Would not the Independents, in following this course, really break faith with the Democratic party, which in all sincerity met their advances cordially, followed their advice, and as they believed rose to the occasion by nominating New York's reform Governor as their common candidate for President?

Do you not think that the chief influence which will lead many clergymen to cast their ballots for St. John rather than Cleveland will be lack of moral courage? Do they not say to themselves, What will my people say of me, if I vote for a man who has this acknowledged stain upon his private life? In your case, moreover, the temptation to yield to this moral cowardice is even greater than on the part of the orthodox clergyman. Liberals have been charged with countenancing free love. In order to avoid even the semblance of such viciousness, is there not danger of laying aside the judgment, and thus really injuring the character in the effort to sustain the reputation?

Already the scandal against Mr. Beecher has been revived by Republican papers which call themselves respectable, because he is giving his support to the Democratic candidate. How much nobler in the eyes of the highest intelligence is his action than that of men who, not being enthusiastic for national prohibition, yet find nothing to choose between Cleveland and Blaine.

JUSTICE.

[We are glad that our correspondent has raised his first point. There is no doubt that many of the Independents who are supporting Cleveland are doing it because they feel that the nomination so commits them. Especially is this the case, if they were among those who pressed the nomination upon the Democrats: honor seems to hold them to the choice. But, in our view, the conditions are now changed by what has become known concerning Cleveland's private life, so that no one is bound by honor to support him, if he now thinks him an unfit candidate. Moreover, there are thousands of Independent voters who took no part in the Conference that recommended the support of Cleveland; and, certainly, every one of these "carries his sovereignty as a voter under his own hat." With respect to our correspondent's second point, on which he makes a personal application, we will only speak for our own action. We have never been accustomed to consider what Mrs. Grundy may say, and have not thought for a moment what she is likely to say in this matter.—W. J. P.]

Mr. G. H. Heywood, of Princeton, Mass., writes: "It should be said, relative to your remarks in *The Index* of October 2, that the copy of *The Word*, which seems so to have exasperated Rev. Mr. Applebee, was sent him at the request of one of his own parishioners interested, to draw his attention to labor and social questions of growing importance. Said parishioner also paid for the papers sent Mr. Applebee. But, supposing he had not ordered or paid for *The Word* sent as above, the statute invites and permits publishers to send specimen copies to whomsoever they think best. If the papers are not wanted, the receiver has simply to say so to the carrier or postmaster, whose legal duty it is thereupon to notify the publisher that papers are misdirected or refused. It is surprising to not a few intelligent people that Rev. Mr. Applebee is so far behind the times, free-speech wise. After the rulings of Judges Treat, Nelson, and Pitman of the United States and States Courts have completely reversed the irrational attitude of Clark, Benedict, and other judges, which Mr. Abbot justly denounced in the columns of *The Index* and in Liberal League Congresses seven years ago, here is a minister, claiming to represent Theodore Parker, who seems far behind even orthodox clergymen on mental liberty issues! Rev. Mr. Applebee's action calls to mind the bigots in Park Street Church, who, in 1837, I think, prayed God to put a hook in St. Theodore's jaws and haul him quickly into hell fire!"

BOOK NOTICES.

LIFE AND LETTERS OF BAYARD TAYLOR. Edited by Marie Hansen-Taylor and Horace E. Scudder. In two volumes. Boston: Houghton, Mifflin & Co. 1884. Price \$4.00.

Apart from its interest as the biography of a brilliant and versatile genius, and one of America's most illustrious *littérateurs*, this work has a charm of its own which ought to gain for it readers, even among the few who do not know Bayard Taylor either through his lectures or writings,—in the fact that this true story has all the ingredients of a first-class novel, which it reads like in its record of deserved success. The hero is all one could desire. He is portrayed at first as young, handsome, in poverty; in love, a genius, ambitious, enthusiastic; pure in life and thought, high in aim; strong, daring, romantic. His love story is a romance, his beloved is an ideal realized. She is young, she is gifted, she is daintily lovely. Their attachment is frowned upon and forbidden by her worldly-wise parents. Its constancy is tested by years of patient hopeful waiting on her part, of eager endeavor on his. The story told in the beautiful letters which passed between the two is intensely interesting; and few can read without tears the pathetic ending of that love story in the death of the young wife of a few months, after all those years of discouragement and patiently borne disappointment.

There can be no doubt, however, that this severe discipline of hardship and of sorrow in his earlier years bore good fruit in making Bayard Taylor a stronger man and writer than he would otherwise have become, and doubtless made more dear and earnest the affection he gave to his second choice. That he was always a man of high moral purpose and courage, the extracts given from his early correspondence with Mary Agnew show very clearly. We hope there are still many young men of to-day who may read these volumes, and find in their own souls an echoing answer to such brave words as these, written when he was but twenty-two years old: "I find that, in the midst of all this toil and struggling which I am now going through, a strong will is fast growing into existence,—a will which will do all and dare all. I am determined to conquer penury and care, and keep, withal, that love of the pure and the beautiful which is the soul of true poetry. This determined spirit, combined with the enthusiasm of my nature, has helped to accomplish all which I have yet done, and will achieve still greater results."

And again, a year later, he writes: "In the continual struggle after what is good and true, I have learned self-dependence of thought. I will not suffer any one to control my own free judgment, though a sympathy of feeling is always grateful beyond words. The true, the exalted faculty of thought, can brook no trammels; and it is now far easier for me to bear the remonstrances or even pity of those who think I have fallen away from the good path than to feel the degradation of having been unfaithful to myself." It

was little wonder that a man like this drew around him and to him many and high-souled friends, such as were his for the greater part of his life; or that some of these wrote of him, as did one gentleman, his elder by years, that "his company is a gain to me in every respect. . . . He has won my love by his amiability, his excellent heart, his pure spirit, in a degree of which I did not believe myself capable." It is pleasant to the expectant reader of this true romance to mark step by step the progress made in gaining recognition, honor, fame, tangible remuneration also, as well as friends and love, so that he could write appreciatively but a short time before his death, on the occasion of his being appointed Minister to Germany from the United States: "The world does appreciate earnest endeavor in the end. I have always had faith; and I have learned to overlook opposition, disparagement, misconception of my best work, believing that the day of justification would come." His work in literature took a wider range than that of most writers. He was journalist, traveller, lecturer, translator, novelist, but most of all a poet; and to be a poet and a great one was his chief ambition. Whether he achieved that ambition, other generations can better decide. That he did exceptionally good work in that line there is already no doubt. Taylor was always a worker from beginning to the end of his public life. His plans widened with his opportunities; and, at the last, he was obliged to leave unfinished some of his cherished purposes. He died in December, 1878; and, in the September previous, he wrote from Berlin, in a letter to Whitelaw Reid, "I am now sure of securing two to three hours a day for myself, which is all I need; and I have the most delightful and generous offers of assistance (in regard to the *Life of Goethe*) from all sides." This contemplated *Life of Goethe*, however, was scarcely begun by reason of his illness and death. In spite of his many disappointments of one sort and another, his was a brave, busy, earnest, and successful life. Mrs. Taylor and Mr. Scudder have done their work as biographers with excellent judgment and rare good taste. Nowhere do they obtrude their own individuality as partisans or critics on the reader, and the story is so felicitously told that it almost seems to tell itself. These volumes contain so many literary reminiscences that they must needs become a necessary part of the library of every lover of or dabbler in literature, as well as of those of the recognized co-laborers of Taylor.

S. A. U.

TRUTH.

For *The Index*.

Hold your grip on what is true,
Though heaven should fall:
Truth will live to bear you through,
Over all.

Show the world your honest mind,
And never dare
Profane the holy truth you find
Waiting there.

Curses falling thick and fast,
Like stony hail,
Though driven forth by angry blast,
Shall not prevail.

Fiercest storms are soonest spent,
And peace serene
Is like a benediction sent,
To close the scene.

Truth, though crushed, shall rise again
Some other day,
When colors false no longer stain
Fair display.

Though faith may blind the human soul
With creeds of youth,
Our reason sees an aureole
Around the truth.

Ice-guarded truth around the pole
Hath charms to draw,
Though hungering death may wait the soul
Who dares her law.

Behind the facts which nature shows,
But half revealed,
With sphinxy power that no man knows,
Is truth concealed.

All conquering truth shall wear the crown
By natural right,
When all that's false has fallen down
Before her might.

Though prejudice may overcast
Eternal fact,
The truth may stand revealed at last
By nature's act.

Honest thoughts we here enshrine,
All hearts to win,
That truth like beacon light may shine
From within.

A. D. MARCKRES.

Society for Ethical Culture, Boston, Mass.

CLARA M. BISBEE, Speaker.

Profoundly impressed with the need of a purer morality, we have united for the purpose of Ethical Culture. Our Society, established April 6, 1884, is a continuation, in principle, of the Free Society of Dorchester, as founded by Mrs. Bisbee, July 3, 1841, and was originated by individuals of the Dorchester Society, with a view to greater freedom and usefulness.

DISTINCTIVE FEATURES.

1. Association without formal organization.
2. Ethical growth of the individual through personal friendship and reverent free thought.

MEETINGS.

1. Sunday, 10 A.M.: Young People's Ethical Class, Dorchester. Character Talks and the Study of all Bibles.
 2. Sunday, 2 P.M.: Young People's Ethical Class, Boston. Like the Dorchester Class, with addition of courses in Nature, Hygiene, and Citizenship.
 3. Sunday, 3 P.M.: Address to Adults, Boston. Bearing directly on Human Conduct, and followed by a Free Discussion on the topic of address.
 4. Wednesday, 8 P.M.: Conference of Members as to the Ways and Means of Ethical Growth, with Reports as to work accomplished.
 5. Monthly Recreative Assemblies for Adults and Young People.
- To the many Liberals in Boston and vicinity, especially those opposed to sectarian organization, our Society looks for earnest co-operation; and, being dependent for support on voluntary subscription, it asks such aid of all whose sympathies are with the cause.
- Will you kindly express interest, either by a remittance of money, or by the calling of Free Thought Meetings, which, on reasonable terms, Mrs. Bisbee will address?
- We cordially invite your presence with us, and solicit an early examination of our work.

SOCIETY FOR ETHICAL CULTURE,
BOSTON, MASS.

Communications should be sent to
MRS. CLARA M. BISBEE,
CLARK STREET, DORCHESTER (BOSTON), MASS.

Theodore Parker's Works.

The Collected Works of Theodore Parker, containing his Theological, Polemical, and Critical Writings, Sermons, Speeches, and Addresses, and Literary Miscellanies. CHARLES D. B. MILLS

is ready to make engagements with any who may desire for Lectures, during the season from and after the 1st of December next. For list of subjects and terms,

Address CHARLES D. B. MILLS,
SYRACUSE, N.Y.

JAMES KAY APPLEBEE

is open to accept engagements for the delivery of SUNDAY EVENING LECTURES at towns within reach of Boston by Sunday afternoon trains. For terms and subjects, address JAMES KAY APPLEBEE, Boston, Mass.

MRS. EMILY J. F. NEWHALL'S

School for Girls and Young Ladies will reopen
Oct. 1, 1884.

As heretofore, its management will be conducted upon the basis of EDUCATION rather than INSTRUCTION. The proper use of English will be made an especial feature of the *daily work*. Under the direction of John Storer Cobb, LL.D., from London University, this branch will comprise a thorough study of the English language, as well as Latin and mathematics. The illustrated lectures upon the *great tone-masters*, the use of the lantern, and attendance at the *Art Museum*, will be continued. For catalogue, address No. 91 Newbury Street, Boston; or apply between 11 and 1, after September 15.

THE FLORAL WORLD.

A SUPERB, ILLUSTRATED \$1.00 MONTHLY WILL
BE SENT ON TRIAL

FREE ONE YEAR!

To all who will enclose this ad. to us NOW with 12 2c. stamps to prepay postage. The *Indiana Farmer* says: "Contents interesting and to flower lovers well worth the price,—\$1.00 per year." Sworn subscription list over 12,000 in every State and Territory, Canada, Great Britain, South America, Africa, India, and Australia.

Mrs. R. A. Houk, Bingen, Ind., says: "It is the best floral paper I ever saw." Mrs. J. W. Fay, Big Beaver, Mich.: "It is magnificent!" Mrs. R. G. Stambach, Perth Amboy, N.J.: "Have never seen anything half so good." Mrs. J. L. Shankin, Seneca City, S.C.: "It is just splendid."

Sawing Made Easy.**MONARCH LIGHTNING SAWING MACHINE**

For logging camps, wood-yards, farmers getting out stove wood, and all sorts of log-cutting—it is unrivaled. Thousands sold yearly. A boy of 16 can saw logs fast and easy. Immense saving of labor and money. Write for elegantly illustrated catalogue in 6 brilliant colors, also brilliantly illuminated poster in 5 colors. All free. Agents Wanted. *Big money made quickly.*
MONARCH MFG CO., (A) 206 State St., Chicago, Ill.

BY ALL ODDS THE BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algonia, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches**, which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars**, which are models of comfort and elegance; its **Palace Drawing Room Cars**, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that it is the best equipped road in the world.

All points of interest North; North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, and take none other. All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

The Secret of the East;

OR,
 The Origin of the Christian Religion
 and the Significance of its
 Rise and Decline.

By **FELIX L. OSWALD, M.D.**

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvelously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript*.

CURRENT TOPICS.

BY B. F. U.

THE mortality of the globe, as given by a foreign journal which has made the computation, is as follows: per minute, 67; per diem, 97,790; and per annum, 35,639,835; whereas the births are 36,792,000 per annum, 100,000 per diem, and 70 per minute.

THE slaveholders in Brazil are bitter in their denunciations of the government that recently passed a law to hasten emancipation, and are using every means possible to defeat it at the next election. A curious feature of the fierce contest is the sympathy of the British residents and bondholders with the slaveholders' party. The fierceness of the agitation, it is said, recalls the condition of this country in 1860.

SAYS the Boston Transcript: "It is so foreign to our common notions to look for anything in the way of progressive thought from Spain—though Republicanism, as Señor Castelar's papers proved, is hardly further beneath the surface there among the intelligent classes than in England—that it is with surprise as well as pleasure that we receive a pamphlet containing an address on 'Woman: Her Moral and Political Influence,' by the Viscount de Campo-Grande, delivered before the Royal Academy of Moral and Political Sciences two years ago. His views are interesting more as revealing the better sort of Spanish grandees' endeavor to keep pace with the progress of the world, and their temper and point of view in reference to such a thing as the woman question, than as contributions to the solution of the problem. The translation is from the hand of Mrs. Thomas Nickerson, of Newton Centre."

SAYS the Radical Review: "The aims and doings of the Society of Ethical Culture have been repeatedly referred to in the columns of the Review. To-day, we wish chiefly to speak of one feature of its work in which we are especially interested, and which is of prime importance for the future of Liberalism,—the education of children in practical morality. It is here that the society is destined

to do truly great work, and we cannot too strongly urge parents to co-operate with it in this important mission. Mr. Salter meets his children's classes once a week, to teach them by the hand of fable and history, with precept and example, the duties of man to man. As yet, the work is in its infancy; and the number of children who can be brought under the influence of this excellent instruction is a very limited one. We sincerely hope that Mr. Salter will receive all possible aid in this part of his work, and that the Ethical Society will be upheld by all true Liberals in the city of Chicago for their children's sake."

THE Parker Memorial Science Class devoted its entire session last Sunday to exercises in memory of the late Miss M. A. Hardaker, who, until her health failed, was one of the most active and useful members of the Class. The president, Mr. John C. Haynes, was in the chair. B. F. Underwood, who made the opening address, was followed by Mrs. Moody of Malden, Mr. S. H. Roper, Mr. Clement, editor of the Boston Evening Transcript, Mr. W. R. Spear, Mr. W. H. Hamlen, Mr. W. Mitchell, Miss Agnes Burke, Mrs. Sara A. Underwood, Miss Ella Johnson, Mrs. Tower, Miss Adams, and Mr. D. H. Clark, who all spoke from personal acquaintance with Miss Hardaker. None of the speakers indulged in the fulsome praise and the solemn platitude so common to memorial services. On the contrary, the addresses were marked by discrimination in their estimate of the character of the deceased as well as by evidence of sorrow at the loss of a friend, a member of the Class, and an able, earnest, and independent thinker and writer. The exercises were a fitting tribute to the deceased.

REFERRING to the action of the National Liberal League at its last Congress, the Radical Review says: "This [the evil effect of adhering to the repeal policy] was being perceived by many Liberals; and, as our readers know, a move was being made to effect a reconciliation between the hostile factions. The Liberal League Convention, if we are rightly informed, would not listen to anything so base, but in strange inconsistency elected Col. Ingersoll, who publicly disapproved of the policy to which the League pledged itself in 1880, to the Presidency; and Mr. Charles Watts, who played a similar rôle in England, to the Vice-Presidency. If there is any other explanation of this action than that the League lacks vitality and is really dead, we do not know it. Had the Cassadaga Lake Convention elected Messrs. Ingersoll and Watts to the chief offices after rescinding the action pledging the League to the repeal of the national obscenity law, or had it elected men favoring that policy, there would have at least been consistency. In stultifying itself in the manner indicated, the Cassadaga Lake Convention reaped little honor for Liberalism."

REV. MR. CRAFTS, of Chicago, wants newspaper subscribers to unite in a protest against Sunday editions. He does not seem to know that Sunday papers are published because there is a demand for them. Sunday papers are independent of the

daily edition, and are sustained by special subscribers, and supported therefore by those who want them. Mr. Crafts suggests, too, that printers and reporters strike everywhere against the Sunday paper. He evidently thinks that the Sunday paper is the result of Sunday work. If his anxiety is for the printers and reporters, why does he not protest against the Monday edition? Says the Inter-Ocean: "The newspaper man is in no need of philanthropic sympathy; and a well-conducted Sunday paper is a blessing, a boon, a practical benefit, and may be made a moral comfort to society, and is in no sense an injury or a disturbance. The Sunday paper not only does not secularize the Sabbath and imperil the nation, but it exerts as moral an influence upon both as can any other agency of intelligence, spiritual or intellectual, that operates by the wisdom of man. The Sunday paper is an institution of education. It came in obedience to the requirements of a more active and far-reaching thought, a more generally diffused knowledge than formerly obtained. It is unassailably fixed in the good opinion of the public, and only material inexcellence can defeat the life of the Sunday newspaper."

IN an article on the degeneracy of family characteristics, suggested by the death of Henry Clay, grandson of the brilliant orator and statesman, from the effect of a wound received in a drunken brawl, the Chicago Inter-Ocean remarks: "Occasionally, we see instances where the order of greatness is maintained through several generations, as in the notable experience of the Adams family, where the great-grandson borrows little from the fame and reputation of his honorable ancestors, and yet lives as high in regard and holds equal place in individual character and in intellectual attainment. It is difficult to understand why the qualities of a superior mind are so seldom transmitted from one generation to another, and it seems impossible that the explanation should be a deficiency of brain power or mental capacity." The Inter-Ocean thinks it is really not a question of heredity, but of education. The success of the parents begets conditions that deprive the children of experiences, such as were incentives to their own endeavors and helped to lay the foundations of their own success. Young men who are shielded against the pressure of untoward circumstances, without exercising their own intelligence and industry, and who evade the rigors of self-restraint by dissipation, are very liable to drift, making no earnest, well-sustained effort and often yielding to the allurements of debilitating vices. The lesson to be learned from that phrase of ignominy known to every civilized age, "Degenerate son of a noble sire," is to check the license allowed to youth in the use of money and dependence upon parental aid. "The sons of rich fathers should be taught self-reliance, a virtue that the sons of poverty learn of necessity; and, until that sort of discipline is put upon the growing mind and disposition, nothing else is to be expected than that the sons of men distinguished above the people will fall below the moral and serviceable standard of the people."

INDIVIDUAL RESPONSIBILITY FOR PUBLIC OPINION.

Public opinion is a powerful unwritten law in human society. But it is no impersonal entity. It is not an abstract, irresponsible thing whose sources cannot be traced. It derives its power solely from individual minds and characters. It has no vitality apart from the active vital opinions of living men and women. Its roots run down into the personal sentiments, impulses, and activities of individual lives. It has a personal source and cause. It is the aggregate power of the dominating individual opinions in any community. It is a power that works for both good and evil. For which it shall work depends upon whether the personal source whence it springs is of good or evil quality. People who live upon a low moral and intellectual level and pursue ignoble objects degrade the moral standard of the community about them, and infect the moral atmosphere with corrupting elements. People who live honestly and nobly help to raise to a higher level the whole surrounding community.

These commonplace truths, which everybody will assent to, should lead to a higher regard for the law of moral accountability contained in them. The fact that each person helps to make public opinion puts into his hands a powerful lever which he may use for the public good. Public opinion is a force which has more to do with shaping people's characters than have government and laws. It is a power behind law and government which shapes even them. To stand with one's hand on public opinion is to stand, therefore, at the very sources of the power that moves the human world, with the opportunity to turn it at one's will. A wise educator of public sentiment is a savior of the race. But it is educated *character* rather than learning that is invested with this high office. Enlightened individual opinion, directed by moral earnestness,—this is the power needed behind public opinion to make it an effectual instrumentality for promoting public benefit.

And this is a power that is mighty in its results, when it is once fairly aroused. But the arousal is not so frequent as it might be. The trouble is that too many of those whose natural province it would be to shape public opinion to good ends are too fond of their own ease, too averse to self-sacrifice, to make the necessary effort. They are too apt to think or hope that things will somehow drift right of themselves, and so they withhold the word or the action which is wanted to turn the current in the right direction. According to one of the old Hebrew stories, Jehovah promised to save a city if there should be ten righteous men found in it. To-day, the ten righteous men must save their own city. It will not do for them to sit down and fold their hands and wait for a supernatural intervention. And, perhaps, this was the meaning of the old legend. Righteousness, of necessity, is an active leaven which works out from individual characters and efforts, and thus gradually vitalizes public sentiment with purer qualities of life, and cures the evils that afflict human society. It is the law of social redemption that the improvement, if it come at all, comes through the earnest and untiring endeavors of just those few people who see most clearly that it is desirable. Their clearness of perception and corresponding faith and earnestness infect others. Sometimes, a few resolute words or a brave action at the right moment will turn the whole current of public sentiment from a dangerous to a safe direction. There is a greater power in the simple, confident assertion of the right for moving the popular mind than people are wont to think. Evils yield, reforms are accom-

plished, social progress is made, because there are always some people who keep working away for precisely these ends. By here a little and there a little, the thought and feeling of the community are changed, obstacles give way, and the goal is reached. It is not done by any chance drift of opinion, by waiting for something to turn up, much less by any miracle; but it is done by the steady fidelity of those who see the better thing in standing heroically to what they see until public opinion is converted into an agency for doing it.

There are special reasons at this time, and in this country, why individual faithfulness in enlightening and elevating public opinion is particularly demanded. One of the most alarming features of American society at present is the prevalent disregard of integrity in respect to financial obligations and trusts. Delinquencies of this kind—defalcations, embezzlements, swindlings—have been of late of such frequent occurrence among men who have acted as officers and agents of financial corporations, or have had the use of trust-funds, or have held official positions in government service, as to suggest that there must be some contagious epidemic of mental or moral disease.

And there is *moral disease* at the bottom of the trouble. Physicians speak of certain physical organs which, having lost their healthful vitality, can no longer normally discharge their functions as having suffered "degeneration." So, in these breaches of financial trust, there is degeneration of the sentiment of honor and of the faculty of conscience. In the prevailing haste to get riches, or through the strong preference of a large body of mentally enterprising persons, who have not riches, to live by their wits on financial speculations rather than by the prosaic processes of common industry, the simple virtues of honesty and honor, which are the very bond of civilized society, are lost sight of and violated. Conscience inevitably becomes callous under the operation. The moral perception is enfeebled, until the man who would feel himself forever disgraced by being caught at petty larceny from a shop window will coolly take a hundred thousand or a million dollars intrusted to his care in a corporation-safe or a bank-vault, and walk off with it apparently without a compunction. But the disease is not confined to himself. The trouble lies back of his degeneration of conscience. Possibly he might have been saved from such fatal degeneration, if the public opinion of the business world had held him to stricter account in his business methods while he was in smooth sailing, and before he took the final plunge. Did he feel the least frown from the business circles around him upon his *smartness* in speculation? Was he not rather led to feel that success in speculative enterprises was the measure of their morality? Did he not perceive that many ways and methods in the financial world, which would be counted dishonest and criminal if they failed, were condoned if they succeeded? And, since speculation was his whole business, should he not take the chances of winning, even in such a stake? Of course, all this does not lessen his crime, and should not lessen his shame. But it does point back of him to a too lenient and guilty public opinion concerning those methods of business which lead to such crimes. A man of this type may get off to Canada, where he may defy the whole legal power of the United States, and become a sort of lion for the public admiration. Or, in the reverse case, he may come from Canada and set up in business again in New York, and find plenty of business men to aid and trust him. The lack of an extradition treaty between Great Britain and this country for such offences as this is a disgrace to international law. And

that public opinion does not demand such a treaty in terms which the two governments could not help but heed is only confessional proof of its own laxity in passing judgment on these great financial criminals, who are the legitimate product of the gambling spirit which rules with such immunity in the business world.

Again, the aspect of political questions in our country at this time loudly calls for the elevating influence of a nobler public sentiment. Good men of all parties can but be grieved at the demoralizing spectacle presented by the Presidential campaign through which the nation is now passing. Neither of the two leading candidates for the Presidency satisfies the moral sentiment of the country: not that a perfect character is to be expected in a candidate, but that the moral sense of the country does demand that the President shall be a man free from great transgression, whether in his official or personal character. There are large numbers of people who confess in private that the two prominent candidates fail to meet this demand, who are yet going to sacrifice their own opinion to the party pronunciamento and work and vote for one or the other of them. And yet nothing is more needed for the purification of politics than just this outspoken voice of the upright individual conscience. If the moral sections of the two great parties at this time had not been so ready to yield their own conscientious convictions to party authority, the country might have been saved from much that is now most demoralizing in the Presidential campaign. Even now, their protest should be spoken, though it may be too late to change the conditions of the present problem. But it is not too late for changing the conditions of coming political problems. It is not too late to set political conventions a lesson they will not be likely soon to forget, nor to begin to create a public opinion that shall shape the issues of the Presidential campaign four years hence. And it is due to the best interests of his party as well as his country that every one who is dissatisfied for moral reasons with the Presidential nomination which his party has made should speak out his most genuine convictions,—his highest moral conviction,—and be ready to act upon it in the most effective way. The bane of our politics is partisanship,—not party organization, but *partisanship*,—the spirit that subordinates truth to party expediency, honesty and candor to party victory. There is sectarianism, bigotry, intolerance, the pressure and yoke of authority in politics as in religion; and some of the evils that most grievously afflict modern politics spring from this spirit. To break down this insidious evil influence, a more healthful public opinion needs to be invoked.

And, again, what is needed to effect practical reforms in legislation is a public opinion strong enough to order them. Secretary Stanton once said that the national government would never reform its Indian policy until the people should knock at the doors of Congress with an unmistakable demand for it. The civil service reform, so far as it has been carried at all, has been carried in opposition to the chief party leaders, through a few persons of both parties who earnestly set themselves to effect it, and who knew that the plain common sense of the country would support it. A half dozen other most important matters of national legislation might be named, which are now postponed to party exigency or obstructed by party jealousies, and which need the creation of a strong public sentiment outside of Congress in order to put them on the way to success.

Nor need any persons plead that they have no public position nor large opportunity for affecting

the public mind. The responsibility cannot be thus escaped. The ten men whose existence, it was said, would save an ancient city, are not declared to have been ten legislators, nor ten office-holders of any sort, nor ten editors, nor even ten clergymen; but they were its ten "righteous men." And righteousness, we know too well, is not monopolized by legislatures, municipal governments, nor even by editorial chairs and pulpits. Wherever it exists, in however humble and private position, if it only bravely manifest itself, it will show its power. Two or three morally earnest boys or girls in a school, not afraid to stand out in a good cause against their fellows, can change the moral atmosphere of a school-room. One honest, plain-spoken man in a corporation or legislature or town-meeting can so prick the bubble of a specious speculation or political job that, in the clarified air, the very elements of it shall disappear before even the ballot can be applied to it. Woman, unfortunately, cannot vote; but she cannot be robbed of the opportunity of sharing in the formation of public opinion. Let her not echo what she may hear from man, but utter her own thought and instinctively finer sentiment. From the parlor and family circle, she may send out influences that shall appear in better laws and a purer administration of office. What is wanted on all sides is more faith in the potency of speaking and standing by one's best thought, even though one may have to stand alone. Sincerity, moral earnestness, fidelity to moral convictions,—these are the missionaries that must convert public opinion into public benefit.

WM. J. POTTER.

THE PERPETUITY OF LIFE.

II.

Having examined into the probable effects upon life of any very sudden changes in its environment, it remains to be discussed in what manner the same life would be affected, were these changes to take place with extreme slowness, the increments of variation to be evenly distributed through long periods.

The changes in atmospheric pressure which have been borne by human beings have been referred to. It is to be noted that the very exceptional extremes have in no instance been borne for any length of time. In the case of changes of residence to great altitudes, such as that of Quito, the inconvenience is said to be frequently great at first, but is generally overcome by acclimatization; and it would be bold to assign a definite limit to the adaptive capacity of life in this direction.

In regard to the probable effects of gradual changes in temperature, we can arrive at very definite conclusions. That the human inhabitants of the temperate zone have no difficulty in adapting themselves to the extreme heats of arid and sultry regions—that those forms of life which are accustomed to a climate so equable that the maximum annual range of temperature does not exceed 20° can accommodate themselves to one where the daily variation is often more than that, while the difference between the annual extremes encompasses 120°—is an established fact. That such accommodations entail some suffering we know. Should the extreme heat of summer in the city of New York, now about 100° F., rise 1° every year, a considerable increase in the mortality of its inhabitants would unquestionably result. But what if this rise were evenly distributed through ten years? It would be much less dangerous. What if the rise of the annual extreme of heat were only one hundredth of a degree? In this case, all forms of life would probably adapt themselves to it. And if the extreme heat of each year were only

increased by one thousandth of a degree? There would be no perceptible effect upon health or life. But, in one thousand years, this would make the extreme summer temperature of New York 101°; in ten thousand years, it would make it 110°; in one hundred thousand years, it would make it 200°; and yet even then the annual increase would only be one thousandth of a degree, a quantity too small to be observable on the ordinary thermometers. Whatever forms of life might exist at any one temperature could undoubtedly bear the transition of the next one thousand years. Where, then, is to be placed the limit to gradually attained temperature which life would not be able to transcend? Clearly, increase or decrease *alone*, when sufficiently gradual, cannot be fatal to life, however injuriously some of the immediate physical consequences of this change might affect it. And this same line of argument may be applied to its other physical surroundings.

But it is in the investigation of the adaptive capacity of the organism to gradual changes in its chemical environment that we meet with the most wonderful facts. That men and animals can accustom themselves to breathe an air containing scarcely more than one-half of its ordinary quantity of oxygen per volume, as well as to the much vitiated air of cities, is well known. A by no means small percentage of the inhabitants of civilized communities have virtually abandoned the habit of drinking water and substituted for it beer, wine, coffee, tea, and other artificial beverages. Current popular opinion to the contrary, notwithstanding, travellers of acknowledged veracity state that they have drunk sea-water without ill effects; and, were our supply of fresh water to become gradually more and more salt, we would probably accommodate ourselves to this change without any great difficulty.

The dangers to the continuity of life which may arise from the attempted use of untried foods have in a number of cases been eliminated by gradual accommodation. We all know what large numbers of the human race readily habituate themselves to the steady consumption of alcoholic beverages and tobacco, both poisons. The existence among us of a not inconsiderable number of individuals addicted to the use of opium preparations (laudanum, morphine, etc.) is frequently made the subject of public comment. Nothing, indeed, is more wonderful than the adaptive capacity of the human race for the preparations of opium. Three grains of morphine would, in most cases, be fatal to an unhabituated adult; yet persons are not rare who indulge in a daily consumption of sixty grains of this poisonous alkaloid without inconvenience. To what extent such people have succeeded in *protecting* themselves can only be realized by supposing this dose to be simultaneously administered to each and every human being. For this procedure would sweep away the entire human race—with the sole exception of those very individuals who had become habituated to this large dose of so deadly a drug—as surely as one of the before mentioned "star-explosions" of the solar system. To the morphine-eater, what was once a poison, and later on a stimulant, at length becomes a necessary article of food. It is important to note that the constitutional function of the conquest of such foods from the "banquet of death" appears to be that of the substitution of one chemical radical for another in the composition of the tissues and secretions. Considerable differences in the composition of the corresponding tissues of different animals are known to exist, and the instances of animal and vegetal species enjoying perfect immunity against virulent poisons are numerous. Pigeons are said to feed upon the ber-

ries of the deadly nightshade, and to be scarcely affected by doses of atropine which would quickly put an end to the existence of a strong man.

Many caterpillars and other insects subsist exclusively on plants very deleterious to vertebrates. I have myself observed the growth of fungoid or algoid organisms in strong arsenical solutions. From all this, we may conclude that all organisms are capable of radically changing the constitution of their tissues and secretions, and even their assimilative capacity itself.

So far then, as we have seen, no change in the environment of life, however great, need be fatal to it, provided only that it be either very much localized in place or very gradually brought about.

Some logical objections, however, still remain to be met, when we assume the change in chemical conditions to have led to the total disappearance of those material elements which now seem indispensable to the formation of the tissues of all living organisms. And still greater logical difficulties must be overcome, when we endeavor to call up an image of life among the conditions of a fiery fluid planet or an intensely glowing nebulous mass, offering no solid materials whatever from which tissues could be framed.

When we assume the gradual disappearance of those elements which are now indispensable to life,—carbon, hydrogen, oxygen, nitrogen, etc.,—we are still able to fall back upon the possibility of the gradual substitution of some other similar elements at present unknown. Or we may reinforce our views by reference to the probability of a *modification of the elements* themselves by steps so gradual as to have, during our brief scientific acquaintance with their chemical nature, so far escaped our notice. That such a modification may be brought about *by the use and disuse during long periods of their various physical and chemical powers* I have long believed; although it is quite possible that the experimental proof of this proposition may never be attained by human hands.

In the conditions which must have held sway upon a fiery planet, I can find no obstacles to the existence of life so long as this planetary mass presented the variety of aggregational states which make life possible among us,—solid materials, fluid oceans and currents, and a gaseous envelope. Elements may exist among those known to us—or, if not among these, they may lie buried nearer the earth's heart, or may have been modified past all recognition of their former character—which answered this purpose during the fiery epoch of the earth's history, now gone with the forms it nourished.

A greater obstacle to the assumption of the existence of life is encountered, when we take a planet at a temperature so high as to preclude the existence of solid matter. It is true that organic forms are even now known whose solid framework—like that of the jelly-fish and vinegar-mother—is reduced to a minimum. But some solid framework, however slight, all living forms now known do show. Yet we must not forget that the solid, liquid, and gaseous states of matter can be made to pass into each other by insensible gradations. And thus the last logical gate is opened through which the organic form of the imagination may pass, from among the glowing molecules and pathless chaos of the nebulous mass, across the mystery of its million years' existence among the flaming tides of a molten planet, on and on to palæozoic days,—nay, even to these years and this very hour!

That any very sudden change, exceeding very much the usual intensity and range of the variations in the conditions which environ life, might annihilate forever this growth and line of descent,

may be admitted, and the gigantic span of the theory of interstellar migrations thrown across the philosophic chasm. But, be this as it may, the natural law of safety (and its reciprocal, that of danger) is not in doubt nor indefinite.

The safety of the continued existence of any living race under any change in its environment is directly as the time within which this change eventuates, inversely as the space affected, and inversely as the ratio which this change bears to the extremes to which the organism is accustomed.

CHARLES FROEBEL.

MORMONISM IN A NEW LIGHT.

II.

"The Manuscript Found."

Nobody doubts—nay, everybody seems to know—that the Spaulding manuscript (the name given to an historical romance said to have been written by a graduate of Dartmouth College) is the original of the Book of Mormon. Such prominence and emphasis have been given to this assertion by nearly every writer on Mormonism, it being adopted even by the New Encyclopædia Britannica, that it has become the prime article in the anti-Mormon creed. But the question is not, who believes it, how many believe it, nor how long it has been believed, but what are the facts? This story of the Spaulding romance has itself a history quite as inscrutable, to say the least, as the one it was meant to confront and annihilate.

I will begin by quoting from the testimony of the widow of Solomon Spaulding, given in 1839:—

In the town of New Salem, or Conneaut, Ohio, there are numerous mounds and forts supposed by many to be the dilapidated dwellings and fortifications of a race now extinct. Mr. Spaulding, being an educated man and passionately fond of history, took a lively interest in these developments of antiquity; and he conceived the idea of giving an historical sketch of this long-lost race. As he progressed in his narrative, the neighbors would come in from time to time to hear portions read. It claimed to have been written by one of the lost nations, and to have been recovered from the earth, and assumed the title of *The Manuscript Found*. From New Salem, we removed to Pittsburg, Pa. Here, Mr. Spaulding found a friend and acquaintance in the person of Mr. Patterson, who was very much pleased with it, and borrowed it for perusal. He retained it for a long time, and informed Mr. Spaulding that, if he would make out a title-page and preface, he would publish it, and it might be a source of profit. This Mr. Spaulding refused to do. Sidney Rigdon, who has figured so largely in the history of the Mormons, was at that time connected with the printing-office of Mr. Patterson, as is well known in that region, and, as Rigdon himself has frequently stated, became acquainted with Mr. Spaulding's manuscript and copied it. It was a matter of notoriety and interest to all connected with the printing establishment. At length, the manuscript was returned to its author; and soon we removed to Amity, where Mr. Spaulding deceased in 1816. The manuscript then fell into my hands, and was carefully preserved.

Mrs. Spaulding and her daughter then visited her brother, William H. Sabine, at Onondaga Valley, N.Y.; and in 1820 she married a Mr. Davison, of Hartwicks, near Cooperstown, N.Y. The trunk containing the writings of her former husband still remained in her possession. In 1828, the daughter was married and went to reside at Monson, Mass., where she was joined by her mother, who died there in 1844. The trunk with the manuscript was left at Hartwicks, in care of Mr. Jerome Clarke. So runs the story.

Sidney Rigdon made reply through the Boston Recorder, in which Mrs. Davison's letter appeared, denying the whole charge as regards himself, never, as he says, having heard of Spaulding or his manuscript until years after his residence in Pittsburg. He had a slight acquaintance with a Mr. Robert

Patterson, who had once owned a printing-office. This Mr. Patterson afterwards said he "had no recollection of any such manuscript being brought here for publication." Lambdin, his partner in the business, was dead; but the widow, Mrs. Lambdin, writes, "I am sorry to say I shall not be able to give you any information relative to the persons you name [Rigdon and others]. They certainly could not have been friends of Mr. Lambdin." Employers of the firm have testified they know "nothing of Spaulding or his book, or of Sidney Rigdon." All the evidence shows Rigdon did not go to Pittsburg until the year 1822, when called there as the pastor of the First Baptist Church, which was at least six years after the Spaulding family had removed to Amity, Pa. But this difficulty is easily surmounted. "Now, as Spaulding's book can nowhere be found, or anything heard of it after being carried to this establishment, there is the strongest presumption that it remained there in seclusion till about the year 1823 or 1824," etc. So reasons Mr. Hurlburt in *Mormonism Unveiled*, in the face of Mrs. Davison's statement that "the manuscript was returned to its author," "carefully preserved by myself," and "frequently examined by Mrs. McKinstry, my daughter, and by other friends!" And Mrs. Ellen E. Dickinson, a grand-niece of Mr. Spaulding, as late as 1880, says, "After keeping it a while, Mr. Patterson returned it, declining to print it." And this lady, too, credits Rigdon with the forgery.

There never has been a whit of evidence showing the existence of a correspondence of any kind between Smith and Rigdon before the Book of Mormon was published and the church was organized. Parley P. Pratt, writing in 1839, "defied the world" to prove that Sidney Rigdon was "either directly or indirectly" connected with the printing establishment in Pittsburg, though a fact which Mrs. Davison had said was "a matter of notoriety and interest to all connected with the establishment." He continues: "The statement that Sidney Rigdon is one of the founders of the said religious sect is also incorrect. The sect was founded in New York; while Mr. Rigdon resided in Ohio, several hundred miles distant. Mr. Rigdon embraced the doctrine through my instrumentality. I first presented the Book of Mormon to him. I stood upon the bank of the stream while he was baptized, and officiated at his ordination."

The story has a continuation. The battle has to be fought over again at the other end of the route. The toils were laid for Rigdon at Pittsburg, and now they are spread in New York for Joseph Smith. Mrs. Dickinson, already quoted, speculates in this fashion: "Smith, however, could easily have possessed himself of the manuscript, if he had fancied it suitable to his purpose; for it is understood that he was a servant or teamster on the farm of Mr. Sabine (Mrs. Spaulding's brother), in whose house the package of manuscript lay exposed in an unlocked trunk for several years." But there is no proof that Joseph Smith was in Onondaga Valley during that time, much less in the employ of Mr. Sabine, "a lawyer of distinction and wealth." The Smith family deny it, and Mr. Sabine never claimed it. And what is there to show that "the manuscript lay exposed in an unlocked trunk"? Nothing more than the bare word of Mrs. Dickinson, who belongs to the second or third generation of this race of inquisitors. The manuscript is said to have been at Mr. Sabine's, from 1816 to 1820. It was at this latter date Smith reports having his first vision. He was then but fifteen years of age. Onondaga Valley, Mr. Sabine's residence, was one hundred miles east of Manchester where Smith lived. The scene of all of Smith's doings up to this

time, as told by friend and foe, is within the town of Manchester. Some of his critics seem always to have had him under their eye; and in none of their diaries is there to be found room for such an exploit as going a hundred miles, and getting a sight of the Spaulding manuscript. But the same authority that tells us the manuscript was at Mr. Sabine's states that it was removed in 1820 to Hartwicks, which was still farther away. Smith, then, must have copied the manuscript or committed it to memory before the age of fifteen, both of which suppositions seem equally absurd; for one of the charges made against him by his enemies is certainly true,—he was illiterate. He would seem to have been in need of a Urim and Thummim to discover and to translate the Spaulding manuscript, no less than the golden plates. Moreover, the manuscript lay at Hartwicks long after Smith's first visions, and after the translation of the Book of Mormon had begun, 1827, and even after its publication, 1830.

But the story's dénouement is not yet reached. So far, it is the play of Hamlet with Hamlet left out. Dr. Philastus Hurlburt is the inventor, or originator, of the Spaulding story. He joined the Mormons in 1832. Because of unvirtuous habits proven against him, he was disfellowshipped. Confession and repentance restored him to confidence. But he was afterward expelled from the Church for attempting the seduction of a young girl. He was put under bonds in Geauga County, Ohio, for threatening the life of Joseph Smith. I have not seen these charges contradicted, so I suppose them to have some other ground than the axiom that "pure, honest, virtuous men never apostatize,"—an axiom loaded with the spirit of bigotry and persecution. Hurlburt coined for himself the title of "Doctor," in virtue of his being the seventh son. To which was now added the title of "Reverend," as soon as he turned anti-Mormon lecturer, which was very soon. In his travels, he learned from a Mr. Jackson, of Jackson, Penn., a friend of Solomon Spaulding's, of a romance written by the latter, relating to the ancient history of America. He returned to Ohio, and there broached his theory of the origin of Mormonism, which it appears the people of Conneaut had never dreamed of until this moment, when several were ready to testify that they recognized in the Book of Mormon the romance of Solomon Spaulding. Sums of money were raised to enable Hurlburt to bring out his *Mormonism Unveiled*. He was also deputed to visit Mrs. Davison for the purpose of obtaining the manuscript. He went and got it. Mrs. Davison and Mrs. McKinstry testify to the fact. In an affidavit obtained from Hurlburt by some of Spaulding's relatives, he states: "Upon examination, I found it to be nothing of the kind, but a manuscript upon an entirely different subject. This manuscript I left with E. D. Howe, of Painesville, Ohio, with the understanding that when he had examined it he should return it to the widow. Said Howe says the manuscript was destroyed by fire, and further the deponent saith not." Mrs. Dickinson, who visited both Hurlburt and Howe recently, informs us that the latter "advanced the theory that Hurlburt got the real Spaulding manuscript, but that the one given him was something else." She adds that "it was obviously of value to the Mormons; they have probably had it in their control, and the fate of it will never be known." She forgets that the manuscript was "obviously of value" to others besides the Mormons. At least from the time its name became linked with that of Mormonism, whatever its real value, its fictitious value was then great. Hurlburt disposed of his *Mormonism Unveiled* to

Howe for \$500, and stopped there. And what better reason can be assigned than his finding that the Spaulding manuscript "did not read as he expected"? And, instead of Howe thinking Hurlburt had made some other disposition of the real one, the fact of his burning the one given him indicates that his fears were all the other way.

The burning of that manuscript was as great a fraud as the one charged against Joseph Smith, while the one is proven and the other is not. Any Spaulding manuscript would have solved the mystery, acquitted or condemned Mormonism. Some peculiarity of thought or style, some mental idiosyncrasy, if nothing else, would have enabled the world to detect the author's identity. But, happily, we do at least hear something of its contents. Hurlburt, in his original statement, speaks of it in these words: "It is a romance purporting to have been translated from the Latin, found on twenty-four rolls of parchment in a cave, but written in modern style, giving a fabulous account of a ship being driven upon the American coast, while proceeding from Rome to Britain, a short time previous to the Christian era, this country then being inhabited by Indians." And this statement receives the strongest corroboration from the testimony of Mr. Jackson, who was the first to inform Hurlburt of the existence of the Spaulding romance. Hurlburt, before he had wilted on finding that the manuscript "contained nothing that suited his purpose," called on Mr. Jackson and asked him to sign a document which testified to the probability of Mr. Spaulding's romance having been converted into the Book of Mormon. This he indignantly refused to do. "He stated there was no agreement between the two; adding that Mr. Spaulding's manuscript was a very small work in the form of a novel, which said not one word about the children of Israel, but professed to give an account of a people who originated from the Romans, which Mr. Spaulding said he had translated from a Latin parchment he had found." But it is declared by Spaulding's friends in Ohio that he "told them he had gone further back with dates, and written in the old Scriptural style." But is it not strange that not one of these writings, drawing at one time such "a large circle of admirers," has survived to us? Why did not Spaulding publish some of them? Why did not the widow make some attempt to utilize her husband's labors for the benefit either of the family or the world? Why did not Hurlburt publish it, when by so doing he could have gratified two of the very strongest of passions, cupidity and revenge? And, finally, why did not Howe publish it, who was just then putting on the market "*Mormonism Unveiled*?"

Spaulding's relatives and others say his book endeavored to show that the American Indians are the descendants of the Jews or the ten lost tribes. But these witnesses against the Book of Mormon had read it before making their affidavits. It matters not that John Spaulding "was perfectly familiar with his brother's romance, and repeatedly heard the whole of it read," as Mrs. Davison informs us; for that is the very thing to be proven. It only makes his testimony the weaker, as he can remember so little, and that little easily learned by a hasty glance at the index to the Book of Mormon itself. It would have been very desirable to know what the report of their memory would have been without any reference to the table of contents or the printed page of the Book of Mormon. The world seems satisfied because certain persons affirm the identity of the two works, whereas the thing most needed is an identification of the Spaulding romance by an agreement of witnesses not tampered with.

One of the Hebrew or "lost tribe" class of witnesses says the Book of Mormon is the identical work of Solomon Spaulding; but this is a lie on the face of it, for the Book of Mormon makes but few references to the ten tribes, and there states that the American Indians are not their descendants, and that they were never in America. Another of this same class says the Book of Mormon, with the exception of the religious matter, is copied word for word from Spaulding's manuscript; but how can that be, when the narrative is, in respect to style and language, *one throughout*, and that style has not a trace of literary handicraft?

The only other class of witnesses is the Latin or "Roman colony" class, who agree among themselves, and with the other class, in these particulars: on the name, *Manuscript Found*, and that the work was not religious, but historical; that it was an idolatrous, and not a religious people; and that the work was small in size! Mrs. Davison stated that the manuscript of her husband was one-third the size of the Book of Mormon; Mrs. McKinstry that it was about one inch thick (of written, not printed, matter); and, of the other class, Jackson states that the romance was a very small work; and Hurlburt says it contained about one quire of paper.

The Book of Mormon, on the contrary, has five hundred pages of closely printed matter, with a religious purpose running all through it, and nowhere betrays the diction or the lore of the scholar and student of history. It says not one word about the Romans; and, instead of being a history of the ten lost tribes, it brings its first migration from the Tower of Babel before the existence even of Jacob, their great progenitor, and its second migration from Jerusalem before the Babylonish captivity.

One thing we have found out is that this *Manuscript Found* will not stay found when it is found: like a will-o'-the-wisp, it vanishes as soon as seen. It cannot be identified, as it has no identity. Its only ascertained attribute is its power of transformation: only, it reverses the evolutionary process by evolving from definiteness into indefiniteness. Is it a myth? The last act of its friends would seem to prove it such beyond all peradventure.

T. W. CURTIS.

EDITORIAL NOTES.

BY B. F. U.

THE meetings of Mrs. Clara M. Bisbee's society (the Ethical Society) are held in the Church of the Unity, Pembroke Street.

It is better to wait, and to defer the realization of our ideas until we can realize them fully than to defraud the future by truncating them, if truncate them we must, in order to secure a partial triumph for them in the immediate present. It is better to bear the burden of impracticableness than to stifle conviction and to pare away principle until it becomes mere hollowness and triviality.—*John Morley.*

OF divorce, the *Free Press* (Ottawa, Ont.) takes this view: "Divorce is the medicine for unhappy marriages. Like ordinary medicine, when improperly and injudiciously administered, it kills when it should cure; but its non-use, like its abuse, perpetuates or intensifies unhappiness and suffering. The proper course, then, is a well-defined law of divorce, federal in its operation, strict in its application so far as causes are concerned, and easy in its obtaining, where adulteries, crime, intemperance, and insanity can be proven against the respondent, the decree only being issued when the children of such unhappy unions are satisfactorily provided for in the court's opinion."

AN article in the New York *Tribune* takes the ground that much of the injury ascribed to educational over-pressure in our schools is due rather to lack of intelligent regulation at home, and that, while there is still room for improvement in the modern methods of education, the tendency to lay all the blame of the break-downs that occur now and then upon the schools, and to overlook the accountability of home training, is calculated to lead to wrong conclusions, and is unjust to our educators and the system under which they teach. The *Tribune* thinks that unwholesome food, late hours, dissipation, candy-eating among girls and cigarette smoking among boys, etc., have quite as much to do in producing abnormal conditions of health as any possible educational over-pressure.

REFERRING to Miss M. A. Hardaker, *Unity* says: "A bright, gifted intellect quickened by courage was hers. People seriously differed from her, and may have disliked some of her positions and peculiarities; but none could doubt her sincerity." After quoting a paragraph from *The Index*, *Unity* adds:—

The same paper contains resolutions of respect passed by the Meriden Scientific Association to the memory of Miss Emily J. Leonard, a woman who acquired eminence in the widely different fields of social and botanical science. The death of these women, so different and yet so alike in their strength and fearlessness, suggests the constantly widening field of influence and power open to woman. It also calls tenderly to the mind of the editor of this paper the keen intellectual companionship which he enjoyed with the former as a fellow-student at Meadville, and the earnest and helpful support which he received from the latter as a parishioner in the first years of his ministry. The lives of both women show how independent cheerful living or courageous dying is of theological tenets or doctrinal formulas. Wherever there is activity, there is joy; and, wherever there is sincerity, there is courage.

ON the 2d inst., the Rhode Island Woman Suffrage Association held its eighteenth annual meeting at Providence. The speakers were Mrs. Elizabeth B. Chace, the President, Mrs. L. B. C. Wyman, Mrs. Lucy Stone, Mrs. Sara A. Underwood, Rev. Mr. Tomlinson, Mr. F. A. Hinckley, Hon. George L. Clarke, and Mr. Thomas R. Slicer. The daily papers of the city gave fair reports of the proceedings, and mentioned the speakers with the utmost respect and courtesy, in very marked contrast to the treatment some of them received in the early periods of this agitation. We have room only for the editorial remarks of the *Providence Daily Journal*, which gave the addresses of the speakers mentioned at considerable length:—

Mrs. Elizabeth B. Chace is always listened to with respect and attention; and her re-election to the office of President of the Rhode Island Woman Suffrage Association is deserved testimony to the sincerity and the fidelity with which she has devoted herself to the cause, and to the dignity and courtesy with which she has occupied the chair. Her address was sensible, and reviewed the situation in a calm and philosophical spirit. All intelligent men, whether in favor of woman suffrage or not, are willing to acknowledge that the legal status of woman is not what it ought to be, and what a wife and mother deserves. Few will question that a widow's right in regard to a husband's estate should be identical with that of the surviving husband in the wife's estate, and that the present system is often attended with cruel hardship to woman at a time of life when the attractions and vigor of youth may perhaps have departed, and she is ill prepared to struggle unaided for her support. Mrs. Chace clearly pointed out the evident fact that the advocates of woman suffrage must overcome the indifference of women before they can expect to convince the judgment of men; and she advised for that purpose the circulation of literature on the subject, and personal and systematic visitation. The address, in the afternoon, of Mrs. Sara A. Underwood was very interesting and, perhaps,

measurably alarming in its quoted suggestion that women, if admitted to a share in the government, might be prompted by their love of material display to keep the nation perpetually embroiled in costly wars. Mrs. Underwood did not, however, agree with this view of the possible results of the extension of the franchise. "So long," she said, "as men believed in settling disputes between nations by an appeal to force, the pride, pomp, and circumstance of glorious war will find, both among men and women, encouragement and support in natural vanity and pride, as well as patriotism"; but the era of universal peace could be brought about only by improved international relations, and the continued advancement of the moral and material interests which broaden the sympathies and bind nations together.

MR. SAMUEL P. PUTNAM, Secretary of the National Liberal League, sends us a printed circular, addressed "To the Liberals of America," with a request that we publish it, "if not all, at least a part of it." It invites the cooperation of all "those who are in favor of a total separation of Church and State." The League is to revolutionize society, "so that every worker shall have a home, and every child born upon this planet a place to live and a right to nature's bounty." "To carry out these all important undertakings, vital to ourselves and our children, the National Liberal League has voted to raise a fund of \$5,000,"—certainly a very modest sum, considering the magnitude of the undertaking. "To carry out all the purposes named, Mr. Watts, the first Vice-President of the League, and myself will devote ourselves to the lecture field." Mr. Putnam, once an orthodox, afterward a Unitarian preacher, who left the pulpit a few years ago, started out as a liberal lecturer, and, failing of support, declared he found a higher morality in the Church than among Liberals, returned to the pulpit and left it again, but not from choice, now, as secretary of the National Liberal League, proposes, with the aid of a colleague, if the sum of \$5,000 is raised, to make some wonderful changes on this old planet, so that "every worker shall have a home, and every child born upon this planet a place to live and a right to nature's bounty." There is to be "an aggressive campaign," "points of attack," and for the "enemy no resting spell." While effecting "a change of front of the universe," Mr. Putnam solicits invitations to attend "the burial of our dead," and announces that he and his colleague "will be ready at any time to serve those who, in the shadow of death, require the noble consolations of our secular faith." He does not mean that, to those "in the shadow of death," he will give consolation by talking about State secularization. He means that he will give them "the consolations of our secular faith"; that is, the faith of those who believe in the system called Secularism. Whether he knows the difference between State secularization and the creed called "Secularism" is doubtful. If he does, how can he, as the Secretary of the National Liberal League, while asking for the membership and co-operation of all who believe in the separation of Church and State irrespective of religious or philosophical beliefs, announce himself as the authorized exponent and minister of "our secular faith"? The circular is full of Utopian ideas, cheap rhetoric, "liberal" cant, and that sort of exhortation, assurance, and dogmatism peculiar to a certain class of preachers who bring to the liberal movement the method and spirit of their old faith. We advise Mr. Putnam to throw this ridiculous circular into the fire, and get somebody to write one which, whatever be its other defects, will not confound State secularization, the alleged object of the League, with Secularism, an ethical and philosophical system which many who are in favor of State secularization do not accept.

The Index.

BOSTON, OCTOBER 16, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

A Study of Primitive Christianity.

V.

SOCIAL ASPECTS OF THE RELIGION OF JESUS.

Jesus' Doctrine of the Kingdom of Heaven.

The religion of Jesus would by no means be adequately viewed or comprehended in its entirety, if regard were had only to its technically religious or theological aspect. Beside its Godward look, its attitude toward the current supernaturalism of the time, its relations of consent or negation toward the ancient faith of his people, it had also its manward look, its ethical and social side. In entering upon a consideration of this phase of the thought and teaching of the Galilean prophet, we would completely fail to understand it, to give its several precepts their proper force and correct interpretation, if we neglected again, and even more clearly and emphatically than heretofore, to strike the key-note of his entire system of thought, as it is revealed to us in his doctrine of the kingdom of heaven and its speedy advent.

In his general conception of the heavenly kingdom as a new spiritual and social order to be established on the earth, with the will of the heavenly Father for its sole and perfect law, with all evil and hurtful conditions completely overcome and destroyed; the necessity for toil obviated by the constant production of all necessary articles of food through the spontaneous fruitfulness of the regenerated earth; the cessation of war and conflict; the destruction even of death itself by the complete eradication of sin through which death had come into the world,—Jesus did not apparently differ from many of the earnest and faithful followers of Judaism in his generation, among the different sects of the Pharisees and the "people of the land." Pictures of this "good time coming" were drawn from the older prophets, and exaggerated by the glowing imagination of the hope-

ful and faithful representatives of the faith of Israel.

"It shall come to pass at the end of days that the mountain of Yahweh's house shall be established on the top of the mountains, and shall be exalted above the hills; and all nations shall flow into it. And many nations shall go and say, Come ye and let us go up to the mountain of Yahweh, to the house of the God of Jacob; and he will teach us of his ways, and we will walk in his paths: for out of Zion shall go forth the law, and the word of Yahweh from Jerusalem. And he shall judge among the nations, and shall rebuke among many peoples; and they shall beat their swords into ploughshares, and their spears into pruning-hooks: nation shall not lift up sword against nation, neither shall they learn war any more."*

In the writings of the rabbis, we find wonderful pictures of this heavenly kingdom. Wild animals are to become tame and harmless, "the lion and the lamb shall lie down together"; immense bunches of grapes are to burden the vines; springs of living water are to burst from the barren rock, as under the rod of Moses, at the desire of whosoever may thirst; and life is to be a continual round of "delight in the law of the Lord." There are many evidences, outside the New Testament, that this expectation was held by the early Christians as well as by the Jews. Irenæus, writing during the latter part of the second century, declares that Papias, an earlier Christian writer, quotes from the memoirs of the apostles, as genuine words of Jesus, this saying: "The day shall come when each vine shall grow with ten thousand boughs, each bough with ten thousand branches, each branch with ten thousand twigs, each twig with ten thousand bunches, each bunch with ten thousand grapes, each grape shall yield twenty five measures of wine."

The Speedy Advent of the Heavenly Kingdom.

The special thought of Jesus, that wherein he differed from many of the Jews around him, that which impelled him to his prophetic labor and which dominated and gave color to his ethical system, was the profound conviction that this great change was "at hand."† It was coming now,—in this generation. "There be some standing here which shall not taste death till they have seen the kingdom of God come with power." Such is the assurance of Jesus as preserved in the oldest gospel.‡ "Verily I say unto you, All these things shall come upon this generation." . . . "So likewise ye, when ye shall see all these things, know that it is near, even at the doors. Verily I say unto you, This generation shall not pass till all these things be fulfilled." These are the words of Jesus as reported by Matthew.§ This is the concurrent testimony of all the synoptical writers in many similar texts, derived incontestably from the primitive tradition out of which they drew their materials for the biographies of the Galilean prophet. No teaching in the New Testament is so plainly presented or so frequently reiterated as this. It is inconceivable that these assurances should have entered into the gospel narratives, unless Jesus really uttered them; for no writer of after times, desiring to present the claims of Jesus as an infallible teacher, could possibly have invented and referred to him these unfulfilled promises and prophetic utterances which by no possibility could ever be fulfilled, since the time plainly set for their accomplishment had already long since passed away. These assurances of Jesus are at once the proof of his reality as an historical personage and

* Isaiah li., 2-4. † Mark i., 15; Matt. iii., 2, etc. ‡ Mark ix., 1. § Matt. xvi., 28; xxiv., 33, 34; xxiii., 36, etc. Compare Luke ix., 27; x., 11; xii., 40; xxi., 8, 32, etc.

of his human fallibility and liability to error,—a fact of the most striking significance.*

The Kingdom of Heaven described in Parables.

Believing thus in the speedy advent of the heavenly kingdom, and perceiving the blindness and unpreparedness of his people, the overmastering desire of Jesus was to arouse them from their apathy, and induce them to make clean their lives in preparation for the new life which awaited the "sons of God,"—the children of the kingdom. To those who heard him willingly and accepted something of his message, he explained the nature of this new life in apt and beautiful allegories. In the parable of the Sower,† he thus taught that the preparation for the coming kingdom was an inward process, an ethical regeneration of the soul, and not merely an external obedience to the precepts of the law.‡ In the parable of the mustard seed,§ he presented the hopeful assurance that the acceptance of the kingdom, "in spirit and in truth," by a few humble believers, would ultimately result in the world's regeneration. In the parable of the tares,|| he assured his disciples that the faithful doers of the word, though few in number, would be preferred to the many who carelessly neglected or wilfully rejected his warnings. In the allegories of the treasure hidden in the field and of the "pearl of great price,"¶ he solemnly impressed his belief that all else was as nothing compared with the necessity of "seeking first the kingdom of heaven and its righteousness." In the parable of the house-holder,** he held out the merciful assurance that even late repentance and return to righteous living would secure all the rewards of the kingdom, in which "the first should be last, and the last first." In the parable of the nobleman and the servants,†† he illustrated the truth that the faithful laborer should be abundantly rewarded, while he who perceived the truth without laboring to spread it should be surely punished.

Jesus not a Zealot.—His Doctrine of Non-Resistance.

Jesus taught that the best preparation for the coming kingdom was to commence now to live as nearly as possible the ideal life of the sons of God. The time was short before the great change would take place: therefore, it was better to bear the ills of the present life with patience and without physical resistance rather than increase them by fomenting insurrection against the "powers that be," thus bringing down upon his followers the persecution and oppression of the government. This thought appears to lie at the foundation of his teaching in regard to the non-resistance of evil. "Resist not evil," he said. "If any man smite thee on the right cheek, turn to him the other also. And if any man will sue thee at the law and take away thy coat, let him have thy cloak also."†† He forbade his disciples to take with them either gold or staves in their journeys.§§

When his enemies sought to entrap him by

*The current orthodox claim of the fulfilment of these prophecies in the alleged phenomena of the "day of Pentecost" is wholly unsatisfactory. Apart from the want of evidence sufficient to establish the historical verity of these phenomena, they in no manner fulfil the conditions of the advent of the heavenly kingdom as set forth in the prophecies. The belief in the second advent of Christ as an event yet to occur, which has been common in all ages of the Christian Church, testifies to the admission of theologians that the New Testament prophecies are yet unfulfilled, but fails to take cognizance of that clear and vital element in the prophecies which limits the period of their accomplishment to the then living generation.

asking whether it were lawful to render tribute unto Caesar, he pointed to the emperor's image and superscription on the current coin of the empire, and said, "Render unto Caesar the things that are Caesar's, but unto God the things that are God's."* In assuming this attitude toward the existing government, he at once thwarted the machinations of his more active and violent enemies, who sought to identify him with the party of the Kanaim, or Zealots,—who taught the duty of resisting taxation and abjuring the authority of the Romans,—and disappointed his more literal and patriotic followers, who believed that the Messiah, in his own person, would lead the faithful of Israel to overthrow and destroy the oppressor by force of arms, and thus re-establish the kingdom of the house of David.

Jesus' Communistic Teaching.—His Exaltation of Poverty.

As the kingdom of heaven was to constitute a sort of ideal community, where all would be equal before the heavenly Father, it appears also that Jesus and his disciples attempted to realize this social ideal in their intercourse with the world and with each other. It seems to have been a condition of discipleship that the true believer should relinquish his individual property, and hold all things in common with his brethren. One of the disciples was therefore appointed the treasurer, or custodian of their common fund.† Not only community of interest, but the blessedness of poverty appears to have been explicitly taught by the Galilean prophet. To the rich young man who had fulfilled the entire law in its spirit, loving God and dealing justly with his fellow-man from his youth up, he still further commanded that he should sell all that he possessed, and give the proceeds thereof to the poor, before he could be accounted a true disciple.‡

Jesus was not alone among his people in his abhorrence of riches and exaltation of poverty. The long conflicts of the Jews with foreign enemies, the destruction and spoliation of their cities and their sacred temple, and the later period of lawless violence during the reign of Herod, seem to have given rise among them to two diverse ways of regarding poverty and riches. Those who dwelt in the larger towns and cities—the artisans, tradesmen, and inheritors of the priestly office and its emoluments—became very frugal and saving, careful to obtain the greatest possible advantage in bargain and trade. Of this class were the sellers of doves and changers of money in the court of the temple, whom Jesus in his indignation is said to have driven out with a whip of small cords. Others, however, accepted their poverty as the righteous appointment of God, to rebel against which was impiety. Certain religious enthusiasts, particularly among the Galilean peasants who believed in the speedy advent of the heavenly kingdom, taught that it was wrong to accumulate property, and that all in excess of one's personal needs should be given to the poor. In the Jerusalem Talmud is preserved an account of Rabbi Jeshobeb, a contemporary of Jesus, who gave all his property to the poor. For so doing, he was reproved by the celebrated teacher, Gamaliel, at whose feet Paul sat.§

Less than a century later, this improvident mania had become so prevalent that a convention of rabbis, held at Usha, a town of upper Galilee, decreed that no one should bestow upon the poor more than one-fifth of all he possessed.|| The

* Matt. xxii., 17-22; Mark xii., 13-17; Luke xx., 21-26.

† So John xiii., 29, following a generally current tradition.

‡ Matt. xix., 16-22; Mark x., 17-22; Luke xviii., 18-24.

§ Jerusalem Talmud, tract *Peah*, 15, b.

|| Babylonian Talmud, tract *Kethuboth*, 50, a; *Arachin*, 28, a. See also Renan, *l'Évangile de Jésus*, p. 169, ff.

Essenes and disciples of John the Baptist despised riches, commanded alms-giving and the equal distribution or communistic possession of property. These sects, as well as Jesus and his disciples, believed that the poor would enjoy special privileges in the heavenly kingdom. Ingenious attempts have been made by Christian commentators to soften or explain away the saying of Jesus: "It is easier for a camel to go through the eye of a needle than for a rich man to enter the kingdom of God."* They have even gone so far as to invent a Greek word, *καμίζος*, defined as a heavy cord or rope, thus suggesting difficulty, but not impossibility, in the salvation of the rich. The word, however, is spurious, being found nowhere outside the fertile imaginations of its originators. The "needle's eye" has also been explained as the designation of a low gate in the city walls of Jerusalem, through which a camel could only pass by kneeling and being stripped of its load, the proverb being thus robbed of its terrors, and made to convey only the trite suggestion of the impossibility of taking worldly riches into the life beyond the grave.

As a matter of fact, however, Jesus in this saying merely quoted or adapted a common Semitic proverb, which is found in a slightly altered form in the Talmud and the Koran as well as in the New Testament.† That his own interpretation was very literal appears not only from his admonition of the rich young man, but also in the parable of Lazarus and the rich man: the former of whom reposes after death in the bosom of Abraham, for no virtue, so far as we know, save his poverty; while the latter is suffering the torments of unquenchable fire, for no reason, so far as we know, save his riches.‡

In the parable of the wedding feast, also, Jesus appears to have taught that only the poor could inherit the heavenly kingdom.§ He pronounced blessings upon the poor and curses upon the rich.|| He commended his disciples to "lend, hoping for nothing in return." He forbade them to "lay up treasures upon the earth." He bade them "take no thought of the morrow," but live from day to day like the lilies of the field "which toil not."¶ He ordered them to make no provision for their journeys, but to solicit alms everywhere among those who would receive them, and to shake off the dust of their feet against that house which should refuse to entertain them.** He declared plainly the impossibility of at once serving God and Mammon.††

The attempts to soften, discredit, or explain away these explicit teachings of Jesus, while their obvious relation to his belief in the speedy advent of the heavenly kingdom, constituting their only rational explanation, is overlooked or ignored, have been both ingenious and amusing. They stand, however, as certainly reflecting the thought of the Master as anything recorded in the New Testament. The earliest communities of Jewish Christians accepted these doctrines; and their successors derived from them the designation of "Ebionites," from the Hebrew *Ebionim*, "the poor,"—a designation which came to be regarded as synonymous with the terms "saint" and "friend of God."

The Possibilism of Jesus.—His Views of Marriage and the Family.

It would appear from all these considerations that Jesus' view of existing society was essentially

* Mark x., 25; Matt. xix., 24; Luke xviii., 25.

‡ Luke xvi., 19-26.

§ Matt. xxii., 1-11. Compare Luke xiv., 12-14, 16-24.

|| Luke vi., 20, 24, 25. ¶ Matt. vi., 19-21, 28-32; Luke xii., 27-34.

** Matt. x., 8-15; Mark vi., 8-11; Luke ix., 3-5. †† Matt. vi., 24.

pessimistic. The present and natural social order he regarded as not worth saving. Its inevitable burdens were to be endured while they must, in hope that patient endurance would speedily work out "a more exceeding weight of glory."

In reference to the domestic relations, Jesus exhibited the same tendencies of thought and feeling which he manifested toward society in general. He declared that in the heavenly kingdom there would be "neither marrying nor giving in marriage." * Endeavoring to conform himself to this ideal condition in the midst of the existing order, he formed no family relations himself. He even withdrew from the companionship of his father's family, and declared that his true disciples, following his example, must "forsake father and mother, brother and sister, husband and wife," and devote themselves wholly to preparation for the coming kingdom. His true relations, he declared, were his disciples and followers.†

Yet we are not to suppose that his thought and action herein was occasioned by any deficiency of the natural affections. His love for little children was not the manifestation of a disposition naturally cold or ascetic. Of such, he declared, was the kingdom of God. "Whosoever shall not receive the kingdom of God as a little child," he affirmed, "he shall not enter therein."‡ He took little children in his arms and blessed them, rebuking his disciples when they would prevent their mothers from bringing them into his presence.§ "Take heed that ye despise not one of these little ones," was his command to his followers. He appears to have regarded children as representatives of that purity and simplicity of character and that sincerity of faith and trust which he deemed essential to the members of the ideal community of the heavenly kingdom.

The relations of Jesus with his disciples, and with those families who received and entertained him, appear to have been always friendly and social. In this respect, certainly, he was no ascetic. He dined with Pharisees and Publicans alike,|| and was even accused by his enemies of being "gluttonous and a wine-bibber." Herein, he resembled neither the Essenes nor the disciples of the Baptist, who, like the Nazarites of old, were total abstainers, and lived on the most spare and frugal diet.

His views of the sacredness of the marriage relation, regarded as a necessary accompaniment of the existing social order, were of the most exigent character. He forbade divorce save for the single cause of adultery;¶ but he also defined adultery as the inward desire of the heart, which, if admitted literally as a sufficient cause for divorce, would perhaps open the doors as widely as is desired by any of our modern social reformers.** Doubtless, his doctrine of divorce, also, can only be rightly estimated as it is related to his belief in the speedy coming of the heavenly kingdom.

His Views of Education and Labor.

Jesus nowhere commends education or the systematic cultivation of the mind. Literary or scientific attainments formed no part of his own personal equipment, nor did he conceive of them as necessary or valuable to others. They were not an

* Matt. xxii., 30; Mark xii., 25; Luke xx., 35. According to another text (Matt. xix., 10-12), he even countenanced self-mutilation as an alternative to marriage.

† Matt. viii., 21, 22; x., 34-38; xix., 29; xii., 46-50; Mark x., 29, 30; iii., 31-35; Luke ix., 59-62; xiv., 26; xviii., 29, 30; viii., 19-28.

¶ Matt. xix., 3-9.

** Compare Mark x., 2-12. In this older and perhaps more reliable version, the prohibition of divorce is absolute, not even adultery or fornication being recognized as a legitimate cause for divorcement. This would of course deprive the above suggestion of all force or pertinency.

essential part of the preparation for the kingdom of the future, wherein all useful knowledges would arise in the mind spontaneously by a divine intuition.

Opposing the acquisition of property, and adjuring his disciples to live as the lilies which toil not, he naturally refrained from any explicit recognition of the necessity, importance, and honorableness of labor. Incidentally, indeed, he declared that "the laborer is worthy of his hire," *—a principle which, carried to its logical conclusion, would conflict radically with every system of servile labor. Yet he nowhere expressly recognizes, either in approval or condemnation, the existing institution of chattel slavery,—an institution which, in the subsequent evolution of society, became a constantly aggravated social evil. Had he given it a thought, doubtless, like the apostle who returned the fugitive Onesimus, he would have deemed it better to endure the evil for a time without protest rather than to interfere directly with a social order which was so soon to pass away.

(To be continued.)

CORRESPONDENCE.

THE REMONSTRANTS RIGHT.

Editors of The Index :—

It appears that the "Remonstrants" are going to block the wheels of the "Woman's Rights Movement," so called. And this is eminently right and proper. An effort extending back for forty years is pushed forward by certain women who have become particularly identified with this movement, and they have been aided by certain philanthropic men, and by some men well known; but there has always been in the movement more noise than strength.

So far as these efforts are directed to the opening of new avenues to women for getting money and wealth by their own exertions, I say, and all men say, God speed; but, when it comes to imposing new duties upon all women, a majority of them being already overburdened, then the women themselves rise up and remonstrate. Their remonstrance will be heard and heeded, and the right, privilege, and duty of voting will not be assumed by the female sex for an indefinitely long time; and this conclusion will be just.

For, as long as there is a respectable minority of the sex who are not willing to undertake the duties which belong to the ballot, so long there is no right in anybody to impose them upon it. There is a rule in the government of the United States House of Representatives, made to protect the minority, that allows one member by his single objection to turn aside and defeat the will of every one of his colleagues. So in the question of woman's voting. "I object," say the Remonstrants; and the business moves on to some other channel.

This matter of majority is conventional. In Russia, one is a majority. In America, sometimes 51 per cent. is a majority; while at other times it requires 67 per cent., as in Democratic Conventions, and again 75 per cent., as in amendments to the United States Constitution. Now here comes along a small clique or club or association or party, or whatever else you may call it, and demands to apply this conventional rule to the establishment of a new order of society, and to the breaking up of the traditions of that long interval since voting came into fashion as a factor, or, finally, as the factor, if you please, of governing.

The conventional rules of majority do not apply to this case. No legislature nor Congress, be the majority in favor of it never so great, can disturb a vested right. That principle has become so well settled that it has become an axiom. How much less can a majority of men decide that the female half of the world shall be charged with new and onerous duties and grave responsibilities! To these, the Remonstrants object. They declare that they are not ready for the change; that they have rights that society is bound to respect, and will respect; and that they will not assume the duties that are attempted to

* Luke x., 7. The connection, however, implies only the enunciation of the right of the disciples to food and lodging—the bare necessities of life—while they were prosecuting their missionary labors.

be foisted upon them. Congress and the legislatures have nothing in justice to do about the matter. It is beyond their province. They might as well be asked to legislate English out of and Sanskrit into the vernacular of the people. If the movers in this matter are anxious to succeed, let them proceed to convert the women of the body of the people to their notions; for they may rest assured of one thing,—namely, that, whenever the women of the land, with anything like unanimity, ask for the elective franchise, they will be sure to get it. There is nothing in this world that they are physically fitted for that they cannot do, if they will, and nothing they cannot have, if they desire it.

Now let us briefly examine the practical aspects of woman suffrage, and see whether the Remonstrants are not right in refusing this so-called boon.

The United States has finally adopted the practice of universal suffrage as to males, and its strongest advocates are not pleased with its success. The better class is constantly neglecting to vote, and rings led by a conscienceless set of demagogues rule the cities and rob the tax-payers. They even get hold of State governments, and they are not unknown at Washington. Spasmodically, the better class rise up and stamp upon these creatures; but, being endowed with immortal life, they constantly come to the top again.

New York has finally resorted to the unprecedented experiment of confiding the powers of her government mainly to one man, hoping that a knowledge of this fact may constantly draw out the vote of its conservative element, and thus secure good municipal government. Now, how, as an illustration, would female suffrage work there?

It is said that the *demi-monde* of that city embraces thirty thousand women. The vote of every voter among them might be safely put down for misrule and the robbery of high taxes. The great number of the good women who could find time to vote at all would vote as most of the good man vote,—on party lines. It is the great army of the neutrals that is to be relied upon to counterbalance the rings and their voters, and so it would be the neutral and independent-of-party women who would have to be relied upon to counterbalance the new auxiliaries of the rings. But here comes in the weak point of female suffrage; and that is, that not so large a proportion of the good, non-party women could be relied upon at the polls as of the good, independent-of-party men. The reason is obvious. It is inherent in woman. I estimate that fifteen per cent. of the best women would be necessarily absent from every election. This rule would only apply to the *demi-monde* with half the force or less. Then, after we have excepted the women who could not come to the election, how many respectable women, whose husbands or fathers did not insist upon it, would come out in rain or snow or slush, and stand in a queue to await their chance to vote and their share of the gibes and sneers that would be sure to be cast upon them?

But I think I hear the friends of the measure say: "We should not propose to require the women to vote with the men. We should provide separate and suitable quarters with fires and dressing-rooms, with suitable refreshments." Exactly; and, I doubt not, pretty soon, with proxies, so that all the discomforts and labors of voting might be avoided. Gallantry should go a great way; but allow me to say that the rulers of parties and members of rings have no gallantry to waste in politics. Throw open your ballot-boxes to women; and then gentlemen will soon discover how to disfranchise (practically) the respectable women, while they avail themselves of the female vote they want.

In the South, the effect of female suffrage would be mischievous in the last degree. Add another million of ignorant voters to the million we have now, with polling places far distant, often ten or even twenty miles from some of the voters' residences, and tell me how many of the reliable and respectable women could you expect to go to the distant polls? But every darkey wench would go. It would be only a frolic for her.

To saddle upon our overworked women the duty of riding over bad roads, perhaps behind oxen, and camping out of nights in fear and risk or in the presence of rain and the victims of insects, vainly to attempt to counterbalance the gratuitous and useless increase of ignorance and irresponsibility at the polls is to put upon them a duty which, as they have not

asked for it nor coveted it, they will decline to accept. I know they will thank their sisters, the Remonstrants, for the stand they have taken in bearding this lion in his very den.

JOHN G. WEBB.

OSPREY, FLA.

EMERSON'S THEISM.

Editors of *The Index* :—

In *The Index* of September 25, under the title of "The Ghost of Theism," W. S. Kennedy admits that Emerson "is theistic in his prose and in many parts of his poems." This fact I wish to emphasize. Throughout Emerson's writings, his theism is made prominent. His belief in Deity seems to be the mainspring of his inspiration. In the lofty prose-poem, "The Over-Soul," this is especially discernible. From point to point in that wonderful essay, he rises to the rapture of the saint; but his statement is intellectual, and has not, as he says of Plato's writings,—"what is, no doubt, incident to the regnancy of intellect in his work,—the vital authority which the screams of prophets and the sermons of unlettered Arabs and Jews possess." But precious to the soul in its rational search after the "Supreme Intelligence" are Emerson's words in the above-named essay: "Ineffable is the union of man and God in every act of the soul. . . . How dear, how soothing to man, arises the idea of God, peopling the lonely place, effacing the scars of our mistakes and disappointments! The soul gives itself, alone, original, and pure, to the Lonely, Original, and Pure, who, on that condition, gladly inhabits, leads, and speaks through it. Then is it glad, young, and nimble. It is not wise, but it sees through all things. It is not called religious, but it is innocent. It calls the light its own, and feels that the grass grows and the stone falls by a law inferior to, and dependent on, its nature. Behold, it saith, I am born into the great, the universal mind. I, the imperfect, adore my own Perfect. I am somehow receptive of the great soul, and thereby I do overlook the sun and stars, and feel them to be the fair accidents and effects which change and pass. More and more the surges of everlasting nature enter into me, and I become public and human in my regards and actions. So come I to live in thoughts, and act with energies which are immortal."

Something more than "The Ghost of Theism" is visible in these passages, and others of kindred nature may be culled in abundance from Emerson's glowing pages. In "Spiritual Laws," he exclaims: "O my brothers, God exists. There is a soul at the centre of nature, and over the will of every man, so that none of us can wrong the universe." And, in "Self-reliance," he says, "When a man lives with God, his voice shall be as sweet as the murmur of the brook and the rustle of the corn." In "The Poet," we are admonished that "the spirit of the world, the great, calm presence of the Creator, comes not forth to the sorceries of opium or of wine"; and, in "The Problem," we find

"The passive Master lent his hand
To the vast soul that o'er him planned;
And the same power that reared the shrine
Bestrode the tribes that knelt within."

But it is needless to multiply examples. Emerson had evidently no "plunge" to take from "the shore of the dark river of nescience," but was ever serene in the thought that "as a plant upon the earth, so a man rests upon the bosom of God; he is nourished by unfailing fountains, and draws, at his need, inexhaustible power."

M. F. D.

STONES AND BREAD.

Editors of *The Index* :—

In the article of *The Index* of September 4, on "Stones for Bread," by Thomas Davidson, what this writer says of the demand for strict morality in a moral teacher has our hearty approval; but he evidently has no moral sympathy with a person educated in Orthodoxy and gradually emerging from the pit through doubt and fear. Teachers generally reject one error in this old creed at a time; and, while passing through their state of mental evolution, they may be very inconsistent with themselves while they are wholly sincere. There is often a state of semi-intellectual looseness when the heart is honest. Persons in a transition state are not bound to preach all their

doubts. A person grows into the rejection of such doctrines as trinity and eternal punishment by degrees. The evil is oftener in one's circumstances than in himself, and those preachers who accept their creed "for substance" of doctrines are not conscious of dishonesty. Prof. Swing, on trial, seemed to believe statements of doctrine which seemed to be refuted in his public teachings. There are many preachers who consent to the best results of natural science, who do not see the inconsistency between those results and their own theology. They are not dishonest, however illogical they may be.

To declare that, "for the most part," the preachers of this country are more dishonest than "men of any other profession" is an outrageous slander. It is admitted that they may have a creed which they have learned by rote, and still really think that they honestly believe it. They may show "a sad want of intellectual thoroughness, courage, and spirituality"; but they may still be honest. On the basis of Bible authority and interpretation, preachers may teach the most unreasonable dogmas and still speak their inmost convictions. The writer supposes that the "historical criticism and philosophical discussion" of this age must naturally lead all minds to the same conclusions. He does not allow for the mental condition of these thousands who adhere to the old doctrines, despite the "light which is in the world to-day." He may say that the light which is in them is darkness, but still it is their light. A boy put under Catholic authorities at the age of twelve years, and kept twelve years under such authorities till he is a priest, must believe the dogmas of the Catholic Church. Many Protestant ministers are educated almost exclusively under dogmatic influence. The narrower one's scope of vision, the more intense is his conviction and the deeper his sincerity. The average orthodox minister who sticks "doggedly to his old-fashioned notions" is as honest as he is bigoted. His errors are more of his head than of his heart. I say this, not in charity, but from sheer justice. All educated persons do not accept the results of the Dutch school of Biblical criticism nor the conclusions of the Concord School of Philosophy, and still those persons may be honest. All scientists are not evolutionists. The religious mind of the age is subject to the law of evolution in accordance with which gills precede lungs, fins arms, and a fish is the prophecy of a man. Is it not honest in the amphibian to use gills in the water and lungs in the air? There are amphibian preachers. I scorn the statement that "the Christian ministry is, at the present day, one of the most effective schools of deceit in existence." Let those who stand outside of all religious institutions show us that they can be just to the deluded orthodox.

Let us now look at the charge that many ministers who accept the advanced views of religion "go on preaching the old doctrines, trying, for the low motives of money, position, and popularity, to convince themselves and others by means of vague, equivocal language that they still adhere to them."

We admit that there is a considerable number such, as he illustrates by the "Episcopal minister"; but their error is more of the head, in a theory of moral action, than in the intention. There may be many liberal-minded persons in the pulpits who are trying to filter the new theology into the minds of their hearers by the indefinite use of popular phrases, and they verily think they are doing God service in this way. Their ethics are Jesuitical. But such preachers are an exceptional class, and their peculiarity is generally recognized by their hearers. They do not represent the average educated Christian minister of any denomination. There is the liberal orthodox preacher who is a time-server, and there is the liberal teacher in an orthodox pulpit, who is honest and true according to his light.

Rev. Heber Newton is a representative of such; and there are many in the country who are in the Congregational churches, and under the yoke of no imposed creed, who are as honest as he. We regret to find men of the class to whom we would object, who are liberal or orthodox according to their companions and the occasion. I believe a minister who gains the reputation of being a Unitarian or Universalist or a Rationalist, while filling the place of an orthodox minister faithfully, does not put conscience into his religion; and the layman who upholds him in this stage-acting, knowing his private opinions, has no religious conscience. There are a few such people;

but fifty laymen who uphold the double policy for the sake of the pews, where there is one minister who preaches from the low motives referred to. Some denominations have an immoral policy with heretics. It is frankly said by Methodists that they did not wish to trouble or persecute Dr. Thomas, of Chicago. He could hold what opinions he chose, only he must preach Methodism. Yes: they would be willing that he be dishonest with himself, if he would preach Methodism. In this direction, the Methodists, some of them, seem to be falling from grace. But such are only a class, and do not represent the mass of the Methodist Church.

S. S. HUNTING.

THE MORMON OATHS.

Editors of *The Index* :—

The charges made against the Mormons by Mr. Michelsen, one of the "apostates," in *The Index* of September 11, whether true or false, were well calculated to stimulate that prejudice or feeling already so strong against this religious sect to its highest pitch of intensity. I, too, have been through the Endowment House, and at the proper time and place will tell my own story, which will be found, however, to be but a very small part of the whole story which begins with the article in this week's *Index*. But I must make one or two observations now. The Endowment House oaths are the result, and not the cause of persecution; while the reports given of them thus far have been in a spirit of malignant exaggeration. The testimony of this "apostate" may be offset by that of Bishop Tuttle, whom he misquotes at the very head of his article by the omission of these words, "I know them to be honest, faithful, and prayerful workers," and also by the fact that this Bishop in the Episcopal Church had had a residence among the Mormons of some twenty-five or thirty years. It would seem as if these revealers of the secrets of the Endowment House are a refutation of their own charges, as these things which they relate as so horrible prove not to have been the cause of their own apostasy; while their revelation of them eventually has not brought them any personal harm. And, to the party now in question, these oaths, it seems, were quite endurable, not going "against the stomach of his sense"; while the prophet's avowal that "the best revelation he ever had was good sound sense" proved that Mormonism was not of God, was not divine!

T. W. CURTIS.

BOOK NOTICES.

OUTLINES OF PSYCHOLOGY, with Special Reference to the Theory of Education. A Text-Book for Colleges. By James Sully, M.A., author of *Sensation and Intuition*, *Illusions*, etc. New York: D. Appleton & Co. 1884.

There is no science which has been so radically revolutionized by modern scientific and philosophic thought as that of psychology, and this book is a spontaneous result of this change in the method of viewing mental phenomena. In the old method of study, physiological conditions were ignored, and the universality of the application of the doctrine of evolution to all phenomena was unknown; and the attempt was made to erect this science on a metaphysical basis, deducing the whole from a few abstractions from our mental experience. But, when it was discovered that our mental as well as physical life is slowly and solidly built up by the conspiracy of the myriad influences acting as stimuli upon the sensitive organism, itself the result of the same evolutionary process carried on through ages of ever-accumulating toil, a science of the most mysterious and unknown domain of human inquiry became possible. In view of the fact that the development of scientific thought in other departments have shown this to be the most difficult of all sciences, on account of the extreme complexity of the ever-varying phenomena, involving in their operations the twofold world of mind and matter, it may be said to be yet in its infancy, and consequently cannot by any means be regarded as a completed science.

But, as a compendium of what has been accomplished toward this end, this work fills a much-needed want; and its value can hardly be over-estimated. The new method of studying this science has enabled the able author to give a clear, full, and most interesting account of the different phases of mental action; and he treats all the various

classes of the phenomena with great scientific completeness and accuracy, and in a manner to be easily understood by the common mind. The feeling which pervades one's mind on its perusal is, not that he is soaring in the thin air of metaphysical abstractions, which offer no fulcrum for his thought, but that he is dealing with concrete facts, which spontaneously admit of practical application in his every-day experience.

The author has long been a persistent student of mental science from the evolutionist's stand-point, and has written many periodical essays, besides publishing other works upon the same subject, notably among which are *Sensation and Intuition* and *Illusions*, both of which are most valuable contributions to our knowledge of mind. He brings to his work in this book a vast fund of information from English and foreign authors, and every page bears marks of one who is conversant with the views and conclusions of the leading writers upon mental science.

The paramount importance of this work in the cause of education cannot be too highly estimated. If a fraction of the time devoted to the study of obsolete languages were given to the new psychology, the results would entirely overbalance any beneficial influence of theirs to education and general culture. The reasons for this are very palpable; for, while these linguistic studies deal with the superficial developments of mental phenomena,—isolated mental facts,—the study of psychology, by enlarging our knowledge of the universal nature and science of mental action, out from which all linguistic as well as all other mental development springs, enables us to comprehend them in their very origin and connections, and to detect the shades of meaning in the variations and derivations of terms resulting from changes in psychological states and conditions, in consonance with changes in material conditions and in all the different phases of social environment.

The work consists of seven hundred and eleven pages, divided into fourteen chapters, in which all the different phases of sentience are very fully treated respectively, as follows: Scope and Method of Psychology; Mental Operations and their Conditions; Mental Development, Attention, which are especially valuable; Sensation; Perception; Reproductive Imagination (Memory); Constructive Imagination; Conception; Judgment and Reasoning; Feeling (Simple Feeling); the Complex Feelings (Sentiments),—under this head are treated Sympathy, Intellectual Sentiment, Aesthetic Sentiment, and Moral Sentiment; the Will (Voluntary Movement), in which the nature of Desire and its relations to Will in connection with Representation are ably elucidated; Complex Action (Conduct), besides several pages of very interesting appendices. The evolution of the mental faculties in the mind of the child is very fully treated in connection with various phases of mental action throughout the work.

SOME HERETICS OF YESTERDAY. By S. E. Herrick, D.D. Boston: Houghton, Mifflin & Co. Price \$1.50.

In this volume, we have a course of twelve lectures given as a Sunday evening course to the people of his church, by Rev. Dr. Herrick, of the Mt. Vernon Street Church of this city. For these lectures, the writer could well have taken the words of Lowell as a text:—

"By the light of burning heretics Christ's bleeding feet I track,
Toiling up new Calvaries ever with the cross that turns not back.
And these mounts of anguish number how each generation learned
One new word of that grand *Credo* which in prophet hearts have burned."

Dr. Herrick's "Heretics" are "Tauler and the Mystics," "Wiclif," "Hus," "Savonarola," "Latimer," "Crammer," "Melancthon," "Knox," "Calvin," "Coligny," "William Brewster," and "John Wesley." These lectures give an excellent bird's-eye view of the advance in Christian theology from 1290 until the beginning of the nineteenth century. The advance since then has been much more rapid and wide-spread; and the "heretics" of these days are the religious saints, if not the religious bigots, in the thought of some of the thinkers of to-day. Though delivered from a Christian stand-point, these sketches are admirably filled out, and present to Christian or radical an excellent epitome of the progress of religious thought.

THE VIKING BODLEYS: An Excursion into Norway and Denmark. By Horace E. Scudder, author of the *Bodley Books*. Boston: Houghton, Mifflin & Co. Price \$1.50.

This is the eighth and last volume of those delightful story books for young people, the *Bodley Books*. The author, referring to the characters which he created, says: "For my part, I, the writer of these simple chronicles, have other friends to whom to say farewell. I bid good-by to the many children and their parents who have followed me year after year as I have set down the observations and thoughts which were part recollections of my own childhood, part the creations of a playful fancy, part the new discoveries which come to us when we who were children have children." The present volume describes the journey of the Bodley family through Denmark and Norway, giving a realistic description of the people and manners of those countries. Considerable space is devoted to Björnson, Ole Bull, Hans Christian Andersen, and Thorwaldsen, whose portraits, with other pictures of interest regarding them, are given. The book is beautifully bound, has eight full-page illustrations, and about forty smaller ones, picturing noteworthy places, scenes, or people of the countries described.

WHAT'S THE MATTER? By Celia B. Whitehead. Southington, Mass. Price 25 cts.

This pamphlet is a vigorous appeal for reform in the dress of women. Mixed with considerable wholesome and sensible truth on the subject, there is also much crudeness of thought and impracticable suggestions in regard to the reform dress to be adopted in accordance with the writer's ideas. The style is lively, earnest, and readable.

THE Art Amateur for October might be called a Club Number. It gives "Glimpses of the Tile Club of New York" by Mr. Lathrop, illustrated by woodcuts of the works of the artists who belong to it. These are clever sketches in charcoal, and show vigor and life in the club. It is a small association, composed entirely of artists. The object of the club seems to be social enjoyment, which encourages good feeling among the artists rather than serious study. "Beta" gives an account of the Art Clubs of Boston, and the reasons why artists are dissatisfied with the original Art Club, whose control has passed into the hands of moneyed men rather than members of the profession. It is a mistake frequently made to seek rapid outward success for an institution by admitting to its counsels and government those who are not fully committed to the aims and purposes for which it is founded. Such a course brings fine buildings and large investments, but not real success in carrying out the idea. "The Paint and Clay Club" has striven to make up for this defect by confining its membership to "contributors to Art." It appears to be on friendly terms with the Art Club, which has granted to it the use of its gallery. The "St. Botolph's Club" is a more general association, including literary men. "There is one objection to all these clubs,—that they exclude women, in order that they may admit" "wine and cigars," the sale of which articles contributes largely to the pecuniary success of the Clubs. We hope Boston may yet have artistic and literary associations not open to these objections. There is the usual variety of interesting instruction and illustration in *Decorative Art*. The *Art Amateur* is a welcome guest in every household where there is a love of beauty or a taste for fancy work.—E. D. C.

THE Revue de Belgique for September, after discussing military and academic training, gives a powerful article by Count Goblet d'Alviella on the best way to resist those reactionary papists who have not only crippled the public school system of Belgium, and thrown open all the municipal and village treasures to be plundered by the clergy and the convents, but have openly violated the national constitution. The Church has taken such a position that her priests must be simply electioneering agents, who meddle with religion in their spare moments, but always with a view to political spoils. The clerical party opposes so obstinately all expenditure of money on the public schools that the friends of education ought in return to set themselves against any State aid to public worship. The mottoes of the Belgian liberals must be, "No more plunder of the State by the Church!" "Down with the convents!" Our friends expect soon to be obliged to add, "Down with the Church."

THE INEVITABLE.*

[In memoriam of Miss Hardaker, among whose last words uttered to the only near friend who stood by her death-bed were these: "I have made a hard fight, but have to yield."]

Her serious life
Was constant strife
Betwixt her fortune and desire;
Her strong, firm will
No fate could chill
Nor e'en her steady purpose tire.

The victories gained,
The ends attained,
To her seemed earnest of her dower;
That fragile frame
To her became
But servant of volition's power.

The weaker-souled
To whom she doled
A scornful pity,—courage-bred,—
For winds that swayed
Or storms which laid
Their fairest hopes among the dead,

Eyed her askance,
Said, "If perchance
Death inevitable should come
At life's high noon,
Would she attune
Her will to resignation dumb?

"That would decide
Her strength of pride,
If, quivering not in Death's cold clutch,
She dared defeat,
And tried to cheat
Him of the life she loves so much."

We little guessed
How soon such test
By that brave soul would be endured;
Her heart ne'er failed,
She never quailed,
Even when Death's victory was assured.

She faced alone
The vast Unknown,
Dared lone the mysteries thus revealed;
She asked no friend
To share the end;
In silence masked her thought concealed.

Thus to await
Her new estate,
Her new life's birth or sole life's close,
Gave evidence
That no pretence
Had ruled her vaunt to friend or foe.

SARA A. UNDERWOOD.

The American Lesson OF THE Free Trade Struggle in England.

By M. M. TRUMBULL.

300 pages. Price, paper, 35 cents; common cloth, 50 cents; fine cloth, 75 cents.

PRESS NOTICES:

"There is no other teaching of Free Trade by example at all to be compared with it. . . . It is as interesting as a romance."—*Chicago Times*.

"The author does not deal with statistics, but relates the story of the contest in such a pleasing manner that it reads like an enchanted tale."—*Omaha Herald*.

Sawing Made Easy.**MONARCH LIGHTNING SAWING MACHINE**

For logging camps, wood-yards, farmers getting out stove wood, and all sorts of log-cutting—it is unrivaled. Thousands sold yearly. A boy of 16 can saw logs fast and easy. Immense saving of labor and money. Write for elegantly illustrated catalogue in 6 brilliant colors, also brilliantly illuminated poster in 5 colors. All free. Agents Wanted. Big money made quickly.

MONARCH MFG CO., (A) 206 State St., Chicago, Ill.

BY ALL ODDS THE BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its *Day Coaches*, which are the finest that human art and ingenuity can create; its *Palatial Sleeping Cars*, which are models of comfort and elegance; its *Palace Drawing Room Cars*, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that it is the best equipped road in the world.

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, and take none other. All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

Modern Thinkers,

Principally upon Social Science.

By Prof. VAN BUREN DENSLOW, LL.D. With Introduction by ROBERT G. INGERSOLL. Including critical analyses of Swedenborg as a Seer, of Adam Smith as an Economist, of Jeremy Bentham as a Law Reformer, of Thomas Paine and Junius as Political Revolutionists, of Charles Fourier as a Socialist, of Herbert Spencer and Ernst Haeckel as Evolutionists, and of Auguste Comte as a Positivist, with an Essay on Wealth in its Relations to Christian Ethics.

The Fifth Edition has just been issued

"Upon the question of money, this volume contains the best thing I have ever read."—R. G. Ingersoll (in Introduction).

"We confess that, if we stood on the ground on which Mr. Spencer stands, we should find it difficult to prevent ourselves from being pushed by the stalwart arm of Dr. Denslow's logic into the gulf of ethical nihilism."—Prof. Goldwin Smith.

"Now, the whole force of this case depends upon the assertion of Goldwin Smith that Dr. Van Buren Denslow is a disciple of Herbert Spencer. But the assertion is not true in any sense or in any degree. On the contrary, Dr. Denslow is an open antagonist of Mr. Spencer. His essay on Spencer's Philosophy, first published in the *Chicago Times*, while speaking of the man in the usual terms of perfunctory compliment, as have also Goldwin Smith and the *Saturday Review*, is adverse, carping, and depreciatory on every point that he considers. The criticism was regarded as so damaging that Spencer's friends were told they must reply to it or forever hold their peace; and we were confidently assured that the last we should ever hear of Spencer's system was the thud of the clods that Denslow had thrown upon its coffin."—Prof. Youmans, in *Popular Science Monthly* and in *Introduction to Current American Edition of the Data of Ethics*.

Stephen Pearl Andrews, as political executor of the late Thomas Paine, is as fiercely indignant at Mr. Denslow's analysis of Paine's politics as Prof. Youmans is at his assault on Spencer's Philosophy. On the other hand, George Jacob Holyoake speaks of the analysis of Paine's political philosophy as "the most masterly refutation of it extant, without showing in his words or in his mind any enmity against the great agitator whom he confutes."

The late Dr. George M. Beard, of New York, wrote to the author: "Your critique on Spencer's *Data of Ethics* has all the force of a discovery in ethics, and is of great value. It deserved to be made the subject of a separate treatise."

BELFORD CLARKE & CO., Publishers,
CHICAGO, ILL.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of medievalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript*.

CURRENT TOPICS.

BY B. F. U.

THE people of Wyoming Territory are to vote upon the 4th of November on the question of taxing church property.

THE Executive Committee of the Prohibition party has issued a call to the people of this country, in view of the evils of the liquor traffic, "to observe Wednesday, October 29, as a day of fasting, humiliation, and confession."

THE First Spiritual Temple in this city, now nearly completed, is a massive and lofty edifice. The cost of the building and the lot on which it stands is said to be \$250,000, the gift of Mr. Ayer, a wealthy Spiritualist. The main hall will seat fifteen hundred persons; and in addition there are small halls for lectures, schools, and other purposes.

On the 13th, after the celebration of mass in St. Peter's, London, the bishop of the diocese and the clergy and the congregation, numbering five hundred, proceeded to the shrine of Edward the Confessor in Westminster Abbey, where they knelt and prayed for the conversion of England to the ancient faith. The *Despatch* says: "The people made the sign of the cross. The visitors at the Abbey were much astonished by the proceeding."

MR. VANDERBILT'S munificent gift of half a million dollars to the College of Physicians and Surgeons of the City of New York, is a most praiseworthy contribution to the advancement of medical science, which will receive grateful acknowledgment from all who are interested in the study and practice of medicine, and from intelligent people generally, who see the intimate relation between a knowledge of the cause and cure of disease and the general welfare.

SOME of the religious papers of New York think the new five-cent rule of the elevated roads will lead to desecration of the Sabbath, but the *Christian Union* speaks in praise of it as follows: "This is a good movement, and one to be encouraged as a promotion of better Sunday observance; for it will enable the poor classes, hived in their tenement-houses during six days in the week, to

get into the country with their families at little expense. It will, we trust, afford a counter attraction to the Sunday excursions, which are almost invariably accompanied with drinking, often with carousing, and sometimes with fighting. Anything which tends to break up the tenement-house system in New York is beneficent, even if it breaks in upon it only one day in seven."

It is now urged against Carl Schurz that he is an "infidel." Gath writes to a Cincinnati paper: "In my first letter, I described him as having been born of good Catholic parents. It seems that he has no religion himself. . . . He has no respect for the humblest class and no recognition of God. Where has he attended church in this country since he came to it? Yet his English education has made him very careful about offending the Orthodox instincts of the Americans." The letter is headed, "A man without religion, honesty, or principle." Gath, who seems to be devoid of piety except during political campaigns, is in pretty small business when he attempts to excite popular prejudice and resentment against a man in a political contest, because of his views on religious matters.

THE London Society for Psychical Research was organized two years ago. The president is Prof. Henry Sidgwick, who fills the chair of moral philosophy at Cambridge. It has four hundred members, among whom are Rayleigh, Tennyson, Ruskin, Balfour Stewart, and Prof. W. F. Barrett. The society divides its work into several departments, each of which is under its own committee. Among the objects of investigation are hypnotism, mesmeric trance, clairvoyance, Spiritualism, alleged apparitions, etc. It aims to separate illusion and deception from fact, and to make a scientific examination of certain obscure phenomena instead of leaving them to the control of chance or charlatanism. Consequently, instead of putting aside any alleged phenomena as impossible, on the ground that the belief in them is the result of superstition, it endeavors to explain or expose them by its own original investigations. We understand that a Psychical Research Society, modelled after the London organization, has been formed in Philadelphia.

REV. W. J. COLEMAN, referring in the *Christian Statesman* to the Prohibition party, after mentioning that the National Reform Association ("the God in the Constitution party") has been laboring forty years "to vindicate the claims of our Lord Jesus Christ to national acknowledgment and obedience," rejoices that "now there rises a party which, in the first plank of its platform, acknowledges God's sovereignty over nations and the supreme authority of his Word." Of those who compose this party, he says: "So far as I know, they are all Christians. Infidels are on the other side, as the champions of man's 'personal rights.'" The fact is, "infidels," so called, have been pioneers in the cause of temperance, and, in proportion to their number and means, are not behind Christians in trying to lessen the evils of the liquor

traffic and supporting rational temperance principles; but how can they, while working for the complete separation of Church and State, supposing they have overcome all objection to what is implied in prohibition, give support to a party that would, if it had power, make such changes in the National Constitution as would virtually disfranchise them? Temperance is a virtue; but, when the honest sentiment in favor of it is, through the influence of men of narrow religious views and intolerant zeal, misdirected to the support of a movement which not only opposes every effort to remove the existing remnants of the union of Church and State in this country, but aims to Christianize the government and to incorporate into the Constitution sectarian theological dogmas, consistent "infidels" will think twice before giving such a movement their support. The cause of temperance deserves better associations and wiser leadership than it gets from those who use it to secure legislation in the interests of sectarianism, and against religious freedom and equal and exact justice for all.

THE *Investigator* says, "A Spiritualist, and even a Christian, as well as an Agnostic, might join the League; for it does not at all interfere with any of their views on religion." This accords, with the design of the founders of the National Liberal League; but is it consistent with the declarations of its Secretary over his official signature, in regard to building "halls for Liberalism," promising that, if "friends give of their wealth, they shall see the cross vanish in the laboratory of science," and talking about "our consolation, our faith, our glory founded in the life that now is," "the noble consolations of our secular faith," etc.? Since Christians are invited to join the League, is not a Christian eligible to office? If elected to the position of secretary, would he be permitted by the liberal members to declare officially his intention to build Christian churches, "to speak our word, our consolation, our faith, our glory in the life that is" to come, "the noble consolations" of our Christian faith, etc.? When the co-operation of all who believe in complete State secularization is solicited in support of an organized movement for that distinct purpose, how can the leaders of such a movement, by their official words and acts, honestly or fairly commit it either to Christianity or to "our secular faith"? If Liberals wish to unite for the propagation of any particular religious or anti-religious philosophy, it is their right to do so; but they have no right to declare that their work is one in which "even a Christian as well as an Agnostic might join," and then announce a policy and a programme in which no Christian can concur, and to which some even who are not Christians conscientiously object. We go as far as anybody in the rejection of theology and in opposing it fairly and honorably, but do not believe in, and cannot even by silence consent to, the smuggling into a movement announced by its leaders to be solely for State secularization a scheme to oppose the religious faith of thousands who sincerely believe in State secularization.

AN OASIS IN THE POLITICAL DESERT.

In the midst of the crimination and recrimination of the pending Presidential campaign, and the dreary dearth of commanding political principles in the discussions on party platforms and in the party press, it is refreshing to find an account in a few of the newspapers of a very important philanthropic meeting that has been held in behalf of the reformation of the national Indian policy. This meeting took place at Lake Mohonk, New York, in the last week of September, and continued three days. It was called by Albert K. Smiley, one of the United States Indian Commissioners, who is the proprietor of the Lake Mohonk Mountain House and its twenty-five hundred acres of forest grounds. In his capacity as commissioner, he has himself made frequent visits to the Indians, and has a thorough knowledge of the Indian problem; and the object of the meeting was to bring together in conference as many as possible of those persons who, either as Indian Commissioners or agents or educators, understand the practical condition and needs of the Indians, and also prominent representatives of that class of citizens who are now philanthropically interested in the civilization of the Indian as the only solution of the Indian question. It was, therefore, a conference that was important by its weight of character; and its voice can but have great influence in moulding public sentiment, and even in affecting congressional opinion, if Congressmen, after the Presidential election is over, can be induced to give heed for a few weeks to the elementary principles of common sense and justice in legislating upon Indian affairs.

Among the members of the Conference, which numbered about sixty persons, were Gen. Clinton B. Fish, Gen. E. Whittlesey, William McMichael, and William H. Lyons, who are also on the Board of Indian Commissioners with Mr. Smiley; Dr. Rhoads, Henry S. Pancoast, Herbert Welsh, and Philip C. Garrett, of Philadelphia, who represented the Indian Rights Association; Gen. Armstrong of Hampton, Va., and Captain Pratt of Carlisle, Pa., who have had experience as practical educators of Indian boys and girls; Gen. R. M. Milroy, who has been a wise and successful Indian agent in Washington Territory; and Alice C. Fletcher, who has just completed most satisfactorily the difficult and delicate task, as government agent, of settling the Omaha Indians upon lands in severalty, with individual deeds of ownership. In addition to these were several officers of associations for doing educational missionary work among the Indians, and other noted men and women specially interested in obtaining legislation for righting the Indian's wrongs.

The work of the Conference was carefully laid out with a view of confining the discussions to a logical order, and bringing them to a clear and definite conclusion. The whole subject was divided into two parts: first, Indian citizenship as the solution of the Indian problem; second, criticism of the present national system of managing the Indians. Each of these parts was again subdivided, and hours allotted successively for consideration of each of the subdivisions. Under the first head were considered: proofs of Indian capacity for citizenship, and, as necessary for securing and maintaining citizenship, the ownership of lands in severalty with a personal and protected title; the ballot; education in all its branches, industrial, intellectual, moral, and religious; also, for accomplishing these ends, the reformation of public opinion and the reformation of national legislation. Under the second head, the discussions covered the matters of government treaties

with the Indians, the reservation system, government aid and agencies, law and courts. It was clearly shown that the custom of making treaties with the Indians as if they were a foreign people, the granting to them large tracts of territory without showing them how to cultivate it, the taking care of them through agents (and often dishonest agents) as if they could not take care of themselves, and their anomalous position in respect to the national laws and courts, are great obstacles in the way of Indian civilization. Yet it was also admitted that, in order to prevent suffering, these obstacles must be gradually removed, while the Indian is being prepared by education and supervision, through carefully chosen wise agents, to pass from the present system to that which is proposed.

As to the capacity of the Indians for civilization and hence for citizenship, there was no question among these men and women, whose testimony on this matter is to be regarded as that of experts. The fact was brought out that, in several instances where the conditions had been favorable, and even sometimes in the face of great difficulties, tribes or portions of tribes are already far on the road to civilization. Commissioner Lyons, for instance, said of the Flandreau Indians, a part of the Sante Sioux, who for the last nine years have had homesteads in Flandreau, Dakota, that they "have already good farms, excellent houses,—in some of them a melodeon,—clean and nice housekeeping. The merchants of Flandreau trust them the same as white men; the banks likewise. They are already civilized,—that is, Americanized,—good citizens; and yet some of them were of the bloody Sioux who engaged in the New Ulm massacre."

Nor was there any essential difference of opinion in the Conference as to what needs to be done. The resolutions were clear and pointed. They recommended the adoption of measures that would gradually abolish the tribal relation and the reservation system, and the granting of lands in severalty at once to all Indians who are ready to take them. It was also resolved that the bill which passed the Senate at the last session, known as the Coke bill, would, though susceptible of some amendment, be a good law for effecting this object, and that the House of Representatives should be urged to pass it at the coming session of Congress. Another resolution declared that all adult male Indians occupying lands in severalty should be admitted to full privileges of citizenship, including the ballot, by a process analogous to naturalization, on evidence of adequate qualifications presented before a court. Strong protest was made against the Indians being removed from one reservation to another, entailing much loss and suffering upon them, because their lands happen to be wanted by white settlers; and education, especially industrial, was urged as the sovereign remedy necessary to accompany all other measures, and the government was called upon to increase its appropriations for this object. It was equally urged that the issuing of rations for the support of the Indians, though now often a necessity on account of the bad policy of the government, is a demoralizing, pauperizing custom, and should as rapidly as possible be made unnecessary by training the Indians to self-support.

There was abundant evidence offered to show that the experiments already made in respect to education and self-supporting industry have had a most encouraging success. The testimony of Miss Fletcher and of Gen. Milroy, direct from their devoted labors of many years among the Omahas and the Puget Sound Indians, was especially valuable on this and all other points which came up for discussion. Miss Fletcher struck the key-note

of the solution of the Indian problem, when she said, "The only way out for the Indian is right out into the midst of our civilization." And Gen. Milroy hit the philosophy of the method in saying: "The Indians have capacity enough, but they lack culture and the desire for accumulation. One word is the key to Indian civilization and to all civilization,—*Want*. Increase the Indian's wants, and you increase his civilization."

It is to be hoped that the results of this excellent meeting will not be entirely lost in the turmoil of present political strife. It is a sign of a new era for the Indian in our country. Here is no party question. It is a question of simple justice, honor, and enlightenment to a wronged race. And, whichever party shall succeed in the approaching national election, Congress should be besieged with petitions to put such recommendations as this Conference has made into laws.

WM. J. POTTER.

THE PRAISE OF CITIES.

I.

The controversy of the town and country mouse is old in literature, and is continually recurrent in our modern life. If its merits were to be decided by an appeal to the poets or to the literary class in general, to get a verdict for the country side would be an easy matter. The poetry of the country is an infinite quantity and has an infinite variety. The poetry of the city—one could read all the best of it in half an hour. Bryant's "Hymn of the City" is but a poor companion for his "Forest Hymn"; and it is a poem by itself, while the "Forest Hymn" is one of many of the closest kin. Wordsworth has left us hardly anything more perfect than his "Early Morning on Westminster Bridge."

"Earth hath not anything to show more fair.
Dull would he be of soul who could pass by
A sight so touching in its majesty:
This city now doth like a garment wear
The beauty of the morning; silent, bare,
Ships, towers, domes, theatres, and temples lie
Open unto the fields and to the sky;
All bright and glittering in the smokeless air.
Never did sun more beautifully steep
In his first splendour valley, rock, and hill;
Ne'er saw I, never felt, a calm so deep!
The river glideth at his own sweet will:
Dear God! the very houses seem asleep;
And all that mighty heart is lying still."

But here, again, we have a poem by itself; while of Wordsworth's nature—poems the name is legion, and their beauty is "too great for rivalry, too high for praise." It is true that Wordsworth and Bryant are pre-eminently nature poets; but, in the total range of modern poetry, the proportion of the city's to the country's praise is hardly greater than is to be found in theirs. But there have been men of letters who have loved the city well. Sir Walter Scott was sure that he should die if he couldn't see the heather now and then. Charles Lamb was equally dependent on the sights and sounds that made the London of his heart. He was homesick for these in the lake-country of Wordsworth's habitual admiration. Grasmere and Windermere could not detain him long. His happiest hour was when he stood again within the shadow of St. Paul's. And Thackeray was a man of cities, and Dickens was just London incarnate. What one of all its queerest nooks and corners did he not know and love? And, in his novels, their queerness will delight a dozen generations, who will seek in vain for the originals, swept into nothingness by the remorseless tides of change and progress and decay. Indeed, the modern novel is seldom, with some great exceptions, pastoral or idyllic. It is an affair of cities. Its situations are the dining-rooms and parlors of the city house. There is covert praise in this. It means that in the city there is

better opportunity to study life and character than in country neighborhoods. And where there is most life and character is pretty evidently the place where a live man or woman would prefer to be.

The inference is common from the praise of country scenery and country life, in which modern poetry abounds, to the superiority of country life as compared with that of cities. It is a hasty inference. The loveliest or the grandest scenery does not imply the happiest and most successful life.

"The God that made New Hampshire
Taunted the lofty land with little men."

This contrast has not been uncommon. It was Buckle's theory, and there was much to recommend it, that the most imposing scenery is fatal to the growth of character. It is too potent for the imagination, and it is the nurse of superstition. The application here, of course, is to the humbler races of mankind, and not to those who go to nature fortified with the arts and sentiments of an elaborate civilization. In our own time, it is not clear that natural beauty either creates or cultivates the sense by which it is enjoyed. Witness the slaughter of the innocents against which every summer I expostulate in vain. No sooner is the summer haying done than the heart of the farmer is seized with an incomprehensible Berserker rage against all roadside beauty. Down, down it goes before his axe or scythe. In fifteen or twenty minutes, he thanks God, he can destroy a tree that it has taken the economy of nature fifteen or twenty years to grow. If he could reduce the mountains to an equal ruin, he would not for a moment hesitate. Their beauty does not generally exist for him. He approves the taste of that eccentric Englishman who, with the loveliest site in England at his command, built his house without a window on the viewsome side. With a view beseeching admiration, how not to see it is apparently the New England farmer's dominant idea. But, in truth, he doesn't think of it at all. Such love of nature, such delight in her, as exists for country people is not indigenous to the soil. It is imported from the cities. It would be an interesting matter to discover how much of the praise of country scenery and country life has been written by habitual dwellers in country towns and villages and ruder places. One who is himself a country poet testifies that

"Only those who in sad cities dwell
Are of the green trees fully sensible."

Too sweeping this, but a sufficient symbol of the fact that natural beauty finds its commonest and best appreciation among those who are not to the manner born, or who have been taught by absence better to understand the power and beauty of those things which had for them, at first, no potent charm. One of the most important items in the praise of cities is this amusing paradox, that the life of cities is the happiest preparation for the enjoyment of that natural beauty of which the country is the grand purveyor.

But those who live in cities are too quick, I am persuaded, to concede to the country all the beauty that there is. After my first pleasant Sunday here in Brooklyn, I took a steamer at the evening's quiet end, and started on my journey back to Western Massachusetts. Thousands of many-colored lights sparkled and gleamed along the shores and on the craft that crept or hurried by. They seemed almost as many as the lights that glittered overhead. But the most magical effect of all was when we swept with easy, noiseless motion into the lights and shadows of the bridge. Preternaturally dark and bright, they gleamed and gloomed upon the broken surface of the tide, and the great towers loomed above us like two mighty

sentinels guarding the vast and solemn cities in their sleep; and it seemed to me that all my summer's joyance had not brought to me so fair a sight, that I had never been so touched, so thrilled by any purely natural beauty. This was not purely natural. It was a sweet conspiracy of earth and heaven, man and God. It is habitually at night, when the beauty of the country sleeps, save when Diana wakes Endymion with her kisses, that the beauty of the city is most strikingly revealed. Then everything that is harsh in outline, tawdry in decoration, is subdued and chastened by the infallible genius of the dark. And, when the rain is coming down in torrents that would make the country night a terror to the heart, the beauty of the city grows and grows. The lights and shadows and the reflections of the flooded streets make up a wonder that is almost enough to drive an artist mad as he attempts to reproduce its brilliant phantasy. And then, too, in addition to all these uncalculated and unbought perfections of the city are the beauties of its music and its art, the former bringing to our city weariness such melodies as are beyond the reach of any bird or stream, the latter making forests green for us and rivers warm and bright, when all the country woods are bare and sere and all the streams go creeping under icy roofs down to the cheerless sea.

JOHN W. CHADWICK.

THE COST OF MAN.

I.

Thou, thyself, O reader (who art an achievement of importance), over what hair-breadth bridges of accident, through what yawning perils, and the man-devouring gulf of centuries hast thou got safe hither from Adam all the way.—*Carlyle*.

From *Adam*? Thou mighty, sombre shade,—from the Ascidian. A man comes, crossing more bridges of accident than Carlyle ever dreamed. *Man* came, and his way hither was bridged by a miracle. So dreamed the ancients. And so the face of nature seemed to teach. For this body,—so complex, and so adjusted, member to member and structure to function,—does it not imply a maker in the same sense as a watch? Look deeper. The eye seems the most perfect of organs, and to Mill it seemed the thought-work of a mind high in the science of optics. But the most perfect human eye has at least seven defects. Assuming what Spencer calls "the carpenter theory of creation," some of these defects imply lack of knowledge in the Supreme Mechanic, others imply lack of care, and others lack of power.

The ear seems hardly less divine than the eye; but, under the scrutiny of science, it is shown to be almost as defective.

The heart, veins, and arteries,—no pump invented by human thought and no irrigating pipes or canals would bear comparison with this wonderful mechanism. Even the valve which man puts in his pump implies knowledge of hydrostatics. The valves in the heart, veins, and arteries,—they must have got there through knowledge of the science which man is learning?

Consider the matter more closely. If valves are needed at all in the veins and arteries, it is where they are vertical, not horizontal. In the intercostal veins and arteries which are horizontal there are valves, but they do not function. In veins and arteries of the limbs which are vertical, valves occur where, theoretically, they should be. These vessels extend from the limbs through the trunk to the heart; but within the trunk, although still vertical, they are without valves. A thinker of the Paley School, if such were now possible, would be sorely perplexed.

That system through which the miracle of creation is wrought on each individual is not so invit-

ing to the teleologist. Woman, the books used to say, was struck by a curse. "Unto the woman," he said, "I will greatly multiply thy sorrows: in sorrow shalt thou bring forth children."

From the erect position of the body, to prevent prolapsus of the seat of suffering, the attachments should be such as to hold the organ up. It is such, rather, as to pull it downward. It is held by firm ligamental bands attached to the pelvic girdle. We are perplexed, and turn for fuller light to bodies not human. The deer or horse, any quadrupedal mammal, may help us. Here, we find the same vascular system as in man. The human heart is no improvement on that of the deer. The intercostal blood-vessels have valves, as they should, being vertical. The vessels which traverse the limbs vertically have valves. Entering the trunk, they become horizontal and have no valves. All this is as it should be.

The uterus is held in place by the same ligamental bands as the human. The deer is prone; and, from the movement of the body, the tendency of this organ is forward. The attachment by bands of ligament to the pelvic girdle holds it back. Suppose, now, that a prone, quadrupedal body becomes erect and bipedal, the vascular and uterine systems not undergoing responsive modifications. The seemingly anomalous facts we have considered would be luminous. If such a thing has happened, man is not synchronous with certain structures of his body, nor are the parts of his body synchronous with each other.

The renal system is corrective of the vascular and therefore younger. Urea is made in blood-making. Its presence in the blood must not be tolerated. The function of the kidney is to withdraw it. It has lately been shown that this action is mechanical. So much pressure on the blood, so much urea is pressed out. But the mechanism which takes urea from the blood takes albumen too. This must not be, for blood must have albumen. The tracts of epithelia in the kidney return the albumen to the blood. If the function of the epithelia is impaired, Bright's disease ensues. The kidney is an act to supplement and amend an act. The epithelia are an act to amend the amendment of an act. So reads, like a volume of human laws, the human body.

Facts like these, and facts of still deeper import, seem to strike at the very citadel of teleology. Very perfect and beautiful seems the adaptation of each organ and member to its function. Here, if anywhere, is design. But, if we consider well, we will see that no organ functions as the first draft of that organ must have functioned. The wings of a butterfly are differentiated from the tracheæ, and therefore they began to develop as parts of the respiratory system. Veins and arteries began as chyme-bearing tubes, which branched from the stomach. The lungs of a vertebrate began as diverticula from the gullet, and their first function was hydrostatic. In the fishes called *dipnoi*, they are assuming respiratory functions, although they are not yet the sole organs of respiration. In the human embryo, they are in abeyance, the liver performing their function.

It is clear that the framework of man has come hither over seeming "bridges of accident" and through "yawning perils."

How strangely tortuous the bridges over which each body passes in coming hither "all the way from" a jelly bleb! In an early stage, it is fish-like. It has four gill clefts and arches. In brain as in gills, it is fish-like. Time passes, and the little body escapes fishdom by growth of the anterior lobe of the brain and by losing its gills. The fourth cleft closes, and every vestige is effaced. Parts of the first, second, and third remain, and pass through

the *strangest* history of any structures in the whole economy of nature. The skeleton framework of a gill, which Nature, in her first fishy thought, has laid, is cut, and the parts are wrought into other structures. From the posterior portion are made the ear bones, called "hammer" and anvil, malleus and incus. The "stirrup" rises from the posterior segment of the second arch. The anterior portion of the first and second is wrought into the mouth skeleton, the upper and lower jaws. The tongue is an outgrowth from the middle portion. The clefts all close except a small segment of the first, which remains as the ear-opening.

This story, if not read from nature, would seem incredible. No magician of the *Arabian Nights* ever wrought such strange transformations. The non-evolutionist who is acquainted with these facts must conceive of his Deity as an infinite magician. Imagine his thaumaturgist in the act of creating a man. He speaks or puts forth his hand,—for, in this night-realm of thought, our conceptions must be anthropomorphic,—and we behold the first draft of a man. But "man" we would never call it. No eye but that of science would see in it even "the promise and potency" of a man. His hand is lifted again, and, lo! a wonder. We had guessed his aim to be fishward. We were wrong. One fourth of his fish work—the fourth gill—he destroys completely. The rest he is transforming into a something as unlike to a gill as a man to a fish. He is making what he began as a gill into the jaws, tongue, and ears of a mammal: we cannot say yet whether mouse or man. Thou thyself, O reader (to speak Carlylese), who babblest thy inanity into ears designed to breathe from the deep the eternal silences, thou clatter-teeth (claque-dents), consider that this tongue and these jaws have come to thee by perversion of a better purpose: consider the silence of the fish.

Two words, freighted with profoundest meaning, have lately come into the language of every civilized people. They are "ontogeny" and "phylogeny," genesis of the individual and genesis of the phylon, tribe or race to which it belongs. If we assume that the first is an epitome of the second, the facts which have so perplexed us in the structure of man, and his growth in embryo, are luminous. The creation of a man types the creation of man. As a germ unfolds through successive animal forms to man, so unfolded through vast geologic ages the phylon which culminated in man. If the body about to be human has gill openings, it is as the memorial badge of a remote gilled ancestor. If this body, in a later stage of the journey toward man, has a caudal appendage and limbs not yet differentiated into arms and legs, it is the memory it holds of a quadrupedal ancestor. And, if the body, when at last erect and human, shall carry animal structures too conservative to have faded out under human conditions, how rich will it be in historic lore! Low down among the tunicate mollusks appears as a sort of adjunct to the mouth a ciliated groove. It traverses the gill region, and carries food into the stomach. It functions in the ascidia,—a mollusk,—and begins to lose its function in the lancelet, the lowest of vertebrates. It appears in some modified form from the lancelet clear up to man, where it is known as the thyroid gland or Adam's apple. The Adam's apple is the most venerable part of the human body. Through what æons has this structure lingered superfluous! It has been on the "retired list" from the very dawn of vertebrate life.

The external ear rose from a prolongation of the edges of the first gill-cleft. It is no longer of use to man. It is surrounded by shreds of muscles which, if they had any function, would move the

ear forward, downward, and upward. They are the heirlooms of muscles which did so function. It is a fact of deep significance that every one of these degenerate and atrophied muscles appears in the gorilla and in the same state of atrophy. Either the gorilla has risen in strength or enemies have declined, since the man-ape has no need "to prick its ear" to catch a danger signal. And man, since his removal from a state of nature when

"Wild in woods the cringing savage crept,"—

man has no need to prick his ear for a danger sound.

As we find all useless structures in the human body to have lapsed from structures which functioned in a merely animal body, we must assert the derivation of man from the animal.

Through what cost in time, in hunger, in war of hungry mouths, life rose from amoeba to mammal will not concern us now. We linger here only to say that, as in human infancy, so in the infancy of life itself, the fate of the individual, the lines on which its development shall move, seem most the determination of accident.

Here is a ciliated gelatinous globule moving freely in water. Nature, which Heine called "the unseen thought," seems to say, "Go to: I will push in a portion of this little sphere on itself, and the cavity formed by invagination shall be a stomach. The opening shall be a mouth." If development stops here, the result is the Olynthus sponge. Whether development stops or not, this is a form of life—first after the egg—through which every organism in the animal kingdom passes. And, now, whether the gastrula goes up or down at one time was a question as uncertain as the sport of the waves. Thrown by a wave against a rock and lodged there, the walls of sarcode thickened, and little canals were developed, and traversed them in all directions from the stomach. They were the beginning of a vascular system. "Accidents" favoring, the gastrula passed from this stage to a higher. Suppose the life to have been a little more sluggish and the gelatinous walls to have grown thicker and the canals to have grown outward till they reached the surface. Such "accidents" occur to-day. Each opening of a canal becomes another mouth; and, the organism having gained a hundred mouths, the physiological importance of the primitive mouth declines. "Business leaves it," and finally it closes up. The canals, having now each its own mouth, rise in importance; and the primitive stomach, having lost its mouth, shrivels and fades out. Our gastrula has sunk and become the sponge, whose colonies unconsciously fabricate that wonderful mechanism known as Euplectella.

To continue were to crowd the columns of *The Index* too much. *The Index* reader, who certainly is an "important achievement," and not ashamed of his ascent, will wait another week.

W. D. GUNNING.

THE PRESENT DUTY OF RADICAL LIBERALS.

Again our country is upon the threshold of a Presidential election.

The position occupied by the two great political parties is a remarkable one; for, while heretofore we have always been accustomed to identify our quadrennial struggle with an effort of the people to carry some momentous issue, believed to be seriously threatening the future welfare of the nation, to a final practical political decision, at present even the most ardent of partisans will hardly pretend that such an issue is before us.

So long as we had the slave with us, the question of the extension or abolition of the "peculiar institution" constituted an issue upon which the

political parties could *honestly* declare and maintain a war to the knife. Slavery is no more, and our great issue is lost. It is to this loss that the corruption of both parties is mainly due. Introduce the new blood of another great issue into their political veins, and both parties will purify themselves. But by what new issue can the one forever lost be replaced? While the problem of slavery was unsolved, it fascinated the political attention. No minor question has been able to do this in the past, and none will be in the future. The new issue must be of even *greater* importance than slavery. It thus becomes a matter of extreme consequence to inquire on what essential motive-peculiarities this fascinating power of the question of slavery depended.

The problem of slavery was pre-eminently an issue of *morality*. As such, it involved the individual happiness of millions, always indissolubly linked with their liberty. It excited the sympathy and aroused the indignation of the noblest hearts of the nation to impassioned opposition. The abolition of slavery is currently believed to have been accomplished by the Republican party, the sole lineal descendant of the Free-soilers, the latter an advanced branch of the old-time Whigs. Nevertheless, it is a well-known fact that the abolition of slavery was never really demanded by the Republican party, and was only reluctantly carried into effect as a measure necessitated by the events of the late civil war. That war was begun by the South under the influence of serious apprehensions regarding the safety of a vast accumulation of property in slaves. These apprehensions were excited by the bold attacks, in word and deed, of the old Abolition party upon the "peculiar institution," on the ground of its *immorality*.

It is here that we feel bound to call attention to the generally committed error of confounding *political* parties, working for the immediate attainment of a practical purpose, with *ethical* parties,

Sworn to maintain a beacon-light
On truth's and virtue's altar,
With far-eyed flame-crown to the right,
To guide all steps that falter.

The destruction of slavery, this enormous achievement of our time, was the work, not of a *political*, but of an *ethical* party. The Abolition party was a true party of great moral ideas, the *only* such party of *progressive* tendencies this country until recently produced; for the only other moral party known during the same period was its *reactionary* opponent, the party of Calhoun. The Abolition party branded slavery as an *absolute wrong*: it demanded emancipation as an *absolute right*. For a number of years, it placed in nomination men of spotless purity of character, *knowing well that they could not, even by the wildest chance, be ever elected. It did not trim or bargain; it never felt the pulse of the people; it was never in any sense politic, neither was it, in any true sense, impractical; it fulfilled its true mission*; for it must be again and again repeated, It is the mission of ethical parties to throw the radiance of *ideal* issues upon the path of those who are more directly engaged in effecting the immediate changes of politics.

In the midst of the present conditions of political affairs, the radical Liberals have waited in vain for the advent of a third political party to lead them to greater liberty. Yet their disappointment has been, in part at least, deserved; for, if they would be free, they must themselves show the way. *The two great political parties have lost that way for want of a guiding light.*

In the "National Liberal League," we have indeed the tentative beginning of a new progressive ethical organization, which can, if it will, take the place of the old party of Abolition; but the organ-

ization of the League is apparently still in many points defective. To enable it truly to fulfil its mission, it must, we believe, change its method of organization, consolidate its ranks, and take the field an aggressive party of freedom, militant! The radical Liberals of the country must close their ranks in formation of a true ethical party. They must organize in accordance with an ideal method radically different from any and all of the methods hitherto employed in party organization. They must formulate a platform of social ideals based in all its details upon a greater liberty than we now possess or are even likely to attain in a still remote future. They must nominate men of such purity and intelligence as to be absolutely "unavailable" in the political sense. Not among "popular" men, however liberal, but rather among those who are hated for their convictions' sake, they must select their party's candidates. Such men can, I believe, still be found,—men who would die for the right, even though they knew their death to be in vain! They may be known by the insignia of their rank.

The glory of the fool's contempt,
The envious slanderer's pearls undreamt,
The splendors of the villain's hate
(Tis few receive such gifts from fate),—
Gems never sought by baser sight,
The noblest hearts' and souls' delight,—
They shine upon his manhood's crown
Signs of true merits mis-renown.

This is the duty of the radical Liberals of our day. Will they perform it? That is the question. The writer for one will gladly bear his part.

CHARLES FROEBEL.

LABOUCHERE says in *Truth*: "I see it stated that the Church Missionary Society has expended in thirty-three years upward of £120,000 on 'missions' to Jews and Mohammedans in Palestine without making a single convert. The London Jews Society spent £30,000 between 1877 and 1882 with the same result."

Of the Christians in India, the *Indian Witness* says: "The rich are like the rich Hindus, and the poor are like the poor Hindus. Their religion is gross superstition and idolatry. Christianity has not added a spark to their intelligence or respectability. They are closely on a par with Hindus of the corresponding classes in education, and we never heard of any collector or commissioner remarking upon the paucity of crimes among them."

THE writer of the article on "Lights and Shadows of Army Life" in the *Century* tells the following story: "When General Pope was falling back before Lee's advance in Virginia Valley, his own soldiers thought his bulletins and orders somewhat strained in their rhetoric. At one of the numerous running engagements that marked that disastrous campaign, a private in one of the Western regiments was mortally wounded by a shell. Seeing the man's condition, a chaplain knelt beside him, and opening his Bible at random read about Samson's slaughter of the Philistines with the jaw-bone of an ass. He had not quite finished when, as the story runs, the poor fellow interrupted the reading by saying: 'Hold on, Chaplain. Don't deceive a dying man. Isn't the name of John Pope signed to that?'"

THE Unity Quartet and Concert Company, Mrs. L. F. C. Richardson, Soprano; Miss Annie H. Lord, Contralto; Mr. Charles R. Adams, Tenore; Mr. H. L. Cornell, Basso; Mr. George B. Ford, Elocutionist; and Mr. Howard M. Dow, Pianist and Director,—offer great attractions in the talent of the artists named and in the programme presented to lyceum committees and managers of concerts for this season. Communications in regard to terms, etc., may be addressed to Howard M. Dow, care of O. Ditson & Co., Boston.

The Index.

BOSTON, OCTOBER 23, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

The Ethics of the Political Situation.

An Address delivered before the Society for Ethical Culture, Sunday, Oct. 19, 1884.

BY FELIX ADLER, PH.D.

The American people are impanelled as a great jury to decide a contest of momentous significance. It is expected that from nine to ten millions of voters will go to the polls on the 4th of November next. It is believed by many that our country has passed through no such trying ordeal since the close of the Civil War. At such a time, it behooves us to weigh well the duties which we owe to the State as citizens, and to consider in a calm spirit in what manner we may best discharge those obligations.

I do not propose this morning to deliver a partisan speech. I believe it to be in general a wise rule that teachers of religion should not, as such, take sides in the debates of parties, and that for two obvious reasons: first, because by so doing they injure religion; secondly, because they injure the State. They injure religion, because, on whichever side the teacher of religion may enlist as an advocate, he is sure to displease those who have espoused the opposite side, and thus to diminish his influence for good in the community. They injure the State. And here I need not stop to dwell on details. All history is full of examples showing how often the clerical order have pursued their own sectarian interests at the expense of the true interests of the people; how often, also, they have hampered the progress of popular liberty and led the masses in blind subjection to their will. Even where the motives of the clergy are entirely disinterested, it is easy to see how unfair an advantage they possess in being able to throw the authority of religion into the discussion, how strongly they must be tempted to identify their own perhaps biased opinions with eternal truth, and how they can thus disturb the balance of judgment in their favor. Some, though not all, of these objections apply to teachers of religion in general, no matter what the particular religion may be which they advocate. But there are occasions when exceptions must be made to every rule, and I believe an occasion has arisen when an exception must be made to this rule. For the first time since the great anti-slavery struggle, the political contest turns upon a moral question. A distinct moral issue has arisen. Grave moral prob-

lems are discussed in the newspapers, not always with candor or courage. The minds of many men are perplexed as to the course which they ought to pursue, and their conscience is divided between allegiance to party on the one hand or to what are represented as the paramount interests of the country on the other. At such a time, it is not possible for a teacher of ethics to maintain silence. What would you yourselves think of a teacher of morality who should discourse concerning the ethics of the stars at a time when the air resounds with discussions of moral questions that affect the very life of the people, when every patriot's pulse beats faster with hopes or fears touching the future of the country!

We cannot absolve ourselves from the obligation to consider the points of duty involved in this Presidential contest. We ought not to abstain from offering our contribution, however feeble or unwelcome it may be, toward the solution of the points at issue. But here precisely the line must be clearly drawn. We are considering only the ethical side of the conflict. We are assembled here not as Republicans or as Democrats. We have left our party affiliations and party preferences outside this hall. We will sit down together this morning as earnest men and women seeking to learn in what direction the path of duty lies. And I ask you,—yes, even those of you who are most fixed in their convictions, who have grown warm and wedded to their opinions by frequent discussions, who enter into the debate only to convince others, being absolutely determined as to their course themselves,—I ask even these to be willing to look upon the subject as if it were presented for the first time, as if it were wholly new; for only thus can they give a really impartial hearing, and avoid that intensity of feeling which darkens judgment and obscures the reason.

When a practical problem of conduct seems complicated, it is well to go back to first principles. I propose to clear the discussion at the outset by submitting certain political first principles. There has been too much empirical discussion, too much building of arguments in the air, with too little thought of the foundations whereon such arguments should rest. I hold the following to be first principles in political ethics: that parties exist for the benefit of the State, and not the State for the benefit of any party; that there are certain fundamental or primary principles and certain secondary principles of State welfare; that, in the primary principles, all parties are agreed, while the differences relate only to secondary principles. To illustrate my meaning, I will give the following examples of primary principles: Obedience to the laws is one, respect for the right of property is another, respect for the law of the family is a third. Any party which should deliberately adopt law-breaking as a principle, or the abolition of property, or the recognition of free love would thereby extinguish its existence as a party, and would become a seditious faction. The following is the plain distinction between parties and factions: that all parties are agreed in accepting the primary principles of State welfare, while such combinations of men as reject these principles are justly stigmatized by the opprobrious epithet of factions. If there were only primary principles, then no such thing as a division into different parties would be possible; but the whole mass of moral and intelligent citizens would coalesce into a single party. Let me now speak of the secondary principles that are the actual nuclei around which the crystallization of the people into distinct parties takes place. Such secondary principles are protection and free trade. There can be no difference between two parties as to the right of holding property or as to the law of the family, but there may be and is a difference of opinion as to whether the welfare of the State will best be secured by a policy of protection or of free trade. The ardent adherents of either side, indeed, are sure that only their policy will inure to the benefit of the State, while the policy of their opponents is ruinous; but the matter has not been so far settled that difference of opinion should not be legitimate. In the same way, the question of State sovereignty, as opposed to national sovereignty, and the question of the governmental control or ownership of the facilities of transportation, or their control by private corporations, involve secondary principles of State welfare. However deep may be the importance of these principles, however decisive their influence in shaping the destinies of the nation for good or evil, yet, because they are unsettled, they

must be classed as secondary principles concerning which men may honestly differ. It is around these principles that parties cluster: these principles give zest and interest to political discussions; and the individual citizen chooses his party according to the secondary principles for which it stands.

