Library of Science.

The publication of our *SCIENCE LIBRARY* will be welcomed as an event of the highest importance to thousands. For the first time it brings within their reach the scholarly productions of the *MASTERS* in modern science. Each work is complete in itself, well printed from good or large type, on excellent paper, bound in neat paper covers. In cloth-bound books these same works have heretofore been published at prices ranging from \$1.50 to \$3.00 each.

By JOHN TYNDALL, F. R. S.

The Forms of Water in Clouds and Rivers, Ice and Glaciers. 19 illus. 15c
Lessons in Electricity. 60 illustrations. 15c
Six Lectures on Light, with illustrations. 15c

By HERBERT SPENCER.

Education: Intellectual, Moral and Physical. 15c
The Data of Ethics. 15c
Progress: Its Law and Cause, with other Disquisitions. 15c

By THOMAS H. HUXLEY, F. R. S.

Man's Place in Nature; numerous illustrations. 15c
Origin of Species. 15c
Physical Basis of Life, with other Essays. 15c
Lectures on Evolution; illustrated. 15c
Animal Automatism and other Essays. 15c

By BALFOUR STEWART, LL.D.

The Conservation of Energy; with numerous illustrations. 15c

By CHARLES DARWIN.

The Origin of Species. 60c

Town Geography. 15c

By ALEXANDER BAIN.

Mind and Body. 15c

By CAMILLE FLAMMARION.

The Wonders of the Heavens. 15c

By JOHN GARDNER, M.D.

Longevity: The Means of Prolonging Life. 15c

By R. K. MILLER, M.A.

The Romance of Astronomy. 15c

By GRANT ALLEN.

The Evolutionist at Large. 15c

Vignettes from Nature. 15c

By PROF. H. HELMHOLTZ.

Popular Scientific Lectures, illustrated. 15c

By GEORGE RAWLINSON.

The Origin of Nations. 15c

By ANDREW WILSON, Ph.D.

Facts and Fictions of Zoology. Numerous illustrations. 15c

By RICHARD CHENEVIX TRENCH.

On the Study of Words. 30c

By ARCHIBALD GEIKIE, F. R. S.

Geological Sketches. 30c

By HUXLEY, ACASSIZ and Others.

Darwin and Humboldt. 15c

By W. STANLEY JEVONS, F. R. S.

Money and the Mechanism of Exchange. 30c

Any of the above sent postpaid on receipt of the price.

IN BOUND VOLUMES:—All of the above, with numerous other important works in Science, are published also in five large octavo volumes, aggregating 3,381 pages, neatly bound in cloth, for the net price of \$5.50 per set; or strongly bound in half Russia, red edges, for the net price of \$6.50. If by mail, 20 per cent. extra required for prepayment.

100-PAGE CATALOGUE sent free. The best literature of the world at the lowest prices ever known. Books sent for EXAMINATION BEFORE PAYMENT on reasonable evidence of good faith. Mention this paper. Address

JOHN B. ALDEN, Publisher,

F. O. Box 1227. 393 Pearl Street, New York.

TRACTS.

No. 1.—*Truths for the Times*, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 2.—*Fear of the Living God*, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—*Lecture on the Bible*, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 4.—*Christian Propagandism*, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. Full of Figures, Facts, and Interesting Extractions. Price 10 cents; 12 copies, \$1.00.

No. 5.—*"God in the Constitution"*, by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.

No. 6.—*"The Sabbath"*, by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 7.—*"Compulsory Education"*, by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—*The Present Heaven*, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—*The Christian Amendment*, by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.

No. 10.—*The Impachment of Christianity*, by F. E. Abbot. Sixth Ten Thousand. Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.

No. 11.—*The God of Science*, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.

No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, \$1.00.

No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—*A Study of Religion: The Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.

No. 15.—*The Battle of Syracuse*. Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

BANKERS,
Doylestown, Pa.

Draw Bills of Exchange on England, Ireland, and other points in Europe. Agency for the American Line of Steamers.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price \$3.00 per annum; 75 cts. for three months to trial subscribers.

THE INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR's basis of action, and the best exertions of its managers will always be used to render it a free and independent journal devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

JOSIAH P. MENDUM,
PAINE MEMORIAL BUILDING,
Appleton St., Boston, Mass.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent, will be excluded.

For 1 to 12 Insertions, . . . 10c. per line.
" 13 " 25 " . . . 8c. " "
" 26 " 51 " . . . 5c. " "
" 52 " " " . . . 5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent. On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the above calculated, will be made.

PUBLICATIONS

OF THE

BY B. F. U.

PROF. F. W. NEWMAN, who has done such grand service for free thought, reaches his eightieth birthday on June 27.

THE *Banner of Light* denies the statement of a Philadelphia paper "that the séances of the mediums for the physical manifestations in Boston were not remunerative the past winter, etc. The fact is just the reverse. The managers inform us that the interest in the spiritual manifestations was never more satisfactory and remunerative."

At the Easter meeting of the pew-holders of Christ's Church Cathedral, Montreal, there was a disgraceful scrimmage. The Clerk of the congregation was objected to as Secretary, and sent sprawling on the floor by a member of the High-Church party. Frequent hisses and applause accentuated a scene of disorder, which lasted until one o'clock in the morning.

THE low average morality of the people is indicated by the following paragraph from the Boston *Sunday Courier*: "While, in general terms, it is recognized as true that war between any two of the family of nations means loss to all, and while equally is recognized the moral enormity of carnage and bloodshed, it is amazing to find how general is a feeling of submission to the catastrophe of a war between England and Russia, because it is expected to start up trade in this country."

BISHOP LAFLECHE, of Three Rivers, Canada, wants the St. Louis Club of that city to come under his episcopal direction. The St. Louis, like the Somerset or St. Botolph Club of this city, a pleasant social resort for good people, objects to revision of its rules by ecclesiastical authority. Pressure may repeat the history of *L'Institut Canadien* of Montreal, which latter concern in the direct and indirect consequences of its resistance to arbitrary interference cost the Church of Rome, among other things, \$60,000 in cash.

JOHN A. TAYLOR, corporation counsel of Brooklyn, in answer to an inquiry from the Civil Service Commission, affirms that women are eligible to serve in positions under the city government,

and may, the same as men, compete in examinations for these positions. He says very sensibly: "Clearly, the law should be plain which should shut out any large class of persons from demonstrating, under the careful restrictions provided by your commission, their capacity to serve the public; and no great hardship can arise from placing on the salary list a few women from whose money, collected through the tax-office, we are constantly paying the salaries of males."

MR. ALLEN PRINGLE, in his admirable article in the April number of the *Popular Science Monthly* on "Apiculture," says that "the more advanced scientific bee-keeping of to-day, without assuming much license or latitude, may be called 'one of the fine arts.' To the cultured and æsthetic devotee of art proper in the recesses of his studio, who has never practically studied the nature and habits of the wonderful little honey-bee, and manipulated it from day to day, this claim for our beloved art may excite a smile. Nevertheless, the apiarian devotee, who has studied, observed, and handled the marvellous denizens of his hives for twenty years, will affirm his art, no less than the flavor of the nectar it produces, to be, indeed, *fine*."

REV. DR. GIFFORD condemns the skating rinks because people go there for pleasure. He seems to regard pleasure as sinful. "Man," he says, "cannot love God and pleasure at the same time. When he loves God, he excludes pleasure. When he loves pleasure, he excludes God. There is not room enough in the same soul for both. People go to skating rinks for pleasure: that is enough to condemn them." This reminds us of what Macaulay said of the Puritans, who were opposed to bear-baiting "not because it gave pain to the bear, but because it gave pleasure to the spectators." It did not seem to occur to Mr. Gifford that very many people go to church for precisely the same reason that people go to the skating rinks, because of the pleasure it gives them. Mr. Gifford is as severe in his condemnation of the theatre as of the rinks. The Boston *Herald* justly says: "The philosophy of Mr. Gifford's discourse is faulty as its statements and deductions are false, and the religion it teaches is a libel upon God. The idea that the Creator who made the colt to play, the lamb to skip, the dog to frolic, the child to crow and laugh, and all creatures to be glad in their own way, regards pleasure as so alien to himself that 'man cannot love God and pleasure at the same time,' is monstrous."

WE have received a printed circular entitled "What Unitarian Christians do Believe and What they do not Believe," by Jasper L. Douthit. The author says that, in preparing this new edition (the third), he has had the criticism and suggestions of more than a hundred Unitarians, most of them ministers, and has consulted freely various statements published by individuals, churches, and conferences, and especially those issued by the American Unitarian Association. The first article of the Unitarian creed, as stated by Rev. Mr. Douthit, is as follows: "Unitarian Christians do believe in one God, the Father, who is strictly one

Person, one Being, and only one; in Jesus Christ, the Son of God and the Son of Man; and in the Holy Spirit, the presence and power of God in the human soul." Among the other beliefs are these: "Forgiveness by faith in God through Christ saves us from a sense of alienation from God, but it does not immediately remit any other penalty." "That Jesus Christ is the best teacher and guide in morals and religion, and the reason, conscience, and soul are our final authority as to what he taught. Our fellowship is a *fellowship of Christian believers*, each one being free to define his own belief for himself." There are not a few Unitarians who would be unable to subscribe to the creed stated by Mr. Douthit.

INDUSTRIAL pursuits and commercial interests depend so largely, in the complex and extended civilization of modern times, upon international conditions that war between any two nations entails more or less loss upon all. A temporary advance in the price of wheat in this country, in consequence of a possible war between England and Russia, is referred to by some as proof of the great advantage such a war would prove to this country. This is a short-sighted as well as a heartless view of the subject. The temporarily increased activity which might result here in any department of trade would be more than offset in the end by the diminished power of purchase and consumption sure to result from the losses of the war.

THE Crimean war brought to the grave a million soldiers and workmen, so Kinglake declares; and the money cost to all the nations involved has been computed, by a French statistician, to be over \$1,700,000,000. It ought to be impossible in this enlightened age for two nations to engage in a contest to settle, by brute force, matters that belong to the domain of reason. When Mr. Adams proposed on behalf of the American government to submit the differences in regard to the Alabama claims to arbitration, Lord Russell declared rather haughtily that "her Majesty's government are the sole guardians of their own honor." But other English statesmen favored arbitration, and the question in dispute was settled at Geneva in a way that compromised neither the honor nor the dignity of the parties to the dispute. Why should not the dispute between England and Russia regarding the Afghan boundary be also a subject of that arbitration which Gladstone declared once to be "a powerful engine on behalf of civilization and humanity"? A writer in the *Pall Mall Gazette* says, "If ever there was a question fit to be referred to arbitration, it is this." As the Chicago *Inter-Ocean* remarks, "Before these powers actually get a throat-grip on each other, and plunge into a bloody struggle, it would be worth their while to calculate whether the advantages either might gain would compensate for a price that might come very close to that of the Crimean horror." It looks now as though the Dardanelles and not the Afghan frontier would prove the point of antagonism between English and Russian interest.

A ROPE OF SAND FOR LOGIC.

Joseph Cook has always been fond of securing the indorsement of distinguished names for his views. And this year, his Boston lectures being particularly thin in their material, and being withal crowded into a corner by his long "prologues" and "interludes,"—not to speak of other side-shows of the "Monday Lectureship,"—stood in special need of such indorsement. He accordingly solicited letters from well-known theologians, college presidents, professors, and others, in which the writers should succinctly state the evidence which to them respectively was most conclusive for their belief in the supernatural authority of Christianity. Several such letters were read at the last two lectures. Most of them, perhaps, were characterized by signs of senility in the writers, which need not be wondered at, as generally they were from ex-presidents and ex-professors. But in none of the letters was this quality more painfully apparent than in the one from Prof. Park, of Andover. Among all the writers, Dr. Park would probably be pronounced as not only the most famous theologian, but as having naturally the largest measure of intellectual strength. He has been a power in the Orthodox Church for half a century. In the earlier part of his career, he was regarded as latitudinarian in doctrine. Latterly, he has been a leader of the conservative party, and busily intent on trying to prevent the old landmarks of Orthodoxy from being swept away by the very doubts and questionings which his earlier teachings aided in arousing. But, if his strongest defences are shown in this letter sent to the "Monday Lectureship," his exertions, plainly, will be of little avail. The letter discloses the fact that for more than fifty years he has been anxiously laboring to hold his creed together by a rope of sand.

Dr. Park begins his letter with a confession of his early doubts, and of how they were—not removed, but silenced. He says:—

Fifty-five years ago, I was sorely troubled by the objections of infidels against the morality of the Old Testament. About that time, I heard of a remark made by Dr. Channing in private conversation. The remark was this: "I have so high an opinion of the character of Jesus Christ that I am ready to believe anything and everything which he says." This remark appeared reasonable to me. The perfect heart of our Saviour would have made his intellect perfect, and his perfect intellect would have detected the real character of the Old Testament. If this character were not good, he would have detected it and would not have indorsed it. But he did indorse the Old Testament in the fullest degree and in the most decisive terms. If I cannot see the propriety of some of its statements, I believe that he saw it; and I bow down before his authority.

Dr. Park here took for the corner-stone of his creed the original Unitarian averment of the moral perfection of Jesus. But, even admitting that position, it is a crumbling foundation on which to build the Orthodox faith in the Bible as an infallible revelation. The Unitarians soon saw the weakness of the argument that entire purity of heart implied perfect intellectual discernment; and they generally came to say, with James Martineau, that the one point of infallibility left in the Bible was the moral character of Jesus, while all matters therein involving mental knowledge and perception, including Jesus' own mental beliefs, were to be tested and judged by the ordinary methods of human reason. Some Unitarians even came to see that to assert the moral perfection of Jesus as something to be judged apart from revelation would yield no infallible standard, since that assertion was made only by comparison of the moral character of Jesus with the finite and

fallible moral standard of man himself; and some of the bolder ones even affirmed that, according to their ideal of a morally perfect character, Jesus did not come up to the standard at every point.

But Dr. Park does not appear to have seen any of the logical difficulties in the way of building up the Orthodox doctrine of the Bible on the logically loose "remark made by Dr. Channing in private conversation." So he proceeded, merely on his own "high opinion of the character of Jesus," to infer that Jesus must have had a perfect intellect, and thence to infer again that his perfect intellect would have detected the real character of the Old Testament so that he would not have indorsed it, as he did, if its character had not been sound and good. And thus Dr. Park arrived at the conclusion that, even when his own reason fails to see the propriety of some of the Old Testament statements, he can believe that Jesus saw it; and he silences, therefore, his own reason before his authority. But *did* Jesus "indorse the Old Testament in the fullest degree and in the most decisive terms"? We have an idea that he questioned and denied some of the things "said by them of old time"; that he made light of not a few of the ceremonials directed to be observed in the Law of the Old Testament; that he openly violated the Old Testament commandment with regard to the Sabbath; and that, in other things, he was a pretty radical revolutionist in respect to the Hebrew religion. Prof. Park's logical rope, with one end attached to Dr. Channing's "remark" and the other to the "Andover creed," does not appear to hang well together. And, at best, how far does his method of inferential logic raise him above his own "opinion" of Jesus' character, from which he started? Has it come to this,—that the Orthodox creed rests, for its corner-stone, on the mere fallible opinion of any man?

Dr. Park brings forward several points of Orthodox belief, and seeks to substantiate them against hostile attacks by the same logical (?) method. We will quote one more of these, the one which he elaborates at greatest length. It is his argument for miracles, and is as follows:—

Once more. Fifty-five years ago, I became very sceptical in regard to the miracles recorded both in the Old Testament and in the New. The evidence in favor of them was too strong to allow my disbelief in them; and, on the other hand, the evidence against them was too strong to allow my belief in them. I remained for a long time in painful suspense. But, when I reflected on the vicarious atonement made by our Lord, I was so impressed by its grandeur that miracles in favor of it appeared to be reasonable. There seemed to be a propriety that he should rise from the grave. Indeed there seemed to be an impropriety that he should not rise. His atonement is so noble, and speaks so directly to the heart, and is so benign in its influence on men, that it removes the antecedent improbability against the great miracle of his resurrection. It creates a probability in favor of that miracle. It justifies our implicit faith in the testimony which favors it. We fully believe that Christ rose from the dead. Now, this is the most stupendous miracle recorded in the Bible. If we believe the greater, we can easily believe the smaller. If we believe in one, we can believe in all the miracles connected with that one. Now, all the miracles in the New Testament are connected with the sublime miracle of Christ's resurrection. All the miracles in the Old Testament are connected with the same. They were all designed to support the authority and to heighten the honor of the Messiah who was to come.

Let us analyze this argument. Prof. Park was unable to accept the ordinary evidence for the Bible miracles. Though not rejecting them, he says emphatically that "the evidence against them was too strong to allow of my [his] belief in them." He was in a state of "painful suspense." But, reflecting on the "vicarious atonement," his

mind was so impressed by its "grandeur" that all antecedent improbability against the particular miracle of the resurrection of Jesus was removed. Indeed, Jesus' atonement was so "noble" that "there seemed to be a propriety that he should rise from the grave"; ay, "there seemed to be an impropriety that he should not rise"! And, on the strength of this seeming "impropriety" that Jesus should remain in the tomb because of the nobleness of his act of atonement, Prof. Park henceforth gave "implicit faith" to the testimony for the resurrection, which previously his reason had been unable to accept.

It is to be noted, too, that Prof. Park's mind must have been impressed by the purely natural aspects of Jesus' death on the cross. The supernatural halo about his character, the miracle-element in his life, the ordinary Orthodox doctrine of the atonement as the act of a dying God, must all be left out of the question; for whether or not Jesus was invested with miraculous power was the very point in debate. If it was the common Orthodox view of the atonement which so impressed Prof. Park's mind, the argument would have been in too evident a circle to hold for a moment. We must assume that it was the simple, natural nobility of the atoning act—the death of a noble martyr for a grand cause—that had such a powerful effect on Dr. Park's mental vision that it seemed an "impropriety" that so noble a being should not rise miraculously from the grave; and his reason accordingly was convinced that "the stupendous miracle" of the resurrection of Jesus was true. Logically, this was a long and remarkable step; but Dr. Park must have taken this stride,—unless he described the vicious circle above indicated.

This great miracle being thus justified to Prof. Park's faith by the deep impression made upon his mind by the "grandeur" of the atonement, it became an easy thing for him to accept "all the miracles in the New Testament." The "greater" includes the "smaller." There may be no logical connection between them, and the conditions of the testimony for them may be very different; but, when faith has once adjusted its capacity to a miracle of the size of the physical resurrection of Jesus, it apparently can take in all the rest without any trouble,—the walking on the water, the stilling of the waves by a word, the feeding of five thousand men with five loaves and two fishes, and the like. The reasoning is not strictly scientific, the step, again, is long and not exactly logical, yet it is taken. Dr. Park took it. But still longer and more extraordinary was that other step by which Prof. Park went back to the Old Testament and took into his faith all the miracles there on the ground that "they were all designed to support the authority and to heighten the honor of the Messiah who was to come." This is a proposition that would appear to need some proof. The Jews apparently thought that the Old Testament miracles had something to do with substantiating their religious beliefs. But, according to Prof. Park, they all pointed to the miracle of Jesus' resurrection, and they are only rendered credible by the nobility of Jesus' atonement. At least, he himself was not able to believe them until his mind was impressed by the "grandeur" of the "vicarious atonement" on Calvary.

But Prof. Park has hung upon that impression on his own mind altogether too heavy a weight. The chain will not hold. If this is his strong argument for the supernatural authority of Christianity, we imagine his defence against infidelity will raise more doubts than it can allay. Not all persons are impressed in the same way by the thought of the "vicarious atonement." Not a few

people fail to see the nobleness of a transaction in which offended justice is alleged to have been satisfied by the punishment of an innocent being. They have the same doubts on other points which Prof. Park describes himself as having had fifty-five years ago; but they have quite as much trouble over the idea of the atonement, and are not likely to find relief by his method of cure. It is, indeed, sad to think of a man with Dr. Park's splendid intellect and fine scholarship putting down by such a process the rational protests and natural inquiries of his vigorous mind, and spending his long life in constructing an argument for the Orthodox system of belief, which, as he uncoils it in this letter to the "Monday Lectureship," proves to be only a rope of sand.

WM. J. POTTER.

"ARE YOU A CHRISTIAN?"*

A tract was put into my hands in travelling, the other day, with this title. The tract distributor did not wait for an answer. Had he done so, I should have been obliged to reply, "In your sense of the word, probably not."

Had he been charitable enough to ask, "Are you not then, in any other sense, a Christian?" (the remark would be charitable, observe, as implying that there might be some other respectable definition besides his own), I should perhaps have answered, "I hope so." For many people simply mean by Christian one who "calculates to do about right," as a good woman once said to me. And I should be sorry to be left wholly out from that list.

Yet, if he had taken the trouble to follow the matter still farther, and had said, "But do you call yourself a Christian, putting your own meaning on the term?" then I should probably have said, "No, I do not."

To be sure, a general word like Christianity becomes, by much using, like a box with a false bottom, into which you can put as much or as little as you please. There are senses in which I might feel proud to be called a Christian, just as, if I wrote blank verse, I might be proud to be called Shaksperian. But as I know that the word is not generally used in that sense, and as we cannot spend our lives in giving definitions, I should prefer to be called simply a man—or, if you like to add an epithet, a good man or a bad man—rather than a Christian.

I remember that once, when studying at Divinity Hall in Cambridge, I happened to meet Octavius Frothingham at the wood-pile in the cellar; and we passed very rapidly, as students will, from the knotty wood to some other hard knots. I said, "Why, if we believe Jesus to have been simply a man, should we wish to call ourselves Christians?" He answered, "I have no wish to be called a Christian: I am quite willing to go through life as a Frothinghamian." His position then seemed to me very consistent, and I am sure he has adhered to it well.

The trouble about calling one's self a Christian is, first, that it is a very vague word, used in a great variety of meanings. Secondly, that, if you do not believe Jesus to have been the Christ (in any but some imaginative, Oriental sense), you have really no business with the word. And, thirdly, that the world has been trying for centuries to outgrow these domineering personalities in religion,—as in Buddhism and Mohammedanism, for instance,—and it seems better to throw one's influence on that side. Every great religious personality first helps the world and then hinders it. When we leave Calvin and Wesley and Swedenborg, and come among the Calvinists and

Wesleyans and Swedenborgians, we are conscious of narrowness and imprisonment. The greater the man, the more he appears to imprison other men. It seems the divine compensation for the good that great men do,—this belittling they leave behind them.

The profoundest writers of the age have not missed this truth. Emerson said, twenty-five years ago: "Genius is always the enemy of genius by over-imitation. The English divines have Shaksperianized now for centuries." And Goethe says in the same way, "Shakspeare is dangerous to young poets: they cannot but reproduce him, while they fancy that they produce themselves." (*Aphorisms*, by Wenckstern, p. 111.) What then? Are we not to read Shakspeare? Of course, we are; as Goethe says elsewhere, in same book, "The artist who owes all to himself has very little reason to be proud of his master." We need teachers; but it is the exclusive acceptance of any one teacher, even though he be the highest, that dwarfs a man.

It is inevitable, I suppose, that all our sects, in relaxing the severity of dogma, should pass through an intermediate period when the worship of Jesus stands in place of all other creed. To them, this worship will do good, because it is a step forward. But, to those who have been accustomed to a simple "Natural Religion," this personal idolatry would be a step backward; and it is better to keep clear of it. And it is satisfactory to think that those who decline to take Jesus for an exclusive exemplar really get more good from his example in one way than those who are more exclusive.

"Shakspeare was not made by the study of Shakspeare," nor Jesus by the study of Jesus. He at least was not a Christian,—in the sense of dependence on another,—whoever else is. If to be a Christian meant to get spiritual knowledge at first hand, as Jesus did, the name would be indeed worth assuming. But, if his disciples are to be trusted, he ended, like inferior other prophets, in teaching that no man could come to the Father but through him; and it is now too late by eighteen centuries to disentangle this subtle thread of error from the word "Christian." If this be so, we shall save ourselves from much perplexity by not claiming it.

T. W. HIGGINSON.

VICTOR HUGO.

Victor Hugo's eighty-third birthday (February 26) was celebrated in Paris with remarkable enthusiasm. Happily, he is not yet too aged to appreciate the homage which the occasion has called forth; although one must read this in his face, instead of hearing from his lips the response that he feels. In fact, robust and erect as he appears, the veteran author is passing into the Silent Land. Deafness has encroached so far upon him that he seems disinclined to converse. Perhaps he suspects his intellectual powers of failing with his hearing, though this is far from the fact. I called upon him, by appointment, on his birthday; and, though he spoke but little, what he did say was genial, vigorous, and had in it the old ring of the orator to whose eloquent conversation I had listened years ago. His humor also remained. He was amused by the title given him in the *Pall Mall Gazette* which I brought, "The new King of France," and the ingeniously ugly portrait which accompanied the article, which otherwise was gratifying, especially as it quoted Tennyson's sonnet addressed to him after his hospitality to the Laureate's son. His face beamed at the name of old John Brown, his daughter-in-law having reminded him that I conveyed to him twenty-two

years ago, from his American friends, a bust of the captain, concerning whom he had written, "America executing John Brown would be Washington slaying Spartacus." I was accompanied in this visit by Theodore Stanton; and, when we left, the old man attended us to the door, and parted from us with his habitual graciousness. This was about two o'clock in the afternoon. The family were busy with decorations of the house for the large reception which was to occur in the evening. Already, at the door outside a crowd had collected; and I observed a number of policemen, whose presence suggested the possibility of an anarchist demonstration. Nothing of the kind occurred, however; and the anniversary has passed off to the general satisfaction.

On the evening before the poet's birthday, a grand dinner was given at the Hotel Continental, at which two hundred guests were present. The leading journalists of Paris were brought together on this occasion. I expressed to my neighbor some surprise at seeing there a representative of the *Figaro* like M. Wolff along with a socialist editor like M. Maret, but he said it was the unique characteristic of Victor Hugo that all parties were united in their love for him. He has become a figure of France to whom none can be disloyal. The materialists love him, though he believes in God and immortality; and the Catholics revere him, though they cannot claim him as a Christian. The only lady among the two hundred guests, Madame Edmond Adam, who came as an editor, leaned upon his arm as we passed in to dinner, and sat by his side. She is accustomed to declare herself a pagan, a devout believer in the polytheism of Greece; but what her real religion is may be gathered by a note contributed to a collection of autographic felicitations presented to Victor Hugo on this occasion: "Maitre, Vous avez la taille de ceux dont les vieux Grecs faisaient des dieux. Votre amie, dont l'admiration s'accroît avec vos années, Juliette Adam." Madame Adam is a beautiful lady, whose wit and grace added much to the charm of the evening. With the *menu* was a leaf on which was a design by Maurice Leloir, representing two fair genii bearing a wreath and palm to the head of a statue of Victor Hugo. The speeches were few and brief. Arsène Houssaye read a little poem he had composed for the occasion; and Mounet-Sully, tragedian of the Théâtre Français, read effectively a poem written by Victor Hugo in 1821, entitled "Le Poète dans les Révolutions." M. Richard presented to Victor Hugo the first *fascicule* of the new *édition de luxe* of his works, and also a medal engraved by M. Roty, on which was a portrait, and on the other side, around the Muse, the inscription, "Il vivra éternellement sur les lèvres des hommes." M. Richard, in his remarks, promised the author that he would live to see the completed edition of forty volumes laid on an altar in the Champ de Mars on the sacred anniversary of '89. Victor Hugo smiled at this. He appeared deeply interested by the reading of his poem, repeatedly bowing his head with delight in the splendid rendering. When the speaking was over, and all eyes were turned upon him, he arose, and said: "Gentlemen, I can say but a few words. My emotion is too keen to speak long. You who hear me, and who are the representatives of French thought,—be thanked!" When the company passed into an adjoining room, where conversation was continued, some of the most eminent persons present conversed with young Charles Hugo, a fine-looking and modest youth of seventeen, who made a pleasant impression on all. He promises to be a good outcome of *The Art of being a Grandfather*.

"Child-lover" is the epithet that Tennyson has

* From *The Index* of Jan. 25, 1873.

applied to Victor Hugo, and it is felicitous. The great happiness of his age is to have little children around him, and to witness their joys. At the children's ball, given at the opera Mardi Gras afternoon, I observed him seated in a box, gazing with serene delight on the variegated sea of costumes rippling and dancing before him. Around him were his grandchildren; and an artist near me was making a study of the group, which ought some day to appear in the Salon. Similar balls are sometimes given at his house, when this old king of the republic of letters *s'amuse* in his way,—that is, in giving delight to others.

It is by his large and quick sympathies that Victor Hugo has been carried to the Left, where beats the heart. The son of a warrior, bred in the camp, his very pleadings for peace have echoed thunders of the artillery, as in that grand invective against war uttered in his oration on the centenary of Voltaire. I heard that oration, and was impressed by the feeling that, though I had seen the chief French commanders in the time of war, here was the ideal marshal of France. It was a proud soldier still who remained in exile on his island for twenty years, scorning the twice-offered amnesties of "Napoleon the Little," answering, "When Liberty returns, I will return." His great heart has pledged him to the people: the literary fraternity sometimes call him their father, but to the poor and the toiling his tenderness is maternal. On the evening of this birthday festival, when his drawing-room was full of gay children bringing him flowers, and a splendidly dressed company, the old man was told that at his door there were some thousands of people, mainly working men and women, come to pay him homage. He went to the front window of the ground floor, and, when it was opened, sat there as the vast throng filed past, each bowing to him. Then he said, "My friends, age draws on; but, before I die, let me say to you how deeply I am touched by this manifestation"—Here his voice broke down, and tears flowed freely on his cheeks. The people were silent with sympathy. Then the aged man summoned all his powers, and cried out, with a loud voice, "Vive la république!" The great crowd with one voice shouted back, "Vive la république! Vive Victor Hugo!"—this last cry echoing on through the great avenue that bears the poet's name, far and wide into the night.

For some days, the Paris press has been, as it were, edited by Victor Hugo; and the illustrated papers especially have devoted themselves to his apotheosis. *L'Univers Illustré* has a fine picture of John Brown pausing on his way to the gallows to kiss a negro child held in its mother's arms, side by side with a full-length portrait of the poet. Victor Hugo's words concerning John Brown have also inspired a note, included among the autographs already referred to, from a Haytian negro physician and scholar here,—St. Louis Joseph Tanvier,—who assures him that his name lives in the heart of every child of the dark race. These autographs, collected by the editors of *Gil Blas*, and bound finely in red and gold, are very numerous. Jules Simon writes: "Others will thank Victor Hugo for his works: I thank him for the unanimous admiration which they have inspired. All parties and all peoples together applaud his glory. Of all the spectacles our age shows us none is more consoling and reassuring than this." Renan opens the volume with the words, "Onorate l'altissimo poeta." Alphonse Daudet tells how, in boyhood, he used to read Victor Hugo all night, his candle veiled with paper lest the light should betray him. Naquet writes, "What glory for France to be the country of Victor Hugo!—Victor Hugo, less grand because the greatest of poets

than because he has placed his marvellous poetic genius at the service of the noblest of causes, that of humanity." Charles Bradlaugh writes, "To Victor Hugo, poet and pleader for the poor and suffering, lover of children, teacher of men, hater of tyrannies, worker of freedom, the reverent and admiring tribute of C. Bradlaugh." Lord Lyons writes:—

"Still may he have
All 'that which should accompany old age,
As honor, love, obedience, troops of friends.'"

William Rossetti:—

"Soul of the Poet and Hero of all the world,
With heart for all the world,
Homage and love to thee from all the world."

Wilkie Collins writes, "I offer the tribute of my respect to the great writer whose works are worthy of his country, whose life is worthy of his works."

There are tributes in Greek, Polish, Chinese, Arabic (Ali Bey), Spanish, Italian, but, alas! only one from Germany!

The *édition de luxe* promises to be a superb series of volumes. The illustrations are by the finest designers and engravers, and, so far as I have seen them, are beautiful. This will be the real monument of Victor Hugo, who, along with Carlyle, Emerson, and Darwin, will always be regarded as among the most striking figures and potent influences which our century has produced.

MONCURE D. CONWAY.

THE PARALYSIS OF THE PULPIT.

Among the many ministers who to-day are perceptibly heretic toward the established creeds of their churches, how many are cognizant that they invite, with ill-bestowed temerity, two dangers,—one of stultification toward the corporate Church, and one of stultification toward individual communicants? The innocent early-day acquiescence in loosely considered confessions of faith often returns in later life as a spectre to vex good souls struggling toward the light. We must, in looking over this field, always, of course, allow for the unconscious heresies that appear in men who hereafter may realize their position; for a great deal of such growth is evident to an inquirer. This care is necessary, in order that we may not do wrong to those who, hedged by an organized intolerance which gives little liberty once it is sworn to, writhe and tear the flesh in manly endeavor to escape bonds. But, after we have yielded this much, the limit of concession is reached. The further wranglings between the pulpits and the synods is not so habited as to command respect or sympathy. Up to a certain point, the thinker may believe his new views in accord with dogmas he conceives to be necessary truths. The time must come, however, when the moral nature of the man is submitted to test, and, when acknowledged, must take the place of suspected heresy. In the United States, to-day, we can recall numberless instances in which this seeming course is being enacted. Some among the heretics are merely formal Protestants,—alleging not that a dogma, for example, is wrong, but that the Church's interpretations of it are unequal to the trials of the age. But, generally, the difficulty presents one side, dealing not with varied offences, but with the common sin that persuades men to live under and by stated professions long after the substance of such professions is, to them, dissipated.

The pulpit is full of compromise. This comes from the fact that dogmatic religion is parading without a definition. It was once possible to bring all harbored within stated enclosures down to a common covenant. That is no longer done. The small advisory boards of the sects are given up now to dissension and uncertainty. How rarely

indeed is the preacher brought to an absolute description of what he thinks as to the future life! Once, hell was an actual factor for Christian propagation. Who dares to make it that now? The hypocrisy of unmeaning profession has usurped all potent places, and given the world fashion as a substitute for faith. Loosely sit all the demands for sincerity. Can we wonder, knowing this to be so, that men in the pulpit can dare to outrage every moral duty, and preach that which gives the lie to their own souls and to the creed under whose shadow they claim warrant? Truly, the man "without God in the world" is not the man whose heart tells him that no infinite love exists in the far-away skies to shape human life to certain ends, and who dares so to make a courageous deed of his persuasion. Rather is the "atheism" elsewhere, each could tell us in what neighboring pulpit, among the offenders, who are the "God-invested" of form and spiritual disease!

If ever evil needed that passion of righteous denunciation should follow it, this, first and foremost, appeals to honest men. Do we seek the soul or the vestment of truth? And, if it is the soul, do we not insult Nature herself by forging a name whose honor we have no warrant to make trade and barter with? What is life to serve, if not trust in its only true sense? We bow to false gods of our own creation the while we scorn those innate to natural power. This taint that vitiates the pulpit thought of modern days soils all that is called "the religious life." It makes men turn aside from the open pathway upon which their untrammelled inclinations would lead, to seek the jungles and serpentine resorts of literature. It leads to invention of useless terms, to sophistical efforts to establish consistency, to effeminating measures to emotionalize an audience into forgetfulness of intellectual implications, to a complication of external trappings that could be relied on to varnish the hollowness of spiritual promise. Is this nothing over which we need be anxious? Is justice so unmeaning that it deserves to be traded off for hypocrisy and tergiversation.

No one impugns the pure souls whose order of life is the same without and within. But the pulpit collectively gives out no such clear note at this day. Any one who doubts the declaration needs but to nail the first minister he meets to a definition. The road must be narrow, if we would hold our victims on such an occasion! When we do meet with such men as accept the challenge,—we might name Dr. Shedd,—those supposed most closely to agree with them cry out that the Church claims judgment for its to-day, not its yesterday. But when, again, we take the complaint in good faith and ask them, "What of the now?" evasion still stands foremost to baffle inquiry.

Nor can I wonder that the preaching of the time is simple equivocation. Long ago, men ceased resorting to the Biblical arguments for the State and ordinary social life. The common intellect found it necessary in science to explain phenomena by other than first century learning. To attempt to cling to religious truths of early ages while parting with all other primitive cogitations outrages reason. Therefore, integrity, as it generally finds expression in churches, speaks with a forked tongue. There is no marvel whatever in the experience. It is not possible to fit childhood's dreams with maturity's realities. However the inspiration lasts, the material grows old. Then comes in the conflict for the new body. The test involves the wreck of formalism.

There is something forbidding to an unfettered intellect in the contemplation of the struggles many men in pulpits invite before they are willing to resign names and things which no longer of

right accrue to them. Allowing for every force "bred in the bone," the dissimulation (for it is practically that) presents a danger which, while incident to fossilized organization, is repugnant to the taste of an enlightened investigator. Think (for each one can), as fitting here illustratively, of the divers Unitarians who have so sadly pacified all feeling of independence. That Church, if we but duly note it, contains, along with some of the noblest of men, a whole cavalcade of officers and privates to whom the idea of consistency seems an insult. Perhaps we do wrong to claim an exceptional coherency from Unitarians. I can easily admit that, if Unitarianism is willing to pool its issues in the Orthodox pot. But, if we have the right to ask explicitness of the mediæval remains, we certainly are entitled to an explanation from this new expositor, who rebukes mediævalism for its lax lines and magnificent subterfuges. No instances of clerical recalcitrancy are apt so forcibly to offend as those found among Unitarians. For that sect, even radicals, who do not halt with it, have a natural affection. Yet what shall we say of its cowardice? As the last stopping-place in "respectability," it shelters a refined clique of the educated and the aspiring, who, did they but obey their free sense of reason or their just interpretation of the Unitarian name, would no further outrage Jesus by a hypocritical use of his prestige, or insult the science of the day by dubbing its devotees philosophers of "pigwash." What is this "Lordship" of the Eastern Shepherd that we find still accepted by Unitarians? Was it ever reasonably defined from the Unitarian ground-plan? Is it not a nursing of old figures of speech? Does it not falsely give one ear to the future and one to the past, and accept favors, like a faithless woman, from rival hands?

So we may indeed see how a sin scarcely observable to the naked eye, and never clear to those who won't see it, ramifies near and distantly, to the ruin of pure aspiration. How sublimely does the Nihilism of Stepniak, obvious as are its faults, transcend such dainty handling of the truth! To me, belief that is present in every act of the man is always admirable. Rather, undue passion, excess of emotion, a wide wandering from reason, than play and by-play with the precious moments of the soul! What can the "permission" of bishops, the compliments of weak-hearted congregations, the power of a big salary, do to assuage the thirst of unsatisfied nature? Men turn their backs on themselves. They approve the moral laxity of congregations by preaching to Pleasure rather than Duty. We will have growth in the church, they remark placidly. Say, rather, growth in hypocrisy! It is to sad eyes that organized "religion" so disports itself. What is saving to moral impulsion springs from other though discredited sources. From this soaked and rotted body, hope is forever gone.

The passing age is that of "Red Revolution," over which the major number of men express horror. But I confess that to me there is a danger in the hypocrisy of churchly preaching which I cannot find in the hearty endeavor and unquestioning faith of the revolutionist. And, at least in the degree of candor and trust, the latter outdoes the best word of the unsexed priesthoods. The Nihilists in Russia, the Fenians in Paris, the Socialists in Germany, pin their indorsements to an explicit message. It is because the world is full of self-seeking and mental cowardice that this comparison becomes possible. Nor dare I urge emphatically against means of revolution that my heart condemns, while I find that murder and assassination naturally come in rebound from a fruitful hypocrisy. If we all dared to face the world with

the inmost thought and to honor every soul's endeavor to unseal the mysteries, no tale of outrage would ever be written. When we strain conscience, making it speak for others, and not for us, we subject nature to a tension which distorts and endangers the course of life.

No word of philosophy can be thought by a capable head to be the final outgiving. Because preachers have long closed every problem, they dare not now open the doors even to themselves. And here is the confessed spoliation of spiritual treasure. I honor the man who is equal to his conscience. I can applaud the thinker who dares, when light comes, to leave the windows open. And, when creeds change to bonds, what more noble than the heart that refuses to wear them? For more than so single a regard for integrity I ask no man. Conformity can be the burden of no free song. But the world of the spirit to-day asks explanation from establishments; and because their blood has lost purity and vigor, and they cannot give what is required, it has turned its face farther east. The playfulness of the formalists, the suavity of approving bishops, the sophistry of anxious money-gatherers, the dull, dead level of common preachment, can embarrass, but not stay the movement. And, while we can anxiously regard the struggles of isolated souls which strive through an indefinite light to penetrate beyond old stand-points, scarcely daring to leave loved pulpits even when the word of separation is due, we cannot pause to justify weakness and hesitation when so much hard labor is needed at the front.

HORACE L. TRAUBEL.

ANNUAL MEETING OF THE F. R. A.

The annual business meeting of the Free Religious Association will be held in Parker Fraternity Hall, Boston, Thursday evening, May 28, at 7.45. The usual conventions will be held in Parker Memorial Hall Friday morning and afternoon, as will be more fully announced next week. The Festival will take place on Friday evening in the Meionaon.

F. M. HOLLAND,
Assistant Secretary.

EDITORIAL NOTES.

BY B. F. U.

THE Mormon President Taylor in his "general epistle" says, "If we are sinners, Abraham was also." Very possibly, but Abraham is not at present within the jurisdiction of the United States.—*Springfield Republican*.

RECENT articles in *The Index* by Mrs. Elizabeth Cady Stanton have been republished in tract form under the title of *The Christian Church and Women*. Price 5 cents a copy, 50 cents a dozen. For sale at *The Index* office.

IN the death of David B. Morey, of Malden, Mass., liberal thought has lost an earnest and useful friend. He was, years ago, a supporter of the anti-slavery cause, and of the Free Religious Association from its foundation up to the time of his death. He was, in fact, interested in every progressive movement; and he generously contributed to advance whatever he believed true and right.

CORRESPONDENTS of the late Miss Emily J. Leonard, of Meriden, Conn., who have in their possession letters from her will confer a favor by loaning such of them as may be of service in a record of her life, to Miss G. L. Leonard, 65 L Street, North-west, Washington, D.C., who will promptly return them to their owners after copy-

ing the portions of them found useful for a contemplated biography.

AGAIN, last Sunday evening, Col. Ingersoll addressed a vast audience in the Boston Theatre, holding his hearers spell-bound nearly two hours by his wit and eloquence. His subject was "Blasphemy." There can be no stronger proof of Col. Ingersoll's power as an orator than the fact that with the thought the *Investigator* was advocating on its own merits half a century ago, he can every year fill the Boston Theatre with an audience glad to hear him as long as he cares to speak. Here is one passage from the lecture: "To live on the unpaid labor of others is blasphemy. It is blasphemy to build dungeons for the soul, to frighten babes with the threat of hell, to appeal from reason to brute force, from principle to prejudice, from justice to hatred, to answer argument with calumny, to beat wives and children, to persecute for opinion's sake,—in fact, every act which adds to the sum of human misery is blasphemy. What is worship? To do justice, to defend the right, to be strength for the weak, to be a shield for the defenceless, to keep the peace between neighbors and nations, to labor,—all these are worship. To build a home, to fell the forest, to delve in mines for the love of woman,—this is worship. To fill with joy the heart of her who rocks the cradle of her child,—this is worship. It is worship for the husband to watch by the bedside of his sick wife, and kiss her hand in devotion when it is no more dimpled; it is worship for the wife to cling to a husband and lift him from the gutter of degradation, making him by her love once more a man. Bodies are sacred, not books and rituals. Human happiness is sacred, and whoever clouds the sunshine of a heart is a blasphemous. The total of useful human labor,—that is the Bible. All the poems and pictures, the statues and the dramas, the discoveries of science and the inventions of genius, the prattle of babes and the lullabies of mothers, and the words of honest men,—these constitute the real Bible."

THE MELODY.

For *The Index*.

Oh, solemnly and slow
Those deep, bass notes are sounding,
Those deep, bass notes are sounding,
So solemnly and slow;
While harsher chords revealing
Sad dissonance of feeling,

With wail, like miserere, follow the music low.

But list! above the strain,
In clearest, liquid sweetness,
In clearest, liquid sweetness,
Far up above the strain
An angel voice is singing,
A melody is ringing;

On spirit wings our souls to heaven mount with its pure refrain.

How like it is to life!
The solemn music throbbing,
The solemn music throbbing,
How like it is to life!
With chords of sadness thrilling,
With dissonances filling

Our souls with wail of sorrow, with mortal anguish rife.

But catch the strain above,
Sweet strain divine and holy,
Sweet strain divine and holy,
Ah, catch that strain above!
One joy receiving, giving,
Makes all life has in living,
The melody we hear through all, sweet strain of human love!

ANNA OLCOTT COMMELIN.

The Index.

BOSTON, APRIL 23, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

A Study of Primitive Christianity.

BY LEWIS G. JANES.

VIII.

THE CHURCH IN THE APOSTOLIC AGE.

Conflict with Orientalism: The Gnostic Sects.

The first Christian century covers the period in Roman history from the time of Augustus to that of Trajan, including the reigns of Tiberius, Caligula, Claudius, Nero, Galba, Otho, Vitellius, Vespasian, Titus, Domitian, and Nerva. Many of these reigns were of short duration, and the contact of the early emperors with infant Christianity was slight and unimportant. This period, however, was a notable one in the history of the growing faith. At this time, the conflict began between those tendencies and doctrines which subsequently became recognized as authentically representative of orthodox Christianity and certain opposing ideas and tendencies, mainly of Oriental origin, which threatened at one time to turn the thought and life of Christendom into other, and entirely different channels. The chief of these conflicting tendencies was that known as Gnosticism. "Gnosticism," says Prof. Allen, "is a genuine and legitimate outgrowth of the same general movement of thought which shaped the Christian dogma."* The school of Marcion, and, less evidently, the other Gnostic sects, bore a direct relationship to that form of Hellenized Christianity which arose from the thought and instruction of Paul. Gnosticism was an honest attempt, by professing Christians, to solve the problem of the universe in accordance with an intellectual system, the materials of which it drew mainly from the dualistic Orientalism of Persia, and to a lesser degree, perhaps, from the philosophies of India and Egypt. It is not our purpose to present here any detailed account of the various Gnostic sects. A brief description of the general

principles upon which their philosophy was founded is, however, necessary to a correct understanding of the attitude of primitive Christianity toward the Eastern philosophical systems and of the natural development of Christian dogma.

The complete dualistic separation of God—the Supreme Light and only perfect being—from the material universe was assumed as the philosophical basis of the Gnostic systems. To span this apparently impassable gulf and account for the creation of the world and the orderly government of the universe, the Gnostics had recourse to the Oriental theory of creation by emanation. From the Supreme Mind emanated a series of *Æons*, or "Eternals," the highest order of which proceeded directly from Deity himself; while the inferior orders were related logically and genetically to man and the material universe. These *æons* were conceived as male and female, united in marriage, and thus transmitting by generation the creative force from God to matter and to man. In the system of Valentinus, Depth, or the Abyss, and Silence, or Thought, begat *Nous*, or Mind, and *Alethea*, or Truth. These in turn begat *Logos*, or Reason, and *Zoe*, or Life; and these gave birth to Man and *Ecclesia*, the Church or Ideal Society. The world in its present state, they argued, must have had a beginning. Time and circumstance must have had a beginning also. Before them existed only the Infinite,—not indeed an infinite void, but an infinite *Pleroma*, or fulness, represented by the *Æons*. Man, by reason of his alliance with matter, was fallen from the high estate of a spiritual being. The Gnostic conception of the fall of man was, therefore, not ethical, but philosophical or metaphysical. Mind was degraded by contact with matter; and salvation, through the influence of the *Æon*, Christ, was regarded as the means of dissolving this temporary copartnership, of liberating the pure mind from its material associations.

Gnosticism, in its leading schools, was the complete antithesis of Judaism; and Yahweh, the God of the Jews, even became the Gnostic *demiourgos*, the creator and ruler of the evil material universe, the antagonist of the Supreme Mind, the true and only Deity. The man Jesus was wholly absorbed in the ideal Christ: his bodily appearance was a mere phantom; and the Christ, no longer regarded as a person, was represented as a universal cosmic principle rather than a principle of moral regeneration. Many of the Gnostic teachers were undoubtedly the intellectual superiors of their orthodox opponents, but in the character of their strength lay also the source and explanation of their weakness. The final downfall of Gnosticism as a part of the Christian system was a logical necessity. It broke the historical continuity of Christian development in separating itself entirely from Judaism, and severed also the logical continuity in subordinating the ethical element, supreme in the teaching of Jesus, to a mystical and metaphysical philosophy which was foreign to his thought. In the second century, we find orthodox Christianity crystallizing its primitive dogmatic tendencies free from the metaphysical philosophy of Gnosticism, and "equally removed," says Dean Milman, "from its unmingled and unsullied original, the Judæo-Christianity of Palestine, of which the Ebionites appear to have been the last representatives."*

Judæo-Christianity: The Ebionites.

We have already had occasion to speak of the Ebionites as the recipients of the earliest Judæo-Christian tradition. We would err greatly, however, if we were to suppose that they adhered strictly to all the forms of ancient Judaism, or maintained its doctrine unalloyed and uncon-

taminated. Pharisaic Judaism and, still more, such sects as the Essenes had already assimilated much from Oriental sources; and Jewish Christianity resembled these later sects much more closely than the primitive faith of the Hebrews. From Oriental sources had come the later Messianic doctrines and the current millenarianism of the time,—the rite of baptism, and probably whatever is most noteworthy in the ascetic tendencies which some of the Jewish sects exhibited in common with many of the followers of Jesus. The Persian dualism had entered deeply into the doctrines of the Nazarenes and Ebionitic Christians. They regarded the present world as the kingdom of Satan,—as wholly corrupt and given over to the powers of evil. Out of this conception grew their characteristic doctrine of the blessedness of poverty. Those who enjoyed the wealth and luxuries of the present world, it was believed, would be deprived thereof in the kingdom of the future.

After the destruction of Jerusalem by Titus, the Christian Church of the apostles removed in a body to the Batanea, near the Jordan River, where they continued their organization, and numbered among themselves the descendants of the family of Jesus. It is related that, during the reign of Domitian, the emperor, being informed of the existence of a family descended from the ancient Hebrew kings,—according to the then established tradition of the royal lineage of Jesus,—ordered them to be brought before him; but, on beholding their hands hardened with toil and their general appearance of poverty, he ceased to regard them as possible rivals, or insurrectionists against his authority, and permitted them to return unmolested to their homes.

The Ebionites, like the Essenes, were very abstemious in their habits, living, according to Epiphanius, entirely on a vegetarian diet. Clement of Alexandria confirms this tradition, and declares that the Apostle Matthew and James, the brother of Jesus, ate no meat. The Ebionites practised circumcision, and kept the Jewish Sabbath, the feasts of the new moon, and the passover. They celebrated the eucharist with unleavened bread, and with water instead of wine. They attached great importance to the doctrine of angels, which the Jews had derived from the Persian angelology, and closely connected Christ with this order of supernatural beings. The community at Batanea continued to use the Syro-Chaldaic tongue, in common with the inhabitants of the region in which they dwelt. They made use of a primitive Gospel written in that language, which has been identified as the Gospel of the Hebrews. It contained no reference to the miraculous birth of Jesus, but directly affirmed his manhood, commencing with the assertion, as from the mouths of the apostles, "There was a man named Jesus, about thirty years old, who hath chosen us out."* The earliest generations of the Nazarenes, or Ebionitic Christians, wholly rejected the dogma of Christ's divinity. During the third and fourth centuries, however, some of their number appear to have assigned to him a unique and supernatural character, approaching the conception of a divine being.

The Legend of Simon Magus.

Among the earliest and most noteworthy Ebionitic documents are the pseudo-Clementine Homilies. Herein we have an account of the alleged contest between the Apostle Peter and one Simon Magus, or Simon the magician, who is represented as a sorcerer and teacher of false doctrines, who travelled through Europe and Asia Minor, claim-

* *Christian History*. By Joseph Henry Allen. For an account of Gnosticism, see also Baur, *History of the Church in the First Three Christian Centuries*; Milman, *History of Christianity*, etc.

* *History of Christianity*.

* See the compilation of extant fragments of this Gospel by Dr. Nicholson.

ing to be a Christian teacher, assuming to work miracles in the name of Christ, and even seeking confirmation as an apostle at the hands of Peter and John. The Acts of the Apostles also mentions Simon Magus; and there is no doubt that this legend obtained general recognition among the Christians of the early part of the second century, though no mention of Simon is made in the secular history of the period, and his identity as an historical personage is more than problematical.

From the general character of the descriptions found in the Homilies and elsewhere, the rational investigator can hardly fail to be convinced with Baur* and other liberal scholars that Simon Magus is no other than an Ebionitic caricature of the Apostle Paul. Peter is made to pass over almost the exact route of Paul in his authentic journeyings in following Simon around to extirpate the seeds of heresy and dissension which he had sown among the churches. There is no historical evidence, however, that Peter ever went into Europe at all; and the entire story of the Homilies must be regarded in the light of a semi-historical romance. Beausobre terms Simon Magus "the hero of the romance of heresy"; and Dean Milman says of the Homilies, "That in their present form they are a kind of religious romance few will doubt."†

According to the story, Simon was accompanied in his wanderings by a beautiful but frail woman named Helena, who is doubtless nothing else than the personification of the Hellenic philosophy and influence so noticeable in the writings of Paul, and so demoralizing to the primitive doctrine of Jesus, according to the views of the Ebionites. In the following address to Simon, recorded in the Homilies, the allusion to Paul is plain and unmistakable: "Even though our Jesus appeared to thee in a vision, made himself known to thee, and talked with thee, he was wroth with thee as an adversary, and therefore spoke to thee through visions and dreams, or it may be through outward revelations; but can any man be commissioned to the office of teacher by a vision? And, if thou sayest it is possible, why did the teacher go about constantly for a whole year with men who were not dreaming, but awake? And how can we believe that he revealed himself to thee? How can he have appeared to thee, who hast opinions contrary to his doctrines? If thou really didst become an apostle by his appearing to thee and instructing thee for one hour, then expound his sayings, preach his doctrines, love his apostles, and dispute not with me who was with him! For thou hast striven against me as an adversary, against me, the strong rock, the foundation of the church!" How significant is this language in connection with the notable fact that Paul quotes but once the words of Jesus, and in connection also with his boast that he withstood Peter at Antioch "to his very face"!

Simon Magus is everywhere represented as a man of ecstatic, visionary experiences,—an admitted characteristic of Paul. He is said to have been born in Samaria; and Epiphanius testifies to the existence of a similar traditional belief among the Ebionites in regard to Paul. The doctrines of Simon, as represented in the Homilies, are exaggerations, and often misrepresentations, of the Oriental and philosophical teachings of Paul. Simon is said to have called himself the first æon or emanation from the Deity,—a Gnostic conception, which is applied, not to Paul, but to Christ, in the Epistle to the Hebrews,—at the

time when the Homilies were written, probably attributed to Paul. Simon is also represented as a believer in angels and demoniacal influences, and as making it his avowed object to emancipate mankind from these evil powers. Paul's dualism is exaggerated; and the Oriental doctrine of the evil nature of the material universe, found in the Pauline Epistles, is greatly intensified.

The conception of Simon Magus as an historical character once having gained a foothold among the traditions of the early Christians, many curious legends grew up concerning him; and his true character as identified with Paul was ultimately forgotten. To this day, he is usually deemed by orthodox theologians to be an historical personage; and some regard him as one of the founders of Gnosticism. There can be little doubt, however, that the theory of Baur presents the true explanation of the romance of the Homilies. Against the original "Simon Pure," in the person of Simon Peter, the writer set up this opposing picture of the false Simon, or Simon the magician, who, in his character of an attempted purchaser of apostolic honors, becomes the originator of the ecclesiastical crime of simony. This is doubtless a slanderous accusation against Paul; and its only apparent historical foundation appears to be discovered in a circumstance every way honorable to him,—the fact that he raised and contributed money to the struggling church of Peter and the so-called "pillar" apostles at Jerusalem.*

Nero and the Earliest Christian Persecutions.

The Apocalypse, or Book of Revelation, written probably about 68 A.D., shortly before the destruction of Jerusalem and soon after the death of the Emperor Nero, is also a document of strong Judæo-Christian tendencies. Some of its obscure references to the circumstances of the period have doubtless been correctly interpreted by Renan and other critics of the liberal school. At the time of Nero occurred the most notable of the early persecutions of the Christians; though violent opposition to the new doctrine, regarded as a phase of Judaism, had already commenced during the reign of his predecessor, Claudius. At this time, dissensions had arisen in the Jewish colony at Rome; and, regarding the Christians as merely an insignificant sect of the Jews, Claudius had punished them all together with indiscriminate severity. The Jews were generally looked upon as atheists and contemners of the popular religion; and the Christians thus experienced the truth of the homely proverb, "Give a dog a bad name, and then hang him."

The character of Nero, as preserved to us in history, is a most remarkable and detestable one. He was the traditional æsthete of his period. A scholar, proficient in both the Greek and Latin languages, a writer of poetry, and critic of no mean pretensions, he accepted the debased philosophy of the Epicureans, and gave to their conception of happiness as the ideal end of existence a purely selfish and sensuous interpretation. "In the strictly modern sense of culture," says Renan, "as distinguished from original philosophical speculation or scientific research, he was the most widely and exquisitely cultivated man that ever enjoyed an autocrat's opportunities for self-gratification."† In his later life, he was given over to the most unexampled exhibitions of luxury, mingled with cruelty and the grossest sensuality. While he lived, he was greatly admired, even by many among the cultivated classes. In accordance with the custom of the period, he received divine honors as an incarnate deity. "He was

called Zeus, the liberator," says Tiele, "and even the saviour of the world."* Expiring, it is said, with a sentence of Homer on his lips, he left a name execrated by all succeeding generations.

The great fire at Rome in the year 64 A.D., which some of his contemporaries attributed to the act or command of Nero himself, was by him charged upon the Christians. Their identification with the hated Jews, the false interpretation of their publicly proclaimed doctrine of the speedy destruction of the world by fire, their isolation and avoidance of the public games and the popular worship of the gods, prepared the populace to believe the slander, and to rejoice in the acts of persecution which followed its promulgation. The refinements of cruelty resorted to by Nero at this time were previously unknown in communities claiming to be civilized, and are only equalled in history by the subsequent annals of the Christian inquisition. Some of the victims were crucified; others, clad in the skins of wild beasts, were torn in pieces by ferocious dogs in the presence of the populace; others, enveloped in sheets dipped in tar, oil, or resin, and bound to upright poles, served as torches to illuminate the scenes of these horrid festivities. These executions often took place in the imperial gardens; and Nero, in the garb and attitude of a gladiator, rode to and fro in the midst of the carnival of horrors, courting and receiving the popular applause. Mythological dramas, involving the death or torture of some hero, were represented not only "to the life," but even to the death of their actor-victims. "At the close of the performance," says Renan, "Mercury, with a red-hot iron rod, touched every corpse to see if it would stir; and masked lackeys, simulating Pluto or Orcus, dragged the dead out by their feet, smashing with mallets everything that betrayed signs of life." Not only Christians, but many other convicts and prisoners, were among the victims of this infamous emperor.

The Doctrine of the Antichrist.

Nero died by suicide at the private villa of Phaon, one of his courtiers. His corpse was not exposed to public recognition. It was even believed by some that the body of another was substituted for that of the emperor at the burial. The idea soon became prevalent that he still lived, had fled to Persia or the East, and would presently return at the head of a Parthian army, and resume his imperial sway. Such a conception easily took possession of the terrified objects of his persecution. To the Christians, he naturally and inevitably became the ideal opponent of Jesus,—the antichrist,—the incarnation of all that was sensuous and evil as opposed to the incarnation of all that was spiritual and good. The idea of the antichrist was a creation of Judaism during the period of the growth of the Messianic doctrine. Some writers even trace it back to the prophet Ezekiel. The incarnate representative of evil was identified with the person of Antiochus Epiphanes during the Maccabæan period, and is the "man of sin" of the Pauline Epistles.

The name "antichrist" is found in the New Testament only in the Epistles of John. The Apocalypse, however, is the book which especially presents Nero in this character. "If the Gospel is the book of Jesus," says Renan, "the Revelation is the book of Nero." In the description of the Apocalyptic visions, the name "Babylon" is evidently substituted for Rome; the beast with seven heads that rose out of the sea is the Roman Empire from Augustus to Otho; the fifth head is Nero, the fifth Emperor, "wounded unto death." He was the one "who was, and is not, and is to

be." He was the El Mahdi of that period,—the leader of the hosts of sin, whose return and temporary triumph would be the precursor of the advent of the heavenly kingdom. In the simple and superstitious expectation of the early Christians, he would soon reappear to inaugurate that interval of woe, calamity, and misfortune which, in the prophetic language of the gospel tradition, was to be the herald of the return of Jesus to reign over the saints upon the regenerated earth. "Thanks to the Apocalypse," says Renan, "Nero has for Christianity the importance of a second founder. His odious visage has become inseparable from the face of Jesus. Huger grown from age to age, the monster, sprung from the nightmare of the year 64, has become a fearful incubus on the Christian conscience, the sombre giant of the evening of the world. To this day, in Armenia the name of the Antichrist is Neron. In the seventeenth century, a folio of five hundred and fifty pages was composed upon his birth and education, his vices and his wishes, his perfumes and his women, his teachings, his miracles and his junketings." There is no doubt, however, that Nero was much more to Christianity than the new faith was to him. By him, it was little noticed, save at the moment when it served as the convenient means of turning from himself the odium of the populace, aroused by the incendiary conflagration at Rome. The Apostolic Period, on the whole, was favorable to the growth of Christianity, which found in its own insignificance and obscurity the essential conditions of its early development.

Other Characteristics of Christian Thought in this Age.

In such an atmosphere of strange and fantastic ideas, we discover the Christians of the Apostolic Age. Surely, if there is much in their ways of thought and life, in their doctrine of human brotherhood and their generally pure morality, to give encouragement for the future, there was also much, upon a superficial view, to justify the denunciation of the new sect by Tacitus as "an execrable superstition." Clement of Rome, the venerated Father of the Church, writing at the close of the first century, relates the mythical story of the phoenix as a well-known fact of natural history, and uses it as an argument for the resurrection. Tertullian, a century later, was equally credulous. The writer of the Epistle of Barnabas asserts that the hyena is male and female on alternate years. Belief in demons and demoniacal possession was a universal Christian delusion. The sun, moon, and stars were deemed to be living creatures. The lofty ethics and noble example of Jesus were already becoming obscured by puerile dogma, superstition, and ritualism. The triumph of Christianity, with these ideas predominant, seemed likely to extinguish the better elements in the primitive gospel tradition. The supernatural Christ—the incarnate Deity—was beginning to usurp the position of the Man of Nazareth in the minds of his followers. The subsequent history of the evolution of the Roman hierarchy and of its secular triumph did much to justify the original gospel teaching of the blessedness of poverty and the unrighteousness of the mammon of this world. Yet, beneath all this incubus of puerile supernaturalism, the toiling poor in the Christian communities, little caring for disputes about dogma or subtle questions concerning the relation of the Son to the Father, held fast to the conception of Christ as the Good Shepherd, and clung to the hope, born of the gospel promises, that the day of their trial and suffering would soon pass away, and that the time would speedily come when all men should dwell as equals in the kingdom of the heavenly Father.

CORRESPONDENCE.

A DARK SEANCE.

Editors of *The Index*:—

When the great naturalist A. R. Wallace announced himself as a convert to Spiritualism and issued his book on *Modern Miracles*, it caused a great many students of science to investigate spiritualistic phenomena, because it seemed that a man like Wallace, author of *The Malay Archipelago* and other valuable works, could scarcely have been duped on such subjects as "table rapping," "trance mediums," etc.; but a careful perusal of Mr. Wallace's book on the subject proves that a scientific thinker in the domain of natural history may be a very poor thinker, and a very illogical one, outside his own particular sphere.

For some years, I have sought every opportunity to investigate the matter, but with poor success: either the "conditions were not favorable" or the particular medium I patronized was "a fraud,"—a fact which was generally announced after I had discovered it for myself.

When Mrs. Isabella Beecher Hooker was announced to speak on the subject in this city a few evenings ago, her name seemed a guarantee of good faith. So I formed one of an audience of some eighty people who were gathered in a pleasant parlor to hear what she had to say concerning the spirit world. I confess to feeling shocked at hearing a gray-haired, strong-faced woman like Mrs. Hooker using the same terms and discussing the same phenomena that had become associated in my mind with trickery and small, pitiful ways of raising money among questionable people, but I listened patiently to all that was said. During the evening, Mrs. Hooker introduced one of Boston's leading mediums with many good words of commendation, which words, I find, are indorsed by almost all Spiritualists in this city, and are heartily echoed by the spiritualistic press throughout the country.

This woman spoke fluently, and seemed to have the full confidence of the audience as well as of Mrs. Hooker. So I sought an introduction, and was invited to a seance at her house, an invitation which I gladly accepted; for I desired to see the best and truest side of Spiritualism, and here at last was an opportunity.

At the appointed time, I found myself in a "circle" with some twenty others, in a well-furnished house, in one of the pleasantest parts of the city.

The room in which we sat was small, the circle of twenty chairs almost filling it. The doors and windows were secured, and black cloth was tacked over them, "so that no accomplices could enter"; and the air, in consequence, was not of the best. My fellow-seekers were mostly old people. Bald heads predominated, and the sexes were nearly equally divided. The lady medium sat in the centre, with a guitar and a small music-box within reach, which were the only visible signs of what was to follow. The gas was put out, and nothing was heard save a gentle snapping of the medium's fingers; and we sat in quiet darkness, holding each other's hands, "so as to complete the circle." I felt the medium's hand touch my knee with a quick, passing tap, and I thought that was a peculiar way of beginning the business; but I was startled to hear a little fat woman who sat next to me ejaculate, "I felt a spirit hand touch me!" and soon I found that this was the idea that prevailed all round. I reached my hand out a little way, and soon the medium's fingers touched mine. There was no mistake in that, and I tried to get hold of her hand; but she evidently felt I was a sceptic, and I never got a good chance afterward.

In a little while, she spoke out, and said, "I see two fair children standing beside you." As it was pitch dark, it was rather difficult to tell exactly who was addressed; but a man's quaking voice asked, "Beside me?" "Yes," she replied; and thereupon told the poor man that those two sweet spirits were his children, that they were looking at him with yearning eyes, and evidently longed to speak to him. Then she asked if it were true that he had two children in the other world. He answered, "Yes"; and the little fat woman beside me gasped, "Isn't it wonderful?" The next message came to a man who was informed that four sweet children were standing beside him. He apologetically remarked that there were "only three who had gone." "No," said the medium, "there are four; but one is very young, it

never was named. You didn't know it: it blossomed on the other side." So the man gladly accepted the extra spirit child, and there was joy over the medium's wonderful power.

One woman was informed that she had "five mothers" in the better land! On expressing her mystification, she was told that one was her own mother, one was her step-mother, another was her husband's mother, and, as he had been married twice before, there were his two mothers-in-law! I presume the laws of motherhood in the spirit world are only spiritually discerned. When the medium made a guess that was altogether wrong, and there was no possibility of making it right, a whisper would be heard in the midst of the black darkness saying, "No, not him"; and some sharp-eared listener said to the medium, "The spirits are whispering to you!" And then the medium heard them (!), and the guessing began again. All this time the spirit hands continued the tapping on people's knees, but always on the side of the circle nearest the medium; for the ladies on the opposite side of the circle kept saying, "Don't forget us." "Come this way, won't you?" etc. At times there was an odor of flowers, as though a scented handkerchief had been drawn from the medium's pocket; and, to my surprise, this was counted as a breath of heaven, a gust of celestial air borne in on earthly senses by the spiritual visitors.

I had never received a message from the spirit world, because the mediums had not known my name, and I failed to recognize the "Amelias" and "Mary Anns" who came with messages occasionally; but I was resolved on knowing every spirit that came this time. So, when I received a tap on the knee and an intimation that there was a spirit standing beside me, I was ready. The medium said: "There is a spirit standing beside you: she is calling you by name. She is saying 'Paul' or 'Peter' or some name that begins with P." "It's Peter," I said. "Yes, Peter Annet, I think." "Yes, that's I." "She is looking yearningly at you [most visitants seem to be women, and they all "yearn"!]. Her name is Nellie or Millie or some name like that?" I thought of a fair maiden down in Jersey, whose name is Ella, but who is of material form, dwelling contentedly this side the flood. So I said, "Is it Ella?" "Yes, that's the name!" And then there was a mournful cadence in the medium's voice as she told me how Ella yearned; for it seemed as if Ella were my deceased wife or mother, the relationship was not quite clear. Yet it ought to have been very affecting when the spirit voice whispered, "Dear Peter," and the medium said, "She stands looking at you with great, yearning eyes; she reaches out her arms; she wants to kiss you!" and I murmured softly, "Let her," but she didn't. Ella came several times during the evening, I was assured; and once there came a spirit whisper out from the darkness, calling softly, "Uncle Peter! Uncle Peter!" and I said, "Hello!" upon which the little angels whispered, "We're all here." And I said, "I'm so glad"; for as no children in earth or heaven had ever called me "Uncle Peter" before, and I had never enjoyed the glorious privilege of uncleship, I felt that I had a right to feel glad at being uncle to several angels! About this time, the guitar began to play; and the aimless thrumming was accepted as heavenly music. As the sweet (?) strains ceased, the instrument touched my feet as it fell from the medium's hand. So I laid hold of the guitar, and held it securely between my legs, resolving that the spirits would have some trouble in producing more music. It was not long before a "spirit hand" came tapping round my neighborhood in search of the guitar; but, as the instrument could not be found, the spirits dispensed with music during the rest of the sitting, to the great disappointment of the circle.

One tall man, with a dark complexion, sitting two seats from me, evidently received the "gift of tongues" and spoke in a language that nobody in this world could understand; but, as he mixed his foreign tongue with ungrammatical English, the medium professed to know what he said. He said nothing worth hearing, so the loss was not great. When the light was turned up, I noticed that he had a most peculiar head, with the smallest amount of forehead I ever saw so large a man have; and then, too, he was called "Doctor," which made things clear to me, for I suspect he was an "Indian doctor,"—a class that is far too numerous in this city. This dreadful meeting was carried on for over two hours, till the air seemed poisonous; and the results of the lack of oxygen were

put down as "spiritual influences," and they were certainly well calculated to enable nervous men and delicate women to see visions.

There was a ludicrous side to the entire affair, which I enjoyed; but there was also a pathetic one, which was touching in the extreme. One poor, sickly lady, with gray hair and a sweet face deeply marked with life's sorrows, wearing a black dress that told part of the story which was so visible in her gentle face, was placed next to me, when a change was made during the evening; for there were three men who sat together, and the medium had failed to keep the three faces distinctly in her mind, thus causing the spirits to send them confused messages. And, as no amount of shrewd guessing or spiritual "bulldozing" could give them satisfactory "tests," the gas was lighted and she had a good look at them, then changed us all round a little.

In this change, the sweet-faced woman became my neighbor; and the way her feelings were played on was one of the saddest things I've seen in Boston. The medium evidently knew her, as she was a near neighbor, who had offered to give up her seat to a stranger for the evening, as she "could come in any time"; but she was too good a subject to be allowed to go out, and so she was kept with a cruel purpose. The medium said to her, "I see four little spirits, dear, sweet, little spirits, standing beside you; and they are calling 'mamma.'" The sickly woman trembled like a leaf, and whispered, "I had only two." "Yes," said the medium, "only two are your very own: the others were adopted, and they call you 'mamma' in the spirit life." "Yes, that's right," said the sweet-faced one: "I adopted two little orphans who died." And the poor woman wept like a child as she thought of her loss; but just as she seemed to be going off into hysterics there came a terrible pull and a jerking at her shawl,—a light, gossamer thing it was,—that startled her, and a "spirit voice" whispered, "We want to give you mesmerism: we want to strengthen you, you're weak." And the little fat woman on the other side whispered, "Oh, how good!"

Again from out the darkness came a whisper, acting like a witch's charm upon the fainting woman, "Mamma, mamma, don't mourn for us: we're better off." And the poor, gray-haired sufferer replied through her tears, "I'm so glad, my darlings." And there was so much of motherly pathos in her voice I could have wept with her and for her, poor, weak, broken-hearted dupe.

There was a great deal of such miserable chicanery, playing on the hearts of widows and sorrowing parents; but none appealed to me so strongly as this woman, for she seemed to be a gentle woman, one with fine sentiments and a pure heart. But almost all the rest were "of the earth, earthy," as ready to laugh at ghostly jokes as to weep over ghostly sorrows; and almost the only feeling one could have for such people was that they had paid their money to be humbugged, and they got all they paid for.

I was heartily glad when the cruel farce was over; and I shook the dust from my feet as I left the door, feeling that once more my hopes had been blighted, and that Spiritualism remained to me, as of old, a stupendous swindle. And I wondered, too, if Isabella Beecher Hooker knew what sort of a woman she had commended to the kindly consideration of a Boston audience. The name of the medium is Maud Lord.

PETER ANNET.

DR. HOLMES AS A RELIGIOUS REFORMER.

Editors of *The Index* :—

An article by the senior editor in a late number of *The Index*, referring to the biography of Emerson by Oliver Wendell Holmes, contains some criticism of the biographer which, to an admirer of the author of the "Breakfast-table" series, seems to lack that spirit of candor and judicial fairness which usually characterizes the writings of Mr. Potter.

The present writer has not read the biography in question, and is of course not prepared to enter upon a discussion of its merits or defects. It is in what Mr. Potter says of the biographer, not in what he says of the book, that we find evidence of an apparent want of appreciation of the author's character and work, and statements from which many persons, who are familiar with the works of Dr. Holmes, will be compelled to dissent.

In the article referred to, Mr. Potter says: "Dr.

Holmes has so many virtues that he can afford to have it said that he has never shown himself specially interested in social and religious reform. In religious views, he has progressed with the years as a Unitarian, but always as a Unitarian. He has never seen the need of any larger freedom than that denomination has allowed, never felt any constraining impulse of conscience to break over its—in Boston—eminently respectable bounds. So with regard to social and political questions, Dr. Holmes has always had a safe and reputable regard for the metes and measures of public opinion that may chance at any time to exist." This seems very much like charging Dr. Holmes with being a mere time-server, albeit a person of many (unmentioned) virtues. To use the language in which Mr. Potter, in the same article, speaks of a statement of Dr. Holmes, we might say (with a change of the name), "From anyone but a man of [Mr. Potter's] genial amiability, we should call these slurring sentences."

Is it true that Dr. Holmes has never shown himself specially interested in social and religious reform? Has he shown that regard for existing public opinion with which he is charged? We judge of the motives and opinions of men by their works. There exists no better evidence of the interest of an individual in any class of questions than may be found in his published utterances. If Dr. Holmes has always written with especial regard for existing public opinion, he is guilty of wilful misrepresentation, as well as of moral cowardice. We quote what he himself says of his earlier works and their reception by the public: "It amuses me to look back on some of the attacks they called forth. Opinions, which do not excite the faintest show of temper at this time from those who do not accept them, were treated as if they were the utterances of a nihilist incendiary. It required the exercise of some forbearance not to recriminate. . . . The chief trouble in offering such papers as these to the readers of to-day is that their heresies have become so familiar among intelligent people that they have too commonplace an aspect. All the light-houses and landmarks of belief bear so differently from the way in which they presented themselves when these papers were written that it is hard to recognize that we and our fellow-passengers are still in the same old vessel, sailing the same unfathomable sea, and bound to the same as yet unseen harbor."*

If Dr. Holmes' religious views have always been those of a Unitarian; if he "has never seen the need of any larger freedom than that denomination has allowed," we fear that a recent statement by Mr. Potter of what Unitarians assert, as a denomination, needs revision.† As regards true independence of thought and outspoken fearless expression of opinion on religious subjects, we shall be pleased to have Mr. Potter refer us to passages which he deems more pointed than the following extracts from the works of Dr. Holmes. We quote from *The Professor* :—

How grateful would it be to make perpetual peace with these pleading saints and their confessors by the simple act that silences all complainings! Sleep, sleep, sleep! says the Arch-Enchantress of them all, and pours her dark and potent anodyne, distilled over the fires that consumed her foes, its large, round drops changing, as we look, into the beads of her convert's rosary! Silence! the pride of reason! cries another, whose whole life is spent in reasoning down reason. . . . But does it not occur to you that one may love truth as he sees it, and his race as he views it, better than even the sympathy and approbation of many good men whom he honors,—better than sleeping to the sound of the Miserere or listening to the repetition of an effete Confession of Faith?

The three learned professions have but recently emerged from a state of quasi barbarism. None of them like too well to be told of it, but it must be sounded in their ears whenever they put on airs. . . . When the Reverend Mr. Calvin and his associates burned my distinguished scientific brother,—he was burned with green fagots, which made it rather slow and painful,—it appears to me they were in a state of religious barbarism. . . . If a man hangs my ancient female relatives for sorcery, as they did in this neighborhood a little while ago, or burns my instructor for not believing as he does, I care no more for his religious edicts than I should for those of any other barbarian. . . . What if we are even now in a state of semi-barbarism?

We talk about our free institutions: they are nothing but a coarse outside machinery to secure the freedom of individual thought. . . . The very end and aim of our institutions is just this: that what we may think what we like, and say what we think. Think what we like! said the divinity

* Preface to revised edition of *The Professor*, 1882.

† See an article in *The Index* of Feb. 19, 1885, entitled "Which is the Honest Creed?"

student, think what we like! What, against all human and divine authority?

Against all human versions of its own or any other authority. At our own peril always, if we do not like the right, but not at the risk of being hanged and quartered for political heresy, or broiled on green fagots for ecclesiastical treason.

The active mind of the century is tending more and more to the two poles, Rome and reason, the sovereign church or the free soul, authority or personality, *God in us* or *God in our masters*; and, though a man may by accident stand half way between these two points, he must look one way or the other.

The papers from which the foregoing extracts are taken were written at a time when free thought on religious subjects was far less popular and "respectable" than it is to-day. It will hardly be claimed that they were written with especial reference to "the metes and measures of public opinion" that then existed. It is only fair to presume that the language quoted from *The Professor* represented the real sentiments and opinions of the author. If so, does it not indicate an interest on his part in religious reform?

Has the expression of such views, in books which have been widely read, had no influence in promoting the cause of religious freedom?

Just what is meant by the statement that in religious views Dr. Holmes has progressed with the years only as a Unitarian, we do not know. His later writings are certainly not less outspoken than those above mentioned. We quote from *The Poet at the Breakfast-table* :—

Do you recognize the fact that we are living in a new time? Knowledge—it excites prejudices to call it science—is advancing as irresistibly, as majestically, as remorselessly as the ocean moves in upon the shore. The courtiers of King Canute (I am not afraid of the old comparison), represented by the traditional beliefs of the period, move his chair back an inch at a time, but not until his feet are pretty damp, not to say wet. The rock on which he sat securely awhile ago is completely under water. And now people are walking up and down the beach, and judging for themselves how far inland the chair of King Canute is likely to be moved, while they and their children are looking on, at the rate in which it is edging backward. And it is quite too late to go into hysterics about it. The shore, solid, substantial, a great deal more than eighteen hundred years old, is natural humanity. The beach which the ocean of knowledge—you may call it science, if you like—is flowing over is theological humanity. . . . To study nature without fear is possible, but without reproach impossible. . . . Those superstitions which would have strangled in their cradles the young sciences, now adolescent and able to take care of themselves, no longer daring to attack these, are watching with hostile aspect the rapid growth of the comparatively new science of MAN. . . . We must study man as we have studied stars and rocks. We need not go, we are told, to our sacred books for astronomy or geology or other scientific knowledge. Do not stop there! Pull Canute's chair back fifty rods at once! and do not wait until he is wet to the knees! Say now bravely, as you will have to say sooner or later, that we need not go to any ancient records for our anthropology. Do we not all *hope*, at least, that the doctrine of man's being a blighted abortion, a miserable disappointment to his Creator, and hostile and hateful to him from his birth, may give way to the belief that he is the latest terrestrial manifestation of an ever upward-striving movement of divine power? If there lives a man who does not *want* to disbelieve the popular notions about the condition and destiny of the bulk of his race, I should like to have him look me in the face, and tell me so. . . .

If, for the fall of man, science comes to substitute the rise of man, it means the utter disintegration of all the spiritual pessimisms which have been like a spasm in the heart and a cramp in the intellect of men for so many centuries. . . . What is the secret of the profound interest which "Darwinism" has excited in the minds and hearts of more persons than dare to confess their doubts and hopes? It is because it restores Nature to its place as a true divine manifestation. It is that it removes the traditional curse from that helpless infant lying in its mother's arms. It is that it lifts from the shoulders of man the responsibility for the fact of death. It is that, if it is true, woman can no longer be taunted with having brought down on herself the pangs which make her sex a martyrdom. If development upward is the general law of the race, if we have grown, by natural evolution, out of the cave-man, and even less human forms of life, we have everything to hope from the future. That the question can be discussed without offence shows that we are entering upon a new era, a revival greater than that of letters, the Revival of Humanity.

It seems to be urged against Dr. Holmes that he has been in some sense a conservative, as regards social and political questions. If this be true, it does

not follow that his course has been influenced by selfish considerations; nor does it necessarily follow that his views were incorrect. There are radical theorists who hail every proposed change of an existing order of things as a reform measure of unquestionable excellence and undoubted utility. No matter how sweeping the change, they see no obstacles, they recognize no danger of new and unforeseen troubles. There are others who ever fear to attack time-honored evils, or who seem to rest in the assurance that whatever is right. Is there not often a middle course, which may be wisely and honestly maintained? For example, Mr. Potter himself occupies what many would consider a middle ground in religious controversy. Is he less honest, or is his work and influence necessarily less valuable than that of Mr. Ingersoll, because he does not see fit to call Moses a liar or Jehovah a murderer, or because he does not denounce the influence and work of the Christian churches as an unmixed evil? Moral cowardice and shuffling evasion of duty are contemptible; but many honest and earnest men are in some degree conservative, and it does not follow because an individual entertains conservative opinions regarding proposed social or political changes that his course is influenced by any undue regard for existing public opinion.

H. H. CURTIS.

MERRILL, WIS.

[It was certainly the very farthest from our intent to disparage Dr. Holmes' genius or the many good services he has rendered to mankind; nor does our article seem to us open to such a criticism. We simply stated two facts,—that Dr. Holmes was never allied with the Abolitionists, as Mr. Emerson was, and never suffered ostracism from the Unitarians, as Mr. Emerson did. These facts were stated as the probable reason why Dr. Holmes had given such inadequate treatment to these two important points in Emerson's career. The excellent quotations above given would be regarded as very wicked by Orthodox, but would not make such a man as Dr. Holmes much of a heretic among Unitarians in latter years. They proudly claim Emerson now.—W. J. P.]

BOOK NOTICES.

EDUCATIONAL ART CLASSICS: PESTALOZZI'S LEONARD AND GERTRUDE. Translated and abridged by Eva Channing. Boston: Ginn, Heath & Co. 1885.

The name of Pestalozzi is dear to every lover of education, and yet to many he is only known by the influence he has exerted through others. Miss Channing has done us a great service in bringing one of his most characteristic works before us in a form which we can readily comprehend and heartily enjoy. How great an amount of labor was required to secure this result only one acquainted with the original book can estimate. The style is diffuse to extreme tediousness; but the translator has skillfully abridged it, and given a connected narrative, which preserves the sweetness and simplicity of the German story without its wearisome reiteration. The picture of the little village is full of interest. We have the young lord,—*Jungke*, as the Germans call him,—who is determined to be a good providence to his people, and who administers justice with the wit and wisdom of a Solomon. We have all varieties of human nature depicted with delicate touches of humor. The peasants are like all people who have been oppressed, full at once of subserviency and of cunning, enthusiastic for their landlord while striving to outwit him at every turn. The popular assembly convened to decide upon the division of the common offers an amusing spectacle. When the tricks of the peasants are in danger of exposure, "one man discovered he had forgotten his handkerchief, a second that his tobacco had been left behind; while a third found it imperatively necessary to speak with his wife a minute, and a fourth remembered he had left something out, which might be stolen; one even had the nose-bleed,—in short, a large number of peasants started at once on the homeward road. But the watchman ordered them back, counselling them to borrow tobacco and handkerchiefs from their neighbors, and to stanch the nose-bleed this time at the fountain under the linden tree."

The dialogue is very fresh and lively; and, while the whole atmosphere of the book is thoroughly German, the translator has not introduced German idioms into her language, but has successfully rendered the peculiar

thought of the book by corresponding English words, so that the style is as purely English as if it were an original book. It is less pedagogic than we had expected, giving rather the spirit of a true education than its methods. It is a little saddening to find that these ideas which Arner successfully exemplified in the little village after a few months' trial, and which the Duke's communion found so practicable that they recommended the introduction of the same principles into general government, should have made so little progress in a hundred years that they are now advocated and opposed as new departures and original methods, when presented by Quincy superintendents or kindergarten teachers. Nothing seems really behind our age but the public shame and punishment inflicted on the dishonest bailiff, who has been the chief instrument of evil in town by enticing the men to idleness and intemperance. But the greatest charm of the book is the character of the mother, who is an original creation, full of independent thought and spirit, tender, loving, and unselfish, but original in her methods of teaching, wise and witty in her conversation, and without sentimentalism or anything of the spirit of patient Grissel. We heartily commend the book as sweet, wholesome, instructive, delightful reading to all who love to study human nature and who desire its improvement.

E. D. C.

THE DIPLOMATIC HISTORY OF THE WAR FOR THE UNION, being the Fifth Volume of the Works of William H. Seward. Edited by George E. Baker. Boston: Houghton, Mifflin & Co. 1884. pp. 626.

In this volume is presented a diplomatic view of the War of the Rebellion. It covers a period of our country's history second to none in importance. It may fairly be said that Lincoln and Seward were as necessary to the preservation of the Union as were Washington and Hamilton to its formation. The work is not merely a biography. It recites comprehensively and concisely the great events of which Mr. Seward might have said, "All of which I saw, and part of which I was." The diary or notes of the war in this work are made chiefly from Mr. Seward's despatches, and have been selected with a view of giving an idea of the distinguished statesman's philosophy, as well as a history of the diplomatic relations of the country during the war. The Trent affair, the officious interference of France and England by recognition and mediation, the rebel cruisers, the Alabama claims, the invasion of Mexico by France, and questions of international law are fully presented and fairly discussed. The portion of the volume under the head of "Occasional Speeches and Miscellaneous Papers," of a more domestic character, are extremely interesting, and are not more remarkable for their familiar style and evidences of breadth and versatility of mind than for the wise and patriotic counsel they contain. The volume bears ample testimony to the ability and fidelity of one of America's greatest statesmen. The editor has acquitted himself of his task with excellent judgment and painstaking care, deserving high commendation.

REPLY TO REV. L. A. LAMBERT'S "NOTES ON INGERSOLL." By B. W. Lacy. By invitation of Rev. Father Lambert. Philadelphia: Keystone Publishing Company, 323 Walnut Street. pp. 184.

Some time ago, a little work appeared from the pen of Father Lambert in reply to some of the lectures and writings of Col. Ingersoll. The work was rather lively and witty, and it called forth many favorable notices from the religious and secular press. The author challenged anybody and everybody to expend their might on his shield and helmet in the following language: "Of course, we do not expect him [Ingersoll] to reply to us, and for several reasons: first, he won't want to; second, he can't; third, he can pretend not to notice an obscure country pastor. Very well, then let some of his disciples or admirers try to rehabilitate his smirched character. We hold ourselves responsible to him and to all the glib little whiffets of his shallow school." Mr. Lacy has taken up the gauntlet, and given the reverend controversialist a pretty thorough overhauling, and exposed the logical weakness of much of his criticism, as well as the bad spirit exhibited toward Ingersoll and other free thinkers. A reply to a reply to Ingersoll by a third party is not likely to have an interest for many thinkers, but Mr. Lacy has done his work in a creditable manner.

B. F. U.

IN *Mind* for April is an essay by Dr. Edmund Montgomery on "Space and Touch," in which some curious facts in relation to our cognitions of space are brought to light, and some of the widely accepted theories of psychological inquirers are completely exploded. Dr. Montgomery, whose recent interesting and profound essays in *The Index* have been appreciated by many readers, and who enjoys a wide and well-earned reputation for his valuable scientific researches into the microscopic beginnings of animal life, some account of which was published in the *Popular Science Monthly* for 1878, has been an extensive contributor to this able quarterly, and his papers have been among the most valuable and important of its contributions. The other essays are "Hallucinations," by E. Gurney; "Prof. Sidgwick's Utilitarianism," by H. Rashdall. "Discussion of Experimental Psychology," by Prof. G. Stanley Hall; "Feelings of Relation," by Richard Hodgson, reviewing Prof. William James' article in a previous number. "F. H. Bradley on Fact and Inference," by B. Bosanquet. Among the critical notices are one of T. Fowler on "Progressive Morality," by Prof. H. Sidgwick, and one on Rosmini's theory of the "Origin of Ideas," by J. Burns-Gibson. The other critical notices are of foreign works by W. R. Sarly, T. Whittaker, S. Alexander, and by the editor. The notices of new books are very full. Published by Williams & Norgate, 14 Henrietta Street, Covent Garden, London.

THE *North American Review* for May opens with a discussion of the question, "Has Christianity benefited Woman?" by Mrs. Elizabeth Cady Stanton and Bishop J. L. Spaulding. President J. L. Pickard writes on "Why Crime is Increasing," and David Dudley Field on "Industrial Co-operation"; while Prof. Andrew F. West, of Princeton, contributes an article of great clearness and strength on "What is Academic Freedom?" James Payn, the English novelist, discusses "Success in Fiction," and T. F. Thielson Dyer "Superstition in English Life." A poem by Robert Buchanan on "The New Buddha" will attract attention. The new department of comments continues to be readable.

THE *Journal of Speculative Philosophy* for July, 1884, contains "A View of the Philosophy of Descartes," by E. H. Rhodes; "A Popular Statement of Idealism," by William M. Salter; "Kant's Critique of Judgment," by T. B. Veblen; "Hegel's Introduction to the Philosophy of Religion," translated by F. L. Seldon; "Bradley's Principles of Logic," by S. W. Dyde; "A Study of the Iliad," by Denton J. Snider; "Rosmini's Innate Ideas, a Priori Ideas, and Subject-object Ideas," by Condé B. Pallen. "Notes and Discussions." New York: D. Appleton & Co.

THE RISE OF INTELLECTUAL LIBERTY FROM THALES TO COPERNICUS.

By FREDERICK MAY HOLLAND,

Author of *The Reign of the Stoics*. Price \$3.50.

The author of this book has chosen a magnificent subject; and, although it is formidable in extent and much of it involved in obscurity, and all of it complicated with great questions of history and human progress, he has yet been able to throw much new light upon that liberalization of thought which went very unsteadily forward during twenty-two hundred years, before the great modern movement of the development for intellectual liberty. The work is a delineation of tendencies, a series of sketches of the great minds who at different times and under varied circumstances, and with unequal effect, have struck for independence of thought, a presentation of the counterforces that have antagonized intellectual liberty, and an account of the working of all those larger agencies which have in different degrees hindered or promoted freedom and independence of thought. Without having subjected the work to critical scrutiny, we are much impressed by the evidence it shows of extensive and conscientious labor, the freshness and interest of its chief subject-matter, the untrammelled treatment of the subject, and the vigor of the portrayal of that long and agonizing conflict with bigotry and intolerance, religious and political, public and private, which is the price of our modern liberty of thinking.—*Popular Science Monthly*.

The volume shows remarkable research, keen powers of analysis and comparison, close reasoning, and fairness of judgment. It will be found an invaluable help to the student, who will be glad to learn that the author contemplates a second volume, which will bring the subject down to the time of the French Revolution.—*Boston Transcript*.

For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

Ruskin's Works

\$600
reduced to
\$18

Illustrated LIBRARY EDITION.

An edition *worthy* of RUSKIN,—peerless as he is among living Masters of the English Tongue and of Universal Art,—and, also, by reason of its small cost, is within the reach of every cultured home.

We have paid **\$600** in cash for one complete set of RUSKIN'S Works—some of them being very scarce, and the early editions containing the best impressions of the fine illustrations and many colored plates, being very highly valued by connoisseurs—in order that with the best modern resources of the printers' and engravers' arts, we might reproduce an American edition thoroughly satisfactory to admirers of RUSKIN, and yet at a low price.

We count this publication as the most honorable—the grandest—achievement of *The Literary Revolution*, and rejoice greatly that we are able to offer this magnificent edition to the American people; and we glory not more in the author and the treasures he has given us, than in the fact that there is a great and growing American constituency that appreciates RUSKIN.

The edition we present will be complete in 15 vols., crown octavo. It will contain *ALL* the writings of RUSKIN which are of more than transient or local interest—will contain *ALL* that is included in any other American edition heretofore published, and *nearly 3,000 pages additional*. Numerous illustrations, including many fine colored plates, will be presented, far greater in number and much superior in quality to other American editions which have heretofore cost many times the price of this.

Ruskin's Select Works.

Though all admirers of RUSKIN will, of course, desire his complete works, if it is possible to procure them; yet by reason of their magnitude and consequent comparatively high cost they may be temporarily out of the reach of some. To meet the wants of such customers we shall publish an edition of his "Select Works" separately in eight volumes, for the net price of **\$9.00** for the set. The "specimen volume" mentioned below will be included in this set. For further list of the contents see specimen pages.

A SPECIMEN VOLUME.

The entire set of 15 volumes will be ready not later than August 1, 1885. It will be sold only in sets (and select works as below), at the price of **\$18.00**—with this exception: To make widely known the superb qualities of the work, we propose to offer, separately, *ONE SAMPLE VOLUME* containing four of RUSKIN'S most popular works, namely:

The Seven Lamps of Architecture.—Finely Illustrated.
Lectures on Architecture and Painting.—Illustrated.
The Queen of The Air.
The Ethics of The Dust.

All of these are bound in one handsome crown octavo volume, fine cloth, beveled boards, gilt tops, uniform with the set. This volume is *NOW READY*. On condition that the order is received on or before **June 1, 1885**, we will sell this volume (only) at the reduced price of **85 cents**—15 cents extra if ordered by mail. Purchasers of this volume will be allowed, of course, to complete their sets, but not at this reduced rate.

Specimen PAGES FREE. A copy of the April number of *The Book-Worm* (monthly 25 cents a year), which contains a specimen chapter from RUSKIN'S graphic pen, sent free on request.

Fair Terms.

Books not under \$5.00 in value are sent to anyone for *examination before payment* on reasonable evidence of good faith. *148-page illustrated and descriptive Catalogue* of our immense list of Standard Books sent for **4 cents**. *Mention this paper.*

THE

"FREIDENKER."

Freedom, Culture, and Prosperity for all!

(Organ of the Freethinkers of North America, of the Union of Radicals, and the North American Turnerbund.)

Editor, C. Hermann Beppe.

TERMS, PER ANNUM, IN ADVANCE:
UNITED STATES AND CANADA:

Freidenker..... \$2.50
Turnerische Ausgabe des *Freidenker*
(*Amerikanische Turnzeitung*)..... 3.00

EUROPE:

Freidenker..... \$3.00
Turnerische Ausgabe des *Freidenker*
(*Amerikanische Turnzeitung*)..... 3.50

Sample copies sent, on application, free of charge.

In this weekly, which is now in the thirteenth year of its existence, political, social, and religious matters are discussed with a view to general enlightenment and progress. The *Amerikanische Turnzeitung* is especially devoted to the discussion of topics pertaining to physical culture and matters of interest to lovers of the gymnastical art.

Since Jan. 1, 1885, the *Freidenker* has been enlarged, thus furnishing considerably more reading matter, while the PRICE REMAINS THE SAME AS BEFORE.

For the convenience of those of our readers who are chiefly interested in matters relating to gymnastics, the *Freidenker* and its former supplement, the *Turnzeitung*, have been consolidated into one paper, called *Amerikanische Turnzeitung*, with the sub-heading "Turnerische Ausgabe des *Freidenker*."

This paper contains more reading matter than furnished by both the *Freidenker* and *Turnzeitung* heretofore. In making these changes, the publishers have incurred great expense; and we therefore solicit the hearty co-operation of all friends of the cause in securing for the *Freidenker* and the *Amerikanische Turnzeitung* a wider circulation.

We also publish

"Erziehungsblaetter,"

r Schule und Haus.

A L. German Educational Association.
(Organ of the German-American Teachers Association.)

Editor:

H. SCHURICH, Chicago, Ill.

16 large quarto pages, with four-page cover.

Terms: \$2.12 per annum, in advance.

"Freidenker-Almanach"

FOR THE YEAR 1885.

The almanac, which is now in the eighth year of its existence, is devoted to the propagation of free-thought principles. Price **25 cents**.

"Amerikanischer Turnerkalender"

FOR THE YEAR 1885.

This annual, which is now published for the sixth time, is principally intended to promote the culture of gymnastics, and is pervaded by a thoroughly liberal spirit. Price **25 cents**.

Orders for all kinds of books promptly filled. Radical and Freethought Publications a specialty.

Address all orders to

FREIDENKER PUBLISHING CO.,

470 East Water St.,

MILWAUKEE, WIS.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quick advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 insertions, . . . 10c. per line.
" 13 " 25 " . . . 8c. " "
" 26 " 51 " . . . 6c. " "
" 52 " " " . . . 5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent. On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the above calculated, will be made.

H. T. MARSHALL'S

PATENT
ADJUSTABLE
LACE
CONGRESS

Is easily adjusted to fit any instep or ankle at any time, and will not uncomfortably draw the ankle, like ordinary congress. It has the stylish appearance of a lace boot and all the convenience of any congress in putting on or off the foot. Marshall's Pat. Pat'd May 13, 1884, woven in the front strap or stamped on the shank of each shoe. If your dealer does not keep them, send postal for directions how to get them to the Patentee and Manufacturer of Men's, Boys', and Youth's Fine Boots and Shoes. Tennis Shoe for Ladies and Gents a specialty.
H. T. MARSHALL,
BROCKTON, MASS.

The Independent Pulpit,

A Monthly Magazine, devoted to
LIBERALISM and FREETHOUGHT.
TERMS: Annual Subscription, \$1.00;
Single Copies, 10 cents.
Agents wanted.

Address all orders to J. D. SHAW,
P. O. Box 159. Waco, Texas.

2,000 PHOTOGRAPHS OF WORKS OF THE OLD MASTERS.

Large Copies only 20 cents each.

The following examples are from the so-called "Twelve Great Pictures of the World": The Last Supper, LEONARDO DA VINCI; The Last Judgment, MICHAEL ANGELO; Descent from the Cross, VOLTERRA; Assumption of the Virgin, TITIAN; The Transfiguration, RAPHAEL; Sistine Madonna, RAPHAEL; Holy Night, CORREGGIO; Aurora, GUIDO; Beatrice Cenci, GUIDO; Last Communion of St. Jerome, DOMENICHINO; Descent from the Cross, RUBENS; The Immaculate Conception, MURILLO.

Excellent unmounted copies of all these will be sent by mail on receipt of \$2.40; or any one or more at 20 cents each (with Catalogue when desired). Address

W. H. SHERMAN,
455 Jackson Street, Milwaukee, Wis.

THE COLEGROVE BOOK CO., 135 Wabash Ave., Chicago. WHOLESALE AND RETAIL Booksellers and Stationers.

Catalogues of new and standard books will be sent to any address without charge. Illustrated list of works of American authors sent on receipt of 4 cents in stamps.

N.B.—The prices quoted in the catalogues which we send out are the PUBLISHERS' RETAIL PRICES. These, unless marked net, are subject to a uniform discount of TWENTY PER CENT. to individual buyers. Special terms are offered to the trade and to public libraries. Any book in print will be sent by mail on receipt of the net price, with enough added to cover postage, at the rate of one cent for each two ounces. The postage on an ordinary 16mo book is about ten cents, and other sizes in proportion. Orders by mail are especially solicited, and will receive prompt and careful attention. Liberal books a specialty, our store being the Western agency for the publications of GEO. H. ELLIS and the AMERICAN UNITARIAN ASSOCIATION.

THE FREETHINKERS' MAGAZINE.

Cornell Univ Lib

1. 2127a P Single copies, 25 cents. \$1.50 per annum. First number out is a very valuable one. Send 25 cents in postage stamps, and it will be forwarded to you.

THE FREETHOUGHT DIRECTORY.

Mr. GREEN is preparing a FREETHOUGHT DIRECTORY in which he desires to publish the name and address of every outspoken Freethinker in the United States and Canada. Send your name and address and five two-cent postage stamps, and they will appear in the DIRECTORY. Address
H. L. GREEN, Salamanca, N.Y.

SITUATION AS TEACHER WANTED.

A graduate of Harvard would like a situation as teacher, in which independent thought and honest speech would not be dangerous. For particulars and references, address M., INDEX office.

PUBLICATIONS

OF THE

FREE RELIGIOUS ASSOCIATION.

Freedom and Fellowship in Religion.

A volume of ten essays upon speculative and practical problems of religion, by D. A. Wasson, Samuel Longfellow, Samuel Johnson, John Weiss, W. J. Potter, F. E. Abbot, O. B. Frothingham, J. W. Chadwick, T. W. Higginson, and Mrs. E. D. Cheney, and extracts from Addresses by Ralph Waldo Emerson, Lucretia Mott, Robert Dale Owen, Dr. Bartol, Wendell Phillips, Rabbi Wise, Horace Seaver, A. B. Alcott, Lucy Stone, Charles H. Malcom, Julia Ward Howe, and others,—all given on the platform of the Free Religious Association. Price (reduced) \$1.50.

Reports of Annual Conventions of Free Religious Association, from 1872 to 1879 inclusive. These contain essays and addresses by the various distinguished men and women who have spoken on the Free Religious platform, together with yearly reports of the Executive Committee. 10 cts. each.

TRACTS.

I. *Taxation of Church Property*, by James Parton. 5 cts.; ten, 30 cts.; one hundred, \$1.50.

II. *The Bible and Science*, by John Weiss.

III. *The Sympathy of Religions*, by T. W. Higginson. Enlarged edition.

IV. *Transcendentalism*, by Theodore Parker. Never before published.

V. *The Public School Question*, as understood by a Catholic American citizen (Bishop McQuaid) and by a Liberal American citizen (F. E. Abbot).

VI. *How Shall We Keep Sunday?* An Answer in Four Parts: 1. Sunday in the Bible. 2. Sunday in Church History. 3. Sunday in the Massachusetts Laws. 4. The Workingman's Sunday. By Charles K. Whipple, Minot J. Savage, Charles E. Pratt, and Wm. C. Gannett.

VII. *Evolution and Religion*, by John Fiske. 5 cts.; ten, 35 cts.; one hundred, \$2.00.

Nos. II., III., IV., V., VI., 10 cts. each; ten, 60 cts.; one hundred, \$3.00.

Reason and Revelation, by W. J. Potter. 5 cts.; ten, 30 cts.; one hundred, \$1.50.

Address

FREE RELIGIOUS ASSOCIATION,

44 Boylston Street, Boston Mass.

CURRENT TOPICS.

BY B. F. U.

GLADSTONE is doing all that can be honorably done to prevent an Anglo-Russian conflict, which, however, seems to be inevitable.

THE Jews in Vienna have been greatly excited over the discovery that a beautiful young daughter of their faith, named Rachel Stielitz, has been forced into the cloister. The girl disappeared about two years ago, and no trace could be detected. Her parents mourned her as dead; but they have just received a letter from her, saying that she is in a nunnery, and will soon have to take the veil. She begs to be delivered from this captivity, and it is hoped that the police will insist on her release. Truly, the Church of Rome is the same yesterday, to-day, and forever.

A CIRCULAR published in England says: "The Church ordains that on each Sunday the priest standing at the north side of the Holy Communion table, shall say, 'Remember that thou keep holy the Sabbath day. Six days shalt thou labor, and do that thou hast to do, but the seventh day is the Sabbath of the Lord thy God'; and, then, that the people then present shall respond thereto, 'Lord, have mercy upon us, and incline our hearts to keep this law.' The hairs of the men of this day stand on end at Mr. Bradlaugh reading an oath, which he honestly believes does not contain anything that is injurious; but their hairs lie smoothly on their heads while they each Sunday utter the response, 'Lord, have mercy upon us, and incline our hearts' to do that which even they do not desire, and which unquestionably they have determined that they will not do. Is honesty blasphemy? Is falsehood faith?"

THE Free Congregational Society of Florence (whose desk we occupied last Sunday) has, from

its foundation, attached great importance to the education of the young. Its Sunday-school, under the management of Mr. and Mrs. Spencer, is in a flourishing condition. On last Sunday, a very stormy day, the attendance at the Sunday-school was about seventy. The Executive Committee of the society, in their annual report for the year ending April 6, 1885, say: "One leading object of our society has ever been, and, in our judgment, should always be kept in view, that of developing or improving the intellectual capacity of the children and youth in our society; and, indeed, all of the older members of the society find here an opportunity to keep their minds from rusting and their intellectual faculties burnished. Hence, the opportunity is offered for much volunteer work; and we believe it will be conceded by all that have participated in this volunteer work that they have been substantially benefited by it."

SAYS the Boston correspondent of the Springfield Republican: "The notion apparently has gone abroad that the 'faith cure' folly has affected Boston literary folk generally, because a few more or less prominent writers have been quoted as devoted to it. This is not the fact; though it is true that many quite cultivated people, who would be presumed to be superior to such a shadowy and unsubstantial doctrine, have been giving it countenance during the past season, and that it is still a well-sustained Boston 'craze.' Possibly, Miss Alcott's recently published letter giving the result of her own quite thorough experiments and experiences with it, showing that 'the theory which claimed to cure cancer could not help a headache,' may check the 'craze.' But it is a question. More likely, it will have its run, as 'crazes' in Boston generally do, until the novelty is worn off. It is confined largely to women; and, as this winter it has been quite fashionable in some quarters, its run naturally has been brisk."

THE *Christian Register* is rather non-committal on the question whether attendance on prayers at Harvard should be compulsory. It thinks "there is much to be said on both sides," but that there is another question "of far more importance": "it is whether the college is to become wholly secularized or whether it is to recognize religion, as it recognizes ethics, as an educative force." By religion, the *Register* evidently means Christianity, with omissions enough to make it rather colorless in its teachings. "The place of preacher," it says, "to the University, which was left vacant by the resignation of Dr. Peabody, has not been filled. Had Dr. Phillips Brooks accepted the call to this office, it would have been a happy day for the college. But, since his declination, no effort seems to have been made to fill the office." This the *Register* deeply regrets. It would, no doubt, much prefer that attendance at the prayers should be voluntary; but it does not seem to see the wrong of compelling students to attend prayers and other religious services against their will.

At a séance in the West recently, a sceptic present ejected aniline into the face of the ghost when it appeared. A light was struck, and the

coloring fluid was found on the medium, Mott by name, a fellow who had been clearly exposed before. But the *Banner of Light* does not think the result of this little experiment proves that the ghost and the medium were one and the same person. It says: "Sceptics may imagine that they have really exposed him by 'squirting' aniline upon the spirit-forms, and consequently finding the same on the body of the medium; yet this fact proves nothing in the light of the knowledge which practical experience in such matters has demonstrated, not only to us, but others who have given the subject close attention." Our contemporary's hypothesis in regard to the aniline coloring fluid found upon the medium is "simply that it was an electrical transfer, and nothing else. We fully agree with our Philadelphia contemporary, *Mind and Matter*, which says, 'The doubt about the case prevented a consideration in that connection of the demonstrated fact that marks left upon the dress or person of a spirit-form had been found upon the medium, when the marked spirit-form was seen to vanish as it was absorbed by the medium from whose organism it had emanated.'" Comment is unnecessary.

HON. HENRY B. STANTON, at the solicitation of friends, has embodied some of the more prominent experiences of his busy life in a good-sized pamphlet of seventy-four pages, which he entitles *Random Recollections*. Only a limited number of copies have been published, of which none are for sale, being intended merely for private circulation among the author's friends. This unique pamphlet, written by Mr. Stanton in his eightieth year and in six weeks' time, gives in a lively style, in a succession of vigorous pen-pictures, a mental panorama of the differing phases of the march of progress in this country during the last three-fourths of a century. During the whole of his life, Mr. Stanton has been identified with most of the reformatory movements which one after the other, or simultaneously, have appealed to the sense of justice and sympathetic sensibilities of earnest, true-hearted men and women; and he has thus been brought in contact with and formed the acquaintance of very many distinguished workers for humanity, as well as of some others distinguished for their opposition to progressive thought. John Quincy Adams, Clay, Webster, Choate, Story, Gen. La Fayette, Daniel O'Connell, Lord Brougham, Lyman Beecher, Greeley, and many other prominent characters figure in these *Recollections*, which are enlivened by interesting anecdotes illustrative of the prominent peculiarities of many of them. Mr. Stanton made his first anti-slavery speech in 1832, and in 1834 attended the anniversary of the American Anti-slavery Society in New York City, where, he remarks, he encountered "the first of my two hundred mobs." One of the most interesting events of his eventful life he notes as follows: "Before sailing for Europe, I was united in marriage, on May 1, 1840, with Elizabeth Cady, of Johnston, daughter of Daniel Cady, then one of the leaders of the New York Bar."

A STATE RELIGION.

The *Christian Statesman*, as the readers of *The Index* well know, is a journal devoted to securing an amendment to the national Constitution which shall make that document recognize the Christian religion, and the Christian religion in the Orthodox interpretation of it. Yet even the *Statesman* sees the light when there is a different kind of sectarian raid upon the State. In speaking of the so-called "Freedom of Worship" Bill, which is before the New York Legislature, and the object of which is to permit Roman Catholic religious services, including mass, in the State reformatory institutions, the *Statesman* says: "This is another step toward the establishment of the Romish Church in the United States. No other Church ever asked such privileges."

But that journal is altogether too self-depreciatory. It is itself asking for a higher privilege every week; namely, to have its own creed incorporated in the organic law of the land, and then to have all national legislation and customs directed in conformity therewith. The Catholics in New York are only asking that members of their own Church, who may be shut up in penitentiaries or in State reform schools, may be visited by Catholic priests with the right (where not interfering with necessary discipline) to institute their special forms of worship. But the *Statesman* is asking that the national Constitution, which is for all the people in the nation, whatever their religious views, and which any citizen elected to national office may be called upon to take oath to support, shall be indoctrinated with Protestant evangelical beliefs, and that the government shall make itself an evangelist for maintaining those beliefs.

Nor is the *Statesman* quite exact in saying that "no other Church ever asked such privileges." At least, whether formally asking or not, other Churches have taken such privileges. In a recent article on this "Freedom of Worship" Bill, we showed that in the very institution for which the Catholics specially desire the bill—the Randall's Island House of Refuge—an Orthodox Protestant form of worship is regularly conducted. And most likely, considering that a large proportion of the children sent there are Catholics, it was this fact that stirred the Catholic Church to labor for this new law. If the State had taken the just ground that it had nothing to do with providing worship in State prisons more than elsewhere, and had not permitted to the Protestant Churches "such privileges," the Catholics, probably, would have never asked for them. Moreover, the Protestants have obtained similar privileges of instituting their peculiar forms of worship in the public schools in most of the States, in the legislatures, and in the national Congress. The *Statesman* would, doubtless, be shocked, should the Catholics ask for and secure the "privilege" of having mass celebrated in the Capitol at Washington for the benefit of Catholic Congressmen. Yet why should not such a "privilege" be instituted by law as much as the present custom of Protestant prayers in the Capitol by Congressional chaplains paid from the national treasury?