It is now necessary to call attention to a third factor that enters the discussion. In how far is the citizen bound to submit to party rule, to subordinate his own preferences to the authority of the caucus? In our democratic society, a wide-spread sentiment exists in favor of party allegiance; and, whenever such a sentiment exists, there is sure to be some element of truth blended with it, though, for lack of clearness in first principles, the limits within which that truth applies are not perceived, and monstrous and mischievous conclusions are put forward in consequence. Touching the submission of the individual citizen to the party caucus, I believe the following to be a clear and self-evident rule: Having once adopted the principles of a party, and as long as he continues to hold them, the citizen is bound by the party caucus or convention in all matters that relate merely to the application of the common principles; that is to say, in all matters of expediency. It would argue an intolerable insolence and egotism, if any citizen were to be allowed to break through the coherency of parties, simply because his opinions as to the ways and means by which the common principles are to be realized are not adopted by his fellow-members of the same party. Parties are necessary to accomplish the purposes of government. Only by the association of many for great political objects can these objects be fairly tested and triumphantly secured. In all such associations, the sacrifice of individual preference is the essential prerequisite for united action: to refuse such sacrifice is to paralyze the efficiency of parties, to block the machinery of government, and to reduce civil society to a condition of chaos. This proposition, however, does not need to be emphasized: it is commonly overstated rather than understated; and the essential qualification needs rather to be kept in view,—that the authority of the party applies only to questions of expediency. The conclusions, then, at which we have arrived, are the following: in all questions of expediency, the citizen is bound by the authority of his party; in all questions that involve secondary principles of national welfare, the citizen is free to choose his party and free to abandon it at any moment when its principles no longer commend themselves to his reason or when it proves faithless to these principles. And this freedom cannot be pledged away nor bargained away: it is one of those rights that appertain to citizenship as such. How much more, then, if this is true even of the minor principles of national welfare, must it be true of those primary principles by which the very existence of parties as such is conditioned! These primary principles, indeed, are not stated in so many words in any party platform. We are not accustomed to read in the manifestos of parties declarations to the effect that stealing is a crime, that the law of the family is sacred, or that honesty is a virtue. These primary moral truths on which the stability of states depends are not stated, because they do not need to be stated, because they are tacit assumptions implied in every party programme, because a party ceases to be a party whenever it rebels against these fundamental moral truths. These principles are the unwritten planks included in every party platform. But precisely because they are unwritten, because they are not specifically mentioned, it comes to pass that in times of great excitement they are altogether ignored; and the question may arise in the minds of those who think superficially whether parties as such have any concern whatsoever with this hidden foundation of the social structure.

The question before us, as I understand it, in the present Presidential contest, is a question touching the fundamental principles of political ethics. I may be deceived; but I do not believe that the two great national parties which to-day claim our suffrages are divided upon any of the secondary principles, the so-called political issues. We have arrived at a great ebb tide in the political life of the nation. The issues of the Civil War, and those that grew out of the war, have, in the main, been settled: new issues have not arisen, or, if they have, they have not yet acquired such prominence as to be adopted by either of the historic parties, and are represented by leaders in whom we have no confi-

dence and to whose appeals we cannot lend a willing ear. At such a time, it has come to pass that the character of the respective candidates has become the leading issue on which the contest turns; and in this discussion of character, whether we wish it or not, whether we approve or deplore the circumstances which have shaped the issue, the fundamental principles of political ethics have come conspicuously into the foreground. Is a high sense of honor essential in the character of the chief magistrate of this nation? Is a single eye to the public interest, without regard to private gain, essential? Is truthfulness essential? These are matters that ought to go without saying, yet they are points that are now indignantly raised. Is respect for the law of the family an essential in the character of the highest public functionary? This, too, ought to go without saying; but it is a question which is now being discussed.

On the one hand, then, we are confronted, in the Republican candidate, with a public man against whom the gravest charges have been proffered. The case of the Republican candidate is simple, and can be easily despatched. Let no one infer that we are lacking in intensity of feeling, in the profound moral indignation which such offences ought to call forth. I can imagine nothing more alarming than that the chief magistracy of the United States should be intrusted to the hands of one who is really guilty of one tithe of what this man is accused of. I only say the case is simple: the charges are plain. They are: the prostitution of public office for private gain, the espousal of the cause of a gigantic monopoly against the interests of the people, and falsehood on a scale of unparalleled audacity and magnitude. And these charges are made to rest, not on hearsay evidence or on the testimony of the candidate's enemies, but on statements made in his own letters, over his own signature, whose authenticity no one disputes. If a fair interpretation of these letters bears out the charges,—and this is not the time nor the place to pronounce upon that, that the common sense of every reader must settle for himself,—then, all I have to say is that the moral question is an easy and plain one; then, no matter what our party preferences may be, no matter what self-interest may dictate, so far from crowning such a candidate with honor, we should rather repudiate him with scorn, and to make it impossible that such a candidate, so stained and so dishonored, should ever again insult the American people by presenting himself for their suffrage. Public honesty is one of the unwritten planks in every platform. To elect a man to office who has proved himself dishonest is to outrage one of the primary principles on which the welfare of the State depends. If the charges are true, I repeat, then the moral question is settled.

In the case of the Democratic candidate on the other hand, judging from the bias of discussion in many circles, the moral question does not appear to be so plain. He, too, is charged with a grave offence; and, touching the main charge that is proffered against him, there cannot be any doubt; it is admitted; he himself has said, "Tell the truth." And yet many intelligent and moral citizens are arrayed on the side of this candidate,—not by any means, of course, all intelligent and moral citizens,—whose motives we respect and whose character we honor. They see in the most vivid manner the vices with which the opposite candidate is charged; they see the serpent of corruption coiling its deadly folds around our government; they fear that the treasury will be depleted by hosts of public plunderers; they predict that an era of general fraud will set in; that the integrity of young men,—of clerks, cashiers, and men who occupy offices of trust,—already threatened as it is, will be still further weakened if a conspicuous exemplar of these offences is raised to the supreme place of honor. And they think it almost treason that any one who has the welfare of the nation at heart should refuse to help to avert such a danger by polling his vote for the only other candidate who has the remotest chance of success. The Ship of State is sailing to-day into a narrow channel, with Scylla on the one side and Charybdis on the other. The party I allude to see very clearly the perils of Scylla, but do not see the perils of Charybdis, or, rather, they assert that there is no Charybdis. They maintain that we need only steer clear of Scylla, and then we shall be safe; that the offence of the Republican candidate is the only one we need to dread, against which we should rally all the

moral forces, while the offence of the second candidate is one that we may be permitted to ignore. Now, this the very point we are bound to consider. This is clearly a moral question, if there ever was one. Is the offence of the Democratic candidate one which we can or ought to ignore? I shall consider the points advanced in support of this position in order, and give my reply to each.

First, it is claimed that dishonesty in public officials directly imperils the State, while the offence with which the Democratic candidate is charged affects his private character only, with which the State has no concern. But surely there must be a great misconception underlying this statement. The offence with which the Democratic candidate is charged is a violation of the law of the family. Now, the family is the corner-stone of the State, the foundation of the national character and the national strength. If that foundation is sapped, the whole superstructure is certain to totter and fall. You are very anxious that public dishonesty should not be allowed to spread. Have you, then, never heard of the story of the goose that laid the golden eggs, and of the man who was so intent upon the possession of the eggs that he was willing to kill the goose? The golden virtue to which I allude is honesty, but the perennial source from which that and all other virtues come is the family. The family is the training school in which all the qualities essential to good citizenship are nurtured. In the family are developed reverence for authority, that indispensable element of citizenship; the sense of justice; obedience to law; respect for the rights of others, of which honesty is only another name. As society is now organized, and for centuries on centuries to come, the family must remain the only school in which the young can be trained to administer properly the trust of citizenship. Weaken the family, and you withdraw the underpinning of the entire political edifice. Is, then, the violation of the law of the family a matter irrelevant to the fitness of one who aspires to the highest political preferment? Is it a matter with which the State has no concern? You might as well say that it is the business of an army to fight, but that, in sending out an army, we need not trouble ourselves about the provision train which is to supply the soldiers with food while they are fighting. The family is the great commissariat which feeds the moral forces that enter into the political conflict. If you cut off this basis of supplies, your political army is beaten at the outset. The integrity of the family, in as deep a sense certainly as public honesty, is one of the primary principles of State welfare. It is not mentioned in platforms: it need not be. As a tacit assumption, it underlies all party programmes. A party would cease to be a party the moment, either by expressed words or by the selection of improper candidates, it contradicts that principle.

Secondly, it is claimed that the offence of the candidate should be ignored, because, if he is culpable, ninety-nine out of a hundred are culpable, to which I can give only the reply that on the 4th of November next we are supposed to elect, not the ninety-nine men out of a hundred, but the one man out of a hundred,—the one man out of fifty millions worthy to hold the highest office in the land. Have a care, my friends, lest in your zeal for one type of morality, which you deem all-important, you argue away the hope of moral progress in general. I am well aware that, when I hold up the integrity of the family as the vital principle of the State, I am holding up a principle to which the practice of but too many persons does not do honor. As when the deluge swept over the earth, according to the mythical story of the Bible, upon the subsidence of the waters there was formed at first only a thin crust of earth, while the muddy waves continued to heave underneath; but that crust deepened and deepened until at last it hardened into *terra firma*. So in the moral world. The thin crust to which I allude is the outward standard of respectability. We know very well that underneath that surface-cover the vices of society continue to heave, a dark and turbid tide. But these vices have at least the grace to hide themselves: they move under the surface, and that is one point gained. But now these vices seek to penetrate into the light of day, and we are asked to put the stamp of public condonation on that which should be kept under. Let us not do this thing. Let us maintain at least the outward standard of respectability: it is the beginning of better things. Let us not use the word

"hypocrisy": such hypocrisy is the homage which vice pays to virtue. Let us maintain this outward standard, so that it may solidify more and more into an inward standard, and become at last the *terra firma* of a new and nobler earth. And now to turn again to the argument of culpability, and the plea that such culpability is general. I cannot concede that this is so. The offence of the Democratic candidate is one that stands apart as peculiar from the common transgressions of the world. In young blood and fervid passions, much may be forgiven; but another judgment should be rendered, when the offender has reached the mature age of thirty-five. Furthermore, the offence was directed not only against the souls of two adult persons, but it was a sin against childhood; and this seems to me to be the most serious part of the charge, that which terribly aggravates the charge. When the mother of two children goes astray, what is it that honor and manliness should dictate to any one who is not bereft of his reason by passion? Why, honor and manliness would dictate an attempt to recall such a mother to the path of right, to remind her of her duty, not only to herself, but to her children. But what shall we say of one who, in the mature years of life, not only does not make any such attempt to recall the mother to her duty, but helps her on the downward path,—helps her to put the brand of shame on those innocent children's brows. Is he a man fit for the Presidency? I cannot believe it. I cannot persuade myself of it. I cannot indorse it by my vote. Do you say that the State has no concern with such actions, that the family is one organism and the State another, with no intimate interdependence between them? Tell me, has the State an interest in preventing the physical degeneracy of its citizens? Does or does not a nation succumb in war and rot in peace, when the citizens grow weaker and weaker in their physical constitution? Has the State an interest in preventing illiteracy, and, above all, the increase of the criminal classes? Are not all these first-rate State interests? Well, then, whenever the law of the family is violated, whenever children in large numbers are reared outside of the family, the unfailing results are the physical degeneration of the race, the spread of illiteracy, the increase of crime. Read the story of Rome under the emperors! Study the causes that contributed to the decline and fall of that proud and splendid civilization, and you will judge whether the integrity of the family is of importance to a State or not. Nay, why go so far? Read modern statistics to convince yourselves. Hear what an eminent French statistician tells us: that, of every four children reared outside of the family, three do not live beyond the twelfth year, and one is almost unalterably dedicated to a life of crime. Read the reports of the Prison Association of New York, where you will find that, of six hundred and thirty-three criminals confined in a certain prison, three hundred and forty-three were brought up outside of the family. Hear again what a statistician tells us: that, of eight thousand youthful criminals in France, well-nigh five thousand were children reared outside of the family. Does this immense increase of criminality not affect the well-being of the State? I say that any one who, by his example, has helped to add to the weight of this great curse upon the State, whatever his qualifications may be in other respects, is in so far and to that extent an enemy to the State, not one to be selected as the chief guardian of its interests.

With some of the minor points of the defence we can now deal summarily, because their logic is too feeble to call for an extended discussion. It is said that, if our objection against the Democratic candidate is valid, it would have ruled out some of the most eminent statesmen of America from our country's service. To this, I reply that there is the greatest difference between the vague rumors of a campaign gossip, which no one can verify, and an offence which has been investigated, proved, and confessed; that, moreover, the present political contest, unlike others in previous times, does not turn upon any great political issue, but upon the character of the candidates; and that, if we are so strenuously asked to pronounce against one candidate, because of a fault in his character, we cannot ignore the fault in the character of the other; that the question for the American people to settle to-day is not whether the one candidate or the other will give us a good administration when elected,—we may reasonably expect that either of them will give us a better administra-

tion than their opponents predict,—the question is not what the candidate will do after he has obtained the office, but whether he is worthy to obtain it; not how he will act after he has entered the White House, but whether he is worthy to pass its gate. It is a great decision on the qualities essential in the candidate which this election is designed to render, a question far transcending in importance the fortunes of our government during the next four years. It is not a man whom we are electing this year, as has been well said in one of the leading partisan journals of this city, "but a national standard of honor." Well, then, it behooves us to say whether we include in the national standard of honor honesty only, or whether our self-respect as a nation requires that we should include the element of moral cleanness as well. Again, it is said that one candidate confesses his fault, while the other seeks to extenuate and excuse it. But I have never heard that, because an accused person enters the plea of guilty, he should therefore be exempt from the punishment that is justly due his offence. It is said that the Democratic candidate is deeply penitent, and we are asked whether it does not argue an extreme harshness and an extreme uncharitableness to be unwilling to forgive him; whether it has not been said, "Though your sins be as scarlet, they shall become white as snow." Well, then, to this I will reply that the question of penitence is of the utmost importance in regard to the state of a man's soul; but we, as citizens, are not concerned with the state of the man's soul. He may be penitent or he may not: there are contradictory reports; but the question of penitence is outside the discussion. In a celestial court of inquiry, it would be important: in a celestial court of inquiry, many of those who rank highest with us on earth might be sent to the bottom, and many of those who to us seem guilty might be raised to the top. But we, in our terrestrial affairs, can judge of men, not according to the state of their souls, but according to their actions. We, the body of the citizens, are asked this year to elect "a standard of national honor"; and it is for us to say whether we are willing to include the actions, the record of this public man, as a part of the national standard of honor or not. I remember that a few years ago there came to me a man who had committed the crime of murder. He had done so under great provocation. He had suffered for his crime for years in jail. At last, he was pardoned. I conversed with him often and for hours. So far as I could judge, this man had indeed risen to a higher plane through his terrible moral experience; and yet would it have been right to have offered his name even for the smallest office of public trust? It was right, his record having been what it was, that he should thereafter walk in obscurity and bear the penalties of his transgression as a part of his inward purification.

Again, it is said that all this may be so, but that we are under a mistaken impression; that election to the Presidency does not mean a public coronation; that we select a President because of his special fitness to do certain things,—to execute the laws, to transact the business of the country; that we choose a President as a merchant would choose a clerk. But to this I reply that the chief magistracy of the American people is, in my humble estimation, a very great honor indeed; that it is not only so in my opinion and that of others, but that the Constitution has expressly designated the Presidency as a place of honor. The President of the United States not only executes the laws, but he receives ambassadors, he exchanges courtesies with foreign sovereigns, he presides over the hospitalities of the White House, and thus gives tone to the society of the capital, and through this channel influences the tone of society throughout the country. In all these respective functions, the President is clothed with the dignity of the most exalted office, and stands forth, not as a clerk who does his employer's bidding, but as the living representative of the collective sovereignty of the entire American nation.

And, once more, it is urged that we are demanding an ideal man, but that plain people know that in practical politics we cannot apply the ideal standard, and must be content with something short of that. But we ask whether we are indeed applying an ideal standard when we demand that candidates for the highest office shall not be selected among those who have grossly transgressed, who are deficient in the moral A, B, C, who have violated one or the other of

the primary principles by which the coherency of human society is guaranteed.

Lastly, it is urged—and this is the argument that perhaps appeals to the greatest number—that we may wish, indeed, that we had better candidates, but the fact is we have not; that the government must go on; that one or the other of the two leading candidates is sure to become President; and that we are bound, therefore, that it is our duty as citizens, to vote for either of the two. But consider for a moment what a reflex light this proposition, if it were true, would cast on some of the best pages of American history. Arise, shades of Wendell Phillips, of William Lloyd Garrison, and ye the champions of the Free-Soil party, who went to the polls for years to deposit your votes for candidates of whom you were sure they could not be elected. You were all wrong. You were not the patriots we supposed you to be. On the contrary, according to the wisdom of our new political sages, you were citizens who betrayed their trust. You should have voted for one of two candidates, neither of whom you could approve of. What if, by not so voting, by standing out against party dictation, you infused a higher principle into the politics of the country, what if you caused the politicians themselves to adopt higher standards, and contributed toward the formation of the new party on the nobler platform? You should have foregone all these ultimate results. You should have asked yourselves, in the election now pending, which of the two candidates is the lesser evil, and cast your votes for him.

The argument that the government must go on is indeed a feeble one. There is never any danger that the government will come to a stop; there are always enough persons who will see to it that a President is elected. The true reason why every citizen should vote, if possible, is in order that a part of the people shall not usurp the sovereignty which belongs to the whole. But such a state of things has already come about. A part of the people, a very small part, the political leaders who rule the party caucuses, have in a measure usurped the sovereignty which belongs to all. They are the ones who have prepared for us this so-called choice of evils; they seek to yoke us to this alternative; they are now wielding the party lash to whip us all into the traces. And it is for us to resist this dictation of the politicians, to affirm that the citizen's vote is his own vote to the extent that he must put his own conscience into his ballot, and thus to rescue the principle that the sovereignty belongs to the whole people, to every member of the people, to be used according to the dictates of his reason.

When the caucus of my party has decided upon a matter of expediency, I am bound to submit. When one or the other party proves faithless to a political principle which I consider sound, I have the right to turn my back on that party. How much more, then, when both parties, in the selection of their candidates, prove faithless to those fundamental principles whereon the whole political edifice rests, is it my right and my duty to wash my hands of the uncleanness of both parties, to abandon both parties, even if in so doing I am compelled to stand alone. But I shall not stand alone. In the country towns and villages—yes, and in the cities, too—there are men, not a few, who feel an intense disgust at the predicament in which the political leaders have sought to place us; who feel that, when the charges against the candidates became known, it would have been the duty of those who represent the intelligence and the morality of the community to demand that a new and entirely clean candidate be put in nomination, no matter how the election might have gone in consequence; who feel that the so-called Independent party have missed a golden opportunity in not coming up to their duty in this matter; and who are determined, so far as they themselves are concerned, to vote strictly according to their consciences. There is still something of the Puritanical fibre left in our people. There is a growing though silent revolt of the better moral instincts of the masses going on; and it should have been the part of the intelligent to lead these instincts, instead of to fall below them, as they have actually done.

I love my country. I do not believe the libel which they are trying to put upon her. I do not believe that among her statesmen there could not be found those who are intellectually able and morally clean. I do not believe that, if England can boast of her Gladstone, a man of commanding ability as a statesman and of the most stainless

private life, we, in this country, should be so poor as not to find any one in our midst who is both intellectually vigorous and unexceptionable in character. I believe that such men exist, though it may not be the interest of the politicians to put them forward. But if only the better elements hold together, if we strike out for a higher standard of national honor than that which is commonly accepted, if we show that there is indeed a conscience vote in the country, we may not be able, indeed, to avert the result of the pending election, but we may be able to avert that candidates should ever again present themselves for the suffrages of the people of whose moral fitness there is the slightest doubt.

At such a time, then, as this, I believe it right that we should look about among the candidates; and, if we find any one whose character is strong and whose record is stainless, that we should cast our votes for him, no matter on what party platform he may stand. For, in this contest, party platforms are not at issue, and character is all in all.

I, for one, do not believe that this country is going to be ruined during the next Presidential term, whoever is elected. This giant land that stretches downward toward the Southern Seas and is washed on either hand by the waters of the Eastern and Western Oceans, this Titan America, is too full of the redundant energies of youth to be ruined in a single Presidential term. But this, it is conceded on all sides, is not the question at issue. The question is whether we shall introduce into the blood of this young land the seeds of a moral disease which will eventually poison its entire system, and cause it to sink into that grave where so many republics already lie buried. The one kind of moral disease with which we are threatened is public dishonesty: the other is a weakening of the law of the family. I consider both kinds of disease harmful and fatal. I cannot undertake to decide, as some do, which is the greater evil. I cannot undertake to drive out Satan with Beelzebub. I regard both as detestable evils, and can encourage neither by my vote.

When the armies of Great Britain had at last grown weary in the struggle with the colonies, when peace was signed at Passy and the Revolutionary War was over, the representatives of the States, in committee assembled, issued a proclamation, in which they invited the people to hold a public thanksgiving in honor of the completion of our Independence. That thanksgiving was held on the 19th of October, 1784, just one hundred years to-day. It was a time of unspeakable promise and hope. A golden prospect was opening for the young Republic, but there were also hidden perils lurking in the distance. The hearts of the fathers of the Republic were anxious, and among the things which they especially prayed for in that solemn hour of dedication were these: that the citizens might ever be filled with an earnest regard for the national honor, and that young men might be raised up eminent for their virtue to the service of Church and State. It seems to me that these words of the thanksgiving's proclamation of a hundred years ago should reverberate in our hearts to-day, that the supreme duty of the hour for us is to see to it that the citizens retain an earnest regard for the national honor in its highest acceptation, and that the men who are raised up to the service of Church and State shall not be men who are conspicuously deficient, but men who are eminent in those fundamental virtues whereon the true welfare of peoples and governments depends.

CORRESPONDENCE.

MILWAUKEE CORRESPONDENCE.

Editors of The Index:—

The question of opening the Milwaukee Exposition on Sunday has again been agitated. The management, after consideration of the matter at various meetings, decided negatively. "Let well enough alone," was the final dictum. The Personal Liberty League made a vigorous stand on the question, and sent circulars all over the State, requesting responses with regard to individual opinions as to the desirability of the Sunday opening. The excitement incident to the Presidential campaign has overshadowed this question, and but few responses were received. The League will not let the subject die, and another year will widen the sphere of action. The increasing interest shown each succeeding year indicates a prob-

able future decision that will be favorable to the opening of the Exposition on Sunday. A pressure may be brought to bear by the non-attendance of those opposed to the closing on Sunday. Mr. Herman Boppe, president of the League, introduced a resolution at a recent meeting declaring it was the sense of the meeting not to recommend to their friends to visit the Exposition, which was adopted. A gentleman at the head of a large manufacturing establishment said to me that a weight might be thrown in the scale of such non-attendance by the hundreds of employés in his own factory and other hundreds in other manufactories refusing to attend the Exposition, unless it was opened on Sunday. The right of reasonableness is on the side of the Sunday opening for working men and women, and by continuous agitation of the question such right will ultimately win.

The Personal Liberty League is also engaging in political work. Agitation committees have been appointed in the assembly districts, with instructions to exert their influence upon all parties actively engaged in elections in favor of the aims advocated by the League, and to see that only such candidates are nominated for the assembly who, if elected, will work in their legislative capacity for the interests of the League. Immediately after a nomination for the State legislature has been made by any party, the agitation committees are to call on the candidate, acquaint him with the objects of the League, and ask him for a written declaration concerning his position with reference to the League, and at once report to the chairman of the executive committee that an opportunity may be given to inform voters by means of the daily papers concerning the position taken by the candidates. On election day, the agitation committees are to see to it that representatives of the League are stationed at every poll; circulars are to be sent to all candidates nominated for the legislature, asking them for pledges to oppose all attempts at the passage of Sunday and prohibition laws and to use their influence to secure the repeal of obnoxious laws trespassing on personal liberty. The formation of clubs, as members of which all legal voters might be admitted who, without regard to other party affiliations, favor the election of liberal-minded members of the legislature, is recommended for every assembly district.

Agitation of the question of incorporating manual training in the Milwaukee public school system is being actively carried on. The arguments in its favor are largely based upon the growing demand for skilled labor in the handicrafts, as well as upon the ethical value of a knowledge of the useful arts and the healthier mental and physical influence consequent upon combining manual with intellectual training. In a city which has been second to none in the adoption of needed reforms in its public schools, there is little doubt that the experiment of industrial schools will be tried. Manual training supplementing the secularization of our schools are experiments in ethical culture which rationalists rejoice over as heartily as the churches deplore them. A few days since, at the exercises incident upon the opening of an Episcopal parish school, a Milwaukee divine rivalled Monsignor Capel in invective against the American public school system. "They teach all things," he said, "but the one thing needful,—to make good Christians. In spite of all the years of public schools in this country, crime has been on the increase. Parents are growing more and more anxious concerning the physical condition of their children. Their food, their clothing, their school-rooms, all receive attention; while their religious culture is neglected."

Well, that is exactly what we have been working for many years; and there is this recompense, spite of such behind-the-time ideas,—a minister's indorsement that the emphasis is beginning to rest upon the idea of *physical morality*.

In an atmosphere of rational ideas such as surrounds the supporters of *The Index*, it is sometimes difficult to believe how much of ignorance and superstition remains among fairly intelligent people, in some districts. It would be difficult for you to conceive of a community satisfactorily settled in the old ruts of religious notions, that has never been disturbed by a doubt of the authority and sanctity of the parish parsons, has never questioned their threadbare platitudes, if you had not, like myself, seen such a one and dwelt in the midst of it. I did not be-

lieve such a place was possible in this pushing, progressive State. Still more difficult is it to believe that in a city pervaded with rationalism, and where intellectual culture prevails, seasoned as it must needs be to-day with scientific investigation and liberal thought, a minister over a large and intelligent congregation can remain so deep in the ruts of intolerance and ignorance as to carry into a household stricken with the sorrow of a death parting the torturing horrors of an eternal hell, can hold up to sorrow's eyes the picture of a soul "forever cursing" its earthly friends because it was "allowed to go unprepared to meet its God"! But this, terrible as it is, is true. And such torturing words were inflicted upon a loving family, simply because the dying one was spared by them from talking and dwelling upon death. The dying one, too, was a believer in the Christian doctrine, a member of an orthodox church, and had striven by her light to live a Christian life. What did the parson want more? This family, too, were believers and church attendants. In view of what was said by him under these circumstances, it baffles imagination to guess what his Christian doctrine would furnish by way of consolation to the sorrowing relatives of dying unbelievers. Can we know these things as present and reliable facts, and remain passive under our obligations to promulgate Free Religion? Ought we not, in view of them, to become propagandists of a religion so full of sweetness as well as reasonableness? Should we not spread its gospel, which disarms death of the terrors rooted in superstition, softens the pangs of separation, with or without the hope of immortality, by the knowledge it brings that death in its natural form is not only inevitable, but in harmony with the method of the universe, and the simplest safest solution of prolific life?

The following, found among an advertised list of subjects, comprising a series of Sunday sermons on the future life, are suggestive of the soothing influences that surround the Christian contemplation of death: "The Nature of the Sinner's Future Punishment"; "The Punishment of the Wicked will be Eternal"; "The Justice of God in the Eternal Punishment of the Wicked."

MILWAUKEE, Oct. 6, 1884.

A REPLY TO MR. M. D. CONWAY.

Editors of The Index:—

Returning lately from a visit to the Unitarian Conference at Saratoga, I was on the point of sending you some notes of my impressions on the contrast between American and European organized Unitarianism, when I saw in *The Index* of October 2 the "Apologia" of Mr. Conway; and, dissenting as I do very strongly from some of its positions, would answer the American's notes on England before I send you the Englishman's notes on America.

While I dissent from very much that Mr. Conway says on the reasons which led the Unitarian Association to "give him the cold shoulder," if I may quote his own words, I will, to avoid personalities, leave this question undiscussed, and confine myself to his remark on English theism, on which he says: "Theism means belief in God; and, since then the name of God has been legally and politically defined. The nation has been authoritatively given to know what God means. It means a proud monarch, for not believing in whom a parent must be deprived of a child, men must be dragged from their families and shut up in gaol, members of Parliament must be deprived of their seats, and constituents dishonored, and ladies refused admission into seats of learning." And further, "The name of God has been of late so degraded, it has been so adduced to label public meanness and wrong, that it can never be utilized for any organization that shall represent the supreme ideal and aim of a free and civilized people."

Now, Mr. Conway puts himself outside of criticism in this sentence, because he avoids mentioning the special cases on which he would rely to substantiate his statement, and states a half-truth in such a way that it conveys an inaccurate impression. There are three persons in England, avowed atheists, whose names at once occur to the memory in connection with such phrases as the above. These are Mrs. Besant and Messrs. Bradlaugh and Foote. Mrs. Besant has, I believe, suffered a very great wrong; but, as far as I know, the case was so complicated by non-theological issues that it is not a fair instance. I know theists who are among Mrs. Besant's most

passionate partisans, and atheists who are opposed to her on what they call ethical grounds.

The second statement of Mr. Conway, that theism means a God, for not believing in whom men are dragged from their families and shut up in gaol, refers, to the best of my knowledge and belief, to the case of Foote and Ramsay, who were condemned by Justice North, on the prosecution of the corporation of the city of London, to one year's imprisonment for the publication of indecent and blasphemous pamphlets. Now, I voted with the majority of the members of the British and Foreign Unitarian Association, in May, 1883, in favor of a petition to Parliament for the immediate release of Messrs. Foote and Ramsay, simply because I am a Christian theist, and believing that I was following the example of Jesus, and, as in the Abner Kneeland case, of William Ellery Channing also. Had I been a Conwayite, I should have said, "This pretended friend of the atheists has irreparably damaged our cause by his atrocious indecency; and, since our opponents have punished him, let us hope that he will learn in future to be more circumspect in his language." I have many friends who are atheists and agnostics, both in Germany and in England, but not one who fails to appreciate the human beauty of Biblical poetry, even though he may regard it as mythical. But Messrs. Foote and Ramsay had chosen Christmas time, which is so intertwined in the hearts of the English people with that domestic poetry of which, alas! they have far too little in their Philistine homes, as a time to send into households of fervent Christians the most disgusting attack on their faith that I have ever yet seen.

I remember particularly two pictures in Foote's Christmas pamphlet. One referred to that passage in which Moses, desiring to see God, is put in a cleft in the rock, and may only gaze upon his hinder parts; and the picture represented an old man turning to the spectator the many-patched seat of a pair of trousers! The man who can thus drag the exquisite poetry of the Hebrews in the mud of the London slums is fit only for a lunatic asylum. The other picture referred to the words of Jesus to his mother, when he had been disputing with the doctors in the Temple: "Woman, what have I to do with thee? knowest thou not that I am about my Father's business?" The picture represented Mary as an old hag, and Jesus as a young hoodlum, with the words, "Jesus jawing his mother." Now, Foote was not an ignorant man. He had education enough to appreciate decency, and he had not the slightest excuse for such gross indecencies as the above mentioned. When we discussed the question, first in the Council and afterward in the annual public meeting of the British and Foreign Unitarian Association, I regretted very much that the motion of Mr. Elwin Lawrence, one of the chief supporters of the *Christian Life*, to register the names of those who voted for or against the motion to petition for Foote's release from punishment, was not accepted. It would, I think, have shown that the believers in second-hand Christianity, who are guided by fashion, were mostly opposed to the motion, while precisely those whose theistic faith was the strongest were for letting the men go unpunished, save by the contempt with which most fair-minded men would regard their disgusting indecency; while Chief Justice North, by inflicting upon them a punishment very much heavier than that which Lord Saint Leonards had to suffer for his attempt to commit an indecent assault upon a servant girl, led the working people of England to suppose that the law was severer for the poor than for the rich. But, in view of the fact that the most thorough-going theists of England, the liberal wing of the British and Foreign Unitarian Association, petitioned for the release of Ramsay and Foote, it is manifestly incorrect on the part of Mr. Conway to identify theism with their prosecution and punishment.

Then Mr. Conway says that members of Parliament must be deprived of their seats and constituencies dishonored for not believing in God. Is Mr. Conway, after twenty-two years' residence in England, so innocent as to believe that the members of the House of Commons who voted against Mr. Bradlaugh's admission to that House are less atheistical than Mr. Bradlaugh himself? If so, he has a better opinion of them than I have, of such men at least as Lord Randy Churchill and Baron de Worms. Mr. Bradlaugh, as a defender of the rights of the English Proletariat, has advocated the abolition of perpetual pensions and other means of helping useless aristocrats like Lord R

Churchill's brother, the present Duke of Marlborough, whose late appearance as defendant in the divorce court against the suit of his wife was such a peculiar sample of the way in which the British nobility practise the motto, "Noblesse oblige," in order to live in luxury without labor while England's working men and women are starving. Mr. Bradlaugh is the author of a work entitled *An Impeachment of the House of Brunswick*, and so men oppose him to curry favor with our pleasure-loving Prince of Wales.

But I do not think the Prince of Wales is a theist. He must, of course, if he would ever be King of England, subscribe to the act of Parliament Church. But I rather suspect that he is nothing more than a virgin worshipper,—not indeed of her whose name has been idealized in past centuries by poet and painter and saint, but of those ancient virgins, like Sarah Bernhardt, whom from time to time my fashionable countrymen, and yours, too, import from Paris when they are worn out there, whose altar is the stage, their church the theatre, and their liturgy the filthy trivialities of Parisian playwrights. Gladstone, who, however illogical his theological writings may be, is really an honest believer in a personal God, has done all that lay in his power to secure Bradlaugh's admission to Parliament; but those whose chief idea of heaven is a prince's favor vote for his exclusion, and are only too glad to use his atheism as a cloak for their true motives.

The fourth statement, that ladies are refused admission into seats of learning because they do not believe in God, can only refer to the exclusion of Mrs. Besant and Mr. Bradlaugh's two daughters from the ladies' classes of University College. Now, in this case, the supposed atheism of these ladies was not even made the pretence. For, when James Martineau, the most spiritual of theists, was proposed as professor of moral philosophy at University College, he too was rejected. And, while I am convinced that the real motive for Mrs. Besant's exclusion was simply a desire to curry favor with the court, the published pretence was her publication, in company with Mr. Bradlaugh, of an alleged immoral or indecent work. Now, I believe that Mrs. Besant's action in this matter was unwise; but the action of the people who excluded her was far more indecent, far more unchristian than her own.

What Mrs. Besant said to the Proletariat of England was, in effect, the following: "Through the selfishness and injustice of a pampered and state-endowed Church, and the dishonesty of an ignoble nobility who pocket the nation's taxes without performing the duties of their feudal ancestors, you are deprived of the bread of life, physical or moral. The shameful self-indulgence of your so-called betters has a more profound influence upon your lives than the lofty Puritanism of the Unitarians and Christian theists. We cannot alter this. So long as such infamous wrong is done in high places, we cannot expect you who have been deprived of all means of moral discipline to practise that self-control which is the condition of all other virtues. At any rate, I will try to teach you at least how to prevent your self-indulgence from killing your wives and giving life to children who, if the popular theology be true, are only candidates for hell in the next world, and, whether it be true or not, are likely enough to raise hell in this. I will teach you to imitate the means used by the slaves of fashion in the so-called respectable classes of society to avoid the responsibilities of parentage."

Not a sweet or noble gospel this, I grant you; but who that has read *The Bitter Cry of Outcast London* can deny that even so poor a message as this is infinitely better than the hell to which the mothers and children of the London Proletariat are condemned by the brutish self-indulgence of their husbands and the shameful neglect of our nobility and our priesthood?

To me, the treatment to which Mrs. Besant has been subject seems most unchristian, if Christianity be what is taught by the Evangelists and St. Paul; but Mr. Conway has no right to charge this to theism, Christian or non-Christian.

The Lord whom these sham respectabilities worship is not the Lord God of hosts, but a creature like Lord Saint Leonards or the Duke of Marlborough. And, if I understand Mr. Conway's action aright, I much fear that his teaching in these later days rather encourages this tendency to self-indulgence, and hypocrisy. The worst of all atheism, to my mind, is

the combination of unbelief and conformity; and Mr. Conway, who had for some years past been preaching the Gospel, not of Matthew, Mark, Luke, or John, or Paul, but that of Saint Rabelais, has seemed to me to be among the forces which emasculate the society of England rather than those which strengthen it.

When Mr. Conway says that he has found the Church more liberal than Unitarianism, the reason is not hard to find. It is because the authorities of the Church, for the greater part Christians or unbelievers, know that Rabelaisianism is far more favorable to acquiescence in false creeds, and all the social hypocrisy that accompanies them, than a clear and honest theism, which, fearing God, is not apt to bow the knee before the princes of London or of Washington. I, too, have felt the enchantments of Church of Englandism. Like Tannhäuser, I have been in her Venus cavern; for I was educated at the Diocesan School of York, and I have only grateful remembrance for my teachers; but all that was best and strongest and most heroic in the modern life of England I have found among the Christian theists or those secularists who had spent at least a part of their lives under the inspiration of theism.

JOHN FRETWELL.

THE PRESENT POSITION OF THE NATIONAL LIBERAL LEAGUE.

Editors of The Index:—

There seems to be a misapprehension in the minds of some as to the nature of the declaration of the late Congress of the League. I will state what I think was clearly in the minds of all those who participated in that Congress.

The Congress specially declared that the Nine Demands of Liberalism as adopted at Philadelphia in 1876 should hereafter be the basis of union, and should define our mission as free thinkers and reformers.

What is the meaning of this declaration?

It means that, beyond the Nine Demands, the League is committed to no particular political action. Each member is left to his own personal judgment.

Therefore, whoever joins the League and partakes in its action commits himself only to the Nine Demands,—that is, to State secularization.

On the question, therefore, of repeal or modification, the League now stands where the original Congress of 1876 stood. It leaves the question open for its members to decide according to their private judgment as to the wisest method by which the rights of free thought can be maintained.

On this question, Liberals are divided. It is a question that involves in its settlement principles that go beyond the scope of the Nine Demands. The League therefore cannot declare in favor of either repeal or modification. It is objected that there was no rescinding resolution at the late Congress; and, because one Congress has declared in favor of repeal, therefore the League is permanently committed to this policy.

This is not so. The voice of one Congress is not the voice of a succeeding Congress; and, unless the resolutions of a previous Congress are reaffirmed by a succeeding Congress, they do not stand as the voice of the League. This is the express declaration by resolution of the League itself. It says "that resolutions heretofore or hereafter passed by the annual Congress of the League are no test of fellowship in the League, but simply express the sentiments of those voting for them, and of the particular Congress of which they are a majority."

These words plainly declare that the League is not now committed to the policy of repeal; and, therefore, both those who are in favor of repeal and those who are in favor of modification can harmoniously work together. Experience shows that there is an honest difference in this matter, but that does not prevent an entire unity of action on the basis of the Nine Demands.

SAMUEL P. PUTNAM,
Secretary of National Liberal League.
NEW YORK, Oct. 13, 1884.

[We are glad to print the above official statement that the League no longer asks for the repeal of postal laws against the transmission of indecent literature through the mails, and that henceforth its efforts will be devoted to the work of State secularization. If it shall in good faith confine itself to this work, its past mistakes and inconsistencies will be overlooked, and it will be judged by its fidelity to its

declared objects. During the past six years, through evil and through good report,—chiefly through evil report among the adherents of the League,—we have persistently opposed the repeal folly which wrecked the organization: it is not strange that we have with satisfaction witnessed the total collapse of the repeal movement. The spirit manifested by some of the members of the Cassadaga Congress toward the active opponents of the repeal policy, and the fact that the League is yet to some extent controlled by those who are in actual sympathy with that policy, shall not prevent our recognizing, although with no thanks to them, the practical failure of that agitation which the League, its present leaders declare, has abandoned, nor prevent our noting the official announcement that in future the League will confine its efforts to the original objects of the organization. At the same time, we must say that consistency and honesty demanded the rescission of the repeal resolutions passed at previous congresses of the League. Resolutions are supposed to be expressive of the views and purposes of an organization until rescinded or rendered null and void by subsequent resolutions or by circumstances which make them inapplicable to a changed condition of affairs. The League, in its desire to adhere to the repeal policy, and yet to secure the co-operation and support of those opposed to it, has, at several congresses, done some strange things not to be explained upon any logical or rational principles. Is the particular resolution Mr. Putnam quotes, which was not reaffirmed at Cassadaga, to be regarded as expressing the views of any other congress than the one that passed it? If not, why is it cited to prove that the League is not bound by the resolutions passed previous to the last Congress? If it is to be regarded as expressive of the League through all its congresses, how is it that this one resolution, which is no part of the constitution, can bind all the congresses held subsequent to its passage, when all other resolutions, and even the Nine Demands of Liberalism, in order to continue as a legal expression of the League's position, have to be reaffirmed every year? Perhaps we should not question too closely the past proceedings of the League. Let us hope now that it will keep to the "principles that do not go beyond the scope of the Nine Demands." We do not believe there is any danger of a return to the repeal agitation. It never could have obtained organized support but for the false interpretation of postal laws in the cases of Heywood and Bennett. But there are indications now that the professed objects of the League will be subordinated to the promulgation of the views of its managers on other subjects than State secularization. Already, Mr. Putnam has issued a circular which confounds State secularization with secularism, and which speaks of our "noble secular faith," while calling for the support of all who believe in the separation of Church and State.—B. F. U.]

THE editor of the *Truth-Seeker* writes: "I inferred from your note that you thought the attendance at the League Congress was not quite so numerous as your reporter gave it. That others got the same impression I know, from the fact that I was asked by the ex-president of the League to correct you. If you did not intend to be unfair, I have no further grievance on that point. But your language, and the way you used it, gave coloring to the view taken by Mr. Wakeman, myself, and others. . . . But I have a bone to pick with you for saying the *Truth-Seeker* dishonestly suppressed a certain incident occurring at the Congress. I suppose you allude to the election of a long list of vice-presidents, and the subsequent reconsideration of the vote. In the interests of harmony, I was asked not to print that by all the leading Leaguers, whom you would call the 'better element,' although I do not recognize any such element. All the people, so far as I know, at the Congress, were good enough for me to associate with. If by following the advice and heeding the requests of your 'better element,' I lay myself liable to the charge of being dishonest, hadn't I better the next time listen to the 'unworthy characters' who 'so largely influenced the action of the Congress'? And, by the way, won't you kindly mention the names of these unworthy characters? I have been applied to by several for information as to whom you could mean, but I am unable to even guess. Names, please. . . . As to your charge, that 'it was well understood at the Congress that the *Truth-Seeker* would become the virtual

organ of the League,' I can only say that the *Truth-Seeker* is the organ of no organization. It is not in any way controlled by the officers of the League, and it does not desire to in any way control them. It will help the League as it always has done, but no more, I presume, than the other liberal journals will be glad to do."

[We have given above so much of the letter as aims to correct or explain what we stated recently in regard to the *Truth-Seeker*. 1. The inference that we intended to convey a meaning which was neither expressed nor implied in the language used was unwarranted. Our report gave the number in attendance, and our statement as to the number who were delegates was made on the authority of the *Truth-Seeker*. 2. If the leading Leaguers composing the "better element" (an expression quoted by us from a letter from a member of the League) advised the editor of the *Truth-Seeker* to suppress the truth in regard to portions of the proceedings, knowledge of which was necessary to a correct understanding of the action taken, the fact does not change the moral quality of the act, although the motive may not have been bad. As a free-thinking journalist, the editor of the *Truth-Seeker* should not have been swerved from an honest and fearless statement of the truth by any "element." His duty was to publish a fair and faithful report, or none at all. 3. As to "unworthy characters," the editor of the *Truth-Seeker* has his views, and we have ours. Our reference to some of the persons at Cassadaga was made from knowledge, and was just; but giving their names,—which in fairness would require statements with proof,—when the persons are unknown to the liberal public, and have no influence outside of the League, would serve no useful purpose. 4. That the *Truth-Seeker* is "controlled by the officers of the League" we have not stated, although its editor admits that he suppressed certain facts in the proceedings by their advice. Immediately after the Cassadaga meeting, we were informed by a reliable person who was present that it was understood the *Truth-Seeker* would be the "virtual organ" of the League, and two or three weeks afterwards *Man*, its organ, was merged in the *Truth-Seeker*, as was consistent; for, of all papers, it has been the most prominent and pronounced in advocating the "repeal" movement.—B. F. U.]

For The Index.

WHENCE AND WHITHER.

Leaving the branch of a forest tree,
And falling to earth as the sun went down,
Resting on mosses, alone it lay,
An acorn of green in a cup of brown.

Stooping, I raised up the dormant thing,
And I felt the throb of a heart within:
Fallen so low, it would rise above
The earth and the mould where its hopes begin.

Embryo life of the mighty oak,
Asleep in thy shell, to thee I appeal:
Wrapped in thy silence and solitude,
Oh, what of the future canst thou reveal?

Fathomless secret of birth and death!
I weary my soul in its fruitless quest:
Mystery deep as the realm of truth
Enfoldeth the home of our final rest.

JULIA CLARK CHASE.

MADISON, WIS.

THE executive committee of the North American Gymnastic Union (Turner Bund) have issued a circular address, protesting against "all prohibitory and sumptuary laws." While condemning the abuse of alcoholic drinks and of "each of Nature's other gifts as well," and approving of laws "for the punishment of every offender against the rights of his fellow-beings or against morals and the good order of society," the address says: "We must and do protest, however, against that mediæval system of attempted law-making, which at best destroys the rights and curtails the liberties of the many on account of immoderation and vices of the few; and we hold that, by a natural law, which found expression in our National Declaration of Independence in the words, 'Governments derive their just powers from the consent of the governed,' all such attempts at patriarchal legislation are forbidden; and that no true power exists in any State or municipality to

destroy the free agency of any one human being, because of the possibility that another may abuse the liberty guaranteed to every one by our national Constitution. Neither do we now place much stress upon the established fact that 'Prohibition fails to prohibit' beyond pointing to it as but another demonstration that prohibition is wrong in principle. No extreme measure can ever live or be enforced in any community without both the moral support of that community and the conviction on the part of those intrusted with its execution that it is right and just in principle; hence the failure. We oppose all prohibitory and sumptuary laws as being: 1. Wrong in principle; 2. A perversion of true governmental functions; 3. Destructive of human free agency, of self-respect, and character; 4. And as but poorly disguised attempts to force the private opinions of one part of a community upon the unwilling minds and rebellious consciences of the other." But, since the abuse of alcoholic drinks is so common and the results so frightful, bearing directly upon the most important interests of every community, society certainly has a right to put such restrictions upon their sale as experience teaches are effective in lessening the evils of the traffic without violating the principle of personal liberty.

THE *Atlantic* for November has an interesting instalment of the autobiography of the late Henry James, under the title "Stephen Dewhurst's Autobiography." Brooks Adams contributes an instructive political paper on "The Embryo of a Commonwealth." Maurice Thompson has an engaging essay, "In the Haunts of the Mocking Bird," the scene being laid in the South. Valuable literary articles are "Mistral's Nerto," by Harriet Waters Preston; "Crude Science in Aryan Cults," by Prof. E. P. Evans; "The Last Stand of the Italian Bourbons," by William Chauncey Langdon; and "De Senectute," by F. Sheldon. An article which cannot fail to attract general attention is "The Negro Problem," by N. S. Shaler; and notes from several specially competent persons are given,—Gen. Armstrong, Col. T. W. Higginson, ex-Gov. D. H. Chamberlain, and others. Another delightful travel sketch, "The Lakes of Upper Italy," is given. J. M. Hillyar contributes a paper on "Malta." Edith M. Thomas has an out-door sketch, "Grass: a Ruminantion." There is a poem by Mr. Whittier, another by Paul Hayne, and a variety of brief essays in the "Contributors' Club."

IN the November number of the *Popular Science Monthly*, Dr. W. A. Hammond, in "Relations between the Mind and the Nervous System," defines mind as a force developed by gray nerve tissue, and maintains that this force is generated wherever in the living organism gray nerve tissue is found. He denies that either the absolute or the proportionate weight of the brain indicates a definite rank in intelligence. In the "Origin of the Synthetic Philosophy," Herbert Spencer replies successfully to recent statements made by Frederic Harrison. Other articles are: "German Testimony on the Classics Question," by Frederic A. Fernald; "The Future of the Negro in the South," by J. B. Craighead; "Pending Problems of Astronomy," by Prof. C. A. Young; "Drowning the Torrent in Vegetation," by S. W. The American Lesson

OF THE

Free Trade Struggle in England.

By M. M. TRUMBULL.

300 pages. Price, paper, 35 cents; common cloth, 50 cents; fine cloth, 75 cents.

PRESS NOTICES:

"There is no other teaching of Free Trade by example at all to be compared with it. . . . It is as interesting as a romance."—*Chicago Times*.

"The author does not deal with statistics, but relates the story of the contest in such a pleasing manner that it reads like an enchanted tale."—*Omaha Herald*.

For logging camps, wood-yards, farmers getting out stove-wood, and all sorts of log-cutting—it is unrivaled. Thousands sold yearly. A boy of 16 can saw logs fast and easy. Immense saving of labor and money. Write for elegantly illustrated catalogue in 6 brilliant colors, also brilliantly illuminated poster in 5 colors. All free. Agents Wanted. Big money made quickly.

MONARCH MFG CO., (A) 206 State St., Chicago, Ill.

BY ALL ODDS THE BEST EQUIPPED RAILROAD IN THE WORLD.

to forever remember that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travelers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches**, which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars**, which are models of comfort and elegance; its **Palace Drawing Room Cars**, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that it is the best equipped road in the world.

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, and take none other. All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

GEN'L PASS. AGENT, C. & N.-W. RY
CHICAGO, ILL.

J. HART & CO.,

BANKERS,
Doylestown, Pa.

Draw Bills of Exchange on England, Ireland, and other points in Europe. Agency for the American Line of Steamers.

Modern Thinkers,

Principally upon Social Science.

By Prof. VAN BUREN DENSLOW, LL.D. With Introduction by ROBERT G. INGERSOLL. Including critical analyses of Swedenborg as a Seer, of Adam Smith as an Economist, of Jeremy Bentham as a Law Reformer, of Thomas Paine and Junius as Political Revolutionists, of Charles Fourier as a Socialist, of Herbert Spencer and Ernst Haeckel as Evolutionists, and of Auguste Comte as a Positivist, with an Essay on Wealth in its Relations to Christian Ethics.

The Fifth Edition has just been issued.

"Upon the question of money, this volume contains the best thing I have ever read."—R. G. Ingersoll (in Introduction).

"We confess that, if we stood on the ground on which Mr. Spencer stands, we should find it difficult to prevent ourselves from being pushed by the stalwart arm of Dr. Denslow's logic into the gulf of ethical nihilism."—Prof. Goldwin Smith.

"Now, the whole force of this case depends upon the assertion of Goldwin Smith that Dr. Van Buren Denslow is a disciple of Herbert Spencer. But the assertion is not true in any sense or in any degree. On the contrary, Dr. Denslow is an open antagonist of Mr. Spencer. His essay on Spencer's Philosophy, first published in the *Chicago Times*, while speaking of the man in the usual terms of perfunctory compliment, as have also Goldwin Smith and the *Saturday Review*, is adverse, carping, and depreciatory on every point that he considers. The criticism was regarded as so damaging that Spencer's friends were told they must reply to it or forever hold their peace; and we were confidently assured that the last we should ever hear of Spencer's system was the thud of the clods that Denslow had thrown upon its coffin."—Prof. Youmans, in *Popular Science Monthly* and in *Introduction to Current American Edition of the Data of Ethics*.

Stephen Pearl Andrews, as political executor of the late Thomas Paine, is as fiercely indignant at Mr. Denslow's analysis of Paine's politics as Prof. Youmans is at his assault on Spencer's Philosophy. On the other hand, George Jacob Holyoake speaks of the analysis of Paine's political philosophy as "the most masterly refutation of it extant, without showing in his words or in his mind any enmity against the great agitator whom he confutes."

The late Dr. George M. Beard, of New York, wrote to the author: "Your critique on Spencer's *Data of Ethics* has all the force of a discovery in ethics, and is of great value. It deserved to be made the subject of a separate treatise."

BELFORD CLARKE & CO., Publishers,
CHICAGO, ILL.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions, . . .	10c. per line.
" 13 " 25 " . . .	8c. " "
" 26 " 51 " . . .	6c. " "
" 52 " " . . .	5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

The Secret of the East;

OR,

The Origin of the Christian Religion
and the Significance of its
Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvelously strong one. The superstitious and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript*.

Man --- Whence and Whither?

By RICHARD B. WESTBROOK, D.D., LL.B.

Price \$1.00.

For sale at THE INDEX office.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price \$3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR's basis of action, and the best exertions of its manage will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

CURRENT TOPICS.

BY B. F. U.

A CORRESPONDENT of the *Montreal Times*, who is making the rounds of the churches, says that "preachers are so given to using the old terms with new meanings and mental reservations that heresy cannot often be detected in the pulpit. One must talk with them in private to learn their real views."

SAYS an exchange: "The disfranchisement of every leader of the [Mormon] Church under the Edmunds bill is doing quietly its work. The young men are mainly monogamous, and at once are placed in a position of political importance, which is sure to be dangerous to the gray heads of the Church."

VOTERS in Massachusetts are reminded that the next Legislature will be petitioned to tax church property, as well as to repeal the statute by which testimony is liable to be discredited on account of theological disbelief. No party interests should prevent the choice of men who will decide these questions justly.

ARCHDEACON DIXON at the Congress of the Anglican Church in Toronto, the other day, denounced the unsectarian school system, and held that the Church of England should demand that "they be placed in the same position as the Roman Catholic Church in respect to education, having their own schools." He declared that there was a mania for suicides in the United States, and that it could be traced directly to godless instruction in the public schools!

THE celebration throughout Europe and America of the one hundredth anniversary of Sir Moses Montefiore's birthday was a fitting tribute to a man of character and worth, whose love of his fellow-men is unlimited by sectarian creeds, national boundaries, or distinctions of race. Thomas Paine said, "The world is my country, to do good my religion." The broad sympathy and boundless philanthropy expressed in this sentence are pos-

sessed by Israel's noble patriarch in an eminent degree.

At the annual Convention of the Catholic Total Abstinence Union of America, held in Chicago last August, Bishop Ireland said that the Catholics in our large cities furnish the largest proportion of criminals and paupers. The cause, he said, was intemperance. Too many Catholics were in the saloon business. He wanted the people educated so that they would not run saloons; for liquor-selling, he believed, was doing to the Church more harm than all other causes combined. He argued in favor of both moral and legal means for the suppression of the evil.

MR. PETER ANNET, recently from England where we are informed he did good work in organizing and lecturing to science classes, gave an address last Sunday before the Parker Memorial Science Class. His subject was "The Star-fish." The lecture was devoted to a description of this lowly form of life, its structure, habits, relationships, and the unmistakable proof it offers of the truth of evolution, with interesting statements explaining how by advancing in myriads upon oyster beds, and feasting upon its victims, it directly raises the price of one of our luxuries, and indirectly affects the price of food in general. The lecture was not only replete with information, but by the treatment was made as fascinating as a fairy tale. Mr. Annet, by special request, will address the class again next Sunday at the usual hour, 12.15 P.M. Subject, "The Stars."

REV. H. A. FAVELL, vicar of St. Mark's, Sheffield, Eng., has issued a circular to his seat-holders referring to the Bible classes to be held during the coming winter, in which "gentlemen" and "ladies" are directed to meet at the "vicarage," "men" and "women" at the "parish room." He also states that the attendance of domestic servants will be specially welcomed at the "parish room." The distinction is further emphasized in the circular by having the invitation to gentlemen and ladies on one page and that to men and women on the opposite. "Some one," says the *London Inquirer*, referring to this circular, "once divided the human race into 'men, women, and clergymen.' While there are such clergymen in existence as the Hon. and Rev. R. W. L. Tollemache-Tollemache and the Rev. H. A. Favell, there is occasion for a classification which allows for an epicene order." The clergyman with the long name is vicar of South Wytham, who lately required the villagers, farmers, and the school-teacher of his parish to come into his priestly presence only through the back door of his house.

HENRY WARD BEECHER last week, in defending the private character of Gov. Cleveland from what he declared to be unfounded calumnies put in circulation by "rash and credulous clergymen" who "went to harlots and drunkards" for their stories, concluded his speech with the following words for which honorable men of all parties will respect him, when the excitement of this campaign shall have subsided: "When, in the gloomy night of my own sufferings in years gone by, I sounded

every depth of sorrow, I vowed that, if God would bring the day-star of life to me, I would never suffer brother, friend, or neighbor to go unfriended, should a like serpent seek to crush him. That oath I will regard now, because I know the bitterness of venomous lies. I will stand against venomous lies that seek to sting to death a man and magistrate worthy a better fate. Men counsel me to ponder lest I stir again my own griefs. No: I will not be prudent. If I refuse to interpose a shield of well-placed confidence between Gov. Cleveland and the swarm of liars that nestle in the mud or sling arrows from ambush, may my tongue cleave to the roof of my mouth and my right hand forget its cunning!"

MR. HARRISON is a brilliant writer, but he is neither profound nor accurate. In the recent discussion with Spencer, the contrast between the two men was very striking. It is generally admitted that, argumentatively speaking, there was not enough left of Mr. Harrison to be visible to the naked eye. His statement, now made rather petulantly, that "all the *idées mères*, as the French said, of the Synthetic Philosophy were those of the Positive Philosophy," is an old misstatement revived, and one no thinker can indorse who is acquainted with and capable of understanding both Comte and Spencer. "No English man," wrote John Stuart Mill to Spencer in 1864, "who has read both you and Comte can suppose you have derived much from him. No thinker's conclusions bear more completely the marks of being arrived at by the progressive development of his own original conceptions; while, if there is any previous thinker to whom you owe much, it is evidently (as you yourself say) Sir W. Hamilton. But the opinions in which you agree with Comte, and which, as you truly observe, are in no way peculiar to him, are exactly those which would make French writers class you with him; because to them Comte and his followers are the only thinkers who represent opposition to their muddy metaphysics." In a recent letter, Mr. Spencer, after quoting the above extract, says: "To this I may fitly add a passage contained in Mr. Mill's work, *Auguste Comte and Positivism*, issued a year later, in which, distinguishing between that part of the Positive Philosophy which belongs to Comte and that which 'is the common inheritance of thinkers,' he says: 'Mr. Spencer rejects nearly all which properly belongs to M. Comte, and in his abridged mode of statement does scanty justice to what he rejects.' (p. 5.) Now, considering that Mr. Mill was a profound admirer of M. Comte, kept up a correspondence with him, and raised funds to support him, and considering that, when the above letter was written, I knew Mr. Mill only through two calls at the India House, and was an antagonist of Comtean views which he accepted, and had publicly combated one of his own views, it is manifest that any bias he may be supposed to have had was against me rather than for me. Such being the case, most persons will, I think, regard his voluntarily given opinion as decisive."

SOUND CHARACTER THE FOUNDATION OF PUBLIC WELFARE.

The question is continually raised, not merely by theoretical reformers, but in the practical experience of life, Where is the cure for the various social disorders and sufferings which afflict mankind? It is, in fact, the old question which has, from immemorial time, been the burden of all religions,—the question of human salvation. But the time is past when any very large number of the world's enlightened and leading minds can accept the old ecclesiastical solution of this problem. Schemes of atonement are no longer available, and a solution which is not to take effect until a future world is not accepted. Hence, in modern days, the question of human evil has been considered in more practical shape; and various plans have been from time to time proposed—plans of legislation, of extended suffrage, of enlarged liberty, of special philanthropies, of political and industrial reform—by which, it is urged, the desired end of human virtue and happiness will be attained. And very good and necessary projects many of these are. They do help to solve the problem. They are steps in the forward march of mankind.

Personally, we have given sympathy and aid to most of these modern philanthropies and reforms. Yet the longer we live, the more strongly we are convinced that there are no reform schemes which can bring any adequate remedy for the moral evils burdening society, unless they reach down to the roots of personal character and begin the remedy there. It is not enough to remove an evil: good must be put in its place. It is not enough to increase liberty: men and women must be educated, intellectually, morally, physically, to the right use of their liberated faculties. It is not enough to fix outward boundaries, as of legislation, upon a vice: pure appetites and desires must be cultivated to crowd out the bad ones that create the vice. The help most needed by human beings to enable them to overcome their besetting temptations, and more faithfully to discharge their duties, is that which in some way quickens their conscience, deepens their love of virtue, inspires in them a profounder reverence for integrity, and thus increases their own moral strength. And, in respect to improving the condition of society in general, there can be no lasting reform which does not supply nourishment to the moral motives, or refine and purify those inner dispositions and tendencies which are the secret springs of conduct. The crying need of mankind to-day is sound, healthful, upright character,—character so firmly grounded in the sense of right that, let come what will of temptation, nothing can sway it off from that rock.

Perhaps it would not be true to say that society is becoming less sensitive on points of moral honor and purity than formerly, that rectitude is less esteemed, that the standard of morality in society at large is deteriorating; though there are good observers of mankind who make these charges. But, possibly, they do not make sufficient allowance for a transient moral aberration through temporary causes. This much, however, in the charges is doubtless true. The temptations that assail character at the points of integrity, probity, honor, purity, are immensely greater than ever before. The stupendous material and financial enterprises of this age; the vast increase of the mercantile interests of society; the growth of enormous moneyed corporations, with powers unheard of in former times, and with treasures largely intrusted to individual honor; the marvellous extension of all that side of life which relates to material comforts and

luxuries; the stimulation and pampering of appetite; the rapid increase of wealth and increased demands of living; the new ways for acquiring riches; and the sharp competitions, fierce excitements, and fascinating games of speculation which attend the new ways,—all these things have brought temptations which former generations, at least in this country, knew little of; and probably it must be confessed that as yet there has not been a corresponding increase of moral strength to withstand the temptations. In the maddening rush of business and of pleasure, the voice of conscience, certainly, does not get the hearing which is its due. The serious responsibility of life is not adequately felt. The character of men elevated to high office is too little discriminated. Smartness is apt to have a larger following than soundness. Bluster takes the place of principle. Not who is the best candidate, but who is the most available, is the question asked in politics. Success in carrying a measure is made of more account than honesty in the means. Partisanship brings almost all the political leaders to the degradation of masquerading on platforms in an exciting political campaign in any other garments than those of simplicity and truth. And the greatest obstacle to reform, both in the political and the business world, is that so large a number of the prominent political and business leaders are a part of the very thing to be reformed.

No remedy, therefore, for this state of things can be effective except through a higher culture and a more vigorous exercise of the moral sentiment among all classes of people. A nation or a municipality, when political corruption has gone too far for its own security, may rid themselves of the evil by an indignant uprising of the people. But, to save themselves from falling under similar corruption, they must see to it by perpetual vigilance that only men of proved character are put into office. Candidates for office must be made to understand, not only that they will be measured by their political principles and their mental competency, but that integrity and purity of character will be regarded as more worthy of trust than fealty to party. In a republic, a good and safe government can only be secured so far as the citizens themselves have a reverence that is stronger than all partisan ties for honorable and virtuous character. A republican form of government will not be more vigilant for the right than is the public conscience which stands behind and guards the government.

So, too, in respect to the various projects which philanthropy offers for improving the outward conditions of existence. As instrumentalities and helps, they are good in their place; but they will prove a delusion, unless they serve to enrich and purify the inner elements of character. There is no genuine social reform which does not mean the reformation of individual character. There is no final safety but just there. No reform is sure, until it has carried that position. There is no insured safety for society, unless that inner citadel of the heart's loyalty to virtue, the keeping of which is finally intrusted to the vigilance of each individual man or woman, can be held by a goodly majority of persons against all forms of assaulting temptation. There is no security, unless, whatever else has to go, individual character can finally rely on its own valorous love of virtue to save its rectitude.

A young man, for instance, goes for the first time away from the restraints of home love and friendly acquaintance and the eye of parental care, to live as a stranger in a great city. He finds a public opinion not over-scrupulous, or he finds that he may let down his conduct from the old home ideal, and yield to the temptations of

gain or the temptations of appetite, and no public opinion for which he cares have any cognizance of the matter. What can save him in that hour but the strength of those unseen ties which, through childhood and youth, have been binding his character in loyalty to honesty and purity, and which, instead of bending helplessly before temptation, will almost welcome it for the sake of the conscious pride of manly power in overcoming it? When a young man feels such a devotion to virtue that he will stand by it as he would defend his own mother, then he may be regarded as morally safe. Nor are these high heroic ideals among young men so rare as some moral cynics would have us believe. And whatever in the customs of business and society or in political action and discussion tends to break them down is a public calamity.

WM. J. POTTER.

THE CHRISTIAN CHURCH AND WOMAN.

I.

The grand ideas of Confucius, Zoroaster, Buddha, Mohammed, Jesus, have been slowly transforming the world from the reign of brute force to moral power, and science has been *as slowly* emancipating mankind from their fears of the unknown; but the Christian Church has steadily used its influence against progress, science, the education of the masses, and freedom for woman. It is often asserted that woman owes all the advantages of the position she occupies to-day to Christianity, but the facts of history show that the Christian Church has done nothing specifically for woman's elevation. In the general march of civilization, she has necessarily reaped the advantage of man's higher development; but we must not claim for Christianity all that has been achieved by science, discovery, and invention.

If we admit that the truth it has taught, as an offset to its many errors, has been one of the factors in civilization, we shall concede all that can be fairly claimed. The prolonged slavery of woman is the darkest page in human history; and she has touched the depths of misery since in Bethlehem the Magi gathered round the child in the manger, who was hailed as the Saviour of mankind. But the life and teachings of Jesus, all pointing to the complete equality of the human family, were too far in advance of his age to mould its public opinion. We must distinguish between the teachings attributed to Jesus and those of the Christian Church. One represents the ideal the race is destined to attain; the other, the popular sentiment of its time.

Had Jesus lived in Russia in the nineteenth century, he would have been exiled as a Nihilist for his protests against tyranny and his sympathy with the suffering masses. He would have been driven from Germany as a socialist, from France as a communist, and imprisoned as a blasphemer in England and America, had he taught in London and New York the radical ideas he proclaimed in Palestine.

I speak of the Christian Church, Catholic and Protestant, of the priesthood, the bulls of its popes, the decrees of its councils, the articles and resolutions of its general assemblies, presbyteries, synods, conferences, which, all summed up, compose the canon law, which has held Christendom during what are called the Dark Ages until now under its paralyzing influence, moulding civil law and social customs and plunging woman into absolute slavery.

The worst features of the canon law reveal themselves to-day in woman's condition as clearly as they did fifteen hundred years ago. The clergy in their pulpits teach the same doctrines in regard

to her from the same texts, and echo the same old platitudes and false ideas promulgated for centuries by ecclesiastical councils. According to Church teaching, woman was an after-thought in the creation, the author of sin, being at once in collusion with Satan. Her sex was made a crime; marriage a condition of slavery, owing obedience; maternity a curse; and the true position of all womankind one of inferiority and subjection to all men; and the same ideas are echoed in our pulpits to-day.

England and America are the two nations in which the Christian religion is dominant; yet, by their ethics taught in the pulpit, the ideal woman is comparatively more degraded than in pagan nations. I say comparatively; for, because of the various steps of progress in education, science, invention, and art, woman is now more fully the equal of man in these countries than in any other nation or period of the world. And yet the old ideas taught by the Church in the Dark Ages of her inferiority and depravity are still maintained; and, just in proportion as women are the equals of the men by their side, the more keenly they feel every invidious distinction based on sex. To those not conversant with the history of the Christian Church and the growth of the canon law, it may seem a startling assertion; but it is, nevertheless, true that the Church has done more to degrade woman than all other adverse influences put together. And it has done this by playing on the religious emotions (the strongest feelings of her nature), to her own complete subjugation. The same religious conscience that carried the widows to the funeral pyre of their husbands now holds some women in the Turkish seraglios, others in polygamy under a Mormon theocracy, and others in the Christian Churches, in which, while rich women help to build and support them, they may not speak or vote or enjoy any of the honors conferred on men, and all alike are taught that their degradation is of divine ordination, and thus their natural feelings of self-respect are held in abeyance to what they are taught to believe is God's will. Out of the doctrine of original sin grew the crimes and miseries of asceticism, celibacy, and witchcraft, woman becoming the helpless victim of all the delusions generated in the brain of man.

Having decided that she was the author of sin and the medium through whom the devil would effect the downfall of the Church, godly men logically inferred that the greater the distance between themselves and all womankind, the nearer they were to God and heaven. With this idea, they fought against all woman's influence, both good and evil. At one period, they crucified all natural affections for mother, sister, wife, and daughter, and continued a series of persecutions that blackened the centuries with the most horrible crimes.

This more than any other one influence was the cause of that general halt in civilization, that retrogressive movement of the Dark Ages, for which no historian has satisfactorily accounted. At no period of the world was the equilibrium of the masculine and feminine elements of humanity so disturbed. The result was moral chaos,—just what would occur in the material world, if it were possible to destroy the equilibrium of the positive and negative electricity or of the centripetal and centrifugal force.

For the supposed crimes of heresy and witchcraft, hundreds of women endured such persecutions and tortures that the most stolid historians are said to have wept in recording them; and no one can read them to-day but with a bleeding heart. And, as the Christian Church grew stronger, woman's fate grew more helpless. Even the Reformation and Protestantism brought no

relief, the clergy being all along their most bitter persecutors, the inventors of the most infernal tortures. Hundreds and hundreds of fair young girls, innocent as the angels in heaven, hundreds and hundreds of old women, weary and trembling with the burdens of life, were hunted down by emissaries of the Church, dragged into the courts with the ablest judges and lawyers of England, Scotland, and America on the bench, and tried for crimes that never existed but in the wild, fanatical imaginations of religious devotees. Women were accused of consorting with devils and perpetuating their diabolical propensities. Hundreds of these children of hypothetical origin were drowned, burned, and tortured in the presence of their mothers, to add to their death agonies. These things were not done by savages or pagans: they were done by the Christian Church. Neither were they confined to the Dark Ages, but permitted by law in England far into the eighteenth century. The clergy everywhere sustained witchcraft as Bible doctrine, until the spirit of rationalism laughed the whole thing to scorn, and science gave mankind a more cheerful view of life.

So large a place has the nature and position of woman occupied in the councils of the Church that the Rev. Charles Kingsley facetiously remarked that the Christian Church was swamped by hysteria from the third to the sixteenth century. Speaking of witchcraft, Lecky says the Reformation was the signal for a fresh outburst of the superstition in England; and there, as elsewhere, its decline was represented by the clergy as the direct consequence and the exact measure of the progress of religious scepticism. In Scotland, where the reformed ministers exercised greater influence than in any other country, and where the witch trials fell almost entirely into their hands, the persecution was proportionally atrocious. Probably the ablest defender of the belief was Glanvil, a clergyman of the English Establishment; and one of the most influential was Baxter, the greatest of the Puritans. It spread with Puritanism into the New World, and the executions in Massachusetts form one of the darkest pages in American history. The greatest religious leader of the last century, John Wesley, was among the latest of its supporters. He said giving up witchcraft was giving up the Bible. Scepticism on the subject of witches first arose among those who were least governed by the Church, advanced with the decline of the influence of the clergy, and was commonly branded by them as a phase of infidelity.

One remarkable fact stands out in the history of witchcraft; and that is, its victims were chiefly women. Scarce one wizard to a hundred witches was ever burned or tortured.

Although the ignorance and crimes of the race have ever fallen most heavily on woman, yet in the general progress of civilization she has had some share. As man became more enlightened, she of necessity enjoyed the results; but to no form of popular religion has woman ever been indebted for one pulsation of liberty. Obedience and subjection have been the lessons taught her by all alike.

Lecky, in his *History of Rationalism* and his *European Morals*, gives facts sufficient to convince any woman of common sense that the greatest obstacle in the way of the freedom and elevation of her sex has been, and is, the teaching of the Church in regard to her rights and duties. Women have ever been the chief victims in the persecutions of the Church amid all its awful tragedies, and on them have fallen the heaviest penalties of the canon law.

But the canon law did not confine itself to social relations: it laid its hand with withering touch on

the civil law, and blighted many personal and property rights accorded woman under the Roman Code.

Speaking of the Roman Code before the introduction of Christianity (Gaius), Maine says: "The juriconsults had evidently at this time assumed the equality of the sexes as a principle to the code of equity. The situation of the Roman woman, whether married or single, became one of great personal and property independence; but Christianity tended somewhat from the very first to narrow this remarkable liberty. The prevailing state of religious sentiment may explain why modern jurisprudence has adopted these rules concerning the position of woman, which belong peculiarly to an imperfect civilization. No society which preserves any tincture of Christian institutions is likely to restore to married women the personal liberty conferred on them by middle Roman law. Canon law has deeply injured civilization."

ELIZABETH CADY STANTON.

THE COST OF MAN.

II.

Edwin Arnold, in *The Light of Asia*, makes Buddha say that life once begun must run its round of living, climbing up through worm and fish and bird to shaggy beast, from shaggy beast to man. The procession, after a march through what Arnold, in the time-scale of Buddha, might have called a "ninihut" of years, reached the shaggy beast.

A telegram was sent from Australia to the British Association at Montreal, announcing that Mr. Coldwell had just discovered that the monotremes are oviparous. The president of the Biological Section voiced the opinion which all thoughtful naturalists must form, when he said that no words more important to science had ever passed through the submarine cables. The monotremes have been regarded as the lowest of mammals, having affinities with reptiles and birds. The "duck-bill" is bird-like in more significant structures than the bill. It is reptilian in brain. Its dominant characteristics are mammalian. It has mammary glands, although they are without nipples. And now it is found that this mammal lays eggs, and that "the eggs develop very much as those of a reptile." The monotremes are the horizon line on which the bird, the reptile, and the mammal meet.

The full meaning of the telegram announcing that the lowest mammals are still oviparous can be understood only by the geologist who has learned from mesozoic rocks west of the Missouri that birds have descended from reptiles, and that gigantic reptiles in the Jurassic age, in certain structures, were mammalian. The land of the monotreme is in arrest of development. Australia is a faint echo of the Jurassic world. If our Jurassic rocks were to yield mammalian fossils, they would be monotremes. As the earliest were not recorded, we will pass from a hypothetical oviparous monotreme to the earliest of recorded mammals, the Bathmodon, whose remains are entombed in the eocene strata of New Mexico.

The limb of Bathmodon was short. The lower segment was composed of two bones, fibula and tibia, which articulated, one with the heel-bone, and the other with the astragalus, or "turning-joint." The heel-bone was short, and the astragalus and applied tibia were nearly flat, making an imperfect hinge. The toes, five in number, were short, and furnished with little trowel-shaped hoofs. This ancient foot differed but slightly from a pattern still more ancient, that of the reptile. It was plantigrade.

The teeth are in correlation with the feet. Bath-

modon's tooth was cylindrical, and its crown was quadratuberculate.

The brain was smooth and small,—small not only in the cerebral lobes, but in the lobes of smell and sight and sound.

As Bathmodon had but little power of flexing the ankle, its gait must have been slow and awkward. As its tooth was not specialized as insectivorous or carnivorous or herbivorous, its diet must have been general. As its brain, even in the lobes of sense, was small, it could not have been surrounded by enemies quick of wit or fleet of limb. The struggle for life had not yet grown sharp.

If Bathmodon had been wise and vocal, it might have said: "My world is a world of monotony. Its features are few and faintly carved. Over this expanse of plain, I roam in sluggish immunity from foes. I look down through the coming ages, and see the features which now are intensified and other features appearing. Here is a river sculpturing a valley, and here is another sawing a canyon. Here is rising a chain of wooded mountains, and there will stretch a treeless plain. Here will be a zone of frost, and there a zone of heat. My progeny is multiplying. They are pushing out for room. Some betake themselves to the wooded mountains, others linger on the barren plain. Some are wandering up into the icy north, others remain on this fatherland of the south. Change must follow, responsive to change of conditions. That distant child of mine, which springs from crag to crag on the mountain, must differ from that which browses on the plain below, that which bides the icy blast of the north from that which lounges lazily in the south. Looking far down along the ages, I see a member of my line differing from its neighbors in the form of the heel-bone. The change has come from the repercussion of the foot on the ground. The bone is slightly elongated.

"Simultaneously with this change in the heel-bone has come a change in the turning-joint. It, too, has elongated; and it begins to present to the tibia the grooved segment of a pulley, making a more flexible joint. This will be of advantage to an animal wanting speed. And, as the struggle for life begins to grow sharp, speed is of advantage to an animal lacking strength. Generations pass, centuries, ages, and I see on this line the heel-bone growing more and more elongated and the turning joint deeper and more deeply grooved. The creative forces are moving for speed. For this end, one toe will be better than five, and one bone in the lower segment of the limb better than two. I see the toes fading out till only the middle toe remains and a vestige of the second and fourth. The fibula is fading out. Its vestige at last blends with the tibia.

"The tooth is changing responsive to changes in the foot and limb. It is losing the cylindrical form; and the tubercles of the crown are coalescing in pairs, and forming ridges with valleys between. The ridges bend, and the valleys deepen. The animal at the end of this series must drop my name, and take the name 'horse.'

"I see in a far-off age another member of my family which differs from its neighbors in having a slight elongation of the toe-bones and a sharpening of the trowel-shaped hoofs. This would be of advantage to an animal which fights. In this series, the hoofs at last pass into bent daggers. The tooth changes with the foot. The tubercles coalesce, not in pairs, but all four into one, and form a sabre-shaped fang. By these changes and others co-ordinate with them has come the order of 'carnivora.'"

The prevision imagined in Bathmodon is a demonstrated fact in paleontology. From Bathmodon,

in the lower eocene, up through tertiary strata of New Mexico and Wyoming, we find the ruins of a gradated series leading to the horse, another leading to the carnivora, and another leading to the ruminants. What relation does this history sustain to man? In our limbs, we answer to the primitive type. The two bones of the lower segment of the limb remain in the same relations as in Bathmodon. In our feet, we are primitive. Like Bathmodon, we are plantigrade. We have a short heel-bone, a flat turning-joint, and nails half-way between claws and hoofs. In our teeth, we are primitive. We have the old-fashioned quadratuberculate molar. Our digestive system is old-fashioned. Our vascular system is old-fashioned. From Bathmodon, the creative energy moved forward on one line, developing an apparatus in toes and teeth for the destruction of life; along another line, developing feet and limbs for rapid motion over the ground. On neither of these lines did nature reach man. His feet and limbs have not been modified for speed. His teeth have not been modified for tearing flesh or cropping grass. If a generalized mammal like Bathmodon was in the line of man's ancestry, we must seek for the divergence which led to man in another series.

There was a time when mammalian life was not arboreal. Some descendant of Bathmodon may have been the first to climb a tree. If this animal had been illuminated, it might have reasoned in a vein something like this: "The struggle for life has grown very sharp. My neighbors are preying upon each other. They want to eat me. I cannot run as fast as my cousin here, the forthcoming horse. I cannot fight like my cousin there, whose line will end in the tiger. What shall I do? The sanctuary of the weak shall be a tree. I will escape the hungry mouths by climbing. I cannot climb much; but, if I climb at all to-day, to-morrow I can climb better. The act which is occasional with me will become a propensity in my offspring, and in my remoter offspring a fixed habit. And, as my line is becoming arboreal, through what changes is it passing? Nature will not care specially for my feet. A very little modification will adapt them for climbing. And she will not care for my teeth. A little change of the pattern will adapt them for fruit-eating. But the cunning which drives me up a tree, nature will build on that. She will build on the brain, and 'cephalize' the fore-limb to be its servant. If I escape from my enemy by climbing, and become the progenitor of an arboreal race, far down in the coming ages I see my posterity as cunning apes, and at last, in the very fulness of time, as sapient men."

To speak again in Carlylese. There in the cogitations of a eupeptic Bathmodon was involved the fate of a world. Thou, O reader, over what a hair-breadth bridge didst thou pass on thy way hither, when shagginess cogitated whether to run or fight or lie or climb. Consider it well. If shagginess had run and run well, thou mightest to-day be a horse not obedient to a bit. If he had turned on his foe, and fought mightily with tooth and nail, thou mightest have been an heroic tiger with blood of sheep on thy fangs. If he had called into play the low instinct of certain beetles, and escaped death by simulating death, thou wouldst unquestionably be that confirmed liar, the opossum. But he climbed a tree, and thou standest erect on two legs, with somewhat of the tiger and the opossum in thee; and thou art called *Homo sapiens*.

When a branch of mammalian life became arboreal, man was assured. To raise a prone quadrupedal body to an erect bipedal body were im-

possible to any forces or factors known by science. The quadruped whose line was to end in the biped had to become arboreal. The arboreal ape had to come down from the trees to the ground-life of its ancestors. Here was another hair-breadth bridge. The dog-headed baboon which abounds in vestiges of arboreal structures is as strictly quadrupedal as the dog itself. Time was when the forests of the fatherland of this baboon failed; and the animal, adjusting itself to life on the ground, leaped to the form and habits of a pre-arboreal ancestor. "*Facilis descensus, sed revocare*"; to ascend, to become erect, "*hoc labor*."

Comparative anatomy shows that the column of life of which man is the capital rose from the monotreme through the marsupial to the half-apes, from the half-apes through the true apes to the anthropoids, and from the anthropoids to man. The highest of the anthropoids, taken in the totality of structures, is the chimpanzee. The scansorial muscles have been reduced, showing it to be less arboreal than its ancestors. While the dog-headed ape has lapsed, chimpanzee has advanced, and become almost erect. We need not hypothecate an ideal anthropoid as the immediate ancestor of man. That ancestor was a chimpanzee or something very like to it. Every anatomical feature which differentiates man from chimpanzee is in correlation with certain modes of fighting. As long as an animal uses its body for a weapon, so long it must be an animal. Chimpanzee fights with his teeth. His canines are strong tusks. His jaws must be correspondingly large and strong. The muscles which move them must be large and firmly attached. The zygomatic bone must be prominent. The entire face must take a bestial cast from the jaw and its correlations.

In further correlation with the teeth and jaws must be the muscles which move the head. These muscles must be large and strongly inserted on the skull. In gorilla, the temporal ridges coalesce and form a serrated bony crest to hold the muscles which move the head in the act of fighting.

Let us imagine now that when Nature was somewhat younger, and animal forms more plastic, a chimpanzee or a chimpanzoid ape fell into the habit of striking with the hand, and finally with a club. Suppose, the habit became congenital. This is all the imagining we shall have to do. This is the last hair-breadth bridge on our way hither from brutedom. "*Arma virumque*,"—the sequence in Virgil is the sequence in history. Arms preceded man. The teeth were reduced. The canine lost the character of a tusk, although in the lower types of man it still retains a little of this character. The jaw contracted. The muscles which move it shrunk. The zygomatic bone grew less prominent. The serrated crest over the skull faded out. A new factor in evolution had come. It was *mind*. When the mind armed the hand with weapons, the weapons with which the body itself had been equipped began to fade out. When he clothed the body, nature's own clothing of hair began to abort. When mind became a factor, it was a constantly increasing factor. Because of the struggle for life, it grew. When a being threw from its arm a club or stone, it was only a matter of years when man would hurl his projectile from the lips of big-throated cannon.

Other projectiles, even while he is *Homo silvestris*, he will throw from his mind. Painful to the child man were the pelting storm and tiger's claw, but more painful his own dawning thoughts. "His heart forebode a mystery. He named the name Eternity." Into this mystery his brain shot forth, as ours to-day, many a random arrow. It was a fine instinct in the old Hellenes which led them to name man "anthropos,"—the one with an upturned eye.

Man is an upward looker. Contrast the Hellenic spirit with that of a South Sea Island tribe which called man "long-pig." Such a people may have made the transition from the animal body to the human, but it must forever retain the animal mind.

See now what proofs we carry, even the highest of us, of these later transitions. The big toe of the human embryo stands out, as in the arboreal apes; and, if it functioned in that attitude, it would be opposable, and the foot would be prehensile. In the region of the thigh is a vestige of the scissor muscle which has already suffered reduction in the anthropoids. Scansorius and toe testify that back somewhere on our line the body was arboreal. Structurally, our canines are tusks, and the fossil man of the Enghir cave had canines so long that they protruded from the shut mouth like tusks of a boar. The tooth was a weapon. Our teeth and jaws have been reduced, and the facial parts in correlation with them have been deanimalized. The occipital regions have not changed correspondingly. The bony knobs and pits could support muscles more powerful than those required now to move the head.

Our task in the field of anatomy is done. A truth remains to be gleaned. It is *unity*, the deepest word spoken in nature. At the very core of things is one matter, one law, one life. I give ether to chimpanzees. It lulls the nerves; and, though I pull his teeth, he feels not a tinge of pain. I descend on the scale of life to the sensitive plant, and etherize the roots. The drug mounts with the sap, and lulls the leaf to insensate sleep. I go down on the life-scale to the very base, and etherize the yeast plant. It is locked in the same sleep as leaf and brain. The etherial drug has laid the same touch of oblivion on the same fabric of life, from its base in the cell-plant up to its perturbed throne in the brain of man. I am one with the cell-plant, and I am the measure of all the forces which have lifted that common life-stuff to a throne in the thinking and aspiring brain. I count the cost of all that has made me man, and sounded in me the voices syllabled never in the animal mind, "Thou shalt," "Thou shalt not"; and to myself I say with Darwin, "I will never in my own person violate the dignity of humanity."

W. D. GUNNING.

THE PRAISE OF CITIES.

II.

But, even if the country had an absolute monopoly of natural beauty, it would not follow that its advantages as a place to live in are beyond dispute. Man shall not live by bread alone, but a diet of natural beauty would be quite as insufficient for his complex development. A girl in one of Mr. James' stories objects to the omnipotence of scenery that she cannot walk round with a tree. There are other uses to which scenery is equally intractable. What is so commonly esteemed the condemnation of the city is its highest praise of all, and this is its intense humanity. The city is better than the country, because it has more men in it; and, by parity of reasoning, the larger the city is, the better. The proverbial saying, "God made the country, but man made the town," has about as much truth in it as proverbs generally have, which is not much. The country, as we know it, is hardly less a thing of man's device than Boston or New York. The general contour of the mountains and the hills is about all that is at present left to us of nature's pure originality, for which God's making in the proverb stands. Everything else has been made over by the device of man for better or for worse. The forests are not the same

forests, the rivers are not the same rivers that would have stood and streamed, had never man arrived. And, much more obviously, the cultivated aspect everywhere is human utterly. There are two fields I often see upon my summer drives, which are a brief epitome of man's relation to the earth. One is as rough and jagged as it came from nature's unassisted hand, strewn thick with boulders which the glaciers dropped upon their way: the other, close beside it, is a patch of velvety soft green, without a visible stone to mar its gentle undulations. The labor necessary to tame the rudeness of this field, which once was like the other, and make it what it is, is representative of, and it does not exaggerate, the labor that has everywhere subdued the original rudeness of the planet to the use of man. That God made the country any less on account of this impression which man's work has made upon it only the foolish will conceive. Men are not less his ministers than winds and waves, the cleaning frost and the destroying fire. He is the master architect and builder of every house and pyramid and temple that the journeying sun has seen, the chief surveyor of all city streets, and the deviser of all stores and dwellings, palaces and churches, that shut in their human tides. But, if the city is not less God's workmanship than the country road or farm, it is much more conspicuously the product of the energy and skill and patience of mankind. The country segregates, the city aggregates the proofs of man's intelligence and resistless will. The city is the grandest monument of human power. It is inscribed with Shakspeare's magic phrase, "What a piece of work is a man!" Nowhere do I find myself disposed to say so proudly, "I also am a man," as in our city streets, when by some happy accident the might and wonder of it all are delivered on my imagination with incalculable power. What a commentary here upon the low opinion, the contempt, of theologians for the mind and will of man! The mountains and the sea, the pleasantness of country fields and lanes, the sight of green things growing,—I yield to no one in my satisfaction and delight in all these things. But they never quicken me with such tumultuous joy as the spectacle of human energy which is presented to me by the plenitude and multiformity of life in these great cities; they never make my heart leap up as does the many-throated voice of these. The hurrying crowds; the merchandise which the great drays and wagons carry to and fro, and which represents the industry and skill of every people under the cope of heaven; the enginery and machinery that multiply more than a hundred-fold the natural energy of man; the handsome ships; the steamers, great and small, flying like merry shuttles to and fro, weaving the towns and continents together; the theatres and churches; the miles of shops, noble and gay with their provision for the simplest uses and the costliest tastes; the galleries of pictures; and the music of the masters rendered so that it might lure them back from heaven to listen and be glad,—these things and many hundred more make up a spell that only the most dull of sense and heart can fail to feel and know. "It is good for us to be here,"—here where there is more of human life, throbbing warmer and faster, than anywhere beside in this new world. Yes, it is something even to be a fly upon this mighty wheel whose revolutions urge the comfort and the happiness of half a continent to better ends with each revolving day.

The moral aspect of the case remains to be considered. The popular impression is that cities are the haunts of vice, but that the virtues are as friendly to the rural districts as the nymphs and

dryads were supposed to be of old. The impression is not one that will bear examination in the light of history or of the statistical results accumulated by the patient cultivators of the field of social science. In the light of history, the cities do not appear at any disadvantage as compared with the agricultural regions. Quite the contrary. And the superiority is not merely intellectual. It is moral equally. Certainly there were aggregations of vice in the ancient city as there were not in the country. This was inevitable. The white sheep have more wool than the black ones, because there are more of them. But the ancient city was the centre from which light and strength and use and beauty streamed into the world beyond. The rhetorician has often wreaked himself violently upon the luxurious vices of the rich, the meaner vices of the poor, of ancient Rome. Nevertheless, for hundreds of years Rome was the moralizing principle of the ancient world, the fountain of all best and noblest things; nor did she perish till she had prepared a matrix for the germ of Christianity, without which the new religion never could have come to birth. And, when it had come to birth, its earliest conquests were always in the cities. One little word lets the whole secret out,—the word *pagans*, of which the Latin correspondent is *pagani*, villagers. And how did *pagans*, villagers, come to be the word for people outside of Christianity? Simply because the villagers clung to the old religion long after the cities had succumbed. It was not till the year 529 that the last rural temple of the ancient gods went down in Italy, and the monastery of Monte Casino was erected in its place. To-day, in Belgium, we see the same opposition of the country and the towns in the religious crisis that is shaking society to its foundations. The country stands for the old darkness, the towns for the new light. The rise of the free cities of Europe is the theme of one of the most interesting and important chapters in the intellectual development of Europe, and its moral development as well. In these free cities, the new arts and sciences were fostered, the passion for the new learning had its fullest swing, the pretensions of the Church and of the feudal system were for the first time successfully rebuked, and the political aspect of the modern world showed its first vigorous shoots. In a few years, we shall arrive at the centennial anniversary of the most important circumstance of modern times,—the French Revolution, "the only absolutely unmixed good," said Wendell Phillips, "that God has ever vouchsafed to mankind." That is a trifle strong, but it is true that no event since the Protestant Reformation has brought so many blessings in its train. The political history of Europe from 1789 to 1884 has been the progressive working out of the ideals of the Revolution. And this Revolution was an affair of cities, of Paris most of all. The country districts were a drag upon the wheel. Witness the trouble the Republic had with La Vendée alone. And it is still from Paris, London, and New York that light is streaming out into the world beyond. The vices pertaining to overcrowding are conspicuous in our great cities, but it may well be doubted whether they are greater in the aggregate than those pertaining to the loneliness of the remoter country-places. These, not the cities, have been the most fruitful mothers of insanities, if the statistics do not lie; and they have bred the most abominable and monstrous and distressing crimes that have shocked and paralyzed the common heart. But, even if upon the side of positive crime the comparison of the city with the country were wholly to the advantage of the latter, the morality of the country as a whole would not be thus approved. The comparison of positive virtues

would still remain to be made; and, in respect to these, the city always leaves the country far behind. Public spirit, intelligent benevolence, the passion for political justice and reform,—these virtues house with those who live in city streets, and not with those “who glory in the goad, and whose talk is of bullocks.” We must not wilfully deceive ourselves in regard to the universal elements that abound in the life of our great cities. They are innumerable, and some of them are passing foul. All the intelligence and patience that we can command are necessary for our successful coping with these social elements. But why should those who live in cities take to themselves unnecessary shame? Let them believe that they have in themselves not only force enough to cope with these enormous evils, but something over and beyond that shall avail to thrill the lethargy of rural denizens with intimations of a fuller, larger, warmer, richer life than any which they yet have known.

JOHN W. CHADWICK.

CONVENTION OF THE FREE RELIGIOUS ASSOCIATION.

There will be a Convention of the Free Religious Association in Cosmian Hall, Florence, Mass., Wednesday evening, November 19, and Thursday forenoon, afternoon, and evening, November 20. Full particulars hereafter.

F. A. HINCKLEY, Secretary.

EDITORIAL NOTES.

BY B. F. U.

THE *Freidenker* for October 9 and 16 quotes with cordial comments the article in praise of Mr. Salter's work in Chicago, recently contributed to the *Magazin für die Litteratur des In- und Auslandes* by that able writer on ethics, Georg von Gizycki.

BISHOP HERBERT VAUGHN, in describing the religious condition of England, says: “It would appear that considerably less than half of the population of this country frequents any place of worship on a Sunday, and that the minds of men are becoming silently alienated from the Christianity of their fathers. Doubt and unbelief are spreading, even among the young, and girls in their teens prate about infidelity. We are witnessing the gradual dechristianization of society.”

THE *Radical Review*, one of our best liberal journals, published at Chicago, is not receiving the support it deserves. The Liberals of the West ought not to allow this able and independent paper to be published at irregular intervals, even for a while, from lack of money. The ability, courage, and earnestness of its editors, Mr. and Mrs. Schumm, should receive appreciative recognition; and the best way to show this is to subscribe for the paper, and assist in increasing its circulation and putting it upon a firm business basis.

A MINISTER in the Highlands is credited with the following prayer: “An' noo, Lord, that we're prayin' for a' sorts and conditions o' men, dinna forget the puir auld deil that's lying chained in the inner neuk o' hell! Lord, let bygones be bygones; an', gin ye tak' him to yoursel' again, mak' him cut off his horns and his hoofs, and gar him look like anither mon!” This large-hearted and compassionate prayer reminds one of the last verse in Burns' “Address to the Deil”:—

“But fare ye weel, auld Nickie-ben!
O, wad ye tak' a thought and men',
Ye aiblins might—I dinna ken—
Still hae a stake.

● I'm wae to think upon yon den,
E'en for your sake.”

THE *Catholic Review* mentions the addresses on Emerson delivered before the Concord School last summer, and adds: “No miracles have yet been claimed for their patron except in a transcendental sense, but they are not slow to insist that he possessed the Christian virtues in an heroic degree. True, they say nothing about the slight circumstance of his life-long connection with and encouragement of the Free Religious Association, of which our esteemed contemporary, *The Index*, is the organ, and which, whatever else may be said of it, cannot be accused of an overweening admiration for or zealous devotion to the principles of Christianity. Yet Dr. Bartol says: ‘That Emerson was a pious man, and that religion was a feeling in him raised to the highest power, was proved to me by the rapture in his look, after a service in his house nearly half a century ago. His eyes let out more light than they took in.’”

MR. HARRISON is in error, and it is a strange error for a Positivist, when he reproaches his opponent for employing the term Unknowable instead of Unknown; for the Unknown embodies a knowable element,—the sum of all the phenomena and laws which still escape our faculties, but which we are capable of knowing, and which we shall certainly more and more fully know. The Unknowable, on the other hand, stands for what must always lie beyond human knowledge in virtue of our intellectual organization,—the first Cause, the Noumenon, the Essence of things. . . . Thus, Littré, for instance, says: “Immensity, regarded in its material as well as in its intellectual manifestations, appears under the double aspect of reality and inaccessibility. It is an ocean which rolls up against our shores, but one for which we have neither barque nor sail; and yet the clear perception of its existence is as salutary as it is overwhelming.”—*Count Goblet d'Alviella, in Revue de l'Histoire des Religions*.

THE American *Israelite* thus refers to the superiority of the French Republic over the Empire: “Ten years ago, France was crushed politically and financially: to-day, her prestige is restored, more than restored. She can cope now with England as the mistress of the sea, has established the nucleus of two new empires in Africa and in Asia, has secured domestic peace and political unanimity at home, and is to-day the wealthiest and most advanced nation of the European continent. All the Kaiser meetings, military parades, and political manoeuvres are inadequate means to hide this fact from the eyes of the nations. They cannot help seeing the marked superiority of the republic over the empire; and, seeing it, they will have to come to the conclusion that Europe's hope of regeneration is in the European republic. The elements of a European revolution are at hand. Whenever they will be toned down to the sober idea of the democratic republic and be purged of their infamous race theories, the end will be at hand.”

ACCORDING to Mayo Powell, the Wintun Indians of the Sacramento Valley believe in three worlds, and that each has its peculiar class of inhabitants. The sky is smoke, while to the majority of Indians it is ice, and a few think it is quartz crystal. Mountains were made by the burrowing of the mole-god. Light and darkness are maiden goddesses. Rocks and other inanimate things were once living, and some rocks now live and speak, this being the Wintun explanation of echoes. Whirlwinds are little spirits seeking water to drink. Diseases are caused by mythical animals. Bits of negro folk-lore are found among many tribes of Indians, from whom the slaves must have obtained them.

GEN. BUTLER is not unfit for the Presidency from any lack of knowledge as to the methods of

machine politicians. In one of his recent speeches, he said:—

One of the parties nominates one man, and another party nominates another man, and then they ask you in the name of one of the two parties to vote for one of the two men; and, however you may think them unfit, you are told that you are renegades, and you are called all sorts of hard names, if you do not walk up and vote according to the behests of party. Well, now, who nominates those men? How can they be nominated? A few men get together in a ward caucus, for example. Some of them get in early, and get round the platform or the desk; and then, the moment the hour arrives, one man steps inside the railing and calls out: “This meeting is organized. I want to hear names for chairman.” A dozen voices call out names, but he only hears one; and that, of course, is the predestined one. Then he nominates a committee, and submits a list of delegates, and rules out of order any other men [laughter]; and the list of delegates is brought in. Then they are chosen; and, if anybody makes any protest, the chairman calls for a policeman to put him out of the hall. Do not think I don't know, when I have been attending caucuses all my life. Then you have delegates chosen, not by the people, but by party machinery; and, ten to one, that chairman is a paid servant and an agent of the opposition party. Then those delegates, so chosen, go and nominate somebody else for office, some one else of their own kidney; for like seeks like.

REFERRING to the removal of the czar's portrait from public places in St. Petersburg, to avoid a repetition of disrespectful treatment, the execution of six army officers and two ladies, and the discovery of a plot to blow up a fortress, events following in close sequence, the Boston *Transcript* observes: “As long as conspirators are obscure wretches, their revolts the sporadic risings of misery driven desperate, society can afford to ignore them and their doings as things unpleasant, but not unusual; but when officers of the army and navy, men of talent and means, whose interests are apparently with the maintenance of existing institutions, plot the overthrow of government, and detected go to the scaffold full of faith in the ultimate triumph of their cause, society is only in doubt as to whether the volcano will give out warning rumblings or will at once send forth the burning lava of revolution. Many officers have been shot or hanged since the close of the Russo-Turkish war for the vague offence of ‘Nihilism.’ But ‘Nihilism’ would not inspire men of their character, many of them distinguished, and not a few of them young; and their real offence is that they have plotted the establishment of free government. The czar may send scores to death, and hundreds less happy to the mines; but the movement which neither the scaffold nor exile can daunt will go on, and persecution will simply intensify the fury of the outbreak which is inevitable.”

PREMONITIONS. For The Index.

Though earthly natures, love of dross,
To future fate our vision blind;
Though in our usual moods at loss
How we shall leap death's gulf across,
Or meaning in life's struggle find,—
Moments, and sometimes hours, there be
Of clear, exalted sight, when we
Beyond the barriers seem to see
Of life the grand and lucid key,
The solving of all mystery.

Then fancy o'er the dark abyss
A bridge of radiance bright extends,
That with the farther boundary blends,
A pathway from yon world to this.
And we, un'ware of sin and evil,
In hope's delightful visions revel,
And in our inner spirits feel
That surely all we dream is real;
That life but as a fleeting night
Precedes the everlasting light;
And, when from time's stern durance freed,
In bliss we drop each ill and need.

TUDOR WILLIAMS.

BROOKLYN, L.I.

The Index.

BOSTON, OCTOBER 30, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, BENJAMIN F. UNDERWOOD, : : : : : } Editors.

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

A Study of Primitive Christianity.

BY LEWIS G. JONES.

V.

SOCIAL ASPECTS OF THE RELIGION OF JESUS.

The Ethical Teaching of Jesus.

The ethical teaching of Jesus finds its highest illustration in the Golden Rule and the collection of aphorisms, beatitudes, and allegorical sayings known as the Sermon on the Mount.* Perfection in practical righteousness is herein held up as the end and object of all human endeavors. Happiness and misery, here and hereafter, are declared to depend upon the character and actions of the individual.† By these he will be judged and known, as the tree is known by its fruit.‡ The teachers of religion are to be tested, not by their professions, but by their practical works; and the people are warned against "false prophets who come in sheep's clothing, while inwardly they are as ravening wolves."

Everywhere, the inward motive and purpose of the heart is regarded as the supreme test of character rather than outward observance or appearance. It is not the act alone, but the sinful thought which constitutes adultery.§ Not he alone who kills, but he who is angry with his brother without a cause, shall be in danger of the judgment.¶ Gifts placed upon the altar while anger is in the heart are of no avail. "First be reconciled to thy brother, then come and offer thy gift."‡ The formality of an oath adds nothing to the simple majesty of the truth. "Let your communication be yea, yea, nay, nay; for whatsoever is more than these cometh of evil."** Alms given in the

sight of men possess no saving virtue. "When thou doest thine alms, do not sound a trumpet before thee, as the hypocrites do in the synagogues and in the streets, that they may have glory of men. I say unto you, They have their reward. But when thou doest alms, let not thy right hand know what thy left hand doeth: that thine alms may be in secret: and thy Father, who seeth in secret, shall reward thee openly."* A like secrecy, as we have seen, was commanded in prayer, as it was also in fasting.†

The honest scorn of pretence and hypocrisy which characterizes the teaching of Jesus, his virile denunciation of evil in high places,—of the scribes and Pharisees, who sit on the high seats in the synagogues and devour widows' houses, and for a pretence make long prayers,‡—is little like the conventional meek and lowly Saviour of the current emasculated Orthodoxy of the present day, but resembles rather the lofty courage and fearless preaching of the ancient prophets, or the plain-speaking of the American Abolitionists, and justifies the fine conception of Thomas Hughes of the "manliness" of Jesus.

Yet on his tenderer side, as illustrated in the beatitudes and many of the parables, there is a felicity of presentation, a gentle persuasiveness and "sweet reasonableness," which must have been most winning and attractive. It contrasts strongly with the dry, metaphysical reasoning of the philosophers, appealing only to a few cultivated intellects, or with the sublimated mysticism of the Brahmanical schools; and no less strongly with the hair-splitting logic and dogmatic appeal to traditional technicalities of the contemporary rabbis. Jesus was no philosopher; his simple idealism was free from the mysticism of the schools; he propounded no logical or deeply reasoned system of belief. He accepted the crude cosmogonical and cosmological notions of his time and nation without question. He taught the simple, strong, natural morality of an exceptionally fine ethical nature, fed by the nourishing stimulus of the Hebrew prophets. He did not stop to argue the question with his hearers: his vital words were spoken with the straightforward earnestness of one who stood upon the firm foundation of assured inner conviction. "He taught as one having authority, and not as the scribes."

His Doctrine of the Forgiveness of Sins.

Upon one point only, besides his belief in future punishment, he appears to have been in concurrence with the dogmatic statements of modern Orthodoxy: he accepted, apparently, the current Jewish doctrine of the divine forgiveness and remission of sins,§—the natural and humane accompaniment of an arbitrary system of morality, based upon alleged revealed commandments of the Deity. To this he added the belief that this power of forgiving sins and cancelling the natural results thereof was committed by the Father to the Messiah, or "Son of Man," as his duly appointed representative or servant.¶ This doctrine, however, in his mind, did not descend to the grossness of the modern theory of a vicarious atonement. The forgiveness of sins was conditioned, not upon the acceptance of any dogmatic belief or the substitution of an innocent victim for the guilty, but solely upon repentance,—an inner moral change in the direction of righteous living, attested and assured by the free and full forgiveness of their enemies on the part of the sinners.¶

Modern Criticisms upon the Ethical System of Jesus.

The ethical teachings of Jesus have been criticised from two quite different stand-points, which may be distinguished as the practical and the ideal. On the one hand, it is affirmed that his moral instructions are unpractical and impossible to apply to the affairs of our every-day life, because they are too exclusively altruistic. Modern society, it is claimed, could not exist, if we were to leave evil unresisted, if we were to turn the other cheek to the smiter after having been once unjustly stricken, if we were to give our cloak unasked to the beggar who had demanded and received our coat or to the thief who had stolen it.

It appears quite evident, however, from our previous consideration of these questions that this extreme altruism was not intended for application during a long continuance of the natural social order. It is due almost wholly to the erroneous belief of Jesus that the present order of society was to endure but for a day; that a new, divine, and eternal order was soon to be established in its place. Had he looked forward to what we may now look back upon,—to many centuries of continuance under the old social order, to a natural evolution in human affairs instead of the supernatural revolution which he anticipated,—his teaching might, and doubtless would, have been greatly modified in some of these particulars.

Nevertheless, we have reason to be profoundly grateful for the vision of a perfect social order which is suggested by these ideal conceptions of the Prophet of Nazareth. It is by such visions as these that the world is lifted up and led onward to higher planes of thought and life. Like a rift in the clouds through which the sunlight streams, they gladden the hearts of men with the promise of diviner possibilities in the life that now is. In our way, we also may look forward to a higher order of human society to be established upon the earth. Each and all of us may in some manner so live as to hasten the period of its fulfilment. We, too, may pray with the disciples of the Nazarene that the kingdom of God may come, and his will be done on earth as it is in heaven.

Prof. Francis W. Newman and other able writers have criticised the ethical appeals of Jesus from quite another stand-point,—because they are not sufficiently altruistic in their foundation. It is affirmed by this class of critics that they are almost universally based upon self-interest instead of a desire to benefit society as a whole or to do right because it is right. Even the Golden Rule, it is alleged, would measure the love for the neighbor by the love for self. The beatitudes are each accompanied by some promise of selfish reward,—the offered attainment of some future happiness. The entire moral system of Jesus rests upon the accompanying assurance of eternal happiness in the heavenly kingdom for the workers of righteousness, and the co-ordinate threat of eternal misery for those who in this life fail to accept the conditions of salvation.

The most recent attempts to establish morality upon an assured scientific basis, however, recognize the necessity of giving due weight to the egoistic as well as the altruistic side of human action. An extreme and unqualified altruism would defeat the rational end of all moral action by speedily destroying the life or health of the agent. Action without regard to ends, ultimate or immediate, is everywhere properly regarded as irrational; and action which does not have explicitly in view the ultimate happiness of all, including the actor, can only be regarded as moral when, by previous analysis and comparison, we have been enabled to subsume all moral actions under

* Matt. v., vii. † Matt. vii., 16, 21, etc. ‡ Matt. vii., 15-20.

§ Matt. v., 28. ¶ Matt. v., 22. ¶ Matt. v., 23, 24.

** Matt. v., 33-37.

a universal law which has been proved to result in the security of universal happiness, and we are therefore impelled to obey the law without regard to its special or ultimate consequences.*

To no such profound philosophical view of morals, however, had the prophet of Nazareth attained. His ethical appeals were direct, simple, personal, devoted to the production of immediate results. Viewed broadly, except as they were affected by the erroneous expectation of the speedy coming of the heavenly kingdom, they do not suffer or lack in impressiveness, as tested by the rigid rules of an abstract moral philosophy. The ethical element was everywhere dominant in the religion of Jesus. His "heavenly Father" was a moral ideal personified,—a conception not inferior, but superior to that of the Hebrew prophets and law-givers. God to him was still, and ever more supremely, the "Eternal, not ourselves, that makes for righteousness." The test of morality was at once and inseparably theocratic and utilitarian: the two ends were in no wise differentiated in his thought. To do right was alike conceived as perfect obedience to the divine will and as the means of securing happiness among men.

The Religion of Jesus as related to Judaism.

What, finally, was the relation of the religion of Jesus to Judaism and its system of morals as enunciated in the Torah? This question can hardly be answered more satisfactorily than in the language of one of the most lucid and rational critics of the gospel literature, Ferdinand Christian Baur.† "Jesus," he says, "declared at the outset that he was not come to destroy the law and the prophets, but to fulfil them, and might thus appear to have taken up an entirely affirmative position toward the Old Testament. It might be said that the difference between the teaching of Jesus and the law, or the Old Testament, was not one of quality, but of quantity. On this view, no new principle is advanced in his teaching: all that is done is to widen the application of the moral precepts which the law contained, and assert their authority over the whole extent of the moral sphere to which they are capable of referring. That is given back to the law which should never have been taken away from it. The law is declared to be capable of expansion in its meaning and its range of application, and this is said to be done.

"This interpretation of the Sermon on the Mount appeals to the fact that, in the further discussion of the subject, individual injunctions of the law are taken up, and each of them brought back to the original meaning of the law or interpreted in a sense which satisfies the moral consciousness. But, though there is no enunciation of a general principle which is to apply to all cases alike, yet, when we consider what is said to be the true fulfilling of the law in each separate instance, and see how in each instance what is done is to contrast the outward with the inward, to disregard the mere act as such, and lay stress on the disposition as that which alone confers any moral value on a man's acts, we cannot but recognize in this a new principle, and one which differs essentially from Mosaicism. What the law contained, it is true, but only implicitly, is now said to be of most importance, and enunciated as the principle of morality. The expansion of the law quantitatively amounts to a qualitative difference. The inner is

opposed to the outer, the disposition to the act, the spirit to the letter. This is the essential root principle of [the religion of Jesus];* and, in insisting that the absolute moral value of a man depends simply and solely on his disposition, the [religion of Jesus] was essentially original."

Historical Verity of the Man Jesus.

And now, as we pass on to a consideration of the later phases of the development of the Christian faith and doctrine, let us bear onward with us this sublime picture,—not indeed of a God or a supernatural being, but of a man,—a man loving in all ways to identify himself with his fellow-men, even the poorest and lowliest among them. More frequently than by any other designation, he refers to himself as "the Son of Man," a common designation of the prophets, and at the time of Jesus probably not regarded as a Messianic title. Urged by an irresistible affection for his fellow-men, he gave the best labors of his life for their moral inspiration,—for their salvation from sin and preparation for the life of ideal perfection in the heavenly kingdom. Viewing his character in this purely natural and human aspect, we need not and will not consent to the uncritical judgment of those destructive writers who would deny to the gospel stories all historical validity or regard Jesus as the servile imitator of the founder of another and widely different religion. After separating from them the legendary and mythical accretions of an unscientific and credulous age, does there not yet remain to us the "saving remnant" of the New Testament narratives? Looking upon this picture, with all its lights and shadows of a noble yet fallible humanity, may we not say of the Prophet of Nazareth,—

"He was a man:
Take him for all in all,
We shall not look upon his like again!"

Would it then be just to conclude, with Christendom, that the career of Jesus presents phenomena wholly unique in the world's history? Such is, perhaps, the natural impulse of the human mind, after contemplating a life of heroic self-abnegation and devotion to the welfare of human kind. With a like thought, we have doubtless risen from the perusal of the noble tribute to the founder of another of the world's great religions in Edwin Arnold's *Light of Asia*.† We are touched in a similar manner by the contemplation of the noblest characters of fiction,—the Jean Valjeans and the Romolas, ideal exemplars of this religion of lofty self-sacrifice. But sober second thought should lead us to question whether we ought not rather to bear in mind the human limitations of even the noblest of those who have lived and died for man, lest we fall into a species of idolatry and hero-worship inconsistent with the mandates of rational religion. At least let us not exalt one unduly by the disparagement of all others. The orthodox doctrine of "total depravity," the dark background against which the ideal picture of the supernatural Christ is limned, has no place in the healthy creed of rational religion.

Old Father Taylor, of Boston, the seamen's missionary, whose abundant humanity outweighed the depressing implications of his creed, when he

* We substitute this phrase for "Christianity," in order to obviate the confusion which might arise from the use of a term which ordinarily implies certain doctrinal beliefs not found in the teaching of Jesus. As a matter of fact, this term was not applied to the new religion during the lifetime of its founder.

† We cannot protest too strongly against the systematic depreciation and condemnation of both Jesus and the Buddha in such works as Dr. Oswald's *Secret of the East*, of which more hereafter. Making all due allowances for theological errors, due largely, as we have seen, in the case of Jesus, to the failure to give due weight to a single mistaken belief, the noble personality and fine moral insight of those two great teachers are influences for good that the world will not willingly let die, or consent to see misrepresented or undervalued.

was asked, "Do you think there ever was as good a man as Jesus?" instantly replied, "Yes, millions of them!" Have not you and I also known hearts as true and souls as full of manly courage?

Let us not deny Jesus his proper place in the world's history, nor place him so far above the level of our common manhood that he shall fail to be to us always a rational example and inspiration to all noble things. Let him live in our hearts and minds a heroic, manly character, "not too saintly to be human." Is this indeed so difficult?

"Long fed on boundless hopes, O race of man,
How angrily thou spurn'st all simpler fare!
'Christ,' some one says, 'was human, as we are.
No judge eyes us from heaven our sin to scan.
We live no more when we have done our span!'
'Well, then, for Christ,' thou answerest, 'who can care?
From sin which heaven records not, why forbear?
Live we like brutes, our life without a plan!'
So answerest thou. But why not rather say,
'Hath man no second life? Pitch this one high!
Sits there no judge in heaven our sin to see?
More strictly than the inward judge obey.
Was Christ a man like us? Ah! let us try
If we then, too, can be such men as he!'"

CORRESPONDENCE.

CONDITIONS OF TRUE GROWTH.

Editors of The Index:—

The aim and object of each individual should be to attain to the finest manhood and womanhood: first, in the earthly surroundings where we in our spiritual infancy are placed, as the child in his kindergarten; and, afterward, in the continual developments of our spiritual nature, which brings out the capacities of the spiritual *man* which is to be, as the ultimate of this prior and developing process. All the education the spirit obtains through its mortal and immortal (two conjunctive states) existence is to this purpose, and is received through the experiences attained by contact with circumstances.

The body of the child must grow to the stature of the man before the responsibilities of that state naturally inhere in him, and he may properly exercise the functions of that period; and the soul of the child must develop to a condition of manhood before it can properly take cognizance of its responsibilities and faithfully perform its duties. It is by no means certain that the man's form contains the man's soul; for, by birth or after-conditions, it is often the case that the interior spirit is yet rudimentary and unformed and child-like in its growth, even when the adult size of the body has been reached.

Through the natural up to the spiritual is the legitimate law of our growth; and to remain in the natural, and not pre-eminently aspire toward the spiritual, is not even natural, but is decidedly unnatural and materialistic. There are capabilities and pleasures attainable by the man whose eyes are spiritually opened to discern the qualities of things which are wholly unknown and unsupported by him who is a novice in spiritual perception. Many a man remains in ignorance of his highest happiness and good and in love with the glories of earth just for need of a quick ray from the candle of some one who has climbed a step farther than he up the winding stair of progression toward the Life, to illuminate his condition, and assure him of his own heaven-born faculties. The rays of the sun of Truth are continually seeking for lodgement in our hearts; but, alas! we shut ourselves up so closely in our own self-complacency that they find no crevice whereby to enter. Let us make ourselves as open as the day to all sweet and elevating influences, using our own reason as a guide by which to criticise their sweetness and wholesomeness, making ourselves receptive and negative, while yet we are positive in our determination to appropriate only the best and highest to our use.

The union of the body and spirit is vital, and proper relations are essential to the well-being of both. The hand cannot say to the foot, "I have no need of thee," neither can the spirit or body of man say the same of either. They are interdependent; and the spirit cannot act through its subordinate mental processes, unless the body provide a healthy, clean house of heart and brain by which it may be assisted to do itself justice. Therefore, for the future

* See Spencer's *Data of Ethics*, Savage's *Morals of Evolution*, Prof. Everett's essay on "The New Morality," etc. See also John Stuart Mill, *Autobiography*. Mr. Mill even lays down the principle that the greatest happiness cannot be attained when it is consciously made an end and object of pursuit.

† The *Church History of the First Three Centuries*, by Dr. Ferdinand Christian Baur, late Professor of Theology in the University of Tübingen.

and present good of the spirit, which is the true man whose good we seek to attain, the body should be properly cared for, though not pampered, and should be taught and induced to follow in the paths made productive of these results. All the appetites and functions of the body should be properly used, but not abused. When these divisions of our nature are gratified in the hope of the interior growth of the man himself, and not merely to minister to the entire use of the body, they are sanctified by such intention, and serve the last use much more perfectly than if directly intended only for that purpose. The body is fed and made finer and better, while the spirit receives new growth and strength to hold itself still more superior to the clogs of earth.

There is a very great difference in the results attained by the proper regulation and allowance of all the normal needs of the body, with reference to their effect upon the immortal spirit, whether here or hereafter. If these are made the end and aim of life, the man or woman grows sluggish and heavy and gross in nature. If they are made a means to growth, they help to throw off this sluggishness and torpidity, and to vitalize the whole man and render him clear and logical and far-seeing and spiritual. It is the spirit that is clear-seeing; and, if we minister to its highest needs, we not only induce this desirable condition of things here, but we clear and purify and render healthy the temple in which the man, for the nonce, resides. All material wants should be subordinated to spiritual needs, as the surest and speediest method of rendering our bodies strong and self-poised and healthy and enduring.

LITA BARNEY SAYLES.

AN ETHICAL CLASS IN BIOGRAPHY.

A Visit to Prof. Felix Adler's School in New York.

The readers of *The Index* know Prof. Adler's work as founder and leader of the Society for Ethical Culture. His direction of the practical philanthropies connected with that society is marked by a rare union of enthusiasm and practical sagacity. His Workingmen's School gives technical instruction to more than two hundred pupils, chiefly of the needy class. He supervises a society for the relief of the sick poor, and has organized together a number of benevolent men who intend building improved tenements for the poor at a very low rate of interest.

In teaching the younger members of his society, his lessons comprise a series: 1st, of cases of conscience; 2d, biography; 3d, history; 4th, philosophy of life. A visitor to one of his classes in biography thus describes its method in the *Montreal Star*: "We were shown into a class-room where Prof. Adler sat encircled by a group of about twenty young girls. The theme was the biography of Margaret Fuller. Every member of the class had read the life of that remarkable woman, so as to be prepared for the teacher's questions. Without hesitation, the young misses soon told the time and place of Margaret Fuller's birth, her early education by her father, who taught his little girl at six both Greek and Latin. Her remarkable precocity, stimulated rather than restrained, was commented upon; and the injurious effects on her mental and bodily health were pointed out. Margaret, after learning all her father could teach, was sent to a boarding-school. There, her force of mind and will, together with unusual powers of pleasing when she chose, had some very singular results, which a bright little German girl narrated admirably.

"In taking part in amateur theatricals, Margaret once resorted to rouge to heighten the color of her pallid cheeks. The improvement in her looks was so decided that she continued the practice. Of course, this was more than the lady principal and the teachers could bear. So much, however, did they dread Margaret's anger that they could not summon up courage enough to tell her to desist from the practice. They resorted to a species of reproof which produced a much worse scene than a frank rebuke would have done. One morning, when Margaret came to breakfast, every girl's cheeks showed a flushing circle of rouge! She ate her breakfast in silence, and went to her room, where, in a tempest of passion, she struck her head violently against the wall, bruising herself badly. More bitterly than the ridicule cast upon her did she feel the faithlessness of her school-girl friends. Constant in their professions of admira-

tion and attachment, not one had spared her humiliation by disclosing the stratagem of the rouge-pot. Stung by hate and fury, Margaret for a time sought revenge by fomenting discord in the school. Possessed of many confidences, she found her task an easy one. At last, so serious became the contentions among the pupils that the principal instituted a searching inquiry into their cause, and convicted Margaret of being that cause, and of using falsehood to aid her mischievous plans. The culprit admitted her guilt, and passionately sought forgiveness with ardent promises of reform. Her mind had received a lesson in discipline which it needed. She soon was reinstated as empress, and never again committed an act unworthy her throne. Her power of fascination was remarkable: it was not based on attractions of personal beauty, but on the quickest and warmest sympathy and profound intelligence. One poor little girl at school worshipped her idolatrously, constantly endeavored to serve her, and almost intrusively sought to be always in her radiant presence. This Margaret disliked. One day, the timorous little devotee worked herself up to the point of throwing her arms around Margaret's neck, and sobbing, 'O Margaret, I wish you would love me.' This incident afforded Prof. Adler an opportunity of pointing out to his class the danger of being over-impressed by force of personal or mental endowment. Self-respect would forbid unreasoning worship, which may have a sad awakening when attractions wane and defects of character appear. The instinct by which we look for leadership, friendship, and love must be carefully guided in the selection of its objects, or disappointment and heart-breaking may be the consequences.

"The class then traced Miss Fuller's public career, told of the fame which early made her the friend of Hawthorne, Channing, and Emerson. We learned how she became the successful principal of a school at Providence, and then editor for four years of the *Dial*, the organ of Transcendentalism and advanced thought in New England. Miss Fuller's powers as a conversationalist were then remarked upon. So great were they that for five sessions she led a conversational class of the most cultured ladies in Boston, treating art, mythology, literature, and reform as her themes.

"The next phase of Miss Fuller's life came home to the class. It was that which included her connection with the *New York Tribune*, when she was an inmate of Mr. Horace Greeley's household. This passed, the class spoke of Miss Fuller's visit to Europe, her sympathy with the struggle for liberty in Italy, and her romantic marriage with Count Ossoli. Little then remained except to tell Margaret's mournful end. With her husband and babe, she perished in the wreck of the bark which had brought her within sight of home. The 'Elizabeth' struck a reef on July 19, 1850, off Fire Island, near New York; and the greatest woman America has known was no more.

"In his fine analysis of her character, Prof. Adler showed the play of impulse as opposed to conscience, of waywardness as opposed to judgment and good sense. He pointed out that, remarkable as Miss Fuller's natural gifts were, they had only been perfected by matchless industry and the tireless pursuit of ideal aims. She was not satisfied with the consciousness of power. She felt moved to exert it for the good of her sex and the world."

THE *Religio-Philosophical Journal*, in an able three-column editorial on the "Promotion of Psychical Research," says: "The very scant allusions incidentally made in the editorial columns of the *Journal*, and by its editor during his summer travels, concerning a society or institution for psychical research, have been widely noticed and treated in a most friendly way in various non-Spiritualist quarters. A number of papers have quoted what has been said or published, and seconded the suggestion. Quite a number of scientific and literary people, together with many progressive men in the ministry, have written the editor or approached him in person upon the subject. The very general encouragement of the plan is indicative of the universal interest in the matter involved and the readiness with which hearty co-operation will be forthcoming, and powerful allies obtained in quarters most influential and desirable. . . . One of the most thoroughly accomplished and painstaking essayists and lecturers of New England wrote us, immediately after seeing Mr. Underwood's article in *The Index*

of the 9th inst., as follows: 'I do not, as you doubtless know, have much confidence in the Spiritualist hypothesis as one likely to be of service in explaining the various phenomena which it is sought to explain by it, but I am glad to see it tested reverently by every sincere person to whom it does commend itself. And permit me to say in simple frankness that I know of no one else who is working in that direction with spirit and method so commendable and so interesting as your own. I am glad to see you favor the establishment in this country of a Society for Psychical Research, like the English society. I should heartily welcome such a society as that, and I sincerely wish that Stanley Hall and some other of our psychologists would take to it.'" The editor of the *Journal*, with confidence in the truth of Spiritualism, but with a desire to have its claims fairly tested, adds: "Very many representative Spiritualists, as well as people of wealth and prominence who, while believing in Spiritualism, have refrained from identifying themselves publicly with it, together with the body of acute, critical, and fearless Spiritualists and investigators constituting the bulk of the *Journal's* constituency, deeply feel the need of more thorough scientific effort and the imminent importance of constructive work, which, thoroughly grounded upon a scientific basis, shall steadily lead onward and upward, dealing more and more with the higher aspects of Spiritualism. It will be seen that in the movement for a psychical research institution there is a community of interests among those who, while widely differing in many respects, are all equally anxious and ready to find the truth. The benefit of an institution for psychical research will be realized as much by those already Spiritualists as by the world at large. Indeed, the intelligent Spiritualist will say that Spiritualism as a distinctive movement will be the greatest gainer."

THE *Radical Review*, agreeing with *The Index* as to the action which honesty and consistency demanded of the National Liberal League at its late Congress, says: "The reaffirmation of these Nine Demands was good enough so far as it went, as all Liberals subscribe to them; but this was not sufficient to effect the unification of the two great factions among the Liberals of this country. On several previous occasions, the National Liberal League had pledged itself in favor of the total repeal of the national law for the suppression of obscene literature,—not because it in any wise countenanced obscenity, but because the law had been perverted into a weapon against the liberty of the press by that religious fanatic, Anthony Comstock. The more conservative Liberals, while they condemned the ecclesiastical assaults on the free press of this country as strongly as any one, were yet unwilling to join in the popular demand among their fellow-thinkers for the total repeal of the national obscenity law. Instead, they demanded its modification in such manner that it might not again become a menace to the liberty of the press. With the watchword 'Modification' on their banner, they seceded from the body of the Liberals whose watchword was 'Repeal.' Instead of pursuing their common cause, the Liberals wasted much time and energy in fighting each other. To put an end to this and bring about a reconciliation of the hostile factions was one of the objects of the Cassadaga Lake Convention. The reaffirmation of the Nine Demands of Liberalism was a step in that direction, but it was not large enough. If reconciliation was indeed desired, the Convention ought to have done what was really required to effect this end. It ought to have rescinded the action of the League pledging it to the policy of repealing the national obscenity law. This would not have meant that the 'repeal' policy is in itself false, but simply that it is not proper to the National Liberal League policy, instead of passing the whole matter over in silence. That would have been honest; that would indeed have lifted the Liberal League 'into the realm of universal principles'; and that would have secured the co-operation of all Liberals in the great work before them."

THE PUNISHMENT OF ATHEISTS.—The *Edinburgh Encyclopedia*, conducted by David Brewster, LL.D., says that, "when the denial of a God is openly avowed, we believe the most suitable punishment would be to devote the offender, as a dangerous maniac, to solitary confinement." This leads the *Ottawa, Ont., Free Press* to say: "That the views of an atheist can be reformed by incarcerating him within four ugly

walls made by man, and shutting out the contemplation of the greater manifestations by the Supreme Power lying in the world beyond and the universe throughout, before which even the inquiring spirit of Thomas Paine fell down in worshipful awe, is a declaration open to serious questioning. The suggestion of civil punishment for alleged errors in what are matters largely of speculative thought is a modern survival of the hell-born bigotry and cruelty which incited a Claverhouse to sodden the moors and glens of Scotland with the blood of noble Covenanters, which made the European kings and authorities of the Middle Ages anticipate as holidays the *auto-da-fé* upon whose flames the noble spirits of Catholic and Protestant martyrs soared to heaven, and which in the gloomy vaults of the inquisition trained Torquemada's ear to recognize in the shrieks of the poor wretches on the rack the most melodious of Te Deums. With us in these modern times, that recognition of civil and religious liberty in the fullest understanding, which underlies the exercise of true political liberalism, is a trust too sacred to be lightly regarded."

BOOK NOTICES.

AN APPEAL TO CÆSAR. By Albion W. Tourgee. New York: Fords, Howard & Hulbert. 1884. pp. 422. Price (until November 15) \$1.00.

This is a stirring and vigorous showing of the dangers apprehended in view of the present aspect of political affairs in the South, resulting from the enfranchisement of the slaves, the constant increase in the numbers of the colored race, and the antagonism of the whites to any political recognition of their equality. Among these dangers, Judge Tourgee thinks a war of races imminent. He says that "these masses of population, which nature and a wonderful sequence of events have arrayed against each other in seemingly unavoidable antagonism, are likely to be precipitated into a conflict which, for savage horror, would have no parallel in history, by the folly and inconsiderate prejudice of vast bodies of the ignorant and reckless of both races." One of the chief factors in developing such a state of affairs he considers to be "the prevailing illiteracy of the Southern people of both races"; and the only preventive of such collision is in the encouragement and enforcement of education in the South by government interference and national provision. The "Cæsar" to whom the author appeals is "The American People," whom he wishes, by their votes, so to influence the national government as to cause this remedy to be speedily applied. He argues the case strongly and feelingly, and supports his arguments step by step by tabulated and unimpeachable statistics on every mooted point. The fact that this book is issued in the midst of a Presidential campaign, and that the author is an ardent believer in the efficacy of one special political party to undertake and carry out his scheme of free education for the South, making the "Appeal" in a measure a campaign document, will have some effect to lessen the influence of its statements as to the impending peril.

UNITARIAN CHURCH DIRECTORY AND MISSIONARY HANDBOOK. 1884-1885. New York: Thomas R. Knox & Co.

This little publication is something new among the Unitarians. Its editors are Russell N. Bellows, of New York, and Albert Walkley, of Keene, N.H. Mr. Bellows (son of Dr. Bellows) is the secretary of the National Unitarian Conference. Yet the handbook is a private enterprise on the part of the editors and publishers. The preface says, "Frequent inquiries for facts and figures, showing in compact compass the history, aims, beliefs, hopes, and present actual condition of the Unitarian Church in the United States, suggested to the editors the preparation of this little Directory and Missionary Handbook." Its lists of ministers and societies are the same as those in the "Year-Book," as now issued by the Unitarian Association, but they are arranged in more convenient form; and, on other points, the information given is much more complete. The little work is edited in a broad and liberal spirit. Theodore Parker is generously mentioned among the leaders who have brought the Unitarian movement to its present position, and even *The Index* is named among publications representing the movement! The latter can be a true classification only on the basis of a very broad def-

nition of the Unitarian movement,—broader than any Unitarian organization has ever made. The handbook can be obtained through *The Index* office.

TEXT AND VERSE FOR EVERY DAY IN THE YEAR. Scripture Passages and Parallel Selections from the writings of J. G. Whittier. Arranged by Gertrude W. Cartland. Boston: Houghton, Mifflin & Co. Price 75 cents.

Considerable ingenuity is displayed by the compiler of this pretty little volume in making the poet Whittier seem an unconscious paraphraser of Scriptural texts. Still, in spite of Miss Cartland's evident painstaking study and research, in many cases the parallelism between the text and verse is far-fetched and doubtful. It makes, however, a pleasant variation from the common devotional year-books, which are wholly Scriptural.

OVER THE SUMMER SEA. By John Harrison and Margaret Compton. New York: John W. Lovell & Co. Price 20 cents.

We have here a pleasantly told story, cleverly done into verse, of the experiences, love affairs, and comical happenings occurring to a party of tourists on a steamer voyage between New York and Liverpool. It will serve very well to while away a leisure hour on just such a trip as that described.

THE Century for November begins the series of papers on the Civil War by Gens. Grant, McClellan, Rosecrans, and others in high rank. "The Battle of Bull Run" is contributed by Gen. Beauregard, who adds to his description a postscript on the consequent conduct of the war and his own relations with Jefferson Davis. The first part of the "Recollections of a Private" begins with the enlistment of the soldier, and continues the description of his life, including Bull Run, thus supplementing Gen. Beauregard. The frontispiece is one of Elihu Vedder's illustrations of the Rubáiyát of Omar Khayyám, the Persian poet, five others of which are reproduced, with text by Horace E. Scudder. "The Chinese Theatre," by Henry B. McDowell, is an interesting paper. "The Sculptors of the Renaissance" is by Kenyon Cox. Joel Chandler Harris tells a new story of ante-bellum days in the South, entitled "Free Joe and the Rest of the World." A story of Colorado, by Mr. T. A. Janvier, is entitled "The Lost Mine." The fiction comprises "A Tale of Negative Gravity," by Frank R. Stockton, and the beginning of a new novel, by Mr. W. D. Howells, dealing with the life of an American business man, and called "The Rise of Silas Lapham." Col. Waring contributes the first of two papers on "The Principles and Practice of House-drainage." Mrs. James T. Fields recounts "An Acquaintance with Charles Reade," with hitherto unpublished letters. Bishop Potter discusses "A Phase of Social Science," and George Ticknor Curtis makes some suggestions as to "How shall we elect our Presidents?" "Topics of the Time," "Open Letters," and "Bric-à-Brac" are all readable. [For sale by Cupples & Upham.]

THE Freidenker Almanach for 1885 opens with a calendar giving not only the usual astronomical information, but an elaborate list of chronological eras and a vast amount of biographical and historical dates. The Jewish, Moslem, ancient Egyptian, and Greek Catholic calendars are also printed at some length, but not the Positivist or that of the first French Republic. There are about a hundred pages of reading matter, among the most interesting articles being the poem of lofty tone, "Suchst du das Göttliche?" the chapter of autobiography entitled "Would it not be better to leave People in the Old Faith?" by Edward Schröter, a noted speaker in the Free Congregations, or *Freie Gemeinde*, and an argument for the abolition of the Presidency in nominating Blaine, for which office the Republican party is charged with having shown itself morally bankrupt. The maxims and other brief quotations also make this Almanac extremely valuable as a means not only of learning German, but of spreading advanced ideas. It may be obtained for twenty-five cents of the *Freidenker* Publishing Company, Milwaukee.

HOUGHTON, MIFFLIN & Co. make the annual catalogue of their publications a very desirable addition to any library by the large collection of excellent portraits given of the many well-known writers whose works they publish. Several new portraits are added to their latest catalogue just received at this office in

addition to those given in previous numbers, among them those of Louis Agassiz, Alice and Phoebe Cary, Joseph Cook, James T. Fields, John Fiske, Celia Thaxter, Sara O. Jewett, Lucy Larcom, James Parton, Elizabeth Stuart Phelps, Thoreau, E. P. Whipple, and others. Small as these engraved portraits necessarily are, they are all excellent likenesses and finely finished.

NATURE AND MAN.

"As interesting as a fairy tale."

"Skilfully popularizing Science."

THE REIGN OF LAW.

By the Duke of Argyll, with 4 illustrations by Wolfe. Crown 8vo, cloth, Long Primer type, leaded. Price \$1.25. Price of the cheapest competing edition, \$2.00.

"As interesting as a fairy tale."—*The Illustrated Times*. "A very able book, well adapted to meet the spirit of inquiry which is abroad, and expresses many deep and suggestive truths."—*London Times*. "The volume is full of vigorous thinking and most successfully mediates between science and theology."—*British Quarterly Review*.

THE UNITY OF NATURE.

By the Duke of Argyll. Crown 8vo, cloth, Long Primer type, leaded. Price \$1.25. Price of the cheapest competing edition, \$2.50.

"The author of the *Reign of Law* has in this treatise... shown a steady and penetrating power of thought, a depth, an acuteness, a mastery alike of natural science and the main principles of mental and moral science, such as in their combination few living men, if any, could have shown."—*London Quarterly Review*. "Admirably clear and comprehensive."—*London Spectator*. "A grand treatise on Natural Theology and the Philosophy of Man."—*The Literary World*.

PRIMEVAL MAN.

By the Duke of Argyll. Crown 8vo, cloth. Price 60 cts. Price of the cheapest competing edition, \$1.50.

"Deserves to be carefully read by all who would keep abreast of the leading tendencies of the time."—*The Living Church*. "The book is worthy a place in every library, as skilfully popularizing science."—*London Nonconformist*.

THE DUKE OF ARGYLL'S WORKS.

The three works mentioned above bound in one volume. Crown 8vo, extra cloth, bevelled boards, gilt top, \$2.00.

Though printed and bound in the best style, my price for this volume is ONLY ONE-THIRD the price of the cheapest edition heretofore obtainable.

Sent postpaid on receipt of price. No discounts from these prices. Send direct to the publisher. Books may be returned and money will be refunded, if not satisfactory.

O. H. BOIES, Publisher,
393 Pearl Street, New York City.

LECTURES

ON LEADING REPRESENTATIVE MEN OF OUR TIME, INCLUDING

EMERSON, CARLYLE,
HUXLEY, TYNDALL.

Also, upon the early *Growth and the History of Culture; Evolution of the Arts; Origin of Mythology; The Survivals in our Present Civilization; The Aspects and Promise of the Time*, etc., will be given where desired this season by the undersigned.

Address CHARLES D. B. MILLS,
SYRACUSE, N.Y.

October 20.

The American Lesson

OF THE

Free Trade Struggle in England.

By M. M. TRUMBULL.

300 pages. Price, paper, 35 cents; common cloth, 50 cents; fine cloth, 75 cents.

PRESS NOTICES:

"There is no other teaching of Free Trade by example at all to be compared with it. ... It is as interesting as a romance."—*Chicago Times*.

"The author does not deal with statistics, but relates the story of the contest in such a pleasing manner that it reads like an enchanted tale."—*Omaha Herald*.

Big money made quickly. **MONARCH MFG CO., (A) 206 State St., Chicago, Ill.**

THE BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches**, which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars**, which are models of comfort and elegance; its **Palace Drawing Room Cars**, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that it is the best equipped road in the world.

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, and take none other. All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

principally upon Social Science.

Of **VAN BUREN DENSLOW, LL.D.** Introduction by **ROBERT G. INGERSOLL.** Including critical analyses of Swedenborg as a Seer, of Adam Smith as an Economist, of Jeremy Bentham as a Law Reformer, of Thomas Paine and Junius as Political Revolutionists, of Charles Fourier as a Socialist, of Herbert Spencer and Ernst Haeckel as Evolutionists, and of Auguste Comte as a Positivist, with an Essay on Wealth in its Relations to Christian Ethics.

The Fifth Edition has just been issued

"Upon the question of money, this volume contains the best thing I have ever read."—*R. G. Ingersoll* (in Introduction).

"We confess that, if we stood on the ground on which Mr. Spencer stands, we should find it difficult to prevent ourselves from being pushed by the stalwart arm of Dr. Denslow's logic into the gulf of ethical nihilism."—*Prof. Goldwin Smith.*

"Now, the whole force of this case depends upon the assertion of Goldwin Smith that Dr. Van Buren Denslow is a disciple of Herbert Spencer. But the assertion is not true in any sense or in any degree. On the contrary, Dr. Denslow is an open antagonist of Mr. Spencer. His essay on Spencer's Philosophy, first published in the *Chicago Times*, while speaking of the man in the usual terms of perfunctory compliment, as have also Goldwin Smith and the *Saturday Review*, is adverse, carping, and depreciatory on every point that he considers. The criticism was regarded as so damaging that Spencer's friends were told they must reply to it or forever hold their peace; and we were confidently assured that the last we should ever hear of Spencer's system was the thud of the clods that Denslow had thrown upon its coffin."—*Prof. Youmans, in Popular Science Monthly and in Introduction to Current American Edition of the Data of Ethics.*

Stephen Pearl Andrews, as political executor of the late Thomas Paine, is as fiercely indignant at Mr. Denslow's analysis of Paine's politics as Prof. Youmans is at his assault on Spencer's Philosophy. On the other hand, George Jacob Holyoake speaks of the analysis of Paine's political philosophy as "the most masterly refutation of it extant, without showing in his words or in his mind any enmity against the great agitator whom he confutes."

The late Dr. George M. Beard, of New York, wrote to the author: "Your critique on Spencer's *Data of Ethics* has all the force of a discovery in ethics, and is of great value. It deserved to be made the subject of a separate treatise."

BELFORD CLARKE & CO., Publishers,
CHICAGO, ILL.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 insertions, . . .	10c. per line.
" 13 " 25 " . . .	8c. " "
" 26 " 51 " . . .	6c. " "
" 52 " " . . .	5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By **FELIX L. OSWALD, M.D.**

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

CURRENT TOPICS.

BY B. F. U.

THE item in the papers stating that Miss Anna E. Dickinson celebrated last week her forty-second birthday may serve to remind many who saw her in her youthful beauty, and listened to her eloquent words in 1861-62, that they are no longer young.

SAYS the *Presbyterian*, "Most of the theologians of the present time or of the time just past have read Archdeacon Paley's books on the Evidences or recited his *Natural Theology* in the class-room. One of his descendants, Prof. Paley, went from the Anglican Church to Romanism in the first fervor of the Puseyistic movement. Now, he has swung to the other extreme, and is clamoring for free thought; is, in truth, among the broadest of the 'Broad.'"

IN his recent speech to the preachers at the Fifth Avenue Hotel, Mr. Blaine declared that the tariff "is the issue which lies at the very foundation of the prosperity of the American people, and the very foundation of the success of the Christian religion." Quite different from this view is that of Mr. Fiske, who in his latest work incidentally remarks, "Our robber tariffs, mis-called 'protective,' are survivals of the barbarous mode of thinking which fitted the ages before industrial civilization began."

THE New York *Sun* thus refers to some remarks of Rev. Dr. G. H. Smyth, of Harlem, to the effect that the prevalence of dishonesty and sin is due to decay of faith in the Bible and belief in Herbert Spencer: "We are not now concerned with Dr. Smyth's criticisms on the attitude of the pulpit toward commercial dishonesty, but it is proper to call attention to the injustice of the assumption involved in his remark in regard to Herbert Spencer. The idea which it conveys is that the study of Mr. Spencer's philosophical writings is conducive to laxity of morals. Nothing, in our opinion, can be further from the truth than this suggestion. If anything is distinctly taught in his philosophy, it is the absolute necessity of doing right in order to live happily, and the certainty

that punishment will follow sin. We do not believe that any one intelligent enough to comprehend the author's meaning was ever made worse by reading the works of Herbert Spencer."

SAYS the *Boston Transcript*: "M. Renan's visit a month ago to his birthplace in Brittany has raised a storm in the clerical teacup. M. Renan was anxious to sleep during his stay at Tréguier in the very house in which he had been born, and which is now inhabited by several different tenants. But the difficulty was that these good folk were all devoted sons of the Church, and by no means inclined to offer hospitality to the author of *Vie de Jésus*. One of them, however, was more tolerant, and lent his room. For this act of courtesy, he has been so bitterly assailed that he has felt compelled to publish a *pièce justificative*. It was quite true that he had lent his room to the infidel, he said, but then he had also lent it on a previous occasion to another distinguished man of unimpeachable Orthodoxy, whose good influence might perhaps have haunted M. Renan. Besides, was it not worth while trying whether the revival of all the surroundings of his youth might not reawaken also in the heretic his early faith?"

IN a notice of an excellent little work (which was reviewed in these columns some weeks ago) entitled *The Development Theory, a Brief Statement for General Readers*, the joint production of Joseph Y. Bergen, Jr., principal of the high school at Peabody, Mass., and Fanny D. Bergen, his invalid wife, the *Springfield Republican* says: "Prof. Bergen is an Illinois man, a graduate of Antioch, then principal for some years of the old Deerfield Academy in this State, and afterward Professor of Natural Sciences at Lombard University, Galesburg, Ill., whence considerations of health again induced him to come East. He is a man of fine moral and intellectual perceptions, to which he is loyal; and this statement of the development theory will be found of value to all who want a concise and precise conception of it. Prof. Bergen is a thorough disciple of Darwin, and does not undertake to reconcile religion with science. He doubts whether science admits of reconciliation with the existing historic religions. The work is a convenient 16mo of 240 pages, and evinces scholarly labor."

WE have not in these columns cared to discuss the political situation or to define our position in the contest just ended. The campaign has been a very bitter and exciting as well as an extremely scandalous one. A paper like *The Index*,—non-political in its character,—which is open to the presentation of all sides of questions considered in its columns, must be very careful, even in treating the ethical aspects of such a contest, lest it invite controversy sure to go beyond the proper and legitimate province of the paper. This has been done very judiciously by our colleague. An opportunity has been given for a few words of defence and criticism of all the parties, and happily none of the virulence of the campaign has entered these columns. The result of the election will probably be known to all our readers before they see this

paragraph. Our own vote this year is for one of the two candidates whose election is regarded as possible, and for the one who, if elected, will we believe make the best President. *The Index* goes to press this week before any election returns are received.

WE have learned with sorrow of the death of Hon. Wolcott Seymour, of Danville, Iowa, who died at his residence, October 19, aged seventy-one years. Mr. Seymour was a man of character and worth, respected and esteemed by all who knew him. He had filled many positions of trust and honor. Twice he had been elected to the State legislature. At the time of his death, he was President of the Burlington Insurance Company, an office he had held eighteen years. He was a free thinker, interested in the progress of liberal thought, a subscriber to *The Index*, and always ready to support liberal lectures in his town by his money, influence, and presence. The Directors of the Burlington Insurance Company, the Thursday following his death, passed resolutions "that in the death of the Hon. Wolcott Seymour we are called on to mourn the loss of a well-beloved officer of this company, one whose stalwart integrity was beyond reproach, whose counsel was prudent and ever reliable, and whose friendship was highly prized; and that, while sincerely deploring the event which has removed him from our midst, we bow in humble submission to the decree of the Almighty, who doeth all things well, and we will continue to cherish the memory of the deceased, keeping in view his sterling qualities of heart and mind, that the memory thereof may have a salutary influence upon our official and individual action in time to come."

THE Conference of the Mormon Church, held recently at Salt Lake City, presented some very interesting and significant features. The *Springfield Republican*, referring to it, says: "At the Sunday meeting, when the sacraments were administered, some fifteen thousand people, mainly foreign born and taken from the very lowest classes, assembled in the vast Mormon tabernacle. They had come by rail, stages, or common wagon, some camping out on the way like religious pilgrims in the East. Upon the raised seats of the platform sat the great embodiment of the religious commonplace of Utah, John Taylor, the prophet of God; and about him were about five hundred high-priests, elders, and officers of the Church. The largest organ in the West, and perhaps in this country, together with a choir of two hundred and fifty voices, led this vast assemblage in an impressive hymn. Then they partook of the sacraments, spring water being substituted for wine, the saints drinking it 'by the barrel.' As a phenomenon in religious history there is really nothing like this Conference in any country. The officers of the Mormon Church are chosen by heaven through the medium of revelation, and ratified or, as they term it, 'sustained' by a vote of the Conference. No political convention ever went through the machinery of nomination with the precision of the autumn Conference."

IDEAL POLITICS.

Before this number of *The Index* reaches its readers, the exciting Presidential campaign will have been ended, and in all probability a decision will have been made. Not the sagest politician, at the time of this writing, is able to tell what that decision is to be, though for weeks at every political rally, whether Republican or Democratic, the regulation prophecy has been made with perfect positiveness that the candidate in whose interest that specific meeting was being held was sure to be victorious. Our paper, too, will go to press on the evening of election day, before anything decisive can have been learned with regard to the result. It may be confidently expected, however, that, when our readers see this article, they will know beyond a reasonable doubt who is to be the next President of the United States. There is only the most remote chance that the election will have to go to the national House of Representatives; and it is to be ardently hoped that, whichever way the popular vote may turn, it may in every State be so sure that there may be no possible chance to dispute the result.

We are not among those who think that this country is going to be ruined by its Presidential choice, whatever it be. The country has had a great variety of Presidents. The most of them, we may truthfully and proudly claim, have been able and upright men. But some of them have been weak and some of them wilful, and a series of them were servile tools of the slaveholders' oligarchy. Yet the nation has endured and survived them all. It survived Tyler and Polk and Buchanan and even Andrew Johnson. And, what is more, it was not ruined even by the crushing burden of slavery nor by the terrible war which slavery brought upon it. The nation has shown itself, in its hundred years of life, to have elements of virtue and prosperity, which are able to overcome and cast out a good deal of evil. And, therefore, we shall not despair of the Republic whether Mr. Blaine or Mr. Cleveland shall be elected President. For reasons we have before given in these columns, we do not think either of them worthy of the high office, and shall vote for neither; and we apprehend that certain evil results will follow the election of either one of them. But we cannot believe, considering what the country has already endured and overcome, that these evils will be so dire as to bring the country to destruction. No one man, however high he may be placed and however corrupting his action or his example, can have such power as that. Could this be true, our republican form of government were already a failure.

And among the things which are going to help in counteracting the evil effects of the nomination and election of such Presidential candidates is the moral protest which has been raised against them. Though this moral protest is unavailing to prevent the election of one or the other of them, it has been strong enough to make the election a close and costly battle. The very nomination of Mr. Blaine drove into revolt a formidable section of the Republican party, because of his official misdeeds; and this revolt clouded his prospects from the very beginning of the canvass. Partly through the pressure of some of these Independent Republicans, Mr. Cleveland was then nominated by the Democratic convention as a candidate whom they could support. But, when the blot on his private character became known, a portion of these Independents and many others who had previously been disposed to vote for him felt equally compelled to raise a protest against his election, because of his personal misdeeds; and this defection

from his ranks has been the most serious obstacle in the way of his success. Hence, whichever of these two candidates is placed in the White House, he will know that he enters it against the protest of a large section of his fellow-citizens, who on political grounds would have gladly voted for him, but who have withheld their votes solely because of their belief in his moral unfitness for the office. He will know that his conduct in private and in public will be closely watched, and that, if he offend by such misdeeds as have weighted him down in the political race, there is a vigorous moral sentiment in the country ready to be roused to indignant action against both him and the party that supports him. The great parties that have nominated and adhered to these candidates will also see and know this even more clearly than the candidates themselves. They know full well, in spite of their efforts to treat the matter lightly, how heavy a burden they have had to carry with their candidates on account of this moral protest against them. The party that succeeds will know also that, before this conscience vote, success will be no moral vindication of its candidate. And the party that is defeated cannot fail to feel, however slow to confess, that it was this largely prevailing belief in the moral unfitness of its candidate which crushed him. In either case, political parties will be taught that the moral sentiment is a factor which their conventions cannot afford to trifle with; that the conscience vote is already a practical power in politics; that this vote has given warning that, hereafter, not only political principles, but character both official and personal will be deemed fit matter for inquiry in respect to candidates for the Presidential office.

It is indeed some compensation for the demoralizing partisanship and disgusting indecencies which have appeared in this political campaign that the men who are charged with being merely idealists and impracticables in politics are, after all, showing their power. They may not hold the balance of any political power immediately available to save the country from moral disgrace, but it is beginning to be seen that they hold the scales of judgment over future political parties and conventions. What would not the Republican party have given in these weeks just past, if, in place of the Mulligan letters, it could have presented a record of really able, broad, upright, and unselfish statesmanship on the part of its Presidential candidate? Yet this is one most important feature in the political "idealist's" standard of availability for a Presidential candidate. Or what would not the Democratic party and its Independent allies have given for a clean personal character in their candidate? And yet clean moral character is another of the features of availability which the "idealist" in politics has demanded that candidates for public office should possess. But he has been laughed at for his verdant simplicity in making such demands as these. What does he know, it is asked, in his study of "the Higher Law" and of ideal ethical principles, of the exigencies of practical politics? But both parties have been brought earnestly to wish in this Presidential campaign that their candidates stood nearer to the "idealist's" standard. On the one side, nothing would have been so "available" in the candidate as to have been able to show an unquestioned official integrity; and, on the other side, no qualification could have been added to the official record of the candidate so "available" as an unquestioned personal character.

It is also a matter for congratulation that, since the political battle has been fought on so low a moral plane, a very large number of citizens have been set free from party organizations and methods,

and are able to see the right in respect to political questions more clearly than before. The party veil has dropped from their eyes, the party bias has been eliminated from their minds. Amazed and incensed by the monstrous arguments into which extreme partisanship on both sides has been driven, they have not been frightened into the support of either of the leading candidates by the dismal prophecy of calamities sure to come should the other be elected. Nor have they been caught by the shuffling sophistry which has argued that not to vote at all or to vote for a third candidate was merely to waste their power for the sake of a selfish satisfaction to their own conscience. They have seen that on their withheld vote or their ballot cast for a third candidate was written the moral lesson of the campaign. And not to secure any private luxury of self-satisfaction, but to set that lesson before the eyes of all parties for the country's benefit, has been their motive. For this end, they have accepted the responsibility of following their own consciences, and not the conscience of a party. In the midst of party demoralization, they have held up their moral standard; and they willingly abide the issue. Perchance their action will make the germ of the new party that is needed to take up the questions of the new time. For years, they have seen pressing questions of political duty pushed aside by party jealousies and competitions, which have consulted only what is expedient for to-day's success. It is time for the higher politics which sees future success in to-day's right.

WM. J. POTTER.

THE PRAISE OF CITIES.

III.

We have compared the æsthetic, intellectual, and to some extent the moral aspects of the country and the town; but having come so far upon our way, pausing for a moment, there comes upon the air a long and melancholy wail. Not perfectly articulate, its significance in so far as it can be divined seems to be this: That the intellectual and moral life of our great cities is dying at the top; that the education which our young men are receiving, those who have most to pay for what is called a liberal education, is not such as fits them for the work of life, for its harsh and grinding competitions, for its political and social uses. The truly liberal education, we are told, is that of poverty and self-denial, training a man to hardihood, developing in him that element of "clear grit" which our friend, Robert Collyer, has so much insisted on, which no man can have, he argues, who has not been born and reared in poverty. *Nos morituri te salutamus!*—"We about to die salute you!" To-day, it is no gladiator that salutes the throned and pampered Cæsar so, but the throned and pampered youth of cities who thus cry, or would if they could have prophetic souls, to the young gladiators who are swarming up from out the country neighborhoods to take their part in all the fortunes of the day. This is the way, substantially, in which the case is put by many moralists and educators and preachers of our time. I do not find myself inclined to give in my adhesion unreservedly to such a statement of the case. There is some truth in it, no doubt; enough to think about for many a sober day. The truth is this: that the education of our city youth, where it is costliest, is often such that it does little or nothing to prepare them for the special work they have to do, the general life they have to live. It is this also: that the indulgence of children and young people in their every wish and whim is obviously a premium upon their future misery,—not in a hell beyond the grave, but in a very pres-

ent hell of wastefulness and discontent. But unwise indulgence is not confined to any class. Those of us who have had acquaintance with both rich and poor have found, perhaps, more of it with the latter than the former. The pre-eminently wasteful are the poor, and among the rich the *novi homines*. The greatest caution in expenditure is among the people of established fortune, and it is a great mistake to fancy that the opportunity for self-denial does not exist for these and for their children. Do any of us who have greatly bettered our own circumstances find that our self-denials have become less numerous and exigent with the change? I think not. Did we ever want so little as when we had the least? It is expanding taste and culture that makes self-denial a more difficult virtue and the opportunity to practise it more omnipresent. This excellent gymnastic is not, then, for country boys alone, nor only for the children of the poor. There is a place for it in the city home which wealth has done its best to comfort and adorn. In the mean time, the demand for a revision of our educational methods is so imperative that it cannot go unheeded very long. Witness the hearing and reply it has received already in the notable article written by President Eliot for a recent number of the *Century* magazine. The idea of a liberal education which he there presents is one that does not make the name seem like an irony upon the thing. It is an idea the importance of which cannot easily be overrated.

But, while so much of truth must be allowed in the indictment that is brought against our city youth, its general import is not by any means to be conceded. If it were really true that only those who pass their youth in poverty or straitened circumstances have any reason to expect the prizes of life, to be anything worth being, or do anything worth doing, what poor encouragement would there be for any man to lay to his bones and work for the advancement of his fortunes! If his success means failure for his children and his children's children, then to the ambition to amass a fortune he may well say, "Get thee behind me, Satan!" But it does not mean this. It is just as true to-day as it was seventeen hundred years ago that "even in a palace life may be well led." Marcus Aurelius said it, and his life approved his word. Doubtless, the increase of wealth brings many strong temptations. But the very fact that it does so proves that the rich man's son is not without some stout objective against which he can measure himself and prove himself to be a man. The spectacle is not uncommon of rich men's sons who have all the practical, business energy which their fathers had before them. The younger Vanderbilts, Astors, and Harpers are not remarkably exceptional. And even where such energy is sicklied over with an abundance that leaves nothing to desire, so that it does not go out in search of the same objects, it may go out in search of others that are not less worthy to be sought,—not such as minister to a purely selfish gratification, but such as are of public use. Time and again, it has been proved in our own beautiful city that her decency and honor have no better friends than those young men to whom she has nothing to offer of material reward. They have given to her their time and money without stint. In this respect, the young mayor of our city is a representative man. He is one of a large and growing class whose conscious or unconscious motto is *Noblesse oblige*,—advantages are obligations,—and who are doing all that in them lies to make the government, the charities, and the culture of Brooklyn conform to loftier and the loftiest ideals.

I do not believe that those of us who live in the great cities of America are half so mindful as we

ought to be of the high privilege that we enjoy. Doubtless, the law of compensation is made good by the relations of the town and country as by all other things. Happy are they who have the best of each in pleasant alternation, and so find their enjoyment, first of the one, then of the other, wonderfully enhanced! But the great city is an epitome of all the vast experience of mankind. Something of all the best that has been done in literature and science, in all the fine and useful arts, and in the art of living most of all, is here for our instruction and reward. Freely we have received, freely we ought to give. Shame on us if, when we are ministered unto with so many circumstances and events that are calculated to enrich our minds and to expand our hearts, we simply take what we can get with absolute selfishness, or imagine we have done our part when we have attended to our various legal obligations. That was a dreadful superstition of the Middle Ages that, when any noble structure was to be built, there must be a human sacrifice, a breathing creature shut alive and warm into the growing pile. But was it not a striking symbol of the commanding truth that without human sacrifice—not of that superstitious sort, but of a better—no social structure can attain to an abiding strength or satisfying beauty? It is for those of us who live in the great city's busy, crowded ways to build our living selves, our just and honorable and steadfast lives, into her streets and stores, into her business and her arts, into her manners and her laws. And, doing so, we shall attain to something that transcends all differences of town and country places, even to the sense of a communion and fellowship with the Eternal Power that makes for righteousness, even with Him who is in and over all, God blessed forever.

JOHN W. CHADWICK.

THE ETHICS OF PROPERTY.

I.

Natural property may be simply defined as possession given by might to desire. Legislation complicates this title by the intervention of social forces, but without changing its arbitrary character. Employed for the most part to formulize and consecrate acts of plunder by nations or classes, it embroiders on primitive force variations from State to State and from one administration to another. Legal right is then often a paradox no less audacious than the converse of Proudhon, that property is robbery, and can only be defined as a problem, the solution of which employs and supports the judiciary and legal profession, including the members of legislatures.

To this social purpose and class interest, its involved technicalities, its voluminous complexity of cross jurisprudence and of influential precedents by court decisions, all concur. Thus, it is substantially the property of a certain class, to whom we leave it. Between justice or equity and the acquisitive forces, whether simple or complex, there are casual coincidences; and, besides what are casual, there is a general relation in the policy of respect to facts, which may require us, within certain limits, to endure wrongs, when the righting of them would entail collateral evils worse than the first wrong. Thus, Indians must endure wrongs inflicted by the white races, under pain of extermination, and accommodate themselves to existing facts. This premised, the three titles of property, conferred by simple nature, by legislation, and by equity, remain distinct.

Ethical property is also natural, but neither primitive nor simple. It is composite or mutual, one of its factors being the consent of the property appropriated.

Ethical right is a natural conscience, but only developed with the maturer faculties of the individual or society. Colored by temperament, it is modified by education. Now, it is emerging from the chaos in which politico economists have plunged the common sense of relations between capital and labor; that is to say, between dead and living labor. The Chinese use their coffins as ornamental furniture. We improve upon this ghastly humor by carrying our dead ancestors on our two pious shoulders, bowed and broken-backed beneath the burden of interest. I do not concur with that socialist protest which absolutely and in principle condemns interest, nor would I impugn inheritance of property any more than heredity of faculty. We may admit a principle, without allowing it as now, in case of property, to become the principal principle, but reduce it to ethical proportions.

That "property is robbery," on the other hand, is a sarcastic truth that squints like Houssaye's *aimer c'est mourir*, both having such seasoning of fact as wit needs for pungency, but neither facing that essential destiny of which attraction prophesies.

Other squinting truths are "the struggle for existence and survival of the capables," axioms that promenade the garden of philosophy, arm in arm with liberty, equality, fraternity, in awaiting opportunity to cut each other's throats.

In view of society at cross purposes and clashing interests, the more sinister axioms impeach the successes of knavery and the fatalities of devotion. Proudhon's grates sharply on the fine ear of foxes beloved by the law. "Possession plus legal privilege," the more serious definition of a recent lively writer, Mr. Kelly, while quite compatible with Proudhon's, yet will be accepted by the foxes, since legislation has formed strict alliance, offensive and defensive, with the mammons of iniquity. This recognized, we do not here propose to hunt the legal fox, nor to dispute with our socialist friends the honors of his brush, criticism being but accessory to our study. To distinguish between ethical and arbitrary property is the more urgent, by reason of those false definitions which debauch the code of State, where, as with churches *vs.* religion, the phenomenon obscures the substance. True conceptions of true property are rendered somewhat difficult by the rarity of the goods in question, due in great measure to legislation, which ingeniously contrives to set the dinners on the upper end of the social table and the appetites at the lower end. Now, as the natural property in dinner weds eupepsia with turkey, it is apt to be baffled, even in the sultan, by satiety, while the gaunt toilers lay down life, grumbling like the Indian, "You never said turkey to me once." They have the buzzard for their share.

In venturing on the slippery ice of definitions, we shall aim to avoid commonplace technicalities, and shall fire no candle crackers at the millionaires, though the wind of our doctrine may happen to visit their cheeks somewhat roughly. We accept the probable reproach of transcendentalism; but our portrait of property, though evolved like the camel of the German painter from the depths of our consciousness, is also faithfully reflected by the rural scene of our labors, as we write under the shade of our fruit trees.

We begin by impugning the fallacy, that the exclusion of others from a certain benefit is the condition of our own proprietorship. Nature consociates in my orchard the enjoyment of beast, bird, and insect, not to mention the featherless biped who often puts in a reminder, with my own. In vain should I protest. I submit with a good

grace. Just enough for one's self of a good thing is always too little. But, where life crowds on life, life must fence out life. Yes, but this negative fact, now as real as apparent, and which often makes the fence cost more than the garden, is but a process incidental to morbid conditions, and superseded by the harmonies of force in mature social organisms. As a complete synthesis replaces incoherent evolutions, reciprocity becomes the sanction of personal ownership, which, until then, in the struggle for existence, dependent either upon powder and shot, or the bâton of police, is either invalidated or imperilled by presenting temptations to aggression, instead of guarantees of mutual advantage. The exclusion of others is a tentative, which, while distracting from the assimilation of goods, breeds jealousies and envies that defeat their inclusion or possession by one's self.

Most property is now so improper, that however fenced in by laws and moralities, and whether inherited or purchased, begged, borrowed, or stolen, it is only a relative or exchangeable value, and not inherent to its owner. True ethical property is a creation which retains something of its creator, and which, even when exchanged, is not absolutely alienated. An artist's reputation is but the shadow cast upon society of the personality infused into his picture, his statue, his poem, or any other work in which an original conception is embodied. Such property also must be paid for, not merely in money, but in appreciative sympathy: otherwise, it is alien to its actual possessor.

Now, farther, with regard to the ethical property of the artist in his work, after selling it; if he part with it to a stranger never to see it again, he sustains a lesion in his ethical property, which is obviated if the purchaser be a friend in his own city or one that he visits, since in this case he remains within the sphere of radiation or æsthetic vibration which his work propagates through sympathetic media, and feels thereby a just increment of his personality. If the work be susceptible of multiplication, as by photographs or the press; it is evidently just that this faculty should be either retained, as in case of a royalty on each edition, or else made the object of a distinct transaction. If the work be simply an æsthetic value, such qualified possession in it may be undefined; but, if it be useful invention, for which a patent is granted, it is just that the patent or royalty be of limited duration; for no one can hold exclusive property in a principle or mode of application which others might have discovered or may discover as well as himself.

Ethical property must be essentially honest; *i.e.*, produced without lesion to the property of others. More than this, it should be friendly; *i.e.*, auspicious toward the enjoyment of others. Most perfect is it when solidary. Every exchangeable value has an element of solidarity, but inventions and discoveries have more, in ratio to their susceptibility of propagation through time and space.

M. E. LAZARUS.

THE CHRISTIAN CHURCH AND WOMAN.

II.

Rev. Charles Kingsley says: "Whoever wishes to gain insight into that great institution, Canon Law, can do so most effectively by studying Common Law in regard to woman. There will never be a good world for woman until the last remnant of Canon Law is civilized off the face of the earth. Meanwhile, all the most pure and high-minded women in England and Europe have been brought up under the shadow of the Canon Law, and have accepted it, with the usual divine self-sacrifice, as

their destiny by law of God and nature, and consider their own womanhood outraged, when it their tyrant is meddled with." Women accept their position under the shadow of the canon law for the best of reasons,—they know nothing about it. And, if they should undertake to explore it, they would waste their lives in the effort. While spending a year in England, I heard that a learned clergyman in the Established Church, living near by, had a remarkable library of old and valuable books, and among others innumerable huge volumes of the canon laws. So, thinking I might readily find those affecting women, I made arrangements to spend a day in his library. The volumes as large as our largest family Bibles stood there in long rows, leather bound and clasped, without an index, and all in Latin. Seeing the formidable array, I said, Could you be kind enough to give me the volumes that contain canons specially affecting woman? He said, Alas! I could not, without looking through all of them; and that, as you readily see, would involve more time than you and I have to spare. But, he added, as the customs of society, the position of woman in the Church, and the old common law of England have all been moulded by the canon law, you can judge of the general spirit of these volumes by what you see and hear of woman's condition in every-day life.

This is one of the peculiarities of woman's position: she knows nothing of the laws, either canon or civil, under which she lives; and such churchmen as the Rev. Morgan Dix are determined we never shall. Nero was thought the chief of tyrants because he made laws, and hung them up so high the people could not read them. What shall we say of the great State of New York, that makes laws for women, and binds them in calf, and then forbids its daughters to enter the law schools where they might learn them, or to plead for the most unfortunate of their sex in our courts of justice?

As the result of the canon law, what is woman's position in the State and the Church to-day? We have woman disfranchised, with no voice in the government under which she lives, denied until recently the right to enter colleges or professions, laboring at half-price in the world of work; a code of morals that makes man's glory woman's shame; a civil code that makes her in marriage a nonentity, her person, her children, her earnings the property of her husband. In adjusting this institution of marriage, woman has never yet in the history of the world had one word to say. The relation has been absolutely established and perpetuated without her consent. We have thus far had the man marriage. He has made all the laws concerning it to suit his own convenience and love of power. He has tried every possible form of it, and is as yet satisfied with none of his experiments. If an inhabitant of some other planet could suddenly light in one of our law libraries, and read over our civil and criminal codes, he would be at a loss to know what kind of beings women are, so anomalous is the position we hold, with some rights partially recognized in one place and wholly obliterated in another. In the criminal code, we find no feminine pronouns. All criminals are designated as "he," "his," "him." We might suppose our fathers thought women were too pure and angelic ever to commit crimes, if we did not find in the law reports cases in which women had been imprisoned and hung as "he," "his," "him." And yet, while the masculine pronoun can be made to do duty for punishments, when it comes to privileges we are excluded, because the laws and constitutions do not contain the feminine pronouns "she," "hers," "her." We are a kind of half-human, half-animal being, like

those wonderful questioning sphinxes we see in the Old World.

And we present very much the same appearance in the Church. Go into any little country town, and the chief excitement among the women is found in fairs, donation parties, festivals, Church building, and decorating. The women are the chief, untiring, pertinacious beggars for the church. They compose the vast majority of the congregations. Rich women give large sums to clear church debts, to educate young men for the ministry, and to endow theological seminaries. Poorer women decorate the temples for Christmas and Easter, make surplices and gowns, embroider table covers for the altar and slippers for the rector; and all alike think they are serving God in sustaining the Church and the priesthood.

In return, the whole tone of church teaching in regard to woman is, to the last degree, contemptuous and degrading.

Perchance the very man educated by some sewing society of women will ascend the pulpit, and take his text in I. Corinthians xiv., 34, 35: "Let your women keep silence in the churches: for it is not permitted unto them to speak; but they are commanded to be under obedience, as also saith the law. And if they will learn anything, let them ask their husbands at home: for it is a shame for women to speak in the church." Ephesians v., 23: "Wives, submit yourselves unto your own husbands, as unto the Lord. For the husband is the head of the wife, even as Christ is the head of the church." I. Timothy ii., 11, 12, 13: "Let the woman learn in silence with all subjection. But I suffer not a woman to teach, nor to usurp authority over the man. . . . For Adam was first formed then Eve." I. Corinthians xi., 8, 9: "For the man is not of the woman, but the woman of the man. Neither was the man created for the woman, but the woman for the man."

Now, my friends, what effect do you think such Epistles as these, written by Paul to the Ephesians, the Corinthians, and the Thessalonians, had on the men and women of those times; and what is the effect of sermons from such texts to-day but to degrade woman and demoralize man? These teachings in regard to woman so faithfully reflect the provisions of the canon law that it is fair to infer that their inspiration came from the same source, written by men, translated by men, revised by men. If the Bible is to be placed in the hands of our children, read in our schools, taught in our theological seminaries, proclaimed as God's law in our temples of worship, let us by all means call a council of women in New York, and give it one more revision from the woman's stand-point.

Disraeli said that the early English editions contain six thousand errors in the translation from the Hebrew, which were constantly introduced and passages interpolated for sectarian purposes or to sustain new creeds.

The *Church Union* says of the present translation that there are more than seven thousand variations from the received Hebrew text, and more than one hundred and fifty thousand from the received Greek text, making by these two authorities one hundred and sixty-three thousand errors. It is fair to suppose that at least one-half of these errors are with reference to woman's position. It would not be assuming too much, in view of all the facts of history, for woman hereafter to take the liberty of defining her own position, without the slightest reference to the Church, its canon law, or Biblical interpretations.

But, to return to the temple of worship, the sermon finished, to which women reverently listen in silence, the choir performs its part in this travesty on womanhood.

In all the great cathedrals in England and in some here in New York, boys from ten to fifteen chant the hymns of praise that woman's lips may not profane, while they, oblivious to these insults to their sex, swell the listening crowd, and worship the very God they are told who made them slaves, and cursed them with sufferings that time can never mitigate.

When last in England, I visited the birthplace of Dean Stanley. The old homestead was occupied by a curate and his two daughters. They escorted us all over the place,—in the school where poor children were taught, in the old church where the dean had long preached. "Do you see that table-cover in the altar?" said one of the daughters. "Sister and I worked that." "Did you spread it on the table?" said I. "Oh, no," said she: "no woman is allowed to enter this enclosure." "Why?" said I. "Oh! it is too sacred." "But," said I, "men go there; and it is said that women are purer, more delicate, refined, and naturally religious than they are." "Yes, but women are not allowed." "Shall I explain the reason to you?" I replied. "Yes," she said, with a look of surprise. "Well," said I, "it is because the Church believes that woman brought sin into the world, that she was the cause of man's fall from holiness, that she was cursed of God, and has ever since been in collusion with the devil. Hence, the Church has considered her unfit to sing in the choir or enter the Holy of holies." She looked very thoughtful, and said, "I never supposed these old customs had such significance." "Yes," I replied, "every old custom, every fashion, every point of etiquette, is based on some principle; and women ignorantly submit to many degrading customs, because they do not understand their origin." Though women are pre-eminently fitted to preach a gospel of glad tidings, yet the Quakers, the Unitarians, and the Universalists are the only sects that ordain women. The Methodists allow them to preach, but do not ordain them. None of the sects allow women to be elders or deacons, though a few individual churches have conferred these honors. The Greek Testament speaks of "deaconesses" in the early Church; but our translation interpolates the "wives of deacons," by no means an honest substitution. In the Episcopal Church, they would not allow a woman to be a member of the vestry, even though obliged to fill the office with a man who was not a communicant. Better a man unbeliever than a saintly woman to officiate in church matters. And the few women that are ordained over congregations find there are ever some adverse influences at work that they feel, though they may not be able to say, "Thou art the man." All these indignities have their root in the doctrine of original sin, gradually developed in the canon law,—a doctrine never taught in the primitive Christian Church. In spite of the life, character, and teachings of Jesus, ever proclaiming the essential equality and oneness of the whole human family, the priesthood, claiming apostolic descent, so interpret Christianity as to make it the basis of all religious and political disqualifications for women, sustaining the rights of man alone.

The offices woman held during the apostolic age she has been gradually deprived of through ecclesiastical enactments. Although, during the first four hundred years of the Christian Church, women were the chosen companions of Jesus and his followers, doing their utmost to spread the new faith, as preachers, elders, deacons, officiating in all the sacraments, yet these facts are carefully excluded from all the English translations of the Scriptures; while woman's depravity, inferiority, and subordination are dwelt upon wherever the text will admit of it. Under all the changes in

advancing civilization for the last fifteen hundred years, this one idea of woman has been steadily promulgated; and to-day, in the full blaze of the sunlight of the nineteenth century, it is echoed in the pulpit by every sect and in the halls of legislation by every party.

ELIZABETH CADY STANTON.

THE PROGRESS OF PROTESTANTISM.

The *Catholic Review* calls attention to the well-known statement of Macaulay, that the line marked out by Protestantism, in its original struggles, has never changed; that, while holding the territory it first seized, as a missionary movement in Catholic countries it has proved a failure.

Attention is also called by the same journal to Froude's recent remarks in regard to the revival of Romanism in the very territory in which Protestantism made its original conquests. Froude's explanation, in a word, is that the heart of man craves for certitude in matters of faith and worship, and that this Protestantism has failed to give. The *Review* mentions the "rapid development of German Protestantism into infidelity" and the hopeless lethargy into which such Protestantism as still exists there has sunk. From the *Baptist Weekly* are quoted statements of Dr. Christlieb, who, at the Copenhagen Conference of the Evangelical Alliance, said in substance that, of the population of Berlin, only two per cent. attended public worship; that in Hamburg, with a population of four hundred thousand, only five thousand attended church; that in the rural districts also the state of things was bad; that the reading of "infidel" books was very common; that in London a million out of its four million never attend church; that in Glasgow two hundred thousand out of seven hundred thousand neglect all public worship. The *Catholic Review* concludes that "Protestantism, save as a political agency, is moribund, its churches are empty, its people gone. It very much resembles the whited sepulchres to which our Lord in His anger likened the Pharisees."

There are some facts which our esteemed contemporary seems to have overlooked. It is true that Protestantism leads logically and legitimately to what the *Review* calls "infidelity"; that is, to the rejection of all ecclesiastical authority and all hierarchical dictation in matters of religious belief. When Luther protested against the authority of the pope, he conceded by implication the right of others to protest against his theological views, and the right of every rational being to protest just so long as he sees anything to protest against. The true Protestant of to-day is the rationalist who acknowledges no authority higher than that of human reason. The right of every man and woman to read and interpret the Bible for themselves—certainly an absurdity, if the Bible be an infallible divine revelation—must result ultimately in the destruction of all belief in the authority of an alleged book revelation from God and the pretensions of the priestly office, and in the supremacy of human reason.

But people that have been for centuries under the slavery of ecclesiasticism are not emancipated in a day. Taught to accept as unquestionably true absurd assumptions and to found their hopes upon fictions, it is not strange that there are many even in Protestant countries with whom hereditary tendencies and traditionary beliefs are still powerful enough to incline them to the church which teaches certitude in regard to matters beyond the domain of scientific inquiry. So large is this class in all Protestant countries, it is not strange that the thoroughly organized, vigilant, aggressive Church of Rome can boast of accessions

to her numbers even in the territory of the original Protestant revolt. The accessions would be even much greater but for reactionary and retrogressive movements among Protestants, the subordination in the less enlightened and liberal communities of the essential principle of Protestantism to dogmatic theological teaching, and the adaptation of the sectarian polity to the wants of those who require certitude in matters of religious faith.

At the same time, the conquests of Protestantism considered as a revolt against arbitrary authority in religious matters and a movement in favor of free and independent thought, is making continual conquests not only in the territory it acquired in the early days of the Reformation, but in those countries to which the Reformation did not extend or in which it was easily and suddenly checked. In England, Germany, the countries of Northern Europe, and the United States, the tendency is toward greater religious freedom, disregard of hierarchical authority, and the adoption of more rational views. With the progress of knowledge and liberality, which in this age is very rapid, the necessity of accommodating the teachings and policy of the Protestant churches to those who demand certainty in regard to matters of which we possess no knowledge becomes less, and the outlook of the Catholic Church more and more discouraging. In this country, every observer can see how a multitude of secular agencies and influences combine to make intelligent young men of Catholic parentage comparatively indifferent to all theological teaching.

In Catholic countries, hitherto so classed and regarded, like France and Italy, Protestantism in its essential principle and spirit is strong and continually gaining in strength, as the Catholic papers of Europe and of this country testify every week. Italy was not ripe for the Reformation in the sixteenth century, but she has not escaped during the past four hundred years the influence of that mighty movement; and to-day millions of her people are in a state of intellectual revolt against not only papal pretensions against which Luther protested, but against dogmas and declarations for denying which Luther was in favor of putting men to death.

The Protestantism of France, Italy, Belgium, Spain, and other Catholic countries, is a movement in which the right and duty of protest against the authority of the Romish Church are declared, without the requirement that the theology of that Church slightly modified must still be believed on penalty of punishment here and hereafter. The Protestant sects have made but little progress in Catholic countries since the Reformation; but true Protestantism has been steadily at work there, and shows itself in protests against the demands of the Romish Church, in disbelief of absurd theological doctrines, in efforts to secularize the schools, to limit the power of the clergy, to extend popular liberty, and to reform government. This Protestantism the *Catholic Review* calls "infidelity." It is everywhere the invariable sign of intellectual activity, industrial enterprise, and popular freedom.

B. F. UNDERWOOD.

In a notice of Bayard Taylor's *Life and Letters*, the *Congregationalist* says:—

This history, on the whole, has much of sadness in it. Bayard Taylor was clean and true and brave, strong in various intellectual power, and fairly amazing in his industry. But he made the irreparable mistake of handicapping himself by a load which weighed too heavily all the way, until it broke him down at last. Had he earned money which, in various methods, he sunk at "Cedarcroft," been invested with ordinary sagacity, he would have found himself,

at five and forty, in independent circumstances, would have saved himself the degradation of no end of hack work, could have done larger justice in every direction to his great abilities, could have wrought out to its completion his *magnum opus*, and with his grand physique might no doubt have lived to be ninety. The lesson is a pregnant one. Let us hope it will not be wholly lost.

ON THE MOUNTAIN.

They sat in the woods together
On the mountain's tranquil height,
And spoke of the autumn weather,
Of the blue and tremulous light
That played on the distant river,
And robed the mountains afar
In a robe more rich than ever
Was worn by Caliph or Czar.

The wine of the beauty around them
They drank till the sun hung low,
Till the scene like a spell had bound them;
For the forest was all aglow
With the countless tints that follow
Spent summer's retiring tread,
When freely on height and hollow
All beautiful colors are shed,—

All hues that the rainbow showeth,
All opulent dyes that flush
The western sky when goeth
The Lord of Day, and the blush
Of river and lake and ocean
Betrays that his last caress
Their life-blood keeps in motion
Till he cometh again to bless.

No valley of famed Cashmere
Such exquisite tints puts on
As the woods that crown the year,
When hot-footed summer is gone;
When every tree is a flower,
Gigantic, superbly aflame
With ruby and scarlet,—a shower
Of beauties no tongue can name.

They sat and communed together:
She spoke of this dream of life,
And quietly questioned whether
'Tis worth all the sorrow and strife
That burden the hearts of many,
That tangle the steps of all;
For surely there is not any
Who 'scapeth the serpent's thrall.

He said: "Such a thought but troubles
The good that in life we find,
Distorts fair truth, and doubles
The anguish that clouds the mind.
Surely, this cirque of beauty,
And that blue heaven above,
Make love of life a duty
And life a thing to love."

She said: "The winter cometh:
These splendors will cease to be.
Like the joy in the heart that hummeth
An hour for you and me,
Then suddenly sinks to ashes,
So perish all beautiful things;
So Love for an instant flashes,
Then folds his languid wings."

"Ah! now I suspect you dissemble,"
He presently made reply:
"You need not fear nor tremble,
For surely you and I
Have faith in love's endurance,
And know that beauty abides
For souls that in blest assurance
Discern where it haply hides."

In silent and solemn abstraction,
She gazed on the pictured trees,
Through which a pale reflection
Of light and a friendly breeze
Shimmered and sighed so kindly.
She dreamily said: "Maybe
Too coldly, perchance too blindly,
I've judged of this world—and thee!"

They rose and descended the mountain,
So happy and hallowed in thought
All nature to them was a fountain
Of tender emotion that wrought
A longing for nobler endeavor,
A wish to make life a boon
For others as blest forever
As theirs that afternoon.

GEORGE MARSH.

The Index.

BOSTON, NOVEMBER 6, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, BENJAMIN F. UNDERWOOD, : : : : : } Editors.

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

Evolution of Masonry and Theology.*

BY F. B. STEPHENSON, A.M.,

Membre titulaire de la Société d'Anthropologie de Paris.

To the intelligent, thoughtful man of this age who witnesses for the first time the ceremonies of one of the various forms of systematized worship practised by humanity, they may seem strangely full of meaning and in marked contrast with scientific views of nature.

To the outside world, masonry may appear merely a system of unseemly rites and mysterious ceremonies, being to the thoughtful a vain show, to the indifferent absurdity, "to the Greeks foolishness." To the initiated, however, each rite has its foundation deep in human experience, and every ceremony is full of significance.

Whence come these rites and ceremonies?—a question that can be answered only by going back to the earliest experiences of the race, and solved, if solved at all (as like questions in regard to religious and other institutions of serious nature are to be solved), by studying their origin and progress.

(As first in order of time), let us seek the source of the religious rites and ceremonies that have possessed men's hearts and lives through long ages, and see how these came to have such a sway over human actions; and then how, in the main, they

*I give names of some of the authorities consulted. A complete list would be much longer. There are scores of books in Astor Library and Brooklyn Library which I have looked into and culled from for confirmation of the main ideas presented: *Analysis of Egyptian Mythology*, J. C. Pritchard; *Bible Myths*, Anonymous; *Encyclopedia Britannica*; *Histoire Abrégée de Différents Cultes*, J. A. Du-laurie; *History of Masonry*, Rebois; "History of Zuni Indians," F. H. Cushing, in *Century* magazine, 1883; *Isis Unveiled*, H. P. Blavatsky; *Les Origines des Cultes*, Dupuis; *Life of Jesus*, D. F. Strauss; *Mythology and Folklore*, G. W. Cox; *Mythology of the New World*, D. G. Brinton; *On Ancient Egypt*, Bunsen; *On Mankind, their Origin and Destiny*, an M.A. of Balliol College, Oxford; *Philosophy of Mythology*, Max Müller; *The Bible, The Great Dionysiac Myth*, Robert Brown, Jr.; *The Origin of Pagan Idolatry*, G. S. Faber; *Zoological Mythology*, De Gubernatis; *Masonic Writings of Albert Pike*; *Mythology of the Aryan Nations*, G. W. Cox.

correspond with and complement the institution which forms more especially the subject of this study,—masonry.

All the rites and ceremonies above referred to have arisen from the idea that nature and man must have had a beginning and some agency to put them in progressive motion.²

In the early ages of humanity, the attention of thinking men was very strongly attracted to the study of the most striking appearances of the material universe; and among these were the positions of heavenly bodies at different times of the twenty-four hours and at various periods of the twelvemonth. The succeeding seasons of the year spread wonders before such observers. In prehistoric and legendary days, these operations of nature were represented by symbolic forms, whose significance was understood by the enlightened only. In the minds of the unlearned, who had not yet been "raised to perceive the light," such forms became endowed with distinct, individual life; and to them were ascribed physical and emotional qualities of man's nature. The symbols of the wise became the idols of the ignorant. The masses worshipped forces of nature, the various manifestations of which were thus made actual personalities.

Those who controlled the minds of the people naturally became their acknowledged rulers. This group of thinkers being, by force of circumstances which they had utilized, a sort of superior class, formed themselves into a kind of society, with ideas widely differing from those of the multitude. Ceremonies were adopted by which they could perpetuate the existence of the truth, and keep it safe from the corruption of ignorance. At times, such societies became places of refuge for free thinkers, truth-seekers, because too plain speech in presence of superstitious people is not without danger, to incur which might be useless. From such associations of superior minds, some forms of government have grown. At first, credulous man was controlled by superstitious beliefs and practices, and often so for his own good. Later, these associations, used by instructed although vicious men, became means of possible oppression, inasmuch as they were secret, existed among, and derived their power from an unenlightened populace. The government of ancient Egypt, where kings and priests were members of one organization, is an illustration.

The wise men of ancient Egypt represented the astronomical circumstances which caused the succession of day and night by a four-cornered figure, with an image of the sun at each angle. One of these corners indicated east, one west, one south (mid-day), one north (midnight, the "place of darkness"). They signified morning, evening, highest noon, deepest night; that is, light at its birth, in its full glory, at its disappearance, and the "total absence of light." The sun in this figure occupied successively these four points. The imaginative mind of the Eastern sage pictured the sun on this journey, in the growing morning, as a beautiful young man; at noon, as a mature, full-bearded man; at evening, as an old man, with "shaggy hair and leathern raiment." As darkness was opposed to light, so a spirit of the midnight region was supposed to antagonize the god of light, the mid-day sun. This sun-god, just after being exalted to the meridian in the south, began to go down; at the west, he was further hurt; but the third was the "fatal blow," and the prince of darkness, the midnight north, overcame him. This going down of the sun toward the point of midnight darkness was called the death of the now personified day-star; but as he had before been seen to rise, so now, on his going down, all living nature was content, trusting in the promise of the joy to come.

He who was to be the sun of the new day, the "Prince of Peace" and "King of Glory" to the world, was guided by the "Great Architect of the Universe" through the valley and the shadow of death to the resurrection morn, and was raised again, "by might and by power," to royal splendor and to a new course of beneficence. The hope of the sun worshippers had full fruition.

The same allegory was used to represent the apparent progress of the sun in the heavens as the circling year brought the various seasons. The four angles or corners of the square represented the equinoxes and the solstices. As the sun appeared in each sign of the zodiac, he was regarded as assuming the form of the being by which that sign was pictured on the celestial chart. Thus, in the sign of Taurus, he was worshipped by the unenlightened as a bull. The ancient sign of the summer solstice was Leo (or lion), when the sun reached the highest point, was exalted gloriously to complete life and supreme power.

These ideas were also shown by a cross with an image of the sun, represented as a human form of various ages, placed at the four extremities. The cross, thus at first used to teach physical, astronomical truth, was afterward an instrument employed in moral and religious instruction.

As man saw two kinds of forces and two forms in nature,—the active and passive, the male and female,—so, when he placed the image of the sun triumphant in the zenith, beside him was figured the "queen of heaven." But, since the philosopher knew there could not be two distinct powers on the throne, that law is the one governor throughout the universe, these forms were separate down to the waist only. They were two, and yet but one. The Mosaic account of the creation of man is probably drawn from this, being merely part of an astronomical allegory.

During long ages, the multitude did the hard work of building houses, cities, and temples, under the control of the few who were enabled to see the light of truth and to obtain power. The masses were not yet sufficiently educated to appreciate the symbolic structure which typified the march of time. As centuries passed, and through war and social turmoil the true meaning of these types, thus pictured in human form, was lost, so that even those who were the ordinary, the recognized teachers among men became ignorant guides of the ignorant, "blind leaders of the blind," these symbols, having come into the possession of uneducated persons, were misinterpreted; and the astronomical history of the day and of the year was presented as the actual history of creation in general. The Biblical account of the creation of the world appears to be an allegory of the day coming forth from the deep darkness of night. In the religious systems of the ancient Hindus and Egyptians, the material sun, from being merely a type of the Creator, one manifestation of the All-powerful, became in men's minds very God, Law-giver, Saviour.

Throughout all systems of religion (or, more correctly, of theology), the elements of this sun-allegory, this astronomical symbolism, have been and are the essential points. In the sun, the Hindus adored Brahma, the personification of the creator of light, the genius of good; while Siva represented the opposing power of darkness, and was the genius of evil. The Persians revered the good principle and feared the bad. The case was the same with the Chinese. In the same way, the Egyptians regarded Osiris and Typhon as antagonistic forces of good and evil. In like manner, the Hebrews worshipped the one God, Jehovah (or Yahweh), and dreaded the powers of opposing evil. Substantially, the same is true of the religious sys-

tems of Greece, Rome, the peoples of Northern Europe, the Mound-builders, ancient Peru³ and Mexico, the Zuñi Indians,⁴ and the Hawaiians.⁵

The so-called gods of the ancient and of the Eastern worlds, which played such singular parts in the theological systems of these various countries, and whose existence is yet believed in by many communities of the Western world, were merely physical elements and powers of nature. By the inherent qualities and natural tendencies of the human mind and through the necessary mechanism of language, some have become personified. In some instances, their origin may have been due to the worship of individuals, a sort of hero-worship, in which men were supposed to be incarnations of some part of the forces of the universe. Ancestor worship is also a probable source. The theological dogmas about the origin of the world, nature of God or deity, apparition of his person in visible form, revelation of his laws, are simply figurative narrations of static, progressive, celestial, and terrestrial phenomena, such as are seen at the present time.

To the ancient Egyptians were known four principal stars, which formed in the heavens, or celestial sphere, an "oblong square." A casket of the same shape, and made of hewn stone, has been found in the central chamber of the Great Pyramid; and this peculiarly shaped vessel existed at least fifteen hundred years before the time of Moses.

Scientific research, as well as tradition, has tentatively located the birthplace of the human race near the mountains of Central Asia. From this location, man could have seen the sun, at midsummer, the time of his greatest power, rise in the north-east, ascend in regal majesty to the zenith, and occupy the kingly throne. Then began the decline toward the west; and, at the close of day, he sank into the death of night. Each new appearance of the morning sun was a new birth, a resurrection of the slain god, to become the life of earth, and of all that live in or of the earth. In like manner, man himself comes forth from this homestead, the "north-east corner or angle" of the world, and proceeds south and to the west. The individual passes into the valley of night, into the place of the departed; but the race, the highest work of nature, of God, goes on,—ever onward and upward in mind-life, in the search after perfect light, for truth most pure.

It is written that in the Garden of Eden were four rivers, one going toward Havilah (which means land of gold or of light,—that is, high noon or midsummer), one toward Ethiopia (midnight or deep winter), the third toward the east of Assyria; "and the fourth river is Euphrates" (west). This is evidently an allegorical picture of the earth in relation to the day and the year.

Among different men and with diverse peoples, these images of the sun at four distinct points, in course of time, came to be regarded as so many independent individualities. Being placed oppositely, they were considered antagonists. Hence, the mid-day sun was enemy to him of midnight. Morning and evening were hostile to each other. They became, likewise, four kings. Then followed, in human imagination, all the hosts which may be supposed to constitute the courts of monarchs or may be used to represent the various qualities with which man felt himself endowed; and these formed the armies of Paradise and of Pluto's regions. They fought; and there were "wars in heaven," on earth, and in Hades.

The ancient astronomical plan also showed midsummer as a beautiful woman at the high point—where were knowledge and power—in the heavens, where the gods were supposed to dwell, according to religious systems of ancient and modern times.

The bearded man was at the opposite point. In Adam and Eve, this idea is represented. The woman invites the man to come up,—to approach the tree of knowledge. In their union is typified the seed-time of spring. The year passes on. Autumn comes with its fruitfulness; and, later, winter, when earth, in the northern hemisphere, loses its warmth and verdure. From these occurrences arose thoughts of nakedness, shame, sin, and the curse of transgression; but the promise of new life was given, and fulfilled with the returning year.

From this imagery has grown a host of theologies. Adam, thus typifying the sun, is made to grow old, and to go down into the valley of death; but, even as the sun, he goes on, passes through the place of departed spirits, is raised, resurrected to a new life, appears as the new Adam, and again ascends the heavens as the victorious god of day,—the lord of all.

In the "Book of the Law," it is written, "He placed at the east of the Garden of Eden cherubim and a flaming sword, which turn every way to keep the way of the tree of life." Is not this a type of the sun that gives light to the world, which drives away darkness? In the moral world, by this we may see typified the sword of justice, both human and divine. In the same manner may be symbolized speech "sharper than a two-edged sword," which is powerful to search out and spread abroad the light itself,—truth.

In ancient (as well as modern) Eastern languages, which were very free in the use of hyperbole, the terms which we represent by "life" and "death" were not so limited as commonly understood. They were general forms of speech for rewards and punishments. "Ye shall surely die," meant, "Ye shall decrease from this time, shall suffer, and finally pass away."

Cain and Abel are symbols of the opposing powers of darkness and light, of evil and good. In the allegory as represented by the story of Noah, the ark is winter, or the night of the year. The flood may represent merely the rainy season (in that country). The veil which Moses spread out to hide the exceeding brightness of the divine presence is typical of material nature which conceals the true, the spirit God from the mind devoid of light. The legend of Samson, who is said to have been weak when beardless (that is, the young day or year), but strong when his beard was grown and his hair long (that is, declining day, the old year, mature time), is a form of the same allegory. Compare herewith the legend of the Chaldean Izdubar. Another instance is that of the story of Herod and John the Baptist, in which the representative of the region of darkness kills the personified sun, and even tries, by the slaughter of the innocents, to prevent the rising to power of the next child of light, as the subsequent part of the narrative shows; but this one escaped by the "flight to Egypt" till "his time had come."

(To be continued.)

¹In this paper, masonry is taken as a type of systemic religions: another of the various ancient or modern modes of worship or service—religions—may be used instead.

²To the rational observer, God is in nature as mind is in man.

³The monarchs of ancient Peru were revered as children of the sun.

⁴The Zuñi Indians of New Mexico, United States of America, in their ceremonies of religious initiation, caused the candidate to kneel at an altar, and to "face the east." An object was used which became an "instrument of torture to the flesh." He was caused to undergo great pain, to test his endurance. He was clothed in a peculiar manner. Incense was used (this is done in Spanish lodges). They worshipped the sun at its rising and at the vernal equinox.

⁵Among the native tribes and peoples of West Africa, near the Gulf of Guinea, there were practised in 1882 certain religious ceremonies which seemed indecent to the casual, uninitiated English observer; but these were merely remnants of more complete rites, the symbolic meaning of which is at once understood when their origin is traced to Egypt and India.

⁶The legend of the Hawaiians, in regard to the creation of woman, is the same as that in Genesis, and occurs in the ancient form of their language. Their temples are parallelograms; that is, "oblong squares."

For The Index.

"PHILOSOPHY OF THE UNCONSCIOUS."

Now that Hartmann's great work, which gained at once such great popularity and made so profound a stir among thinking people in Germany, has been put within reach of the English-reading public, they will have the opportunity to acquaint themselves with the highly original and novel philosophic views of this independent and fearless inquirer into the principles upon which all the phenomena of our conscious experience rest.

The three volumes composing this translation were the fruits of Mr. Hartmann's studies into the nature of the ultimate principle which forms the basis and goal of inquiry of all systems of philosophy; and it adds to their interest that they were written out by him with no other view than to satisfy his own intellectual cravings for truth, and without a thought of external consequences arising therefrom, either personal or material, remaining in his desk for a year without thought of publication.

The systems of the great German metaphysical thinkers had failed to satisfy the growing needs of the philosophic minds in that country, in consequence of the enlargement of our psychologic knowledge of sentient and mental phenomena, when in 1869 Hartmann launched the first edition of his most remarkable and unique philosophical work upon the public; and the great avidity and favor with which it was received sufficiently attest that a new application of speculative reasoning was demanded by minds enlightened with the more profound, accurate, and wider views which these new scientific discoveries had brought. That work, which has now reached its ninth edition, forms the present translation, and is the same as the first, with additions in the appendix.

Scientific investigation had developed the fact that, underlying all our conscious experience, a vast realm of unconscious psychical processes was going on, and that in this domain we must look for a philosophic explanation of conscious phenomena. These volumes of Hartmann's may be regarded as the first great attempt to formulate these facts of science into a system of philosophy. In this work, he has made a vast advance on the one-sided metaphysical systems of the previous great German thinkers by basing his inquiries on the inductive method so prolific in all scientific inquiry along with the deductive.

The grand desideratum of all philosophies has been to unite the material and sentient, soul and ideas, with matter and laws. All the extant metaphysical systems have made no real advance in this direction. Hartmann claims that the "Philosophy of the Unconscious" bridges this chasm in showing the identity and fundamental unity of mind and matter. Will really means force, and matter without force is unthinkable, of which it must be a result, or the points where forces counterbalance each other.

To make a brief statement of the main idea of his system, and of what is meant by the "Philosophy of the Unconscious," it may be said that the underlying cause of all phenomena, both sentient and material, is intrinsically endowed with all the psychical properties, qualities, and attributes which are possessed by sentient and conscious life, but existing in an original, unconscious condition, and are brought into individual consciousness through the evolution and interactions of principles contained in this absolute realm of unconscious being. These principles in their original character are Will and Idea, which become in consciousness Will and Representation. From their union, all the phenomena of conscious and unconscious life are evolved. In elucidating this idea, he ranges over all the great fields of human inquiry, and in the first of the three great divisions of the work traces the manifestations of the unconscious psychical principle through all the phases of bodily life, including a most interesting section on instinct, which he describes as "purposive action without consciousness of the purpose," and that it can only be explained "as a result of unconscious mental activity." The second division treats of the action of the unconscious in the human mind, including its operation in Instinct, Sexual Love, in Feeling, in Character and Morality, in the Æsthetic Judgment and in Artistic Production, in the Origin of Language, in Thought, in Mysticism, and in History.

* PHILOSOPHY OF THE UNCONSCIOUS. By Eduard von Hartmann. Speculative Results according to the Methods of Physical Science. Authorized Translation by William Chatterton Coupland, M.A., B.Sc. In three volumes. New York: Macmillan & Co. 1884.

The third division treats of the Metaphysics of the Unconscious, in which he shows himself a master in the domain of speculative inquiry, and capable of making flights in the realms of abstract thought equal to Kant, Fichte, Schelling, or Hegel, with the added advantage of a system that is not hampered by basing all its conclusions upon an introspective point of view, but draws its facts from all sources. Indeed, he claims that the principles enunciated by these thinkers cannot be properly understood nor made logically intelligible without supplementing them by the basis furnished by the "Philosophy of the Unconscious." This it is which forms the core of their systems; this principle it is which alone constitutes and interprets Spinoza's "Universal Substance," Fichte's "Absolute Ego," Schelling's "Absolute Subject-Object," Hegel's "Absolute Idea," and Schopenhauer's "Will," and their analogues in other systems of philosophy, which are nothing else but this unconscious substratum of Will and Idea, Force and Form, which upholds the vast fabric of the universe, and impels into life all its phenomena. But not only does this philosophy embrace, interpret, and explain the ultimate conclusions of all the metaphysical systems, but it is equally in accord with all the teachings of science, and thereby reconciles and unites these two great opposing schools of thought.

As this work of Hartmann's becomes better known in this country, there is no question but it will obtain a large circle of readers; for no philosophic work so interesting has ever before been published. The pessimistic views incorporated in chapter thirteen of the work, although of a very moderate type, have been emphasized and made the chief point of attack upon his system by English critics heretofore; but the general verdict of the ablest of his more recent critics and reviewers is that they have no organic connection whatever with his philosophy, and do not flow logically from its general principles. His criticisms and interpretations of previous philosophical systems, from the standpoint of his own principles, such as those of Plato, Spinoza, Schelling, Hegel, and several others, are exceedingly interesting and valuable.

But, while this work must prove of such surpassing interest to all thinking readers, the question spontaneously comes up, What is its value and true place as a philosophical explanation of the great "Problem of Life"? Its phenomena are an immeasurable ocean, as it were, of processes which seem to indicate purpose and the most consummate knowledge, ingenuity, and skill which no conscious intellect of ours has ever begun to fathom, simulating an intelligence before which any that we consciously possess sinks into insignificance. The unconscious physiological processes going on in all animal and human organisms display the most perfect adaptation and discrimination in constructing, renovating, and repairing, and in carrying every minutest chemical atom to its appropriate place in the animal economy; and these processes go on without conscious volition just as accurately and well during sleep as when we are awake, and even better; in the lowest savage as in the most enlightened and cultured man. But still more wonderful unconscious processes are going on in the cultured human mind. All the contents of a life-long memory lie latent and unconscious somewhere in our psychical being. Not only this, but all that goes to make up our conscious being, our characters, proclivities, sentiments, feelings, and thoughts, with the memory of what these were during our whole conscious experience,—of all these and all that we are, not a hundredth part comes into consciousness at any one time, and only when they do can they have any conscious existence, so far as we are concerned. But they must still exist intact in some condition. Do not these facts indicate that all the phenomena of conscious life are a "becoming" out of unconscious conditions of being? This view is the only one that escapes logical contradictions which have beset and proved fatal to every other metaphysical system thus far. The most towering and gigantic of these—that of Hegel—imposes certain prior conditions upon which all self-consciousness must logically rest,—that of correlative opposite conditions whose tensions toward and into each other culminate as consciousness. Hence, his philosophy, while explicitly assuming that these prerequisite conditions are consciously created, implicitly and really bases consciousness upon priorly unconscious conditions equally with that of Hartmann.

FRANKLIN SMITH.

THE STAR FISH.

For The Index.

In his recent lecture on the Star-fish before the Parker Memorial Science Class, Mr. Peter Annet gave some interesting facts respecting this lowly form of life, which, he said, furnished an excellent illustration that "all existing forms of life are the result of antecedent forms." Though this little creature has a simple structure, it has played an important part in the world's history. It is found in nearly every sea and at all depths. It is also found in nearly every geological formation, back to the very dawn of life on our planet. The common star-fish, *Aster rubens*, has been known to all the peoples who have ever lived near the seashore; and strange myths and marvels have woven themselves about its curious form, and even Pliny has calumniated the poor aster. But a change has taken place on the seashore of late, that has driven away the myth, and brought the star-fish under the keenest scrutiny of nineteenth century science; for it has taken to eating oysters,—like a true American,—and caused enormous losses to the oyster planters of Long Island Sound and elsewhere. So now comes the question, What is a star-fish, its place in the scale of life, and its relation to other creatures?

The form of the ordinary aster is familiar to most people; and it seems a very simple one, consisting of calcareous base, with five radiate fingers, points, or rays, with a series of tubercles on the convex side, and a bright carmine spot on one side of the base, which forms an eye of lowly organization. On the under or concave side is situated the mouth, in the centre of the base, surrounded with a series of bony spikes; and down the middle of each ray is a canal, or cavity, in which the feet are placed.

The nervous system consists of a white cord that encircles the disc, and extends to the end of each ray, where it forms an eye of feeble character. Like some other members of the same family,—the polyps,—the aster can grow a new ray, if he loses one, or all five rays, if need be; but a ray dies when broken off, and cannot, as some have supposed, produce a star-fish. The method of reproduction is peculiar to the family and is well worthy of study. It is neither by alternate generation nor metamorphosis, but partakes of the character of both. The young of the aster have been mistaken for various other forms of life by different naturalists, so unlike at certain stages of growth is the parent to the offspring.

They arrive at maturity in about fourteen years, though spawn is sometimes obtained from them at six and seven years of age. The period of their quickest and freest growth is during the fourth year. The principle on which the aster is constructed is that of water canals, or hydraulics, and is shown to perfection in the ambulacra, which are formed on the same basis as one of our "latest inventions," patented as a "suction pump." On the inner side of the ray is a series of crystalline spheres extending over its entire length. On pressing one of these spheres, a tiny tube is projected, almost transparent, with a globular termination. The globe touches a stone, and on the withdrawal of the fluid a vacuum is formed by the globe, and through the powers of suction clings to the stone, and the star draws itself along. If the star is allowed to attach himself to the finger-nail, and then is lifted up, he has no power to let go, so true is the disc of the tiny globe. And so he hangs until the little tentacles break and let him fall.

These animals destroy the oyster by simply wrapping themselves round it and waiting for the stupid bivalve to open his mouth, whereupon the star inserts his foot, "and begins to suck the poor oyster out of house and home with the facility of a 'Tombs lawyer.'" It has been maintained by some observers that the star injects a poisonous fluid into the oyster's shell, by which the oyster is killed; but this assertion has not been proven.

The nearest relation of the star is the echinoderm, or sea urchin, a spheroidal form of star-fish common on the Florida coast as well as up the Mediterranean, and many other places. Between this *Echinus* and the star there is every form of life, quaint enough some of them are; and between the *Aster rubens* and the *Comatula*, or feather star, there are also corresponding similarities, which bring us to the fact that the star family began life on stems, as sea lilies, or encrinetes, which fact was first discovered by a Mr. Davies in Cork Harbor, in 1823. But it has remained for believers in the theory of evolution to follow this

out step by step, till we find the beautiful sea lily, *Pentactinus*, blooming on the ancient sea bottoms of an early world, having in itself the elements of the perfect aster of to-day, including the very form and likeness marked in each joint of its calcareous stem. So that we are carried by this star-fish step by step back to the very dawn of life on our planet, and that not by poetic flight, but by the unerring facts of inductive science; for in this almost infinite chain we have no "missing links," but we are brought face to face with the fact that the lowly star and his criminal relatives have built our limestone mountains, and given us ornamental "encrinital marbles" for our drawing-rooms and palaces, and have endured through ages that make the human mind falter in its hopeless endeavor to reduce them to terms of years, and brings us at last to say that "it passeth all understanding." But one thing we may speculate on with something of humility is that this lowly form of life which has preceded the human race by so many countless ages will by its very lowliness exist still for countless ages when man has passed from the scene, and our nation, our language, our temples, and our tombs have perished.

CORRESPONDENCE.

WILLIAM STAFFORD.

Editors of The Index:—

A memorial gathering of the friends of the late William Stafford of Southwark, England, was held at the Southwark Radical Club on Sunday, Sept. 14, 1884, Mr. Stafford having died on September 4 in his forty-eighth year. Mr. Stafford was for a long time a member of the South Place Congregation, and was an active worker in political and social matters.

Addresses were delivered by Mr. Stafford's four oldest friends and co-workers, Mr. J. B. Medland, Mr. W. E. Fielding, Mr. Mark H. Judge, and Mr. F. W. Souther.

Mr. Mark H. Judge, in his address, said it was a melancholy satisfaction to be permitted to pay his tribute to the worth of his dear friend William Stafford. They were met on an occasion when the words of William Gaskell would give appropriate expression to the thoughts they all had of their departed friend:—

"Calmly, calmly lay him down!
He hath fought the noble fight;
He hath battled for the right;
He hath won the unfading crown.

"Memories, all too bright for tears,
Crowd around us from the past,
Faithful toiled he to the last,
Faithful through unflagging years."

It was twenty years ago that he first made the acquaintance of Mr. Stafford. This acquaintance began in a railway train on the return journey of a Sunday excursion to Hastings, they having both taken that opportunity of getting away from the dull and dreary streets of our metropolis. From that time to the day of Mr. Stafford's death, they had been the closest friends; and for years they were as closely connected in public work, until circumstances led to their residing at a considerable distance from each other. He was associated with Mr. Stafford at the time referred to by Mr. Fielding, when George Odger contested the borough of Southwark, and when for the first time it was made manifest that entrance to the House of Commons was no longer to be debarred to artisan workmen of intelligence and capacity. The moral victory then achieved by George Odger was mainly due to the untiring energy and enthusiasm of William Stafford,—enthusiasm for a principle, not a man,—a principle of which George Odger was undoubtedly the ablest representative and exponent. George Odger opened the doors of the House of Commons to the artisan workmen of England, and it was the work of William Stafford which enabled Mr. Odger to achieve this honorable distinction. Thus, the work of their friend would have a direct influence on the future of England. Of what his influence had been in Southwark itself they had already heard. Though one of the founders of the club in which they were assembled, Mr. Stafford was prevented from attending the inaugural meeting. In consequence of ill health at the time, Mr. Stafford was on a visit to him in Cornwall; but his friends in Southwark were not forgotten, and the green lanes and hedges of that dis-

tant county were made to contribute to the decoration of their club house on the opening night.

The present gathering was especially gratifying to him after the inappropriate ceremony which attended the funeral of him who was the centre of their thoughts that morning,—one whose life had been so full of work and hope, and whose departure from the scene of his labors would, he trusted, direct their attention to the solemn matter of the burial of the dead.

The orthodox discourse delivered at the grave in Norwood Cemetery on the 8th of September was altogether out of harmony with the life and work of him to whom the clergyman thought his words had reference, and it gave pain to the great majority of his friends on that account. The fact that this discourse had since been printed in the public press emphasized the impropriety of the whole proceedings. He hoped the publication of this theological discourse in connection with the burial of their departed friend would remind all who are imbued with the scientific spirit that they owe a duty to themselves and to the principles they hold,—a duty to which they are not true, when they allow the more serious events of their lives to be directed by preachers whose doctrines it is the purpose of their lives to disprove. In marriage, in the naming of our children, and in consigning our dead to their last resting-place, let all see to it that nothing is done which is contrary to the principles of the persons concerned. Out of respect alike for theological opinions as well as for those who in life have been unable to accept them, the separation existing in life should be maintained in death. He felt sure that his friend Stafford, could he do so, would thoroughly indorse that opinion; and he hoped that, in so far as it was possible, all would leave behind them some expression of desire that their burial might be conducted in a manner that would be in harmony with their lives, so that their departure from this world, as we know it, may be a consistent termination of the life that has gone before.

In conclusion, Mr. Judge said that Leigh Hunt's "Abou Ben Adhem" was an early William Stafford who

"Awoke one night from a deep dream of peace,
And saw within the moonlight in his room,
Making it rich, and like a lily in bloom,
An angel, writing in a book of gold.
Exceeding peace had made Ben Adhem bold,
And to the presence in the room he said,
'What writest thou?' The vision raised its head,
And, with a look made of all sweet accord,
Answered, 'The names of those who love the Lord.'
'And is mine one?' said Abou. 'Nay, not so,'
Replied the angel. Abou spoke more low,
But cheerily still, and said, 'I pray thee, then,
Write me as one that loves his fellow-men.'

"The angel wrote, and vanished. The next night
It came again with a great wakening light,
And showed the names whom love of God had blessed,
And, lo! Ben Adhem's name led all the rest."

In a letter not originally designed for publication, Mr. Allen Pringle, a prominent Canadian Liberal, thus writes us in regard to his mother, Mrs. Lockwood Pringle, who recently died at his residence at Selby, Ont., at the age of seventy-three:—

"Although a Christian, she was a woman of broad and liberal views, and utterly rejected the orthodox doctrine of eternal punishment. Her distinguishing qualities were firmness, indomitable perseverance, industry, frugality, a perfect uprightness of character and conduct without a shadow of turning, and a very clear and analytical intellect. . . . Her latter years were strongly marked by deep thought and reflection, with a seriousness amounting to sadness; and she said very little on religious or theological questions. Being well versed in ecclesiastical history and Biblical theology, with a strong intellect, her replies in conversation to attacks upon the Bible and Christianity were the very best that could be made, but at the same time were made with great moderation, and were rather suggested than asserted or affirmed. My firm conviction is that, during the latter years of my mother's life, there was a long mental struggle (quiet and sad) between the religious faith into which she had been educated, and lived in its best and most rational aspect for fifty years, and an enlightened intellect which logically condemned that faith. Her departed children—my deceased brothers

—to whom she was fondly attached as a mother, she longed to meet again in the future; and hence the complexion of this mental struggle,—the strong and tender, maternal yearnings refusing to listen to the cruel though irrepressible voice of intellect against the probabilities of a future existence. . . . I would not wrench a harmless mental comfort from a living soul, much less from the aged parent in the sad twilight of a long and good life. For my own part, whatever my feelings may be to the contrary, I can see no proof, and very little evidence, for any future life. It is possible, but it does not seem to me at all probable. That it is a sad, sad thought that the parting from the loved ones at the grave is final, no believer in immortality need remind us. I, for one, feel it and realize it. . . . But we can only turn our faces sadly away from the dead, again approach the living, and bravely resume the many duties of life."

BOOK NOTICES.

THE DESTINY OF MAN VIEWED IN THE LIGHT OF HIS ORIGIN. By John Fiske. Boston: Houghton, Mifflin & Co. New York: 11 East Seventeenth Street. The Riverside Press, Cambridge. 1884. pp. 119. Price \$1.00.

The essay read by Mr. Fiske before the Concord School last summer has been expanded by the author, and is given to the public in this handsome little volume. The main portion of the essay is devoted to setting forth the teachings of evolution within the province accessible to investigation and to the discussion of questions which lie within the scope of scientific inquiry.

Man, Mr. Fiske argues, is a modified descendant of lower forms, belonging "as a genus to the catarrhine family of apes," "doubtless descended from a common stock of primates, back to which we may also trace the converging pedigrees of monkeys and lemurs, until their ancestry becomes indistinguishable from that of rabbits and squirrels,"—a conclusion Mr. Fiske thinks as little likely to be gainsaid as the Copernican astronomy is to be replaced by the concentric spheres of Dante's heaven.

The Darwinian theory, by showing how the perfecting of man is the goal toward which Nature's work has been tending, enlarges the significance of human life, and makes it seem more than ever the chief object of the activities of the universe. With the enormous psychical difference between man and the group of animals to which is traceable his pedigree, due to growth of brain, upright posture, and other anatomical changes with correlative mental changes, the bodily life became subordinated to the intellectual, necessitating future progress through psychical variations in the one particular species,—man. "Not the production of any higher creature, but the perfecting of Humanity, is to be the glorious consummation of Nature's long and tedious work." The destinies of all other creatures are becoming more and more dependent upon man's will. Natural selection is being gradually subordinated to man's rational choice.

"Whence came the soul," Mr. Fiske says, "we no more know than we know whence came the universe." It is, however, correlated with the brain and nervous system. "The gulf by which the lowest known man is separated from the highest known ape consists in the great increase of his cerebral surface, with the accompanying intelligence, and in the very long duration of his infancy." The view which Mr. Fiske propounds unmistakably implies, and he in some of his writings maintains, as Darwin and Spencer do, that human intelligence is the product of modifications of lower intelligence; but, in this volume, the language of which it seems to us is rather temporizing, while the implication is evident enough, the statement of the conclusion is omitted.

The chapters on "The Origins of Society and of Morality" and "Improvability of Man," although brief, are comprehensive and suggestive, as are the chapters which indicate how universal warfare was first checked by the beginnings of industrial civilization, and how natural selection upon man is being continually diminished through the operation of social conditions.

The transcendental implications of the teachings of evolution are reserved for the sequel. The author says that there are no data for a scientific demonstration of the immortality of the soul. Cerebral physi-

ology says nothing about another life. But the assumption "that the life of the soul accordingly ends with the life of the body is the most colossal instance of baseless assumption that is known to the history of philosophy." But the question is whether man's conscious identity survives bodily dissolution; and on this point, equally with materialists, he is in doubt. Mr. Fiske says, "With his illegitimate hypothesis of annihilation, the materialist transgresses the bounds of experience quite as widely as the poet who sings of the New Jerusalem, with its river of life and its streets of gold. Scientifically speaking, there is not a particle of evidence for either view." What Mr. Fiske by this statement means is, of course, that there is no scientific evidence either for a belief in a future state or against the belief; but, instead of saying this, he uses phraseology which makes him appear to limit his denial of scientific evidence to the "hypothesis of annihilation" on the one hand, and of "the New Jerusalem, with its rivers of life and its streets of gold," on the other.

Mr. Fiske proceeds to say that while the doctrine of immortality does not admit of scientific proof, yet he accepts it "as a supreme act of faith in the reasonableness of God's work." If one believes that there is a Supreme Intelligence that directs the operations of Nature, and under whose guidance man has been evolved from the lowest organic forms, it is not unreasonable to say that his belief carries with it some implication, some slight moral probability, at least, that physical death is not the end of human consciousness. This is the only reason Mr. Fiske gives for his belief in immortality. It is a very old one, and still has great weight with many broad thinkers. But how he can reconcile the statement just quoted with his repeated efforts in other works to show that morality, volition, purpose, intelligence, and consciousness are qualities which the thinker has no right to ascribe to the Ultimate Reality, it is not easy to understand. Did he not claim to be still in accord with Mr. Spencer on this point, we should think his views had recently undergone a radical change.

"The greatest philosopher of modern times," says our author, "the master and teacher of all who shall study the process of evolution for many a day to come, holds that the conscious soul is not the product of a collocation of material particles, but is in the deepest sense a divine effluence. According to Mr. Spencer, the divine energy which is manifested throughout the knowable universe is the same energy that wells up in us as consciousness. Speaking for myself, I can see no insuperable difficulty in the notion that at some period in the evolution of humanity this divine spark may have acquired sufficient concentration and steadiness to survive the wreck of material forms and endure forever. Such a crowning wonder seems to me no more than the fit climax to a creative work that has been ineffably beautiful and marvellous in all its myriad stages."

Mr. Fiske is of course entirely correct in saying Mr. Spencer "holds that the conscious soul is not the product of a collocation of material particles," but the statement that he holds it "is in the deepest sense a divine effluence" is liable to mislead those who are unfamiliar with his writings. Mr. Spencer holds that the intelligence of the lower animals is not the product of collocations of matter. And, in the same sense in which it is affirmed that he holds the conscious soul is a "divine effluence," it may also be said that he believes not only the intelligence of the dog, but the sensation of the worm is a "divine effluence." We may go farther, and say that, with quite as much accuracy, it can be affirmed that Mr. Spencer regards the entire universe as a "divine effluence," since he holds that it is the same Ultimate Reality that is manifested to us subjectively and objectively.

With such questions as how modifications of life and intelligence, under natural law, could have resulted in the evolution of an immortal being from one that was mortal, or indeed whether man's ancestors, from the ape down, were mortal or immortal, Mr. Fiske does not attempt to deal. He contents himself with arguing against a dogmatic materialism, which indeed has no adherents among great thinkers to-day, and expressing belief in immortality as a moral probability. The essay is in Mr. Fiske's best style, marred only by expressions which, used by an orthodox Christian, would be consistent, but in a work by the author of *Cosmic Philosophy* seem somewhat out of place.

B. F. U.

AN OUTLINE OF THE FUTURE RELIGION OF THE WORLD, with a Consideration of the Facts and Doctrines on which it will probably be based. By T. Lloyd Stanley. New York: G. P. Putnam's Sons, 27 & 29 West Twenty-third Street. pp. 538. 1884. Price \$3.00. (For sale by Cupples, Upham & Co.)

The object of this volume is to furnish a basis for religious faith and practice that will endure when theological criticism shall have completed its work, in showing the frail foundation of many of the dogmatic beliefs which have long awayed the minds of men. The author does not claim to be an original investigator; but he gives the results of the investigations of others in regard to the great religions and religious teachers of the past, with much fulness of information and in a painstaking and scholarly manner. The four great religious philosophers and founders of religion, he says, who shall exercise, and probably will ever exercise, vast influence over the minds of men, were Manu (or the author of the earlier Vedas), Moses, the Hebrew lawgiver, Gautama, and Jesus. Doctrines and narratives in the Jewish and Christian Scriptures are freely criticised, always in a catholic and kindly spirit, and generally with judiciousness and discrimination.

The author is a theist, and a confident believer in the immortality of the soul. He holds that future religion must take the direction of greater spirituality and intellectuality; that it will rest mainly on the teachings of Jesus, "relieved from the incubus of the marvellous and the legendary." The disciples of other religions, including "the cosmopolitan Israelite, the disciple of Zoroaster, and even the proud Mohammedan, strong in the confidence of his pure monotheism, will," Mr. Stanley thinks, "gladly acknowledge the pre-eminent superiority of the teaching and the life-example of the Nazarene, when no longer required to accept the repulsive dogma of a complex Deity, and when the great teachers of these great world-faiths are by Christians admitted to honor as the Master's worthy coadjutors in the work of bringing to pass upon earth the true kingdom of the one God, the reign of his Father and of man's Father, of his God and the God of the universe."

The essential truths of religion being recognized, including the conception that "all lives form part of one endlessly progressive universe life, culminating in Supreme Mind," the incrustations of superstition upon the simplicity of truth will be cast into the rubbish heap of time; organized and official priest-hoods will be regarded as unnecessary; the "sincerely pious members of the clerical fraternity will become working philanthropists or lecturers on morality, religious philosophy, and science"; churches will become art museums, lecture halls, and colleges, yet always remaining favorite homes of silent communion, prayerful meditation, and the worship of the heart; wealth and education will become more diffused, and governments more republican; woman's sphere will be enlarged; marriage will be entered into earlier; divorce seldom resorted to, and subject to restrictive legislation; monopoly and the accumulation of enormous fortunes will be prevented; employés will more and more share in the profits of successful business; brotherhood will become more general and heartfelt; and nations, under the influence of a realized altruism, will become more and more like the states of one great commonwealth. Our author's disposition is extremely hopeful and optimistic. May his expectations be realized.—B. F. U.

DAILY STRENGTH FOR DAILY NEEDS. Selected by the editor of *Quiet Hours*. Boston: Roberts Brothers. 1884. Price \$1.00.

By religious people, this book will be welcomed as giving, in addition to the Scripture selections for each day of the year and accompanying verse, often commonplace and familiar, such as has too frequently marred the "Daily Food" type of devotional books, some new and fresh selections from the best writers of this and previous generations. A text of Scripture, a verse or stanza of poetry, and a prose quotation, all in the same line of thought are given to each day of the year. The editor in her selections quotes from over one hundred standard authors, ranging from Marcus Aurelius, in the second century, to George Eliot, Frances Power Cobbe, and Thomas Carlyle, of the nineteenth.

BREAD-MAKING. By T. N. T. New York: G. P. Putnam's Sons. 1884. Price 50 cents. "Handy Volume Series."

Good bread is indeed "the staff of life" to many; and, although we may sympathize with the old farmer

who, when dying, being told by his pastor that "man does not live by bread alone," murmured, "No, indeed, he needs a few vegetables," yet, in view of the many failures by professional bakers as well as housewives to produce good bread, such a book as this, containing careful directions and rules by which such a result is attainable, is well worth careful perusal.

ON A MARGIN: A Story of These Times. New York: Fords, Howard & Hulbert. 1884. Price, cloth binding, \$1.25.

We have here a story of Wall Street, New York, and of Washington, D.C., of stock speculation, modern money-making, love, crime, and worldliness. None of its heroes or heroines are perfect or even admirable. The style is unique, interesting, and tantalizing. Its author, who chooses to remain incognito, is said to be a brilliant and experienced writer, who portrays life with masterly skill.

WAIFS AND WANDERINGS. A Novel. By Samuel P. Putnam. New York: Truth-Seeker Co. Cloth. Price \$1.00.

This volume of nearly two hundred pages has all the material necessary for a romance,—a beautiful girl whose birth is hid in mystery and afterward revealed, a love story, the pomp and circumstance of war, a sensational plot and thrilling dénouement in which the horrors of slavery and the troubles of miscegenation are vividly depicted.

THE table of contents of the *Unitarian Review* for November is as follows: "The Right Seed," by Rev. James Freeman Clarke; "What New England Congregationalism really meant," by Rev. J. H. Allen; "Cookery and Health," by Edward Jarvis, M.D.; "Man and Religion," by Rev. George W. Cooke; "Michael Servetus," by Rev. S. C. Beach; and "Bits of English History from the Manuscripts," by William B. Weeden. "The Editors' Note-book" treats of "Theological and Political Repentance and Forgiveness"; and, in "Things at Home and Abroad," Mrs. Lowe has something to say in regard to "The Life of Frederick Denison Maurice," of "Home Matters," and "English Movements."

EACH new issue of *Wide Awake* is always a new surprise and an added testimony to the good taste and good sense of its editors and publishers. The November number just received is no exception to this rule. Its stories, poems, and illustrations are all of superior excellence. We have room to note only a few of the best known names among the contributors to this number, such as "H. H.," Edward Everett Hale, Mrs. Jessie Benton Fremont, Sarah W. Whitman, Dr. Felix L. Oswald, Rose G. Kingsley (daughter of Canon Kingsley), Amanda B. Harris, Oscar Fay Adams, Prof. A. B. Palmer, and Yan Phou Lee, a Chinaman, now of Yale College, New Haven.

THE *Revue de Belgique* for October contains extracts from a work soon to be published on Spanish art by Lucian Solvay, who writes with great vigor, especially when he gives such a description of the real character and history of the Cid as helps us see the worthlessness of mediæval chivalry. Count Goblet d'Alviella exposes the culpability of the Belgian bishops to the impending ruin of the public schools, to save which he calls for closer union among the friends of liberty and progress.

NORA PERRY, J. T. Trowbridge, Louisa M. Alcott, Frank R. Stockton, H. H. Boyesen, and Charles G. Leland are among the brilliant writers whose contributions make *St. Nicholas* for November a most delightful number of an always charming as well as instructive periodical for young people. (For sale by Cupples, Upham & Co.)

BABYLAND for November is bright with pictures, and brimming with winsome baby literature, verse and prose. D. Lothrop & Company, in this as in all their publications, show a wonderful appreciation of the needs and likings of their large juvenile constituency.

WE have received from S. Brainard's Sons, of Cleveland, Ohio, and Chicago, Ill., the words and music of the new songs, "A Boy's Best Friend is his Mother" and "Rocking the Baby to Sleep." Price forty cents each.

Sawing Made Easy.

MONARCH LIGHTNING SAWING MACHINE

For logging camps, wood-yards, farmers getting out stove wood, and all sorts of log-cutting—it is unexcelled. Thousands sold yearly. A boy of 10 can saw logs fast as a cat. Immense saving of labor and money. Write for elegantly illustrated catalogue in 6 brilliant colors, also brilliantly illuminated poster in 5 colors. All free. Agents Wanted. Big money made quickly. MONARCH MFG CO., (A) 206 State St., Chicago, Ill.

BY ALL ODDS THE BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches**, which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars**, which are models of comfort and elegance; its **Palace Drawing Room Cars**, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that it is the best equipped road in the world.

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, and take none other. All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

Modern Thinkers,

Principally upon Social Science.

By Prof. VAN BUREN DENSLOW, LL.D.

With Introduction by ROBERT G. INGERSOLL. Including critical analyses of Swedenborg as a Seer, of Adam Smith as an Economist, of Jeremy Bentham as a Law Reformer, of Thomas Paine and Junius as Political Revolutionists, of Charles Fourier as a Socialist, of Herbert Spencer and Ernst Haeckel as Evolutionists, and of Auguste Comte as a Positivist, with an Essay on Wealth in its Relations to Christian Ethics.

The Fifth Edition has just been issued

"Upon the question of money, this volume contains the best thing I have ever read."—R. G. Ingersoll (in Introduction).

"We confess that, if we stood on the ground on which Mr. Spencer stands, we should find it difficult to prevent ourselves from being pushed by the stalwart arm of Dr. Denslow's logic into the gulf of ethical nihilism."—Prof. Goldwin Smith.

"Now, the whole force of this case depends upon the assertion of Goldwin Smith that Dr. Van Buren Denslow is a disciple of Herbert Spencer. But the assertion is not true in any sense or in any degree. On the contrary, Dr. Denslow is an open antagonist of Mr. Spencer. His essay on Spencer's Philosophy, first published in the Chicago Times, while speaking of the man in the usual terms of perfunctory compliment, as have also Goldwin Smith and the Saturday Review, is adverse, carping, and depreciatory on every point that he considers. The criticism was regarded as so damaging that Spencer's friends were told they must reply to it or forever hold their peace; and we were confidently assured that the last we should ever hear of Spencer's system was the thud of the clods that Denslow had thrown upon its coffin."—Prof. Youmans, in Popular Science Monthly and in Introduction to Current American Edition of the Data of Ethics.

Stephen Pearl Andrews, as political executor of the late Thomas Paine, is as fiercely indignant at Mr. Denslow's analysis of Paine's politics as Prof. Youmans is at his assault on Spencer's Philosophy. On the other hand, George Jacob Holyoake speaks of the analysis of Paine's political philosophy as "the most masterly refutation of it extant, without showing in his words or in his mind any enmity against the great agitator whom he confutes."

The late Dr. George M. Beard, of New York, wrote to the author: "Your critique on Spencer's Data of Ethics has all the force of a discovery in ethics, and is of great value. It deserved to be made the subject of a separate treatise."

BELFORD CLARKE & CO., Publishers,

CHICAGO, ILL.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions, . . .	10c. per line.
" 13 " 25 " . . .	8c. " "
" 26 " 51 " . . .	6c. " "
" 52 " " . . .	5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

The Secret of the East;

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—Boston Evening Transcript.

CURRENT TOPICS.

BY B. F. U.

THE Free-thought Association of Canada will hold a convention at Toronto, December 13, 14, and 15.

OUR neighbor, the *Investigator*, in a pleasant mood says *The Index* "is æsthetical, analytical, syncretical, and unsectarian," "progressive and therefore not Christian."

WE have received from Melbourne, Australia, copies of two new liberal papers: the *Liberator*, "a weekly radical and free-thought paper, edited by Joseph Symes"; and the *Young Secularist*, from the same office. They show enterprise and ability.

SAYS an exchange: "The Madras *Christian College Magazine* publishes letters from Madame Blavatsky to members of the Theosophical Society who have recently been expelled from the society for infidelity to its cause. The letters show conclusively that the wonderful phenomena received by the disciples of the 'Theosophs' have been produced fraudulently by confederation and previous arrangement."

THE steadiness of American securities during the campaign just ended is mentioned by some of the European journals as a striking illustration of the stability of our Republican institutions. Thus, the *Pall Mall Gazette* remarks: "A similar crisis in any other country would convulse prices. A nation of fifty million people decides the fate of its government in a closely contested election, which is conducted with wild excitement from the shores of the Atlantic to the Pacific, with less effect upon the stock market than a report that King Alfonso had a cold in his head would affect the Spanish bourse."

THE daily papers, last Saturday, announced the death of Col. George W. Tew, of Newport, R.I.,

a comrade with whom we served in the Union army, nearly a quarter of a century ago. Of his life since the war, beyond the fact that he was elected treasurer of Rhode Island in 1866, we know little; but, as a fellow-officer, we knew him well. He was a brave soldier, and a man of tender heart, generous disposition, and the most patriotic spirit. The announcement of his death summons from "memory's storied urn" many scenes and incidents of pleasure and of peril which occurred during the dark days of the Rebellion.

THE socialist party in Germany is evidently gaining in numbers and influence. It will have in the new Reichstag nearly twice as many deputies as sat in the old. Bismarck, it is said, fears the socialists more than the liberals. The latter include many learned men, who are patriotic and opposed to Bismarckism, but are rather theoretical and *doctrinaire*, and fail to comprehend the conditions of a progressive popular party. In consequence, the liberals of democratic tendencies every year are leaving the liberal party and increasing the strength of the socialists. There are different classes of socialists. Some are in favor of revolutionary measures; while many, probably the majority, are not. Of course, the socialist professors of Heidelberg, Bonn, Jena, and Leipzig, hold to no such theories as are commonly ascribed to their party, which, in spite of all minor difference, is united in opposition to the imperial *régime* and in the desire to see in Germany "a government of the people, by the people, for the people."

IN response to a rather informal call for a meeting of tax-paying women who had not registered as voters for the school committee, an unexpectedly large and a very thoughtful and earnest audience assembled in Parker Fraternity Hall last Monday evening, composed largely of the class mentioned. Mrs. Sara A. Underwood presided. A number of speeches were made, urging women to use the power now in their hands in favor of the nomination and election of competent and worthy officers, and showing how, in a short time, by supporting the best candidates of both parties and "scratching" all others, they might become a power in the city which political managers would be compelled to consider in the nomination of members of the school committee. The following speakers, and in the order named, addressed the meeting: Hon. George S. Hale, Mr. John Whiting, Representative C. C. Coffin ("Carleton"), B. F. Underwood, Mrs. Henrietta Wolcott, Mrs. Lydia Hutchins, Mrs. Loomis, and Mr. Slack, editor of the *Commonwealth*.

REFERRING to Governor Robinson's appeal to the people in his Thanksgiving Proclamation to let their tribute of thankfulness "be made most acceptable by deeds of charity and love to the needy and stricken ones," the *Congregationalist* makes the following suggestion, which we commend to the consideration of our readers in this city and State who have the means and are desirous of adding to the comfort and happiness of unfortunate fellow-beings reduced to extreme poverty

and dependence: "An excellent way for our readers to make this practical will be to send a donation to Rev. D. W. Waldron, of the City Missionary Society, for the Thanksgiving Dinner Charity. This form of benevolence, started seven years ago, reaches the worthy poor, whose poverty is occasioned by sickness, small wages, or lack of employment. Last year, nine hundred and sixteen families were visited on the day before Thanksgiving by the city missionaries; and, from a record of seven hundred and eighty-four cases, it appears that in four hundred and thirty-six there was no father. Of course, it is designed that the gifts shall cover more than the wants of a single day, and to this end let there be a generous response this year from those who read this."

ON the Sunday evening previous to the Presidential election, a Methodist minister in Springfield, Mass., preached a political sermon, in which he supported St. John, and bore down so heavily on the character of the Republican candidate that members of the church cried out, "No, no," and "Yes, yes." He ordered silence; but some of the more irrepressible brethren declared that they had as much right as he to express their political views, and insisted on being heard. Whereupon, the preacher said that the law would protect him in his own pulpit, and closed the service, intimating very plainly that he or his friends would prosecute those who had insulted him. Since this reverend gentleman chose to introduce into his sermon party politics on which his church was divided, and people generally, under the excitement incident to the last days of a political campaign, were extremely sensitive, he, as a religious and moral teacher and as a fair-minded man, should have given an opportunity for questions and for criticisms of his statements. That would have been but simple justice. An orthodox minister is supposed to be employed and paid to preach a creed which declares the religious faith of all the members of his church. When he enters the arena of politics, he should have the courage, liberality, and fairness to give those whose views he assails a chance to defend their positions and to examine his. But the average orthodox minister is so unaccustomed to being questioned and criticised that he does not expect and is not prepared for opposition, and generally resents an objection to his pulpit statements as an insult and as an indication of moral depravity in the objector. His own language is the more unqualified and reckless, because of his exemption from the necessity of sustaining his assertions by facts and arguments; and when cornered by some fellow in the pew, who has more reverence for truth than for the clerical profession, he is very liable to lose his temper, forget the teachings of his Master, and appeal for "protection" to the law. Jesus, —who, if we mistake not, was rather in favor of discussion with honest opponents,—could he appear in an orthodox church to-day, would be denied a hearing, and, if he persisted in talking back to the preacher, would be hurried out of the church and arrested for disturbing "divine service."

SIGNIFICANT THEOLOGICAL SIGNS.

An editorial article in the *Congregationalist* of this city closes a lengthy and highly appreciative sketch of the remarkable life of Sir Moses Montefiore with these words: "Perhaps no man has lived in our time who—not in boasting, but in simple, humble truth—could more truly say with one of his own race of the land of Uz:—

'When the ear heard me, then it blessed me;
And when the eye saw me, it gave witness to me;
Because I delivered the poor that cried, the fatherless,
And him that had none to help him.
The blessing of the perishing came upon me,
And I caused the widow's heart to sing for joy.'

And yet the life thus sketched and praised is the life of a Jew. Sir Moses Montefiore was born a Jew, has always lived a Jew, and now, a hundred years old, still adheres to the faith of his fathers. His long life, which thus spans a full century, has been filled with deeds of noble charity and wise philanthropy. Having great wealth, he has used it for great objects of human benefit. Feeling naturally a special interest in improving the condition of his own fellow-believers, yet his benefactions have by no means been confined to them. Christian charities of various sorts have been long accustomed to receive his generous help. As one instance of this unsectarian benevolence, the *Congregationalist* relates the following: "One day in 1860, the London *Times* published an account of the miserable state of the Christians of Mount Lebanon, upon whom the Druses had fallen, and driven at least twenty thousand to the mountains. At one o'clock the next morning came into the *Times* office this Jew, Sir Moses Montefiore,—then rising seventy-six,—bringing an appeal for private benevolence to help these Christians, and enclosing as a nest-egg his own check for \$1,000. The *Times* published the appeal; and, as a consequence, upwards of \$110,000 were sent off to Mount Lebanon to their help." His personal relations with people, and especially with the poor and needy,—a truer test of a benevolent heart than large gifts of money,—have been such as to attach all classes to him by the strongest ties. He has been as affable, tender, and self-sacrificing in character and manner as he has been generous in pecuniary gifts. The Ramsgate poor not only revere, but love him. In Palestine, which he has seven times visited,—the last time when he was over ninety years old,—he "has endowed hospitals and almshouses, planted gardens, dug wells, reared synagogues, built windmills, aqueducts, and tombs, and done good in a hundred ways, until its Jews kiss the very hem of his garments." In several countries, he has been able to secure an amendment of the laws, by which the Jews have been relieved from cruel oppressions and obtained governmental protection against Mohammedan and Christian prejudice.

Here, then, is a man who is acknowledged to have, in a remarkable degree, those virtues and graces of character commonly called "Christian"; and yet he is not a "Christian." He belongs to a race that rejected, according to the ordinary Christian teaching, the Redeemer of the world, and that cannot therefore have any part in the Christian scheme of salvation. There are, indeed, Christian missions for the conversion of the Jews to Christianity. Not many years ago, a representative of one of these missions called on a Jewish friend of ours, who was a woman of noble benevolence, to get a contribution from her for sustaining a missionary in Palestine to convert the Jews there to the Christian faith. The missionary representative in this case—who was also a woman—had assumed that her Hebrew neighbor, whose good heart and good works she very well knew, must

have abjured the religious faith in which she was aware that she had been born and educated, and would be quite ready to make a donation for converting her fellow-Jews; and great was her astonishment to find that the good lady, though having apparently all the "Christian" virtues, was not a "Christian," and that, so far from wishing to work for the conversion of the Jews in Palestine, she was a devout believer in the doctrine that the Jews would yet possess Palestine as their providential inheritance. The Christian zealot went away from the Jewish lady's benevolent presence with a new idea: it was that a Jew might lead so good a life as to stand in no great need of conversion to Christianity. Yet it was an idea which it must have sorely puzzled her to reconcile with her Christian theology.

And this idea is, doubtless, spreading in Christian churches. Among the many praises that have been bestowed in Christian journals on the noble character of Sir Moses Montefiore, we do not recall having seen anywhere a single regret expressed that he should not be a Christian, nor anything detracted from his meed of honor on that ground. The *Congregationalist* is a paper that claims to uphold the good old Orthodoxy against the heretical drift of the so-called new theology. Yet, in its long and entirely sympathetic article on his career, it gives not the slightest hint that Sir Moses Montefiore is in any need of conversion to Christianity. And, writing as its editor does of this Jewish philanthropist, it is impossible to suppose that he believes that such a man, though not accepting the Christian faith, is in any danger of going to perdition. It is a significant sign of the times that such an article should appear in such a journal.

Another similar sign of an increasing appreciation among Christians of the virtues of other religions was given a few weeks ago by the New York *Independent*, in the publication of a sermon by a modern Japanese Buddhist preacher. The sermon was published in that journal without note or comment, just as it might have printed a discourse from a Christian minister. It was not a great sermon; but it was a sermon emphatically inculcating, by simple language and apt illustration, the same personal and domestic virtues that are insisted on in what are called practical sermons in Christian pulpits. The native correspondent who sent the translation of the discourse to the *Independent* prefaced it with the following interesting sketch of the preacher and the religious movement he represented:—

Some thirty-five years ago there arose in Japan a class of practical moralists who, against the prevailing tendency of the age to too much speculation, began to popularize the doctrines of Confucius, so as to make them a living force among the great mass of the people. They had ten meeting places in Kiyoto, the capital of the empire at that time. Their preaching, combined with their benevolence,—which showed itself on all occasions, and especially in the times of famine,—had a great effect upon the minds of the people. Their followers multiplied rapidly. The government began to take notice of the work; and, it is said, sent many times a large quantity of rice to be distributed to the people through their hands. The author of the following sermon (which is one of the eighteen sermons preached by him, and reduced to writing by his adopted son and successor) was the head of one of the meeting places. He had many followers, some of whom became men of influence. He was so gentle that he is styled "the dove-like, venerable man."

It will be noted that this religious movement was before the time when Japan was freely opened to foreigners, so that it could not be a consequence of the Christian influences which might now be claimed to prevail there. It was, in fact, a native reform movement in behalf of an ethical religion against tendencies to a speculative and formalistic

piety. Similar reformations have occurred from time to time in all the great religions, showing the inherent force of certain fundamental moral sentiments in them all. If the *Independent* has any readers who are of the old-fashioned type of Orthodoxy, we imagine they must have opened their eyes in wonder over this Japanese Buddhist's discourse, and that some of them may now be pondering the question whether it is quite worth while to spend so much money and labor to convert such "heathenism" as this to the kind of Christianity prevailing in Europe and the United States. Would it not be wiser as well as easier to help such "heathenism" to educate its adherents up to its own standard?

WM. J. POTTER.

ENGLISH CHURCHES AND THE ENGLISH WORKMEN.

If any interested spectator had visited the ecclesiastical gatherings in England twenty or thirty years ago, he would have heard discussions and dissertations mainly on points of doctrine and discipline, on questions of theology or ritual. This would have been true both of the established and dissenting Churches. Were he to visit similar gatherings to-day, he would discover that nearly all the talk had reference to the relations of the Church with social and political problems, with the condition of the poor, the rights of labor, and the attitude of the workman toward religion. Such is the change which has come over the religious world. Within the last few weeks, three great religious bodies have met to discuss their affairs; namely, the Church Congress at Carlisle, the Congregational Union in London, and the Baptist Union at Bradford. And, at all these gatherings, the foremost question was the social and religious condition of the working classes, and the relations of the Churches to the questions in which these same working classes are most interested.

At the Church Congress, political questions proper are supposed to be excluded; but scarcely any of the speakers seemed able to forget that a contest was going on all around them between the people and the privileged orders, in which it is difficult for any man not to take a part one way or the other. Four of the papers read dealt with the relations of the Church to politics, and one of these was a most radical utterance,—that, namely, of Mr. George Harwood, the author of an interesting work on the *Coming Democracy*, in which he reproached in deep earnestness the Church of England for her attitude toward popular reforms in past times, and predicted that she would enjoy no future, if she did not frankly and heartily ally herself with the democratic movement of the age. Indeed, Mr. Harwood said again, with new force, what Dr. Arnold had said half a century before: "The Church of England bears, and always has borne, the marks of her birth. The child of royal and aristocratic selfishness and unprincipled tyranny, she has never dared to speak boldly to the great, but has contented herself with lecturing the poor." With new force, I say, but also with a much wider sympathy and general assent than Dr. Arnold experienced in his day.

What was true of the Church Congress was also true of the Congregational Union in an even greater degree. It is true that the Congregational body has always been on the popular side in political and social matters. But, at the same time, it is distinctly what is called a "respectable" body; and most of its churches are principally maintained or largely subsidized by wealthy middle-class people, whose bias is in a somewhat conservative direction where social questions are con-

cerned. Now, the political movement in England is undoubtedly passing into the social phase. Men are asking why those who toil should receive so few of the world's goods; nor do the optimistic calculations of statisticians satisfy these inquiring minds. This phase of the popular movement is not likely to meet with such hearty sympathy among well-fed, sleek, and comfortable dissenters as did the more purely political phase. But yet the Congregational Union could not avoid the discussion of this subject, which was introduced in two elaborate papers read by prominent ministers, and discussed at some length by the chairman, Dr. Parker, in his address. Painful facts were revealed: a pair of boots made for 5s. 3d. (\$1.30), and sold for £3 30s. (\$15.75); a shirt made by a poor seamstress for 3 farthings, and sold for 1s. 6d.; 296 boxes of matches made by girls for 1s. (25 cents). These were the tales of sorrow and of wrong told by one whose self-denying work in East London is well known. And it was asked: Where did the money go, into whose pockets; and could a body of men, devoted to the principles of justice and love for which Jesus lived and died, tolerate or defend or palliate such a state of things? "Let them," said the speaker, "turn market price out of doors, and let Christ's price—a fair day's wage for a fair day's work—come in." And another member said that "the relations of employer and employed left no room for the moralities of Jesus Christ." There were other utterances, it is true, different from these,—defence of the existing order of things, and deprecation of any attempt to overturn that order; but all through there was a recognition of the fact that the religious bodies must address themselves to these questions, and that dogmatic controversy and barren theological propositions can avail nothing, now that the world is swinging over into the plane of democracy.

At the Baptist Union, too, the ablest speaker present declared that "Christianity was passing through the socialistic furnace." In short, in all these great assemblies of religious people there was a plain indication of a belief, more or less consciously realized, that the Church, if it has any *raison d'être*, must show itself a social body, capable of dealing with social questions, and helping the world to some solution of these questions. Time was when the non-conformist churches of England were apt to regard themselves as a "peculiar people" called out from amongst the rest of the ungodly world by a special supernatural grace. They were animated by the Separatist spirit, and were only saved from its full consequences by some participation in commercial and political life. Now, they appear rather to desire to emulate secularists in their attention to current problems; and, as these problems are chiefly those relating to the emancipation of the laboring classes and their participation in the benefits conferred by the State, it follows that these churches are beginning slowly and with faltering steps and imperfect knowledge, but with awakening sympathies, to join in the great social movement of our age. The case of the Established Church is different. It has never of course been a company of the "elect," or the "peculiar people." Rather has it been too secular, too worldly, controlled as it has been for so many generations by intriguing politicians and by royal and aristocratic patrons. But it has been selfish, cold, heartless, anti-popular, instinct with pride and privilege. But its loosening hold over the people, who now are slowly beginning to understand and use their power, has evidently alarmed and instructed its most acute and far-seeing members. The votes in the House of Lords in favor of the franchise bill given by the

Archbishops of Canterbury and York, and many of the bishops, may be taken as a testimony, unwilling doubtless, but on that very account all the more valuable, that the leaders of the Church of England perceive to some extent that, whether churches or monarchies or other old institutions are to reign by the grace of God or no, at any rate they must reign in the future, if they are to reign at all, by the will of the people.

The English churches, therefore, it may be hoped, will be able to adapt themselves to the new tendencies of our time; and, in the slow but sure evolution of things, these institutions which have hitherto existed so largely for the propagation of dogmas, will in this way become social forces for the furtherance of the reign of justice among men. Is not this, after all, the fundamental idea of so old and venerated a work as Saint Augustine's *City of God*? Is it not the idea dwelt upon with constant reiteration and with earnest sincerity by the great Fathers of the Church? Churchmen will go forward by going back, by reverting to the first principles of their faith, and by drinking at the fountain of early Christian enthusiasm and love. It is at least certain that, if they do not do this, there is no room for them in modern society. One word more may be said. If the churches can develop a new "enthusiasm of humanity," there is reasonable ground for doubting whether their zeal will be according to knowledge. This was one of the reasons of the failure of the early Church. The necessity of our time is the union of emotion and sympathy with knowledge and reason. Cannot some *modus vivendi* be discovered between the thinkers and the enthusiasts? And cannot the reformers combine sweetness with their light? This blending of the two noblest factors in our nature is the special need in England to-day. Our good people do not understand modern problems, and our agitators sneer at sentiments of mercy and compassion. The question is, What true progress can be made while this unnatural divorce continues? If the churches can contribute even an "infinitesimal fraction of a product" to the solution of this question, they will justify their existence to mankind.

WILLIAM CLARKE.

REMINISCENCES OF FREE THINKERS.

This day there was laid in her grave at Kensal Green a venerable lady, aged eighty, whose life had been intertwined with memorable movements. Although she has been justly respected through life as the widow of Hetherington (no other name being known in the community), she was never legally married. The two young free thinkers and philanthropists united their hearts and lives at a period when marriage still preserved sacramental conditions with which scrupulous minds could not comply. Nor did her husband live to see the day of civil marriage which such examples as his brought on. The union openly begun was solemnized by long years of mutual love and faith, and by joint consecration to truth and service of humanity. Fifty-five years ago, Henry Hetherington was printing *The Poor Man's Guardian*, in defiance of the stamp duty; and for it was imprisoned. On his release, he continued his offence until the government surrendered: the stamp was abolished, the press was free. Subsequently, he underwent a severe imprisonment for publishing *Haslam's Letters to the Clergy*. He died thirty-five years ago, and eleven years ago a neat monument appeared on his grave, "Erected by a friend." That friend was the woman who to-day was laid beside him. Out of her small annuity, she saved enough to leave that tribute to her husband; and by severe self-denial, such as is usually supposed possible

only to investors in heaven, she has managed to bequeath her mite to the Woman Suffrage Society and the South Place Society, which she has always attended. I saw her there last Sunday, and received her cheerful greeting. The next day, she died, without pain. Around her grave were gathered a company of veteran radicals who had fought the good fight beside the Hetheringtons in the preceding generation, which now appears so distant. But these are becoming few. During the twenty-one years in which I have been in England, it has fallen to my lot to conduct the funerals of some leaders of a noble army of free thinking and radical martyrs,—W. J. Fox, William Lovett, James Watson, Richard Moore, William Rose, and others, and of "good women not a few." They were people whose sufferings had won the victories of intellectual and religious freedom. I have always found them modest martyrs, so happy in the progress they witnessed as to forget their sacrifices. Nothing is more notable in these valiant radicals of the last generation than their sweetness of heart, their spirit of toleration. This old lady, buried to-day, might have given some useful hints to the author of a new novel entitled *We Two*. This novel is all the more a hopeful sign of our times, because its tenderness toward free thinkers is associated with the genuine Orthodox conviction that Christian beliefs are essential to any completeness of mind and character. With the utmost *naïveté*, the lovely daughter of the free thinker is described as an "Undine,"—quite soulless, until she is converted by studying Jesus in the Greek. Well, I have, in my Methodist days, known some "saintly sisters," but never any saintlier than some of these mothers in the non-Christian Israel. And the same may be said of our free-thinking fathers also. I have never known one of them embittered by the persecutions they have undergone, nor have I known one of them dismayed by the approach of death.

There is a part of Kensal Green Cemetery where many of them lie. Close to the monument of Hetherington is that of William Devonshire Saul, who died in 1855; and beside that is the tomb of David Williams, who, as "Publicola," wrote articles that made oppressors tremble. He died in 1846. These men were buried in graves that long bore no mark, for they were champions of the very poor. But, as radicalism has become richer, one and another handsome stone has appeared to report the fidelity of these "infidels" and their services to humanity. The finest of these monuments, and one of the finest in the cemetery, is that of their famous leader, Robert Owen. This was erected only five years ago,—not entirely, I believe, by his old followers, but partly by those whose liberalism has grown conventional. The monument is some twenty feet high, and decorated with a bronze profile taken during Owen's life. Conspicuous above the medallion are the words, "Robert Owen, philanthropist." Beneath it: "Born May 14, 1771. Died Nov. 17, 1858." The inscription says: "He originated and organized infant schools. He secured a reduction of the hours of labor for women and children in factories. He was a liberal supporter of the earlier efforts to obtain national education. He labored to promote International Arbitration. He was one of the foremost Englishmen who taught men to aspire to a higher social state by reconciling the interests of capital and labor. He spent his life and a large fortune in seeking to improve his fellow-men by giving them education, self-reliance, and moral worth. His life was sanctified by human affection and lofty effort."

It may be observed that all allusion to Owen's religious heresies are conspicuously (no doubt

compulsorily) absent, though most of the free-thinking orators were trained in his old John Street meetings. Notwithstanding this propitiation of the cemetery's conscience by the committee who controlled the memorial, Newtown (Wales), where Owen was born and buried, refused to accept the monument, even with a proffer of £300 for a fountain and clock. One would like to substitute in the inscription some recognition of the old man's religious radicalism for that allusion to the reduction of the hours of women and children in factories. No doubt, Owen meant well; but the inclusion of women with children, in the factory Acts, has proved a heavy blow to women and their children and to society. Under the disguise of philanthropy,—supplied unwittingly by Robert Owen,—working-men have long been steadily depriving women of all power to compete with them in the labor market. Thousands of poor women are refused work because they are legally forbidden to work full time; and whither have their sentimental protectors driven them? Owen had serious limitations, and his influence ceased long before his death; but the affectionate loyalty of his old comrades for him, after outgrowing his ideas, is touching. And now they are gathering around him there in the silent land, where some day their successors will make pilgrimages and read the record of their lives with homage and wonder, ere they turn to stone the next heretics that come along.

MONCURE D. CONWAY.

LONDON, Sept. 26, 1884.

HAWTHORNE ON ATHEISM.

In his *English Note-Books*, under date of Aug. 6, 1854, Hawthorne records the fact that he saw Miss Martineau, whom he describes as a large, robust, elderly woman, plainly dressed; but withal, he says, she has so kind, cheerful, and intelligent a face that she is pleasanter to look at than most beauties. All her talk, he says, was about herself and her affairs; but it did not seem like egotism, because it was so cheerful and free from morbidity. "And this woman," he goes on to say, "is an atheist, and thinks that the principle of life will become extinct when her body is laid in the grave! I will not think so, were it only for her sake. What! only a few weeds to spring out of her mortality, instead of her intellect and sympathies flowering and fruiting forever!" Apropos of this extract from Hawthorne's *Note-Books*, it should be said that, large-brained as the greatest of American romancers was, he was no philosopher, but an emotionalist through and through. He was a most subtle and profound student and anatomist of human nature, with all its queer structural outgrowths of customs, usages, and religious beliefs; but he studied it not for the purpose of demonstrating the absurdity and illusoriness of such beliefs, but with a view to a loving description of them. He studied the human heart rather than the head. He had a deep, innate reverence for all myths, traditions, and alleged supernaturalisms. He loved the mosses and lichens of human nature, so to speak. Superstitions of all sorts found a friend in him, a genius capable of rehabilitating them, and making them charm and fascinate even the practical age and country of rationalism, business, and plain matter-of-fact in which he was born, and by which he was environed all his life, with the exception of the five or six years which he passed in Europe. In fact, no two English-writing contemporaries and literary celebrities of the middle of this century were in more striking contrast than were Miss Martineau and Nathaniel Hawthorne. Miss Martineau, though of the sex in which the emotional nature usually predomi-

nates, was still a case of almost pure intellect and reason; while Nathaniel Hawthorne, with a brain capable of almost any kind of mental achievement, was still an emotionalist rather than a rationalist. Hawthorne would never have allowed himself to write the following sentence from the pen of Miss Martineau, even if he had believed it to be true: "Strange as it may appear, and impossible as it may seem to so many, the Christian religion is in fact, and will soon be generally recognized as, no better than an old wife's fable." Miss Martineau could write thus about Christianity some thirty or forty years ago. It was her sincere conviction, and she boldly announced it. Like Milton, Hawthorne was a Puritan in sentiment, although, as in Milton, the æsthetic side of him was gorgeous with all kinds of poetry. But, of course, Hawthorne, as a great poet, was a liberal and no fanatic, in spite of the inherited Puritanism of his nature. He was a pathologist rather than physiologist as an analyst of the human heart. He was a casuist in his fondness for dealing with cases of conscience. His genius was specially given to working on the trail of sin and sorrow. It wore rather an autumnal than vernal aspect. The weird and crepuscular had an irresistible attraction for it. He preferred to believe rather than to question; to have faith in the myths of the past, and to treat them lovingly, rather than to sneer at them.

But with his great cloud of brain, so to speak, he could have been a cynic, sceptic, and scoffer of the most vitriolic character, had he been so inclined; for his was a most penetrating eye, a most piercing glance. But he cultivated the emotional rather than the philosophic side of his nature, as a writer of romances and twice-told tales. The greatness and versatility of his mental and imaginative power are most strikingly evinced in the fact that he could with equal felicity describe his fatherland, New England, with its unæsthetic and plain practical Puritanism and its social newness and its only two or three centuries of civilized life, with its sombre forests of pine and hemlock and its sombre colonial memories, with its barren rocks and east winds and stern winters, on the one hand, and Italy with its gorgeous Romanism, its thousands of history-and-myth-laden years, its groves of citron and myrtle and soft winds, on the other, as the *Scarlet Letter* and *Marble Faun* most amply show. The old Latin poet, Virgil, had the most intense love of the mythical past of the Italy of his day. He had, too, a larger measure of sentiment, in the modern sense of the word, than any other pagan poet. But even Virgil, a born polytheist, in the seventh book of the *Æneid*, which is specially devoted to the legendary lore of Italy, gives us no such vivid feeling of long-gone mythical times and the twilight of fable as we experience in perusing the two chapters of the *Marble Faun* which are entitled "The Pedigree of Monte Beni" and "Myths." After reading these chapters, one would almost suppose that Hawthorne had lived at the court of King Evander in those primitive days when the site of the Eternal City was a haunted thicket and the forum a cow pasture. After tracing the lineage of his Faun back "to the early morn of Christendom, when the Roman Empire had hardly begun to show signs of decline," our great romancer goes on to say, "but, where written record left the genealogy of Monte Beni, tradition took it up, and carried it without dread or shame beyond the imperial ages into the times of the Roman Republic; beyond these again, into the epoch of kingly rule. Nor even so remotely among the mossy centuries did it pause, but strayed onward into that gray antiquity of which there is no token left save its cavernous tombs and a few bronzes and some quaintly wrought ornaments of

gold, and gems with mystic figures and inscriptions. There, or thereabouts, the line was supposed to have had its origin in the sylvan life of Etruria, while Italy was yet guiltless of Rome." By some astonishing clairvoyance of his weird genius, Hawthorne could more clearly describe prehistoric Italy than could even Virgil or Livy or, in modern times, Niebuhr.

But the *Marble Faun* gives us not only an unequalled and most lifelike delineation of Italian paganism in its remotest aspects, but also of the curious conglomerate of polytheism and Christianity, which could arise nowhere else but in Italy; namely, Romanism, or Roman Catholicism, a spiritual domination, which for so many centuries undertook to emulate the political and imperial domination of the Roman Republic and Empire. In the chapter entitled "Altars and Incense," he describes the emotions of the lovely New England maiden, Hilda, alone and with her dreadful secret, haunting St. Peter's. "Rome," he says, "has a certain species of consolation readier at hand, for all the necessitous, than any other spot under the sky; and Hilda's despondent state made her peculiarly liable to the peril, if peril it can be justly termed, of seeking or consenting to be thus consoled. Had the Jesuits known the situation of this troubled heart, her inheritance of New England Puritanism would hardly have protected the poor girl from the pious strategy of those good fathers. Knowing as they do how to work each proper engine, it would have been ultimately impossible for Hilda to resist the attractions of a faith which so marvellously adapts itself to every human need. Not, indeed, that it can satisfy the soul's cravings, but, at least, it can sometimes help the soul toward a higher satisfaction than the faith contains in itself. It supplies a multitude of external forms, in which the spiritual may be clothed and manifested. It has many painted windows, as it were, through which the celestial sunshine, else disregarded, may make itself gloriously perceptible in visions of beauty and splendor. There is no want or weakness of human nature for which Catholicism will own itself without a remedy. Cordials, certainly, it possesses in abundance, and sedatives in inexhaustible variety; and what once may have been genuine medicaments, though a little the worse for keeping. To do it justice, Catholicism is such a miracle of fitness for its own ends, many of which might seem to be admirable ones, that it is difficult to imagine it a contrivance of mere man. Its mighty machinery was forged and put together, not on middle earth, but either above or below. If there were but angels to work it, instead of the very different class of engineers who now manage its cranks and safety-valves, the system would soon vindicate the dignity and holiness of its origin."

Romanism may well be an impressive superstition and religion; for it is a conglomerate, as I have already said, of the gorgeous and elaborate polytheisms of Hellas and Italy. In it may be found conjoined the superstitions of primitive Egypt, Western Asia, Greece, and Italy, with all their ritualistic pomps and splendors. It is an elaborate hierarchy, with only the least possible infusion in it of the spirit of the Prophet of Galilee, who was the foe of priesthoods and haughty personal dominations of all sorts. Hawthorne was a typical Puritan, like Milton, of a highly æsthetic sort. He was a New Englander and American of the most uncompromising character, so that his European experiences rather intensified than diminished his Americanism. In this, he was unlike his friend and contemporary, Longfellow, who became largely Europeanized by his sojourns abroad, and also largely Romanized in a sentimental way.

At any rate, his "Evangeline" gave, and continues to give, great aid and comfort to Romanism. But Longfellow, though amiable and charming personally and poetically, was greatly the inferior of Hawthorne, who was *sui generis* and unapproached in his genius.

B. W. BALL.

THE ETHICS OF PROPERTY.

II.

Let us try to educe from such concrete facts as the pre-cited (last week), their essence, in a formula which that flat-footed housemaid, Experience, shall not brush away with philosophical cobwebs. Property (ethically defined) is the *benefit reciprocated* by other beings or terra-solar organs, individuate or collective, of the impressions we make on them.

Men and other animals are individuate, but may become collective by social synthesis, as in organized societies. The soil is a collective organ of that planetary life which implies solar influence, hence terra-solar. Plants rooted in the soil, and nourished also by the air and waters, are intermediate, or at once individuate and collective. With particular trees, individualized by our cherishing care and life-long associations, the relation of property is higher than it can be with grains or roots grown in mass, sold by the bushel and consumed every season. Their relation with us is collateral simply to that of their perennial source, the soil.

The rose or the cabbage reflects its gardener's intelligent fulfilment of the purpose that informs it, æsthetic or esculent, completing a circuit of creative will between their human and planetary factors in the collective terra-solar life.

When an enterprising gardener, in evolving the ideal cabbage from the depths of his consciousness, is transported by its mild and moist genius to Puget Sound, he progresses a step into ethical property. Entering the sphere of his reciprocal benefit as a customer; my seed beds, with equal chances for the Puget Sound and Pennsylvania seed, show twenty fine plants of Western origin for one of Eastern. Thus, by forethought and experimental energy, one gardener acquires higher right in a particular culture, whose repute justly profits him, in the same ratio as horticultural society at large. His labor is composite, by consociation with organic terra-solar life forces in their intelligent distribution. By this intellectual element superadded to labor, a special view being prosecuted at personal cost, he becomes a proper candidate for horticultural awards, either honorary or pecuniary, from societies of that class. Reputation thus enhances the profits of skill and successful persistence in realizing an ideal. A higher meed accrues to that sub-creation by which a Van Mons becomes the godfather of fine new varieties of pears, at the same time elucidating the general law of variation in seedlings. Such propagators and hybridizers are producers at once actual and potential, and take rank with inventors or discoverers, in ratio with the social value of their respective successes. No question as to costs can arise here: the greatest may be in pure loss, the enterprising take the chances. They are always a supposable element in merit, and like past labor, concur to form a capital of knowledge and judgment. Inventors and discoverers must often be martyrs to their work; and premiums, when accorded to success, will be more or less capricious, as personal intrigue and favor may supersede merit. This varies with the development of the sense of equity in societies. Gratitude now attaches only to the fashionable arts of pleasure, and chiefly to musicians. If the faint suggestions of

harmony, through sound, thus open purses, how liberal must we suppose the social spirit, when harmony prevails in all sensual and social relations! Such partiality to a fine art entails much injustice toward simple necessary labor. Song birds are insectivorous, and the instincts of society find it less necessary to *be*, than to be splendid. Luxury above all; then comforts; and as for the necessities, they may take care for themselves. *Care* indeed is inherent to their costs. Equity, the idea of which seems to have entered Nature some time after the birth of man, is an instinct of slow as well as late evolution. In the future, as in the past, we may expect partial verdicts; but is it not a less evil, that benefactors of society should sometimes miss their dues, than that that fifth wheel of the coach, called government, itself a privilege, should be invested with arbitrary power to confer privileges, and to pension its favorites from the public purse?

Moreover, as regards property in patents deriving their authority from constituted governments, (and which thus engenders a conservative State party), the experience of inventions—of printing, of gunpowder, of the steam-engine, of photography, etc.—proves that, in the natural evolution of science, every important idea, which in its turn rises upon our horizon of life, finds its rays reflected at once from the facets of minds differently impersonated. It is as if the idea itself were a person, and the inventors, media selected by this person for his uses. Why then should awards or patents be more exclusive than inspirations?

In exploring the golden veins of thought, intellectual men are apt to extravagagate in claims of fancied privilege. See Dickens' solicitude about international copyrights. In nearly every case of a book published in two or more countries, the author or his first publisher has realized as much as costs, at least, before there would be any temptation to infringe upon his privilege of sales. Finally, the books that make fortunes are almost exclusively *fictions*; i.e., works of amusement, and of no value to industry, the arts, or sciences. Moreover, these works of imagination repay themselves by pleasurable emotions in the composer, very different from the conscientious labor required by great works of science.

Copyrighters and patentees should reflect that the only law of nature from which we can borrow suggestion in translating physics by morality, is that gravitative and magnetic forces draw inversely to the *squares* of the distances between their subjects. The analogous attraction of cumulative past labor in capital over present labor, in the form of interest, should diminish in such ratio to the distance in time from the originally producing labor. A general ratio, though inexact, as is natural to all forces translated from the stable equilibrium of physial Nature to the unstable equilibrium of human affairs, obtains between the periods of distance in *time* from labor producing, and the cumulative mass of capital produced. It is curious that the attribution of three-twelfths to capital arbitrarily assigned by Fourier is exactly its customary allowance here as the rent on soils in cotton culture. The artist's faculty is his potential capital which the work copyrighted or patented renders actual. Patents ought then to die out by the same gradual diminution as the awards to other capital. The graduated income tax is an arbitrary method of applying the same law by State governments.

On the other hand, advocates of the "cost limit of price" principle are prone to be niggardly toward skill, and hence to its higher degrees in discoveries or inventions, pretending that devotion brings its own reward. The impossibility to esti-

mate even approximately the various costs of effort and of sacrifice, material and psychic, incident to such devotion, betrays one of the defects of this mode of appraisement. Cost is certainly a true factor in estimates, but cannot vindicate its assumption to be the sole factor. The caprice of individual sovereignty in estimating costs receives a natural correction in case of products measurable alike in quality and quantity, as are provisions and most goods in commerce. Here, however, the exchange of hour for hour, to be just, must imply equal skill in parallel conditions of hygiene. Another complication in estimating costs arises from the painful sacrifice of higher and more pleasurable capacities, which necessary routine labors may exact.

Fortunately, the exactness of ethical adjudications loses its importance in view of the multiplication and the force of social ties which counterpoise accumulation, and assimilate the influence of capital to that of streams which disappear in fertilizing soils.

M. E. LAZARUS.

CONVENTION OF THE F. R. A. AT FLORENCE, MASS.

Wednesday evening, November 19.—Address of welcome, by William H. Spencer. Address by the President, William J. Potter. Subject, "Nineteenth Century Religion."

Thursday morning, November 20.—Subject, "Secularization of the State." Opening paper by Fred May Holland. Addresses by B. F. Underwood and others.

Thursday afternoon.—Subject, "Radical Work for the Young." Opening addresses by Mrs. Anna Garlin Spencer and Mrs. Elizabeth Powell Bond.

Thursday evening.—Subject, "The Practical Side of Religion." Address by Frederic A. Hinckley on "The Human Question," followed by speeches from Miss Mary F. Eastman and Mrs. Abby Morton Diaz.

There will be opportunity for discussion at each session.

F. A. HINCKLEY,

Sec'y F. R. A.

EDITORIAL NOTES.

BY B. F. U.

"GEORGE ELIOT'S LIFE AND LETTERS," edited by Mr. Cross, and filling three large volumes, will be issued in England this month.

"It is not alone" in Roman Catholic countries, says Rev. James S. Bush, in his work just published, *The Evidences of Faith*, "that the popular suspicion of insincerity among the clergy is increasing; and it is a melancholy sign of the decadence of religious faith, when the rulers of a Church continue to teach what they no longer believe."

THE note of Rev. Tollemache-Tollemache, which has been so severely commented upon, was as follows:—

SOUTH WITHAM RECTORY, Sept. 17, 1884.

All the villagers desirous of coming to my house approach it in a becoming and respectful manner; i.e., through the backway and kitchen door. There is not a farmer in the place who ever has had, or would have, the impertinence to do otherwise. I desire that in the future you will do the like.

R. W. L. TOLLEMACHE-TOLLEMACHE.

To the teacher of the Board School, South Witham.

THE student whom the Johns Hopkins refused because she was a woman, Martha Cary Thomas, of Baltimore, has just received the degree of Ph.D. *summa cum laude*, the fourth and highest degree which the university of Zürich can bestow. Think of America sending her republi-

can daughters to the heart of Europe to receive their degrees of lofty scholarship! Think of Europe emerging from her mediævalism before America! Think of the universities of Switzerland, of Italy, of Austria, of Sweden, of France shaming Columbia and Harvard!—*Woman's Journal*.

MR. CHARLES ELLIS, known a few years ago as a radical lecturer and whose name is familiar to our readers as an occasional contributor to *The Index*, has been in this city for a short time. He is, we are glad to see, in improved health. Mr. Ellis was always in favor of liberal organizations, which should combine with the fullest freedom a high order of thought and work of a fine quality. Not finding encouragement in the formation of such societies, he gave up lecturing, and has since devoted himself to literary work. As a writer, his productions always show the same high character that attracted attention to his lectures. We have always been desirous of seeing him engaged on the platform, and hope that he will yet return to the field in which he can use his talents for the greatest good.

THE life of Dr. William Wells Brown, who died at Chelsea, Mass., last week, was, as the *Springfield Republican* says, "not only a record of noble philanthropy, but an inspiration to his race, and a striking example of the power of man to lift himself above the most depressing surroundings." He was born a slave in Kentucky sixty-eight years ago, and was twenty-six years old when he escaped, and commenced working as a steward on a steamer. He educated himself; became one of the anti-slavery orators and writers; represented the American Peace Society in the Congress at Paris in 1849; delivered lectures in England, Scotland, and Ireland, which attracted wide attention and gained him the friendship of statesmen and scholars, meanwhile studying medicine; and at the end of six years returned to this country, and used his voice and pen in supporting the anti-slavery movement. Of late years, he had been devoted to the cause of temperance and education, especially among his own people.

A WRITER of ability and reputation, a contributor to the London quarterly, *Mind*, writes us: "As you say, Fiske's spiritualization of the 'infinite and eternal power' amounts to a theological twist quite unwarranted by the logic of facts. Mind is indeed, in all its manifestations, vastly more evanescent than the extra-mental existent and mentally signified. As for the 'Absolute,' it seems to me there is not the least ground for assuming a universal, all-effective energy behind the definite complexes of power, which actually compel our perceptions. And these compelling powers, when they are not other human beings, are inferior to our own nature. The progressive drift of evolution, taking place beyond all consciousness, is the one fact which points to an inscrutable guidance of events." We quite agree with our learned friend that there is no reason to believe in a "universal, all-effective energy behind the definite complexes of power which actually compel our perceptions"; but is not the power itself which compels our perceptions and operates universally absolute in the sense in which that word is used by thinkers? And of this power, this ultimate existence, by whatever name called, is not even "the progressive drift of evolution taking place beyond all consciousness," as disclosed to us, a phenomenal manifestation? Whether the ultimate existence is psychical in its nature we do not profess to know. Our objection to Mr. Fiske's statement was that, after declaring his belief in the psychical nature of the ultimate reality, he erroneously

claimed that this was also the position of Herbert Spencer.

REV. MR. WOODROW, of the Theological Seminary at Columbia, S.C., has his own notions as to the origin of man and woman. He wants to harmonize evolution with Genesis; and so he claims that Adam's body was developed from the body of a brute, but that his soul was introduced by the direct act of God, that afterward Eve's body was made supernaturally from a rib of Adam. The Board of Trustees by a vote of eight to three sustain the author of this unique theory so far as to say that "there is nothing in the doctrine of evolution, as defined and limited by him, which appears inconsistent with perfect soundness in the faith." But the minority of the Board give the following reasons for protesting against Rev. Woodrow's views as heretical:—

First.—Evolution is an unproved hypothesis, and the Seminary is not the place for such teaching.

Second.—Belief in evolution changes the interpretation of many passages of Scripture from that now received by the Church.

Third.—The view that the body of Adam was evolved from lower animals and not formed by a supernatural act of God is dangerous and hurtful.

Fourth.—The theory that Adam's body was formed by the natural law of evolution, while Eve's was created by a supernatural act of God, is contrary to our confession of faith, as that confession of faith has been and is interpreted by our Church.

Fifth.—The advocacy of views which have received neither the indorsement of the Board nor that of the Synods having control of the Seminary, which have not been established by science, which have no authority from the Word of God, which tend to unsettle the received interpretation of many passages of Scripture, and to destroy the confidence of the Church in her doctrinal standards, which have already produced so much evil, and which will injure the Seminary and may rend our Church, ought not to be allowed.

The two reports have been the subject of considerable controversy among the orthodox ministers of the South. Recently, the Presbyterian Synod at Greenville, S.C., was engaged several days in a warm and spirited discussion of Evolution, several leading divines participating. The question was settled by the adoption of the following resolution, 50 voting for and 45 against it: "Resolved, That in the opinion of the Synod the teaching of evolution in the theological seminary at Columbia, except in a purely expository manner, with no intention of inculcating its truth, is hereby disapproved."

THE INDEX, in its criticism of the action taken by the National Liberal League at its last annual meetings, is sustained by the *Radical Review*, which says: "But, as we have stated, the League had pledged its members to the repeal policy. Now, if it sincerely desired the reconciliation of the two hostile liberal factions, it ought, therefore, to have rescinded the resolutions pledging it to the 'repeal' policy, instead of passing the whole matter over in silence. That would have been honest." "Was it not stultification on the part of the League to elect him [Ingersoll] to that position, when we remember that he had left it because it indorsed the 'repeal' policy, and when the League still indorses that policy?" Of the same purport are these sentences from an editorial in Monroe's *Iron-clad Age* of last week: "These [the objectionable resolutions] left unrepealed are in full force, like the Delaware laws against blasphemy that came so near catching our Robert. . . . If the League Congress was sincerely in earnest in its efforts to bury bygones and bring about reconciliation, fairness, and good feeling, it is to be regretted that it left open any avenue for misunderstanding to creep in." The *Freidenker*, the leading German free-thought journal of the country, whose objections

to the League we should in fairness state are not in all respects the same as our own, says of the organization, in view of the action at Cassadaga, that "we no longer feel ourselves one with the same. It has enormously removed itself from us." The *Religio-Philosophical Journal*, in a lengthy editorial, criticises the League on the grounds stated above, and because it has issued a programme for the promulgation of secularism, while professing to be limited in its scope to State secularization. *Lucifer*, published at Valley Falls, Kan., hitherto one of the staunchest defenders of the League, and *Liberty*, Mr. Tucker's little paper, are among the journals which have withdrawn from the League all sympathy, because of its action at Cassadaga, which they regard as inconsistent and temporizing. No paper that opposed the League prior to its late convention supports it now, while several of those that defended it then have abandoned it since. We have already stated that, so far as the League confines its work to State secularization, it will have our best wishes; but no amount of abuse in papers that suppress the truth by the advice of the leaders of the League shall prevent independent and candid criticism of its action in these columns.

A HARVEST DAY.

"Im engen Kreis verengert sich der Sinn."—Schüller.

"The mind grows narrow in a petty round."
Thus did I read the grand old poet's phrase,
And thought upon my dull, disheartening days
Which no bright noontides, no rich sunsets crowned.

In vain I beat my wings against the bars,
Scorning the trifling cares, the lower range.
My fellowship I deemed was with the strange,
Free souls whose course sped straightest to the stars.

One day, when flaming autumn robed the lands,
I wandered forth, my irksome tasks undone,
To warm my chilled frame 'neath the chary sun,
And take the year's gold with belated hands.

Beside brown fields I rested, where the soil
Its royal largess late had yielded up,
To furnish forth the loaf, to fill the cup
Which Time awards to honest, sturdy toil.

A feeble crone who gleaned the scattered ears
Raised her dim eyes. "O great, rich world!" she cried:
"So much for hope! So much for love and pride!
O, world, I thank thee!"—this with happy tears,

And joyful smiled, and bound her slender sheaves.
The whole round world was hers, beyond her cot.
Ashamed, I faced once more my lowly lot,
And homeward walked beneath the flaming leaves.

A SONNET.

When o'er my soul a twilight darkness lies,
And I discouraged can do naught but pray
That soon the Light of Truth may find the way
Into my saddened soul, all passion dies
Within me: a great, wide-spread content
Fills all my being, and I feel my heart
And mind and soul expanding with the smart
Of hidden ecstasy. Then am I bent
From my own will to His, the God of Truth;
And I can say with tear-stained eyes and wet,
"More patience, Lord: I know Truth is not yet,
But my poor heart is sore with bitter ruth
Waiting for dawn." I'm glad I have been taught
"Thy will be done": my will, shall be as naught.

M. L. B. O.

The Index.

BOSTON, NOVEMBER 13, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, BENJAMIN F. UNDERWOOD, } Editors.

No WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

Evolution of Masonry and Theology.*

BY F. B. STEPHENSON, A.M.,

Membre titulaire de la Société d'Anthropologie de Paris.

(Concluded from last week.)

As the sun at the four stations, in the ancient symbolic chart, was figured by a human form, so, in course of ages, each one of the several images came to represent a distinct person. The history of these various persons was handed down through widely separate lands, and became so many independent versions of the original allegory with the usual imperfections resulting from the errors of human narrators. These four stories may be seen in the four Gospels, all referring to the same individuality,—the one sun.⁶ The two Saints John are two of the four suns. One is young and loving, the other is old and rough. One is typical of morning and of spring, the other of evening and of autumn. As the sun of the next day appears, we see him called Son of Man, as well as Son of God. The elder John knows that he must decrease, while the new sun and saviour must increase. The new sun is lowly born in the east. At an early age, he rises to talk with the "wise men in the temple" of the upper world, and astonishes them with his learning. He is aware that the noontide Ruler and himself are in the same duty. "I and my Father are one." He is

*I give names of some of the authorities consulted. A complete list would be much longer. There are scores of books in Astor Library and Brooklyn Library which I have looked into and culled from for confirmation of the main ideas presented: *Analysis of Egyptian Mythology*, J. C. Pritchard; *Bible Myths*, Anonymous; *Encyclopædia Britannica*; *Histoire Abrégée de Différents Cultes*, J. A. Du Laure; *History of Masonry*, Reboid; "History of Zulu Indians," F. H. Cushing, in *Century* magazine, 1883; *Isis Unveiled*, H. P. Blavatsky; *Les Origines des Cultes*, Dupuis; *Life of Jesus*, D. F. Strauss; *Mythology and Folklore*, G. W. Cox; *Mythology of the New World*, D. G. Brington; *On Ancient Egypt*, Bunsen; *On Mankind, their Origin and Destiny*, an M.A. of Balliol College, Oxford; *Philosophy of Mythology*, Max Müller; *The Bible, The Great Dionysiac Myth*, Robert Brown, Jr.; *The Origin of Pagan Idolatry*, G. S. Faber; *Zoological Mythology*, De Gubernatis; *Masonic Writings of Albert Pike*; *Mythology of the Aryan Nations*, G. W. Cox.

the God-Man. He is sent "by the Father." From each and from both goes forth the Holy Spirit of Light and Truth. As he, the rising one, has passed the youthful days, and continues his mission of good, his upward course, the elder John, the dethroned sun of sinking day and year, his supposed antagonist, strives to resist him. "Comest thou to me?" he asks. "Suffer it to be so now," says the voice of authority. The man of the leathern raiment splashes the waters of the dark river upon the son (or sun) of the morning,—baptism in Jordan,—but he cannot restrain his progress. It is the will of the All-Father. The God of heaven, by the typical dove, acknowledged him as son; and the course of nature goes on. At last, the time comes when he, the new sun, in turn is lifted up, placed on the cross (the astro-nomic cross) in sight of all the earth. With him are two personages. On the one hand is a mild and loving being, on the other one fierce and cursing. They are types of hopeful morning and spring, of despairing evening and autumn. Then the central sun himself passes through the night's darkness, the winter's cold and nakedness, through the valley of death. Three spaces of time he tarries in the regions below, before the early dawn, the vernal equinox, and then begins to rise again, and by "three efforts," or periods, ascends to highest heaven, the resplendent sun, the type of light, of truth, of life.