It is evident that, as soon as the State goes into the business of setting up religion, it makes a great deal of difference to people whose religion is set up. The *Christian Statesman* never would be satisfied to have Catholicism made a part of the organic law of the land and Catholic priests officiating in the various religious offices of the nation. Yet who knows what may happen, if that Church goes on increasing in numbers and power? If the *Christian Statesman* should get its amended con-

stitution and its stricter religious laws, it might set the Catholics an example they would not be slow to imitate, and put machinery into their hands they would be quick to use, should the power come to them. The only safe course, as well as the only just course, is for the State to give to no sect or church or creed any special "privileges."

Quite curiously, in the same column in which the *Christian Statesman* deprecates the advance of the Romish Church toward "establishment in the United States," it has another paragraph in which it inculcates the idea that the nation as a nation must have a religion. Replying to some very just remarks of our neighbor, the *Investigator*, on excluding the Bible as a book of worship from the public schools, it says:—

The writer of these quotations makes a very common mistake. He imagines that, if a government would leave its citizens free in the matter of religion, it must have no religion itself. Because the atheist has been left free not to worship, he insists that the nation is not free to worship or to acknowledge God. Having the liberty of irreligion, he denies to the nation the liberty of religion. Having secured exemption from possible pains and penalties on account of his own atheism, this atheistic zealot claims the right to veto the expression of any religious sentiment, or the observance of any religious institution, on the part of the people as a whole. The nation must have no God to pray to, and must never pray. Could anything reveal more clearly the fanatical intolerance of atheism?

The writer of the above quotation appears to make the mistake of conceiving of a nation as something apart from its citizens or people. The atheist is as much a part of the nation as the theist, the Jew as much a part of it as the Christian. And as the atheist is free not to worship, so the theist, the Christian, the Jew, are just as free to worship, and to worship each in his own way. But why should the Jew or Christian or theist insist on doing double worship, first in their private capacity as themselves, and then as the nation? The atheist does not claim to represent the nation in his non-worship: why should any kind of theist claim to represent it in his worship? How can "the people as a whole" worship, when they do not all believe in worship, and even those believing in worship do not agree together in the kind of worship? Has not the atheist, after all, as much right to say that his part of the nation shall not pray as the theist has to say that his part shall pray? If the theist says no to this question, then on which side is the "fanatical intolerance"? This idea of "a nation" apart from the people constituting it is a pure fiction. And there is no such thing as a nation having religion any farther than the people have religion individually. Is there, then, any better way to get religion into a nation's character and institutions than, allowing freedom to all ways of thinking, for the different sects and churches to go to work with zeal to make as many people as possible religious in their characters and lives?

WM. J. POTTER.

"BEACON LIGHTS OF HISTORY."

Dr. John Lord gave a series of historical lectures some years ago, which he published in book form under the above title. The fifth volume, recently issued, is devoted to representative women, as sovereigns, politicians, authors, saints, and women in society, as friends and lovers.

His philosophy on the controlling forces in the formation of character, and the influence of religious faith on women under Paganism and Christianity, is as contradictory as pitiable, when we

consider the large audiences of women who flocked to hear him, and the still larger number probably now reading his crude deductions from the facts of history.

He occupies the well-worn ground that there is no security for woman's happiness or morality but in her steadfast faith in the Christian religion. Contrasting the lives of women under different religions, he gives their comparative goodness and happiness, attributing whatever they are and all that they enjoy to their religious faith, and not to the form of civilization in which they chance to be born and educated. Those without Christianity he describes as victims of their impulses and passions, immoral, gloomy, desolate, having no knowledge of God or hope of immortality. Yet all races of mankind, in all ages, have had their ideas of a Supreme Being and a future state, and in their way had a fair share of happiness. True, they worshipped some hideous graven images made of wood and stone; but their deformities were gradually toned down, and a more refined type in silver and gold took their places. These were succeeded by still higher ideals in pictures, until, in a purer civilization and greater individual development, no one man's God satisfied his neighbors. Then we ceased to represent the great over-soul, the unknown, the invisible, in any tangible form whatever.

But the old ideals are still recognized according to the moral and intellectual status of the believer. The ignorant and irrational still worship a cruel, jealous, angry God, who creates generation after generation merely to drag out in poverty and wretchedness a miserable existence here, and to endure everlasting misery hereafter. A moral monstrosity! quite as revolting to the cultivated mind as were the hideous graven images of the past to those who had an eye for beauty.

While some of the noblest, purest women, who exemplified all the cardinal virtues in their daily life and conversation, lived before the advent of Christianity, Dr. Lord makes his selection of those who may best represent his theory. The follies and vices of all women under Paganism he attributes to their religion; their virtues, to nature grandly asserting herself above the creeds and customs of the times. The virtues of those under Christianity he attributes to their religion; their follies and vices to nature, warring against their struggles for holiness. Think of Dame Nature, in all her grandeur and immutability, playing bo-peep in this way with the daughters of Eve, holding them steadfast in the most exalted virtues in spite of the dogmas and superstitions of a debasing faith before the Christian era; and, then, helping to plunge them into a deeper slough of despond immediately after!

Again, we are told that those who believe the dogmas of the Christian religion will have peace and happiness under all life's trials and tribulations, and a joyful hope of eternal bliss in the future. But the doctor loses sight of his philosophy—so pleasing to Orthodox ears and so well calculated to sell his books—when he comes to his illustrations.

In the chapter on St. Theresa, his representative devout Christian, he describes one of the most melancholy saints in the calendar, who spent twenty years of her life in tears and groans about her own soul, crucified her strongest natural affections, and passed the sunset of her life in solitude and charity. Nothing could be more gloomy than the lives of most of the saintly women that comprise so large a share of church literature. Having taxed our sympathies to the utmost limit with the sufferings of his happy St. Theresa, he attributes the sadness of George Eliot's life—aris-

ing from so many social complications—to her change of faith from Christianity to Rationalism, when, in fact, the happiest part of her life was after she emerged from the superstitions in which she had been educated, and analyzed the dogmas of her old faith by the light of reason.

Poor St. Theresa! what reason had she to suppose that she would be happier in the next sphere than this? The Orthodox "God is immutable, unchangeable, in wisdom, power, and glory"; he has governed us here by direct fiat, we are told, and made the vast majority of us miserable. What proof have we that the whole basis of government will be changed in the next sphere? We shall be subject to the same laws, the same principles of justice, the same Supreme Ruler of the universe, who is eternal, and "knows no variable-ness or shadow of turning." The accepted revelation gives us no hope of a change of dynasty or discipline. It promises rewards and punishments for belief and disbelief in certain doctrines of faith there as here. Hence, for all we know, St. Theresa is still weeping and groaning over the final destiny of her soul. Her faith and fears made her miserable here: why not in the next stage of action, if our future life is an eternal progression? Harriet Martineau said "the happiest day of her life was when she gave up the charge of her soul." It would be the dawn of a brighter day for most women, if they could be relieved from all anxiety about their souls and a future state, devote themselves to building up strong bodies, sound morality, and a just government for all. We have subordinated this world with all its high duties to an unknown future long enough. If all the thought, the feeling, the intense interest expended in vain speculations and preparations for the next sphere of action had been devoted to this life, we might ere this have realized our Paradise on earth.

ELIZABETH CADY STANTON.

MORMONISM IN A NEW LIGHT.

V.

The Book of Mormon.

The Mormon Bible, as it is called, is nothing more nor less than a supplement to the Hebrew and Christian Scriptures, supplying certain missing links of prophecy, history, and God's providence, from the stand-point of the believer, and not of the sceptic. Because the Book of Mormon is inferior in some respects to the Bible, people conclude it cannot be of God, forgetting the fact that the one is a completed work, the other a work just begun; the one is wrought into its present form by centuries on centuries of labor, and the other the product of a single generation; the one is a bible made, the other a bible in the making.

The Book of Mormon is accepted less for its own sake than for the sake of the prophet, as he is accepted less for his own sake than his gospel's sake. Yet the same arguments used against the Book of Mormon will apply with about the same force to the Hebrew and Christian Scriptures; and, at the same time, its faults have been exaggerated greatly. Few of its critics have even so much as read it, and those who have read it have done so with their minds full of prejudices and false ideas concerning the book and Mormonism itself. They have found in it no "revelation"; but it was obnoxious to the charge of "plagiarism," "cant phrases," and "heresy," and as being "an outrage against God's wisdom and glory." The means by which the Book of Mormon is said to have been translated, the Urim and Thummim,

is sneered and laughed at by persons who believe God commanded Moses to command Joshua to "stand before Eleazer the priest, who shall ask counsel for him, after the judgment of Urim before the Lord." (Numbers xxvii., 21.) "And the Tishathah said unto them that they should not eat of the most holy things, till there stood up a priest with Urim and with Thummim." (Ezra ii., 63.) The orthodox Jews believe the uses of the Urim and Thummim are to be restored. Christian commentators think they were the means or conditions of receiving responses to questions asked of the Lord. Where is the difference between these stones in the breastplate of the priest and the stones in the rims of the bow used by Joseph Smith? Where is the difference in the screen used by him and the curtain before which the priest presented himself that parted the more holy place from the holy place?

The question is not so much whether the Book of Mormon is true as whether its translator believed himself inspired of God. And the facts, I think, all go to show that he did believe himself inspired of God. The question as to the quality of this inspiration is also important,—the question being not whether it was God who really spoke through Joseph Smith, but was it that "power which makes for righteousness." All "inspired" writings are a blending of history and tradition, of faith and reason; and the tradition shapes the history, and the faith the reason. The Book of Mormon, like other sacred histories, is fortunate in having to do with the past, thus far impenetrable to the researches of the learned, ancient America, about which so little is known that the story of Mormon cannot be disproven, the few facts known tending, the Mormons claim, to corroborate it. A deft use has been made of that imprint to the first edition of the Book of Mormon,—*"Joseph Smith, Author and Proprietor."* And this first edition is supposed to have many peculiar features not found in later editions. This is not so. The changes have been wonderfully few, and these wholly of a grammatical kind. Possibly, these rumored peculiarities it was that made Macaulay charge the English minister at Washington with the task of procuring for him, if possible, a copy of this first edition. Whether Edward Bulwer, her Majesty's representative, succeeded on this errand, I do not know. It will be but just to quote from the title-page of the first edition the following: "Be it remembered, in the fifty-third year of the Independence of the United States of America, A.D. 1829, Joseph Smith, Jun., of the said district, hath deposited in this office the title of a Book, the right whereof he claims in the following words, to wit: 'The Book of Mormon, written by the hand of Mormon upon plates taken from the plates of Nephi, . . . written by way of commandment, and also by the spirit of prophecy and revelation,'" etc. The use of the imprint quoted above was in compliance with "An Act for the encouragement of learning by securing the copies of maps, charts, and books to the authors and proprietors of such copies." This sounds prosaic enough, but it must be remembered ancient prophets had no such difficulties to contend with. There is, in these days, besides a law of God, a law of the land; and this imprint in the Book of Mormon no more proves that Joseph Smith was its author than the absence of such imprint in the productions of inspired writers of olden time proves they were not of human origin.

"Say unto them, Thus saith the Lord God. Behold, I will take the stick of Joseph, which is in the hand of Ephraim, and the tribes of Israel his fellows, and will put them with him, even with the stick of Judah, and make them one stick; and

they shall be one in my hand." So prophecies Ezekiel. The Book of Mormon is the record of the tribe of Joseph. For Isaiah, too, said, "Thou shalt be brought down, and shalt speak out of the ground; and thy speech shall be low out of the dust, and thy voice shall be as of one that hath a familiar spirit out of the ground, and thy speech shall whisper out of the dust." The golden plates were a voice "speaking out of the ground." But the prophecy is still more specific. "The vision of all is become unto you as the words of a book that is sealed, which men deliver to one that is learned, saying, Read this, I pray thee; and he saith, I cannot, for it is sealed." And were not "the words of the book" delivered "to one that is learned," in the person of Prof. Anthon; and were they not to him "a sealed book"? "And the book is delivered to him that is not learned, saying, Read this, I pray thee; and he said, I am not learned." This is Joseph Smith's answer to the angel, when commanded to read or translate the book.

The Book of Mormon reports three migrations from Asia to America, the first being immediately after the Dispersion, the last in the reign of Zedekiah, 600 B.C. They are called Jeredites, Lamanites, and Nephites, from their respective leaders. They founded civilizations, beginning in Central and South America, that perished from their own corruptions. Jesus visited this continent after his ascension. The gospel was preached, but its triumph was imperfect and fluctuating. Dissensions led to merciless, even exterminating, wars. The last great battle was fought between the Lamanites and Nephites on the site between the spots now called Manchester and Palmyra, N.Y. The Nephites were slain nearly to a man. Shiz fell in the last encounter before the sword of Coriantume. These huge mounds that meet the eye to-day are formed of the heaps of the slain,—the sepulchres of a nation and a race,—

"Whence and why art thou, mysterious mound?
Are questions that man asks, and asks in vain;
For o'er thy destinies a night profound,
All rayless and echoless, doth reign."

But Mormon, one of the last of the Nephites, passed the records of these people into the hands of Moroni, his son, by whom they were finished, "being written in the characters which are called among us the reformed Egyptian, being handed down and altered by us according to our manner of speech." "Condemn me not because of mine imperfections, but rather give thanks unto God that he hath made manifest unto you our imperfections, that ye may learn to be more wise than we have been." "I am the same who hideth up this record unto the Lord. None can have the power to bring it to light, save it be given him of God; for God will that it shall be done with an eye simple to his glory." The record is addressed "to the Lamanites, also to the Jew and Gentile."

The New Jerusalem is to be built up on this land. And, at the same time, the Jews are to return and rebuild Jerusalem. But America is Zion. "It is a choice land, saith God, unto me, above all other lands." "And it shall be a land of liberty unto the Gentiles; and there shall be no kings on this land." "And I will fortify this land against all other nations, and he that fighteth against Zion shall perish, saith God; for he that raiseth up a king against me shall perish, for I, the Lord, king of heaven, will be their king." "Behold, hath the Lord commanded that any should not partake of his goodness? Behold, I say unto you, Nay; but all men are privileged, the one like unto the other, and none are forbidden. He commandeth that there shall be no priestcrafts; for, behold, priestcrafts are that men preach, and set

themselves up for a light unto the world. Behold, the Lord hath forbidden this thing: wherefore, the Lord hath given a commandment that all men should have charity, which charity is love. But the laborer in Zion shall labor for Zion; for, if they labor for money, they shall perish. And, again, the Lord commandeth that men should not murder, that they should not steal, that they should not envy, that they should not have malice, that they should not contend one with another, that they should not commit whoredoms, for whoso doeth these things shall perish; for none of these iniquities come of the Lord, for he doeth that which is good among the children of men. And he inviteth all to come unto him and partake of his goodness; and he denieth none, black and white, bond and free, male and female, and he remembereth the heathen, and all are alike unto God." "But, behold, in the last days, . . . they preach unto themselves their own wisdom and their own learning, that they may get gain and grind upon the face of the poor; and there are many churches built up, which cause envyings and strife and malice; and there are also secret combinations, even as in old times, according to the combinations of the devil, who is the foundation of all these things, yea, of murder and of works of darkness." "But, behold, in the last days all the nations of the Gentiles and of the Jews will be drunken with iniquity and all manner of abominations; and, when that day shall come, they shall be visited of the Lord of hosts with thunder and with earthquake, and with a great noise, and with storm and with tempest, and with the flame of devouring fire. And all the nations that fight against Zion, and that distress her, shall be as a dream of a night vision." Thus speaks the prophet Nephi, in the second book of the Book of Mormon.

The American Indians are the descendants of the Lamanites, an Israelitish remnant. In the fulness of time, which is now at hand, they are to be restored to their birthright, and to become "a pure and delightsome people." A Mormon hymn sends up this petition:—

"Great Spirit, listen to the red man's wall,
Thou hast the power to help him in his woe:
Thy mighty arm was never known to fail;
Great Chieftain, save him from the pale-faced foe."

Nor is this mere sentiment. The Indians are being baptized by the score. Hundreds and thousands have already heard and rejoiced in the glad tidings, and entered into the covenants of a new life, casting aside their filthy habits and blood-thirstiness, and practising the arts of cleanliness and of peace, and helping to build up the waste places of their fathers.

T. W. CURTIS.

THE CONCEPTION OF LIFE.

III.

The question which confronts us at this stage of our investigation is by what means and in what manner does the ethical power establish its sway over the forces of nature.

All living beings, conscious or unconscious, seek for happiness; and "happiness is the daughter of beauty." The modes of the beautiful are the objects of our desire: only beauty can call up hope in the sentient being, and sway it by the anticipation of possession. The power to possess beauty is the fulfilment of desire; the fulfilment of desire is liberty; and liberty is life.

All ugliness, be it that of material or that of dynamic form, engenders pain in the sentient beholder; and all pain, however slight, is a symptom of disease, the vanguard of death. The ugly is

generally not anticipated, for its home is not in the future. When it does come upon us, it

"Gildes forth among the shadows, cast
Upon the present by the past,"—

a power of darkness and fear.

And as we hate this power of darkness and evil, ugliness, pain, and disease, as we love beauty and happiness and their servant truth, so are we found worthy to enter the innermost shrine of the temple of morality.

As the first initiative to action of the ethical forces proceeds from the beautiful, it is prophetically mirrored in our emotions as desire. All our efforts for the attainment of this beautiful, the object of desire, whether those of conscious will or of unconscious impulse, consist in the trained action of only those disciplined natural forces which, by their subjection to our purposes and ideals, acknowledge themselves the sworn allies of the ethical power.

It must, however, be clearly understood that, although all our desires may be truly said to be excited by some mode of the beautiful, it is by no means necessary that this excitement should be directly effected by our love for or sympathy with the beautiful itself. Equally well may this desire be excited by the antipathy and hate which we bear to its opposite ethical pole,—the ugly.

In the former case, desire is due to a correspondence subsisting between the wave-proportions and recurrences proper to the beautiful itself, and like or similar ("homoeiomorphous" or "homoeiorhythmic") wave-proportions and recurrences proper to the emotional phases of the sentient being. Desire thus depends upon the prophetic sense of commensurability; happiness, upon the actual commensurating contact between certain modes or aspects of motion pertaining to the emotional life of the sentient being, and similar modes or aspects of motion pertaining to that being's environment.

In the latter case,—that of the excitement of desire for the beautiful and good through our antipathy to the ugly and evil,—we have, apparently, to deal with the non-correspondence which must necessarily exist between the wave-disproportions and non-recurrences proper to ugliness and the utterly unlike or dissimilar wave-proportions and recurrences eventuating in the emotional phase of the sentient being, a phenomenon of ethical contrast-effect.

And, thus, we perceive in the direct birth of desire, arising out of the sympathy between us and the beautiful, there is manifested a *law of ethical or morphocratic induction*; in the indirect awakening of the same desire through the antipathy between ourselves and the ugly, a *law of ethical or morphocratic polarization*.

While it would hardly be practicable in the brief compass of this essay to give a clear and definite account of the exact relation which the æsthetic and ethical phases of life bear to the beautiful, yet, to avoid all possibilities of misconception, it should be here stated that the terms "beauty" and the "beautiful" are here nowhere used with a narrow restriction to the designation of regularity of external superficial form alone. Not the rhythm and proportion of a series of harmonic curves in space only, but the orderly procession of musical waves beating in melodious surf upon the shores of sense as well; the play of color which lights the smile or illumines the frown of the landscape, the rhyme of conduct in the life of the sincere teacher, the honorable man of action, and the tender, loving woman,—are all equally but varied modes of the beautiful.

By anticipating and hoping for the objects of

our desire, we definitely locate their existence in the future. I am aware that it is a common habit to regard the actual existence of these objects as of doubtful reality, or rather as a mere contingency not to be thought of for a moment as of the same order of certainty with the facts of the past.

But the truth remains, we do anticipate; and, when the object of our prophetic vision has been realized by the magic touch of the present, have we not received a most tangible proof of the correctness of this our "memory of the future"? It is true the most vivid of our anticipations are often doomed to disappointment; our powers to mingle with the forms of a yet unborn age are most limited; we cannot see clearly, nor penetrate far beyond the veil which separates our present from the what-shall-be. But can we do so in the other direction? Could we make the experiment with the past, how many of our memories now believed to be "as surety sure" would unveil themselves images of delusion and deceit? Could we retrace our steps as well as we advance them, we would fall upon history, and justice and truth would erase from her most authentic records many a word, sentence, and page. The faculties of memory and prophetic vision are the same. Both are often right, frequently at fault. But, in the latter case, proof and disproof of reliability continually arise before us as the future springs into the being of the present. The character and faithfulness of the memory are little questioned, only because these proofs and disproofs of the present are ever wanting.

All human misery—sin and pain, nay, death itself—is indissolubly linked with the immediate unattainability of our desires. Could we under all circumstances and always attain these, we should be—"even as the gods"—morally responsible for all we know to be, omnipotent, and absolutely free. And, as the realization of these objects of desire, dwelling in the time-halls of the yet unborn years, is our inalienable birthright, we must unceasingly strive for their possession. The evil power which ever opposes itself to their attainment is that of the unsubdued natural forces, the enslaving causes, which continually arise from the past. We, the human race, bound by our line of descent to a base animal ancestry, can attain to full moral dignity only in so far as we avow ourselves

"With arms, unyielding valiant borne,
The champions of the future's morn!"

CHARLES FROEBEL.

THE NEEDED STIMULUS IN EDUCATION.

The golden key to unlock the treasure vaults in which are concealed the mysterious riches that, when found, so richly repay all the toil of search, is simply the wish to find out things, the spirit of curiosity. This wish, always so strong, such an active element in all children, is not sufficiently recognized in their training. Instead of being encouraged and rightly directed, it is oftener frowned upon, and every effort made to prevent its growth. It is thought to be the spirit of mischief, and as such must be eliminated by restraint and punishment from the child's nature. Thus forbidden to use this pure instinct given him for his growth and the acquisition of knowledge of nature which, in after years, would prove a talisman against corrupt influences, he will often secretly fill his mind with the poisonous food found in dangerously exciting novels and vicious companions. "Curiosity should be early awakened and judiciously fostered." With this for its controlling force, the inquiring child will become the intel-

ligent man or woman, whatever may be its future station. Institutions of learning can only lend their aid; and without them even, as one often sees, the noblest workers in life, either in art, science, philosophy, or in the no less royal kingdom of home, are found.

In thus encouraging the spirit of curiosity, we shall find the natural bias of the child's mind, and be able to give him the special training suited to his bent; for, as Emerson says, "Capacity undeveloped is only an organized day-dream with a skin on it." "Our works," says Carlyle, "are the mirror in which the spirit first sees its natural lineaments." "Know thyself is an impossible precept till it is translated into this partially possible one, Know what thou canst work at."

What a vast amount of happiness there would be in the world, if every one could find and work in the business most adapted to taste and ability! What superior, almost perfect productions in all departments of life we should witness! "No round pegs in square holes, then"; and the result so apparent now everywhere, of failure in happiness and success. One writer has truly said, "Life is a delight just in degree as it is consecrated to action, or the conscious volitional exercise of our noblest qualities." Work is the wooing by which happiness is won. Industrial education, just beginning to be recognized as a necessary accompaniment to all intellectual training, will be one of the most potent instruments in revolutionizing and reforming society. It is necessary to cultivate imagination; for the child must imagine there is something hidden, or he will not use his faculties to gratify his curiosity, and try to find out.

How dreary would all lives be without the possession of this blessed faculty, and the stimulus it affords to all its best and highest feelings! Not curiosity alone has impelled the students of science and art, or the discoverers of new continents, to such self-denying, heroic exertions; but imagination has been the food on which curiosity has fed, and which has been the nutriment by which the spirit of investigation has grown, and which has been to the hunger of that spirit as meat and wine to hungry and thirsty physical bodies. Grindon says: "The body must be taken into the playhouse of nature, and the mind be inspired through the imagination, upon which curiosity itself depends. A child's imagination can hardly be too much encouraged, provided it be always guided to some resting-place, where it can repose awhile, and then in due time be led onward again, but always with an interval." Let us imagine ourselves for a moment in a small ante-chamber, with doors leading from it to innumerable rooms, into which we long to enter and feast on the rich treasures which we imagine they contain; but the janitor forbids our even attempting to unlock the doors, and answers every entreaty with, You cannot enter: it is not for you to know what is contained in these rooms; it is forbidden fruit.

Such I imagine must be the unformulated thought of the little child who has just begun to understand that all around him are so many, many things which he wants to find out about, and cannot be made to perceive why he is denied the search,—why, when he tries with all his innocent child powers to reach the inside, and find out the mystery, he is told, That is very wrong, and you must be punished, if you do it. How much better to direct his attention to some other object of curiosity, to encourage him to observe everything, the little blades of grass, the flowers, even the weeds and pebbles about his path, to tell him that even the watch, with its tick, tick, tick, and its ever-moving wheels, he can learn all about when he is older! The parent or teacher who can inspire

the child with that divine stimulus which will impel him to search untiringly for knowledge and for truth without prejudice or fear is alone the true educator.

R. F. BAXTER.

EIGHTEENTH ANNUAL MEETING OF THE FREE RELIGIOUS ASSOCIATION.

The Eighteenth Annual Meeting of the Free Religious Association will be held in Parker Memorial Building, Boston, Mass., as follows:—

Thursday evening, May 28, at 7.45 o'clock, business session for the hearing of reports, election of officers, etc.

Friday morning, May 29, at 10.30 o'clock, address by the President, followed by addresses from Mr. W. D. Le Sueur, of Ottawa, Can., and Rev. M. J. Savage of Boston, on the question, "Is a Scientific Basis for Religion Possible?" After these addresses, the subject will be open for speeches, not exceeding ten minutes each, from the floor.

Friday afternoon, at 3 o'clock, the Rev. R. Heber Newton will address the meeting on "The Religious Aspect of Socialism." During the afternoon session there will also be opportunity for ten-minute speeches from the floor.

The annual festival will be held in the Meinaon, Tremont Temple, Friday evening, commencing at 6.30 o'clock. R. Heber Newton, W. D. Le Sueur, Wm. J. Gill, H. W. Holland, Mrs. E. D. Cheney, Miss Mary Eastman, and W. J. Potter will be among the speakers.

F. A. HINCKLEY, Sec'y.

EDITORIAL NOTES.

BY B. F. U.

"The Philosophy and Ethics of Naturalism" will be the subject of an address, by B. F. Underwood, before the Secular Society at Paine Hall next Sunday, at 2.45 P.M.

Mrs. IMOGENE C. FALES will address the Boston Society for Ethical Culture in the parlors of the Parker Memorial at 3.30 P.M., Sunday, May 3, on "The Divine Law of Co-operation."

ANY one of our subscribers can obtain a copy free of the *Pansy*, a most attractive magazine for children and young people, by sending a postal card requesting it, and giving full name and address to D. Lothrop & Co., Boston, Mass.

THE essay by Mr. Potter, read last Saturday evening before the Liberal Union Club of this city, on the "National Unitarian Conference and Mental Liberty," will be printed in full in *The Index* next week. The brief reports in the Boston daily press give an incorrect idea of the address in some important particulars.

TO A "medium" of this city, named Bliss, whose latest scheme is presented in a pamphlet he is circulating, the *Investigator* replies as follows:—

"J. A. B., Boston.—We have received a copy of your pamphlet, in which you say, in your notice of the "Developing Circle Extension Fund," that you "plead for the spirit friends that seek the means to return from spirit life." We were not before aware that spirits had to pay anything to return; but, if they do, we can put you in the way of sending them \$1,500, if you can perform in your "developing circle" a genuine, "materialization" that will satisfy two sceptics who offer the above large sum to see the "phenomenon." As you profess to be a medium, this information may be interesting; for we understand that the sceptics will be ready at short notice.

SAYS the Boston *Herald*: "When we get Gen. Grant's religious views reported by Newman, they are decidedly Newmannic. Take that remark yesterday, reporting Gen. Grant as saying (on Sunday), 'This is the Lord's day, and it would

seem like mockery for me to be out riding when so many people are praying for me.' That is Newman. Gen. Grant might have said, 'I guess I'd better stay in Sunday,'—meaning that some people would consider it improper for him to be riding on that day. Parson Newman says that a few words from a reticent man mean much. He is a liberal interpreter, and makes the most of the few words which drop from those firm lips."

A CORRESPONDENT of the Boston *Transcript* writes: "I heard a good story about the well-known wit, Joseph H. Choate, to-day, with which this somewhat rambling letter may be brought to an end. Mr. Choate was sitting in his law office, when a young man—very well known in society, who is always extremely well dressed, takes great pride in his family connections, and has a pretty high opinion of himself generally—entered, and introduced himself something as follows: 'I am Mr. J. Van Rensselaer Jones.' 'Ah!' replied Mr. Choate, 'take a chair.' 'Yes,' continued the young man, bent upon impressing his importance upon the lawyer, 'I am—er—the son-in-law, you know, of Governor Smith.' 'Indeed!' rejoined Choate: 'take two chairs!'"

For *The Index*.

THE STAR OF THE LION.

The stars of twilight, one by one,
Come out above the sunken sun,
At first with faint and timid beams
Amid the daylight's fading gleams.
Anon, as sunset's splendors die,
Distinct they lure the pensive eye,
And gem the dusking western sky
Like pearls on storm-strewn beach, that lie.

With face turned sunward, body spread
O'er half the azure fields o'erhead,
The constellated Lion grim
See couchant in those star-depths dim.
And, lo! his chiefest orb to-night,
Basilikos,* flames clear and bright.

Mark well that lamp of summer even,—
Star more renowned illumines not heaven.
In history's primeval days,
Ere David, Job, or Homer sung,
Ere Rome 'mid woods of Latium sprung,
It drew the Babylonian's gaze
For signs of fate when scanning space.

Chaldean sages watched the glow
Of Regulus thus long ago;
Thus far, 'mid mists of backward time,
Observed it from their towers sublime.
'Twas Regulus, the kingly star
Which ruled Chaldaea's calendar,
And Greek Hipparchos taught aright
The movement of the hosts of night.
Here, through our New World's twilight gray,
It beams with undiminished ray,
On us as brightly shining down
As on Assyrian monarch's crown.

And when our lips have long been dumb,
And a far future shall have come,
And dull oblivion made its prey
The fames and grandeurs of to-day,
And all now breathing melted be
In bosom of eternity,
The Lion's regal star will shed
Its radiance still through evening's red,
And still shine on with changeless ray
O'er earth's mutations and decay,
And bring as now to sleepless eyes
The peace of its far tranquil skies.

B. W. BALL.

*The principal star in the constellation of the Lion was called Basilikos, or the Little King, by the Greek astronomers. It is known to modern astronomers as Regulus, which is a Latin word of the same significance. The Arabs, too, called it the Royal Star.

The Index.

BOSTON, APRIL 30, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, BENJAMIN F. UNDERWOOD, : : : : : } Editors.

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

What Religious Education Shall Liberals Give their Children? *

BY WILLIAM LLOYD GARRISON.

Do not suppose that I have come prepared to answer the question I propound. I am in search of light; and, in giving expression to my own doubts and surmises, it may be that your suggestive comments will help illumine "what in me is dark."

We are living at a period that seems to mark the ebb tide of religious belief. The historical and analytical researches of the last generation regarding the Scriptures have resulted in overturning or reconstructing many faiths which were supposed to be based on the solid rock of divine revelation. The great discoveries of mole-eyed science, groping among the atoms from which to deduce the natural laws, have revealed facts in those older scriptures written in the earth's formation, destructive to the Bible history which our parents and many of us, in earlier life, accepted as the groundwork of truth. A great unsettling of belief has followed. Our feet find under them the shifting sand of Sahara. In place of the Gibraltar whose firm support was our refuge and our strength. Doubt and denial are in the air. Instead of furtive questionings of the future life, open and emphatic negations of the soul's existence are popular. Where twenty-five years ago the Orthodoxy of Boston prayed that God would put a hook in Theodore Parker's jaws, Parker's heterodoxy is now orthodox, and Col. Ingersoll can fill Boston Theatre with thousands of enthusiastic auditors at a dollar per head, to hear his ridicule of the same God to whom Park Street Church addressed its infamous petition.

Many of us who are not yet converted to the new gospel, although compelled to relinquish much of the old and doomed to see beliefs that were sacred pass into the realm of fable, still cling to the hope of immortality and the immanence of the divine in the human soul. The prophets of

the new dispensation are scarcely less confident than their evangelical predecessors, and from narrow bases are not too modest to fulminate their dogmas or attempt to build up their little systems from ill-digested facts. Iconoclastic as the advance of free thought has been, one must rejoice at the wider liberty which it implies. The dethronement of the literal devil and the abolition of the bottomless pit much more than offset the loss of the imaginary heaven with its pavement of shining gold, or the transformation of the second person of the trinity from the Godhead into the ranks of glorified humanity. We are emancipated from haunting fears, although certain hopes of bliss are consequently weakened.

When I think of my agony of mind, when a child, connected with death and the burning torment, I am most thankful that my children will pass through no such horror. By this I do not mean to imply that such suffering came from home instruction,—far from it,—but the current theology of the time was so stamped upon youthful minds that playmates terrified each other with Calvinistic threats. Yet Orthodoxy, with all its sins, had some shining virtues. It had grit and self-denial at bottom, and an earnestness in matters of morality that we are in danger of losing in our broader theology. New England could ill afford to part with many of its qualities that are of Puritan inheritance.

The result of the wide-spread change of views regarding the authority of the Scriptures has been a laxity in church-going. The great majority of the community are not regular attendants, and religious societies languish. How to fill the pews and the treasury is the problem of all denominations, and smartness in the pulpit which can draw crowds and raise church debts commands a higher premium than piety. Excepting among the Catholics, the mere veneration of the Church is on the wane. In discussing the value of church organization, stress is more often laid on social and business advantages than on the salvation of human souls. I knew a thrifty tradesman in a neighboring town, whose first inquiry on settling there was, "Which is the most popular society?" and it resulted in his hiring a prominent pew in the Unitarian church. It was to the benefit of his temporal condition, whatever influence it exerted on his everlasting welfare.

There are various reasons why thinking men, earnestly desiring to leave the world better than they found it, are not attracted by the Sunday sermon. With their example of non-attendance, the children are naturally absent from the Sunday-schools, and religious instruction by the parents is neglected.

Let us consider why the churches cease to attract. Generalizations are tempting, but unsafe; and what I have to say must bear the impress of individual experience.

The anti-slavery movement started with ardent members of the Church. It ended with its leaders assailing the Church as the chief bulwark of slavery. It revolutionized the theological ideas of abolitionists, who were insensibly forced to re-examine their ground of belief in the light of conscience and reason as opposed to tradition. They belonged (to quote Conway) to "the fraternity of those who, amid a world that weighs eternal verities in their relation to gold and fashion, steadily say, 'Unto their assembly, mine honor, be not thou united!'" To their children, the clerical garb and the formalism of public worship had few attractions, educated as they were in the only really religious movement of the day, vital with faith and courage. If one had lived in the days of the apostles, in the burning times of the Refor-

mation, or among the early Quakers, he could have fellowshiped no loftier souls or witnessed a braver martyr spirit. After companionship with men and women eager only for truth and counting no suffering for principle a sacrifice, how uninspiring did the conventional pulpit seem! With the children of abolitionists, therefore, church attendance and the Jewish Sabbath were naturally disregarded. Sunday was a favorite day for anti-slavery meetings, to the scandal of the churchgoers in the country towns. Nor were they placated by the oft-repeated claim of the itinerant speakers that, if Jesus were to appear in that community as a stranger, he would avoid the churches, and find himself at home only in the plain hall where the down-trodden and oppressed were remembered. I shall never forget Mr. Phillips' pungent allusion at Abington to "this God-forsaken town, with four Orthodox churches and no anti-slavery society." Theology brought out its texts to strengthen the slave's chain, to oppress woman, to make the Sabbath a prison for the poor. The time-serving nature of the popular churches, thus revealed by the touchstone of slavery, did not change with its abolition. The ministers, after the accomplished fact, discovered that, as "God had turned abolitionist," to use Dr. Putnam's phrase, it was no disgrace for them to throw up their caps, and appropriate the honor for the Church. Antagonizing bitterly every important reform in history, the Church claims each when successful, and enrolls among its saints the martyrs that it put to death. But slavery is gone. Has the nature of the Church therefore changed? Test it with the reforms of to-day. It is, with noble exceptions, still prostrate across the path of progress. How can we expect it to be otherwise? By its constitution, it must represent the sentiment of the community. The pews direct, the preacher obeys. If a minister wishes to see how long it will take to preach himself out of his pulpit, let him deal faithfully with the sins of his own people. It is the denunciation of other people's sins that they are tolerant of.

Why do I not go to church regularly? I ask myself that question in thinking of my children and my duty to them. I should go,—in fact, I could not stay away,—if the ministers near me dealt with matters of immediate concern to me. I listen composedly to the exposition of Jesus' beautiful character, of wickedness that was rampant over eighteen hundred years ago, interpretations of Scripture that have no interest for me with my disbelief of their authority, of glowing periods praising the abstract virtues; and I go away hungering. I am anxious to know what the preacher thinks of Boston in the year 1885, of the great social and national questions of the time, of the duties his hearers are neglecting, of the way to make virtue easy and vice hard in this city of the Puritans. Every day, life gives us new problems to solve, dangers to face, obligations to perform. What is the pulpit for, if not to help us in our perplexity by honest speech? When Mr. Parker preached his "Lessons for the Day," Music Hall was too small for the congregation. The people thirst for the word. Given a preacher vitalized with humanity, and empty pews are unknown. "The common people heard him gladly" was affirmed of the unconventional preacher of Judea.

I hesitate to force my children to go to Sunday-school, because of the dogmas taught, even among the Unitarians. Rather than bias their immature minds, I would let them wait till old enough to construct their own theology. We know so little of the great mystery that surrounds us here, and of the laws which guide our footsteps, that to

* An address delivered before the Liberal Union Club, February 28, 1885.

serious minds the flippant assumptions of theology seem profane. I never hear a prayer addressed to the unknown Author of creation, which concludes with "We ask this in the name of Jesus Christ," without feeling it to be incongruous. It is a wonder that so many ministers, who disbelieve the Christian myth, still use this irreverent formalism. What would be thought of one who should pray through Socrates? As illustrative of theological impressions on youthful minds, the story recently told me by a friend is to the point. He was walking with his little boy at night, and talking of the stars. On being told that God made them, the little fellow asked with astonishment: "Is God alive? I thought the Jews killed him." And many a child of larger growth has put the humble carpenter's son in the place of the supreme Power.

Now, my children lose something by my abstinence from church. The noble, uplifting hymns, whether theological or not, that have been the inspiration and the joy of generations, and stirred the soul to sacrifice and labor, do not thrill them, although martyrs and saints have been sustained by their sentiment and melody. They lose also familiarity with the Bible, which, interpreted aright, is, after all, "the book of books" for the inspiration and comfort of humanity. Nor am I sure that their religious nature and their veneration do not suffer. I cannot doubt that these attributes were given us for an elevating purpose, or that their exercise uplifts and strengthens us in trials. We can echo the prayer of Tennyson:—

"Let knowledge grow from more to more,
But more of reverence in us dwell."

The non-church-going children of abolitionists were reared in the atmosphere of faith in great ideals. In these changed times, our children cannot so easily catch the "vision splendid" that on our "way attended." What can we give them in place of what we take away? Supposing we say to them, Because we cannot see God, and do not believe he ever manifested himself in recorded miracle, and cannot affirm to ourselves that he is personal, therefore worship only humanity. Such instruction may stimulate fellow-feeling and benevolence, and persuade one to labor for the physical amelioration of his kind; but it does not satisfy the longings of what we have been used to call the soul. The most perfect comfort of the body is compatible with anguish of mind; and how often we feel like

"An infant crying in the night,
An infant crying for the light,
And with no language but a cry,"

and only obtain relief when we rest on the invisible and mysterious influences that surround us, define them as we may!

The worship of humanity! I can understand such terms as the dignity, the grandeur of humanity, but its worship never. What is humanity but the aggregate of human beings, of which I am one; and, as each knows his own weakness and dependence, how is it possible to worship one's self without degradation instead of exaltation? For the finite to attempt to measure and judge the infinite, call it by what name you choose, Nature, Fate, or God, and to assert itself as the supreme, is pitiable. Can I point my children to the lives of eminent unbelievers as examples? Yes, unbelievers of the current theology, unbelievers of the false gods of religion and fashion that society sets up, unbelievers even like Harriet Martineau and John Stuart Mill, who yet, in spite of intellectual disbelief, discerned with clearness the moral laws, if they could not discern the lawgiver,—unbelievers only in name. The current theology is always at war with reform, but the reformers who move the world are those who believe greatly. It is the

men and women of faith who illuminate history. Weak in themselves, they become invincible, panoplied in the divine spirit. The familiar quotation of "one with God is a majority" comprehends the fact.

But unbelievers in the materialistic sense, those who are impatient at the mention of another world, and claim to know that death ends all, I do not hold up to my children as helpers. The mournful inculcation of the Rubáiyát is not stimulating to man's highest faculties:—

"Waste not your hour, nor in the vain pursuit
Of This and That endeavor and dispute;
Better be jocund with the fruitful grape
Than sadden after none, or bitter, fruit."

I apply the same reasoning to such minds as to religious dogmatists. Be modest, my good man. What you assert as final will still be the subject of discussion and doubt, of hope and despondency twenty centuries hence, as it was twenty centuries ago. The same problem that perplexed Socrates and Plato and Cicero before the Christian scheme had made its million of converts will still burden human minds, and the Sphinx will still sit "at the gate of life with the old question on her awful lips." So I am not disheartened when the scientist brings me a hopeless message from animals or rocks. Wisdom has its limits; and, while I quarrel with no man's conclusions for himself, I rebel at having them imposed on me, just as I resist the tenets of Orthodox theology. The world is full of doubting Thomases, and the privilege to be happy on negations or to enjoy poor health is one I shall not meddle with. Each one to his taste. I like other company.

To deny the divine spirit because we cannot see it satisfies some minds, but with equal reason might we deny the existence of electricity, because no one ever saw it or even knows what it is. I went to hear Ingersoll recently, and did not regret the absence of my children. Wit and palpable hits and justifiable ridicule of foolish dogmas and eloquent passages abounded; but flippancy and *ad captandum* appeals and the turgid artificial, rhetoric of the peroration made the whole performance depressing. I contrasted the effects on one's feelings, on coming out, with the inspiration that men felt in leaving Emerson's Divinity School address, or one of Mr. Parker's exceptional sermons; an anti-slavery speech of Mr. Phillips, or on rising from reading Whittier's "Eternal Goodness," where the topics treated search the profoundest depths of human nature and stimulate the highest sentiments. One who has felt the touch of the master cannot thrill when the pretender fingers the keys. More than all else that troubles me in the ethical education of my children is the animalism that is encouraged by materialistic thought. It would pain me little to have them embrace Calvinism with conscience, compared with entertaining liberal ideas and lax morals. The wine cup and its associations and the degradation of the tobacco habit I dread for them more than the fear of hell; and, if I can teach them to make character, and not abstract belief, determine their friendships, I shall not worry about their intellectual speculations.

It may be that age brings back the outgrown beliefs of childhood, and that at last, tired of the activity of promulgating advanced ideas, we seek to find rest in the comfortable pew which we had abandoned. I trust, however, that, while retrospect, softened by the mist of memory, wears a glory we did not realize as we passed, our faces will continue to front the sunrise and our steps to climb.

No lives can be repeated, and conditions are as evanescent as the clouds. We cannot reproduce

for our little ones the religious fervor of the great struggle of the century. From some other source must their torches catch their glow. Satisfied with the spiritual education acquired under exceptional circumstances, are we not in danger of taking it for granted that they may be saved vicariously? It is because our lives have carried us beyond dependence on the Sunday service that our children find themselves outside the influences that affect their playmates who are in the Sunday-schools. What can we give them better than the churchmen teach? I live in the hope that some "rugged Luther of these latter days" may call their higher nature to an awakening, and bind them to the saving service of a great cause.

Whether the reflux wave of spirit that is to cover the muddy flat of materialism shall show its snowy crest to our expectant eyes, who can foretell? I hold to the belief that it is on its way, destined to float the stranded ships of faith upon its swelling bosoms. "May such things be!"

GEORGE ELIOT'S LIFE.

BY R. E. WHITMAN, U.S. ARMY.

Mr. Cross has done a real service to his generation in his reverential devotion to the memory of this grandest of women. He has lifted with delicate hand the curtain that shuts the studio of the artist from the cosy rooms that constitute the home. We all loved her art so truly it was no impertinent curiosity which made us long for a nearer view of the woman,—the arm-chair, the soft firelight, the homely soil out of which could come such verdure, that could grow and ripen such fruitage. In this act of graceful kindness, he has kept himself only so much in view as seems necessary to call attention to more prominent and characteristic features in the picture. He knew her tastes, and did not forget them.

Of biographers, she says, "Is it not odious that, as soon as a man is dead, his desk is raked, and every insignificant memorandum, which he never meant for the public, is printed for the gossiping amusement of people too idle to reread his books?"

"He gave the people of his best.
His best he gave, his worst he kept."

But there is a certain set, not a small one, who are titillated by the worst, and indifferent to the best. I think this fashion is a disgrace to us all. It is something like the uncovering of the dead Byron's club-foot."

Mr. Cross' book will never be read by the idle lovers of gossip. Whoever do read it will go back to her books with a keener interest, and will, to a certain extent, see them in a new light. The wonderfully furnished head they knew; but the warm, true, deeply religious heart-pulses under it, the motive force, they now, for the first time, clearly appreciate.

Intellectually, the book is of great value, showing as it does the completeness of her education, her wonderful range of study, the complete genesis of her books, as well as the development of mind, character, and opinion, even unto the end. The frail body wavered, failed, and died: the woman grew broader, deeper, and sweeter, until the moment of final separation of soul and body. Emerson says: "We have never come to the true and best benefits of any genius so long as we believe him an original force. In the moment when he ceases to help us as a cause, he begins to help us as an effect; then he appears as an exponent of a vaster mind and will. The opaque self becomes transparent with the light of a First Cause."

George Eliot said of herself, "In all the best part of her writing there was a 'not herself' that took possession of her; and that she felt her own personality to be merely the instrument through which this spirit, as it were, was acting." If this story of her life has any force that will live, it is the clear shining of this great eternal light through her for us. The Jew refused to believe any good thing could come out of Nazareth. Sectarianism still questions the possibility of good coming from a life unshackled by creed, and doubts the existence of a simple religion, with charity

as broad as that taught by Christ or Gautama in the absence of a well-defined theology. In living her life, George Eliot did not hesitate at the unexpected consequences of her own development. She dared to be a law unto herself, as in some things all real character must be. Each human soul is a new creation, a new combination, such as no generation gone before could have produced. Human law, always imperfect, "waxes old as a garment"; and we are asked to reverence it because of its antiquity, not to love it for its present fitness for our needs. Any law has outlived its usefulness when it no longer yields to the human necessities of the "now."

Mr. Cross' book is brought into strong relief by the sombre background of Mr. Froude's Carlyle. There are many striking points of similarity of these great lights in the literature of this century: both born of artisan fathers, both of second wives; the fathers in both cases of strong frames, inflexible honesty, and remarkable for a strong common sense; the mothers, alike, devoted, industrious, and affectionate. They were both marked from childhood with the stamp of intellectual superiority: both omnivorous readers; both from early age strongly under the domination of evangelical belief; both subject to the pangs of dyspepsia, the brain busy in either absorption or creation to the neglect of working the mill to grind the corn of life; both thorough haters of sham, lovers of real work; both with the earnestness that comes from an early contact with the actualities of common life; both ambitious to do something for their kind; both seekers after truth for its own sake,—Carlyle, in his impetuosity, "I seek not Heaven, I fear not Hell. I crave the truth alone whithersoever it may lead. Truth, though the heavens crush me for following her. No falsehood, though a celestial lubberland were the price of apostasy"; George Eliot in her quieter way, "My only desire is to know the truth; my only fear, to cling to error"; both self-reliant in matters of intellectual conviction; both brave enough to walk by the light with which the Creator had endowed them, alike finding their true Christian earnestness after they had renounced the authority of dogma; both teachers, whom money could not induce to write, unless in accordance with their own convictions of duty to themselves and their race.

The grand difference in their development was simple, though broad and deep as the sea. The stern Scot snorted his contempt at the idea of seeking earthly happiness. The gentler English woman early declared the seeking of happiness to be a duty, no less than a human necessity. She found it, and thankfully accepted it. Carlyle sees the world and humanity in the cold electric glare of pure intellect. His lights and shadows are intense. He deals only in the superlative, and invents new words to intensify his invective. He works like a very Vulcan forging his thunderbolts for the demolition of the walls of sham, and never knows that a soul by his side is starving for want of human affection. George Eliot looks out from the ruddy glow of domestic firelight. The lights and shadows meet and mingle in its kindly flickering: the lines are never well defined,—the light might so easily be shadow and the dark place made light by a slight change in the arrangement of things.

She says: "Happiness means all sorts of love and good feelings, and that is the best result that can ever come out of science." "My own experience and development deepen every day my conviction that our moral progress may be measured by the degree in which we sympathize with individual suffering and individual joy."

The capacity for love in the human heart is like the inherent force in the horseshoe magnet: it craves a keeper, something of the opposite or negative quality that it may hold to itself, gathering strength by the apparent expenditure of force. Not finding it, it grows weaker in the silent reaching out after distant and various objects, until, finally, its useless life seems to expire. The giving is more important than the receiving. George Eliot gave in rich abundance,—a wife to him who could claim no wife; a mother to his boys, devoting hours to correspondence with them after her minutes had become golden; redeeming one man from the desert of despair, and through that, hoping and striving to do her share toward the redemption of the race.

In one of her early letters after her union with Mr. Lewes, she says: "If I live five years longer, the positive result of my existence on the side of truth and

goodness will outweigh the small negative good that would have consisted in my not doing anything to shock others; and I can conceive of no consequences that will make me repent the past. Do not misunderstand me, and suppose I think myself heroic or great in any way. Far enough from that! Faulty, miserably faulty I am,—but, least of all, faulty where others most blame." In 1857, after three years of her "dual life," as she loves to call it, she says: "My life has deepened unspeakably during the last year. I feel a greater capacity for moral and intellectual enjoyment, a more acute sense of my deficiencies in the past, a more solemn desire to be faithful to coming duties than I remember at any former period of my life. And my happiness has deepened, too: the blessedness of a perfect love and union grows daily."

There are many who will be able to see in the following a spiritual flight as far beyond creed as creed is beyond fetishism. "As for the forms and ceremonies, I feel no regret that any should turn to them for comfort, if they can find comfort in them. But I have faith in the working out of higher possibilities than the Catholic or any other Church has presented. And those who have the strength to wait and endure are bound to accept no formula which their whole souls, their intellect as well as their emotions, do not embrace with entire reverence. The highest 'calling and election' is to do without opium, and to live through all our pain with conscious, clear-eyed endurance." Again: "My books have for their main bearing a conclusion, without which I could not have cared to write any representation of human life; namely, that the fellowship between man and man, which has been the principle of development social and moral, is not dependent on conception of what is not man! And the idea of God, so far as it has been a high spiritual influence, is the ideal of a goodness entirely human (*i.e.*, an exaltation of the human)." "Will you not agree with me that there is one comprehensive church whose fellowship consists in the desire to purify and ennoble human life, and where the best members of all narrower churches may call themselves brother and sister in spite of their differences?" "I believe that a religion, too, has to be modified,—'developed,' according to the dominant phrase,—and that a religion more perfect than any yet prevalent must express less care for personal consolation and a more deeply awing sense of responsibility to man, springing from sympathy with that which of all things is most certainly known to us, the difficulty of human life."

Always true to the light within her, she says: "If I could be seduced by such offers, I might have written three poor novels in one year, and made my fortune. Happily, I have no need to exert myself to say, 'Avant thee, Satan!' Satan, in the form of bad writing and good pay, is not seductive to me." Again: "I shall go on writing from my inward promptings,—writing what I love and believe, what I feel to be true and good, if I can only render it worthily, 'as it was in the beginning, is now, and ever shall be' with those who are to produce any art that will lastingly touch the generations of men." "I can write no word that is not prompted from within." "My function is the rousing of the nobler emotions, which make mankind desire the social right. . . . It is one thing to feel keenly for one's fellow-beings; another to say, This step, and this alone, will be the best to take for the removal of particular calamities." "Oh that we were all of one mind, and that mind good,—pity and fairness, two little words, which carried out would embrace the utmost delicacies of the moral life!"

An indefatigable student, seeking light from all sources, exploring all fields of argument because she believed

"Not God himself can make man's best
Without best men to help him,"

again she prays,—

"Give me no light, great Heaven, but such as turns
To energy of human fellowship;
No powers, save the growing heritage
That makes a completer manhood."

For the effect of this broad religion upon herself, it has been freely stated and widely believed that it led her to a condition of settled melancholy. In a letter to an intimate friend four years before her death, she says: "It is remarkable to me that I have entirely lost my *personal* melancholy. I often, of course, have melancholy thoughts about the destinies of my fellow-

creatures; but I am never in that mood of sadness which used to be my frequent visitant, even in the midst of external happiness. And this, notwithstanding a very vivid sense that life is declining and death close at hand."

Her interest never flagged to the very end in

"The dire strife of poor Humanity's afflicted will,
Struggling in vain with ruthless destiny."

"We cannot be utterly blind to the results of duty, since that cannot be duty which is not already judged to be for human good. To say the contrary is to say that mankind have reached no inductions as to what is for their good or evil." "The art which leaves the soul in despair is lamming to the soul, and is denounced by the healthy sentiment of an active community."

We can barely better sum up her attitude toward existing religious systems than by the following extract: "All the great religions of the world, historically considered, are rightly the objects of deep reverence and sympathy,—they are the record of spiritual struggles which are types of our own. This is to me pre-eminently true of Hebrewism and Christianity, on which my own youth was nourished. And in this sense I have no antagonism toward any religious belief, but a strong outflow of sympathy. Every community met to worship the highest Good (which is understood to be expressed by God) carries me along in its main current; and, if there were not reasons against my following such an inclination, I should go to church or chapel constantly, for the sake of the delightful emotions of fellowship which come over me in religious assemblies." No one can doubt the deeply religious feeling and motive underlying all her acts and opinions. As to her attitude in relation to the destinies of the race, she claims to have invented the word "meliorist," which seems to be the only refuge for a candid, thoughtful, sympathetic mind,—as, logically, pessimism ends in either brutal indifference or insanity, optimism in a weak ignoring of all but pleasant facts; an airy relinquishment of all personal responsibility for suffering; a childish hope that somehow things are better than they seem, or, at any rate, that they will come out all right, while we comfort ourselves with our *eau sucrée*.

The point in the life of this representative woman round which circle universal interest and inquiry is her union with Mr. Lewes. We may well be content to let their bright, happy, nobly useful lives plead for justification, if any is needed. The fact is that two natures necessary to each other found the law of the land and the Church inexorably blocking the path that led them toward happiness and peace with "Whom God hath joined together, let not man put asunder." This thunderbolt, which is hurled mercilessly at the head of him who dares ask for divorce, may in the future find its proper place in the catalogue of ghostly aphorisms. When the conveniences of fashion, respectabilities of custom, religion, and law stand in the way of the union of two natures which seem to demand each other, each needing what the other is better for giving, it would seem there was a real putting asunder of what the God of nature had joined together by his fundamental laws, while cutting the chain forged by inconsiderate haste, ignorance, and the agency of a licensed marriage legalizer, which binds either one or two human beings to the corpse of dead hope and self-respect, is but the "loosing the bonds of the captive, and letting the oppressed go free."