"The third day there was a marriage in Cana." The miracle of Cana is an allegory of the sun producing the juice of the grape from water through the usual course of nature.⁷ The Son of Man fed the multitudes. He touched the food, and it was multiplied in his hands. He told his disciples some things they understood not, some ideas they were not yet able to bear. He gave light, sometimes partially, sometimes fully, now gradually, again suddenly. The eyes of the physically and spiritually blind were opened, according as they could bear the light. He employed means to bring the uninitiated "to the light." He gave the twelve (months,—disciples) bread and wine (as the autumn does to the year). He partook of the "bitter libation." Consider the allegoric signification of Christ being tempted by the Prince of Darkness—and of the history of Judas. The symbolic meaning of Jesus saying three times that he must go up to be crucified may be inferred. "The end of the world" means the "end of the year." The coming of the Messiah or Saviour is the resurrection of the sun with the new day,—the return of the sun with the new year. A prominent Jewish writer has said our "Messiah is Truth." Jesus teaches the brotherhood of men, and that we all have one God,—Father, Lord of Light and Truth. The great civilized community is the modern "City of God," the kingdom of heaven.

In the story of Babel, which may represent, at least in part, merely a lodge or portion of a theological system, great stress was laid upon material work,—they would build a tower to heaven. Moral force spoke against such a degradation of the true light, and there arose a confusion of tongues. When, as related in the New Testament, the Spirit came, it was as the sound of a "rushing, mighty wind, which filled the house." The chosen ones received the gift of tongues; that is, they were made masons, and received the true inspiration. "Every man heard them [the apostles] speak in his own language"; that is, in the universal speech, or the language of truth, masonic terms. This infusion of the Spirit was the advent of the higher life among men at that time. In this higher life, not living by bread alone, should modern civilization find solid basis, and, by this en-

lightenment, the true way of progress be discovered.

In the thirteenth chapter of the Gospel by Matthew are several verses of symbolic teaching. Since the story of the agony in the garden is rejected by the critics as not being a part of the canonical books, its presence among them, and the manner of its coming, may serve to explain the way in which arose different versions and modifications of one original allegory.

We read, "In the beginning was the Word, and the Word was God." In him was life and light. The Greek "Logos," which is translated "Word," may come from a word which means "archives." It thus might mean the place where mental life is; and so the alphabet would be "Logos" (which also means speech, discourse, wisdom), from which the Perfect Light goes forth, as the rising sun, to dispel the darkness of ignorance, prevent sin, and bring about the rule of truth and right.

The thought contained in the sentence, "I am the same, yesterday, to-day, and forever," was written in reference to the divinity of the Hindus long before the time of Moses.

In the mysteries of India, the initiate was divested of his shoes, and clothed in a garment without a seam (compare the seamless robe of Christ). On him was put a cord of three strands, so twined as to make three times three (cable-tow); and he was made to go three times around the cavern. Silence, fortitude, prudence, temperance, and justice were inculcated. He was sprinkled with water (baptism). There were secrets never to be divulged "except to those who, after long trial, should be found worthy." Certain formulæ of the Brahmins were never written, but were (and yet are) imparted by a whisper in the ear.

In the Persian mysteries, the candidate was received on the point of the sword, presented to his "naked left breast," by which he was slightly wounded. The priests of Mithras promised the initiates a deliverance from sin, by means of confession and baptism.

The Egyptian priests revered a being whom they called the Great One. Initiation into the mysteries, as practised by them, was considered a symbolic death and descent to a place of purification (purgatory), with subsequent resurrection to new life, which was to typify a higher intelligence; that is, more light to the mind. One of their legends relates that a certain personage (Osiris or Horus) was born of a virgin, slain by the enemy, and his body hidden. After long search, the remains were found and buried by friends. Then followed resurrection.

The mysteries of Egypt, Assyria, Persia, and Phœnicia, gave rise and elaboration or development to those of the Hebrews. The mysteries of the Essenes were derived, in great part, from those of the antecedent and contemporaneous Hebrews; and from these, in turn, came the secret rites of Christians, who used the Jewish modification of many peculiar terms.⁸ At its beginning, Christianity was an initiation, like that of pagan religious societies; and one part of the ceremony was the "bringing to light."

The use of incense in different religious systems (so-called churches), the laying on of hands, the degrees or stages of advance, and other ceremonies, are very significant in considering the question of origin of these associations. The similarity of the ritual of the various Christian churches and that of the religious systems of the ancient world (or that of the "lodge") suggests their common origin. The substance of the ceremonies and mysteries which constituted the early Christian worship may be found in the forms of sun worship or nature worship. The celebration of these rites

was called the mass, the Latin name of which (*missa*) is full of meaning.

These ancient mysteries were a kind of inner, purer religion, of which the practices of the populace became corruptions and degenerations, and sometimes the most decided degradations.

The different systems of religion that have arisen, both before and after Christianity, are of the same general form with it, being more or less varied in completeness and in extent of ceremonial.

The legendary poems of ancient Greece contain illustrations of the sun allegory. In Homer's *Iliad*, Book First, lines 531-535, it is said that Jove went to hold a banquet among the Ethiopians (that is, in the region of night and of winter), and with him went all the train of the gods (that is, all the celestial host). Twelve days, or spaces of time, must elapse ere he returned to heaven. Recall, in this connection, the history of Priam, Hector, and Achilles (the younger binds the elder to his chariot wheels, and drags him in the dust), and the Laokoön (contest against time). The victories of Hercules are but exhibitions of the solar power which have to be ever repeated. The twelve labors are twelve months.

In ancient Roman mythology, we find a form of the sun allegory presented by the history of Romulus and Remus. The double-faced Janus is a figure of the year. The young face typifies the happy morning and joyous spring: the aged one means evening and autumn (or the phases of the day, the beginning and end of the cycle of seasons). When intelligently conceived, they are not antagonists, but harmoniously unite to complete the round of nature.

The legends of Scotland, Norway, and Sweden, teach us that Odin came from Asia through Eastern Europe. The religious systems of the Goths and kindred peoples of North Europe are similar in their supernatural features to those of Greece and Rome. The story of Faust and Mephistopheles is very ancient, and may be viewed as a form of the allegory of the sun.

Many illustrations of this idea may be found in the hieroglyphic literature of Egypt, in Homer, in Hesiod, Virgil, Dante, and Milton, as well as in the folk-lore of various peoples and places.

By the monks of Thibet, the priests of Hindustan, Egypt, Persia, Assyria, Samothrace, Eleusis, Rome, and those of peoples in every country thence around the earth to the mountains of China, the mysteries of numbers and symbols were used, all pointing to the variety and harmony, the beauty and grandeur of the universe of God. From India, through nations and countries encircling the world westward to India again, the worship of the sun or nature worship has furnished the central idea of multiform idolatries.⁹

In modern masonry, the typical personage is the representative of the sun in his apparent progress through the heavens. He appears at the south gate of the celestial temple, and passing this point receives the first blow (intimation of coming destruction or death). Going on toward the west, he receives another more serious wound, and "blood is drawn." As he approaches the north, the dim-night point, he is put to death by another sun, transformed to a spirit of darkness, and for a time the Evil One is triumphant. The representative lies in the tomb three spaces of time, and then is raised by three trials to become again the king of earth, enthroned in heaven.

About Christmas time, the solar year commences to be (born again), and the days begin to grow longer. The ring (*annulus*) of the seasons rolls on. After the seed-time of spring follow the ripening of summer and the harvests of autumn; while winter is the year grown old, which "must be born

again." The passage of the twenty-four hours of the day may be symbolized in like manner.

In the term "Hiram" is easily recognized Brahma of the Hindus, Osiris of the Egyptians, Mithras of the Persians, Bacchus of the Greeks Balder the Beautiful¹⁰ of the Goths; and many others might be named of which these various peoples celebrated the birth, maturity, downfall, and death, with resurrection to a new life and glory. Each became a source of power, joy, and triumph to the respective nation. Even so are the ceremonies connected with the worship of the one who "was called a Nazarene."

The historic or generic existence of the various entities or individualities herein referred to is possible or even probable; but many of the circumstances alleged of them (constituting perhaps the *mythos*, respectively) seem explicable by reasonings from phenomena observed of impersonal nature.

The allegory of the apparent course of the sun is the history of the twenty-four hours of each earthly day, the symbolic record of the year; and human life may be thus typified:—

"Like leaves on trees, the race of man is found,
Now green in youth, now withering on the ground;
Another race the following spring supplies:
They fall successive, and successive rise.
So generations in their course decay,
So flourish these when those have passed away."

—Homer.

In like manner may be portrayed the history of the birth, rise, progress, downfall, and death of nations.

While special forms of life dissolve away as the ever approaching west is brought successively near, the race lives on.

The "Great Architect" is over all; and the mercy of the Supreme Ruler is "from everlasting to everlasting," that all may know his ways and obey his laws.

These allegories, drawn from the motions of celestial bodies, have lost much of their primitive beauty in the modern scientific mind; but they seemed more interesting and impressive in the days of the ancient wise man, who represented the sun and stars as homes of powerful beings and pure spirits. Yet in this stupendous vastness of universal nature is an awful grandeur that must make the thoughtful mind devout.

Upon this symbolic chain of ideas have been hung many wise moral teachings which human experience has found good for man's guidance through life.

Through careful research and observation, (masonry or) modern theology is found to be very ancient in origin, and to have come down to the present time through many and various channels. Nevertheless, though now widely spread among men of different races and languages, the central ideas thereof remain essentially as in the beginning. In its truth and purity, masonry may well be called the universal religion.

As the history of human thought is studied, it may be seen that, while various systems of religion have arisen, flourished, and decayed, the eternal principles of right remain. By these principles founded on truth,¹¹ men should govern themselves. Morality is not dependent upon theology, but is of far higher source and of much greater value.

⁹ The existence of other versions of the allegory, variously full in particulars, is not denied.

¹⁰ "To the contemplative mind, humanity is the mysterious power that, over all the face of inanimate nature, turns water into wine."

¹¹ The Hebrew element in masonry is comparatively modern, and its presence is an illustration of the influence of local circumstances and of different languages upon the original purity of symbolic representations and expressions.

¹² Esoteric and exoteric Buddhism may be cited as illustrative of the antiquity and territorial extension of the

main ideas of this essay. The wide-spread existence of associations of men of various nations,—from India through Persia and Assyria to Egypt,—before and during the time of Alexander the Great, is interesting in this connection.

¹⁰ When Balder was wounded by the mistletoe, the assembled gods were "struck with horror." He was made (in the legend) to drink from a human skull. A ring was given him to wear on the finger as a safeguard.

¹¹ "Magna est veritas et praevalabit."

CORRESPONDENCE.

THE NEW YORK DIET KITCHENS.

Editors of The Index:—

An English gentleman who has recently visited the United States on a tour of investigation and inspection of our more notable charitable institutions has written to a London newspaper that it would be well for that city and Paris to copy the New York charities; and, of them, he particularly mentions the diet kitchens for the sick poor. This is praise indeed as coming from an Englishman, as everything British is generally considered right and everything American wrong by our cousins over the water.

The diet kitchens are three in number, and are located in different parts of the city, where they are most needed, in neighborhoods of terrible squalor and wretchedness. They were inaugurated eleven years since, under the name of "The New York Diet Kitchen Association," and have been supported by voluntary contributions, legacies, and donations, the city government occasionally making small appropriations for them. Any one paying the small sum of three dollars annually can become a member. The membership of the organization includes both men and women, but the whole control of affairs is managed by women. The president, vice-president, and all the officers are women, with an advisory of men who are mere ornamental figures in the society. Every woman in our country may well be proud of the ability shown by the lady managers of this Association. Their tact, clear-mindedness, and self-possession have been admitted by all who are acquainted with the methods of this most excellent charity. Many of the prominent physicians of New York have testified to the benefit of these kitchens to the sick poor.

The object of the society is to furnish nourishment to the destitute in time of illness. The chief articles supplied are beef tea, milk, and bread; and many poor creatures with barely life enough to crawl to the kitchens for sustenance have been saved from an untimely end. The free medical dispensaries of the city are closely connected with these establishments. The poor apply to them for treatment and medicine. If the attendant physician finds them unable to buy nourishment of a suitable character, he gives them a ticket to the matron of the diet kitchen, on which is written a requisition for whatever is needed, for a given space of time,—usually one week. On the other side of the card is printed, "Take a clean vessel with you,"—a necessary precaution, as poverty is generally very untidy. The address, too, of the petitioner is written on the card by the physician.

The matron takes the ticket, and supplies the demand. But her task does not end here. She has one far more trying. It is her duty to visit the abiding-places of those who present themselves or for whom nourishment is asked. She must climb stairs to unclean attics, or go down into dingy cellars, anywhere the address bids her to inspect, in order to learn the true situation of the impecunious invalid. She sees at a glance if it is a case demanding charity, or if humbug has been resorted to for food. She makes eighteen visits sometimes in a single afternoon, and for this labor with her other duties is paid about \$400 a year. This visiting of the matron is an admirable provision, as busy physicians have little time to investigate into the pecuniary condition of their charity patients, while the quick intuitions of a woman divine their needs at once, and she reports accordingly.

At one of the kitchens, the number of applicants is frequently between eighty and ninety daily; and the ratio increases at the rate of one thousand a year. This is a startling fact, as the increase of the population would hardly warrant it. And here arises the interesting question whether the poorer classes of New York become more demoralized and wretched

with the progress of time and civilization, or that the wisest of charities fosters pauperism. During 1883, at the three kitchens, ninety thousand pints of milk were given for sick children. Who could refuse nourishment for the little ones, whatever the parents or relatives may be? It is sad to mention in this connection that drunkenness is the sole cause of distress in very many cases of application.

It might be a lesson to many who are dissatisfied with the comforts of life without its splendors and elegancies to watch the procession which enters either one of the diet kitchens at noon any day of the year,—the pale woman who still has the something about her that tells of better days; the women who are shame-faced to be seen asking for charity, and half hide their features; and the brazen ones. Alas! it is a terrible sight as they present their tin pails for food for themselves or their sick in their wretched hiding-places.

Most of the applicants are foreigners. There is rarely an American in the long line of poverty-stricken creatures, rarely a Jew or colored person, and never a Chinese.

With all the precautions taken against fraud, not infrequently a genuine case of obtaining food under false pretences is discovered. A miserly woman had milk and bread for days, when it was learned she had money at interest. Another woman obtained milk to make a pudding for her boarders. Still another had excited great sympathy for her sick children whom she was forced to leave alone while she went out to work, until it was learned her husband was lying in her room drunk from day to day. Such instances only sharpen the eyes of the matrons, until they become the cleverest of detectives.

It was the ladies of New York who first established such head-quarters of relief for the sick poor. Their example has been followed since in other cities, and sometimes under a more pretentious name. For the plain, unadorned rooms used for the purposes described, the word "kitchen" seems very appropriate; and it is one that pleases the taste of the average Knickerbocker.

ELLEN E. DICKINSON.

"REASON THE ONLY ORACLE OF MAN."

Editors of The Index:—

The above is the title of a book (elsewhere termed *Oracles of Reason*) of which few copies are to be found, written by Ethan Allen, prior to 1782, and published by Huswell & Russell at Bennington, Vt., for the author, in 1784.

A very small edition was printed, and this was subsequently suppressed by the author's friends as much as possible. One copy is in the State library at Montpelier, slightly defective in the table of contents. Another and complete copy belongs to the Vermont Historical Society, having been presented (in January, 1882) by the late J. N. Pomeroy, Esq., of Burlington. This copy has written in it, by the author himself, the following several inscriptions:—

"Dear Fanny, wife, the Beautiful and Young, the partner of my joys, my dearest self, pride of my life, your sex's pride and pattern of sincere politeness: To thee a compliment I make of treasures rich, the *Oracles of Reason*."

"Ethan Allen was born 21st of January, 1739, and Fanny, his wife, was born 4th April, 1760, and were married February the 16, 1784."

"This book is a present from the author to his lady."

Ethan Allen was twice married, his first wife dying at Arlington in 1783. He died of apoplexy, near Burlington, Feb. 12, 1789, aged fifty years; not living to see his proud little commonwealth, nor his own services to the nation acknowledged by Congress, as they have since been. Statues of him in marble have been erected at Burlington and at Montpelier, and some attempts have been made to do justice to his life and memory.

His political writings were numerous, and, like his military actions, were pointed, sharp, effective. Upon these chiefly his reputation rests; but the freedom which characterized his mind and spirit in politics was equally a factor in his religion. He was no servant of tradition, fear, or custom, but believed sincerely in Deity, in moral duty, and in future existence with rewards and punishments. He discarded miracles and supernatural revelation as incredible, impossible; and for this he was denounced and feared, though his life was as upright, moral, and honorable

as others of his time. It cannot be disputed that he was honorable, generous, just, a kind and noble man.

But he thought in advance of his time. Without education or books, he was a free, direct, original thinker, and sought for the truth of things. It has been charged that he derived his ideas from reading English Deistical writings, and from one Thomas Young, a noted infidel of his time, who resided in Connecticut, and afterward removed to Philadelphia. It is not improbable that he met and conversed with noted men, both in this country and in England, who were of his way of thinking. But, in the preface to the *Oracles of Reason*, he writes: "In the circle of my acquaintance (which has not been small), I have generally been denominated a Deist, the reality of which I never disputed, being conscious I am no Christian, except mere infant baptism makes me one; and, as to being a Deist, I know not, strictly speaking, whether I am one or not, for I have never read their writings. Mine will therefore determine the matter, for I have not in the least disguised my sentiments."

The *Oracles of Reason* he regarded as his greatest work, the chief accomplishment of his life. It is elaborated with great care; and, though imperfect and incorrect in some particulars, for a man in his circumstances it is certainly a remarkable work. And, as a treatise on natural theology, even from the modern religious stand-point, it deserves exemption from the sweeping condemnation it has received at the hands of the defenders of "revealed religion." Mr. Sparks, while criticising severely the literary qualities of the book, yet admits that "some of the chapters on natural religion, the being and attributes of God, and the principles and obligations of morality, should perhaps be excepted; for, although they contain little that is new, yet they are written in a tone and express sentiments which may screen them from so heavy a censure." Mr. Sparks adds: "There is much to admire in the character of Ethan Allen. He was brave, generous, and frank, true to his friends, true to his country, consistent and unyielding in his purposes, seeking at all times to promote the best interests of mankind, a lover of social harmony, and a determined foe to the artifices of injustice and the encroachments of power. Few have suffered more in the cause of freedom, few have borne their sufferings with a firmer constancy or a loftier spirit."

Surely, a man of whom all this is said is entitled to a candid hearing of his religious opinions. The limits of this communication will not permit me to give an abstract of the *Oracles of Reason*; but, in my opinion, while not affirming the truth or untruth of it, even modern theologians have not been able to make any more direct, complete, and convincing statement of arguments for the existence of God and a moral government by God. It is what its author claimed, a system of natural theology. The vigor with which it applies reason and knowledge to religion is certainly remarkable, considering the age in which it was done. "We are obliged," says this book, "to admit an independent cause, and ascribe self-existence to it; . . . but the eternity or manner of the existence of a self-existent and independent being is to all finite capacities utterly incomprehensible."

Traces, like slight dawnings, of modern agnosticism, and even evolution, are not wanting. The author distinguishes between "creation" and "formation." The former he treats as "eternal and without succession," implying the necessary properties, qualities, aptitudes, which we denominate nature, while "formation" is modification and growth.

He rejects the Mosaic cosmogony, and says of ancient writers, "We should not act the part of severe critics with their writings any further than to prevent their obtrusion on the world as being infallible."

He argues for morality as "derived from natural fitness, and not from tradition." "Though natural evil," he says, "is unavoidable, yet moral evil may be prevented or remedied by the exercise of virtue." "Morality is therefore of more importance to us than any or all other attainments."

A. N. ADAMS.

OBJECTIONS TO WOMAN SUFFRAGE CONSIDERED.

Editors of The Index:—

A reform has never been inaugurated without many objectors; and the advancement of women, and the reform of the laws and usages against her social and political equality with men, are no excep-

tion to other reforms in this respect. There is a conservative element always opposed to new things. It predicts evil results without end sure to follow the adoption of liberal laws; and yet, when in spite of obstacles the reform moves on and is established, it finally ceases its opposition, and finds things not turning out so disastrously after all. Every one will admit the position occupied by women in the present time to be a long ways in advance of that of a century ago, and yet each step onward has been contested. Every obstacle that could be found has been diligently raked into her path; and, with unwearied patience and endurance, she has surmounted them, until in our own country in many of the States she stands almost on an equality with man except politically. And now that she, in company with a few noble, unselfish men, is striving for the franchise, the rakers are still at work hauling in obstacles to obstruct her march. I do not fear that they will at last be overcome, but they prolong the time when the freedom of woman may be hailed; and many faithful workers in this cause will not live to see the perfect fulfilment of their hopes.

Let us glance for a moment at some of the objections offered against woman suffrage. In an article entitled "The Remonstrants Right," found in *The Index* for October 16, the writer states as an objection that the baser element of womankind would be manipulated in the elections by political wire-workers, while the better sort would take no part or interest in the matter. He brings up the thirty thousand women of New York City who belong to the demi-monde as an instance of the kind of women that would vote. There are enough ignorant, unscrupulous voters now, he thinks, without adding a host of immoral women. What about the immoral men? The demi-monde is not composed of women alone. The writer does not say how many men have enlisted in its ranks, but we may safely place the number at double that of women. If there were no licentious men, there would be no prostitutes among women. What can be more inconsistent, more audacious, what more contemptibly egotistical or more insulting to women in general than to array the feminine part of the demi-monde in the rags of disgrace and banishment, and let the masculine part in broadcloth and fine linen soar into full political privilege? Licentiousness is the lowest of crimes, but it is not one atom more to be condemned in woman than in man. If it is deemed best to make certain conditions requisite for franchise, let them be made, but made the same for men and women. If lewd women are to be excluded, then also exclude lewd men; and the number of voters would be materially lessened. But where is the justice of denying the franchise to those women who wish to exercise it, because evil women might claim the same power, or because all women do not care for it? The nation needs the influence of women in its politics. The "woman-soul" is lacking there; and never will the politics of any country be elevated to the highest flame, until this want be supplied by the proper element. Woman will not be contaminated by her association with men in our government, and those who fear it do not see far enough.

Another objection is that women are already overworked, and the writer kindly suggests that to thrust upon them the burdens of political life would be inconsiderate. Women, with some exceptions, have enough to do, I admit; but their work is of a kind that might with great profit be exchanged in part for something different. If the writer would bring forward a plan by which a few of the endless kinds of work done in the household might be transferred to other hands, he would confer a real boon upon the overworked women he sympathizes with. The average tradesman or mechanic does his particular kind of work and gets his pay for it; but the wife of this man must bake and cook, sweep and dust, wash and iron, mend and make, bear and nourish children, and supply their ever-increasing wants, and all for her board and clothes, and not a dollar at the end of the weary day that she can call her own. After all this, she is denied a political existence because she has enough to do already. This is too outrageous to be suffered in silence. Take off some of the harassing cares of every day; put out the washing; hire skillful hands, not stiffened with hard work, to do the sewing; give the women a chance. Do away with the idea they have taken in with their mother's milk,—that they are, always were, and always must be, inferior to men; that the great concerns of the

world must be left to men, and the boys must run to quench the fire on the mountain-top, while the girls must keep the cat out of the cream-pot.

It does not take long to deposit a vote, and women would not neglect their work to do it. The few of them who would enter actively into political life would not be burdened with other cares to a great degree; and the homes would not be deserted, children would be born, and the elevating influence of woman would increase, although she exercised the elective franchise.

I certainly believe that there has never been brought forward an objection to woman suffrage which had any weight, and all the apparent ills which loom up like spectres will vanish entirely when approached with actual results. C. M. E.

BOOK NOTICES.

THE EVIDENCE OF FAITH. By James S. Bush, author of *More Words about the Bible*, etc. Boston: James R. Osgood & Co. 1885. pp. 357. Price \$2.00.

We have in this volume a series of sermons by an Episcopalian clergyman whose religious views are much like those of Dr. R. Heber Newton. In these discourses, he endeavors to reach the average understanding of serious-minded people, and to present to them "the spiritual truth of Christianity as free as possible from the errors contained in the current traditional theology." He thinks that popular theological beliefs must be recast, and that the interests of Christianity are imperilled by the want of broader and more liberal treatment of religious themes. The impression rapidly spreading among the people, that the clergy lack sincerity and candor in dealing with them, can be removed only by admitting "traditional errors" and giving more attention to difficulties that perplex thoughtful minds. Appeals must be made to the spiritual nature of man, and reliance on miracles abandoned.

The late Mr. Morgan, some time president of the American Association of Natural Science, notwithstanding his well-known disbelief in miracles, said, a short time before his death, "My heart is with the Christian religion." Mr. Bush says that, if such men are denied the privileges of membership in the Church and excluded from the ministry, Christianity must look for no conquests in the future. True faith is not belief in books or dogmas, but "the heart's desire for the divine in character, in life, the divine that revealed itself in Jesus, in his hatred of shams and of all iniquities, in his love for the things that were just and true and beautiful in the lives of men." With all men who love the truth and do the right, God is an active moral force working in them.

The Scriptures men must be free to study with the closest scrutiny, and at liberty to "distinguish fact from fiction, poetry from prose, legend from history, tradition and speculation from revelation"; and belief in theological dogmas must not be regarded as the essential condition of Christian character or faith. In short, Mr. Bush divests the Christian system of much that has made it offensive to reason, and gives prominence to general ethical and religious principles underlying all the great systems of thought as the essentials of Christianity. It would be easy to raise objections and point out inconsistencies in this volume; but a work from an orthodox minister, containing so much judicious criticism, liberal thought, and common sense, we are not inclined to criticize. The style is scholarly, and the spirit candid and earnest.—B. F. U.

PERSEVERANCE ISLAND, or the Robinson Crusoe of the Nineteenth Century. By Douglas Frazer. Boston: Lee & Shepard. Price \$1.50.

Stories of the Robinson Crusoe type have always been eagerly welcomed by all lovers of adventure, whether young or old, appealing as they do to our admiration of those traits of character in man which make him refuse to submit supinely to misfortune without desperate efforts to overcome the worst circumstances and to turn to his advantage even the evils which threaten him. The morals of such stories are elevating, since they excite feelings of emulation of the undaunted and cheerful spirit manifested by these heroes in their sorriest plights. This new number of the Crusoe family not only makes us admire him for the prompt and practical energy he exhibits, but also for his varied and encyclopedic scientific knowledge, which enables him, in the words

of the author, to "surpass the achievements of all his predecessors, and to surround himself with implements of power and science beyond the reach of his prototype, who had his wreck as a reservoir from which to draw his munitions," while the hero of *Perseverance Island* had nothing except his brain, his hands, and the natural resources of his island from which to work some very marvellous results. The story is naturally and interestingly told, has over a dozen full-page illustrations, is handsomely bound, and altogether makes a most inviting addition to the list of holiday books for the young. S. A. U.

PUBLIC RELIEF AND PRIVATE CHARITY. By Josephine Shaw Lowell. New York and London. G. P. Putnam's Sons. Price, cloth, 75 cents; paper, 40 cents.

The author of this (No. 13 of the "Questions of the Day" Series) work states frankly that "there is not perhaps an original thought or suggestion in it," but that her reason for so concisely compiling the result of the experience of many of the most prominent students and workers in the modern methods of charity is that nowhere could she find a small book in which the principles underlying the science of right giving were clearly and plainly stated. "From all parts of the world," she reports, "the testimony of the experts is the same; and it is this fact which makes our task so encouraging." As much of this testimony as could be conveniently crowded into so small a compass is given; and the book is full of suggestive facts and hints to her fellow-workers in this good cause, who will find it an excellent aid in rightly directing their efforts to ameliorate the condition of the suffering poor.

VOCAL AND ACTION-LANGUAGE CULTURE AND EXPRESSION. By E. N. Kirby. Boston: Lee & Shepard. Price \$1.25.

Mr. Kirby is the teacher of elocution in the Lynn high schools, and has had years of experience in teaching in addition to the years of study he has given to this subject, and thus should be fitted to become an authority as to the right method to be pursued in this at present very popular exercise. He makes, however, no pretensions to become such an authority, and in his preface modestly states that his "aim has been simply to make a concise and practical hand-book on elocution, adapted especially to the needs of those who have had no adequate instruction or practice in an art which they must use as readers, speakers, or teachers."

"MIND," the English quarterly review of psychology and philosophy for October, contains the usual variety of essays, criticisms, and reviews on the topics of recent inquiry in these branches of science. Edmund Gurney writes upon the phenomena of hypnotism, and considers the various theories and explanations as inadequate. Charles Mercier continues his most able essay on the "Classification of the Feelings," and tabulates the various classes on evolutionary principles in an orderly and symmetric gradation. He argues that the separation of the will from the rest of the sentient faculties is an error; that, as mind is resolvable into "feelings and the relation between feelings," "will must be either a feeling or a relation." He states, as the difference between will and all other feelings, "that it is not, as that of other feelings is, the activity of this or that centre or region; but it is the resultant or algebraical sum of the activities of all the highest nervous regions. Hence, the feeling which it underlies is in a special manner identified with the ego. When I say I have a feeling of warmth or anger, I regard the feeling as something distinct from the I that feels it. But, when I will, I regard the will as the expression of my whole self. And it is this identification of will with the subject that constitutes its peculiarity as compared with other feelings, and that has led to its relegation to a region of mind apart from them." J. Hutchinson Stirling claims that "Kant has not answered Hume," and avers that "causal necessity is not a necessity of reason: it is only a necessity of feeling, and it is due to custom." W. L. Davidson discusses the "Separation of Questions in Philosophy." In "Mind as a Social Factor," Lester F. Ward criticises the sociological and political views of the evolution school of thinkers. There are several able and interesting reviews of new works. W. C. Cooplund reviews a new German work on social psychology or ethics, in which the author, Dr. G. H. Schneider, while acknowledging his obligation to Mr. Spencer in strong terms, and agreeing with his doctrine that pleasures are the

correlatives of actions favorable and pains are the correlatives of actions injurious to the organism, signals, however, two errors in Mr. Spencer's statement of the axiom: in that he has overlooked the most important element in the relativity of pleasures and pains,—namely, that we only attain to a consciousness of pleasurable feelings so far as a successive furtherance, a change for the better, or a simultaneous difference in our favor, occurs or is perceived, and the contrary in the case of pain,—"that therefore pleasure only attains to consciousness through the want of it and through suffering, and the latter only attains to consciousness through the want of it and through pleasure." Closely connected with this is another error; namely, the regarding pain or suffering as injurious under all circumstances, and conversely pleasure or satisfaction as in all cases useful, with the inevitable consequence that slight passing pains are underestimated.

In the English quarterly *Mind*, as above stated, Mr. Ward in criticising the theological and political views of some modern thinkers characterizes them as the *laissez faire* doctrine, and claims that the drift of modern evolutionist scientific thought is utterly nihilistic in its tendencies and subversive of human welfare; that "all forms of philosophy have been thus far negative and nihilistic"; and that, if they had had full sway, would have robbed man of all mental power over his environment, and caused his early extermination from the earth. He denies "that civilization is the result of natural law." The human method is the exact reversal of the method of nature. "Art is the antithesis of nature." If the school of evolutionists represented by Mr. Spencer have drawn wrong conclusions from the fundamental doctrine of evolution in its application to human agency, Mr. Ward has taken an extreme view in the opposite direction in denying that all human agency, however manifested, is governed and directed by the same natural principles of evolution that have developed all the rest of nature. The most fundamental law underlying all development, when fully understood, may show that what appears to Mr. Ward as antagonistic methods are but the complementary and correlatively opposite tendencies necessary to generate the force and resistance which evolve the development of all mental as well as material action. When evolutionary philosophers say that "civilization is the result of natural laws," they take a far more comprehensive view of these laws than does Mr. Ward in limiting the action of natural law to matter alone. The narrowness of his views is rendered still more conspicuous in his statement that, "for aught we know, the laws of nature are such as make a recognition of strict scientific truth a positive barrier to social advancement."

LECTURES

ON LEADING REPRESENTATIVE MEN OF OUR TIME, INCLUDING

EMERSON, CARLYLE, HUXLEY, TYNDALL.

Also, upon the early *Growth and the History of Culture: Evolution of the Arts: Origin of Mythology; The Survivals in our Present Civilization; The Aspects and Promise of the Time*, etc., will be given where desired this season by the undersigned.

Address CHARLES D. B. MILLS, SYRACUSE, N. Y.
October 20.

The American Lesson

OF THE

Free Trade Struggle in England.

By M. M. TRUMBULL.

300 pages. Price, paper, 50 cents; common cloth, 75 cents; fine cloth, 75 cents.

PRESS NOTICES:

"There is no other teaching of Free Trade by example at all to be compared with it. . . . It is as interesting as a romance."—*Chicago Times*.

"The author does not deal with statistics, but relates the story of the contest in such a pleasing manner that it reads like an enchanted tale."—*Omaha Herald*.

Address all orders to THE RADICAL REVIEW, 412 NORTH AVENUE, CHICAGO, ILL.

POPULAR BOOKS

CURRENT TOPICS.

BY B. F. U.

MR. J. P. MENDUM, publisher of the *Investigator*, informs us that Ethan Allen's *Oracles of Reason*, noticed in *The Index* by Mr. A. N. Adams, has been kept for sale at the *Investigator* office during the last twenty years. Price 50 cts.

THE English papers bring full reports of James Russell Lowell's recent address at Birmingham, on "Democracy." It is one of the finest and at the same time one of the most radical utterances of Lowell's life, and a very effectual answer to some suspicions that he was growing reactionary as he grew older. He tells England that "there is no good in arguing with the inevitable." He believes democracy to be inevitable the world over, and he welcomes it.

In a letter we received this week from Mr. M. D. Conway, who writes from Berlin, occurs the following passage: "I had hoped to see much of Friedrich Kapp, whose death has caused much sorrow. His body was cremated at Gotha last week. Had he been buried here, there would have been an impressive funeral. Kapp had for many years regretted the bitterness of certain passages in his early work on America (*Ueber und aus Amerika*). For the last ten years, he has been at work on a History of the Book Trade; and he has left it nearly complete. It was on a recent visit to Antwerp, to study the book-treasures of the Musée Plantin there, that he suffered the fresh attack of an old trouble from which he could not recover. He was an admirable man."

A FEW years ago, the lecture lyceum was popular in this country. But its managers, learning that there were more people who would pay to be pleased than there were who would pay to be instructed, found no difficulty in changing the char-

acter of the entertainment. The supply was suited to the demand; and men of genius and learning gave way to adventurers, pretenders, and buffoons. But, according to the *New York Tribune*, there are indications that the old lecture system which was allowed to sink into comparative obscurity is to be revived. "It is to be hoped," says this journal, "that in future this state of affairs will be changed, and that eminent men in every walk of life will be willing at once to instruct and amuse the people by talking with them personally. Lecture bureaus, if properly managed, may thus be turned into a great free parliament for the people, which will be to the whole country what the literary salon of Europe is to a few chosen people of culture."

A WRITER in *Monroe's Iron-clad Age*, referring to the course of the present leaders of the Liberal League, who declare its sole object is State secularization and ask for the support of all who believe in this and yet announce a programme which includes general opposition to theology and the advancement of Secularism, says: "People should not be asked to support an organization for a specific object, and their membership and money then be used to propagate a system in which they do not believe and which was not included in the request for their corporation. Secularism is a philosophical and ethical system, in which many who favor State secularization do not believe. Why, then, does the secretary of the League announce this as our 'noble faith,' and speak as though the leagues were an organization formed to oppose the beliefs of many who are heartily in sympathy with its professed objects? Why not keep to the Nine Demands of Liberalism, and confine the work of the League to State secularization, or else organize an association to oppose theology and to build up secularism and honestly announce its objects? Nothing is to be gained by trickery or double dealing in assailing error."

WE have recently received a copy of the lecture programme of the English National Reform Union for the coming winter, containing a list of the Union's lecturers with their subjects. There are twenty-six lecturers in the list, the number of subjects announced under each name sometimes being more than twenty; and nothing could give one a better idea of what now chiefly enlists the attention of English social reformers than a study of this list of subjects. Mr. William Clarke, M.A., the London correspondent of the *Boston Advertiser* and well known to readers of *The Index* by many articles in our columns, holds, as we were interested to note, the first place in this list of lecturers, speaking upon the following subjects: "The Representation of the People," "The House of Lords and the British People," "Democracy v. Aristocracy," "Hereditary Rule: The Mischief it has done," "Lessons from America for the English People," "War, Taxation, and the Working Classes," "Local Self-Government," "England and Ireland," "Our Foreign Policy: What shall be its Nature?" "The Necessity for Reforming our Political Machinery." This list is a fair sample.

There is scarcely one of the lecturers who does not discuss the question of the reform or abolition of the House of Lords. There is none of the lecturers who is not evidently an outspoken democrat. We are struck by the number of American subjects,—*"Lessons for Liberals from the Life of Abraham Lincoln and the American Civil War," "Henry George and his Book," "England and America, and Free Trade,"* etc. Judging from the titles of several lectures, there seems to be a considerable difference of opinion among the members of the Union on the question of Free Trade v. Protection or, as the English style it, Fair Trade. It would seem that England as well as America is on the eve of a new and very thorough-going discussion of this whole matter.

A REMARKABLE figure in the history of the England of to-day has passed away in the death of Hon. Henry Fawcett, M.P., the blind Postmaster-General of Great Britain, who died, after a few days' illness, on Thursday, November 6, at his home in Cambridge. His life offers a splendid example of what may be accomplished, in the face of the greatest difficulties, by cheerfulness, energy, and will. At the age of twenty-five, Mr. Fawcett, a struggling law-student of Trinity College, by the accidental discharge of a gun in the hands of a companion was made totally blind for life. Such a misfortune would have proved the ruin of most ambitious young men; but Mr. Fawcett, although he had to relinquish his law studies, never lost heart, but began at once to fit himself for political life. Through the medium of amanuenses, he soon became well known as a political writer for the magazines and as the author of an excellent *"Manual of Political Economy"* and a book entitled *The Economic Position of the British Laborer*. He was elected Professor of Political Economy in Cambridge in 1863, and in 1865 was elected member of Parliament. In 1867, he married Miss Millicent Fawcett, who proved to him a most noble helpmate and fellow-student, and to whose devotion and genius he ascribed much of the success and happiness of his later life. She is a strong and consistent advocate of the political rights of her sex, in the advocacy of which Mr. Fawcett was in entire sympathy with her. In 1880, Mr. Gladstone made him Postmaster-General of England, a position which, in spite of his blindness, was never better filled; and his administration has been marked by many postal reforms of incalculable benefit to the people, some of which have served as models and incentives to our own and other governments. In spite of his misfortune, Mr. Fawcett was cheerful, happy, a lover of out-of-door exercise, such as rowing, fishing, skating, etc., in which he found relief from his arduous and absorbing intellectual labor. He was always and in the largest sense the friend of the unfortunate, of the laboring man, and the disfranchised woman. The presence of over fifteen thousand people at his public funeral testifies to the esteem in which this—one of the most talented blind men since Milton—was held by those for whom he cared and for whom he labored.

THE CATHOLICS AND THE PUBLIC SCHOOLS.

The Catholics in this country quietly, but with that persistency which is characteristic of their Church, are pushing the establishment of their parochial schools, with the consequent withdrawal of their children from the public schools. There is not so much discussion of the matter as there was a few years ago; and cases of conflict between Catholics and local school committees, with regard to the reading of the Bible in public schools, appear to have greatly subsided. But the public mind will be much deceived, if it draw the inference from this quiet along the lines that the battle is over, and that the Catholics have been defeated. They have not yielded their position in the least. On the contrary, they have advanced to another position, in which, with effective zeal, they are now entrenching themselves. Their opposition to Protestant religious exercises in the public schools attended by their children, or to the compulsory participation of their children in such exercises, was perfectly logical, whether from their own point of view or from the liberal point of view from which all public school regulations should be framed; yet it was only a preliminary skirmish to the larger contest which is now going on. What the consistent Catholic really objects to is not merely a school in which Protestant religious exercises are permitted, but a school in which there are no religious exercises at all and no teaching of religious doctrine. He objects, of course, to Protestant schools for his children; but he objects equally to a secular school system. Such a school system, he says, is "godless," "irreligious," and therefore "immoral." And it is on the basis of this objection that the Catholic Church is now establishing its parochial schools.

The progress of this work in the last few years has been very marked. The *Catholic Review* refers to an article on the subject in the last number of the *Quarterly Review*, with which it expresses great gratification,—as well it may, if the *Quarterly's* figures are correct. We have not seen the article itself; but, according to the *Catholic Review's* quotations from it, there are now 2,532 Catholic parochial schools in the United States, and the number of children in them is 481,834. This number, it is added, is nearly seven per cent. of the Catholic population of the country, while the public schools have not more than ten per cent. of the entire population. And this result has been obtained through the wonderfully effective organization of the Catholic Church and the faithfulness of its members to its decrees. It has required no great outcry to accomplish it, no wide-spread discussion nor public agitation nor frantic appeal for funds. There have been, it is said, no endowments for the work by wealthy members, but the necessary money has come from the charities of the Catholic people at large; that is, perhaps, the priests have told the people what they ought to give, and for the most part they have given it. In the city of our own residence, with a population of only thirty thousand, a large Catholic parochial school was established two years ago; and the building for another, equally large, is now in process of erection. So far as we are aware, there had been no public demand on the part of the Catholics in the city for these schools, and no conflict at all between them and the public school authorities. There had been no meetings to stir up the Catholic community to the work. But quietly, one day, it was announced in the newspapers that an eligible lot had been purchased and contracts made for the erection of a Catholic parochial school building. The bishop had spoken, and the thing was done. And now comes still another building for the same

purpose. This is only an illustration probably of what has been going on through the country.

And now that these parochial schools are becoming so numerous, it is proposed that they be brought into a more definite and unified system. The writer of the article in the *Quarterly Review* recommends that each Catholic diocese shall have a board of education whose sole business it shall be to have charge of the interests of all the parochial schools in its limits. Already such a diocesan board exists in a part of Indiana. It consists of "eleven priests and a reverend secretary,"—not a layman, it will be perceived, in the number. This board prescribes the text-books to be used in the schools, lays out the courses of study, appoints and determines the qualifications of teachers, inspects the schools, etc. And the institution of a similar priestly board is commended to other dioceses. Thus, at the time when, in several countries of Europe, public opinion is in struggle to rescue common school education from the hands of the priesthood, in this country the Catholic population is rapidly and energetically moving to adopt the mediæval school system which enlightened nations are discarding.

This increase of Catholic parochial schools bodes no good to the future of the United States. The Roman Catholic Church, with all its virtues,—for it has certain great virtues,—has been the persistent foe of human progress in just those matters on which the stability and success of free institutions depend. Education in the largest and best sense, the training of the people to individual thinking, to self-reliance, to mental and moral responsibility,—this is the necessary condition of sound and progressive republican government. The Catholic Church is based on the idea of absolute monarchy; and that idea pervades it, in all its complex organization, through and through. Authority, in it, comes not up from the mental and moral convictions of its members, as must needs be the case in a republic, but comes down from the mind of one man, its head, whose word is recognized as supreme. The evil of such a system for our country and time lies not in any probability that the Pope will precipitate a direct conflict here between his Church and the authorities of the State,—for the papal prelates are generally shrewd and sagacious rulers as well as devoted ecclesiastics,—but the peril lies in the fact that the absolutist principle on which that Church is founded and under which its membership is trained is directly and totally antagonistic to the principles of democracy. Under that principle, people are inevitably kept in a condition of mental and moral childhood. They are trained to obedience, not to self-sovereignty; taught to follow leaders, not to think and to act upon their own thought. In politics, this principle leads to bossism with all its degradations and corruptions.

Hitherto, a strong confidence has been felt that the mollifying influences of the free institutions of the country, and especially of its public schools, would gradually counteract these antagonistic principles of Catholicism, and prevent any serious harm. But, if the Catholics are to remove their children from the public schools, and keep them in sectarian schools which are wholly under the supervision of their own priesthood, the most important of these counteracting agencies ceases; and the grave question then presents itself whether the next generation of Catholics, when they come to the polls, will be so well prepared for the duties of American citizenship as is the present generation. Can anything be done as an offset to this danger? On this question, we may have something to say next week.

WM. J. POTTER.

TAX THE CHURCHES.

The prosperity of the American churches is largely due to their standing on a popular basis. In Protestant Germany, the Church is a state institution, an ally of the police, and nobody feels particularly bound to go. In America, the churches are the people's free-will offerings to religion, and each congregation delights in keeping up its own house of worship. The zealous Roman Catholic, or Episcopalian or Methodist or Congregationalist, or Universalist feels that his soul is much better looked after by his own church than it could be by the State. The business of the State is to protect person and property, as well as to take care of other material interests which no individual can provide for so well. Religious societies are organized to do precisely what cannot be done by the State, and need not be. Some of us think we can take care of our souls without the help of a church; but nobody wants to have his soul saved by the State, and everybody is willing that each church should be free to do all it can for those who believe in it, and to take all the aid they choose to give individually. In the United States, each church and synagogue stands squarely on its own merits, and each man and woman is left at full liberty to decide what institutions to support. This is the system which our people have adopted, and it works so well that nobody wants to give it up. All that should be attempted is to have it carried out more consistently. So recent is the introduction of this voluntary system that there still linger some relics of the old despotism which forced every one to attend and support the established church, whether he liked it or not. It is not the spirit of the nineteenth century, but that of the Dark Ages, which says that churches should not be taxed. Look at the facts. The tax commissioner in Massachusetts reported in 1874 that meeting-houses to the value of \$28,853,745 were exempted in our State, and the present amount undoubtedly exceeds thirty millions. This real estate has to be protected like the rest by the firemen and the police. The premises are lighted by street lamps; the moving to and fro of the worshippers necessitates keeping up the streets and bridges; and any damage to a church by a mob would have to be paid for by the whole community. An attack on the cathedral in Boston might cost the city three million dollars. The churches make substantially the same demands for protection as houses and stores do, and the expense of carrying on the government is increased proportionally. If churches were taxed like other real estate, they would have to pay about half a million annually in Massachusetts, where every citizen who pays \$100 to the State has to contribute \$1.50 of it because they are exempt. Where we pay sixty dollars to the State, we pay one to the Church. Each tax-payer has to pay about a dollar more on this account, which simply amounts to a compulsory contribution. Most of the people willingly pay much more than this to support the churches; but every man likes to know where his money goes, and he would rather give ten dollars to his own chosen place of worship than put one into an indiscriminate fund, as we all have to do. If each tax-payer were openly called on to give a dollar a year for the churches and synagogues generally, the law would have to be repealed at once. This compulsory contribution would be impossible, if it were plainly understood.

Ten years ago, public attention was called to this extortion, but it was by men who asked the taxation, not only of churches, but of colleges, hospitals, agricultural societies, and literary, benevolent, charitable, and scientific institutions gen-

erally. The plan won enthusiastic support, but failed, owing largely to the fact that many of the institutions in question—for instance, Harvard College and the Massachusetts General Hospital—are carried on simply for the public good. The same plea was also made for the churches, and will be again. Now, nobody denies that they do some good; but everybody knows that their main object is to make proselytes to their own peculiar ritual and creed. Was that great three million cathedral erected in order to help Protestants in their Protestantism, and not rather to increase and maintain the number of Roman Catholics? That costly building is kept up for the benefit of Roman Catholicism. So is Trinity Church for Episcopalianism, the Old South for Congregationalism, and another expensive structure for Spiritualism. Nobody objects to having all these isms represented by appropriate edifices, but these churches are not public benefits in the same sense that colleges and hospitals are. No peculiarity of opinion stands in the way of consulting the Library of Harvard College or taking a bed in the Massachusetts General Hospital; but the first question a man asks about a church is, "Do I agree with its ceremonies and its creeds?" Another question equally important is, "Can I get a seat there?" And there are costly churches where a poor man might ask this in vain. Among those churches most unwilling to be taxed in 1874 was one which has been notorious for the difficulty with which any stranger could gain admittance. Can an array of pews, rented at high prices to rich men who permit no trespassers on their privileges, properly be called a public charity, deserving a grant of money from the State? Must the poor farmer or mechanic, who gladly gives what is necessary to keep up his own crowded and inexpensive house of worship, be taxed to help a few millionnaires enjoy a costly and luxurious edifice where he would be treated like an intruder, and could get nothing to feed his soul. Such churches might find it hard to pay their taxes, but it would be simply a case of survival of the fittest, if they had to give place to really religious societies which have done so much to help outsiders that they are sure of generous support. If any churches are public charities, it is only those whose aims are unsectarian and whose seats are all free. And even the most public-spirited of churches is obliged, simply because it is a church, to work so much within its own circle of sectarian sympathy that it is not so well entitled as a college or a hospital to be called a public charity. In fact, this name might be given with greater justice to private schools, some of which are carried on simply for the public good with no profit to the owners; to printing-offices, without whose aid no Protestant church could be kept up; and to savings-banks, whose influence is stronger than all others in encouraging those habits of industry and economy which are the foundation of virtue. If property is to be exempted according to its usefulness, the list should either take in savings-banks, printing-offices, and private schools, or else should leave out the churches. It is urged that these last are unproductive; but our laws tax a great deal of property which yields no pecuniary return,—for instance, fast horses, pleasure yachts, club houses, diamonds, paintings, and ornamental furniture. The rich man is taxed for these and other luxuries, why not also for the painted glass, costly carving, and dainty upholstery in his church? It is further contended that expensive churches ought to be exempted on account of their architectural beauty; but, if this principle is to enter into our taxation, it should be applied systematically by a special commission authorized to exempt buildings,

whether churches, houses, or stores, pre-eminent for artistic excellence. All such arguments really tend to make false issues; for the real question is whether each church ought not to look for its whole support to those who agree with its creed and ritual, and who find themselves benefited by its influence.

While the case seems plain enough as simply one of the right of each property-holder to decide what to give to any church, it is well also to mention that one of the results of taxing religious societies would be to bring out their powerful influence against municipal corruption. For instance, the levy of \$50,000 tax on the cathedral would make every Roman Catholic in Boston vote against needless expenditure of public money. Tax the great churches, and they will become the bulwarks of honest government. Here in Massachusetts there has appeared a general desire to repeal the exemption, or at least to reduce the amount. Thus, ten years ago, one of the commissioners of our State Legislature, Thomas Hills, formerly chief assessor of Boston, urged that exemption be limited to \$25,000. The Report signed by him in 1875 shows that similar views were then expressed by the assessors of this and four other cities and seventeen towns, representing more than half of the wealth of the State. Societies worth \$20,000 or even \$10,000 should, however, find little difficulty in paying their own taxes. If there must be an exemption, it should be confined to those churches worth less than \$5,000 in which every seat is free. And any exemption, however moderate, would be a violation of one of the fundamental principles of religious freedom. There should be no compulsory contributions to sectarian interests.

In view of these principles and of the vote of the Free Religious Association at its last annual meeting, the annexed petition has been prepared for presentation to the Legislature of Massachusetts. All interested are cordially invited to co-operate promptly. Signatures will be gladly received from all parts of the State, and copies of the petition furnished for that purpose at *The Index* office or by the undersigned, who will be especially grateful for any items of information showing the result of taxing churches and the extent to which those now exempted are monopolized for the benefit of the rich. Friends willing to give pecuniary aid should address the chairman of the committee, Mr. Richard P. Hallowell, 127 Federal Street. Editors and journalists are requested to present our case as fully as possible in all its aspects. Animated discussion of both sides and all interests involved will assist the Legislature to act intelligently. The pulpit should not keep silence; and the clergy are earnestly entreated to speak freely, not only on the expediency of escaping taxation, but on the advantage of owing their support wholly to the free will of the people, and not in the least to compulsory contribution.

And every friend of the Church should remember that she cannot teach pure morality, unless she is willing to "render to all their dues," and think it "more blessed to give than to receive."

F. M. HOLLAND.

Box 61, CONCORD, MASS.

COMMONWEALTH OF MASSACHUSETTS.

To the Honorable, the Senate and House of Representatives, in General Court assembled:—

Your petitioners, voters and tax payers of the Commonwealth of Massachusetts, respectfully represent,

That the Seventh Clause of Section Five of the Eleventh Chapter of the Public Statutes of the Commonwealth exempts from taxation "houses of religious worship owned by a religious society, or held

in trust for the use of religious organizations, and the pews and furniture (except for parochial uses)";

And that said exemption, as being an indirect taxation for the support of denominational places of worship, is contrary to the interests of religion and morality as well as to the spirit, if not the letter, of Article X. of the Bill of Rights, by which each individual is bound to contribute his share of the expense of protecting his property, while the protection of life, liberty, and property, is specified as the proper object of taxation.

And, therefore, your petitioners pray that said clause, together with all special acts of like purport, may be repealed.

JOHN FISKE'S PROOF OF GOD AND IMMORTALITY.

It is of prime importance that theorists should discriminate between facts and arguments and their own personal leanings. To do this is one of the best marks of a good logician and a true philosopher. But, obvious and easy as it seems, it is a mark which is often wanting in writers of no small distinction. Their fixed prejudgments (prejudices) operate like a press-gang on all facts, which are forced to render abnormal service and perform a slave's work; and the uttered views of other men are perversely appropriated in a like spirit and action. This cannot be supposed to be a fair picture of so able a writer as John Fiske. But he is not so unlike it that it could not innocently be mistaken for his. Happily, his personal preferences are of so noble an order that "even his failings lean to virtue's side." But, instead of leading him to repudiate certain inconsistencies, they induce him to distort them into seeming accord with his preferences; and all this is done with as much ability as is compatible with such mental imperfection. Such are the characteristics of Mr. Fiske's latest book, *The Destiny of Man viewed in the Light of his Origin*.

He starts out with an unavowed thesis, the immortality of the soul and of all the fruitage of the mind. The thesis is worthy of man's highest powers, and in all ages it has taxed them. Mr. Fiske's treatment of his theme is in many respects excellent. His description of phenomena is generally accurate, his exposition of theories and their supports is always lucid, and his conclusions concerning them are for the most part just, so that few could read the book without profit on the score of information or of intellectual excitation. But, ever as he approaches his own main task, he becomes feeble, as if he were tired and exhausted with his preliminary toil.

Mr. Fiske is a cosmic evolutionist, which means that he advocates the unity and identity of the cosmic force with all the known forms of life. All are modes of the One; and, by laws which are an intrinsic necessity, growing out of the nature of the one, they are all developed in temporal and spatial relations to each other.

This theory excludes all the distinctive elements of what has always been reckoned as theism in distinction from atheism and pantheism. The God of theism is not the world, is self-conscious and purposeful, is creative and not evolutive in his action. On the other hand, cosmic evolution identifies what it calls god and the world and all that is on it. It makes the supreme power unconscious and unpurposeful, because this is the character of the cosmic force except in a very small number of its infinity of forms of existence, and there it does not act or know itself as a unity and grand totality; that is, it does not know itself at all, only some of its modes know themselves. Cosmic evolution excludes creation, because it denies the increase as well as decrease of

the sum of being, and affirms that all beings are one, which is always necessarily changing in its forms or modes, so that there can never be either creative purpose or act, except as we choose to use the term creation to designate evolution, which is not its proper and loftiest meaning, which meaning ought to be preserved as an idea, though it have no counterpart in fact.

These facts nullify all the exposition and arguments of Mr. Fiske in favor of his thesis. He does indeed make quite a free use of the terms "God" and "creation" to help him, and he needs them; but they are entirely foreign to a thorough-paced doctrine of cosmic evolution. He speaks of "the creative activity which is manifested in the physical universe"; but where it is manifested or how he does not tell, and as an evolutionist I cannot find it without his help. The cosmic force, whatever that may be, was not created, so far as we know. It is supposed to be eternal and immutable, except in its forms. None of all the forms it takes on are creations, simply because they are evolutions, according to the hypothesis, and so in their essential substance and force they are eternal.

In his plea (shall we say argument?) for man's immortality, he interrogates: "Are man's highest spiritual qualities, into the production of which all this creative energy has gone, to disappear with the rest? Has all this work been done for nothing? Is it all ephemeral, all a bubble that bursts, a vision that fades? Are we to regard the Creator's work as like that of a child who builds houses out of blocks just for the pleasure of knocking them down?" If there is a conscious Being of infinite perfection, he could not so act; but to assume that there is to assume everything that is debated or doubted, and about which evolution says nothing because it has no need of that hypothesis, dispenses with it and antagonizes it as a needless and alien intrusion. So far as evolution extends there is no place for the admission of creation or creator; and, if evolution is total and universal, the only knowable form of action and existence, the hypothesis of creative energy, is absolutely and forever excluded. And this is the logical conception of cosmic evolution.

Mr. Fiske is quite dogmatic in denouncing the dogmas of atheism, and materialism and their doubt of a future life. But he ought to know that there are no such dogmas among scholars. In this direction, all is negation, doubt, agnosticism. In these days there is no such thing as a speculative or metaphysical materialism which maintains a special theory about matter in distinction from mind. The only existing materialism is the assertion that from the cosmic force, call it what you will, all the power of organic human consciousness is derived; and to this, as good evolutionists, we are all agreed, even though we are idealists. If this in its popular form does not positively favor atheism, it makes no demand for theism; and infinity and creation should not be superinduced upon the natural and finite till there is a demand of scientific and logical necessity. If it does not positively oppose the doctrine of human immortality, it sees and shows no proof of it, and acts on the modern doctrine of parsimonious inference, and implies that pure assumptions should be scarce as angels' visits. It modestly says that as conscious life seems to begin with organization, and with organization to end so far as we know, we have hence no right to assert anything more.

Equally striking and erroneous is Mr. Fiske's adduction of Mr. Spencer in support of his views. Mr. Spencer, he says, teaches that the soul is "in its deepest sense a divine effluence"; but my impression is that Mr. Spencer has never been guilty of using such language. Spencer does indeed

identify the human and cosmic energy, saying that the energy which works in all the world is "the same as that which wells up in us as consciousness." But that is only pantheism, or true evolution, not theism and creation, which makes the divine energy not the same as that which wells up in us as consciousness.

In short, Mr. Fiske's book is excellent for those who wish to think and believe as he does; but, however able, it is by no means successful as an argument from the cosmic origin of man to theism and human immortality. The book, however, is worth reading as a specimen of an effort that deserved to succeed.

WILLIAM ICRIN GILL.

MORMONISM IN A NEW LIGHT.

III.

The Golden Plates.

Misrepresentation is as good a missionary as any cause ever had in the field. They who teach any other doctrine are the defenders of Mormonism, and not I. A truth is a truth and a lie is a lie, whether it come from Mormon or Gentile lips. And now, in discussing the golden plates, let us allow that gold is gold, and brass is brass, in whose hands it is found. But the question is not, whether the plates were gold or brass, though such a question was actually started in Congress recently by senators condescending to dispute about the quality of a thing, which not one of them believed ever existed.

The world laughs at the idea of Smith having found any golden plates; for what need of them with the Spaulding manuscript in his hands? And its denial in the one case is supported by an even higher authority than its belief in the other. I say authority, mark you, not facts. The letter of Prof. Anthon is that authority. "This letter speaks for itself and needs no comment," says the historian. A writer who knew "Joe Smith and the Smith family, and was editor for many years of the *Wayne Sentinel*, which published the first edition of the Book of Mormon," says, "These delusions culminated in 1827 by the great imposture of the pretended finding of the ancient metallic plates resembling gold," etc.; and that the learned gentleman, whose bibliographical scrutiny had been solicited, "scouted the whole pretence as too depraved for serious attention, while commiserating the applicant as the victim of fanaticism or insanity." And this view receives the indorsement, apparently, of Thurlow Weed, who says in his note to his friend Tucker: "I have long hoped that some one with a personal knowledge of this great delusion, who saw it as I did, when it was 'no bigger than a man's hand,' and who has the courage and capacity to tell the whole truth, would undertake the task. I read enough of your manuscript to be confident that you have discharged your duty faithfully." Stephen S. Harding, at one time Governor of Utah, is another witness, who writes in a similar strain. "I knew Smith, and also Martin Harris and Oliver Cowdrey, with some of their fanatical associates at and around Palmyra, and can appreciate the importance to the civilized world of your forthcoming narrative." This Harding "went with Joe Smith, at his special request, to his father's house," to "hear read the wonderful translations from the sacred plates." He was present in the *Wayne Sentinel* printing-office, when "the proof-sheet of the first form of the book, including the title-page, was revised." By the consent of the young prophet, he was "given this revise sheet as a curiosity," which two years after Smith's murder was bestowed by him on a Mormon missionary, who deposited it as a sacred relic

in the archives of the "Historians' Office" at Salt Lake City. Oh, that among the sacred relics of other religions the world only possessed one such as this, the first real proof-sheet of God's Word as it came from the mouth of the holy prophets!

The book from which I have just quoted says: "In unbelief, the Smith family were unqualified atheists. Can their mockeries of Christianity, their persistent blasphemies, be accounted for on any other hypothesis?" If any one would know how little can be said in support of the charge of imposture against Mormonism, let him read that book. It contains the old story of Smith being a money-digger, a robber of hen-roosts, the finder of a press-stone and of the Spaulding manuscript; and the bias of the whole work is revealed in the account given of the Spaulding manuscript, which is a deliberate falsification of history by a suppression of one half of the facts.

The following is Smith's own account of his first discovery of the plates. It was in September, 1823. He was eighteen years of age:—

I obeyed. I returned back to my father in the field, and rehearsed the whole matter to him. He replied to me that it was of God, and to go and do as I was commanded by the messenger; . . . and, owing to the distinctness of the vision, I knew the place as soon as I arrived there. Convenient to the village of Manchester, Ontario County, N.Y., stands a hill of considerable size and the most elevated in the neighborhood. On the west side of this hill, not far from the top, under a stone of considerable size, lay the plates deposited in a stone box. This stone was thick and rounding in the middle on the upper side and thinner toward the edges, so that the middle part of it was visible above the ground, but the edge all around was covered with earth. Having removed the earth and obtained a lever, which I got fixed under the edge of the stone, and with a little exertion raised it up, I looked in, and there indeed did I behold the plates, the Urim and Thummim, and the breast-plate, as stated by the messenger. The box in which they lay was formed by laying stones together in some kind of cement.

While the translation was in progress, eleven witnesses testify to having seen the plates. In the testimony of three of them, it is said: "And we declare with words of soberness that an angel of God came down from heaven, and he brought and laid before our eyes, that we beheld and saw the plates and the engravings thereon," etc. The eight witnesses testify that "Joseph Smith, Jr., the translator of this work, has shown unto us the plates of which it hath been spoken, which have the appearance of gold; and, as many of the leaves as the said Smith has translated, we did handle with our hands; and we also saw the engravings thereon, all of which has the appearance of ancient work and curious workmanship," etc.

In February, 1829, Martin Harris, one of Smith's first converts, visited New York City, for the purpose of obtaining the opinion of the learned concerning some of the characters taken from the plates, together with a translation of a portion of them. He reported that Prof. Anthon gave him a certificate, certifying that the translation was correct, and that they were true characters, Egyptian, Chaldean, Assyrian, and Arabic. But when, being told in answer to the question how the young man came to find the plates, that "an angel of God had revealed it unto him," Prof. Anthon said, "Let me see that certificate," and, receiving it, "tore it to pieces, saying there was no such thing now as ministering of angels, and, if I would bring the plates, he would translate them. I informed him that part of the books were sealed, and that I was forbidden to bring them. He replied, 'I cannot read a sealed book.'"

In 1841, twelve years afterward, Prof. Anthon wrote a letter to an Episcopal minister in New

Rochelle, West Chester County, near New York, in answer to an inquiry concerning the words or characters said to have been presented to him. It is lengthy, but I will quote its essential parts:—

Many years ago, the precise date I do not recollect, a plain-looking countryman called on me with a letter from Dr. Samuel J. Mitchell of our city, requesting me to examine and give my opinion upon a certain paper, marked with various characters, which the Doctor confessed he could not decipher, and which the bearer of the note was very anxious to have explained. A very brief examination convinced me that it was a mere hoax, and a very clumsy one too. When I asked the person who brought it how he obtained the writing, he gave me the following account. [The story of the discovery and translation of the plates is here given somewhat in detail, though not without some straining of the facts in order to make it appear ludicrous, and some mistakes.] On hearing this odd story, I changed my opinion about the paper; and, instead of viewing it any longer as a hoax, I began to regard it as a scheme to cheat the farmer of his money, and communicated my suspicions to him, warning him to beware of rogues. He requested an opinion from me in writing, which of course I declined to give. . . . This paper was indeed a singular scroll. The characters were arranged in columns like the Chinese mode of writing, and presented the most singular medley I ever beheld. Greek, Hebrew, and all sorts of letters, more or less distorted, either through unskillfulness or from actual design, were intermingled with sundry delineations of half moons, stars, and other natural objects; and the whole ended in a rude representation of the Mexican Zodiac. . . . Some time after, the farmer paid me a second visit. He brought with him the gold book in print, and offered it to me for sale. I declined purchasing. He then asked permission to leave the book with me for examination. I declined receiving it, although his manner was strangely urgent. . . . I have given you a personal statement of all I know respecting the origin of Mormonism, and must beg you as a personal favor to publish this letter immediately, should you find my name mentioned again by these wretched fanatics.

This is a remarkable letter. The public will not hesitate in deciding whether Anthon or Harris spoke the truth on the points of difference between them. Does it not seem most natural that Harris would try to obtain a certificate on the strength of the recommendation from Dr. Mitchell, before emptying his mind on the subject? And does it seem natural that *after* the Professor had said the thing was "a hoax," and had warned him "to beware of rogues," that he would then ask for a certificate? Then Harris told his story immediately after the interview, while that of the Professor comes "many years" after. And it can be seen what a dread Prof. Anthon has, lest "his name should be mentioned again by these wretched fanatics." Is it not surprising that Harris should pay him a second visit, after having been routed so on his first visit, and having too, as it is made to appear, carried a lying report away with him? Does it speak favorably for the breadth and temper of Prof. Anthon that he not only refused to purchase, but even to look into the Book of Mormon?

Alas, that the name of Anthon should be forever interwoven with Mormon history, and his fame become a buttress of Mormon faith! For so it is. The certificate he refused to Martin Harris he has given to the world, and in a manner which enhances its value a thousand-fold to the Mormon cause. The facts I am about to relate have been suppressed or distorted by most writers, "either from unskillfulness or actual design." Taylor, for instance, an English divine, wholly omits them, while he quotes just so much of Anthon's letter as enables him to say, "This clear statement, written without reference to the controversy, throws unwelcome light on the subject." Mayhew, a fair writer in many respects, whom the *Edinburgh Quarterly Review* rebukes for partiality

toward the Mormons, gives Anthon's letter in the first, and the facts that are the key to its interpretation in the last, chapter of his book, saying, "It is 'writ down in our duty' to say a few words on this curious point."

Two years after the Book of Mormon appeared in print, Prof. Rafinesque, in his *Atlantic Journal* for 1832, gave the public a *fac-simile* of some American glyphs found in Mexico. He says: "The glyphs of Otolum are written from top to bottom, like the Chinese, or from side to side indifferently, like the Egyptian and the Darnotic Libyan. Although the most common way of writing the groups is in rows, and each group separated, yet we find some formed, as it were, in oblong squares or tablets, like those of Egypt." And, by an inspection of these thirty-six elementary glyphs, we find how complete is the resemblance between them and Prof. Anthon's description of the characters presented to him by "a plain-looking countryman." In 1843, a year before the death of Joseph Smith, there was found at Kinderhook, Ill., twelve feet below the surface of one of those large ancient mounds, six plates of brass, of a beel shape, fastened at the end by a ring and two clasps. Being washed by diluted sulphuric acid, they were found to be completely covered with characters, which none have yet been enabled to read. And, since then, a small tablet of gold has been found in Ohio, containing hieroglyphics that have a strong re-semblance to the Egyptian.

A certain writer, with first-class credentials, makes this reply, "Smith may have obtained through Rigdon (the literary genius behind the screen) one of these glyphs, which resembled so nearly his description of the book he pretended to find on Mormon hill." Very clever indeed, when the discovery of these other plates followed the publication of the Book of Mormon! And this writer goes so far as to say that Rigdon "is not known to have ever disclaimed the part that for more than thirty years has been publicly assigned to him in the great plagiarism and imposture," when as emphatic a disclaimer as was ever penned has been before the public all this time; and it has never been cancelled by any utterance of his, even though, being defeated by Brigham Young in his candidacy for the headship of the Church after Smith's martyrdom, he rebelled, and was cut off from the Church.

It has also been many times said that some of the witnesses to the Book of Mormon denied their testimony, while the reverse of this is true. Not one of the eleven witnesses has made a statement contrary to the original to which their names are affixed in the Book of Mormon. One of the witnesses, David Whitmer, is still living. He left the Church in the dark days of persecution in Missouri, and has still very bitter feelings toward the prophet, "who," as a Mormon writer puts it, "he wrongfully imagines, endeavored to injure him." But he is lately reported as saying, "These hands handled the plates, these eyes saw the angel, and these ears heard His voice; and I know it was of God." Orson Pratt, the Mormon apostle, asks: "When Saul, the King of Israel, became a murderer in his heart, by seeking the life of David, did that destroy or even weaken the testimony he had formerly delivered as a prophet? The Lord appeared unto Solomon twice; yet, even after all that, he fell into transgression, and became a most abominable idolater. Did this wicked idolatry prove his proverbs and other writings were not inspired of God? Did Peter's lying, cursing, swearing, and denying the Christ invalidate or destroy his testimony concerning the glorious voice he heard on the mount?"

T. W. CURTIS.

UNITARIANISM AND THE FREE RELIGIOUS ASSOCIATION.

In a recent sermon on the twenty-fifth anniversary of the church of which he is pastor, Rev. M. J. Savage, referring to the formation of the Free Religious Association, said: "From our galaxy of ministers, some of the very brightest stars succeeded to form a constellation of their own. . . . The question at stake was as to whether Unitarianism was brave enough and confident enough in the truth to trust itself to perfect intellectual freedom and subject its position to the test of the scientific method,—the only one that has ever been fruitful in truth-finding results. For a while, the majority drew back, hesitating to launch its bark fearlessly on the God-begotten and God-guided current of the age; and the little minority went out into the new wilderness, led, as they believed, like John the Baptist, by the Spirit."

Not only "for a while did the majority draw back." Their action, to the present time, has made it impossible for a large number of independent thinkers—who are unwilling, even by implication, to be committed to doctrines in which they believe not—to belong consistently to this denomination. It is not strange that a Christian denomination, the majority of whose members, perhaps, and whose most influential leaders, still cling to theological dogmas, declined to surrender to rationalism so far as to omit all statement of theological beliefs with which the denomination has been identified from its earliest existence. It has shown progress in going so far as it has. Unitarianism in the past has accomplished much good, and it is still helping to modify the creeds of the orthodox churches and to liberalize the religious sentiment of the people. But it does not now and never has represented the boldest, the most radical, the most advanced thought.

The "little minority" went out into no "wilderness," but rather into rich and inviting harvest-fields, knowledge of which made them dissatisfied with the restricted pasturage afforded by Unitarianism. These fields had been and were being cultivated by minds whom neither Unitarianism nor any other form of Christianity was brave and progressive enough to recognize. It is by gleaning in this field that Mr. Savage has become imbued with modern thought and discontented with theological restrictions. In the sermon from which we have quoted, he says: "On Nov. 24, 1859, the year and the month of our church dedication, was published the first edition of Darwin's *Origin of Species*. I mark this year because this book precipitated a world-wide conflict, out of which a new universe has been born. Seven years earlier than this, Mr. Herbert Spencer had published an essay whose implications involved the whole mighty change that was to come. But Darwin's book forced the recognition of the scientific world. These two master minds will, in the far future, stand like twin mountains, sky-kissing in the r sublimity and overlooking all the modern world. Spencer is the more far-reaching and comprehensive in his grasp, while Darwin outranks any purely scientific brain that the world has ever seen. . . . Neither of these men has said much about theology, but they have compelled theology to say a great deal about them. They have literally given us a new universe,—not by destroying any old truths or by creating any new ones, but by helping us to see things as they are. . . . Never in all the earth's history before has so vast a revolution of thought passed over the human mind."

"But," continues Mr. Savage, referring to the Free Religious movement, "this was only a split in a growing tree, the vigor of whose life is able

to heal again. These men have stood by their flag of utter intellectual freedom; and we,—let us confess it,—in our forward march, now find ourselves close by their sides once more. And the future will rejoice, not that for a long time we lost them by our fault, but that they were found again. As in the case of Parker, it will be discovered that they who were for a time cast out were the truer representatives of the divine purpose that was leading our life. They will be counted as a part of our heritage and pride."

That Unitarianism has advanced beyond the position it occupied when the Free Religious movement was inaugurated is undoubtedly true. Like every other Christian sect, it has been profoundly influenced by the scientific discoveries, philosophic discussions, secular pursuits, and rationalizing tendencies of the age, which are among the causes that contributed to the new departure which resulted in the formation of the Free Religious Association. At the same time, Unitarianism, considering its past history and the claims of some of its representatives, is too timid and conservative, and too much controlled by the theological rather than by the scientific spirit and method, to command the unqualified support of the great mass of thinkers whose beliefs are substantially the same as Mr. Savage's, not to speak of the large class of agnostics. Far from being close by the side of those who "have stood by their flag of intellectual freedom," the Unitarian denomination discourages the exercise of such freedom in its pulpits, when the theological creeds formally assented to by the majority of Unitarians are subjected to direct and vigorous criticism. A combination of favorable circumstances, it is doubtless true, makes Mr. Savage's remark applicable to his own society; but he probably knows better than we do that the more radical ministers of his denomination feel the necessity of being extremely cautious in the expression of their views, lest they incur the displeasure of those who control the denominational machinery. It is not many months since the writer of this article, by request, cancelled a lecture engagement which was to be given in a New England Unitarian church, because it was feared the lecture, if given, might prevent expected financial aid from the Unitarian Association. What encouragement does the Unitarian denomination give radical thinkers who do not take the Christian name and decline to use theological language which for them has no meaning? And why should such expect encouragement from Unitarianism?

The Free Religious Association offers a free platform for the representation of Christian, extra-Christian, and anti-Christian thought, and without subjecting its members to the necessity of listening to prayers and participating in a "service" which to them is meaningless. Is it likely that the members of this Association could be satisfied to unite with the Unitarian denomination, because it was founded by men who had been prominent Unitarian members and because Unitarianism, in common with other Christian sects, has since made marked progress? It is certain that, even if those now living who were identified with the formation of the Free Religious Association should be satisfied to abandon it and return to their old religious fold,—which is extremely improbable,—the great majority of its members and the thousands for whose principles of intellectual freedom it stands, who have and wish to have no connection with a Christian church, would not be gained to Unitarianism. Is it not possible that, when Unitarianism and other Christian denominations shall come to concede the justice and the importance of the principle of intellectual liberty, the Free Religious Association will itself make a for-

ward movement in harmony with the progressive spirit of the age? There is always room for an advance.

B. F. UNDERWOOD.

EDITORIAL NOTES.

BY B. F. U.

GOVERNOR HOADLY (who, it will be remembered, is one of the Vice-Presidents of the Free Religious Association) issues a Thanksgiving Proclamation this year which is the least objectionable of any paper of the kind we remember to have read. It is as follows:—

By virtue of authority conferred upon me by section 3177 of the Revised Statutes, and in accordance with the old and honored custom, I hereby appoint Thursday, November 27, as a public holiday, and invite the people of Ohio then to join in thanksgiving for the blessings of the year. Let us remember and act upon the principle, "It is more blessed to give than to receive," so that in these days of wide-spread poverty the more fortunate by acts of charity and gifts bestowed and kindness may enable all to share in the spirit and feeling of the occasion.

Given under my hand and seal of the State of Ohio at the City of Columbus, this eighth day of November, A.D. 1884.

GEORGE HOADLY, Governor.

JAMES W. NEWMAN, Secretary of State.

In a notice of Mr. John Fiske's essay, read last summer at the Concord School of Philosophy, the *Congregationalist* says:—

In a charming style, he depicts his idea of the development of man and of society, argues earnestly in favor of immortality, not as scientifically demonstrable, but as credible by a sincere faith, and closes with the declaration that, "as we gird ourselves up for the work of life, we may look forward to the time when in the truest sense the kingdoms of this world shall become the kingdom of Christ, and he shall reign forever, King of kings and Lord of lords,"—words which, in any sense, sound as strange as they are pleasant from the lips of a cosmic philosopher.

The "sense" in which these words are used enables Mr. Fiske, no doubt, to form some sort of connection between what they express and what he means; but, if one did not know that our "cosmic philosopher" is without any belief whatever in Christ in a theological sense, he might from the sentence above quoted infer that he was an evangelical Christian. Doubtless, these words and others of an accommodating nature in Mr. Fiske's late writings are "pleasant" to the *Congregationalist*. They are words which only a Christian can consistently use, from the lips of a non-Christian and an agnostic. And they serve to conceal his heresy—or that part of it which, when plainly stated, can be popularly understood—from the majority of his readers. The fact that such words are known to be "pleasant" in so many quarters has an unhealthy influence on many of our authors, who, recognizing that force moves along the line of the least resistance, modify their views and trim and temporize in the use of language until, indeed, their essays meet with but little opposition, for the reason that they fail to state fairly and fully the positions of the writers, and give insincere support to popular error. They encourage indirectness and ambiguity of expression, and leave unpopular truth to be presented without evasion or equivocation by a few whose task is made harder by the timidity and time-serving of those who accept the premium which Orthodoxy offers upon the suppression of heresy. Where are the scientific and philosophic writers in this country, holding positions, who dare speak with the plainness and directness which mark the addresses and essays of Huxley, Tyndall, Maudsley, Romanes, and others in England?

SOME of our liberal papers are not as "liberal" as their professions would lead one to suppose. They claim to be in favor of the freest and fullest

discussion; but when a question arises on which they know their readers are not agreed, even though it be of great importance to the liberal movement, they are ready to prevent controversy and to suppress the truth in regard to it. And this, to our knowledge, is sometimes done in the professed interests of "harmony," when in fact the real motive is to guard against the failure liable to result from a disclosure of the truth, of some personal interest or preconcerted scheme. The policy in such cases is to appeal to those who, with all their claims to liberality, are filled with the spirit of sectarianism, and who are easily persuaded that controversy on questions on which Liberals differ, and the deliberate suppression of the truth, are right and proper when the object is "to prevent a division of our forces" and "to direct all our strength against the enemy." Those who protest against this dishonesty, who insist on presenting the facts and discussing differences, are accused of "captiousness," "fault-finding," "illiberality," etc.; and, while their motives are thus impugned, their statements, with the reasons and arguments therefor, are carefully kept from the readers of the papers in which they are weak after week the objects of ungenerous and disparaging criticism. Of course, this is not Liberalism; but it is the method and spirit of some papers which claim to be, and which are nominally classed with liberal journals. To such is commended this passage from an article we find in *Lucifer*, a little paper published at Valley Falls, Kan., in whose columns appears much from which we dissent, but whose words here given are not only courageous, but just and timely: "I repeat, I cannot understand why I should be reproached with an asserted desire to fight when I criticise the words and acts of Liberals, while other writers are regarded as engaged in a perfectly legitimate work when fiercely assailing the orthodox and attacking Orthodoxy. Truth is truth wherever found and by whoever taught. Error is error wherever found and by whoever taught. Why should I not call to the bar of liberty and reason the free-thought lecturer and writer as well as the Christian priest and author, when I believe the former to be in the wrong? Or do liberal speakers, editors, and writers constitute a mutual admiration society, each member sworn to indorse all that all the rest say and do? If so, that lets me out! We are 'fighting' wrong wherever we find it, whether under the cassock of the priest or the coat of the infidel, in the Council of the Church or the Congress of the League."

GROWING OLD.

It's only the dead who never grow old,
Waiting in windowless cell,
Where the years unrecorded may never unfold
A change in the place where they dwell.

The living grow old, and their image impaired
Is scattered along on the years,
Where identity rests when proof can be squared
With life in its different spheres.

For the absent and lost what changes are wrought
Are out of our knowledge and care,
But just as they lived, by photograph thought,
They're fixed in our memory there.

And the image I hold no iconoclast dares
To break with his sacrilege base:
It's the child of my love, unheeding my prayers,
With death's aureole on her face.

Yet only a child my memory knows,
And then I am lost in my dreams
That somehow, as nature's economy flows,
Eternity saves and redeems.

For in fancy I feel a little hand-clasp
Is clinging with innocent art,
And little white arms with a tender grasp
Encircle the void in my heart.

A. D. MARCKES

The Index.

BOSTON, NOVEMBER 20, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, lightness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher morality and an improved Social Welfare.

WILLIAM J. POTTER, : : : : : } Editors.
BENJAMIN F. UNDERWOOD, : : : : :

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

KAMA LOCA.

BY W. A. CRAM.

What is Kama Loca? According to the doctrine of "Esoteric Buddhism," as presented by A. P. Sinnett,* man is not simply a material, visible body, and a soul or spirit dwelling in this body, manifesting life through it, as has been popularly believed or accepted in Christendom. According to the teaching of occult Buddhistic science, man is a much more complex being in his constitution. In brief, the human being, while living in this world, is constituted of seven distinct elements or principles, the five lower being developed and active, the two higher in a kind of embryonic state. This is their order, beginning with the lowest and grossest: first, the material body; second, vitality; third, the astral body; fourth, the animal soul; fifth, the human soul; sixth, the spiritual soul; seventh, the spirit,—the spiritual soul and spirit in our present earth life being in embryo, awaiting some higher state for development. The animal soul and the human are the active wills of the whole body throughout life here. The animal soul, being the lower, is subject to the human. In the complete human being there are two bodies to these souls: the material one that we commonly see; and a finer, invisible one, called the astral body, which we may consider within the grosser, material one, though we must ever bear in mind this finer invisible one is of matter only a degree higher or more refined than we can see. It is a higher continuation of our visible world of matter, adjoining it, though just over the borders of the visible. The astral body is then essentially the invisible body of the animal soul, the ethereal duplicate of the material one. The animal soul being subject to the human soul in this life, the human soul is able to use this invisible astral body through the

medium of its servant, the animal soul. At what we call death there is a wonderful separation of these elements or principles. First, the visible, material body drops off, crumbles to dust, and is resolved into gases. Thus, the animal soul is freed from the grosser matter, and now lives outwardly in its astral body. Then the human soul cuts loose from the animal soul, and with its embryonic spiritual soul and spirit ascends to a higher state of being.

But what of the animal soul and its astral body? Freed from the grosser elements and left by the higher human soul, it seems to be at large. Now, this astral body is only one degree more refined than the gross, visible matter of our world,—only just over the borders of visibility from us. It naturally gravitates to its own kind and degree, which is the vast realm of invisible matter adjoining and surrounding our visible world. We might say our atmosphere was the realm where the animal soul in its astral body took up its abode, when at death it was separated from its old relations in the human organism. According to Esoteric Buddhism, this is true but in part; for it is not limited to our atmosphere for its abode, but may rise to a certain degree into the finer ether above our atmosphere. They give the name of "Kama Loca" to this region or abode of those animal souls which once dwelt in human organisms, but were set free from their earthly relations by what we call "death." While in the human body, the animal soul is the subordinate member, it is subject to the human soul as to a master. In the course of the natural life, it gets educated into the emotions, will, hopes, and aspirations of its master in a large degree, just as a good servant here, long subject to a kind master, grows habituated to feel his master's life a great deal his own, almost unconsciously thinks and acts according to his master's will. So this animal soul, without any distinct or strong individuality of its own, thinks, hopes, and strives, from the will of its master, till it scarcely has any conscious life outside of that master. At death, being left by the head that has so long ruled it, and ushered into a new world,—"Kama Loca,"—it finds itself all abroad, drawn downward to the old material scenes and interests, and upward to its old master, the human soul. With no distinct organic life or personality of its own, it lives a kind of amorphous spiritual life, living over the emotions, hopes, and aspirations it received from its master when in the human body with him. According to Esoteric Buddhism, we may consider ourselves as surrounded by the company of these animal souls dwelling in our atmosphere,—"Kama Loca,"—all invisible to us, yet coming and going, an ever-present host of the unseen, their conscious life being in the main a revival, a living over, thoughts, hopes, and emotions of the life they once experienced in human bodies like ours, still retaining quite a close relation with the elements and powers of this world. Their bodies being but one remove from visibility, as in our life, under certain conditions, they may become visible to people of very sensitive organizations, presenting at times quite remarkable likenesses to the old human forms they once were members of, being thus mistaken for the "ghost" or "materialized form" of some one who has died.

While dwelling in "Kama Loca," they are related to and work through elements and powers in some measure common to our life. Thus, electricity, in weak and imperfect ways, we have learned to control and use; but it more abounds as an element or force in the realm about us,—"Kama Loca,"—so that the animal souls inhabiting that region, in crude and imperfect ways, may use

it to produce phenomena cognizable by our senses,—as rappings from unseen agencies, electric sparks, moving material objects no moving mechanism visible, playing on instruments by unseen hands, writing on sealed slates, etc. According to the doctrine of Esoteric Buddhism, all these phenomena may be produced by these animal souls dwelling in "Kama Loca," just adjoining us, since they possess and use elements and powers in some measure common to our lives. Moreover, there are certain individuals, living in our world and life, whose human and animal souls are but loosely united, the human soul having but imperfect control over the animal in their bodies. Hence, at times, they may become temporarily separated. If animal souls of quite strong individuality in "Kama Loca" find a human being where the two souls are but loosely united, they may, by a strong purpose or desire, force out the animal soul from its earthly tenement for a while, and themselves take temporary abode in the body, and influence the human soul there to think, speak, and act, in a measure, according to their emotions and desires, and thus re-enter partially their old way of life. They may influence such a one to speak their thoughts and emotions. In such a case, the ideas and feelings spoken may bear, in a lower degree, strong resemblance to the thoughts and emotions of the human soul with which they were once conjoined, in the natural life of a human being, so that some might remark that it was the one who had died come back to earth again. In such cases of influence, the words and acts will be noticed to fall below the knowledge and power of the human soul these animal souls appear to personify, if that human soul while in earth life had been largely educated. And this is quite natural, since the animal soul cannot possibly express the highest state of thought or feeling of the master soul that had once ruled them in a human body. Thus, if the animal souls in "Kama Loca," that had once been conjoined in this life with the human soul of a Parker or an Agassiz, could so influence some man or woman as to speak their thoughts, they could only utter but weakly and imperfectly the thoughts of their late master, since they could have but inadequately apprehended them; yet, at the same time, their ideas would bear a certain resemblance to the form and spirit of the thoughts and life of Parker or Agassiz as they had been known while on earth. Do, then, animal souls always remain in "Kama Loca," doomed to this very crude and subordinate life? If we understand the occult science of the Buddhist*, all these souls sooner or later are again reincarnated in the forms of human beings for further education, so that they, on their particular line of evolution, attain higher and higher degrees of being through each new reincarnation.

Is there any scientific basis for "Kama Loca" and its inhabitants, the animal souls that have once held subordinate places in the human bodies of our world? As to the locality called "Kama Loca" by Esoteric Buddhism, there can be no matter of doubt, since science is more and more discovering that our visible world, this earth globe, is but as a grosser nucleus of matter and forces to the vast sphere of higher and finer matter and forces that enfold it as an atmosphere; that the invisible is far more than the visible. Moreover, of this great realm of unseen matter and force that surrounds our seen world, we are learning something. It is discovered to be the region of elements and powers not altogether separate from our seen, but that they at certain points mutually interblend, as, for instance, electric and chemic forces and other subtle powers of our organization and life that act in our world, yet are more abun-

* Esoteric Buddhism. By A. P. Sinnett. Published by Houghton, Mifflin & Co.

dant and active in the outlying and invisible region that enfolds us as a measureless ocean of forms and being, whose tide sweeps over and through our world at all times; for all the most potent and directive forces of chemical action—vegetation and animal growth—flow in upon our world from the great unseen adjoining. From all analogy and reason, we must suppose that this realm of unseen elements and powers is not a dead world, but rather the scene of evolution of forms and life of some kind and degree; that we are not surrounded by death, but life. Ever the vision of worlds and life is deepening and widening, and each newly discovered degree is found to be subject to the same law of evolution of organization and life as the old. Witness the microscopic and telescopic discoveries of realms of forms and life, a thousand-fold greater than what had been discerned by the uneducated naked eye. How can we escape the conviction that this must be the fact and method of nature in the next degree of the unseen, just outlying our present seen?

Hence, the region named "Kama Loca" is one of the facts of modern science; and that it should be the scene of organization and life of some kind is the most legitimate conclusion reached by following out the line of natural discovery and the lead of rational scientific imagination.

What of the animal souls that may people "Kama Loca"? The term souls, although so general in use, is somewhat ambiguous. We use it here in the popularly accepted sense, as that invisible reality which is not of matter nor by matter, but of which matter is the sensible expression or instrument of action. It is the noumenon of which matter and organization are the phenomena. Of the human being, we say the soul is the origin of life,—of the willing, hoping, loving, and striving. At death, this soul is set free from the body of living matter. Thus, conscious life passes from that body, since the soul is the seat of consciousness. Just here, the question arises whether there be but one soul, one individual consciousness, in a complete human organism, or whether we must count one principal and many subordinate. If we go back to the simpler forms of animal life, at one stage we find the nucleated cell plainly possessing an individuality of existence. Must we not postulate a consciousness of being of very low degree in it? Higher in the scale of being appears a number of these primitive animal bodies, strung together in a kind of community of life like a string of beads, with some kind of a common nervous thread uniting them all, so that, while each individual segment or cell has a distinct existence, it also has a life in common with all the others, united by a primitive nervous thread, insuring a sort of community of action. Still higher in development is the organism where some one or more of this community of cells or individuals has a larger nervous system, and this by virtue of more brain and better organs has become master of the whole community, stamping the whole organism with the stronger individuality of its own will and emotions. The most perfected animal is only a higher continuation of this process of evolution into a greater differentiation of parts and a completer subordination of the parts to the one central will. In the human organism, the different organs are not subject directly to the central will, but to many subordinate wills, located at various directive points throughout the body; and these lesser controlling wills to the central one. Thus, we locate the master will or mind of the man in the brain: there are received all the important reports of sensation, from thence issue all the important commands. Thus, the master mind or soul feels and wills in a measure through all the

countless cells and varied organs of the body; and each individual cell, and each community of cells constituting the separate organ, is educated more or less into the feelings and will of the master soul in the brain. Now between the master soul and the cell individual and the organ community are subordinate wills or souls, located throughout the whole human system in the ganglia or minor brains, found at the branching ways of nerves and organs. These are seats of emotion and willing, controlling special portions of the system under the direction of the central will. Hence, we cannot regard the human organism as the seat of one will or soul, but of many of different degrees of development.

At what we call death, what changes in the relation of the principles or elements of the body are wrought? Of the central will or soul, we conceive that it is set free from the grosser elements and powers of the visible body to rise into a new and higher state of being. The material cells we can trace through decomposition, crumbling away to earth mould or resolved into gases, awaiting some new combination into vegetal or animal growth. But what of those lesser wills or consciousnesses that were located in the smaller brains, the ganglia? Are they lost at death? Many of them, no doubt, have received a far higher development in willing, thought, and emotion than the master souls of worms and insects or than some of the higher animals. They have been imbued, educated, more or less, with the larger conscious life of the central soul which they so long served. We cannot believe them annihilated at death: they, too, must have a habitat and being. Where? We trace the grosser material elements and forces of the body, over which these minor wills or souls ruled, under the direction of the master will or soul. We trace these elements and forces through dissolution, passing into earth mould and into the atmosphere. May it not be—what more natural in the line of evolution than that these minor souls, holding awhile a kind of community relation, as in the body, should pass into the great realm of the unseen that surrounds our little seen? Such might be the animal souls of "Kama Loca." In that unseen realm adjoining ours, they would hold an intermediate position between our world and that higher realm of the human souls who had ascended through death; related to both, it may be serving both. We may conceive of some such condition and relation as this: a realm of the unseen adjoining our seen, we know. How hardly can we escape the conviction that it is but a higher continuation of our seen world and life in the line of evolution! Into this higher, outlying unseen, we may quite naturally suppose that souls, freed from seen matter, pass to finer, more perfect degrees of matter, force, and life.

Of the souls or separate individual consciousnesses that dwell in the human organism, at death the master soul ascends to that degree in the unseen for which it is fitted. Of the lesser subordinate individual consciousnesses or souls, that ruled in the lesser brains, the ganglia, as the seats of willing, emotion, and striving, although educated into much of the life of the master soul that ruled over and through them, they are not so largely developed, hence will gravitate to a lower degree of the unseen, remaining, it may be, quite close to the old earth of matter in our atmosphere, organizing and controlling matter and forces, only just over the borders of visibility and tangibility to us. What more natural than that they may produce phenomena sensible to us, under certain conditions? Still working in and through elements and powers close bordering upon us, com-

mon to them and to us, may they not quite naturally at times produce raps and voices, audible to us, through electricity or some other of the subtle forms of force with which we are ever surrounded and permeated, in the midst of which they live, through which they may find their most common action? If, moreover, these souls dwell in and manifest through unseen matter bordering on our seen, and therefore so nearly visible to us, is it unscientific to imagine that they may "tone down" their unseen forms of matter to a condition where they may be visible to our duller senses, and so appear as materialized forms of those departed into the unseen?

The scientific principles of fluorescence point how open may be the way. It requires no far stretch of the "scientific imagination" to conceive of these unseen beings, through the subtle yet mighty forces that permeate their realm and ours, as an unseen tide flowing back and forth, moving objects visible about us. Yet, again, if they still retain much of the spirit and power of the willing, hoping, and striving they were once inspired with and educated into by the master human soul that has ascended above them, being so closely related to us, may they not quite naturally find means to communicate something of that life to us? Lastly, conceiving of these souls as still holding some relation and communion with those master souls that have gone above them, may they not receive and bear from them to us, though in a weak, imperfect way, some messages, some tokens of love and good will, some communications of thought and aspiration, some facts of that higher life they have reached and toward which we move? Is "Kama Loca" such as this? Shall we some time grow to find, plain to our sense and understanding, what now we grasp but weakly, and "see through a glass darkly"?

CORRESPONDENCE.

CUSTOM OF HEBREW DIVORCE IN THE UNITED STATES.

Editors of The Index:—

Few people are aware that much family trouble and forced seeking for charity are caused among the Jews in America by the above-named habit, which is a relic of the ancient times when Church and State were as one, and of course is without legal value to-day in this country. Much, on the contrary, has been said and written in praise of the strictness of the Hebrews in preserving intact the marriage state, reflections having been cast on our condition as less admirable in this respect.

These divorce papers, so called, are made by the assistance of some Hebrew rabbi, and are written in the old characters in thirteen lines accurately formed. It is deemed necessary that the paper, when complete, should be handed to the woman in the presence of one or two witnesses. When she accepts it, either knowing its contents or not, the divorce is complete. Remarriage can take place; and only occasionally do the parties feel the need of appeal to the civil courts in the matter, and then usually it is from the information received from outside their number.

In both the following cases, the husbands had deserted their wives and families and left the city, causing hardship and requests for aid, which, when inquired into, led to the real cause of the trouble, and a speedy bringing the men to court to obtain the support required by our laws of husbands, of any nationality or creed, for their families.

In order to provide all needed facts to substantiate this article, the names of the parties are given for identification.

Simon and Leah Silverman: former at Attleboro, Mass.; latter at 65 Salem Street, Boston. Myer and Rachael Maccola: former at Washington, D.C.; latter at 5 Morton Street, Boston.

Divorce.

This is to certify, in the hand of the woman Shena Leah, that she is free, who is the daughter of Harris,

that she is divorced from her husband Simon, the son of Myer. This is public, this is written and sealed in Boston which is near the sea and the Charles River, in the third week of September, which is the twenty-third day of Ella in the year 5643 since the beginning of the world. The witnesses to this are Solomon, the son of Rafael, and Abraham, the son of Eliza. And she can marry any Hebrew under the Hebrew law, except a (descendant of Aaron) Kahen; and Siskind, the rabbi of the Mikra Kodash holy church of New York, arranged this matter between them and divorced them.

REV. S. M. SISKIND.

52 1-2 Eldridge Street, N. Y.

In the third week, the fifteenth of the month of Air (May) in the year 5643 since the beginning of the world as we count it here, in New York near the sea and the river Hudson, I, Myer, the son of Gedalia, living in New York, which is a great seaport and near the river Hudson, being troubled in my soul and with sickness, being at the point of death, come to separate from you my wife, Udis Rachael, the daughter of Joseph. I give you freedom to part with me and to be separate from me to have your own will to marry any other man. And no man can prevent you from doing this from this day forever. And you have the right to any man, and this I give you to show, a written paper, as a separation. This is a divorce separating us according to the laws and religion of Moses and the Israelites.

Witness, Moses Simon, the son of Mordecai, Isaah, the son of Isaac.

Objection has been widely made to other religious sects who have assumed illegal positions in regard to marriage and divorce in America. This then, equally, should be adversely criticised and prevented, rather than to allow it to be hidden away, so that many never hear of the fact at all, one would suppose.

JOHN DIXWELL, M.D.

Boston, 1884.

[The following extract from Dr. Mielziner's recently published work, *The Jewish Law of Marriage and Divorce*, may be of interest in connection with the curious divorce papers cited by Dr. Dixwell:—

"As long as the Jews had autonomy in all their matrimonial affairs, and Jewish courts were permitted to exercise a kind of ecclesiastical jurisdiction in cases of divorce, they were strictly governed by the Rabbinical law concerning such matters. Since the beginning of the present century, this autonomy has ceased in most of the European countries. Here in America it never existed. Under these circumstances, a valid marriage can be dissolved by the competent courts of the State only. The laws by which these courts are governed differ in many respects from the rules of the Rabbinical Code. The rabbi in our time has no power or authority to enforce a dissolution of marriage where it is required by the Jewish law, or to direct the act of a ritual *Get* [Document, meaning what is called "bill of divorce" in the Bible,] so long as the marriage has not been duly dissolved by the competent court of the country. In general, the Jewish parties whose marriage has been dissolved by court apply for a ritual *Get*, in order to be permitted to remarry according to the Jewish Law; and, in this case, the rabbi will comply with their request."

It seems from this extract that divorce papers like the above have no validity for Hebrews in this country under the modern Jewish law of divorce, as they certainly have none under the laws of the States. This form of the bill of divorce, as given by Dr. Mielziner, refers to "the city situated on the river," "and containing wells for water." He says the present form of the document was probably established by the Babylonian teachers of the fourth century, who laid down some very minute rules for its peculiar orthography and calligraphy. It may be written in any language; but the Rabbinical idiom, which is a mixture of Hebrew and Aramaic, is still used.—B. F. U.]

SOCIAL HAPPINESS.

Editors of *The Index*:—

The late death of Charles F. Barnard, the founder of the Warren Street Chapel, suggests the subject of "Social Happiness." Thanks to Channing and Parker, we now enjoy more favorable conditions for the growth of cheerfulness. Creeds do not constitute character, but they affect character. With all his

natural tenderness of heart, Mr. Barnard could not have succeeded in making so many thousands of children happy in their social relations, if he had accepted the current beliefs and doctrines of the Trinitarian churches. Even as it was, he was hampered by traditions and narrowness of Unitarian churches. He was an innovator when he instructed and entertained children. And, even now, efforts to promote social happiness are hindered by the doctrines and prejudices of churches. The popular feeling is still opposed to joining the worship of God with amusements for the young.

The laws of associated life are not taught and exemplified by the churches. They were organized for another purpose, although social morality has never been wholly lost sight of. We are soon to have sociology recognized as its importance demands, and not as a side issue.

Morality and philanthropy, under the inspiration of more rational views of the source and life of the universe, will seek the aid of science to improve the moral and social condition of the world, to remove the causes of unhappy homes, and of the immoralities which darken our streets and fill our prisons. We are to have such eloquence as Phillips used to improve the financial and social condition of the masses. Music Hall should be filled every Sunday to receive instruction and inspiration on such themes as social happiness, and through the week we need joyous gatherings of young and old in the interests of pure and unadulterated benevolence.

Boston is all the better and happier for Mr. Barnard's boldness and enthusiasm. We owe the Public Garden, the Museum of Fine Arts, the attention paid to children and the unfortunate, to him. He had a genius for doing good, at the expense of personal health and strength. Though he lived to be over seventy years of age, his real life work was consummated many years ago. His ideas of social happiness are still acted upon by his successors at the Warren Street and the Appleton Street Chapels. They have no doubt modified the workings of numerous churches.

W. G. B.

BOOK NOTICES.

ATHEISM IN PHILOSOPHY, AND OTHER ESSAYS. By Frederic Henry Hedge, author of *Reason in Religion*, *Primeval World of Hebrew Tradition*, *Ways of the Spirit*, etc. Boston: Roberts Brothers. 1884. pp. 390. Price \$2.00.

By philosophic atheism, Dr. Hedge means "speculative denial of a supermundane, conscious intelligence,—theories of the universe which regard it as the product of blind force, or as a self-subsisting, self-governing, independent being." In speculating about the universe, there is no evading the question of origin; and here atheists differ widely, almost as widely as they differ from theists. Two prominent examples the author selects for illustrations, one drawn from antiquity, the other from modern times,—Epicurus and Arthur Schopenhauer. The lives of these philosophers are sketched, their systems expounded, and some of their distinctive positions critically examined. A chapter is also devoted to a critique of pessimism as taught by Eduard von Hartmann.

Of Epicurus, Dr. Hedge says: "I call him an atheist in philosophy; for, though he recognizes the existence of the national gods, it is only as accidents, not as powers. He recognizes no divine agency in his system. His gods have no right to be, in the light of his philosophy. . . . Finding them fixed in the popular belief, he uses them as illustrations of a blessed life. The testimony of the ancients is decisive on this point." His system Dr. Hedge regards as superficial, and his thought crude. Literature, he thinks, has probably suffered little by the loss of three hundred volumes ascribed to Epicurus. "For him Plato had lived, and Aristotle was living, in vain." But his life was a serene and, in some respects, a noble one; and he was widely and deeply beloved. "On the whole, it was a pure and beautiful life which those garden philosophers lived, if not, as judged by Stoic and Christian standards, a very heroic one." One feature of the gatherings in the garden of Epicurus, mentioned, was the presence and participation of slaves; "and a beautiful trait in the character of Epicurus, noticed by Seneca, is the treatment of this class of fellow-beings, whom he called his friends, thus proving his superiority to the prejudice of his age, and illustrating by his own example the human-

ity commended in his doctrine." Yet Dr. Hedge thinks that the word "Epicurean," although it does not represent the idea and purpose of the Epicurean school, represents the natural tendency of its philosophy.

Of Schopenhauer our author says: "I select this German, partly as being the only modern atheist who seems to me really profound, and partly because of the points of contrast between him and Epicurus, showing the range of the atheistic mind. The contrast is striking. Epicurus was a flat materialist, Schopenhauer an out and out idealist. Epicurus was an optimist, Schopenhauer a pessimist. Epicurus was sunny-tempered, bland, humane: Schopenhauer was a cynic and malcontent. Epicurus gathered his followers about him in a garden, and invited the world to partake of his cheer: Schopenhauer shut himself up in a German *Studierzimmer*, and wreaked with curses on the world his spite at the world's neglect of his wisdom. Epicurus despised and decried all learning: Schopenhauer was richly, widely, profoundly learned. Epicurus exhorts us to make the most of life: Schopenhauer teaches that renunciation of the will to live is the true wisdom. Epicurus lived abstemiously, and taught that pleasure is man's chief end: Schopenhauer lived daintily, and taught that the end of man is suffering." The exposition of Schopenhauer's philosophy is lucid; and the criticism of it is marked by discrimination and fairness, as is the essay on some portions of Von Hartmann's philosophical teachings. The author writes from the stand-point of a Christian theist, but with such acquaintance with the subjects treated, with such varied scholarship and breadth of thought, and in a style so clear and fine that his work is fairly entitled to careful reading by those whom the author calls atheists. In addition to the essays mentioned are several others, every one of which is well worth reading. The titles only can be given here: "Life and Character of Augustus," "Gottfried Wilhelm von Leibnitz," "Immanuel Kant," "Irony," "The Philosophy of Fetichism," "Genius," and "The Lords of Life."

BLACK AND WHITE: LAND, LABOR, AND POLITICS IN THE SOUTH. By T. Thomas Fortune, editor of the *New York Globe*. New York: Fords, Howard & Hulbert. 1884. Price \$1.00. pp. 310.

We have in this unique volume a powerful presentation by a colored man, and one who was for the first nine years of his life a Southern slave, of the present aspect of the case of the black man versus the white man of the United States. It is a volume well worth reading, written with a fire, force, and eloquence rare in these days, and, read in conjunction with Judge Tourgee's *Appeal to Caesar*, issued by the same publishing firm, will be pretty sure to awaken earnest thought on one of the most vital problems of our domestic economy. Mr. Fortune, in his natural indignation at the many mistakes made or wrongs perpetrated upon his race by the whites, often makes his indictments altogether too sweeping against the latter; but, remembering the indignities and injustice which the negroes have been in the past obliged to endure, we can easily understand and overlook their representative's passionate, one-sided, yet brilliant rehearsal of their wrongs. He seems to think that the duty of the American government toward the colored race stopped far short of justice with the mere act of manumission; and, contrary to the general feeling among his people of rejoicing over and glorifying of President Lincoln's celebrated emancipation proclamation, he denies that there was anything save statesmanlike policy for the purpose of saving the Union in that document, and that no high sense of justice or humanitarian feeling induced the issuing of that proclamation, which was only made possible by the arrogant and suicidal demands of the Southern leaders. "Everything," he says,—"humanity, justice, posterity,—was placed upon the sacrificial altar of the Union, and the slave-power was repeatedly and earnestly invited to lay down its traitorous arms, be forgiven, and keep its slaves." He declares that in mere manumission the duty of the government toward the blacks is only begun; that the power which made them freemen should also educate them, protect them in the exercise of their new liberty, and make some suitable provision for their future by apportioning to them for cultivation a share of the land in which the nation is rich. He agrees in many respects with the theories of Henry George, and declares that "the parasite which is eating away

the energies of the people, making paupers and criminals in the midst of plenty and the grandest of civilizations, is the powerful monopolies we have created,—the "monopoly in land, in railroads, telegraphs, fostered manufactures, etc.,—the gigantic forces in our civilization which are in their very nature agents of public convenience, comfort, and absolute necessity. Society in the modern sense could not exist without these forces: they are part and parcel of our civilization. Naturally, therefore, society should control them or submit to the humiliation of being ruled by them. And this latter is largely the case at the present time." He agrees with Mr. Tourgee in the fear of a racial conflict, unless something determinative be done to change the present condition of affairs at the South, and thinks with him that education of both whites and blacks is one of the first essentials toward a better understanding between the races and a better spirit.

S. A. U.

THE AMERICAN LESSON OF THE FREE TRADE STRUGGLE IN ENGLAND. By Gen. M. M. Trumbull. Chicago: Schumm & Simpson, *Radical Review* office. 1884. pp. 300. Price, paper, 50 cts.; cloth, 75 cts.

The first edition of this work, now revised and enlarged, was published in 1882. In a letter to the author, John Bright spoke of it as a "useful and very interesting *History of the Free Trade Struggle in England*." With the additions which have been made to the volume, its value is greatly increased, especially for those who desire to understand the morale of the contest between free trade and protection, which is as applicable to this country as it ever was to England. Mr. Trumbull says that all the arguments used now by those who advocate the American protective system are borrowed from speeches delivered in the British Parliament in 1844 in support of the English protective system, which was wisely abandoned in the interests of progress and prosperity, after England had persevered in it at a wasteful expense for centuries, and when, having gone through an education in economics, she discovered its folly, and adopted the principles of commercial freedom.

Mr. Trumbull maintains that the laws of moral science are as inflexible as the laws of mathematics, and that no enactments of legislation, no differences of climate, can make right or beneficial selfish restrictions on trade between nations. "It is easy," he says, "to persuade most people that to 'protect' their own artisans from the competition of 'foreign pauper labor' is an act of patriotism. This admitted, it is easily narrowed down to our State, our own country, our own city, our own village, or even our own street. In the last century, the farmers of Middlesex, the county in which London is situated, petitioned Parliament against improving the abominable roads of England. They frankly claimed that, so long as the roads were bad, they had a monopoly of the London markets for the sale of their vegetables, fruit, and grain; that, if the roads were improved, the farmers of other counties would be able to bring their produce to the London markets, which would be disastrous to the 'industry' of Middlesex. This looks very foolish on the face of it, and yet it is the doctrine of American Protectionists to-day."

Very interesting are some of the so-called "protection" laws of England, enacted in different centuries in the professed interests of the people; but we have no space to quote any of them here. By the free trade struggle in England is meant the campaign which extended from 1838 to 1846, or from the formation of the Anti-corn Law League to the final overthrow of the protective system. The account of this is very instructive. The author is thoroughly acquainted with the period, deeply interested in his subject, and writes in a clear, forcible, and popular style. However widely the reader may dissent from some of his conclusions, he cannot doubt his ability, his earnestness, or his aim to treat the subject with fairness. This work is evidently by the same author who wrote *Signing the Document*, and *Other Essays*, under the name of "Wheelbarrow," which we noticed in these columns a few months ago.

THE JEWISH LAW OF MARRIAGE AND DIVORCE IN ANCIENT AND MODERN TIMES, and its Relation to the Law of the State. By Rev. Dr. M. Mielziner, Professor of the Talmud and of the Rabbinical Discipline at the Hebrew Union College. Cincinnati: The Bloch Publishing and Printing Co. 1884. pp. 149.

This treatise by a very competent author gives the fullest information regarding the elaborate law

of marriage developed on the basis of the Mosaic code, and which, with modifications, is still acknowledged by religious Israelites as the rule of their practical conduct in matrimonial affairs. "The Marriage Relation according to the Ethical Doctrines of the Bible and the Talmud," "The Sources of the Jewish Marriage Law," "Modern Modifications," "Legal View of Marriage," "Monogamy and Polygamy," "Prohibited Marriages," "Qualifications to contract Marriage," "The Form of Marriage in Ancient Times," "The Form of Marriage in our Time," "Marital Duties and Rights," "Divorce," "The Husband's Causes," "The Wife's Causes," and "The Jewish Law of Divorce in Modern Times" are among the subjects treated. Considerable attention is given to the questions which have arisen in modern times regarding the Jewish law of marriage and divorce, and to the resolutions passed during the last forty years by various Rabbinical conferences and synods for the purpose of bringing some of the provisions of this law into harmony with the changed circumstances of our time. The work is not only of value to jurists and clergymen of all denominations, but it will make a desirable addition to the library of every educated man.

SONGS OF THE SILENT WORLD, AND OTHER POEMS. By Elizabeth Stuart Phelps. Boston: Houghton, Mifflin & Co. Price \$1.25.

The mysteries of "the valley and the shadow of death" seem to have taken strong hold of the mind of Miss Phelps in her later works. In her prose stories, *The Gates Ajar* and *Beyond the Gates*, this tendency to dwell on the problems of a future life is the prominent feature and the main attraction of those books. And, in this small volume of recent poems, many of them exquisite in their rhythm and beauty of word-painting, this shadow of death hovers continually over them all, making the reader arise from their perusal with wet eyes or a heart saddened by the plaintive strain running through them, and with a surmise that the beyond holds all that is dearest and nearest to the heart of the writer. Death, Immortality, Love, the Sea,—these form the somewhat monotonous though lofty refrains to poems of considerable strength, warmth, and grace. A strain of deep religious fervor, devoid of anything like cant or sectarianism, permeates these poetical outpourings of a genuine and loving woman's heart. An excellent portrait of Miss Phelps adorns the first page of this volume, giving it an added value to her many admiring readers.

FLAXIE FRIZZLE STORIES. FLAXIE GROWING UP. By Sophie May, author of *Little Prudy Stories* and *Dotty Dimple Stories*. Illustrated. Boston: Lee & Shepard. Price 75 cents.

Sophie May's delightful series of story books for the young are too well known to need commendation from us. The Dotty Dimples, Little Prudys, and Flaxie Frizzles, of the United States, know their good friend and faithful portrayer too well to make it very necessary to call their attention particularly to this new phase of *Flaxie Growing Up*; but, although this Flaxie is an exceptionally fortunate girl in her friends, fortune, and surroundings, yet her feelings, adventures, haps, and mishaps, are so like those which occur to many girls of her age that these will find much pleasure, and, if they choose, profit in learning to "see themselves as others see them," through Flaxie's experience and taking to themselves at less cost the lessons taught her by that experience. This book with its handsome binding, clear type, and illustrations, will make a welcome holiday gift to other Flaxies growing up.

S. A. U.

In the *Art Amateur* for November, Montezuma's Note Book is pretty severe upon the decorations of a Broadway hotel, which we presume to be the Hoffmann House, upon the Opera House decorations, and indeed upon most things he mentions except the Art Year Book for 1884 of the Exposition of the New England Institute, whose exterior he praises highly. Greta has a rather flippant article on "Boston Architecture." The two biographical articles on Alphonse Legros and Joseph de Nittis are very interesting. They were representative men, showing the kind of work done and its results in our own day. Legros especially was a man of strong individuality, who put ideas into his work. A union of humane humor with devotional piety seems to have characterized him. We would rather have one such history com-

pleted in the number than have it carried through two and a second one begun. This cutting up of a subject is very distracting, and is inexcusable except where an article is really too long for the space which can be allowed to a given purpose. There is much practical good sense in the articles on "Wood Engraving," "Working Art Clubs," and "Materials for Oil Painting," which wisely recommend the use of good tools. In *Decorative Art*, we have the "Fitting up of the Bedroom," "Artistic Book-binding," and the usual variety of suggestions and illustrations for fancy work. Boucher's allegorical designs of Painting and Music are very prettily engraved in imitation of red chalk.

E. D. C.

THE Catholic World for November has the following list of contents: "Scriptural Questions," by Rev. A. F. Hewett; "Frenchwomen portrayed by a Frenchwoman," Kathleen O'Moore; "Two Translations of the Dies Irae,"—I., George M. Davie; II., John Mason Brown; "Solitary Island," Part Second, Rev. John Talbot Smith; "Fray Junipero Serra," Bryan J. Clinche; "Down the River to Texas during the Flood," Thomas F. Galway; "A Critic of the Great Republic," Rev. Walter Elliott; "Katherine," Chapters XV., XVI., E. G. Martin; "The Liquefaction of the Blood of Saint Januarius," Louis B. Binns; "A True Reformer, Nicholas Krebs," by Rev. Henry A. Braun, D.D.

SCIENTIFIC LECTURES.

PETER ANNET, of England, who lectured very acceptably before the Parker Memorial Science Class on two Sundays recently, will lecture for societies on Astronomy, Geology, Zoology, and philosophical subjects, within an easy radius of Boston, upon application. For terms, etc., address

PETER ANNET,
P.O. Box 2468, Boston, Mass.

LECTURES

ON LEADING REPRESENTATIVE MEN OF OUR TIME,

INCLUDING

EMERSON, CARLYLE,
HUXLEY, TYNDALL.

Also, upon the early *Growth and the History of Culture; Evolution of the Arts; Origin of Mythology; The Survival in our Present Civilization; The Aspects and Promise of the Time*, etc., will be given where desired this season by the undersigned.

Address CHARLES D. B. MILLS,
SYRACUSE, N.Y.

October 20.

The American Lesson

OF THE

Free Trade Struggle in England.

By M. M. TRUMBULL.

300 pages. Price, paper, 50 cents; common cloth, 75 cents; fine cloth, 75 cents.

PRESS NOTICES:

"There is no other teaching of Free Trade by example at all to be compared with it. . . It is as interesting as a romance."—*Chicago Times*.

"The author does not deal with statistics, but relates the story of the contest in such a pleasing manner that it reads like an enchanted tale."—*Omaha Herald*.

Immense saving of labor and money. Write for elegantly illustrated catalogue in 6 brilliant colors, also brilliantly illuminated poster in 6 colors. All free. Agents Wanted. Big money made quickly.

MONARCH MFG CO., (A) 206 State St., Chicago, Ill.

BY ALL ODDS THE BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travelers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches**, which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars**, which are models of comfort and elegance; its **Palace Drawing Room Cars**, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that it is the best equipped road in the world.

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, and take none other. All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

GEN'L PASS. AGENT, C. & N.-W. RY
CHICAGO, ILL.

CURRENT TOPICS.

BY B. F. U.

A BILL giving women who pay taxes the right to vote in municipal and town elections has just been defeated in the Vermont legislature by 113 to 69.

It looks now as though the Franchise Bill would pass the House of Lords, but on terms giving Lord Salisbury and his party the privilege of refashioning the electoral system,—a compromise which the Radicals do not contemplate with satisfaction. Such a result, sure to reinvigorate the functions of the House of Lords, although it will doubtless be a victory for the cabinet, will fall short of what the Liberal party expected.

THE liberal organization formed under the name of the Unitarian Society, chiefly by the efforts of Mr. Rowland Connor, at East Saginaw, Mich., about four years ago, has now a church which represents an outlay of \$20,000. It was dedicated last Sunday. Judging from the descriptions of the building in the East Saginaw papers, it is a handsome and unique structure. May Mr. Connor long remain with the society! His radical lectures given often to large audiences and printed in the daily papers, and widely circulated in Northern Michigan, have had a most liberalizing influence in that part of the State.

In a letter to the Cincinnati *Commercial Gazette*, Moncure D. Conway says: "Democracy of the European type has confirmed my belief that suffrage ought to be restricted to those who are intelligent enough to know something of the power they are wielding in the ballot. With that proviso, self-government ought to be extended through every part of a nation. My main reason for sympathizing with the American democracy is that I have hope of its establishing free trade. Free trade is not an English notion of mine. It was always my belief; and it was confirmed in me by the wisest man I ever knew,—Emerson. Since

I have been in England, I have perceived here a growing desire that America should retain its protective system. So long as it does so, England will preserve almost a monopoly of trade in the East and of the carriage of commerce by sea. I am not likely to become a partisan, having lost none of my radicalism. I would abolish the Presidential office, if I could, and have only one House of Congress. These notions may appear wild to your readers."

JEAN PAUL said that nothing would be more to the advantage of a German university than a law obliging every professor to take a walk with some other professor at least once a week. So it will greatly invigorate the Free Religious Association to have its members and friends meet often for a social meal and friendly talk. The October supper was a great success, though the plan proved susceptible of some improvements, which will be made next time, as follows: On Wednesday, December 10, the doors of Parker Fraternity Hall, Appleton Street, near Tremont, will be open at 6 P.M. Tables, having seats for all, will be spread, with a more substantial supper than before, in the hall below at 6.30. Col. T. W. Higginson will preside. At 8, Mr. F. M. Holland will read a brief essay written for the occasion, on "How Religious Liberty is Invaded in Massachusetts." Other speakers will be in readiness. Music by the choir of the Parker Fraternity Society. Tickets, 50 cents, at *The Index* office. A prominent feature will be the opportunity for social intercourse, in which it is hoped that all who attend will join freely, both before and after the speeches. Two petitions against those laws which discriminate unjustly against men giving testimony in the courts on account of religious unbelief, and which compel all owners of property to contribute to sectarian societies, will be ready for signature and discussion. A cordial invitation is addressed to all who believe in just and equal taxation, in freedom of thought, in the separation of Church and State, and in social progress.

THE articles in the *Religio-Philosophical Journal* in favor of forming in this country a Psychical Research Society have attracted wide attention; and there is some prospect that such a society will soon be formed, on a sound financial basis, for the investigation of alleged spiritual manifestation and of mental phenomena in general. We notice that our neighbor, the *Banner of Light*, does not look upon the project with favor. It thinks "that in America, at least, there is the greatest danger of these psychical societies rapidly degenerating into self-appointed jundos, whose debates, instead of seeking to arrive at the truth sought to be conveyed by the phenomena presented, will take the character of Star Chamber conclaves for the deciding of who are and who are not legitimate mediums. It is not necessary for us to revert to the past history of the cause in America to prove that this danger is real, and not chimerical. How often has the effort been made to substitute human authority and human ignorance in place of spiritual power and angelic inspiration. The angel-

world workers will take care of all this in time, though self-seeking mortals accidentally occupying prominent places in the ranks of Spiritualism may succeed for a while in multiplying the difficulties of the situation." Still, making all allowance for every danger apprehended by the *Banner of Light*, might not a society, composed of Spiritualists and non-Spiritualists, formed for the purpose of scrutinizing the claims of "spiritual power and angelic inspiration," help fair-minded men and women to arrive at the truth as to the genuineness or spuriousness of the phenomena examined?

THE *Spiritual Offering*, a Spiritualistic paper published at Ottumwa, Ia., reprints from *The Index* a statement of some of our views made in a lecture at Montreal, reported in the *Montreal Star* and copied into these columns a year ago, in reply to the statement of a minister of that city that an agnostic is one who has no opinions. Our purpose was simply to show that one who admits his ignorance in regard to whatever lies beyond the phenomenal world may yet have convictions in regard to matters within the province of the knowable and the known. The *Spiritual Offering* expresses hearty approval of many of our expressions, but objects to our ignoring a future existence. We did not affirm anything in regard to a "future existence," for the reason that, from lack of data, we could not do so intelligently and honestly. We do not deny the reality of such an existence; but nearly every attempt we make to examine the alleged phenomena to which Spiritualists appeal in support of their claims to knowledge regarding the subject, is resented as unreasonable incredulity, if not impertinence, on our part. The article concludes thus: "Mr. Underwood's articles of belief are an improvement on the old; and we should be glad to have him proclaim them throughout the land, rallying and organizing his agnostic forces to battle for the right and against the wrong. When we see agnostics doing something besides using the sledge-hammer of destruction against the old, presenting some plan of reconstruction, we shall have hope for their accomplishing some good." The views referred to we have presented during the past dozen years and more in almost every State from Maine to Oregon; but we do not regard them as finalities, nor do we think it would be wise to make these views, many of them on disputed points, the basis of an organization. What would such an organization be, if effected, but another sect? Organization for the accomplishment of definite and distinct objects—such, for instance, as the secularization of the State or the maintenance of the right of free, untrammelled discussion—we approve; but the necessity of organizing men and women to advance the particular views we hold, and to oppose all others, is not apparent. Rather, we trust to increasing intelligence, the progress of science, the diffusion of liberal thought by lectures, papers, and books, and to a multitude of other agencies which do not depend upon any such organization as our Spiritualistic contemporary suggests, for the decay of error and the triumph of truth.

THANKSGIVING DAY.

Thanksgiving as a religious festival has come down from a great antiquity,—we may say, indeed, from time immemorial; for probably no antiquarian research could now discover when the first Thanksgiving proclamation among mankind was made. We are apt to think of Thanksgiving as peculiarly Christian and Puritan, for such is the origin of the festival in this country. But Thanksgiving days were a prominent feature of the Hebrew faith; and the old days, believed to have been established by Moses, are still observed by the loyal Jews wherever they are scattered over the face of the earth. And according to Hebrew traditions there were Thanksgiving ceremonies before the time of Moses. The germ of the Hebrew festival may be found probably in the legend of Cain and Abel, who are represented as bringing the one "of the fruit of the ground," and the other "of the firstlings of his flock," as thank offerings to Jehovah.

And a similar germ of thanksgiving as a religious festival may be found in other religions. The religions called pagan have even more of such festivals than the Hebrew and Christian religions. The Hindu faith abounds in them. Ancient Greece and Rome had them. They existed in the old religion of Scandinavia. And, when traced to their origin, they appear everywhere to have sprung from man's sense of a gracious bounty in the powers of nature. Such expressions as "of the fruits of the field" and "of the firstlings of the flock" are phrases, perhaps, that dropped out of the first harvest song that man ever sung, and indicate the primitive faith of the human race in a benignant Providence operating in the natural forces amid which the race has its being. And alongside of these thank-festivals in the primitive religions of mankind were days and seasons of other religious observances, corresponding to the Hebrew and Christian fasts; ceremonies of expiation and penance, indicating a belief that there was a Power in nature not always benignant, but capable of being propitiated into kindness by certain acts of man.

But, with regard to Thanksgiving Day in the United States, it is a well-known fact that it originated in New England, and is one of the legacies of Puritanism. As the Puritans began their voyage in the "Mayflower" with a day of solemn fasting and prayer, so they ended it, as they landed at Plymouth, with bending on their knees upon the new-found coast in solemn thanksgiving. Many fast-days followed in those early months and years, and some fasts that were not voluntary, but compulsory from scarcity of food. But afterwards, as the years rolled round with their harvests, a thanksgiving day began to come as regularly as the years, in special commemoration of the infinite bountiful Giver to whom the Puritan devoutly believed he owed all his prosperity.

Thus, the American Thanksgiving Day had an origin as natural as it was devout. And, since the Puritan Church and State were strictly one, the Puritan having no other thought than to establish a religious commonwealth as nearly as possible after the pattern of the old Hebrew theocracy, it was perfectly natural, too, that the Thanksgiving Day should be both a religious and a civil institution. Between religious and civil institutions there was then no distinction. All citizens were assumed to be members of the church, and of the same church; and at first they were. The town meetings provided for the support of the church as they provided for roads and schools. Hence, it was safely assumed that the whole community was equally interested in the observance of Thanks-

giving. It was merely the appointment of an extra religious service on a secular day by people who believed substantially alike, and went to one church, and agreed as to the significance and importance of the service. And if, in the Thanksgiving proclamations or appointments of those earliest New England days, by whomsoever issued, certain phrases had appeared indicating the special Puritan theology, there was no dissenter whose conscience could have been offended. The Puritan did not profess to establish the principle of absolute religious toleration, much less a government of equal rights in respect to religious conviction. What he desired and the only thing he aimed at in coming to the wilderness of America was conscience freedom for himself and his fellow-believers.

But, as time went on, and the little colony in the wilderness expanded into a people of many faiths, it began to be seen that, to secure the conditions of absolute freedom in religion, the institutions of State and Church must be separated and kept entirely distinct; that the State must be organized to care specially and exclusively for the secular interests of society; and that religion, in all its doctrines, practices, and institutions, must be committed wholly to the free convictions and support of voluntary believers. This is a complete overturn of the doctrine of the Puritans when they colonized New England,—namely, *the identity of Church and State*; yet it was the only way, as the experience of history taught them, by which they could justly preserve their own religious rights and liberties. Gradually, they learned to apply the Golden Rule in the matter of religious faith, and did for others what they wanted others to do unto them,—leave them alone in respect to religion. But not till the Federal Constitution did there come a perfect legal expression of this ground of equal rights in religion. That instrument severs the institutions of Church and State completely, establishing a government to promote the moral, social, and industrial welfare of the people of the United States, but leaving religion as a matter between each individual and his own conscience. *Theoretically*, the separate States have intended to take the same ground, the old States changing their laws and constitutions in the direction of individual religious liberty, and the new naturally conforming to the larger views of religious liberty that have gained ground in the country since the Puritan days. Yet, in most of the States, either in the constitutions or laws, there are survivals of customs and phrases that belong to the old order of things when the State and Church were one, and are opposed to the new order of things, by which Church and State are separated. And, even in the usage of the federal government, in violation of the spirit of the Federal Constitution, and without any warrant from its letter, things are permitted which infringe on the equal religious rights of a portion of the citizens.

Among these survivals of customs infringing on religious liberty—though perhaps the most harmless of them all—is the appointment of special seasons of Thanksgiving and Fast by the authority of the civil government, national or State. The appointment of Fast Days may now be left out of consideration. They rest upon a theological idea which has been proved false and which is nearly obsolete. They would be objectionable, even if they were appointed only by the act of the churches themselves; and hence, as concerns our special thought to-day, we had better leave them aside, with this simple remark,—that, if there be any reasons why the civil government in our country should abstain from the appointment of thanksgiving days, these reasons are very much strengthened against the appointment of fasts by

the civil power. But a Thanksgiving Day,—a day for the expression of the grateful and joyous emotions of religion; a day of special remembrance of the things that bring cheer and happiness and prosperity and good will into human life; a day for recalling the bounties of nature and our relations to them; a day for commemorating and hence for perpetuating the mutual obligations and affections of the home and for strengthening the best bonds of society,—the occasional setting apart of a day for these objects is certainly in harmony with the spirit of rational thought, and the usage is to be cherished and improved rather than abolished.

Thanksgiving Day being, then, a day good in itself, which it is rational and useful to have, is there any harm in leaving its appointment to civil authority, where usage in our country has hitherto left it? Why is it not perfectly just and proper that the executive power of the State or the nation should fix and proclaim the day as now? To this question, we answer that, while we do not think any *great* injustice or any *great* harm ensues from the present custom, still the custom, so far as concerns the federal government, is in violation of the spirit, if not the exact letter, of the Federal Constitution, which very guardedly and intentionally commits religion to the free conscience of the individual citizen; and, so far as the State governments are concerned, the custom is in violation of that drift and progress of things which has been going on from colonial times toward the entire separation of Church and State, as the safest bulwark of religious freedom. In other words, this country has committed itself, openly and expressly in the Federal Constitution, and impliedly in the Constitutions and progressive legislation of the several States, to the principle of the separation of the functions of Church and State, as the strongest governmental guarantee of individual liberty of conscience. If this principle be a sound one, and this method of protecting religious liberty be sound,—and the soundness of the principle and the method is evinced clearly in the experience and tendencies of all modern civilized nations,—then whatever is in violation of them is a harm, to be checked and abolished. The harm may not be apparent in any special instance, nobody may loudly complain of the injustice, yet, in the end, harm is done by all such violations of any fundamental principle which in itself is recognized as sound and good. It is proved by the history of religion in the United States that it is not only just, but entirely safe, to commit religious institutions to the voluntary support of the people. And there need be no doubt but that Thanksgiving Day would still be observed, though no President or Governor should appoint it. The harm of its appointment by civil authority does indeed seem small. But it is often through the accumulation of little harms that great harms are done.

WM. J. POTTER.

HEREDITY AND INEBRIETY.

We cannot here attempt, and do not attempt, to prove the law of heredity. It must be assumed that it is established as a law of general application, the apparent exceptions to it being instances in which we are ignorant of some of the conditions of its action. It must be further assumed that it applies to passions and appetites as well as to mental and physical features, and that an appetite for drink is capable of being inherited in the same way, and probably in the same degree, as are other characteristics that go to make up what we call the individual, or the personality. And here we should be warned not to be too much misled by the verbal distinction often made between an inherited and an acquired taste for drink. It is

plain that an impetuous, high-strung nature, such as may lead one irresistibly to acquire the taste for drink, may be as well inherited as the taste for drink itself.

Without considering fully the bearing of this view of the sin of intemperance on the question of the moral responsibility of the unhappy beings who are burdened by it, the assumption that fondness for liquor is an hereditary trait, if fully accepted, certainly raises some very weighty suggestions.

In the first place, alcoholism being an inherited trait as regards both mankind at large and the individual, we see that it is not a peculiarity deliberately acquired at some stage of the development of a society, or of the growth of an individual. Does any man confer with himself at some period of his life and say, "Now, I'll be bad, and love liquor?" It is absurd to suppose so. Neither has mankind at large, or any given nation, calmly determined to become a community of drinkers or of drink lovers. Alcoholism in the individual has the same relation to the whole man as do mental traits, and a similar one to physical traits, like dark hair or a Roman nose. In the nation, it occupies the same position as a trait as do vivacity and changeableness, for instance, in the French, or apathy and perseverance in the Germans.

There is here opened a field of inquiry promising rich results. An investigation of the origin of this trait, could it be carried far enough, might give data enabling us to lay down with scientific accuracy a plan for its eradication. Here can only be stated the suggestions as to such a plan which our first assumption naturally draws after it.

As regards its treatment there are three points of view from which alcoholism may be looked at: that of the individual, whether subject to it or not; that of society; and that of the State.

The individual, having a knowledge of the law of heredity as part of his mental status, not merely as an occasional conviction, would rule himself thus: Not being an intemperate, he would take care that he did not come into such circumstances, or degenerate into such a mental or physical state as would lead him to become one. He would look on intemperates who might come under his observation and influence as unfortunate rather than as vicious; he would supply them, as far as possible, with motives and aids to removing the burden resting upon them, and would assist in changing their circumstances from those in which temptations might be constant to those in which they might be rare.

The intemperate would, so far as he could make the knowledge of the nature of his weakness prevail over the weakness itself, be vigilant to avoid temptation, and so to conduct his life as least to give opportunities for his thirst for liquor to overpower his conviction of the harmfulness of its indulgence. As an individual, too, the intemperate would allow the knowledge that his weakness is hereditary to influence him in respect to marriage. He would feel strongly, being conscious of his own inheritance of woe, the justice of the demand that he should not bring into the world others with a like inheritance; and society and the world would be ever making this demand. He would see that every human being born with an irresistible tendency to alcoholism is a creature of wretchedness in itself, and is an additional burden to an already overburdened world. On the importance of this lesson, too much stress cannot be laid.

The view of intemperates taken by society, under the influence of our first assumption, would be similar to that taken by the individual. Organizations devoted to their amelioration and to the suppression of intemperance would see more

clearly the supreme value of intelligence to those for whom they were laboring,—of an intelligence, that is, through which it may be plain that inebriety is something to be scientifically battled with, not something to be subdued at the call of sentiment. Charitable organizations would realize the futility and even the wrongfulness of expending their energies on attempts to redeem such persons as, if redeemed, would not be worth the sympathy and energy expended on them. There are certainly many men whose natures are so weak that they cannot, even when for a time released from the bondage of a terrible vice, stand alone in the world. More than that, such men, depending on the capable and the virtuous for aid or for their very existence, and so being a hindrance to the latter's advance, often perpetuate themselves in children born to an inheritance of physical weakness and moral depravity. Philanthropy thus often increases future wretchedness while alleviating present misery. Properly to treat such members of society without checking the growth of our sympathies is very difficult. But, heartless and cold-blooded as the proposition may seem today, it is probable that in the future some of those who now get much of our sympathy and aid in the form of helps to living a life like that of the most of men will get that aid and sympathy in a different form. A powerful public opinion may encourage the taking an attitude toward the incapables which will lead to their withdrawing from life, in large part; to their refraining from matrimony; and to their making themselves, in comparative exile from their fellow-men, as little of burdens to the world and as far self-dependent as possible.

The world has advanced from a condition in which every man's actions were for the most part directed and restrained to a condition in which they are comparatively unrestrained; that is, from a condition in which the circumstances of a man's birth had an overpowering influence on his whole life to one in which the life depends largely on the man's nature,—on his character and capacity. We are advancing to still another stage,—one in which the individual will be restrained in his conduct by laws established by the whole people instead of by a monarchy or a ruling class. Whether such a condition is the best form of society, or the final form, we cannot now inquire. Certain it is that we are entering upon it, and that mankind at large now demand such legislation as will soon bring us fully within the reach of its benefits and its evils. Of this legislation, a good instance is the laws regulating the use and sale of liquor. Under the influence of what may be called the socialistic spirit, such legislation has been in late times demanded, and will no doubt continue to be demanded for some years to come. What should be its nature, in view of the fact of the heredity of alcoholism?

In the first place, the liquor-traffic should be more largely prevented. Knowledge of the nature of alcoholism, of the fact that a tendency to it may be inherent in any child, and that it may be transmitted by any person subject to it, has been seen to be essential to the right conduct of the individual. Such knowledge should as far as possible be impressed on every child. Something more than the value of temperance and the dangers of intemperance should be taught in the schools. The teaching of the principles of heredity, and of the conduct every individual owes to humanity in consequence of those principles, should be compulsory. Further, there should be laws aimed at making confirmed inebriates as little burdensome to the world as possible,—perhaps, to that end, more often confining them, and in proper cases forbidding their

marriage. It may be said that such measures as this last are beyond the proper sphere of government; but a government which can properly say that its subjects shall not, except under certain conditions, make, use, or sell certain articles, is not acting on novel principles when it says they shall not marry except under certain conditions. The advisability of restrictive legislation being once admitted, prohibitory laws will be seen to be proper, and to conform to the demands of the principles of heredity. If the thirst for drink be an impulse which will be inevitably yielded to or withstood, according to the conditions in which the possessor of it may be, it seems entirely proper that the government should aid the individual by adapting the circumstances to his weakness and shielding him from temptation. And, if the thirst for drink acquired by one generation may appear as positive alcoholism in the next, the government should put all possible obstacles in the way of the acquisition of that thirst. And, if the intemperate use of liquor by the fathers tends to make the children useless or dangerous members of society and burdens upon it, surely the government is justified in prohibiting that intemperate use.

It may be said that this examination teaches nothing new, that the suggestions raised by the assumption of the general application of the law of heredity are those which have always been followed by the advocates of temperance and of prohibition. To this it can be answered, in the first place, that it is encouraging to find that the work in the past has been on the lines which late scientific thought would point out as the proper ones. It may further be said that there is much that is new in the suggestions that we should view the inebriate with more charity, that we should look upon him more as an unfortunate and less as a vicious person, and that the sympathy tendered him should be tempered with a knowledge of his possible uselessness. There is new force given also to the reasons for making the teaching of temperance scientific as well as moral; for showing the child that temperance is good because it is productive of good results, as well as good because it is right. And, in general, this brief examination again impels us, while not neglecting the aid of sentiment in our work, to give more scope to the influence of reason.

JOHN COTTON DANA.

MYTHOLOGY.

VIII.

To the student of the history of humanity, every object he meets has its interest; nothing is so trivial, threadbare, commonplace, but it has its freshness and value, an important tale to tell in relation to society and mankind. The geologist takes up a lump of clay, and he finds it filled with the relics of organisms that were once athrob with life, and that have much to give him in regard to all the subsequent history of the planet. All the world is illumined and significant, striking, through his science. There are sermons in stones.

So, to the explorer of history, all has its suggestion and vital worth. The modern dwelling is the modified and transformed hut of the savage, the steps of the inevitable evolution to be clearly seen in the leading features of the structure. In the cellar put under all the homes, the preserved cave still of the old troglodyte. In getting out above ground, man brought his house with him.

The gentleman lifts his hat as he passes an acquaintance or friend on the street. He thereby carries a reminder, as he perpetuates the form of an expressive symbol, of acknowledged subjection in long bygone ages. The wedding ring and the proud bracelet to-day bear unconscious reminis-

cence of the fetter by which woman was bound when she had been captured in the chase, which was formerly probably with all races, and is still with some savages, the method of obtaining wives in marriage. This relation was, on the part of the female, one of the most absolute subjugation and slavery. The old Norse word meaning marriage was "*quân-fang*," "bride-seizing." In the German, "*brüt-lausti*," "bride-racing," signifies marriage. Our English phrase, "to catch a wife," carries reminiscence probably also of the same custom in the far back time.

The names used in our tables of weights and measures—grains, barley-corns, feet, ells, spans, miles (*mille passus*), etc.—tell clearly of the early counters and metres employed by man as he began to take measurements. The character still standing at the head of our physicians' prescriptions, the symbol of the planet Jupiter, is a significant relic of the old astrology. I read lately that in the civilization of Peru, at the time of the Incas, idol worship being in full play, the great deities of sun and moon were represented by discs with human countenances, very much like those we see in our almanacs. May it be that these figures among ourselves carry reminiscence of a like nature-worship with our distant ancestors?

So the beliefs and the customs founded upon them, which we constantly meet, furnish many a fruitful suggestion in regard to past history. Reference was made in a former number to the Christmas banquets, as successors and representatives of the feast of our pagan ancestors given to the deities at Yule tide. The Christmas tree, it appears, came from the old world-tree of mythology. In the Norse, it was Yggdrasil. Yggdrasil represented in symbol probably the universe. Its roots ran down deep in the kingdom of Hela, or death; its branches wave in the highest heights of the skies; the Nornas water it from the fountains of being; and under its profound shadow the gods hold their meetings. De Rougement says of this tree that it is "one of the most magnificent emblems invented by the human mind." The Christmas tree, I think, has more significance and true beauty, as we recall its so-called pagan origin.

In connection with this mythologic tree, certain woods have found, and still hold, peculiar veneration. The ash—Yggdrasil was of ash—is regarded as sacred and of magical power. Pliny speaks of the antipathy of the serpent to the ash, showing thus that the superstition in regard to the tree is as old at least as his time. In Cornwall, it is believed that a blow from an ash stick is instant death to an adder; while, if struck with stick of any other wood, the reptile will show signs of life till sundown. This belief in regard to the life of a snake continuing till set of sun, even though he should be decapitated and crushed to a jelly, was current in my time. I recollect well to have heard it in childhood; and, for aught I know, it obtains yet. In some parts of England, ash rods are exhibited to cattle and sheep to cure them of diseases. In Staffordshire, as reported by Grimm, the common people believe to this day that it is very dangerous to break a bough of the ash. A piece of wood of the mountain-ash is frequently carried in Cornwall for years in the pocket, as a charm against ill wish and a cure for rheumatism.

The elder, the hazel, and other woods have shared the veneration given to the ash. In Somersetshire, they never burn the elder wood for fear of ill luck; and the tree is seen planted in England beside many rural cottages, not unfrequently also in our own country, especially New England, the reason originally being in its supposed protective power against witches. In Germany, the hazel was formerly employed to hedge in courts of justice: even

now, it is used to hedge in corn-fields. The superstition in regard to the magic powers of the witch-hazel is active and potent in our own country. The oak was a hallowed tree; and the names Holy-oak, Holywood, etc., tell their own story in regard to this sacred belief.

I have noticed that, in all the rural cemeteries with which I am acquainted, the graves are all laid in one direction, due east and west, or nearly so. I hear that this obtains generally throughout our country. The practice was observed widely through Europe in the Middle Ages, and it is still known there. Probably of those who bury, hardly one in ten thousand may have asked,—or, if asking, been able to answer,—Why all in this direction? More commonly, I believe, the head is laid toward the west, face looking toward the east.

It is perpetuation of the old custom of orientation, grounded in the thought of the soul's finding its new life in the east. There was a tradition that the body of Jesus was laid with the face looking eastward. The duty of burying the dead with the face toward the east is expressly enjoined in an ecclesiastical treatise of the sixteenth century. The burial among the ancient Greeks was in this same line of east and west, sometimes with the head toward the west, sometimes the reverse. The same custom obtains among savage races in the present, as Australians, Fijians, Winnebago Indians, tribes in South America, the Ainos in Japan, etc. The most of these bury with the face toward the west, as the familiar thought with them is that so the body would follow the departing soul.

Thus, unconsciously to this hour, we are continuing in this simple and little noted observance a worship very ancient in the history of humanity, and of wide, almost universal diffusion. Every time I pass by a graveyard in the country, I see a reminder that carries back to the belief of a far distant savage ancestry.

The wedding cake, the bride-loaf,—so essential a part in the observance of marriage,—bears also to old mythological epochs. It has a long history behind it, comes remotely from the symbolical corn-ears that were worn by the bride. These ears were afterward made into cakes and sprinkled on the bride's head. Corn, in one form or another, appears always to have entered into the marriage ceremony; and Sir John Lubbock has shown that it is found among rude savages and semi-civilized people. Mommsen says, "Nothing is more significant than the close connection in which the earliest epoch of culture places agriculture with marriage."

There were talismanic virtues recognized in the corn or the loaf; and pieces of it—in the north of England, for instance, where plates of short-bread are broken over the bride's head as she enters her new home—are scrambled for by the company for the good fortune they insure. A piece drawn through the wedding ring imparts divination, so that, laid under the pillow at night, it gives prophetic dreams. The custom of putting a ring in the cake is founded on a very old belief in the magical virtues of the ring. It confers luck, has indeed all the fruitfulness and marvellous power for enrichment of the Grail, this itself being another form of the same symbol. The horse-shoe is another, the same originally as the ring. Speaking of this, Mr. Drake, writing for New England, says, "One sees this ancient charm against evil spirits in every household."

Very interesting results we should find in tracing to their sources other customs, quaint and whimsical, trivial in seeming, yet standing for matters of gravest reality once, and largely held so now: such as binding a piece of red flannel upon the

throat, for example, to cure irritation or inflammation there,—the color must be red, no other will answer; or winding a stocking about the neck for the same purpose,—the garment must be taken fresh from the foot, this is one absolutely indispensable condition; putting on new clothes—some article of apparel, at least, new—on Easter day, held an imperative obligation in the north of England, and not to be neglected, except on severe penalty; throwing a shoe to assure luck to a departing friend, or laying the shoes crosswise in relation to each other beside the bed at night to secure charms against cramp and "rheumatics," etc.

All these, and many more not to be mentioned here, are capable of mythological explanation; and they carry us back a long way toward the infantile, at least the child, condition of the human mind.

Of all the magic talismans in history, the cross is the most conspicuous. It has played the most decisive rôle in society almost from the beginning of time. It is far older than Christianity, and goes back, as a religious symbol apparently, even to the stone age. It was known and venerated as a sacred sign among pile-dwellers in ancient Italy, among Etruscans, Egyptians, Babylonians, Phœnicians, Hindus, and races in Central and South America. The inhabitants of the *terramares* in Italy—their time is probably thousands of years before Christ—wrought it upon their pottery for household use and their cinerary urns. They had not attained the potter's wheel or baking their ware in the fire, had scarcely begun what we call civilization, yet they had this symbol. It was their talisman as they laid their dead in the tomb. It would be very valuable, did the space permit, to trace as far as possible this history, to learn what was the original significance of the sign and how it came to be an object of such wide-spread and degrading idolatry.

Examples of its superstition are seen in the instance above named, of the shoes placed crosswise; another, in the charm performed by the Welsh housewife against the evil spirits, making the sign of the cross over the dough she is kneading, lest they should prevent its rising; or that of the dairy-maid in Wales laying two sticks of the roan or mountain ash-wood running crosswise under the churn, to guard against the witches and secure the bringing of the butter. The German peasant uses this sign of the cross to dispel a thunder-storm.

Not without appropriateness and significance rightly read, as a religious symbol the cross has become the great fetich of Christendom, holding a sway of incantation and bewitching jugglery to the mind, almost unbroken to this hour. It is believed in as if it had magic power to take away all sins, and to protect as an omnipotent luck-charm against all evil influences, to save from the very jaws of hell itself. Its connection early and perhaps naturally wrought with sacrificial blood has given it doubled force as a charm.*

"How great the wonders of that cross,
Where our Redeemer bled and died!"

"O wood, most blest, whereon great God extended hung," says one of the Sibylline leaves.

The threads of the past are shot and inwoven in all ways into the tissues of the present, and form with it one web. It is difficult to separate and distinguish the one from the other. To eject and eliminate dead matter from the living organism, even in the physical, requires good chemistry. In the intellectual and the moral or religious, few in any age have been equal to it. We inherit our faiths. We are in large degree, all of us, what

*In old pre-Mexican manuscripts, now owned in Europe, Baring-Gould tells us, referring to Klemm, is represented in the end a colossal cross, and in the midst a bleeding deity.

early education, what the folk-lore and religious opinions of past ages have made us. Probably not one in four in society anywhere holds his views on any subject, whether educational, political, or religious, independently, as the result of free and careful inquiry. And far more is this the case in religion. Free and independent thinking and investigation here are the rarest of experiences with any of us. "Our belief," says Max Müller, not properly our own, "is mainly belief in the beliefs of others," these, for most part, our predecessors and progenitors. "Nothing is more rare in any man," says Emerson, "than an act of his own."

To see what creatures we are and vassals of the inherited and traditional, receptacles mere, repeaters of what has come down to us, may perchance help us to self-knowledge and an ambition to seek liberation.

CHARLES D. B. MILLS.

SIR WALTER SCOTT AND DEMOCRACY.

That modern democracy had its dawning during and immediately subsequent to the later years of Shakspeare and Cervantes is a matter of history. At the time these two died, the *Utopia* of Sir Thomas More had been published for just a century. During that time there had been a gradual tendency in society toward the democratic idea; and, in the century immediately following, political speculation burst forth into the richest bloom in such works as the *Atlantis* of Bacon (1624), the *City of the Sun* by Campanella, the *Argenis* of Barclay, and the *Oceana* of Harrington (1656), all of them interpenetrated with democratic principles, which found practical embodiment in the Civil War and the establishment of the Commonwealth. In the light of these facts, it is a fertile and searching suggestion, recently made in the *Critic* by Mr. Whitman, that behind the feudal plays of Shakspeare, as well as in the great work of his contemporary, Cervantes, there lurk the satire and scepticism, respecting chivalry, of one in whom the modern political idea was taking root. And, further, if the sun of feudalism dyes the pages of Shakspeare with the color and dazzle of its setting, and, as in an arctic midnight, also begins immediately to send up premonitory gleams of its rise into democracy, then with stronger reason should we look to find in the pages of Walter Scott yet more emphatic witness of the growth of the new political cult; for he wrote at a much further remove from the life of chivalry. Shakspeare saw feudalism in its setting: Scott saw it only in a third momentary and phantom after-flush. Shakspeare wrote his historical plays for men whose ancestors, a few generations back, had been participants in the events which form the warp and woof of his stories; he treated of themes which still thrilled the hearts and memories of his audience. But Scott's love of mediævalism seems to me to have been (unconsciously to him) chiefly sentiment or imagination, half-sham, like the stuccoed ornaments on certain rooms at Abbotsford. In reading Lockhart's *Life of Scott*, you get the impression that the romancer was a Tory and aristocrat in family pride and in literary and antiquarian tastes, but essentially democratic in his fundamental and interior human sympathies. The main proof, however, is to be found in the novels, wherein the most lovingly and carefully delineated characters are always the "irrespective" people of the *dramatis personæ*. Shakspeare's princes and potentates, his rich stream of lords and ladies, move across the stage in greater pomp and majesty than do Scott's; yet, in general, they, too, are made little account of in the action of the pieces. Cymbeline, Alonzo, King of Naples, King Duncan, Don Pedro in "Much Ado," the dukes in the

plays of "Othello," "Merchant of Venice," "Measure for Measure," "As You Like It," and "Twelfth Night,"—they are all little more than figure-heads on the stage. And herein both the poet of the Avon and the poet of Abbotsford show plainly where their vital affinities lie. It is true that by the magic of his art Scott contrives temporarily to enthuse us for a few of his princes,—e.g., the Queen of Scots, the King of the Lion Heart, and King Jamie First,—and even enkindles in our hearts, while we read, something of the blind and instinctive enthusiasm for royalty that glows in the bosom of his Magdalene Graeme, or Lady Bellen-den, Sir Henry Lee or Redgauntlet. But, on reflection, we easily see through the illusive atmosphere of respectability and fashion thrown around the sentiment by the romancer. In our cooler moments, we are convinced that Mary is an immoral woman; James the First, dissolute, weak, vain, and unfaithful to his promises; Charles Edward, a libertine; and George the Fourth, an idiot. And we feel that there is whimsical paradox and anti-climax in the wild devotion paid to persons so unworthy.

Descending from monarchs to titled subjects, we see that Scott, in spite of himself, can make out of his heroes and his nobility nothing but lay figures or milk-sops. Take the six first written and best of the novels, *Waverley*, *Guy Mannering*, *The Antiquary*, *Old Mortality*, *Rob Roy*, and *The Heart of Mid-Lothian*, and see around what groups of characters the interest centres. On the side of the aristocracy, you have the following list of comparatively uninteresting persons: the members of the Waverley family; Fergus McIvor, Colonel Mannering, Lovel, Sir Arthur Wardour and his daughter, Die Vernon, Francis Osbaldistone, Lady Bellen-den of Tillietudlem, Edith Bellenden, Lord Evandale, Henry Morton, and George Staunton. But, on the other side, you have these immortal characters, painted with the minutest detail of enthusiastic portraiture from the life of the common people: Dandie Dinmont, Duncan McWheebie, Meg Merri-ries, Dominie Sampson, old Caxon, the barber, Edie Ochiltree, Jonathan Oldbuck, John Burley of Balfour, Ephraim McBriar, Cuddie Headrigg, Mause Headrigg, old Ailie, the housekeeper, douce Davie Deans and his daughters, Madge Wildfire, Saddletree, the Laird of Dumbiedikes, and Duncan of Knockdunder.

Now, it is a curious thing that, while Sir Walter's deeper sympathies are thus proved by his romances to have been democratic, and while we know that the chief pleasure of his private life was taken in the company, not of titled and fashionable persons, but of such dependants as Tom Purdie, and such friends as the rustic James Hogg, and William Laidlaw, and the witty publisher John Ballantyne, and that he loved better to swing an axe with his men in the woods than to walk the floor of the Edinburgh law courts in wig and gown, yet all his life he succeeded in persuading himself that the currents of his being set toward caste and feudal aristocracy. But he builded better than he knew. Grant that he could ask and carry home with him as an inestimable treasure the cup which had touched the lips of imbecile royalty in the person of George the Fourth; admit that, as a politician, he was a violent opponent of all Whiggery and reform and a sneerer at the mob, and that he was stoned and spat upon by the people while making a Tory speech at Jedburg, some even crying, "Burk Sir Walter!" and admit that, in his novels of *Old Mortality*, *Woodstock*, and *Peveril of the Peak*, he grossly caricatures the Paritans and Covenanters, and sedulously whitewashes the aristocracy, makes of Cromwell a petty intriguer and bloodthirsty

assassinator, of the pure and noble enthusiast Harrington a half-crazy fanatic and venal time-server, and leaves it to be inferred that Bletson's atheism and his republicanism are in him connatural doctrines,—grant all this, and grant that he could stake his happiness, his fortune, and his life in the building and furnishing of a splendid Gothic hall which should be the seat of his descendants to remote generations, and revive within its walls the glories of departed chivalry, still it seems to me, as I have said, that in his sincerest moods, and his deepest affinities as a man, he partook, even a great deal more than Shakspeare, of the always waxing sentiment of democracy, the sentiment of the worth and sterling manliness of the toiling people. And it is precisely because the feudal sentiment was rooted chiefly in his imagination, and not in his heart and his reason, that the framework and machinery of his romances are become to us the merest rubbish, while their portraits of humble individuals will always endear him to the heart of his race as the Shakspeare of domestic life.

W. S. KENNEDY.

THE FLORENCE CONVENTION.

The unexpected snow-storm on Wednesday, November 19, did not prevent the gathering of a sufficient number of brave people in the Cosmian Hall at Florence that evening for the opening session of the Convention of the Free Religious Association. A cordial address of welcome was delivered by the pastor of the Free Congregational Society, Mr. W. H. Spencer. He called attention to the motto above its platform, "Above all things, Truth beareth away the victory," as well as to the breadth and elevation of the position held by its enlightened and philanthropic founder, Samuel Hill, who loved liberty not merely as an end in itself, but as a means of doing good.

In reply, the President of the Free Religious Association, William J. Potter, after observing that it was needless to speak at Florence of the aims of the Association, went on to show that the value of a religion does not depend on its age or its conformity to the dead records in dead languages of the history of dead nations, but solely on its capacity to feed the wants of the day. The religion of the nineteenth century must in the first place be rational. It must not repel science, as Presbyterianism does in South Carolina. It must also be moral, or rather it must be morality. Then, again, it must be philanthropic, and give its attention to practical problems rather than theological. And, finally, it must be based on the consciousness of man's relations to the great power working in and through all things, the higher law above all the promptings of selfish pleasure. Such must be the religion of the nineteenth century.

Rev. J. C. Kimball, of Hartford, Conn., added that this religion must have organization, and that the tendency to organize was as marked to-day as ever before.

On Thursday morning, the 20th, Mr. F. M. Holland, after saying that it was also necessary that the religion of the nineteenth century should be free, and should serve liberty not slavery, as had been done by the old religions, proceeded to deliver an address on "Secularization of the State."

Mr. B. F. Underwood, after dwelling on the difference between secularization and secularism, which issues are confounded by the Liberal League, objected to the religious use of the Bible in public school and to the taking of oaths. These the State has no right to impose, and it is contrary to the interests of morality to let people suppose that they are any less bound to tell the truth for not

* To be printed in *The Index* soon.—Ed.

having performed such a ceremony. In answer to a question from Mr. Marsh, he insisted that a Liberal ought never to take an oath. Speaking next for the taxation of churches, he asked why the Parker Memorial building should be exempted, but not the Paine Memorial by its side. He praised Governor Hoadly's Thanksgiving proclamation, and condemned the employment of chaplains, but admitted that the State has a right, in order to promote the use of Sunday as a public holiday, to suspend business and forbid disturbance. Mr. Potter, after mentioning that one of the officers of the Free Religious Association had been fined as a Sabbath-breaker, protested against prohibiting the collection of damages by people injured on Sunday by the badness of the roads. Mr. A. T. Lilly, of Florence, called attention to the efforts to place God in the Constitution.

After partaking of a generous collation, the Conference heard Mrs. Anna Garlin Spencer and Mrs. E. P. Bond, of Florence, speak earnestly in behalf of the education of children of radical families and societies. Both ladies admitted that a liberal Sunday-school ought to have nothing to say about theology; but Mrs. Spencer suggested that, after the lessons arranged for the benefit of all the children, there might be a devotional service for those whose parents believed in one, and then a discourse. She pointed out with great force the danger that children who were not given equal social advantages with their orthodox neighbors might grow up prigs or hermits, or selfish longers after such pleasure as might make up for what they had lost. Mrs. Bond, while pleading like Mrs. Spencer, and with deep pathos, for the need of religious training, urged that it should be left wholly to the parents, but that a liberal Sunday-school, while not inculcating faith, should take care not to close the child's mind against it. Mr. Hinckley said the time had gone by when the mind needed anything but plain, unadulterated truth, and there was danger that any definition of the unknown might interrupt the natural development of that sense of universal relation which is the basis of religion. He then told how his own school advanced from infantile observation of plants, stones, and insects to a thorough study of the great religions. Mr. Holland suggested that the Free Religious Association might hold a children's festival. Mr. Hill showed how much of the crime of the day was due to insincerity, which is characteristic of Orthodoxy. Mr. Underwood and Mr. Ferry spoke in regard to having agnostics and theists work together. Miss Eastman urged that radicalism was not so chilly as it seemed to be felt by the essayists. Facts are not cold. Mr. Lilly was glad he had no connection with people who teach what they do not know, and who, after letting knowledge carry them as far as it can, appeal to sentiment in hope of going still further.

After a supper of which all partook together, Mr. Hinckley gave a thoughtful essay, entitled "The Human Question." One great mistake of reformers was to treat of social evils without taking any notice of their causes. Drunkenness, for instance, is sometimes due to the wild exhilaration of youth and sometimes to the gloomy despondency of declining years. Prostitution was often caused by poverty, and might be remedied by teaching women to earn their own living. Similar instruction might put an end to juvenile vagabondism. Churches have been dedicated to the Father, the Son, and the Holy Ghost. On the temple of the future should be written, *Sacred to humanity*. Miss Eastman spoke on our duty to speak our most advanced thought, and thus give others the benefit of its truth while we had a chance of finding out our errors. Mrs. Diaz said

it was the fashionable and frivolous women whose extravagant ways of living were responsible for the existence of prostitutes. The poor might do well to send missionaries to the rich. The dangerous classes were the upper ones rather than the lower. The dangerous women are the belles. The dangerous men are those who will not pay the debts they are perfectly able to meet. The poor and ignorant and wicked are not so dangerous as those whose selfishness makes them wickedly rich, wickedly learned, and wickedly good.

Petitions for taxing churches and protecting unbelievers from discredit as witnesses were circulated during these sessions, which gained peculiar interest from the active participation of the people of Florence.

F. M. HOLLAND,
Assistant Sec'y.

EDITORIAL NOTES.

BY B. F. U.

THIS paragraph is taken from the Philadelphia Times:—

The ministers, as usual at their Monday morning meetings, found something to talk about yesterday. The Presbyterians were quite agitated about the subject of evolution, which has been brought up lately by some rather advanced views expressed by one of their preachers in the city. There were almost as many varieties of opinion expressed as there were ministers present. Some half-dozen ministers having expressed, with more or less modification, the strictly orthodox Scriptural view of the origin of man, one or two others ventured to assert, without saying anything about evolution, that Darwin's *Origin of Species* was a useful and profitable book for any minister to study. Rev. Dr. Bacon said he guessed it was, and added that it was one of the best books ever written for a religious man, to kindle his thoughts and deepen his speculations with regard to the wisdom of the Creator. In response to the question whether he believed Adam was the first man, Dr. Bacon said: "I am willing to admit that the name of the first man who had a spirit was Adam, but not to admit that he was the first of his species. I don't see any disgrace in being descended from a well-formed, sinewy chimpanzee." Rev. Mr. Baker said the Scripture conveys the suggestion of the existence of a race of human beings previous to the creation of man. If not, where did Cain get his wife? Cain must have married into a race of strange people and degenerated the stock. After some further remarks, the meeting closed with prayer.

MR. JULIAN HAWTHORNE opens the biography of his father, Nathaniel Hawthorne, with a statement that evil traits are more likely to come under the law of heredity than virtues, because "the former belong to a man's nature, as distinguished from that self-effected modification of his nature which we call *character*. A tendency to drunkenness, for example, or to pocket-picking, is more easily traced in a man's ancestry than a tendency to love one's neighbor as one's self, or to feel as charitably disposed toward those who injure us as toward those who injure our enemies. In other words, nature is passive and character is active; and activity is more apt than passivity to be original, or peculiar." The assumption that the evil in man belongs to his nature, and that the virtues do not, is a new way of asserting the doctrine of total depravity. Traits are the most persistent that are the most fundamental, that have been repeated through the longest periods of the species' life. What is called "nature" is more subject to heredity than what in distinction to nature is called "character," since it is more firmly established, being the result of innumerable ancestral experiences; while what is called "character" becomes more and more enduring as it is repeated through generations,—in other words, as it becomes nature. Whatever in the environment of a being serves as perturbations to modify heredity, as bodies in space, observed or unobserved, prevent in the march

of planets the realization of the first law of motion, bears upon both the good and the evil propensities. Their exemption from the effects of surroundings is not in proportion to their goodness or badness, but rather to the completeness with which they have become incorporated into the constitution.

WE listened last Sunday to an interesting lecture before the Parker Memorial Science Class, by Mr. James Carey, one of the members, on the mysteries of electricity and magnetic currents as shown in the use of the telegraph and telephone. Returning from the lecture in a musing mood, induced by thoughts the lecturer had awakened of the future possibilities opened to mankind by the progress of applied science, we carelessly opened a series of circulars which lay at hand. These circulars purport to be issued by "The National Developing Circle," whose head-quarters are in this city. As we read, the marvels of the telegraph and telephone suddenly became commonplace and faded into insignificance in comparison with the greater wonders, related in the most matter-of-fact way, of the doings in this mundane sphere of those whom we had supposed released by death from the sordid and sorrowful cares as well as the pleasures of this life. One of the circulars gravely informs us that "the time has now come when wise and watchful spirit guides see fit to extend their plans of operation, and place within the reach of every hand and home an instrument of fine and subtle developing power." What that instrument is is indicated in a general way in a paragraph relating to a certain medium whose name has frequently been mentioned in connection with fraudulent "spirit manifestations": "It was agreed [by a band of spirits] that, if a medium (possessing such an unlimited amount of magnetic power) could develop mediumship in a local circle with so small an expenditure of that power, why could not the currents of magnetism be sent through him to various distances, a stated time being appointed for the circle to sit, and thus establish a sympathetic circumference, the developing medium acting as the magnetic centre?" In order to make this "sympathetic circumference" as large as possible, another circular—purporting to be direct from the spirits of Thomas Paine, Andrew Jackson, and William T. Hodges (whoever he may be)—declares: "As Controlling Spirits of the Circle, we hereby appoint the following named Spirits to have the charge of the circles held in the following named States and Territories, and empower them to appoint spirit assistants to aid them in their labors in developing mediums in said States and Territories." By what authority this spiritual hierarchy exists and acts of course we know not, nor do we know on what principle its appointments are made. It sends the arctic explorer, Kane, to Colorado, not to Alaska; Emerson to Connecticut, not to his native Massachusetts; Garrison to Michigan, not to a Southern State; Robert Dale Owen to Alabama; Garfield to the District of Columbia; Alice Cary, whose life was passed principally in the East, to Florida; John Brown is assigned to West Virginia; and, rather appropriately, Col. Baker to California, Daniel Boone to Kentucky, Gen. Burnside to Rhode Island, Calhoun to South Carolina, Sam. Houston to Texas, and Gen. Robert E. Lee to Virginia. "Running Water," "Wild Fawn," "Red Wing," "Wild Bill," "Lightfoot," "Red Face," and "High Wind" are among the spirits appointed to look after the spiritual interests of other States. To carry out the great work revealed to the "powerful developing medium" by his "spirit guides," money is solicited. "Nothing will be done without a consultation with the spirits of the band." *Mirabile dictu!*

The Index.

BOSTON, NOVEMBER 27, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, : : : : : } Editors.
BENJAMIN F. UNDERWOOD, : : : : : }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

What we Know of the Bible.*

TRANSLATED FROM THE SWEDISH FOR "THE INDEX,"
BY MISS ANNA WALDBERG.

Two answers have been given to that question. One of them is what Prof. Warholm says with Holm-lazius, that the whole Bible is inspired,—*verbatim et literatim*, the direct work of the Holy Spirit. The other answer is that the Bible, as well as every production of the human mind, has grown under the law of development. Believers in this opinion have some support for it in the names of the Bible. Even until the fifth century after Christ, it was called only the Scriptures. After that time, it was called Biblia (Greek books), a name that, only a few centuries ago, changed into the singular for "the Bible." When the Bible was written, by many independent writers during the long period of thirteen to fourteen centuries, it was natural that their impressions and language should have varied greatly. But this view was entirely suppressed during the Middle Ages by the dogmas of the Church. With the Reformation, the claim of the right to reason about the Bible began. But, very soon, a reaction took place; and, in the reformed churches, the inspiration dogma was established with its whole rigidity.

Doubts about its inspiration awoke at the same time. Spinoza attracted attention to the two different narratives of the creation in Genesis: first chapter, first verse; second chapter, third verse; and second chapter, fourth to twenty-fifth verses; and two accounts of the giving of the law on Sinai: Exodus, chapter twenty, and fifth book of Moses, chapter five. In the middle of the eighteenth century, the French physician Astruc discovered that the narrative part of Genesis is constructed from two old records, which, on account of the different names of God occurring there, are called the Elohim and the Jehovah records. In support of this theory, a German, Eichhorn, entered upon deeper investigations; and he found that the different names of God represented two very different ideas of God. These investigations have been prosecuted ever since by great scientists. Semler paved the way for a critical investigation of the New Testament. The efficacy of Lessing was awakening

* A lecture given the 9th of February, 1884, by Carl von Bergen, Ph.D., in Stockholm, Sweden. Dr. Bergen is the leader of a Free Religious Society in Sweden, called the Protestant Union, formed in 1881.

for that purpose. His words are significant, when he says, "Luther, great and misapprehended man, you have delivered us from the yoke of tradition: who shall deliver us from the yet more insufferable yoke of the letter?" Lessing maintained that occasional truths such as the miracles of the Bible (if they are historical) never can serve as proofs of metaphysical truths, and that Christianity existed before the Scriptures of the New Testament. The historical criticism of these Scriptures then cannot hurt the former. He even maintained the hypothesis of an old Jewish-Christian evangel—the Nazarene evangel—as being the derivation for the now existing synoptical gospels. He edited the epoch-effecting "Apologi, or a Defensive Pamphlet for the Reasonable Worshipers of God," by Reimarus (the Wolfenbüttel fragments), bringing about a conflict with the orthodox of his time, particularly with Rev. Götze in Hamburg, in which he defended the idea of a progressive education of mankind.

Herder was another apologist for the modern views of the Bible. His activity was the foundation of the comparative science of religion. Physics and astronomy, that began to flourish at that same time, aided in explaining the derivation of the different religious creeds. Dupuis thinks that a sun myth is to be considered as the ground for the mythology of the different nations. In the beginning of our century, Creuzer edited his *Symbolism and Mythology*. Notwithstanding his imperfect views, his great work was vastly important to other writers, as Augéti Dupéron, who discovered the old records of the Persian religion, Zend-avesta, and the holy scriptures of the Indies, Veda, and rendered a comparative search of the religion of the Aryan nation possible. Through this, the thoughtful came to the belief that the religious development of mankind has grown in an unbroken line, excluding all gaps or miracles, and that the development of heathendom was a preparation for the gospel (*preparatio evangelico*).

At the head of the new Biblical critical school is the one at the university of Leyden, in Holland. Prof. Abraham Kuenen has shown the chief result of his researches in his work *The Religion of Israel*. His opinion is that Genesis, which is considered as the oldest part of the Bible, is later than the Prophets.

John Smith, an Englishman, has, in studying the Assyrian cuneated letters, found the narrative of the creation and the flood corresponding to the one in Genesis, showing their Assyrian-Babylonian origin.

Kuenen says, further, that the fifth book of Moses, which shows such a high moral religious point of view, cannot be derived from the childhood of the Jewish people. This book was written 620 years B.C., and was the one that was delivered to King Josiah by the high priest Hilkiah (II. Book of Kings xxii.). It is impossible that, if the contents of this book of laws—that Jehovah commanded the Jews to worship with offerings only in Jerusalem, and that he could not suffer any other gods besides himself, and that he would not be worshipped with the lascivious extravagances usual with the other religions—had been known ever since the time of Moses, they could have been so forgotten that its reading could cause the greatest consternation to the king and his court.

In the beginning, the offerings of the Jews and the religious ceremonies could be made by anybody, though on solemn occasions the Levites performed them. After a while, the Levites alone had that right; but in the tribe of Levi there was no difference of rank (the view of the fifth book of Moses). After that, a more decided difference was drawn up between the genuine ministry, the descendants of Aaron, and the rest of the Levites, who in the temple service performed a subordinate part. This is the view of the second, third, and fourth books of Moses. The Dutch theologian Oort was the first who paid any attention to this difference, and Kuenen made his discovery in regard to it in his great work.

The Jewish religion developed originally from polytheism (still remaining in the plural form, Elohim as the name of God) to a monolatry (worshipping of one national god, Jahve or Jehovah, by the side of which were several other gods of inferior rank), and at last monotheism (worshipping of Jahve as the only god). The original form of the polytheism from which the worship of Jahve developed was probably a worship of the dead persons' spirits,—*animism*. Elohim was thus from the beginning the same as the lares and penates of the Romans. When it is told that the witch of Endor called up the spirit of the

dead Samuel, she said, when Saul asked what she saw, "I see gods [Elohim] rise out of the ground."

The older Jahve cult was characterized through the deliverance from Egypt. When that had taken place through Jahve's mighty arm, the people were after that sworn to his service. It was his own people. The covenant was external, the service consisted especially of ceremonies. The change from monolatry to monotheism depended upon the purifying of the idea of God through the prophets. Jehovah was the only God: he alone was holy, and required a pure mind and life. The other gods were no gods, as we can see, because they required sensual extravagances by the worship and cruel offerings of human beings. The Prophets had a great influence on the development of the Jewish religion.

Of the one hundred and fifty psalms, according to Ewald, only fifteen are by David; but, according to the Dutch criticism, none. David, as he is described in the historical books of the Old Testament, was a sensual, cruel king, who stood on a very low religious ground. The Psalms, which are in great part of inestimable religious value, even for our time, could not have been written by him, except a few showing a spirit of vengeance. The Proverbs are, according to latest researches, not by Solomon, neither are the sceptic Ecclesiastes, nor the Song, the latter being no prophecy of Christ and his Church, but only a love song, but as such of a noble kind, glorifying one of the greatest human virtues, fidelity.

Christianity is life and spirit and the influence of an irresistible person. The Bible is only the fixed impression which that person made on his surroundings. Efforts made to write down those impressions were combined with great difficulties and errors. A whole century passed (according to another opinion a century and a half) before what is called the New Testament was wholly written. That is not astonishing, when we consider the illiterate surroundings amidst which this religion originated, and the many traditions that were so highly appreciated that they were at first given a higher rank than the evangelical literature, such, for instance, as the general idea of the first Christians of the immediate return of Christ to judgment,—an idea that may be seen all through the New Testament.

Later, when they found that they must live a little longer in this world and that the time passed without that great change, the Christians felt a desire to read about the words and deeds of Jesus. At first there appeared only some occasional writings, such as the Epistles of Paul, undoubtedly the oldest part of the New Testament. The school of Tübingen reduced the true Epistles of Paul to four; namely, the Epistles to the Romans, both Epistles to the Corinthians, and the Epistle to the Galatians. But, later, the Bible students think that also the First Epistle to the Thessalonians, to the Colossians, the Philippian, and to Philemon, were written by Paul. Paul contested his great feud against the Jewish Christian direction in the Epistles to the Corinthians, to the Galatians, and to the Romans. In the last, he gave a decided negative answer to the question whether the Jewish Christians would be preferable to those converted from heathendom to Christianity, and pronounced the doctrine that faith alone makes a person happy, not good works; or, in other words, that the improvement of the soul must begin inwardly and alter man's outward life. This doctrine of Paul has caused two great religious revolutions: first, when the Christian religion delivered itself from the narrow Jewish view; and, after that, when through the Reformation the Church delivered itself from Catholic forms and ceremonies. I think that this doctrine will cause one more great religious reform in opposition to Orthodoxy, which is so dogmatic. The so-called Catholic Epistles (two Epistles of Peter and three of James, Jude, and John) have been named so, because they were not dedicated to anybody in particular and were closely connected with the origin of a Catholic (common) Church, through the joining of the Jewish Christian aim and that of Paul. None of those are derived from the author whose name they bear. The Second Epistle of Peter is very likely of the latest date among the writings of the New Testament.

Revelation, as well as the books of Daniel and Enoch, belongs to the so-called apocalyptic literature. Such writings were meant in times of suffering and persecution to encourage believers to steadfastness. They were written in an allegoric form. From necessary prudence, not to attract the attention

of the persecutors, such words were used as would not be understood except by those who had the key to the meaning. The key to Revelation is in the number of the Beast 666 (Rev. xiii., 18). The solution of this was impossible as long as the Greek alphabet was used. At last, some German scientist thought that the author, being a Jew from Palestine, although he wrote in Greek had meant the Hebrew language, and found the solution in the words Neron Kesar (the Greek for Nero Caesar = Emperor Nero). Writing these words with Hebrew letters and adding the worth of the ciphers (the Hebrews wrote ciphers with letters), you get the sum of 666. Nero, the cruel persecutor of the Christians,—who, according to a tradition, was not dead, but only wounded and had fled,—was, according to this book, coming back as anti-christ, but his power would be of a short duration and immediately be followed by the coming of Christ and the victory of God's kingdom. This book was probably written after the fall of Nero and a short time before the destruction of Jerusalem. The sayings of Christ, which became the beginning of the evangelical literature, consisted partly of short, often seemingly paradoxical, simple, striking utterances, that, once heard, stayed forever in the memory of the hearers and were told from generation to generation: partly in parables, in which he represented his doctrines of the kingdom of God; and at last partly in the mighty descriptions of his second coming to the final judgment.

With those sayings of Christ belong the evidences of his Messiahship and the endeavors to reconcile this with his death on Calvary, through a new application of the prophecies of the Old Testament, trying to prove that Messiah should suffer and die and then go to his glory. The historical representation, therefore, mostly mentioned his sufferings. From this are direct connections with his last visit to Jerusalem and the establishment of the Lord's Supper (the only incident in the life of Christ Paul mentions). All the rest is lost in the darkness of myths and tales. The necessity of justifying the suffering and death of Christ and making it correspond with his Messiahship for the Jews, who found the idea of a crucified Messiah offensive, was the original cause of a history, in union with his sentences, parables, and prophecies. From those notes of the actions and words of Christ, the three synoptic evangels were derived. They were so called, because they can and ought to be viewed together. Such a combination is impossible, though, between them and the Fourth Gospel. According to the former, the chief scene for the activity of Christ was Galilee and only once in Jerusalem. According to the latter, it was in Judea, and he visited Jerusalem several times. According to the Gospel of John, John the Baptist knew Jesus from the beginning. According to the synoptics, he did not know Christ before the baptism. According to the synoptics, the driving out of the money-changers from the temple happened shortly after Christ's entrance into Jerusalem, and was one of the causes of his imprisonment. According to the last Gospel, that happened in the beginning of his public activity. The synoptics let him say that all his twelve disciples, without exception of the traitor Judas, are going to judge the twelve tribes of Israel. The Fourth Gospel let him beforehand—in a wonderful way—know of the action of the traitor. The 14th of Nisan was, according to the synoptics, the last passover meal, as it also must be by the Mosaic law. According to the Fourth Gospel, Christ ate a common meal the 13th of Nisan with his disciples, and the day after was the day of his death. The first three Gospels give a human image of Christ, and represent him as the Messiah who was expected by the Jews. The Fourth Gospel represents him as independent of the human development, and puts him in the sphere of the divine and supernatural. If the synoptics are historical records of the life of Jesus, it is impossible that the Fourth Gospel can be so.

In the origin and development of Christianity as in all human development, the higher has proceeded from the lower. What is worth living remains at last in victory. The truth cannot be worshipped by a retention of prejudices, but through going forward to a free research.

Does any man wound thee? Not only forgive, but work into thy thought intelligence of the kind of pain, that thou mayst never inflict it on another spirit.—Margaret Fuller.

CORRESPONDENCE.

THE LOWER LAW OF COMPETITION AND THE HIGHER LAW OF CO-OPERATION.

Editors of The Index:—

The Sixteenth Annual Co-operative Congress of England met at Derby this past June, 1884, and represented two hundred and thirty-five co-operative societies, which sent four hundred and twenty-three delegates. This Congress was first inaugurated by William Pare—a veteran in co-operation—in London in 1839, at which sixty-one societies were represented by sixty-four delegates. The difference between the two representations marks a striking co-operative growth.

Mr. Edward Vansittart Neale, the well-known writer upon co-operation, and Secretary of the Congress, in his preface speaks of the "numerous attendance," and that "the number of delegates who desired to take part was considerably in excess of the time which could be allowed them, and showed a real interest in the subject-matters discussed, which was gratifying in itself and satisfactory in its promise." He calls these annual meetings "centres where the coals are raked together, and the fire of co-operative zeal becomes quickened into new life."

It is a significant fact that the general work of this Congress was done in a line of co-operative production,—the relations of capital to labor rather than that of distribution, which has been heretofore usual in these deliberative Congresses. Mr. Sedley Taylor, the President, in his inaugural address devoted himself mostly to a consideration of this new departure and its best methods. The feasibility of co-operative production, it was declared, will prove equal to that of distribution. He referred to the great success attained in France in "profit-sharing," which, he said, "has at command potential energies capable of opening an entirely new source of profits, and so of independently creating its own fund." He advised that the workmen themselves make the experiment, without waiting for capitalists, by organizing more widely than they had yet done industrial and agricultural production on a genuine profit-sharing basis. Much capital has already been amassed through the distributive societies.

As one of the finest illustrations of the evident truth that the law of force legitimately dominates so long as man is in the lower stage of civilization, but, when the higher reasoning and spiritual powers of his being are evolved, that the law of force naturally gives way to that of justice or love, the law of competition or antagonism to that of co-operation or harmony, I quote from Mr. Neale's preface to the Report:—

"The object of co-operation may be defined to be the determination to substitute, in the ordinary business of life, reason for selfish impulse, concord for strife. The attempt may be denounced as beyond the power of man, as a vain effort to alter the unalterable, to fight against nature. But rather would I describe it as an attempt to carry on to its completion the work of which nature shows us the beginning. The world of nature may be aptly called a sub-reasonable world, a world where reason is latent; where the primitive, indispensable factor of self-assertion, without which there could be no individual being, has not in its evolution attained to the faculty of self-government. Therefore, in the world of nature, we find everywhere that 'struggle for existence,' in which the genius of the great naturalist of England has of late taught us to see the disguised action of a reasonable power shown in making this struggle, and its inevitable consequence,—death,—into an instrument of progress, whereby the ever-fresh creations of life have been moulded, through their own mutual interactions and the 'survival of the fittest,' into the beings best adapted to their surroundings, fittest to live. By this process of what Mr. Herbert Spencer has called differentiation there have been developed from the undistinguished mass of latent energies which once constituted the nucleus of our solar system all those manifold forms of existence differing from each other which compose the natural world. As its ultimate result, there appeared upon the earth reasonable beings; and with their appearance there has set in an operation the converse of differentiation, which, borrowing a word from Mr. Spencer, though used in a very different sense, I call integration. What Nature separates, Reason unites. Everywhere, this is the function of reason. It finds differ-

ences: it seeks unity. It finds the ever-changing, phenomenal many: it looks beneath appearances for the unchanging, one,—the combining conception which holds together the vanishing utterances of time in the enduring grasp of the eternal. The science which forms the boast of the present age is only the result of this action. . . .

"Now, what in art, in industrial invention, in science reason thus seeks, shall it not seek to effect in life? Are the relations of human beings to each other in their separate lives alone exempt from the action of this harmonizing faculty? Must they alone be left to adjust themselves as best they may by the natural process of struggle and differentiation? Are they alone of all human activities 'deaf to the voice of the charmer,' unsusceptible of that harmonizing unity which in every other sphere the integrating faculty of reason can discover or produce? Not so, in my judgment. Not so, say instinctively all who have taken up co-operation as a great social principle, capable of producing and destined to produce the redemption of society from the manifold evils arising out of the actual state of struggle. Not so. The social life of mankind is not given over to hopeless struggle. It is not exempt from the blessed influences of all-integrating reason. Its present ills may be cured by modes of action which the actual condition of society has made possible through its vast organizations for repressing violence, its enormous accumulations of material resources, its countless labor-saving inventions, its unprecedented facilities of locomotion, its corresponding means of diffusing thought, and that wide-spread political freedom which, emancipating men from the necessity of fighting for the permission to unite, leaves them at liberty to determine how they shall use their freedom to build up the higher social order of a reasonable world. The present ills of society may be cured . . . by giving to the natural powers of the system a new direction, and stimulating them to work out the desired cure by their own inherent energies. By using methods and forces known to be possible and available, we may gradually bring about changes which, when effected, will seem as natural as it seems now that the stage-coach should be superseded by the express train, and the old American liner, which crossed the Atlantic in a month, should give way to the steamer that effects the voyage in a little more than six days; and will be as superior in their results to what we now see produced as the modern modes of locomotion are to those which they have superseded."

Another distinctive feature of this Congress of Derby is the economic aspect of co-operation with respect to the household; and still another, urging upon co-operators the duty of educating themselves as essential before much can be done.

LITA BARNEY SAYLES,
A. G. Sec'y Sociologic So. of America.

PROTECTION vs. FREE TRADE.

Editors of The Index:—

In *The Index* of November 6, you state that Mr. Blaine, in his speech to the preachers at the Fifth Avenue Hotel, declared that "the tariff is the issue which lies at the very foundation of the prosperity of the American people and the very foundation of the Christian religion"; and that quite different from this view is that of Mr. Fiske, who in his latest work incidentally remarks, "Our robber tariffs, mis-called protective, are the survivals of the barbarous mode of thinking which fitted the ages before industrial civilization began."

You impliedly condemn Mr. Blaine's remark, and evidently indorse Mr. Fiske's. To be very brief, let us put a single case, and in the light of that case test the principle involved and determine, if we can, which of these apparently extreme statements is more nearly correct. Let us eliminate all discussion of details, and put the *facts* in the form of assumptions, so that we shall not primarily linger over them. If need be, we will examine them afterwards.

Assume that England has free trade, France a protective tariff, that both make any one class of goods. Assume that a Frenchman makes and can sell in his home market two, and only two, thousand pieces of the goods at a given price; that, if he makes three thousand pieces, he can make each of the three thousand pieces at a lower price—say two pence—than when he makes only two thousand; his selling price at home remaining the same, he will gain four thou-

sand points more on that home trade, merely by making the larger amount, the pieces costing him that amount less.

Assume that he sends the last thousand pieces to London and, to make a quick sale, sells them at a loss of three points on each piece: he will lose three thousand points on this part of his trade; but, on both trades taken together, he gains one thousand points. And so continuously, and on calculation of that profit, he repeats that operation. His neighbors do the same, and all in every country in the same trade follow suit.

It is easy to see that the English merchant is satisfied with this state of affairs, for he gets his goods for less than cost, less than any one anywhere can make and sell all his product for. The English maker, working man at least, must compete against all these goods sent and sold, as we have assumed at a calculated and intended loss balanced into a gain on the whole as set forth above.

Ordinarily, the English maker must also lose, and lose till he is ruined, by this mere trick of trade, this hopeless, unjust, fatal competition, or give up his trade, and turn to another to be attacked and ruined in like manner in that. Any device to countervail this trick of trade, this operation blameless as the world goes,—any adjustment to modify this particular kind of competition in the interest of fair play for working-men, would seem to lie very near the foundation of every just or sagacious government and of the success of every humane religion.

This a tariff might do, by making the Frenchman in the case pay to the English government more on each piece than he could possibly gain by his unwholesome "free trade" with the English merchant.

Now assume that this case is repeated in every line of goods, that similar operations produce similar results in all lines: do not the necessity and beneficence of a judicious general tariff, at least under the circumstances assumed, plainly appear?

Is there a single unwarranted assumption,—one that might not stand for an admitted fact?

This situation has nothing in common with medieval tariff, it is purely a product of modern commercialism—modern "free trade."

Many other independent lines of argument, many different sets of facts, lead to the same result. We here rest on this single case. In the light of this case, is Mr. Blaine very far wrong? And is the incidental remark you quote from Mr. Fiske about "robber tariffs" the "survival" of a habit of making rash generalizations from facts imperfectly understood? Possibly it is.

JOSEPH SHELDON.

NEW HAVEN, CT., November, 1884.

MEMORITER.

For The Index.

When gliding years have worn their track
In furrowed lines they show,
The ghost of youth in thought comes back
From out the long ago.

Again we hear the voices true
And list the whispering sigh,
And youthful hands are reaching through
Where years in chasms lie.

Our joys and griefs have each in turn
Wrought out their vital test,
Maturing life that we may learn
How quiet love may rest.
The soul-lit eye with beacon light,

Illumes a pathway clear
Through storms that rise in fancy's flight,
And guides us safely here.

When raven locks by "silver threads"
Foretell the blossom crown,
With hearts still young our older heads
Will choke the tempest down.

But dormant chords with magic touch
Ring out in life's refrain,
And loving arms instinctive clutch
At phantoms of the brain.

A. D. MARCKES.

GOD-MAN.

For The Index.

"In apprehension, so like a God!"—*Hamlet*.

Take the mouldering dust,
Wake it into life,—
Matter is but servant of the mind.

Touch the silent keys:
Genius can evoke
Music wherein gods commune with men.

Read the soul of man
And the farthest star:
Truth is one, and is forever true.

Think the wildest thought,
Hope the utmost hope,—
Time shall be when all shall be fulfilled.

Wonder not at deed,
Wonder more at thought,
Wonder at the hope that feeds itself.

Genius is divine,
Genius is the True:
Man becomes what'er he worships,—God!

GOWAN LEA.

PSYCHICAL RESEARCH.—The Springfield Republican describes the work of the Society for Psychical Research in England, and says: "It is proposed to organize a similar society in this country; and the lead is taken by the *Religio-Philosophical Journal* of Chicago, which, under the editorship of John C. Bundy, has shown an earnest desire to get at the truth in Spiritualism and to expose the falsehoods, quackery, and corruption that disgrace it, and repel many who would willingly believe in the communion of spirits from looking into the matter at all. Mr. Bundy has made enemies by his course; but he has gained the respect of all who value truth, whether Spiritualists or not. His journal has long demanded that mediums shall submit to test conditions, and he was influential in the successful effort made to purge the Lake Pleasant camp-meeting last summer of its disreputable elements. The *Religio-Philosophical Journal* proposes that this society shall be started by Spiritualists, and makes the unexpected statement that 'we can name off-hand twenty Spiritualists whose aggregate wealth exceeds \$60,000,000,' who should endow such a society. The *Journal* presents a scheme for the society, assuming that it shall be founded in the belief that 'a portion of the phenomena now generally acknowledged as occurring are manifestations of spirits once in mortal form.' The first step, according to its plan, would be an experimental school of psychical research, to examine mediums and sensitives, with a salaried secretary, and a corps of experimenters who should, as a whole, compass 'chemistry, mathematics, mechanics, anatomy, physiology, electricity, mesmerism, biology, psychology, phrenology,' etc. All these should be fair-minded men, approaching the subject to find the truth and not to confirm a preconceived theory, and capable of standing by the record of experiments and vouching for their accuracy to the world. The head of the school should be a Spiritualist possessing the confidence of those who hold that belief and of the general public as well. This scheme is interesting, and deserves only good-will; but since scientific men in England have believed in Dr. Slade, and since Robert Dale Owen, who possessed the confidence of Spiritualists and practical people alike, was completely humbugged by Katie King, the examination of mediums and sensitives by any sort of committee will be regarded with very little respect. The difference between Mr. Bundy's proposed society and that at work in Great Britain is very great." The *Religio-Philosophical Journal* last week contained a reply to the Republican objections and is urging the formation of the proposed society with great vigor.

ORGANIZATION.—Monroe's *Iron-clad Age*, published at Indianapolis, doubts the wisdom of attempting to unite Liberals for organized work. In an article on

"Organization," this journal says: "A formal organization of the infidel philanthropists might be of benefit to themselves in some cases, but it is doubtful if the emancipation of the human mind from superstition and prejudice would be hastened by such organization. We must be broad and liberal, not narrow, selfish, and clannish, if we would gain the confidence and respect of the world; and we must excel in good works, not in wars. And, besides, infidels are a hard lot to organize. The efforts in this direction have not advanced the cause nor inspired the confidence of the public in the benevolent, unselfish character of the leaders in the movement. Desultory efforts in the open field are revolutionizing thought on every hand, and perhaps we had best be content with these till the disintegration of the churches, so visible on all sides, proceeds a little farther."

BOOK NOTICES.

FICHTE'S SCIENCE OF KNOWLEDGE. A Critical Exposition. By Charles Carroll Everett, D.D., author of *The Science of Thought*. Chicago: S. C. Griggs & Co. 1884. Price \$1.25.

This work forms one of the series of "German Philosophical Classics," published by the above firm, of which *Kant's Critique of Pure Reason*, by Prof. George S. Morris, and *Schelling's Transcendental Idealism*, by Prof. John Watson, have already been published.

Fichte took such particular pains to hammer his principles in their abstract form into his readers as to render his original works somewhat tedious reading for the general mind; and the people who have the inclination or the time, in this fast age, to study thoroughly and attentively his *Science of Knowledge* are very few in number. But, when we consider the importance of Fichte's ideas in the history of philosophy, Prof. Everett has done a very valuable work in rendering them in a style comprehensible by the general philosophic reader without very great effort. He has illustrated them in such a plain and familiar way and with so much clearness that his readers will get a better idea of the main principles of Fichte's system than they would from any cursory reading of his original works.

This work consists of two hundred and eighty-seven pages divided into thirteen chapters, the first treating of Fichte the man, and the others devoted to his philosophy. The second is an exposition of its relations to that of Kant. The succeeding chapters give a very complete, concise, and clear statement of Fichte's system. In the final chapter is a comparison of it with those of Schopenhauer and Hegel, which are especially interesting, in which he shows that the main ideas of Schopenhauer were the same as those of Fichte. In both, consciousness is a striving which springs from dissatisfaction; but "we find, however, one great point of difference. The system of Fichte recognizes a goal toward which the will is pressing. This goal, indeed, is infinitely removed, and thus can never be reached; but the movement toward it involves a gain with every advance. . . . The will of Schopenhauer, on the other hand, recognizes no such goal. Its course is movement, but not progress."

Of his contemporary German philosophers, Fichte has received much less general attention than Kant, Schelling, or Hegel; yet his contributions to our philosophic knowledge are as important as theirs, and the central principle that formed the *real core* of their systems was seen as vividly by him as by any of them. None of his contemporary thinkers saw more plainly or emphasized more strongly the great fact that all conscious realization was the result of the collisions and interchanges of antithetical but complementary opposites. This indeed is what implicitly constitutes the core and foundation of his philosophy, and not any conscious ego, in any other sense but as the resultant of antithetical or polar opposites; because, as he himself declares, the absolute ego, as such, comes to consciousness only through the antithesis of opposite conditions. This is also the fundamental principle in Hartmann's philosophy; and, so far as the evolution of consciousness is concerned, the main ideas of Hegel were previously enunciated by Fichte.

Near the close of his interesting volume, in comparing Fichte with Hegel, Prof. Everett criticizes his exposition of consciousness as being mechanical, and says, "If Fichte had seen, as he came so near seeing,

that the spirit is absolute, not merely absolute spirit, but the absolute, and that the process by which spirit is spirit is its very being, he would not have needed these mechanical appliances." That the absolute being consists of nothing but a process is an inconceivable proposition and impossible to thought. We cannot conceive of reality consisting in mere change, of any change in condition without something existing in these opposite conditions. If the condition is the alone reality, then every change in a condition would be the annihilation of the condition from which it changed. It would be in a worse plight than Alice's cat in the fairy tale, of which "nothing was left but the grin." In this case, even that would not be left. When we get so that we can conceive of absolute nothing becoming something or of nothing moving, we may accept Hegel's dictum that "process is Being." As no man has ever been able to conceive this, it is safe to say that Fichte would be perfectly justified in repudiating any such pretended advance on his system. Hegelian critics of Fichte's philosophy have often made the charge that his exposition of the evolution of consciousness was mechanical. But can we ever form any rational or even intelligible idea of conscious determination without involving the action of something external upon the individual consciousness? Even Hegelians have to posit an "other," something outside consciousness, to get up any kind of mental action, even that of self-consciousness. If there was no such action, then there could be no relation, no reason for any action. Mental action may involve mathematical and mechanical principles that all our science has not begun to dream of. The wonderful mechanical arrangements in the human body and brain indicate such principles; and may not mental and sentient phenomena involve geometrical and mechanical principles as much more subtle and complex than our mechanics as thought is more subtle than tangible matter? F. S.

HEIDI: Her Years of Wandering and Learning. A Story for Children. Translated from the German of Johanna Spyri. By Louise Brooks. Boston: Cupples, Upham & Co. 1884. pp. 668. Price \$2.00.

This first English translation from the works of Fräulein Spyri, who holds high rank in her native Germany as a popular writer of juvenile tales, was undertaken as a labor of love on the part of Mrs. Brooks, who publishes it solely for the benefit of the kindergarten department of the Asylum for the Blind at South Boston; and all profits accruing from its sale will be donated to that institution. The story itself is a very pure, healthful, and charming one, and presents graphic pen pictures of the contrast between life in the German cities and the Swiss mountains. Heidi, the simple little Swiss girl, is a delightful character in her sincerity, cheerfulness, lovingness, and passionate love of nature; and her wealthy lame friend Klara is as lovely a creation in another direction. In fact, even the worst characters in the story are shown to be quite human when the right chord was touched. There are many pages in this beautiful book which will excite the laughter as well as the sympathies of the American readers of the honest little maid's adventures. S. A. U.

CHATS. By G. Hamlen. Boston: Lee & Shepard. 1884. pp. 279. \$1.00.

These *Chats*, which have for their motto, from Burns' "Cottager," "Now talked of this and then of that," are serious, sensible, pleasant talks on a wide variety of subjects of every-day importance to young people. There are nearly fifty of these "Chats," and each contains kindly administered advice on some pertinent subject. The titles of these "Chats" do not always indicate their real purport, "Miss Cash," for instance, being a lesson in economy designed for shop girls of all sorts, who need to live well on very little money. "One of the R's" gives hints on the art of reading well. "Out in the Snow" gives some ideas in regard to true politeness and girl's rights. In a gentle way, she points out many every-day mistakes and inconsistencies to which young as well as old are liable. Some of her more definite subjects are "Comparing to be Old," "Brain or Stomach," "Politics," "Conversation," "Reading a Newspaper," "Judging in Haste," "Quoting," "Loungeurs," "Some Words on Language," "Quacks," and "Too Systematic by Half." The book is nicely bound and clearly printed, while the style is readable and attractive. S. A. U.

DORCAS, THE DAUGHTER OF FAUSTINA. By Nathan C. Kouns, author of *Arius the Libyan*. Illustrated. New York: Fords, Howard & Hulbert. 1884. For sale by Clarke & Carruth. Price \$1.25. pp. 255.

This is a religious novel, delineating with much power of expression and refinement of style the sufferings and faithful endurance of the early Christians in the third century. There is an interesting love story between a lovely Christian girl and an earnest sincere pagan centurion, who finally became a convert to the Christian faith and a leader in the Church through his love for Dorcas, whom he of course married. The manners, morals, history, and fashions of the Romans of that day are graphically depicted. The book has nearly a score of fine illustrations, is handsomely bound, and nicely printed.

The leading article in the December number of the *North American Review* is "Labor and Capital before the Law," by Judge T. M. Cooley,—an article which shows that law is a progressive science; that, when a state of things arises for which there is no precedent, a new precedent must be made; and how the common as well as the statute law is thus made to keep pace with the general advance of civilization. To the same number, William K. Ackerman contributes some suggestive "Notes on Railway Management"; Dr. Schliemann tells what he found in his excavations of the ruins of Tiryns in Southern Greece; and Principal Shairp supplements his scholarly article on "Friendship in Ancient Poetry" with one on "Friendship in English Poetry." The other articles in the number are "The British House of Lords," by George Ticknor Curtis, and "Responsibility for State Roguery," by John F. Hume.

The first calendar for the coming year received at this office is the work of a lady, Mrs. E. S. Miller. It is unique in its scope and variety of subjects and authorities, as shown in the prefacing lines, which we give:—

"Three days in each month here are goodly receipts
For dishes or draughts for the sick;
Two days there are riddles, charades, or conceits;
One day there's a rule or a trick
For knitting, crocheting, or making something
Ornamental or useful in dress;
And sometimes a hint upon health we shall fling
On our pages to soothe man's distress.
One day there are lines to some plant, tree, or flower,
To some animal, insect, or bird;
But through all the rest of the month shall be heard
The strains of the poets,—the dower
Most precious to hoard they have left us,—the gold
For our life-streams to shine with and hold."

Published by Brentano Brothers, New York.

The American Lesson OF THE Free Trade Struggle in England. By M. M. TRUMBULL.

300 pages. Price, paper, 50 cents; common cloth, 75 cents; fine cloth, 75 cents.

PRESS NOTICES:

"There is no other teaching of Free Trade by example at all to be compared with it. . . . It is as interesting as a romance."—*Chicago Times*.

"The author does not deal with statistics, but relates the story of the contest in such a pleasing manner that it reads like an enchanted tale."—*Omaha Herald*.

Sawing Made Easy.

MONARCH LIGHTNING SAWING MACHINE

For logging camps, wood-yards, farmers getting out stove wood, and all sorts of log-cutting—it is unrivaled. Thousands sold yearly. A boy of 15 can saw logs fast and easy. Immense saving of labor and money. Write for elegantly illustrated catalogue in 6 brilliant colors, also brilliantly illuminated poster in 5 colors. All free. Agents Wanted. *Big money made quickly.*
MONARCH MFG CO., (A) 206 State St., Chicago, Ill.

BY ALL ODDS THE BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travelers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches**, which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars**, which are models of comfort and elegance; its **Palace Drawing Room Cars**, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that it is the best equipped road in the world.

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, and take none other. All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

J. HART & CO.,

BANKERS,

Doylestown, Pa.

Draw Bills of Exchange on England, Ireland, and other points in Europe. Agency for the American Line of Steamers.

Modern Thinkers,

Principally upon Social Science.

By Prof. VAN BUREN DENSLAW, LL.D. With Introduction by ROBERT G. INGERSOLL. Including critical analyses of Swedenborg as a Seer, of Adam Smith as an Economist, of Jeremy Bentham as a Law Reformer, of Thomas Paine and Junius as Political Revolutionists, of Charles Fourier as a Socialist, of Herbert Spencer and Ernst Haeckel as Evolutionists, and of Auguste Comte as a Positivist, with an Essay on Wealth in its Relations to Christian Ethics.

The Fifth Edition has just been issued.

"Upon the question of money, this volume contains the best thing I have ever read."—R. G. Ingersoll (in Introduction).

"We confess that, if we stood on the ground on which Mr. Spencer stands, we should find it difficult to prevent ourselves from being pushed by the stalwart arm of Dr. Denslow's logic into the gulf of ethical nihilism."—Prof. Goldwin Smith.

"Now, the whole force of this case depends upon the assertion of Goldwin Smith that Dr. Van Buren Denslow is a disciple of Herbert Spencer. But the assertion is not true in any sense or in any degree. On the contrary, Dr. Denslow is an open antagonist of Mr. Spencer. His essay on Spencer's Philosophy, first published in the Chicago Times, while speaking of the man in the usual terms of perfunctory compliment, as have also Goldwin Smith and the Saturday Review, is adverse, carping, and depreciatory on every point that he considers. The criticism was regarded as so damaging that Spencer's friends were told they must reply to it or forever hold their peace; and we were confidently assured that the last we should ever hear of Spencer's system was the thud of the clouds that Denslow had thrown upon its coffin."—Prof. Youmans, in Popular Science Monthly and in Introduction to Current American Edition of the Data of Ethics.

Stephen Pearl Andrews, as political executor of the late Thomas Paine, is as fiercely indignant at Mr. Denslow's analysis of Paine's politics as Prof. Youmans is at his assault on Spencer's Philosophy. On the other hand, George Jacob Holyoake speaks of the analysis of Paine's political philosophy as "the most masterly refutation of it extant, without showing in his words or in his mind any enmity against the great agitator whom he confutes."

The late Dr. George M. Beard, of New York, wrote to the author: "Your critique on Spencer's Data of Ethics has all the force of a discovery in ethics, and is of great value. It deserved to be made the subject of a separate treatise."

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. The case against the Christian Church is a marvellously strong one. The superstitions and miseries of medievalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—Boston Evening Transcript.

Sent by mail, postpaid, on receipt of price by the INDEX ASSOCIATION, 44 Boylston Street, Boston, Mass.

CURRENT TOPICS.

BY B. F. U.

THE German citizens of Boston and vicinity are arranging for memorial exercises in connection with the placing of a monument over the grave of Carl Heinzen in the Forest Hills Cemetery.

THE late Archbishop Purcell's creditors wrote to the Plenary Council at Baltimore: "People are beginning to think that, if heaven needs all the substance of the widow and orphan to keep the clerical profession in affluence and splendor, it is time to retire from the sanctuary and delve for some other scheme of salvation."

RECENT disclosures are not creditable to the "highest" circles of London life. Only a few months ago, the papers recorded the death of Mr. Justice Williams in a brothel at Nottingham, attended in his last moments by painted prostitutes, which last week found a counterpart in the announcement that Hon. George Hubert, Dean of Hereford, who is fifty-nine years of age and enjoys a stipend of \$5,000 a year, is brother of the Earl of Powis, and has been a great sportsman, had been committed for trial for outrageously indecent conduct in company with disreputable characters in Hyde Park.

THE Salvation Army officers distributed circulars lately in Salem, this State, of which the following is a copy: "Salvation army, ho! Hallo! who is this? Why, Kansas Jack! The Salvation Army's saved desperado, who will swoop down on us and lasso as many of the devil's braves as possible, hauling them into the kingdom of Jesus Christ, of which through grace he is now a subject. But who is this fellow? Why, Captain Walsh, the converted minstrel from Brooklyn city, who will speak, play, and sing for the glory of God and the good of your soul. The best thing out! Take it

all in. Meeting commences at 8 P.M. Collection at the door to save disturbance. Everybody expected to give. Give your heart to Jesus."

SAYS the Springfield Republican: "Rev. Martin K. Schermerhorn's purpose to join the Protestant Episcopal Church is surprising chiefly because, when last heard from, he was bent upon organizing a theistic church in New York City, which should not affirm the Christian religion any more than the Buddhist or the Brahman or the Hebrew, but should rest on those principles of radical unity found in the existence of one God and the pursuit of good. This venture probably proved a failure. He compiled his *Sacred Scriptures of the World* for use in the pulpit, and left the Unitarians because they were not ripe for his catholicity. This happened two or three years ago, when he resigned from the Channing Memorial Church at Newport, R.I. Mr. Schermerhorn is a bright and graceful writer and speaker, but not a strong man; and he will be very much at home in the Episcopal Church, where his religion of humanity will meet with the most generous indulgence."

MANY of the Harvard students have signed a petition to the Board of Overseers, which asks that the attendance at prayers be made voluntary for those students who are twenty-one years old, and that for boys under age attendance be made optional, according to the wishes of their parents or guardians. A correspondent of *Crimson*, the college paper, writes: "There will be a canvass of the college, and we hope that every one will sign. If every one will show an interest in this movement, we have better prospects of succeeding than we have ever had before." One of the students, asked by a representative of a Boston paper, "How do the students regard morning prayers?" replied, "As an exercise to be got rid of, if possible." To the question, "What would be the effect of making attendance on prayers voluntary?" he said: "I don't believe fifteen men would go to them. Some fellows go now willingly, because the habit has grown upon them, and it is a convenient way to start the day; but they might just as well at the prayer hour go over to the Delta and walk with uncovered heads once around the statue of John Harvard." The students, generally, regarded it as "a mockery from a religious point of view." A writer in the Boston Transcript says that "for the cause of religion there is woful need of saying that perfunctory religion of the college-morning-prayers sort is a delusion, and that to enforce such perfunctory delusive pietism is a scandal which ought to be abated. If there were any possible way to make college morning prayers genuine and useful to those who incline to pietism, and to such as might be freely drawn to attend for the sake of possible benefit, the plea against compulsory attendance would yet stand just where the students put it. But there is no way, never has been any, and never could be any. Morning prayers have no use but that of a police muster, and there is nothing more imperatively demanded at this moment than their cessation, that an injury to religion, as well as the scandal of their enforcement, may be abated."

THE dedication of the new church of the Unitarian Society of East Saginaw, Mich., on Thursday, November 23, was a very sensible and interesting affair. The exercises were opened with an organ voluntary, which was followed by the chorus, "Joy, Joy, Freedom To-day," sung by the choir. Short selections from the Scriptures and from the writings of noted men were read by Mr. Rowland Connor, when the choir sang a beautiful dedicatory song, the words and music of which were arranged for the occasion. Addresses were delivered by Mr. F. E. Kittredge, Mr. Charles Ellis, and Mr. Connor, a trinity of heretics. Mr. Connor said that the society was indebted to Hebrews, Christians, and free thinkers. On the subscription paper were the names of Congregationalists, Presbyterians, Baptists, Methodists, Lutherans, Catholics, Episcopalians, Spiritualists, and Materialists; and, "whatever the motives which had led to these subscriptions, they at least testified to good fellowship and public spiritedness as well as to the decay of bigotry." The departure from conventional methods of church building had, he said, been dictated not by a spirit of innovation, but by the needs of the society and the community. Their Sunday-school and social rooms were intended to give opportunities for the organization of literary and scientific clubs, for the instruction of children in morality, and for that social intercourse which, rightly enjoyed, is the flower of civilization. Their main audience room had been shaped from similar motives. They desired a room in which, so far as possible, all might see and hear with equal ease. Church building in this country had been patterned too much after the European cathedral, which was adapted to the confessional, to processions, to worship only. They needed a building for preaching primarily, and it was this need which had shaped the main room and gallery and arranged the seats. The seats were indeed a great departure from the ordinary and often uncomfortable church pew; and, because of their introduction, some newspapers had charged the Unitarians with trying to make church-going pleasant and comfortable. They were willing to admit the essential correctness of the charge. Mr. Connor dedicated the church to Truth, Justice, and Love. The report in the East Saginaw News, from which the above is condensed, says: "The services closed by the singing of a hymn to the air of 'Old Hundred,' in which the words Justice, Truth, and Love were used as those of the Trinity are in the Doxology." A radical liberal writes from East Saginaw: "The work was done in the broadest manner, and there were no theological limitations whatever. The society is liberal and progressive in every way. The church is a perfect gem throughout, and is a great credit to the society and a most worthy monument to Mr. Connor's patient perseverance. Liberalism can have no better advocate in the highest and best sense than he is, and no surer gain than the establishment of such societies or churches as his." Of the entire correctness of this statement we have no doubt. We congratulate Mr. Connor on his great success.

CATHOLIC PAROCHIAL SCHOOLS.

We called attention two weeks ago to the rapid development in this country of the policy of the Roman Catholic Church to withdraw Catholic children from the public schools and educate them in parochial schools under its own supervision. We pointed out the danger to republican institutions which this policy threatens, and raised the question whether anything can be done to avert it. To this question we now return.

That the Catholics have a perfect legal right to institute schools of their own for the education of their own children is, of course, to be admitted. They have the same right to do this which Episcopalians, Methodists, Baptists, or any other sect, have; and no statute in this country can interfere with this right. But, this right being conceded on the ground of liberty of conscience, the State must firmly stand by its unsectarian public school system as one of the strongest ultimate defences of this same freedom of conscience and as a necessary bulwark of republican government. Let there be on the part of the State no weakening in the position that, as a matter of self-preservation, it must provide and guarantee a common school education, open and free alike to the children of all citizens. And, in order that it may the better maintain this position against the antagonism of the Catholic Church or the indifference of any other sect, there are certain measures that ought to be adopted and rigidly adhered to.

1. The public schools should at once be made really as well as theoretically unsectarian. They are not generally so now, and will not be until the reading of the Bible as a religious exercise, and other special forms of worship, are excluded from them. This is a simple act of justice which it is a public wrong to delay. Not only do Catholics object on the ground of conscience to their children being obliged to join in reading the Protestant Bible or in Protestant ceremonies of worship, but Jews, agnostics, free thinkers, may and do object for their children on similar ground. And since the public schools are supported by the impartial taxation of all citizens, and all kinds of religious believers and non-believers are thus called upon to pay for them, it is a manifest injustice that they should be used to secure an advantage to any one religious sect or group of sects. It is true that this exclusion of the present form of religious exercises from the public schools would not now meet the objection to these schools made by those Catholics who are most eager to establish their parochial schools. Their objection is to the secular school system as such, and their aim is to have schools in which religious instruction can be imparted under their own supervision. But not all Catholics have yet been brought to this position. It is evident, from the article in the *Catholic Review* to which we referred two weeks ago, that there is not a little of "indifference" and "opposition" even among Catholics to the parochial schools. Many of them prefer the public schools as better than their priestly schools, and think that the Church may amply provide for religious instruction elsewhere. Others, perhaps, do not like the idea that their children should be brought up as a religious clan by themselves. They see that this is a free country, with political and social opportunities open to all; but they foresee that these opportunities are more likely to be gained by those who have been educated amidst public interests and relations than by those who have been closely guarded within an ecclesiastical enclosure. For these reasons, it is still important, as one means of resisting the present Catholic policy with regard to education in this country, that the public

schools should be freed from those religious exercises to which the conscientious Catholic objects. And, even if these reasons did not exist, justice demands that these exercises should be abolished, not only for the sake of the Catholics, but many other citizens; and what justice demands should be done.

2. The State should strenuously resist any attempt on the part of the Catholics to secure a division of the public school fund for the support of their own schools. This attempt will doubtless be made. The *Catholic Review* is already advocating it. In its last week's issue, it commended for adoption in the United States the usage in the Canadian Province of Quebec, which makes "a fair division of public funds to Catholics and Protestants alike, according to the relative number of each." To meet all attempts of this sort, whether made by Catholics or any other denomination, every State and the United States should have a constitutional provision prohibiting public taxation or the use of public funds for the support of any sectarian schools. In this country, where, notwithstanding certain exceptions in practice, the avowed principle is completely to separate ecclesiastical from civil administration, there can be no half-way work in such a matter as this. Either the public school system must be put above the reach of all sectarian control and aims whatsoever or else it must be entirely abandoned, and education be given up to such voluntary support as can be secured for it. No republican government in this age will take the latter course. So to do would be suicide. Nor can any State in this country consistently or safely undertake to raise money by taxation for the maintenance of denominational schools over which it has no control. To secure fairness, the public school money would not merely have to be divided into two portions, Catholic and Protestant, but it must be apportioned impartially among all the different sects and religions that are represented in the community, and also to those who adhere to no religious sect. Such an anomalous system in the United States would be full of mischief. It would be manifestly unjust that the fund should be divided in proportion to the number of scholars in the various religious groups, since no right of representation in the management of the schools would go with the taxation. The only plausible plea on the ground of justice would be that each of the groups should receive for its own schools that part of the funds which has come from the taxes of its own members,—a plan which would necessitate that assessors should classify tax-payers according to their religious beliefs! It is a fundamental principle of government in the United States that the State knows its citizens, not as Catholics nor Episcopalians nor Baptists nor Jews nor Liberals, but only as citizens; and no civil government here would assume the duty of taxing the citizens according to the lines of a denominational checker-board for the support of schools of their multifarious forms of belief. The only alternative is a system of common schools non-denominational, non-sectarian, supported by the impartial taxation of all citizens, and open impartially to the children of all citizens. If any class of citizens choose, for any reason, to establish and support other schools for their children, this they have a right to do; but they cannot justly plead to have their share of the public school fund remitted to them. If remitted in one case, it must be remitted in all cases of the kind; and the result would be the destruction of the public school system, on which the very prosperity and safety of republican institutions rest.

3. The public schools should be made so good that Catholic parents, as all others, will see that

their children will suffer detriment by not attending them. And here there is much chance for improvement. Though the public schools are by no means open to all the charges which many Catholic zealots bring against them, yet they are capable of being made greatly better than they are. This their best friends are beginning to see, and various reforms are already proposed. It is certain that, for the money expended upon the public schools, much better results might be secured in preparing the young for the various duties of society and citizenship. Reform should aim at three points: first, to train the mental faculties to work accurately rather than to stuff the mind with knowledge; second, greatly to increase moral instruction and training; third, to graft industrial education upon the public school system. With reforms in the directions here indicated, such as many of our wisest educators are now advocating, our public schools might be made so excellent that parochial schools, even if upheld by the rigid authority of the Roman Catholic Church, would find it difficult to compete with them; and the more enlightened Catholics would not be likely to submit readily to the double taxation which the parochial schools necessitate, when they would only be getting a plainly inferior article.

And, finally, since education is so all-important as a condition of republican government that the government is under obligation to guarantee a certain amount of education to all children in its domain, it might well be maintained that, even if parents choose to send their children to parochial or private schools, the government should have a right to establish some method for examining these children annually within the limits of the common school age, in order to ascertain whether they are receiving the requisite amount and kind of schooling; and one requirement at such examinations, as well as in public schools, should be ability on the part of the older pupils to show that they had been instructed, to a certain extent, in the history and free institutions of their own country. The necessity of meeting such public examinations would tend to counteract some of the evil effects of sectarian parochial schools.

WM. J. POTTER.

THE CHRISTIAN CHURCH AND WOMAN.

III.

In one of the essential doctrines of Christianity,—namely, self-sacrifice,—women have been carefully trained, until, as John Stuart Mill says, that has come to be their pet virtue. This is nowhere better illustrated than in their religion. There is no depth of personal degradation they have not touched in the religious worship and sacrifice of ancient civilizations, and no humiliations of the spirit that mortals can suffer when ostracised by those in no way superior to themselves that educated women in our day have not endured. Seeing this, I have endeavored at many of our suffrage conventions to pass some resolutions embodying the idea that woman's first duty was self-development; and at last, after a prolonged struggle and much opposition, even by women themselves, the following resolutions were passed at our thirtieth anniversary, held in Rochester, July, 1878:—

Resolved, That, as the first duty of every individual is self-development, the lessons of self-sacrifice and obedience taught woman by the Christian Church have been fatal, not only to her own vital interests, but through her to those of the race.

Resolved, That the great Principle of the Protestant Reformation, the right of individual conscience and judgment, heretofore exercised by man alone, should now be claimed by woman; that, in the interpretation of Scripture, she should be guided by her own reason, and not the authority of the Church.

Resolved, That it is through the perversion of the religious element in woman, playing upon her hopes and fears of the future, holding this life with all its high duties in abeyance to that which is to come, that she and the children she has trained have been so completely subjugated by priestcraft and superstition.

The following Sunday, the Rev. A. H. Strong, D.D., President of the Baptist Theological Seminary of that city, preached a sermon especially directed against these resolutions, which met strong clerical criticism and opposition by all the fraternity in the State who chanced to see reports of the proceedings.

One amusing episode in that convention is worthy of note. Frederick Douglass, who has always done noble service in our cause, was present. But his intellectual vision being a little obscured that warm afternoon, he opposed the resolutions, speaking with a great deal of feeling and sentiment of the beautiful Christian doctrine of self-sacrifice. When he finished, Mrs. Lucy Coleman, always keen in pricking bubbles, arose and said: "Well, Mr. Douglass, all you say may be true; but allow me to ask you why you did not remain a slave in Maryland, and sacrifice yourself like a Christian to your master, instead of running off to Canada to secure your liberty like a man? We shall judge your faith, Frederick, by your deeds." The time has come when women, too, would rather run to Canada to taste some of the sweets of liberty than to sacrifice themselves forever in the thorny paths marked out for them by man.

Whatever oppressions man has suffered, they have invariably fallen more heavily on woman. Whatever new liberties advancing civilization has brought to man, ever the smallest measure has been accorded to woman, as a result of church teaching. The effect of this is seen in every department of life.

There is nothing so cheap as womanhood in the commerce of the world. You can scarcely take up a paper that does not herald some outrages on woman, from the dignified matron on her way to church to the girl of fourteen gathering wild flowers on her way to school. I hold men in high places responsible for the actions of the lower orders. The sentiments and opinions expressed by the clergymen and legislators mould the morals of the highway. So long as the Church and the State, in their creeds and codes, make woman an outcast, she will be the sport of the multitude. Whatever can be done to dignify her in the eyes of man will be a shield and helmet for her protection. If the same respect the masses are educated to feel for cathedrals, altars, symbols, and sacraments was extended to the mothers of the race, as it should be, all these distracting problems, in which their interests are involved, would be speedily settled. You cannot go so low down in the scale of being as to find men who would enter our churches to desecrate the altars or toss about the emblem of the sacrament, because they have been educated with a holy reverence for these things. But where are any lessons of reverence for woman taught to the multitude?

And yet is she not, as the mother of the race, more exalted than sacraments, symbols, altars, and vast cathedral domes? Are not the eternal principles of justice engraven on her heart more sacred than canons, creeds, and codes written on parchment by Jesuits, bishops, cardinals, and popes? Yet where shall we look for lessons of honor and respect to her?

Do our sons in the law schools rise from their studies of the invidious statutes and opinions of jurists in regard to women with a higher respect for their mothers? By no means. Every line of the old common law of England on which the American system of jurisprudence is based, touch-

ing the interests of woman, is, in a measure, responsible for the wrongs she suffers to-day.

Do our sons in their theological seminaries rise from their studies of the Bible, and the popular commentaries on the passages of Scripture concerning woman's creation and position in the scale of being, with an added respect for their mothers? By no means. They come oft-times fresh from the perusal of what they suppose to be God's will and law, fresh from communion with the unseen, perhaps with the dew of inspiration on their lips, to preach anew the subjection of one half the race to the other.

A very striking fact, showing the outrages women patiently endure through the perversion of their religious sentiments by crafty priests, is seen in the treatment of the Hindu widow, the civil law in her case, as in so many others, being practically annulled by theological dogmas.

"The most liberal of the Hindu schools of jurisprudence,"* says Maine, "that prevailing in Bengal proper, gives a childless widow the enjoyment of her husband's property under certain restrictive conditions during her life"; and in this it agrees with many bodies of unwritten local custom. If there are male children, they succeed at once; but, if there are none, the widow comes in for her life before the collateral relatives. At the present moment, marriages among the upper classes of Hindus being very commonly infertile, a considerable portion of the soil of the wealthiest Indian province is in the hands of childless widows as tenants for life. But it was exactly in Bengal proper that the English, on entering India, found the suttee, or widow-burning, not merely an occasional, but a constant and almost universal practice with the wealthier classes; and, as a rule, it was only the childless widow, and never the widow with minor children, who burnt herself on her husband's funeral pyre. There is no question that there was the closest connection between the law and the religious custom; and the widow was made to sacrifice herself, in order that her tenancy for life might be gotten rid of. The anxiety of her family that the rite should be performed, which seemed so striking to the first English observers of the practice, was in fact explained by the coarsest motives; but the Brahmins who exhorted her to the sacrifice were undoubtedly influenced by a purely professional dislike to her enjoyment of property. The ancient rule of the civil law, which made her a tenant for life, could not be gotten rid of; but it was combated by the modern institution, which made it her duty to devote herself to a frightful death. The reasoning on this subject, current even in comparatively ancient times, is thus given in the *Mitakshara*: "The wealth of a regenerate man is designed for religious uses; and a woman's succession to such property is unfit, because she is not competent to the performance of religious rites." Thus the liberal provisions of the civil law were disposed of by burning the widow, and she was made willing for the sacrifice by a cultivated sense of religious duty. What is true in this case is true of women in all ages. They have been trained by their religion to sacrifice themselves, body and soul, for the men of their families and to build up the churches. We do not burn the bodies of women to-day; but we humiliate them in a thousand ways, and chiefly by our theologies. So long as the pulpits teach woman's inferiority and subjection, she can never command that honor and respect of the ignorant classes needed for her safety and protection. There is nothing more pathetic in all history than the hopeless resignation of woman to the

*Early History of Institutions, Lecture XI, on the Property of Married Women.

outrages she has been taught to believe are ordained of God.

ELIZABETH CADY STANTON.

EQUAL RIGHTS.

No one's right to life, property, or liberty should be in the least interfered with on account of theological differences. Catholic and Protestant, Jew and Christian, theist, atheist, and agnostic, all have equal rights before the law. The only logical alternative is such persecution as we look back upon with horror. If the massacre of St. Bartholomew was wrong, it is because legal equality, unaffected by doctrinal disagreement, is right. Justly does the constitution of Massachusetts, like those of other States, guarantee that "no subject shall be hurt, molested, or restrained in his person, liberty, or estate, for worshipping God in the manner and season most agreeable to the dictates of his own conscience, or for his religious profession or sentiments, provided he doth not disturb the public peace or obstruct others in their religious worship."

Fail to carry out these lofty principles, suffer any citizen to be liable to molestation or pecuniary loss on account of peculiarities in belief, and there is a double wrong. Not only is the individual defrauded, but all the community is injured by the interruption of that even course of justice which must be kept up sacredly, in order to have any one's right to life, liberty, or property remain secure.

Precisely this double wrong is now possible in our enlightened Commonwealth on account of the statute declaring that evidence of disbelief in God may be received to affect the credibility of a witness. Exactly the same phraseology is used of discharged convicts. So the constitution of Texas, while it gave negroes the right to testify, added,—"the credibility of their testimony to be determined by the court or jury hearing the same." Texas said that the testimony of a negro might be admitted, but not as equal in value to that of a white man. Massachusetts says that the testimony of an atheist or agnostic, perhaps a man like Humboldt or Darwin, or John Stuart Mill or Herbert Spencer, may be admitted, but not as equal in value to that of a Mormon or a Jesuit. Even if this clause in our statute did nothing worse than declare that atheists and agnostics as such are less worthy of belief than other men, that would be a sufficient reason for its repeal. If there is any man whose testimony is to be received with suspicion, it is not he who will swear to nothing of which he has no personal knowledge, and who is willing to avow unpopular views which he holds, not only to his social obloquy, but, in case he has been in the ministry, to his constant pecuniary loss. Is the man who will speak nothing but what he thinks truth, however much it costs him, less worthy of belief than the fellow who comes ready to swear to anything, no matter what? Shall our statutes say to atheists and agnostics: "If you tell the truth about your views, it may affect your credibility as a witness. Cover up your unbelief with hypocrisy, and you will find us ready to believe all you say. If you want to have your life and property and those of your friends protected, you must do your best to cheat the State."

Thus, this law teaches immorality plainly, in spite of the fact that it has not yet been enforced since its passage, less than thirty years ago. One of the senators who heard our petition last winter said that this is a sufficient reason for its repeal. The law against smoking in the streets was repealed simply because it was a dead letter. We want no fossils lumbering up the statute-book and lessening the authority of laws which ought to be

in force. And these dead-letter laws sometimes come to life again, and prove terrible ghosts. Thus, the old obsolete usage of trial by combat was called up in England, not many years ago, to let loose a murderer. In 1381, Parliament commanded that every sheriff should take an oath to put down Lollardism; and this custom was kept up until 1626, when one of these officials protested against having to swear to attack the national Church, which had been for nearly seventy years in power. So the law was repealed as a dead letter; but, if it had remained in force sixty years longer, it would have proved a dangerous engine of oppression in the hands of James II. Is it impossible that sectarian fury may yet stir up this statute against atheists? I should not enjoy testifying in court with a loaded blunderbuss pointed at me, even if it had never been fired off. Probably the discharge would not hurt me, but it might interrupt the proceedings and confuse the jury so as to prevent doing justice. This seems to have been the result, when one of the Star-Route trials was interrupted by enforcing a statute similar to that of Massachusetts. Wisely does Oregon declare in her constitution, "No person shall be rendered incompetent as a witness or juror in consequence of his opinions on matters of religion, nor be questioned in any court of justice touching his religious belief, to affect the weight of his testimony." Similar provisions may be found in the constitutions and statutes of other States. Michigan and Vermont go so far as to forbid all inquiry about the religious belief of witnesses, but this is more than any one has asked of Massachusetts. No one should ask it. Knowledge of the theological position of a witness may be necessary to secure justice. Suppose a medium were prosecuted for obtaining money under false pretences. It might be very important to know whether the witnesses were zealous Spiritualists or confirmed disbelievers in the possibility of going beyond the known laws of natural phenomena. It ought to be plainly understood that repealing the portion of our statutes by which the credibility of a witness may be impugned, simply on account of his disbelief, would still leave it possible for a lawyer to ask any questions which really have anything to do with the merits of the case. No special legislation is needed to enable the judge to say when it is proper to question a witness about his religious opinions. All that would be impossible without the present law is that any lawyer may now get up a free fight about theology, without any excuse from the nature of the case, but merely in order to make a false issue, and bewilder the jury enough to cover up the badness of his cause. Atheists and agnostics are good enough citizens to be willing to stand any questions likely to secure full justice. They object only to attempts to delay justice by wantonly and maliciously assailing their credibility as witnesses. Prohibition of such petty persecution would still leave it easy for the lawyers and the jury to find out all the facts they have any right to know. It should further be remembered that unjustly assailing the credit of a witness is not likely to injure him, but only some of the principal parties to the suit, who are not in the least responsible for his opinions, and may be strictly orthodox. It is the interest of every good citizen to have our courts dispense even-handed justice without regard to differences about theology.

Col. Higginson and other friends of equal rights have tried repeatedly to cleanse our statutes from this foul blot. A bill to that effect was passed by the Senate last winter, but voted down by a small majority in the House. This year, we shall try again, as authorized at the last annual meeting of

the Free Religious Association; and we shall keep on trying until we succeed. Victory cannot be far distant, for there are no vested interests in our way. All the argument is on our side, and nothing is needed but to make the state of things generally understood. We invite the co-operation of all reformers, and call earnestly for due notice from the daily and weekly press. Friends wishing to sign or circulate our petition, which is given below, are requested to call at *The Index* office or address

F. M. HOLLAND.

Box 61, CONCORD, MASS.

COMMONWEALTH OF MASSACHUSETTS.

To the Honorable, the Senate and House of Representatives, in General Court assembled:—

Your petitioners, citizens of said Commonwealth, respectfully represent, That the portion of Section 17, Chapter 169, of the Public Statutes of the Commonwealth, which is in the following words: "And the evidence of such person's disbelief in the existence of God may be received to affect his credibility as a witness," ought to be repealed.

First, Because the principles of justice and freedom forbid that any man's character should be impeached or his testimony disparaged on account of his theological opinions;

Second, Because Article II. of the Bill of Rights guarantees that "no subject shall be hurt, molested, or restrained, in his person, liberty, or estate, . . . for his religious profession or sentiments";

Third, Because discrediting the testimony of an unbeliever would not injure him, but only some innocent third party, immediately interested in the case, and not responsible for his disbelief;

Fourth, Because, without the aid of the statute, the judge can allow the introduction of any evidence tending to advance the ends of justice;

Fifth, Because the preservation of a dead letter on the statute-book impairs the authority of all laws actually in force.

And therefore your petitioners ask that it may be repealed.

LIBERAL ORGANIZATION.

An Open Letter to B. F. Underwood.

Dear Sir,—I take pleasure in acknowledging the receipt of your lines of the 29th ult., and note your suggestion that I state more fully and definitely what, in my opinion, "should constitute the basis of the proposed liberal organization" and "to what statement of principles and purposes" I "would have all members subscribe."

I act upon your suggestion with mingled feelings of pleasure and apprehension; the former, because my heart is deeply involved in the problem; the latter, because the more it is so involved the more do I dread to be misunderstood.

The entire question of the organization of the liberal ranks is, in my opinion, but a repetition of the Columbian problem of placing an egg on end. Columbus smashed the egg to make it stand. So I think we should ask all members of the proposed liberal organization to subscribe to those principles and purposes *only* to which all members could conscientiously subscribe.

If we have any right and title to the faith that is in us as to the ultimate triumph of "Liberalism," that right and title must be based upon the fact that within the incessant change and transformation of opinions by which we are surrounded there must be dominant a constant, unchanging law of development potent to attract all true radical Liberals to one pole, all true adical Reactionaries to the other pole of its magnetic axis. If we then can discover the innermost nature of this magnetism of the ethical law and its socio-diametrically opposed polarities, we shall be in position to state not only what principles,—abstracting from actually existing conditions,—all true radical Liberals should subscribe to, but also what principles we would have them subscribe to, when taking these conditions into consideration.

All the social and political agitation of the present day is, I think, due to the struggle for supremacy between two radically distinct, as yet unrealized, civilizations, one finding its fullest imaginative expression in the social ideals of the Ultra-Catholics (Jesuits), the other in those of the Ultra-Liberals (Socialists). The root of each of these civilizations is a *religious belief* drawing sustenance from the ultimate depths of human wants, affections, and desires. From each of these roots rise the majestic trunk and the far-spreading branches of an *ethical system*. Each shadowing crown bears the leaves, flowers, and fruit of a *social order*. The two trees are of radically distinct species; but the peculiarities of the leaves, flowers, and fruit of the trunk and branches, of the roots and their ramifications, of each tree, are interdependent, and determined by certain opposite traits of human nature, the germs from which they each have sprung. And the peculiarities of each tree are the polar opposites of those of the other. A belief in a God *distinct from* and therefore *without* the universe is the tap-root of Ultra-Catholicism. A belief in a God *identical with* and therefore *within* the universe is the tap-root of Ultra-Liberalism. Hence the true ultra-Catholic expects all that is good from without, the true Ultra-Liberal from within, human nature. The fountain of truth at which the former would drink is *revelation*; that at which the latter would quench his thirst, *philosophy*. The authority of Ultra-Catholicism is armed with the *flaming sword of coercion*, that of Ultra-Liberalism with the *magic wand of conviction*. All for One Only is the principle which governs the Ultra-Catholic state; each one for all, that which must sway the Ultra-Liberal community.

From all this, we must conclude that both civilizations, that of Ultra-Catholicism as well as that of Ultra-Liberalism, are necessary and beneficent manifestations of the social forces, through whose reciprocal action the development of the human race is effected. Such indeed would be the decision of one occupying the exalted position of "Secretary of State for Human Society at Large." But not only is the profession of such secretaries of state for human society too much crowded to be at all profitable, but the span of individual existence of each of us also is so brief as emphatically to necessitate the philosophic man of action's sinking all considerations of social statesmanship in those of the social partisan, taking his stand *within one* rather than *above both* contending parties.

Notwithstanding this necessity, however, the advantages of an occasional philosophic ascent to the heights of "social statesmanship," where all human affairs, becoming equidistant from our point of view, assume their true relative proportions, can scarcely be overestimated. For that height is not a "cold" height removing us beyond all sympathies with mankind: it is but the height from where we can mete out to all men, of whatever creed or endeavor, the equal sympathy of justice. But, for all that, we must not forget again to descend.

In the social order of our day and country, the two civilizations of Ultra-Catholicism and Ultra-Liberalism are incongruously intermingled. This is the characteristic peculiarity of our so-called "Christian" civilization, a hybrid mixture of thoroughly incompatible elements. Not only society as such, but even its individual members, are almost without exception inconsistent and divided against themselves within the limits of their personal convictions.

This latter circumstance is one of the chief obstacles to the successful organization and con-

tinued prosperity of liberal associations. As I believe there will be found few Ultra-Catholics who are not liberal in some of their views, fewer still are the Ultra-Liberals entirely free from Catholic opinions. Most Ultra-Catholics would cry out when brought face to face with the legitimate ultimate consequences of their fundamental principles; most Ultra-Liberals would shrink in horror from the extreme logical conclusions to be inevitably drawn from the adoption of their social axioms.

Hence it is that the more numerous the members of any liberal association are, the fewer will be the principles and purposes to which all of them can conscientiously subscribe. Hence it is also that the *method of organizing* a liberal association becomes almost of more importance than the choice of purpose which is to form the motive of its growth. Indeed, in consideration of this circumstance, I think it of the highest importance for the continued success of any association that it should in no case pursue more than *one single purpose*. Only in this way can it hope for permanence and steady growth. Such restriction should therefore be embodied in its constitution, with the proviso that only absolute unanimity shall effect its abrogation. But, even if the association should be unanimously in favor of the indorsement of two distinct liberal principles, it would be much better to *duplicate* it—i.e., to form two associations, one for the advancement of each purpose—than to pledge one association to the support of both objects. Such duplication would enable each body to assimilate many who could not conscientiously become members in both. Then any number of such societies, each pursuing a different specified liberal purpose, could maintain such relations with each other as would *not* coerce the less radical minorities; and this union of the societies would grow closer with the gradual education in radicalism of the partially dissenting more timid Liberals. Each association would become a school for the further education of its members in liberal principles, a free field for propaganda in favor of all the purposes represented by the other associations. The partially dissenting timid Liberals could be addressed with that advantage which would accrue from the removal of all fear of coercion. One special society should form the tie between all these organizations. The principle upon which it could be based must be one which can be demonstrated to underlie and genetically determine all other liberal principles and purposes.

Any association, to be effective of public good, must be organized as a "*party militant*." As an army, a "*salvation*" army of Liberalism, it must advance upon the enemy. It must not be satisfied to "hold the fort" it has all along held: it must advance and storm the fortifications now occupied by the opposing forces. This it can only accomplish, if it is properly subdivided, officered, and drilled. The customary internal grouping of associations appears to me little better than that of a mob. Even the army of the United States, in which I have served, is, I think, but imperfectly organized. The machinery of our political life is unjustly derided. In so far as it favors the coercion of the minority, it is indeed responsible for much evil; but the subdivision of political masses, their officering and training, and the systematic assignment of the various duties of political agitation, the performance of which must always precede each elective battle, is necessary, beneficent, and proper. Any organization of the Liberals of this country, to be effective of good, must partake of this machinery of political war.

As I stated in one of the articles referred to in

your note, I believe that "The Present Duty of Radical Liberals" consists in the formation of an "ethical party." As I there claimed, I hold that no *political* party is able to keep the path that leads to the right without the guiding light of great moral ideas which it is the office of *ethical* parties to maintain, is thrown thereon from on high. But, since the article referred to was written, I have become almost convinced that even more than this is necessary. To be effective in the performance of its functions, an ethical party must throw a *far-eyed* light; and, to do this, its beacon must be supported upon the heaven-aspiring height of a *religious* party,—that is to say, a *church*.

As already stated, each of the two civilizations which incongruously mingle in the modern state springs from the roots of a religious belief. A belief in a God *distinct from*, and therefore *without* the universe, is the tap-root of ultra-Catholicism. A belief in a God *identical with*, and therefore *within* the universe (i.e., a *Unitary Life of the All*), is the tap-root of ultra-Liberalism. All the various accomplished facts and demands of the two civilizations are but necessary developments and logical conclusions from these two deepest reaching of all fundamental principles. To enter here upon a detailed demonstration of this fact would lead me too far; but I have personally not the shadow of a doubt that the religious belief in a Unitary Life of the Universe or All—i.e., an All-Being—is a principle to which all true ultra-Liberals can and will *eventually* subscribe.

The social demands of Liberals are logically derivable from a Pantheistic view of the universe, even though the individual Liberal maintaining them should decline to be classed as a Pantheist. To give a systematic account of these logically connected demands would, however, be the work of many months; and I must therefore restrict myself to the rather unsystematic enumeration of a few of the more important and available for the purposes of liberal organization.

I. Demands bearing on the Relations of Church and State.

1. The Abolition of the Exemption of Church Property from Taxation.
2. The Abolition of Civil (Legal) Recognition of Religious Days.
3. The Abolition of Civil (Legal) Recognition of Religious Marriage.
4. The Abolition of Chaplaincies in Governmental Organizations.
5. The Abolition of Religious Oaths.

II. Demands bearing on Education.

1. The Abolition of Authoritative Teaching.
2. The Furtherance of Developmental Teaching.

III. Demands bearing on Suffrage and Political Power.

1. The Abolition of Existing Limitations to Suffrage.
2. The Inequalization of Suffrage pro rata of Intelligence.

IV. Demands bearing on the Administration of Justice.

1. The Abolition of Private Expense for Justice.
2. The Legalization of the Plea of "Injustice of the Law."

3. The Enactment of Provisions for Reparation of Wrongs committed by the State against Individuals.

V. Demands bearing on the Relations of the State to the Unavoidable Misfortunes of Individuals caused by Agencies of Nature.

1. The Introduction of Free Insurance of Property by the State.
2. The Introduction of Free Insurance of Lives by the State.

VI. Demands bearing on the Relations of Interdependence in Distress of all Living Beings and their Affections exclusive of that of Sex.

1. The Organization of Succor from Pain of Living Beings irrespective of Race or Species.

VII. Demands bearing on the Sexual Relation.

1. The Liberation of the Marriage Contract from Sectarian Religious Limitations.

VIII. Demands bearing on Property and Taxation.

1. The Abolition of Indirect Taxation.
2. The Enactment of a Uniform Tax on Property.
3. The Resorption of Railways by the State.
4. The Resorption of Land by the State.
5. The Limitation of Inheritance.
6. The Limitation of Property.

In my opinion, any one of the above enumerated objects of agitation, or any other single purpose which is in harmony with the fundamental religious belief of Liberalism in a Unitary Life of the Universe and its ethical corollary that the world cannot be reformed by compulsion from without, but only by conviction from within of the individuals composing it, will answer as a rallying cry for a *first* liberal organization. Yet it cannot be denied that some of the above-mentioned objects of desire exert greater influence than others over the hearts of the liberal masses. Indeed, it appears probable to me that the demands bearing on property and taxation would manifest the greatest concentrating power; but, in this, I may very possibly be mistaken.

Should you be inclined to take the initiative toward the perfection of a liberal organization on the lines drawn in this letter, I suggest that the first step should be to elicit a vote from as large a number of Liberals as can be reached on the relative urgency of agitation for the different objects above enumerated, etc. The purpose which received a plurality of the votes cast, for first urgency, would become the purpose of the first association, the purpose which received the next highest vote would become the object for the agitation of which the second organization would be formed, etc.

Much remains to be said upon the discussion on which I cannot here enter. But I cannot close without once more emphasizing the great importance of the method of organization, also the necessity of abstaining from the coercion of minorities, and for this reason on the multiplication of associations, and the restriction of each one to a single object. Finally, I repeat that, in my opinion, the tie which is to unite all these associations must be a religious one.

I am, dear sir, very sincerely yours,

CHARLES FROEBEL.

AN IMPORTANT QUESTION.

Recently, a gentleman in Scotland set aside a large part of his fortune to be expended in efforts to solve the following question: "What are the best means, consistent with equity and justice, for causing a more equal division of the accumulated wealth of the country, and a more equal division of the daily products of industry between capital and labor, so that it may become possible for all to enjoy a fair share of material comfort and intellectual culture, possible for all to lead a dignified life, and less difficult for all to lead a good life?"

Certainly, this is an immensely important question. Any one acquainted with current events in Europe must know that the social problem there is assuming vast proportions, that the present social condition cannot last a long time, and that there is a demand for a change, which must come sooner or later through a pacific, judicious solution of the above question or by violence and bloodshed. The question is one with which we on this side of the water are concerned, for the necessity of answering it will sooner or later press upon society in this country as it does in the countries of Europe. Only last Thursday, a thousand men, in answer to a call, met in Chicago "to ex-

press their reasons for not giving thanks to the Lord on the national Thanksgiving Day." Their rude shields bore inscriptions like these: "Our capitalistic robbers may thank their Lord that we, their victims, have not yet strangled them." "Shall we thank our lords for our misery, destitution, and poverty?" "Thanks to our lords who have the kindness to feast on our earnings." "The turkeys and champagne upon the tables of our lords were purchased by us." "Why we don't thank: because our capitalistic brothers are happily enjoying our turkeys, our wine, and our houses." Says the despatch: "A procession, headed by two red flags and two black flags of hunger, started off and was wildly cheered; and about five hundred men fell in behind them and marched up Michigan Avenue." The band played the "Marseillaise." Occurrences like these are not without significance for us.

The trustees of the fund generously set aside by the Scotch philanthropist (who declines to allow his name to be made known) have arranged for a series of select conferences between delegates representing numerous associations of capitalists and laborers, and those occupied with industrial problems. The intention is to have the discussions of the conferences, with all obtainable information on the above question, published in a permanent form, thus bringing together valuable data, the result of the labors of many dealing with the subject under very different conditions. The first conference, it is stated, will be held before the end of the present year. The *Herald* of this city, alluding to the conferences, wisely remarks: "Anything which tends to keep before the public mind the great evil and danger to society which must arise from the great disparity of comfort resulting from our modern industrial life, although it may shock those who have only a selfish desire for their own well being and may seemingly give encouragement to wild and foolish socialistic agitation, is none the less desirable. It is not well for any one to dwell in a fool's paradise, shutting his eyes to the stern teachings of history and experience. It is by such blindness, by an unwillingness to gracefully accept the inevitable, that the great class outbreaks of the past have been encouraged. We should be wiser than the Greeks and the Romans, or the nobility of the ancient régime in France. We should profit by their sad experiences; and, if radical changes are necessary in our industrial and social organization, we ought to patiently search out the best means of effecting these changes, and build up a public opinion that will permit the changes to be made without undue friction."

B. F. UNDERWOOD.

EDITORIAL NOTES.

BY B. F. U.

We will send *The Index* and the *Atlantic Monthly* one year for \$6.20.

SAYS the Boston *Herald*: "Rev. Dr. Burchard asked in his Sunday sermon the puzzling conundrum, 'Why am I not in heaven?' A good many Blaine men wish he had gone there the day before the Fifth Avenue visitation."

THE *Christian Statesman* calls attention to the fact that "the Free Religious Association is moving again for the taxation of church property in Massachusetts," and adds: "Although not in Massachusetts, we shall bear our part in the discussion, and shall watch its progress with interest. It is really a national question, and the act of Massachusetts will be but an incident in its final settle-

ment." From the same number of the *Statesman*, the following is taken: "The renewed effort to tax church property in Massachusetts is inspired by opposition to Christianity, and especially to any recognition of Christianity by the State. It is part of the programme for the secularization of the State. It proceeds from those familiar enemies of national religion,—*The Index* and the Free Religious Association. Can any one contemplate the increasing tokens of national godlessness in our own and other countries set forth in this paper without the conviction that organized resistance, in some form, to this wide-spread tendency, is the solemn and urgent duty of all Christians?" It is true that the effort to tax church property is inspired by opposition to any recognition of Christianity by the State, and is in the direction of complete State secularization; but the entire movement is inspired by something deeper,—by a sense of justice and love of equal rights and religious freedom. Christianity, like every other religious system, should depend upon its own merits to commend itself to the acceptance of men, and not upon compulsory support enforced by civil power. All religious beliefs and observances, which do not violate laws founded upon the principles of natural morality, should be protected, but none should be favored by the State. In this great republic, where the experiment of popular government is being tried on a grand scale, every vestige of the union of Church and State, which has been, and in some countries still is, a great hindrance to freedom and progress, should be speedily and totally abolished. All religions should be left entirely to the voluntary support of those who believe in or choose to support them. The State should be entirely secular. If this is "national godlessness," then "national godlessness" is national justice, and is exactly what is needed in the government of this country.

"THE renewed effort to tax church property in Massachusetts" is an effort to advance the cause of public justice and morality, and deserves the encouragement and support equally of Christians and non-Christians who are opposed to the wrong of compelling men by law, regardless of their own convictions, to sustain churches used for religious worship. Any sect or any system, like the Christianity of the *Christian Statesman*, for which in our opinion it would be unjust to hold Jesus, the free-thinking Nazarene, responsible, that puts itself in opposition to public justice and morality, is sure in this enlightened and progressive age, sooner or later, to be defeated and damned beyond redemption. In this belief, *The Index* will continue to insist upon the taxation of church property, the abolition of the judicial oath, the exclusion of religious exercises from our public schools, the secularization of Sunday, the discontinuance of religious proclamations by the President and Governors of States, and such other reforms as are necessary to effect a complete separation of Church and State. This righteous movement, inaugurated in Europe by the French Revolutionists, introduced into this country at the beginning of our national existence by Jefferson and Paine, encouraged by Washington and Franklin, advocated half a century later by the able pens of Judge Thomas Herttell and Judge E. P. Hurlburt of New York and Abner Kneeland of this city, and by *The Index* from the date of its foundation, and many years earlier by Houston's *Correspondent*, Owen and Frances Wright's *Free Inquirer*, Vale's *Beacon*, the *Investigator*, and other liberal papers, is right; and it must ultimately triumph. It has of late suffered from the folly of some of its short-sighted friends, as has every other reform in some period of its progress; but, being in accord with the moral and

progressive spirit and tendencies of the age, neither the mistakes of friends nor the opposition of enemies will discourage its adherents or prevent its success.

THE *Christian Union* says of Carlyle:—

There is not a note of joy in any line of any letter or any entry in any journal. His life was one long November day. He bore its cold blasts bravely; but he never knew an intermission in the storm, never saw a ray of sunlight breaking through the gray clouds. He never so much as heard the voice, "Come unto me and rest." "My life here these three years has been sere and stern, almost frightful; nothing but eternity beyond it, in which seemed any peace." This one sentence gives a true picture, not of three years merely, but of the whole eighty-five. The best that Natural Religion can ever hope to give the world it has given in Thomas Carlyle. If there is in his letters any trace of acquaintance with the Christianity of Jesus Christ, we have failed to discover it.

Among the causes that made Carlyle's life "sere and stern, almost frightful," most powerful was that Christian theology, the sad effect of which on Scotch character is described by Buckle, the influence of which (chiefly by inheritance) but partly by education, affected profoundly the entire life of Carlyle. He outgrew belief in it as a system, but he could not outgrow the effects of generations of ancestral belief and the mood induced thereby. It is doubtless true that his life would have been more harmonious and happy, could he have remained in that belief. Much that was anomalous, incongruous, and discordant in his disposition was due to an intellectual development involving the extinction of this faith, and the persistence of traits and tendencies which through many generations had been largely formed and fostered by it, and which in his strong nature, severed from their source of renewal and in conflict with his positive convictions, made him continually at war with himself as well as in antagonism to others. That "the best that Natural Religion can ever hope to give the world it has given in Thomas Carlyle," there is no reason to believe. There are many reasons for thinking otherwise. Carlyle was, all admit, in many respects great. He had rugged strength of character and moral integrity, he was a scornful hater of shams, he was for the genuine and the true according to his understanding. His writings have stimulated and encouraged many, and will continue to do so in the future. But a deep and noble philanthropy he did not possess, his judgments of men and measures were generally distorted by unreasonable prejudices, he was opposed or indifferent to the best reforms of the age, he had no sympathy with the weak and the oppressed, he was unable to appreciate the labors of our foremost men of science. He disparaged and abused men who were his superiors in important respects, and he was a chronic grumbler. Such a character with all its undeniable greatness is certainly not "the best that Natural Religion can ever hope to give the world." The character of Emerson, of John Stuart Mill, of George Eliot is far more admirable.

THE Convention of the American Woman Suffrage Association recently held in Chicago was a great success. "Hershey Hall," says the *Religio-Philosophical Journal*, "was packed at every session by as fine-looking an audience as was ever gathered within its walls. Mrs. Mary B. Clay presided; and the leading speakers were Dr. Blackwell, Lucy Stone, Mrs. Livermore, Mrs. H. T. Cutler, Dr. Mary Thomas, Mrs. Haggart, and Mr. Foulke of Indiana. Probably no meeting with the same object was ever held in this city which accomplished as much. Undoubtedly, a stronger impetus has been given to the work, which will grow

The Index.

BOSTON, DECEMBER 4, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

A Study of Primitive Christianity.

BY LEWIS G. JANES.

VI.

MYTH AND MIRACLE IN THE GOSPEL STORIES.

The earliest phase in the development of the Christian faith is that presented in the life and teachings of the Nazarene Prophet; that, in short, which we have attempted to deduce in the two preceding lectures from the record of the Triple Tradition of the Synoptical Gospels. The four Gospels also contain the record of a later phase in the growth of the new religion,—that embodied in the mythical and miraculous accretion which gathered at a very early day around the striking personality of the Man of Nazareth. Though the modern scientific spirit, which recognizes the enduring supremacy of law throughout the operations of nature, including the various mutations of human affairs, would perhaps justify us in relegating the miraculous elements in the gospel stories to the realm of the imaginary and unreal on *a priori* grounds, in view of the importance which these elements have ever maintained in the popular apprehension, we cannot refrain from a further careful consideration of their true historical meaning and the probable sources of their origin.

Demoniacal Possession and the Miraculous Cure of Disease.

We have already suggested that there may be a certain historical foundation for the alleged phenomena of demoniacal possession and exorcism, interpreted as the relief of nervous diseases, such as epilepsy or hysteria; and a like germ of actual fact may lie at the basis of other stories of miraculous cure found in the synoptical tradition. The

influence of a powerful mind and will over impressionable natures is so frequently illustrated in the affairs of our every-day life that it requires no supernatural hypothesis for its explanation. A trusted physician or nurse often exercises a more potent influence over an invalid than that derived from medicine or the more obvious hygienic appliances. Belief in the curative efficacy of religious rites and priestly manipulations is common among all ignorant peoples, resting, doubtless, on similar, wholly natural, and non-miraculous facts, exaggerated by the imagination. We have only to suppose a like exaggeration, such as universally occurs in the oral transmission even of the reports of ordinary every-day occurrences, to account for the greater number of the alleged miraculous events recorded in the synoptical Gospels.*

The Birth Stories of the Synoptical Gospels.

A critical examination of the records of other reported phenomena of an extraordinary character discloses so many discrepancies of statement that, apart from any general scientific hypothesis of the incredibility of miracles, and from the fact that the witnesses to the events are all anonymous and testify at second hand, we are justified in rejecting them by the recognized rules of testimony concerning ordinary statements of fact. We have already pointed out some of these discrepancies in the stories of the miraculous birth of Jesus. Apart from the fundamental disagreements in the narratives of Matthew and Luke, it is wholly incredible that Mark, the earliest writer, and John, the latest biographer of Jesus, should omit all reference to this alleged and most wonderful occurrence, if it had the least foundation in fact.

The natural genesis and growth of these legends among an uncritical and unscientific people like the early Christian converts are easily accounted for. Bishop Lightfoot says of the Jews of this period: "They were given over beyond measure to beliefs in all sorts of delusions, exorcisms, amulets, charms, and dreams. They were ready to believe everything strange, wild, and unnatural." Reuani declares that "miracles were considered at that time the indispensable mark of the Divine and the sign of the prophetic calling."† Nor was this tendency an exclusive characteristic of the Jews. The masses of the people, and even many of the educated classes throughout the Roman Empire, were addicted to like beliefs. The birth stories of the Gospels, indeed, were evidently not of Jewish, but of Aryan origin. The earliest Jewish converts, as we have seen, and their successors, the Ebionites, rejected the story of the miraculous birth and the alleged virginity of the mother of Jesus,—a fact which was accounted to them as heresy by the already growing Orthodoxy of the earliest Christian centuries. The birth stories of the Gospels have much in common with the similar legends related of Krishna, Buddha, Apollo, Horos, and other Pagan deities. Through all of them run the easily discernible features of a primitive solar mythology, to which they are referable for their true explanation. The religion of Jesus at once came into contact and competition with the current faiths of Paganism, and the non-Jewish or Hellenized Christian apologists could by no means fail to ascribe to Jesus the possession of powers as wonderful and of an origin as divine as those claimed for the older demi-gods

* A recent interesting study of the alleged miracles of the present and past generations may be consulted in *The Dictionary of Miracles, Instructive, Realistic, and Dogmatic*, by L. Cobham Brewer, LL.D.

† *Life of Jesus*, p. 230. There are some indications that Jesus was himself less credulous than the masses of his people, and that he did not regard miracles as necessary credentials to his office as a teacher of morals and religion. Thus, he rebuked the Pharisees for "seeking after a sign," declaring, according to the oldest Gospel, "There shall no sign be given unto this generation." (Mark viii, 11, 12).

in strength as time passes." The same paper adds: "Mrs. Livermore, in one of her speeches, animadverted upon that stock objection to woman suffrage; to wit, if women are given the ballot, their votes will be largely controlled by the clergy. In the course of her remarks thereon, she said, 'The Boston Index parades this before its readers constantly.' To the large majority of her hearers, no other inference was possible than that *The Index* was an opponent of woman suffrage: whereas, nothing could be further from the truth. Mrs. S. A. Underwood, the wife of the junior editor of *The Index* and a regular writer on that paper, is a pronounced and active suffragist. Mr. Underwood is in full sympathy with the movement, so far as we know. The assertion that this danger does attend the ballot in the hands of women has at first blushed some force; and, no doubt, it has been pointed out by the correspondents in *The Index*, as it has in most liberal papers. The journal is in no fear that the ballots of the women of America can be used by the preachers and priests against religious liberty. But all such objections are evasions of the issue. The question of suffrage for women is one of right and justice, not of favor or expediency. How they will vote when the ballot box is reached is no man's business. Of one thing we may be sure, however: when women do vote, the polling place will not be approached through back alleys and the ballots handed in at the rear windows of drunkard factories. Neither will women enter the gin-mills by the front door after depositing their ballots, as many men now do." To the comments of the *Journal*, we may add that both editors of *The Index* have for years advocated woman suffrage. Neither has ever urged the above objection against it, nor do we think that it has been presented in these columns by correspondents more than two or three times within the past three years. In almost every number of the paper appears some word in favor of the rights of woman. Among our contributors are some of the most talented and best known advocates of woman suffrage, and their articles have commanded wide attention. The allusion to *The Index*, therefore, which Mrs. Livermore is reported to have made in Chicago, has no foundation in truth,—indeed, conveys an impression the opposite of the truth. And we cannot understand how this talented and worthy lady could have made the allusion, for she takes *The Index* and must know its character. She may have been misunderstood. We shall make inquiry of Mrs. Livermore.

For The Index.

THEOLOGY'S DEMAND.

'Tis not enough that *man* must be enslaved,
And all his nature warped to fit a creed;
That faith, undoubting, be his only hope,
His mind from priestly pow'r be never freed;
That bigotry entraps his reason still,
With false assumption of a right decreed.

'Tis not enough that *woman*, too, is held
In hopeless bondage, where her soul is chained
By stubborn dogmas grim and gaunt and old;
That her fair purity of heart is stained
By contact with confessional and cant,
With mental freedom never gained.

Ah, no! the helpless *child*, in cruel greed,
Is rudely fettered with the iron band
Of stern theology that never yields.
The budding wonder with an icy hand
Is chilled, and growing reason cramped and dwarfed,
All at credulity's absurd command.

MADISON, WIS.

JULIA CLARK-CHASE.

of the Aryan mythology.* How completely these stories were ignored by the earliest Jewish Christians, however, appears in the total absence of reference to them in the Gospels, outside the early chapters of Matthew and Luke, in which they are related.

The Similar Legend of Apollonius of Tyana.

Perhaps the growth of the Christian legend can be better understood and illustrated by reference to the history of another remarkable man whose life was contemporary with the earliest Christian century, and whose story, upon its mythical and legendary side, bears striking and noteworthy resemblances to that of the founder of Christianity as preserved to us in the gospel traditions. Apollonius of Tyana was undoubtedly an historical personage. His leading biographer, Philostratus, whose work has descended to our time, was a Greek writer of repute who lived in the second and third centuries of the Christian era. Before Philostratus wrote, however, several biographies of Apollonius had already been composed, the first during his lifetime by one Damis, his friend and disciple, and others later by Maximus, of Ægæ, and Mæragenes. Ritter says of the work of Damis, which constituted the main reliance of Philostratus in the composition of his more elaborate biography, that it was "probably free from all intentional dishonesty."† The memoirs of Apollonius by Mæragenes are referred to by Origen in his reply to Celsus, and the leading facts in his career were well known before the time of Philostratus.

The General Reliability of the Life of Apollonius by Philostratus.

The biography by Philostratus was undertaken at the urgent request of Julia Domna, the wife of the Emperor Alexander Severus, in the early part of the third century of the Christian era, rather more than a hundred years after the death of Apollonius. Baur ‡ regards this work as a "tendency writing," the object of which was to harmonize the doctrines of the Pythagorean philosophy with the prevailing Platonism of the extant systems of Paganism. He conceives that Philostratus intentionally attributed to Apollonius wonderful works of a like character to those ascribed to Jesus by the Christians, and thus inferentially throws doubt upon the historical value of his biography. The general tenor of the work, however, is unquestionably personal and biographical rather than philosophical. Its defence of the Pythagorean philosophy is fragmentary, incomplete, and wholly incidental to its main object. Its leading facts and features are explicitly asserted to have been derived from the older memoranda of Damis, against which no such suspicion has ever obtained. They were accepted as in the main trustworthy by eminent controversialists of the time, and are confirmed in many particulars by internal evidence and by such allusions to Apollonius as we find in earlier and contemporary writers, and may be regarded as generally authentic, with the same allowance for exaggeration and interpolation in the mythical and miraculous portions of the narrative which we make in our estimation of the Christian Gospels. Ritter, whose treatment of this subject is candid and rational, does not agree with Baur that Philostratus had Christ in mind in composing his biography of Apollonius, and affirms that those who take this view "appear to have looked but

little into the general character of Philostratus as an author."* This conception of Baur may properly be discarded as resting upon no visible evidence, either internal or external to the work itself.

It is noteworthy that all these writings relating to Apollonius were composed in the Greek language, which was the native tongue of their subject. Their authorship is unquestioned; and the memoranda of Damis, the chief source of their information, were written during the lifetime of Apollonius. In all these respects, the biography by Philostratus, which is the only one possessed by us, presents testimonials to its validity superior to the Christian Gospels, the authorship of which is anonymous or pseudonymous, which were written in a language that Jesus did not write or speak, and in the composition of which we have no assured evidence that their writers possessed any memoranda prepared during the lifetime of their subject.

The Life and Labors of Apollonius.

Apollonius was born in Tyana, the capital city of Cappadocia in Asia Minor, shortly after the birth of Jesus.† He obtained his earlier education at Tarsus under one Euthydemus, a well-known instructor, and afterward withdrew to Ægæ, a small village containing a temple dedicated to the god Æsculapius, where he spent some years in study and meditation upon the problems of religion, philosophy, and practical ethics. He there met Euxenus, a disciple of Pythagoras, by whom he was instructed in the philosophy of that eminent teacher. While very young, he renounced the follies and superficial pleasures of society, lived abstemiously upon a vegetarian diet, totally abjured the use of wine, wore no covering upon his feet, and only the simplest clothing. He refrained from cutting his hair, as did the Hebrew Nazarites and Hindu ascetics, and slept upon the hard ground.

After spending some five years in ascetic contemplation and study, he travelled for a long time through the Eastern countries,—Assyria, Persia, Babylonia, India, and Egypt,—studying their different religions and social customs. During his travels, and subsequently, he is said to have performed many marvellous works; though his biographer, in a tone strikingly similar to that of the modern Theosophists and advocates of "Esoteric Buddhism," everywhere disclaims the implication of miracle or violation of law apparently involved in the stories.‡ Apollonius is said to have possessed the faculty of clairvoyance, or "second sight," by means of which he perceived and described the murder of the Emperor Domitian, when many miles distant from the place of its occurrence. He also foretold future events upon the occasion of his own journeyings, and in the more important affairs of Roman history. He is said to have appeared to his friends Damis and Demetorius bodily, though at a distance from his actual abiding place, while yet alive; and to have appeared to the Emperor Aurelian when he was about to destroy Tyana, and to a young unbeliever who ridiculed his doctrine some years after his death.

*History of Ancient Philosophy, Vol. IV. So likewise the author of "Apollonius Tyænus" in the Encyclopædia Britannica.

†Mr. Daniel M. Tredwell, of Brooklyn, N.Y. (Mem. Am. Eta. Soc.), an enthusiastic student of the Apollonian literature, fixes the time of his birth in the precise year from which our era is erroneously dated. Of the exact date, however, there appears to be considerable uncertainty.

‡Pythagoras was also reputed to be a thaumaturgist or worker of miracles, and the healers of disease in general were accredited by the popular superstition as the possessors of remarkable and supernatural powers. These claims should not be regarded as the result of deliberate fraud or dishonesty, but rather as a recognized feature in the current methods of medical treatment, involving an element of mystery and concealment which the profession has not yet wholly outgrown.

Alleged Instances of Demoniacal Exorcism and Cure attributed to Apollonius.

He possessed a remarkable power over the wills and actions of others; something akin, apparently, to the phenomena known to us as "animal magnetism." At one time, he is said to have quelled a turbulent and riotous crowd of people by simply waving his hands over their heads. At Lesbos, he is reported to have cured a young man possessed of devils; and many other instances of demoniacal exorcism are also attributed to him. A young man in Athens, through whom the demon uttered cries of fear and rage, could not face the look of Apollonius,—an incident reminding us of the healing of the demoniac of Gadara by Jesus. In another instance, a statue is said to have fallen, overturned by the evil spirit as he departed out of the afflicted person,—recalling the entrance of the demons into the swine and their destruction in the sea, in the Christian legend.

In Asia Minor, Apollonius is said to have cured many people of the plague then raging; and, in Rome, it was reported and currently believed that he restored to life a girl of noble family who had been dead for some time.* During his life, he was regarded by many as the incarnation of the god Jupiter. He was mentioned with honor by his contemporary, Lucan,† the author of "Pharsalia"; and another contemporary, in contemplating his career, is said to have exclaimed, "We have a god among us!" His death occurred probably at Ephesus, when he was about a hundred years old. It was believed by many that he did not die, but that he was taken up bodily into heaven, as in the stories of the Hebrew patriarch Enoch and the prophet Elijah. A popular legend subsequently assigned the place of his translation to the temple of Diana Dictynna in Crete, upon the occurrence of which event it was said that the voices of young maidens were heard singing, "Quit the earth, O divine Apollonius, and ascend up into heaven."

The Deification and Worship of Apollonius.

After his death, he received divine honors at Tyana and throughout Asia Minor, and was held in universal respect by the Pagan world for many generations. Hierocles, the governor of Bithynia, a noted Pagan controversialist, wrote a work in opposition to Christianity, the main feature of which consisted in an ingenious parallel between Christ and Apollonius. His object, however, was not to claim divine honors for Apollonius, but to combat the similar claim made for Jesus by Christian apologists. His work‡ was rationalistic in its leading features; and he declared that the intelligent heathen did not regard Apollonius as a god, but only as a man beloved of the gods.§ The philosopher Ennapius, in consideration of the remarkable character of Apollonius as described by Philostratus, proposed to entitle his biography 'Επιδημία εἰς ἀνθρώπων θεῶν, *The Advent of the God-Man*. Even Christian apologists, like Sidonius Apollinaris|| and Cassiodorus,¶ have nothing to say against Apollonius, but, on the contrary, speak loudly in his praise.**

A temple was erected to his honor at Tyana, his

*Philostratus, while reporting these marvellous occurrences on the authority of Damis, does not regard them as evidences of supernatural or miraculous power, but refers them to the profound knowledge of the powers of nature which Apollonius had acquired through investigation and study.

†Marcus Annæus Lucanus, a Roman poet, *circa* 23-65 A.D.

‡Λόγος φιλάληθειας, *Words of the Love of Truth, or True Discourse*.

§Our information is derived from the essay of Eusebius, *Contra Hieroclem*.

||*Circa* 431-484 A.D., some time Bishop of Clermont in Auvergne, and author of historical epistles, poems, etc.

¶Lived 468-560 A.D., author of a Universal History to A.D. 519, and other works.

**See *Apollonius of Tyana*. By Albert Réville, Doctor of Theology, Rotterdam.

*The application of the title "Son of God" to Jesus, by a not unnatural misapprehension of the non-Jewish converts to Christianity, doubtless served to suggest and encourage the belief in the divine incarnation.

native city; and his statue was placed therein among those of the gods. Another temple was erected to him subsequently by the Emperor Caracalla, and Alexander Severus enshrined him among his household deities. For four centuries, he received divine honors throughout Greece and Asia Minor, and his renown extended to remote countries.*

The Religion and Ethical Teaching of Apollonius.

The religion inculcated by Apollonius tacitly recognized the gods of the Roman pantheon, but tended strongly toward monotheism. He especially recommended, says Ritter, a pure worship of the Supreme God who is separate and alone, to whom should be offered the pure prayer of the spirit, which requires not even words for its expression. He forbade all animal sacrifices, and also taught that no sacrifices of any sort should be offered to the Supreme God, on the ground that whatever belongs to earth is impurity to God. Herein, doubtless, we see the influence of those Eastern philosophies of which Apollonius was a faithful student.

In his travels, not only in his native country, but in Egypt, Assyria, India, and Persia, he taught everywhere a higher morality than that inculcated by the current religions, and endeavored to reform the grosser abuses of the heathen modes of worship, thus spending his life in the effort to benefit and elevate mankind. Soon after his return from his long sojourn in the East, he applied for initiation into the sacred mysteries of Eleusis; but his popular reputation as a magician, or worker of miracles, caused his application to be rejected. Four years later, however, when his character and the beneficence of his labors were better known, he was received and initiated.† "Apollonius," says a writer in the *Encyclopædia Britannica*, "is not to be looked upon as a shallow and vulgar impostor, though, to influence men's minds, he had recourse to artifices and pretensions unworthy of a true philosopher. With some of the spirit of a moral and religious reformer, he appears to have attempted, though vainly, to animate an expiring Paganism with a new and purer life."‡

Remarkable Coincidences of the Apollonian and Christian Traditions.

We have sketched the salient points in the career of Apollonius thus at length, in order both to rescue from unmerited oblivion the name and story of one who in his day was well counted among the benefactors of mankind, and also, by comparison with the Christian legend, to illustrate the growth of mythical and miraculous accretions around the record of a noble human life. The relegation of these elements to their proper region of unreality does not in the least justify us in questioning the historical verity of the personage about whom they have grown into being; nor do the striking coincidences of the Christian and the Apollonian legends detract at all, as some have claimed, from the probable truth of the story of the man Jesus of the Triple Tradition of the Synoptical Gospels. The contemplation of these coincidences, however, and of the leading features in the Apollonian tradition, cannot fail to throw valuable light upon the genesis and development of the Christian *mythus*, and to convince us that

the story of Jesus, on its supernatural side, is no single or unique phenomenon in the history of the world's religions.

The significant fact of the contemporaneous growth of these two legends, each centering about an undoubted historical personage, will go far to explain the similarity of the mythical and miraculous elements which enter into the popular versions of both. Each came into being in the midst of a society familiar with the leading features of the Greek and Roman mythologies, with which were also mingling the similar beliefs of Persia and India. The acquaintance of Apollonius and his disciples with the Eastern mythologies is noteworthy and suggestive. The likeness of the two narratives, however, appears in just this subsequent accretion of myth and miracle, and in nothing else. The personal histories of Jesus and Apollonius—the one an uncultivated Galilean peasant, dying an ignoble death upon the cross at the age of about thirty-three years, in an obscure corner of Asia; and the other an educated pagan, rounding out a full century in the light of the highest civilization then known to the world, and dying in favor, apparently, with God and man—are totally dissimilar. The one was a Pythagorean philosopher: the other taught no system of philosophy; and that which commingled with his simple moral teaching in after times was not the doctrine of Pythagoras, but that of Plato. The supposition that the Christian story was borrowed from the Apollonian is, therefore, as unreasonable as the contrary hypothesis of Baur; and all comparisons between the two narratives made with the intent to throw doubt upon the identity of Jesus as an historical character, or to undervalue his work as a religious teacher, are futile and irrational.

Moreover, the conclusion in regard to the non-miraculous character of the marvellous works reported of Apollonius, through the frank admissions and explanations of Pseudostratus, is precisely similar to the conclusion to which we are compelled by the critical investigation of the gospel stories. In both instances, perhaps, there may be some foundation for the alleged phenomena of exorcism and cure in the potent influence of mind over mind. We discard at once, however, all idea of reality in connection with such relations as that of restoring life to the dead, except as it may have been based upon the relief of some such condition as trance, and assign to their proper mythological sources the origin of the fables about the miraculous birth and bodily translation of Apollonius. The appearance in both the Apollonian and the Christian legends of certain elements, apparently of Eastern or Hindu origin, and the well-authenticated account of the travels of Apollonius in India, together with the attempt of certain recent writers to attribute a Buddhistic origin to the entire gospel tradition, make it imperative for us to examine further the grounds of this opinion.

(To be continued.)

CORRESPONDENCE.

A NOTE FROM MR. SAVAGE.

DEAR MR. UNDERWOOD:—

If I had time, I would like to notice somewhat in detail your article on "Unitarianism and the Free Religious Association" in *The Index* of November 20. But I cannot possibly do it now.

One point, however, I am not willing to see pass unchallenged. You say, "It is not many months since the writer of this article [yourself,] by request, cancelled a lecture engagement which was to be given in a New England Unitarian church, because it was feared the lecture, if given, might prevent expected financial aid from the Unitarian Association." When I first read this, I believed it to be unjust in

its implications concerning the present official management of the American Unitarian Association. I therefore wrote to Mr. Reynolds, the present Secretary, and asked him the plain question. I quote from his reply: "As regards the statement of *The Index*, so far as the American Unitarian Association is concerned, I can say simply that the officers of the American Unitarian Association have too much to attend to to inquire who does or does not deliver lectures before societies that in one way or another it helps, and that they have never showed any disposition to make such inquiries."

Now, I have no doubt of the facts as you state them. But I am convinced it was the minister's own timidity, and that alone which was at fault. And I am further convinced that such action does not represent the attitude or spirit of Unitarianism to-day.

Most sincerely, M. J. SAVAGE.

Nov. 28, 1884.

[The engagement was cancelled, not by the request or desire of the minister, but of leading supporters of the church, business men, some of them radical Liberals, who, we are assured by one of them, felt no timidity, but deemed it best not to have the lecture (which was to be on Voltaire), lest parties should successfully urge it as a reason for withholding the expected help. There was probably no fear that the Association would institute an inquiry; but it was thought that information as to the lecture, conveyed to officers of the Association without any inquiry on their part, would probably influence them in the matter mentioned. That is all.—B. F. U.]

CARLYLE'S RELIGION.—From an article in the *Spectator* in regard to Carlyle's religion, the following passage is taken: "At first, his religion, which was cast in the stern old Hebrew type, insisted a great deal on the everlasting foundations of truth, on the permanent duty of honest industry, on the severe grandeur of constancy and good faith, on the sublimity of God's eternity, and on the magnificence of the heavens. Further, it poured the utmost contempt on miracle as exploded by science, treated the external story of the gospel as childish legend, based the faith in human immortality on a kind of intuition, and ridiculed all positive revelation as Hebrew old clothes. This is what Carlyle's faith was in his manhood. But, apparently, if Mr. Froude may be trusted, it was more hesitating toward the end. He admitted, we are told, that his deep faith in Providence was without evidence, if not against the evidence. When Mr. Froude told him, not long before his death, that he (Mr. Froude) 'could only believe in a God which [*sic*] did something,'—with a cry of pain which I shall never forget, he said, 'He does nothing.' 'For himself,' adds Mr. Froude, 'however, his faith stood firm. He did not believe in historical Christianity. He did not believe that the facts alleged in the Apostles' Creed had ever really happened. The resurrection of Christ was to him only the symbol of a spiritual truth. As Christ rose from the dead, so were we to rise from the death of sin to the life of righteousness. Not that Christ had actually died and had risen again. He was only *believed* to have died and *believed* to have risen, in an age when legend was history, when stories were accepted as true from their beauty or their significance.' In a word, Christianity was not true; and all who 'were pretending to believe, or believing that they believed, becoming hypocrites conscious or unconscious, the last the worst of the two, not daring to look the facts in the face, so that the very sense of truth was withered in them,' were on the side of cant."

BOOK NOTICES.

THE LIFE OF THE BUDDHA AND THE EARLY HISTORY OF HIS ORDER. Derived from Tibetan works in the Bkah-hgyur and Bstan-hgyur, followed by notices of the early history of Tibet and Khoten. Translated by W. Woodville Rockhill, second assistant secretary United States Legation in China. Boston: J. R. Osgood & Co. pp. 269. Price \$3.00.

The first part of this volume is devoted to an analysis, with literal translations, of the greater part of the historical or legendary texts contained in the Tibetan *Dulva*, which is declared to be unquestionably the most trustworthy and probably the oldest portion of the Bkah-hgyur. Not only have we here the life of Buddha as related by Buddhist authors, but the Buddhistic account of the history of the world "from

*The poet and controversialist Lucian, writing about 150 A.D., the friend of Celsus, whom Froude calls "the most gifted and purest-hearted thinker outside the Church, who was produced under the Roman Empire," alludes to Apollonius incidentally in his account of the religious charlatan Alexander of Abonoteichus, whom he supposes to have been instructed in magic by the disciples of Apollonius. Lucian condemned the supernaturalism of the followers of Apollonius as he did that of the Christians.

†"The Eleusinian Mysteries," by François Lenormant, *Contemporary Review*, May, et seq., 1880.

‡Article, "Apollonius Tyænus," *Encyclopædia Britannica*, ninth edition.

the time of its renovation" to the time of Buddha's ministry, with a history of the Church during the hundred and ten years which followed his death. The histories of the councils of Rājagriha and of Vaisali contained in the eleventh volume of the *Dulva* are here translated for the first time. They differ in many respects from the versions of these events previously translated from Pāli or Chinese. Mr. Rockhill thinks that the authenticity of the council of Rājagriha has been doubted on insufficient grounds. One chapter of the volume gives a literal translation of the greater part of a work by the renowned Indian Buddhist, Bhavya. There is another chapter on the early history of Tibet in which the author has endeavored to supplement the researches of those who have preceded him in this field with such additional facts as he has been able to obtain. The appendix contains notes furnished by Dr. Ernst Sen Manu and Bunyiu Nanjio, including a translation from the Bhagavati by the former, and translations of two Chinese versions of the Samana-phala Sūtra by the latter. Mr. Rockhill is a modest and unpretentious author, and claims only to have furnished "materials for those who hereafter may undertake to write a history of the Buddha founded on the comparative study of works extant in the different countries in which his doctrines have flourished." The volume contains material which is not only interesting, but new at least to all except original investigators in this field of religious thought.

B. F. U.

FRESH FIELDS. By John Burroughs. Boston: Houghton, Mifflin & Co. Price \$1.50. pp. 298.

Those who already know from his earlier works this American prose-poet of nature will need no second-hand invitation from reviewers to become *en rapport*, through this new literary venture, with the author of *Wake-Robin* and *Locusts and Wild Honey*. The "Fresh Fields" which this lover of nature offers us photographic views of, through the mediumship of his careful pen, are European fields, those of Great Britain. Two of the longest chapters, entitled "In Carlyle's Country" and "A Sunday in Cheyne Row," are particularly interesting just now, on account of the recent publication of Froude's *Carlyle in London*. The remaining chapters are on "Nature in England," "English Woods,—A Contrast," "A Hunt for the Nightingale," "English and American Song-birds," "Impressions of some English Birds," "In Wordsworth's Country," "A Glance at British Wild Flowers," "British Fertility," and "At Sea." It is delightful in these days of high pressure, hurry, and condensation to come across a cultured, leisurely, careful observer of nature, keenly alive to all natural charms and closely observant of the ways of nature's children,—the flowers, trees, and birds,—and one, too, who can give his readers, as Mr. Burroughs does, the result of those observations and discoveries in language so clear and a style so charming that they seem to see the things he describes with their own eyes instead of through his.

S. A. U.

THE BIBLE TRIUMPHANT. Twelve dozen Sceptical Arguments Refuted. A reply to an infidel work entitled *One Hundred and Forty-four Self-Contradictions of the Bible*, by Mrs. H. V. Reed, author of *Earnest Words to Earnest Sceptics*. Revised, with a preface and an appendix containing infidel testimonies to the truth of the Bible, by H. L. Hastings. London: Samuel Bagster & Sons, 15 Paternoster Row. Boston: H. L. Hastings, 47 Cornhill. 1882.