Humanity never moves in masses toward a better civilization, a purer ideal of religion, or more humane laws. Argument grows on what it feeds. Neither can humanity be driven toward higher ground by the terrors of the law. An Indian chief once said to me: "Why should I forsake my way of life, and live like the white man? You need not say because I must, for I'd rather die here and now than to be afraid; but show me how your life is better?" The cold axioms of social science are alike vanity. "If you are ill, the first of all duties is to be well." If you are unhappy, seek happiness as a right. The grandest mind is useless, when shrouded in gloom and darkness.

No manufactured smile of patient endurance can force its way to responsive sympathy, only to pity. Morally as well as physically, the great army of men must be led, not driven, to its duty, to its legitimate happiness. Endurance is only a virtue when there is neither help nor cure. It is a question of some importance in regard to law-making as to how far the law-maker is influenced by an intelligent regard for

the future well-being of society and how far by the social effect upon himself of the published record of his vote, in cases where the law under consideration has no present nor prospective interest to himself. It is to be hoped the day will come when men will hesitate at taking the responsibility of law-makers upon themselves, instead of, as now, wearing their election as feathers of personal distinction.

Human laws so far as regarded lands and property, were speedily and very generally modified after the overthrow of the feudal system. The baron and the bishop were alike compelled to yield their broad lands to the ownership of the many, but those laws which had been framed for the conservation of morals yielded the ground slowly. They are still under the influence of conservative, dogmatic feudalism. We call ourselves republicans, but the republicanism of conscience is not yet come. The feudalism of the Church is long-lived, because so many are willing to be serfs, and glory in the iron ring of servitude.

When men will stand on their feet in God's great republic, and take his message as it comes direct from him to their consciences, when they have the courage to love their neighbor as themselves, irrespective of creed,—“this brother whom they have seen,” and take that for sufficient evidence that they “love the Father whom they have not seen,”—then will feudalism in religion pass away, her strongholds be converted into hospitals for the poor and disheartened, for whom Death is the only physician. Law will then emerge from the fatal shadow which has so long darkened it, and men will at last know that the only possible advance for humanity is along the line in the direction of its own instinctive tendencies. We may deepen the channel through which the river of human life is to flow, we can cut off many a reedy, stagnant, miasmatic inlet, make clean the banks; but we can never change the direction of its flow until we can by some cunningly devised law compel the iron filings to restrain themselves from rushing to the embrace of the magnet. Then also we can call the roof which shelters two discordant souls a home! Both religion and law must be the servitors of humanity, not the taskmasters.

A nobler, broader religion will come to the waiting thousands who refuse to believe this world has no higher significance than a “mourners' bench” whereon to spend their allotted time, repenting for the sins of Adam, the indulgence of the practical selfishness of learning a formula by which to save their own souls; who contend that this world is at least a respectable ante-chamber to the audience hall of the great King, and that they should comport themselves as gentlemen. To this great, ever-increasing number of the waiting and hoping, the Great First Cause, the “not me,” seems to speak by the life no less than by the voice of George Eliot.

SOUTH NORWALK, CONN., March 10, 1885.

ETHICAL CULTURE.*

BY MRS. CLARA M. BISBEE.

This meeting is called with the single purpose of arousing fresh interest in Ethical Culture, under the auspices of free thought. That the attitude of this society before the world (and before the city of Boston particularly) may be understood, let me for exactness define, in writing, our platform. First of all, we are Free Religious. We believe in the all-important reality which may be conceived and named in as many ways as there are individuals among us. God, Nature, or the Unknown, is recognized by us in common, through a silence broken only by soft strains of music. The words of no human being are competent to express the communion of the finite with the infinite. But, because of our necessary regard for this reality, we are led to the study of its every possible manifestation. Nature's process, by which the higher or more complex is constantly evolved from the lower and simpler, forces upon us a knowledge (more or less) of the conditions of happiness. All along, we trace the strife (consciously or unconsciously) for a better order of things, for the largest possible happiness of the race, which indeed constitutes morality. At last, we arrive at a period when consolidated experience amounts to moral intuition, when the human intellect sees far enough to set aside the near for a

* Anniversary address before the Society for Ethical Culture on the occasion of their removal to Parker Memorial parlors, April 5, 1885.

more remote good, egoistic for egoistic and altruistic pleasures,—in short, to demand from the inductions of the past something like a formulated moral code. So increasing knowledge becomes the requisite of all people, that all may reach sooner the ideal or happy state. Each human being may become actively a factor toward this end. But, looking over the world (and at home most truly, too), we find incompetency to realize the highest good already seen. Hence, motives must be discussed; and the one only intrinsic motive to good conduct—namely, the desire for race-happiness—must replace all others. The work here to be done for the world is perhaps even greater than the inciting to knowledge. This society, then, becomes a “Society for Ethical Culture.” It takes this title, because, while recognizing the reality on which morality is based, it finds the main work of life to be moral training.

As to its methods. One peculiarity is “association without formal organization.” The nucleus of this society began its work in Dorchester in 1881; and the leader has, from the first, believed it possible for a community to exist joined only through the bonds of a pure friendship. If Utopian, yet this is the aim; and, from a moral stand-point, it succeeds.

There are two ways of improving character: the one by changing external environments to something better, as sampled by the distinguished Felix Adler, of New York; the other, by quickening the inner life of the individual, as illustrated by this society. And friendship here between members of whatever rank in intellect or worldly condition, age, color, or sex, is such as only the sincere can know or the reverent liberal appreciate. Our young are educated from three years, upwards, on the principle of the kindergarten. Independent thought and noble endeavor are the end. The little ones are versed in what are termed the “flowers of the heart,” these having correspondence, through color, with garden blossoms. The children, too, make record through the week of character growth attained. Older pupils choose from the wide world of thought their topics for conversation, seeking in turn to solve the problems of life or to improve by study of some rare life.

One word as to the call for a society like our own in the midst of the liberal churches of Boston. It holds a unique place, because no other society that we know is absolutely free! The leader here is one of the association, each member of which gladly offers his best gift. The leader simply gives impetus to a movement shared by all. The leader is in no sense representative of the society's thought (except as to freedom and ethical culture in general); and the leader here, as in no other society in Boston, is true to the society only so long as she is true to her highest. If her view of the universe, of the origin and destiny of man, should change to-morrow, being true to herself, she would retain her place, as others would hold theirs in like transition. This, I claim, is practical free religion; and I prophesy that the church of the future will be in small communities like ours (say of fifty members), who, through the stimulus of “personal friendship and reverent free thought,” will draw themselves into accord with the highest. As to support of a society like this, financially, I would say that on principle each does his best; and some monthly payment of money (or its equivalent in work) is considered the very alphabet of morals with us. Yet payments are adjusted to ability. The leader here needs support for herself and her children. The only conflict ever with her is how to make a limited vitality do the work at once of leader and mother, while outside the society she earns her livelihood. At present, her income here is twelve dollars per month. Still, the hope forever allures that fifty memberships at ten dollars per year, or one hundred at five dollars, will be secured, and so a longer lease of life be granted.

That this society does not attempt extensive reforms in the environments of the poor, ignorant, and wicked outside, is not because the seed of such remains unsown: it is because the time for blossom and fructification is not yet come. Make interiors right, and exteriors will adjust themselves! Who shall describe that ever-widening circle whose centre we may be for good? Thus deeply impressed as I am with the need of individual ethical culture, and by means of reverent free thought, I invite our friends to-day to give their kindest, strongest words for our support, and in behalf of the world at large who feel unconsciously for a work like ours.

CORRESPONDENCE.

CLERICAL PERVERSION OF SCRIPTURE.

Editors of The Index:—

I said, in *The Index* of April 9, that candor is not to be expected from an orthodox clergyman in regard to matters wherein church creed and church custom have dictated what he shall say. Reading in the *New York Observer* of the same date an editorial article illustrating this fact, I think it well to call attention to it.

The reverend editor of the *Observer* quotes approvingly the following resolution passed by the General Conference of the [Orthodox] Congregational Churches of Connecticut at its last annual meeting:—

“Resolved, That the obligation of the divine law concerning the sacred observance of the Sabbath, as well as the needs of humanity, demand of the railroad corporations of the country the curtailment of all freight and passenger traffic on the Lord's Day, save that which can be proved to be absolutely necessary.”

The reference above to “the divine law” means the fourth commandment of the Hebrew decalogue. This command specifies the seventh day of the week, Saturday, as the divinely appointed day for Sabbatical rest, and specifies the six preceding days as the ones divinely appointed for work. The Jews, to whom this command was originally given, still observe this Saturday Sabbath. The Presbyterian editor of the *Observer* has never once in his life observed it, neither have the Orthodox Congregational ministers of Connecticut; yet both these try to make their readers believe that this same commandment allows work on Saturday, and forbids it on Sunday! They pretend to hold this as law abiding, and to obey it, while they systematically violate both parts of it, and teach others to do so; and they falsely claim Scripture warrant for representing devout attendance on their Sunday ceremonies as a duty, and work or recreation on Sunday as a sin.

Whether these men, and the class to which they belong, intend to speak falsely in this matter is a debatable question. What is certain is that their claims in regard to it contradict the book which they pretend to quote as a perfect and sufficient rule of life, and that their union in support of those claims, coinciding as it does with their present pecuniary advantage, is a noteworthy and suspicious circumstance.

C. K. W.

EXCUSES FOR DYNAMITE.

Editors of The Index:—

I like *The Index* too well to wish to see its columns closed to the discussion of any honest opinion. There will always be differences of opinion as to what changes may be necessary to progress, and as to what means may be adopted to advocate and bring about such changes. There is a small party—mostly foreigners, it is to be hoped—in the United States, which thinks that the only way to emancipate Ireland is to blow up English non-combatants with dynamite at railway stations and other places of public resort. On the last occasion on which these tactics were resorted to in London, there was a unanimous shout of indignation raised all over the Union. The leading organs of all parties hastened to disavow sympathy with the perpetrators, and demanded such a change in the law as would bring them to punishment. The only exception to this which I have seen, excepting of course the *Irish World*, is, I am sorry to say, to be found in the pages of *The Index*. In the number for the 26th of February, there is an article, if not exactly applauding these villainies, extenuating them,—making all manner of excuses for them, and drawing a parallel between them and the doings of the French in Tonquin and the English in Soudan. The writer speaks about England's crimes in Ireland, and about the murders committed in the name of the law, by which, I suppose, he means the hanging of the Phoenix Park gentry. He says also, “If we can grieve over untimely deaths in London, let us not less sorrow for the thousands hounded to the grave in unhappy Ireland.” When were these thousands hounded to the grave in Ireland? Is he going back three centuries, in order to make out a case? This is a good illustration of the utter ignorance on the part of newspaper writers of Ireland and of Irish affairs. The fact is that the Irishman of the present day does not labor under a single disability or injustice. He is in a far

better position than his fellow-subjects in England and Scotland: he is not taxed to support a State Church as they are, and he has advantages in the matter of land tenure which they have not. True, if we go back far enough, we shall find plenty of oppression and injustice. The Irish never were able to unite for the purpose of resisting the English invader. Ireland forms a marked contrast to Scotland in this respect, a smaller country with fewer people, and not separated by an arm of the sea. The English conquerors parcelled out the lands of Ireland among themselves, just as the Norman conquerors did with the lands of the English Saxons. Lands were originally acquired in something of the same way in all countries which have a history, but nobody except the Irish dream of confiscation for this cause.

I think that the man who can see no difference between the blowing up of railway stations by Irish dynamiters and the English war in the Soudan is to be pitied. The English, rightly or wrongly, consider themselves a sort of police to preserve order among semi-barbarous tribes. They at the present moment maintain order over a large part of the earth's surface. Much can be said on both sides as to their presence just now in Egypt and Soudan, but they make war only on armed men: they do not attack Arab women and children; they do not lay trains under the market places, and blow them up when they are full of people; they do not— But further illustration is useless. One might as well try to convince O'Donovan Rossa or Patrick Ford as try to make any impression on *The Index* contributor.

J. G. WHYTE.

OTTAWA, CAN., March 30, 1885.

HORATIO P. GATCHELL.

Editors of *The Index* :—

This very learned physician died at Asheville, N.C., on the 25th of March last, at the ripe age of seventy-one years. He was born at Hallowell, Me., and educated in Bowdoin College when Longfellow was professor of modern languages. Most of his life was spent in the West and South, and he had been in the vicinity of Asheville several years for his health. In the West, he was honored by all schools of medicine, and held professorships in medical colleges in Cincinnati, Cleveland, and Chicago for more than twenty years. Probably but few persons in his native New England were aware of his vast professional and other attainments, and of his rare qualities of personal character. The following just tribute is copied from the *Daily Advance* of Asheville:—

Dr. Gatchell was an example of certain virtues which have always been rare with professional men. He subordinated every material and financial consideration to the science of his profession. It could not be told of him, as some one once remarked to Dr. Akenside, "Doctor, from all you have said, my opinion of the profession is this: our ancients endeavored to make it a science, and failed; our moderns, to make it a trade, and succeeded." It was utterly beyond the character of Dr. Gatchell to seek praise, intrigue for business, or practise any kind of deceit with the public or his patients. He treated sick persons with simple honesty, looking upon them as subjects for his medical skill and experience. The writer of this article has had the good fortune to meet, familiarly, many of the most distinguished men of the medical profession, but hardly one who possessed in a greater degree exact knowledge of the vast range of the science of medicine. His name ought to have stood by the side of the brightest lights in America's brilliant galaxy of talented men. His mistake was, as the world goes, not to have sought popularity and money. But the attainments of this remarkable man extended far beyond the ordinary range of medical science. Probably no specialist in the country was so fully and accurately informed upon the relations of meteorology with health as he. It will always be the sorrow of the scientific world that an exhaustive book upon this question was recently destroyed with the burning of Dr. Gatchell's house. There was hardly a branch of modern science or department of literature with which he was not familiar; and, in all his public discussions in magazines and professional journals as well as in the charm of private talk, he displayed the finest critical judgment.

Prof. Gatchell was of a deeply refined and highly intellectual nature. His mind was as broad as civilization, and his thought as invigorating as the air of the mountains. With the firmest moral principles, he united that variety of mental powers which we call genius. We now speak of him as dead, but the fruits of these powers keep him still among the living. The generous noble fire has gone out, but its impression on mankind is an immortality.

He was attracted, not by State or Church or wealth, but by truth and justice and humanity; and for these alone he devoted himself to science. He was the friend of the young, the help of those in trouble, and to the old a fountain of cheerfulness in life. His memory will be always bright with those who have felt the thrill of his surpassing eloquence or the enchanting delight of his personal acquaintance.

G. W. F.

BOOK NOTICES.

VOLTAIRE'S ROMANCES. Translated from the French. A New Edition. Complete in one volume. New York: Published by Peter Eckler, 35 Fulton Street. 1885. pp. 448. Price in cloth, bevelled boards, \$2.00; in half calf or half morocco, \$4.00.

Mr. Eckler seems to be editor as well as publisher of this excellent collection of some of Voltaire's most charming stories; for he gives in the preface a short sketch of the life of the famous wit, author, and politician, has embellished it with sixty-seven fine illustrations, and has added copious notes to enable the reader of to-day to understand more thoroughly the purport of these romances. He has been discriminating in his selection, declaring in his preface that "the romances and tales in this publication have been selected for their graceful and sprightly wit, as well as genial humor and keen satire; and, further, because they are free from even a suspicion of impropriety. They each teach a lesson of wisdom and morality; they teach courage, fortitude, and resignation; and, what is perhaps of even greater importance, they also tend to free the mind from the baneful errors of priestcraft and superstition." He further remarks: "Their quaintness, piquancy, and simplicity are altogether delightful, giving to them the aroma of attar and the flavor of fine old wine. They have, besides, great power and purpose, their trenchant wit cutting like a Damascus blade deep into the foibles of society." The collection consists of seven long stories and ten shorter sketches. The titles of the lengthier ones are "The White Bull," "Zadig, or Fate," "The Sage and the Atheist," "The Princess of Babylon," "The Man of Forty Crowns," "The Huron, or Pupil of Nature," and "Micromegas." Among the illustrations are three portraits of Voltaire: one, the frontispiece, is from a bust by Houdon, representing him as he appeared in his eighty-third year; a full-length portrait shows him in his seventieth year; and the third, copied from a French edition of his works published in 1746, was taken in his early manhood. The full-length likeness gives a much kindlier expression to his face, while preserving all its marked characteristics, than any other picture of him we have ever seen.

U.

TRANSACTIONS OF THE SCIENTIFIC ASSOCIATION, MERIDEN, CONN., 1884, Vol. I. Published by the Meriden Scientific Association. pp. 40.

This pamphlet is mainly a catalogue of the phænogamous and vascular cryptogamous plants found growing in Meriden, Conn., compiled and left incomplete by the late Emily J. Leonard, director of the botanical department of the Association, and now "published as a tribute to her worth, and also as a recognition of her services as a botanist." The catalogue contains seven hundred and forty-nine distinct species of plants, and represents "at least five years of the constant labor of one woman, almost wholly unaided." Her discoveries were recognized by eminent botanists. Soon after her death, the Meriden Scientific Association, in a resolution, said, "Our fields and mountains will miss her familiar footsteps, our wild flowers will weep, and Flora herself mourn for her loved disciple." Miss Leonard died at Meriden, July 16, 1884, in her forty-seventh year. Last year, she spoke in this city for the Massachusetts Woman's Suffrage Association and for the Moral Educational Association. The last evening she was in Boston, she attended the Festival of the Free Religious Association. Of this remarkable woman, the little work published as a tribute to her memory says:—

She passed the Harvard examination for women, and was offered a professorship at Vassar College. Miss Leonard was well read in Greek and Latin, also spoke French and German, and had a sufficient knowledge of Italian and Spanish to read in those languages. She assisted Prof. Bocher, of Harvard University, in the preparation of his French grammar, and translated from the French a *History of Political Economy in Europe*, by Jerome Adolphe Blanqui. Miss Leonard also assisted Mr. John J. Lalor

in the preparation of his *Cyclopedia of Political Economy*. Miss Leonard was greatly interested in the subject of political economy, and accumulated a valuable library on the subject. An essay on "Money," read by her at a convention in Cleveland, Ohio, attracted a great deal of attention at the time, as did also a paper on "Political Economy," read at Portland, Me., before the Woman's Congress, in 1882. In 1880, when the Scientific Association was formed, Miss Leonard was one of the earliest and most active members. One of her first papers read before the Association was on the "Definition of Botanical Terms." In February, 1880, she read a paper on "Pollen, and the Means by which it is distributed." In 1882, at the Darwin meeting of the Association, she read a paper on "Darwin's Observations and Experiments." Dec. 11, 1882, she read a paper on "Stomata and their Functions." June 11, 1883, she read a paper on "Dimorphous and Trimorphous Heterostyled Plants." She read at other meetings of the Association papers on the "Nutrition of Plants," "Fertilization of Plants," and in June, 1884, a paper on "Myths and Myth-makers."

U.

HOW SHOULD I PRONOUNCE? Or the Art of Correct Pronunciation. A Manual for Schools, Colleges, and Private Use. By Wm. Henry P. Phyle. New York and London: G. P. Putnam's Sons. 1885. Price \$1.25.

The author, in his preface, says, "There is no book upon this subject, whether popular or profound, that considers the question of pronunciation in its most general sense; no work sufficiently simple and brief, on the one hand, to meet the wants of ordinary people, and yet sufficiently complete and accurate, on the other, to satisfy those of more scholarly attainments." This want he hopes to supply in this work. To "ordinary people," the formidable list of books bearing upon the subject of English pronunciation, which is given in the appendix, will of itself give new ideas of the possibilities of study in the direction of the seemingly simple matter of pronunciation; while the titles of the different chapters of the book give some hint as to the scope taken, as, for instance, "The Physical Nature of Sound," "The Nature and Use of the Vocal Organs," "Articulate Sounds in General," "Alphabetics, or Symbols in General," "The Sounds of the English Language." There are twelve chapters, and each chapter has a long list of subheadings. Only one, however, is devoted to giving the correct pronunciations of a list of over a thousand words often mispronounced.

U.

TOKOLOGY. A Book for Every Woman. By Alice B. Stockham, M.D. Chicago: Sanitary Publishing Co.

Mrs. Stockham was one of the earliest women physicians in this country, and has been in constant practice for nearly thirty years. Her book, which deals mainly with the ailments incident to maternity, their cause and cure, is written in a clear, vigorous, and interesting style. Her remedies are based on sensible hygienic principles, which she carefully explains in direct, easily understood language. Several of the chapters are devoted to advice as to the care of infants, how to avoid and remedy the diseases to which childhood is prone, and the proper dietetics for both mothers and children. The book contains nearly three hundred pages, is printed in good, clear type, and is handsomely bound.

WIT AND WISDOM OF E. BULWER-LYTTON. Compiled by C. L. Bonney. New York: John B. Alden.

This compilation is a little unique, in that it proceeds in a somewhat more methodical fashion than that in which such compilations are usually made. The extracts are taken from twenty-eight of Bulwer's best known works; and the choice bits from each form a section by themselves, preceded by the title of the work they are taken from and a synopsis of the chief characters. So that, in addition to getting what the compiler evidently considers the cream of each story, the reader, unacquainted with Bulwer at first hand, gets also an inkling of the plan and purpose of the book from which they are excerpted. The quotations are numerous, not lengthy, and in good taste.

"ALDEN'S LIBRARY MAGAZINE" for May is a very solid number, enriched with the best thought of the day by leading writers. It gives nearly forty articles, of which we have only space to call attention to St. George Mivart's "Organic Nature's Riddle"; "Egypt and the Soudan," by Sir W. H. Gregory; "Contemporary Socialism," by J. Thorold Rogers; "The Organization of Democracy," by Goldwin Smith; "Cooperation in England," by Thomas Hughes; and "Interviewed by an Emperor," by Archibald Forbes.

UNITY CHURCH-DOOR PULPIT.

The second year of the "CHURCH-DOOR PULPIT" began April 1. The series of twenty sermons will differ from last year's in two respects. Four numbers will be devoted respectively to

Channing, Parker, Emerson, Martineau, giving a score or two of what in each writer may be called his "Gospel Passages." If one would learn in short space for what the four great prophets of our Liberal Faith stand, let him read these numbers, and keep them on hand to give a friend.

In three more numbers, the subjects "God," "Miracles," "The Bible," will be respectively treated in extracts from several writers. Each of these three pamphlets will be, as it were, a handful of short liberal tracts on its special subject.

The other thirteen numbers will probably be single sermons from as many preachers,—preachers ranging in their thought from Liberal Orthodoxy to the Society for Ethical Culture; most of them finding a home, therefore, under the Unitarian name. So far as those invited have been heard from and decided on, the list, alphabetically arranged, stands now:—

Felix Adler,
 C. A. Bartol,
 Phillips Brooks,
 John W. Chadwick,
 Rowland Connor,
 Washington Gladden,
 T. W. Higginson,
 John C. Learned,
 Andrew P. Peabody,
 Minot J. Savage,
 John Snyder,
 S. H. Sonneschein.

The hope is that Liberal churches, West and East, will catch the new church-habit, to regularly and freely furnish forth a table or shelf near the door with such pamphlets, first for home reading and then for lending and mailing, each reader becoming his own missionary society for whatever he finds worthy.

Each church that subscribes \$25 for a block of fifty copies and uses them thoroughly through individual readers, as here suggested, besides any good done in its own homes, sends out twenty times fifty, or one thousand and twenty copies, to spread the Liberal Faith,—a little mission well worth adding regularly to any church-life.

Will those who think that such a series of twenty pamphlets as is here described promises good pocket and post-office preaching at once send in their subscriptions for the coming year?

Single subscription for the year, twenty numbers, \$1.00.
 Block subscriptions for ten or more copies to one address, fifty cents each copy.

 Chicago, Ill.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price \$3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR's basis of action, and the best exertions of its manage's will always be used to render it a free and independent journal devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

JOSIAH P. MENDUM,
 PAINE MEMORIAL BUILDING,
 Appleton St., Boston, Mass.

THE PATRONAGE of the liberal advertising pub. is respectfully solicited for THE INDEX. It must not be held responsible for any advertisement made by advertiser. It is made to keep the public in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions, . . . 10c. per line.
 " 13 to 25 " . . . 8c. " "
 " 26 to 51 " . . . 6c. " "
 " 52 " . . . 5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent. On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the above calculated, will, be made.

SITUATION AS TEACHER WANTED.

A graduate of Harvard would like a situation as teacher, in which independent thought and honest speech would not be dangerous. For particulars and references, address M., INDEX office.

RELIGIO - PHILOSOPHICAL JOURNAL.

Established in 1865.

A Paper for all who Sincerely and Intelligently Seek Truth without regard to Sect or Party.

The JOURNAL, in the estimation of a large proportion of the leading authorities on Spiritualism, stands pre-eminent as a fearless, independent, judiciously fair advocate of Spiritualism. It has received more general notice, and more frequent and higher commendations from intelligent sources, regardless of sect or party, than any other Spiritualist or liberal paper ever published: the records will confirm this.

The JOURNAL is uncompromisingly committed to the Scientific Method in its treatment of the Phenomena of Spiritualism, being fully assured that this is the only safe ground on which to stand.

The JOURNAL is unsectarian, non-partisan, thoroughly independent, never neutral, wholly free from cliques and clans.

PUBLICATIONS

OF THE

FREE RELIGIOUS ASSOCIATION.

Freedom and Fellowship in Religion.
 A volume of ten essays upon speculative and practical problems of religion, by D. A. Wasson, Samuel Longfellow, Samuel Johnson, John Weiss, W. J. Potter, F. E. Abbot, O. B. Frothingham, J. W. Chadwick, T. W. Higginson, and Mrs. E. D. Cheney, and extracts from Addresses by Ralph Waldo Emerson, Lucretia Mott, Robert Dale Owen, Dr. Bartol, Wendell Phillips, Rabbi Wise, Horace Beaver, A. B. Alcott, Lucy Stone, Charles H. Malcom, Julia Ward Howe, and others,—all given on the platform of the Free Religious Association. Price (reduced) \$1.50.

Reports of Annual Conventions of Free Religious Association, from 1872 to 1879 inclusive. These contain essays and addresses by the various distinguished men and women who have spoken on the Free Religious platform, together with yearly reports of the Executive Committee. 10 cts. each.

TRACTS.

- I. *Taxation of Church Property*, by James Parton. 5 cts.; ten, 30 cts.; one hundred, \$1.50.
- II. *The Bible and Science*, by John Weiss.
- III. *The Sympathy of Religions*, by T. W. Higginson. Enlarged edition.
- IV. *Transcendentalism*, by Theodore Parker. Never before published.
- V. *The Public School Question*, as understood by a Catholic American citizen (Bishop McQuaid) and by a Liberal American citizen (F. E. Abbot).
- VI. *How Shall We Keep Sunday?* An Answer in Four Parts: 1. Sunday in the Bible. 2. Sunday in Church History. 3. Sunday in the Massachusetts Laws. 4. The Workingman's Sunday. By Charles K. Whipple, Minot J. Savage, Charles E. Pratt, and Wm. C. Gannett.
- VII. *Evolution and Religion*, by John Fiske. 5 cts.; ten, 35 cts.; one hundred, \$2.00.

Nos. II., III., IV., V., VI., 10 cts. each; ten, 60 cts.; one hundred, \$3.00.

Reason and Revelation, by W. J. Potter. 5 cts.; ten, 30 cts.; one hundred, \$1.50.

Address
 FREE RELIGIOUS ASSOCIATION,
 44 Boylston Street, Boston, Mass.

TRACTS.

No. 1.—*Truths for the Times*, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 2.—*Fear of the Living God*, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—*Lecture on the Bible*, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 4.—*Christian Propagandism*, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extraneous.* Price 10 cents; 12 copies, \$1.00.

No. 5.—*"God in the Constitution,"* by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.

No. 6.—*"The Sabbath,"* by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 7.—*"Compulsory Education,"* by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—*The Present Heaven*, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—*The Christian Amendment*, by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.

No. 10.—*The Impeachment of Christianity*, by F. E. Abbot. Sixth Ten Thousand. Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.

No. 11.—*The God of Science*, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.

No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, \$1.00.

No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—*A Study of Religion: The Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.

No. 15.—*The Battle of Syracuse.* Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

CURRENT TOPICS.

BY B. F. U.

A COSTA RICA correspondent of the Boston *Herald* writes: "A Spanish highwayman does not swear at you, and command you to give him your money or your life: he makes a profound bow, places his hand upon his heart, assures you that he is devoutly grateful that you are looking so well, and regrets that he is compelled by pressing necessities to request that you will loan him whatever valuables you have upon your person. Then, thanking you for your promptness and courtesy in sparing him the painful duty of shooting you through the head, he will mount his horse and ride off with a prayer that the Almighty will protect you from the perils of your journey."

SAYS the *Christian Register*: "It is the *Catholic Review* which announces that 'Prof. Harkness, of Boston College, has prepared a manual on book-keeping with a special view to the wants of the Catholic clergy,' adding, 'If its lessons are mastered by every young ecclesiastic, obliged also by the most disagreeable necessities of his position to be a man of the world and of affairs, it will save many a heart-burning.' If there is any place where this commendation of the study of book-keeping will be appreciated, it is in Cincinnati. There is no evidence that the late archbishop was a dishonest man; but, if he had understood and applied a simple method of book-keeping, he might have avoided the pain of burning the pockets and the hearts of his parishioners."

In the Massachusetts Senate, last Monday, Senator Joyner, of Berkshire, speaking in favor of his substitute bill providing for the taxation of churches in excess of a valuation of \$25,000,

claimed that the taxation of churches, as the bill proposed, would tend to discourage the erection of so many costly church edifices, and encourage the building of small chapels and churches. The increase of church property from 1850 to 1860 was, he said, about one hundred per cent., while the increase in church membership was only twenty per cent. The same was true from 1860 to 1870. He mentioned that seven churches, four Unitarian and three Trinitarian, in this city, on the Back Bay, represent \$2,000,000 of property exempt from taxation. It was time, he thought, to call a halt in this vast accumulation of tax-exempted property in the hands of the Church. The substitute bill was refused, 9 to 19; and the adverse report was adopted.

CHARLES DUDLEY WARNER, in the *Drawer*, humorously discusses the "deceased wife's sister" question, which comes annually before the British Parliament for consideration: "The desire," he says, "of the Englishman to marry his deceased wife's sister is one of the most marked phenomena of the times. The deceased wife's sister bill may be said to be his steady occupation. In all his breathing spells from emergencies, he turns to that. When he is not being massacred by the South Africans, or slaying Soudanese, or fighting Afghans, or pacifying the Irish, or being blown up in his Tower, he is attending to the deceased wife's sister bill. He comes back to it out of all victories and all defeats with unwavering pertinacity and courage. It appears to be the passion of his life to marry his deceased wife's sister. We, who live in a land where nobody opposes such an alliance, cannot conceive the attraction it seems to have to Englishmen. And, seeing how universal and strong this desire is in England, we cannot but inquire why the Englishman does not marry the wife's sister in the first place. Why does he go on marrying the wrong one, and then wait for death and the law to help him out?"

DOUGLAS JERROLD is said to have remarked to a friend, who was reading a book in order to review it, "I never do that: I find it prejudices me." His course seems to have been adopted by the literary editor of the *New York Independent* in criticising F. M. Holland's *Rise of Intellectual Liberty*. For instance, the review says: "The attempt to introduce the Knights Templar in the rôle of martyrs of intellectual liberty is a miracle in its way"; and, again, "Mr. Holland might as well say that the last Jew put to the rack, and tortured to force from him the secret of his wealth, was a martyr of intellectual liberty as to write the Templars into this position." What Mr. Holland does say is simply this, "I see no sign of heresy or free thought in these proceedings"; and, again, "The Templars were only imaginary heretics" (p. 211.) His index (p. 455) runs thus: "*Templars*, not heretics, but not innocent of crime." What he actually tries to show is that the real reason the novice was in a few cases asked to deny Christ, spit on the cross, etc., was merely that the Knights wanted to amuse themselves with his scruples or cowardice. The theory is a novel one, but should

not be misrepresented. Similar injustice is shown in charging Mr. Holland with an attempt "to describe Jesus as a rationalist liberal," whereas the *Rise of Intellectual Liberty* says (p. 69), "What independence he showed was as a mystic, not as a rationalist." And so to blame the author for "his guess that Calvin meant to have Servetus burned" is by no means warranted by the passage on page 370. "The attempt of the famous persecutor to have his victim beheaded was useless; and he undoubtedly knew from the beginning that conviction meant death at the stake, as was required by the ancient law, then often enforced against witches." Censure in such a spirit should recommend the book to fair-minded men.

LAST Monday evening, Mrs. Isabella Beecher Hooker gave the last of a course of lectures in this city on Spiritualism. The discourse was rather discursive, but was marked by evident sincerity, earnestness, independence of thought, and a kindly spirit. She spoke at length of the experiments of Crookes and the investigations of Wallace, and defended mediums in general, and Mrs. Maud Lord—one of whose séances was the subject of a recent letter in *The Index*—in particular. At the close of the lecture, the medium named referred to the article in *The Index* and its author in very caustic language, and said she was glad he was present to hear her opinion of him. At once there was a stir in the audience, and a general looking for the fellow thus castigated. In a moment all eyes were turned toward the innocent writer of this paragraph, who occupied a seat near two ladies, in the rear of the small hall. The spirit guides of the medium had not kept her from falling into a mistake as to the presence of *The Index* correspondent, and we were thought to be the individual who wrote the account of the "dark séance." After the experience of being stared at several minutes by the whole audience, we took an opportunity to remark that we thought the author of the article which had given offence was not present, else he would be likely to be heard from; that our own responsibility was simply that of an editor who expressed his own views, and was willing to allow others to express theirs; that the columns of *The Index* had been and were open to a defence as well as to criticisms of the claims of Spiritualism, etc. These remarks seemed to satisfy the audience: smiles took the place of frowns; the medium said she had been misinformed, and tendered an apology; and Mrs. Hooker, in the kindest tones, intimated that we possessed mediumistic powers, and thought that through the efforts of a dear friend in the spirit world interested in us, and with whom she had communicated, we would at no very distant date be convinced of the truth of Spiritualism. Another medium spoke, stating that she had recently seen Longfellow, the poet, and a spirit who claimed to be, and she had no doubt was, Mohammed. The meeting was, from different points of view, quite interesting. It ended more pleasantly than it would probably, had the writer of the article on "The Dark Séance" been present.

CHRIST'S MISSIONARY NATIONS IN ASIA.

The founder of Christianity is styled the Prince of Peace. He was a man of peace. Persons who have adopted "non-resistant" views have claimed him, and with very good reason, for their authority. By precept and example, he opposed the use of physical force for the accomplishment of his ends. He even taught that physical force is not to be resorted to for resisting physical force. And the Christian Church is fond of reciting concerning him the old words, though they were written without any reference to him: "He was oppressed, and he was afflicted; yet he opened not his mouth: he is brought as a lamb to the slaughter, and as a sheep before her shearers is dumb, so he openeth not his mouth."

We do not here raise the question whether the teachings and example of Jesus in this respect give the right ethical standard for human society. Certain it is that human society, with slight exceptions, has never followed, and makes no professions to follow, this standard. Though Jesus is the acknowledged head of the Christian Church, there is no Christian nation that makes any pretence of keeping his precepts with regard to peace. The contrast between his teachings and the common Christian practice could not be more forcibly illustrated than by the attitude of the two great nations, England and Russia, in Asia to-day. Here are two of the most powerful Christian nations in the world. In each there is a State Church. The sovereign in each country is, *ex officio*, the Head of the Church in each, Defender of the Christian Faith, and a visible representative of Christ on earth. The Christian people of these two countries have manifested great solicitude for the salvation of the pagan populations of Asia by their conversion to the Christian faith. Yet these two nations are at this time gathering immense armies in Asia, that are liable any day to be precipitated in bloody conflict over a boundary line between countries to which neither of them has the shadow of any natural right. What kind of faith in the religion of Jesus are these powerful national defenders of Christianity exhibiting to the "pagans" of Asia? What a commentary upon the Sermon on the Mount is their zeal to outstrip each other in getting national dominion over Asiatic soil! "The meek shall inherit the earth," said Jesus. Are these leading Christian nations now acting in Asia as if they believed that? Of course, they do not believe it; and no Christian nation has ever acted upon that precept. The scattered preaching missionaries of Christianity in Asia are teaching that Jesus said that "the peacemakers are the children of God," and that "they are blessed who hunger and thirst," not after dominion and power, but "after righteousness"; but the stronger missionaries are these Christian nations themselves, represented in their armies and their diplomats. These tell the story, not of what Jesus taught on Asiatic soil nearly two thousand years ago, but of what is the character of the religion which now bears his name, and is especially defended and supported by the powers of State, in two of the strongest nations of Europe in this present year of the Christian era.

How far Christianity everywhere is from the moral teachings on which Jesus appears to have laid most stress is curiously shown by a little remark made incidentally in an excellent article that recently appeared in the *New York Independent*, on "The Church of Abyssinia." The writer says, "Directly south of the Soudan lives a peculiar people, whose confession and worship is *Christian*, and who have for centuries been *living in deadly hatred* with their Mohammedan neighbors." I have italicized

the words which do not seem to fit together, very well, if the theoretical and Sunday descriptions of Christianity are to be accepted. And yet this writer, who gives a learned account of the history and customs of this Abyssinian branch of the Christian Church, seems to think that it would be a disastrous thing if its existence were to be imperilled, as he thinks it might be, by the success of the Mahdi. "It is the only distinctively Christian nation and people on the African continent," he says; and, therefore, the inference is that the Christian Church everywhere should be interested in preserving the independence of these Abyssinian Christians, even though they "have for centuries been living in deadly hatred" with their neighbors. And, indeed, why not? The Abyssinian Christians are not exceptional among Christian nations on account of this little peculiarity of living in "deadly hatred" with their neighbors. Larger and more civilized Christian nations manifest a good deal of the same peculiarity. England and Russia to-day, both of them intensely Christian, are exhibiting this same trait of the Abyssinian Church, as their armies confront each other across the Afghan mountains in Asia. There is certainly a very "deadly hatred" in the spirit of these two nations toward each other at the present time. France and Germany are not regarding each with very fraternal eyes across the Rhine. Nor is there any strong exhibition of brotherly love between Italy and Austria. Yet these are all Christian countries. The only strange thing about it is that all these nations, including the Abyssinian Christians, should insist that Jesus, the "Prince of Peace," is the founder of their religion, and should read his precepts about meekness and gentleness and forgiveness as if they really believed them, and should affect to think that his honor will suffer and his cause be imperilled, unless they maintain the integrity of what they are pleased to call his Church and extend its domain by extending their own power.

As we look at it, if England and Russia were really Christian nations in the sense of being followers of the precepts of Jesus, they would not be in Asia with their armies at all. And, aside from all regard to their professed zeal for the religion of Jesus, considering the broad interests and ideas of modern civilization and the humanitarian sentiment of this age, it is cause for humiliation and shame that these great nations should be rushing to the arbitrament of the sword in a war, which, if it comes, is likely to imperil the security of all nations, over a dispute about a boundary in the mountains of Afghanistan. If there was ever an international dispute which could be left to the arbitration of a neutral court, this is one. Now is the time for pushing the idea of a permanent international court for settling such quarrels. There may be national disputes which cannot be thus settled. All wars might not be thus prevented. War sometimes comes, as did the Civil War in the United States, as a moral conflict between antagonistic ideas, and as inevitable retribution for previous violation of the laws of justice and right. But all the modern wars in Europe, and the wars that European nations have carried into Asia and Africa, have been wars caused by international rivalry and ambition. An international court or congress of arbitration should have been able to prevent them all. And yet it is Christian nations that have fomented and waged these wars,—nations that have elevated Christianity to the position of a State Church; nations that specially profess to be defenders of the Christian faith; nations in whose churches Jesus is preached and sung and worshipped as the Prince of Peace. We would respectfully call the

attention of the *Christian Statesman* to these facts. That a nation as a nation professes and adopts the Christian religion does not appear to save such nation from committing great injustices and crimes, does not prevent it from waging bloody and needless wars, nor from living for centuries in "deadly hatred" with its neighbors.

WM. J. POTTER.

THE FRENCH REVOLUTION, PAST AND PRESENT.

I lately went to the School of Fine Arts, beside the Seine, to hear a lecture from M. Taine, whose name is printed in the regular list of lecturers. The concierge of the institution looked at me with astonishment. "The lecture," he said, "will be delivered by M. the Librarian of the School." "Is M. Taine then ill, or out of town?" "I think not." "When will he lecture?" "Not again, I think." I afterward learned that M. Taine could not now lecture except at risk of a riot. His offence is his arraignment of the Revolution and its leaders in the last century, contained in the last volume of his history. It is indeed a fearful story. He has gone into the long-hidden details, and shows how, when the degraded populace and their leaders sprang into the seats of power, they were drunk with their success. It now seems pretty clear that those revolutionists carried with them the superstition even in which they had been so long drilled: they must have a ritual, though its object is now a painted harlot crowned as "Reason"; they were driven with the same passions as the nobility they dethroned, and made every chateau the scene of indescribable orgies. It was a riot of lust and murder, the rioters now being less orderly and grammatical than those they ousted, and their famished passions free from such partial restraints of decency as those that surround the indulgences of a more nearly satiated aristocracy. M. Taine writes in a time and country which have overlaid these excesses with refined theories, ideals of popular progress, and euphemistic pictures of what "the Revolution" promises to-day; but he compares all this to the splendor and decorations of that ancient Egyptian temple where the candidate for initiation moved from hall to hall until he came to a curtain: that fine curtain being withdrawn disclosed a crocodile. M. Taine withdraws the embroidered curtain hung so ingeniously over the origin of the Revolution, and reveals—a monster! The worst of his offence is that he has not only laid this charge, but proved it.

Was it worth doing? No doubt the revealed monster had swallowed a previous monster much like itself. The Reign of Terror overthrew a reign of regulated rascality. Yet I cannot help feeling that M. Taine has done heroic service to France—nay, to Europe and the world—in reminding them by a salient example that pauperism and ignorance cannot make a school of virtue and wisdom. They must go to school. The suppression of the most brilliant historian in France because he has brought to light undeniable facts unpalatable to the populace is his justification. The love and honor bestowed by the English people on Carlyle for more than thirty years after he had sincerely opposed their enfranchisement is an evidence that the majority of them are fit for enfranchisement; but the enfranchisement of the French masses must still be regarded with misgivings, however welcome as the better alternative to supremacy of the treacherous priesthood and heartless imperialism which have fostered their faults. One need only attend a popular meeting in Paris to perceive that the atheist has hardly learned a better method of promoting his cause than that of priest, and that the "anarchist" is still a despot. The

long reign of priest and despot is represented in the fact that there is not yet, even in the fifteenth year of the Republic, a hall in Paris suitable for a popular assembly. The people have to meet in dancing or music saloons, which may have more effect than one might suppose in giving a carnivalesque character to their proceedings. I attended a meeting in the Vauxhall saloon, summoned to consult for peace, which became a scene of strife for nearly three hours. Whenever one group of the thousands present heard a sentiment from the platform which they did not like, they straightway set up a yell which silenced the speaker completely. As each group practised the same tactics, no speaker was fairly heard at all. Finally, the "anarchist" party, wishing to take entire possession of the meeting, began beating its neighbors over the head or shoulders with canes and umbrellas, and, having so fought their way to the platform, began stating its no-government nostrum for bringing on the millennium. I could not help remembering poor Heine, who said that, although all the arguments of German theologians had failed to convince him of the existence of God, that work was achieved by a few moments' experience of an atheist assembly in Paris. But I supplemented Heine's remark with the reflection that it was plainly the surviving Orthodoxy of these people that made them so intolerant of all opinions except their own. I suppose that the stake and wheel of the Inquisition were evolved from the stick with which primitive man broke his fellow's head when it did not agree with him; and, now that the improved apparatus of uniformity is abolished, wheel and stake relapse into the original cane and umbrella. That is considerably better than the imperial plan of turning them into anti-democratic rifles, but the principle is the same. At this moment, it is impossible to hold an orderly public meeting in Paris for the discussion of any subject whatever. That is the protoplasm out of which all despotisms are evolved under favorable conditions.

Now, I have passed many pleasant summers in France, and known all sorts and conditions of French people, and have found that individually they are generally polite in conversation, able to listen quietly to opinions other than their own, affable, good-natured, and sensible. It is when massed together in parties or groups, collected under some partisan flag, and brought in sight of an opposite company and flag, that they become so fierce and intolerant. I suspect this is a reversion from the man to the soldier, whose business, as Tennyson reminds us, is not to reason why, but only to do and die. The armies of several thousands of years have tramped all over France, recognizing no existing laws or usages where they moved,—each, as Napoleon said, a huge worm crawling on its belly, and devastating districts to supply that belly,—and the old habits and instincts adhere to these undrilled remnants of them after uniform and sword are laid aside. For thousands of years, this people have never been gathered *en masse* except for a dance or a fight; and, as the political meeting is not for a dance, it must be for a fight,—if not with weapons, then with explosive lungs and sharpened tongues. It is this military instinct which imperils the Republic. It is that which tempts the so-called republican government to follow so fatally the footsteps of its imperial predecessor. It is well known that the late war of Napoleon III. against Germany was a dynastic war. The empire had no chance whatever of escaping the wild vengeance of the masses—whose wise leaders it had banished—but by turning them upon an old *vendetta* trail toward the Rhine. It raised the glittering talisman of mili-

tary glory and conquest, covered its pursuers with epaulettes and decorations, and the masses—which *Punch* carefully misprinted "them asses"—at once turned with a rush on the anti-Teutonic trail. The late Ferry government tried the same trick. The Tonquin war was dynastic also. The Republic inherited from the Empire a mutilated territory, an exhausted treasury, a weakened army, but at the same time was expected to shed new lustre on France, and raise her into a commanding position among the nations of Europe. It must outshine the phosphorescent Empire which rotted away. It was impossible. Unable to think of recovering from Germany the lost provinces, powerless to send either men or money to share with England the occupation of Egypt, bowed to the lowest seat in the councils of Europe, the Republic began to hear murmured memories about the splendors of the Empire; and when ministry after ministry had fallen with perilous celerity under the growing eagerness of its parliamentary enemies, encouraged by popular impatience, Ferry resolved to touch once more this vulnerable military vanity of the masses. He prudently selected China, a presumably weak enemy, a distant one, about which all manner of fictions might be told without contradiction; and it is now certain that he meant to prolong the process of worrying China until after the next elections. He would appeal to the military vanity of his countrymen, to their longing to eclipse past defeat with big-typed stories of glory, and then protest against "swapping horses in the middle of a stream." The Chinese proved unwilling to be annoyed so long for Ferry's benefit, and, as we all know, made themselves so disagreeable that the scheme failed. M. Clemenceau, and the small group of anti-military radicals who knew perfectly the game Ferry was playing, had long been prepared to spring on him in the moment of any defeat. That is why they tore him to pieces so ferociously at the first disaster. They could not stem the longing of the people for victory so long as sensational tidings of victory were coming in; but they realized that they would presently have a Republic only in name, that poor Grévy was already a President only in name, and so Ferry has "gone to meet" Ollivier, Jules Simon, and other dead men who still walk the earth.

If another Taine, a century hence, should tell the whole truth about this French Republic, he would have to record that, so fast as the *bourgeoisie* succeeded to the power and resources of the *noblesse*, they displayed a tendency to the same corruptions. M. Brisson inaugurates his premiership with a demand for money to support the piracy of Tonquin by a nation groaning over loss of a Tonquin of their own on the Rhine. How long will France travel in this vicious circle? The military spirit, the childish fondness for soldiering, is but a barbaric form of the ancient communistic sentiment which Socialism plays upon without understanding. Earlier socialists—Fourier, Saint-Simon, Louis Blanc—had noble, however impracticable, Pisgah-visions of a phalanx of labor, armed with implements of art and utility, drilled into an irresistible engine of transformation, turning chaos to paradise with labors made light by a co-operation securing happiness, plenty, even luxury, for all. The military spirit were as good as it is now bad, could it be directed against the dragons and snakes, the demons of ignorance and superstition, which have become such a giant brood in France during the ages in which the Saints have been slumbering in Palestine or waging war with phantom foes of the Year One.

A true friend of France ought to rejoice that Germany has taken from her Alsace and Lorraine,

—cut off the two fingers without which she can never attack Germany, and which can never grow again. Then a true friend of France should rejoice at every reverse her colonial ambition receives in regions where she has no right to be. If the French can only be driven home and kept there, they may become the leading nation of Europe in affairs and interests which will be of living importance, when their rifles and uniforms will be shown in some museums, like that now travelling about to fairs with ancient instruments of torture. The steady reduction of France from what, in military nomenclature, is called a Great Power to what Shakspeare calls "the blessedness of being little," appears to me absolutely essential to human civilization. That of course cannot be accomplished solely by severance from the Rhine or frustration of colonial ambition. There must be agencies within which can turn such apparent weaknesses to the service of the superior forces from which those weaknesses really result; for the later children of France will glory in that of which their fathers are ashamed,—the passing of the Latin race out of the military epoch.

MONCURE D. CONWAY.

WHAT A GERMAN LADY THINKS OF "FREE RELIGION."

Baroness Suttner, one of the correspondents of the *Magazin für die Literatur des In- und Auslandes*, or Magazine of German and Foreign Literature, published at Berlin, has contributed to the number for March 7 the following article, entitled "An American Journal, *The Index*." "In Boston meets an organization which calls itself the Free Religious Association, and announces its objects thus: 'To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history,—in other words, virtue, brotherhood, and truth.' And these aims are to be reached by means of unrestricted liberty of thought. All traditional authority of special religions and supposed revelations—the Christian not less than the others—is to be subjected to the judgment of scientific criticism and impartial reason; and thus religion is to be set free from the fetters of dogmatism and sectarianism, in order that she may devote her mighty powers to elevating morality and improving the social condition of mankind. . . .

"This association possesses an organ, *The Index*, a weekly journal now in its fifteenth year, whose motto is 'Light, Liberty, Right.' . . . This journal is conducted with such consistency, firmness, and ability as must naturally command the admiration of all kindred thinkers. Modern thought, which yet embryo-like flutters about in the atmosphere of our time and stirs most heads to doubt the old and to long for a new faith, takes in the columns of *The Index* the form of clear, calm, and strong affirmations. Every number contains brilliantly written essays on the problems of social, ethical, and religious science, with controversial articles, whose tone is always moderate, and a general survey of all the movements of free thought. From among the numbers lying before me, I take a few titles as specimens of its contents: 'Modern Civilization and Christianity,' by W. J. Potter; 'Pietism and Morality,' 'Some Free Thinkers from the Old World,' and 'Moral Teachings of Darwinism,' by B. F. Underwood; 'The Unveiling of the Statue of Harriet Martineau,' by Sara A. Underwood; 'Samuel Johnson's *Religion of India*;' 'Natural Genesis'; 'Witchcraft in Boston'; 'The Pioneers of the Women's Rights Movement and their Adversaries'; 'Emerson's Philosophy'; 'An Agnostic's Creed.' Poems: 'Work On,' 'A Priest of Nature,'

'Aspiration.' Book reviews: 'Jesus, his Ideas and Character,' 'Journal of Speculative Philosophy,' 'Bible Myths,' 'The Philosophers of Greece.'

"Thus, the paper is of twofold interest; first, as the organ of a certain society whose endeavors, tendency, and accomplishments it portrays in definite delineations, and then, as a literary phenomenon, exhibiting as such a view of American journalism, the development of style and thought in the New World. Its editors and regular contributors, like Sara A. Underwood, F. E. Abbot, O. B. Frothingham, F. M. Holland, etc., are widely esteemed authors, whose books are popular among the American readers of Paine, Emerson, Spencer, Darwin, Bain, Tyndall, Buckle, Strauss, Büchner, Lange, and Haeckel.

"Among the characteristics of the picture of the activity of the Boston free thinkers, given in *The Index*, are these: The champions of modern thought have organized there a congregation which regards its convictions as a religion, and surrounds them with a sort of worship, including public declaration of principles, regular gatherings for edification, and all sorts of joyous and solemn celebrations. Harriet Martineau has been honored with a statue, Herbert Spencer with a banquet, and Thomas Paine with a memorial building which might almost be called a temple, and which is the head-quarters of another liberal journal, the *Investigator*, which announces itself as 'devoted to the welfare, improvement, and happiness of men and women here and now in this world, the only world of which there is any positive or demonstrated knowledge.' Preaching is held on the platform of the Free Religious Association, and tracts are distributed; but the sermons announce the glad tidings of evolutionism, and the tracts are such as Frothingham's *Fear of the Living God*, Abbot's *Truths for the Times*, containing his 'Fifty Affirmations' and 'Modern Principles,' Voysey's *Lecture on the Bible*, etc. . . .

"It is also evident that women take an active part in its proceedings, are enrolled among its vice-presidents, speak on its platform, and contribute largely to its literature. The emancipation of woman seems to be one of its articles of faith; and this is simply logical, since all liberalism, freedom of commerce, press, etc., springs as a natural outgrowth from freedom of thought. . . . Thus are inscribed upon the programme of this school of thinkers the equalization of woman, the fraternization of all nations, the removal of protective duties, censorship, and the like, and, above all, the abolition of that evil which most deeply stings their moral sentiment,—the sentiment of love and compassion,—the evil of war. It is an honor to the city of Boston that the humanitarian ideas, which are the offspring of our modern scientific spirit, are there manifested with such remarkable courage and energy. In Europe, I know of no city where free thinkers form so imposing an institution, having its own press, represented by the ablest speakers, and enjoying the widest esteem. Although the growth of these ideas requires a soil as free as America's, it could not be said that they had their birth in America. . . . Still, in the very fact that the thoughts of the greatest sons and daughters of Europe are made the foundation of the sublimest movement in America, we welcome the rapturous assurance that above the national distinctions of thinking minds reigns One Universal Mind, who makes his dwelling-place wherever men search for the truth; . . . and that from the spiritual achievements of all nations shall be 'skimmed a *crème*,' which is to realize Goethe's conception of a 'world-literature.'

"And, as to literary physiognomy, although *The Index* is a special organ, so to speak,—and special

organs, as a rule, make style and diction subservient to their tendency,—its depth of thought, its flight of inspiration, its clearness of diction, stand unequalled, since its task embraces the highest problems of the mind. Those who in their writings approach the highest achievements of their time will ever be the greatest masters of style. During the reign of Louis XIV., the most brilliant literary products were odes to the king and pulpit orations (compare Bossuet, Fénelon, Massillon).

"To-day, the most ideal achievement of the age is not faith, but science; and so we see that those authors who treat scientifically of the world's problems in philosophy, jurisprudence, history, and theology, write with peculiar clearness and eloquence. Who can be more logical than Mill, more poetic than Quinet, more brilliant than Taine, or more convincing than Buckle? When a special organ expresses its object in the words 'Light, Liberty, Right,' it might be expected that the best writers in the land should appear in its columns; and this is actually true of *The Index*. In his article on 'Rationalism in America,' in the *Revue des Deux Mondes*, April 1, 1883, Count Goblet d'Alviella says: 'When we look at the essays and addresses which *The Index* publishes weekly, we are surprised, not only at the number and zeal of the evolutionists, but at the means they find of giving religious feeling a new horizon and satisfying its loftiest aspirations. Some of these writings are valuable only as indications of the new movement; but the books and addresses of Abbot, Savage, Potter, etc., contain passages which are as remarkable for power of argument as for elevation of idea and poetry of diction. These are in every respect works to be recommended to those who fear that the progress of science will cause any deterioration of what constitutes the might and grandeur of the human soul.'