A few years ago, a little pamphlet was published in which passages from the Bible were set in opposition to one another, to show that the book contained one hundred and forty-four plain contradictions. The compiler was not lacking in anti-theological zeal, but his eagerness to multiply contradictions led him into many mistakes. Some of his imagined contradictions had no contradictions at all. The work of which the title is given above, with a copy of which we have been favored by the author, is a reply to this pamphlet. Mrs. Reed shows clearly enough that some of the alleged contradictions have no substantial foundation; but, in her effort to reconcile other passages which do fairly contradict one another, her theological zeal leads her into fallacies, sophistries, and errors as palpable as any which she exposes. Although she succeeds in exhibiting the ignorance of the author of the little pamphlet she examines, mainly a compilation from previous works of a similar character, she fails to impair the force of

more than about one-fourth, or possibly one-third of them. We suggest now that she try her hand on some of the contradictions shown by scholars like Strauss, Colenso, W. R. Greg, Dean Stanley, and Robertson Smith. Mr. Hastings' addition to Mrs. Reed's work is simply beneath criticism.

B. F. U.

SONGS AND RHYMES FOR THE LITTLE ONES. Compiled by Mary Morrison. New York and London: G. P. Putnam's Sons. 1884. Price \$1.75. Boston: Clarke & Carruth.

This handsome book contains over two hundred pages of rhymes, old and new, adapted to tickle the fancy and inculcate sound morals in the mind of childhood. The compilation forms a perfect storehouse of charming stories told in verse, from which the wearied mother or nurse can bring forward an ever-new and varied stock of amusement to charm the fretful and counsel to check and impress naughty and wilful little ones of the household. Most of the poems are short; but there are a few old friends of sufficient length to send off to a delightful dreamland the most restless and discontented little lad or lassie that shall ever, in the households where this volume may enter, essay to rebel against the power of the "sand man" in his nightly rounds.

THE AGNOSTIC ANNUAL, 1885. London: H. Cattell & Co., 84 Fleet Street, E.C. Price 6d.

This pamphlet of sixty-four pages contains a number of well-written articles, chiefly in exposition and defence of agnosticism. The contents are as follows: "Agnosticism and Atheism," by Charles A. Watts; "Pessimism and Physiology," by C. N.; "The Rationale of Agnosticism," by G. M. McC.; "Islam, or the Universal Hymn," "Agnosticism and Theology," by Charles Watts; "Bruno of Nola: A Poem," by "Lara"; "Mars Hill in London," by M. D. Conway; "The Philosophy of Agnosticism," by "Ignotus"; "Agnosticism and Theism," by W. B. Carpenter, M.D.; "Reply to Dr. Carpenter," by W. B. Taggart; "The Council of Ten," by Thomas Mead; "The Messrs. Facing-Both-Ways of Science," by Edward Aveling; "Agnosticism and Christianity," by F. S. Morris; "Darwin and Theology," by Charles C. Cattell; "The Antiquity of Man," by W. W. Collins; "Scraps," by A. M. D.

THE *Andover Review* for November has the following articles: "The Future Life in the Old Testament," by Prof. Moore; "Competition and Combination," Arthur T. Hadley; "Plutarch and his Writings," A. P. Peabody, D.D.; "The Perspective of American Literature," Prof. Charles F. Richardson; "Aspiration, from the German of Emanuel Geibel," Caroline Hazard. Among the "Editorial Topics" treated of in this number are "East and West," "Services at Ordinations and Installations," "Result of Recent Historical and Geographical Research," and "Papers before the Church Congress at Carlisle." The departments of "Biblical and Historical Criticism," "Literary Intelligence and Notes," "Book Notices," and "Books Received" are full and interesting as usual.

BABYLAND for 1884 reappears in a beautiful bound volume just in time for the Christmas holidays. "Merry" indeed will be the Christmas and "happy" the "New Year" of the babies fortunate enough to receive this as token of the interest taken in them by Santa Claus or other kind friend. Published by D. Lothrop & Co., Franklin Street.

OUR *Little Ones and the Nursery* for December, from the Russell Publishing Co., 36 Bromfield Street, has, in addition to its many beautiful illustrations, more than a dozen interesting tales and poems by first-class writers.

"PANSY" for November is received from D. Lothrop & Co., and is full as usual of pretty pictures and excellent moral stories.

MR. I. M. GAUGENGIGL has attained eminence in his art through pictures, which have been seen in Boston and other cities for the past three years. Every fresh work from his brush makes more manifest the influence of foreign study. His choice of subject is most happy. He is thoroughly in sympathy not only with the subject he selects, but with the public to whom it appeals. For this reason, the fact that he is now engaged upon a painting in the form of a Christmas card, to be reproduced by L. Prang & Co., has an in-

terest for all lovers of art. The demand by amateurs for floral studies is steadily on the increase. Those by Mrs. E. T. Fisher are admirably adapted for the purpose, from their fidelity to nature and the poetic spirit in which they are conceived. Among the more popular publications by this artist are recent studies of Zinnia, and Marigold.

OUR DECEMBER SUPPER.

This social gathering on Wednesday, the 10th, has a special purpose announced in the following hymns, to be sung by all present:—

PAST, PRESENT, FUTURE.

TUNE, "Russian Hymn."

O Earth, thy past is crowned and consecrated
With its Reformers, speaking yet, though dead;
Who unto strife and toil and tears were fated,
Who unto fiery martyrdoms were led.

O Earth, the present, too, is crowned with splendor
By its Reformers battling in the strife;
Friends of hum unity, stern, strong, and tender,
Making the world more hopeful with their life.

O Earth, thy future shall be great and glorious,
With its Reformers toiling in the van,
Till Truth and Love shall reign o'er all victorious,
And earth be given to freedom and to man.

WATCHMAN, WHAT OF THE NIGHT?

TUNE, "Hamburg."

Out of the dark, the circling sphere
Is rounding onward to the light:
We see not yet the full day here,
But we do see the paling night.

And Hope that lights her fadeless fires;
And Faith that shines, a heavenly will;
And Love that courage reinspires,—
These stars have been above us still.

O sentinels, whose tread we heard
Through long hours when we could not see,
Pause now; exchange with cheer the word,
The unchanging watchword, Liberty!

Look backward, how much has been won!
Look round, how much is yet to win!
The watches of the night are done:
The watches of the day begin.

In this spirit, we advocate the complete separation of Church and State, and present our petitions for the taxing of churches and the repeal of the law exposing witnesses to discredit on account of unbelief in God. All interested in these reforms are earnestly entreated to come and hear the addresses which will be given between 8 and 9 P.M. Col. Higginson will preside. Mr. F. M. Holland will read an essay prepared for this occasion on "How Religious Liberty is invaded in Massachusetts," and remarks are expected from several other speakers.

Our zeal for these measures will not, however, cause us to forget the principal object of the whole series of meetings in which this occurs; namely, to promote good fellowship among the friends of freedom and progress. We insist that those who find that their consciences prevent their enjoyment of the social advantages gained by attendance at the popular churches are peculiarly bound to give themselves and their families every possible opportunity of friendly intercourse with their brothers and sisters in the common cause. It is our sacred duty to show that life is all the better worth living for being inspired by noble aims. Accordingly, the doors of Parker Fraternity Hall, Appleton Street, between Berkeley and Tremont, will be open at 6 P.M. to all who are willing to contribute fifty cents toward meeting the necessary expenses. A plain but substantial supper will be ready at 6.30. Both before and after the speaking there will be ample time for social conversation; and every possible effort will be put forth to make all present, especially strangers, feel thoroughly at home. We cordially invite all who love liberty and truth to meet with us.

FOR THE COMMITTEE.

1000 Autograph Albums, \$1 each.....	2,000	Raw Silk Parlor Suit Furniture.....	400
2 Village Carts.....	200	1,400 Gold Finger Rings, Ladies'.....	1,400

Gent's Scarf Pins, Lockets, Fans and Chains, and 92,421 other presents, valued from 20 cents to \$500. makes a grand aggregation of 100,000 presents, thus guaranteeing a present to each and every new subscriber who sends us 50 cents. All of the above presents will be awarded in a fair and impartial manner. Presents will be sent to any part of the United States or Canada. The 50 cents which you send us is the regular price for three months' subscription, and therefore we charge nothing for the present. Our profit will be in your future patronage and the increased rate we will get for our advertising space. Your subscription Free. Get five of your friends to join you, and you will receive the **ILLINOIS AGRICULTURIST** for three months, and one numbered receipt for each of your subscribers, and one extra for your trouble. No postponement. Send ten subscribers with \$5 and we will send you 12 subscriptions and thirteen receipts. **FOR 60 DAYS ONLY!**—This offer will hold good for sixty days only, as we shall limit the number of new subscriptions to 100,000, so we would advise all our friends to forward subscriptions at an early date, as in no case will they be received later than January 1, 1885. **THE ILLINOIS AGRICULTURIST** is the best and ablest edited paper in the country and contains the most complete and reliable information of 20,000 copies, and only requires 80,000 more to get the desired number. It contains eight pages.

Elegant
Gold Watch
For 50c.

500 GOLD WATCHES FREE!

In making up the above list of \$30,000 in Presents, we decided to reserve \$5,000 to be divided equally among the first 500 subscribers received. If you send 50 cents you will be entitled to one receipt good for one present, and if your letter is among the first 500 received you will be entitled to this beautiful watch. We will print in full in the February issue of the **ILLINOIS AGRICULTURIST** the names and addresses of the winners of the 500 Gold Watches. This offer is bona fide and will be carried out to the letter. Send now, don't wait. The **ILLINOIS AGRICULTURIST** is so well established, having already 20,000 subscribers, and is backed by ample capital, so that everyone of our subscribers may be sure of getting what we promise. Indeed we could not afford otherwise with a paper that has already secured 20,000 subscribers on its merit. Undoubtedly some who read this new departure will think an offer to give away \$2,000 in presents is most unreasonable and unprofitable; but let us say to all such persons that it costs anywhere from \$2,500 to \$3,000 to secure a large circulation to a paper. We know of a publisher that spent \$50,000 in one week in giving away free copies and advertising his paper, and the money was well spent, for it secured for him an established circulation that paid good interest on the investment. Publishing nowadays must either be done on an extensive scale or not at all. It costs just as much for matter, and just as much for illustrations, electrotypes, editorial services, rent and for setting up the type for a paper of 100,000 circulation as it does for a paper with 30,000 circulation. On small editions, each one of the above items swells the cost of a single paper alarmingly, but on very large editions, the expense is spread over so many papers that it is almost entirely lost; thus you can see that large profits can be made only by doing a large business. This is precisely what we propose doing with the **ILLINOIS AGRICULTURIST**.

We will send a printed list of the Awards Free, and all Presents will be forwarded to Holders of Receipts as they may direct. Our Old Patrons and Subscribers, whom we number by the thousands, should at once go to work and help us to increase our list, by this grand and generous offer.

Only 50 Cents Secures the **ILLINOIS AGRICULTURIST** three months, and one receipt good for one present. One number of the paper is worth double the subscription price. As to reliability we refer those who do not know to *Land or Mercantile Agency*. **REMEMBER** these are Presents to our Subscribers given to them absolutely Free. (2-Cent Postage Stamps taken. Money in sums of \$1 or less may be sent in an ordinary letter at our risk; larger sums should be sent by Registered Letter or Postal Note, and addressed **ILLINOIS AGRICULTURIST, 162 LaSalle Street, CHICAGO, ILL.**

Modern Thinkers,

Principally upon Social Science.

By Prof. VAN BUREN DENSLOW, LL.D. With Introduction by ROBERT G. INGERSOLL. Including critical analyses of Swedenborg as a Seer, of Adam Smith as an Economist, of Jeremy Bentham as a Law Reformer, of Thomas Paine and Junius as Political Revolutionists, of Charles Fourier as a Socialist, of Herbert Spencer and Ernst Haeckel as Evolutionists, and of Auguste Comte as a Positivist, with an Essay on Wealth in its Relations to Christian Ethics.

The Fifth Edition has just been issued

"Upon the question of money, this volume contains the best thing I have ever read."—*R. G. Ingersoll* (in Introduction).

"We confess that, if we stood on the ground on which Mr. Spencer stands, we should find it difficult to prevent ourselves from being pushed by the stalwart arm of Dr. Denslow's logic into the gulf of ethical nihilism."—*Prof. Goldwin Smith*.

"Now, the whole force of this case depends upon the assertion of Goldwin Smith that Dr. Van Buren Denslow is a disciple of Herbert Spencer. But the assertion is not true in any sense or in any degree. On the contrary, Dr. Denslow is an open antagonist of Mr. Spencer. His essay on Spencer's Philosophy, first published in the *Chicago Times*, while speaking of the man in the usual terms of perfunctory compliment, as have also Goldwin Smith and the *Saturday Review*, is adverse, carping, and depreciatory on every point that he considers. The criticism was regarded as so damaging that Spencer's friends were told they must reply to it or forever hold their peace; and we were confidently assured that the last we should ever hear of Spencer's system was the thud of the clouds that Denslow had thrown upon its coffin."—*Prof. Youmans, in Popular Science Monthly and in Introduction to Current American Edition of the Data of Ethics*.

Stephen Pearl Andrews, as political executor of the late Thomas Paine, is as fiercely indignant at Mr. Denslow's analysis of Paine's politics as Prof. Youmans is at his assault on Spencer's Philosophy. On the other hand, George Jacob Holyoake speaks of the analysis of Paine's political philosophy as "the most masterly refutation of it extant, without showing in his words or in his mind any enmity against the great agitator whom he confutes."

The late Dr. George M. Beard, of New York, wrote to the author: "Your critique on Spencer's *Data of Ethics* has all the force of a discovery in ethics, and is of great value. It deserved to be made the subject of a separate treatise."

THE BEST ALL ODDS RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travelers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches**, which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars**, which are models of comfort and elegance;

its **Palace Drawing Room Cars**, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that it is the best equipped road in the world.

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, and take none other. All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

CURRENT TOPICS.

BY B. F. U.

SINCE the University of London opened its doors to women, many have availed themselves of the privilege. Several hundred are already matriculated. Last year, one hundred and twenty women entered the examinations. Fifty were made "Bachelors of Art," eight "Bachelors of Science," and three "Bachelors of Medicine." Recently, a lady has received the title of Doctor and Master of Arts.

THE Ottawa (Ontario) *Free Press*, referring to the recent defeat in the Vermont legislature of the bill giving women who pay taxes the right to vote in municipal and town elections, says that "in Ontario the so-called 'unprogressive Canadians' are a little more progressive than the people of Vermont. The bill which their legislature rejected is already the law of Ontario. Score one for the premier province of the Dominion."

MR. GLADSTONE'S Franchise Bill, which gives suffrage to millions of men in Great Britain and Ireland, is now law. In obtaining the concession of a conference on redistribution, the Lords gained a parliamentary point which will not be without some advantage to them; but the victory of the ministry, whose programme, as originally announced, was the Franchise Bill now, the Redistributive Bill at a future session of Parliament, is beyond dispute.

At a recent convention of the English Positivists at Manchester, Frederic Harrison said that what was wanted was "a practical scheme of society and politics leading to a new future for the commonwealth of nations." "The Christian priest had nothing to do with the thoughts of ninety-nine out of every hundred of his congregation." The testing question for every system he declared to be, "What have you done and what do you expect to do with this burden of modern poverty, this suffering hopelessness, this degradation of the vast laboring masses?"

DESPATCHES from Rome say that "all Italy is alarmed by a carnival of clerical crime." The language of the announcement is somewhat sensational; but there is no doubt that the publication

of occurrences, in which priests figure prominently as offenders against chastity and the purity of the home, has become so frequent that the popular indignation is very pronounced. The papers contain shocking details, which we do not care to reprint. It is said that these scandals have been urged upon the attention of the Pope, who shows much concern, and has ordered a searching investigation, and demanded that "nothing be left undone that would tend to relieve the Church of the odium which had been cast upon her by her unworthy sons."

A CONVENTION of the Rhode Island Woman Suffrage Association was held at Providence,—two or three of the sessions in the State House,—December 3 and 4. Mrs. Elizabeth B. Chase, the president, delivered an address of welcome. Among the other speakers were Mrs. Lucy Stone, Rev. C. W. Wendte, Miss Susan B. Anthony, Hon. Abraham Paine, William Lloyd Garrison, Miss Mary F. Eastman, Frederic Douglass, F. A. Hinckley, John C. Wyman, Dr. F. F. C. Garvin, and Henry B. Blackwell,—certainly a strong array of speakers. Letters of sympathy and encouragement were read from Elizabeth Cady Stanton, Congressmen Hoar and Long of Massachusetts, and Mrs. Margaret Bright Lucas, a sister of John, and Jacob Bright. The attendance was large, and the deep interest manifested was very gratifying to the friends of woman suffrage.

THE other day, a man was arrested in New York by a policeman for having caused a crowd to collect to hear the result of the Jerome Park races; and he was placed under bonds by the police court to keep the peace. The defendant appealed to Judge Barrett of the Supreme Court, who was unable to discover that the man had committed any offence. "There is one thing," he said, "that people should get out of their minds,—that it was a heinous offence for a citizen to refuse to obey the most extraordinary command of a policeman. It is proper that not only should citizens get that idea out of their heads, if it had been put there,—and it seemed that it had,—but the idea should also get out of the policemen and magistrates. It is not a crime to refuse to obey an order of an officer which is not a proper one." Indifference to personal liberty is as dangerous as disregard of the requirements of social order. It is a duty to insist upon our own rights as well as to observe the rights of others.

THE *Commonwealth* does not seem to comprehend fully the breadth and scope of *The Index* or of the Free Religious Association. In taking exception to a recent statement in this paper which appeared over the writer's initials, it remarks: "*The Index* is the organ of the Free Religionists. If the above represents all the religious consolation Free Religionists can give humanity, we think the sooner they retire from the religious business altogether, the better." When it is considered that the Free Religious Association does not require subscription to any creed as a condition of membership, and that its members individually represent a great variety of beliefs, from Judaism and Christianity

to agnosticism; and, furthermore, that *The Index* keeps standing in every number of the paper a notice that "no writers in *The Index*, editorial or otherwise, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own,"—it will be seen that the remark of the *Commonwealth* is hardly just.

THE New York *Evangelist* says: "There can be no doubt, we think, that the notion that the body of man was first developed from some inferior form of organization, and that the creative act consisted in breathing a rational soul into this animal organization, is without a particle of support in the word of God. There is as little room for doubt that this notion is just as clearly unwarranted by the confession and the catechisms to which the Southern Church is so conspicuously loyal. . . . As for the special notion that man, as a physical organism, is an outgrowth of antecedent forms of life, we may, after the manner of Prof. [Henry Boynton] Smith, fitly characterize it as a hypothetical inference abstractly derived from an unproven metaphysical assumption: it is, in fact, nothing more." The theory of the derivation of the higher from the lower organisms is so well sustained by cumulative proof that the great majority of scientific men who have carefully investigated the subject regard it as next to a demonstration. The proof is of a character that any logical mind, with a general knowledge of science, must see its force. "The notion that the body of man was developed from some inferior form of organization, and that the creative act consisted in breathing a rational soul into this animal organization," is a notion in which is combined a scientific fact with a theological fiction, making the notion an absurdity. Such a notion, although frequently asserted by men who try to "pour the generous new wine of science into the old worn-out bottles of Judaism," is, from a scientific and philosophic point of view, ridiculous. If the human body is derived from lower forms, the human mind is derived from lower intelligences, which are correlated with these structures. Otherwise, the animal intelligence must have been expelled from some body to make room for a ready-made human soul, or the dead body of some animal, resembling man in structure, must have been resuscitated to become the tabernacle of a human intelligence. If the intelligence or mind of the supposed animal was evolved by modifications of pre-existing intelligence, why deny that a continuance of the process resulted in the intelligence which was correlated with the physical structure of earliest man, when it is admitted that the human body was developed from the body of an animal? The primary fact of evolution is continuity, which is conspicuous by its absence in the supposed method of creating the human mind and lodging it in the body of a brute. If a theory is presented, it should have, to command respect, at least a certain consistency and coherency of thought, even though it have no facts to sustain it.

DEFINITIONS OF RELIGION.

At the recent Convention of the Free Religious Association at Florence, one of the speakers, Mrs. Diaz, in her very bright and pungent address, raised the question of the meaning of the word "religion" as used in the constitution of the Association. It is not the first time that this question has been raised, nor will it probably be the last. It has been asked at previous meetings of the Association. It has been considered from time to time by writers in *The Index*. And because, when the question is thus raised, no one steps forward to speak for the Association or the answer is given that no individual, be he member or officer, has a right to speak for it in such a matter, an impression is apt to be left that either the Association has used the word without attaching any meaning to it or that its purpose in using the word cannot now be known with sufficient definiteness to admit of an intelligible statement of it. But neither of these inferences, in our opinion, is correct. If no one assumes to answer the question for the Association, it is because of the fact that the constitution of the Association by express clause stringently guards the individual responsibility of each member for his or her opinions. On account of this clause, no one has a right to speak for the Association in the domain of opinions and beliefs; and any member, especially one in official position, who may be asked what the Association means by its use of the word "religion," may well hesitate about answering, lest unguardedly and unconsciously he may impart a coloring and form from his own definition of religion to his interpretation of the Association's use of the word.

That individual members of the Association are at no loss how to define religion, is a proposition which probably no one who has any acquaintance with their writings and speeches will be inclined to dispute. We recall at once definitions which have been given by Abbot, Johnson, Wasson, Frothingham, Weiss, Savage, Lucretia Mott; and others might be found without much effort. Our own definition we have stated and restated in *The Index* and elsewhere. There is a traditional story, resting we believe on fact, that an Andover theological student, who attended one of the earlier conventions of the Free Religious Association, went away and reported that he had heard there as many different definitions of religion as he heard speakers,—some three or five of them. How is it possible, was his query, that an Association calling itself "Religious" should be able to accomplish anything, when its representative speakers and officers do not even agree among themselves as to what religion is? He did not see that a part of what the Association intended to accomplish consists in this very freedom and diversity of individual thought and expression; that one of its leading objects was to show that, under variety of opinion and belief, there might be essential unity of aim and spirit. Very likely, too, these different definitions of religion which have been given by prominent speakers on the Free Religious platform, if closely analyzed, would be found to differ more in form of statement than in substance. But, whatever the difference, it is a difference which is not shared by the Free Religious Association alone. Strict unity in defining religion is not to be found even among strict Orthodox theologians. The word has different meanings in popular usage. The dictionaries give these various meanings. Even the etymological derivation of the word from the Latin is in doubt.

Is it, then, impossible to say or to discover what the Free Religious Association meant by its use of the words "religious" and "religion" in its

name and constitution? We reply that it is by no means impossible. The constitution itself gives the answer, if it is given anywhere. That is the only official, corporate utterance which the Association has ever made concerning the matter; and that *must* be regarded as the corporate voice of the Association itself,—that is, of all its members. Let us go, then, to the constitution and see what it says, bringing to it not any of our individual commentaries upon its meaning, but applying to it those simple rules of grammatical and logical interpretation which have to be applied to any piece of composition to ascertain what it means.

First, as to the use of the adjective "religious" in the name of the Association and in the expression of the third of its three objects as stated in the constitution,—namely, "to encourage the scientific study of man's religious nature and history,"—it might probably be safely assumed that only the common and primary meaning of an adjective so formed was intended to be signified; that is, that the Association was to concern itself with the subject of religion. But the adjective, of course, gives no clue to the meaning of the noun. It simply shows that the Association singles out one of the most prominent and powerful of the facts of human history, and, without assuming any explanation of it, proposes to concern itself with that fact, in all its length and breadth and meaning, whatever these may be. The main point of inquiry, therefore, pertains to the meaning of the substantive "religion" as used in the constitution, and not to the use of the adjective "religious," which merely signifies "relating to religion."

The word "religion" occurs but once in the constitution of the Association. This is in the statement of its first object, as follows: "To promote the practical interests of pure religion." The phraseology here would seem clearly to point to that broad distinction which is recognized in all the specific religions between theological creeds or beliefs and those virtues which concern character and conduct. Even the dictionaries recognize this distinction. In this clause, the Association says that it exists to emphasize the practical, ethical, or conduct side of religion, in distinction from its speculative or theological side. This, then, is the meaning, and the only meaning, in which the Association as a corporate body can be said to use the word "religion." It definitely applies it to matters of character and conduct.

This, as we said above, seems clear from the form of the statement itself. But it is put beyond all possible question by another important sentence in the second article of the constitution, which says: "Nothing in the name or constitution of the Association shall ever be construed as limiting membership by any test of speculative opinion or belief; or as defining the position of the Association, collectively considered, with reference to any such opinion or belief; or as interfering in any other way with that absolute freedom of thought and expression which is the natural right of every rational being." This constitutional provision makes it impossible that the Association, as such, should adopt or indorse any of the definitions of religion which may be put forth on philosophical or theological grounds by any of its members or by other persons, however rational and logical any of these definitions may be, or however important it should seem to the individual holders of them that they should be uttered and urged, or however really beneficial it may be to the progress of thought that these individual views should be proclaimed. As contributions to the free discussion of a great subject, the Association legitimately welcomes such statements, and any well considered opinions concerning religion, on its

platform and in its publications. But, as a body, it distinctly declares that none of them shall be made a qualification for membership.

Not only, then, by the special phraseology of the clause in which the word "religion" occurs in the first article of its constitution, but still more by this sentence in the second article, does the Association clearly restrict and define its own use of the term "religion." It says in the second article that it does not use the term as denoting any kind of speculative opinions or beliefs or systems of theology; and, in the light of what is here excluded, the first article says, as plainly as words can say anything, that by "the practical interests of pure religion" is meant practical righteousness. It cannot be charged, therefore, that the Free Religious Association uses the word "religion," but cannot explain what it means by it. The constitution of the Association is its voice; and that says, without any equivocation, that the word "religion" as there used does not signify any special system of theological beliefs, but is restricted in its application to that more important and more practical part of life which is concerned with conduct. The question, indeed, might still be raised whether some better form of words might not be found to express this same idea; but it cannot be maintained that this amendment is required because the constitution, as it is, logically expresses any other idea.

WM. J. POTTER.

CREATION, EVOLUTION, AND MONAD-
OLOGY.

The so-called scientific world of our time has thrown aside the term "creation," whereby men in former times cloaked their ignorance respecting the origin of things, and has replaced it by the term "evolution." Creation, meaning the making of something out of nothing by Somebody that nobody knew anything about, became, as soon as men dared to trust their eyes, a very transparent cloak, and revealed in all its nakedness the ignorance and presumption which it was supposed to conceal. For this reason, it has given way to evolution. This is supposed to be a less transparent cloak, and for the present, indeed, it is so. But, after all, it is only a cloak which, in spite of its great fashionableness, covers up profound ignorance.

An explanation of any fact or series of facts means the expression of all that is contained in that fact or series of facts in terms already understood. An unknown is never explained by being expressed in terms whose meaning is not comprehended. If I say that the world exists because God created it, and understand neither of the terms "God" and "created," I am merely darkening words without understanding. But I am doing nothing better when I try to explain a fact by means of terms which imply essential conditions not existing in the fact under consideration. If, for example, I say with Schopenhauer that the apple falls to the ground because it wills to fall, I am giving an explanation which means nothing, because the term "will" has no meaning apart from conscious intelligence, which the apple certainly does not possess. *Voluntas non fertur in incognitum*,—that cannot be willed which is not known.

In the same way, if I say, with the so-called evolutionists of the present day, that the world, as it becomes and exists, is the result of the evolution of a single unknown principle, I am saying something which, if carefully examined, is found to have no meaning whatsoever, to correspond to nothing in our experience, and to be, therefore, a mere cloak for ignorance. The term "evolution"

means simply "unfolding," and in its scientific sense is applied to the development of organized beings (plants and animals) from their seed. Now, all such development implies, besides the seed, an environment, between which and the seed action and reaction can take place, and of which the seed, or the active principle in it, can appropriate a part, and thereof build up a material organism. Without an environment, no seed would ever germinate or unfold, no evolution would be possible. Appropriation of foreign material is an essential element in all physical development of which we know anything or can form any rational conception. And what is true of physical development is equally true of spiritual or mental development. We know of no mental evolution that is not dependent on an environment. All is conditioned by action and reaction. If we choose to assume that there is, or may be, an intelligence not so conditioned, we are making an assumption that is purely arbitrary and gratuitous, letting our imaginations run wild in the pathless regions that lie beyond our experience. The simple truth is that a single entity,—call it what you choose, idea, force, will,—evolving through itself, is as unthinkable as a God creating a world out of nothing. In fact, there is, at bottom, no difference between the two pseudo-concepts, creation and evolution: both imply action without reaction, action upon nothing, which, in the case of mind, no less than in the case of matter, is unthinkable.

I maintain, then, that the doctrine of evolution, as at present held, involves an impossible concept, just as the older doctrine of creation did. Not only are these concepts impossible, but the attempt to hold and apply them is fraught with very disastrous consequences to intelligence and to morals. Indeed, any attempt to make the intellect seem to say what it does not say, or to palter with its deliverances, is intellectual dishonesty and the first step toward moral obliquity. But the present view of the conditions of evolution tends toward the same result in other ways. The belief that the world is due to the evolution of a single principle leads to fatalism and to disbelief in the permanency of any individual, and this it does independently of whether we conceive the one principle to be psychical in its nature or not. Now, fatalism and disbelief in the permanency of individuality are both prejudicial to morality. The former makes morality impossible, the latter makes it aimless or unjust. No man can act morally or, for that matter, immorally, so long as his actions are controlled by fate or necessity; and no order of things is moral in which good actions do not produce good results, or in which he who performs them does not exist long enough to receive the reward thereof. That one being should labor and suffer want, while another reaps the fruit of this labor, is eternally unjust and the very essence of injustice, no matter whether this other be a capitalist of the present day or a member of that far-off "coming race," which, it is supposed, will be selfish enough to accept and enjoy all the rewards of the toil and martyrdom of previous races.

If such be the outcome of the current doctrine of evolution, we ought surely to hesitate before accepting it in its present form.

"But," it will be answered, "evolution is a fact; and you cannot do otherwise than accept it." This may be true, but it does not touch the question under consideration. That question is, not whether we shall accept evolution, which is a fact, but whether we shall accept the theoretical explanation of evolution at present current. I say we must not and cannot, (1) because it is not an intelligible theory, and (2) because it is a theory which stultifies the intellect and paralyzes moral

action. "But how can we obviate these objections?" will be the next question. I reply, By casting aside your baseless assumption that evolution is due to a single principle, a universal energy, and assuming the eternal existence of individualities,—in other words, of a multiplicity of principles. When you have done this, you will have given every one of such principles an environment, and made action and reaction and, consequently, evolution possible. But you will also have done more than this. By making your various principles eternal, you have, to a great extent, made them independent of each other, secured them a large sphere of freedom, consonant with their inner nature, and banished fatalism from the universe. At the same time, you have given morality a meaning, and made it possible for justice to be done under the sun. That which exists forever is certain, sooner or later, to receive the full reward of its deeds, be these good or evil; and it is this certainty alone that satisfies the demands of the intellect and the cravings of the heart, and gives life its full significance.

I have said that the notion of evolution's being all due to a single principle is a baseless assumption, and I say so for two reasons: (1) because I have never seen one fact that favored it; and (2) because the whole conception of evolution conflicts with it. In the words of an able writer quoted in *The Index* of November 13, "it seems to me there is not the least ground for assuming a universal, all-effective energy behind the definite complexes of power which actually compel our perceptions. And these compelling powers, when they are not other human beings, are inferior to our own nature." Indeed, I think the true doctrine of evolution may be stated in this way: Every individual of those composing the universe evolves exactly in proportion as it involves itself, through action and reaction, with other individuals different from itself. If this be true, the amount of evolution in the case of any individual will depend upon four things: (1) the number of other individuals with which it is involved; (2) the degree of development of these individuals; (3) their variety; and (4) the degree and kind of involution which is possible with them. A completely evolved being would be one that had involved itself, as far as its own nature would permit, with all the other individuals in the universe; and an absolutely perfect individual would be one that had involved itself with all the other individuals in the universe, down to the inmost depths of their being as fully developed. It is of course plain that, upon this principle, no one individual could be absolutely perfect until all had reached their highest possible development. And this result is in perfect conformity with facts.

The truth is, the doctrine of evolution, instead of seeking to find a basis in Spinozism, as it has hitherto done, must connect itself with a doctrine of monads, such as Leibniz set forth, if ever it is to become intelligible and satisfactory. About a primitive universal energy it is on all hands admitted that we can know nothing, though some have maintained that "the conditions of human thought are such that we must either refrain from thinking of the universal energy at all or think of it as in some inscrutable way psychical."* This would be to think a contradiction. On the other hand, of individual monadic energies we know a great deal, since every human soul is such an energy, and all

* John Fiske in *The Index* for September 4th, ult. It surprises me that a writer of Mr. Fiske's ability and clearness should have allowed himself to pen the last self-contradictory clause. When he uses the term *psychical*, he uses it to symbolize something that he understands, that is scrutable for him, or he does not. If he does not, he is using a word without meaning. Whatever else *inscrutable* may mean, it certainly means *unthinkable*; and to think of a thing as in some unthinkable way psychical is surely a remarkable feat, and one which, it is to be hoped, the conditions of human thought do not compel it to perform.

psychology is but the knowledge of such souls. Human souls, it is true, are monads in a high state of evolution, having risen above sensation to intelligence; but even they, in the first portion of their human career, are only sensitive, and their actions purely instinctive. There seems to exist no valid objection to the hypothesis that all the activities in the universe have their origin in monads, sensitive and intellectual, like the souls of men, or else merely sensitive, like souls in a lower stage of development. Such an hypothesis has found favor with some of the most profound and courageous thinkers that the world has ever seen, e.g., with Giordano Bruno and Leibniz.* Be the hypothesis correct or not, one thing is perfectly certain: that, unless the ultimate energies† of the universe are similar to our own spirits, they will forever remain inscrutable to us, for the simple reason that all knowledge, in order to be true knowledge, must be capable of analysis into psychological facts known directly and requiring no further reduction. For this reason, we may say with perfect certainty that, if ever the universe and its processes are to be comprehended, it will be on the basis of a doctrine of monads, or spiritual entelechies.

"Du gleichst dem Geist den du begreifst,
Nicht mir"

(Thou resemblest the spirit which thou comprehendest,
Not me),

says the earth-spirit in *Faust*, and vanishes, incomprehensible even to God's express image (*Ebenbild der Gottheit*). We must resemble that which we conceive, else we cannot conceive at all. This is why creation and evolution, as at present held in words, are, and must ever remain, incomprehensible to us. Being is not intelligence, as Parmenides thought; but being is feeling and instinct, or it is nothing—for us at least; τὸ γὰρ αὐτὸ αἰσθάνεσθαι εἶναι τε καὶ εἶναι.

THOMAS DAVIDSON.

SUFFRAGE: A PLEA FOR WOMAN.

I.

The present aspect of the Woman Suffrage question revives a recollection of the people of Prussia earnestly but peacefully struggling for constitutional representation. William III. was an unlimited monarch, who sincerely believed that he held his crown by a divine right, and that to give up a prerogative was to betray a trust confided in him by God; and yet the generations had not described a half-score since the people placed his ancestors in power.

There sat William of Prussia reflecting upon the ingratitude of his subjects for asking a constitutional representation! How could the impracticable people know anything about ruling? Was not he the anointed ruler of the land, accountable to God alone? All that he asked of his subjects was unquestioning obedience, and in return he would love them—as long as they loved and were subservient to him. But to ask for constitutional rights was too much: it was treason, and must be resisted. He tried resistance; and soon the question assumed the proportions of a constitutional king, or a king without a crown. And, with a reservation which the kings of "divine rights" always practised, he submitted; and the Germans will henceforth protect their own liberties.

* See an admirable statement of Leibniz's doctrine in Dr. Hedge's recent work, *Atheism in Philosophy and other Essays*, in the essays on "G. W. von Leibniz" and "The Lords of Life." Dr. Hedge himself, one of the most cultivated and fair-minded thinkers of our time, expresses his belief in the doctrine of monads, supplementing it with the Buddhist doctrine of *Karma*, which is but another name for the volitional results of evolution.

† I use the term *energy* (ἐνέργεια) here in the Aristotelian sense, as almost equivalent to *entelechy* (ἐντελέχεια) or monad. I must beg to express my utter dissent from Dr. Hedge's opinion that ἐντελέχεια ought to be rendered into English by *function*.

A few years ago, perhaps since William of Prussia granted constitutional rights to the Germans, a small band of women in this country became imbued with the idea that women who paid taxes on property have rights in that property, individual and inalienable, except so far as they in their own judgment see fit to release control. These women were called crazy adventurers, pestilent agitators desirous of subverting wholesome regulations of national polity. Woman's rights, indeed! What rights had a woman to ask for, except such as her noble protector, man, should choose to grant? It was folly, and every conservative power was invoked to frown down the unreasonable beldames. The pulpit opened its broadside assaults upon the movement as a sacrilegious innovation upon Bible teachings; society looked with scorn upon the devoted band; their gatherings were sometimes intruded upon by a jeering crowd of citizens, often overstepping the bounds of decency in their behavior, whose conduct was condoned by the plea that it was provoked by a lot of women gathered to talk nonsense. But, in some way, these women gained that which they demanded; and now a recorded deed makes a sound title for the sale and transfer of real estate, when signed only by a woman.

A predecessor of William of Prussia instructed his ministers to adopt a general system of education; "although," said Frederick the Great, "I am aware that they will learn their rights, but my contests will be with men, not brutes." These women entered into the contest from the stand-point of education and cultivated refinement: they had but one object, and thought that, if that should be gained, they would be satisfied. But a taste of the fruit from the tree of liberty produces an exhilaration which calls for more, until the partaker feels a sense of being in possession of a fair proportion of the supply. They now ask to be intrusted with the ballot and full citizen rights; for women are not citizens, they are persons amenable to the law, and make up the population which is the people. And if any portion of a community, under a system of freedom for all, be not citizens, they can by no logical conclusion be anything save one of two things: either they are alien residents or that which that word "thing" implies. They are living things, and nothing more. The convict who has served his penal servitude walks the earth a living thing: he is dead to rights as a citizen. There are men who, for an error,—a mistaken yielding to passion,—render themselves justly amenable to penalties of outraged law, but with sensibilities as keen as the judge who sentences or the jury who are compelled to convict, and with sense to know the right and to desire to avoid the wrong; and to such the consequences of their wrong-doing must be a living death.

These women to whom the right of suffrage appears a palladium of freedom, and a release from a position for which they have done nothing to justify a penalty, feel their situation as keenly as that unfortunate convict. But there is a difference which must be frankly admitted. The women never had citizen rights, wherefore they have lost nothing. But is not the craving, gnawing, hankering for a hope deferred as cruel to bear as a penalty deserved, however cruel that penalty may be?

But say some men and many women: "It was never intended that woman should go out from a certain sphere in which she is lovable and deserves to command respect. But give her the ballot, every beautiful characteristic will vanish: she will be unsexed, lost to womanly sensibilities, boisterous, polluted, and useless in the community, if she exercise citizen rights." This declaration is a libel upon the ballot, an accusation that its tendencies are polluting. Such an idea is a corruption

of the body politic, which should be extirpated as carefully and with as much determination as is resorted to for the purpose of destroying a cancer eating vitality from the body material. What is this sphere in which so many men and women think a woman must confine herself to be lovable and deserving respect? It is so conventional, so definite to the understanding and the mind of all, that it would be superfluous to describe, but for its bearing further on. This sphere, then, is to be a wife and mother, with children to wash, dress, and keep clothed with an assiduity which knows no cessation; to cook, wash, iron, scrub, and keep the house in perfect order in every appointment; to instruct the children, and prepare the daughters to fill a sphere,—and all the time appear cheerful, happy, and contented, without which loveliness will be destroyed and respect withheld. If I exaggerate the average sphere of a woman to whom these men and women refer, discount all assertions or applications in the precise proportion that I fail in this picture.

Perhaps unfortunately, perhaps unhappily, but undeniably there are young women who possess a firmness of principle which guides them to the determination that they will be the centre of no sphere until they meet the man who, in their judgment, has those characteristics which will justify the conviction that he is the one with whom they can form and create a sphere where they can be lovable and command respect. In the circle of their acquaintance, no such man presents himself; and, reliantly and fearlessly, they decide upon a career to gain a livelihood. And, when success crowns their efforts, they are precisely as lovable, precisely as worthy of esteem, as if they had followed out the line of the conventional sphere. And I deny that they lower the standard of womanly attributes, whether their capability and taste enable them to succeed at the anvil or plough, the literary chair, the hospital walk, in the farm or field, kitchen or parlor,—in any occupation which is reputable and proper for any man to enter into. If not, why not? Your only answer can be that it is contrary to custom, it is unconventional.

Not three centuries since, it was the custom that a daughter making a request for a new dress, or in regard to placing her affections, or any proposition of moment, should kneel to her father, with eyes lowered upon the ground, and in all humility of demeanor receive his decision as an oracle which would render her unworthy of her sex, if she questioned for an instant or refused to obey without hesitation. And, within this decade, I have seen the report of doings in conventions of various organizations, where the question of the judicious limits for female education was seriously discussed. In slavery times, the economic question of the minimum of food upon which a slave could exist was ever uppermost to the planter. And this was no more cruel a question than to ask at what point to place the maximum of intellectual food for man or woman. It should be all that can be properly digested in either case. A woman deserves to acquire all knowledge within the scope of her capacity.*

J. F. WETMORE.

*It is thought by many persons, particularly our New England friends, that the practice of Germans in the West permitting their wives and daughters to work in the field evinces a lower standard of civilization than that which prevails in New England. This is a prejudice, as I know by experience of many a night passed in German farm-houses, where the women returned from field labor to be the centre of refinement and even culture, as indicated by the completeness and thoroughness of every household duty, accompanied by a display of needle-work and that simple decoration which makes a plain home cheerful, often with efforts of native talent exercised to produce paintings or pictures, with flowers always present. My visits were of a character to cause me to be a welcome guest; and a dance was a usual incident, accompanied by music and singing, sometimes so exquisite as to be as fascinating as any formally arranged affair, and all combined leaving that impression of a "feast of reason and a flow of soul" possible only when the surroundings are those of refinement and culture.

THE MORAL EDUCATION OF CHILDREN.

Many methods by which children in our schools may receive a moral education have been suggested, but I know of none of which such good results can be predicted as that of classes in ethical biography similar to those established by Felix Adler in his Society for Ethical Culture in New York.

All who have had experience of the love of children for what they call "truly stories" know with what interest they listen to such narrations, and how readily their sympathies are excited on the side of truth and justice. The first lessons in ethics are here imparted. The lines of our departed poet—

"Lives of great men all remind us
We can make our lives sublime,
And, departing, leave behind us
Footprints on the sands of time"—

have found an echo in the hearts of thousands, and influenced them to resist the temptation to float idly down the current of time, with no strivings for a higher, nobler life. That there is something in human nature which responds to the good in others, which recognizes the spiritual and moral elements in character, no student of history can doubt. This undeveloped moral germ in the child needs the warmth and stimulus which lives of men and women eminent for the possession and practice of the noblest virtues of humanity can impart. In the young minds wanting these indispensable conditions of moral development and growth, the poisonous seeds afforded by many of the sensational books and papers to which they can readily have access will take root, and bear the fruit of selfish indulgence and vicious practices.

There can be no greater incentives to lead lives consecrated to rectitude and usefulness than the biographies of men and women who have struggled with adverse circumstances and have conquered, whose worth and genius the world now acknowledges. What an influence these classes in ethical biography, under the guidance of a sympathetic teacher, who, like Mr. Adler, would take up the work with enthusiasm, would have on the young men and women going out from our schools to take their places in the great workshop of the world!

To aid in this work of training the children to love and practise usefulness, not only the moral and intellectual faculties must be developed, but the physical also must receive attention. For this purpose, industrial education should become a part of all systems of instruction. Our prisons are filled with those whom selfishness and idleness have induced to lead lives of infamy. They are not, as a class, ignorant men, but oftener those whose intellects have been cultivated, and not the moral or industrial elements of their complex natures. They are the demagogues, the defaulters, those in whom the greed for gold has silenced every good impulse, in whom the passions have been allowed full sway, and in consequence have demanded gratification, and obtained it through brutality and bloodshed. Many of these men would now perhaps be filling honorably their places in their families and society, if the moral impetus, the industrial stimulus, had been early given them by the right kind of examples set before them at home and in school.

The teacher of biography must be adapted to his work, or he cannot be successful. "Knowledge is much, but not all," said Prof. Tyndall. "He must have power as well, the ability to stimulate as well as to inform. The power of character must underlie and enforce the work of the intellect." The success which crowned the efforts of

Prof. Tyndall in the life of hard work and self-denial he led, while pursuing his scientific studies in the German universities, was owing to the spirit by which he was infected by reading the works of Fichte, Emerson, and Carlyle. "The Alpha and Omega of their teaching was loyalty to duty, and this it was which kept him at his work." Through the inspiration, the moral force of the characters and teachings of these men, of whom he says, "Let no one persuade you that they were not great men," we to-day are now blessed with the ripe and vast stores of knowledge of one of our most advanced thinkers and scientists,—one who says "he bears the scars of the battle in which many are now engaged." Shall not our schools have the benefit of his and of other noble lives, and our children be encouraged to emulate them, and these influences go on multiplying and increasing the power of good over evil?

R. F. BAXTER.

EDITORIAL NOTES.

BY B. F. U.

THE University of Heidelberg has done itself no honor in declining 100,000 marks offered by an unknown benefactor, on condition that women should be allowed to study there.

SOME of the papers read before the Science Class, whose meetings are held at the Parker Memorial every Sunday at 12.15 P.M., are of great merit; and the discussions which follow are usually very interesting and instructive.

SAYS the *Christian Union*, "The sorrowful life of Carlyle is a providential answer to the modern philosophy, which asks the young to reject the historic Christ, and anchor their faith to their spiritual intuitions." To what are the lives of Darwin and Emerson, differing widely, but neither of them a "sorrowful life," "a providential answer"? So far as we are able to judge from years of observation, the lives of those who reject "the historic Christ" as a superhuman character are just as cheerful and happy as the lives of orthodox or even heterodox Christians.

THE *Boston Herald*, referring to polygamous marriages in Utah, remarks: "Having failed to interdict these marriages, the government is now embarrassed by the results of its negligence. The most that can be done, apparently, is to prevent, by sure penalties and punishments, the contraction of further polygamous unions; to require a license, publicity, and a record of all marriages; to confirm and extend the disqualifications of polygamists, as a deterrent force with the young men; and to prohibit the immigration of law-breakers recruited by the Mormon missionaries abroad. It is too late to cut up the upas tree by the roots, but it can be girdled and left to die."

THE following Thanksgiving proclamation, issued by Gov. Stoneman of California, is very much like that of Gov. Hoadly of Ohio:—

STATE OF CALIFORNIA, Executive Department.
In accordance with custom, and in conformity with the proclamation of the President of the United States, I hereby designate and set apart Thursday, the twenty-seventh day of November, A.D. 1884, as a day of thanksgiving and prayer throughout the State. In witness whereof, I have hereunto set my hand, and caused the great seal of the State to be affixed at the State Capitol, in the City of Sacramento, on this the seventeenth day of November, A.D. 1884.

GEORGE STONEMAN,
Governor of the State of California.

Gov. HOADLY, interviewed as to his reasons for the omission of the name of Deity in his Thanks-

giving proclamation, said last week to a reporter of a Columbus paper:—

If you desire to know my reasons for omitting to mention the deity, I will tell you. I was reading the New Testament recently, and was thinking if Blaine should be elected what sort of a Thanksgiving proclamation I could issue. I found in the twenty-first verse of the seventh chapter of Matthew that which seems to convey the two principal characteristics of my proclamation,—an intimation that it is not necessary to call upon the deity, and an exhortation to charity. The verse is as follows: "Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven, but he that doeth the will of my Father which is in heaven."

MR. S. E. MOFFETT writes from Kingsbury, Cal.: "The articles of Mr. Curtis on the Mormon question suggest a reminiscence, which I give for what it is worth. Many years ago, an old friend of our family was telling my mother about some boyish jokes perpetrated by himself and a young companion. He said that during the progress of some excavations at Kinderhook, Ill., they prepared some ancient-looking plates, and buried them in the bottom of a hole. When the workmen returned, the plates were discovered and caused a sensation in the archaeological world. This may not be the explanation of the find that Mr. Curtis describes, but perhaps it is."

THE lectures on Emerson, read last summer at the Concord School of Philosophy, have been issued in a handsome volume, under the title of *The Genius and Character of Emerson*, by James R. Osgood & Co. The work is edited by F. B. Sanborn, and comprises lectures by Mrs. E. D. Cheney, Julian Hawthorne, M. Ren  de Poyen Belleisle, Dr. Bartol, Miss E. P. Peabody, F. B. Sanborn, E. D. Mead, Mrs. Julia Ward Howe, G. W. Cooke, William T. Harris, and P. C. Mozoomdar. Also passages from Alcott's correspondence and diary, and poems in honor of Emerson by Miss Emma Lazarus, Ellery Channing, F. B. Sanborn, and Mrs. E. C. Kinney. The work is one which every admirer and student of the serene philosopher will wish to own. Price \$2.00.

SAYS John W. Chadwick, in a recent able and brilliant discourse:—

It is good, old-fashioned Unitarianism, the Unitarianism of William Ellery Channing, which declared that character, not creed, is the essential thing, and that it is our duty, not less than our right, to exercise the fullest liberty of thought concerning the most sacred things. Thousands of times these declarations have been made. Hundreds of times they have been clarified forth upon great public occasions, and have been received with thunders of applause. But it is one thing to say these things or to assent to them in a general way, and it is quite another thing to apply the principles which they involve to a particular case: such, for example, as the famous Year Book controversy, which lately came to such a comfortable, not to say comical, conclusion, spoiling a splendid opportunity for straightforward justice and fidelity to an ideal; such, still more notably, as the constitution of our National Conference, which, had we the courage of our principles, would long since have ceased from being the absurdly contradictory instrument it is to-day. But there are many hopeful signs.

MRS. MARY A. LIVERMORE, in reply to a note of inquiry respecting her alleged allusion to *The Index*, mentioned in these columns last week, writes:—

You are correct in supposing I was "misunderstood." I know very well what is the position of *The Index*, as I take the paper, and read it regularly. Indeed, I was led to subscribe for it because of its noble attitude on what is called "the woman question." Woman suffrage is not so affluent in friends that it can afford to throw over any of its indorsers,—least of all, one that has stood so bravely in its defence these last three years as *The Index*. I could not have said what my Chicago critic affirms. He did

not hear correctly, or he misunderstood. . . . I had in mind two or three contributions to *The Index*, in which this objection was urged. Similar articles have appeared in the *Woman's Journal* and other papers, and have been combated as in *The Index*. But I referred to *The Index* as the exponent of that class of religionists who would be alarmed at the possibility of government being largely administered by clergymen. I was addressing that class at the request of two or three of their number, who asked to have their fears and hesitancy on this subject removed, if possible. I think they understood me, and did not leap to the conclusion that I classed *The Index* among the opponents of woman suffrage, because I referred to articles which had appeared in its columns expressing the reluctance to woman's enfranchisement which they cherished, begotten of the fear that woman's vote may bring back the old days of church interference in affairs of State, and priestly domination. Nothing was farther from my purpose than to misrepresent *The Index*. Nor do I believe that I did.

THE Unitarians do not seem to be disturbed by Rev. M. K. Schermerhorn's reconversion to Orthodoxy; but his attacks on their denomination they seem to regard, and evidently with good reason, as uncalled for and ungenerous. Since the publication of a letter by Rev. Charles W. Wendte, of Newport, from which the following is an extract, Mr. Schermerhorn seems to be more in need of defence than does the denomination which he has left:—

Mr. Schermerhorn informs us that he has "seriously contemplated this denominational change for nearly two years," and has devoted himself during this period largely to preparing himself for it; and yet it is a well known fact that, within the space of two years, Mr. Schermerhorn has still been zealously engaged in New York City in the work of building up a purely theistic society on a far more radical basis than Unitarianism afforded him. Within eighteen months, he has written to friends in this city declaring that he had discarded the Christian name altogether as too narrow for his enlarging faith. The utter collapse of his theistic movement is too recent and well known to require any comment. Unabashed by his failure, Mr. Schermerhorn, having recovered both his Christianity and his Unitarianism, reappeared at our denominational headquarters in Boston as a persistent seeker for ministerial occupation among us. Indeed, his missionary zeal in behalf of our views was so ardent as seriously to embarrass both our officers and parishes, who had become suspicious of the stability of his purposes and justly resentful of his ministerial eccentricities. And thus it happens that no satisfactory settlement and no missionary employment have been found for Mr. Schermerhorn. Until up to a very recent date, he has been in full relation with us, and was an attendant at the National Unitarian Conference only nine weeks ago. In all of this there is, of course, nothing to call into question the seriousness of his present attitude, especially for one who believes in instantaneous conversions. Yet if, as he informs us in his recent letter, Mr. Schermerhorn was induced to enter the Unitarian ministry by a loud call from "one of the largest Unitarian churches in the country," the Unity of Boston, we may be pardoned if, under the circumstances mentioned, we are led to speculate whether a similar call at this juncture might have retained him in our fellowship.

SOME of our liberal friends who supported Mr. George Chauncey when he was denouncing "the tyrant of the sky" and "sky pilots," and dilating on the moral advantages of belief in "one world" only, resent in vigorous language what they regard as the uncalled-for and unjust imputations which he has cast upon them since he became a Spiritualist. Mr. Chauncey is in the habit of talking wildly, drawing upon his imagination for his facts; and his former associates should not be greatly disturbed by what he says. In his transitions from Methodism to Unitarianism, from Unitarianism to Materialism, and from Materialism to Spiritualism, he has indulged so freely in severe and indiscriminating criticism of those with whom he has been successively identified that his recent

utterances reflecting upon the moral character of Liberals generally, and Materialists in particular, will have no weight with thoughtful and fair-minded people of any beliefs or disbeliefs. His recent vituperation is the same in spirit with his denunciation, a year or two ago in Paine Hall, of everything and everybody that seemed to be not in accord with his crude thought and childish impulses. Mr. Chainey expresses "discouragement with the great majority of professed Liberals." To our positive knowledge, they have the past year or two expressed "discouragement" with him. His more intelligent supporters in this city, as several of them distinctly informed us at the time, helped him, with the hope that he would gain knowledge by study and wisdom by experience; but they were disappointed, and withdrew their support. We certainly have no sympathy with those, if such there are, who censure Mr. Chainey because of his recent change of views, although his account of his conversion is as weak as a rope of sand, and the spirit of his recent lectures gives no support to his claim that he is guarded by an angel called "Lily-Dove." At the same time, they are marked by sincerity and by as much consistency and logic as we have been able to discover in anything we have seen from him. What Mr. Chainey needs most to cultivate is charity and liberality, the possession of which by one who is changing his creed and associations often is necessary, to avoid bitterness and strife.

ISOLATION.

For *The Index*.

A young soul sought to wander from the path
Where trod her mates. "Oh, come," she said to these,
"Into some new, broad way, where open out
More light and freedom, where the secrets strange
Of life and death, and mystery of birth,
May be revealed. The milestones worn and old
And time-stained, on the narrow, beaten road,
I read not." But they would not follow her.
"Stay with us," they said: "the path is narrow,
And no view on either side. The hedges
Dense shut off the vista wide; but many feet
Have trod the road, and found their peace at last,—
Thy fathers and our fathers and our friends,—
And at the end is certainty and rest."
She asked no more, but softly to herself
She said, "My love will seek those heights with me."
And, ere the honeymoon had waned, she led
His willing feet out to the open way
Where winds blew fresh and free, and sunny skies
Had charmed her sight. "I breathe, at length," she said,
As, hand in hand, they wandered on to seek
The upland path. And sense of freedom first
Exultant filled their hearts, and new-found joy
That larger prospect grand might be revealed.
But by and by, when they had wandered far
And sat upon the greenward side by side,
He said, "Here let us rest: nor farther seek,
Content with love and this fair scene below,
Nor follow out the dizzy path beyond:
Already thorns have pierced thy tender flesh."
"Tis beautiful," she said, "but fain would I
Go on with thee until my questionings
May find reward, more light, more certainty
Of all the bright beyond." "Tis far enough,"
He said: "the path grows rough and steep, and on
Forever may'st thou go, nor understand
More clear than now." So down the mountain slope
They took their way. The years sped swiftly on,
And children sweet made glad their hearthstone warm;
But oft she thought upon the mountain view,
And longed to see. Too thorny was the road
For little feet. She could not take them there.
But oft to friends she spoke of her desire.
And one would say, "I go part way with thee";
And one, "Thou goest far: it is not meet
For any"; and yet another, "Seek not
What lies beyond that dizzy height at all."
But most said, "Safer is the olden road:
Return, ere yet it is too late for thee."
But once her longing mastered all her fears,
And on she sped beyond the thorny steep,
And up the heights she pressed, with bleeding feet,
To see no limit to the vast beyond.
Life, death, and mystery of being yet
All unrevealed! Night cometh on apace.

ANNA OLCOTT COMMELIN.

The Index.

BOSTON, DECEMBER 11, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index*.

A Study of Primitive Christianity.

BY LEWIS G. JANES.

VI.

MYTH AND MIRACLE IN THE GOSPEL STORIES.

The Alleged Buddhistic Origin of the Christian Tradition.

We have already demonstrated that the Man Jesus of the Triple Tradition of the synoptics was a Hebrew, and a Hebrew only; moving naturally in the Palestine of eighteen centuries ago, speaking the language and discussing the familiar topics of his time and people. His admitted pessimism was native to the soil and thought of Palestine, and neither in its expression nor in its vision of the future did it present any of the characteristic features of Buddhism. If the pessimism of Jesus differed from that of Job and the author of Ecclesiastes, it was rather in this: that it qualified its despair of the existing social order by the great hope and promise of a new and diviner order soon to be established on the earth, in the joys of which all the righteous would consciously participate. To this everywhere present and dominant doctrine of the Gospels, Buddhism presents no analogy.

In examining the ingenious argument of Dr. Felix Oswald in favor of the Buddhistic origin of the Christian tradition,* it is evident at a glance that his analogies, on their Christian side, are borrowed chiefly from the Fourth Gospel, and from the contradictory birth stories of the First and Third Gospels, which, as we have seen, are excluded from the material upon which we are permitted to draw for a rational outline of the life and thought of Jesus.† Other alleged analo-

* *The Secret of the East*. By Dr. Felix Oswald. Compare especially the "Concordance of Buddhism and Christianity," pp. 128-139 in Appendix.

† Cf. paragraphs 1-14, 16, 19, 21, 24, 27, pp. 128-136, *Secret of the East*.

gies bearing upon the mythical or historical sides of the narrative of the Synoptical Gospels, like the stories of the temptation, the transfiguration, and the choosing of the disciples,* bear so little resemblance in detail and present such marked points of dissimilarity that the candid critic can discover therein no evidence of derivation the one from the other. Of the alleged "Dogmatical Analogies,"† some tested by a true critical analysis are found neither in the Synoptical Gospels nor in the authentic teachings of Buddhism; and others have been shown to grow so naturally out of the Judaism of Palestine that no hypothesis of foreign influence is required to account for their natural genesis and development.

On the other hand, it must be admitted that some notable analogies may be discovered between the Buddhist *mythos* and the birth stories of the First and Third Gospels, and the possibility that the mythical accretions which gathered about the historical personalities of Prince Siddhartha and Jesus had a common origin may also be admitted. That the origin of the Christian *mythos* can be traced directly to Buddhism, however, it would be difficult to prove. It bears the easily discernible impress of a solar mythology, the leading features of which were widely distributed throughout Asia and Europe.§ Upon this question, probably, there is no better authority than Prof. Max Müller, who acknowledges the startling coincidences between Buddhism and Christianity and the prior origin of the former faith. In reference to alleged historical channels through which Buddhism has influenced Christianity, however, he declares: "I have been looking for such channels all my life, but hitherto I have found none. What I have found is that for some of the most startling coincidences there are historical antecedents on both sides; and, if we know these antecedents, the coincidences become far less startling."||

The Growth of Miraculous Legends Illustrated in the Gospel Stories.

Investigating further the miraculous relations of the Gospels, we find that the Triple Tradition contains no record of the restoration of the dead to life by Jesus, the only occurrence popularly interpreted to be a miracle of this character being the cure of the daughter of Jairus,|| where Jesus explicitly declares "the damsel is not dead, but sleepeth." The rational explanation of this event may doubtless be found in the well-known phenomenon of trance. In Luke, we have the exaggerated account of the raising of the widow's son;** while the Fourth Gospel, with great detail, relates the still more marvellous story of the restoration of Lazarus to life after he had been dead four days.†† It is absolutely incredible that these occurrences, if having any foundation in fact, should be unknown to the writers of the earlier Gospels, or,

* *Secret of the East*, paragraphs 15, 17, 20, pp. 132, 133.

† *Secret of the East*, pp. 136, 137.

‡ Where, for instance, can we discover the "belief in the necessity of redemption by a supernatural mediator," or in the efficacy of vicarious atonement, in the authentic teachings of Buddhism, in anything like the Christian sense?

§ This is likewise true of the mythical elements in the Apollonian tradition, the ultimate origin of which, like those in the gospel stories, may be traceable, perhaps, to India, but not directly to Buddhism.

|| From a letter addressed to a conference on Buddhism held at Zion College, in June, 1882, to discuss the real or apparent coincidences between Buddha and Christ. Prof. Müller also declared such a discussion, in general terms, almost an impossibility, saying that "the name of Buddhism is applied to religious opinions, not only of the most varying, but of a decidedly opposite character, held by people in the highest and lowest stages of civilization, divided into endless sects, nay, founded on two distinct codes of canonical writings." See Max Müller's most recent work, *India: What it can teach us*, pp. 108, 109, note by Dr. Alexander Wilder (Funk & Wagnalls edition, "Standard Library"). The early date of the *Latita Vistara*, defended by Dr. Oswald, is not accepted by such recent writers on Buddhism as Rhys-Davids and Oldenberg, than whom, I suppose, there are no more reliable authorities.

** Mark v., 37-42; Matt. ix., 23-26; Luke viii., 51-55.

†† Luke vii., 11-17.

†† John xi., 1-46.

if known, that they should not be reported.* By the investigation of these similar legends, we are led to the consideration of the principle underlying the growth of marvellous relations.

It appears to be a universal rule, in the Bible as elsewhere, that miraculous legends are subject to a regular law of growth,—a rule which, if recognized and admitted, at once and completely destroys their alleged character as actual occurrences except as they are susceptible of an entirely natural explanation, and consequently their historical value as evidences of supernatural power. Such stories become uniformly more numerous and more marvellous as time separates the historical events about which they cluster farther and farther from the period of their relation. This is true, even of eras when a belief in the possibility of miraculous occurrences is common. In the writings of the eighth century prophets,† who spoke of their own personal times and experiences, there is hardly a trace of the miraculous; while the Books of Samuel, Kings, and Chronicles, written long after the events which they describe, contain many marvellous relations. The first of the apocryphal books of the Maccabees is a plain historical narrative almost entirely free from miracle; while the later books, five in all,‡ exhibit a steady and constant development of the miraculous as the time of their composition recedes from the period described.

The Epistles of Paul, the earliest writings of the New Testament, report none of the miracles of Jesus, though Paul himself was a believer in "signs and wonders."§ Mark, the oldest gospel, contains fewer miracles than either of the other synoptics; Luke contains more marvellous relations than Matthew; while the Fourth Gospel, though its miracles are less numerous and more obviously selected to serve the special purpose of its writer, exhibits a vast exaggeration in the direction of thaumaturgical effect. The birth stories of the synoptics, absent wholly from Mark, the earliest gospel, found in their simplest form in Matthew, amplified in Luke by the account of the annunciation to the mother of John the Baptist and the story of his birth and relationship to Jesus, are still more exaggerated in the later apocryphal Gospels, where we find not only the basis of the Catholic dogma of the Immaculate Conception of the Virgin Mary, but also many marvellous stories of the childhood of Jesus, illustrated by miracles introduced for a purely thaumaturgical effect, such as making mud birds and causing them to fly, and changing a child into a kid. The story of the calling of the earlier disciples in the synoptical Gospels, related simply and naturally in Mark and Matthew, is expanded and embellished in Luke by the wonderful narrative of the miraculous draft of fishes.

Miraculous Legends of a Mythological or Allegorical Character.

The gospel stories of walking on the water and stilling the tempest, if not legends of a purely mythological character, may have grown out of certain parables or allegorical sayings of Jesus, intended to illustrate the truth that man can overcome the extremest obstacles and difficulties as long as he is sustained by the courage which constant faith bestows, but, with the commencement of fear or distrust, his failure becomes cer-

tain. Goethe assigns to these stories a place of high honor among legends which excel in beauty and depth of meaning.* The story of the miraculous feeding of the multitude may also be of a parabolic or allegorical character, growing out of such sayings as the beatitude, "Blessed are they who hunger and thirst after righteousness, for they shall be filled." If so, these legends are to be interpreted, not as the relation of actual and material occurrences, but as parables, illustrating an obvious interior and spiritual truth. These stories, however, bear some of the characteristic signs of the solar mythus,—signs which become still more evident in the reported miracles of the Fourth Gospel.

Remarkable Character of the Fourth Gospel Miracles.

A further investigation of this remarkable Christian epic in this connection cannot fail to confirm our previous conclusion in regard to its artificial and unhistorical character. In the mythologies connected with other religions, careful students have recognized a notable recurrence of similar circumstances or events in the stories of the various incarnations of the solar deity. Thus, in the Greek and Roman systems, we have reported the twelve labors of Herakles. In the great Babylonian epic, we have related on twelve distinct tablets as many wonderful adventures of the hero Izdubar, whose father was Shamash, the sun.† Among the early Hebrew legends, we have similarly reported the twelve mighty deeds of Samson, whose name also signifies the sun, or one born of the sun.‡ These stories were all originally intended to symbolize the passage of the sun through the twelve astronomical signs of the zodiac; though in after times, and to the popular apprehension, their natural origin was forgotten, and they came to be regarded as narrations of historical facts.

It is a striking fact, and one which has apparently escaped the observation of scholars, that we have certain similar features presented to us in the great Christian epic of the Incarnate Logos,—the Fourth Gospel. The number of the miracles in the Fourth Gospel is commonly stated to be only seven; but, if we bear in mind that we have here not merely the biography of the man Jesus during the short period of his life and labors in Palestine, but the story of the eternally existing Logos, the number of his wonderful works, as herein related, becomes precisely twelve, no more and no less. These are: 1. The creation of the world. "The world was made by him, and without him was not anything made that was made."§ 2. The Incarnation. "The Word was made flesh, and dwelt among us; and we beheld his glory, the glory as of the only begotten of the Father, full of grace and truth."|| 3. The turning of water into wine.¶ 4. The manifestation of clairvoyance, or "second sight," in his interview with the woman of Samaria.** 5. The cure of the nobleman's son, who was sick of a fever.†† 6. The cure of the impotent man.‡‡ 7. The miracle of the loaves and fishes.§§ 8. Jesus walks upon the water at the Sea of Galilee.|||| 9. He cures a blind man at the pool of Siloam.¶¶ 10. He raises Lazarus from the dead.*** 11. Jesus himself rises from the tomb after the crucifixion.††† 12. He appears to the disciples after the resurrection.‡‡‡

The Fourth Gospel Miracles interpreted on the Solar Hypothesis.

It is likewise evident that all of these alleged miracles—no two of which are precisely similar in character—have an obvious meaning as interpreted by the solar theory. The creation legend of the Old Testament has long been recognized by scholars as a myth of the dawn, when the rising sun, moving on the face of the waters, reveals first the earth, then the planets, then the various animals, and, last of all, man, as he comes forth to pursue his daily labors.* So, too, in the Logos epic, the creation of the world may obviously be regarded as the work of the solar deity, not yet incarnate. The incarnation itself is a miracle so universally attributed to the sun-god that it is necessary only to recall the fact to establish the *a priori* probability of its solar character. The transformation of water into wine is but a poetical figure for the ever-recurring wonder which the sun is working in nature. The phenomenon of clairvoyance, of a vision penetrating into all secrets and to the uttermost parts of the earth, is attributed by the mythologies of many nations to the "all-seeing eye" of the sun.†

The miracles of cure are simply poetical statements of the universally recognized fact of the healthful and life-giving energies of the solar rays. Especially is this interpretation significant in the alleged restoration of sight to the blind. It is a beautiful symbol of the sun's beneficent influence accompanying the dawn of every day and the dissipation of the darkness of night. The sun also gives power to the impotent; and, as he marks the passing of the years, he allays the hot fever of youth. So, too, the sun brings food to all the children of man. He multiplies abundantly the "loaves and fishes" for the multitudes of to-day as well as eighteen hundred years ago, by his wonderful fertilizing power.

At the dawn of every new day, the sun-god comes to his wondering worshippers, walking over the sea,—his touch so miraculously light that no tiniest wavelet bows its crest beneath his tread. The resurrection myth, too, was a characteristic feature of the solar cultus in Babylonia, in Egypt, in the sacred mysteries of Mithras and Eleusis as well as in the Christian gospel. And, last of all, on every morning appears to his disciples, after the resurrection,

"The dead earth's divine Redeemer,
Giver of the Light and Law."

When we further recall such expressions as, "In him was life, and the life was the light of men. And the light shineth in the darkness, and the darkness comprehendeth it not"; "That was the true light, which lighteth every man that cometh into the world"; "Every one that doeth evil hateth the light, neither cometh to the light lest his deeds should be reproved"; "For I am come down from heaven . . . to do the will of him that sent me"; "I am the light of the world"; "Yet a little while is the light with you. Walk while ye have the light, lest darkness come upon you"; "While ye have the light, believe in the light, that ye may be the children of light,"—our conviction of the origin of these figures and illustrative miracles in the solar mythology is strongly confirmed.

We would greatly err, however, if we should therefore relegate the entire gospel to this physical and mythological region for its explanation, as certain riders of the solar hobby have attempted

* See *Bible for Learners*, Vol. I.

† Like phenomena, as we have seen, are attributed to Apollonius of Tyana.

* These miracles were not done in secret, according to the record, but were generally known. Of the raising of the widow's son, Luke declares, "This rumor of him went forth throughout all Judea and throughout all the region round about" (Luke vii., 17); while, according to the author of the Fourth Gospel, "many of the Jews" were aware of the raising of Lazarus (John xi., 19, 45, 47-54.)

† Amos, Hosea, Isaiah I., Zechariah II., Micah.

‡ Only two are included in the Old Testament Apocrypha ordinarily published.

§ I. Cor. xii., 9-10; xiv.; xv.

to do.* This was but the body, the garment for an inner soul of philosophical and dogmatic instruction, drawn mainly from the Neo-Platonism of Philo and the Alexandrian schools. About the person and the vague traditional history of the man Jesus, the author drew this garment, woven of the solar rays; and in place of the simple doctrine of love to God and love to man, which the Prophet of Nazareth taught as a preparation for the heavenly kingdom, he substituted his own mystical and dogmatic theology, which for ages has weighed like an incubus upon the life and thought of Christendom.

Spiritual Symbolism: "The Oriental Christ."

Though it is thus evident that many of the miraculous events in the gospel narratives have their parallel in similar relations concerning the religious teachers or alleged incarnate deities of other faiths, though we find such notions as the miraculous conception, the virgin mother, the birth in a cave connected with the stories of many other alleged incarnations of God beside Jesus of Nazareth, and discover also that these and other similar ideas have their origin and explanation in a primitive solar mythology, it should likewise be remembered that in Christianity, as well as in the older religions which drew their symbols from the phenomena of nature, an inner spiritual interpretation pervaded the material symbolism; and the physical origin of the figures was doubtless often forgotten or regarded as relatively unimportant.

We have already noted the fact that a large proportion of the comparisons that have been drawn between the Buddhist and the Christian traditions appears on their Christian side in the extraneous mythological elements of the synoptical Gospels, of non-Jewish origin, and in the unhistorical narrative of the Fourth Gospel. It is noticeably, also, this ideal Christ of the Christian mythology and the Fourth Gospel—the incarnate Logos—rather than the historical Jesus of the Triple Tradition which constitutes the "Oriental Christ" of Protap Chunder Mozoomdar and the Brahmo Somaj of India. The natural genius of the Jew differs as widely from that of the Hindu as does the genius of the Orient from that of the Occident. The one is distinctively and characteristically Semitic; the other is distinctively and characteristically Aryan. The religion of Jesus was simple, practical, free from mysticism. That of India, whether illustrated in the ancient Brahmanical literature or in the theistic rhapsodies of the followers of Chunder Sen, is quite the opposite. The "Oriental Christ" of the eloquent Hindu is an Aryan and not a Semite. He possesses few of the recognizable traits of the historical Jesus.†

The confusion of these two entirely distinct ideals of character,—of the Jesus of history with the legendary Christ,—in the popular and uncriti-

cal perception, is unfortunate and misleading. By no arbitrary process, but by following the guidance of the Triple Tradition of the synoptical Gospels, we have succeeded in eliminating the extraneous accretions from the essential teaching and personal characteristics of the Man of Nazareth, thus discovering him as a Hebrew of the Hebrews, and as a man of men. While it is quite possible that some of the mythical elements which enter into the Christian tradition in its second period of development, and perhaps also some of the doctrinal and dogmatic teachings of the Fourth Gospel, may have been derived from the mythologies and philosophies of India, we may safely conclude that no such connection can be established with the life or doctrine of the historical Jesus. The confusion of these two distinct ideals—the one historical and real, the other mythical and unreal—in the popular conception of the founder of Christianity is seen to have resulted naturally from the contact of the new religion with its local and temporal environment. The circumstance is by no means exceptional or remarkable. Similar accretions of the marvellous have gathered around the persons of the leaders and demi-gods of all the ancient religions. To have discovered a religion without these legendary accompaniments, that, indeed, would have been a notable exception; but no such exception can be urged in support of the exclusive claims of Christianity. In our subsequent discussion, it will appear still more clearly, I think, that, judged in the court of reason and according to the accessible evidence of history, regarded in the light of the new science of comparative religion, Christianity is no exceptional faith. Its claims of supernatural origin and attestation by miracle are unfounded and irrational. Like all the other religions of the world, it is a human institution, a natural growth out of pre-existing conditions, the product of our Father, MAN.

For The Index.

CARLYLE IN LONDON.

BY W. S. KENNEDY.

Mr. Froude's long task is done. The most remarkable, if the most melancholy, biography of the century is completed. The life of its noblest thinker is at length fully unveiled. It is said of Ruskin that in art matters and interpretations of natural beauty he is a teacher among teachers. And what an illustrious roster of soldier-teachers is that which holds the names of the disciples of Thomas Carlyle,—Emerson, Kingsley, Froude, Tyndall, Sterling, Whitman,—the list has no end! A man, Carlyle, like Wolfdietrich, whose angry breath grew flame-hot and took the temper out of swords, and still tender-hearted above all men,—never could resist the appeal of distress; gave and gave to street-beggars, to his mother, brothers, sisters. "We should give for our own sakes," he said. "It is very low water with the wretched beings: one can easily see that." His heart was filled with horror at a story told him of some brutal fox-hunters, who, finding no fox, caught a poor sheep-dog, rubbed its feet with anise-seed, and let the hounds loose upon it to tear it in pieces. "I found," says Froude, "that personal sympathy with suffering lay at the root of all his thoughts." Yet withal there was in him a peasant's obtuseness. He was a peasant and a gentleman in one. It is a surprise to learn in these volumes that there is reason to believe that Carlyle had noble blood in his veins, his father being, apparently, the actual representative of the Lords Carlyle of Torthorwald. Let the dapper critics, who have been calling Carlyle a boor, remember this matter of descent. I saw Carlyle in London in 1871, walking in the neighborhood of Regent Park, with his huge soft hat defiantly pulled over the side of his face to keep out the setting sun; his immaculate, stout Scotch-made suit of gray and brown (he had all his clothes made in his native shire); the fierce glare

of his eyes* turned upon the passers-by (they all seemed dandies when you contrasted them with him), and thumping his stick with angry energy against the ground at every step. Yet one would never dream that he was anything else but a gentleman, and he was not. "He had a knightly chivalrous temperament," says Mr. Froude. "Another sure sign of good breeding was his hand, which was small, perfectly shaped, with long fine fingers and aristocratic finger-nails."

The never-sleeping geyser of Carlyle's heart had its far fount in religious faith. When the shell of his early creed was broken, its core remained. His God was Jehovah still, only engrandized. To obey the moral law as the will of the unseen God, that is the chief concern. Beware how you blur the lines separating the good and the bad. Verily, with your *laissez faire*, your dismal science, your all-dominating greed, your pity for supreme scoundrels, your mistaken philanthropies, your nigger emancipations, and your ballot-boxing of fools, you are on the high road to Tophet. Let the eternal law of retribution have full scope, my friends, or you will rue it sore. The right only is strong; the wrong is weak, and must be allowed to go to the wall. (Carlyle told Lecky that there never was a son of Adam more contemptuous than he of might when it rested not on right.—Vol. II., chapter xxiii.) There are more points of contact than one between the evolution philosophy and that of Carlyle. "The right only is strong,"—do you know any other anchor than this for the religious heart?

Mr. Froude sets Carlyle's religion in new lights for us in these final volumes. It was a grand pantheistic theism. He could not bring himself to believe in the evolution of planets and men, yet felt anxious about it, lest it might turn out to be true. While he detested the cant of priestdom, he hated yet more the doctrines of liberty and atheism. He would not tear down the old roof as long as it sheltered sincere believers, yet often reproached himself for not speaking more plainly upon religion. He thought it not necessary to wound the hearts of such as his poor old mother, yet saw distinctly that the old creeds were doomed. The supernatural in Christ's story was to him only mythology, yet he felt scorn for mockers of that story. He loved the Sabbath, but chiefly because of the cessation of barrel-organs and pianos on that day. ("I easily do a better day's work than on any other day of the seven.")—Vol. II., chapter xxvi.) He could not give up the wistful belief in personal immortality, yet said "it would be as God willed. 'In my Father's house are many mansions.' 'Yes,' he said, 'if you are God, you may have a right to say so; if you are a man, what do you know more than I or any of us?'"

His dislike of priests was instinctive and insurmountable. At Bruges, the shovel-hatted, fat priests, with their tonsures, petticoats, and "sasheries about their nasty thick waists," disgusted him. He "had a kind of hatred of them, a desire to kick them into the canals, unless they ceased their fooling. . . . Yet at bottom one cannot wish these men kicked into the canals," for then would follow atheistic Benthamism and French editorial "rights of man," which would be far worse. Therefore, go thy ways, weeping and alone, till the hour be come.

Carlyle said of Cardinal Newman that "he had not the intellect of a moderately sized rabbit." Nor had he much more, if any more, respect for English Churchmen. He had, however, a strong regard for Dean Stanley; and Froude one day thought he would try the doubtful experiment of taking him to hear the Dean preach in Westminster Abbey. Carlyle was then eighty-three years old. Through some mistake, Stanley did not preach, but a popular orator gave them three-quarters of an hour of sugary eloquence. Carlyle bore it like a hero at first; "but by and by," says Mr. Froude, "I heard the point of his stick rattle audibly on the floor. He crushed his hat angrily at each specially emphatic period, and groans followed so loud that some of the congregation sitting near, who appeared to know him, began to look round. Mrs. D—, the Dean's cousin, who was in the seat with us, exchanged frightened glances with me. I was the most uneasy of all, for I could see into his mind; and, at the too florid peroration, I feared that he would rise and insist on going out, or even, like Oliver [Cromwell], exclaim, 'Leave your

*The author has no sympathy with that extreme view which would reduce nearly all of the Old and New Testaments to a series of mythological relations. The historical character and general accuracy of these narratives have been abundantly proven. There is no doubt, however, a strong intermingling of mythological elements in the history of the pre-Mosaic period, much of it of Babylonian or Chaldean origin. The truth evidently lies between the two extremes, and a nice discrimination is often required to distinguish myth from history.

†At the very time when these lectures were in process of composition and delivery, the history of the Brahmo Somaj in India was presenting a most striking and significant illustration of the rapidity with which assumptions of a superhuman or divine character grow up about a noble human personality. Hardly has Keshub Chunder Sen been placed upon his funeral pyre, when his disciples commence to speak of him almost in the precise terms in which the Fourth Gospel refers to Jesus. In a resolution lately passed by the Apostolic Council of the "New Dispensation" occurs the following: "We believe our minister was living in the bosom of God as the minister of the New Dispensation before the beginning of creation. And our relationship with him is not for time, but for eternity. None can accept this dispensation except through him. . . . Hence, when preaching the New Dispensation, it is needful to proclaim his eternal relationship with the same." No better illustration could possibly be afforded of the manner in which the Man Jesus became the ideal Christ, or of the marvellously short time required, in the right intellectual soil, for this remarkable transformation.

*Bloodshot on that day; "of a deep violet in 1849," says Froude, "with fire burning at the bottom of them, which flashed out at the least excitement."

fooling, sir, and come down!" Happily, the end arrived before a crisis; and we escaped a catastrophe which would have set London ringing."

Carlyle's first work in London was the *French Revolution*,—pictures "splashed down in large masses of color, like a smoke and flame conflagration,"—a book that "came flamingly from the heart of a living man," "born out of his soul in blackness, whirlwind, and sorrow." When the manuscript of the first volume was burned, he heroically said, "It is as if my invisible schoolmaster had torn my copy book when I showed it, and said: 'No, boy! Thou must write it better.'" Mill pressed him to accept \$1,000: he would take only \$500,—wages for five months' lost toil. The book, when done, made him famous at once. Dickens carried a copy in his pocket wherever he went; Southey read it six times; Thackeray reviewed it,—"Thackeray, a half-monstrous Cornish giant, kind of painter, Cambridge man, and Paris newspaper correspondent, who is now writing for his life in London," so said Carlyle of his enthusiastic reviewer.

At the back of the Carlyle house in Chelsea was a bit of garden and grass where were some jasmine and some gooseberry bushes transplanted from Hadlington and Craigenputtock to London fog. Here, when spring came, Carlyle used to dig and plant and cut the grass along the walks. The everlasting pianos and dogs and cocks appear again in the narrative of Mr. Froude. Carlyle wished that the cocks and cockerels at least might be boiled into soup and everlasting silence, and that the devil would be pleased to smite with his hammer the pianos all and several of the world, reducing them to mere smithereens. Jane was ordered to borrow Mazzini's gun to shoot the cocks, but she preferred a bribe of £5. Yet, after all, a sound-proof room had to be built at the top of the house above the highest story. There were two walls, with space between to deaden noise. The inner wall had doors and the outer one windows for ventilation only, for the room itself was lighted solely from above. Here at last was peace; and here *Fredrick* was written.

In 1839, Carlyle was persuaded to lecture. He "vomited forth on them like wild Annandale grape-shot." They cried, "Splendid! Devilish fine! Most true!" but the lecturer felt as if he had "been robbing hen-roosts." He would have made a fine orator, thought Emerson; but it was better for him that he was not drawn that way: it would have made him trim his words.

About the same time was begun *Cromwell*, which Mr. Froude thinks to be the most important contribution to English history which has been made in the present century.

As for the style of the author of *Sartor*, it originated in the old farm-house at Annandale. The humorous element in it came from his mother, the form was his father's common mode of speech, and was adopted by Carlyle for its brevity and emphasis. Froude thinks it the clearest of styles! I have never heard of anybody else of that opinion. Carlyle was made anxious by the universal objection to it, but thought a man's style, like his skin, impossible to change.

Blessed were the days of rest at Scotsbrig: "The trees wave peaceful music in front of my window, which is shoved up to the very top [in June]. Mother is washing in the kitchen to my left. The sound of Jamie building his peat-stack is audible, and they are storing potatoes down below. . . . My soul's one wish is to be left alone." In Templand, he walks along in the beautiful opening of the year: Death seems to him "a huge demon-falcon, rising miraculously, we know not whence, to snatch us away from one another's sight, we know not whither."

The old earth, with her star firmaments and burial vaults, carries on a mysterious dialogue with her solitary lover. The spring is beautiful, almost solemn: "Whose great laboratory is that? The hills stand snow-powdered, pale, bright. The black hail-storm awakens in them, rushes down like a black, swift ocean tide, valley answering valley; and again the sun blinks out, and the poor sower is casting his grain into the furrow, hopeful he that the zodiacs and far heavenly horologes have not faltered, that there will be yet another summer added for us and another harvest."

On the moor of the Dairland Hills, he paints another of his wonderful pictures: "The bare expanse of silent green upland is round me, far off the world of mountains, and the sea all changed to silver. Out

of the dusky sunset,—for vapors had fallen,—the windows of Carlisle city glanced visibly upon me; twenty thousand human bipeds whom I could cover with my hat."

Quotations from Carlyle's letters, as given by Mr. Froude, show, naturally, a cooler estimate of Emerson than is afforded in the Carlyle-Emerson Correspondence. At the close of a lecture of Emerson's in London, Carlyle was heard to laugh loud and kindly-contemptuously over what he styled his friend's moonshine. In 1848, he writes: "Gave Emerson a Wood's *Athenæ*; parted with him in peace. A spiritual son of mine? Yes, in a good degree, but gone into philanthropy and other moonshine; for the rest, a dignified, serene, and amiable man of a certain indisputable natural faculty, whose friendliness to me in this world has been great." Elsewhere this: "We had immense talking with Emerson here [1848], but found he did not give us much to chew the cud upon,—found, in fact, that he came with the rake rather than the shovel. [Italics mine. How admirably the words call up the intent, forward lean of the head and the receptive, kindly mood of Emerson, seeking, with shrewd thrift and Yankee acquisitiveness and curiosity, some new thing from his visitor rather than imparting much himself!] He is a pure, high-minded man, but I think his talent is not quite so high as I had anticipated." Subjoined is another quotation from Carlyle's journal:—

"Emerson came here and stayed with us some days on his first arrival. Very *exotic*; of smaller dimensions too, and differed much from me, as a gymnosophist sitting idle on a flowery bank may do from a wearied worker and wrestler passing that way with many of his bones broken. Good of him I could get none, except from his friendly looks and elevated, exotic, polite ways." How that word *exotic* hits the nail in the centre, the more you think of it!

CORRESPONDENCE.

M. D. CONWAY'S REPLY TO MR. FRETWELL.

Editors of The Index:—

The Index of October 23 has only just reached me. The "reply" of Mr. John Fretwell to some statements of mine contained in it might well be left unanswered, so far as I am concerned, since the animus it reveals toward one with whom he is unacquainted sufficiently confirms all I have said about Association Unitarianism in London. Mr. Fretwell's letter shows me, however, the importance of noting every exception to Unitarian illiberality which I have experienced in England, and reminds me that "Manchester" was accidentally omitted from the list of places in my "Apologia" where I have been hospitably received. There, not only the liberal American, Mr. Farrington, but the Rev. Brooke Herford invited the freest expression of South Place heresies in their pulpits. But, as I have said, had I alone been concerned, no notice of Mr. Fretwell's reply were necessary. It is important, however, that his misleading statements concerning others should be remarked. He says that Mrs. Besant's case—deprivation of her child—was "so complicated by non-theological issues that it is not a fair instance." I was in court and heard Sir George Jessel's decision; and he was careful to say that, solely on the ground that she (Mrs. Besant) was engaged in an atheistical propaganda, he had no hesitation in taking the child from her. Mr. Fretwell, in describing the incriminated Christmas number of the *Freethinker*, puts between quotation-marks words not in it; and, though the sense is not greatly altered, it is an instance of the general slovenliness of his letter concerning these important matters. A worse instance is that of his describing the writings and pictures for which Foote and Ramsay were imprisoned as "disgusting indecency,"—a phrase suggestive of some obscenity. I have preserved a copy of the paper; and there is nothing in it which would be regarded as indecent, had it been directed against Jupiter and Jason instead of Jehovah and Jesus. The "indecency" is not in what is written or portrayed, but in its happening to be Mr. Fretwell's idols instead of other people's which are caricatured. Mr. Foote has as much right to ridicule the Semitic Jupiter as his gaoler, Mr. Gladstone, has to deny the deity of the Mahdi. Mr. Fretwell says that Mr. Gladstone "has done all that lay in his power to secure Bradlaugh's admission to

Parliament." On the contrary, Mr. Bradlaugh's exclusion is due to Gladstone, who, as in the case of Foote and Ramsay, had only to speak a word to have secured justice. When female enfranchisement was concerned, and a majority of the Commons was known to be in favor of including it in the Franchise Bill, "William the Woman-hater" commanded his followers to vote against it under an extreme penalty; and they obeyed him, even many old friends of female suffrage abandoning the cause. When the Affirmation Bill was before the House, Gladstone declined to influence his party at all. He declared the Bill innocent, and gave it up to be freely crucified.

These examples are enough to show how untrustworthy Mr. John Fretwell is. No doubt he means to be truthful. His letter represents such pin-hole view of contemporary events and characters as is vouchsafed average defenders of denominations in decadence; but it is important that Americans shall read recent English history, as it affects religious liberty, without sectarian spectacles or casuistry.

MONCURE D. CONWAY.

SECULARISM AND STATE SECULARIZATION.

Editors of The Index:—

State secularization means truth, justice, freedom between citizens. Secularism means earthliness, a limitation of thought, purpose, and aspiration to the pursuits and conditions of our mortal life. One says, "Let no citizen be taxed to support moral and religious theories in which he has no faith and no interest or which he deems erroneous, but let each be free to propagate and support his own theories at his own expense." The other says: "All moral and religious theories which are affected by any considerations drawn from a supposed future life should be dropped; and our present life be ordered and shaped wholly from the existing and known course of nature, just as if we had never had a thought of an existence after death. If there is such a life, we know nothing of it, and should leave it out of consideration in all our plans and action now. Take no thought for to-morrow. One world at once. This theory of secularism is only for individual action. On the other hand, State secularization is only for State action. The two notions differ from each other both as to their subjects or agents and their significance."

It would seem very obvious that things so different would never be confounded by a mind qualified to discuss in public religious and philosophical questions. Yet some men who have made themselves conspicuous in a certain noisy coterie have emphasized and detailed this blunder in print, and even the so-called Liberal League in its organic action has rendered itself obnoxious to this charge. It was started as an organized opponent of all sectarianism in civil action, and this it has proclaimed as its great object all along its questionable and stormy career. Yet its secretary, in the name of the League, has issued an appeal to its members to be more active and liberal (*sic*!) in order to advance the cause of secularism. This appeal is one of the most dishonest and malapert and thoroughly cross-eyed documents ever issued from the press.

On the first page, it contains the famous "Nine Demands of Liberalism," all of which are confined to State secularization, as everybody knows. This is implicitly confessed on the second page in a bombastic exhortation (the secretary was once a preacher) to "all who are in favor of a total separation of Church and State" to labor in connection with the League as "the fountain of joy and the star of hope." Then, on the last page, we are treated to a resolution of the League adopted at its last session,—"that all who favor the secularization of our government be earnestly and cordially invited to unite and become active members of the National Liberal League"; and said session of said League reaffirmed the "nine demands" "as the basis of union henceforth and as defining our mission." Yet, in the same sentence, it recommends the adoption of the name "American Secular (Secularistic?) Union"; and the main body of the paper consists of a high-flown declaration that the League has commenced a systematic course of labor, not for the attainment of the "nine demands," but for the one demand of a few fire-eaters, the promotion of secularism distinctively; and that the first vice-president and the secretary are ordained as the chiefest apostles of this great propagandist mission. On this, the secretary-apostle begins to prophesy that,

if they can get hold of only so small a sum as five thousand dollars, they will speedily make "the cross vanish in the laboratory of science." Think of "all who favor State secularization" contributing for the attainment of such a result as this, and that through the secretary of the Liberal League!

Millions who consider Secularism a noxious weed, soon to be extirpated, are prepared to labor for State secularization on the score of freedom and common justice; and, in this spirit, some of them have joined, or favored for a while, the Liberal League. They would not have secularists deprived of any of their just rights, nor would they tax them for the support of a religious theory they dislike. But, for the same reason, they must protest against being enjoined and even taxed as members of the League or friends of State secularization to support secularism.

The millions who are in favor of State secularization comprise all varieties of theories and opinions, ranging all the way from the most indefinable and tenuous Liberalism down to Popery and Mormonism. Thousands of them are Methodists. Ardent and zealous as they are for certain theological notions and modes of religious life, they want no forced help from those who have no sympathy with their views and experiences, believing that all specialties of opinion should be voluntarily supported by their advocates and friends. To tax others for their support is unjust, and the very essence of the persecuting spirit of the priest-ruling ages. But the freedom which we advocate for all we claim for ourselves, and the crude verbal jugglery we are considering can never draw a dollar from the most generous simplicity for the purpose of aiding the cremation of one's own house. WM. I. GILL.

LAWRENCE, MASS., Dec. 4, 1884.

P.S.—I wish here to make emphatic exception to a fundamental position of Mr. Charles Froebel in his last week's article on "Liberal Organization." He says, and repeats, that "a belief in a God identical with, and therefore within the universe, is the tap-root of Ultra-Liberalism," and that Ultra-Catholicism is the antipodes of this,—the belief of an extra-mundane Deity. If this were a true and adequate statement of the difference of the two, Liberalism is a false name for dogmatism; and it will enforce its dogma by all the means and power it can wield, just as Popery has always done in support of its dogma. According to this, the only difference between the two is in their respective dogmas. In this division of mankind, I shall side with Popery, though I had supposed I was far removed from it and were entitled to consideration as a true and thorough Liberal. I have always claimed that Liberalism is not characterized by any supreme dogma, but by the spirit and method of supreme liberality, in respecting the intellectual and moral rights of all men, and that its supreme dogma is that these rights are of such or such a nature, and should be maintained at all hazards. This general principle it seeks to carry out concretely relative to all the mutual relations of men. On this conception, I proclaim myself a Liberal. This, I conceive, is the substance of the platform of the Free Religious Association, and to that I subscribe, but not to the theological dogma of Mr. Froebel; and an organization built on that were not "liberal," but "Old Priest writ large." W. I. G.

BOOK NOTICES.

BIOGRAPHICAL ESSAYS. By F. Max Müller, K.M., Foreign Member of the French Institute. Rām-mohun Roy, Keshub Chunder Sen, Dayānanda Sarasvatī, Bunyū Nanjio, and Kenjiū Kasawara, Colebrooke, Mohl, Bunsen, Kingsley. Crown 8vo. pp. 390. Price 7s. 6d. cloth.

In this volume, we have a number of essays, but few of which have been before published. The first opens with an address on Rājāh Rām-mohun Roy, the Rājāh's death, Sept. 27, 1883. The next essay which was delivered on the fiftieth anniversary of treats very fully of Keshub Chunder Sen, the real successor of Rām-mohun Roy, who carried on the work of religious reform in India initiated by the Rājāh, and in the end became an apostle of Christianity in all but its name. Extracts are given from the correspondence between Keshub Chunder Sen and Prof. Max Müller, with a full account of Dean Stanley's opinions on miracles and other theological topics. The third essay describes the career of Dayānanda Sarasvatī, who united a desire for social improvement with a very strong conservatism in relig-

ious matters, and is represented by the author as a kind of Dr. Pusey in India. Next follow two articles on two Buddhist priests, who came from Japan to Oxford to study Sanskrit, in order to be able to read the sacred books of their own religion in the original language. One of them died soon after his return to Japan: the other is now established in his monastery at Kioto, lecturing on Sanskrit, and helping the Buddhist priests in Japan to study their religion for the first time in its original documents, instead of trusting to the more or less accurate Chinese translations on which they had hitherto depended. An autobiographical sketch of one of these priests, who received an honorary degree from the University of Oxford, allows us a curious insight into the mind of a man who may have a very important part to act in the religious reforms of his country. The articles on Colebrooke and Bunsen had been published before in the *Chips from a German Workshop*. The article on Mohl, the great Persian scholar and indefatigable secretary of the Société Asiatique, contains, besides an account of Mohl's own labors, a short history of the discovery and the gradual decipherment of the cuneiform inscriptions, in which Mohl took an indirect but most important part. The last essay on Kingsley, a translation of a paper contributed by the author to the *Deutsche Rundschau*, soon after Kingsley's death, contains some characteristic letters of Kingsley's on the rights and wrongs of the Franco-German War in 1870-71. B. F. U.

MEXICAN RESOURCES AND GUIDE TO MEXICO. A supplemental volume to *Travels in Mexico*. Frederick A. Ober. Boston: Estes & Lauriat. 1884. pp. 35.

We have in this volume a statement of the mineral and agricultural resources of Mexico and a guide to that city over all the great lines leading thence,—the first "Guide to Mexico," we believe, issued at a small price. It is written in a popular style, and treats of the agriculture, tropical fruits, cabinet and dye woods, tropical plants and fruits, sheep and cattle raising, and Mexican farming operations in general; also of mines and mining, detailing all the rich mines famous in history and the romantic stories of their discovery; the location of the gold, silver, and copper mines of the republic, and the various processes by which the precious metals are extracted from the earth and converted into ore fit for the mints. The table of statistics shows the agricultural productions, the products of the mines, and the coinage of the mints from remote times to the present. It is fully illustrated and has a large folded map of Mexico.

FERISHTAH'S FANCIES. By Robert Browning. Boston: Houghton, Mifflin & Co. Price \$1.00.

This new poem by Browning is somewhat less involved in meaning and purpose, and will be found better adapted in language for the majority of readers, than most of his writings. Ferishtah is a thoughtful man, who, seeking to learn true wisdom, turns dervish; and his "fancies" are the lessons of truth which he is taught by experience, and which he endeavors to teach to other inquirers. Interspersed between these poetical "fancies" are shorter poems, with no apparent relevance to the longer poem preceding. The reason for this is explained in the prologue, however.

THE December Century opens with a paper entitled "Dublin City," by Prof. Edward Dowden, the Shakespeare commentator, which is accompanied by illustrative sketches. There is a narrative of personal experience, "Hunting the Rocky Mountain Goat," by W. A. Baillie-Grohman, with illustrations; a third paper in the "New Astronomy Series," by Prof. Langley; a critical paper on "American Painters in Pastel," by Mrs. Schuyler van Rensselaer; an article on "The Principles and Practice of House-drainage," by George E. Waring, Jr.; and one on "The Poet Heine," by Miss Emma Lazarus. The fiction consists of "An Adventure of Huckleberry Finn, with an account of the famous Grangerford-Shepherdson Feud," by Mark Twain, being a tale of life along the Mississippi River, some of the types being represented in the sketches of D. W. Kemble; the first part of a novelette in three parts, "The Knight of the Black Forest," by Miss Grace Denio Litchfield, a story of American girls in Europe, which is illustrated by Mrs. Mary Hallock Foote; and the second part of Mr. Howells' new novel, "The Rise of Silas Lapham." "Topics of the Times" contain interesting editorials: "One Way to prevent Divorce," "Was the Chinese Traveller

Right?" "Economic Mistakes of the Poor," and "A Ready-made Foreign Market for American Goods,"—the last referring to the need of an international copyright, and apropos of a comprehensive account of "The Present State of the Copyright Movement," which is contributed to the "Open Letter" department by Mr. Lathrop, the Secretary of the American Copyright League. Here also appear, in response to the request of the editor, letters from Gens. James B. Fry and Thomas Jordan, chief-of-staff at Bull Run, concerning the mooted question of the number of men engaged in that battle.

THE *Revue de Belgique* opens with an article on military education. Then follows an argument showing that our age is better than any previous one, especially in being less prone to gossip and slander. The attack on the recent Belgian law in favor of church schools is forcibly written, but with a zeal which seems inclined to interfere too much with the rights of parents to choose who shall teach their children. Our experience in America has proved that all the State has to do is to offer an ample supply of thorough and unsectarian instruction, and insist that all the children shall be educated somewhere. Private schools need no watching, except to see that those carried on in sectarian interests get no aid from the State. A recent French novel is severely criticised, and there is an argument against cremation as too likely to destroy evidence of crime.

THE *Modern Review* for August, September, and October contains the following articles: "Ezekiel," by Prof. Kuenen; "The Argument from Design in the Organic World," by Dr. W. B. Carpenter; "Modern Quakerism," by Alexander Gordon; "Converts to Rome," by R. Rodolph Suffield; "Liberal or Socialist," by Richard A. Armstrong; "Prof. Newman's Christianity in its Cradle," by Francis H. Jones; "Teachings of the Twelve Apostles, Postscript," by Alexander Gordon. London: James Clarke & Co., Fleet Street. Agent for the United States, G. H. Ellis, 141 Franklin Street, Boston. Price half crown.

ALL students of their fellow-men will be glad to know that one of the most elaborate investigations ever made into the antecedents of American paupers and criminals, *Dugdale's Jukes*, has just been reprinted by G. P. Putnam's Sons, with a preface giving some interesting particulars about the philanthropic author.

AN exhaustive article on the "Labor Organizations of the United States," by Col. Hinton, giving full statistics and many important facts, is to appear in the January number of the *North American Review*.

AMONG the literary calendars which have of late become fashionable for holiday gifts, none exceed in carefulness of selection or beauty of design those issued by the firm of Houghton, Mifflin & Co. The two which have reached this office, the Emerson and Holmes Calendars, are very attractive in appearance; and the selections, at present hid from view, are, doubtless, of the choicest of these favorite poets' words. Each has a picture of the poet whose writings are made the subject of the year's lessons. Emerson's benign face looks out from beneath the shadow of the symbolic pine-tree, and the portrait of Holmes is represented as being decorated with rose garlands by a group of lovely girls. Price \$1.00 each.

SCIENTIFIC LECTURES.

PETER ANNET, of England, who lectured very acceptably before the Parker Memorial Science Class on two Sundays recently, will lecture for societies on Astronomy, Geology, Zoology, and philosophical subjects, within an easy radius of Boston, upon application. For terms, etc., address PETER ANNET, P.O. Box 2468, Boston, Mass.

LECTURES

ON LEADING REPRESENTATIVE MEN OF OUR TIME, INCLUDING

EMERSON, CARLYLE, HUXLEY, TYNDALL.

Also, upon the early Growth and the History of Culture; Evolution of the Arts; Origin of Mythology; The Survivals in our Present Civilization; The Aspects and Promise of the Time, etc., will be given where desired this season by the undersigned.

Address

CHARLES D. R. MILLS, SYRACUSE, N.Y.

October 20.

THE BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches**, which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars**, which are models of comfort and elegance; its **Palace Drawing Room Cars**, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DININGCARS,

the like of which are not run by any other road anywhere. In short, it is asserted that it is the best equipped road in the world.

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, and take none other. All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

GEN'L PASS. AGENT, C. & N-W. RY
CHICAGO, ILL.

RELIGIO - PHILOSOPHICAL JOURNAL.

Established in 1865.

A Paper for all who Sincerely and Intelligently Seek Truth without regard to Sect or Party.

The JOURNAL, in the estimation of a large proportion of the leading authorities on Spiritualism, stands pre-eminent as a fearless, independent, judiciously fair advocate of Spiritualism. It has received more general notice, and more frequent and higher commendations from intelligent sources, regardless of sect or party, than any other Spiritualist or liberal paper ever published: the records will confirm this.

The JOURNAL is uncompromisingly committed to the Scientific Method in its treatment of the Phenomena of Spiritualism, being fully assured that this is the only safe ground on which to stand.

The JOURNAL is unsectarian, non-partisan, thoroughly independent, never neutral, wholly free from cliques and clans.

THE INVESTIGATOR.

Published every week at the Paine Memorial Building, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price \$3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR's basis of action, and the best exertions of its managers will always be used to render it a free and independent journal devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

JOSIAH P. MENDUM,
PAINE MEMORIAL BUILDING,
Appleton St., Boston, Mass.

Cornell Univ Lib

No. 1.—**Truths for the Times**, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 2.—**Fear of the Living God**, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible**, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 4.—**Christian Propagandism**, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, \$1.00.

No. 5.—**"God in the Constitution"**, by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.

No. 6.—**"The Sabbath"**, by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 7.—**"Compulsory Education"**, by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven**, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—**The Christian Amendment**, by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity**, by F. E. Abbot. Sixth Ten Thousand. Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.

No. 11.—**The God of Science**, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies \$1.00.

No. 13.—**On the Vision of Heaven**, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing**, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.

No. 15.—**The Battle of Syracuse**. Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

Modern Thinkers,

Principally upon Social Science.

By Prof. VAN BUREN DENSLOW, LL.D. With Introduction by ROBERT G. INGERSOLL. Including critical analyses of Swedenborg as a Seer, of Adam Smith as an Economist, of Jeremy Bentham as a Law Reformer, of Thomas Paine and Junius as Political Revolutionists, of Charles Fourier as a Socialist, of Herbert Spencer and Ernst Haeckel as Evolutionists, and of Auguste Comte as a Positivist, with an Essay on Wealth in its Relations to Christian Ethics.

The Fifth Edition has just been issued

"Upon the question of money, this volume contains the best thing I have ever read."—R. G. Ingersoll (in Introduction).

"We confess that, if we stood on the ground on which Mr. Spencer stands, we should find it difficult to prevent ourselves from being pushed by the stalwart arm of Dr. Denslow's logic into the gulf of ethical nihilism."—Prof. Goldwin Smith.

"Now, the whole force of this case depends upon the assertion of Goldwin Smith that Dr. Van Buren Denslow is a disciple of Herbert Spencer. But the assertion is not true in any sense or in any degree. On the contrary, Dr. Denslow is an open antagonist of Mr. Spencer. His essay on Spencer's Philosophy, first published in the Chicago Times, while speaking of the man in the usual terms of perfunctory compliment, as have also Goldwin Smith and the Saturday Review, is adverse, carping, and depreciatory on every point that he considers. The criticism was regarded as so damaging that Spencer's friends were told they must reply to it or forever hold their peace; and we were confidently assured that the last we should ever hear of Spencer's system was the thud of the clods that Denslow had thrown upon its coffin."—Prof. Youmans, in Popular Science Monthly and in Introduction to Current American Edition of the Data of Ethics.

Stephen Pearl Andrews, as political executor of the late Thomas Paine, is as fiercely indignant at Mr. Denslow's analysis of Paine's politics as Prof. Youmans is at his assault on Spencer's Philosophy. On the other hand, George Jacob Holyoake speaks of the analysis of Paine's political philosophy as "the most masterly refutation of it extant, without showing in his words or in his mind any enmity against the great agitator whom he confutes."

The late Dr. George M. Beard, of New York, wrote to the author: "Your critique on Spencer's Data of Ethics has all the force of a discovery in ethics, and is of great value. It deserved to be made the subject of a separate treatise."

CURRENT TOPICS.

BY B. F. U.

BISMARCK's attempt to revive animosities of 1872 shows how keenly he feels the defeat of his policy by the recent adverse vote in the Reichstag. His organ, the *North German Gazette*, says, "The federal government will never tolerate any one who from the tribune of the Reichstag defends rebellion against the emperor and the empire."

LAST week, the Board of Trustees of the Columbia (S.C.) Theological Seminary asked Rev. Dr. Woodrow of that institution to resign, in consequence of his views on evolution. This he declined to do, and requested a trial, whereupon his seat was declared vacant by a vote of 8 to 4. Upon the action of the board, two of Dr. Woodrow's most able associates, Prof. Hemphill and Dr. Boggs, tendered their resignation. "Thus," as an exchange remarks, "does the doctrine get an unexpected lift from the narrow-minded and ill-considered action of a board of trustees."

CATHOLIC journals in Europe and in this country have, the past few years, denounced in severe language the statesmen of Italy, and predicted many things of the present government not likely to be realized. The government has reduced the taxes on the necessities of life, suppressed brigandage in the wilder portions of Naples and Sicily, organized an army and put it on a good footing; and yet, according to the announcement of the Italian minister of finance, in spite of the extraordinary expenditure and losses occasioned by the cholera,—which raged with such mortality in that country,—there will be no deficit in the budget. "Our traditional opinion of Italian statesmanship, and the low estimate that many have formed of Italian character," says a leading journal, "are such that it is difficult for Americans to realize that the political leaders of Italy have shown a grasp upon great theories of government, and a knowledge of how practically to apply these, that have not been surpassed by the statesmen of any

other European country. It is satisfactory to learn, as we do by a variety of sources, that the industrial development of Italy is going on at the same rate of speed as her political advancement."

MR. GEORGE KEMPTON, an earnest and active worker in the cause of temperance, is sending out for the signature of business firms a form of agreement declaring that, "after the close of the present year, they will not employ persons in any capacity who drink liquors, including ale and beer." It is more than doubtful whether this scheme to boycott all employes who do not wholly abstain from the use of alcoholic drinks will lead to any good results. The evils of drunkenness—which can hardly be overstated—are not likely to be lessened by business firms denying employment to men, regardless of their general character and their skill as workmen, who indulge, however moderately, in drinking habits, when these habits are not contrary to law and are common among all classes of society: This would subject employes, in their personal habits, to rules and regulations which they would have no voice in making, and against the injustice of which even those in favor of a State prohibitory law might fairly protest. The scheme would involve wrong, not only to many worthy men, but to wives and children dependent upon them. It would impair the independence and self-respect of employes to be made thus subjects of arbitrary authority. Temperance cannot be enforced by a threat, such as is implied in the scheme proposed by Mr. Kempton, which is not founded upon principle, and will not therefore succeed. There are better methods, which do not discriminate between employers and employes, and which appeal directly to the self-respect and the humanity as well as to the interests of all classes, without threats of enforced idleness as a penalty for not complying with the demands and submitting to the surveillance of an authority founded upon the relation which capital sustains to labor. We sympathize with Mr. Kempton in his purpose of promoting temperance: his proposed method we regard with distrust.

THE social supper of the Free Religious Association at the Parker Fraternity Rooms, Wednesday evening, last week, was, like the previous one in October, a decided success. Early in the evening, a meeting of the executive committee was held, at which it was decided to continue, with renewed vigor, the work determined upon at the last meeting in favor of taxing church property, and the repeal of the law in this State by which the testimony of atheists may be discredited. After the supper, to which about one hundred and fifty people sat down, Col. T. W. Higginson, who presided in his usual graceful and happy manner, introduced Mr. F. M. Holland, who read a paper entitled "How the Rights of the People of Massachusetts are invaded by Religious Restrictions,"—a paper which was full of facts, and replete with arguments in favor of complete State secularization. Col. Higginson followed in an address, in which he spoke of the good work done by the Association, which he did not think was likely to

be swallowed up or superseded by any other organization. There was a distinct work for it to do, and it would do it. He presented the difficulties that would have to be overcome before the desired legislation necessary to put the State on an entirely secular basis would be secured, and thought it would be well at present to direct the attention of the society especially to the petition for the repeal of the law which allows an atheist's opinions to affect the credibility of his testimony. Brief speeches were made by Mr. F. A. Hinckley, Mr. W. G. Babcock, Mrs. Clara M. Bisbee, and Mr. John S. Cobb. Music was furnished by the Parker Fraternity choir, and hymns sung which had been prepared for the occasion. The gathering was made up of persons of a great variety of religious views; but they were evidently one in spirit, and everybody present seemed to enjoy the supper, the speaking, the music, and conversation with friends and new acquaintances.

LAST week, the captain and mate of the yacht "Mignonette," who killed the boy Parker for the purpose of sustaining life upon his body, were tried in London, found guilty of murder, and sentenced to death by Chief Justice Coleridge, who, in pronouncing the sentence, declared that the law did not recognize the right of killing another to save one's own life except in self-defence; that, while it was a duty to preserve one's own life, it was sometimes a higher duty to sacrifice it. It was therefore, he said, his duty to pronounce the full sentence of the law; and, if too severe, relief must be had in the clemency of the crown. The prisoners appealed for mercy in view of their terrible situation when the deed was done. Home Secretary Harcourt, without recommending a pardon or commutation of sentence, advised the queen to respite the men. Some interesting and important questions are suggested by this case: How far are men, in the situation and in the physical and moral condition to which Capt. Dudley and Mate Stephens were reduced, morally responsible for their acts? Would men in that situation be deterred from prolonging their own lives by such means, if they were certain that, in case they should survive and their act should become known, they would be dealt with as common murderers? Would the enforcement of the death penalty against acts of cannibalism committed under such dreadful circumstances serve in any way to keep men out of situations in which death or killing a fellow being is the only alternative? Does a knowledge of such cases, with all their horrible details, make the thought of killing a human being for food less odious to civilized man, or lower men's estimate of the value and sacredness of human life? Punishment is justifiable only as a means of preventing offences or reforming offenders. Judge Coleridge, no doubt, correctly defined the position of the law in the case of Dudley and Stephens; but probably nobody believes the sentence will or should be carried out.—Since the foregoing was written, the sentence has been commuted to six months' imprisonment without labor.

CHRISTIAN BIGOTRY.

For old-fashioned theological narrowness and bigotry, the *Christian Statesman*, among all our exchanges, carries off the palm. There is a certain logical rigidity in its methods, a stolid adherence to the principles it has laid down in its premises, no matter to what startling and unpopular conclusions they may lead, which can but win respect. The sincerity, at least, of the *Statesman* is not to be questioned. Indeed, if the ordinary assumption of the Christian Church, that Christ is the legitimate head and ruler of humanity for all time, be true, then the *Statesman* perhaps is the most logical representative of Christianity to be found in America. It has the courage to say what other and more popular organs of the Christian system of faith only silently imply. Or it may be that the latter even openly deny in their practical conclusions what they affirm in their premises. Yet, while according this much to the consistency and sincerity of that branch of the Christian Church which the *Statesman* represents, Liberals may be thankful that not all Christendom is so rigidly logical. What would happen in this country, if the party of the *Christian Statesman* should get the majority, we can but dimly conjecture. If they should still be true to the objects they now openly profess, we do not see but that the minority would have to fight, to regain not only the rights of religious liberty, but the right to any representation in the government.

We have been led to these remarks more particularly by an article in the *Statesman* on the recent Thanksgiving Proclamations of the President and of the State Governors; though, whatever topics it treats, the same narrowness of view appears, and the same purpose to engraft upon civil government the evangelical Christian creed. The *Statesman* finds as yet no Thanksgiving Proclamation among those issued this year which wholly satisfies it. President Arthur's was "cold and formal." Governor Hoadly's was, of course, very defective, since it did not contain even the word "God." "The most fervent and Scriptural," it says, was that of Governor Pattison, of Pennsylvania. But, after printing the proclamation with praise for its religious and Old Testament tone, it adds: "In this, however, as in all others which have come under our notice, there is one painful omission. No allusion is made to the Lord Jesus Christ, through whom alone any acceptable worship can be rendered to God, or forgiveness and favor for nations or individuals can be obtained. This persistent and uniform omission of the name of Christ from such State papers indicates a studied avoidance of that name. It is not a casual and inadvertent, but a designed and purposeful, withholding of any recognition of Him through whom alone we have the knowledge of God, and whose mediation secures for us, as men and as nations, all our mercies. We do not say that Christian churches ought to disregard these proclamations, but we do say that they ought not to observe them without an emphatic protest against the dishonor thus habitually done to their Lord and Saviour."

We presume that Governor Pattison remembered, as George Washington did, that there are Jewish citizens in this country who have just as much interest in its government and just as much right to representation in it as have Christians, and that a State paper addressed to all citizens should not be written with sectarian ink, as if the people were all orthodox Christians. But it is evident that the *Statesman* is of the opinion that not only Jews, but agnostics, free thinkers, and even liberal Christians have no rights of equal

citizenship in this country which orthodox Christians are bound to respect. The very sense of justice appears to be obliterated in minds otherwise conscientious, which are dominated by this type of theology. Those who believe that there can be no "acceptable worship" except through the "Lord Jesus Christ," and that "the knowledge of God" and "forgiveness and favor for nations and individuals" and "all our mercies" are to be obtained only through the same mediation, have a perfect right to urge these beliefs, arrogant as they are, upon the free reason of other citizens through the platform, the pulpit, or the press; but, when it comes to asking that these beliefs shall be incorporated in State documents, and shall dictate the laws of the statute-books, and be inserted even in the text of the national and State constitutions, then there are other classes of citizens who have something to say in the matter,—citizens whose equally conscientious beliefs would be offended and shocked by this theology.

But the party of which the *Statesman* is the organ, and which is making this demand, does not appear to have the slightest conception of the doctrine of equality of civil rights in respect to religious beliefs. Its bigotry has made it morally obtuse. The kind of government it is advocating is not that which has been constitutionally established in the United States: it is not democracy nor republicanism, but theocracy. And the people of this country are not likely soon to be converted by the *Christian Statesman's* narrow logic and misapplied zeal. It is only waging a lost battle,—the battle of religious bigotry, surviving from a past age,—against the enlightenment of human reason and the doctrine of equal rights.

WM. J. POTTER.

HUNGER.

I.

"Do we live to eat, or eat to live?"

To some, this familiar query may seem little more than a fanciful play of words. Yet, of all questions that can be propounded, this one is ethically the most momentous to us. Our moral behavior, from first to last, has to receive its word of command from the decision. According to the answer given, we ought either to strive for complete deliverance from bodily associations; or, on the contrary, we ought to aspire to ever higher bodily perfection. Life negation on the one side, life affirmation on the other.

This alternative can in no way be evaded. Its dictum is the very core of morality. If our body is naturally so fashioned that feeding is really the one great vital function aimed at, then no amount of sophistry will ever make life appear morally desirable. Be the means to such an end ever so ingenious and circuitous, the process of securing prey ever so elaborate and skilful, the manner in which it is executed ever so graceful and fascinating,—if sensual self-gratification is the final purport of all this vital exertion, then life is fundamentally bad, and has in consequence to be abhorred.

Is it true, then, that the main bent of vitality is naturally, through bodily constitution, sensual and self-seeking? This is, first and foremost, the vital instruction we wish to receive with irrefragable certainty. These thousands of years, for want of true guidance, we have been keeping up an unprofitable strife with phantasmal ills,—yea, with benignant powers. What prophetic word or oracular enunciation has ever illumined with steady light this dark enigma of life worthiness, confronting us so uncompromisingly at the very threshold of our moral career? But, however obscure to

thought, we may rest assured that its secret lies clearly incarnate in the intricacies of our all-containing organization, to be disclosed by sound biology only, not by any feat of clairvoyance or any ever so dexterous *a priori* handling.

Our natural being consists of an entodermic and an ectodermic economy, of a self-satisfying and of a relational life. Bichat, one of the most illustrious biological thinkers, was the first positively to discern these two distinct lives of ours. And, soon afterward, Von Baer demonstrated their structural origin in two separate embryonic textures, which he respectively called the vegetal and the animal layer. From the latter arise in the course of reproductive development our sensory surface, our voluntary muscles, and the nervous system connecting and centralizing the same. All this together forms our life of outside relations,—a bilateral life, with duplex organs symmetrically disposed. From the vegetal layer is evolved the rest of the organs, generally single and unsymmetrical, and mostly enclosed in the large cavities of the body. The peculiar set of vital activities connected with this seeming kernel of our bodily existence was named by Bichat the organic life, a sphere of self-affecting desires and gratifications.

Now, it is ethically undeniable that, if the entoderm is really the paramount constituent of our natural being, life has to be considered fundamentally immoral; and suppression of natural tendencies—indeed, complete immolation of vitality—must be the aim of our moral striving. If, however, the ectoderm governs, then the innate drift of vitality is essentially moral or altruistic, and the debasement of relational life the veritable gist of immorality.

If hunger and lust are supreme in our world, and the whole body, with all its cunning array of trapping contrivances, a mere engine for the glutting of appetites, then, with innermost disgust, let us turn away from the hideous plot, and resolutely abnegate life for ever and ever. If, on the contrary, the main current of our being presses toward universal influences, toward a wider, intenser relational life, then, with boundless faith in natural progress, let us reverently and joyfully receive and convey the sacred trust.

Emphatically be it repeated that correctly to understand the true relation to each other of these two lives of ours, a relation organically inwrought in our mystic frame far beyond the depth of self-consciousness, is to impart to our moral conduct its rightful direction.

How it comes that in our bodily existence the lead of the entoderm can possibly render life immoral is a further fundamental problem of ethics, connected with the hyper-individual nature of our personality, as briefly explained in a former article (*Index*, October 9).

Our principal religions have all unconsciously been reared on the conception of the ascendancy of the entoderm. Their morality is antagonistic to our bodily existence, because it is a morality based on entodermic life. They assume, to begin with, that our natural being is mainly framed for the gratification of sensual and selfish desires. For this reason, asceticism has always been their guiding principle in the conduct of life, deviation from ascetic rules a mere compromise with temporality.

It is easy enough to argue, in a general way, against the ascetic or pessimistic position; but what if science itself, and even the evolution science of our day, is positively and invasively tending to confirm the intuitive teachings of religion in this particular respect? Since Bichat, biology has in fact never ceased to enunciate the subserviency of the performances of our life of relation to the natural appetites of our organic life.

Bichat himself, who was quite free from any Orthodox proclivities, declared the organic life, or entoderm, to be the seat of the passions, to be that special part of our bodily organization whence emanate all appetitive desires and emotional impulses. It is—so he thought he had discovered—the first to live, the last to die, sleepless and unchangeable; while the life of outside relations, purveyor to all its cravings, is subject to fatigue and disuse, can be trained and modified, prone in every way to accommodate itself to external circumstances. Our moral character—which, in truth, is the expression of our emotional temperament, the physiognomy, as it were, of the genuine bent of our individual impulses—proves thus to be organically and unalterably predetermined in the structures of the entoderm; an ever-greedy core of unconvertible appetite, to be appeased in variable ways by the help of the astonishingly appropriate mechanism which brings it into direct connection with its manifold objects of desire.

Yonder cat, so nimble and spry,—what is she after? Look how adroitly and stealthily she is approaching some object on which her gaze is intently fixed. Now, one unerring bound, and she has seized her prey. Her life of relation has served its purpose. She devours the morsel and rests satisfied.

Is it to be wondered that, under an unsophisticated observation of nature's open doings, this view of the subserviency of the life of relations to the wants of the entoderm has also found expression as a deeply considered philosophical system? It forms, indeed, the burden of the celebrated pessimistic works of Schopenhauer, the misanthropic anchorite, who has become one of the most influential of modern thinkers. And quite consistently, as a moral outcome of it all, he likewise preaches asceticism, deliverance from the cruel bonds of vitality.

To him also, the ever-wakeful will with its appetites and self-affecting desires forms the true kernel of our natural existence, pressing with blind and eager zeal into this phantasmal world of illusory gratification; shaping as its tools the cunning mind to plan, the far-piercing senses to espy, the agile limbs to seize, and then, as genuine symbols of its fierceness, tooth and claw, rigid and sharp-whetted,—frantically, voluptuously to kill, to tear, to cloy. The rest of life, the impulse to procreation, misnamed the tender passion, does it not emanate from the same source of ruthless, self-seeking appetite? And does it not result in the perpetuation of the self-same cravings of life-invested will? Only as a rare exception in human beings, in fact as the strange abnormality known as genius, the intellect liberates itself from its entodermic bondage, creates in its first innocent awakening art and science. Then, puzzled at so much irrationality and disaster in nature, it strives to frame in explanation of it a consistent philosophy. At last, horrified at the dire spectacle of cupidity and carnage filling brimful this sad life everywhere surrounding us, it sickens at it all, and renounces for good the alluring fruits of vitality. This philosophy of Schopenhauer may be regarded as the climax of the entodermic interpretation of nature.

What have scientific evolutionists to say against it? With surpassing discernment and overwhelming proof, we have lately been taught that the struggle for existence, though "red with tooth and claw," leads to progressive development through survival of the fittest. The fittest indeed, but the fittest for what? For attaining the very objects of this struggle for existence, for satisfying the very impulses that bring it about? Does it, frankly expressed, turn on the entodermic issue:

who is to eat and who is to be eaten; who is in consequence to propagate, and who is to be extinguished? In truth, what else can be the purport of faculties entirely evolved in the very realization of those elemental propensities which they are framed to subserve? What can it progressively or ethically amount to,—all this passionate attacking and defending, this sly seeking and hiding, this seemingly tender sexual communion and parental care, if it ultimately achieves nothing but a prolonged and renewed embodiment of the eternal Hunger?

Indeed, only our ideal aspirations coming to us from afar, across the empyrean vast, have invested with a nimbus of altruistic expansion this grim notion of an ever-widening grasp of victorious self-gratification. Quite recently, Georg Heinrich Schneider has formulated an interpretation of vital activities in true conformity with the Darwinian theory.

He classifies all fundamental propensities as nutritive, protective, procreative, and parental. The gratification of these impelling desires by seizure or evasion of external objects is vitally accomplished on the least elevated plane of relational life through mere sensation, involving direct contact; then, higher in the scale, through perception, reaching to a distance; then, still higher up, through mental representation, which figures the objects of its desire or aversion, even in their absence, and leads to their search or avoidance; and, lastly, also through thought, associating several mental representations with each other, whose corresponding perceptions in the world of actual realization are causally linked together, rendering thus possible still more circuitous and far-reaching modes of gratification.

It is clear that, in this very plausible evolutionary system, the impulses of nutrition and propagation furnish the exclusive incentives to all kinds of ectodermic activity. It must in consequence be held that suitable subservience to entodermic cravings constitutes the sole object, the only *raison d'être*, of the entire life of outside relations.

Thus strikingly does modern science, in spite of its ostensible contention, corroborate the intuitive grounds of the ascetic morality, taught as the final aim of religious life in Occidental and in Oriental temples.

This being so, will perchance one or the other reader realize of what import it would be to our ethical bearing toward life, if it could be positively proved that, from the very rise of vital activity, nutrition together with all other functions of life are essentially subservient to the formative play of interaction occurring between the relational life of an organism and the outside influences to which it is related? That this is the veritable aim and course of vitality and organization shall now be demonstrated.

EDMUND MONTGOMERY.

FROUDE'S CARLYLE.

The chief displeasure which one feels in the perusal of this already famous and variously criticized biography is at the perpetual monotone of valetudinarian and dyspeptic complaint which runs through it from beginning to end, so far as the journal and epistles of Carlyle himself are concerned. One is astonished at this, when he remembers who Carlyle was,—namely, the son of sturdy Scotch peasants, brought up with a Spartan simplicity of diet, and himself of a decidedly Spartan and ascetic disposition. But Carlyle was a Sybarite in his hatred of noises of all sorts, but in no other respect. It is recorded in some old Greek book that roosters with their broods of

"tame villatic fowls" were banished from Sybaris by legislative decree, because the shrill clarion of chattering broke the continuity of the sleep of its citizens at an unseasonable hour. Hogarth's "Enraged Magician" had ample reason for his fury, but Carlyle's diseased sensitiveness to the merely ordinary sounds of daily life was ludicrous. After roosters, "vile, yellow Italian organ-grinders" were the special objects of his objurgations. On this side of him, Carlyle was almost as absurd a creature as the famous John Dennis of Pope's *Dunciad*. In reading Froude's biography, one is reminded of the proverbial distich:—

"Great wits are sure to madness near allied,
And thin partitions do their bounds divide."

But much is to be forgiven to Carlyle on the score of his peculiar organization. He was the life-long victim of insomnia, dyspepsia, and hypochondria, and morbidly sensitive nerves. Like all born students, thinkers, and poets, when not in his happier, inspired moods, he was constantly devouring his own heart. His restless spirit was continually fretting his body into bad health. His craving and insatiate ideal nature kept him in a perpetual state of discontent and mental and moral fever. In spite of his diseased nerves, Carlyle proved to be of tough physical fibre, and lived to a long age. But, without his constant morbidness, he would not have been Teufelsdröckh, he would not have been the Diogenes of modern thought and literature. When his *daimon* or better genius did prevail over his ailments, discontents, chagrins, and exasperations, then he mounted aloft, and from his inspired pen flowed such wit, wisdom, eloquence, poetry, and diaphragm-shaking humor as no contemporary genius could produce. Like Byron, he wrote in a frenzy and fury of inspiration,—in his heart's blood, as we are told. After Byron, he was the greatest revolutionary spirit of nineteenth century literature. At heart, he was a great admirer of Byron, though he occasionally attempts to sneer at him in his essays. The English lord had the same detestation of shams and cant and tradition and conventionalism which the Scotch peasant had. Pascal, Rousseau, Shelley, Coleridge, Byron, Leopardi, Schopenhauer, Carlyle,—the above men of genius were all infected with a morbid taint, which made them of one family, so to speak. Their biographies are painful but fascinating reading. They were unworldly, reclusive, peculiar, self-devourers, brooders upon their own hearts, "birds of paradise formed of far too penetrable stuff" for the wear and tear of daily life. So much by way of preliminary remarks. On the whole, Froude's Thomas Carlyle, or Carlylean Epos, takes its place with the greatest of English literary biographies,—with Boswell's *Johnson*, Moore's *Byron*, and Lockhart's *Walter Scott*. After the appearance of his *French Revolution*, Carlyle was recognized and acknowledged as the great author *par excellence* of the English-speaking world, and all did homage to him as such. Cheyne Row, in the London suburb of Chelsea, became a sort of literary Mecca, whither pilgrims of all nations and tongues, and with all sorts of aims and objects, went as to a shrine of wit and wisdom, and finally of charity and beneficence. Indeed, visitors from this side of the Atlantic, where Carlyle was first truly appreciated, became so incessant as to lead him to the conclusion that we were a nation mostly of bores. But among these bores were such personalities as Emerson, James, Ripley, and Margaret Fuller. Carlyle also saw, not as visitors to his own residence, but at the houses of the aristocracy and of great officials, where he was a welcome guest, other distinguished Americans, such as Abbott Lawrence, Edward Everett, and Prescott, the historian, none

of whom interested him much. But Webster, whom he met at breakfast one morning in 1839, did interest him greatly. "I will warrant him," says Carlyle, "one of the stiffest logic-buffers and parliamentary athletes anywhere to be met with in our world at present,—a grim, tall, broad-bottomed, yellow-skinned man, with brows like precipitous cliffs, and huge, black, dull, wearied, and unwearable-looking eyes under them." Carlyle knew a man when he saw one, and he could have had no doubt but that he saw one in Daniel Webster. In dainty literary quarters, Froude's *Life of Carlyle*, with its full portraiture and unreserved exposition of its hero with all his faults and foibles, has caused said hero to be denounced as "an old curmudgeon" and by other harsh epithets. But you cannot have a lion's strength without having occasionally the exhibition of a lion's fierceness.

It is true that Carlyle, like his old literary hero and to some extent prototype, Sam Johnson, was fiercely sarcastic, and at times absolutely brutal and wrong-headed in his talk, in his fits of dyspepsia and exasperation; but all the while there was at the heart of him a fountain of tears, of softest, kindest love, sympathy, and pity, as there was in Johnson. In extenuation and explanation of his acrid and ungracious remarks about distinguished contemporaries and even personal friends, it should be remembered that for long years he was condemned, with all this intellectual power, to poverty, obscurity, and neglect, as Johnson had been before him, and, still further back, as the Roman poet Horace had been. Meanwhile, he saw others of far lesser calibre surfeited with easily won honors and fame. Naturally enough, when such fortunate contemporaries crossed his path, he spoke of them, if he was "in his moods," in terms of that fierce indignation of which Swift, a kindred spirit, speaks as lacerating the heart of neglected and unrecognized genius. Thus it was that he so frequently expressed his feelings in contemptuous sallies of wit and sarcastic characterizations. He was also by nature sarcastic and censorious. Sarcasm and censoriousness are national traits of the keen-brained Scotch; and Carlyle was *Scotus Scotorum*,—a Scotchman among Scotchmen. His intellect was almost fiercely apprehensive, and went over a subject as with tiger-leaps. Hence, he was impatient of all dulness and stupidity. A youth who, unaided, went through Newton's *Principia*, mastering it in all its details, was not likely to find any subject or study or mental achievement beyond his capacity, or too tough for him. Meantime, after saying thus much in extenuation of Carlyle's habit of slurring and slashing his distinguished contemporaries,—for the disposition finally became a habit,—let us confess that it was a most unamiable trait, and betrayed more or less of jealousy and of the gnawing of the tooth of envy.

Carlyle was undoubtedly jealous of successful statesmen and men of action. For, like Byron, at heart he despised the life of a mere writer and literary fellow; and such a life is more or less despicable. In particular, Carlyle was jealous of Gladstone and Disraeli, afterwards Lord Beaconsfield. Both were successful *littérateurs* like himself; yet, unlike himself, both had succeeded in climbing to the heights of political power and shaping the whispers of a throne,—of the throne of an empire on which the sun never sets. Carlyle habitually spoke of these two great writers and statesmen in the most contemptuous, slurring terms. But, finally, he owned that Disraeli, who was at the time British premier, poured coals of fire on his head when, in 1874, he sent him a letter couched in most flattering and magnanimous and noble terms, offering to him, as the greatest

of living English authors, a pension and a patten of nobility. He declined both, but expressed his gratitude in fitting terms. Carlyle's humor was *sui generis*, grotesque, gigantesque, and unequalled in its way, surpassing that of Rabelais even. Men and things etched themselves on his mind as in images of fire, and mostly in a grotesque, ludicrous light. Thus he could not help representing many of his friends in ludicrous terms. Then he had in his nature an inherited Calvinistic Presbyterian taint, which made him intolerant of all mental and moral weakness, and all foibles, and even venial vices. Thus it was that such unfortunate sons of genius as Charles Lamb, Hazlitt, and De Quincey fared hardly at his hands, although he would have shared the contents of his purse with either of them. Such a sensuous, hyper-sensuous, sugar-fancied poet as Keats naturally excited his contempt. Macaulay he spoke of as commonplace, and all gone to tongue. Coleridge he characterized as "a weak, diffusive, weltering, ineffectual man"; and with all his unquestionable genius he was that, and his friend and eulogist, De Quincey, admits as much by implication. He described the British House of Commons to sundry members of it, who had called at Cheyne Row, as "six hundred talking asses, set to make the laws and administer the concerns of the greatest empire the world had ever seen." He doubtless suffered himself to write of Mill as he did, on hearing of his death, because he was annoyed by hearing that writer styled "the great thinker of his age," which he undoubtedly was, Carlyle to the contrary, notwithstanding. I have classified Froude's *Carlyle* with Boswell's *Johnson*. As in the latter you see all the famous Englishmen of the eighteenth century gathered about Boswell's "philosopher, guide, and friend" at one time or another, so in Froude's *Carlyle* all the most famous men of the nineteenth century in both hemispheres file past the reader, so to speak. Thus, it is a work which will be *klēma es aei*, or a possession forever; a book which will make this century luminous, as it were, to all after times.

But Carlyle was by no means all gall and vitriol and sarcasm. He sincerely loved and admired many a mortal among his contemporaries,—such as Tennyson, Peel, Chalmers, John Sterling, and Lady Harriet Baring, his Gloriana, who shone on him like the morning star from the serene altitude of British aristocratic life. He loved his wife, his Jane, too, idolatrously; and his affection for his kindred was exemplary and unsurpassed. In his latter days of comparative affluence, his kindness to the poor and unfortunate was without stint or limit. He himself was constitutionally frugal and inexpensive. His chief delight in the possession of money was that it enabled him to help his unfortunate fellow-mortals. Such being the fact, who dares to question the essential nobleness and unselfishness of his heart? In fact, it was a heart worthy of his genius and brains. In his old age and weakness, he saw that the world could spare him, and that it would move on as usual, irrespective of himself, in its own way. Like most old men, he thought that the younger generations were going to the bow-wow; that Mammonism and hedonism and mechanicalism, and atheism and a gospel of dirt, and stump oratory and democracy would ere long be the ruin of the world, and bring in an era of chaos and anarchy, and subject mankind to a signal visitation of divine wrath and displeasure, such as the old Hebrew prophets speak of. Meantime, he might have consoled himself with the fact that he himself, in his day and generation, had given a shove to the world, and dropped seeds in the shape of ideas into the general mind, which would not fail to fructify in the most marked man-

ner sooner or later, as they are even now doing. Mr. Froude, in closing his biography, truly says that "in future years, in future centuries, strangers will come from distant lands—from America, from Australia, from New Zealand, from every isle or continent where the English language is spoken—to see the house where Carlyle was born, to see the green turf under which his dust is lying. Scotland will have raised a monument over his grave; but no monument is needed for one who has made an eternal memorial for himself in the hearts of all to whom *truth* is the dearest of possessions."

B. W. BALL.

SUFFRAGE: A PLEA FOR WOMAN.

II.

Some may admit that woman is sufficiently intellectual and gifted with a sense of individuality to entitle her to citizenship, but maintain that patriotism and loyalty are characteristics of which she must necessarily be devoid, because she has had no country nor cause to put these attributes to the test.

During a ride of eleven miles through a dairy district in a Western State in the autumn of 1873, with a brother, he told me the experience of each family, house by house, resulting from the war which had ended about eight years before. Husbands, fathers, and grown-up sons had so universally gone to the war that none but women, small children, and old men remained; "and yet," said my brother, "industries did not cease, and the men returned in some instances to find their property in better condition than when they left. The women rose to the emergency. They milked the cows, and delivered the milk punctually at the cheese factories; the girls and boys abridged their school hours and helped their mothers, who did not hesitate to follow the plough, plant and cultivate the crops, and gather the harvest; and, after each day's severe labor, they did what man cannot do. After tying up and feeding the last horse on the place, they locked the barn, and, in individual homes, neighborhood gatherings, and in the village lyceum or in the school-houses, worked upon every conceivable apparel which their dear ones in the field could require; and these went forward in one continuous supply. If a heart-sick sister, unable to support her grief, gave up to despair when hearing of the death of husband, sons, and brothers, her neighbors for miles around gathered at her farm, brought up the work, established committees to see that her interests did not suffer, and soon she threw off her lethargy, and bustled around with the rest. Do you think," said he, "that men with such a patriotic support from the women could be otherwise than invincible? In fact, the glorious termination of the war was almost as largely due to the women of the land as to the men; and, though the numbers of the enemy should be as the locusts now devastating Nebraska, the final result would have been the same while the women of the Western States continue to exist. Women!" he exclaimed. "It is impossible to know the limit of their powers of endurance; and, when you consider that this eleven miles is but one instance of thousands of similar localities, you can judge that the influence of woman was a powerful factor in bringing around a final adjustment."

At the "Corners" was a mansion overlooking a stretch of rich meadow-land, upon which herds of cows were grazing. Under the hill, a large cheese factory, saw-mill, and grist-mill, evidently the same property, indicated large wealth and abundant thrift. "This," said my brother, "was the accu-

mulation of an enterprising man, foremost in every undertaking for the good of the county; and he left it all to an only child, a son, who had no bad habits, but he was a 'no account,' nobody: driving into town every morning, and loitering around the village in an aimless manner until nightfall; leaving his industries in charge of hired people, who, one after another, acquired enough to go on their own account, until the property gave evidence of the want of proper management.

"The village postmaster had a daughter, who kept the books of the store and conducted the post-office and took care of her motherless brothers and sisters, and she and the young man were engaged to be married. Their love was of that Platonic sort which results with villagers growing up together from the cradle, almost precluding sentiment.

"It caused her much sadness and sorrow to perceive that he was such a listless and inefficient man, and her refusal to name a date for the marriage was probably as largely influenced by this as the claim of duty to her family, which she made the ostensible reason.

"One day, in response to his importunities, she said to him: 'Happiness in a married state cannot be possible in the absence of respect and esteem. I neither esteem nor respect a man who can stay idle when his country calls for all her sons. Bring me your enlistment papers and a marriage license, I will not delay the ceremony one hour. Return with an honorable discharge, I will be proud of you as long as I live.' Two hours afterward, they were man and wife. Two weeks following, he marched as a private in a battery corps raised in that district, which reached Mill Creek, Tenn., just in time to enable the commanding general to report that the battle of Mill Creek was saved by an Iowa and an Ohio battery; and no braver soldier marched from Atlanta to the sea than that young man, who emphasized his discharge papers by presenting them in the form of a colonel's commission, two years after his departure. And he found that, under the discreet management of his wife, the property was brought up to its old-time standard; and, in energy, enterprise, and reputation, he worthily represents his father." Woman! Patriotism! Loyalty! If the women of America had hesitated in their devotion, they would have dishonored their maternal ancestry; for historians delight to record that the women of the Revolutionary times were heroic in the cause of liberty. And the women of New England are accredited with having been instrumental in developing that self-reliant and noble race which now peoples the North-west; while the mothers of Virginia are venerated for influencing by their fortitude, endurance, and patience the destiny of the South-west, reclaimed from a trackless forest, filled with wild beasts, wilder men, and cruel pestilence, to be an empire of wealth and beauty; each section differing only in that New England carried its Puritan and Virginia its Cavalier characteristics, now rapidly blending by means of peace and unfettered freedom of commerce, so that the distinctive features will soon wear out and be forgotten. But, while in active existence, each was a giant force, clashing in a terrific conflict with a power which convulsed the world; and these men had mothers worthy of such sons.

Woman suffrage may assert claims deserving the largest sympathy and unbounded respect; but, after all, it will be acknowledged only upon its merits, as a right which may not be safely withheld in consistency with national polity. Right, though encased in the golden folds of living truth, has to endure a fearful struggle before it attains full recognition and continued existence, if opposed

by power; for power has a charm so infatuating that its possessor will look upon the wrack of ruin, bearing all to a common destruction sooner than relax its grasp, even though that doom be the soul's perdition. Right succeeds only when strong enough to strangle opposing power. In numerical strength, the advocates of woman suffrage avowedly working in the cause are only as the power of the linnet to the eagle or the hare to the lion; but, by an influence granted to truth, justice, and right, it is no longer a power to be set aside to a more convenient season, or waved aside with supercilious contempt, nor paralyzed by listless indifference. It is a living question which legislators are forced to treat with dignified consideration, and will not down until successful or crushed by its own inherent defects.

Many of us will not live to see it fully realized; but I am convinced that many now living will see the day that youths, now infant boys and girls, will assert equal citizen rights at their majority, and exercise those rights, almost unconscious and incredulous that their mothers were not citizens, but merely resident aliens, respected so long as lovable in the sphere definitely marked out for them, but to step beyond which bounds was social ostracism and withering contempt. Freedom is at once the fruit and the food of Liberty. Nourish freedom, that Liberty may live.

Men of America, your mothers, wives, and sisters are not free. Women aided in the struggle to assert Liberty, and again to retain it. They were welcome toilers in erecting the temple, but are refused the protection of its roof. Beware, lest ingratitude for a devotion as patriotic as your own bravery tarnish your hard earned and dearly cherished liberty, and injustice so obscure its lustre that Liberty will become a by-word to the nations and to yourselves a shame by means of a selfish grasping of power, not all of your own procuring. Be not like the king of the beasts of the forest, who willingly follows the guidance of the jackal to the prey, but drives him from the quarry, leaving nothing but bones and scraps of the feast to afford an unsatisfying repast, and a sense of the remorseless ingratitude of domineering power. Extend the area of freedom by enfranchising woman, and Liberty will rejoice that justice and right have been done in her name; and she will march on with a banner truthfully inscribed, Liberty for All! worthily dedicated to American freedom.

J. F. WETMORE.

REFLECTIONS ON A DECISION REGARDING WIFE-FLOGGING.

In an English divorce suit, reported in English papers, which resulted in a disagreement of the jury last week, the judge decided that the flogging of a wife in the presence of her son does not constitute cruelty! If this is English law, English law is in one respect at least on the side of falsehood and brutality, and should be speedily repealed or radically modified so as to conform to decency and common sense as to the treatment of wives. Supposing a wife, possessing the necessary strength and courage, should flog her husband in the presence of his daughter: would *that* be cruelty?

Not a few English Christian writers have written in regard to the arbitrary authority legally exercised by husbands over wives in certain periods of Roman history, to show how little Paganism, in comparison with Christianity which superseded it, did for woman. If writers, two thousand years hence, when Christianity shall have taken its place among the worn-out and obsolete systems of the past,—all the good remaining, of course, as is now true of Paganism,—shall come across the decision above mentioned, and other similar decisions in

Christian England in this nineteenth century, sustained by appeals to learned Christian jurists like Blackstone, what language will they be warranted in using in regard to the Christianity of England, which permits without protest, and even sustains, such injustice?

If some ingenious casuist shall wish to prove the superiority of Paganism over the faith which superseded it, he may quote the remark of Cato the Censor, who lived in the third century before the Christian era, that "They who beat wives or children lay sacrilegious hands on the most sacred things in the world. For myself, I prefer the character of a good husband to that of a great senator." To this, he may add, to show how the equality of the obligation of chastity was asserted in Pagan Rome, the words of Antoninus, who, in issuing a condemnation for adultery against a guilty wife by request of the husband, added, "Provided, always, it is established by your life that you gave her an example of fidelity. It would be unjust that a husband should exact a fidelity he does not himself keep."

He might cite authorities of the highest character to show that woman's position in the Pagan Empire was one of great social dignity: that a large class enjoyed great legal independence; that woman could hold property in her own right; that she inherited a portion of her father's property, and retained it independently of her husband; that no inconsiderable portion of the wealth of Rome at one time was under the control of women, who often loaned money to their husbands. He might quote whole pages from Tacitus, to show in what high consideration women were held, and with what respect they were treated among the unchristianized Germans, who acknowledged the equality of men and women in political and religious matters. From F. W. Newman, he might take passages like the following: "Only in countries where Germanic sentiment has taken root do we see marks of any elevation of the female sex superior to that of Pagan antiquity; and, as the elevation of the German woman in her deepest Paganism was already striking to Tacitus and his contemporaries, it is highly unreasonable to claim it as an achievement of Christianity."

In contrast to whatever is noble in the Pagan ideals of womanhood, and just in the Pagan laws and treatment of women, might be adduced a multitude of testimonies showing an inferior estimate of woman by eminent representatives of Christianity, and most unjust laws and decisions in regard to woman's status in Christian nations. From Lecky might be quoted: "But, in the whole feudal legislation, women were placed in a much lower legal position than in the Pagan Empire. In addition to the personal restrictions, which grew necessarily out of the Catholic Christian doctrines concerning divorce and the subordination of the weaker sex, we find numerous and stringent enactments, which rendered it impossible for women to succeed to any considerable amount of property, and which almost reduced them to the alternative of marriage or a nunnery. The complete inferiority of the sex was continually maintained by law; and that generous public opinion which in Rome had frequently revolted against the injustice done to girls, in depriving them of the greater part of the inheritance of their fathers, totally disappeared. Wherever the canon law has been the basis of legislation, we find laws of succession sacrificing the interests of daughters and of wives, and a state of public opinion which has been formed and regulated by these laws; nor was any serious attempt made to abolish them till the close of the last century. The French Revolutionists ["infidels"], though rejecting the proposal of Sieyès

and Condorcet to accord political emancipation to women, established at least an equal succession of sons and daughters, and thus initiated a great reformation of both law and opinion, which sooner or later must traverse the world." To this might be added a sentence from Maine's *Ancient Law*: "No society which preserves any tincture of Christian institutions is likely to restore to married women the personal liberty conferred on them by the middle Roman law." Then all the disabilities under which women are kept in Christian nations might be collected into a chapter, and another could be devoted to showing that both the Old Testament and the New teach the natural inequality and inferiority of women. If our future historian should follow the example of those theological writers who have brought together all the crimes and vices of Pagan nations, and contrasted them with the virtues of Christian lands,—not content to compare the ancient and modern civilizations as wholes, the good with the good, the evil with the evil,—he would draw dark pictures only of Christendom, and dwell in contrast on the noble lives, the sublime ideals, and splendid achievements that shed undying lustre on Pagan antiquity, to which the genius, fidelity, and loveliness of woman largely contributed.

Let us hope that, twenty centuries hence, wife-flogging will be unknown, and that decisions like that referred to in the beginning of this article will be, as they should be, regarded as anomalies in nineteenth century civilization.

B. F. UNDERWOOD.

EDITORIAL NOTES.

BY B. F. U.

THERE will be a Christmas festival at the Church of the Unity, four P.M., December 25, by the Young People's Ethical Class, under the direction of Mrs. Clara M. Bisbee. There will be speaking, Christmas carols, tree and Santa Claus. Admission, 25 cents. Tickets have been left for sale at *The Index* office.

SAYS an exchange:—

At a "holiness" meeting in Connecticut the other day, one of the speakers, a business man, who avowed that he was wholly freed from the power of sin, spoke on missionary work as a remedy for business depression. He said, on either side of the equator there is a belt of five hundred million people living almost naked. "Christianize them, and their demand for goods would be so great that all the mills now in existence would not supply them, running day and night." He must think less of the fact that, according to his theology, those people all go now where clothes won't stand the heat than of the possible market for our surplus products.

MAX MUELLER wrote to Chunder Sen in 1881 as follows: "Stanley certainly did not approve of the Thirty-nine Articles; but he signed them as an historical document, knowing their origin and their historical purpose, and accepting them as a compromise between the different parties that have formed the Church of England." Müller adds, "How could we have any religion, how could we have any Church, without a compromise?" The *London Inquirer* quotes the above, and adds: "According to this, we might subscribe to anything, if we had sufficiently 'robust consciences.' We do not for a moment reproach those of our Broad-Church friends who, being born and bred in the Established Church, think it their duty to remain in it and make the best of it; but we do vehemently reproach those who enter it without professing any real change of conviction, from worldly or other motives or from sheer indifference."

R. C. SPENCER, of Milwaukee, in a letter printed in the *Religion-Philosophical Journal*, thus refers to

the National Liberal League, of which he was once an active member: "I am in receipt of the remarkable circular of the Secretary of the League, appealing for the sinews of war and promising therewith to move instantaneously upon the Christian Church and wipe it out of existence without ceremony. Having never considered this any part or parcel of the design or purpose of the real League, I could not consistently encourage such an undertaking under that name. Besides, I am not anxious to see such a thing done, certainly not on such short notice. . . . I am a Liberal, or have so considered myself, and once had hope of the usefulness and honor of the League; but the thing takes such strange and ridiculous freaks that there seems to be no sort of safety in coming anywhere within reach of it. It strikes wildly, lunges, kicks and flounders so amazingly that it is pretty certain to be the death of itself. Its antics would be amusing, were they not so much in blind earnest."

SAYS the *Christian Register*: "We are glad to see a movement among the Spiritualists of this country for the formation of a society for psychical investigation. It cannot be denied that there is a vast range of phenomena, the causes of which are hidden in mystery. When a table without contact may be made to walk around the room, music may be evoked from a locked piano, and writing obtained from a slate by invisible agencies, there are facts here that require investigation. This whole realm of facts has too long been committed to a class of people incompetent for scientific investigation. It has even been surrendered to gross impostors. After all the trickery and humbug is removed, there is still a sufficient and astonishing basis of the marvellous to call for profound study. To our Spiritualist friends, the only satisfactory solution is that they are evidences of the power of disembodied spirits. There are many who accept the facts as well attested without being able to accept this philosophy. Our Spiritualist friends can command wealth enough to establish such an institution for psychical study, and they ought to lead in such an enterprise. But it ought to be so managed that the investigation shall proceed on strictly scientific principles."

ACCORDING to *Our Herald*, a journal published at Lafayette, Ind., and devoted to woman suffrage, "certain church boards and clergy," after the results of the Presidential election were known, asked the Women's Christian Temperance Union, "which had its own political belief," to pass a resolution promising that in its prayer-meetings politics should not be mentioned, and stating that, if this request was not acceded to, notices of the Union would not be read from the pulpits. One woman said, when the communication was read: "Sisters, the power attained by the Women's Christian Temperance Union of this county has not been by the hand of the clergy; and, as we are in a position to dictate to them, instead of them to us, let us resolve to support ourselves instead of them, and treat this demand with silent contempt, as it deserves." *Our Herald*, which is edited by a woman, adds: "Be it said, to the honor of this band of women, that they acted upon the well-timed advice. This request appears the more arrogant, when we remember that all these pulpits have resounded with political sermons for several weeks, from the mouths of these would-be dictators. When women are wise enough to snub such priestly interference by allowing these men to look elsewhere for their support than from 'teas,' 'socials,' and other womanly ways, they will learn that a white necktie has no more divinity hedging it about than a white ribbon."

The *London Secular Review* quotes from our neighbor, the *Investigator*, that Mr. George Chainey

"stated that he had been told repeatedly by Col. Ingersoll that he [the Colonel] was sick of lecturing on Liberalism, and that he would not give another lecture if it were not that he wanted money." The *Review* thinks "American incentive against the Almighty is too evidently the Almighty Dollar. The gallant Colonel, we gather, shares our opinion in regard to orations framed to wake the vulgar echoes of the Cat and Ladle. . . . When we hear of the laches of the mighty ones, we grope about to find where God is, that we may thank him that, although we are far from rich and have not a penny save what we earn, we are yet rich enough to be no free-thought hireling and missionary." At the same time, the *Review* thinks "it was more than indiscreet to tell a public meeting what his unsuspecting friend Ingersoll had told him in confidence." Criticism of Col. Ingersoll, based upon the remark imputed to him, we are inclined to think is premature. We must, with the *Investigator*, strongly doubt whether he made the remark. Mr. Chainey's statement is more likely to be the result of a misunderstanding on his part. We have never seen anything in Col. Ingersoll to indicate lack of earnestness in his opposition to theology. His ability as an orator would draw large audiences, and enable him to make money by lecturing on whatever subject he might speak.

The *Catholic Examiner* quotes the following from Bishop Spalding's article, "The True Basis of Government," which appeared in a recent number of the *North American Review*: "Women are the most religious, the most moral, and the most sober portion of the American people; and it is not easy to understand why their influence in public life is dreaded. They are the natural educators of the race, and they and their children are the chief victims of drunken men. And, since men have been unable or unwilling to form a right system of education or to find a preventive of intemperance, there can be no great harm in giving on these matters at least an experimental vote to women." The comment of the *Examiner*, considering that it is a Catholic journal, is remarkable: "Who shall say after this that there is not a sentiment in favor of extending the suffrage to women? And suppose it was done? We do not believe they would abuse it in the manner in which a very large proportion of our men do. Bishop Spalding points out that for reasons that are obvious they would stand for and advocate morality in public life; that their votes would unquestionably be cast to promote it, and, if they did this, none but good results would follow. The smart men of the press may laugh at the idea of woman suffrage, but we are not sure that it is a thing to be laughed at. One thing is plain; and that is, that there are at present a great many more people willing to allow women to vote than there were a few years ago. The world moves. The end is not yet; and he is a rash prophet who would say that women will not some time have a voice in the government of the land for which they bear and educate rulers."

For *The Index*.

TO MOTHER NATURE.

"Oh, pray to Him!" they say to me:
"Prayer is for all that live!"
Alas! I know not what to ask:
Thou knowest what to give.
The leaves bestrew my lonely path,
I wot not where I go;
But in yon dimly twinkling stars,
And in this drifting snow,
Is somewhat yet that speaks to me.
And Mother Nature's call
Is aye the voice I love to hear,
For she is all in all.

GOWAN LEA.

MONTREAL, November, 1884.

The Index.

BOSTON, DECEMBER 18, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

NINETEENTH CENTURY RELIGION.

An Address given at the Convention of the Free Religious Association at Florence, Mass., Nov. 19, 1884.

BY WM. J. POTTER.

It is popularly taught that the value of a religion depends upon its age. If a religion can be shown to have originated a good many centuries ago, this serves among its adherents as *prima facie* evidence of its truth to-day. If it is believed that we have the authentic reports of witnesses vouching that they were present at the birth of a religion some nineteen hundred or three thousand years in the past, and that there were strange wonders accompanying its birth, this is commonly alleged to settle the validity of the religion for the modern world, no matter whether it be adapted to the intelligence and practical conditions of the modern world or not, and even though the same kind of evidence would not be accepted for authenticating the origin of a religion in the present age. The religion thus claimed to be true may seem to be entirely at variance with the real needs of men and women now living, it may not anywhere touch the changed social and personal conditions of the communities to whom it is commended, and yet it is none the less declared to be the true religion for them; and, if the modern world does not readily accept it, it is pronounced to be the world's fault and not the religion's. The religion remains true as in its origin, and mankind must be pined and fitted to it.

In contrast to this ordinary theological habit of dwelling upon the antiquity of a religion, it was refreshing to hear a speaker in a parlor conversation assert that he was "more concerned to know what is to be our religion to-morrow than what it was so many centuries ago." "Nay," said another, "to know rather what our religion will be the day

after to-morrow." It occurred, however, to my more prosaic and practical mind that there was a question of nearer concern still, though perhaps not capable of so witty rhetorical statement; and that is, to know what is the religion for to-day. This, certainly, is the question that most closely concerns us who are living to-day. The old sentence still has its force, and may have a very radical meaning: "Now is the accepted time; now is the day of salvation." And this is the question which I propose here to consider. We want a religion that will meet the actual needs of human society to-day; that will inquire into and adapt itself to the conditions, mental, moral, social, of men and women as they exist this moment; that will meet them squarely, without equivocation or evasion, as they stand or grope with all their questionings, doubts, sorrows, temptations, darkness, sins, and wretchedness; and that will recognize also all their light and culture and gladness, and all that abounding enterprise, ambition, power, and restless aspiration which mark this latter half of the nineteenth century. In a word, we want to-day's religion more than yesterday's or to-morrow's; this century's religion more than that of four or eighteen centuries ago or of a century hence. To study the religion of a past era has its interest and value; to conjecture what religion may become in some remote future era may be a pleasant dream; but that which is of most vital import to us is to find a religion—or philosophy of life, if that phrase be more liked—which will help us to do our own work better, solve to-day's pressing problems, deliver us and human society from to-day's evils, and bless humanity with all of to-day's possible good and gladness.

What, then, is the kind of religion that is called or in these last decades of the nineteenth century? Not all the religion that exists at any time is of that time or for that time. Religion, more than anything else perhaps, persists in retaining certain modes of thought and belief and certain customs and ceremonies after the natural demand for them is past. This comes from the fact that religion, with its beliefs and institutions, has been commonly conceived to have been sent to man from an omniscient source, through supernatural agency, instead of being a natural outgrowth from human thought and feeling. If religious creeds and ceremonies have been revealed to man by Omniscient Wisdom, of course they are infallible and cannot be changed. What was good and demanded for nineteen hundred or five thousand years ago is just as good and necessary for mankind to-day. Or, if a change come, it can only be made on the theory that Omniscient Wisdom adapts its revelations to the ignorance and weakness of human nature, only revealing that which human intelligence is able to comprehend and use. But this theory, though it implies a sensible mode of procedure, yet has so few advantages over the theory of a natural revelation of religious truth, and so strongly resembles it, that the strictest adherents to the old standards of theology have looked upon it as heretical and dangerous. It is, they say, only an easy sliding down from the high platform of an infallible standard of truth to the inadequate and unsafe ground of natural religion. And pertinently do they ask, What is the occasion for a supernatural revelation, if it simply conforms to the ignorance and weakness of human nature, and does not supplement these natural infirmities of mankind with a knowledge of truth not obtainable by men in their natural capacity? And so it is that, under the old theory of an infallible revelation for all time, many religious doctrines and usages continue to be taught and observed long after they have ceased to have any elements of truth, unless

it be by the most far-fetched and fanciful interpretations, or to yield any practical benefit.

Look, for illustration, at the training which is given to the preparation of ministers in most of the theological seminaries of Christendom. The whole system of instruction centres in two books, which are written in languages that are nowhere spoken by any existing people, and which concern the history and interests of a race which long ago ceased to have a distinctive national existence. Two books, in two dead languages, which record the political and religious fortunes of a dead people,—these make the basis on which preachers are educated to teach the living people of Europe and America in this nineteenth century! Religious doctrines, ethical precepts, approved examples of character, to be found in these books,—these are to be taken for truth to-day; while what is not to be found in these books or does not accord with what is found there is pronounced false or unessential. Now, I would not depreciate the value of the Old Testament and New Testament of the Hebrew and Christian churches as books of religious instruction. The Hebrews as a race had a special religious temperament and a noteworthy religious history. A small nation, they have yet been a powerful factor in history. They were a central nation in the midst of mighty movements that shaped history for centuries. Their books are freighted with valuable moral and spiritual lessons. Nor would I depreciate the value of still studying languages that are dead, and of making researches into the life of nations that have passed away. The literature of even dead nations may still be vital with the living power of great truths. And nothing takes us so near to the mental and moral life of a people as to read their own literature.

But it is not on the ground of the special religious temperament and history of the Hebrew people, nor on the ground of the naturally stimulating mental and moral effect of getting near to the literature of a people who had a peculiar intellectual and moral robustness in their religious history, that the Hebrew and Christian Scriptures are made the basis and centre of the entire scheme of instruction in most of the theological seminaries of Christendom. Were these the grounds, then the literature and history of other peoples would also justly claim a share in shaping instruction, even though a less share: whereas, they are entirely ignored, or have been until very recently. But the Hebrew and Christian Bible is made the basis and centre of theological instruction, its languages, though dead, must be learned, its chronicles studied in the minutest details, its doctrines investigated and absorbed as those of no other book, because of the theory that these are not men's words, but God's words, and that the people whose acts are here recorded were specially God's people, as were not the Greeks or Hindus or Chinese. It is because of this theory of a local revelation and a partial Providence that learned and able scholars have spent their talents and lives in the study of these books and in settling the exact way in which the ancient text should read and be interpreted; it is because of this theory that they have devoted immense research and energy and money to such questions as whether this word or that or even this letter of the alphabet or that letter were the one actually used by Paul or Jesus or Isaiah; whether the style of this Epistle corresponds with that Epistle or that Gospel; how the prophecies of Daniel and the visions of the Book of Revelation are to be understood; how the various discrepancies in the different parts of the books are to be explained away; was this passage something said by Jesus, or an inter-

polation by his biographer? when Jesus said "everlasting," did he mean everlasting?

See some of the results of this theory in other directions. I look into the Sunday-school lesson printed in one of the most widely circulated evangelical papers for use in evangelical Sunday-schools on the Sunday of the week when this essay was written. The lesson is concerned with all the details of the succession of King Solomon to King David, the movement of Adonijah to seize the crown, the aid given to his conspiracy by Joab, the able and wily soldier, the counter-movements to foil the plot, etc. But what has all this to do with religious instruction in a Sunday-school in America in this nineteenth century? Has it any more relevancy than the story of the succession of Charles I. or of Henry VIII. to the throne of England? Has it a hundredth part of the relevancy which the story of Abraham Lincoln's succession to the Presidency of the United States in 1861 would have? Why should we say that the Almighty lived among the Jews more than he lives among the American people? Why is there any more religion in studying the military movements of General Joab among the wild tribes of Palestine than in studying those of General Sheridan among the North American Indians?

Look at another illustration of this theory of religion. The Southern Presbyterian Church has recently been thrown into great consternation because of the discovery that a professor in its theological seminary at Columbia, S.C., has been teaching the scientific doctrine of evolution to his classes there. The professor has explained frankly just what he teaches, and it proves to be a very mild form of the doctrine. It is simply that the Bible does not profess to teach scientific theories, and that it does not contradict the theory of evolution as to the creation of plants and animals and the physical part of man. But this is regarded as the beginning of a very dangerous heresy,—as perhaps it is,—the thin edge of the wedge behind which all Darwinism may follow; and Southern Presbyterianism was not satisfied with the compromise resolution which the majority of the seminary directors passed after a two days' session, permitting the professor to continue his office, though reminding him that such instruction had better be sparingly given. A minority of the directors entered a protest, solemnly affirming that to teach that Adam's body was formed by causes of natural evolution, while Eve's body is distinctly declared to have been created by a supernatural act of God, is directly contrary to the creed of the Presbyterian Church, subversive of all sound doctrine of Scriptural inspiration, and most perilous to the whole system of Christian theology and to the very existence of Christianity. The synod of South Carolina has considered the matter, and voted that the heresy ought to be suppressed. And now the momentous question is likely to go for decision to the general Presbyterian Assembly. Just think of it! Men being educated for religious instructors of the people in this nineteenth century on a theological basis that stands or falls with the old mythological fable of Eve having been created from a rib of Adam! Men being educated to speak every Sunday to people who read and who may think, and yet a forbidden heresy to let these coming preachers know what the scientific world is saying on the doctrine of evolution.

Now, religion on this old theological basis of an infallible Biblical revelation has got such a deep hold of Christendom that it is going to last a good while yet. And, so long as it lasts and wherever it is taught, it will be responsible for many superstitions and many irrational doctrines that are proclaimed in the name of truth. But there is

something in the mental atmosphere of the nineteenth century that is not congenial to these old theories of religion. Though taught, they are felt to be out of place. They are an importation of mediæval beliefs into the modern mind. Even in the South Carolina Presbyterian Synod, forty-five out of ninety-five delegates voted for the Columbia professor. This is not an age of blind faith, but of vigorous inquiry. Belief must wait upon evidence. Modern creeds must conform to reason. An old creed may be revered for its antiquity, sacred associations may cluster around it as it is liturgically repeated in the Church; but it is sentiment, and not truth, that sustains it, unless to-day's thought can indorse it. And whatever the thought of the day cannot indorse, what enlightened reason opposes, is out of place in the modern world. Though it may linger for years, its doom is sealed. Whatever else the nineteenth century may demand, it demands of institutions or customs or creeds, however venerable, the reason why. It is a century that calls for robust thinking. If the churches are losing their hold on the mass of thinking and cultivated people, it is largely because they do not feed the mind as once they did, because they have in some way lost their harmony with rational thought.

The first characteristic, therefore, of nineteenth century religion is that it must satisfy Reason. It must answer to-day's questions, and not merely those of four hundred or four thousand years ago. It must be in respect to beliefs *en rapport* with the modern mind. It must keep pace with the progress of thought; be afraid of no discovery of science; face the intellect of the future, and not that of the past. It must allay superstitions, not foster them. It must venerate truth rather than tradition. It must accept truth as its proper food. The love of truth must be its impelling enthusiasm, the pursuit of truth its engrossing object, the living of truth its supreme pleasure. On no other terms can religion meet the conditions of existence in this modern era: it must, first of all, respect the liberty of the human mind; it must be free.

And, again, nineteenth century religion must be moral. It may be more than morality, but it must at least have morality. Without this, it is but sounding brass and a tinkling cymbal. And morality must be not simply an attachment to it removable at pleasure, or one of its indirect consequences only: religion must be itself moral through and through. Its beliefs must be moral, its objects of worship must be moral, its usages must be moral. And it cannot be said that either religious usages or objects of worship or creeds have always been moral. The day is past when religion can safely speak of morality as "filthy rags"; or when any theological scheme of atonement can atone for a defect in personal integrity; or when soundness of creeds or any amount of pious observances can take the place of righteous conduct; or when the suffering of another soul can take away from a guilty soul the proper retribution of its guilt. It is no longer religion and morality: it is religion *in* and *through* morality. There never was, indeed, a genuine religion *without* morality, though much that has passed for religion has lacked that supreme qualification. But now more than ever is morality to be made the test and proof of religion. Now more than ever is it recognized that they who would see the Most High must be pure in heart; that they who would abide in holy tabernacles and dwell in holy mountains must have clean hands and a pure heart, walk uprightly and work righteousness, eschew vanity and deceit, and speak truth from their hearts. Now more than ever does the spirit of the age cry to the devotees of religion, "Not your

many prayers, your solemn meetings, your Sabbaths and fasts, shall be sufficient to procure you acceptance; but wash you, make you clean, put away the evil of your doings, cease to do evil, learn to do well."

And so, again, nineteenth century religion is a humanitarian religion. It is not only morality, but philanthropy; not only integrity, but beneficence; not only love of and fidelity to truth, but it is loving kindness and charity. It not only does justice, but it loves mercy. It not only abstains from doing ill to the neighbor, but it seeks to do him good. Ecclesiastical religion has been too apt to play the part of the priest and the Levite in the presence of human distress, and pass by on the other side. But religion to-day must prove its title by performing the office of the good Samaritan. Its institutions, its sabbaths, its churches, its services, are made for man, not man for them. They must bend to his needs, not his needs be sacrificed to their fancied sacredness. The manifold social problems of our time, the degradations and slaveries of body and mind, the intemperance, the pauperism, the vices, the crimes, the crying miseries that spring from ignorance and wickedness,—all these point to the appropriate field of religion's work. Religion is no longer to be nursed as a private luxury for the solace and refuge of one's own soul, but is to be sent out into the world as a stalwart worker for social amelioration. In the past, its primary office has been to solve problems of speculative theology for the intellect, and to save the individual soul for bliss hereafter: now, it must try its hand at solving practical problems of sociology for human benefit on earth, and possess the spirit of the Buddhist vow, wherein the worshipper declares that he will never accept individual salvation for himself alone, but remain in the world of struggle, sorrow, and sin till all souls are redeemed. Mr. Moody shows many theological fossils embedded in the primitive kind of beliefs he preaches; but, when he tells the story of the young nobleman, who built a house for his own residence in one of the poorest and most vicious districts of London, and set himself to work there personally to better the condition of his chosen neighbors, he touched one of the secrets of the religion that is demanded to-day. And, to a considerable extent, he himself works upon this plan; and to that extent, in spite of his crude and in many respects abhorrent beliefs, he does a good work,—a kind of work that in some form must test the value of all religion.

Free Reason, Morality, Humanity,—these, then, are the three great characteristics of nineteenth century religion. These make the trinity of the new religious beliefs that are taking shape in men's thoughts to-day, and modelling the Church of the future. Let these be organized together in character, and religion rounds to symmetrical fullness. Let either of these be wanting, and religion is maimed in a vital part.

Yet the mere combination of these three qualities would not necessarily make religion. They must be *organized* together in character, under the vitalizing principle or impulse of what, for the want of a better term, I call the religious sentiment,—by which I mean the thought *and* feeling, or thought surcharged with feeling, that man does not exist for the sake of his own pleasure or profit or individual culture alone, nor even for humanity alone, but that he lives in vital relation to the whole world and all world-forces, and has a part to perform in carrying out the purpose of the great Power that is working in and through all things. And this idea leads us to take another step, and an important one, in the development of our theme. And this step I ask you now to take with me, with

thoughtful considerateness, still keeping carefully to the basis of recognized facts and their logical implications.

This idea of man's vital relation to the eternal energy of the universe is essentially a nineteenth century idea. It is a product of the doctrine of evolution; though something in crude shape corresponding to it has always been, in my opinion, the central fact of religion. That is, man has always, at least from the time when he began to leave traces of his consciousness for the after historian to retrace, had some conception, however dim and inadequate it may have been, of his connection with the living or moving powers of the universe around him. The difference is that, in former times, man's connection with the universal energy was conceived as supernatural, miraculous, extra-organic: now, under the teaching of science, it is conceived as natural, organic, vital. But from the actual fact of such connection, however it may be regarded or explained, there is no escape, since without it man himself could not be. And, in the perception of this fact and the natural feeling attending the perception, I find the rational basis of religion to-day,—a basis that is not disturbed, but only confirmed by the investigations and discoveries of science. Let us look at this point a little more closely for a moment.

Man is thus directly connected with the ultimate causal Power of the universe. In whatever way that causal Power is to be conceived, whether in some sense as intelligent and personal Being, or as vitalizing Force, or as eternal Energy, man is a product of it. He is, according to science, one of the organisms which it not only has made, but still pervades. He is a part of this great fructifying and ever-flowing stream of life. Not more truly is any single one of the many channels through which the Nile enters the sea directly connected back through the main stream of that mighty and life-giving river to its far-off sources in the hidden interior of the African continent than is man vitally connected with the causal Power of the universe, however hidden in the far-off, mysterious genesis of things that Power may be. And by this question concerning his own origin there has always been kept an open door from man's intellect into the infinitudes of power and life. Childish *theologies* may have once represented that door as opening upon an historical roadway only extending some six thousand years back, and then coming upon an absolute beginning. But *Science* to-day holds that door ajar, and bids us look back through receding vistas of time extending into æons which are measureless, and through them all bids us behold already working at its measureless tasks the same productive Power which is at work behind all phenomena and speaks in our consciousness to-day. Human life thus has its infinite relations. And, even though it be claimed that man cannot exist apart from some kind of material organism, that his life and his very power of thought and feeling depend upon some function of matter, still man is not then shut up to the finite; for matter has its infinite side. Science deals with the material world. All its investigations begin with some phase of that. For a while, it proceeds briskly, as it traces the transformations of forms and forces, and keeps the pathway of well-known laws, and passes through the physical and chemical attractions, and gets down at last to the elemental atoms and forces and protoplasmic cells. But what then? There stands an impenetrable barrier. Science cannot get behind it nor see through it. Yet it knows well that the same vital forces and atoms which it has tracked up to that wall must be, in some way and shape, as busy and potent the other side of it as they are this side.

It were the most arrant unreason to suppose that the great world-life stops at that line with the range of our vision or the goal of our knowledge. The forces and forms all hint at—nay, necessitate—a mystery of being and power behind them which they do not reveal. Thus, matter itself, in the very book of science, has its infinite relations.

Though, then, man cannot comprehend this eternal Energy of the universe in its entirety, though in its essence it be even unknowable by him, yet he knows that it exists and must exist, and that he himself is dependent upon it and receives his life from it; and, further, that it is an organizing power, ever bringing forth higher and richer forms of life; and, still further, that he himself, through his faculty of reason, through his sense of right, through his finer sympathies and affections, may enter as a creative factor into this organizing work, and help forward its grand achievements. And here comes in the practical ground and motive of what I have called nineteenth century religion,—something to take the place of the motive which systems of theology have offered in their summons to obey the revealed will of God rather than selfish aims. Human reason, human morality, human beneficence, which are to be cultivated to the highest degree possible, have not merely for their goal to glorify man, but to glorify the life of the universe of which man is a part. The service is not merely for self, it is for something infinitely greater than self. The standard of human conduct is not measured on the arc of one's own life, it is not determined by individual well-being alone, but it concerns a righteousness that is good for all worlds and is true for all time. And, among the feelings that cluster around this consciousness of relation between the finite soul and the mysterious mighty Life of the universe in which it is embosomed, are those of joy, aspiration, wonder, reverence, grateful loyalty, and self-surrender. Here is room, therefore, for expression of worship rationally understood; room for lofty ideals of character and life, and for the spirit of consecration; room for the finite soul to utter its longings for a larger participation in the order, beauty, and righteous activity of the infinite Life; room, finally, for the trustful feeling of dependence on a Power that is higher than we, and at the same time for those brave acts of self-assertion as well as of self-denial and self-sacrifice which have always been a vital part of genuine religion. Self, living from and for a Higher than self, surrendering itself to the demands of a higher law and purpose than its own pleasures, ready, if need be, to perish, so that the Higher Life may survive,—this has always been the essence of all real religious life under all forms of belief; and this must remain, so long as human nature keeps its identity, the seed-corn of religious life for this and coming centuries.

I have dwelt upon this point because, as it seems to me, Liberalism specially needs some such motive power as I have here indicated, in order that it may become a specific organizing force in society. And I can but think that this scientific idea of man's relation to the eternal Universal Energy is by and by to shape a pretty distinct religious philosophy, and secure also practical expression of itself.

Our thought, then, comes to this conclusion: Look into our complex human life where we may, it has an infinite side. In our most familiar daily actions and habits of thinking, there is unconscious reference to a power that is unseen and uncomprehended. We are accustomed to say that death is mysterious. But life has more of mystery than death,—more of the unexplained, more connection with forces and laws that reach beyond

earth and beyond all human computations of time and human analysis of causes. Modern science tells us this. And it is the distinguishing feature and function of religion—beyond its philanthropy, beyond the emphasis which it must needs ever give to morality and to the rights of reason—that it represents this open and upper side of human life, this relation of man to the infinite, the unbounded. Our lives, at their ordinary level, are tethered fast enough to material limits and objects. In the narrow range of work and duty, with its often very prosaic, drudging service, to which our lot may compel us, it is good to have this larger outlook, this consciousness of connection with a grander purpose. Nineteenth century religion must indeed work with all zeal—with a zeal even greater than now anywhere manifested—for human welfare on earth. Let it make this world a veritable Paradise, and redeem man into a being worthy to inhabit and keep it. Let it prize morality as the apple of its eye, the jewel of its heart, never to be put off nor veiled behind any disguise of creeds. Let it bring forth all needed philanthropies and charities to assuage earthly suffering and sorrow, and to eradicate the very conditions of evil; and, in all this labor for human amelioration and education, let it take constant counsel of free reason and of the wisdom and knowledge which science is gathering. But none the less let religion also be prized for this special and crowning function, that it represents to man his vital connection with the sources and forces of a Life that is infinite in its sweep and its aim. While he works and struggles upon this little earth, religion opens a window in his mind toward boundless skies. And he can work the more zealously, with a consecration that is both more devout and more hopeful, because his thought is lifted to a Power eternal, immortal, invisible, omnipresent, one only and true, that is working in and with and through him, and through all things now and forever.

CORRESPONDENCE.

LIBERAL ORGANIZATION.

Editors of The Index:—

That a necessity exists for a "liberal organization" few will deny, and that Boston is a fitting centre for such an organization will also be readily conceded. But the reading of Mr. Froebel's letter to Mr. Underwood, in *The Index* of December 4, is not encouraging to me, at least, for it seems as though it was a labored and scholarly attempt to "create" an organization; and, so far as I know, the only organisms that endure are the ones that grow.

If we are to have any union of liberal forces, it must be one that is the outcome of the needs of the hour; and the formulation of such far-reaching "demands" as Mr. Froebel makes does not seem to be the way to meet such a need.

I have spent the last four years in England, and have seen the method of organization there and felt its benefits; and it would be well, perhaps, just to point out how it succeeds. And I do that, not as one who was within the circle of workers, but as one who was without; who simply took a living, active interest in liberal movements, but sat in no council, held no office, nor interfered in any way.

Going into a strange city in England, I had only to consult my paper, the *National Reformer* or the *Secular Review*, to find out where liberal meetings were held and what were the subjects for discussion, and I could soon find friends and pass a few pleasant hours with people of like mind as myself. The subjects were of all possible kinds, from abuse of the Church to an exposition of Darwinism, from the crudest rant to the most scholarly expression of the last and best thought of the day; and so complete is the organization—imperfect and all as it still is—that a good lecturer passes from end to end of the country, always finding an audience and always earning his bread, even though he may not always earn his butter. But

real good, scholarly lecturers are sure of more than dry crusts. Yet, even if it were not so, Liberalism could find men who would bear the "fiery cross" far and near for love of truth. And, perchance, it would be best for Liberalism in the end that there should be few loaves and fishes for its teachers at the present time; for wealth soon breeds rottenness, as we have seen in many organizations.

From my experience of Boston, it seems that what is needed to-day is not the formulation of any "demands" that aim at a complete revolution of existing things, but a sound system of secular education by means of popular lectures, and such other means as kindly liberal thought can devise; for surely there are men fitted for such teaching in this city of culture, this "Hub of the Universe."

But a few evenings ago, I was invited to a "private circle" to hear a wise man lecture on the planets Venus and Mars. This man sat in a room that had been "de-gas-o-lized," to use his own elegant phrase, to a becoming obscurity. And then he talked the most arrant nonsense that ever I heard for nearly an hour and a half, till nearly all his hearers were suffering from lack of oxygen and dozing off, which he kindly excused by saying it was "spiritual influence." He told of spirits travelling from earth to Mars, from Mars to Jupiter, etc., setting aside with one fell swoop every law of matter, motion, time, and space.

He told us that Tom Carlyle and Garibaldi came from Mars to help the suffering world, while in Venus, when a man was elected to office, it was because he was sweet and lovable, not because he was wise or scientific; and many more such things did he tell us that would make a student's flesh creep. And all this time he was talking to people who were well-dressed and intelligent-looking; to people who took part in the battle of life in this great city, who rub shoulders with us every day and pass for good citizens, and are good citizens in the ordinary sense, but who are yet so ignorant of the first, simplest, grandest laws of the world they live in that a charlatan of this description can make money out of their ignorance. And this, too, not in a solitary case, but in countless ones all around. And yet unorganized, intelligent Liberalism sits with folded hands, and has no remedy save in the formulation of high sounding "demands," and the organization of another society to add to the already countless societies of this much society-ed Boston!

Yours truly,
PETER ANNET.

PAROCHIAL SCHOOLS AND RELIGIOUS RIGHTS OF CHILDREN.

Editors of The Index:—

The very excellent article by Mr. Potter in *The Index* of December 14, entitled "Catholic Parochial Schools," is not entirely satisfactory, because it does not seem to touch a vital principle which is at the bottom of the question; namely, the principle of religious liberty as it concerns the religious rights of children.

Religious liberty is the right freely to form and exercise such religious opinions as suit the individual. In the enjoyment of this natural right, the individual should be protected by law against undue interference. The federal Constitution provides that the State "shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof." This is a prohibition which is disregarded when the State commands religious observances and support, as it does when church property is exempt from taxation, religious days and times are to be kept, religious oaths and disqualifications are imposed, and religious exercises are introduced into public schools and other State institutions. Since the law does not protect children against the infringement of their religious rights by parents, churches, and individuals, and they are not able to protect themselves, the religious liberties of children are constantly and systematically trampled upon without legal remedy. The parent, as the natural guardian of the child, it is presumed, will exercise judgment and care in his treatment, and do nothing to the child's injury. In general, the motive of the parent in the religious training of the child will be good. From the most excellent motives, he may, however, violate the rights of the child. The goodness of the motive will not prevent the injury. Morally speaking, the same religious liberties and rights which belong to adults belong also to children, the chief of

which is unrestricted inquiry and voluntary choice. These rights the religious world does not fully understand and recognize, and children are the principal sufferers. Especially is this true in the Catholic and other more orthodox churches.

The assumption upon which parochial schools are partly founded is that morality depends primarily upon religious training in childhood and youth. On this assumption is based opposition to purely secular schools. That this is a mistaken assumption is, we think, being shown by the superior moral sense and character of children educated in secular public and private schools. Indeed, the exclusion of special religious instruction and training from the schools is giving more abundant opportunity for the introduction of such moral teaching as will make the young the most intelligently conscientious in their regard for others, and the most firm and resolute in maintaining those human rights upon which the perpetuity of free institutions depends.

The efforts of the Catholic Church and other denominations to build up and permanently sustain parochial schools will fail, as they should, opposed as they are to the rights of children and to the principle of religious liberty fundamental to our institutions and civilization. The disappearance of parochial schools will not only remove a fruitful cause of sectarian jealousy, but with them will pass away an impediment to sound learning, higher morality, and religious progress.

R. C. SPENCER.

LEGISLATIVE PRAYERS.

Editors of The Index:—

If a Harvard student can say that students regard morning prayers as "an exercise to be got rid of, if possible," so, I think, do legislatures where custom (not law) decrees, as it does here in Vermont, that the two Houses shall each have a chaplain, and that he shall go through the same ceremonious routine—often illiterate and lacking in taste and sense—at the opening of each day's business.

It is a fact that, during the late session of the Vermont Legislature, the attendance upon the morning service of Scripture reading and prayer, from being full at the outset, gradually decreased until, during the latter part of the session, not one-half of the whole number—two hundred and forty—were in their seats at the hour of prayer; and it was but too apparent that many not only regarded the service with silent indifference, but intentionally avoided getting in at the appointed hour.

I am more than ever convinced that it is the part of honest men, looking one another fairly in the face, to abolish a custom which has become so hollow and wanting in respect, which has no possible use, and to address themselves directly to the business of the hour and the State, in a manner and spirit becoming to an age of light and law.

A. N. ADAMS.

FAIR HAVEN, VT., Dec. 4, 1884.

A YANKEE BURIAL GROUND.

Editors of The Index:—

Nothing but the death of a neighbor or friend will bring out in fullest force the characteristics of the "real Yankee"; for, when discussing death, and at no other time, is he at once curious, reminiscent, and garrulous.

Just outside of Portland, the other day, I stopped to rest for a moment against the fence that fronted a little burying-ground; and, while I rested, I made a remark and gained an acquaintance. He to whom I spoke was a red-haired, freckled, loosely jointed man of fifty, who also leaned against the fence, and who whittled a stick with much deliberation. Alluding to the farming country, I said that the soil appeared sandy and barren. Applying my observation to the cemetery, he headed a train of recollections with the reply:—

"Yes, it's a sandy sile an' a loose bottom; but I've noticed that people most giner'ly stays when they git here.

"It was curi's, too, how this place come to be picked out. Ye see, the Widder Harris (she that was 'Mandy Jones) owned this hull piece o' ground, an' her sister-'n-law, Mis' Wells, owned the lot acrost the road where the school-house sets. When we voted, in taown-meetin', to lay out a graveyard, the' was a good deal of argyfyin' which land we should take.

Mis' Harris an' Mis' Wells hated each other wuss'n p'ison, an' I cal'late either one or 'em would a-gi'n her land, if she'd been asked, to spite t'other. But nobody asked 'em. Finally, we app'inted 'Squire Pettie, who favored the widder, an' Jake Hamlin (he'd been shinin' 'round Mis' Wells), an' Ben Gavitt—an' he despised both women—a committee to decide which land the taown should take. The committee hed prayers by the minister, an' then they sot to wranglin'; an', when he see it couldn't be settled no other way, Ben Gavitt pupposed to draw straws to see whose land should make the graveyard, an' Widder Harris's was took. When it come out, though, how 't had been fixed, the' was so much talk that the taown took Mis' Wells's land for a school-house, an' then both the old women felt kinder more comf'table.

"We've hed some curi's funerals here, too. After the land was took, we started out to fix it up. Wal, Hen Phillips was a-goin' to do the heft o' the work on it; but, 'fore he'd been at it a week, he fell into a post hole, an' broke his back, an' we hed ter bury him here when things was re'lly in a scand'lous state. (That's his monimunt; the one with the baby on the top.) I don't b'lieve nobody but me ever knowed how Mis' Phillips felt about it. I was fust Selec'man, ye see, an' she come to me, bein' 's I was in authority, an' sez she, 'Henry was a good pervider, deacon, an' I want him to hev a corner-lot'; an' I told her he should. Seems, though, the sexton forgot about it, an' I went away that week, so they dug the grave under that air big ellum tree. But when the percession got here, Mis' Phillips wouldn't have it; an' they h'isted the corpse back to the house, an' kep' Hen on ice for two days, till they'd fixed the right hole. She was putty sot in her ways, Mis' Phillips was.

"You said this was a sandy sile. Wal, so 'tis; but I guess, after all, it's a good thing that nobody but Gabr'el could raise anythin' here. There's al'ays liable to be fusses an' hitches over a graveyard, an' I cal'late it's safest to pick out a piece o' ground that ain't wuth shoe-strings for anythin' but buryin'. Up in Vermont, I heard, t'other day, the' was a sort of a private ground fell inter the hands of a kinder reckless chap, an' he turned it into a potetter patch. I don't want no sech thing to happen here. I set store by this yard, I tell ye! I think more on it than Bill Dennison did, I guess. You didn't know Bill? Wal, that's curi's! He hed three bunions on one foot, an' I s'posed everybody knowed Bill. 'S I was sayin', he hed a row with his sister, Philury, 'bout a lot in here, when old Father Dennison's 'state was 'ministered on. ('Fore that, Bill an' Philury 'd kep' the old man above ground more'n a week, discussin' whether the body sh'd head west or north. Wal, they settled it on the basis o' south, an' p'inted the old man that way.) Then the lot was vallyed at \$45, an' Philury offered Bill a fair half, or \$20 in cash; but Bill wouldn't take nuther. He give her a deed of it for a dollar; said he couldn't feel right in his mind, if he took any more. Natchully, Philury was wrahty to hev it thought they hedn't give their father as good a buryin' as anybody could want; an' she threatened ter sue Bill for slander. He said, daown 't the store, that he didn't know whether a wuthless grave or a wuthless woman was the most wuthless, an' he wa'n't goin' ter stay ter find out; an' then, 'fore she could git at him for deformation o' character, he moved away.

"It's a sightly place, too, ain't it? Them ellums make it look kinder putty, an' that school-house over acrost sets off the hull. (Improv'in' to the younguns to be reminded o' their latter eend, I cal'late.) I useter think, years ago, it was a pleasant walk 'round here of an evenin'. Maria an' me did the heft of our summer courtin', settin' on that flat stone, yonder. 'Afraid,' was we? No, sir! I ain't scairt o' bones; an' I al'ays thought that, if I wus kinder 'quainted with the place, it'd seem more like home to me when I come here to stay."

WALTER L. SAWYER.

"No vice, then, is more foul . . . than avarice, especially in great men and such as administer the republic. For to make a gain of the republic is not only base, but wicked also and abominable. Therefore, that which the Pythian Apollo delivered by his oracle, 'that Sparta would perish by nothing but its avarice,' he seems to have predicted not about the Lacedæmonians alone, but about all opulent nations."

—Cicero.

BOOK NOTICES.

RALPH WALDO EMERSON. "American Men of Letters" Series. By Oliver Wendell Holmes. Boston: Houghton, Mifflin & Co. Price \$1.25.

We confess that we approached this book somewhat unwillingly. Emerson we knew, and Holmes we knew. Ever since Emerson's death, nearly three years ago, there has poured from the press a constant stream of reminiscent Emersonian literature,—essays, poems, biography, and lectures innumerable. It seemed as though all had been said. What need was there, then, for Holmes giving us still another volume? We had given him credit for better sense. This was our mood on opening these pages, but we have closed them filled with a sense of gratitude that the "Autocrat of the Breakfast Table" has lived long enough to add this crowning treasure to his works. From the first pages to the last, we read on with ever-increasing delight. There is no evidence of this being the work of a septuagenarian. The inimitable humor, the felicitous wording, and the clear, keen, critical insight, characteristic of Holmes, seems unimpaired by age or consequent weariness of writing. The only sense of dissatisfaction comes from the almost total absence of personal reminiscence which we had rather confidently looked forward to as one of the reasons for the existence of the book and one of the incitements to becoming interested in it, since it is the record of one great writer's life by a contemporary and neighboring author. Whether the omission is due to lack of personal acquaintance or to the modesty of Dr. Holmes, we are not informed. Dr. Holmes has not been a partial critic. He has clearly shown what he considers defects as well as excellences in Emerson; yet, in referring to his intellectual shortcomings, he not infrequently quotes, in support of his position, Emerson's opinion of his own work.

The living writer has greatly enhanced the value of this biography by quoting or calling attention to many of the more exquisite thought gems found crystallized in every differing emanation of the genius of the dead seer, in doing which he has often given original gems nearly, if not quite, as exquisite as those to which he draws attention. He is himself an illustration of the truth of some of his own remarks regarding Emerson; as, for instance, these: "Consciously or unconsciously, men describe themselves in the characters they draw. One must have the mordant in his own personality, or he will not take the color of his subject. He may force himself to picture that which he dislikes or even detests; but, when he loves the character he delineates, it is his own in some measure at least, or one of which he feels that its possibilities and tendencies belong to himself." "All his great men interest us for their own sake; but we know a good deal about most of them, and Emerson holds the mirror up to them at just such an angle that we see his own face as well as that of his hero,—unintentionally, unconsciously, no doubt, but by a necessity which he would be the first to recognize."

The comparison he draws between Emerson and Carlyle will just now interest most readers. "The two writers reveal themselves as being in strong sympathy with each other, in spite of a radical difference of temperament and entirely opposite views of life. The hatred of unreality was uppermost with Carlyle, the love of what was real and genuine with Emerson. Those old moralists, the weeping and the laughing philosophers, find their counterparts in every thinking community. Carlyle did not weep, but he scolded. Emerson did not laugh, but in his gravest moments there was a smile waiting for the cloud to pass from his forehead. The duet they chanted was a *Miserere* with a *Te Deum* for its antiphon; a *De Profundis* answered by a *Sursum Corda*." Of Carlyle, he further says, referring to Emerson's invitation to him to become the editor of the *Dial*, in case he came to America: "The idea of the grim Scotchman as editor of what we came in due time to know as the *Dial*! A concert of singing mice with a savage and hungry old grimalkin as leader of the orchestra!" Of the fate of the *Dial*, he remarks: "It was conceived and carried on in a spirit of boundless hope and enthusiasm. Time and a narrowing subscription list proved too hard a trial, and its four volumes remain stranded like some rare and curiously patterned shell, which a storm of yesterday has left beyond the reach of the receding waves."

Holmes' complimentary allusions to his compeer are frequent, and strong as well as choice in their wording. On page 298, he calls him "this sweet-souled dealer in spiritual dynamite." Elsewhere, "Emerson is so essentially a poet that whole pages of his are like so many litanies of alternating chants and recitations. His thoughts slip on and off their light rhythmic robes, just as the mood takes him." "Emerson was not only a poet, but a very remarkable one" (page 315). "It is to be remembered that Emerson is one of those authors whose popularity must diffuse itself from above downwards." "This little planet could not provincialize such a man." "This is the fascination of Emerson's poetry. It moves in a world of universal symbolism. The sense of the Infinite fills it with its majestic presence. . . . His poetry is elemental: it has the rock beneath it in the eternal laws on which it rests; the roll of deep waters in its grander harmonies; its air is full of Æolian strains that waken and die away as the breezes wander over them; and through it shines the white star-light, and from time to time flashes a meteor that startles us with its sudden brilliancy." "Too much has been made of Emerson's mysticism. He was an intellectual rather than an emotional mystic, and withal a cautious one. He never let go the string of his balloon. He never threw over all his ballast of common sense, so as to rise above an atmosphere in which a rational being could breathe." "Emerson hates the superlative, but he does unquestionably love the tingling effect of a witty over-statement." Holmes himself is not averse to this same "over-statement,"—*anglice* exaggeration,—as is shown when, in speaking of Emerson's English tour, he says: "Emerson saw the country on its best side. Each traveler makes his own England. A Quaker sees chiefly broad brims, and the island looks to him like a field of mushroomrooms." He says of Emerson's proneness to this habit: "The habitual readers of Emerson do not mind an occasional over-statement, extravagance, paradox, eccentricity: they find them amusing, and not misleading. But the accountants, for whom two and two always make four, come upon one of these passages, and shut the book up as wanting in sanity. Without a certain sensibility to the humorous, no one should venture upon Emerson. If he had seen the lecturer's smile as he delivered one of his playful statements of a runaway truth, fact unhorsed by imagination, sometimes by wit or humor, he would have found a meaning in his words which the featureless printed page could never show him."

Of Emerson's religion, Holmes says: "The name most frequently applied to Emerson's form of belief is pantheism. How many persons who shudder at the sound of this word can tell the difference between that doctrine and their own professed belief in the omnipresence of the Deity?" Holmes refers frequently to Emerson's chivalric respect for woman, and loyal demand that her rights of all kinds should not be denied her; and says he speaks "of woman in language which seems almost to pant for rhythm and rhyme," and that Emerson's account of Margaret Fuller, with his "extracts from her letters and diaries, with his running commentaries and his interpretation of her mind and character, are a most faithful and vivid portraiture of a woman who is likely to live longer by what is written of her than by anything she ever wrote herself." Our quotations from this delightful biography must here cease,—cease from want of space, not from any lack of material to draw from. We can only hope that the taste we have offered our readers from this fountain may induce them to purchase and read the book for themselves.

S. A. U.

EVERY DAY LIFE AND EVERY DAY MORALS. By George Leonard Chaney. Boston: Roberts Brothers. Price \$1.00.

These lectures, the author explains in his preface, "had their origin in a local agitation [in Atlanta, Ga.] about some publicly exposed pictures which were considered by some excellent people to be more injurious to the people's morals than helpful to the people's taste." Other aspects of the same subject grew out of the consideration of this phase of it; and the result is embodied in the eight lectures here given on "Art and Morals," "Juvenile Literature and Juvenile Morals," "Literature and Morals," "Business and Morals," "The Stage and Morals," "The Press and Morals," and "The Pulpit and Morals." These lectures are liberal in sentiment, sensible in treatment, and interesting in style.

EZRA ABBOT. Published for the Alumni of the Harvard Divinity School, Cambridge. 1884.

This thin volume of seventy-five pages appears from the press of George H. Ellis. It will receive most grateful welcome from the friends of Dr. Abbot, and be prized by the friends of high scholarship generally. It consists of the addresses at Dr. Abbot's funeral and at the meeting of the Harvard Divinity School Alumni, a few weeks later, by Rev. Messrs. C. C. Everett, A. Woodbury, A. P. Peabody, and J. H. Thayer. All of them are excellent, that of Dr. Thayer being the most elaborate; and together they give a very full view of Dr. Abbot's simple life, rare scholarly attainments, and exceptionally fine character. An appendix contains a large number of minor tributes from the pens of distinguished scholars and the resolutions passed by scholastic societies; and a life-like portrait of Dr. Abbot is given as the frontispiece.

TOMPKINS, AND OTHER FOLKS. Stories of the Hudson and the Adirondacks. By P. Deming. Boston: Houghton, Mifflin & Co. Price \$1.00.

This collection of short stories, which were originally contributed by the author to various magazines, will be welcomed for their rather unique treatment and the unexpected *dénouement* characteristic of this writer. The titles are "Tompkins," "Rube Jones," "Jacob's Insurance," "Mr. Tobey's Wedding Journey," "Hattie's Romance," "The Court in Schoharie," and "An Adirondack Home." The moral tone of these stories is clean and pure, and the style quietly humorous.

HARPER'S YOUNG PEOPLE. 1884. New York: Harper & Brothers.

Harper's Young People is not a very impressive publication as it appears from week to week. A careless eye might give it little heed. The more careful would find the reading excellent for the boys and girls for whom it is intended, the pictures educative of their artistic sense, and the variety of matter suited to various tastes. But it is when the fifty-two weekly numbers come to us bound together in one handsome volume of eight hundred and thirty-two pages that the aggregate beauty and pleasantness are something marvellous. Harper & Brothers have done what they agreed to do: they have made a periodical that is more interesting as well as more decent and instructive than the dime novel and the trashy papers of the same intellectual and moral standing. The volume for 1884 certainly holds its own as compared with those of previous years. It has a fair proportion of continued stories and shorter, with puzzles and facetiae in great abundance. The frontispiece, by J. G. Brown, is better for not having the color of his paintings. Such pictures as those on pages 1 and 217 will make the elders linger, and the whole will be apt to evoke from many a sigh for their lost youth.

The Atlantic Monthly for December opens with "In War Time," Dr. S. Weir Mitchell's serial, which is finished in this number. Stuart Chisholm, in "Over the Andes," gives an account of experiences in South America. A nicely discriminative sketch of "François Coppée" by Frank Marzials, and a clever article by George Parsons Lathrop on "Combination Novels," form the more distinctly literary features of this number. "Poe's Legendary Years" gives, for the first time, a satisfactory account of the more obscure passages in Poe's life. It is written by George E. Woodberry. Other articles and stories are "Penelope's Suitors," by Edwin Lassetter Bynner; "These are your Brothers," by Olive Thorne Miller; "Among the Redwoods," by E. R. Sill; "An American Flirtation," by Grace Denio Litchfield; "Canada and the British Connection," by Edward Stanwood.

The Catholic World for December presents the following table of contents: "The Present and the Future of the Negro in the United States," by Rev. J. R. Slattery; "An Italian Pessimist," A. J. Faust; "Scriptural Questions, No. II," Rev. A. F. Hewitt; "The Quartier Latin since the War," William O'Donovan; "Saint Mona's Lambs," A. R.; "An Apostle of Doubt," Agnes Repplier; "Leaves from English History,—A.D. 1570-76," S. H. Burke; "Solitary Island," Chapters IV., V., Rev. John Talbot Smith; "Shakespeare and his Æsthetic Critics," Appleton Morgan; "Home Life in Colorado," Brendon McCarthy; "Katharine," E. G. Martin; and "The Glenribbon Baby," by Julia M. Crottle.

BY ALL ODDS THE BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travelers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its *Day Coaches*, which are the finest that human art and ingenuity can create; its *Palatial Sleeping Cars*, which are models of comfort and elegance; its *Palace Drawing Room Cars*, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that it is the best equipped road in the world.

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, and take none other. All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

GEN'L PASS. AGENT, C. & N-W. RY
CHICAGO, ILL.

RELIGIO - PHILOSOPHICAL JOURNAL.

Established in 1865.

A Paper for all who Sincerely and
Intelligently Seek Truth with-
out regard to Sect or Party.

The JOURNAL, in the estimation of a large proportion of the leading authorities on Spiritualism, stands pre-eminent as a fearless, independent, judiciously fair advocate of Spiritualism. It has received more general notice, and more frequent and higher commendations from intelligent sources, regardless of sect or party, than any other Spiritualist or liberal paper ever published: the records will confirm this.

The JOURNAL is uncompromisingly committed to the Scientific Method in its treatment of the Phenomena of Spiritualism, being fully assured that this is the only safe ground on which to stand.

The JOURNAL is unsectarian, non-partisan, thoroughly independent, never neutral, wholly free from cliques and clans.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price \$3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is demonstrated knowledge. The INVESTIGATOR's basis of action is the exertions of its management always be used to render it a free and independent journal devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

JOSIAH P. MENDUM,
PAINE MEMORIAL BUILDING,
Appleton St., Boston, Mass.

TRACTS.

No. 1.—*Truths for the Times*, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 2.—*Fear of the Living God*, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—*Lecture on the Bible*, by the Rev. Charles Voysey, of England, is an over-whelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 4.—*Christian Propagandism*, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. Full of Figures, Facts, and Interesting Extracts. Price 10 cents; 12 copies, \$1.00.

No. 5.—*"God in the Constitution"*, by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.

No. 6.—*"The Sabbath"*, by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 7.—*"Compulsory Education"*, by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—*The Present Heaven*, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—*The Christian Amendment*, by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.

No. 10.—*The Impeachment of Christianity*, by F. E. Abbot. Sixth Ten Thousand. Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.

No. 11.—*The God of Science*, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.

No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies \$1.00.

No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—*A Study of Religion: The Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.

No. 15.—*The Battle of Syracuse*. Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

Modern Thinkers,

Principally upon Social Science.

By Prof. VAN BUREN DENSLOW, LL.D.
With Introduction by ROBERT G. INGERSOLL. Including critical analyses of Swedenborg as a Seer, of Adam Smith as an Economist, of Jeremy Bentham as a Law Reformer, of Thomas Paine and Junius as Political Revolutionists, of Charles Fourier as a Socialist, of Herbert Spencer and Ernst Haeckel as Evolutionists, and of Auguste Comte as a Positivist, with an Essay on Wealth in its Relations to Christian Ethics.

The Fifth Edition has just been issued

"Upon the question of money, this volume contains the best thing I have ever read."—R. G. Ingersoll (in Introduction).

"We confess that, if we stood on the ground on which Mr. Spencer stands, we should find it difficult to prevent ourselves from being pushed by the stalwart arm of Dr. Denslow's logic into the gulf of ethical nihilism."—Prof. Goldwin Smith.

"Now, the whole force of this case depends upon the assertion of Goldwin Smith that Dr. Van Buren Denslow is a disciple of Herbert Spencer. But the assertion is not true in any sense or in any degree. On the contrary, Dr. Denslow is an open antagonist of Mr. Spencer. His essay on Spencer's Philosophy, first published in the Chicago Times, while speaking of the man in the usual terms of perfunctory compliment, as have also Goldwin Smith and the Saturday Review, is adverse, carping, and depreciatory on every point that he considers. The criticism was regarded as so damaging that Spencer's friends were told they must reply to it or forever hold their peace; and we were confidently assured that the last we should ever hear of Spencer's system was the thud of the clods that Denslow had thrown upon its coffin."—Prof. Youmans, in Popular Science Monthly and in Introduction to Current American Edition of the Data of Ethics.

Stephen Pearl Andrews, as political executor of the late Thomas Paine, is as fiercely indignant at Mr. Denslow's analysis of Paine's politics as Prof. Youmans is at his assault on Spencer's Philosophy. On the other hand, George Jacob Holyoake speaks of the analysis of Paine's political philosophy as "the most masterly refutation of it extant, without showing in his words or in his mind any enmity against the great agitator whom he confutes."

The late Dr. George M. Beard, of New York, wrote to the author: "Your critique on Spencer's *Data of Ethics* has all the force of a discovery in ethics, and is of great value. It deserved to be made the subject of a separate treatise."

BELFORD CLARKE & CO., Publishers,

CURRENT TOPICS.

BY B. F. U.

THE Montreal Free Thought Club has re-elected officers for the ensuing year, as follows: Capt. Robert C. Adams, president; J. H. R. Molson, P. Lyall, and Dr. O. B. Ward, vice-presidents; C. Stevens, secretary; A. A. Murphy, vice-secretary; M. Boas, treasurer.

At the Freethinkers' Convention, held recently at Salamauca, N.Y., the subject of establishing a non-sectarian school in that city was discussed; and Mr. H. L. Green has since issued a circular asking for pledges to the amount of \$25,000 for the erection of a school building, "with the positive understanding that not one cent shall be called for until the whole sum is raised, and not then until the proper organization is perfected and chartered by the New York State Legislature."

SAYS the Ottawa Free Press: "The election of a Jew as mayor of Leicester, despite Simon de Montford's declaration that no Jew should dwell within the borough till the end of the world, teaches again the lesson that the past cannot arbitrarily bind the present, and that the present cannot arbitrarily legislate for posterity. Day by day, the heavy hand of the dead past, which by this institution or that has fettered the living present, is being lightened; and humanity, breathing in the freedom of a new life, is capable of greater advancement than ever."

THE following passage is taken from a letter in the Boston Herald, written by a correspondent in Mexico: "The Church still exercises a powerful influence among the common people,—peons as they are called; but, in political affairs, the priests are powerless. The old Inquisition building, which has sheltered more horrors than any other structure on this continent, is now a medical college, where bones are sawn asunder in the name of science instead of religion. The cathedrals have been stripped of their treasures, and their candlesticks are now gilt instead of gold. I was told the other

day by a railroad manager that his purchasing agent had bought over three hundred wooden saints for fuel, many of which had been carved and gilded in Spain hundreds of years ago. A solid silver balustrade, which has stood in one of the churches since the time of Cortez, was torn down not long ago and taken to the mint; and a chandelier in the cathedral of Puebla, when melted, made sixty thousand silver dollars."

JUDGE DUFFY, of New York, said last week to a slugger who had been locked up over night for getting drunk: "I am told you are a pugilist. I am opposed to pugilism. Pugilists ought to use their muscles for something that would benefit humanity, welding iron, digging cellars, and such like. You may think John L. Sullivan a wonderful man. So he is a wonderfully muscular man, but he has very little brains. Brains are superior to muscle. If a ship were at sea, and the captain and mate should be washed overboard, and John L. Sullivan was aboard that ship, he wouldn't be selected to bring it into port. The passengers would be more likely to trust their lives to the smallest man aboard that ship, if he had the most brains. That goes to prove that brain outweighs muscle. Some of these days, some respectable citizen in the neighborhood of Madison Square Garden will come down here and make complaint against that place as a disorderly house. If he does, I'll issue a warrant and arrest all you pugilists, and commit you to the island as vagrants for six months. There isn't any judge of the Supreme Court that'll let you go. McCoy, you're a stranger in town, I'm told. I was going to fine you \$10, but I won't: I'll discharge you."

THE Russian ministers seem to be renewing their activity of late, in spite of the rigorous action of the Czar, who tries in vain to stamp out the conspiracy against the government. Whatever be thought of the methods pursued by the Nihilists,—and some of them we believe unwise and unjustifiable,—there is no doubt that the Russian people have good reason for rebelling against the imperial government. "One-tenth of the oppression practised upon the people of Russia, if applied in this country," says the Herald of this city, "would drive hundreds of thousands of our people into armed resistance to its enforcement. The great defect in the policy of the Czar is that it is diametrically antagonistic to modern enlightenment. It runs counter to the spirit of the age; and, unless Russia can be completely secluded from the rest of the world,—an operation which could only be accomplished by transferring the empire to some other planet,—no cessation of revolutionary efforts can be looked for. As the blood of the martyrs was the seed of the Church, so in this case the blood of the Nihilists shed in the cause of Russian freedom must serve to encourage the growth of more and more revolutionists holding, as they now seem to hold, high social and political positions, until it will be no longer possible for the Russian administration to hold up under the conspiracies with which all of its great departments will be honeycombed."

In a recent lecture on "The Miseries of Poverty" reported in the New York papers, Prof. Felix Adler said that the income derived from the worst class of tenements far exceeds the rents yielded by the finest residences on the best streets. The income is secured by persistent violation of laws; but the landlords, through the political influence they possess, easily protect themselves. The lecturer said that there should be an Act passed by the New York Legislature like the Cross Act of the English Parliament, compelling the owners of unsanitary houses to sell their possessions. He urged, also, the formation of a building company, to be composed of private citizens, who should receive a loan from the public treasury, either city or state, and be empowered to rebuild the bad tenements and to put up new ones. The company should be restricted from taking more than a moderate percentage on the investment. Under Prof. Adler's direction, a Sanitary Aid Society for the Tenth Ward of the city of New York has been organized. The inspection of tenement houses will be a part of its work. According to the official record there have been 15,697 fatal cases of diphtheria in New York during the last ten years, and 1,018 fatal cases since the beginning of the current calendar year. Diphtheria, a filth disease, prevails in the localities where there is the greatest need of sanitary work. Prof. Adler, as a member of the Tenement House Commission, has already done much to awaken interest in a very important reform.

THE archbishop of the Church of England has prepared a prayer for the British army in Egypt, to be read in the home churches. In it, he prays, not only for the soldiers, but for the cause in which they are engaged. He says, "We commend to thy fatherly goodness the men who through perils of war are serving the nation; beseeching thee to take into thine hand both them and the cause wherein the country sends them." According to the Unitarian Herald, a correspondent of the London Echo has paraphrased the archbishop's prayer, making a very good argumentum ad hominem for its Christian readers, as follows: "And, as the followers of the Prince of Peace, we humbly beseech Thee to enable our soldiers, with the deadly weapons of their warfare, to mow down those Soudanese who have no more right to their country than we have to ours. Grant that we may both kill and take possession, making wives, widows, and children fatherless. We acknowledge that we have no right to carry the sword and death among the inhabitants of other lands, but we plead the merits and mediation of Him who taught us to love our enemies and to do as we would be done by. Grant, we beseech thee, most merciful Father, who art the Father of all the children of men, that the blood of thy children, shed by this thy people in different quarters of the globe, may work the peaceful fruit of guaranteed dividends for the rich and increased taxation for our poor; and unto thee shall be all the glory, through Him who came to visit us in humility, and who hath said, 'Take my yoke upon you, and learn of me.'"

CHRISTMAS.

By general consent in Christendom, the twenty-fifth of December is celebrated as the birthday of Jesus. The precise time of his birth, however, either as to the year or the day of the year, is not known. With all their researches, scholars have not been able definitely to fix it, although agreeing that the accepted time cannot be correct. The name given to the day, Christmas (Christ-mass), indicates that it was primarily established as an ecclesiastical festival; and it was the custom of the early Christian Church to appoint its days of religious observance without much regard to historical or natural data. The immediate religious use was regarded as more important than the exact celebration of any past event. As early as the fifth century, accordingly, the Church had settled upon the twenty-fifth of December for celebrating the nativity of Jesus, though previously different sections of the Church had observed that event on different days; and it is altogether probable that this time was chosen because it came at the same season with the old pagan Saturnalian festival,—an ancient festival of nature worship so deeply rooted in the sentiment and habits of the people that it could with difficulty be eradicated, and features of which have since mingled with the Christian celebration of Christmas.

But, assuming the popularly accepted tradition of Christendom, what does this day celebrate? Setting aside, for the moment, the theologies that have been built and the myths that have gathered around the name and career of Jesus, what does the day signify to the rational thinker? Leaving out of view the opinion entertained, without as it seems to us adequate basis, by some Liberals,—that no such historical person as Jesus ever existed, and that the New Testament Jesus is wholly a mythological character,—the rational thinker would put it in some such way as this: Eighteen hundred and eighty-four years ago, in an obscure town of Palestine, there was born of humble peasant parents a child, to whom was given the not uncommon Jewish name of Jesus. Like the other children of like station around him, he grew up to man's estate, his childhood and youth and earliest manhood being so obscure and unexceptional that little or nothing is known of them authentically. His father was a carpenter, and the son worked at the carpenter's bench. His public career did not begin till he was about thirty years of age. Then he became a bold and radical religious reformer; a prophet of the elder Hebrew type, but of larger and more revolutionary ideas as regards the established religion of the Hebrew people; a teacher of a remarkably pure and elevated morality; and a man of singularly lofty, noble and inspiring character, mingling womanly sympathy and spirituality with masculine virility of spirit and deed. By the power of his teaching and his character, he drew around him a devoted band of disciples and a larger multitude of followers, who hailed him as the expected Jewish Messiah and urged that he should so declare himself. He yielded to the persuasion so far as to accept the title, though evidently in a different sense from that commonly given it. Brought thus into bitter conflict with the Jewish authorities, he was crucified at the age of thirty-three, or perhaps before, as a revolutionary disturber of the civil and religious peace of his nation.

Only three years, perhaps less, of public life; and yet those years were in some way charged with a power which changed the whole after-course of history, and became the origin of a new and powerful religion,—of a religion which in a few centuries had converted the Roman Empire to its

service, and thus spread among the nations which have grown to be the ruling forces of the modern world. And, to-day, the birth of that little child, eighteen hundred and eighty-four years ago, of peasant Jewish parentage, in the far-off Asiatic village, in a rude country inn, possibly in a manger of a stable, is celebrated throughout the most enlightened countries of Europe and America as the advent of the most remarkable personage this earth has ever known. From the advent of that life, civilized mankind now reckons time and counts the years; and Christian historians have made it the centre of human history,—the point toward which, by convergent lines, all previous history tended, and from which all subsequent history of any importance has diverged.

A problem of unique interest is certainly presented here for a rational thinker to settle. The great majority of Christendom have not attempted to settle it on grounds of natural reason alone. The vast majority of Christian believers have always maintained that in those few years of Jesus' life on earth there was an original and miraculous revelation of divine power; that he, in short, was not a natural man. Even during his lifetime, a kind of power, which he most probably possessed in healing certain diseases, became the ground of a popular belief that he was supernaturally gifted, and could work those miracles which it was the custom of the age to expect at the hands of a heaven-sent religious teacher. And, not many years after his death, it began to be believed by some of his followers that he must have been miraculously born,—that he had no human father, but was the offspring of the Holy Spirit, and that his birth was accompanied by many signs and wonders, by which, even then, heaven prophesied his future greatness and vouched for his more than human powers. In the course of a few centuries, with the aid of the subtleties of Grecian philosophy, the pious imagination of the Christian Church advanced to the idea that in him was even incarnated the being of God himself,—that the babe born at Bethlehem was a veritable Deity, since none but Deity, it was assumed, could do the works which he grew up to do. And this is still the belief of much the greater number of Christian people who celebrate this Christmas day. Not many years ago, even so broad-minded a man as Charles Kingsley said in a published volume of sermons: "The babe who is born at Bethlehem, who grows up, as other human beings grow, into the man Christ Jesus, is none other than the Lord God who created the universe"; and again that God was a child, and was nursed in a cradle, and grew into youth and manhood.

But these efforts of orthodox Christians to explain the greatness of the results which have come from the life of Jesus not only lead to monstrosities like this, which the rational thinker at once rejects, but they also clearly evince to him that the actual teachings and life of Jesus are only a part of the sources from which these great results, manifest in the various power and phenomena of Christianity, have come. These very beliefs and sentiments, which grew up in later years and centuries about Jesus, and many of which are quite contrary to his teachings as found in the New Testament, helped toward enlarging the result. The contributions that came from other sources as well as from Jesus and Judea, especially the contribution from the Greek-Alexandrian philosophy, adapted the new religion for its wide-spread empire, and gave it a power it could not otherwise have had over the European nations. It would be, indeed, unjust to Jesus that he should be held responsible for much that has passed under the name of Christianity, and been even counted

among the essentials of its permanence and power. The truth is, the great river of ecclesiastical and theological Christianity has many tributary streams; and the waters of some of them, if analyzed, show quite different elements from those which are found in the character and doctrines of Jesus. So far, indeed, has Christianity in general departed from the simplicity of his character and life and from the ethics of his teaching that almost in one thing only can he be said to have been its founder; and this is in its acknowledgment and development of his doubtful claim to be the expected Messiah.

But, after Jesus has been divested of the theological and mythological accretions which have concealed his real character, there still remains enough to draw the heart of mankind to him in admiration for his gifts, and to make it natural and easy to celebrate his birth. Indeed, it is not until we have put him in the line of natural humanity that we begin to appreciate his real greatness. As a god, he falls short of our ideal. As a supernatural man, there are points on which he fails to meet expectation. But, as a man only, with only human powers and subject to human imperfection and limitation, he rises to grandeur. It is a thousand pities that the Christian Church has so long gazed at him through the glamour of its theological conceptions and worshipped him as Deity that it cannot now see him in the simple greatness and strength of his humanity. The ecclesiastical portrait, with all the endeavor to deify him, has only succeeded in representing an emasculated saint; but the real Jesus was the most robust of men. He could thunder with indignant passion over injustice and hypocrisy, no less than melt with compassion for the suffering and wronged. Let Christmas celebrate for us, not Jesus the god, but Jesus the man. Wisely says Emerson: "If you are childish and exhibit your saint as a worker of wonders, as a thaumaturgist, I am repelled. That claim takes his teachings out of logic and out of nature, and permits official and arbitrary senses to be grafted on the teachings. . . . Whoever thinks a story gains by the prodigious, by adding something out of nature robs it more than he adds. It is no longer an example, a model; no longer a heart-stirring hero, but an exhibition, a wonder, an anomaly removed out of the range of influence with thoughtful men. . . . The history of Jesus is the history of every man written large."

WM. J. POTTER.

HUNGER.

II.

It is amazing to me how any one, while giving vent to his own fanciful conceits, can find courage to sneer at protoplasm, to make light of the veritable life-quickened substance actually here in existence, to disparage flightily and overweeningly the visible, tangible manifestation of all vital activity. Those who are thus self-complacently indulging in the derision of protoplasm can hardly be aware that they are not making fun of any whimsical coinage of the human brain, such as commonly displayed with so much ardor and dazzling eloquence in the lucubrations of speculative philosophy and theology. They are not even engaged in detracting from the merits of those conjectured entities that form the building material of our most prominent sciences, not engaged in scoffingly questioning the potency of the supra-sensible atoms of physics or of the evanescent mental particulars of psychology. They are unwittingly laughing at their own vital being; at the positively manifest existent, which in its most primitive stages—long ere the formation of any

stationary organs—is already displaying under our eyes all the essential and wondrous functions of life, and which in its most developed forms is constituting our own living selves. It can, indeed, be only want of attention to the facts under actual view that provokes the soaring imagination of introspective seers to slight the substance embodying all vital powers.

I, also, have revelled in the poetry of various tongues, and have pondered the foremost thought of all ages; yet have I met with nothing remotely so fascinating as the study of protoplasm, especially in its most primitive forms. Day after day and year after year, I found myself silently riveted to the microscope, watching in lucid transparency the magic cycle of visible activities that constitutes life. Whoever is desirous of seriously occupying himself with the problems of living existence cannot possibly be spared the trouble of contemplating the general facts of vitality and organization. We here, at all events, have to enter somewhat intently into the sphere of biology; for our task is to learn what part of our natural being is organically paramount, the entoderm or the ectoderm, the so-called organic life or the life of outside relations.

A tiny globule of finely granulated material pushes forth into its watery medium long and slender projections from all parts of its surface. In various kinds of such protoplasmic individuals, the projections or rays measure, at last, more than three times the length of the diameter of the original globule, and are so slender as to be visible only with very high powers. The most primitive of these beings remain motionless with stiffened rays, passively exposed to the currents of their medium. Of the numberless impinging particles of foreign matter, only very few adhere to the substance of the seemingly deadened rays. On close examination, it becomes apparent that some sort of chemical interaction is taking place between the material thus adhering and the coagulated protoplasm. The foreign matter is in reality the food of the moner, evidently attracted and retained by dint of chemical affinity.

Now, the question is: Have the rays been protruded, in order to get food; or have they been protruded, in order to establish more extensive intercommunications with the dynamical powers, to bring the living substance into efficacious physical contact with terrestrial and cosmical influences capable of affecting it? Let us then search for the real purpose or effect of this blending of food-particles with the exteriorized and stiffened protoplasm. Under our eyes, we see it redeemed from its deadened state and rehabilitated to life. It gradually regains its fluent constitution, forms under intrinsic commotion rounded masses, is re-incorporated into the body of the moner, and goes, under full reintegration, to develop new rays.

Unmistakable evidence proves that the outflowing protoplasm, forming the projections of amoeboid individuals, becomes more or less rapidly and profoundly disintegrated through normal contact with the medium, through functional stimulation by the dynamical powers of the environment. Its combination with foreign material, its so-called feeding, has no other object than to restore it to full integrity. Food, whether immediately assimilated as foreign stuff or assimilated only after elaborate organic preparation and transformation, as nutritive medium or blood, remains in all instances nothing but complementary material, fit to reintegrate functionally disintegrated protoplasm. Nutrition is simply reintegration, and by no means organic new formation, or extraneous supply of ready working-power to a pre-constructed vital engine.

In higher forms of moneric life, the material of the projections is pushed out in much larger masses, and is in consequence not coagulated through and through during its contact with the medium. Only its surface becomes more or less deeply deteriorated and stiffened, but is soon again remelted by chemical union with the more protected and less disintegrated substance inside the projections; the whole forming, under continuation of this play of outside and inside forces, a shrinking mass, at last wholly retracted and fully reincorporated with the main body of the individual. In these more advanced stages of life, an accumulation of restitutive material or food inside the moner enables it to carry on uninterruptedly, and without any further immediate material help from outside, the significant vital play of alternate propulsion and retraction of portions of its substance. To our senses, the individual life of primitive protoplasm seems to express itself entirely in the constant reiteration of this one vital activity, the pushing forth of projections and the drawing in of the same. If not abnormally disturbed, the moner continues hour after hour its monotonous movements. The living substance at a certain stage of its expansion is disintegrated by the influences of the medium, and shrinks in consequence. Thus disintegrated, it combines with restitutive material, and re-expands in consequence. This is the gist of all objective vitality. Life consists in this definite cycle of chemical and physical incidents.

The more attentively we study various kinds of amoeboid individuals, the more obvious does it become that the consummation of all their vital activity consists in presenting their chemically highest substance to the stimulating influences of the environment. The moment of clash between the chemically unfurling protoplasm and the functionally disintegrating external agencies constitutes the climax of vital manifestation. And, moreover, the direction of all fundamental organic development is impressed upon the vitally reacting mould during this specific act of disintegration. By splitting off from the protoplasm a definite molecule, the forces of the medium determine to some slight extent the composition of the ensuing restitution. The pre-established direction of the organized affinities of the living substance undergoes some infinitesimal modification during the molecular displacement effected on each concussion by the dynamical agents. This modification tends through molecular adaptation to equilibrate the combined effect of all disturbing influences, establishing a centralized unification of such effects.

This surely is the narrow and laborious path by which fundamental organic development forces its gradual ingress into the living substance. In this process of superimposed increments of molecular elaboration, the functional disintegration of the active protoplasm gains the significance of functional evolution,—an evolution so attuning its play with the environment as to render the intrinsic vital reaction consonant with the dynamical action of the external stimuli. In all this vital activity, food serves only as complementary material to reconstitute the chemical integrity of the substance disintegrated during the functional play.

The Darwinian theory, brilliantly luminous so far as it goes, fails to account for the fundamental facts of organization as necessary products of the interaction between the living substance and its permanent medium. It only explains how accidental variations of the necessarily established organs are selected as useful during the more or less casually occurring incidents of the struggle for existence. The perpetual dynamical influences of the medium are, however, the veritable powers

that shape and sustain the essential groundwork of organization. In living beings, the surface of contact with their medium becomes differentiated in the course of development into specific sensory provinces,—touch, sight, hearing,—answering to the specific stimulation of as many dynamical powers. And the central intercommunications and unifications of such peripherally differentiated sense reflect faithfully in universal forms the general and constant relations of the organism to the influences affecting it. It is the sensory organs thus fashioned, together with their centralizations and the conjoined motory instruments, which are apt during the struggle for existence to undergo such incidental transformation as renders the organism best suited to carry on its special mode of life under the influence of special surroundings.

These peculiar surroundings are formed by the objects immediately and urgently affecting the organism. They call forth and usurp its vital reactions in a manner far more striking to us than the persistent and universal powers. Thus, the hunting, seizing, and devouring of prey are performances mentally realized by us as vital exertions, ministering immediately to the sensual appetites actually felt by the pursuing organism. Yet the demand for restitutive material originates really in the want of chemical saturation, occurring in the ectoderm when functionally disintegrated during its play with the forces of the medium. Only, the practical difficulties in the way of the satisfaction of this want engross in most instances the life of outside relations to such an extent as almost completely to obscure its own evolutionary supremacy.

The study of transparent, elementary forms of life renders it, however, unmistakably evident that one part of the protoplasm is partitioned off by its direct chemical interaction with so-called food, and is thus destined merely to prepare the restitutive material for the other portion of protoplasm carrying on the dynamical functions. It is quite certain then that, in organization, the preparing or digesting material—the entoderm, in fact—is essentially subservient to the wants of the substance constituting the life of outside relations. It is biologically evident that a living being does not in verity move, feel, and think for the ultimate purpose of feeding, but that it feeds, in order that through moving, feeding, and thinking it may reach higher stages of development.

A more significant and helpful truth than contained in this simple and undubious observation the study of nature cannot well reveal. Together with its generical bearings, the bequeathment and inheritance of organic results thus developed, it constitutes the fundamental fact and import of vital evolution. It contains also the intrinsic and inexorable vital ground, the genuine "categorical imperative" of the ethics based on the philosophy of organization. It is, all in all, the foundation in actuality of our social and moral tendencies,—the constitutional potentiality of true progress.

Life means at its very outset the spatial increase, the specializing refinement, and the central unification of organic correspondences to the universe of outside influences. Thus far, then, every doubt is dispelled concerning the veritable drift of our actual existence; and it is to the humblest of living monads that we owe the precise elucidation and incontrovertible certitude of this all-important bearing of vitality. However much concealed by the coarser exigencies of the struggle for existence, it remains, nevertheless, the supreme fact of life that the uplifting power in organization is to be found in the increasing harmonization of our relational life with the external world actually affecting it.

Hunger is a feeling only mentally and vicariously indicating an organic need, having its real origin and ultimate fulfilment in the structures of the entoderm. It is the sensory surface—the nerves, brain, and muscles—that have to be supplied with restitutive material, so that amid their functional play they may preserve their structural identity.

Pleasure itself, elevated by hedonic ethics to the paramount, self-sufficient aim of human striving, is—even in its widest sense, as comprehensive happiness including altruistic satisfaction—only a mental concomitant, vicariously significative of harmonious interaction between the organized faculties of our life of relation and the influences affecting it. Whenever gratification of any kind of feeling is made an end in itself, then the hyper-individual or generical import of organization has been perverted. Not self-satisfaction even of the most ideal kind ought to be made the true aim of human life, but higher organization through rational, ethical, and æsthetical transformation of our environment, and therewith of the relations connecting us with the same.

The ethical misdirection of noble creeds, as well as the banefulness of ignoble lives, have their origin in the false position ascribed to or assumed by the organic sphere embodying the appetites. Thus far, the conscious attitude of ethical culture has been little more than a defence against the inordinate promptings of entodermic requirements or sensual feelings. It ought to become, indeed it is its naturally ingrained propensity to become, the intellectual sublimation of such requirements and feelings for the far-reaching ends of ectodermic fructification and elevation,—ends in themselves altruistic and undying, but necessarily involving more and more perfect individual organization by means of more and more subtle, comprehensive, and unifying relations to the vast order of multitudinous interactions among which we move and have our being.

EDMUND MONTGOMERY.

HEMPSTEAD, TEXAS.

A MAN'S A MAN FOR A' THAT.

Mr. Kennedy finds an indication of Walter Scott's proclivity to democracy in the fact that a number, perhaps the major number, of that novelist's most powerful portraiture are of persons in humble life. For myself, I see nothing in this but the instinct of a true artist, who, conceiving of remarkable and salient characters, places a goodly number of them in situations where the restraints of polite life and the veil of cultivated manners are wanting, and where, accordingly, character displays itself more freely. But this is not my present point. I wish to remark upon a current abuse of the word "democracy." Democracy is a political doctrine and condition. As a condition, it lies essentially in universal suffrage, with the delegation of all authority by popular election; and it rests upon the doctrine that, so far as concerns political matters, every man is the moral equivalent of every other, therefore entitled to an equal voice in determining the obligations of a community. Whoever embraces this doctrine with entire persuasion is a democrat fully fledged: whoever inclines toward it, but without entire and conscious persuasion, is a democrat in the egg, that may or may not chip the shell. Aristocracy, on the contrary, gives to a limited number a position of superiority determined by birth, not by merit, and so continued in hereditary succession from age to age. Now, these two systems, diametrically opposed as they seem, agree in one fundamental particular. By both, all natural, all real distinctions are ignored. In both alike, knowledge and ignorance, intelligence and stupidity, nobleness and sordid-

ness, are placed on an artificial level. Aristocracy says that some men are peers by virtue of their birth from a certain lineage; democracy, that all men are peers by virtue of their birth as human beings. Both, in short, are conventional systems, and, to the extent of the agreement here noted, conventional in the same way.

Suppose some one, now, to say in the face of an aristocracy that a man should have weight according to his worth, and to pour contempt upon those rules of distinction which make a great man little and a little man great in estimation, for no other reason than that each is the son of his father.

Such a sentiment would be hailed in some quarters as democratic, especially if it were said in a splendid and powerful way by a man of great name in literature; but it were just so far from being a democratic sentiment as the speaker from saying that in political relations all men should be of equal weight, and worth be left quite out of the account. Take for an example Burns' "A man's a man for a' that." How often has this been recited as embodying and immortalizing the creed democracy! But just so often its import has been grossly mistaken, for the burden of the ringing verses is no such platitude as that a man in homespun is as much a member of the human species as any other. "Man" has not here the sense of *homo*, applicable to all human beings indifferently, but of *vir*, applicable only to a superior order of man. In our vernacular, one may express the highest admiration of another by saying emphatically, That is a man! *Man* is here, like *gentleman*, a term of distinction, but more expressive and energetic than the latter. Burns uses the word in this sense,—that is, as a peculiarly vigorous term of distinction; and the poem is a reclamation in behalf of that nobility which lies in a man's soul as against that which lies only in his estate, costume, and coat-of-arms. It does not assert the equality of homely worth and gilded worthlessness, but their unspeakable inequality rather. It does not say that Greatheart in hodden gray is as much a man as Noheart in purple and fine linen. As much indeed! That is not the tune by a good deal.

"The rank is but the guinea's stamp,
The man's the gowd for a' that."

Would he say that "yon berkie ca'd a lord" is gold, and that all men are gold, "berkies" as much as any? No, the astonished lordling hears that, beneath golden trappings, he himself is base metal,—hears it from the guest whom he had invited to his house to entertain his company with the scintillations of genius, but whom, as being a peasant and therefore, of course, not fit to sit at table with himself and his fine friends, he had sent to the kitchen to dine with the servants. It is no plea for equality to which he listens, but the notes of proud and just disdain. Rank is admitted, but as the stamp to distinguish gold, not to give lead the pre-eminence of gold or to make all metals equal. To call this democratic, as has so often been done, is simply to throw over the poem a verbal blanket which conceals, instead of expressing, its meaning. Burns did not sing, A man's a man for all his being an ass. What he sang is, in truth, not a political doctrine of any sort.

But, if the word "democracy" be here intruded, it is so yet more flagrantly when an occasion to apply it is found in the mere fact of an artistic or dramatic sympathy not confined within the strait limits of a conventional system, or even of a creative imagination more at home in the cottage than in the castle or court. Can one really believe that Scott in conceiving and portraying the character of Meg Merrilies, and in giving her a place of such importance in his plot, signified, even remotely, an opinion of the gipsy's fitness and title to vote,

and the title of all gipsies as well? Why, then, shall we not say that Mr. Cole and Mr. Johnstone, in painting cows with great truth and expressiveness, indicate an opinion that these creatures should be permitted to vote? Nay, since they paint cows rather than human figures, why must not we suppose them to think that cows should vote by preference? Really, we must try not to see everywhere only the color of our own eyes. The system we prefer will lose the service of our wits, when we suffer the very extremity of our predilection for it to confound them. To avoid this catastrophe, let us call to mind the case of a man who shows how little democratic opinion can be inferred from somewhat more significant than artistic sympathy; that is, from the strongest and most appreciative personal sympathy with characters that owe nothing to birth or fortune. The two portraits which Carlyle, himself the son of a peasant, has drawn with most love and delight, are those of Burns and Johnson, men humbly enough born; while his greatest hero, Oliver Cromwell, was a country squire. On the other hand, I can recall no instance in which he has represented a lord by inherited title as a great man, unless Mirabeau, who was a ragged sort of patrician, be regarded as an exception. Certainly, no man ever showed a slighter respect for merely titular pretension. But all the world knows that he was far enough from being a democrat. He contended that the truly great man should be the governing man,—the great man being he that has the clearest eye to see what ought to be done, and the highest power to combine the energies of many in disciplined order and direct them toward the doing. His idea is not strictly practicable; but it is one, nevertheless, that through democracy or whatever system must be in some tolerable degree realized under penalty. That is no lucky nation in which little men do the governing, however democratic its methods. Even Jefferson recognized this, and claimed it as a chief merit of popular institutions that they afford, as he alleged, the surest guarantee for the constant promotion to power of those whom he called "the natural aristocracy." Perhaps he thought it but for the hour in which he was writing to John Adams; for he was pre-eminently one of those concerning whose deliverances we must consider, not simply what was said, but who was addressed. And yet the claim might prove not altogether unfounded, were natural standards and real distinctions kept always and clearly in view, or were we less disposed to flatter the system we favor than to supply its deficiencies and redress its one-sidedness from the resources of mind, in open communication with that fulness of all truth which is contained, or to be contained, in no institution whatever.

The foregoing is preliminary to a short homily, which I propose to deliver in the next number of *The Index*.

D. A. WASSON.

POE: THE POET AND THE CRITIC.*

Thirty-five years ago (on the 7th of October, 1849), Edgar Allan Poe—friendless almost and destitute quite—died in a Baltimore hospital. For every year which has since elapsed, we have had a biography of the poet; designed to show why this child of genius, happily born and kindly nurtured, lived and died as he did live and die; making self-will or will-weakness, pride or vicious inclinations, ill-fortune or besottedness responsible for what is alleged a life failure. Widely variant as each estimate of the poet's life and work is, self-contradictory in statements and conclusions as

* Read before the Northern and Southern Club at Portland, Me., Oct. 22, 1884.

most of them are, no one of these biographies discovers to us the man, and none is worthy the acceptance of this later generation. We may gratify a proper pride in the remembrance that the poet Willis—himself one of Poe's truest friends—gave to the world the most comprehensive and appreciative of these numerous estimates of Poe's genius and character; but the imperfections which mar the beauty of Willis' essay even—and its brevity is one of these—serve in their way to emphasize the statement that Poe's biography is yet to be written.

The world has waited long and impatiently for this ideal biography of its idol; but into this wearisome time of waiting compensations have come. We understand Poe, as most of his contemporaries could not understand him. Time has relieved us from the necessity of defending him. The symmetrical beauty of his character is apparent to us. That we may know and love the man, it is not now necessary that we should look at him with partial eyes, but that we should see him as he truly was. The mists have cleared away. The shadow of the man has melted into thin air; and the man himself, great and godlike, stands before us, proudly uncomplacent, yet tenderly responsive, waiting his laurel crown!

The truth is that like Keats, like Carlyle, Poe was in advance of his age,—as the man who is, above all things, original, must always be. American literature, at the time of Poe's entrance upon the arena, had become little more than a name and a memory. Bryant with his "Thanatopsis" had sounded the first note of the revival of letters; but Bryant's youthful genius, though it struck out unhackneyed thoughts, patterned the arrangements of its works after the prevailing style, so that, at his appearance, the then "poets" did not at once take alarm. The "favorite poems" of the day were utterly dull and thoroughly respectable. Almost without exception, they were born in lawful wedlock of Homer's *Iliad* and Blair's *Rhetoric*. The subjects being thus chastely conceived, they were enwrapped in the dainty swaddling clothes of correct rhymes and rhythms, and attained their majority and passed into old age without ever once freeing themselves from any of these restraining bonds. In short, it was at this time the unwritten law of American literature that style must maintain itself even, if necessary, at the cost of sense; and that the poetry of the emotions must be left to the ladies,—who made sad work of it. A personage of Poe's creation sums up the situation thus:—

"We seldom find . . . half an idea in the profoundest sonnet."

Poe threw a firebrand into the camp of the Philistines. With the masterful instinct of the true poet, he made rhymes and metres subserve his thought, while his thought subserved only the promptings of a mighty genius. Love was his choicest theme; and, disdaining the worn-out similes and the threadbare comparisons with which his predecessors had adorned their classically correct amatory verse, his lines were so vibrant with passion, so surcharged with sweetness, that they fixed their place with the great originals from which other poets had copied. Somewhat more than this: they took higher place, for they were more in harmony with the true free thought—though few there were who exercised it—of the day in which they were written. As between Poe and "the poets of the tuckermanities," the old contest of the present with the past was once more renewed. The master and the slaves contended, and Time fought on the side of the master.

Let it be noted and remembered that Poe's attitude and acts in his battle with the little-great

men of his own time were consistently dignified and manly. His pen was a caustic which burned that it might heal. Not for the ignoble "love of cruel sport," which urges so many professional critics to be severe, did he rebuke the pretenders to thrones in the realm of poesy, but because he felt himself the God-appointed guardian of Parnassus, the angel set at the gate with a flaming sword to keep out the unworthy. No man ever held the poetic faculty in higher honor; none ever more sacredly administered his sacred trust. "With me," he wrote in the preface to his collected poems, "poetry has been, not a purpose, but a passion; and the passions should be held in reverence. They must not, they cannot at will be excited, with an eye to the paltry compensations or the more paltry commendations of mankind." Holding allegiance to such a faith, he could neither hesitate nor falter. His duty was plain: the world was to adjudicate the pretenders' claims, but the pretenders were first to be set before the world in their true light. It was to this work that Poe, in his capacity of critic, addressed himself; and this work it was which he steadfastly pursued, though fame and wealth were with his enemies.

And then the clouds swept down! It is sad reading, the life history of this man, who would have blessed his fellows, and was cursed of them. Here on the one hand was a fiery yet sensitive nature, in which high heroism and the sweetest tenderness commingled; on the other, the boorish tastes and low sensibilities of a mob of (miscalled) literary men. The present outcome of the uneven contest was certain. He might enrage them, but he could not better them; for their natures were not susceptible of improvement. He, with Truth for his weapon, could arouse in them the unreasoning anger of the brute; and they, from behind their refuge of lies, could send forth baser lies to cause him the poignant anguish which such a nature as his alone could feel. It was at the cost of temporal peace that he gained enduring fame: rest was for him only in eternal rest.

Of the man who could thus suffer and thus endure, we must predicate somewhat more than obstinacy or self-will. We must admit his possession of all the finer and higher virtues which may sway the human breast,—Truth, Sincerity, Courage, Love. We may inquire into his character, search his works, as we will, yet we shall find nothing which militates against his possession of all these. True and sincere, kindly and manly was he at all times. Without affectation, without hope of reward, he held on in his appointed way. If there seem to have been in his conduct, at times, variations from the straight path, let us believe—as we have reason—that they were more apparent than real. So long as we condone the frailties of Burns, for example, repeat applanisively his bacchanalian odes, and wink at the misery which his habits brought to those who should have been his dearest, we have no right to befoul the memory of the great American, who—if any one suffered—suffered in his own person for his faults, and whose writings trend toward the highest morality. If, by the same standard for action which we apply to others, we test Poe, he will need no defence.

Through the weird intensity of "The Raven"; the sometimes sibilant, sometimes clangorous melody of "The Bells"; the tender pathos of "Annabel Lee"; the powerfully contrasted grief and indignation and aspiration of "Lenore"; the sweet loveliness of "Israfel"; there breathes a higher strain. Between the lines, the partial reader sees another aspiration which Poe might well have made his own,—a trust which every word of his illustrates and enshrines: "And we are now men, and must accept in the highest mind the same transcendent

destiny; and, not pinched in a corner, not cowards fleeing before a revolution, but redeemers and benefactors, pious aspirants to be noble clay, under the Almighty effort let us advance on Chaos and the Dark!"

WALTER L. SAWYER.

THE STATE AND RELIGION.

Commenting upon a recent editorial in *The Index* in opposition to the appointment of a Thanksgiving Day by the federal government, the *Christian Statesman* says: "*The Index* is always logical and consistent. We almost always justify its reasonings, but dissent from its premises. Its premises, in this case, are these: Christianity has not been proved to be true; the Bible is not known to be the word of God to man; there is no evidence that nations are dependent on the favor and accountable to the government of a personal God. Granting these premises, its conclusion is sound. But take these premises: there is a living, personal God who is the author of national as of individual life, and who in his word commands all nations to worship and obey him. At once, the appointment of a time for the united expression of thanks for his mercies is seen to be reasonable and becoming. *The Index* will not deny that this is the teaching of the Bible. It is more honest and candid than those Christians who hold to the secular theory of government and ignore its contradiction with the word of God. The real question then, the only question, is whether the Bible is true. And we fail to see how *The Index*, even on its own principles, can object to a people who believe in the Bible and in the government of God over nations, expressing their belief and acting on their convictions."

The people who accept the theological doctrines mentioned by our contemporary, whether many or few, should be, as they are, at liberty to agree upon and appoint a time for the expression of their thanks. But there are multitudes who do not accept these theological doctrines. Their intelligence and honesty are beyond dispute. They help support the government. Many such have fallen, and others bear scars of wounds received, defending in battle their country's flag. Many Christians there are too, who, accepting as authoritative the Bible as they understand it, yet believe that evil only can result from discrimination by the government in favor of or against any class on account of any religious or unreligious views, and who wish to see Christianity depend now wholly upon its own appointments and the inspiration it imparts, as it did when its conquests were made before it was united with the State under Constantine. Supposing the party which the *Christian Statesman* represents had the numerical strength and the power to carry out its purposes, how could it, with any pretence even of regard for justice and respect for the rights of man, disregard the convictions and wishes of all these people whose interest in the peace and prosperity of the country certainly will not be questioned? If the State can recognize the Bible as the word of God and Christianity as a divinely revealed system, it may logically declare what interpretations shall be accepted, what sect correctly represents Christianity; and, in using the Church as a means, it can logically make a compulsory church law, compelling all persons above a certain age to belong to and attend church with prescribed regularity.

"The real question is whether the Bible is true," says our contemporary. The general and growing conviction in these days seems to be that the Bible, fairly tried by the accepted canons of historical criticism and examined in the light of science and common sense, must be regarded as

partly true and partly untrue. This conviction is shared by immense numbers of Christians, including many of the most learned and the most honored of all Christian lands. While Christians are not agreed as to the dividing line between the divine and human, the inspired and uninspired, the true and the erroneous portions of the Bible, and differ as to just what this revelation reveals; and while a large and increasing number of intelligent and thoughtful people regard the book as simply a collection of ancient writings, containing the history, traditions, and fables, the laws, proverbs, and precepts, the poetry and prophecies, the prayers and imprecations of a remarkably religious race,—why should the State assume to decide between these divergences as to the correct position, and make requirements and issue proclamations, virtually saying to one class, "You are right," and to all other classes, "You are wrong"? Rather do not justice and liberality, as well as the voice of history and the lessons of experience, teach us that the settlement of such questions should be left to time and research, the State meanwhile favoring no religious beliefs and opposing none, but protecting the adherents and the opponents of all in the enjoyment and advocacy of their views.

The *Christian Statesman* assumes that Christianity is true; that the Bible is God's word; that Jesus Christ is the ruler of nations; that therefore our national constitution should be made an evangelical document; and that, in all official acts and papers, Christianity, presumably as it is understood by the *Statesman*, should be recognized as the national faith. It believes in compulsory Christian education in our public schools, requiring all taxpayers to contribute to the support of Christianity, in excluding the testimony of "infidels" from our courts, rendering them ineligible to office and probably depriving them of the ordinary rights of citizenship. The consummation of its purpose would be the destruction of religious liberty. Of this, fortunately, there is no great danger. The present tendency, on the contrary, is toward more complete State secularization. But the *Christian Statesman* represents quite a large class of religious zealots; and there is still in this country an enormous amount of religious bigotry and intolerance, to which at times they can very successfully appeal in obstructing and delaying liberal reformatory work. "Eternal vigilance is the price of liberty," and it is well to keep an eye on these pious plotters against freedom and progress.

B. F. UNDERWOOD.

It has been said that a New England man, weaned early and sent out West, makes the best type of an American. Wade, Douglass, Chandler, and Carpenter were New Englanders who made themselves Westerners by early transplantation. Senator Ingalls still lives as an illustration of what a man of Puritan stock can become in the imperial environment of the great States of the West. In a Senate too largely composed of mere millionaires, he stands out conspicuously noteworthy for high intellectual qualities. As a debater, he is eloquent, pungent, and formidable,—in fact, up to the best traditions of the United States Senate in its palmiest days, before the euroaching spirit of Mammon had lowered the senatorial standard of intellect. He went West in the Border Ruffian period of the history of his young State, when it was the debatable ground between freedom and slavery. Thus, he was trained in the very storm and stress of the slavery conflict. He went fully armed and equipped intellectually to make his mark. He is not only one of the leading debaters of the Senate, but he is a writer whose pen is in request in the pages

of our best periodicals. He is orator, scholar, and publicist, all in one. He has had two terms of service in the Senate, and is likely to be re-elected next month to serve a third term. Now that there is to be another Democratic administration after a lapse of twenty-five years, Kansas may need the services of her distinguished senator at Washington more than ever. His career serves to remind us of New England that there is an ampler, vaster New England in the great West which was settled by Yankees and indoctrinated with the New England spirit. The future triumphs of the descendants of Puritans are to be achieved, and there such New-England-born men of intellect as Senator Ingalls did well to transplant themselves in youth; for there they have found environments, physical, intellectual, moral, and political, suited to their capacity, and making possible their careers of great usefulness and honor.

EDITORIAL NOTES.

BY B. F. U.

WE have received, as a specimen of Prang's Christmas cards, a set of four, representing some scarlet-robed, comical-faced Christmas elves at their merry pranks, which, however, are designed for the pleasant surprise of mortals during the festive season of joy-giving.

A FRIEND writes us, "Dr. Davidson, the most eminent Biblical scholar in England and the head and front of the Protestant scholars of the world, says *The Index* is edited with more ability than any American paper he has received, but he has no sympathy with agnosticism."

THE sanguine lessons of history have ineradicably laid down in human consciousness certain ideals. They are the guides to general peace. For man do they appear as self-knowledge, love to others, sense of duty, veracity. He whose mind has ripened in those spheres cannot be a hypocrite, a coward, a reveller, a serf, a niggard, a fanatic, a mocker. Adversity incites him not to egotistic anxiety, not to usury, but to the most energetic assistance, to a courageous defence of the common danger ere it assumes gigantic dimensions. Cowards are in *primis* those who within their walls of luxury and splendor revel in effeminate security, who but vegetate in their refined abundance as higher animals. "They have received their reward." Wealthy or poor, whoever knows no higher ideal than to eat, drink, sleep, whoever can but meet with lust and selfishness all Friendship, Love, and Beauty, is already punished, as his heart is dead to the numberless blessings which in daily intercourse with humanity enchant ever afresh the pure in mind.—*Bostoner Rundschau*.

THE following extract from an address of the president of the Milwaukee Trade Assembly, to workmen of that city, as the *Haverhill Daily Laborer*, from whose columns we take it, says, contains a lesson that has a broad application, and may be thought of with profit by members of labor organizations everywhere: "We do not take the full advantage of the means at our command to help us forward. The things that are of the utmost importance to us are scarcely noticed, while others that are useless or positively an injury to us receive too much of our attention. The opening of a variety theatre is of more interest to a majority of us than the opening of our night schools. The *Police News* and periodicals of that class have a larger circulation among our ranks than the labor journals that are published for our interest. We can talk like philosophers about a game of base ball, but have a very limited knowl-

edge of the laws of political economy or of the workings of our social system. Our billiard and pool rooms are crowded nightly, while the public reading-room has but few visitors."

HON. HARVEY N. SHEPARD, before the New England Club last Saturday, upon the occasion of their forty-first dinner in celebration of Forefathers' Day, thus referred to the Pilgrims:—

Strong in faith, cheerful in devotion, large-hearted beyond their means, wonderfully free from the superstitions of their times, social and hospitable, remarkably tolerant, they maintained the separation of Church and State, and established freedom of conscience. The first to declare the right and duty of the individual as against both Church and State, they not only claimed for themselves the right to free thought and free conscience, but also gave, willingly and ungrudgingly, to others who differed from them like respect and freedom. They did not, as the Puritans, make church membership a qualification for voting, nor prescribe severe penalties to secure absolute conformity; but, like the Catholic colonists under Lord Baltimore in Maryland, they molested no man in the free exercise of his own religion. Episcopalians, Baptists, and Antinomians, fleeing from the prisons, the whipping-posts, and even gibbets of Massachusetts Bay, found in the Old Colony a quiet home. To the Hutchinsonians, they granted a tract of land, "although they had their errors in as great dislike as" those from whence they came. To John Myles and his Baptist flock, they gave a dwelling-place and a welcome to offices of honor and power. Roger Williams they made for three years associate pastor of their church. Only two persons were ever tried for witchcraft, and they both were acquitted.

IN a recent review of Mr. Fiske's brilliant essay *The Destiny of Man*, we remarked of the author's avowed acceptance of the doctrine of immortality "as a supreme act of faith in the reasonableness of God's work," that, while a belief in a Supreme Intelligence "carries with it some implication, some slight moral probability at least, that physical death is not the end of human consciousness," we could not reconcile Mr. Fiske's exuberant declaration of faith with his "repeated efforts in other works to show that morality, volition, purpose, intelligence, and consciousness are qualities which the thinker has no right to ascribe to the Ultimate Reality." We added, "Did not he claim to be still in accord with Mr. Spencer on this point, we should think his views had recently undergone a radical change." The *Commonwealth* quotes our remarks, and adds: "Mr. Underwood was bound to state, which he seems to have forgotten to do, that, whenever Mr. Fiske argues against the right of the thinker to ascribe morality, volition, purpose, and so on, to the Ultimate Reality, he is always arguing against an anthropomorphic conception of that Ultimate Reality; he is arguing always against the thinker's right to 'posit an external agency which is in the slightest degree anthropomorphic,' and to affirm of that external agency that it adequately represents the Ultimate Reality." Of course, when Mr. Fiske "argues against the right of the thinker to ascribe morality, volition, purpose, and so on, to the Ultimate Reality, he is always arguing against an anthropomorphic conception of that Ultimate Reality,"—in other words, against a conception of the Ultimate Reality which includes "morality, volition, purpose, and so on,"—a proposition so self-evident that we could not "have forgotten" and were not "bound to state" it.

IN his *Cosmic Philosophy*, Mr. Fiske endeavors to show at length that there are no grounds whatever for believing that the Ultimate Reality possesses morality, purpose, design, will, or intelligence; but that, on the contrary, the attribution of these qualities to the Ultimate Reality involves palpable absurdities. "If," he says, "harmony and fitness are to be cited as proofs of beneficent design, then discord and unfitness must equally be kept in view as

The Index.

BOSTON, DECEMBER 25, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

SECULARIZATION.

A Paper read at the Convention of the Free Religious Association at Florence, Mass., Nov. 20, 1884.

BY FREDERIC MAY HOLLAND.

This does not mean secularism or atheism or abolition of the churches. It simply means elevating them to the high position earnestly desired by their most enlightened advocates, that of institutions supported wholly by free-will offerings, and carried on with most strict deference to the sacred rights of individual liberty. In short, secularization means having the churches run by the people, and not letting them run over any of the people.

Nowhere does the nineteenth century surpass the Dark Ages more gloriously than in having put an end to burning and massacring heretics. Nothing is more to our honor as a nation than our having given up all attempt to produce uniformity in belief by the labors of hangman, sheriff, and constable. Every American can believe what he likes and disbelieve what he likes, go to church or synagogue, or stay away from all places of worship, and not have the least fear of being treated as a criminal. The constitutions of our States contain ample guarantees against persecution, and its infiction would be so utterly impossible under the light of public opinion that it makes comparatively little difference what the law-books say on the subject. There are, however, some exceptional cases in which petty persecution is still legally possible. For instance, there is the statute still in force in Massachusetts by which the credibility of a witness may be disparaged on account of disbelief in God. Pennsylvania, too, has statutes which deny people who think like Humboldt and Harriet Martineau the right to protect themselves or their friends by legal testimony. This discrimination against men and women who are too conscientious to say they believe what they do not know sufficiently, amounts to a discrimination in favor of the people willing

to swear to anything. Thus, these statutes and unconstitutional provisions might be entitled "Law to encourage Perjury and Hypocrisy." Our Massachusetts statute is, fortunately, a dead letter, which is a strong reason for its repeal. Nothing does more to weaken the authority of good laws actually in force than to adulterate them with enactments which cannot be executed, and should not be.

North Carolina stands, so far as I know, alone in saying that "all persons who shall deny the being of Almighty God shall be disqualified for office." This is a direct attack on the right of every voter to say who is most fit to guard his interests. Not many years ago, the opportunity of securing an excellent governor for North Carolina was taken away by this atrocious law. It is hard to tell whether we have more reason to blame or pity the bigotry which condemns men like Mill, Gambetta, and Humboldt as unfit for any position of public trust. To say, as six of our States have done, that clergymen should not hold office, seems to me equally contrary to the right of citizens to choose their own representatives. This latter provision is also of interest as showing that some of our wisest men have thought that the power of the Church should be checked rather than encouraged by the State. None of these disqualifications for office are in force in Massachusetts, and I presume that all legislation of this class is a dead letter everywhere. If so, it ought to be promptly buried out of sight. The same may be said of our law punishing denial of the existence or government of God, and exposing the Bible to contempt or ridicule, with imprisonment for not more than two years in state prison or a fine not exceeding three hundred dollars. Similar laws exist in other States. No one can seriously think that writers like Theodore Parker or John Stuart Mill deserve to be punished as criminals. They could have been under these laws; and so could Martin Luther for saying that the Apostle James wrote an epistle of straw, and Henry Ward Beecher for telling his congregation of the colored woman who said she liked to read the Revelation of John, for that was the only book in the Bible she really understood. Perhaps it is not safe to tell such stories. Certainly, I have no right, according to the law against blasphemy, even to remind you of Jonah and the whale or Balaam's ass. Attempts have been made to stop Ingersoll's mouth by this statute; but the fact is that it would muzzle Beecher, Talmage, Spurgeon, Collyer, and popular preachers generally. The religious newspapers, too, would be much duller than at present, and the pastoral visit lose all its charm. Nobody wants to enforce the law. Why not clear it out of the way?

A second great principle of freedom in which all our State constitutions agree is that the churches are to be sustained by free-will offerings, so that no individual is to be forced to contribute for ecclesiastical purposes, and no public money appropriated to aid sectarian enterprises. This principle, however, like that of not molesting individuals on account of unbelief, has not yet been carried out consistently. The question whether church schools are to be aided by the State has been settled forever within our own remembrance, and after a struggle in which the founder of *The Index* took a prominent part. There are laws actually in force in nearly all the States, which annually invade the right of every citizen to his property by compelling him to make contributions for sectarian purposes. Churches are exempted from taxation, and this is increased just so much for the owners of other property. The poor man's house or shop has to pay the expense to the State of protecting costly shrines for the exclusive bene-

evidences of less admirable contrivance. A scheme which permits thousands of generations to live and die in wretchedness cannot, merely by providing for the well-being of later ages, be absolved from the alternative charge of awkwardness or malevolence. If there exist a personal Creator of the Universe, who is infinitely intelligent and powerful, he cannot be infinitely good; if, on the other hand, he be infinite in goodness, then he must be lamentably finite in power or in intelligence."

"In short, there can be no hypothesis of a 'moral government' of the world which does not implicitly assert an immoral government [the italics are Mr. Fiske's]. As soon as we seek to go beyond the process of Evolution disclosed by science, and posit an External Agency which is in the slightest degree anthropomorphic [that has will or intelligence], we are obliged either to supplement and limit this Agency by a second one that is diabolic, or else to include elements of diabolism in the character of the first Agency itself." "When we speak of intelligence, we either mean nothing at all, or we mean that which we know as intelligence. But that which we know as intelligence implies a circumscribed and limited form of being, adapting its internal processes to other processes going on beyond its limits." "It is the primitive fetichistic habit of thought, however modified by conflict with scientific habits, which furtively leads us to regard volition as supplying the nexus between cause and effect, and to interpret the harmonious correspondence in nature as results of creative contrivance and indications of creative purpose." Again, "The unconditioned Source of the phenomena which we distinguish as material may well be neither quasi-psychical nor quasi-material." Thus, it is seen that in *Cosmic Philosophy*, Mr. Fiske—agreeing with Spencer, whose philosophy he accepts and ably expounds—argues against the right of the thinker to ascribe to the Ultimate Reality any moral or mental qualities whatever; and, from that stand-point, we repeat, Mr. Fiske's argument in favor of immortality based upon "the reasonableness of God's work" is inconsistent and absurd. Accepting the hypothesis of an intelligent and moral Author of the universe, one may consistently argue from the beneficent nature of that Author in favor of immortality; but if he denies our right, as Mr. Fiske does, to ascribe goodness or intelligence to the Ultimate Reality, and declares it to be unknowable, of what value is an argument based upon its character?

For The Index.

THE AGNOSTIC VIEW.

I bow to no concept of haughty man,
No tyrant in the skies, no trinity
Of manlike gods whose will created me
A slave, to struggle through life's fitful span
And offer up eternal prayers. The plan
Of all the holy creeds I fling from me
As vain and idle thought, base imagery
Of that we cannot know. I cannot scan
This mighty cosmos,—space and world and star,
And life on countless globes so wondrous, vast,
Through time's grand cycles in majestic flight,
I cannot see, feel, know all things that are,
And bow to such as these,—ghosts of the past,
Huge shadows of ourselves that flee the light!

To this I bow: the Infinite Energy
That lives in all, that breathes throughout all space;
The Self-existent, in whose wide embrace
The myriad worlds revolve in swarms, and we
Are born, grow old, and die. Philosophy,
In its sublime research, no words can trace
Whereby the mind may grasp its vastness. Place,
Time, cause, design, Lord, God, or Deity
Are transient, earth-born things. Its laws are sure
And steadfast through eternity; they guide
The stars, and people worlds with life; they teach
Me wisdom, truth, and right, what shall endure,
What perish, all that man can know this side
The silent grave: beyond, no thought can reach.

C. F. DE MOTT.

fit of the rich. Only those churches whose seats are free can, with any propriety, be called public charities. No building can be called a public charity which is not open to public use. And there may still be a question whether an institution carried on mainly for sectarian ends, however openly, is so plainly a public charity that its taxes should be remitted by the State. There are many so-called charitable societies which are only sectarian enterprises, carried on with too little regard for the general welfare to deserve exemption from taxation. Why should men be forced to contribute toward the expenses of any society, whether openly religious or ostensibly charitable, whose main object is not to lessen the number of paupers or criminals or sufferers, but to increase that of Episcopalians or Methodists or Baptists? Corporations are said to have no souls; and their intentions are not necessarily so holy as to exempt them from taxation, merely because they call themselves charitable and religious. Only the unsectarian charities can justly claim State aid. So, again, the salaries of chaplains in the legislature, army, prisons, and other public institutions, are paid in violation of the principle that no money can justly be collected from the citizen except for the general good. Does the welfare of the community require that the murderer be taught to say, as he mounts the scaffold, that he is going straight to heaven, and that he wishes the spectators were as sure to go there as he is? Are the prayers which usually open the legislative sessions anything but an empty form? Are not the clergymen who live in the neighborhood of the hospitals, poorhouses, and prisons, able and willing to visit such of the inmates as desire it? And is it not better that each inmate should have the right to see a minister of his own faith than that a representative of one single sect should be sent by the State to men and women holding hostile views? All the money thus paid by individuals in consequence of the employment of chaplains and the exemption of churches and sectarian charities is taken unjustly by the State, and the amount is great enough to justify vigorous agitation. The plainest case of extortion is the exemption of churches, which costs every tax-payer in Massachusetts, on the average, a dollar annually, and increases all taxes about one and a half per cent. Some of us are trying to have the churches left wholly to that amply sufficient revenue which flows in readily from voluntary support. They will stand all the stronger and nobler when they are placed wholly on this basis, as is the case in California. They cannot teach pure morality, if they refuse to pay the State what they owe it for protecting their property. They do not follow Him who came to preach to the poor and the outcasts, to publicans and sinners, if they devote themselves to pleasing the wealthy and respectable, and therefore spend money so profusely that they can steer clear of bankruptcy only by keeping the publican—that is to say, the tax-gatherer—out. We propose to have the publican let into the Church. Massachusetts is already acting more justly than some other States, in taxing religious societies for all their property not actually used in public worship. We ask the State to go one step further, and tax all church property without exception.

A third great doctrine of liberty is universally recognized by the States of our Union, in declaring that no preference is to be shown by the law to any sect or church. But here, too, we have not yet been able to live up to our principles. Our Sunday laws, for instance, show a decided preference for the opinion of a few sects over that of sensible people generally. Massachusetts may justly be required to cease to set up ten-dollar

and fifty-dollar fines, like scarecrows, against working, travelling, hunting, fishing, dancing, going to the theatre, etc. There is no object more proper for petitions from all the States than to have our letters as promptly and frequently carried and delivered on Sunday as during the rest of the week. It is a mockery of religion as well as of justice to have Sunday set apart as a day on which a man who will not pay his debts can show himself in public without danger of legal process. The law invalidating contracts made on Sunday seems to take it for granted that the best way to save men's souls is for the State to curtail their chances to save their property. There are possibilities of real injustice to honest people, suggested by the story of the young man who repudiated his matrimonial engagement, because it was a Sunday contract. I am willing and desirous to have Sunday a holiday, but I think it would remain so without the existing laws.

We all know, too, that the Anglican version of the Bible is used in our public schools, and not as a text-book or a means of teaching morality, but as a symbol of religion, a sacrament. And this is an unconstitutional discrimination, not only against the Baptist, Unitarian, and Roman Catholic translations, but also against the disbelief of the Jews in the New Testament, as well as against the strong conviction of all Roman Catholics and free thinkers as well as many Unitarians, that the Bible is wholly out of place in a public school. The Roman Catholic, of course, wishes no religious instruction or influences for his children except from his own priest; and his feelings are what ours would be, if we were asked to send pupils to a school where prayers were offered to the Virgin or worship was regularly observed according to Jewish, Moslem, or Mormon ritual. It is greatly to the credit of the Roman Catholics that they have been so patient under this injustice. No wonder that they keep on asking for schools in the interest of their Church, when the Protestant insists so obstinately, not only on his Bible, but on his most sectarian hymns. In fact, the hymns have much more effect than the Bible; and it is strange that liberal people can quietly suffer so much Orthodoxy to be openly taught their children at their own cost. It is high time for us to say plainly that reading the Bible in the unrevised version, and following it up with orthodox hymns, is simply using public money for sectarian propaganda, and no longer to be allowed. Extracts from the Bible might properly be employed in ethical culture; but the sacramental use of the Bible, according to the custom followed in the churches, cannot be permitted to teachers paid by general taxation. So clearly unconstitutional are our school laws in this respect that we may any day see the practice abolished by a decision of the Supreme Court of some State whose citizens press the issue.

Such a compulsory shutting up of the controversy is, however, much less desirable than to have it satisfactorily ended, after full discussion, by the free choice of the voters, ordaining that sectarian preferences shall henceforth be excluded from our public schools. The observance of Thanksgiving and Fast Day is certainly in the interest of those citizens who belong to the so-called evangelical sects rather than of those who do not, and who usually have good reason to protest against the wording of the proclamation. The most objectionable case of sectarian preference, however, besides the religious use of the Bible in our schools, is the compulsory observance of Sunday. Let us hasten the time when all sects and religions shall become fully equal before the law.

If those provisions of our state constitutions

which guarantee that no preference shall be given to one form of faith above another, that public money shall not be appropriated for sectarian purposes, and that peaceable citizens shall not be molested on account of their belief or unbelief, were really carried out consistently, we should have no more laws discriminating against the credibility or capacity for office of atheists and agnostics, punishing honest and manly expression of opinion as blasphemy, forbidding Sunday travel or labor, increasing individual taxation on account of the exemption of churches and employment of chaplains, and presenting a sectarian translation of the Bible for the religious reverence of the children in our public schools. All this part of the great war for religious freedom can be waged on constitutional ground. A word or two of the letter of the constitutions may here and there have to be improved, but their free spirit will thus become only more clearly manifest.

There is a fourth principle, however, which is not adequately recognized by the constitutions of any of our States. Their framers, while willing that there should be no superiority of sect to sect, were in general desirous that there should be a decided preference expressed for religion in some shape over irreligion. Thus, Connecticut, Delaware, Maryland, and Massachusetts plainly declare that it is the duty of every man to worship God. Most of the constitutions begin by acknowledging his existence; and there is not a single State which does not sanction the taking of oaths, and thus declare that religious hopes and fears have a higher claim on the conscience than the moral law, which bids us speak the truth always without regard to self-interest. Our law should say with Shakspeare:—

"I'll take thy word for faith, not ask thy oath:
Who shuns not to break one will sure crack both."

The State has no business to try to teach theology. Government exists for the political good of the governed, not the spiritual welfare. No State can have any just authority over the soul. The first duty of the State is to protect the lives and property of the citizens. Some high authorities, like Herbert Spencer, argue that it has no right to do anything more; for the liberty of each has no just limit but the equal liberty of all. If that is the case, the State has nothing to say about religion. Perhaps we may cautiously advance a little farther on rather dangerous ground, and admit that the State has a right to raise money to keep up roads, bridges, schools, public libraries, and a few other institutions open to all citizens, without regard to their religious peculiarities, and plainly serviceable to the whole community, doing for each citizen what no one can do so well for himself. The peculiarity of religion, however, is that each soul can best minister to its own needs. Does the Roman Catholic seek to have his spiritual wants relieved by those whom he calls heretics? Does the Protestant look for light to the Church of Rome, or the come-outer to any sect or church? Does the Jew want Christians to provide for his religious needs? What can a State in which the ruling majority is Protestant do for Jews or come-outers or Roman Catholics, except to leave them alone? Only when the State keeps on its own ground, and lets the churches and synagogues take care of their interests without a word of preference, does it hold the position which most surely entitles it to the love of all its citizens. It is the State which has no religious aims or preferences which can most confidently ask for the support and reverence of all the people, without distinction on account of belief or unbelief. The welfare of the State demands that it stand above all religious differences and sectarian strifes. And thus it becomes the fountain of laws which all

good men wish to enforce, the throne of moral authority which all citizens, even the wicked, must alike revere. Is the State to step down from this high position, in order to prop up the churches? All experience has shown that the churches are most pure and useful when they owe their whole support to those who believe in them sincerely and disinterestedly. It is not likely that the churches will be given up, at least for many centuries; but it is highly important for the whole community that they should prosper in proportion to their services to the people, and should not to the smallest extent be kept up by public money and patronage, contributed as a matter of course, whether they deserve it or not. Let every church live on what its own members offer, and do what it can in return to give them heavenly riches. Let the State confine itself to taking care of our earthly interests. This is certainly all that our Presidents and Governors and Legislatures are able to attend to; and, if they seek to do more, it can be only to accomplish less. All history shows that when the Church has been most lavishly pampered and patronized by the State she has been most corrupt. Our prosperity as a nation has been largely due to our increasing success in making the Church and State each stand squarely on its own ground and do its work without interfering with the other's privileges. All our legislation must ultimately be brought into conformity with the principle of complete independence of Church and State. This result is as loudly called for by the economic law of division of labor as by the great principle of religious liberty. The true interest of both State and Church requires that each should take full possession of its own peculiar field.

Deeply religious men, like Harris, Garfield, Bryant, Collyer, Savage, and Hale, have spoken earnestly for the complete separation of Church and State. The first organized effort in America began when one of the purest and noblest of reformers, Francis E. Abbot, announced in *The Index* for Jan. 4, 1873, those nine Demands of Liberalism soon to be incorporated in the Liberal League. They run thus:—

THE DEMANDS OF LIBERALISM.

1. We demand that churches and other ecclesiastical property shall no longer be exempt from just taxation.
2. We demand that the employment of chaplains in Congress, in State Legislatures, in the navy and militia, and in prisons, asylums, and all other institutions supported by public money, shall be discontinued.
3. We demand that all public appropriations for educational and charitable institutions of a sectarian character shall cease.
4. We demand that all religious services now sustained by the government shall be abolished; and especially that the use of the Bible in the public schools, whether ostensibly as a text-book or avowedly as a book of religious worship, shall be prohibited.
5. We demand that the appointment, by the President of the United States or by the Governors of the various States, of all religious festivals and fasts, shall wholly cease.
6. We demand that the judicial oath in the courts and in all other departments of the government shall be abolished, and that simple affirmation under the pains and penalties of perjury shall be established in its stead.
7. We demand that all laws directly or indirectly enforcing the observance of Sunday as the Sabbath shall be repealed.
8. We demand that all laws looking to the enforcement of "Christian" morality shall be abrogated, and that all laws shall be conformed to the requirements of natural morality, equal rights, and impartial liberty.
9. We demand that, not only in the Constitutions of the United States and of the several States, but also in the practical administration of the same, no privilege or advantage shall be conceded to Christianity or any other special religion; that our entire political system shall be founded and administered on a purely secular basis; and that whatever changes shall prove necessary to this end shall be consistently, unflinchingly, and promptly made.

These demands cover substantially the same ground as this essay. Why they were not pressed by the Liberal League, and why that society has

lost many of its best members, I need not say here. If the League will prosecute vigorously its legitimate work of secularization, and drop other issues, I shall gladly overlook the past. Neither that organization nor another, which has unfortunately done nothing but publish an admirable pamphlet, "The Provisional National Association for the Secularization of the State," can do more, however, than might be accomplished by the Free Religious Association. It is nearly twenty years since it began its great work of purifying religion and binding all who profess its various forms together in bonds of brotherhood. This has already been so far accomplished that the most zealous members have often asked, "Cannot the Free Religious Association do something more?" Last summer, the *Christian Register* inquired, "What is your organization going to do, which cannot be done better by the American Unitarian Association?" The members of the Free Religious Association can answer, We are going to secularize the State. We expect much help from Unitarians, but we are aware that some of them are unwilling to aid us; and we are sure that the American Unitarian Association will not consider this any part of its legitimate work. We are united in our desire to increase religious liberty, and to sweep away all laws which infringe upon it, whether by compelling unwilling contributions for sectarian purposes, by discrediting atheists in court, by enforcing Sabbatarianism, by excluding unbelievers from office, by punishing free speech as blasphemy, or by setting up the Bible to be worshipped in our public schools. All these abuses must be reformed before religion can be called really free. Our constitutions and statute-books must be purified, not only of these relics of the Dark Ages, but of all phrases requiring the observance of Sunday and the taking of oaths. Expression of faith in the divine existence may be highly proper elsewhere, but it can have no place in the official utterances of the State. In order to free religion from governmental control, we must confine the State to its legitimate business of protecting life, liberty, and property, and doing simply what we all wish to have done, but none of us can do well enough for ourselves.

These great reforms lie before us. It may take a century to carry them out; and, when they are accomplished, our Association can still find work enough to do. An endless and glorious future lies before its members, rather let me say before all who believe in liberty and morality, who love freedom of thought and speech, who delight in reform and progress. But let us not look so far into the future as to overlook the pressing reforms that stand close at hand. Two petitions have been prepared by the Secularization Committee of the Free Religious Association, as authorized at the annual meeting, in hope of hastening on reforms for which some of us have already asked in vain, and for which we shall keep on asking until justice triumphs. These petitions ask the taxation of churches and the repeal of the statute discrediting the testimony of unbelievers. I invite all who believe in these reforms to help me circulate the petitions. I beg those who really feel an interest in this work to assist it by pecuniary aid. I implore all my friends to keep, not only these special measures, but the general interests of secularization dear to their hearts. The struggle with vested interests must be long and bitter, but victory is only waiting to crown the champions of freedom and justice.

Who best can suffer best can do.—*Milton*.

ALL true work of a man, hang the author of it on what gibbet you like, must, and will, accomplish itself.—*Carlyle*.

CORRESPONDENCE.

THE WAY TO IMPROVE THE RACE.

Editors of The Index:—

What one knows and can do may be very short of what one is capable of knowing and doing. There being no truth more universal of the race than the above, the practical and foremost duty of the day is not one of breeding a higher type of man so much as one that will enable men to use more effectually the talents they already possess. If there is a demand for a higher type of the human race, the way to meet this demand most successfully is in making the very best provision possible for the present type of humanity. If the children of the world were properly fed, clothed, and sheltered, and educated, and trained to habits of industry and true recognitions of each other's rights and duties, they would be so far above their parents that they would claim to be born of their teachers. JOEL DINSMORE.

DISCRIMINATION.

Editors of The Index:—

I read years ago Burnap's paper on discriminating between principles, opinions, and phraseologies, and was edified by it. I ask now the question whether we should not discriminate between the character of Jesus and his mistakes.

In all human history, we know of no better instance of unbounded love than that of Jesus. The happiness of mankind depends very largely upon indiscriminate love,—love for the good and the bad, love for one and all. We will sing joy to the world for the character of Jesus. But, if his mistakes had died with him, as they do with most of mankind; if his admirers had discriminated between his character and his mistakes,—we should not have had so much bigotry, intolerance, fanaticism, and wretchedness. All his mistakes have been adopted and perpetuated as of equal importance with his character. His mistakes concerning poverty, his Messiahship, his second coming, the doom of the wicked, the necessity of baptism, the supremacy of Caesar, the existence of Satan and of demons, have been foundations and authorities most tenaciously upheld by conflicting sects. Mankind will not become a mutual admiration society, with love one for another, until they shall discriminate between the character of Jesus and his mistakes. W. G. BABCOCK.

RELIGION A JOYFUL THING.—A correspondent of the *Montreal Times*, whom we take to be Capt. R. C. Adams, is writing very pleasant descriptions of what he has seen and heard in making the rounds of the churches of that city. At the St. James Street Methodist Church, he lately heard Mrs. Pearson, a handsome English lady, speak from the pulpit. "To watch," he says, "her glowing, rosy cheeks, bright eyes, pearly teeth, as she utters the terrors of hell and damnation, the warning seems almost pleasurable; and, when she appeals to you with a beaming smile to come to Jesus, you feel you would like to do so, just to oblige so charming a lady. But, as a terrifier of sinners, she is not powerful; for the tale of woe from such a cheery face makes one feel that the speaker really cannot believe that God is going to torment forever the vast multitude who do not believe or have not believed in Jesus as the only Saviour." After praising the music, the correspondent relates what he saw after the service: "David said he did not understand certain things till he 'went into the sanctuary,' but it was when I came out of the sanctuary that I got light as to why young people go to church. The young men gathered in a line opposite the doors; and I counted at one time forty-three on the curbstone, and others were on the steps against the houses. Occasionally, one stepped up to a blushing maiden, and, hooking his hand under her arm, escorted her away in the bright moonlight, doubtless to discuss sacred themes. A merry laugh came back, showing that the young pair heartily indorsed Mrs. Pearson's statement that religion is a joyful thing. The exit of beauty was closed by a very tall young girl, who stopped to converse with a taller young man, who had immense buttons in two rows on his coat, possibly a policeman. One of the few young men who had not found a mate then turned to his comrade and sadly said, 'Well, it is all over now!'

They moved to the next corner and said, 'Let's wait till that tall girl comes along.' I passed them and went up the hill, with a stream of young ladies, each being helped up the toilsome ascent by a strong hand placed under her arm; while cheerful voices showed that the sermon had not occasioned any alarm as to future torments. I reflected. Here is one great secret of church-going. Is it not a good feature of an institution that it provides so much social enjoyment, and such opportunities for the promotion of acquaintance between young people? Only let proper instruction be given upon such occasions, and all will favor the preservation of the Church, as a useful factor in social and mental progress."

BOOK NOTICES.

JOHN ADAMS. "American Statesmen" Series. By John T. Morse, Jr. Boston: Houghton, Mifflin & Co. Price \$1.25.

Mr. Morse has given us in these three hundred and thirty pages, in addition to a well-written biography of the second President of the United States, a compact, impartial, succinct history of the causes that led to the revolt of the American colonies against the claims of Great Britain, the ultimate success of the fight for independence, and a vivid picture of the state of American politics in the years immediately following that hard-won success. The biography strikes the reader as a remarkably conscientious piece of literary work. The faults as well as the virtues of the old patriot are clearly shown and commented upon. His rashness, impetuosity, egotism, and jealousy of his contemporaries are shown to be not in the least incompatible with his sincere patriotism, unswerving honesty, sagacious statesmanship, untiring industry, and sturdy independence of thought on all matters, including religion. There is a warning lesson conveyed to all ambitious youths in this record of a singularly successful and brilliant life, exhibiting as it does how full of hard work, turmoil, disappointment, and annoyances the most apparently glorious careers are capable of being. A leading member of the first American Congress, one of the committee chosen to draft the Declaration of Independence, thrice appointed as the representative of America to foreign nations, elected to the first Vice-Presidency and made the second President of the United States, in addition to various smaller honors, one would think his cup of happiness had been full to overflowing; and yet that he was far from being satisfied the record of his life plainly evidences. Every high office brought with it its own peculiar inconveniences, trials, and hardships. There is no effort at fine writing in this work. Its style is plain, lucid, and sensible; but it is admirably well fitted to give just and true ideas as to the beginnings of this government to young students of history. S. A. U.

OUR GREAT BENEFACTORS. Short biographies of the Men and Women most eminent in Literature, Science, Philanthropy, etc. Edited by Samuel Adams Drake. With nearly one hundred portraits emblematically embellished. Boston: Roberts Brothers. 1884.

Mr. Drake is an unwearied book-maker; and, in the present instance, he has resorted, as did Raphael and other famous artists, to a company of under-workers in the performance of his work. Few, if any, of the biographical sketches are his own. They are "the joint production of many writers," and are of unequal value. The scheme of the work is Mr. Drake's, and it is well conceived. What is aimed at is "an abstract and brief chronicle" of the most helpful men who have been active since the introduction of the art of printing. No strictly military heroes are admitted. Literature and art furnish the greatest company. It contains some whose places might have been better filled,—Hannah More, but not George Eliot; Southey, but not Tennyson! Some who are here with fullest right seem to demand the presence of others. Why Dickens and not Thackeray? Why Longfellow and not Emerson? Theodore Parker and John Brown are conspicuously absent from the department of "Philanthropy." In "Philosophy," we have Roger but not Francis Bacon! And Immanuel Kant is wanting, though his philosophical profundity does not prevent his being the subject of a very interesting personal sketch. Other omissions might be named; but it would be ungracious to name them where so much is given, and generally that which

could not be left out. The book is one for boys to read. They cannot learn too soon something about these benefactors of the race. The portraits are not flattering; and the way in which they are "emblematically embellished" is not beautiful, though it is ingenious in some instances. The omission of Darwin's name from the catalogue of "Science" is an omission so astonishing that we have reserved the mention of it for our closing word.