"Of course, those who have such fear of progress will not read *The Index* with sympathetic comprehension, but will take offence. Large as is the majority which this class forms, the disciples of progress should not lose courage. If their aims cannot be reached at once, they may find some reward in the strife itself. This is expressed in words in this little poem, which I have noticed in *The Index*, and which may serve as a specimen of its treasures:—

"I've found some wisdom in my quest
That's richly worth retelling:
I've learned that, when one does his best,
There's little harm in failing.
I may not reach what I pursue,
Yet will I keep pursuing;
Nothing is vain that I can do,
Since soul-growth comes of doing."

F. W. OPP.

THE LIMITS OF GOVERNMENT.

One of the strongest arguments against excluding witnesses for disbelief and legalizing frauds committed on Sunday is that government ought not to be carried on for the special benefit of partisans of particular creeds, but for the common good of all the people. The guilt of burning Servetus, massacring the victims of St. Bartholomew, and hanging the Quakers, is all the darker because it was not the proper business of those governments to do anything of the sort. The State exists in order to protect life, not to take it away. So, in waging needless war, government acts like a sheep-dog, who slays the lambs he ought to guard. Another of the primary duties of government is to protect property. The United States do not form an absolute despotism, but a limited partnership. Each citizen retains his right to his private property, with the exception of such part as is needed for the protection of the rest.

When our government exacts money in taxation for ends outside of its proper limits, it deserts its legitimate place of a protector of property, and becomes a robber. Webster's Dictionary tells us that any ruler who imposes burdens which the purposes of government do not require is a tyrant. Protection of life, liberty, and property, is generally recognized as the principal duty of government. It ought to be equally well understood that the State which tries to do more runs great risk of doing less. The levy of taxes for any purpose except defending our liberties and estates is not protecting our property, but taking it away. Of course there are many institutions, like schools, roads, and streets, which are so necessary for the preservation of life, liberty, and property that they ought to be kept up at the public expense. On the question whether this is true of churches, I need not enter here. All who ask for exemptions, privileges, or bounties, are imperatively called upon to prove that such special legislation is compatible with the paramount right of all holders of property to be protected equally. It is particularly necessary to insist on this right, when so many socialistic schemes are being urged upon our Congress and State Legislatures.

Another question to which the light of these principles ought to be applied is our tariff. Even if we admit for argument's sake that our manufactures could not have sprung into existence without it, we may still ask whether the time has not come for ceasing to make this gigantic exception to the plain duty of protecting all property alike. One of the best known of New England mill-owners, Rowland G. Hazard, is making masterly arguments to prove that the American manufactures could do better without special protection. I remember hearing a similar testimony from that enlightened philanthropist, Mr. Samuel Hill, of Florence. A Connecticut maker of hardware, Mr. J. B. Sargent of New Haven, has recently delivered in Boston an address, since published, urging that, "provided the manufacturers were relieved from the tariff on raw materials, they would need no protection." He is obliged, for instance, himself to use a mixture of American iron with Scotch; and the latter is taxed so heavily as to hinder him from exportation. He could compete much more easily with foreigners, if he could get iron as cheaply. What superiority he and other American manufacturers enjoy over European rivals he ascribes to our superior skill and energy. Another maker of hardware was asked, while visiting Germany, if he had found out what wages were paid there. He replied: "No; nor did I want to know. Tariff or no tariff, we can beat them, if they get their work done for nothing."

And I feel all the more sure that our manufacturers have such ability and resources as would enable them to stand alone, without being propped up by the State, because history shows that this great industry had no pauper origin. In 1766, Benjamin Franklin told the British House of Commons, "I don't know a single article imported into the Northern colonies but what they can easily do without or make themselves." The making of hats and of hardware was then carried on so successfully without State aid as to alarm the English manufacturers; and prohibitory Acts of Parliament were passed in consequence. Better and cheaper shovels, scythes, etc., were made here before the Revolutionary War than could be imported from Europe. Massachusetts then owned a vessel for every one hundred inhabitants, and fifty ships of colonial build were sent across the ocean for sale every year. Lynn began exporting boots and shoes to Europe more than two hundred years ago. The whole history of manufactures shows

that they have long been carried on with peculiar success in New England, because it is New England, and not merely because it is now under a high tariff. In fact, the assertion that, if we had no tariff, we could have no manufactures, seems to me worth about as much as the reasoning of the farmer from West Virginia, who wanted to have a bounty on foxes, in order to assist the propagation of the gospel. "You see," he said, "we can't have the gospel, unless we have preachers: we can't get preachers among us, if we don't give them chicken for dinner. And we can't raise any chickens, if there isn't a bounty on foxes."

No one should forget the interest of the workmen. But it ought to be remembered that they are much better off with England's free trade than under Germany's high tariffs. An intelligent machinist has recently sent me a strong argument to prove that the reason they are more prosperous in America than in Europe is that they are not taxed here for the maintenance of State churches, great standing armies, and hereditary aristocracies. The workingman prospers in America, because our government, with exception of the high tariff, is carried on for the equal good of all the governed. The only competition he has to fear is that of emigrants, who come over from Europe and Asia to underbid him. Whatever may be said about the inhumanity of trades-unions and Chinese laws, they give much more efficient protection to labor than could be established by the highest tariff.

I don't want to dogmatize on questions where each side is upheld by enlightened and philanthropic advocates, but I do want to know what right our government has to levy taxes for the special benefit of one class of industries. It is for the supporters of high tariff to show how their position is to be reconciled with the plain duty of the State to protect all property holders alike. The purchasers of nickel-plated ware, for instance, have a right to know why they should all be taxed for the benefit of one man who owns a mine in Pennsylvania. Lovers of art may fairly ask why a duty of thirty per cent. is levied on imported pictures, when, among twelve hundred and forty-three American artists recently consulted, more than nine-tenths wished to have no duty at all. We should do well to consider whether Emerson was not right in saying: "The basis of political economy is non-interference. The only safe rule is found in the self-adjusting metre of demand and supply. Do not legislate. Meddle, and you snap the sinews with your sumptuary laws. Give no bounties, make equal laws, secure life and property, and you need not give alms." (*Conduct of Life*, Essay III., p. 91.)

F. M. HOLLAND.

DEATH.

Whether or not death is the gate of entrance into another state of existence, it is certain that it ends our connection with this mortal life. It goes without saying, in these days of thoroughly awakened reason and common sense, that intelligent people refuse to indulge in futile speculations in regard to death or to adopt the myths, imaginations, and dreams of old barbaric theologies and mythologies. Solemn before all of us stand, veiled in impenetrable shadows, the dark portals of exit from this brief existence; and through those portals we see our friends and comrades vanish, one by one, until we, too, follow them into the gloom and mystery of the unknown and unknowable. Meantime, the human race, being perpetually renewed, knows no diminution and feels no loss in the death of any individual or individual members of it, no matter how illustrious and

highly gifted with genius they may have been. Nature, "the inscrutable and mute," gives no sign of regret or of remembrance of the innumerable billions of human beings whom she has heretofore upborne and nurtured in the past; but, as fresh and vigorous as ever, she is continually welcoming new-comers to her domain of earth, air, and sea, and of mixed good and evil, joy and sorrow, to tread the trite routine of life as if it were something altogether novel and unexperienced before. In view of the brevity and uncertainty of life from day to day, and of the mystery and certainty of death after a few short years, the energy, hopefulness, and activity of the human race at the present time are something wonderful; and this energy and activity are constantly increasing. Why is this? Because we find this life itself, in and of itself, a good thing. Therefore, the generations of to-day are determined to make the most of it, and, in order to do so, are bound to press into their service all the forces of nature, and to reorganize human society, so that all men, even the humblest, may have fair play and a chance to enjoy the good things of the world that now is.

Such is the current mood of mankind in all enlightened quarters. Instead of being paralyzed and stupefied by the prospect of death, we find life all the more *worth living* because it is so short and the prospect beyond it is so dark. We are bent on making the world what it ought to be and what it may be, so that we can make the most of life, and so that each of us may say emphatically, in leaving it, *Vixi*,—"I have lived,"—I have exhausted life of all its significance and enjoyment, and now I am willing to depart into the unknown, and leave my place to be filled by a new-comer. The bill of fare at the table of life is limited; and he who has gone through it, and had a taste of all its dainties and substantial, being assured that, if he remained forever, said bill of fare would always remain the same, is likely to depart satisfied. In order that he may do so, he finds his power of enjoyment gradually declining, so that his relish for existence finally is gone. Nature seems to be jealous of those who have become fully aware of her limitations and narrowness, so that she is glad to be rid of their presence in favor of new guests, who find her good things novelties. The great mass of mankind being still in a state of intellectual childhood and unreason, and being also too poor and ignorant to properly enjoy and appreciate this present life, the old childish tales about heaven and hell and purgatory still continue to be current, because they are necessary for the consolation of the poor, ignorant, and wretched, and the intimidation of the brutal and criminal. Meantime, we very well know that the science of man is yet in its infancy.

It is precisely in *ourselves* that the great mystery is summed up and contained. Infinite time and space are modes and forms of our own being. In our ordinary moods, we know not the unspeakable heights and depths of our own natures. It is in *ourselves* that the universe and nature are revealed. It is in and by and through us that the sensible world with all its wealth of hue and sound and odor exists; and, on the side of our *pure reason*, we are overarched by eternity. The soul-science, or psychology, of the day reveals a grandeur in human nature which the old theologies and mythologies, in their noblest adumbrations of temple architecture, music, sculpture, and painting, and in their grandest dreams of eternal bliss and woe, never conceived. Isaiah, and St. John with his Apocalypse of the New Jerusalem, and Dante and Milton with their heavens and hells and paradises, are of the earth earthy when matched with such great modern thinkers and scientists as Kant and

Humboldt. In the cosmical space of modern science, the wings of Milton's mightiest angels would grow weary. Thus, the knowledge of to-day, while it refrains, under the restraint and discipline of reason, from indulging in childish myths and dogmas about a future state of existence, still assures us of the *possibility* of other states and modes of existence, as much transcending this present mode as greatest transcends least. Now, then, let us be contented with this fact, of which all persons deeply versed in psychology and current reflective thought are aware. The deepest utterance to be found in Herbert Spencer's philosophy is that Intelligence and Will are not the highest forms of being. We have intelligence and will; and yet we find ourselves in a state of mental imbecility in the presence of the problems of existence, which are insoluble by us. Meantime, the generations of to-day are right in their determination to utilize to the utmost the forces of nature and to reconstruct society in the light of our higher nature or reason. As sunset and the gloom of night bring into visibility the innumerable suns and systems of cosmical space, so the darkness of death and the grave may be fraught with as august a revelation of other and higher modes of existence.

B. W. BALL.

MATERIALISM.

Materialism is a word to which so many definitions are given and such various meanings are attached that one can never feel quite certain when it is spoken which of its several connotations the speaker has in mind, until he distinctly states the ideas he associates with it.

A popular conception of materialism is that it is simply disbelief in God and the immortality of the soul. Yet many thinkers who are not materialists, whose philosophy indeed is popularly believed to be, and in some respects certainly is, the antithesis of materialism, accept neither of the doctrines named; while, on the other hand, many who are or have been classed among materialists accept them both. John Locke thought it not unreasonable to hold that God has endowed matter with the capacity to feel and think, and he was and is now sometimes called a materialist. Priestley, with the same belief, avowed himself a materialist. The same is true of Thomas Jefferson.

The author of the article on materialism in Johnson's Cyclopædia says that "nearly every materialistic school has had its Christian advocates endeavoring to reconcile it with the spiritual doctrines of Holy Scriptures." As Mr. John Fiske says, "It might forcibly be argued that the denial of personal immortality has by no means been proved to be an inevitable corollary from the assertion of materialism, although it may be freely admitted to be a probable corollary." Many of the adherents, including leading representatives, of modern spiritualism, declare that "spirit is refined matter," and claim that they are the true materialists, in support of which claim they adduce the testimony of spirits who have "left the form" and return to their friends by "materializations."

Strauss, in *The Old Faith and The New*, goes so far as to say that the difference between materialism and idealism is simply one of terminology, or, to use his own language, is a "mere quarrel about words"; for both, in comparison with the dualistic conception of a creator and a created universe of body and soul, are, he says, monistic systems. One constructs the universe from atoms and atomic forces, the other from ideas and idealistic forces. Each of these modes of conception leads to the other. Both agree in ascribing all the

functions of our being to one and the same cause. In Germany, idealism has been not less atheistic than materialism; and it is not strange, therefore, that Strauss declares that both systems "should reserve their weapons for that other veritable and still formidable foe, dualism, while treating each other with the respect or, at least, the politeness of allies."

But Prof. Haeckel, who is commonly regarded as one of the most materialistic, as he is certainly one of the ablest of living naturalists, objects to materialism as well as to Spiritualism, because he thinks they have dualistic implications. In his *Evolution of Man*, he says: "The real materialistic philosophy asserts that the vital phenomena of motion, like all other phenomena of motion, are effects or products of matter. The other opposite extreme, spiritualistic philosophy, asserts, on the contrary, that matter is the product of motive force, and that all material forms are produced by free forces, entirely independent of the matter itself. Thus, according to the materialistic conception of the universe, matter or substance precedes motion, or active force. According to the spiritualistic conception of the universe, on the contrary, active force, or motion, precedes matter. Both views are dualistic, and we hold them both equally false. It is only necessary to reflect on this for a time from a strictly scientific stand-point, to find that, on a close examination, it is impossible clearly to represent the one without the other."

Prof. Huxley claims that "the properties of protoplasm result from the nature and disposition of its molecule," as the properties of water result from the nature and disposition of its component molecules; that all life is probably the result of "the molecular forces of the protoplasm which displays it"; and that thought is "the expression of molecular changes in that matter of life which is the source of our other vital phenomena." Further, he says that "any one who is acquainted with the history of science will admit that its progress has in all ages meant, and now more than ever means, the extension of the province of what we call matter and causation and the concomitant gradual banishment from all regions of human thought of what we call spirit and spontaneity." This seems to be as strongly materialistic language as can be used, and the views advanced cannot be regarded from the idealistic or spiritualistic stand-point otherwise than as the distinctive teachings of materialism; yet Prof. Huxley is, according to his own declarations, not a materialist, but an idealist.

Prof. Tyndall, in his celebrated Belfast address, referred to the original matter of the world as probably containing the promise and potency of every form and quality of life; yet his statements that matter is essentially transcendental in its nature, and that there is no passage from molecular motion to consciousness, are often quoted to show that he is not a materialist, as he certainly is not, according to some of the current conceptions and definitions of materialism,—for instance, those of Mr. John Fiske, who says that, before one can be "correctly charged with materialism," he should hold that psychical phenomena, such as love and hate, can be interpreted in terms of matter and motion, and who further defines materialism in a way which makes it reject or ignore the principle of relativity, without which certainly no philosophy can claim attention to-day among thinkers.

On the other hand, the author of *A Candid Examination of Theism*, said to be G. J. Romanes, affirms that Mr. Spencer's philosophy, which its author declares is neither materialistic nor spiritualistic, leaves "the essential feature of materialism untouched; namely, that what we

know as Mind is dependent (whether by way of causality or not is immaterial) on highly complex forms of what we know as Matter in association with peculiar distributions of what we know as Force."

These extracts and references are sufficient to indicate that even writers of acknowledged ability use the word "materialism" to describe different views, and that it is too uncertain in its meaning to be of value in philosophical discussion. But, worse still, the word is popularly confounded with what, by a perversion of language, is sometimes called "practical materialism." Materialism, as a system of thought, as taught by Epikuros or by the Roman Lucretius,—who, amid the confusion and turbulence of civil war, we are told, "sought some stay for his inner life, and found it in the philosophy of Epikuros,"—or as taught by modern materialists, is confined to a comparatively small proportion of the people, and is generally a subject of interest only to thoughtful and serious minds. For the worshippers of fashion, for mere pleasure-seekers, for political demagogues, for those whose energies are wholly employed in the scramble for wealth, it can have generally no attraction. Yet the views and conduct of these classes are commonly referred to by the clergy as the materialism of the times.

"Such epithets as 'materialism' and 'atheism,'" says Mr. Fiske, "being extremely unpopular, have long been made to do heavy duty in lieu of argument. In this sort of barbaric warfare, the term 'materialism' is especially convenient by reason of a treacherous ambiguity in its connotations. Certain abstract theorems of metaphysics are correctly described as constituting materialism, and the persons who assert them are correctly called materialists. On the other hand, those persons are popularly called materialists who allow their actions to be guided by the desires of the moment, without reference to any such rule of right living as is termed 'a high ideal of life.' Persons who worship nothing but worldly success, who care for nothing but wealth or fashionable display or personal celebrity or sensual gratification, are thus loosely called materialists. The term can therefore easily be made to serve as a poisoned weapon; and there are theologians who do not scruple to employ it as such against the upholders of philosophic opinions which they do not like, but are unable to refute. A most flagrant instance was recently afforded by a lecturer on Positivism, who, after insinuating that pretty much the whole body of contemporary scientific philosophers are Positivists and that Positivists are but little better than materialists, proceeded to inform his audience that materialists are men who lead licentious lives. It would be hard to find words strong enough to characterize the villany of such misrepresentations as this, could we fairly suppose them to be deliberately intended. They would imply extreme moral turpitude, were it not that they are so obviously the product of extreme slovenliness of thinking joined with culpable carelessness of assertion."

Lang, the learned and impartial author of the *History of Materialism*, says "that the sober earnest which marks the great materialistic system of antiquity is perhaps more suited than an enthusiastic idealism, which only too easily results in its own bewilderment, to keep the soul clear of all that is low and vulgar, and to lend it a lasting effort after worthy objects" (p. 47), and that "in the centuries when the abominations of a Nero, a Caligula, or even of a Heliogabalus, polluted the globe, no philosophy was more neglected, none was more foreign to the spirit of the time, than that of all which demanded the coldest blood, the calmest contemplation, the most sober and purely

prosaic inquiry, the philosophy of Democritus and Epicurus." "The age of Pericles was the blossoming time of the materialistic and sensational philosophy of antiquity: its fruits ripened in the time of Alexandrian learning, in the two centuries before Christ."

These are facts worthy the candid consideration of those who use the word "materialism" as a term of abuse rather than in a descriptive sense. At the same time, the wisdom of employing in philosophical discussion a word which is associated with theories and conceptions widely different, and which, therefore, lacks precise and definite meaning, may fairly be questioned. The loose way it is now used, even by some of our best writers, is certainly without excuse.

B. F. UNDERWOOD.

EIGHTEENTH ANNUAL MEETING OF THE FREE RELIGIOUS ASSOCIATION.

The Eighteenth Annual Meeting of the Free Religious Association will be held in Parker Memorial Building, Boston, Mass., as follows:—

Thursday evening, May 28, at 7.45 o'clock, business session for the hearing of reports, election of officers, etc.

Friday morning, May 29, at 10.30 o'clock, address by the President, followed by addresses from Mr. W. D. Le Sueur, of Ottawa, Can., and Rev. M. J. Savage of Boston, on the question, "Is a Scientific Basis for Religion Possible?" After these addresses, the subject will be open for speeches, not exceeding ten minutes each, from the floor.

Friday afternoon, at 3 o'clock, the Rev. R. Heber Newton will address the meeting on "The Religious Aspect of Socialism." During the afternoon session there will also be opportunity for ten-minute speeches from the floor.

The annual festival will be held in the Meinaon, Tremont Temple, Friday evening, commencing at 6.30 o'clock. R. Heber Newton, W. D. Le Sueur, Wm. J. Gill, H. W. Holland, Mrs. E. D. Cheney, Miss Mary Eastman, W. J. Potter, B. F. Underwood, J. K. Applebee, and G. N. Hill will be among the speakers.

F. A. HINCKLEY, Sec'y.

SIC ITUR AD ASTRA.

Follow with single aim thine upward way,
Nor stoop earth's dreary monotone to know,
Its sordid undercurrent, dark and low;
But onward, scaling still some height each day,
In majesty serene as morn of May,
Ne'er heeding whispers subtle of thy foe,
Nor fairest praise, with motive base below,
Sing thine own song and chant thy heart's own lay.
Then, to a fellowship with spirits great,
Whose souls in affluence of thought commune,
More regal pomp than purpled livery,
Than jewelled sheen or panoply of state,
Thy soul, in harmony and finer tune,
With kings and queens of realms of thought shall be!

ANNA OLCOTT COMMELIN.

THE INSCRUTABLE.

Silence forever in the boundless sky,—
No voice from out its depths of starry light!
Raise your wild voices higher, and more high,
Day answereth not, nor yet the solemn night.
And the grand throbbing sea from age to age
Rolls the same measure on its beaten shore:
Its waves, that sometimes murmur, sometimes rage,
Are inarticulate forever more.
Turn we to men whose ever eager minds
Search past and present for some sure reply,—
One in another, man his idol finds,
One thinketh science solves life's mystery.
Then say, fond heart, where shall you fix your faith?
The faith itself is all that answereth.

The Index.

BOSTON, MAY 7, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

The Unitarian National Conference and Mental Liberty.*

BY WM. J. POTTER.

I have been asked to introduce here the discussion of the question, "What Changes are needed in the Constitution and Preamble of the Unitarian National Conference in the interest of the most complete Mental Liberty?" I respond, without consultation with any one, speaking only for myself.

That this question should be discussed here at all needs, perhaps, some explanation. This club is not a part of the Unitarian body. Probably only a small proportion of its membership could be counted as also members of the Unitarian denomination. What interest, therefore, should it have in discussing the terms of organization which the principal representative body of that denomination has seen fit to adopt? Why, indeed, might not such a discussion be deemed almost an impertinence? Because, let me answer, of the peculiar relation which this Liberal Club, which is external to all denominations, bears to the Unitarian movement. Very likely, this club might never have come into existence, had not the Unitarian National Conference framed its Constitution as it did. Had the Conference adopted certain liberal terms of organization that were proposed to it in 1866, those who were most active in forming this club a few years ago might have felt no occasion for any such associated action outside of Unitarianism, but might now be an active and contented part of the Unitarian Club that meets at the Hotel Vendome. In other words, on account of certain theological limitations which were affixed at the outset to the Constitution of the Unitarian National Conference, there was a secession from that body,—not large, but a secession which became quite active in working for religious

Liberalism outside of all denominations. It organized at once, for instance, the Free Religious Association, and more recently this club.

But would it not be more consistent with self-respect for these seceders to go on doing their work in the way that seems to them right, and to leave the Unitarians to fix their constitutions and organizations as they themselves may deem best? Have the seceders been asked to state the terms on which a reconciliation might be effected? Not, probably, in so many words. But the membership of the National Conference itself has not allowed the decision of 1866 to stand as a settlement of the question. Not all members who were dissatisfied with that decision withdrew from the Conference. Many who did not withdraw gave aid and comfort, nevertheless, to the Free Religious Association, became members of it, and believed in its mission. Among Western Unitarians, this dissatisfaction became quite marked, and expressed itself in making the terms of their local organizations more liberal. The question, too, of amending the Constitution of the National Conference, so as to relieve the consciences of the dissatisfied members, has several times come up in that body; and amendments have been adopted with that object in view,—the last as late as the meeting two years ago last fall. Nor, if we may judge from discussions of the matter since, is this regarded as a finality among Unitarians themselves. The Preamble and Constitution, therefore, which were adopted by the Unitarian National Conference at its organization in 1865, and confirmed in 1866, even with the supplementary amendments since made, are not considered by the Unitarian body as a whole as having settled the questions involved. The various attempts at amendment have been reconciliatory overtures to that section of members whose consciences were aggrieved by the original form of the Constitution; and, if we may trust the assurances of many individual members of the Conference,—as I believe we may,—these amendments have also been made with the sincere hope that they would enable those who felt obliged to withdraw from the Conference to return with clear conscience to its fellowship. As that restoration has not been effected to any considerable extent, and as there is still a good deal of dissatisfaction expressed within the Conference itself with the Constitution as it now stands, perhaps the members may like to hear from some of these original seceders (or from those who would now stand with them as excluded) their frankly expressed views of the situation; though I trust not all who are to speak here are of this class. It is with these feelings that I have consented—somewhat reluctantly, I confess, for I have no personal wish to renew an old contest—to introduce this topic as the theme of your consideration here this evening. And I most sincerely hope that the discussion may be such as to help, and not embarrass, any action which may possibly be taken hereafter in the Conference looking toward a more thorough amendment of its Constitution than has yet been attempted. Let us especially bear in mind that it is *principles*, and not *persons*, that are under discussion.

It cannot, I suppose, be assumed that all who are here assembled are acquainted with the Constitution of the Unitarian Conference. Let me quote, therefore, the parts of it that have any bearing on the question to be discussed. They are as follows:—

Constitution.

PREAMBLE.—Whereas the great opportunities and demands for Christian labor and consecration, at this time, increase our sense of the obligations of all disciples of the Lord Jesus Christ to prove their faith by self-denial, and by the devotion of their lives and

possessions to the service of God, and the building up of the kingdom of his Son,—

ARTICLE I.—Therefore the Christian churches of the Unitarian faith, here assembled, unite themselves in a common body, to be known as the National Conference of Unitarian and other Christian churches, to the end of energizing and stimulating the denomination with which they are connected to the largest exertions in the cause of Christian faith and work.

ART. II.—This National Conference shall be composed of such delegates, elected once in two years, not to exceed three from any church, including its minister, who shall officially be one, as any of our churches may accredit to it by a certificate of their appointment.

ART. III.—The American Unitarian Association, the Western Conference, and such other theological, academic, or humane organizations in our body as the Conference may see fit to invite, shall be entitled to representation by not more than three delegates each.

ART. VII.—The National Conference, until further advised by its experience, adopts the existing organizations of the Unitarian body as the instruments of its power, and confines itself to recommending them to such undertakings and methods as it judges to be in the heart of the Unitarian denomination.

ART. IX.—Reaffirming our allegiance to the gospel of Jesus Christ, and desiring to secure the largest unity of the spirit and the widest practical co-operation, we invite to our fellowship all who wish to be followers of Christ.

ART. X.—While we believe that the Preamble and Articles of our Constitution fairly represent the opinions of the majority of our churches, yet we wish distinctly to put on record our declaration that they are no authoritative test of Unitarianism, and are not intended to exclude from our fellowship any who, while differing from us in belief, are in general sympathy with our purposes and practical aims.

It may also be added, as a part of the history of the Conference shedding light on the question under discussion, that a different Ninth Article from the one now in the Constitution was adopted in 1868, at the third session of the Conference, which ran as follows:—

ART. IX.—To secure the largest unity of the spirit and the widest practical co-operation, it is hereby understood that all declarations of this Conference, including the Preamble and Constitution, are expressions only of its majority, committing in no degree those who object to them, and dependent wholly for their effect upon the consent they command on their own merits from the churches here represented or belonging within the circle of our fellowship.

This was allowed to stand only two years. It was rescinded in 1870 (the very next session), and the present Ninth Article adopted in its place.

I will take no time for dwelling upon the curious mosaic of incongruous articles which the Constitution as it now is presents. These incongruities are so patent that, irrespective of questions of radicalism or of conservatism, I am sure the wish must be quite prevalent among Unitarians that the Constitution, if possible, might be transformed into a more homogeneous and self-consistent document. For instance, I, for one, am unable to say whether the Constitution as it now reads was intended to invite any but Christians (or those who take the name Christian) to its fellowship or not. Literally, by any just interpretation of words as used in the successive articles, I judge that this could not have been the intention: otherwise, those words,—the only ones in the Constitution which express an invitation to membership,—“We invite to our fellowship all who wish to be followers of Christ,” would not have been allowed to stand. Yet some individuals who voted for the Tenth Article say that they meant thereby to extend fellowship to non-Christians as well as Christians. But, What did the Conference mean? is the question. And, surely, it should be possible to use words which should put such a simple matter as this beyond question.

*Read before the Liberal Union Club, Boston, April 25, 1885.

But, though the variegated character of its several Articles deprives the Constitution of that logical and literary coherency usually expected in such a document, yet this characteristic, historically considered, is a correct and valuable index of the actual state of conflict which has existed, especially for the last twenty years, in the Unitarian body. The denomination is moved by two strong, but contradictory impulses. On the one hand, as traditionally connected with the Christian Church and still one of the sects of Protestant Christendom, it asserts and adheres to the special authority of Jesus as head of the Church. On the other hand, having its birth as a denomination in a new and emphatic assertion of the rights of human reason and the principle of free inquiry, it is inwardly impelled (and still more strongly as the years go on) in the direction of complete mental liberty. The presence and conflicting action of these two impulses have been forcibly illustrated in the history of the Constitution of the National Conference, with its successive amendments and reamendments, as the one or the other of the impulses has gained temporary ascendancy.

It was between these two principles—the authority of Jesus and absolute freedom of thought—that the issue was made at the meeting when the Conference was organized in 1865; and it was these two principles that came again into the closer and more decisive contest at Syracuse, in 1866. On this latter occasion, it was made clearly manifest that it was the fear of appearing to remove Jesus from his place of authority as head of the Church which was the strongest operating motive for adhering to the Constitution as it was. And it is these two principles that are still at issue in the Unitarian body. Around these, all the conflicts centre. It is to be regarded as a contest between conscientious convictions on both sides. There is, doubtless, among Unitarians a strong and conscientious adhesion to the Christian name, to the special and distinctive authority of the Christian religion, and to the belief that Jesus was a being of perfect character, if not perfect knowledge, an example not to be questioned, and the providentially appointed leader for humanity. And there is as little doubt that there is among them a strong and conscientious adhesion to the principle of free inquiry as one of the most sacred rights of man, as announced by Dr. Channing with such absolute emphasis in his address at the dedication of Divinity Hall. The conservatives of the denomination do not allow that there is any antagonism between these two principles, and somehow try to reconcile them in their own consciousness, though I remember seeing no argument successfully leading to that result. The radicals of the denomination affirm a necessary and logical antagonism between the two principles, and maintain that authority, in the ecclesiastical sense of the word, can no more attach to Jesus than to the Church or to the Bible, where the principle of rational criticism is allowed full sway.

The conflict between these two principles, though always existing in Unitarianism, was revealed more clearly to the denominational consciousness by the formation of the National Conference. Previous to that time there had been no such general representative body in the denomination,—no organization at all that was authorized to speak for the churches. There had been only associations of individual Unitarians and mass conventions. The individual associations one need not join, if there was anything in their constitutions or proceedings which he did not like, and still he might remain a Unitarian in good standing. At the conventions there was no common statement calling for subscription. But the Na-

tional Conference was formed by regularly accredited delegates representing the Unitarian churches; and it planted itself on a Constitution that became henceforth the voice of the churches, taking part in it by appointed delegates. In effect, it was the same as if the delegates at each meeting of the Conference affixed their names to the Constitution, since it was the organic law by which alone they were empowered to act as constituent parts of the Conference. It became, therefore, a question of serious moment what was said in this Constitution. And when the radical members of the Conference and of the Unitarian denomination saw that in the Preamble, which is a component part of the Constitution, there were expressions affirming the Lordship and Kingship of Jesus, and also his special divine Sonship, they could but turn away in earnest protest, or, if they remained, could only accept the Constitution under which they acted with mental reservations. Henceforth, they could not have mental peace in the Conference. Nor have the successive amendments which have been passed to meet their difficulty brought the needed relief to their consciences. In some cases, the spirit of fellowship, the strong desire not to break old associations, and a disposition generously to trust the future for relief, have overcome conscientious scruples, and temporarily silenced the expression of them; but, nevertheless, the inner protest has remained.

Nor, in my judgment, does it suffice to declare that these theological phrases are only expressions of the view of the majority, and not to be regarded as "an authoritative test of Unitarianism"; that they were not intended as a creed, but are only the natural language to indicate that the Unitarian body is a branch of the Christian Church; that they have a variety of meanings, and may be interpreted in a merely metaphorical sense; and that, especially, they were not used for the purpose of excluding any one from the Conference who wishes to work with it, and has confidence in its practical aims. The facts none the less remain that some persons are excluded by them; that a considerable number of persons, who have been educated in the Unitarian communion or have come to have certain natural affiliations with it, cannot rationally and conscientiously use these phrases as common appellations of Jesus, even in a metaphorical sense; that these persons were, or still are, invited to the Conference as eligible, on equal terms with others, to its membership, but, on entering, find that the majority have inserted in the Constitution theological beliefs which they cannot accept, thereby violating the terms of equality in the fundamental conditions of membership; that, moreover, the tenacious insistence with which these theological phrases have been retained in the Constitution is proof that they may be properly interpreted as defining even the "purposes and practical aims" of the Conference, and as placing upon its "work" certain theological limitations.

For these reasons, the methods hitherto adopted for meeting the protest of the dissentient minority have not reached the root of the trouble. Is there any method that will reach and remove that root? In my opinion, there is none except the method which will sweep away from the Constitution all those theological phrases that have aroused the protest, free the Preamble and Articles from every fragment of dogma which may even have the guise of a creed, recognize the unlimited right of free inquiry, and place the members as regards each other on conditions of perfect equality, the majority no more than the minority expecting to have their theological beliefs expressed in the organic law of the body. This would be going

back to first principles,—doing now what, perhaps, not a few persons, in the light of history, have come to see might have been safely done, as it was the just thing to do, when the Conference was organized. Some of the wisest heads among the older Unitarians, remembering the emphasis which Unitarianism had placed on mental liberty, saw then that this was the fair and just course,—as, notably, Dr. Dewey, whose letters published since his death show him to have thought and said at the time that "no language should have been retained in the Preamble which both parties could not agree to. . . . What they [the young men] asked was reasonable." And again: "The Conference is wrong. If it expects the young men to act with it, it should adopt a platform on which they can conscientiously and comfortably stand." And here let it be said and clearly understood that the minority have never asked or thought of asking that their special theological views should be put into the Constitution in lieu of those of the majority. They would be content—nay, they desire—that the Constitution should be as colorless in respect to beliefs which may be dear to them individually as they ask that it should be in respect to beliefs which the majority may hold dear. All that they ask for is equality, fairness, justice to all. The Constitution of the National Unitarian Conference need not in the least determine the beliefs which any individual member may himself hold or may deem most important to be uttered and urged in his own work.

And now, assuming that the Conference really desires to effect a reconciliation between these divergent minds or parties of which I have been speaking, let us turn to consider the special ways possible for reaching this end. Does some one ask whether the substitute for the Preamble and First Article, which was offered and contended for by the minority at the second session of the Conference, would now satisfy those who then labored for it? That proposed amendment, in brief, included a definition of the object of Christianity as "the universal diffusion of love, righteousness, and truth"; a declaration that "common creeds or statements of faith" are a hindrance to the "perfect freedom of thought, which is at once the right and the duty of every human being"; and the expression of a purpose to make the Conference an "organization for practical Christian work, based rather on unity of spirit than on uniformity of belief." And the name of the Conference was to be changed to "The National Conference of Unitarian and Independent Churches," not, however, apparently, from an objection to the word "Christian" in the present name, but with a view to including some societies not regarded as Unitarian. The proposed substitute used freely the words "Christian" and "Christianity," but sought to define them as synonymous with the aims and spirit of universal religion, and as entirely consistent with the purest freedom of thought. But, since that time, some of us have come to see—brought to the sight, perhaps, in part by the very resistance which this amendment encountered—that "Christian" and "Christianity" cannot properly be thus defined, and we accordingly no longer call ourselves by the Christian name. To my mind, the word "Christian," when used in its primary and proper ecclesiastical sense, carries with it a dogmatic idea which my reason cannot accept, and, when used in a general sense to signify certain high virtues and graces of character, does a real injustice to other religions, under which I observe that these same virtues and graces of character are nurtured. The word "Christian," therefore, to-day seems to me to stand in the way of that large and free religious fellowship and of that progress of

mankind toward practical brotherhood which, to my mind, are the finest features in the religious aspirations and trend of the modern world. Hence, the amendment proposed in 1868, or any equivalent of it, would not satisfy my conscience now; and I presume there are others in the same position with me.

Another proposed remedy is, or might be, to strike off the Preamble, and put nothing in its place, striking off also the supplementary Articles IX. and X., which have been added as commentary on the Preamble; to leave out the conjunctive *therefore* which connects the Preamble with Article I.; to make some changes, perhaps, in the wording of that Article; and thus to put the Conference on a purely "business" basis, expressive merely of a purpose to stimulate the societies thus connected together to more earnest and effective work in behalf of the interests which they have at heart. Unless this proposition contemplates considerable change in the First Article,—making, for instance, some substitution for the word "Christian," which now occurs three times in it, and giving to the Conference a new name in part,—it would be open to the same objection as the amendment just discussed: the Conference would be defined and bounded by the Christian name, and some persons who cannot conscientiously take that name would be debarred from membership, though, as concerns other conditions, they would naturally be included. But let us suppose that these changes are made, and that the amended First Article should read something like this: "The churches and societies, Unitarian and other, here assembled, unite themselves in a common body, to be known as the American Conference of Unitarian and other Independent Societies, to the end of energizing and stimulating one another to the largest exertions in behalf of the important interests which they have at heart." In harmony with this amended form, some verbal changes would be required in the subsequent Articles, so that such phrases as "our body" and "our churches," meaning now the "Unitarian body" and "Unitarian churches," might be turned to a less sectarian significance.

This plan, clearly, has certain signal advantages. It avoids the points on which there might arise a difference of opinion,—or a difference in the expression of opinion, which is often a harder thing to get over than a difference of opinion. It contains no dogma, and says nothing about creeds or statements of faith, either for or against. I see not why the most extreme rationalist and radical, if he believes in any such organization at all, could not subscribe to anything that is here expressed. Nor do I see that there is anything here to which the most conservative Unitarian could not subscribe, provided that he is ready for all that that phrase "and other"—"Unitarian and other"—implies; namely, that the Conference is not to be limited by the Christian name and boundary. And that he is ready for this is our present hypothesis. This plan, moreover, does not propose to settle in the Conference any of the questions at issue between the different and conflicting parties. It establishes no principle save that of the equal freedom of all members from any constitutional creed or statements of theology. It leaves all questions as to the meaning of Unitarianism, the meaning and character of Christianity, modes of religious service, the rank of Jesus, the authority of his teachings, etc., to the individual churches; and this is in accord with the idea of the Congregational system of ecclesiastical administration which is held among Unitarians of all shades of belief,—the autonomy of the individual society,—while it gives to all beliefs and opinions an equal

chance to make themselves heard and a fair field for vindicating themselves to the rational judgment of the world. On its face, therefore, this plan seems hospitable, equitable, and just; and, if offered, I see not now why the radicals might not consistently accept it. Under it, as I understand, the Twenty-eighth Congregational Society in Boston, the Free Congregational Society of Florence, the Free Religious Society of Providence, and even the Societies for Ethical Culture, should they desire to join the Conference, would be freely welcomed as equal members; and, if the Conference shall thus amend its Constitution, it may be rightly expected that the practical meaning of the amendment will be shown by invitations to these societies to send delegates to the Conference. Indeed, this plan might possibly be open to the charge of liability to too lax a freedom,—a danger, however, which might be guarded against by the Committee on Fellowship being empowered to consider, not the creed, but the character of societies that might ask for admission to the membership of the Conference, just as it now satisfies itself with regard to the good character of ministers seeking to come into the Unitarian ministry from other denominations.

But, whatever might be the advantages of this plan, is there not still a more excellent way? Fair and equitable as it may be, treating all members, parties, and opinions in the Conference (or having any natural relation to it) alike, the plan, it is evident, leaves the Constitution not only as colorless, but as cold as a marble statue. Ought such a document, which might tell a great message to the world, have only the bare formality of a business contract? The individual societies and members, it is true, would animate it with those vital interests which they themselves, at any time, have at heart. But is there nothing which they might say also heartily together and all the time through the Constitution, which is the very basis and bond of their associated action? It would seem as if there must be some such community of thought or feeling or spirit, else would they never have been drawn together at all. The Constitution, according to this plan, would give no light as to what the Unitarian movement means, or toward what it aims, to persons who knew nothing of it already. Such a paper should, if possible, tell to all the world the story of its own meaning, as the Declaration of Independence has told to mankind for the last century the meaning of these United States. Now, I believe that there are certain principles—not theological beliefs, but certain intellectual principles, having a most important bearing upon questions of belief and upon questions of life—which all Unitarian societies and people and all those others, too,—those radicals who are not now of the Unitarian Conference, but might be of it,—profess to hold as fundamental conditions of all belief and all religious organizations, and could say unitedly together. There are two such fundamental principles: first, freedom of thought is an inherent and inalienable right of the human mind; second, uprightness of character is an aim in life that has precedence over all theological creeds. Whatever else Unitarianism may mean to any of its adherents, whatever beliefs and historical antecedents it may signify to any minds, and however important such minds may deem it to hold and urge these beliefs, and however variant may be the theological positions which are to be found in the Unitarian ranks, I think that all Unitarians without exception profess to hold, and have so professed for years, these two principles,—freedom of thought, and character before creed. Though, as some of us may perhaps now be thinking, these principles, professed by the lip, may

have been often violated in act, and however logically inconsistent with these principles may appear to us certain beliefs which some Unitarians may attempt to hold with them, yet I suppose it may be safely said that the Unitarian is not to be found who would not assert and defend these two most important principles. Here, then, are certain things which all Unitarians can say unitedly, and might say strongly and gladly together, and which those "others" who are not, but might be, of their National Conference, could say sincerely and heartily with them. Is it not therefore possible so to insert a statement of these principles into that cold and colorless frame of a constitution outlined above as to give it breath and life? Try it, and see the effect. These principles would give the Constitution a soul. It then might read, as under my prosaic pen, somewhat like this, though perhaps some inspired penman may come and give to the declaration the ring of a new rallying-cry for human progress:—

"The churches and societies, Unitarian and other, here assembled, reserving to themselves the right to hold and proclaim such other religious principles and beliefs as may seem to them individually to be reasonable and true, but agreeing together that Freedom of Thought is a sacred and inalienable right of the human mind, and that True Character is of vastly higher moment than any uniformity of creed, do hereby unite themselves in a common body to be known as the American Conference of Unitarian and other Independent Societies, to the end of energizing and stimulating one another to the largest exertions in behalf of the important interests which they have at heart for the promotion of righteousness and truth."

Brothers of the Unitarian household and fellowship, brothers of the scattered radical army, tenting in the open field, are we not, on that platform, *one*?

CORRESPONDENCE.

UNITARIAN CREEDS.

Editors of The Index:—

I have read with interest your article on "Unitarian Creeds" and Mr. Gannett's letter. As facts and truth can never harm, I will give you also my experience and view.

With several others, I suffer from the vagueness and "paleness" of Unitarian affirmations. They give to our fellowship a "broadness" and "long stretch" which make one feel very, very lonely in it. I speak only for one.

Yet there are good reasons for this. We are a set of men who feel that the "kingdom of heaven is at hand," that it is "within us." But no one among us has had his "hand in it," or brought it clear out; hence all the vagueness. We all feel it there, but do not agree as to just what it is or how it is to be brought about. Yet, in spite of all indefiniteness, this is a strong bond of union. How strong the differences our conflicting beliefs and spirits—it yet, in our loose organization, keeps heartily together—measure! Each one of us probably has his definite views of "the kingdom" and "the way"; but he knows he does not stand in the full truth, but only loves it and believes he sees it. Hence, his fellowship must naturally be with those who love it and believe they see it, even though our views conflict as day and night. The indefiniteness is deplorable, indeed,—but only the fault of the period, not of the men,—and has this kernel of hope and good in it, that it proves the sincerity and the calmness of our men. Unitarianism will never stand for "blind" assertions nor ever be the victim of hypocritical illusions. If in deep, sad earnestness and humility we all toil on our own ways, we must be led unto "all truth."

My view of Unitarianism is this:—

1. It stands for belief in morality and religion of some form. So do "orthodox" churches in and out of Christianity, and so do Free Religious Associations; but

2. It differs from all orthodox churches by making religion a direct and personal matter between myself and God, now and here, without leading me by crooked ways up or down space or time. It stands for religion as the consciousness of ever-binding obligation and all-filling sanctity; or, to express it in good old Bible phraseology, "God made not 'this' covenant with our fathers, but with us, even us, who are all of us here alive this day."

3. It distinguishes itself from all Free Religious Associations by (perhaps, unconsciously, often) recognizing the truth and obligation in natural historical growths. It does not attempt to begin as if man was created yesterday, but to work on where our fathers left off, recognizing our obligation to our historical and geographical position, forgetting or denying which is, to my mind, the greatest mistake of all Free Religious Associations. It has faith in the divine growths in humanity rather than in human constructions. It stands practically, as against "Free Religion," for evolution, while, as against "orthodox religion," for "freedom." It does cling to natural growth and to historical foundations, only building farther on the "foundation which is laid," instead of trying to uproot it, with you. Thus, we keep within the organic religious growths, have roots, and, therefore, hope of having flowers and fruits.

Here and there, individuals drop off from the Unitarian body into either of the two bordering "abysses," "Free Religion" or "Orthodoxy"; but I think others also will feel that Unitarianism as a thing men did not make, nor can unmake, is the thing thus "limited." And, when we do come down to this, we do enjoy fellowship of spirit, calmly standing on the foundation laid, glorying in the work of the fathers, assimilating "all of good the past has had," yet in gladness communing with God here and now, soul to soul, and turning to the future with a hope that makes our hearts sing.

Thus much for unity, now for our differences. Allow me to give one illustration of these by giving briefly my own personal, cherished faith. I hope *The Index* does not make "free thought" and "anti-Christianity" synonymous; that it will not deny the name of "free thinker" to such as by free, fearless thought have arrived at pure "old" Christianity.

1. I think Mr. Gannett's statement, that our "supreme" idea is "ethics and the great faith it leads to," injurious. My "supreme" idea it certainly is not: it is my "germinal" idea; but it has led to a faith far higher (I hope) than Mr. Gannett's "great faith." That "great faith" I would rather call the yet unopen seed of true religion. Let it grow, and the "supreme" crowning idea will be (has been to me) the "Fatherhood of God." "Faith in the moral order of the universe,"—out of it grew to me faith in the great, good Orderer of the universe, the great "Shepherd," whose eye is on all and each. "Faith in all-ruling righteousness" developed in me into faith in God, my Father, who so loves me that he has given me the spirit of "an only son."

2. In Jesus, I see the type of the "Son of God," up to which, with God's help, I hope also to grow.

3. In the Bible, I see the human, remarkably perfect record of the "ways of God" with a nation which for fifteen centuries, at least, B.C. held the essence of religion, the kernel of all true faith (at first, just that "great faith" of Mr. Gannett's), and out of which at last came Jesus, the revelation of the human spirit as "Son of God," and through him a new spiritual kingdom. Call it natural or supernatural, revelation or evolution, I do not care. The fact is that "out of Zion God hath shined" also on me.

The Bible to me is the record of the evolution of the highest character and religion. Wherefore, I, for my own part, protest against Mr. Gannett's statement that "it is poor logic, poor taste, and faint-heartedness" that makes so many ministers use only the Bible in the pulpit. Sometimes, perhaps; but, sometimes, it is good logic, good taste, and the courage (highly needed) of conviction.

4. I deem it waste of time to discuss of immortality or its hold upon us. I believe in it. "God is my Father, and I shall not die." "I know that my redeemer liveth."

5. I believe in "free thought," but would emphasize "thought." In "free thoughtlessness," or superficial, blind rejection of all but what at first glance seems "reasonable," often misnamed "free thought," I do not believe, but think it "the curse" of our

present time. Where there is earnestness, reverence, and humility, free thought and Christianity will never differ but in words.

6. Finally, I believe in "words" and "names" which concisely and clearly express what we believe, feel, love, will, and try to do. The word "Christian" thus expresses my highest ambition and all my conviction, and all my daily endeavors and aspirations. To believe and feel as Jesus did, to possess his spirit, to "put on Christ," is my aim; though to say it sounds like a rebuke, so far, far ahead is it from the actual. God help me thereunto, and be with us all.

Yours for God and man,

H. TAMBS LYCHE.

SCIENTIFIC MATERIALISM.

Editors of The Index:—

One of the saddest articles that has appeared in *The Index* was that one from the pen of William Lloyd Garrison in last week's issue. To me, it was one great moan over the glories that have departed; and the cry of the Israelites in the wilderness came again to my ears, "Why have ye brought us up out of the land of Egypt to perish in this wilderness?" and the voice of Tom Hood comes with it,—and there was always a moan in that to me,—"I'm further off from heaven than when I was a boy."

I sympathize heartily with the writer as he thinks of the old hymn tunes and the holy associations, the pious reverence for God's house, the sacred memories of the long ago; but it strikes me that this is sadly out of harmony with the truth that has come "to light every man that cometh into the world" in our country to-day, for the scientific materialism is not what Mr. Garrison seems to think it is. For it is not "animalism that is encouraged by materialism," but, on the contrary, a sound, scientific education gives us the solid rock on which to build good character; and nineteen centuries of Christian teaching have done but little for the world in which we live in that direction, because the ultimate result of teaching that which is not true is bound to be immoral. And every doctrine must be weighed in the balance of truth to-day, and we are bound to accept every theory on its merits; and we may fearlessly resolve that we will teach our children "the truth, the whole truth, and nothing but the truth," confident that the ultimate result of so doing will be beneficial and moral.

The scientific materialism of to-day has no "mud flats": its associations are not the "wine cup" and the "tobacco habit." Those may be associated with the iconoclastic ignorance of the fool who "has said in his heart there is no God"; but that materialism which is carrying away the Christian's God on its restless bosom lifts the hearts of men away from the meannesses of earth, and opens unto them books of miracle and shows them wonders far surpassing the crashing walls of Jericho or the divided waters of Jordan,—wonders and glories of which the prophets of old never dreamed. We lose Joshua and his stationary sun, but we find Copernicus and the revolving world. We miss Genesis and the story of creation; but, instead, we have the marvels of Darwinism, of evolution, and the gain is great. John of Patmos has given place to John Tyndall; and the "beast with eyes in its horns" is fading out along with all the old balderdash with which so many generations have been poisoned. And now a true spirit of inquiry is growing up, and the awe and reverence of the rising generation are excited by the wonders of the world in which we live. The telescope and the microscope are taking the place of the pulpit and the "eye of faith"; and, to the world growing up about us, "the heavens declare the glory" of the human mind, the immensity of space, the shortness of life, and the sternness of the law that only the truly good can be happy. For in the world of science there is no evading the law that "whatsoever a man soweth, that shall he also reap." We cannot shift the burden of our sins on to innocent shoulders: "every man shall bear his own burden." And so we see in a scientific materialism the seeds of that good time coming, when

"Man and man the world o'er
Will brothers be for a' that."

And the power and strength of the true scientific materialism may be gathered from the slowness of its growth.

The mushroom springs up in a night, but passes away almost as rapidly. The oak-tree grows slowly,

sinks its roots deeply, but endures through the centuries. So with materialism. Almost three centuries have passed away since Bruno died for a scientific truth; and the scholars of Boston moan, "Past days were better than these." Never! The world never was better than it is to-day, and I heartily indorse an old hymn we sang when I was a boy:—

"We are living, we are dwelling
In a grand, an awful time,
In an age on ages telling
To be living is sublime."

Let us teach our children these things.

PETER ANNET.

FREE TRADE vs. PROTECTION.

Editors of The Index:—

In your issue of April 16, your protectionist contributor replies to my criticisms. It will be seen by reference to my note, published in *The Index* of January 8, that it was not there claimed that, by the introduction of free trade, no industries would be injured, but that the ruinous competition could not be extended, as he suggested, so as to destroy all of the industries of the "unprotected" country; that, on the other hand, losses in one direction would be accompanied by gains in another. This conclusion was based upon the principle which he explicitly recognizes in his second communication (April 16): that, "if you wish to buy, you must sometimes consent to sell to have something to buy with." He rejects, however, the converse proposition that, "if you wish to sell, you must consent to buy," and insists that "we should be able to sell our cotton and corn to Great Britain, even though we made every thread of our cotton and woollen goods, all our hardware and pottery, without buying from any one a single cent's worth of either." Does he mean "without buying from any one a single cent's worth of anything"? What, then, are we to receive for our corn and cotton? Money? Suppose "British gold" to be inexhaustible. What do we want of it? We have an abundance of our own to serve as a medium of exchange. Beyond that point, we should be simply importing it as merchandise. We should be selling corn and cotton, and buying gold. That is, we should be accumulating a large stock of a commodity whose possession is by no means capable of making the largest possible contribution to national prosperity,—a commodity, moreover, which we ourselves produce, and which therefore, according to the beneficent system of protectionism, other nations should be debarred from intruding upon us. Nothing could more happily point Mr. Fiske's reference to the medievalism of the mis-called "protectionist" system than this illustration of the fact that its advocates have not yet outgrown the "mercantile" fallacy that wealth consists exclusively of money. One other point your contributor makes very clear: "A fisherman drops his hook, baited with a worm, among a school of fishes," etc. The fish insists upon selling itself to the angler at the beggarly price of a morsel of bait. Its conduct is nearly identical with that charged against the British manufacturer. It is obvious that such competition would be ruinous to the food-producing enterprises of the fisherman, and that there are therefore needed rigid prohibitory game laws for the protection of—the man.

HENRY DOTY MAXSON.

WHITEWATER, Wis., April, 1885.

THE STAR OF BETHLEHEM SEEN IN OHIO.

Editors of The Index:—

The following paragraph recently appeared in one of our country newspapers, and I send it to *The Index* as a specimen of "religious instruction" which is occasionally attempted by the country press:—

The Star of the East that led the good shepherds to the manger in Bethlehem to behold the new-born King of the Jews, nearly nineteen hundred years ago, can now be seen in the eastern sky in the morning from 6 o'clock till 8. It is the brightest at 6.30 now; but, as it will only remain in sight till the 29th inst., it will appear earlier in the night, as time advances. This is its sixth appearance to the inhabitants of this earth since the birth of Christ, appearing only once in every three hundred and fourteen years. This star was unknown before the birth of Christ, no record having ever been made of it by noted astronomers before that date.

The boldness of the writer in bringing this old myth out into the light could hardly be surpassed. The "star" referred to is no doubt the planet Venus,

which was the morning star at the time the paragraph appeared. I know several persons who believed the statements contained in the paragraph, and who actually got up in the early morning to take a look at this wonderful star of Bethlehem.

DAVID O'KEY.

WOODSFIELD, OHIO, April 28, 1885.

TAXING LEGACIES.

Editors of The Index:—

New York, as will be seen by the item below, has proposed a tax which will seem a peculiarly light burden to those that pay it. The only question is whether any similar steps might be taken with advantage in regard to direct inheritance:—

ALBANY, N.Y., April 30.

The legislature has passed a bill imposing a tax of 5 per cent. on all collateral inheritances and bequests of over \$500. It is expected this will bring \$1,000,000 annually into the state treasury.

F. M. H.

THE OLD THEOLOGY VERIFIED.

Editors of The Index:—

How can earnest seekers after truth fail to become confused and even discouraged at the present entanglement of theological beliefs or creeds? All ministers—teachers and leaders of the people—take the Bible for their text-book, and also claim to be prepared for their avocation through the grace of God. But what are we to think when one minister finds that the Bible teaches that the gratification of the senses is not pleasing to God, and another, apparently equally earnest, finds it is pleasing to God; when one understands God to be one person only, and another understands him to be three persons in one; when one teaches eternal punishment, and another universal salvation; when one teaches that Jesus was the Son of God (a part of Infinity), and another that he was both the Son of God and the Son of man (a part of Spirit and a part of matter); when one understands that he was preferred by God and endowed with a superior power by him, and another understands that God is no respecter of persons, and that Jesus was simply a moral man; when one professes to know that the miracles recorded in the Scriptures are true, and another to know that they are allegorical; when one teaches the resurrection of the flesh, and another the destruction of materiality and the resurrection of the soul?