THE Almanac issued in the joint interests of physical and mental culture by the Freidenker Publishing Company of Milwaukee, and entitled *Amerikanischer Turner-Kalender*, is animated by a strong and noble purpose to bring the German and American elements of our nation into a closer harmony, which will enable them to exchange reciprocally their advanced ideas of political and religious freedom. Few Americans can show such complete freedom from superstition and bigotry as may be found in this little pamphlet, joined with healthy moral feeling and a lively, good-natured humor, free from all irreverence. The poetry is particularly good; and the extracts from Heinezen are remarkably interesting, as are those in that companion volume, already noticed in these columns, the *Freidenker-Almanach*. It is to be observed that the reading matter in the two works is wholly distinct, except the few introductory pages which ought to be in every Almanac. The calendar proper, or list of days, designed for the Turners, has the advantage of being in better type than is used in its companion. Either can be obtained for 25 cents, and will be found of great value, not only as an astronomical guide and a help to learn German, but as a teacher of the most completely developed truth.

READERS of the *Art Amateur* for December naturally looked first for criticisms on two important artistic exhibitions open during November,—the pictures of Mr. George Fred. Watts in New York and the illustrations of the Persian Poems of Omar Khayyam by Elihu Vedder in Boston. They will find a very interesting account of Mr. Watts and his pictures, with two good woodcuts. This painter seems to have stepped out of conventional ruts, and to express his ideas with originality and force; but we have not had the opportunity of seeing the pictures here, as we yet hope to do. The English school should be fully known in all its varied character. Greta gives a flippant notice of Vedder's pictures, which by no means does justice to these original and profound creations. Mr. Vedder has caught the spirit of the Oriental poems, which, while seemingly expressing only the lightest Epicureanism, bring out rich overtones of thought and philosophy, so that they are counted by some as religious poems. So Vedder's pictures, while giving the bacchanal laughter which mocks at the earnestness of life, present such depth and beauty in other forms and faces as to reveal the spiritual permanence which underlies the transitoriness of mortal appearances. We wish the Art Museum could secure these remarkable drawings, so that they might be thoroughly seen by all who are interested in American art. Art Hints and Dates contain admirable suggestions to the young artist, as, "It is a great mistake to try to put into a drawing more than your eye sees in the original," and others on "The Use of the Claude Lorraine Glass," on "Saving Palette Scrapings," and on "The Preservation of Sketches." Practical Lessons in Wood Engraving, Modelling, Architecture, and Decorations are continued, and many new publications noticed. We are grateful to the publishers for not giving us a Christmas number of hackneyed sentimentalities. We wish them a prosperous and happy New Year.

THE contents of the December number of the *Popular Science Monthly* are as follows: "The Reformation in Time-keeping," by W. F. Allen (illustrated); "American Aspects of Anthropology," by E. B. Tylor, F.R.S.; "School-culture of the Observing Faculties," by J. C. Glashaw; "Queer Flowers," by Grant Allen; "Alcoholic Trance," by T. D. Crothers, M.D.; "The Problem of Universal Suffrage," by Alfred Fouillée; "Cannibalism as a Custom," by A. St. Johnston; "Starvation: Its Moral and Physical Effects," by Nathaniel E. Davies, L.R.C.P.; "The Chemistry of Cookery," by W. Mattieu Williams; "The Perils of Rapid Civilization," by C. F. With-

ington, M.D.; "Religion and the Doctrine of Evolution," by Frederick Temple, D.D.; "Liquefaction of the Elementary Gases," by Jules Jamin; "The Oil Supply of the World," II.; "Oddities of Animal Character"; "Biographical Sketch of Edward B. Tylor" (with portrait); "Correspondence," "Editor's Table"; "Science in School Management"; "The Abuse of Political Power"; "A Jewish Explanation of Jewish Success," "Literary Notices," "Popular Miscellany," "Notes."

THE frontispiece of the Christmas *Wide Awake* is a reproduction in eighteen colors, by Louis Prang & Co., of a water-color by F. H. Lungren, a Merry Christmas Scene. In addition to this, the holiday season is duly referred to in the articles: "Wonderful Christmases of Old," by Hezekiah Butterworth, with ten illustrations by Lungren; "How Christmas Cards are made," by M. E. Hollingsworth, with seven illustrations by E. H. Garrett; the poems, "Christmas Day," by Susan Coolidge, "A Christmas Carol," by Mary E. Wilkins, "December," by M. E. B.; and the pictures, "The Christ Child" and "A Christmas Carol," by Hassam. There are also excellent contributions by Charles Egbert Craddock, Mrs. A. D. T. Whitney, Edwin Arnold, Mrs. Lizzie W. Champney, Annie Sawyer Downs, Rose G. Kingsley, Mrs. Jessie Benton Fremont, E. E. Hale, Sarah W. Whitman, Prof. A. B. Palmer, Yan Phou Lee, and other writers.

THE *Unitarian Review* for December contains the following articles: "The Unties of Unitarianism," by Rev. James T. Birby; "The Hebrew Prophets," by Rev. R. P. Stebbins, D.D.; "The Revised Version and its Marginal Renderings," by N. S. Folsom, D.D.; "The Father of English Protestantism," by Rev. Nicholas P. Gilman; "Wiclif," by Rev. F. W. Holland; "None Other Name," by Rev. George W. Briggs, D.D. "Schleiermacher's Sermons" are noticed at length in "Things at Home and Abroad."

THE Christmas or December number of *St. Nicholas* is in no wise an unworthy tribute to the patron saint of the holidays from whom it takes its name. Pictures, poems, and stories are all excellent, and the outcome of excellent brains. These are some of the writers who make this number of an always brilliant magazine for young folks well worth a year's contribution: among poets, John G. Whittier, "H. H.," Lucy Larcom, and Christina G. Rossetti; among prose writers, Louisa M. Alcott, Mary Halleck Foote, H. H. Boyesen, Frank R. Stockton, J. T. Trowbridge, Edna Dean Proctor, and Mary Mapes Dodge.

SCIENTIFIC LECTURES.

PETER ANNET, of England, who lectured very acceptably before the Parker Memorial Science Class on two Sundays recently, will lecture for societies on Astronomy, Geology, Zoology, and philosophical subjects, within an easy radius of Boston, upon application. For terms, etc., address PETER ANNET, P.O. Box 2468, Boston, Mass.

LECTURES

ON LEADING REPRESENTATIVE MEN OF OUR TIME, INCLUDING

EMERSON, CARLYLE, HUXLEY, TYNDALL.

Also, upon the early *Growth and the History of Culture: Evolution of the Arts: Origin of Mythology: The Survivals in our Present Civilization: The Aspects and Promise of the Time*, etc., will be given where desired this season by the undersigned.

Address

CHARLES D. B. MILLS, SYRACUSE, N.Y.

October 20.

The American Lesson

OF THE

Free Trade Struggle in England.

By M. M. TRUMBULL.

300 pages. Price, paper, 50 cents; cloth, 75 cents.

TEACHING NOTICES:

"There is no other teaching of Free Trade by example at all to be compared with it. . . . It is as interesting as a romance."—*Chicago Times*.

"The author does not deal with statistics, but relates the story of the contest in such a pleasing manner that it reads like an enchanted tale."—*Omaha Herald*.

BY ALL ODDS THE BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travelers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches**, which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars**, which are models of comfort and elegance; its **Palace Drawing Room Cars**, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that it is the best equipped road in the world.

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, and take none other. All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

GEN'L PASS. AGENT, C. & N-W. RY

RELIGIO - PHILOSOPHICAL JOURNAL.

Established in 1865.

A Paper for all who Sincerely and Intelligently Seek Truth without regard to Sect or Party.

The JOURNAL, in the estimation of a large proportion of the leading authorities on Spiritualism, stands pre-eminent as a fearless, independent, judiciously fair advocate of Spiritualism. It has received more general notice, and more frequent and higher commendations from intelligent sources, regardless of sect or party, than any other Spiritualist or liberal paper ever published: the records will confirm this.

The JOURNAL is uncompromisingly committed to the Scientific Method in its treatment of the Phenomena of Spiritualism, being fully assured that this is the only safe ground on which to stand.

The JOURNAL is unsectarian, non-partisan, thoroughly independent, never neutral, wholly free from cliques and clans.

TRACTS.

No. 1.—**Truths for the Times**, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 2.—**Fear of the Living God**, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible**, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 4.—**Christian Propagandism**, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, \$1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven**, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—**The Christian Amendment**, by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impachment of Christianity**, by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science**, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.

No. 12.—**In Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies \$1.00.

No. 13.—**On the Vision of Heaven**, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing**, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.

No. 15.—**The Battle of Syracuse**. Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

Modern Thinkers,

Principally upon Social Science.

By Prof. VAN BUREN DENSLOW, LL.D. With Introduction by ROBERT G. INGERSOLL. Including critical analyses of Swedenborg as a Seer, of Adam Smith as an Economist, of Jeremy Bentham as a Law Reformer, of Thomas Paine and Junius as Political Revolutionists, of Charles Fourier as a Socialist, of Herbert Spencer and Ernst Haeckel as Evolutionists, and of Auguste Comte as a Positivist, with an Essay on Wealth in its Relations to Christian Ethics.

The Fifth Edition has just been issued.

"Upon the question of money, this volume contains the best thing I have ever read."—R. G. Ingersoll (in Introduction).

"We confess that, if we stood on the ground on which Mr. Spencer stands, we should find it difficult to prevent ourselves from being pushed by the stalwart arm of Dr. Denslow's logic into the gulf of ethical nihilism."—Prof. Goldwin Smith.

"Now, the whole force of this case depends upon the assertion of Goldwin Smith that Dr. Van Buren Denslow is a disciple of Herbert Spencer. But the assertion is not true in any sense or in any degree. On the contrary, Dr. Denslow is an open antagonist of Mr. Spencer. His essay on Spencer's Philosophy, first published in the Chicago Times, while speaking of the man in the usual terms of perfunctory compliment, as have also Goldwin Smith and the Saturday Review, is adverse, carping, and depreciatory on every point that he considers. The criticism was regarded as so damaging that Spencer's friends were told they must reply to it or forever hold their peace; and we were confidently assured that the last we should ever hear of Spencer's system was the thud of the clods that Denslow had thrown upon its coffin."—Prof. Youmans, in Popular Science Monthly and in Introduction to Current American Edition of the Data of Ethics.

Stephen Pearl Andrews, as political executor of the late Thomas Paine, is as fiercely indignant at Mr. Denslow's analysis of Paine's politics as Prof. Youmans is at his assault on Spencer's Philosophy. On the other hand, George Jacob Holyoake speaks of the analysis of Paine's political philosophy as "the most masterly refutation of it extant, without showing in his words or in his mind any enmity against the great agitator whom he confutes."

The late Dr. George M. Beard, of New York, wrote to the author: "Your critique on Spencer's *Data of Ethics* has all the force of a discovery in ethics, and is of great value. It deserved to be made the subject of a separate treatise."

CURRENT TOPICS.

BY B. F. U.

THE Montreal Free Thought Club has happily utilized the present mania for holiday cards by issuing for popular distribution very handsome Christmas and New Year cards, of refined designs, accompanied by verses or sentiments inculcating liberal thought from Thomas Paine, R. C. Adams, Hattie Tyng Griswold, and other writers. A good idea!

"THE Brotherhood of Thieves; or, A True Picture of the American Church and Clergy," a letter, by the late Stephen S. Foster to Nathaniel Barney of Nantucket, has been republished by the author's old co-worker, Parker Pillsbury, of Concord, N.H. The reprint is a close facsimile of the original in form and general appearance. It was originally published in 1843, and was a powerful weapon in the anti-slavery armory.

At a meeting of the Liberal Union Club, held at Young's Hotel last Saturday evening, Dr. W. T. Harris spoke in favor of excluding the Bible from our public schools. Col. T. W. Higginson urged the importance of working for the repeal of the law in this State, under which the testimony of the atheist is liable to be discredited; and Mr. F. M. Holland pointed out the injustice of exempting church property from taxation. Brief remarks were made by Judge Holmes, George W. Stevens, D. H. Clark, J. H. Wiggin, Cornelius Wellington, and others.

THE *Herald* of this city thinks the pope was not in a Christmas mood on the glad anniversary. "There was," it says, "no trace of 'peace on earth, good will to men,' in his reply to the Christmas congratulations of the cardinals. His holiness 'deplored the abnormal position of the papal see, vigorously censured the Protestants for their machinations,' rebuked the liberal press, and denounced the divorce laws submitted to the Chamber of Deputies. Another day than Christmas

would have been more appropriate for these pessimistic deliverances. It would do the pope good to get out of the twilight of the papal palace and take a tour through the United States."

REFERRING to the Delmonico dinners,—in celebration by our wealthy respectability, Conservatism and Orthodoxy, of "the starveling band of despised come-outers who settled at Plymouth,"—the *Boston Transcript* observes: "It is well for self-satisfied respectability and conservatism to pay the tribute of veneration to radical come-outism, even that of a couple of hundred years gone by, and even though it may never occur to them that the come-outism of to-day may be similarly honored in the generations that are to come. It must needs result in a little loosening of the soil, hard trodden by the feet that blindly follow leadership. As for the come-outers and independents, whether those of two hundred years ago or those of to-day, it is the very law of their being that they never care much what others say. If they did, they would never leave the regular religion or the regular party."

THE Christmas and New Year's Cards for this season issued by Louis Prang & Co., the pioneers and leaders in this business, seem to have reached the acme of perfection in the different departments. Looking over a specimen collection of these cards, one is lost in wonder at the variety in form, the wide range of artistic yet appropriate design, the wonderful combination of colors, and withal the delicacy of finish in most of them. This year, Mr. Prang has, at great expense, called to his aid the best attainable artistic talent. Among those who have contributed designs to this season's productions are such artists as G. B. Le Fanu, J. W. Champney, Walter Satterlee, W. Hamilton Gibson, W. H. Beard, Dora Wheeler, A. F. Bellows, Mrs. Sarah E. Whitman, Harry Beard, Miss L. B. Humphrey, E. B. Bensill, Mrs. E. T. Fisher, Miss F. Bridges, A. Sandier, W. L. Taylor, Mrs. O. E. Whitney, Geo. Merwanjee White, Miss L. B. Comins, Mrs. M. B. O. Fowler, J. F. Murphy, Miss V. Gerson, H. Giacomelli, and H. Winthrop Peirce.

SAYS the *Springfield Republican*: "Oliver Johnson desires that there shall be no legislative chaplain appointed henceforth, for reasons reverential to Christianity and the usage of prayer; and he proposes that, instead of the perfunctory opening with prayer, the Christian members of any legislature substitute a daily devotional meeting of an hour or half an hour, to be held in the legislative halls, thereby 'to quicken the consciences of the tempted, to abate partisan feeling, and promote a public sentiment favorable to just legislation.' He thinks 'men holding bribes would flee in dismay' from a legislature so protected with spiritual preparation and the answering presence of God, and asks which of the State legislatures will be first to try his plan." Think of it! The average legislature of these days spending an hour or half an hour at a daily devotional meeting! "Men holding bribes," instead of fleeing in dismay, would be the most regular attendants at such meetings,

and would make the "devotional" feeling in many cases subserve their evil purposes. What we need in legislators is intelligence, education, common sense, and strict attention to the public interests. The legislative hall is no place for a "devotional meeting." It is the place for public business, for the public good. Perhaps Mr. Johnson would have a *silent* devotion of an hour or half an hour! That would, in one respect, be an improvement on the ordinary prayer of the chaplain; but it would involve the infliction of unmerited punishment upon some, and might increase the power of mischief of others, for

"Satan finds some mischief still
For idle hands to do."

THE unjust and cruel treatment of the Chinese in this country is not limited to those communities in which the Chinese question is a burning social problem. In this city, assaults are made upon them frequently; and the protection afforded them by the police, of which they are greatly in need, owing to a disposition of roughs to persecute them, is less than is given to any other class of our population. In some instances that have fallen under our notice, the policemen called upon showed indifference to the assaults, if not in sympathy with the assailants. E. Toy, an American citizen of Chinese birth, in business in this city, writes thus to the *Boston Daily Herald*: "It seems to me very queer and unjust that a hard-working Chinaman and citizen cannot be protected from the many depredations committed on him by the hoodlums who make his life miserable. A week ago last Sunday, a pane of glass in my store, No. 37 Broadway extension, valued at \$5, was broken. I immediately went in search of an officer. As I was going along the extension, I was attacked by the mob which had by this time collected. In the scrimmage that followed, I received a black eye. In addition to this, I had \$28.50 stolen from my inside coat pocket. The party who committed the assault I had arrested, and I thought that I would have redress in the municipal court; but, for some reason or other, this party was discharged. Seven years out of the eighteen which I have spent in the United States, I have been in business in this city. Three years ago, I was naturalized, and hold my papers to-day. Now, I do not speak for myself, but also for the rest of my countrymen, who are troubled in the same manner. It seems to me that we who are the least source of trouble to the Commonwealth should be protected." The ill-usage of the Chinese living in this city shows that there is a public opinion which is either uninformed or callous to wrong done repeatedly to a small class of the community for no other reason than that they are Chinese and have methods of living differing in some respects from our own. We have read much about the Chinese's hatred of foreigners, whose ill-treatment in the interior of China is often mentioned as an indication that the people are on a "low plane of civilization." Had we not better turn our attention to some of the indications that the "plane" we are on is not the highest possible?

NEW YEAR'S PROSPECTING.

It is the wont of *The Index* to pass from the old year to the new, and from one volume to another, without specially marking the transition. It has no new prospectus to issue and does not reprint an old one. Several of its "esteemed contemporaries," of various religious persuasions, have contracted the habit of coming out at this holiday season with a special number in gay-colored covers, and with a good deal of promise concerning the future, and not a little self-complacent glorification over their enterprise. We do not call in question their right to this species of self-celebration,—to this holiday tone and attire: though we have noticed that generally they fall into the old gait again soon after the new year is entered, and then we have thought that, after all, the old gait is best, unless some of the new promises can really be fulfilled. Even our usually staid and sober neighbor, the *Christian Register*, which is approaching its threescore years and ten, appeared this season in the disguise of a garb verging toward "yellow-covered literature," and of cosmetics that happily but ill concealed its wise and venerable age. *The Index* has not such friskiness of nature, but keeps its steady mien and its own natural every-day dress through Christian and Roman Saturnalias and Easter festivals and all the denominational carnivals. Though still young in years, it aspires to that rational kind of dignity and authority of which it is said that "wisdom is the gray hairs unto men." None the less, *The Index* wishes all its religious contemporaries, whatever be the color of their covers or their creeds,—blue, green, red, or yellow,—a Happy New Year; and also all the success, not perhaps that they may wish, but (we will be sincere) all that they deserve and rightly earn!

With this amiable and considerate spirit toward all the rest of the world, *The Index* has, however, on this New Year's day something to say for itself. This is its fifteenth birthday. Its most sensitive friends will excuse it, therefore, if to-day it departs from its usual modest reticence, and talks a little of its own aims, desires, and ambitions. It has, indeed, no new promises to make, but frankly asks that expectations of its future, at least for the coming year, be measured by its present performance; and it has the assurance to think that this will give ample ground, not only for its holding the place it now has with its constituency, but for its presenting increased claims to the attention of the liberal public. If compliments—and compliments from sources which make them mean something—would pay printers' bills, *The Index* would have a fine fund in bank to draw upon. It has its critics and fault-finders,—as what paper has not?—and its editors have by no means reached their own ideal. They would make *The Index* better, if they had a larger income at command. But, even as it is, they believe that it may not be ashamed to receive the congratulations of its friends to-day, and that it may be amply justified in hoping for new friends and for a generous increase in its subscription list. Several new contributors of fine scholarship and ability have appeared in its columns the past year, among whom, to name no others, may be especially mentioned Thomas Davidson, Edmund Montgomery, and Charles Froebel. Its old list of writers remains nearly intact, some coming back into the present number who have been too long absent. Any paper may congratulate itself, and reasonably ask for a liberal support, that can bring together into its New Year's issue, and chiefly by their own spontaneous impulse, four such writers as Messrs. Wasson, Tuttle, Chadwick, and Abbot.

The Index continues to hold a unique place in journalism. Its first number was issued on the first day of January, 1870, in Toledo, Ohio, under the editorship of its founder, Francis E. Abbot. In September, 1873, it was removed to Boston, which has since been its home. Mr. Abbot continued to edit the paper for ten and a half years, bringing to it the great intellectual vigor, the clear logical acumen, the intrepid moral courage, and profound moral earnestness which distinguish all his mental work, and which our old readers will joyfully recognize and welcome in the address which we print from him to-day. Absorption in the cares and labor of private teaching has not diminished his interest in liberal ideas nor detracted aught from his power to state them. We hope that *The Index* anvil may hereafter ring with his strong strokes oftener than he has allowed it to do in recent years. Mr. Abbot retired from the arduous task of responsible manager and editor of the paper with the last issue for June, 1880; and the publication was then transferred, with his cordial good will and with all its prestige and possessions, by the old *Index* Association to the Free Religious Association, under whose auspices, through the medium of a board of trustees, it has since been conducted. Its editors, however, have been as free from control by a superior authority in their official duties as was Mr. Abbot; and the principles and objects of the paper have remained essentially unchanged. If any readers have thought they detected a difference, it has been only that difference in respect to ways and methods of working for the same general object which necessarily appears in different individual workers. In his standing prospectus, Mr. Abbot used to say that it was the aim of *The Index* "to increase general intelligence with respect to religion; to foster a nobler spirit and quicken a higher purpose, both in society and in the individual; to substitute knowledge for ignorance, right for wrong, truth for superstition, freedom for slavery, character for creed, catholicity for bigotry, love for hate, humanitarianism for sectarianism, devotion to universal ends for absorption in selfishness; in brief, to hasten the day when free religion shall take the place of dogmatism and ecclesiasticism throughout the world, and when the welfare of humanity here and now shall be the aim of all private and public activities."

These are substantially the same aims which are stated in the prospectus of *The Index* under its present management; and to these aims it expects to adhere in the future. There are other liberal publications that are working in a general way in the same direction; but we know of none that has precisely the same stand-point as *The Index*, or that works for precisely the same aim or by just the same method. We especially know of none that appeals to the same class of readers. There are liberal journals which, in their way, may be doing a necessary work, which have yet a very narrow aim and a very crude, not to say coarse, method. Their method is still largely that antique one of showing up the discrepancies and indecencies of the Bible, and ridiculing the absurdities of orthodox theology and the moral infirmities of church members. There are others which are on a higher and broader platform, but are yet mainly destructive in their work, or, in their constructive work, are devoted to the propaganda of some special phase or side issue of Liberalism. *The Index* has always aimed to keep abreast of the advancing scholarship of the age and in full accord with the progress of science. It has been constructive quite as much as destructive. It does not think it worth while to waste much powder on dogmas that are being rapidly outgrown

by the enlightened minds of Orthodoxy itself; but it would watch the new positions which such minds are taking, and be ready to test them, on equal grounds, in the courts of scholarship and of rational, scientific philosophy. Thus, *The Index* has become an organ through which thinking, scholarly, well-equipped writers have sought to express their convictions on questions of the deepest import to religious progress and to the social and moral well-being of mankind. In this way, keeping to the scientific method of ascertaining facts and their purport, and of the freest inquiry and discussion, it is doing a constructive work toward a more rational philosophy of life as well as destroying old superstitions. Particularly does it seek to emphasize the supreme importance of morality in all efforts to propagate and organize Liberalism. Holding the position that true thinking is a condition of essential and vastest moment to human progress, it would yet proclaim the sovereignty of moral law over all human activity and the supreme transcendence of right living as the goal of all thought and all endeavor. It would arouse Liberalism itself to a deeper sense of its moral mission.

The Index is sometimes criticised for not being sufficiently popular. It is complained that it is too scholastic and literary, and shoots over the head of the average reader. We admit that a larger infusion of the popular element into its columns might be an advantage: it would doubtless be a pecuniary advantage. And, when this can be done without detracting anything from its intellectual and moral character, we shall welcome the change cordially. At the same time, if these two aims cannot be successfully united, we confess that it would rather be our ambition to make *The Index* a paper that should command the attention of thinking and cultivated readers of various sections of society than to make it a publication that should simply satisfy the liberal masses. We would make it a teacher of the teachers, a paper to be read, not only by thoughtful men of affairs, but by editors, preachers, students, professors, and others who are or are to be, in various ways, the moulders of public sentiment. This, to a considerable extent, is its office already: we would make this still more its office. We would make *The Index* a paper that should both propagate liberal ideas and lift and educate Liberalism itself. And on this, its birthday, we ask its friends, old and new, to consider its opportunities and how they can help it better to fulfil its mission. Let us rally to extend its subscription list; and so make, if possible, this new year the best year which *The Index* has ever known.

WM. J. POTTER.

POSSESSOR OR POSSESSED.

Every political system is, of necessity, conventional and arbitrary, more or less. Every one, if it be not altogether vicious,—in other words, not really a political system at all,—has a ground in truth and right; but even the best comes far short of including all that truth which goes to a right order and conduct of corporate societies. No doubt, aristocracy had its function in civilization, and therein its reason to be. It belonged to the immemorial antiquity of all the best nations, all the most progressive ethnic stocks. The kernel of civilization grew originally in that shell, and continued to grow in it long, the two expanding together.... This is proof that such institutions did not have their sources in mere unrighteousness and unreason, for the shell that has such an origin is one in which no living kernel grows. Nevertheless, aristocracy was always conventional and arbitrary in part; and, at length, in quite too

large a part, as we in this country are sufficiently aware. Turn now to democracy. "All men are equal," it says; and this affirmation is the basis it builds upon. But this is only one pole of the whole truth. The correlative truth is that men are unequal, that they differ widely in value, and differ in extreme cases as light and darkness, or as positive and negative quantities, some being of priceless worth and some worth much less than nothing. The equality of all men, if put forth as the whole truth, becomes as huge and noisome a lie as was ever disgorged upon the world. But the correlative opposite which must be conjoined with this affirmation to make it other than false, so far from being a basis upon which democracy builds, has no place in its structure of institution. It may, indeed, be in the action, if it be in the minds of those who take part in the working of those institutions; and thus the partiality or one-sidedness of the system be redressed in its operation. But it will not be in their minds, if they permit the system, as it were, to think for them, to be speech in their mouths and belief in their heads. Ours may be an excellent system to possess, but every public system is a bad one to be possessed by.

Observe that I do not here speak to the reproach of democracy, not even by remote implication. Turning to any other system, actual or possible, I should not indeed find the pinch in the same place; but it would surely be found somewhere. Institutions, like individuals, have their leanings and limitations; and as no man is mankind, so no political system is the perfect embodiment of political truth. Hence, every such system, if it is long to endure as a form of productive and progressive life, must receive both nourishment and correction from the truths it does not contain. From whom is it to get those necessary succors? Only from those of whose heads it has not so taken possession that all their thoughts must needs bear its impress; only from those who have some sufficient power to look about them with fresh, unbiassed eyes, as if in a new-made world. But what if there are none such? It is not of good augury. When democracy or whatever system has so far prevailed over the best intelligences that they can speak only in its dialect, think only in its moulds, and judge only by its standards, it has prevailed quite too far for its own health. Feudalism had arrived at this last stage of supremacy, when a Froissart could see honor and worth only in men of feudal rank, and in doing so had reached its point of decline, the point from which it could only pass, so to speak, into a state of hibernation without spring to follow, living upon its own fat until it should die of inanition. Do you answer that democracy is not feudalism and could not suffer in the same way? You utter the very prepossession against which I am trying to raise a small note of warning. Any and every public system may suffer in that way; and democracy is at present the likeliest of all to do so, since it is that which engages prepossession most.

Hence, the need for those who, taking part in our democracy as good citizens, shall do so as men swim in the sea; that is, with the head out. They will be all the more able to serve it for not suffering their minds to be swamped in it. Would I could say how deeply I have this matter at heart, and with how good reason! Myself passing off the stage of life, I look with unspeakable longing among those entering upon it for the bright and brave spirits who shall stand to democracy in the relation of possessor and not of possessed, with eyes to see and courage to utter the truth that will be least to its liking and most pertinent to its need. They will have noble examples to follow. The republican Milton wrote in his Defence of the

English People, "Nature gives the wise man rule over the less wise." In those discourses which cost the republican Algernon Sidney his life there is a passage too long to be reproduced here, but whose tenor is indicated by the opening clauses, thus: "That equality which is just among equals is just only among equals; but such as are base, ignorant, vicious, slothful, or cowardly are not equal in natural or acquired virtues to the generous, wise, valiant, and industrious," etc. (Vol. i., p. 105, edition of 1750.) So republicans have spoken, their heads not swamped in a system, nor they converted from their proper human estate into a sort of fish-like creatures, to breathe the air of thought only as implicated in a denser medium; but how many among us choose rather to flatter democracy by claiming for it all that does and all that does not belong to it, like one who should find Beethoven's symphonies entire in the tune of Yankee Doodle! One man, however, we have had, who, while none could accuse him of undervaluing democracy, was not its echo, but retained the power to shock its self-love upon occasion. Emerson was a theoretic democrat, and beyond the point of sound judgment, as I think; but it was he who said: "Why this continual crying up of the masses? The calamity is the masses." And it was he who wrote to Mr. Conway that "not one man in thirty is worth his room in the world,"—very undemocratic utterances, but a very wholesome bitters for our democracy, nevertheless. And, in this connection, I feel bound to name Mr. Kennedy again. His excellent little paper, "Carlyle in London," makes it clear that, whatever sign to the contrary one may see or imagine, his head is above water, and that he does not make democracy the measure of his appreciation. This confirms an opinion I had already half formed, that he is one who can lend our system the service it least desires and most needs.

The work of the American scholar, what is it? Many have given an opinion on this head; and the latest is that it is his work to do, not the work of a scholar at all, but that of an agitator. Well, here is a part of my opinion. It is one chief function of the American scholar to uphold the balance of truth against the necessary one-sidedness and exclusiveness of our political system. He is not to turn agitator against it, but to be a vessel and voice of the truth it does not contain,—a function little performed, more's the pity, and, when performed, little welcomed even by those who themselves should take part in it. Matthew Arnold comes to this country, and discourses upon the place in civilization of the few who judge by standards and live to ends which are not those of voting majorities, but without whose higher spirit and ever-burning lamp it would not be well with voting majorities. What follows? Not merely vulgar zealots, but men of liberal intelligence, cry out indignantly that he assails our democracy. I dare say he had no intention either to assail or defend any political system whatever; but, however this be, he offered our democracy the best possible service by holding up to view one of those truths which it is the tendency of that system to obscure or conceal. Mr. Parkman publishes a paper on "The Failure of Universal Suffrage," and champions rush to the rescue, intent to smite. Suppose him wrong: nevertheless, being a man of sincere and penetrating intelligence, he speaks truths that have among us few tongues, and shows our democracy where it is weak or wanting. When will the hot advocates of universal suffrage do as much to render it not a failure?

In conclusion, let me come to the test-point. Suppose some one to believe with firm confidence that democracy is the best system for us and for

all nations that have had the requisite training, and suppose him to speak as follows: We must admit the wise and the stupid, the high-minded and the sordid, as political equivalents, since we know not how to draw a fixed line between them: nevertheless, they are moral equivalents nowhere, nor more at the polls than elsewhere; and those who are not moral equivalents cannot have the same right to determine the obligations and direct the conduct of the community. He possesses democracy and retains the mind of a man. Suppose some one, on the contrary, to reject as utterly false the latter clause of that sentence. He is to my mind one of the possessed. Let him not take it ill of me that I say it frankly: the words might be suppressed, but as to the thought I have no choice. To assert the equal right of the capable and the incapable, the well-intentioned and the ill-intentioned, to directing and controlling power, is but to say in other terms that they are moral equivalents. To me, this is a monstrous imagination; and of him who holds it veritable I must perforce think that his head is under the democratic element, not above it in the free air and light of Nature's truth. I grant that unequal men must be admitted more or less to equal power. Sheer off as we may the excesses of ultra-democracy, this necessity will remain; but, when an external and conventional necessity gets into men's heads as an ideal right, it has conquered what should command it. Let it be ours, while admitting that necessity, to be indomitably sane in presence of it, and thus to give it all the correction which uncorrupted thoughts can afford.

D. A. WASSON.

THE RATIONAL TIME-VIEW.

The New Testament time-view was, "The time is short." The rational time-view is, The time is long. Behind us and before, the faith of reason sees an extent of years, of centuries, of ages, in comparison with which the chronology of Archbishop Usher is a very little thing. The six thousand years, which the archbishop dates from the beginning with sufficient Biblical warrant, are the most recent times of the chronology of modern science. At the Biblical date for the creation of the world, the civilizations of Egypt and China could already boast an immemorial antiquity. Already, they had perfected great arts and sciences, founded great institutions, evolved great systems of government and sociality and religion. But these things had not grown up, like a mushroom, in a night. They were the slow result of almost incalculable reaches of time. The movement of civilization in its higher manifestations is sometimes tolerably swift; but, in its lower and its lowest stages, it is slow and painful to the last degree. It is the first step that costs. From the old stone age to the new stone age (that is, from the time when man's only implement was some natural chip of stone to the time when he deliberately fashioned some chip or other into a more serviceable shape), what centuries of patient groping there must have been; and, again, from the stone age to the bronze, and from the bronze age to the iron! And yet, beneath deposits that must be allowed at least half a million years for their accumulation, the geologist discovers implements which bear the marks of undoubted human workmanship. Yea, verily, the time is long; at any rate, the time which has elapsed since man began his long and painful march from his primeval brutishness up to the present hour,—so long that, in comparison, all that he has done would seem discreditable, if we did not remember what a wretched, squalid animal it was who took the first

step of that advance which has at length resulted in our arts and sciences, our morals and religion, our government and homes.

The time is long,—the time that man has been upon his way from worse to worse and bad, from bad to good and better. Will the time of his yet future progress from better onward to the best, which forever entices him and eludes him, be shorter than the time consumed already? It cannot be.

"To insight profounder
Man's spirit must dive;
His eye-rolling orbit
At no goal will arrive;
The heavens that now draw him
With sweetness untold,
Once found, for new heavens
He spurneth the old."

If man had no farther to go than he has already come, then, it may be, a million years would be sufficient for the cycle of human development; for the rate of progress is much more rapid now than it was in the remoter periods of the past. But I am by no means going to believe that man's present attainment is any half-way house upon the mountain side of his immense endeavor. I find my faith embodied in the words of Browning, worthy as any that I know to form a part of that great Bible of humanity which is being slowly written by the succeeding generations:—

"Man's self is not yet man,
Nor shall I deem his object served, his end
Attained, his genuine strength put fairly forth,
While only, here and there, a star dispels
The darkness; here and there, a towering mind
O'erlooks its prostrate fellows. When the host
Is out at once to the despair of night,
When all mankind alike is perfected,
Equal in full-blown powers,—then, not till then,
I say, begins *man's general infancy*."

Here is a faith worth cherishing. But it is a faith which demands a mighty range of time for its free play. I think a million years will hardly be too much to bring so vast a consummation to its birth. But how the vision dwarfs the millenarian's petty dream of some theatrical catastrophe! How it ennobles the mind that dares to cherish it! And what a sword it lays upon the shoulder of each one who dares, knighting him and demanding of him such thoughts, such words, such deeds as shall contribute to bring in the late but glorious day!

What is the moral ideal which is relative to this rational time-view, as the New Testament morality was relative to the time-view of the Apostolic Age? That view—"The time is short"—demanded a certain order of moral ideas. What order of ideas is demanded by our view,—The time is long,—an order based upon the continuity of human nature and society, as the apostolic order was based upon the expected revolution of the one and dissolution of the other? Then no domestic or social or political institution was truly sacred, because the death warrant of each and every such institution was already signed and sealed. The doom was so imminent that there was no future even for the individual. For us, it is not so. For us, who still feel our life-blood warm in our veins and who have no good reason to anticipate disease and death at any early day, the matters which were indifferent to the early Christians are by no means indifferent. Paul's reasons for marrying or not marrying, based upon a groundless anticipation, have for us no force whatever; nor any more have his injunctions to political and industrial indifference. Whether the government under which we live is good or bad, whether our means of livelihood are adequate or not, whether our lives can be made comfortable and beautiful, how we shall provide for our children, how educate them, and so on,—these are matters which the rational time-

view forces on our attention. We might be as indifferent to them as Paul himself, if we believed in any speedy breaking-up of the existing order; but we do not cherish any such belief. Even the most doleful scientists do not forbid us to declare, "The time is long." It may be that the sun is going out or that the earth is going to rush in upon its fiery heart. In the former case, as Prof. Clifford said, we shall be frozen: in the latter case, we shall be fried. Yet not exactly "we," not even our great-grandchildren many times removed. Some million of years longer, the old bounty will go forward, and children will be born upon an ever happier earth. And so for us the order of this present life becomes a matter of engrossing interest. The contempt which has been heaped upon it, the indifference which men have vainly endeavored to feel concerning it, we see to be a pitiful survival of an order of ideas based upon a misconception of the first Christian community. We cherish no such contempt. We affect no such indifference. The order of this present life is for us a matter of commanding interest and supreme importance. To make this order as just and fair, as bright and beautiful, as sweet and sane, as free and grand as it is possible to make it,—this is the moral ideal that is correlated with the rational time-view, with an indefinite continuance of the present order of the world.

JOHN W. CHADWICK.

HARD TIMES.

Republicans say the times grow worse for the incoming of the Democrats, and the latter reply, This is the result of twenty-four years of misrule. One cries that it is tariff-tinkering and fear of free trade; another, that it is this same high tariff which has brought on general stagnation. Has it? England with her boasted free trade is faring worse than we. Protection kills the goose in America, and free trade finishes it in England! "Look at it!" exclaims another politician. "Has not the country always prospered under a high tariff? and, when this has been removed, have not stagnation and panics brought us to ruin?" Perhaps, but we have had twenty or more years of high tariff,—almost prohibitory at times; and does the present condition of affairs offer anything to boast of? From press and platform, from counting-house to farm, from palace to cabin, goes up the wail of 'hard times.'

When the pressing question is asked as to the cause or causes of the present stagnation, low prices, and general depression, the sage political economist complacently answers, "Over production,—too much produce, too much machinery, too much labor, too much cloth, too much everything." Saying which, the oracle falls back into dignified silence, as though the sentence was axiomatic; and the editorial columns of the press echo the reply, and debate upon it, as though a new economic law had been discovered. Of all the pretensions to scientific knowledge, of all the shams by which unblushing ignorance seeks to impose on honest credulity, the science of political economy as at present taught is the most shameless and unmitigated. "Overproduction!" Of what? Wheat, corn, flesh, houses, furniture, clothing? Would then a drought, a blight which would destroy the next year's harvest, be a blessing? Would a half crop be a cause for thanksgiving? It would double the price; and, while a few lucky holders would gain, famine would, from the other side, reach out her livid hands and cry for bread. Is there too much flesh? Then murrain or fever or cold winters to decimate the herds of millions of cattle grazing on the Western plains would be desirable. Beef would advance: a sirloin would sell

for twice its present value. Is there too much cloth? Then the burning of the mills or the suspension of the hum of countless spindles and looms would, by enhancing the value of cloth, be the greatest of blessings. Too much lumber sawed, too many nails made, too much of everything used in building houses? Political economy! The child's method of putting effect for cause. Overproduction, when in the midst of this plethora of abundance there are at least a million souls who will this winter's night go to their beds, if beds they have, hungry and shivering! There are mountains of coal, elevators bursting with grain, lofty warehouses packed from basement to attic with clothing, yet this want and suffering.

"Ah," comes in reply, "these are the products of labor; and, if people will not work, they must shiver and starve." Of whose labor are they the products? Who will not work? These poor? Give them fair wages and a chance, and see whether they will not work. Do the owners of those elevators work? Have they performed a single day's labor for the millions of bushels of grain they hold? The owners of the coal mines, is it by their sweat the long drifts are struck into the heart of the seams? Do the owners of the factories, the mill-masters, the "bosses" of labor, work? Few will work, unless something be gained by their toil; and when wages sink to starvation rates, when the toil of the day will not give bread for one's family and a respectable shelter, not to say home, between idleness and work there is little preference. A recent correspondent in a New York journal says that, if one should go to the great thoroughfare leading to the Brooklyn bridge at five in the afternoon and remain until seven, one hundred thousand working women would pass on their weary homeward way. The united wages of this hundred thousand, toiling the long day, would not reach the daily income of Vanderbilt, who has done nothing more than drive a fast horse for an airing, happily, if in his insolence he has not run down some unfortunate footman. One hundred thousand are glad of a narrow room and a hard pallet, that one may live in vulgar profligacy.

Talmadge, who is perhaps one of the best weather-vanes, catching quickly the drift of public thought, in his thanksgiving sermon takes for granted that all our woes come from overproduction, and, as he wildly beats the air with arms and legs, like revolving rakes on a Western reaper, shrieks for the Almighty to open the "gates of the South," and let the vast accumulation flow into Mexico, Central and South America! Yet he in the same discourse wails over the "millions" who are hungry, who will have no Thanksgiving dinner, and only consoles himself with the thought that their bare plates will be filled when the Southern gates are opened! It is not clear how produce going out of a country can feed the hungry in the country. Ordinary intelligence would conclude that, when the gates were open and the South supplied, there would be more urgent hunger. But the great preacher is not troubled with ordinary understanding, and political economy is composed of a series of paradoxes. Its foremost students have for some past generations been frightened by the terrible Malthusian doctrine of overpopulation. They have regarded it as a law as fixed and demonstrable as that of gravitation that population increases out of all proportion to that of the food supply, and hence have looked upon wars, pestilence, plagues, heavy death-rates as disguised blessings. These strike the quick blow, and those who fortunately escape are kept from prolonged starvation. Vice and crime are nature's checks, and celibacy a wise resort for the cultured. Now, in the face of this delightful theory, on this

continent the inhabitants have multiplied beyond precedent or Malthusian dream; yet the food supply has more than kept pace, and has now reached such an alarming abundance that it threatens the nation with bankruptcy! And, more dreadful than everything else, there is, back of all so much labor, such an infinite creative power that, if turned loose, ruin would come with swift feet.

The Chinese, then, must be walled out, convicts must not compete with outside mechanics, prohibitory tariffs must protect home productions, else the necessities of life will become so cheap we shall be ruined. Again, we meet a paradox: costliness of products is a measure of prosperity. In accord with this wise theory, when the coal lords are not satisfied with the price of coal, they close the mines until the price advances many times beyond the cost of production, and then they call it lively times. When cloths advance, so that the factory dukes receive as profits a lion's share of the wages they pay, it is good times. The mine, the furnace, the factory, "shut down" and await a better market. But what of the men who are thus "shut out"? Good times? Not until every family in this broad land can by honest toil sit at evening around their own blazing hearth; not good times until they can by honest toil be comfortably clothed and fed; not good times until, after these essential requirements are met, a little time is gained for mental and moral culture.

If all were comfortably housed, clothed, fed, and educated, there would be no overproduction. "But," comes the objection, "any one can have these desirable objects, if they will work for them." A favored few may do so, but the many cannot. Do not say that they are not willing to work. If they had the certainty of a home before them, the most idle would become like Hercules. Say to a man, A cottage, a garden, a farm; home where your children can gather the grapes from the vines you planted, where you can sit with your wife under the shade of the fruit trees you have grown, where all shall be your own and descend to your children without reserve, and the dream of life is answered.

It takes money to make money, and so true is this saying that a single dollar pitted against the combined labor of the world will in the end conquer and gather the whole to itself. All it asks is to receive its interest and be let alone. It will never become sick, grow weary, or for a moment rest. Whatever may happen to labor always works advantage to its invincible power. There is still a little room left for labor to go West, but even this requires money. Money must be had to get money. In other fields, what opportunity has the laborer for securing a home? What hope is there for the woman who by overwork receives the princely salary of fifty cents a day, or for the man who receives twice that sum, and has a family to support!

In these times do we hear of the capitalists cutting down their own personal expenses, foregoing pleasure trips to Europe in private yachts or over the continent in special palace cars, driving fewer fast horses, or in any manner curtailing their vulgar waste and profligacy? Oh, no: the cut comes from the other end of the line. The laborer who creates this wealth, who receives barely enough to supply the absolute necessities of life, who sees with grim patience his wife thinly clad, his children in their raggedness gather at a table where half-rations are served,—he is the sufferer. Ten, fifteen, twenty per cent. reduction on an already inadequate allowance is the economic method. It is exactly in effect like a "shut down," if there is a strike, and better, if there is not.

When improved machinery cheapens the cost, the

laborer is not given the benefit. As long as possible, the grain is reaped by capital; and, when the product is cheapened by competition, the laborer suffers reduction of wages. The hopelessness of labor begets improvidence and recklessness, and a keen sense of injustice nurses those passions the full expression of which appears in Nihilism.

A true political economy will recognize that every laborer is a financial gain to the State. Every product is a gain; and the more vigorous the production, the greater the wealth and prosperity. But there must be just and harmonious distribution. It is not overproduction, it is want of just distribution that is the cause of the present unfortunate state of affairs, whereby there are hunger and nakedness in the midst of wasteful abundance. The owner is often surprised, on examining a hive in late winter, to find the combs loaded with honey, a populous colony, yet all dead. The honey had been stored where they could not reach it. They exhausted the central supply, and then perished because they could not reach the outlying combs. Unlike the bees, the human worker suffers, but not patiently or blindly; dies, but is reproduced and remains to have his wrongs righted; to have even-handed justice; to enforce his demands even in the face of death. To open the gates of the South; to tinker the tariff, so as to protect this or that affair; to pass pettifoggery laws, which make compromises and patch up for the time,—may momentarily relieve the pressure; but the cause remains in its potency, and will remain as a perpetual menace to the security of our institutions.

It is not how to throw our surplus on foreign countries, not how to prevent labor and machinery producing to their utmost, not how to suppress population or diminish the food supply, but how a just and righteous distribution of the abundant and diversified products the Cyclopean hands of machinery have made possible can be made to those who assist in their creation. The solution may reach beneath the traditional methods of government and send some of the present ideas held sacred by monopolists to limbo; but come it will, and the method of its coming depends on the wisdom of those in power.

HUDSON TUTTLE.

THE TYRANNY OF PUBLIC OPINION.

Public opinion never rises to the intellectual or moral altitude of the great thinkers, and it never sinks to the depths of the most debased individuals. It is "collective mediocrity." It finds expression in manners, habits, usages, laws, and literatures, which react upon it and tend to give it comparative fixedness in its elementary characteristics, in spite of its proverbial fickleness, which is true of it only in regard to that which involves no perceptible disturbance of the established order of things. This complex body of thought, like an organism in which many parts coalesce and become co-ordinated in one structure, although subject to modification in the later accretions, becomes like "the cake of custom" hardened with age. It is not strange, therefore, that in some of the older countries, like China, it is hardly possible for the reformer to make so much as a dent in public opinion, in favor of the removal of barriers to progress and the introduction of the ideas and methods of a more advanced and progressive civilization.

Even in the most enlightened communities today, the tyranny of public opinion is the most powerful influence constantly exerted against intellectual development and moral and social progress. It prevents free and impartial discussion of

unpopular views, and intimidates into silence and conformity with prevailing beliefs and observances the great majority of those who hold these views; thus directly discouraging independence, sincerity, and consistency of thought and speech, if not indeed making these qualities the exception among those who hold decidedly unpopular views, and silence or acquiescence and a temporizing course the general rule.

Authors are compelled by the tyranny of public opinion to keep back their best thought, when it is unpopular, lest the publisher decline to issue their book, or the thought, if published, be used by those representing public opinion against their reputation and the sale of the work. The secular press aims to represent public sentiment in its treatment of moral, social, and religious questions. If a journal thinks it has gone a little too far one way, it is not uncommon for it to counteract the impression by going as far in the opposite direction. We look neither to the pulpit nor the platform for entire fearlessness and frankness of expression. Professional men who depend upon the public for patronage, politicians who are ambitious for office, teachers in our schools and colleges, and merchants and business men generally, if they have opinions which are in conflict with those of the masses, avoid making them known either by silence or juggling with words, that they may conceal rather than express their thoughts. Facts like these—which, we think, cannot be fairly disputed—indicate that the tyranny of public opinion even among us to-day, when heresy is no longer punished with death, imprisonment, or fines, is the foe of intellectual and moral advancement.

As John Stuart Mill says: "A state of things in which a large portion of the most active and inquiring intellects find it advisable to keep the general principles and grounds of their convictions within their own breasts, and attempt, in what they address to the public, to fit as much as they can of their own conclusions to premises which they have internally renounced, cannot send forth the open, fearless characters and logical, consistent intellects who once adorned the thinking world. The sort of men who can be looked for under it are either mere conformers to commonplace or time-servers for truth, whose arguments on all great subjects are meant for their hearers and are not those which have convinced themselves. Those who avoid this alternative do so by narrowing their thoughts and interests to things which can be spoken of without venturing within the region of principles; that is, to small practical matters which would come right of themselves, if but the minds of mankind were strengthened and enlarged, and which will never be effectually made right until then. While that which would strengthen and enlarge men's minds, free and daring speculation on the highest subjects, is abandoned."

All original thought must come from individuals. All great moral and social reforms must receive their first impulse from the few and not the many. Nothing, therefore, can be more imperatively demanded in the interests of progress than the freest and fullest expression of those opinions which clash with the orthodoxy and conservatism of the day, as a counterpoise to the tendency of an arbitrary and despotic public opinion to make all think alike, and thus to produce "intellectual peace at the price of intellectual death." It is not simply the right, it is the duty of those in advance of their fellow-men to speak their honest thought, and in a way to be understood. They who temporize in dealing with great questions of public interest are so far, though they talk and

write in praise of morality, the enemies of moral progress. Loyalty to conviction and courageous devotion to the highest conceptions of truth, regardless of public opinion or personal interests, is a demand of the times, both in public and private life. It is not enough for the liberal thinker of to-day to praise Paine and Parker, Emerson and Darwin, who gave to the world their best thought. Nearly all the intellectual and moral heroes of the past have their eulogists among the more conservative minds of to-day. The thought of the past is no finality. Our intellectual horizon was not fixed forever by any or all the thinkers now dead. Darwin's views, now accepted in the main by men of science, were ridiculed by press and pulpit within the memory of men who are yet young. If there were no conceptions of to-day similarly regarded by those who represent public opinion,—which does not yet indorse Darwin's teachings, but is tolerant of them,—the fact would not be creditable to this generation. There is a vast amount of truth not likely to be popularly received for a long time; and they who defend it, in spite of the tyranny of public opinion, perform a service the value of which cannot be estimated. There is still need of journals "whose praise," as a London periodical says of *The Index*, "is not in all the churches," and whose praise, we may add on its fifteenth birthday, is not likely to be in all the churches in the year just commenced.

B. F. UNDERWOOD.

EDITORIAL NOTES.

BY B. F. U.

TO ALL our contributors and readers a Happy New Year.

It can do truth no service to blink the fact known to all who have the most ordinary acquaintance with literary history, that a large portion of the noblest and most valuable moral teaching has been the work, not only of men who did not know, but of men who knew and rejected the Christian faith.—*Mill*.

We have received from the Ingersoll Secular Society of Boston a card of membership, for which the society will accept our thanks. On the card, in addition to a brief statement of the society's principles, are these two sentiments, the former from Ingersoll, the latter from Clifford: "Banish me from Eden when you will, but first let me eat of the fruit of the tree of knowledge"; "If men were no better than their religions, the world would be a hell indeed." The meetings of the society are held in Paine Memorial every Sunday at 2.45 P.M.

"THE function of the State is purely secular. It is to see that equal rights are enjoyed and the general welfare promoted; but it has no right to decree, for example, that any book or any day or any place is holy, or to except church property from taxation, or to appropriate any portion of the public money for sectarian purposes, or to enforce the reading of the Bible in the public schools, or to proclaim when it behooves the people to fast for their sins or feast for their abundance, or to require any religious test for office, suffrage, naturalization, or giving testimony in the courts."—*Wm. Lloyd Garrison*.

"THE rival claims of society and solitude," writes Lillian Whiting, in the *Boston Evening Traveller*, "often present a problem perplexing to one inclined to studious pursuits. If the persons one may meet are great in the literary world, there is the possibility that their condensed greatness may be better received through their books or their

pictures or statues. If they are not great, the student is liable to think, with a slight flavor of deprecation, that their society would be of little consequence at best. But there may still be another view not wholly without value,—that every one needs the correction and the adjustment, the facile mental habit, that is gained alone by contact with the world and the attrition of companionship. Lacking this or even limiting one's social interchange to one especial class of people, one lacks all the side lights and varied angles of vision from which new points of view are obtained. The life that becomes crystallized in a narrow groove, however high it may be, is not the life of beneficence or of the widest influence."

IN a very interesting lecture recently delivered by Mr. Anagnos, Superintendent of the Blind Asylum of this city, before the Science Class at the Parker Memorial, the lecturer, as reported in the daily papers, said:—

A Mr. Mollineaux, a learned Irishman, was the first to ask the question whether, if one were born blind and sight were given by a surgical process, such a person could tell the difference between a cube and a round ball. To this, Locke replied no. Leibnitz, however, took the opposite ground, and said that our mental faculties were not dependent on our senses, and that a person could tell the difference; and Locke's assertions were discredited. Light was soon thrown on this very point by the operation of a great English surgeon, Dr. Fessenden, who removed cataracts from the eyes of a child born blind. Then came the test; and it was found that the child could not tell the difference, nor could he by looking at them distinguish a cat from a dog. The animals had been his pets. He was observed putting his hands on them and stroking them, then looking at the cat and saying, "Ah, pussy, now I can tell which you are hereafter." The problem "that the impressions which we receive are the experimental result of our senses" seemed to be solved then.

At present, *The Index* is living upon the vinegar of quoted criticism, which it mixes to the consistency of mud with its own innuendoes. Why in the name of common sense can it not buckle down to its own peculiar task of never saying anything to displease the preachers, and let other people alone to do their work? The world is wide; and no one would ever stumble upon *The Index*, if it did not obtrude itself upon their notice.—*Truth-Seeker*.

The above paragraph is taken from the coarse and scurrilous sheet which our neighbor the *Investigator* once—with some exaggeration, however, we think—characterized as "the New York cesspool." It is a sample of the notices we have from time to time the past few years received from that paper, which is rarely mentioned in these columns. It is not anything "mixed to the consistency of mud" found in *The Index*, nor "its own peculiar task of never saying anything to displease the preachers," which really offends the *Truth-Seeker*,—the name of which we have long thought should be changed to *Truth-Hider* or *Truth-Flincher*,—but rather the fact that *The Index* fearlessly tells the truth on questions that concern the liberal public, whether it "displease the preachers" or so-called liberal papers, which with narrow sectarian views, and from considerations of self-interest, distort or conceal from their readers the truth, as the editor of the *Truth-Seeker* by his own admission suppressed a portion of the proceedings of the National Liberal League in his report of its last meetings.

ONE of the contributors to the *Christian Statesman* has discovered another cause for Blaine's defeat. It is that nine days only before the election he travelled on Sunday, the whole day. All things had been going prosperously for him up to that date. Immediately afterward, the disasters and blunders of his campaign began,—among which the correspondent enumerates Dr. Burchard's unfortunate alliterative remark, the millionaire ban-

quet, the stormy night for the Blaine procession, the clear skies and dry streets for that of Cleveland. These, the correspondent thinks, were evident tokens of the divine displeasure at that Sabbath-breaking. Cleveland, as we believe the papers reported, went to church that Sunday. The *Statesman's* contributor sums up this grave matter thus:—

As the *Tribune* says, "One week before, the election of Blaine was sure." But it, and all, omit an event which began that week and which was the first fatal step, and all the more inexcusable because of the certainty of the result and the want of any plea of political necessity. Mr. Blaine travelled all that Sabbath day, journeying from Chicago to Jamestown, N.Y. That this was Mr. Blaine's own plan or suggestion I do not believe, but that he wickedly yielded to the plans of the Committee who arranged for the desecration of that holy day is evident. Others, who like him are members of Christian churches, and officers, and among the rest Stewart B. Woodford, an elder in the Dutch Reformed Church, are reported as having participated in that same dishonor to the Christian Sabbath and its divine Lord. No wonder the disastrous week, begun in such defiance of the Lord, was continued with such noticeable warring of the elements against the Republican candidate and his party. Jeremiah declares (xvii., 19, 27) that the Lord will honor those who honor his Sabbath, but will kindle a fire in the gates where the princes and rulers "will not hearken unto the Lord, to hallow his Sabbath." As Christian professors, their guilt is a thousand-fold greater; and it is only of the Lord's mercies that, instead of sending folly, and confounding their wise counsellors, and turning into defeat their bright prospects and wise plans, some greater judgment did not fall upon the guilty ones.

For *The Index*.

OLD YEAR AND NEW.

White and cold, winding-sheet
Wrap softly round him;
Leave him now, lying cold,
Where winter found him.
Old Year of sin and pain, Old Year of sorrow,
Die with thy evil gain, cloud no to-morrow.

White and soft, budding year,
Cling to me purely;
Fill me with peace and truth,
Tenderly, surely.
New Year of hope and trust, New Year of doing,
Come, give me life for dust, comfort for ruling.

For *The Index*.

THE NEW YEAR.

"Rejoice! it is the glad new year, rejoice!"
This was the greeting from a cheerful voice.
The earth seemed newly decked in glistening white,
And on my window-pane the morning light
Shone through quaint landscapes; for the frost and snow
Had traced with artist hand o'er all below
(And while the human world in slumber lay)
The fairest scenes,—a wonderful array.
My fancy, too, not idle, spread its wings,
And, joyful as the lark that joyful sings,
Upon the canvas of the untold year
Portrayed its every joy and hope and fear.

That New Year's day, with all its hopes sublime,
Is garnered now into the lap of Time;
The pictures on my window-pane are lost;
Ideals, too, have vanished like the frost.
How shall I now rejoice in the New Year?
Responsive in my soul, a voice spake clear:
"Rejoice, rejoice, with every birth of morn!
For with each dawn a new new-year is born;
Though airy castles fall, yet build again:
Far nobler fights the soul shall yet attain;
No losses can its majesty appall,
For Time shall be till it surmount them all!"

GOWAN LEA.

MONTREAL, 1885.

The Index.

BOSTON, JANUARY 1, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, : : : : : } Editors.
BENJAMIN F. UNDERWOOD, : : : : : }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

The Intellectual System of Liberalism.

Substance of an Address before the Liberal Union Club,
Boston, Oct. 25, 1884.

BY FRANCIS E. ABBOT, PH.D.

The subject upon which I shall venture to speak to-night, with necessarily inadequate preparation, is the "Intellectual System of Liberalism,"—a subject which may seem not directly connected with our practical concerns, and yet, in my opinion, lies at the root of all practical concerns.

I have been for many years a believer in the theory that thought, or intellect, is the deepest fact in our nature; that life itself would be impossible except as the manifestation of purposive intelligence, and that the action of intelligence, in some low, crude form, must accompany everything that can be called sentient being, as distinct from the unconscious existence of the inanimate world. There must be some directive idea to give an aim even to the affections or to the impulses,—much more to the will. An animal cannot seek its prey, or even open its mouth to feed, without having a more or less conscious purpose of satisfying hunger by the act. It must have some intellectual element in its consciousness, before the feelings or passions or even the blindest instincts can find any object upon which to expend themselves. The feeblest sensation, the most elementary consciousness, is a species of knowledge, and knowledge is the activity of mind alone.

Now, while mere sensation is the lowest conceivable form of intellectual life, or the minimum activity which is compatible with its existence as such, there is no higher form of it conceivable by us than the scientific co-ordination and subordination of all discovered truths in a self-coherent intellectual whole—in other words, a theory of the universe sufficiently comprehensive to embrace all that Man has yet learned of Nature, and suffi-

ciently elastic to make room for all that he may yet learn of it. Such a theory of the universe will be, in the sense in which I use the words, the "Intellectual System of Liberalism." Such a theory, I admit, notwithstanding the confident and exaggerated claims of some modern philosophers, and notwithstanding the still more exaggerated claims made for them by some of their indiscriminately admiring disciples, has not yet been framed; nor will it be framed, until philosophy itself has undergone a mighty revolution of foundation, spirit, and method; nor will it even then be framed by any one mind alone, but only by the co-operating minds of many generations of great thinkers. But, for all that, it will be framed at last, and the revolution in philosophy which will prepare the way for it is even now silently and surely going on. Liberalism can never become a dominant force in the evolution of human society until it has become an intellectual system first of all; and I am very sure that the beginnings of its intellectual system will be the beginning of its practical power in the world. I see, as a fact, that, while the various systems of superstition are strong and active and well supported, and while they govern the world in virtue of their creeds, liberalism is weak, because it has no common unity of thought; it has no intellectual system of ideas to which all liberals may give their free adhesion, and out of which may grow common unity of action. They do not act together because they do not think together,—because they have no intellectual system. If liberalism is ever to be the controlling force in the world, it can be so only in virtue of working out something which I call an intellectual system, a system of thought distinct from rules of action or guides to feeling, yet creative of both.

If I were called upon to define liberalism in its intellectual aspect, I should give this definition: LIBERALISM IS THOUGHT FREE TO FOLLOW NATURE. That is the utmost freedom that thought can ever attain. If it follows fancy, self-interest, hope, fear, desire, it is enslaved; it is truly free, if it follows Nature. That is to say, if thought, in the relations which it creates for itself, follows the relations which exist in the objective universe, that is precisely what sensible men mean by freedom; and the tyrant, the despot, the Pope, interfere with freedom of thought, because they prevent thought from following the relationships which exist in the objective universe, and would compel it to follow some other guide of their own devising. Such is the forced thought which is imprinted upon children's minds, in early infancy, through the Catechism, filling the young head with dogmatic notions which divert the intelligence from following nature: it is made to follow an artificial system of men's devising. Thought not free is that which is not allowed to follow nature, but on the contrary made to follow some theory, devised artfully or artlessly as the case may be, which is forced on the child's mind in the stead of nature; and I mean by liberalism, in its intellectual aspect, thought free to follow nature, free to be moulded by the relations of things as they are. This is not freedom from all system; it is simply freedom from the arbitrarily and unnaturally contrived systems which have grown out of human ignorance, or selfishness, or folly. Freedom from human systems does not mean freedom from all system. If thought is free to follow Nature, then the question whether thought is systematic or unsystematic will depend upon the question whether Nature has any system or not. *If Nature has a system, then thought, in following Nature, must be systematic.*

I want to put this idea forward clearly at the beginning; for, to my mind, thought that follows

nature does not attempt to impose any law on truth. That thought alone is free which takes its highest law from something higher than itself, and faithfully moulds itself according to that which really is. Truth itself lies in establishing an equation between the interior thinking and the outward reality; and it is attained when the thought-relation established internally is identical with the actual relation discovered externally. So, whether our thought is to be systematic or not, must depend upon the prior question whether Nature is systematic.

What shall be the answer to that question? Do we find order in Nature? Do we find unity, organic wholeness, correlation of part with part, a course of things exhibiting such a smoothness of action and freedom from friction as to result in universal evolution? If we do, then Nature has her system, for those results cannot be produced without system; if we do not, then Nature is chaos, for chaos means nothing but Nature without system. In fact, the earliest word used in the Greek language to denote the universe as a whole was the very name for system, *cosmos*,—order, beauty, harmony. That was one of the earliest perceptions forced upon the mind of man, when he began to consider the larger aspects of existence; he could not help perceiving the unity, the wholeness, the orderliness, the system of Nature. Very well, then; if we concede this point, that Nature has her system, then thought, when free to follow Nature, must reproduce that system, and must itself be systematic. Such I conceive to be the truth.

Now every man, more or less, endeavors to systematize his thinking. He may not do it in a very profound or philosophical manner; he may do it half instinctively; but every man, if he looks deep enough, will see that back of his every act lies some theory of life which he is trying to carry out,—some system of thought, wise or foolish, large or small; he has his theory of life, and that theory is his intellectual system and theory of the universe.

Believing this, that Nature has her system, and that thought left free to follow Nature will be pre-eminently systematic, I want to point out that there are two kinds of systems, which I have perhaps already assumed; but I wish to speak of them more definitely and to show their difference. I mean *artificial systems* and *natural systems*.

There may be an artificial and partial order of things deduced from a part of the facts, as when Linnæus founded the science of botany upon the number of stamens and pistils. The relations he discerned were real relations, but were not adequate to give the entire system of plants which will correspond to all the facts of nature. It was a provisional and quite artificial system, not based upon all the possible relations that could be detected existing among plants; and it has become now entirely displaced by what is called the natural system, which classifies plants according to their total organic relations.

Now, all the imperfect systems of men, undoubtedly, even the most crude and despotic systems, have been based upon some true insight; they never have been made out of the whole cloth, with nothing in nature to correspond to them. I suppose the crudest system of fetishism had its basis in truth, and it was perhaps the best theory the fetishistic tribes were intellectually competent to conceive. It was a step in the line of progress to adopt their theory. But, as knowledge grew, that theory was seen to be incomplete,—a system which followed nature, but followed it incompletely. It was necessary to correct the first crude insight by the larger subsequent insight, and that system

began to decay, and another provisional system took its place, but a better one. No sane man imbued with the thought of this time will imagine that we shall ever arrive at a perfect system, co-extensive with the infinitude of the universe. The best system ever devised will be imperfect; but the essential distinction between artificial systems and natural systems lies here,—that the one is *invented* with more or less will, while the other is simply *discovered*; that is, found to be existing, and adopted from Nature herself. Just so far as the element of will enters into men's thinking, just so far you have arbitrary and despotic systems. The systems which have most cursed mankind have been those into which entered the most of will. Every intellectual system ought to follow the existing relations of things as they are, which can neither be changed, nor inverted, nor subverted, by the will of man. Nature pursues her own course, by her own laws. The utmost the human mind can do is to discover what those laws are, and what the real relations of things are. The distinction between artificial or invented systems and natural or discovered systems is supremely important to be borne in mind, and I do not mean to forget it, in speaking of the intellectual system of liberalism. By that I mean the natural or discovered system of the universe, as distinguished from all artificial, invented, or arbitrary ones.

There has been a very great and indiscriminating dread of all system among liberals. Those of you who have lived in the world of radical thought during the last twenty years will remember what vehement and often passionate expression has again and again been given to the feeling of contempt for all attempts to systematize liberalism, either socially or intellectually: "Away with definition! Let us have no definition of God, no system of thought, no organization of the liberal movement! Let us have all fluent! To define, to systematize, to organize, is to stop the wheels of progress, and arrest the ever-changing thought!"

All that, it strikes me, was a symptom of our own crudity. I thought so during those twenty years, and I think so still. For all life, from its lowest to its highest forms, is essentially *organic*. Organization is at once its necessary result and its noblest manifestation. All intellectual life tends irresistibly to intellectual system; all social life tends irresistibly to social organization; and every social organization is necessarily the expression of some intellectual system. If liberalism is ever to be a living force in history, it can only become so by evolving an intellectual system first of all, and then creating a social organization based upon that system as its organic idea. The Greek idea was the political independence of the city; hence its social organization was communal individualism. The Roman idea was the political unity of the world; hence its social organization was universal imperialism. The Christian idea was the politico-religious unity of the world; hence its social organization was the union of political and religious imperialism in the Catholic Church. The mediæval idea was success in war; hence its social organization was chivalry and feudalism. The modern idea in its highest form is democracy, or the reconciliation of personal liberty with political unity; hence its highest social organization is the American republic. And the liberal idea is the further evolution of democracy into the spiritual republic, socially organizing freedom and fellowship and religion in the Commonwealth of Man.

I began my own work with a plea for liberal organization and thought, in life, in society, in religion. My whole work as a liberal has been connected with the work of organization,—seeking to establish no arbitrary system of my own mak-

ing, but to follow the discovered pattern set in Nature herself. But experience has shown me that the liberal movement (in this country at least) is not yet intellectually mature enough to permit any large or effective social organization of it. Without unity of thought no unity of action is possible, and what we call the liberal movement has neither. The only unity it possesses is negative—opposition to the established order of things; it has no intellectual system, no moral system, and therefore no root of constructive or positive social unity. For this reason I have ceased to desire any social organization of it on a large scale, at least for the present, and shall dedicate what remains to me of life to the task of furthering the development of its intellectual and moral system—in a word, its philosophy. And the system of its philosophy must be natural, not artificial,—discovered, not invented.

To have a dread of system, then, is to have a dread of Nature; and that is to me the last foolishness. I do not understand what there is to cause so much dread of system, unless, as the burnt child dreads the fire, liberals dread the artificial kind of systems which have hitherto prevailed. But the experience of the past, wisely interpreted, simply teaches us to substitute a natural system for artificial systems of whatever kind, and to look for its foundations to the ever-increasing knowledge of Nature herself. The most formidable artificial system which exists in this country is that of Christianity; and you will readily see how it differs from the natural system of democracy.

The organic idea of Christianity is that the human race is to be governed by a divinely appointed Christ or king; that monarchy is the divinely appointed system of government, and that mankind owe allegiance to the Christ-king as monarch by divine right. That idea, more or less crude, more or less developed, lies at the foundation of all the various forms of Christianity. It was the fountain head of the whole system. Christianity as it appears in the Middle Ages was nothing but the logical application to human affairs of that idea of the divine Christ-king. Jesus the man was crucified and disappeared, but his followers conceived the idea that he still survived in the heavens as the real, though absent, monarch of mankind. What must be the result of that thought of a divine king, invisible in the heavens, and yet still the ruler of mankind? Human government must go on. What more necessary than that somebody should represent on earth that divine monarch in the heavens? Logic prevailed in history, and the Pope became the viceroy of Christ. Logically develop that system, and what do you get? A papacy in which the Pope becomes first the infallible viceroy, then the incarnate Christ, and lastly the incarnate Trinity itself. That, instead of being a violation of Catholic logic, would be its logical development, and the Pope would be worshipped as God himself; that would be the natural culmination of this theory of the Christ. Of course, such an artificial theory is despotic; it can only co-exist with despotism; and you find, all the way down, that Christianity has been in alliance with political despotism all over the world. It has been the background upon which the throne political stood forth, an object to be not only seen, but religiously venerated, by the popular imagination. There is always this background of divine sanction behind the thrones of Europe, because the organic idea of Christianity is essentially monarchical. But the strength and growth of the republican idea in this country have been such that we seldom understand so artificial a system. Christianity as a system is

unintelligible in a society which has lost all the monarchical consciousness; we are so used to the people's self-governing that we can hardly understand the real Christian thought and feeling. Particularly is this true of religious liberals. I think that few radicals understand the real Christian consciousness, because they cannot conceive that intense personal devotion to a divine monarch like the Christ, which is at the very heart and core of Christianity. Still, be that as it may, the artificial nature of this Christian system is shown by its utter incongruity with all modern life. It is an excrescence in America. All our life here is based upon the republican idea, which has crept from the Constitution of the United States into the popular mind, and is advancing steadily in the direction of larger and larger freedom from this domination of personalism.

The artificial system of Christianity began to break up some hundreds of years ago. First it was the Pope who was the object of protest; then it was the Church; then the Bible; then Christ himself; and now, the idea of infallible intuition. Men are now coming to the conclusion that experience only is the ground of all knowledge of objective reality—not the experience of the senses alone, but experience in the broad sense of all actual affection of human intelligence by the outward world, all bringing of thought and fact together in actual contact. This is the origin of knowledge,—the constant action and reaction between man and his environment; and, in that, the chronological priority of the action of the environment will be established as the true principle. Experience, the actual affection of intellect and sense by outward existence—that is the beginning of all knowledge.

The Christian theory of dogmatic revelation, the revelation of abstract dogmas, practically inconsistent with nature, led to a false system of human life. The Church system, however, was based upon some truth. Its ethical laws were often of the highest type, and will remain so to the end of time. Who questions the authority of the Golden Rule? That rule was a true insight of Christianity, and it will abide, no matter what changes. But, taken as a whole, the system of Christianity did not correspond with the whole of human life; and, as life grew larger and broader and deeper, the necessity became manifest for some other and truer system. For this reason the human mind broke away from it by degrees, and for us, at least, the whole constraining system lies now in ruins around us.

Liberalism began as a protest against this artificial system, and it went on protesting. Protestantism has been its true name and its real nature, until now it is little else than individualism pure and simple—until little is left but "churches of one member," and cities of one citizen. But is this bald and barren individualism to be the final outcome of liberalism? We find ourselves to-day in a condition in which we experience the weakness of liberalism as a practical social power in the world. We have gone on protesting against artificial systems, but we have no natural system of our own: we are individuals only, taking our own thought as the ultimate appeal and final test of truth, with no common ground of decision when our individual minds fail to agree. Is the eternal truth to be determined by what Tom, Dick, or Harry thinks? Tom thinks he is the final umpire; Dick admits no authority beyond himself; Harry thinks his say-so must be so. But nobody else is convinced by them. Individualism ultimates in an intellectual and social deadlock. The society in which Tom, Dick, and Harry are members must come to some common conclusion,—

must adopt some common course of action. Individualism contains no social principle; it has no seed of social growth; it is nothing but the last stage of protest; its forces are all centrifugal. But liberalism is inherently constructive, social, and organic; it leaves thought free to follow Nature, that it may reproduce the system of Nature in society and life, and mould the world upon it. That is the kind of system liberalism aims at, to bring all human life into perfect conformity with the laws of nature. The cosmical harmony of those laws of nature will be the intellectual system of liberalism, when it is found.

But, you ask, if there is to be an intellectual system which is to govern social life, what shall be its principle of construction? I answer: Science is the discoverer of the facts of Nature; Philosophy is the discoverer of the system of those facts. Science discovers the facts themselves; Philosophy discovers the large mutual relations of the facts; Liberalism must take its system from Science, the discoverer, and from Philosophy, the organizer of the facts. Those are the sources whence the system of liberalism must proceed. It cannot come from mere abstract theory, or from mere empirical observation; still less can it come from the arbitrary dogma or "revelation" of the church; it can come only from the scientific and philosophical experience of mankind. Science is nothing but the clarified experience of mankind; common sense is their unclarified experience. Science, which gives the great mass of unrelated and unordered facts, is reduced to a system by philosophy, which, if it be wise, aims only to organize these facts after the pattern given in nature itself, and to discover that system of which nature is itself the living expression. It is to philosophy, then, that liberalism must look for its system, while to science it must look for its facts; these twain together will yet create the intellectual system of liberalism.

Now we come to the principle which is the hardest to explain and make clear, and yet a principle of supreme importance. Just now I was rejecting the idea that the individual judgment should be taken as the ultimate appeal in matters of truth, and that there should be no higher court of appeal than my own individual consciousness. Yet what other appeal have we? The church is no appeal, the Bible is no appeal, the Christ is no appeal: what is the final appeal, if the individual is not? Well, friends, I think that the system of Christianity, in its only logical and thorough-going form, the Roman Catholic form, has always retained one great and true principle which we liberals have let slip from our hands. Catholicism has always insisted on the authority of the church as a whole,—always insisted upon its right to mould the thought and command the faith of the individual believer. That was but the distortion of a great truth. It was indeed a distortion of it. The church assumed to be itself the rightful authority that should control the believer's faith; and the bishops in their oecumenical councils claimed to be themselves the church. But, in spite of that, the Catholic Church, even in its most extravagant abuse of the principle of the collective authority of the church over the individual, had some sense of the social reason of mankind, the non-individual and universal reason of the race, the eternal reason of the world which includes both matter and man, as distinct from the arbitrary thought of the individual thinker. What keeps the Catholic Church alive to-day is the living power and truth that lie in this principle; and it will continue to live and grow until we have come to see what that truth is, and preserve it, while we let the extravagances and

distortions of it go where they belong—to the limbo of dead superstitions.

Now what can possibly take the place of this ultimate appeal to the individual consciousness? The difficulty lies in the practical necessity of arriving at some decision. If two individual consciousnesses fail to agree, how are they to come to agreement? Unless they do agree, no common action is possible. If each man should account himself the ultimate appeal, there could be nothing but social and intellectual anarchy; society would be impossible. Men in society do not actually live by the rule of ultimate private judgment. Even in our politics, the rough rule that "the majority must govern," is a half-perception of what the Catholic Church has to some extent perceived all the while. Democracy itself rests on the right of the majority to govern. Now what right have the majority to govern, if there is no likelihood, no presumption, that the million are wiser than the one man? I admit that infallibility is no part of human life. The individual and the multitude alike make fearful mistakes; but, nevertheless, as to all public affairs, the nearest approximation to practical wisdom is necessarily assumed on the democratic theory to be the verdict of the most minds. There is an element of truth in that assumption, but not the whole truth. We must look higher to find an adequate conception of the tribunal of truth.

How do you suppose it is that in the last twenty years the theory of Darwin has won its great and magnificent triumph over the old theory of periodic special creation of species? You will remember that in 1859, when Darwin published the *Origin of Species*, the book was received with a burst of opposition, one might almost say indignation. I remember my father's saying to me, on returning from the meeting of the American Academy of Arts and Sciences, that there was but one man who stood up for Darwin, and that was Asa Gray; all the rest rejected this theory. How happened it that the theory rejected all over the world has now become so well established that it is almost as hard to find an opponent of Darwinism as it was then to find a champion of it? The revolution came about solely through the power of evidence. The one man in this case had discovered the system of nature, and had made the evidence clear. The facts were all on his side, so that all he had to do was to present this evidence, and here and there one man would see it, and then another would see it; until the united rejection of the truth was at last followed by the united acceptance of it,—Nature dictating to man what he should think, and man being absolutely unable to disobey. That is the explanation of the triumph of Darwinism. So with every other discovery that at last becomes accepted. The process is simply that of bringing before mind after mind the relations that exist objectively in Nature, until Nature's system forces itself into universal recognition. These two elements, individual discovery and universal recognition, are equally essential to the establishment of any truth; and the combined result would be impossible, if either Nature had no intelligible system, or if the individual had no power to discover that system, or if all individuals had no common intellectual nature subject to universal laws. Philosophy must find room for all these facts, or confess its failure to comprehend the greatest of all facts,—the actual existence of a great body of established truths about the universe, the actual validity of human science as the work of universal human reason guided and controlled by the universal reason of Nature herself. It is this necessary fact of the universality both of human reason and cosmical reason to which individualistic liberalism

is stone-blind; and its intellectual blindness is the root of its social powerlessness.

It is in that way that we have to recognize the influence of numbers in matters of thought. Darwin had to conquer first this man, and then that man, until finally the great mass of men gave in its adhesion to his discovery. But so long as one intelligent and competent scientific man can be found to dispute Darwin, just so long Darwinism must be an open question. Questions become closed in science by the unanimous agreement of all those entitled by special knowledge of the facts to form an independent opinion. No question is ever ruled out arbitrarily in science. Scientific associations adopt no creed; they are united by the desire to discover, and he who can discover can make it plain at last. If he has discovered, he has the evidence on his side. Scientific men do not need a creed; the common reference is to the standard of truth in Nature herself, to the existing relations of things. Nature herself is the only creed of the scientific association; no more, no less. The facts, the relations, the system of the universe itself,—that is the creed. The method of science is thoroughly objective,—testing, verifying, repeating the experience, if you are not sure of the facts, going over the thing again and again, until you find that there can be but one answer,—that the answer of experience is so and so, and not otherwise. Then men cannot help believing. Nature dictates belief, when she has made her relations clear and plain. That is the way science establishes every truth. People talk about the variances and disagreements among scientific men. There is a margin of unsettled questions, but it must not be overlooked that the great body of science is established as firmly as the rocks of the globe. The great body of science is made up of established truths; truths first of the individual, then of the few, then the belief of a party, then the conviction of the race. The unsettled questions gradually become settled, and the verified answers pass by common consent into the great common treasury of knowledge; and it is only from this universally accredited knowledge that civilization itself proceeds.

But, when all who know the most agree, who has any right to raise a question? He alone who knows more than they,—not he who knows less; and this superior knowledge he must prove to the world's satisfaction. Ignorance is usually conceited, and we find ignorant men now and then trying to prove perpetual motion, though it is known to be impossible. We find ignorant men now and then bringing forward various impracticable theories, and making futile attempts to demonstrate the impossible. How are they treated by scientific men? Do they put them in prison, or interfere with their freedom? Not at all. The crank is as free as the most profound philosopher, but he does not get a hearing; that is the silent answer Science makes to the cranks. She holds men to be reasonable, and, if not so, laughs at them, as she laughs at Brother Jasper of Virginia. That is the answer, and that is the only persecution the scientific world ever inflicts upon the crank and the fool. But the answer is effective without persecution.

Now the system of liberalism will have to be built up by the same process. We must take our facts from science, and our system from philosophy, and the union of the two will give to liberalism a system by which it will create a new and beautiful harmony, first in human thought, and then in human life. For life lived as nature would have it lived is the ultimate aim of liberalism,—not the life of natural savagery, but the life of natural civilization, since it is the true nature of man to be a social and moral being. . . .

I am sick to death of the pertness and personal conceit of which I see so much among radicals. It is time for us to cultivate a different temper, the temper of the man of science,—most tenacious of his thought, never letting it go so long as there is the least hope of truth to be got, never losing sight of it, adding experience to experience, until by and by he has all the light he can get, and then presents his results before his fellows, willing to be corrected or to be proved mistaken, only anxious to advance the truth. This temper of the scientific mind, such as it shone in Charles Darwin, is the most deeply religious thing that characterizes this century. I see more of true religion in that humble yet resolute devotion to truth for its own sake than in all the churches, in all the songs and prayers and sacraments of Christendom combined. It seems to me the most truly religious state of mind, as far removed from pertness or conceit as can be. We need to correct this individualistic self-feeling of ours by keeping ever before us the higher dignity, the superior majesty, of the universal human mind; for it, and it alone, may claim to be the prophet and priest of Nature, and to interpret to each successive age the Universal Reason of the All. But it is Science, not the Church, which voices the loftiest insight of the human mind.

Philosophy, I said, was to be our organizer, our system-maker, scrupulously and reverently taking the facts as Science gives them. But Philosophy herself has got to be revolutionized. Modern philosophy is in a very crude state. We are wandering about as in the labyrinth of Crete, and Philosophy has not yet found the clew to lead us out. We have got to begin afresh, with the existence of human knowledge as the original fact of all facts. When we do that, we find that human knowledge is not my knowledge, nor yours; it is the knowledge which is the possession of the whole human race. We must make the transition from the little individual *I* to the universal *We*. The beginning-point of philosophy is not with the individual, but with the race; and when that is clearly seen, and its consequences accepted, there will be the greatest revolution in philosophy that has taken place since the birth of human thought. The change must be from the narrow stand-point of individualism to the stand-point of universalism; the question is, not what I think, feel, or believe, but what the human race knows. What is the highest information about this or that fact? What has Science discovered about it? Bringing all things to the test of the *We* instead of the *I*, the revolution will yet be made, and its mighty results will at last appear. Then we shall have a philosophy which does not need to debate whether an external world exists, or not; there will be an end to the elaborate foolery which claims that "all the world is my impression," "all I know is the states of my own consciousness." If this is what I must say, the next man must say that all the world is *his* impression, that I myself am only one of his own conscious states, and that he himself is the whole universe—in a nutshell! This nonsense is the logical outcome of our present philosophy. Old Dr. Johnson, one morning, came down to breakfast very cross. Boswell said, "What is the matter?" The Doctor said, "I had a dream. I dreamed that I got into an argument with a fellow, and he beat me." Said Boswell, "You need not feel badly about that. You were the other fellow too, and you only beat yourself." That is the sort of comfort one gets from the philosophy of to-day. The necessity of revolutionizing it is shown in the fact that modern philosophy began with the *ego* alone, and, trying to construct the

universe on that simple basis as a logical beginning, has never yet succeeded in believing heartily in anything but the *ego*. If it sticks to its own avowed premises, it can logically end only in absolute idealism and egoism; but, this being an unpalatable conclusion, it lays down principles which it dares not adhere to, and pays the penalty of proceeding on unsound premises by making itself ridiculous in the eyes of every keen-witted observer.

The result of the revolution that I point out would be this: that philosophy would cut loose from this idle talk about the *Ego*, and devote itself to something useful. I did not begin my conscious life with any self-created thoughts: I inherited my thoughts; I received thousands of impressions from persons and things around me, and I cannot put myself in the attitude of being the creator of my own derived existence. The time will come, sooner or later, when philosophy will begin with the facts of science as given facts, and cease to call them in question; and science gives that realism which philosophy has no right to challenge. We do *know* an external universe; we cannot make a motion or think a thought without knowing it. With that admission as a beginning, Philosophy has a clear course before her. She must take this universe as she finds it expounded and revealed by Science. The business of Philosophy is to bring these facts into order, to arrange them, see what their system is, and thereby get a clear conception of human life, and help the world to govern its life according to this conception. That is the object of any intellectual system, to give direction to human life; and, if liberalism has any excuse for being, it must exist in order to give to the world, to the individual and to society alike, a higher and better law of life than the churches give. If she has not a better system than they, then, at the start, it is plain she cannot give a higher ideal; and, if she has not that, she has no business in the world at all. Christianity is the best religion, if it shall give the best law of life. That is the practical test, the test of experience, the ethical test; and the world will always believe that that is the best religion which makes the best men and the best society.

I think that Nature herself, scientifically known and philosophically conceived as a living whole, will give this best ideal and this best life. That is why I am so earnest for the spread of liberalism. It is not because I want to force my hobby on my fellow-men, nor because I want to make proselytes. I want to see liberalism spread, but only with this religious thought, with these lofty moral ideals. The system of thought that can organize them into life will make the world wiser and better. Let us think that system out, until it achieves at last this beneficent organic wholeness. Every one of us is a wonderful organic system, and the proof of that fact is our consciousness, our activity, our character, our appearance here to-night. Destroy that system, where are we? Gone, dead. Life must be systematic; the life of the individual, of the world, must be systematic. Liberalism, if alive, must have its organism, its definite intellectual system, its definite social system. It must be one great, united, co-operating whole, made of many parts, with noble relations to each other and the destiny of man; and its unity, order, system, liberty, will be a vivifying and transfiguring power in the world.

PUBLIC discussion is an intellectual stamping-mill, where the worthless quartz is crushed and the pure gold set free.

CORRESPONDENCE.

A LETTER FROM LIBERAL, MO.

Editors of The Index:—

Thinking that many of your readers are feeling an interest in the success of our town, I have thought it not out of place to give you a short description of the place, people, etc., which may be acceptable to those desirous of a change of their location the coming spring. Whether seeking a more moderate and healthy climate, wishing to invest money or to provide themselves with a home among congenial people, there may be some who have never as yet heard of our progressive town. Liberal is located in the southwest part of Missouri, in a rich, fertile, prairie country, with exhaustless coal banks and good building stone quarries; climate moderate, and well adapted to fruit-growing, stock and grain raising. In fact, all branches of farming are successfully carried on. Our town is young; but the people are a temperate, industrious class of thinkers and workers, of all shades of opinion, working together as a unit for the advancement of our town in particular and humanity in general. The Liberal Normal School is already established and in good working order, under the efficient management of Prof. W. E. Grayston, where it is intended to take the child and step by step educate him or her in all the various branches, so that they may be practical as well as theoretical men and women. We have no churches or saloons. We have no use for them; but, instead, we have our Sunday instruction schools, where all alike are instructed in the things of this world. On Sunday evenings, at the general assembly meetings, we have speeches, singing, recitations, music by our little orchestra, etc., all of which is both interesting and instructive. I will not trespass further upon your valuable space, but close by saying, should any person, feeling an interest in the step we have taken, wish further information, it will be freely given by writing.

Respectfully,

S. C. THAYER.

LIBERAL, Mo., Dec. 20, 1884.

MORAL COERCION.

Editors of The Index:—

In your issue of December 18, you are pleased to notice with gentlemanly criticism the documents which I have recently caused to be mailed to the merchants and manufacturers of our State, calling attention to the mutual advantages to proprietors and employes of the system of employing only such persons as abstain from the use of alcoholic drinks.

By the general position assumed in your article, it is fair to presume that you have not read the original documents, copies of which are now forwarded; and I invite your attention especially to the "Testimonials," showing the effect of the adoption of the plan on a small scale and also on the larger scale of a village or town.

While I have long been in favor of moral suasion and legal protection, I am also in favor of using moral coercion and boycotting,—all the means and methods that are available and right for reducing the amount of alcoholic drinks manufactured, sold, and used to the lowest minimum possible. We agree, I presume, as to the end to be obtained, but differ as to one of the means used for that object. The reason why we differ seems to me to be simply this: advanced scientists are apt to overlook some of the old-time formulas that are based on as correct principles as have been evolved in later years, and one of these I hold fast unto as an unchangeable truth,—namely, "An ounce of prevention is better than a pound of cure." In all my temperance work for years, the words I have kept uppermost in mind are—Prevent and Protect. They are the key-notes in all effective arguments in favor of total abstinence or prohibition.

Total abstinence certainly prevents some drunkenness. Drinking stimulants certainly does not, but leads thereto, even if indulged in with moderate intentions. Hence, my common sense tells me that all steps which discourage drinking habits tend to lessen "the evils of drunkenness." And I believe that the employment of drinking men and dealing with dissipated merchants tend to encourage rather than discourage them in their course of life. This also applies to tenants.

In letting the rooms of a tenement house, I inva-

riably ascertain whether the applicant is strictly temperate or not. If not, he must seek rooms elsewhere. My neighbors, observing that I have less trouble with my tenants and less damages to repair than others have, will follow the example. If all the proprietors of rented houses and buildings in manufacturing towns should adopt this course, it would go a great way toward insuring the practice of total abstinence in those towns, avoiding many disturbances and arrests for various crimes, and reducing public expenses. No one here denies that I have a proper right to make this rule and specify what kind of men, as to habits, may occupy my tenements. Does any one in Boston question it? If that right be acknowledged, as I think it must, have I not the right to insist that the man employed at my residence shall be, not only a total abstainer, but a non-smoker, if I choose? It secures greater safety for the man, more security for my family and property, and also for the property of my neighbors.

Now suppose I was engaged in a manufacturing business. If I have the right to rule out drinking habits on one "hired man," the same right holds good on a hundred or a thousand employes. And I fail to see the injustice which you speak of in cases of this kind any more than when applied to tenants. Applicants are not obliged to accede to the conditions, as they can go elsewhere; but the conditions, instead of being an injury to themselves or families, have been proven, wherever tested, to be of great advantage to all concerned. Mr. C. H. Tilton, Boot and Shoe Manufacturer of Ashland, Mass., adopted the system three years ago, and says that, if once adopted by business men, it will never be discarded. Mr. Tilton also testifies that, by the adoption of this plan, his employes—the total abstainers put in the place of drinking men—have increased their comforts fifty per cent., besides adding fifty per cent. to the amount of goods produced, compared with results attained by the previous workmen. The highly respected firm of E. & T. Fairbanks & Co., of St. Johnsbury, Vt., has strictly adhered to this system for many years; and their testimony and comments relating thereto would be very interesting to your readers. So also is the account of Bessbrook, Ireland, with its linen manufactures and population of about fifteen thousand. "No rum-seller or rum-drinker can find any place in Bessbrook: they are kept out of it as strictly as a wolf is kept from a sheepfold or a hog from a Jewish sanctuary. And, in this single fact, we have the most obvious cause of its marvellous prosperity." It has "no idlers, no paupers, no policemen, no drunkards."

A commendatory letter recently received from Edwin H. Baker, agent of the Otis Company at Ware and Three Rivers, Mass., says that they employ nearly two thousand persons, and that the condition of affairs which I am working for has been practically secured by them, "as a result of an unrelenting determination not to take into or retain in our employ any person known to be addicted to the use of intoxicating liquors. The change for the better in the last few years has been as marked as it is gratifying."

To construe this demand on the part of employers into "a threat," we submit is not right or just. The reasons given in the proposed "Notice" to employes are as follows, namely: "This course is adopted to promote the welfare of all whom we may employ and their families, and also for the best interests of the proprietors and of the citizens of our town or city."

As to impairing "the independence and self-respect of employes," we differ entirely on that point. In this enlightened period, the majority of drinking men who are employed have lost their self-respect, manhood, and independence. They care more for stimulants than for their reputation or the comfort of their families. If they could be induced through any honest method to abandon the glass entirely and associate only with abstainers, they would soon acquire manliness and self-respect, and be of some service instead of a curse to society.

Let us not forget that the one hundred thousand intemperate persons annually lost in this country began their course as "moderate" drinkers, not as drunkards, and that the high ground of independence and using without abusing all the privileges (?) of mankind is not safe or wise, as man is constructed at present. If, in the process of development, human beings should become of such physical condition that alcohol would have no more effect on them than the same quantity of tea or coffee, then, although dyspeptics are uncomfortable to themselves and others, they

would not be so dangerous and expensive to the community as to require segregation.

The day is coming, I believe, when business and professional men with drinking habits, and employing drinking workmen and assistants, will have few customers outside of their circle of friends with like characteristics, and when their company will be tabooed by the best society. Such a step would have far greater influence for good than all the moral suasion that could be brought to bear on that class of citizens. For such an example, we may recall the practice followed for many years by earnest members of the Society of Friends, who, at much extra cost and inconvenience, declined to purchase slave-labor goods when free-labor sugars, cottons, etc., could be obtained.

In conclusion, let us look at the subject broadly. Would any scientist or moralist declare that it is not just and proper for railroad and steamboat corporations to establish a rule—as some have—that none except total abstainers from the use of alcoholic drinks shall be employed by them? [If that rule had been in force on one of our Boston steamship lines, the one hundred lives lost on the "City of Columbus" might have been saved for further usefulness; for it is alleged that the officer in charge of the deck that night was in a lock-up in Boston the night previous on account of dissipation, and hence was not in proper condition to go on duty.] And, if one class of corporations can secure more efficient service by adopting this system, all other classes of corporations and business firms can realize more or less advantage by following the same course. If the proper rights and independence of the persons employed by railroad companies are not unjustly interfered with in this respect, then it cannot be wrong for manufacturers to adopt a similar rule.

GEORGE KEMPTON.

SHARON, MASS., Dec. 20, 1884.

BOOK NOTICES.

SI-YU-KI. Buddhist Records of the Western World. Translated from the Chinese of Hsien Tsiang (A.D. 629) by Samuel Beal, B.A. (Trinity College, Cambridge), R.N. (Retired Chaplain and N.I.), Professor of Chinese, University, London; Rector of Wark, Northumberland, etc. In two volumes. 12mo. Boston: James R. Osgood & Co. 1885.

Buddhist books were imported into China as early as the first century of the Christian era. From these books, the Chinese obtained knowledge of the history of the founder of Buddhism, and became familiar with the names of places consecrated by his presence. Many Chinese pilgrims, Buddhist priests, desiring to visit the spots and gaze upon the mementoes dear to the hearts of all devout Buddhists, impelled by the spirit of religious devotion and enthusiasm, visited India, enduring great sufferings while exposed to perils by desert, mountain, and sea. Not the least valuable portion of the Buddhist literature of China, of which a large amount has been discovered the past few years, are the records of the travels of these Chinese Buddhist pilgrims, since they contain the testimony of independent eye-witnesses as to the facts related by them in regard to the geography, history, manners, and religion of the people of India. The *Si-yu-ki*, or "Memorials of the Western World," is a work prepared by Hsien Tsiang, an illustrious Chinese Buddhist priest and traveller, who was born A.D. 629, went to India and gave seventeen years to travel and study in that country and portions of Central Asia before returning to his native land. He brought back with him, in addition to several statues of Buddha of gold, silver, and sandal-wood, one hundred and twenty-four works (sūtras) of the Great Vehicle, and other works, "amounting in the whole to five hundred and twenty fasciculi, carried by twenty-two horses." Of the works translated by him are seventy-five included in "The Catalogue of the Chinese Buddhist Tripitaka," by Bunyiu Nanjio. The *Si-yu-ki* was prepared by Hsien Tsiang from documents brought from India by himself in 645 A.D. Being the result largely of personal knowledge and experience, it is a work of great value for the history of India; and, being full of legend and old folk-lore, it is interesting even to the general reader, while it affords the best material for estimating the marvellous effect which the rise and development of Buddhism had on the old national life of India and neighboring countries. The Chinese original, now translated for the first time into English, is one of the works included in the collection of

Buddhist books sent to the India Office in 1876 by the government of Japan. It consists of Twelve Books or Chapters, and the translation is included in the two volumes here noticed. "It is," as the *London Times* says, "a strange freak of historical preservation that the best account of the condition of India at that ancient period has come down to us in the books of travel written by the Chinese pilgrims, of whom Hsien Tsiang is the best known." The "Records" have a preface by Chang Yueh, who flourished as Chinese minister of State A.D. 713-756. Prof. Beal, in his Introduction, which embraces more than a hundred pages, gives a sketch and the "records" of Shih Fa-hian, who wrote about A.D. 400,—the first Chinese traveller whose name and writings have come down to us,—and of Sung Yun, who was sent A.D. 518 by the Empress of Northern Wei dynasty to seek for books, and who with his associates brought back one hundred and seventy volumes. Numerous notes and explanations add to the value of the work, which is a contribution to the translations of Buddhist literature of a most interesting and important character, for which we believe Prof. Beal and his publishers will have the appreciative thanks of many readers.

B. F. U.

A SKETCH OF THE LIFE AND TIMES OF THE REV. SYDNEY SMITH. By J. Stuart Reid. Illustrated. New York: Harper & Brothers.

Mr. Reid informs us in his preface that his object in writing this book has been to supplement and not to rival the biography by Sydney Smith's daughter, Lady Holland, which has long been the delight of many readers. It is only fair to judge the book by the intention of the writer. As a substitute for Lady Holland's biography with the appended correspondence compiled by Mrs. Austin, this book would not demand attention. We must still go to the earlier book for perfect apprehension of the personality of Sydney Smith and for a report of his most happy sayings. But, as a supplement to the earlier and fuller book, Mr. Reid's has great merits. It is much more formal and exact in its method. The details of the laughter-loving dean's experience are given in a much more orderly manner. The reader's ignorance is oftener consulted and dispelled. The illustrations, some of which are exquisitely done, are a real help to the impression of reality derived from the printed page. The feeling which the former book planted so deeply in the reader's mind is fostered by this into more vigorous growth. We mean the feeling that the wisdom of Sydney Smith was even greater than his wit; that he was fundamentally one of the most serious of men. Here is a story that is told of Voltaire that may be new to some of *The Index* readers. It cannot be to all. "I am astonished," said a Swiss gentleman to him, "that you should speak so well of Haller, for he is outrageous in his abuse of you." "Well, well," replied Voltaire, "I believe the truth is we have both formed very erroneous ideas of each other." There are one or two of Smith's sayings about Macaulay that belong with his desire to get from him "a few brilliant flashes of silence." For example: "I wish I could write poetry like you, Rogers. I would write an *Inferno*, and I would put Macaulay among a number of disputants, and—gag him." It is a pity that he should be habitually thought of as only a jolly man of wit. His interest in politics and in sensible religion was immense. He was one of the most forward-looking men of his time, one of the most advanced, and one of the most catholic. A new book always stands a chance of being read where an old one is not, but we shall be mistaken if this book does not send many to his biography by Lady Holland and to his collected works.

J. W. C.

The *North American Review* for January contains a number of timely and admirable papers. The article by Bishop Huntington on "Vituperation in Politics" is well worth reading. "Froude's Life of Carlyle," by Frederic Harrison, contains more truth and just criticism in regard to Carlyle than any other article that has appeared since Froude's work was published. The other articles are "The Reunited Union," by Henry Watterson; "William Herschel's Star Surveys," by Richard A. Proctor; "American Labor Organizations," by Richard J. Hinton; "Socrates, Buddha, and Christ," by W. L. Courtney; "The Increase of Wealth," by Michael G. Mulhall; and "The Evidence of the Senses," by Prof. John Le Conte. (New York, 30 Lafayette Place.)

H. T. MARSHALL'S

PATENT
ADJUSTABLE
LACE
CONGRESS

Is easily adjusted to fit any instep or ankle at any time, and will not uncomfortably draw the ankle, like ordinary congress. It has the stylish appearance of a lace boot and all the convenience of any congress in putting on or off the foot. Marshall's Pat. Pat'd May 13, 1884, woven in the front strap or stamped on the shank of each shoe. If your dealer does not keep them, send postal for directions how to get them to the Patentee and Manufacturer of Men's, Boys', and Youth's Fine Boots and Shoes. Tennis Shoe for Ladies and Gents a specialty.

BROCKTON, MASS.

ONE MILLION

COPIES WILL BE SOLD IN TWENTY YEARS OF CONGRESS—By James G. Blaine. The only history of our Government from 1801 to 1881. Hon. John S. Wise, M. C. from Va., says: "Whoever takes it up, no matter whether he be Mr. Blaine's friend or enemy, will never put it down until he has read the whole." \$200 per month to good agents. Apply at once, The Henry Bill Pub. Co., Norwich, Ct.

THE BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its line.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches**, which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars**, which are models of comfort and elegance; its **Palace Drawing Room Cars**, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that it is the best equipped road in the world.

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, and take none other. All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

RELIGIO - PHILOSOPHICAL JOURNAL.

Established in 1865.

A Paper for all who Sincerely and Intelligently Seek Truth without regard to Sect or Party.

The JOURNAL, in the estimation of a large proportion of the leading authorities on Spiritualism, stands pre-eminent as a fearless, independent, judiciously fair advocate of Spiritualism. It has received more general notice, and more frequent and higher commendations from intelligent sources, regardless of sect or party, than any other Spiritualist or liberal paper ever published; the records will confirm this.

The JOURNAL is uncompromisingly committed to the Scientific Method in its treatment of the Phenomena of Spiritualism, being fully assured that this is the only safe ground on which to stand.

The JOURNAL is unsectarian, non-partisan, thoroughly independent, never neutral, wholly free from cliques and clans.

TRACTS.

- No. 1.—**Truths for the Times**, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.
- No. 2.—**Fear of the Living God**, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New Edition. Price 5 cents; 12 copies, 50 cents.
- No. 3.—**Lecture on the Bible**, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.
- No. 4.—**Christian Propagandism**, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, \$1.00.
- No. 5.—**God in the Constitution**, by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.
- No. 6.—**The Sabbath**, by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.
- No. 7.—**Compulsory Education**, by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.
- No. 8.—**The Present Heaven**, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.
- No. 9.—**The Christian Amendment**, by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.
- No. 10.—**The Impachment of Christianity**, by F. E. Abbot. Sixth Ten Thousand. Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.
- No. 11.—**The God of Science**, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.
- No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies \$1.00.
- No. 13.—**On the Vision of Heaven**, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.
- No. 14.—**A Study of Religion: The Name and the Thing**, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.
- No. 15.—**The Battle of Syracuse**. Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

CURRENT TOPICS.

BY B. F. U.

ACCORDING to reports published in the papers, justice in Denver is not only blind, as it is everywhere said to be, but in the police court it has of late been blind drunk. The judge of the police-court, whose recent decisions and discharges have been a surprise to the people, had to be escorted home one day last week, so badly was he intoxicated; and now it is said that his eccentric decisions were due to the fact of his having been on a prolonged spree.

DR. W. H. CHANNING, whose death in England occurred recently, was one of the early New England Transcendentalists, and was among those who tried the Brook Farm experiment. He edited the *Present* and the *Harbinger*, and contributed to the *Dial*. He was a nephew of the distinguished William Ellery Channing, whose memoir he wrote in three volumes, one of several works which he wrote. He died in his seventy-fifth year.

PROF. PROCTOR says: "The evidence now obtained confirms the theory which was advanced in 1848, and has since been maintained by Gosse and others, that a race of marine animals exists,—including, probably, several varieties,—which is characterized by a serpentine neck, a head small compared with body, but large compared with the thickness of the neck, an air breather, and deriving its propulsive power from paddles; in other words, a modern representative of the long-necked plesiosaurs of the great secondary or mesozoic era. Creatures of this class have been aptly compared to what would be formed by drawing a serpent through the body of a sea turtle."

JUDGE E. F. BRIGHAM, of the Franklin County (Ohio) Court of Common Pleas, in an action to restrain the city clerk of Columbus and the printing committee of the city council from entering into a contract with the *Sunday News* to do the city's printing during the coming year,—on the ground, principally, that the *News*, being a Sunday paper, necessarily involves the performance of common labor on that day,—decided that the de-

fendant should be restrained from consummating the contract. The defendant admitted that, although the side of the paper on which appears the matter contracted for by the city was done before twelve o'clock Saturday night, the other side of the paper was, to some extent, made up after midnight, and struck off and the papers folded and distributed on Sunday. The decision was made on the ground that, the labor performed on the paper on Sunday being common labor, the contract was made in contravention of the common labor statute, and was therefore illegal and ineffective.

WE have here a judicial decision based on an authority evidently condemned by the reason and common sense of the judge, who said: "Judges, of course, have nothing to do with legislation: we have to construe statutes as we find them, in view of the law as laid down by the text writers and by the courts of authority; and especially are they bound to follow any adjudication made by the highest tribunal of their own State. And, in this case, I am bound to follow the law as I find it laid down, without reference to my individual opinion as to what the equity of the case would demand. Our present statute is superannuated and not adapted to the present time; and it ought to be remodelled and made applicable to the present state of things, as there are many works which have become 'works of necessity' since the adoption of that statute. As, for instance, Sunday newspapers, which were a comparatively unknown thing fifty years ago, have now become, in view of the demand of the reading public for the very latest news, almost a necessity, as there is hardly a town of twenty thousand inhabitants in the country that has not one or more Sunday newspapers. No court has yet defined clearly what works of necessity are. Judge Thurman, in his decision, gives a sort of general definition, stating that it does not necessarily mean 'manual labor,' and goes a little farther and states that it may not be a work of absolute and positive necessity, but it may be 'moral necessity'; but what is meant by a 'moral' necessity is not given."

JUDGE BRIGHAM further declared that a change ought to be made in the statute, and the case in hand was one which should be reviewed by a court having authority to some extent to inaugurate a rule which would not conflict with the rules heretofore recognized, but not established by the Supreme Court. He thought it would be presumption in him to inaugurate such a rule; and he therefore should follow the principles as they are recognized, even though his decision should be reversed. He thus concluded: "I will state further that this is a case which ought to go up and have this question settled by the Supreme Court of the State, and I would not feel at all hurt if my decision were reversed." A few decisions of this sort will be pretty sure to lead either to a modification of the statute or to a judicial interpretation of it in harmony with the requirements of the times.

THE great San Francisco Observatory has been given, in execution of James Lick's will, a full

astronomical outfit, one of the most complete in the world. The thirty-six inch telescope, now under the charge of Alvah Clarke & Sons, of Cambridge, Mass., will not be ready for use for a year or more. Of this telescope, which will be the largest in the world, the *Springfield Republican* says: "The lenses have not yet been completed. The flint disc was made long ago; but no crown disc has yet been obtained, although nineteen unsuccessful attempts to cast one have been made. Two discs cast in the rough at Paris are now waiting inspection. The new telescope will bring the moon within thirty miles of the earth, a gain of fifty miles over the power of any existing instrument. It is supposed that there is another planet in our system; that Jupiter's satellites also have satellites; and that the nebulae, instead of systems now forming, may be nothing but thick groups of stars. On these and other astronomical contentions, the big glass is expected to throw new light."

THE *Christian Statesman* says: "We see that a petition is in circulation in Massachusetts for the abolition of the civil oath. The signers ask that all distinction between witnesses who qualify with an oath and others who decline to do so be ignored by the law. Here, as at other points, the real question is whether the Bible is true. If God has ordained the oath as a means of bringing the human conscience face to face with himself and awakening a solemn fear of punishment in case of falsehood, then courts of justice are bound to use the oath as an 'instrument of investigation' into the truth. If the people believe in the divine authority and in the efficiency of the oath, they cannot but prescribe its employment in their constitutions and laws. Few intelligent and candid infidels will deny that this is the teaching of the Scriptures on this matter." We object to the judicial oath, because it implies acceptance by the State of theological dogmas, because it tends to make men undervalue the obligation of telling the truth when not under oath, and because it offers a premium upon hypocrisy and punishes sincerity and truthfulness by favoring the man who lies in saying he believes when he does not, and imposing disabilities or inflicting disgrace upon the atheist who scorns to falsify in regard to his convictions for gain to himself or others. If the Bible can be quoted in support of the oath, so much the worse for the Bible. But Jesus is reported to have said: "But I say unto you, Swear not at all: neither by heaven, for it is God's throne; nor by the earth, for it is his footstool" (Matt. v., 34). The *Christian Statesman*, however, although it professes to regard the Bible as the word of God and to recognize Jesus Christ as the Ruler of nations, holds to theories and observances for which it would be difficult to find any authority in the Jewish or Christian sacred Scriptures. Our contemporary, for instance, would have the government compel men to observe as a sacred day Sunday, a festival day dedicated by the Pagan Romans to the sun, which, without any Scriptural authority whatever, was substituted by the Romish Church for the seventh day as the sanctified day for worship.

THE SENIOR EDITOR'S CREED.

The senior editor of *The Index* has just completed a connection of twenty-five years with the First Congregational Society of New Bedford as its minister. That society is a good specimen of ecclesiastical evolution. The parent society was organized early in the last century, on the old basis of New England Congregationalism, inheriting the Puritan faith and traditions. In the latter part of the century, it had an Arminian minister, Dr. West, a vigorous thinker and a liberal one for his time, who prepared the society for the adoption of Unitarianism. This step was taken by the larger part of the congregation in 1811. From that time forward, the society has been gradually growing more and more liberal, as evinced, first, by modifications made from time to time in the form of the church covenants, or creeds, that had to be assented to by those who became church-members and communicants in distinction from mere pew-holders; and, second, by the gradual disappearance of all creeds and covenants whatsoever and of so-called sacraments, and the abolition of church-membership itself as anything distinct from membership in the society at large,—until now the society stands practically on the ground of free religion. It has not been represented in the National Unitarian Conference for many years, though popularly known as a Unitarian society. Its membership is freely open to any who may desire to take part in it, no question concerning beliefs being asked. Any adult person of either sex becomes a voting member of the society by regularly selecting and paying for a seat in the church,—a degree of liberty which might lead to harm, perhaps, in a new organization, but which works harmlessly in this. The present minister has been in the habit for years of regarding Christianity as one of the fallible historical forms of faith, and of reading in the pulpit from the Scriptures of all faiths and from modern writers, as having, none of them, any other authority than that which truth itself gives to them. On Sunday, December 28, giving a discourse appropriate to the twenty-fifth anniversary of his settlement, he summed up the main points of his teaching in certain articles of belief, not, of course, to be imposed as a creed upon any members of the society, but as a succinct statement of his leading convictions. As these may also have an interest to readers of *The Index*, they are printed here:—

1. I believe in God as the power eternal, immortal, invisible, omnipresent, within and behind all phenomena, unknown and yet known, working in and through nature, producer and sustainer of all forms of existence, vitalizer of all organisms and life, welling up as mental and moral energy in the consciousness of man, and striving in the development of human history to establish righteousness as the law of life for the individual and for the race, and as the surest, amplest providence for human guidance.

2. I believe in man as the highest consummation and expression of the eternal energy in that part of the universe which comes within his knowledge. Beginning on the level of animal existence, springing from the lower forms of life that were anterior to him, I believe that in him the eternal energy has fashioned such an organism that he has been able to rise from the plane of animal life, through the various grades of savagery and barbarism, until he has reached the heights of civilization, enlightenment, and power which he holds to-day. I believe that he has made this progress, and has capacity for indefinite progress in the future, through his natural faculties of reason, conscience, and affection, which are a manifestation in him, under

finite limitations, of the eternal energy itself, and which may be so vitalized as to make man a secondary creator, through the practical application of his increasing mental and moral wisdom, in co-operating with and carrying forward the eternal world-purpose.

3. I believe that the moral law, or conscience, is man's intuitive perception of the equation of rights between human beings in their relations to each other. I believe that a certain stage of intelligence through the discipline of experience had to be reached by primitive man before this perception became possible, just as a certain degree of intelligence was necessary for perceiving the relation of numbers in the multiplication table; but that, when this degree of intelligence was reached, the perception of the equation of rights between man and man would follow as necessarily as the perception of the relation of numbers. I believe, therefore, that morality rests on as permanent and irrefragable a basis as does the science of mathematics.

4. I believe that religion is the expression of man's relation to the universe and its vital powers, or to its living, sustaining energy. From connection with and dependence upon this power, it is not possible for man to escape. The fact of this relation is established by science; and science, in its broad sense, must be depended upon to give the true theory of it. But, in all ages, man has been conscious of it; and his expression of the relation has threefold form,—through thought, through feeling, and through action. Through one or another or all of these forms of expression, he has sought to perfect his relation to the universal forces and laws. I believe that from this fundamental idea have grown all the special religions, while their distinguishing beliefs and ceremonies have been shaped by the intelligence of the people holding them. I believe, therefore, that the religions all have a natural origin and a natural development; that, by virtue of their common root, they are sects of one universal religion; and that, notwithstanding their differences and antagonisms resulting from their special doctrines and claims, there are among them certain underlying unities of belief and aspiration and moral sentiment by which they are bound together in one fellowship.

5. I believe that the sacred books of the various religions have the same natural source,—the human mind in its effort to express its relation to the infinite power. They are the religious literature of the race or people producing them. Various in merit, they all contain important truths; and the truths in all of them are mingled with errors. As a transcript of what humanity has thought and felt, as it has struggled with the great problems of life, they are invaluable. But they are to be read to-day, not as infallible authority for truth, but with that discrimination which can separate truth from error, and find refreshing for the heart and moral stimulus for conduct instead of a creed to bind upon the intellect.

6. I believe that the founders and prophets of the religions were human beings of superior intellectual endowments or moral insight; holy men and seers, who became the natural leaders of the people about them; and around whose lives, through the pious imagination of their followers, there afterward gathered legends and myths to express the people's wonder and admiration for their greatness and power. I believe that the lustre of the moral example of Jesus is not dimmed nor the power of his character for moral inspiration impaired by thus placing him in the natural line of humanity, and in a group of kindred souls, who have lived and wrought and died, and borne brave

testimony to the truth and the right, for the guidance and healing of the nations.

7. I believe that reward and retribution for deeds done in the body are assured by the natural law that binds effect to cause; that moral error or wickedness produces as its inevitable consequence pain and wretchedness; that, if continued, it is suicidal in its agency, and tends to the ultimate destruction of its own power; that moral good, on the contrary, is self-perpetuating, and leads ever more and more to larger and higher life, to realms of purer happiness, and to ever-greater capacity for virtue and for virtue's service.

8. I believe that, on the ground of the strongest and most rational probability, though it be beyond the realm of knowledge, man may entertain a confident hope—nay, a faith—in his own personal immortality; that the eternal energy, having achieved self-consciousness in the wonderful personality of human character, with its power of progressing upon its own nature, will not lightly throw away such a being and such an advantage after a few years of earthly life. I believe, however, that, while man may entertain this hope and hold this faith, his first of duties is not to dream of the life hereafter, but to work zealously for the amelioration of human society on earth; to show himself less anxious to save his own soul for eternal bliss than to save other souls around him from present ignorance, wrong, and wretchedness to a capacity for moral and spiritual life.

9. I believe that, as God, the eternal, living energy, is ever seeking and striving to embody his power more and more in man, soliciting him by inward constraining impulse to truth and goodness and moral beauty, so also may man correspondingly seek and find God; for

"God is seen God
In the star, in the stone, in the flesh, in the soul, and the
cloud.
And, thus looking within and around me, I ever renew
(With that stoop of the soul which in bending upraises
it too)
The submission of man's nothing-perfect to God's all-com-
plete,
As, by each new obeisance in spirit, I climb to his feet."

10. And, finally, I believe that in this verse we have a statement of religion's threefold expression,—its thought, its emotion, its deed. Here is practical religion, and here also are the spirit and attitude of genuine worship and prayer.

WM. J. POTTER.

THE RELIGIOUS SIDE OF SPENCER'S PHILOSOPHY.

The last few months have done not a little to exhibit Mr. Spencer's philosophy in a new light. Until lately, a large part of his followers have looked upon him as a positivist of the agnostic scientific type; a unique thinker who had cut adrift from all the old schools of philosophy and discarded the old *a priori* metaphysics as unknowable, in order to make a new departure from nature *a posteriori*; an investigator who, starting inductively from the phenomena, had constructed a great cosmic system on facts alone without a trace of idealist assumption. His enemies, not a few of them, joined in this chorus with a will, and abused him roundly for these attributes which his friends had been kind enough to present him with. It was an interesting little dispute too; for the widespread attention aroused by Mr. Spencer's brilliant physical speculations naturally lent weight to their metaphysical side, and his supposed agnosticism and real indifference to ontology were quite in accord with current scientific modes of thought. It was pleasant to have such high authority for pushing aside the old puzzles of religious metaphysics, and natural to suppose his authority would

extend far enough to defend the intellect in its farthest advance, but would not sanction any illogical attempt to recapture in the name of belief a field abandoned in the name of knowledge. Seeing the beauty and extent of the new achievements of science, with which Mr. Spencer was apparently in such close sympathy, they took it for granted that he was as completely satisfied with it as they themselves. And so the buoyant and even arrogant scientific spirit of the times claimed him for a leader, without inquiring very closely into his opinion about abstractions, to which it was fundamentally indifferent. It was enough that he had called them unknowable, and turned to more practical investigations.

Now, however, they find out all at once that this is a mistake, and that Mr. Spencer is not only an idealist, but that his views approach much nearer to positive Christianity than to their own negative philosophy; and they are naturally somewhat at a loss. In his controversy with Mr. Harrison and other recent writings, he has unmistakably committed himself to the spiritualistic interpretation of the universe, and explained that his Unknowable is not a mere negation, but the infinite and eternal Substance that lies beneath all phenomena, which it is easy for us to identify with the central conception of Spinoza and so many other philosophers from the very dawn of thought. Mr. Fiske, too, in his recent Concord lecture on the destiny of man, spoke of the human "soul as a spiritual substance, an effluence from Godhood, which, under certain conditions, becomes incarnated in perishable forms of matter," "the chief object of divine care, the consummate fruition of that creative energy which is manifested throughout the knowable universe," whose earthly completeness was to come in "the time when, in the truest sense, the kingdoms of this world shall become the kingdom of Christ, and he shall reign forever king of kings and lord of lords," while beyond lay the almost irresistible certainty of immortality.

Naturally, this has seemed to the agnostics a startling abandonment of their cause almost in the hour of triumph, a return to the conservative flesh-pots when the promised land is full in sight. But it is not so. It is not a new departure, but an explanation; and Mr. Fiske might have gone much farther without leaving the line of his great leader's arguments. He might have reminded us of the irresistible force of those elementary beliefs, independent of experimental proof or even of intelligent reasoning, which Spencer recognized so fully, and claimed (with many able thinkers) that they include a belief in personal immortality and a personal deity, and thus have pushed forward the cosmic mole of attack until it became a buttress for the threatened wall of the Church,—a broad and easy pathway by which all might enter and yet the citadel be saved. He had a good example, for Mansel had done the same thing for Hamilton; and, in ontology, Spencer is Hamilton's pupil, beyond a doubt. And Mansel's argument was sound, if his premises are conceded; for, if there is any such thing as a conclusive and binding belief which is independent of experimental proof, then the want of evidence is not a sufficient objection to any other such belief. And, if ontology contains contradictions which cannot be solved or explained away, and belief is to remain unshaken by them, as Hamilton and Spencer held, then the imbecility and uselessness of reasoning on such subjects are manifest; and unreasonableness is not an objection to any creed, however extravagant, if it is only a matter of faith.

As this view of Spencer's relation to Hamilton's idealism, and his agreement with his argument

from the antinomies, may seem strange to many, we will here quote from the summing up in Mr. Spencer's *First Principles*, where, after quoting Hamilton's antinomies with approval, he says: "Thus do all lines of argument converge to the same conclusion,"—the absolute creative Power is certain, but it is inscrutable. "The imbecilities of the understanding . . . prove to be necessitated by the laws of that understanding," for "the Reality underlying appearances is totally and forever inconceivable by us." Yet belief must come in to make up for knowledge; for, while the "Absolute cannot in any manner or degree be known in the strict sense of knowing, yet we find that its positive existence is a necessary datum of consciousness, that so long as consciousness continues we cannot for an instant rid it of this datum, and that the belief which this datum constitutes has a higher warrant than any other whatever." And, in this assertion of a fundamental Reality, "Religion finds an assertion essentially coinciding with her own"; for we are obliged to regard every phenomenon as a manifestation of an Infinite creative Power. This is not by any means an exceptional passage. It is repeated many times in various forms. It is true that to Mr. Spencer the old creeds were the fetich superstitions of an undeveloped age; but he urged that within their husks lay a living kernel of truth, the vital belief in an ultimate unseen Reality, an unconditioned creative psychic Existence, to whose "established order" conduct should point. And he went farther under the guidance of Hamilton, and held that the fundamental conceptions of both science and theology were self-destructive, because they involved us in alternate impossibilities of thought and thus compelled us to fall back upon belief in a realm where reason was not only inadequate but misleading,—belief which had notwithstanding the highest warrant.

There is nothing very novel about this. The list is a long one of the great idealist thinkers who have believed in this infinite and eternal Oversoul which we must acknowledge, although we only see it through a glass darkly. The strange thing is that Mr. Spencer's position in their ranks has been so often ignored that the recent explanations of Mr. Fiske and himself have excited surprise. As his main position as an idealist has been so often lost sight of, it is not strange that his minor doctrine about belief should have been forgotten; but it is a perfect defence to Mr. Fiske, or any one else who wishes to give a religious interpretation to Mr. Spencer's philosophy. It is extremely far-reaching; for Mr. Spencer did not stop, as so many of our thinkers have done, with our inability to form an adequate conception of infinity. If he had, he would have held a strong position as to its practical application, and would have been able to correct the vagaries into which belief so often runs by pointing out that they were contradictory or unreasonable. This, however, he cannot well do now; for by accepting the antinomies and the conclusion from them of the imbecility of the intellect on ontological themes, which belief is nevertheless to uphold, he loses it as a negative check. If we have got to believe in an inconceivable result, whichever way we turn, then logic fails, and even the *reductio ad absurdum* loses its force. Deprived of this negative check, no elementary belief can be disproved, however extravagant; and, instead of being surprised at Mr. Fiske's supposed advance, we ought to expect before long some new Mansel to draw the same lesson from Spencer's teaching that the author of the *Prolegomena* drew from Spencer's teacher, and evolve from it again an orthodox creed.

HENRY W. HOLLAND.

MORMONISM IN A NEW LIGHT.

IV. Visions.

The origin of Mormonism has been read by the world through the Spaulding romance and Anthon letter spectacles, which revealed fraud and imposture only, proving Smith and his followers knaves or fools; and yet I believe the verdict of history will be that the Spaulding manuscript never fell under the eyes of Smith, while the characters from the plates did fall under the eyes of Prof. Anthon. Still, the cry of "Fraud! fraud!" is heard on every hand, from reputable authors and liberal editors no less than from venal and bigoted writers. It is hard for the world to admit it has borne false witness against the Mormons, and that, in its attempt to put down Mormonism, it has told more lies about it than it was charged with telling about itself. But what a different complexion is given to the argument, if the Book of Mormon was not taken from the Spaulding manuscript, and if the characters Prof. Anthon called "a hoax, and a very clumsy one at that," were genuine! And yet I do not know of a single writer who has perceived or noted the significance of this fact, though it would seem to call for no great wit or ingenuosness. Still, Jules Rémy, the French *savant*, and by far the ablest and fairest writer on Mormonism, does venture this one remark: "Did Smith himself find any such plates? Likely enough: he is known to have been called 'the manly digger,' and there would have been nothing extraordinary had he, in his frequent diggings, been the first to find objects similar to those which we know Wiley afterward dug up in 1843." And he says, "But what is certain is that Joseph must have known of Spaulding's romance," etc., thus crediting Smith with having found both the plates and the manuscript.

But this is not all. Every writer makes Smith the finder of a peepstone, or seerstone, as it is called by the Scotch; and this stone is said to have been found in 1819, which makes it the first of his discoveries,—another fact which seems to have no significance for any writer excepting in the one direction of fraud and superstition; but the superstition seems to have been shared by the neighborhood, as there were several claimants for the stone, and the people, too, flocked to the places indicated by the young necromancer, where hidden treasures were buried. But mark that, according to the anti-Mormon theory, while prospecting with the stone, the boy finds golden plates engraved with mysterious characters, and a manuscript purporting to give a history of the ancient inhabitants of America! What philosophic mind even can say there is "nothing extraordinary" in this? But these things, be it remembered, happened to a youth, an illiterate youth, from fifteen to twenty years of age. Now, let me ask, *who* would not have faith in such a stone, and count it as something more than a mere geological curiosity? And is it strange that Smith should use the stone, which had discovered the plates, in the translation of those plates? And is it surprising that he should have availed himself of the manuscript, if he found one, as affording some clew to the subject-matter of the ancient record? This view certainly refutes the idea of Smith being a deliberate falsifier, if nothing more, and is a strong argument even in favor of Smith's sincerity, which is a question of prime importance in this discussion. But to admit his sincerity is to concede much more than that.

Let us rise to a higher plane of criticism. The conditions potent enough to generate this new religion were the temperamental bias of the Smith

family, the religious state of the time and neighborhood in which they lived, and the discovery (accidental or otherwise) of golden plates long hidden in the earth. Those were the days of creeds which were believed and proven by the Book. The sects were at war one with the other; and, though alarmed at the progress of the doctrine of the papacy, each asserted its own infallibility. There was a general ferment; and, among the many new *isms* that sprung up in the first quarter of this century, Universalism and Unitarianism are ranked among the first; but the small show of sympathy they manifested toward each other proves how slight was the advance in the religious consciousness of the times. And now at this day even, when the Mormon standard waves over its spreading empire in the heart of this great continent, these two leading sects largely cling to the belief in the inspiration of the Scriptures, and in Jesus Christ as our Lord and Saviour. What, then, of orthodox Christianity *fifty or sixty years back?*

The period of the incubation of Mormonism was from about 1820 to 1830. Joseph Smith's first vision is said to have been in the year 1820, when he was but fifteen years of age, the family having moved from Royalton, Vt., to Palmyra, N.Y., and a few years later to Manchester. The family was poor, the boys working out a great deal by the day. Joseph was uneducated, having attended only one of those elementary schools so common in those days. He was the fourth of nine children. His mother was a Protestant; for she would join none of the sects, though her faith in Scripture was as strong as her faith in the churches was weak. Both parents had visions, containing intimations of new and strange events about to happen. Miracles had been wrought in the family,—one of its members apparently dead had been brought to life. The enemies of the Smiths called them "dreamers and visionary persons," little weening the part religious reverie has played in the making of faiths that have arisen to bless or curse mankind. A writer who knew Joseph in his boyhood, but whose aim is to prove him an impostor, says of him that "he assumed a spiritual or religious turn of mind, and frequently perused the Bible, becoming quite familiar with portions thereof, both of the Old and the New Testaments. His interpretations of Scriptural passages were always original and unique, and his deductions and conclusions *disgustingly blasphemous, according to the common apprehensions of Christian people.*" The mother, in writing of her son, says, "I presume our family presented an aspect as singular as any that ever lived on the face of the earth; all seated in a circle,—father, mother, sons, and daughters,—and giving the most profound attention to a boy, eighteen years of age, who had never read the Bible through in his life." So it seems that Joseph, though an adept in Scripture, did not pay it his exclusive devotion.

In 1820 there was a great religious revival near Manchester, N.Y., in which all the sects of the neighborhood took part. The struggle was fierce for a monopoly of consciences. Joseph's mind was in a state of bewilderment, when he came across a passage in the Epistle of St. James: "If any one of you lack wisdom, let him ask of God, that giveth to all men liberally, and upbraideth not; and it shall be given him." He immediately sought out a solitary place in the woods to pray. He "began to offer up the desires of his heart unto God," when "such a thick darkness gathered round him that he felt doomed to destruction"; but, the moment he seemed sinking into despair, "a pillar of light above the brightness of the sun gradually descended on him, and delivered him from the power

of the enemy." He saw two personages. One said, "This is my beloved son: hear ye him." "No sooner, therefore, did I get possession of myself, so as to be able to speak, than I asked the personage who stood above me in the light which of all the sects was right (for at this time it had never entered into my heart that all were wrong), and which I should join. I was answered that I must join none of them, for they were all wrong; and the personage who addressed me said 'that all their creeds were an abomination in his sight; their professors are corrupt, drawing near me with their lips, but their hearts are far from me,'" etc. He spoke of this vision to a Methodist preacher, who treated it "not only lightly, but with great contempt, saying it was all of the devil; that there were no such things as visions and revelations in these days; and that all such things had ceased with the Apostles. I soon found that my telling the story had excited a great deal of prejudice against me; and, though I was an obscure boy, only between fourteen and fifteen years of age, and my circumstances in life such as to make a boy of no consequence in the world, yet men of high standing would take notice sufficient to excite the public mind against me, and create a hot persecution; and this was common among all the sects, all united to persecute me. . . . However, it was no less a fact that I had seen a vision. I have thought since that I was much like Paul before Agrippa. Some said he was dishonest, others said he was mad, and he was ridiculed and reviled; but all this did not destroy the reality of his vision. I was hated and persecuted for saying I had seen a vision, but yet it was true. I knew it, and I knew that God knew it; and I could not deny it, neither did I dare deny it."

Three years elapsed before receiving his second vision, during which time he was persecuted, he says, by those who, if they thought him deluded, should have tried in an affectionate manner to reclaim him. He does not try to conceal his faults. "I fell into many errors, displayed the weakness of youth and the corruptions of human nature; and, in consequence of which things, I felt condemned, and betook myself to prayer and supplication to Almighty God for forgiveness for all my sins and follies, and also for a manifestation to me, that I might know of my state and standing before him." This time he was in his room, when a personage appeared by his bedside "in a loose robe of most exquisite whiteness. Not only was the robe exceedingly white, but his whole person was glorious beyond description, and his countenance truly like lightning." This was the angel Moroni, "who told me that God had a work for me to do, and that my name should be known, for good and evil, among all nations, kindred, tongues, and people."

This story of the visions is rejected by the Christian, mainly, because there have been no visions since Bible times; and by the infidel, because there have been none at any time. But the more ancient anything connected with religion, the better its chance of being believed. "Distance lends enchantment to the view." Rémy, however, advances this idea: "The principal ideas which inaugurate or accompany Smith's vision, and which he presents as his own personal inspirations, are to be found in the celebrated reveries of Jane Leade. Yet, strange to say, Smith does not once speak of Jane Leade, in the whole course of his apostleship!" But, because her doctrine was known to the French Illuminati, is that any proof that it was known to Joseph Smith? And does it follow that, though she occupied a distinguished place among the learned theosophists of Germany and Great Britain, Joseph Smith

may not have had revelations as well as she? John Hyde, who apostatized from Mormonism in 1857 and wrote a book about it, speaks of "the ridiculous concomitants of the eye of faith and the coming of angels." But having said to the tempter, "Get thee behind me, Satan!" he goes straight away and embraces Swedenborgianism! Of Swedenborg, Emerson says, "His profound mind admitted the perilous opinion, too frequent in religious history, that he was an abnormal person to whom was granted the privilege of conversing with angels and spirits; and this ecstasy connected itself with just this office of explaining the moral import of the world." But it was not an "opinion" with Swedenborg, for the other world was as real to him as the present one. But if he conversed with spirits, and received commissions from them, or believed that he did, why may not others do the same? There is Andrew Jackson Davis, still living, whose experience of this kind has been as wonderful as that of any one who ever lived. And he, like Joseph Smith, was a poor and ignorant boy. *Nature's Divine Revelations* are worthy of the title. How does the world explain them? How is it possible for them to be written by a youth, who never had but a few months' schooling in his life, and could not read without stopping to spell? And it is a fact worthy of note that Mormonism and what is called modern Spiritualism made their appearance at nearly the same time and place, but that the visions of Joseph Smith preceded the date assigned as the birth of the latter.

I see little cause to wonder that Joseph Smith, born with such predispositions into an atmosphere of religious strife and fanaticism, and at the same time chancing to unearth golden plates from their hiding-place of centuries, should, amid this circle of strange coincidence, feel himself the subject of supernatural care and guidance, and should link together the dreams both of his waking and sleeping hours, and not only style them, but believe them to be, heavenly visions. Others have seen angels, so the world at least professes to believe, then why not he? A negative answer is justified according to the common belief, because there was nothing good or great in the man or his doctrine. But not so fast. That is a question that remains to be discussed. There are, I presume, some Spiritualists of standing, who will admit that Smith was a medium. Brigham Young said, "Joseph was a born seer." But my own theory is that neither Mormon nor Spiritualist nor Christian nor sceptic in this case takes due account of the principle of heredity, or of ancestral and contemporary traits and customs, in their influence on the thoughts and characters of men:—

"Born into life, man grows
Forth from his parents' stem,
And blends their blood as those
Of theirs are blent in them:
So each new man strikes root into a far foretime."

THE ART OF QUESTIONING CHILDREN.

In the training and education of children, far too little attention is paid, commonly, to the great usefulness of questioning them. To instruct children by lecturing to them or by reading to them, undoubtedly has its place, but these methods are far less quickening than that of talking *with* them rather than *to* them; and in conversation of all kinds, whether with children or between equals in years and in knowledge, the art of questioning is a chief element. Its advantages with children are too obvious to be stated at length or argued, such as the strict demand on the attention, and consequently the cultivation of the faculty thereof,—

faculty so important that some have even thought great genius to be simply the faculty of prolonged, ardent attention. Questioning also incites to thought, rouses the mind to direct activity, calls it out of the mere receptive attitude into productive action; and this is a directly strengthening process by which the intelligence acquires capacity to cope with problems. Besides, the constant and judicious asking of questions actually accomplishes better what is often supposed to be the chief result of direct instruction by lecturing or reading,—namely, it fills and stores the memory; for we remember best our own discoveries, and to think out a truth for ourselves is to discover it originally, no matter how many times it has been discovered before.

These points are so obvious that probably the reason why parents and teachers so much neglect the art of questioning is that it is a difficult art. It requires study, not only as to its general principles, but as to its immediate application to the subject in hand at any moment. That is to say, the teacher who wishes to question well must consider the general principles of asking questions; but, even when these are mastered, he will never be able to apply them to any subject, for the instruction of the young, without as careful preparation beforehand as if he were about to deliver a critical lecture for adults. Like other very good things, the asking of questions as a means of instruction may be abused; that is, may be so ill-done, as to be worse than asking none at all, because questions, just as much as mere lecturing, may supply the place of thought instead of inciting thought.

The following are very obvious rules for good questioning. Questions ought to be asked:—

1. So as not to elicit merely a *yes* or a *no* for the answer;
2. So as not to indicate the answer by a direct leading question;
3. Yet so as to help toward the answer,—that is, to lead in its direction.
4. So as to open and develop the subject in an orderly and progressive manner, that one thought and one truth may grow out of another, and thus the child have a complete, well-arranged idea of the subject, so far as he is conducted in it.
5. So as not to supply the words, but to make it necessary for the child to use his own language in framing the answer. This, as producing a mental exercise, is perhaps as important as any rule.

It is a good plan to ask for definitions of common ideas or objects, and, when an answer is received, to probe and test it by facts. A definition of anything is really a theory of its nature, and is to be tested, like other theories, by as large an array of facts as possible, to determine whether the theory includes all the facts. When definitions are thus asked, very likely one will be given quickly if the object or thought be familiar, but almost certainly it will be deficient in some element necessary to the definition; and thus good questioning will lead from point to point, until all the needful elements are supplied by the child's answers.

These thoughts were suggested by a class exercise which I attended, during which a colloquy like the following occurred between teacher and pupils:

Teacher.—What is a falsehood?

Pupil.—Saying something that is not true.

T.—But suppose you make a mistake: are all mistakes falsehoods?

P.—No: mistakes are not falsehoods. A falsehood is *intentionally* saying something that is not true.

T.—Well, if one writes a story book, tells a fairy story, is that telling falsehoods?

P.—No: fairy stories are not falsehoods.

T.—But fairy stories are intentional statements of what is not true, which you have declared to be a falsehood.

P.—Well, a falsehood is saying what is not true with *intent to deceive*.

T.—But suppose I do not say a word, but only do some act with an intent to deceive. Is that a falsehood?

P.—Yes.

T.—Then how will you add that to the definition?

P.—A falsehood is either doing or saying something with intent to deceive.

T.—Well, suppose I put bait on a hook and hang it in the water to catch fish. Shall I call that a falsehood?

P.—No.

T.—But that is doing something with intent to deceive. Suppose, again, I am pursued by a furious animal, and I deceive him to get away. Is that a falsehood?

P.—No.

T.—Then what will you do with your definition?

P.—A falsehood is doing or saying something not true with intent to deceive a *human being*.

T.—But suppose that, instead of being pursued by a wild beast, I am pursued by an insane man, and I should make some pretence or play some trick to save myself: why would that be a falsehood, if it be not a falsehood to deceive a wild animal?

P.—That would not be what we mean by a falsehood.

T.—Try the definition again then.

P.—A falsehood is doing or saying something not true with intent to deceive a human being for a *selfish or bad purpose*.

The questioning went on further in a very interesting manner; but this will do for our illustration, for at this point the teacher had conducted his pupils by the exercise of their own minds to one object he had in view,—namely, such a definition of a falsehood as included the motive.

Let teachers study this art conscientiously, and they will be richly rewarded by the progress of the minds whose development they have in charge. Of course, the greatest exemplar of this useful art known in history was Socrates,—an illustration of it so great that, next to his high morality, it is his chief claim to renown.

J. V. BLAKE.

MATTER.

The majority of people think they know a great deal about matter. They name its so-called properties and qualities, never doubting that they are describing an external substance as it exists *per se*, instead of the different ways in which their consciousness is affected by a reality of whose ultimate nature they know nothing. They imagine that outward things are directly mirrored by the senses, and that they are exactly what they seem to be. Tell them that to us matter is a congeries of qualities,—weight, resistance, extension, etc.; that these words imply and describe our own conscious states, and the effects on us of an external reality rather than the reality itself,—and they are utterly unable to comprehend what you mean.

It is none the less true that mind and matter form a synthesis, and neither can be conceived without the other. We are compelled to think of mind in terms of matter, and matter in terms of mind. The hardness and softness (resistance), for example, which we ascribe to matter are sensations: the substantial form in which we are com-

pelled to represent mind is necessarily material. Every perception, every sensation, implies a sensitive organism and an external reality acting upon the organism; in other words, two factors, without either of which sensation is inconceivable. This is what Aristotle meant when he described sensation as "the common act of the feeling and the felt." Without the living organism, what are sound, color, fragrance, hardness, softness, light, and darkness, or any of the so-called secondary, not to speak here of the so-called primary, qualities of matter? Can there be sound without an ear to collect and transmit the aerial vibrations to the acoustic nerve where, to use a materialistic terminology, they can be assimilated and transformed by some mysterious process into sensation, or where they can be so modified that the motion in its *subjective* aspect becomes the sensation we call sound? Without an eye can there be luminous effect?