The foregoing beliefs, and many more equally contradictory, constitute the foundation of what is termed Christianity, or Religion. It would certainly appear as though each denomination had a God of their own, else but one can be correct, and the others must have read the Scripture to their own destruction.

The Bible, if it be truth, cannot be contradictory; and, as so many contradictory doctrines are taught from it, it is proof sufficient that either the book is of no value or else that it is not understood aright. Dr. E. J. Arens, in his work entitled *Old Theology for the Healing of the Sick*,—which, by the way, is not in accordance with the so-called Christian science theory,—claims that the Bible is the truth, and is without a contradiction from the first chapter of Genesis to the last chapter of Revelation; that the truth it teaches is a demonstrable truth, which can be as clearly understood and demonstrated as can the principle of mathematics; that its demonstration is the destruction of sin, sickness, and death; and that the demonstration, like that of mathematics, will be in direct ratio to the correct understanding. He furthermore claims that he is able to impart this understanding to others, and that they can, through it, heal the sick. Now, there are many earnest seekers after truth who are not satisfied with theoretical Christianity, which ends where it begins, and which at best is but speculation. No doubt, too, they have all, in their vain attempt to reach the truth, investigated many a humbug, and, it may be, also spent many a dollar thereon.

This writer challenges all, regardless of their creeds or doctrines, to meet him, not in a spirit of controversy, but rather one of investigation; and he feels confident that he can convince them that he has the truth. Of one thing we may be sure; namely, he thinks he is right, for no man likes to be weighed in the balance, at his own request, and found wanting. Would it not be well to give Dr. Arens what he would consider a fair opportunity to expound his theory before a select company of our best minds? True, it may be a humbug; but there is also a chance

that it may not. And can we, who are not bound by creeds, and who are, therefore, free to acknowledge that we have not a satisfactory solution of the problem of life, afford to lose an opportunity of gaining one? Neither need our theologians be afraid, for the very Scripture which they advocate teaches that the elect cannot be deceived; and, indeed, it must be a marvellous charlatanism that can deceive those who have withstood the fire of modern theology to the present time. And, if on the other hand it be truth, let us by all means have it.

B. T. A.

BOOK NOTICES.

ELEMENTS OF UNIVERSAL HISTORY. For Higher Institutes in Republics, and for Self-Instruction. By Prof. H. M. Cottinger, A.M. Boston: Charles H. Whiting, 32 Bromfield Street.

Prof. Cottinger, in his preface to this work, explains that, in preparing this condensed history, he had two special aims in view,—“to communicate to scholars those events which every well-educated man of our age ought to know, and to aid, with the concurrence of historical facts, in forming their moral character and sense of right. The States and events in which the ideas of right appear most perfectly realized are, therefore, chiefly considered. Both the ancient and modern republics belonged to those States.” In this book of three hundred and thirty-six pages, the facts of history are necessarily much condensed; but the author has facilitated the assimilation of them by the student in several ways: first, by dividing them into ten great periods from the “beginning of historical certainty” to the present time, and subdividing those periods into chapters, and the chapters into sections with appropriate descriptive headings. Foot-notes to each page contain questions pertinent to the chief historical events narrated on the page, and aid the reader to summarize them in order. An exercise at the close of each period described is also given to be written out, “to enable the scholar the better to work up the contents of the history, to grasp more rapidly the events, and to remember more easily the chronological dates.” A condensed chronological table is appended to the work, a chapter is devoted in each period to the history of civilization during that period. Prof. Cottinger, who is the author of several educational works, of which the *Youth's Liberal Guide* is perhaps the best known to our readers, has evidently bestowed much time, study, and conscientious labor on this work, and in its compilation has, he says, consulted the best and most recent authorities on the histories of the countries considered. The work is written in a pleasant narrative style, enlivened by occasional pertinent anecdotes. u.

THE BUNTUNG BALL. A Græco-American Play. A Social Satire. New York: Funk & Wagnalls, 10 and 12 Dey Street. 1885. Price, cloth, \$1.50; gilt edge, \$2.00.

A certain phase of New York society life is very crisply caricatured in this rhythmic account of the absurd possibilities involved in a ball given by some newly rich people. The satire is perhaps somewhat overdrawn, and the law of probabilities very much against such a concatenation of circumstances occurring during one evening; but the versification is bright, airy, witty, and skilful in its combination of classical form with modern thought, even when slangily expressed. Independent of the mystery of the authorship of this work,—said to be written “by one of the most brilliant and well-known of living writers,”—it cannot fail to interest readers on its own merits. Its plan is unique, its rhythm varied, and the movement lively. The author's name is for the present withheld; and the publishers offer \$1,000 in cash to the person or persons who correctly guess it, the prize to be awarded and announced in thirty days after the tenth thousand copy is sold from the office of publication. The book is handsomely bound, and contains 154 pages. u.

THE Popular Science Monthly for May is an unusually good number, being full of articles rich in thought and information on living questions of the day. The first paper, “Our Recent Debts to Vivisection,” by William W. Keen, M.D., is a graphic account of the benefits that have been conferred upon humanity during the last quarter of a century by means of experiments on animals. The second article, by Prof. W. K. Brooks, is an answer to the question, “Can Man be modified by Selection?” Dr. Max von Pettenkofer's timely papers on “Cholera”

end in this number. “Religion without Dogma,” by Mr. George Iles, is a vigorous protest against the trammels of theological authority, and for the freedom and enlightenment of the religious sentiments. “Methods of teaching Political Economy,” by Prof. J. Laurence Laughlin, “A Scientific View of the Coal Question,” by G. Gore, and “Training in Ethical Science,” by Mr. H. H. Curtis, deserve the attention of all who are interested in the subject of educational improvement. The present instalment of “The Chemistry of Cookery” is devoted to vegetarianism, which Dr. Williams commends on rather novel grounds. “The Nervous System and Consciousness,” by Prof. W. R. Benedict, illustrated, and “Arctic Exploration and its Object,” by Dr. Franz Boas, are both strong papers; and there is also an article by Prof. Tyndall, describing “Pasteur's Researches in Germ Life.” An article, treating of the antiquity of man, under the title of “A Very Old Master,” followed by a sketch of M. Pierre Berthelot, closes the body of the number. “Illiteracy as a Source of National Danger” and “A Test of Philosophy” are discussed in the “Editor's Table”; while twenty pages of “Literary Notices and Popular Miscellany” give room for a large variety in these departments.

THE Bay State Monthly for April is an exceptionally interesting number. It opens with a biographical sketch of Hon. C. C. Coffin (“Carleton”), which is accompanied by an excellent and life-like portrait of that genial writer. Sketches of Col. John B. Clarke, of the *Manchester Mirror*, and of Denman Thompson are also given, the former with a fine portrait. George H. Wood writes of “National Banks,” George W. Hopps of “The Clayton-Bulwer Treaty vs. Monroe Doctrine.” “Old Dorchester” is the subject of an historical article by Charles M. Barrows; Rev. Anson Titus describes “The Wedding in Ye Days Lang Syne”; and the serial story of colonial life, by Frances C. Sparhawk, grows in interest. A unique feature of the number is an article giving in the French language the very favorable impressions of a Frenchman in regard to Concord, N.H.

THE April number of the Revue de Belgique contains a rather lively account, supposed to be written in 1885, of the conquest of India in 1885 by a Russian army aided by another Sepoy rebellion. Bismarck is imagined as assisting in dismembering the British Empire. Ireland is turned into a German principality, England becomes a republic, Canada joins the United States, but is eventually taken from us by Russia. The twenty-first century will see the Czar enthroned over all Europe, and civilization a second time conquered by barbarism. Other articles speak of the new State on the Congo, possible reforms of criminal jurisprudence in Belgium, and the customs of modern Egypt. Alexandria, with its forest of masts planted on the verge of the desert, is said to look like a bunch of needles sticking out of a yellow pincushion.

THE RISE OF INTELLECTUAL LIBERTY FROM THALES TO COPERNICUS.

By FREDERICK MAY HOLLAND,

Author of *The Reign of the Stoics*. Price \$3.50.

The author of this book has chosen a magnificent subject; and, although it is formidable in extent and much of it involved in obscurity, and all of it complicated with great questions of history and human progress, he has yet been able to throw much new light upon that liberalization of thought which went very unsteadily forward during twenty-two hundred years, before the great modern movement of the development for intellectual liberty. The work is a delineation of tendencies, a series of sketches of the great minds who at different times and under varied circumstances, and with unequal effect, have struck for independence of thought, a presentation of the counterforces that have antagonized intellectual liberty, and an account of the working of all those larger agencies which have in different degrees hindered or promoted freedom and independence of thought. Without having subjected the work to critical scrutiny, we are much impressed by the evidence it shows of extensive and conscientious labor, the freshness and interest of its chief subject-matter, the untrammelled treatment of the subject, and the vigor of the portrayal of that long and agonizing conflict with bigotry and intolerance, religious and political, public and private, which is the price of our modern liberty of thinking.—*Popular Science Monthly*.

The volume shows remarkable research, keen powers of analysis and comparison, close reasoning, and fairness of judgment. It will be found an invaluable help to the student, who will be glad to learn that the author contemplates a second volume, which will bring the subject down to the time of the French Revolution.—*Boston Transcript*.

For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

TOKOLOGY

A Book for every woman. Alice B. Stockham, M. D.

A COMPLETE LADIES' GUIDE.

30,000 Sold in Little Over a Year. Agents find it the most popular work on the market. "The very best book to put into the hands of a girl or woman."—E. M. HALE, M. D. Cloth, postpaid \$2.00; Morocco, \$2.50. Circulars Free. Sanitary Pub. Co., 159 La Salle St., Chicago, Ill.

AGENTS WANTED for
Twenty Years of Congress,
1861-1881,
by James G. Blaine.
Hon. J. S. Wise of Va. says:
"Whoever takes it up, no matter
whether he be Mr. Blaine's friend
or enemy, will never put it down
until he has read the whole."
Agents make from \$200 to
\$1000 per month. Address,

THE INDEX,
40 Boylston St., Boston, Mass.

UNITY CHURCH-DOOR PULPIT.

The second year of the "CHURCH-DOOR PULPIT" began April 1. The series of twenty sermons will differ from last year's in two respects. Four numbers will be devoted respectively to

Channing, Parker, Emerson, Martineau, giving a score or two of what in each writer may be called his "Gospel Passages." If one would learn in short space for what the four great prophets of our Liberal Faith stand, let him read these numbers, and keep them on hand to give a friend.

In three more numbers, the subjects "God," "Miracles," "The Bible," will be respectively treated in extracts from several writers. Each of these three pamphlets will be, as it were, a handful of short liberal tracts on its special subject.

The other thirteen numbers will probably be single sermons from as many preachers,—preachers ranging in their thought from Liberal Orthodoxy to the Society for Ethical Culture; most of them finding a home, therefore, under the Unitarian name. So far as those invited have been heard from and decided on, the list, alphabetically arranged, stands now:—

Felix Adler,
C. A. Bartol,
Phillips Brooks,
John W. Chadwick,
Rowland Connor,
Washington Gladden,
T. W. Higginson,
John C. Learned,
Andrew P. Peabody,
Minot J. Savage,
John Snyder,
S. H. Sonneschein.

The hope is that Liberal churches, West and East, will catch the new church-habit, to regularly and freely furnish forth a table or shelf near the door with such pamphlets, first for home reading and then for lending and mailing, each reader becoming his own missionary society for whatever he finds worthy.

Each church that subscribes \$25 for a block of fifty copies and uses them thoroughly through individual readers, as here suggested, besides any good done in its own homes, sends out twenty times fifty, or one thousand tracts a year, to spread the Liberal Faith,—a little mission well worth adding regularly to any church-life.

Will those who think that such a series of twenty pamphlets as is here described promises good pocket and post-office preaching at once send in their subscriptions for the coming year?

Single subscription for the year, twenty numbers, \$1.00.

Block subscriptions for ten or more copies to one address, fifty cents each copy.

Send to C. H. KERR,
UNITY OFFICE, 135 Wabash Ave.,
Chicago, Ill.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price \$3.00 per annum; 75 cts. for three months to trial subscribers.

THE INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR's basis of action, and the best exertions of its management will always be used to render it a free and independent journal devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

JOSIAH P. MENDUM,
PAINE MEMORIAL BUILDING,
Appleton St., Boston, Mass.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held liable for any statements made by a Cornell Univ Lib pages in entire character and improper or "blind" advertisements, such advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

SITUATION AS TEACHER WANTED.

A graduate of Harvard would like a situation as teacher, in which independent thought and honest speech would not be dangerous. For particulars and references, address M., INDEX office.

RELIGIO - PHILOSOPHICAL JOURNAL.

Established in 1865.

A Paper for all who Sincerely and
Intelligently Seek Truth with-
out regard to Sect or Party.

The JOURNAL, in the estimation of a large proportion of the leading authorities on Spiritualism, stands pre-eminent as a fearless, independent, judiciously fair advocate of Spiritualism. It has received more general notice, and more frequent and higher commendations from intelligent sources, regardless of sect or party, than any other Spiritualist or liberal paper ever published: the records will confirm this.

The JOURNAL is uncompromisingly committed to the Scientific Method in its treatment of the Phenomena of Spiritualism, being fully assured that this is the only safe ground on which to stand.

The JOURNAL is unsectarian, non-partisan, thoroughly independent, never neutral, wholly free from cliques and clans.

PUBLICATIONS

OF THE

FREE RELIGIOUS ASSOCIATION.

Freedom and Fellowship in Religion. A volume of ten essays upon speculative and practical problems of religion, by D. A. Wasson, Samuel Longfellow, Samuel Johnson, John Weiss, W. J. Potter, F. E. Abbot, O. B. Frothingham, J. W. Chadwick, T. W. Higginson, and Mrs. E. D. Cheney, and extracts from Addresses by Ralph Waldo Emerson, Lucretia Mott, Robert Dale Owen, Dr. Bartol, Wendell Phillips, Rabbi Wise, Horace Seaver, A. B. Alcott, Lucy Stone, Charles H. Malcom, Julia Ward Howe, and others,—all given on the platform of the Free Religious Association. Price (reduced) \$1.50.

Reports of Annual Conventions of Free Religious Association, from 1872 to 1879 inclusive. These contain essays and addresses by the various distinguished men and women who have spoken on the Free Religious platform, together with yearly reports of the Executive Committee. 10 cts. each.

TRACTS.

- I. *Taxation of Church Property*, by James Parton. 5 cts.; ten, 30 cts.; one hundred, \$1.50.
- II. *The Bible and Science*, by John Weiss.
- III. *The Sympathy of Religions*, by T. W. Higginson. Enlarged edition.
- IV. *Transcendentalism*, by Theodore Parker. Never before published.
- V. *The Public School Question*, as understood by a Catholic American citizen (Bishop McQuaid) and by a Liberal American citizen (F. E. Abbot).
- VI. *How Shall We Keep Sunday?* An Answer in Four Parts: 1. Sunday in the Bible. 2. Sunday in Church History. 3. Sunday in the Massachusetts Laws. 4. The Workingman's Sunday. By Charles K. Whipple, Minot J. Savage, Charles E. Pratt, and Wm. C. Gannett.
- VII. *Evolution and Religion*, by John Fiske. 5 cts.; ten, 35 cts.; one hundred, \$2.00.

Nos. II., III., IV., V., VI., 10 cts. each; ten, 60 cts.; one hundred, \$3.00.

Reason and Revelation, by W. J. Potter. 5 cts.; ten, 30 cts.; one hundred, \$1.50.

"FREIDENKER."

Freedom, Culture, and Prosperity for all!

(Organ of the Freethinkers of North America, of the Union of Radicals, and the North American Turnerbund.)

Editor, C. Hermann Bopp.

TERMS, PER ANNUM, IN ADVANCE.

UNITED STATES AND CANADA:

Freidenker
Turnerische Ausgabe des Freidenker
(Amerikanische Turnzeitung)

EUROPE:

Freidenker
Turnerische Ausgabe des Freidenker
(Amerikanische Turnzeitung)

Sample copies sent, on application, free of charge.

In this weekly, which is now in the thirteenth year of its existence, political, social, and religious matters are discussed with a view to general enlightenment and progress. The *Amerikanische Turnzeitung* is especially devoted to the discussion of topics pertaining to physical culture and matters of interest to lovers of the gymnastical art.

Since Jan. 1, 1885, the *Freidenker* has been enlarged, thus furnishing considerably more reading matter, while the price remains the same as before.

For the convenience of those of our readers who are chiefly interested in matters relating to gymnastics, the *Freidenker* and its former supplement, the *Turnzeitung*, have been consolidated into one paper, called *Amerikanische Turnzeitung*, with the sub-heading "Turnerische Ausgabe des Freidenker."

This paper contains more reading matter than furnished by both the *Freidenker* and *Turnzeitung* heretofore. In making these changes, the publishers have incurred great expense; and we therefore solicit the hearty co-operation of all friends of the cause in securing for the *Freidenker* and the *Amerikanische Turnzeitung* a wider circulation.

We also publish

"Erziehungsblaetter,"

fuer Schule und Haus.

A Liberal German Educational Monthly.
(Organ of the German-American Teachers Association.)

Editor:

MAXIMILIAN GROSSMANN, Milwaukee, Wis.

Associate Editors:

H. H. FICK, Chicago, Ill.
H. SCHURICHT, Chicago, Ill.

16 large quarto pages, with four-page cover.
Terms: \$2.12 per annum, in advance.

"Freidenker-Almanach"

FOR THE YEAR 1885.

The almanac, which is now in the eighth year of its existence, is devoted to the propagation of free-thought principles. Price 25 cents.

"Amerikanischer Turnerkalender"

FOR THE YEAR 1885.

This annual, which is now published for the sixth time, is principally intended to promote the culture of gymnastics, and is pervaded by a thoroughly liberal spirit. Price 25 cents.

Orders for all kinds of books promptly filled. Radical and Freethought Publications a specialty.

CURRENT TOPICS.

BY B. F. U.

COL. J. C. BUNDY, editor of the *Religio-Philosophical Journal*, who has been in this city several days, has had a consultation with the committee of the American Psychical Research Society on "mediumistic phenomena"; and he speaks in terms of praise of the judicial fairness and scientific method and spirit of the several members of the committee. Col. Bundy admits that there is an enormous amount of trickery and fraud practised by mediums; but he is confident that there are also genuine spiritual manifestations, and these he desires to see subjected to scientific scrutiny.

REV. DAVID SWING is reported saying that suffrage in this country should be "limited to men having \$500 worth of property." The *Herald* of this city comments as follows: "A dollar cannot be trusted to vote any more than a man. Some voters who have a large amount of money are the least interested in good government, while many voters whose worldly possessions are little or nothing cast their ballots with the greatest intelligence and conscientiousness. Prof. Swing is reminded that his limitation would have ruled out Ben Franklin in his early days, and disfranchised Gen. Grant when the war broke out. A plutocracy is alien to a republic."

MOTT, a medium, whose performances have during the past dozen years made hundreds of converts to Spiritualism, and who has been tried at Kansas City—where he had been exposed by means of aniline dye—for obtaining money under false pretences, has been discharged by the court, on the ground that the complainants were not deceived by Mott's claims, that they paid their money to expose a humbug, and not for the purpose of seeing spirits. At the same time, the judge says that the complainants "demonstrated beyond the possibility of doubt that the defendant was a fraud." The decision was based on a quotation from a previous decision found in American criminal reports, that "the false pre-

tence must be relied on by the party claiming to have been defrauded as true."

REV. PHOTIUS FISKE, for many years a chaplain in the United States Navy, and still on the retired list, is much interested in liberal thought, to the advancement of which he contributes generously. From the *Investigator*, we learn that, at a recent meeting of the directors of the Paine Memorial Corporation, "Mr. Fiske was present, and said that he wished to give the corporation \$1,000, and that he would do this by taking stock for that sum, and making it over to the directors and their successors, to be held by them in trust, that the dividends should be used in carrying on liberal meetings in the Paine Memorial Building." "By this arrangement," says the *Investigator*, "the debt upon the building will be reduced \$1,000, and the directors placed in a position whereby a beginning can be made toward sustaining meetings of a character suitable to the institution founded in honor of Thomas Paine."

A CHINAMAN, in a speech at San Francisco a few days ago, said this country "sends millions of dollars to China to prepare her people for the kingdom of heaven, but refuses them a home in the United States." The reason is evident. The people of this country, of the Pacific coast especially, would rather have Chinamen go to the kingdom of heaven than come to the United States. The Chinaman in San Francisco fails to see that in this country things temporal and things eternal are kept distinct and separate. The former are of practical, the latter of theoretical interest. Not only do we, when we choose, refuse a home to people we are ready to prepare for heavenly mansions, but, not unfrequently, we have those who take charge of spiritual matters carefully labor with individuals, preparing them for their new homes, and then send them thither at the end of a rope. The assurance of their spiritual advisers of their fitness for the kingdom of heaven is accepted with satisfaction, but it does not change our opinion as to their unfitness to remain on earth. When the Chinaman whose words are above quoted has lived in this country a while longer, he will understand these matters.

ACCORDING to the *Pall Mall Budget*, Japan just now presents a singular phase of the Church and State question. A few months ago, it says, the Japanese disestablished and disendowed their ancient faiths; and already there is a movement among the advanced Liberals in the country to adopt Christianity as the State religion on political grounds. A manifesto issued in one of the leading journals of Tokio puts the question in a very naked light. Religion, it says, is one of the garments of a nation; and the prevailing color of that particular garment at present is the hue known as Christianity. Calling the latter for convenience blue, and Buddhism russet-brown, it finds that while the man who shuns the society of his fellows wears the latter, blue is the fashionable color. It would be unprofitable to discuss which is the better of the two: that is of no consequence. Brown may be more sedate and digni-

fied, but the value of a blue coat to the man who wishes to move in polite society must not be lost sight of. Now, Japan does want to move in the polite society of nations, and should, therefore, don the blue coat of Christianity. It is by no means necessary, the writer explains, that the majority of Japanese should become Christians. Far from it: one in every hundred will be sufficient, and all that is necessary is the assumption of a title of a Christian country. The Japanese must change their professed belief, and wear a religious dress uniform with that of the nations with whom they wish to associate. By professed belief, the manifesto candidly adds, is meant what the Japanese profess to believe, apart from the question of what they really believe to be true doctrine. "Assume a religion, if you have it not," is apparently the motto of some of the Liberals in New Japan.

THE *Inter-Ocean*, second in ability to no Chicago daily, in reply to a statement of the Louisville *Courier Journal* that the New York Free Trade Club and the Massachusetts Tariff Reform Association have failed to induce representatives of protection to meet Prof. Sumner, of Yale College, in debate on the tariff, says: "The *Inter-Ocean* does not hold that oral debate is the best or most exhaustive means of correcting errors or removing ignorance concerning the operation of tariffs. But it will take pains to see that no competent free-trader, nor any free-trader whose profession or occupation is such as to cause it to be generally assumed among free-traders that he is competent to discuss the question on the rostrum, is denied an opportunity to do so for want of an antagonist." Prof. V. B. Denslow, tariff editor of the *Inter-Ocean*, debated the tariff question with Prof. Sumner in Cleveland, before four thousand people. As to the merits of the debate, there was, of course, a difference of opinion. Both speakers showed thorough acquaintance with the subject and much skill in argument. Many regarded the debate as a complete protectionist triumph. A renewal of the debate in New Haven was urged by Prof. Sumner's students; but the request, it is stated, was declined. "It is idle and false to say, therefore," the *Inter-Ocean* remarks, "that Prof. Sumner does not know where he can get an antagonist to discuss the tariff question. He knows perfectly well that, if the New York Free Trade Club sends an invitation to the same person who debated with him at Cleveland, it will be accepted." Prof. Denslow debated the tariff question with Prof. Perry, of Williams College, before the Brooklyn Revenue Reform Club; and the debate was admitted by all to be very able and instructive. We suggest that the Massachusetts Tariff Reform Association invite Prof. Denslow and Prof. Sumner to meet in joint debate on the tariff question, in this city, at an early date. Our sympathies are with free trade, but we should like to see presented the strongest arguments that can be urged in favor of the policy of protection, and know of no speaker or writer who can present them more ably and forcibly than Prof. Denslow.

THE ANNUAL MEETING.

Again the Free Religious Association gives notice to its members and the public of its annual meeting, and presents its mental bill of fare for Friday of Anniversary Week in Boston. And seldom has it offered a more attractive programme. *The Index* last week, in the Table of Contents, by some misplacement of a switch, got the Secretary's call for the meeting under the head of "Book Notices." But this is not to be taken as a sign that the record of the Association is finished and put into a book or that the canon of its revelations is closed. Doubtless, the ideas it stands for have been making progress in the public mind during the eighteen years since its organization. But, still, it has a distinctive message to the world: it still has something to say in Boston, Anniversary Week, for which no other association or platform gives opportunity. There will be a variety of platforms and societies this year, as heretofore, presenting their claims to public attention,—organizations for denominational purposes, for social and philanthropic objects, for moral reforms; and not a few of these will interest the constituency of the Free Religious Association, and present valid reasons why they should receive the support of all earnestly liberal minds. But, at the close of them all, and as, in a sense, the culmination and crown of all organizations in behalf of human progress, the Free Religious Association offers its platform,—a place where the deepest and most searching problems of religion itself are thoughtfully discussed, where thought is untrammelled, where all questions that concern human welfare are considered from the highest point of view, where representatives of all beliefs and all religions are cordially welcomed, and where an attempt is made to prove that amid diversity of opinions there may be unity of spirit, and that perfect liberty of thought is reconcilable with the most earnest practical endeavors to promote righteousness, brotherhood, and truth.

The programme for the Association's meeting this year well represents the twofold character of the subjects that specially claim its attention,—the problems of thought and the problems of action; while the evening festival expresses the spirit of fellowship which the Association also aims to cultivate. There is, perhaps, no more incisive question concerning the meaning and permanence of religion than that which is to be considered at the morning session,—“Is a Scientific Basis of Religion Possible?” To a large section of people who are compelled to accept science as the criterion in all matters of intellectual belief, it depends on the way in which this question is answered whether they can believe religion to be a permanent possession of mankind or a superstition destined to pass away. The Association is fortunate in having secured two such clear and strong thinkers as Messrs. Savage and Le Sueur to give their views on this subject. Mr. Savage needs no introduction to *Index* readers nor on the Free Religious platform. No writer or speaker is more welcomed anywhere than he. But this, we believe, will be the first time that Mr. Le Sueur has attended a convention of the Free Religious Association. But readers of *The Index* will remember him as several years ago one of the regular contributors to its columns, and one who never wrote without having something good to say, and saying it well. Latterly, he has been a frequent contributor of thoughtful papers to the *Popular Science Monthly*; and, on the theme upon which he is to speak at the annual meeting, he is thoroughly at home. Whether he and Mr. Savage will answer the question in the same way remains to be seen.

For the afternoon meeting, “The Religious Aspect of Socialism” is to be the subject; and the main address upon it is to be by a man whose name and opinions have been under public discussion in this country for the last two years more, perhaps, than those of any other man of the religious world,—Dr. Heber Newton. But, in New York, Dr. Newton is as well known for his special interest in and study of social questions as for his liberal religious views. He comes to the Free Religious platform to speak of these social problems that are pressing to the front of all reform, without any hesitation or timidity, knowing well that his religious views will not thereby be compromised, however much narrow sectarians may criticise him for the step. He has proved himself to have no fear of criticism where matters of conscience are involved. He would have attended the annual convention of the Association two years ago, had he not expected that he might be engaged in an ecclesiastical trial for heresy at that time. Last year, again, he wanted to come, apparently almost as much as we wanted him, but was prevented by an affection of the eyes temporarily disabling him from work. This year nothing is likely to prevent his attendance; and we anticipate that there will be a great desire to hear him, not only in the afternoon address on Socialism, but in the evening, at the Festival, where he is also to be one of the speakers.

For the names of other speakers at the Festival, reference must be made to the Secretary's notice. Some of them are well known on the platform of the Association, others will be new comers there. Other arrangements which the committee are making for the occasion promise that it will be one of unusual interest. Mrs. E. D. Cheney, we understand, is to preside at the tables. This is the first time a woman has taken that position at our meetings; yet what could be more natural and fitting? It is expected that woman will be seen at the head of the table in a private social gathering, and why not in the corresponding place at public festivities? That Mrs. Cheney will bring dignity and grace to the position, all who know her will at once recognize.

It is to be hoped that this annual meeting will bring together a large number of the members and friends of the Free Religious Association. Especially is it desired that distant members may give their presence. It is an opportunity for the renewal of old ties of friendship and the formation of new ones. Let the cause which has our intellectual assent have also our hearts. Remember the two points in Emerson's words closing his address at the first meeting of the Association: “Within this little band that has gathered here to-day should grow friendship. The interests that grow out of a meeting like this should bind us with new strength to the old eternal duties.”

WM. J. POTTER.

HOW WOMEN HAVE “RUSHED” INTO SCEPTICISM.

In an article published in the *Woman's Journal* of February 7, Rev. W. W. Patton, President of the Howard University, defending himself from criticisms passed on a recent sermon of his on “Woman and Scepticism,” stated that one of the chief points of that sermon was to show that, “when women rush into scepticism, they forsake their best friend and defence,—Jesus Christ and his gospel.”

Mrs. Stanton and others have already amply shown that “Jesus Christ and his gospel” have not always proven woman's “best friend and defence”; and my only purpose in this article is to help expose a very common error embodied in the

sentence quoted as to the manner in which disbelief in old theologies comes to thinking women as to thinking men,—a manner the very reverse of “rushing,” which the dictionaries define as “a violent motion, or course.” It is never a pleasant thing to any truth-lover to be forced, at the imperative dictate of conscience, to differ from the conclusions of the majority. Only the knowledge of the well-attested fact that most discoveries in truth have been made by isolated thinkers, and strengthened at first by single converts, makes it possible for such openly to declare those differences. So it would be a very unlikely phase of wilfulness which would cause a sensitive woman of acknowledged intellectual ability, of thorough acquaintance with worldly wisdom and the unprofitableness of the advocacy of unpopular views, to “rush” into openly declared adhesion to heterodox opinions. And yet some women, acknowledged to be among the greatest of their sex, have, through loyalty to truth, made such open declaration of doubt in regard to the theological beliefs which have been unquestioningly accepted by their contemporaries. These are the women the Rev. Mr. Patton accuses of having “rushed” into scepticism. Will their life records bear him out in this accusation?

Among those he is reported to have named in this connection (and, as a preacher of the religion which made her a martyr to free-thought, should have blushed to name) was the beautiful daughter of Theon, of Alexandria, the most learned mathematician of his day, Hypatia, friend of the Bishop Synesius, vindicator of free thought and free speech, who, when Christianity was enjoying its first triumphs, dared to question its dogmas, and to teach in preference the philosophy of Plato and Aristotle. This lovely and learned woman, a thinker of such acknowledged ability that men of the highest rank flocked to hear her expositions, could not have “rushed” to any conclusions against even the faith whose disciples did “rush” to put her to a cruel death because of her heretical opinions and teachings.

Madame Roland was a thinker and student from childhood, and, as a child, accepted with ardor the Catholic faith which her beloved mother carefully inculcated as a necessary part of her education. When eleven years old, she was sent, at her own urgent entreaty, to a convent, where for several years she remained as a pupil, and applied her developing intellectual energies to an enthusiastic study of the dogmas of Catholicism. She read with delight the *Lives of the Saints*, and entertained serious thoughts of taking the veil. To this early religious fervor, with its accompanying truth-loving nature, may be ascribed the after course of careful investigation which finally led her into a form of Deism, which is expressed in the invocation she wrote when, in a moment of weakness, she contemplated cheating the cruel guillotine of its prey by committing suicide: “Divinity! Supreme Being! Spirit of the Universe! Great Principle of all I feel great or good or immortal within myself! whose existence I believe in, because I must have emanated from something superior to that by which I am surrounded,—I am about to reunite myself to thy essence!”

Mary Wollstonecraft's earlier correspondence shows clearly that she was of a deeply religious nature, and accepted the teachings of the Protestant faith, into which she was born. Her latest biographer says: “Her belief became broader as she grew older. . . . As the years went on and her knowledge of the world increased, her religion concerned itself more with conduct and less with creed. . . . Her belief, such as it was, was wholly the result of her own desire to solve the problems of existence and of the world beyond the senses.”

Whoever reads the last chapter in her *Rights of Woman* cannot fail to be struck with the thoughtful and even reverent tone of her references to religion, which show that the few theological doctrines she had cast aside had been the subjects of thoughtful study on her part before discarding them from her theistic faith.

Frances Wright, the inscription on whose tombstone sums up the true story of her unselfish life in the words, "I have wedded the cause of human improvement, staked on it my fortune, my reputation, and my life," and of whom Mrs. Elizabeth Oakes Smith wrote that "she was grievously asspersed on every side, and she must have felt to the core her innate worthiness to bear it as she did," is another of those women who are accused of "rushing" into scepticism. As an indication of the method in which such "rushing" would be likely to be done on her part, from a description in her biography of her girlhood, I quote the following: "Surrounded at all times by rare and extensive libraries and commanding whatever masters she desired, she applied herself by turns to various branches of science and to the study of ancient and modern letters and the arts. She was at an early age surprised at the inability of masters to answer her questions, which usually turned upon the nature, origin, and object of the subject submitted to her attention. Being checked on one occasion by a deep and shrewd mathematician, who observed that her questions were dangerous, she replied, 'Can truth be dangerous?'"

Harriet Martineau, whose parents were Unitarians, and her theology, in consequence, of a mild type, was yet deeply interested in religious questions. Even as a child, Milton was a favorite. She studied Hartley, Locke, and Priestley. Her earliest published essay was on "Female Writers of Practical Divinity." Her first book was entitled *Devotional Exercises, consisting of Reflections and Prayers for the Use of Young Persons*. It was after years of careful—yes, and prayerful—study of religion that Harriet Martineau at length made her "rush" into scepticism,—a "rush" which, as she expected, alienated many of the pious friends who chose to accept unquestioningly the current religious views of the day.

At fifteen, "George Sand" was sent to a Parisian convent to finish her education. Here, she became an enthusiastic religious devotee; and it was with difficulty that she was persuaded to give up her expressed determination to take the vows of a novitiate and become a *religieuse*. That her strong intellect in her more mature years led her to unorthodox conclusions was not merely because of her impulsive nature, nor of any tendency to "rush" into error, but rather, as Margaret Fuller says, because "she had a desire for truth, as strong as ever beat in human heart."

The recently published *Life and Letters of George Eliot* reveals distinctly what (in spite of her heterodoxy) every thoughtful reader of her books must feel, that hers was peculiarly and intensely what, for lack of a better phrase, we call a religious nature, which, perhaps, may better be defined as the spirit of aspiration after the highest truth discoverable. In her girlhood, she was an ardent church-woman; and it was only after long struggle and analytic criticism that, at the mandate of conscience, she declared her changed views,—a declaration which, as she feared would be the case, antagonized many whom she dearly loved, and created between them and herself a chasm which her love and longing vainly tried to bridge over.

Frances Power Cobbe, whose whole life-work has been ever in the direction of morality and religion, every page of whose writings glows with devout, reverent theism, is also accounted among

the inconsiderate "rushers" into scepticism. From childhood, her mind was permeated with religious ideas; she was eager to do whatever was required of her by that Unseen Power whom she wished to love as well as worship "in spirit and in truth." Her studies in this direction led her outside of Orthodoxy, but in intellectual fields, whose atmosphere is purely devotional and clearly religious.

Although not mentioned in the Patton sermon, yet certainly included in the list of liberal-minded women whom he thus slurred, belong such names as Margaret Fuller, whose life motto was, "Be to the best thou knowest ever true"; Ernestine L. Rose, the carefully tutored daughter of a learned Polish Rabbi; Lucretia Mott, the gentle-hearted Quakeress, heretic, and liberty-lover, whose motto was, "Truth for authority, and not authority for truth," and whose memory is an inspiration to thousands to-day; Lydia Maria Child, that steadfast pleader in behalf of the weak against the strong, whose cheerful religion, albeit unorthodox, was yet of the most trustful type; and Elizabeth Cady Stanton, whose "rush" into scepticism was not so swift but that she had time to secure and carry with her a whole arsenal of intellectual equipment, sufficient to enable her to defy from her citadel of unfaith the onslaught of either officers or canons of the Church. These, with thousands of other less known, but not less earnest women, who have been forced by the intellectual conflicts of this age to think, to question, and to decide for themselves the query of nearly nineteen centuries, "What think ye of Christ?" and have decided in opposition to the views of the majority, dare, with the strength that comes from earnest conviction, to be true to their conscience, and confess their scepticism while ready to give "a reason for the faith" that still remains after the dissolution of their old creeds and dogmas. Everywhere, to-day, sweet womanly lips are taking up the cry of stout-hearted Martin Luther, "*Hier stehe ich: ich kann nicht anders. Gott helfe mir. Amen.*" with tremulous sound, mayhap, but no less resolutely.

SARA A. UNDERWOOD.

RADICAL WORK FOR THE YOUNG.*

It is not in a controversial spirit that I approach the subject appointed for the consideration of this afternoon session. I come to it, not as a citizen to look at it in a general way as affecting the State: I come to it in the most personal way,—as a mother into whose hands has been committed the direction of a vigorous, thoughtful child. And, since my thought upon the subject has been invited, I take the liberty to consider what is the work which I would ask of Radicalism for this child.

In the care of his body, I look to those who have studied the laws of health. In the discipline of his mind, I seek the wisdom of those who have investigated the laws of mental development. But it is not enough that he should have a healthy, shapely body; it is not enough that his mind should have been harmoniously developed; for, when these two things, important as they are, shall have been accomplished, there still remains the question, To what end is this strong, symmetrical body, to what end is this disciplined, well-furnished mind? It is the province of Radicalism to answer this question. This problem of life and its significance has been the problem of the race from the beginning of its career,—the problem of all religions, the problem that renews itself with the birth of every child. The first work of Radicalism seems always to have been a negative work,—a protest against the crystallized answer to this problem. At one point in history, Radicalism was

*A paper read at Florence, Mass., before the Free Religious Convention, November, 1881.

a protest against the answer of the Jews; at another point, it was the protest against the answer of the Church of Rome; at another point, it was a protest against the answer of Trinitarian theology; and perhaps we might say that its latest negative work has been a protest against theology itself.

And I would admit that this is a necessary work, as the plough must precede the sowing-time; necessary in dealing with mature minds. But, when Radicalism approaches the young, then should the plough be abandoned, then should the negative action be exchanged for the positive. For is not the mind of the child already like the well-ploughed field, waiting and asking for seed?

The growth of his body and the development of his mind have necessarily been largely a personal work with the child: he *must* eat his bread for himself, he *must* study his lesson for himself. But now he is ready for the radical teacher, be it mother, friend, or stranger, who shall instruct him that he is not a solitary being in the world, placed here just for the growth of his own body and the development of his own mind, but that he has relations and duties to others that take him out of the region of selfhood, and make his life one thread in the weaving of a great and invisible pattern. Here opens a vast field of positive work for the radical teacher in the building up of personal character, in the unfolding and strengthening of the things that make for righteousness. Truthfulness in speech and action, honesty, justness toward others, generosity, personal purity,—these things must always be the foundation stones in character-building. There can be no question about these things. They must be the fruit of radical work,—work that goes to the root of things,—or the work stands self-condemned. History, remote and recent, is rich in lives that exemplify all these virtues; and biography may be made a most valuable aid in the development and strengthening in young people of virtuous character. Let great and good lives, humble as well as far-reaching lives, be placed vividly before them, that they may say with Longfellow:—

"Oh, though oft depressed and lonely,
All my fears are laid aside,
If I but remember only
Such as these have lived and died."

"The study of mankind" in biography and history is one inexhaustible field for radical workers with young people. For this study may develop not only the strictly personal moral character, but builds up as well the character of the citizen.

Having made sure of our foundation of character that it is laid deep and strong, our superstructure gives us more freedom of choice. The world about us, rocks and flowers and the stars beyond, invite us to most wholesome study and thought. Every such avenue of study opened to the young is an added source of wealth for his future, an added safeguard against the physical temptations that surround him, an added source of rest and consolation for the wearisome and sorrowful hours that must come.

The study of art, whether it be in the field of the painter, the sculptor, the musician, or the poet,—having first made our foundations sure,—promises those graces of character that so sweeten and beautify all our human relations. How strong the instinct of human nature is for these graces is shown in the attempts at art in the rudest peoples, the love for decoration in the least developed. And, when the little baby is placed in our arms, it is the tender lullaby in simple rhythm that voices our brooding care; and, when the little one has outgrown the lullaby, then the nursery rhymes are his delight, until these give place to the stirring

strains of the Iliad or the sweet melodies of our own beloved poets. These are pointings of nature which we need not fear to follow. The mind of the child grounded in truthfulness will as unerringly gather from the poem its vital truth as the bee goes straight to the heart of the flower for its honey. And I might carry the illustration still farther, and say that, as the brilliancy or perfume of the flower attracts the bee to its nectary, so may the rhythm of the poem attract and hold the child to its vital truth. All that we can do to refine his tastes, to make coarse and evil things abhorrent to him,—and this may be done without taking from the strength of the child's character,—is so much done to arm him against the temptations of young manhood or womanhood.

Thus far, I believe I have not touched debatable ground; for I think no one would question that, in the building of character, our foundation must be the personal virtues, and I think no one would seriously object to the teaching of science or art as aids to this work. But, since I am speaking in a personal way of what, unlimited by consideration of others, I would have Radicalism do for my child, I will add that I would have it implant in the virgin soil of his mind the sustaining, the consoling, the all-inspiring faith that the root of all things is spirit. I would have it impress upon his willing mind the belief that he has set out upon an immortal career; that his life is not merely for to-day or for next week or for next year, but is forever and ever; that his powers for getting knowledge are infinite; that his powers for giving light and strength to others are infinite; that it is his high calling to live forever onward and upward toward the infinite God.

But, since I am only one member of a society organized for radical work, I feel myself bound to remember that there are other parents who have not the faith that is my inspiration, and who would not wish to have this faith instilled into the minds of their children. Therefore, I acknowledge that, when we come to the matter of working together as a society, we must choose common ground upon which to work, compromising by silence upon those points upon which our views are different. I acknowledge that I have no right to press upon the children of others teachings that their parents would not approve; and, in my own behalf, I have a right to ask that there shall be no teaching which shall close the mind of my child against that faith which I would make the strength of his feet, the wings of his soul.

I say we must compromise by *silence*, for controversy upon disputed subjects of belief is fatal to the well-being of children. What the storm of hail and wind is to the garden's tender seedlings, that is controversy to children. Their minds cannot grasp the question at issue; and they are only conscious that two sets of people whom they respect equally have serious disagreements, or, to use their own language, "quarrels," and they are bewildered and troubled.

Let us be as tender toward the children as the gardener is to his seedlings, shining upon them with all that is lovely and of good report in human nature, and stimulating them to the use of their own best powers, but protecting them from the withering winds of controversy.

It seems to me, then, that Radicalism, working for the young in societies whose one tenet is toleration, must relegate to the parents the religious training of their children, and that this leaves still to Radicalism the field which in the past religion has so much neglected,—the deep founding of the character upon truthfulness and unselfishness and personal purity.

ELIZABETH POWELL BOND.

JOHNSON'S "PERSIA."

Mr. Johnson's last work upon Oriental Religions—*Persia*—has already been noticed in *The Index* in a most careful, thoughtful, and appreciative paper by Mr. Clifford.* But I wish still to add a word upon this most valuable book. Mr. Frothingham, in his Introduction, describes it as "the masterpiece of the series"; and this, to those who know his other volumes, will be felt as highest praise.

Mr. Johnson seems in the *Persia* to have given us the fruit of his ripest thought and knowledge. He presents to us in the Iranian faith and, going farther back, in the Accado-Assyrian and cognate religions from which Iran drew, as did also the Hebrew people, the spectacle of races that have centred their worship upon personal Will as supreme reality, and has pointed out very skilfully what this involved and assures. It is a worship that has had a long and pregnant history in the past, and to this present dominates largely, almost exclusively, in the faith of Christendom.

There is a chapter on symbolism, very instructive,—the theme of all themes,—which of itself is worth many times the price of the book. Then the relations of Persian or Iranian and Chaldeo-Assyrian thought and culture to the Hebrew, and so to the Christian, is handled in a very thorough and intelligent manner. There is throughout an affluence of learning, fulness of treatment, freedom from prepossession or bias, and a positive, believing, affirmative spirit, leaving in these regards nothing to be desired. He has made us all deeply his debtors by his very thorough studies in this most important of all fields, the history of the religious sentiment in its growth and varied expression, showing withal how all this bears toward the final accomplishment,—attainment of free, catholic, universal religion.

Mr. Johnson has the perception of a seer and the utterance of a prophet. There are passages, many of them, in these writings remarkable for their sustained elevation,—passages, too, that rise to heights of commanding eloquence and power. Take, for example, his chapter upon the cuneiform monuments,—the introductory portion where he dwells upon the tie, ever vital, that binds us to the immemorial past. Free as he is to the marrow of his being, he has no sympathy with that intellectual Celticism or Nihilism which would reject or ignore the historic relation.

"We are products of the past as well as of the present; we are inherited fuel as well as instant fire, creatures of tradition as well as of inspiration. For all inspiration springs from resultant conditions, as the plant is rooted in soil and climate, in geologic layer and continental form."

"Surprise and awe make us poetic and creative; we reconstruct old beliefs and repair old defects."

"Our real knowledge, according to Plato, is 'remembrance'; and, surely, our discovery itself is but recognition. Our enthusiasm and wonder at every new thought is in finding it already familiar, of our own race and experience; in feeling at home in it, as in glad recovery of what had been lost. What is the charm of history but that the whispers of one's own genius have come back to him, as with oceanic roll, from the depths of humanity?" (pp. 162, 163.) The decipherment of the cuneiform he pronounces "the mightiest achievement of modern discovery."

Of like elevation and quickening are his passages upon the sea, or water, as the mother of the earth and its life in the old cosmogonies: "Are not the green islands its offspring, the continents its heaped sediments, the record of its secular life?"

Has it not piled the countless layers, its footfalls, its world-architecture?"

"Well might we fancy this rippling laughter, this pulsing rise and fall, this long commingling and emotion, to be the very quiver of the fecund life swarming beneath,—a life that foreshadows all forms elsewhere existing, and has its foretypes of all strivings toward the human, gracious and hateful, noble and mean."

"How universal the sea! Its shores suggest what an infinitude of moods, emotions, aspirations, passions, what stress of resistance and endeavor, what tones and harmonies! The very pebbles it rolls and heaves into barriers to its own march resound monotonous with the familiar, ever unsolved mystery of life and death, the cry of whence and whither that ceases not from man's infancy to his latest maturity; and all is folded in a deeper silence and peace, where the mightiest waste of unrecorded history lays its hand on man's loneliness and fear, with gentle compulsion to trust." (pp. 245, 246.)

But I have not space here to go into detail. The entire volume is rich, charged to the brim with matter, not only of instruction, but manifold suggestion.

Mr. Haskell's word at the end of the volume—it was left unfinished through Mr. Johnson's death in 1882—gives the key-note to the whole work. "This one," he says, "fully gives by hints and statements his concluding thought,—to him the fitting and all important result of his studies of Oriental religions; namely, the connections between the religions of personal Will, which found their culmination in Mohammedanism, and Universal Religion; and the natural and necessary evolution, in connection with scientific thought, of the worship of personal Will into the worship of cosmic substance, order, and law."

This is the destiny sure as the course of the sun. Christianity and all the special forms of faith are to pass away; rather, are to be absorbed, whatever is of vital and permanent value in them, to be renewed and glorified in the broad, absolute religion of a future and not distant day. These studies are invaluable as preparations for that great work of integration and construction that is to come. They are prophecy, not only of the history that shall be written, they are in good degree fulfilment of the ideal dream.

Mr. Johnson was as much a *man* in all senses as he was scholar and thinker. His figure is to me one of the most heroic and inspiring of our age and time. His life was one luminous, constant record of generous self-sacrifice, noble surrender and endeavor for others. "This man certainly did not labor for money," says Mr. Frothingham, "for he was poorer for all he did; nor for fame, of which he got little or none; but for truth alone, or for humanity, which can live only by truth." And again, "The story of Charles Lamb's heroism would be paralleled by Samuel Johnson's, if it all were known." His enthusiasm, so quenchless, irrepressible, is an amazement to me. How he should have held on amid all the embarrassments and discouragements, depressing, disheartening influences that would have utterly disarmed and defeated most men, toiling through all the lone, weary years of unrecognized, unrequited labor, working for nothing and finding himself,—and doing such work, too,—not only never disheartened, never relaxing, but serene, assured, sunny, and ardent in this love to the very last, is a wonder. Such patience, steadfastness, sublimest hope and trust, come only to souls of loftiest strain.

Mr. Johnson has given us a precious, priceless volume, an original and permanent contribution to the religious history of our race. It should be

*Index, Feb. 12, 1885.

very dear to all lovers of manly independence, fearless utterance, strong, clear thinking. All such will certainly be eager to possess themselves of and study with utmost care this remarkable book.

CHARLES D. B. MILLS.

MORMONISM.

It seems strange that a system of religion founded in this country in 1830 by two or three obscure individuals and based upon a romance written by a Christian preacher, who was born in Connecticut and educated at Dartmouth College, should now number its adherents by hundreds of thousands and have an organization extending largely over the globe. But this system, we should bear in mind, did not come into existence *de novo*. All its essential elements were a part of the popular religious beliefs in the country in which it appeared, and in the lands in which its converts have been made.

Rev. Solomon Spaulding's *The Manuscript Found* abounded in marvellous stories resembling those of the Bible, whose antique style its author imitated; and it was filled with the thought of a mind thoroughly saturated with Jewish and Christian supernaturalism. Rigdon was a Campbellite preacher; and Smith, superstitious by inheritance as well as by education, carried with him a "peep-stone," and was a victim of the religious revivals that frequently swept through the country. There was more or less doubt as to which of the churches was the true one, and much "agonizing prayer" that God would make known whether the Methodist, the Baptist, or some other sect was right.

The mere announcement of a new revelation was welcome to many ignorant people, who needed only a few positive words from the prophet or his disciples to make them converts to the new religion. The main doctrines taught were those they had never questioned; and their state of mind predisposed them in favor of a claim which, if true, would confirm their old faith and answer their longings for a new revelation which should settle definitely all disputed questions. It was easy, therefore, for many to accept the new religion which its founders, from a desire for authority, for leadership, for fame, perhaps, and with that dishonesty and cunning which often characterize abnormally religious minds, presented as a system of divinely revealed truth.

The new religion was, in fact, the old religion as interpreted by those who accepted Mormonism, with the name of a new prophet added and with a supplementary revelation, written by inspiration long ago, preserved by Providence, and newly discovered and translated under divine guidance from the original text. Mormonism was simply a new twig on the old tree of religion, or a new variety of the system out of which it grew. It found, therefore, the environment in which the old system flourished favorable to its early growth. Had it been really a new religion, it would have perished at birth. Rarely does even a new variety (variation) of religion find a combination of circumstances favorable to its development into an organized system.

Without doubt, Mormonism was a reactionary movement. The minds from whom it received its original stamp, who formulated its creed and established its ecclesiastical polity, were literalists, more impressed with the doctrinal portion of the Bible than with its highest ethical teachings, and disposed to emphasize the very parts of the Jewish and Christian system which the more enlightened Christian sects rejected or ignored. For this very reason, Mormonism was acceptable to large numbers upon whom it would have made no impression,

had its founders been men of advanced thought and had the new system embodied all the best and rejected all the worst features of Scriptural teachings or of the current religious belief. There would not have been sufficient points of contact between the old faith and the new with numbers large enough to form and sustain an organization. The Mormon leaders, like Mr. Moody,—who, without education, original thought, or the gifts of oratory, attracts large audiences,—gained attention and made converts by their gross anthropomorphism and crude conceptions of the world, adapted to the unenlightened mind.

Polygamy, it should be said in justice to Mormonism, is not and never was an essential part of the system; nor was it originally taught by the founders of Mormonism. It soon became, however, an essential part of the purpose of the Mormon leaders, who, for very unspiritual reasons, desired to establish polygamy, and with Jewish precedents had no difficulty in making their ignorant followers believe that it had been reinstituted by the authority of Jehovah. The religious belief of the Mormons contains so much that belongs to an intellectual and moral stage of development in which polygamy is regarded as an important institution that it was easily adopted; and its speedy extinction would be, if the Mormons could remain a separate community and escape the influence of the outside public sentiment, an impossibility.

With the abandonment of polygamy, the general character of Mormonism is likely to improve; and it may yet become one of the respectable Christian sects. Its essential teachings are the same as those of all the orthodox churches; and its special, distinctive claims to a new revelation and a modern prophet, gaining strength by age, may last as long as those of Judaism and Christianity, out of which it grew and amidst whose adherents it thrives.

B. F. UNDERWOOD.

EDITORIAL NOTES.

BY B. F. U.

MR. W. SLOANE KENNEDY will speak for the Parker Memorial Science Class next Sunday (at 12.15 P.M.) on "Some Social Views of Ruskin."

COL. HIGGINSON once remarked that he valued his military title chiefly because, to make a place for it, his other title, Reverend, had been rubbed out.

"TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS" is the title of a volume of discourses by William J. Potter, which will soon appear from the press of George H. Ellis.

COL. INGERSOLL, in his recent lecture in this city, stated his agnostic position in the following terse and vigorous language: "I take this occasion again to say that on the subject of theology I know nothing. As to the great question of whence and where, I know just as little as any cardinal or any pope who ever lived, and just as much as all of them put together."

FROM an exchange, we take the following: "'No,' said the Unitarian, 'our church is not a large denomination, its membership amounts to next to nothing outside of New England; but for all that, sir, it is a progressive body, a very progressive body.' 'Yes,' replied the orthodox deacon, 'there's no doubt about its progressiveness. It has already progressed so far as to eliminate two persons from the Trinity; and no doubt, before many years, it will finish what it has begun so successfully.'"

THE *Methodist Recorder*, referring to the fact that the receipts from Rev. Joseph Cook's lectures

lately closed in this city were \$40 under expenses, allowing nothing for the lecturer, says, "Had this occurred in the capital of the Congo country or in Patagonia, we would not have been surprised so much; but to hear of this in cultured Boston sounds rather strange." This leads the *Christian Register* to remark: "And yet it ought not to be strange. The modern Athens, like the ancient one, is constantly seeking new things. Mr. Cook belonged for a while to the class of theological novelties, but he is no longer a novelty. . . . Mr. Cook has great power of popular statement, but Boston has discovered that neither his facts nor his conclusions are always to be trusted."

At the monthly meeting of the Unitarian Club in this city recently, Rev. C. W. Wendte, in the opening address on the question "Why don't People go to Church?" said as reported in one of the daily papers:—

There is also a growing class of people who stay away from church, because they cannot accept its articles of faith and teachings. This class is thoughtful, earnest, and influential, sceptical in regard to the old traditions, forms, and creeds of the Church, but not sceptical in regard to truth. In losing these, the Christian cause is experiencing the most serious disaster from which it has ever yet suffered. To recover them, there is but one way,—to revise the creeds, reshape the forms and institutions of the Church so as to bring them into harmony with modern knowledge and the practical needs of human souls and human society at the present hour. The signs of the times indicate that Christendom is undergoing a peaceful but tremendous revolution in religious philosophy and belief. We are on the threshold of a great spiritual crisis,—a crisis as significant and eventful as that which shook the moral universe when Christianity was born. The ancient and petty nations of the universe have disappeared before the teachings of modern science. Yet the Church, with blind fatuity, declines to accept the new philosophy. It is this which is alienating the minds and hearts of intelligent men, and this which is making the overthrow or transformation of the Church only a question of time.

"THE world's hatred of Christ" has been the subject of countless sermons; yet what "the world" hates is not Christ, whose memory is honored and revered, but religious cant and theological fustian repeated *ad nauseam* in regard to, and in the name of, Christ. Ordinary preachers are unable to distinguish between their absurd theories and tedious sermonizing about Christ and the character of the Judean reformer, fairly judged from the New Testament narrative, subjected to the ordinary canons of historical criticism. If Jesus could return to earth, and should reappear among men to-day, he would probably meet with a warmer reception among "infidels," who criticise the reports of his sayings and doings, than among the orthodox clergy, who talk so much about "the world's hatred of Christ." There is not an "infidel" society that would refuse to give him a hearing: there is not an orthodox pulpit from which he would be permitted to speak. When no pulpit in this city was open to Garrison, he spoke in an "infidel" hall and from the desk of an "infidel" lecturer,—that of Abner Kneeland, who was imprisoned two months in Leverett Street jail for blasphemy. Garrison's praise is now in many churches, because the evil he combated has been removed, and his labors are acknowledged and appreciated. His opposition to theological creeds, if he were with us to-day, would exclude him from the pulpits of those who talk most about Christ. And what chance would Jesus have in this generation to address fashionable orthodox congregations in Boston or New York, if he should condemn established ceremonies and creeds and current hypocrisies and shams as he condemned those of his own day?

The Index.

BOSTON, MAY 14, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, : : : : : } Editors.
BENJAMIN F. UNDERWOOD, : : : : : }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrears is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

The Profit-maker and the Socialists.

BY VAN BUREN DENSLOW, LL.D.

No branch of the conflicting and chaotic body of discussion known as political economy, by some claimed to be already a science, is more crude than that which professes to treat of the distribution of wealth, and especially of the inequalities in its distribution, whereby a few men are the owners of a wealth so enormous that they are supposed to be able to make no profitable use of it, while millions are on the verge of want. Mr. Mill says that, "while the laws and conditions of the production of wealth partake of the character of physical truths," in which there is "nothing optional or arbitrary," it "is not so with the distribution of wealth. That is a matter of human institution solely. . . . The distribution of wealth depends on the laws and customs of society."

In short, Mr. Mill thinks that, while the production of wealth is governed by economic laws as natural as those which govern any department of physics, the distribution of wealth is not regulated by economic, but only by parliamentary and judge-made laws. If legislatures but chose to enact it, wealth could be divided equally, or it could be distributed according to honesty, piety, learning, complexion, personal beauty, or any other required standard. It would be anticipating our argument to affirm that, the distribution of wealth being the chief means to the production of wealth, to say that the latter is governed by economic law, but the former is not, is to say that part of a subject is exempt from law, but the whole of it obeys law, which is absurd. Mr. Mill says that "the rules by which it is determined are what the opinions and feelings of the ruling portion of the community make them." And how comes there to be a "ruling portion of the community"? Why should one portion of the community be ruled by another at all? Because the portion ruling have wealth, and the portion ruled is in poverty. The circle

then is this. Inequality in the distribution of wealth causes the laws and customs of society, and these cause inequality in the distribution of wealth. Mr. Mill's cause is the consequence of its own effect, and its effect produces its cause.

The fact is that the laws which govern the distribution of wealth are not only not human, but, like all natural laws, they are remorselessly inhuman. They are so inhuman that "the opinions and feelings of the ruling portion of the community" have been one unending proclamation of their inhumanity. One has but to enter a fashionable church, where "the opinions and feelings of the ruling portion of the community" are set forth with weekly tact and precision, to learn that the great inequality in the distribution of wealth ranks either among the profound mysteries or the palpable iniquities of this imperfect world. Most statesmen have assumed, as a proposition too self-evident for argument, that that condition of society is happiest where wealth is most equally distributed, and that a period of the rapid differentiation of society into various grades of wealth is greatly to be regretted. The pet phrase in which the politician describes this progress, so as to adapt his thought to the sentiment of the very great mass who feel that they do not lead in the race so nearly as they ought to, is to say that "the rich are growing richer and the poor poorer." A free repetition of this shibboleth impresses the average crowd of the unrich with the notion that the speaker is a man whose sympathies are universal, and whose political economy makes him the friend of the poor man.

Test this proposition, first, hypothetically. Suppose the whole wealth of the people of the United States to be divided among the whole people equally. \$54,000,000,000 divided among fifty-four million persons gives to each person \$1,000. No one has more, no one less. The division takes no note of capacity, but only of personality. Nearly two-thirds of this value consists in each one's share of the land, which, if made equal in area, would be forty-three acres; if made equal in value, would be about \$600 worth. The personal wealth coming to each over his land would be \$400. No person who has no more than \$400 of wealth can devote it, as society is now organized, to any other purpose than that of a saved-up fund to guard against a "rainy day" of illness or loss of work. Hence, an equal division of the capital of the country, much of which is now in the form of reproductive or unconsumable wealth, would convert it all into non-productive, but consumable wealth. No person having a fund of only \$400 could safely or skilfully invest any portion of it in railways; and no railway owned by a vast army of stockholders, not one of whom held more than \$400 of stock, could be successfully run. A New York Central would require at least two hundred thousand stockholders. Not only would all railways, but all banks, manufactories, shipping lines, mining enterprises, in short everything requiring capital as its basis, would be not merely impaired, it would be instantly wholly destroyed. All commercial interchange and association among men would be not impeded, but paralyzed. Universal equality would precipitate general but instant annihilation. A prosperous country would be wrenched with the pangs of instant famine. The radically equalized mob would be surrendering themselves to military organization, in order that, through that complete surrender of its liberties which marks the subordination of the soldier, society might again emerge from social slavery into its present condition of mutual helpfulness, and therefore of freedom.

Tested hypothetically, therefore, the equal distribution of wealth would destroy wealth itself,

and with it society, civilization, and that very human freedom in whose interest equality in the distribution of wealth is asked for.

All wealth, when analyzed with reference to the reason of its distribution, resolves itself into two forms; namely, consumable wealth, most of which would be useless for any purpose of reproducing wealth, and reproductive wealth, most of which is utterly incapable of being consumed except as it wears out in the process of producing consumable wealth. The former might be called enjoyable wealth, the latter instrumental or capitalistic wealth. Food, raiment, shelter, social power, works of art, entertainment and of instruction, music, books, pictures, etc., are enjoyable wealth. Farms, factories, mines, roads and their means of carriage, ships, shops, stores, banks, machinery, money, are all reproductive wealth. Mankind are interested, both from the economic and the humane point of view, in a distribution of these two kinds of wealth in exactly opposite ways. Consumable wealth needs to be so distributed that the capacity of each individual to consume shall be satisfied. Reproductive wealth needs to be so allotted that mankind shall get its free use on the most economic terms and at the lowest cost. Are both these results obtained either absolutely or proximately? and, if the achievement be proximate, how near is the proximate work to that perfection which should mark the operation of natural law?

But anterior to these questions lies the question, What law of economics is it that causes men to distribute consumable wealth with any regard at all to society's aggregate wants? Why should Chinamen interest themselves in carrying bales of tea or raw silk on their backs over the mountains, so that we may enjoy them? Why should this process of mutual obsequious service to almost antipodal strangers go on all over the world? Mr. Jevons* has happily illustrated this law, which, simply stated, is that, owing to the limits on the consuming capacity of each individual, a decline in the value of all that he produces over his own need can only be prevented by his forwarding the surplus to the person who needs it most, such last-named need being expressed economically by the return service such person is willing to render. Every commodity declines in value in the degree that it exists in surplus, and advances in value in the degree that it is brought nearer, or made more accessible, to the persons by whom it is most needed. This law of declining and advancing values is the steam which propels the social mechanism. It is the involuntary philanthropic force which feeds, shelters, clothes, employs, nerves, stimulates, educates, and governs the world, not only in all its industries, but in all its charities. The farmer's wheat is invaluable to him for his own use to the extent of six bushels per head per year for the members of his family, and his seed for the next year. After the quantity which is consumable by him, the rest has no value whatever except as it is marketable,—i.e., as he forwards it to the man who needs it most; such need being indicated economically by the price,—i.e., the value of the return service he can get for it. The value of anything, then, is the quantity of return service it will buy; and this is not at all measured, or at least not measured with any economic accuracy by the labor, capital, skill, or time required to produce it. Rather, value regulates the quantity of labor, capital, skill, and time which will be devoted to produce the thing to which we attach value. Value, therefore, is the cause and creator of labor. It is the point toward which industry tacks and enterprise steers. It is

* *Theory of Political Economy*, p. 26, et seq.

not to be found in the wake of labor, but ahead in its path. What, then, is the cause of value? It is want combined with the power to relieve want; it is hunger backed by muscle, taste backed by capacity, desire to take combined with willingness to give; it is the working and striving being shaping out the becoming; it is the present standing ever at the portals of the future. The greater desirability of that which can be over that which is, is gain or value, and to so live and steer as to obtain it is profit. Hence, all profit is found in relieving want, and all wealth is such only as it abolishes distress. This want must not come empty-handed: it must offer the results of its own effort in exchange for that which it wants. All that a man hath he will give for his life. All that he is able to produce will he give, if need be, for that which he needs to consume. The value of a product in exchange, therefore, is measured, not by the cost of its production, but by the consumer's need and by the consumer's power to produce. Double the facility with which clothing can be made relatively to wheat, and, other things being equal, twice as much clothing will be exchanged for a given quantity of wheat. The measure of the value of the bushel of wheat, therefore, is the quantity of clothing it will buy, not the labor which produced the wheat.

The law governing values involves endless and hourly fluctuations, most of which are too infinitesimal to be noticed. When one is hungry, a meal has great value. Esau proved this, when he sold his birthright for it. When one has eaten, a second meal has no value for him; but its value is as great as ever to the next famished man, and it will again have value for him in four hours. Value rises with desire, and declines with satiety. It is never quite the same as to two persons, nor the same as to one person for two successive moments of time, nor the same at the same moment in two distant places. The winds and clouds are not so variable as values. The bloom on the flower is more permanent. Value is life expending itself to live. It is heart, blood, muscle, bone, and nerve exacting counter service from the heart, blood, muscle, bone, and nerve of others, in the universal effort to send that of which we have a surplus to answer another's need.

Out of this variableness of values springs the fact of profit. Profit is the ever-fluctuating margin between two factors, one of which can never be exactly known, *i.e.*, cost of production, and the other of which will not remain for two moments or in two places or as to two persons exactly the same, *namely*, price. Loss is the same margin, on the wrong side, when cost of production exceeds price. Working for profit, therefore, is playing at a game which is governed by law; but the factors are hidden from sight for the winnings. Capital, life, honor, and toil, all have to be staked. The reward is that the profit-maker shall become owner of the implements of industry, the lands, mines, railways, ships, banks, factories, stores, merchandise. The profit-maker will be the employer-general of labor, the Pharaoh of the wages-workers, the raker-in of the sunken capitals of those who have played for the same great stake, but have lost. The profit-maker has three graces: *First*, before he yet has capital and while he must work for others at wages, he saves. Subduing appetite, passion, and generosity, and thwarting the cunning of every class that would impose upon him, whether in the name of enjoyment, philanthropy, profit, or religion, he insists on conquering the first step toward fortune, *a working capital*. *Secondly*, this capital he invests not blindly, but shrewdly; *i.e.*, with a true sense of where values will come to be, so as to achieve every

time the margin of profit between the two variable and unknown factors, *cost of production and selling price*. *Thirdly*, the steady persistence in this career, withdrawing the smallest possible ratio of his capital to purposes of consumption and devoting the largest possible ratio off it to production, with a sure capacity to avoid losses, makes him a captain of industry, *a Girard, Astor, Stewart, Vanderbilt, Roache; a Rothschild, Baring, Peabody*. All have trodden the same course. Some who exercise this "value sense" passably well for a time have not held out, and are wrecked. The salvage of the wrecks of these insolvents goes to swell the winnings of those who were not mistaken. The law of the profit-maker is that to him that can rightly foresee profit, *i.e.*, can so invest and combine capital with labor that cost of production of that which he produces will be less than the esteem of the consuming world will induce them to pay for his product, whether it be railroads or their shares, raw cotton or cotton goods, the songs of a prima donna or the sermons of a preacher, the books of a philosopher or the oysters of a fisherman, and whether his product be acquired by him honestly or crookedly, piously or shamefully, *to such a one profit shall be given; and from one that cannot so foresee, his capital shall be taken away, until he ceases to have aught to venture or work with, but is degraded to the ranks, reduced to a private in the great army of wage-workers*. Briefly, to him that hath (the sense of value) values shall be given; and, from him that hath it not, they will be taken away, even that which he seemeth to have.

Is this economic law whereby capital tends to accumulate in the hands of the most shrewd profit-makers humane? That is, is it a law whose practical operation tends to secure the most equal and universal diffusion of consumable or enjoyable wealth among all mankind? If so, then inequality in the control of reproductive wealth tends to produce equality in the enjoyment of consumable wealth. If so, then the fewer the men who own and control our railways, and the larger the capitals massed in them, the cheaper will crops and goods be carried. We do not say this good will not be offset by evils, but only that this good will exist. The larger the capitals massed in our factories and the smaller the number of their owners, the cheaper will they manufacture. The greater the massing, or "monopoly," as some will call it, of money in our banks, the cheaper will they lend, and so on through the whole gamut.

Waive for the present the question whether *all* interests of society are furthered by massing the control of reproductive capital into the hands of a few persons. First ascertain whether *any* interests of society, and especially of consumers, are so furthered, and in what degree. We may, then, compare the degree in which the true interests of society are furthered at some points by this cause with the possible degree in which they may be retarded at others.

The function of all reproductive wealth *i.e.*, wealth that earns or makes wealth *must be to forward all consumable wealth to its consumers as equally as possible as between consumers, since only by that means can the owner of reproductive wealth get a profit out of it*. If Astor owns a thousand houses, one of these only is, as to him, consumable wealth; *i.e.*, one only can he occupy, and only one or two rooms of that. The other rooms will be occupied by his family, servants, and guests. The larger he makes his residence, the more nearly he becomes economically the proprietor of a servants' boarding-house. But his nine hundred and ninety-nine houses are abso-

lutely non-consumable wealth, so far as his own capacity of use goes. They are therefore available only as reproductive capital; *i.e.*, so to rent to others as to leave a margin of difference between their cost of production and their rental. If this margin is on the wrong side, the investment is a loss relatively to the other uses that could have been made of their cost. If the rental is in excess of expenditure, there is a profit. Obviously, however, the owner of a thousand houses will keep them in better repair at a lower rent than the owner of one. The latter can seek his tenant. The former must make his houses so desirable that tenants will seek him. Hirers of houses in large cities usually hire them from five to ten per cent. cheaper of the very large landlords than of the class who own few houses. The greater the concentration into few hands of the capital invested in shelter and dwellings, the cheaper society gets its shelter furnished it. In manufacturing, the superseding of the home system by the large factory system, and the attending concentration of capital incident to such a change, have reduced the cost of most kinds of goods to a fifth their former cost. The concentration of the kerosene oil manufacture in America into the hands of one monster company, the Standard, has been fiercely denounced by a community which purchased its oil at a third of previous prices, and at a considerably lower rate of cost for the manufacture. The concentration of the railways in America has been attended by a similar decline in the cost of transportation. A. T. Stewart effected a vast concentration of capital in merchandising, but he reduced greatly the profits and losses of merchandising and the cost of goods. The greater the concentration of reproductive capital, the lower will be the rate of compensation it will be able to exact from society for its use. Thus, the newsboy having but fifty cents of capital fares poorly, if he does not earn a hundred per cent. per day for its use; but, to do this, he runs ten miles to every fifty cents of capital he turns over. When he gets ten dollars of capital, he would think ten per cent. a day a large profit. As his capital rises to \$100, he would be content with thirty per cent. a month. A thousand dollars in trade ought to yield him fifty per cent. per annum, expanding his occupation into that of a retailer of books and magazines. With a hundred thousand dollars, he becomes a great publisher, but is content with twenty-five per cent. per annum. As a retired capitalist and millionaire, six per cent. satisfies him. With fifty millions, he gladly takes three per cent. on government bonds.

It being a law of capital that the larger its aggregations, the lower the rate at which society will enjoy its use; and it being the fact concerning all reproductive capital that it cannot itself be consumed or enjoyed by its possessor, but can only be worn out in the process of diffusing consumable wealth to others, *it follows that society has a very great economic interest in the concentration of reproductive wealth into few hands*. Again, we remark, this gain may have its set-offs; but we are now searching for the gain only. That the greatest concentration in the ownership of the means is essential to the most economic and equal enjoyment of the results is shown in all that class of enterprises in which the State attempts to render a small but equal service to a great number of persons, *say to furnish a city with water in every house or with gas, or to carry letters to all parts of the world*. Here it either creates a monopoly and vests it in private hands, or it becomes itself the monopolist and forbids others to compete with it in its work. It does so, too, in the interests of cheapness, because it knows that one postal service for a

country is cheaper than twenty, and that one water supply or gas supply for a city is cheaper than ten. When the State supplies education, money, and currency, the administration of justice, roads, the support of the poor, etc., it, as a rule, bars out competition more or less completely, and enforces monopoly in the interest of cheapness. But, what the State does thus by its conscious will, economic law—i.e., the workings of ordinary interest and what we opprobriously term greed—does with an unconscious will, which is stronger and more efficacious than the State, and binds together by the ties of commerce those distant peoples between whom there is no State connection.

Mr. Mill, in his *Chapters on Socialism*, calls the attention of workmen to the fact that all reproductive capital is in use by the workers themselves, and is not, as is usually assumed, in the possession of the capitalist. He has a claim on it for profits or dividends, but labor is using it daily in its work of production. Mr. Mill says:—

Another point, on which there is much misapprehension on the part of socialists as well as of trades-unionists and other partisans of labor against capital, relates to the proportion in which the produce of the country is really shared, and the amount of what is actually diverted from those who produce it to enrich other persons. When, for instance, a capitalist invests £20,000 in his business, and draws from it an income of suppose £2,000 a year, the common impression is as if he were the beneficial owner both of the £20,000 and of the £2,000, while the laborers own nothing but their wages. The truth, however, is that he only obtains the £2,000 on condition of applying no part of the £20,000 to his own use. He has the legal control over it, and might squander it, if he chose; but, if he did, he would not have the £2,000 a year also. For all personal purposes, they have the capital, and he has the profits, which it only yields to him on condition that the capital itself is employed in satisfying, not his own wants, but those of laborers.

A truer statement would be that the capitalist has the control and the profits and losses incident to the employment of reproductive capital; operative workers have its loan and use while in operation; and the customers or purchasers of its product, who are nearly equivalent to society at large, have its services.

"But," says the socialist, "as you cannot prove that negro slavery was just by showing that it was economical, that it made cotton, sugar, and rice cheap, or transformed the imported African into a civilized American in the course of years or centuries of plantation tutelage, so you cannot prove that the dominion of the profit-maker over the wages-worker is just by proving that it promotes production, increases abundance, or cheapens goods, nor even by establishing that the capitalist cannot at the same time have the profits, the use, and the enjoyment of his capital. What we demand is to get down to the bed-rock of justice, on which rests the right of the profit-maker to rule over the laborer, or wages-worker."

To this the economist replies that the injustice of slavery itself is subject to modification and deduction in just the degree that it can be shown to have occasioned a production of wealth, civilization, and progress in refinement and happiness which could not have occurred without its aid. Indeed, such alleged injustice would wholly disappear as a quality of slavery *per se*, if it be demonstrable that anterior to the existence of money with which to pay wages, and of commercial honor with which to maintain co-operation, slavery is the sole form in which society can be organized for effective and progressive work. On this being established, as will probably yet be done, the wrong of slavery will attach to its later periods only; and slavery as a primitive type of organization of labor will be seen to be the outworking of an unconscious will or involuntary instinct in man, which is as irresistible and therefore as free from moral quality of any kind as

is the killing of the drones among bees or slavery itself among the ants.

(Conclusion next week.)

For *The Index*.

VERNAL HYMN TO APOLLO.

(A Glimpse of Old Greek Paganism.)

Followers of the Sage of Samos,*
In the foreworld's purple spring,
To the god of song and gladness
Pæans loud were wont to sing.
Seven-chorded lyre their master
Fashioned deftly vibrant rung,
And, as glowed their bright libations,
This perchance the strain they sung:

'Tis the season, O Apollo,
When from mystic sojourn far
Com'st thou, Delphi's steep regaining
In thy swan-drawn, radiant car.
Earth in blossoms breaks to greet thee,
Soars o'erhead the cloudless blue,
Carol birds in every thicket:
We, thy votaries, carol too.

Myrrhine odors from thy temple
Curl aloft in fragrant mist;
Flash the peaks of high Parnassus,
By the rays of morning kissed;
Light of prophecy still streameth
From thy holy mountain shrine;
Gifts of many-languaged suppliants
There in votive splendor shine.

Priceless, glorious mementoes
Of the past are gleaming there,
While o'erhead the crag-born eagles
Poise themselves in azure air.
Sculptured beauty, that decays not,
Deathless haunts thy templed glen;
Charms, that once could fire the nations,
Still witch there the eyes of men.†
Round thy Sibyl, as her accents
Fate's enigmas dark unfold,
Tributes hoarded through the ages,
Kings' ex-votos blaze in gold.
To thy lofty threshold wafted
Come perfumes from sea and vale.
Through its flowery gorge, thy river
Shaded runs by olives pale.

On thy sacred steep thou sittest,
God of justice and of light:
Thither countless votaries climbing
Bow in homage to thy might.
Welcome was thy glad arrival,
Sound of song and lyre was heard,
Dark and bloody rites were banished,
Souls to harmony were stirred.

Pillared fanes and cities rising
Made the earth more lovely seem,
Poet, sculptor, words and marble
Wrought to likeness of his dream.
Genius by thine impulse quickened
Poured itself in Pythian lay;
At thy bidding, truce and quiet
Reigned along each travelled way.

God of shepherds, once you tended
Mortal's flock on pastoral lea,
At your humble service listening
Low of kine and hum of bee.
Garland of the sacred laurel

* Pythagoras.

† There were several votive golden statues at Delphi of women famed for their loveliness, among others one of the fair but frail Phryne, the most famous beauty of ancient Hellas. It was the work of Praxiteles, of solid gold, and stood on a pillar of Pentelican marble. The cynic philosopher, Crates, called it a votive offering of the profligacy of Greece. Beauty was a sacred attribute in the estimation of the Greeks, even the beauty of a courtesan.

‡ The river Fleistus, which flowed from the steep of Delphi through the lovely plain of Cirrha into the sea. Up the gorge of this river swarmed pilgrims to the shrine of Apollo.

Thou round victor's brow dost twine.
Healer, lyrist, and soothsayer,
All thy functions are benign.

Quelled by magic of thy harping,
Darkest passions sink to rest;
Fangs of wild remorse assuaging,
Cleansest thou the guilty breast.
All the festal, glad emotions
At thy bidding wake and glow;
Thus thou giv'st to man, ill-fated,
Respite sweet from care and woe.

Archer art thou; and thine arrows,
Raining plagues and vengeance, fly
When injustice crowned and haughty
Dares affront thy deity.
But thy gentle shafts thou keepest
For thy favorites' release:
Noiseless from thy bowstring speed they,
Dipped in dews of sleep and peace.*

Thus thy votaries might have hymned thee,
Phoebos, in the long-ago,
When the rays of morning deemed were
Arrows from thy golden bow.
Caves and fountains, which you haunted,
Pensive pilgrims, musing, scan:
Now but souvenirs in them find they
Of the fancies strange of man,—

Gorgeous dreams and beauteous shadows,
Which to form and feature grew,
And were shrined as gods in temples,
Ere man his own nature knew.
There a deep hallucination
Real made through centuries long,—
Personal forces, which the reason
Banished has to realm of song.

Of that airy brood, Apollo
Brightest was that fancy feigned.
Lord of light and song and music,
Over Hellas long he reigned.
Like Jehovah on Mount Zion,
He was throned on Phocian Hill.
Shrunk he long since to a shadow,
But Jehovah reigneth still.

B. W. BALL.

CORRESPONDENCE.

CARLYLE THE PEASANT.

Editors of *The Index*:—

The author of the criticism entitled "Carlyle the Peasant," in one of the January numbers of *The Index*, which has just reached us in London, evidently has neglected the study of Hume and Hume's aphorism upon criticism, "No criticism can be instructive which descends not to particulars, and is not full of examples and illustrations." Had the writer adhered to Hume's canon, her comments upon peasant life in Great Britain would have been corroborated by illustrations taken from eminent and reliable authorities or would have been embellished by observation founded upon experience. As illustrations in her criticism are conspicuous by their absence, an Englishman can only infer her statements are chiefly derived from pedagogues whose coloring in writing of peasant life is as illusory as an highly colored oleograph of the beauteous figures and harmonious tones of a Raphael from whence it is taken. No statement can be more erroneous than that where the writer affirms peasant life, especially that species of it which affords her the subject of her criticism, is alienated from the higher and more civilized sections of society. Firstly, history refutes that the peasantry were wronged and down-trodden in the past; secondly, history affirms for the past and living men for the present that the men who have enlarged man's intellectual horizon and taught the passions to move at the command of virtue have been born in a more humble state than Carlyle,—*videlicet*, Richardson, Burns, Faraday, Dickens.

English city life is being constantly increased and

* An euthanasia, or sudden, painless death, was attributed by the ancient Greeks to the gentle arrows (*agana belea*) of Apollo and Dian.

invigorated by the manly, virtuous peasant's son. Through such an influx, our social life is rendered more wholesome, also our intellectual. It is from the peasantry and the descendants of the class from whom Carlyle was descended have emanated most of our illustrious men, notably Shakspeare, the supreme poet, philosopher, statesman, and delineator of morals and manners. With such an example, it were an obvious lack of knowledge to announce the peasant is debarred by caste from comparing himself with many people. Were England Russia, such an observation might pass unchallenged. Besides having the village swain for an associate, Robert Burns found time to become acquainted with Shakspeare and Addison's *Spectators*. Since Burns, the facility for widening as well as increasing similar tastes has been vastly augmented. Be that as it may, peasant life, from Robin Hood to our own age, has been an envious one. To-day, it bears no comparison with the life of the self-sacrificed slaves who are the bondmen to Watt and Stephenson's inventions, and who crowd and demoralize our cities. The peasant's life is simple and pure. Being so, we owe to the peasant the preservation of the *Pilgrim's Progress*, and not to the *savant*, high-born dame or cavalier. Macaulay, the imperious, arbitrary chief of savantship and smooth-faced, external respectability, verifies my assertion. Shakspeare's eagle eye and potent hand record, in an age anterior to Bunyan's, that the age is grown so refined that the toe of the peasant comes near the heel of the courtier. Also another authority, Cromwell, demands no more city tipsters be sent him, being neither good soldiers nor fit companions for his peasant Ironsides. Were the writer or the reader to peruse English ballads, the nerve as well as the mirror of a nation's life, the peasant would be found to have an inherited instinct to praise his wife. The systematic kindness of a peasant to his wife is proverbial. It is to be seen upon her smooth brow, neat dress, scrupulously clean cottage, and the beautifully trained hedge and floral culture which surround it. To be cruel to a wife, to beat her or to be faithless to her, arouses the peasantry for miles around. The offender's effigy is burned, and the hamlet is paraded for three successive nights by men beating old pots and kettles. So odious is the offence and so implacable is the peasant's hatred of cruelty and vice that the offender has to remove into a distant district.

Peasant life being as I have enumerated it, it is not at all perplexing to an Englishman, howsoever it may be to an American, why Carlyle's antecedents have not been accounted the primal cause of what is termed his inconsistencies. Beyond having an inherited instinct to praise his wife, it is to Carlyle's immortal credit that he honored his father and mother, who, if he speaks of in an infinitude of praise, only confirm the scholar's eulogy:—

"Far from the madding crowd's ignoble strife,
Their sober wishes never learned to stray."

Instead of his early environment acting as an incubus upon his career, it preserved him and his energies from the enervating influence of society which to-day visits a great man and to-morrow Jumbo, and both in the same spirit,—curiosity. To Carlyle, the age was out of joint,—not because he viewed it through his ancestors, but because he saw, underlying etiquette of the fashionable sort and the much belauded culture and development, there lurked, actually existed, envy, malice, and avarice. In such a humor and with such a belief, Carlyle's conduct is perfectly consistent both toward the world and his wife, who having married him, her duty was apparent. In marrying Carlyle, her calling and election was settled. Being so, her best possible method was to have endured her lot with a conscious, clear-eyed endurance. But she was differently constituted, being volatile and emotional, parent qualities of the greatest of human vagaries. She designates herself a crotchety creature. Numbers of people love her after their fashion; but his (Carlyle's) fashion is so different from all, and seems alone to suit the crotchety creature she was. She in no way resembles Cato's daughter. Cleaning a room or making bread were quite a minor, insignificant affair to Portia's self-inflicted wound. Mrs. Carlyle was not a heroine, and it is useless trying to make her one. She had the desire of a Boswell; but she had not Boswell's will patiently to endure her husband's moods and superior nature, which was not insensible to her subtlety of language and evenness of manner. His sensibility

and knowledge of the highest feminine characteristics are demonstrated in his portraits of Diderot's wife, Marie Antoinette, and Madame Roland.

Ultimately, Carlyle, like all great men, will be enshrined in fame's palace and in men's hearts for what he has done and for what he can do for them. What boy who reads and revels in *Gulliver's Travels* takes the trouble or cares about knowing of Swift's slow but sure murder of Vanessa or Stella? Or does the gazer upon the "Transfiguration" ignore it because Raphael was connected with La Fornarina? Because Wren or Angelo had some common failing, St. Paul's or St. Peter's is not to be shelved out of existence. Neither are Carlyle's works, which to the world are only of interest to it, excepting Lady Sneerwell's world. Were all great men by all men to pass under the same crucial analysis as Carlyle, human worth and heroism would fade into a *caput mortuum*. The Rousseaus, the Burnses, the Goethes would entirely be *hors de combat*. But let us hope criticism will ere long follow the bee's example, which goes to the thistle's flower, extracts its honey, and heeds not the thistle's prickly nature. One thing is quite evident: Carlyle's prose poems, no more than David's sublime melodies and Solomon's proverbs, can be impugned; but what pale figures mortally these immortal and loved ones look beside the moral, self-denying grandeur of the Sage of Chelsea!

WILLIAM LAW.

9 WOBURN PLACE, RUSSELL SQUARE,
LONDON, W.C.

THE SHUT IN SOCIETY.

A Club Membership of Invalids.

Editors of *The Index*:—

A unique and surprising association called the "Shut In Society" has been in existence since January, 1877. Its object is to broaden the life of the invalid. To Mrs. Jennie M. D. Conklin, then Miss Jennie M. Drinkwater, of New Vernon, New Jersey, belongs the distinction of originating the society, and giving it its name. She was an invalid for three years, shut in the seclusion of her room, and longing for sympathy and companionship of a kind that her condition seemed to make impossible. She wanted some one "to write to, to do good to, and receive good from," to use her own expression. Already, she had one such correspondent,—a sweet little maiden, who was a constant sufferer, rarely taken into the sunshine, and who never walked,—Miss Sadie S. H. Hewett, of Belleville, New Jersey. But the pleasure derived from this acquaintance on paper only made her desire to widen the sphere of her influence. Through chance, her attention at this time was attracted by an article in the *New York Advocate and Guardian*, entitled "My Invalid Friends," and signed "Cousin Alice." She at once wrote to the editor of the *Advocate*, and obtained the full name and address of Cousin Alice. A correspondence ensued between them that was at once delightful and mutually profitable. This second invalid friend of Miss Drinkwater was Miss Alice M. Ball, of Pittsfield, Mass. Miss L. J. Greer soon after joined the little circle of invalid friends, which gradually gathered numbers and began to attract public attention in certain directions. Two years after Miss Drinkwater's first attempt to communicate with invalids shut in like herself, so many sufferers had joined the band that in the autumn of 1879 it was deemed advisable to issue a manual containing all the names and addresses of those connected with the movement. The objects of the association were stated in this printed manual to be as follows:—

- 1st. To relieve the weariness of the sick-room by sending and receiving letters and other tokens of remembrance.
 - 2d. To testify to the love and presence of Christ in the homes of suffering and privation.
 - 3d. To pray for one another at stated times daily, at the twilight hour, and weekly, at ten o'clock on Tuesday mornings.
 - 4th. To stimulate faith, hope, patience, and courage in fellow-sufferers by the study and presentation of the Bible promises.
- It was further agreed, the more surely to reach all the members of the society, scattered as they were over our country, to publish a circular letter every three months, which should be the medium of messages from one to another and addresses of those seeking admission.

Unlike other associations, the "Shut In Society" has no constitution, no by-laws, or initiation fees. To be a sufferer is all that is required to entitle one to its membership and privileges. Shut in from the outside world, perhaps forgotten by it, it is a simple agency to cheer those who are sitting with folded hands or lying on beds of racking pain, deprived of the methods and activities of their fellow-beings that are blessed with health, and too frequently, alas! of their sympathy. There are many members of this society who are not invalids, but have associated themselves with it, who have volunteered their services through their pity toward suffering ones. Through these associate members, a monthly magazine called the *Shut In Visitor* has taken the place of the circular letter, and answers the larger demands of the society, as a frequent method of communication.

Several literary people, who have the ability and time, contribute articles for the embellishment of the *Visitor*, as a gift to their less fortunate fellow-beings. "All invalids are not unhappy," it has been said very truthfully. We know that there are sick-chambers where the sun seems always to shine brighter than anywhere else,—where there is love and harmony and perfect peace. From such rooms, the cheeriest messages go forth sometimes to brighten and give patience to those drooping and languishing in some narrower place. The letters in the *Visitor* are frequently marvels of this kind, and exceedingly pathetic from the very circumstances which surround the senders and the receivers.

At the present writing there are two thousand members (associates and all) of the society.

ELLEN E. DICKINSON.

[So far as the "Shut In Society" contributes to cheer and comfort the sick, its object is of course most commendable; but is it not by its sectarianism practically a *shut out* society for all invalids who are not believers in Christianity?—B. F. U.]

SPIRITUALISM A PROOF OF IMMORTALITY.

Editors of *The Index*:—

In your paper of September 25 is quoted, in regard to the doctrine of immortality, from Mr. John Fiske the following: "Scientifically speaking, there is no presumption either way, and there is no burden of proof on either side: the question is one which science cannot touch. In the future as in the past, I have no doubt it will be provisionally answered in different ways by different minds, in an estimate of what is called moral probability." Again, "There is something overwhelming in the thought that all our rich stores of spiritual acquisitions may perish with us."

It is to find an answer to this question of immortality—a question ever welling up in man's heart, "If a man die, shall he live again?"—that thinking men and women of to-day are turning their attention to the investigation of Spiritualism, feeling and knowing that in Spiritualism, if it be found true, they have an answer that shall forever put the question beyond dispute.

In investigating Spiritualism, a medium must be sought whose faithfulness, truthfulness, and elevation of sentiment shall give you only the best and most truthful results. Such a medium you will find Mrs. Maud E. Lord to be, of whom Mrs. Beecher Hooker, in one of her delightful and instructive Monday evening talks on Spiritualism, Theosophy, Occultism, etc., says: "Mrs. Lord is a dear friend of mine, a lady I dearly love, one who has been of great help to me. She seems to bridge over the chasm between this world and the world of spirits." She could recommend Mrs. Lord as one of the best, if not the best, medium in this country, if not in the world,—a lady in whom she could put the most perfect confidence. Upon this recommendation, I have attended all the sances of Mrs. Lord that it was possible for me to attend; and I have always found that those who attended her sances have, nearly all, gone away delighted with the manifestations of spirit presence.

Some have said, why "are her sances in the dark"? To me, this is no objection; for, as has been aptly said, "half the universe would be to us unknown but for the darkness of night." And we know that, when God would reveal himself to his servant, he took him into the mountains, and, when he had "hid him in the cleft of a rock, caused his glory to pass before him": this is God's way of revealing his wonders, and God is spirit. In the dark-

ness, our minds are better prepared to receive the whisperings from that spirit world than in the glare of day, when our minds are drawn away by our surroundings, and that quiet peace which a spirit's presence should give cannot settle on our hearts.

At Mrs. Lord's séances, I have seen spirit faces and touched spirit hands, and have known the messages to come so fast from the spirit world that the medium could scarce deliver them to the waiting friends; and the evidence has been overwhelming that immortality is true, that man's spirit never dies, but lives, knows, and loves.

F. H. C.

A SUBSCRIBER writes: "I have been reading Joseph Cook's last lectures. I wish you'd review them. If the authors of the Testament were inspired, why does Cook insist that they wrote the record within so short a time after Christ's death? Inspiration could record the facts in the second or third or eighteenth century as well as within twenty-five years. The later the authorship, the more miraculous the inspiration. If not inspired, then the writer's memories were wonderful. How many Boston reporters have such memories? What court would believe witnesses who pretend to remember even ten years one quarter of a prayer or a speech word for word as long as the Sermon on the Mount? Christ told many to 'preach.' If his record was to be the light of the world down all the centuries, why didn't he tell somebody to write? An eternity in hell or heaven depended on a knowledge of the gospel and of Christ. Yet his only commands were to 'search the Scriptures' then written, not what Paul would write in twenty-five years. In view of the myth about Lee's surrender under an apple-tree,—the greatest event of our generation, and only twenty years old,—is it not possible that there is much more myth about the resurrection? An apple-tree is as big as a man just from a grave!"

THE following paragraph is from the *Nation's* review of the new Memorial History of the American Episcopal Church, an exhaustive work in two great volumes of seven hundred pages each. It is interesting for the facts: "The Attitude of the Church during the Civil War" is disposed of in seven pages. Of its attitude on the questions leading up to it there is not a word. The hardest things that have been said against the Episcopal Church for its complaisance in the matter of slavery are less damaging than this dreadful silence. The word 'slavery' does not occur. That there was such a thing in existence; that the country was distracted by it for thirty years,—of this no sign. Words having come to blows, Bishop Perry is happy to record the general refusal of the Church to take any part in the great struggle. The only exceptions were a day of fasting with a collection for the Sanitary Commission, and 'the pastoral of 1862,' which 'stands alone among our Church "state papers" in respect to its declaration of opinion on matters of a civil nature.' What the opinion was, we are not told. In the special prayers ordained for the day of 'fasting and humiliation,' it is noticeable that there is no reference to the matter of slavery, though Lincoln's first Emancipation Proclamation had been published only two weeks before. The chapter on 'The Reunion of the North and South' is equally discreet in its avoidance of all expressions that might give offence to those whose sympathies were with slavery and secession. But, in these respects, Bishop Perry's chapters are in perfect keeping with the general attitude of his Church throughout the anti-slavery contest and the war. Like the spirits whom Dante encountered in the outer court of hell, it was 'neither for God nor for his enemies.'"

HERBERT SPENCER.—The following is from an editorial on "The Test of Philosophy" in the May number of the *Popular Science Monthly*: "There is now a pretty decided agreement among the intelligent and unprejudiced that Herbert Spencer takes rank as the first philosopher of England; and G. H. Lewes, many years ago, declared him to be the only English thinker who has originated a philosophy. How much this may mean is well intimated by the remark of Mr. Lester F. Ward that, when we have reached England's greatest in any achievement of mind, we have usually also reached the world's greatest. . . . Philosophy, to achieve its highest objects, must now begin with the patient study of long-contemned realities; must discipline the imagination; must work in subordination

to established knowledge, and aim to bring out profounder truth for the practical guidance of man in ordering the course of his life. To be the first philosopher of the foremost nation of the world, from this point of view, is exalted praise; and this is the position that Mr. Spencer has undoubtedly won. . . . Mr. Spencer has applied his philosophical views to the subject of education, and his little treatise upon the subject has been rendered into all the languages of the civilized world. And now, by an appeal made to the judgment of English teachers, the verdict has been rendered that the first of English philosophers is also the first of English educators. We see by the *London Journal of Education* that an extra prize was offered for the best list of the seven greatest living educationists, classed in the order of importance. A great number of lists were sent in, and the prize was awarded to 'X Y Z' for the following list: 1, Spencer; 2, Huxley; 3, Wilson; 4, Thring; 5, Miss Buss; 6, Laurie; 7, Quick. Besides this premium list, in which the name of Spencer was first in importance, his name also appeared in seventy-two other lists; while Bain appeared in fifty, Huxley thirty-eight, Thring thirty-six, Miss Beale thirty-four, Miss Buss thirty-three, R. H. Quick thirty-two, E. A. Abbott thirty-one, A. J. Mundella and J. G. Fitch twenty-nine, J. Ruskin and M. Arnold twenty-eight. It has been said, in depreciation of Spencer, that 'only the seven sages can understand him'; but it seems that practical teachers can sufficiently understand him to be able to form a very appreciative estimate of his position in the field where they are the most competent judges."

DEAN STANLEY'S HERESY.—The following is an extract from a letter to Keshub Chunder Sen, by Prof. Max Müller, written in 1881, and just published in the appendix of Müller's *Biographical Essays*: "A dear friend of Stanley's, a high dignitary in the Church, asked me soon after his death, 'Tell me, did Stanley believe in miracles?' I said, 'Certainly not'; and he seemed quite relieved, and repeated again and again, 'Certainly not, certainly not.' And yet this might give you a false idea of Stanley. He certainly did not believe in miracles as they are believed in by many as irregularities committed on purpose. He was not troubled by miracles. He knew, as every historian knows, or by this time ought to know, that there is no religion without miracles, and yet that the founders of the three highest religions have unanimously condemned miracles. Your ancient native religion is full of miracles, and it would be quite as true to call them psychologically inevitable as to call them physically impossible. But Stanley knew that certain minds cannot believe anything, unless they first believe in miracles. To these men of little faith, miracles are everything; and, if their faith in miracles were undermined, their faith in everything else would crumble to pieces. . . . But you may say that, although most miracles performed by Christ offer no difficulties to an historical mind, such as Stanley's was, there are two miracles performed, not by, but as it were for Christ, which must have been a stumbling-block to an honest mind, such as Stanley's was; namely, the miraculous birth, and what may be called the miraculous death of Christ. I cannot tell for certain what Stanley thought on these two subjects, though some of his remarks on a sermon preached in Westminster Abbey by our common friend Kingsley leave little doubt in my mind that he looked for true divinity elsewhere than in the cradle and in the grave. But, to your mind, these two miracles ought to be the least perplexing. You know that, whenever the founder of a religion has been raised to a superhuman or divine rank, the human mind rebels against an ordinary birth and an ordinary death. It is extremely curious to observe how on this point human ingenuity tries to outbid divine wisdom. The highest wisdom, whether we call it God or nature, conceived one kind of birth as the best for man. Man invented what he thought a more becoming birth for God. The intention was good, no doubt; but it was, to say the least, uncalled for. Is there anything more wonderful than the ordinary birth of a child, is there anything more holy, anything that can more truly be called a revelation? Does a miracle cease to be a miracle because it happens every day? Does the marvellous become common because it happens every minute? Depend upon it, no miraculous birth will ever outbid the miraculousness of the plain birth of a child. 'What God hath cleansed, that call not thou common.'"

BOOK NOTICES.

THE CONTINUITY OF CHRISTIAN THOUGHT: A STUDY OF MODERN THEOLOGY IN THE LIGHT OF ITS HISTORY. By Alexander V. G. Allen, Professor in the Episcopal Theological School in Cambridge. Boston: Houghton, Mifflin & Co. \$2.00.

This book of four hundred and thirty-eight pages, from the Riverside press, consists of a course of lectures delivered in Philadelphia under what is called the John Bohlen Lectureship Endowment, the object of which is similar to the "Bampton Lectures" at Oxford, England. The lecturer each year, according to the terms of the bequest establishing the lectureship, is appointed by five officials of the Episcopal Church in Philadelphia. In Prof. Allen, they selected a man who brought to his chosen subject ample learning, a liberal spirit, and, in general, the modern historical instinct. The topics of his six chapters (or lectures) are "The Greek Theology," "The Latin Theology," "Theology in the Middle Ages," "Theology in the Age of the Reformation," "Conflict of the Traditional Theology with Rationalism," "Renaissance of Theology in the Nineteenth Century." Each chapter is an elaborate essay with notes and references. The treatment is always broad, scholarly, thorough, and the point of view that of the most advanced Orthodoxy.

The work, indeed, is an excellent representative of what is coming to be recognized in the orthodox Protestant denominations as the New Theology. So far as we have been able to examine, the consideration of historical facts is fair, and without undue bias. Yet the author's own view and purpose are apparent from the start. He believes that the interpretation of Christianity by the Greek Fathers was not only much more rational and spiritual, but much nearer the truth than the interpretation made by the Latin Fathers; and his contention is that the Christian Church, only by reverting to the Greek interpretation of its theology, can escape that conflict with modern thought which the Latin theology has made inevitable. He says that "the formal theology, the ecclesiastical institutions, which Augustine sanctioned for the ages that followed him, which Calvin renewed for the Protestant Churches, are built upon the ruling principle that God is outside the world, and not within"; and that "what is sometimes called 'modern infidelity' is mainly, I had almost said exclusively, a protest against the theology based upon such a conception of God." He admits that the Augustinian theology had its place, and did a needful work; but he thinks that it now seriously cumber the ground, and he opposes, with no little boldness, the idea of Deity as a colossal man in the heavens, and pleads for the older Greek idea that God is manifest, not only in Christ, but in nature and in humanity. One of the first principles of Greek Christianity was, he says, "that the divine and the human are not foreign or alien to each other; that, if God speaks to man, it must be through the reason or consciousness which is in man; that human reason is the reflection of a divine reason; that humanity, by its constitution, participates in the eternal Wisdom which became incarnate in Christ." And these statements very well represent the dominant principles of the New Orthodoxy.

We have no doubt that Christian theology would be much improved by this reversion to Greek philosophy. It would be improved, because Plato, in whom this philosophy had its source, was a broader and higher-souled man than Augustine. And by and by, perhaps, the Christian Church will get broad enough to give the credit to Plato, and to count him among its founders. Though Christianity as an organized religion began in the confession of Jesus as the Messiah, it is evident that it has had other roots than that. It has been swayed, as Prof. Allen says, for centuries by the mind of Augustine. It was earlier swayed by the more spiritual philosophy of Plato. Possibly it is now to return to this more generous yet more vague system of thought. But it is clear that Jesus knew little of either the Greek or the Latin theology.

W. J. F.

NEW LIGHT ON MORMONISM. By Mrs. Ellen E. Dickinson, with an Introduction by Thurlow Weed. New York: Funk & Wagnalls, 10 and 12 Dey Street. 1885. pp. 272. Price \$1.00.

Mrs. Dickinson has added another volume to the list of books which aim to give the facts of the origin and early history of Mormonism, in which she sustains the commonly accepted view that Joseph Smith

was an impostor, and that the Book of Mormon was constructed from a manuscript stolen from Rev. Solomon Spaulding. In her preface, she says: "A deeper interest may be felt in this attempt to cut to the very root of this monstrous parasite upon our American civilization by my stating here that the Rev. Solomon Spaulding, the author of the romance called *The Manuscript Found*, from which the Book of Mormon was formulated, was my mother's uncle by marriage; that this romance was for a long time in the house of my grandfather, William Harvey Sabine, near Syracuse, New York; and that it contained no suggestion of polygamy. With the intention of writing these pages, I visited Mrs. McKimstry, the daughter and only child of Rev. S. Spaulding, in Washington, D.C., in 1880; and she then made a sworn statement as to her father's authorship of the work which has been used with such disastrous effect by crafty men."

Mrs. McKimstry's statement regarding *The Manuscript Found*, which was originally published in *Scribner's Monthly* of August, 1880, is reproduced in this volume, with many other testimonies never before published, which, taken together, make a strong chain of evidence in support of the claim that Mr. Spaulding's manuscript, in the hands of Rigdon and Smith, was made the basis of the Golden Bible.

The author has had access to family papers and other sources of information not open to other writers on this subject, and she has made skilful use of her material. Her dislike of Mormonism is so great that she writes in the spirit of one who is determined to do all the damage to the system she possibly can rather than that of the impartial historian; but for this the discriminating reader will make allowance, while he will value the work for the interesting information it contains in regard to a system which is the most remarkable religious and social development of modern times. The Introduction by Thurlow Weed, written in 1882, is very brief. It says: "I have not read this book myself, as my health will not permit it; but, in conversation with Mrs. Dickinson, I have become satisfied that she has introduced considerable original material, and has gathered from books already published a large amount of interesting matter relating to Mormonism. . . . With my knowledge of Joseph Smith and one of his first followers, Phelps, a Canandaigua printer, it has been for more than half a century the occasion of surprise and regret that such vulgar impostors should have obtained a following which is even now drawing proselytes by the thousand from Europe." B. F. U.

HEGEL'S AESTHETICS. A Critical Exposition. By John Steinfort Kedney, S.T.D., Professor of Divinity in the Seabury Divinity School, Fairbault, Minn., author of *The Beautiful and the Sublime*. Chicago: S. C. Griggs & Co. 1885. pp. 302. Price \$1.25.

In this work, the author has reproduced the essential thought of the aesthetics of Hegel,—a voluminous work which gave a new impulse and began a new era in art criticism. The philosophic basis of art, its meaning and purpose, beauty in its abstract idea, beauty in the concrete, the ideal in art, the realization of the ideal, art in relation to the public, and the artist, are discussed in the first part of the work, the thought being Hegel's faithfully reproduced, with criticisms by the author interspersed. Part second is a disquisition by Prof. Kedney, which traces the logical and historical development of the art impulse by the pathway marked out by Hegel, the substance of whose thought it gives in regard to classifications into symbolic, classic, and romantic arts, and the progress of art through the chronological order, the temporal and eternal ideals, and the sublime and pathetic in art. The third part of the work treats of all the arts in detail,—architecture, sculpture, painting, music, and poetry, epic, lyric, and dramatic, omitting the more technical part and the minute illustrations of Hegel's treatise relating to these subjects, while presenting the main thought in a condensed form. The following is the concluding sentence: "The result of the author's painstaking has been to show that the eternal idea of the Beautiful has haunted the human race, and that man has been perpetually seeking to solace himself with the imaginative representation of that from which the reality falls so far short; that this endeavor comes from the primal impetus which started our race in its career to create itself as a commonwealth, and for itself a world truly beautiful, no matter what be the sublime and pathetic periods through which it must pass to reach that consoling and satisfying end."

The work is easy of comprehension, and possesses an interest, not only for the student of the philosophy of art, but for all who love art for the pleasure it imparts, and who desire information in regard to its history, development, classification, etc. B. F. U.

In the *Art Amateur* for May is an account of the sale of the collection of pictures of George I. Seney. It gives a great deal of information in regard to the prices of pictures, and the effect which time has had in raising or depressing their value, which is curious and interesting. The sale excited great attention, and thousands paid a half-dollar fee to see the pictures. In spite of the supposed depressed condition of the market, two hundred and eighty-five pictures brought \$56,000 above the sum they were put in for by Mr. Seney as assets. The pictures, however, generally brought less than the prices which Mr. Seney paid for them, whether he bought them of the dealers or at auction. The largest price ever paid at an auction for a picture, \$18,200, was paid for "Evening in Finisterre," by Jules Breton, for which Mr. Seney had paid only \$14,000. The American pictures, on the whole, held their own, and came nearer bringing what was paid for them than did the average of imported pictures, although but few of them brought more than their original cost. This speaks well for the appreciation of American pictures by the public, and shows that they can stand on their own merits and do not need a tariff for protection. There is a long account of the pictures of American painters in the Paris Salon and of the National Academy Exhibition in New York, which is pronounced to be decidedly above the average in general merit. An interesting article on stained glass is the chief feature of the Decorative Department. E. D. C.

In the May number of the *Andover Review*, Prof. Gerhart concludes his searching criticism of the theology of the Reformers. This is followed by the second sermon in Dr. Newman Smyth's series to workingmen, on the use and abuse of capital, considered with reference to the complaints of leading socialists. The third article, by Rev. F. H. Johnson, under the title "Co-operative Creation," aims to show the advantage afforded by the evolutionary theory of creation in the argument for the divine benevolence. In the fourth article, Mr. S. T. Dutton, of New Haven, considers the question, "What may justly be demanded of the Public Schools?" The editorials treat of the "Criteria of Theological Progress" and of "The Revision of the Old Testament, and the Religious Public." The first is introductory to a series designed to point out certain doctrinal advantages of the new theology as compared with the old. A well-informed Lutheran writer gives an historical account of "The Predestination Controversy in the Lutheran Church" in this country (Houghton, Mifflin & Co.)

EIGHTEENTH ANNUAL MEETING OF THE FREE RELIGIOUS ASSOCIATION.

The Eighteenth Annual Meeting of the Free Religious Association will be held in Parker Memorial Building, Boston, Mass., as follows:—

Thursday evening, May 28, at 7.45 o'clock, business session for the hearing of reports, election of officers, etc.

Friday morning, May 29, at 10.30 o'clock, address by the President, followed by addresses from Mr. W. D. Le Sueur, of Ottawa, Can., and Rev. M. J. Savage of Boston, on the question, "Is a Scientific Basis for Religion Possible?" After these addresses, the subject will be open for speeches, not exceeding ten minutes each, from the floor.

Friday afternoon, at 3 o'clock, the Rev. R. Heber Newton will address the meeting on "The Religious Aspect of Socialism." During the afternoon session there will also be opportunity for ten-minute speeches from the floor.

The annual festival will be held in the Meisner, Tremont Temple, Friday evening, commencing at 6.30 o'clock. R. Heber Newton, W. D. Le Sueur, Wm. J. Gill, H. W. Holland, Mrs. E. D. Cheney, Miss Mary Eastman, W. J. Potter, B. F. Underwood, J. K. Applebee, and G. N. Hill will be among the speakers. F. A. HINCKLEY, Sec'y.

The Religion OF PHILOSOPHY;

OR,
The Unification of Knowledge.

A COMPARISON

of the Chief Philosophical and Religious Systems of the World, made with a view to reducing the categories of thought, or the most general terms of existence, to a single principle, thereby establishing a true conception of God.

By RAYMOND S. PERRIN.

Octavo, cloth. \$4.00.

"A book which is one of the most brilliant examples of American philosophic thought: the student will follow its pages in admiration of the reasoning power that they attest."—*Globe, Boston.*

"The author's criticisms, or explanatory sketches, of Greek philosophy and the modern types of English, French, and German philosophical thought, are well done, and will be a decided aid to persons who want a thoughtful guide in those directions. The book has a calmness and dignity of statement springing naturally from an unusual amount of careful reading and thinking. There has not for a long time appeared any book in the English language which, from the purely intellectual and philosophical side of it, is deserving of a more careful study."—*Times, Philadelphia.*

"It is a work of great labor, and required a lifetime of research. The author's statements are fair, his judgment unworried by prejudice; his thought is sturdy, and his reasoning clear."—*Globe, St. Louis.*

"The book is written with candor and clearness, in a philosophical spirit, and discusses questions of the utmost importance to the human race."—*Transcript, Portland, Me.*

"The author is a writer of great power and keen insight. Judging from the subjects discussed by Mr. Perrin and his spirited style as a writer, his volume will have a large circulation among thoughtful readers. It will reach the classes possessing the broadest intelligence and the highest culture."—*Editorial in Evening Journal, Chicago.*

"The author makes a masterly analysis of Herbert Spencer's Philosophy, and subjects his theory of the *Unknown* to a most close and searching criticism. It is an extraordinary work. . . . One of the most important contributions from the press of recent times. . . . One of the most original of recent attempts to unify knowledge."—*Index, Boston.*

SOME RELIGIOUS CRITICISMS.

"The author is absolutely ignorant of the rudiments of common sense."—*The Church, Philadelphia.*

"A mere rehash of philosophical systems. No originality, no thought."—*The Independent, New York.*

"We are incapable of understanding him. There is nothing in the huge volume that is intelligible."—*Unitarian Review, Boston.*

G. P. Putnam's Sons,

27 and 29 West 23d Street, New York.

THE RISE OF INTELLECTUAL LIBERTY FROM THALES TO COPERNICUS.

By FREDERICK MAY HOLLAND,

Author of *The Reign of the Stoics*. Price \$3.50.

The author of this book has chosen a magnificent subject; and, although it is formidable in extent and much of it involved in obscurity, and all of it complicated with great questions of history and human progress, he has yet been able to throw much new light upon that liberalization of thought which went very unsteadily forward during twenty-two hundred years, before the great modern movement of the development for intellectual liberty. The work is a delineation of tendencies, a series of sketches of the great minds who at different times and under varied circumstances, and with unequal effect, have struck for independence of thought, a presentation of the counterforces that have antagonized intellectual liberty, and an account of the working of all those larger agencies which have in different degrees hindered or promoted freedom and independence of thought. Without having subjected the work to critical scrutiny, we are much impressed by the evidence it shows of extensive and conscientious labor, the freshness and interest of its chief subject-matter, the untrammelled treatment of the subject, and the vigor of the portrayal of that long and agonizing conflict with bigotry and intolerance, religious and political, public and private, which is the price of our modern liberty of thinking.—*Popular Science Monthly.*

The volume shows remarkable research, keen powers of analysis and comparison, close reasoning, and fairness of judgment. It will be found an invaluable help to the student, who will be glad to learn that the author contemplates a second volume, which will bring the subject down to the time of the French Revolution.—*Boston Transcript.*

For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

TOKOLOGY A Book for every woman. Alice B. Stockham, M. D.
A COMPLETE LADIES' GUIDE.
 20,000 Sold in Little Over a Year.
 Agents find it the most popular work on the market. "The very best book to put into the hands of a girl or woman."—E. M. HALE, M. D. Cloth, postpaid \$2.00; Morocco, \$2.50. Circulars Free. Sanitary Pub. Co., 159 La Salle St., Chicago, Ill.

AGENTS WANTED for
Twenty Years of Congress,
 1861-1881,
 by James G. Blaine.
 Hon. J. S. Wise of Va. says:
 "Whoever takes it up, no matter whether he be Mr. Blaine's friend or enemy, will never put it down until he has read the whole."
 Agents make from \$200 to \$1000 per month. Address, The Henry Bill Pub. Co., Norwich, Conn.

H. T. MARSHALL'S

PATENT
ADJUSTABLE
LACE
CONGRESS

Is easily adjusted to fit any instep or ankle at any time, and will not uncomfortably draw the ankle, like ordinary congress. It has the stylish appearance of a lace boot and all the convenience of any congress in putting on or off the foot. Marshall's Pat. Pat'd May 13, 1884, woven in the front strap or stamped on the shank of each shoe. If your dealer does not keep them, send postal for directions how to get them to the Patentee and Manufacturer of Men's, Boys', and Youth's Fine Boots and Shoes. Tennis Shoe for Ladies and Gents a specialty.

SITUATION AS TEACHER WANTED.

A graduate of Harvard would like a situation as teacher, in which independent thought and honest speech would not be dangerous. For particulars and references, address M., INDEX office.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript*.

Sent by mail, postpaid, on receipt of price by the INDEX ASSOCIATION, 44 Boylston Street, Boston, Mass.

PUBLICATIONS

OF THE

FREE RELIGIOUS ASSOCIATION.

Freedom and Fellowship in Religion.

A volume of ten essays upon speculative and practical problems of religion, by D. A. Wasson, Samuel Longfellow, Samuel Johnson, John Weiss, W. J. Potter, F. E. Abbot, O. B. Frothingham, J. W. Chadwick, T. W. Higginson, and Mrs. E. D. Cheney, and extracts from Addresses by Ralph Waldo Emerson, Lucretia Mott, Robert Dale Owen, Dr. Bartol, Wendell Phillips, Rabbi Wise, Horace Seaver, A. B. Alcott, Lucy Stone, Charles H. Malcom, Julia Ward Howe, and others,—all given on the platform of the Free Religious Association. Price (reduced) \$1.50.

Reports of Annual Conventions of Free Religious Association, from 1872 to 1879 inclusive. These contain essays and addresses by the various distinguished men and women who have spoken on the Free Religious platform, together with yearly reports of the Executive Committee. 10 cts. each.

No. 10.—*The Impeachment of Christianity*, by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—*The God of Science*, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.

No. 12.—*Is Romanism Real Christian?* Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, \$1.00.

No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—*A Study of Religion: The Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.

No. 15.—*The Battle of Syracuse*. Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

BY B. F. U.

COL. INGERSOLL declares that, in his opinion, all the so-called "physical manifestations" of Spiritualism are fraudulent performances.

MR. S. J. STEWART, of Bangor, Me., who abandoned the Unitarian ministry about two years ago, has just been admitted to the Penobscot bar, and will soon open an office in Bangor.

THERE seems to be no danger that the Free Religious Association will retreat and go into the barracks of Unitarianism; but is there not a liability of its remaining encamped where it now is, when it should advance to new conquests? A forward movement, and a few vigorous, well-directed assaults upon some of the most popular errors and evils of the day, would require sacrifice, of course, but would bring to the Association, if we mistake not, a host of volunteer soldiers, secure it strong allies, enlarge its means of usefulness, and make its future worthy of the courage and progressive spirit of its founders. "Summer soldiers and sunshine patriots" would desire to be mustered out, but it is not this class that adds to the effectiveness of an army.

A UNIVERSITY professor, in a postscript to a business letter, writes: "Garrison's article on 'Religious Education of the Young' is good, but far too despondent. You ought to say, in reply, that it entirely is possible to fill young people (the best of them) with enthusiasm for righteousness and for service to humanity; to make this at once practical and idealistic; to bring in also the poetic element; and yet to encourage no superstition, no reliance upon sacred 'authority,' no distrust of rationalistic methods. I believe this; and, though I've had little experience of it with the young hitherto, yet I am experimenting a little now in that direction, and expect, sooner or later, to learn the secret of success."

THE Congress of Churches, held at Hartford last week, to whose platform was admitted repre-

sentatives of the most liberal Christian sects, the Unitarians even included, was one of the notable signs of the day, one of the significant indications of the increasing breadth of thought and liberality of spirit in the churches. Although their organic union is not possible nor, in our opinion, desirable, while so much importance is still attached to dogmas and so much intolerance remains, yet it is gratifying to see sectarianism so far subordinated to an honest desire to promote the truth by discussion as to enable churches widely separated in belief to consider their differences on a common platform, with entire freedom and without vote, after the manner of the Free Religious Association and liberal organizations generally.

ACCORDING to a correspondent of the *New York Evangelist*, educated and wealthy people at the capital of Costa Rica pay priests large sums of money for pews in heaven, to be reserved for them and their families for all eternity. Single seats are bought at a cost of \$500. The seats about the throne are all numbered, and the certificates given hang in frames in the parlors of many houses. "The poor," the letter says, "are expected to take back seats, I suppose, or stand in the aisles of heaven through all eternity; but the grandees of Costa Rica have paid for cushioned pews, from which they can hear distinctly and see all that is going on." According to the teachings of the priests of Costa Rica, it is easier for a camel to go through the eye of a needle than for a poor man to get a seat in heaven about the throne,—a seat from which he can watch the performance.

A METHODIST minister in the *Pall Mall Budget* says: "The country has a special right to complain of the clergy of the Establishment. We give these gentlemen £5,000,000 a year and a position of unique authority and honor, in order that they may teach us all to be Christians. But if, at a crisis like this, they have either nothing to say to us or, worse still, like the canon of Lichfield to whom you refer, preach the gospel of Moloch, it will be difficult to show cause why they should not be disestablished at once, and disendowed without a penny of compensation. At a recent meeting in St. James' Hall, a workingman grimly suggested that Mr. Bradlaugh ought to be made Archbishop of Canterbury, because he was, at any rate, advocating the principles of the Prince of Peace, while the occupant of that venerable see, as you have observed, was calamitously silent. This is the sort of verdict we may expect to hear more and more from workingmen." In the same number of the *Budget*, M. D. Conway refers to the attitude of a part of the English clergy at this time on the subject of peace as resembling the cowardice and subserviency the American pulpit exhibited toward slavery, when cotton was king. The attitude of the Positivists, on the other hand, has been very pronounced against the war in Egypt from its beginning. Their "Protest against the War in the Soudan" closes by saying that, in the name of Humanity, they protest "against the decision of the government, not merely as pregnant with evil consequences to our material and moral interests as a

nation, but as in itself essentially and radically immoral,—a pure abuse of our strength."

SINCE the article on "Liberal Communities," printed on another page, was written, several papers have been received containing detailed statements in regard to the town mentioned in that article. Some of the statements about Liberal, Mo., are based upon an "exposure" made by a very unreliable Campbellite preacher, whose rancor manifested toward the town may be explained by the fact that he was, a few weeks ago, arrested there charged with some offence, and taken to Nebraska on a requisition from the Governor of that State. All the statements we have seen are more or less sensational in style, and contain much that may fairly be regarded as improbable or very highly colored. They resemble in some respects articles which sometimes appear in Western papers in regard to a community, put in circulation in the interests of a rival town. The main facts, so far as we can judge, are these: About five years ago, Liberal was founded by Mr. George H. Walser, a free thinker, who, by advertising and making terms easy to persons of his own views, induced many such to remove there with their families. A hall was built, and a school and newspaper started. For some time, the town thrived, and people of Christian views or predilections, among others, availed themselves of its business advantages. They soon built a little union church. Mr. Walser bought out the interest of one of the subscribers, and, one account says, "thereafter delivered addresses before the Sunday services, and harassed the preachers with interruptions and questions, justifying his course on the ground that the town afforded 'free speech to every one on all topics.' He was arrested for disturbing the meetings, but never tried; and the fight grew. The people of the town were not more vicious than in other communities, but they flaunted their disregard of customs ordinarily considered sacred." In the dissensions, some of the Liberals joined the Christian party, and worked with them to defeat what they regarded as an illiberal and narrow policy. Some, irrespective of religious beliefs, were in favor of having a liquor saloon, to which Mr. Walser was as much opposed as he was to churches. Last year, a decisive split occurred, and a number of the dissatisfied party bought land adjoining Liberal, and started the town of Dennison, moving their houses and stores, and carrying with them their country trade. Dennison is said to be now about one-third as large as Liberal. These facts prove nothing whatever as to the truth or tendency of any religious or anti-religious beliefs. They show, if correctly stated, simply the effects of the arbitrariness of one man, who, although evidently honest, has much of the sectarian spirit that generally marks the founders of such communities; while they illustrate the folly of making hostility to popular religious beliefs a prominent feature in founding and building up a town,—a folly into which men of sagacity and breadth of thought could never be betrayed.

THE GHOST OF IMPROVED SOCINIANISM.

* Carlyle, in his preface to the English edition of Emerson's Essays, rejoiced that the author did not trouble himself about "the ghost of improved Socinianism,"—namely, the Unitarianism of Boston. It seems to me that our excellent friend, the senior editor of *The Index*, troubles himself quite too much about that same ghost, if ghost it be. No reproach is here intended on the Unitarian body, which is an eminently respectable and increasingly liberal denomination of Christians. But it seems to me altogether to belittle the origin and character of the Free Religious Association to imply that it is or was a mere protest against certain clauses in a preamble, or that it has no value except as it may lead to a still more "improved Socinianism." If it was no more than that, it was hardly worth forming; if it is no more than that, it is not worth sustaining. It may be, as Mr. Potter thinks, that the two or three men who drew up the call for the original convention of the Free Religious Association were simply Unitarian bolters. It is a very common thing for a body of people, once brought together by an almost accidental circumstance, immediately to outgrow that trivial occasion, and expand into something larger in principle than the projectors ever imagined. Even the "mugwump" political movement, for which the nomination of Mr. Blaine was the occasion, soon outgrew mere anti-Blainism, and became an independent appeal for political reform, for which the time was ripe, and which would have come to a head before many years, had Blaine not been nominated. As an immediate occasion for that movement, his nomination was a piece of good fortune for the country; and so it was a fortunate thing if the Unitarian body, by certain words of a preamble, set free such men as Potter and Abbot and Frothingham, and brought many others, who cared nothing for those words, to act with them. Now that this has been accomplished, the circumstances that led to it seem to me no more worth dwelling on than the incidents of Mr. Blaine's career.

However it may have been with a few committee men, the great body of those who came together on May 30, 1867, gathered without any reference to what some Unitarian organization had or had not done. Neither in the call of the meeting nor in the proceedings, I believe, was that fact mentioned. Of the twelve persons announced to speak at that convention, eight were Jews, Quakers, Spiritualists, Universalists, or Transcendentalists, and presumably indifferent to the precise attitude of Unitarians. The president-elect was a Unitarian; but two of the three vice-presidents, Mr. R. D. Owen and myself, cared nothing for this sectarian matter, and would have been equally ready to come into the new movement had the Unitarian action been wholly different. As to Mrs. Severance, the third, I cannot now say. The Chairman elected for the Board of Directors was Rabbi Wise, a Jew. In view of these facts, it seems to me that Mr. Potter wholly deceives himself when he says, at the outset, addressing the Liberal Club (the italics being my own):—

In other words, on account of certain theological limitations which were affixed at the outset, there was a secession from that body,—not large, but a secession which became quite active in working for religious Liberalism outside of all denominations. It organized at once, for instance, the *Free Religious Association*, and more recently this club.

I should say that, in writing this, Mr. Potter either wrote hastily or utterly understated the importance of the convention held in 1867. The men and women who assembled that day came together because the time was ripe, the organiza-

tions insufficient, the churches unsatisfactory. They were of the blood of the Protestants of all ages,—of the Quakers, the Huguenots, the Hussites, the Essenes. Once gathered into their own organization, they entered into their work; and even the committee that had called them together had no more right to speak for them than a man has to determine the career of his great-grandchildren. I have no suspicion that Mr. Potter intends so to speak; but, if he had, he could not. It is only that he unconsciously exaggerates the importance of the particular chain of circumstances that brought him to Tremont Temple that day. We all tend to such exaggeration: it is the self-defence of our individuality,—just as, at a great conflagration, you hear little knots of men in the street talking, not about the fire, but about the precise circumstances under which they heard the alarm. One was on his way to bed, and one was at his own front door, delayed by the loss of his door-key; but, after all, the really important thing is the fire, of which they generally say little or nothing.

But all this, it may be said, is only historical: the question is as to the future. Undoubtedly; I can only say that I, for one, feel as little in sympathy with Mr. Potter's suggestion of a possible future organization as with his interpretation of that in the past. His whole aim and desire in this essay seems to be to find some point of agreement, some *modus vivendi* with organized Unitarianism. When he speaks for himself as minister of a recognized Unitarian society, this is all well enough; but, when he speaks as a prominent radical, and appeals to "brothers of the scattered radical army, tenting in the open field," the other soldiers of that radical army have surely a right to respond. In my own case, the response must be that there is no such yearning desire to be in barracks as he assumes; nor could the quarters he proposes be made attractive by any such inscription as he suggests. I have no more wish to belong to an association of "churches and societies, Unitarian and other, here assembled" than I should desire to belong to a nation labelled "United States, Virginia and other," or "Rhode Island and other," or even "Massachusetts and other." The mere specification sectarianizes. He thinks that Unitarians could agree to this, as well as others "who are not, but might be of the National Conference." Now, I do not know how many of these "others" there may be in the Liberal Club which he was addressing; but I suspect that in the Free Religious Association there are very few. At the present age of the world, the question of the precise verbal formula of the Unitarian body seems to me as utterly unimportant as the mediæval question, How many angels could be assembled on a needle's point? And, if the members of the Free Religious Association are ever to transfer their interest to any other organization, let it be one that is wider, not narrower, than their own.

T. W. HIGGINSON.

THE GHOST LAID.

I congratulate the readers of *The Index*, as well as myself, that my essay at the Liberal Union Club has drawn Col. Higginson's prompt fire. And the main point which he makes is sound. Whatever event in the history of the Unitarian denomination may have been the immediate occasion for forming the Free Religious Association, the fact is not to be forgotten, nor in any way put aside as of little importance, that that Association never has been merely a fraction or faction of the Unitarian body. Col. Higginson is right in reminding us all that, at the start and ever since, a very considerable portion of its members never had

any connection with Unitarianism, and cannot be supposed to have any special interest in what the Unitarian denomination may do or may not do. Their only interest in Unitarianism is the same which they have in the movements of any religious sect which concern religious liberty and progress. And this, it may be added, is the only interest which the Free Religious Association as an *organic body* has in Unitarianism; though some of its members, individually, may also be connected with some branch of the Unitarian body.

There was nothing, however, in my essay that antagonized these statements. I have been so accustomed to assume them, and also to utter them whenever it appeared necessary, that it did not occur to me that anything different could be read between the lines. The Free Religious Association was only incidentally named at the outset of the essay, and the discussion might have proceeded in the line followed without even that reference. I was not discussing the Free Religious Association, much less, as Mr. Higginson's last paragraph seems to apprehend, entering into any diplomatic negotiations between the Free Religious Association and the National Unitarian Conference. I was merely asked to consider the question—which has persisted in coming up in the Unitarian body—of the relation of the constitutional platform of their National Conference to mental liberty. And, in addressing myself to this question, if I did not make the above statements about the Free Religious Association, it was simply because they did not appear to me to have any special relevancy to the occasion. I was not there as an officer of that Association, and I also took pains to say that I was speaking only for myself.

But, possibly, now that the essay has been given a wider hearing in *The Index*, these things to which Col. Higginson has called attention need to be said. They certainly do, if there is valid cause for such a misunderstanding of the purpose of the essay as his closing paragraph suggests. Let me, then, declare distinctly my belief that the Free Religious Association is entirely independent of the Unitarian body, and that its continued existence is by no means necessarily involved in any action which may be taken by the National Unitarian Conference. Nothing was farther from my purpose than the thought that I was offering terms on which the Free Religious Association would merge itself in the Unitarian Conference. Nor do I find now any hint of such a thought in the text. Yet, if any one else finds it there, because of something not said, then, once for all, I disclaim it. I have so often had occasion to say on the Free Religious platform that no member, not even the highest officer, had authority to speak for the Association, that I could not fall into that snare myself. The vision of the President of the Association proposing to lead his fellow-soldiers of that body into the barracks of the Unitarian Conference is, therefore, purely a spectre of the imagination. That, at least, is a ghost which can be laid. A stranger coming into the Free Religious Association might suppose that here was a company of men and women under the generalship of their president; but one who has summered and wintered with them, as I have for eighteen years, knows them too well to imagine that they will be led together by any body. Every soldier on that field is his own general.

Yet, having said thus much, I feel bound to say more. Suppose that the Unitarians should make the suggested changes in the constitution of their National Conference, one effect, doubtless, would be that a considerable number of the members of the Free Religious Association who now feel debarred from the Conference would feel free to

join it, that some who were once of it might return, and that all persons who have any kind of natural affiliation with the Unitarian movement, or who believe at all in a local organization of religion on terms of freedom, and are trying to keep alive or build up such an organization, might consider whether they would not do well to join a Conference which had thus freed itself from dogma, and so widely broadened the terms of its fellowship. All this might happen, and yet the existence of the Free Religious Association might not be affected. It might still have a sufficient reason for being; possibly, as Mr. Higginson suggests in his closing sentence, might enlarge or more positively define its scope; and many of its members, like Col. Higginson, might not feel any more drawing than now toward the Conference. Those not interested in any local society would naturally care nothing for the Conference; nor could they, indeed, have any footing in it, since it is a del-gate conference of societies. Yet these different classes of members, with their special beliefs and interests, might come profitably together in the Free Religious organization, as they have done hitherto. Now, it was the former class of members, or of radicals in general, that I had in mind in the essay under the designation of those "others, not now of the Conference, but who *might* be." I was not thinking at all of the Free Religious Association *en masse* joining the Unitarian Conference. That it could not do, and I perfectly respect the position of those who have no desire to do it. But I was thinking of that very considerable number of radicals in the Free Religious Association and elsewhere, who might find their natural home and a field for congenial work in the Unitarian ranks, were those ranks opened to receive all earnest thinkers and earnest moral workers, irrespective of theological beliefs and religious names.

Let me speak still more definitely. My motive purpose in that essay lay much deeper than the personal desire which Mr. Higginson attributes to me. I do not complain of what he says on this point, for I took no special pains to make my motive clear. But I wish now to say that whatever zeal I have shown in this matter, either in this essay or heretofore, has arisen from no desire or aim, personally, to rehabilitate myself in the Unitarian denomination. My connection with Unitarianism, denominationally, has been very slight. I passed through its penumbra, and soon emerged upon the ground of free religion; and that has been my natural place. But, by peculiar good fortune, I found myself the minister of a society which, though recognized as Unitarian, was by temperament so individual and independent that it cared little for denominational affiliations. My work as its minister went on uninterruptedly, harmoniously, without any of those conflicts and sacrifices to which many of my radical brothers in the ministry have been subjected. Personally, therefore, it has been a matter of little moment to me what my relations to Unitarianism might be. And now it is altogether probable that my ministry will be completed before the Unitarian Conference will so open its doors that I can enter them. But that is of little consequence. I am content to work on as I have worked hitherto. But, for the sake of younger radical men who are already in the ministry, and do not find the course so smooth and pleasant as I have found it, and for the sake of young men of earnest thought and purpose, who would like to fit themselves for a free ministry, could they see any opportunity for securing a place for work from which their beliefs would not debar them,—for the sake of these, I do earnestly hope to see the Unitarian Conference

remove its theological bars and open freely its doors; and for these I speak. My position in the Free Religious Association has brought many inquiries to me from this class of young men. Three such inquirers have asked me for advice since this year began. The Free Religious Association makes no provision for these young men. It has never adopted the policy of aiding in the establishment of local societies. Whether it might not have done so is a question which need not here be discussed. There has been a difference of opinion upon it among the members of the Association, and the negative has prevailed; and there were, certainly, serious practical difficulties in the way of the Association's undertaking such work. Now, I, for one, believe in the importance of local religious institutions, under a free administration. I believe that young men of earnest minds and hearts may rightly and nobly desire to choose for vocation the leadership in such institutions. The Ethical Culture movement will, I hope, open places for some of them. But, to others, that movement does not appear to include everything they deem important; and to these, since the Free Religious Association offers no field, the only encouragement I can give is that Unitarianism, which has the machinery and the means, is progressing; that some of its societies, particularly in the West, are essentially on Free Religious ground; and that, if they are ready for hard work, they had better prepare, and hope for the full freedom that is to come. But I cannot give this encouragement so positively as I would like to do it. Therefore, I am earnestly solicitous that the largest representative body of Unitarians should declare unmistakably their position in such terms that these young men should be able to work with them without any restraint of conscience. Nor am I able to see how any one who has any sympathy with the principle of the Free Religious Association should think such a change in the interest of freedom "utterly unimportant."

WM. J. POTTER.

ENGLAND, RUSSIA—AND VIRTUE.

The age has opened its ears to cries of grievance whencesoever hailing; and no heart has made its appeal, I dare suppose, to an utterly fruitless purpose. But, if every good cause has had its word spoken, by whom has peace been applauded at this moment of its likely infraction at the East? While official Russia and England are engaged in their passage of commercial and conquering courtesies, who has called the common thought to a higher level, upon which the trouble of the hour may have other than merely sordid glasses turned upon it? And in the midst of the bedlam of reason and idiocy, where the mere threat of clashing arms generates such clamor, who has dared to tell the hosts that their frenzy is over an unworthy disturbance, and that it is not by such play with blood that the gods—or the loves—are most truly sought and worshipped? There are voices of protest, but they are not many. Taking the theological implications, nothing could be better said than has been said by Mr. Potter. Nevertheless, the common run of men are led captive to other ideas than these, and are seemingly content to rest what faith they have in the "statesmanship," so called, of our Congresses and Reichstags. The governments traduce the governed, and make the victims believe themselves honored in traduction. Thought is betrayed into channels partial to all save the moral elements of the question. Thence, however little it is meant to be, and from pure misdirection of sympathy, flow out all manner of vile injustices, that at the moment produce in men an emulation as to who shall farthest and quickest

forward governmental crime. The step from the temptation to the fall is an easy one. In the present case, we can see the transition coloring the daily record of events. Though Russia may be barbarous and England all she is said to be, the bottom of ensuing omens is in a common motive. Nor can it be objected that the matter is one exclusively for the primary factors to determine. The nerves of the race are affected by the on coming as well as the presence of martial conflicts; and, therefore, the world is interested in an honest and manly settlement of disputes.

For the moment, peace is evidently assured as between the contestants. Whether Gladstone brought this about by an exercise of Parliamentary tact, which is morally called "evasion," and whether cowardice or humanity dictated the terms, scarcely matters: suffice it that peace is temporarily assured. But, after we have fully acquainted ourselves with this fact, what have we to say of the universal impression that the war now averted is inevitable before many months or years pass away? Here is a question which might well puzzle the wit of the age. If the hour cannot answer it in the interests of peace, we should have done with our boasts of "civilization"; and, if it can mark out a conviction equal to the highest demands of the heart, we should not fail to make the talk of "inevitability" futile gibberish on political and popular lips alike. It is abhorrent to sincere men that we should so carelessly live two lives, evoking the one or the other to-day and to-morrow, as best pleases the flitting color of the demand.

What is the truth about all this Anglo-Russian spleen? What is the motive-force, and what can be anticipated as the outcome? It is not moral right, civilization, the elevation of the people, that mainly engage the attention of the prominent war-partisans. They are willing enough to use these as pretences where they will serve a purpose, but the end sought is other and less pure. Here, as in humbler paths of life, the inspiring note is of material splendor. The sacrifice of everything to gilt and show is taken as dutiously demanded. Value is not placed in virtue, but in coin; and it is the land, not the landscape,—adopting an Emersonism,—which captivates current thought. When a politician, bent yet by some degree of conscience, chooses to retreat from a designed wrong, his act is called cowardice and dishonor. Names are sent flying after fancies, and men who can regret an error are counted as loving their country less than before their moral waking. The visual obliquity is not always "corruption," in the ordinary sense. It is apt to arise in our readiness to give greater credit to the outer than the inner man. But the glaring sin loses nothing of despoiling power for its innocent acceptance. It is more dangerous, the less we know of its prevalence when it prevails. When we are choked by it, and yet seize no means, in our unknowing childishness, to clear the throat and give utterance to the unswerving note that the occasion needs, then have we most call to exercise discretion.

Very vague and hopeless such thought is pronounced by the politicians. We are argued with not to take Russia and England as they might be, but as they are. Grapple with concrete mud! However, we find no dragon at our doors, and can wander forth whither we list. Thus only is it, cut loose from predilection, that we find how cowardly are the principles of modern government. Think of these "defenders of the private man," "bulwarks of society," "arch-enemies of anarchy," in the light of their oft-time performances! They masquerade as civilizers on foreign shores, while bearing down wofully upon their people at home. They persuade subjects to perpetrate the death-

dance upon alien States, whose offence is always chiefly and often wholly imaginary. They count the politicians as the nation; foment discord more pleasurably than they endure peace; and wage wars—or force the masses to wage wars—which would never be invited for a day, if it was upon the leaders that sacrifice and pain and death were to be visited. Energy owed to purity is prodigally sown to corruption. While governments speak with such a voice, what right have we to ask that they be respected and upheld? It is very well to preach of patriotism and the fireside; but is England patriotic,—England, the State,—when it deals justice charily to people at home and abroad? And is the Parliament just, that first fans up the heart-fires and then explains hazily to its constituencies through their passion rather than their reason? The nations never would go to war one with another, had the masses the means of knowing fairly what inevitably are the causes and the results. Politicians distort these, citizens are contaminated, and, lo! the gun is fired, and Hate stands ready at its post. All this in a breath, ere love has its senses collected. And then follow such tales as have, for instance, come to us daily, here in the centres of “civilization,” from Soudanese outposts. History has written and rewritten of the inviolable course till we sicken of the revel.

Can we honor the fireside of home while we outrage that of a neighbor? Do we rightly suffer those who “rule” us to assume that they speak our conviction, when they change “protest” to “behest,” and swear that we order what we do not? Nor can so just a case end with those of similar interrogations. Whether it is the ruler alone or the nation as a whole that enforces the evil principle, condemnation should be spoken with unsparing words. We applaud “reason,” but what reason resides in cannon and bloodshed? We claim our age to be eminently “modern,” loving investigation and moved by means of the interweaving of intellectual and moral research. We send discoverers to the north, south, east, and west, to bring us the farthest and latest photographs of the mysteries of earth and heaven. But, when we come to the passes of political life, we lose all peaceful spirit, though the stake be smaller by vast chasms than Darwin’s or Greely’s, and must needs take a man by the nape of the neck to convince him, or dismiss his precious form, riddled with bullets, to another world (or to sleep) to be enlightened. This we call Caucasian glory. “Civilization,”—“the light of the nineteenth century,”—“peace on earth, good will to men”: how blandly we meet the stranger-hand and pass the sardonic contradictions of the moral life!

I have had men point me to the past. Was war useless there? Did it not open the way to a blessed future? Comparatively, it was helper, not originator. Though a medium, it was not a gracious one. And, however we may learn from the past, we need not and should not pattern from it. Experience has shown that progress is accelerated with free opinion; that races move onward quicker, the more peacefully open are all ports; that settlements prosper more surely upon purchase than robbery. That men lived and moved under harsher conditions in earlier times was despite, not because of the mistakes. The progress of the race was not forced by war, but by that which was deeper, and which bathed in effulgence a future hope. The battlements of old bore their flags, not only to inspire temporary hosts, but to bring on the age of peace. It is an injury to the future to endeavor to read the past into to-day. The astronomer of long ago was dull of sight, and we cannot accept him in the present. Neither do we bow to Cæsar or Napoleon, nor take our creeds from Rome.

Neither, therefore, should we gather our armies and take the assurance of antiquity that men cannot live on earth together, and effect majestic and healthful changes, but through physical combat.

It is always a grief to me when I find men estimating the greatness of a nation by its material possessions. Justice was never written in figures. The churches are too often accounted prosperous by virtue of their dollars, not their excellent souls. States are too often built upon brass. “Britain,” my friend avers, “shines not so gloriously as of yore”; but he puts the Bank of England in the scales, and sees that the weight compares ill with national treasures found elsewhere, and takes that test as adequate. My reliance is not on such delusions. Countries depend less upon bank accounts than accountants. Does England find its foundation in Threadneedle Street? Does its solvency hinge upon the certification of a check? England is great, if her soul is great, though her guineas be few; and she is poor and pinched indeed, though she may gather the earth’s flow to her coffers by means of criminal wars. Russia may conquer Asia, and yet be contemptible while she renders necessary a Nihilism to counteract her autocratic crimes. If the age we call ours has not thus settled “the values” of its spiritual estate, it has done nothing equal to its boast.

The moral of the prevailing and prospective Russo-English controversy lies to me in this,—that men have no adequate faith in their own professions of reliance upon an eternal justice. They discuss every matter as though it could be resolved into dollars and cents. I do not believe they are in this respect peculiarly lower in status than their fellows of the past. On the contrary, the average individual has greatly advanced. But they display lingering traces of a barbarism from which mankind has toilsomely issued. These remnants of brute nature leave them ready in many ways to apply the brute method of settling disputes. Abstract right is rarely treated with, even in cases whose decision involves the happiness of future generations.

Human beings amicably revolutionize scientific theories, art prejudices, medical errors, religious superstitions, by the mere force of intellectual generosity. Should they not be as well able to see and secure the justice in what by contrast we can term the petty occurrence involving Afghanistan? I say again, England, Russia, Afghanistan, Egypt, are not isolatedly responsible for what takes place in such an hour. The world is touched by the results, good or bad, and has, in consequence, a direct right to a word in the council. Man loses inestimably when he shows greater willingness to war for dollars than for virtue. If the warriors now on the local boards won’t see this, internationalism is warranted in calling them to order.

It remains to be seen whether we cannot identify nations and individuals. If it is possible to settle private discord by reference to legal or social tribunals, it should be possible so to settle public troubles. It should be as easy to establish courts of resort for the Afghan controversialists as for the Liberal-Conservative factions in England; or, if not so easy, at least as honorable and wise. Nations are as facile as individuals, and could be as conclusively persuaded as individuals are to act in accordance with the dictates of a higher than barbaric or mediæval reason, if we husbanded our eloquence and surrendered less to mammon.

Again, we should not less circumspectly study our bearing toward nations than toward persons. An individual possesses rights and duties, but holds no higher warrant than a State that stands for number where he represents merely fraction. We trust the fireside of our neighbor, the person,

while we suspect and invade that of our neighbor, the State. Yet both are entitled to an equal protection. What we can change by reason is another thing, and what is to be done when free speech and a free press are impossible raises other considerations. At this moment, Russia and England refuse to allow the privilege I should predict as bound at some time to embrace society not less than its ingredients. Afghanistan, Egypt, India, are modern victims of unrighteous governmental purposes that profess a kindness to men singly which they refuse to men in the mass.

The sooner we perceive the identity of the one and the many, the sooner we can get over present shoals. A nation—this or any—has justice on its side, when it asks and gives in its corporate capacity to like corporate bodies powers that our century vauntingly claims as achieved for the individual.

HORACE L. TRAUBEL.

LIBERAL COMMUNITIES.

A friend sends us an article clipped from a Louisville paper, which says in substance of Liberal, Mo., that three times as many people have moved there and then moved away as live there now, that one or two towns have sprung up and absorbed many of the original settlers of Liberal, whose growth has stopped. A rather disparaging reference is made to the moral tone of the town; and all the alleged misfortunes which have befallen it, the writer declares, are the legitimate effects of “infidelity.” The friend who sends the article desires us to state the actual facts.

We cannot speak of Liberal from personal knowledge, never having been there, and possessing no reliable information in regard to it; but what is affirmed of its experience and condition is or has been true of many, perhaps of the majority, of settlements in the West in the early years of their existence, irrespective of their predominant religious beliefs. It is very common there for new communities to grow rapidly till they reach a certain point, and then come to a standstill or even decline for a while. People come and go, some returning, others moving farther West. Rivalries spring up between different sections of a town, giving rise to antagonisms, and resulting often in the founding of another community near by, and in fierce competition for advantages, degenerating sometimes into hostility to each other, to the great injury of all concerned. We hope this is not true of Liberal, and we certainly have no definite information to that effect; but, if such be its condition, it is probably due, not to the heterodox views of the people, but to causes similar to those which have led to similar results elsewhere.

It is true, however, that a new community, composed chiefly of persons brought together on the common basis of hostility to popular religious beliefs, must encounter difficulties unknown to ordinary communities. And in the growing West especially, with industrial, social, and religious forces pressing continually, vigorously, and at every point from without, a community, however founded and for whatever purpose, must soon lose a distinction based upon dissent from popular creeds,—a distinction which, if retained, would put it at enormous disadvantage as the surrounding country should become settled and communities formed, with churches and religious institutions such as are demanded by the beliefs of the great mass of the people. Such a community, detached in important respects, as it would be, from the larger life surrounding it, would suffer in its business interests, lose its most active members, and the land and buildings would soon fall into the hands of men under whose control the anti-theological views of its founders would have no

more prominence than in the adjacent communities. Under the influence of a strong religious faith, when the members have a common creed and authority, and when they are favored by locality, wise leadership, and shrewd business management, a community in which prominence is given to unpopular religious or social views may last for a few years; but, sooner or later, it will either break up or undergo modifications, until it becomes assimilated to the surrounding conditions. Whether its religious conceptions and social theories be higher or lower than those that prevail outside, its failure is equally certain; for, in either case, the views and theories which are made the basis or a distinctive feature of the organization will serve as a point of antagonism, and partially interrupt normal relations with the million outside, who constitute a closely knit organism, with an established and intolerant public opinion, backed by the precedents and practices of centuries,—a social organism that must sooner or later assimilate and co-ordinate all forms of social life within the reach of its influence. All this is evident from a study of evolution, and is abundantly illustrated by the progress and results of a multitude of social experiments.

In regard to Liberal, while the prominence given to the anti-theological views of its founder—who, we understand, owned the site of the town—and of its original settlers has served to attract many of its inhabitants, these views, it is easy to see, will play no such important part in the future of the community. If it shall continue to prosper, people of different religious beliefs will settle there, churches will be erected, religious influences developed, and everything done to adapt the community to the wants of the population, and to put it in harmony with other prosperous towns. Meanwhile, the anti-theological views will be gradually reduced to about the same relative importance they have in other communities in that part of the country. Without such changes in adjustment to the requirements of the population and in harmony with the surrounding influences, changes in all probability now taking place, continued progress and prosperity would be impossible. This the intelligent business men of Liberal must soon see, if they do not see it already.

Such experiments are not without some good results, if they are really in advance of society in general; for the force with which they react upon the outside public sentiment tends to liberalize it. But such communities are very liable to suffer from the narrowness, erraticism, misdirected zeal, ambition, and selfishness of a few aggressive members. All the mistakes made and all the follies committed are sure to be regarded by the outside public as the legitimate results of liberal thought; and thus important truths, which are gradually gaining and imperceptibly modifying beliefs, customs, and institutions, come to be associated in the minds of many, in consequence of these mistakes and follies, with conceptions and conduct which have no necessary connection with them. In this respect, such communities sometimes do more to retard than to advance liberal thought.

B. F. UNDERWOOD.

EIGHTEENTH ANNUAL MEETING OF THE FREE RELIGIOUS ASSOCIATION.

The Eighteenth Annual Meeting of the Free Religious Association will be held in Parker Memorial Building, Boston, Mass., as follows:—

Thursday evening, May 28, at 7.45 o'clock, business session for the hearing of reports, election of officers, etc.

Friday morning, May 29, at 10.30 o'clock, ad-

dress by the President, followed by addresses from Mr. W. D. Le Sueur, of Ottawa, Can., and Rev. M. J. Savage of Boston, on the question, "Is a Scientific Basis for Religion Possible?" After these addresses, the subject will be open for speeches, not exceeding ten minutes each, from the floor.

Friday afternoon, at 3 o'clock, the Rev. R. Heber Newton will address the meeting on "The Religious Aspect of Socialism." During the afternoon session there will also be ten-minute speeches from Giles B. Stebbins, John Orvis, Henry B. Blackwell, George E. McNeill, Frederic A. Hinkley, and others.

The annual festival will be held in the Meinaon, Tremont Temple, Friday evening, commencing at 6.30 o'clock. R. Heber Newton, W. D. Le Sueur, Wm. J. Gill, H. W. Holland, Mrs. E. D. Cheney, Miss Mary Eastman, W. J. Potter, B. F. Underwood, J. K. Applebee, and G. N. Hill will be among the speakers. Music, including quartet and solo singing, will be furnished by the Temple Quartette. Mr. H. L. Bateman, first tenor; Mr. F. E. Webber, second tenor; Mr. H. A. Cook, first bass; Mr. A. C. Ryder, second bass; Mr. Howard M. Dow, pianist.

Tickets, with reserved seats at tables, at \$1.00 each, may be obtained at *The Index* office, No. 44 Boylston Street, Boston.

F. A. HINCKLEY, Sec'y.

EDITORIAL NOTES.

BY B. F. U.

GIVE expressions to your doubts, I beg of you. A doubt is the bud of an idea. If you give it the sunlight of thought, it may blossom. The man who suppresses a doubt is a kind of Herod who kills a child of the brain.—*Ingersoll*.

MR. GEORGE MARTIN writes thus to the *Present Day*, Mr. Holyoake's paper, in regard to the Montreal Free Thought Club: "The Club is still in a healthy and progressive state. We held our fifth anniversary in January, and the gathering was such as to afford a pleasurable inspiration of hope for the future. All our Sunday afternoon meetings are now open to the public, and are largely attended by our most thoughtful and respected citizens. We have thrown open our reading room and library to the public,—the first step taken in this direction in our city,—I may say in the Province, and I think I may say in the Dominion. Captain R. C. Adams is President of the Club at present, and a most efficient and devoted leader he is. He lectures often, and is always listened to with marked interest."

"UPON one of Whitefield's arrivals from England," says Franklin in his *Memoirs*, "he wrote to me that he should come soon to Philadelphia, but he knew not where he should lodge when there, as he understood his old friend and host, Mr. Benezet, was removed to Germantown. My answer was, 'You know my house: if you can make shift with its scanty accommodations, you will be most heartily welcome.' He replied that, if I made that offer for Christ's sake, I should not miss of a reward. And I returned, 'Don't let me be mistaken: it was not for Christ's sake, but for your sake.' One of our common acquaintance jocosely remarked that, knowing it to be the custom of the saints, when they received any favor, to shift the burden of the obligation from off their own shoulders and place it in Heaven, I had contrived to fix it on earth."

THE following from *Unity* is worth considering: "There is more than one side from which to look at any question, and it occurs to us that those who

are deploring the absence of religious convictions in the late George Eliot have not seen all around. Is it not just as trenchant a rebuke on the current conceptions and beliefs that one of the most earnest and prophetic thinkers could not share them? If the idea of God was inconceivable to her and that of immortality unbelievable, isn't the least unlikely that, as she apprehended these matters, they not only were to her, but would be to most of us, inconceivable and unbelievable. This is no self-regarding vanity that prompts her to the course: her life is one long, steady seeking after righteousness; her ideals are not less eternal than the current ones, her heroism not less sustained, her insight not less clear."

In a letter printed in the *Commonwealth*, Oliver Johnson, after adducing testimony covering the attitude of the churches and pulpits during the period from 1831, and earlier, up to the time of the Rebellion, adds: "The ill-informed or unscrupulous gentlemen who would cover up the guilt of the American churches in opposing emancipation, and, more audacious still, would claim for those churches the credit of abolishing slavery, may as well understand that flinging stones at Garrison, Phillips, and their associates will not help their cause, and that before they can succeed they must meet and overthrow the testimony of scores of men whose Orthodoxy is as unimpeachable as their own. Such men as Prof. Phelps, Dr. Dexter, and others like them, will find that they have undertaken a task beyond their powers. History will rise up in judgment against them. The Persian monarch was not more powerless to blot from the wall the record of his guilt and shame than these men are to avert the just verdict of posterity upon the leaders in Church and State who sought to protect American slavery."

A WRITER in the *Catholic Review* states some facts which his brethren would do well to consider: "Burchard's association of 'rum' with 'Romanism' (Catholicity) was exceedingly offensive, no doubt; and it was resented by a severe loss to Mr. Blaine's vote. Nevertheless, unpalatable a truth as it may be, it is still the truth that, in local politics, the liquor interests and the Catholic vote nearly always coincide. . . . There is no need of exaggeration in this matter. But the truth is that the mechanic who gives up his useful trade and opens a drinking-place on the corner thereby acquires fifty times the influence, or more, which he would have exercised, had he stuck to his honest labor. He becomes a political leader among the poor. Catholicity is the religion of the poor as well as the rich; and, as most of the workingmen who have any religion of consequence are Catholics, the saloon-keeper becomes a political leader of the workingmen, and, logically but sorrowfully it must be admitted, of the majority of Catholics. What is this but 'rum' and 'Romanism'?" This writer calls upon Catholics to assert their independence of the liquor interests, which, he says, are just as tyrannical and perhaps more tyrannical than George III.'s rule.

DR. LYMAN BEECHER was tried for heresy by the Presbytery of Cincinnati for certain utterances of his in New England. The case had got up to the Synod, which met in Cincinnati, in 1834. The testimony was all in. One forenoon, Dr. Beecher commenced summing up in his defence. As usual, he was able and ingenious while addressing his distinguished auditory. On the adjournment at noon, he took a select party to his house for dinner, among whom were some of his antagonists. As was the doctor's wont in enthusiastic hours, he kept right on making his speech at the dinner table. He was vivid, elastic, and facetious. He seemed particularly desirous of favorably im-

pressing his moderate opponents. Suddenly there piped up from the lower end of the table a voice which uttered these words: "Father, I listened to your speech in the Synod this morning, and I know you are plagued good at twisting; but, if you can twist your creed on to the Westminster Confession of Faith, you can twist better than I think you can." The doctor's countenance fell, but only for a moment. He suddenly rallied and said, "All my boys are smart, and some of them are impudent." Then, of course, rose a laugh. The voice that piped up from the lower end of the table belonged to Henry Ward Beecher. Whether he can twist his creed on to the Confession of Faith, it does not become me to decide. The doctor's case went up to the General Assembly, and was yet undecided when the Presbyterian Church was rent in two in 1838.—*H. B. Stanton, in Random Recollections.*

A FRIEND writes: "Dr. G. Stanley Hall's lecture on 'The New Psychology,' delivered on the occasion of his inauguration as professor of philosophy at Johns Hopkins University, last autumn, has just been published. Professor Hall is, perhaps, the most assiduous of American workers in the field of physiological psychology, and the most familiar with contemporary German research. His full and careful *résumé* of recent psychological thought is of singular interest and value, and his large empirical knowledge gives significance to his philosophical conclusions. 'All who have absorbed themselves in these studies,' he says, 'have seen the logical impossibility of every purely materialistic theory of knowledge.' 'If all cells and fibres involved in each act of the mind or emotional statement might be conceived to be numbered and weighed, and all the circulatory thermal, chemical, and electrical changes exactly formulated, the sense of utter incommensurability between these objective relations and the closer, more intimate consciousness of such acts and states would be sufficient as a corrective of materialism and as a positive justification of an idealistic view of the world.' The friend who sent us the above is probably aware that there is a class of thinkers among whom are men of unsurpassed ability, who have long maintained the "incommensurability" between the molecular motions of the brain and consciousness, and who are neither materialists nor idealists, as these words are commonly understood, but who, nevertheless, hold that that which appears objectively as force and matter is identical with that which appears subjectively as consciousness. If, instead of hurling their old objections against each other, the so-called materialists and idealists could forget their contentions long enough to examine carefully an eclectic and synthetic system, which unites in a philosophical realism the profoundest truths taught by materialists and idealists, it would be "greatly to their credit," since it would show an advance beyond the scholasticism of the university professors of philosophy in this country.

B. F. UNDERWOOD will lecture at East Dennis, Mass., next Sunday, on "Ideal and Actual Methods of Progress."

Of all the evil spirits abroad at this hour in the world, insincerity is the most dangerous.—*Froude.*

O you who linger in the night of toil,
And long for day,
Take heart. The grandest hero is the man
Of whom the world shall say

That from the roadside of defeat he plucked
The flower success,
Bravely and with a modesty sublime,
Not with blind eagerness.

—*W. T. Tailbot.*

The Index.

BOSTON, MAY 21, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, : : : : : } Editors.
BENJAMIN F. UNDERWOOD, : : : : : }

No WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

The Profit-maker and the Socialists.

BY VAN BUREN DENSLOW, LL.D.

(Concluded from last week.)

Most socialists concede that, in the present organization of labor, the rule of the profit-maker is temporarily just, because of its temporary necessity. But they desire mankind to believe that it is not intrinsically and perpetually just or necessary; in short, that, as Mr. Mill argues, it rests upon the arbitrary institutions and customs of men and not on irreversible economic law. Those economists, on the contrary, who have elaborated a just because necessary and inevitable doctrine of economic distribution must hold that, whatever ascendancy over the wages-workers economic law gives to enterprisers and profit-makers to-day, it must give them eternally, and that greater equality in the control of reproductive wealth can only be arrived at by increasing the ratio of the enterprisers and profit-makers to the wages class until the former embrace the whole of society and the latter cease to exist.

In economic law, the right of the profit-maker to rule industry arises out of his correlative function of loss-sustainer,—a function which neither Karl Marx, Lassalle, nor any other of the socialists nor quasi-socialists, like Mill, takes cognizance of. If a profit-maker produces that which society does not want, he is punished for it by being obliged to sell it for as much less than it cost him to produce it as society has less need of it than of other things which might have been produced by the same effort. Having no right to compel society to pay him more for his product than it pleases, as society pleases to pay him less than its cost, the difference is his loss, penalty, or punishment for ignorantly assuming to lead social industry into any other form of work than that for which there was most demand or need. It is upon condition of sustaining all these losses that the profit-maker enjoys his counter-privilege of collect-

ing as profits the excess of price which demand or need puts upon his product over its cost of production.

I am aware that the wages-worker points to the "lock-outs, strikes," commercial crises, times when he is out of work, or works for an insolvent employer who does not pay him, and insists that he, too, shares in the losses of industry due to its being turned into channels where its product is not demanded. In the cases of lock-outs and strikes, the wages-worker is paid while he works; but his work stops. There is no loss of pay for work actually performed. Consequently, no wealth passes out of him to compensate society for a mal-employment of labor. On the contrary, he may have grown richer by that very mal-employment of labor by which society would have grown poorer but for the fact that the whole loss to society is paid for out of his employer's capital. In commercial crises, labor and capital both stand still. Labor contributes no value, which is capable of compensating for a loss, to society. But the capitalist who has invested fifty millions in building a railroad worth five millions has sustained a net loss of forty-five millions, which, if society in the aggregate were the capitalist, would have to be borne by society at large. The only case in which the wages-worker makes a loss which makes him a sharer in the punishment due to an unprofitable guidance of industry is when he works for an employer in creating reproductive wealth, and his employer so fails as not to pay him. In this case, the wages-worker "adventures" or risks his labor virtually on the success of the enterprise; and, to make it fair toward him, he ought to be getting enough higher wages than he could earn elsewhere to compensate him.

As a rule and in the large, the profit-maker relieves society of all pecuniary loss by the unprofitable misdirection of labor in the production of that for which there is less than the highest current demand. He exempts society from all waste of labor by paying the penalty of such waste himself. No other system could be so evidently economical to society as that which relieves it of all loss by waste. Compare the waste incident to the building of the New York Court House by Tweed, a socialistic or State enterprise, with the economy with which the East River Bridge was built, a private or "monopoly" enterprise. The latter cost but \$15,000,000 against the former's \$12,000,000, but is one of the seven wonders of the world, while the former is only a court-house. Socialism, under our tax system, already gets access to two and a quarter per cent. per annum on the assessed value of all property in New York City. Out of the fund so acquired, it pays one wages-worker eighty cents per cubic yard for shovelling earth, which it pays another eight dollars and eighty cents to shovel. The difference is the waste which is incident to socialistic method, and may be called "profits of corruption," which, in the case stated, utterly dwarf the profits of capital. If these things be done in the green tree, when socialism has access to only two and a quarter per cent. of the capital of New York City, what would be done in the dry,—i.e., if socialistic methods controlled all distribution of wealth? Might not the profits of capital be lost in the "earnings of corruption"?

Again, who can estimate the value of the vast saving to society which accrues, and the vastly more rapid growth of wealth which results, and the prodigiously greater amount of mental service rendered by each part of society to every other under a system which, by shoving over all uneconomic and unprofitable effort on those who cause it, resolutely holds the great mass of workers to

effort that may be perhaps distasteful and uncongenial to nearly every person engaged in it, but which, by the very fact that it "pays a profit," is inexorably proved to be the most demanded of any service that could be rendered?

To borrow the phrase of Schopenhauer and Von Hartmann, the Unconscious Will, or irresistible instinct, of society is wiser than its conscious will or reasoned theories, even as expressed in legislation, and is especially wiser than the theories of economic charlatans, who are indebted for much of their capacity to write glibly and fluently to their incapacity to "think out" the absurdity of their own imperfect thinking.

In an economic sense, the power to earn and accumulate profits is proportionate to the utility of the service rendered by the profit-maker to society. In short, the economic organization of society is just. This conclusion is inevitable, when it is once perceived that inequality in the diffusion of reproductive wealth promotes equality in the consumption of enjoyable wealth.

The greatest possible saving to society is promoted by the concentration of reproductive wealth into the hands of those who will apply it most profitably and with least loss to reproductive purposes, and who will divert the smallest ratio of it to purposes of consumption. Though reproductive wealth *per se* is not consumable, and though canals, locomotives, land, and furnaces cannot be eaten, drunk, or worn, there is a broad margin of reproductive forms of wealth, such as negotiable securities, mortgages, shares, bonds, notes, bank accounts, and money, which constantly tempts the holder to withdraw them from the work of reproduction and make them a means of increasing his consumption or that of others. He does this whenever he takes capital from his business to increase his cost of living. As between two persons both having the same income, say ten thousand dollars, one of whom devotes two thousand and the other eight thousand to expenditure for consumption and enjoyment, society has a four times greater immediate interest in the concentration of wealth upon the former than in the latter, because under the former four times as much capital is devoted to reproductive purposes. The law that reproductive capital shall constantly tend to accumulate in the hands of those who withdraw least of their gross income for expenditure is at the very basis of the whole business instinct, and is obviously the law which will promote with most rapidity the growth of wealth. That it is natural will be obvious to every one who reflects that it is by the same law that the oak becomes stronger and more permanent than the weed, or one animal than another. Its organization enables the oak to save a large relative proportion of its nutrition, which it deposits in annual layers in a manner to promote the greatest possible reproduction of woody tissue,—i.e., to extend its leafy surface to the light over the largest area. So in the hound there is a large setting apart or saving, out of his nutritive supply, of the nerve fibre and bone which in him supply the means of reproducing his food by the chase. But in the hog there is hardly any capacity whatever, and none in the civilized state, to reproduce his supply of food by his own effort, because it all goes to fat and contentment, wallowing and sensuality. Hence, like a politician, he can only live and attain his full growth by wallowing in the mire of corruption and being fed by those who have more muscle and less fat.

"Capital begins in abstinence," is one of the early modes of expressing the fact that the control of industry inheres in those who divert from reproductive to consumptive purposes the smallest fraction of their incomes. Obviously there

could be no other class to whom society could, if it acted through its conscious instead of through its Unconscious Will, so economically intrust its reproductive wealth as to those who would deduct in the least degree from its volume, add to it whenever practicable, keep it profitably employed, and make a lower charge for its use than any others could.

The immediate growth of society in wealth is, therefore, promoted by having reproductive wealth pass, as it usually does, into the hands of the parsimonious, the grasping, and the avaricious. Sentiment, poetry, and religion may alike rebel against the notion that the great rewards and powers are reserved by natural law to skilful money getters. For thus natural law is brought into open conflict with what is assumed to be divine law. But, as the very pulpit which rebuke the theory are invariably located expressly where they will get the "carriage custom," the pretended conflict is not real.

Reproductive wealth is to society, relatively to consumable wealth, what the engines, tunnels, aqueducts, and water-pipes of a great city are relatively to the water,—namely, means of forcing it from the point where it exists in surplus, and is therefore useless, to the point where it is not only needed, but most needed, the degree of need being always certified in economics by the return of effort or "price" the supply will bring. To say that commodities tend to where they will bring the highest price is to say that supply seeks out the greatest need, and this in turn is to say that the organization of society is humane.

The perfection with which this work of involuntary mutual helpfulness from selfish motives ends in a universal and nearly equal supply of food, raiment, and shelter, has caused nearly all men to believe that it is accomplished by a supernatural, special Providence. This ascription is touchingly expressed in Lamartine's "Morning Hymn" of a little child, of part of which I venture the following translation:—

"They tell me Thou givest alone
The fields to little birds wild,
And also to each little child
The spirit by which thou art known.

"They say it is thou who dost send
The gardens their wardrobe of flowers;
Without thee, our orchards with showers
Of golden fruit never would bend.

"The blessing thy riches afford
All the world are invited to share.
The worm has enough and to spare
At Nature's munificent board.

"The lamb may browse the wild thyme;
The goat may seek out the *cyttise*;
The fly on my cup, if he please,
May drink the white drops of my cream.

"The lark o'er the bitter grain sings,
Which the hand of the gleaner foregoes;
The swallow the winnower knows;
And the child to its own mother clings."

While in nature the supply for the lower forms of life seems to be thus everywhere provided, in fact the struggle for subsistence is of the same character in nature as in man. Although in man every act of production and exchange seems voluntary and artificial, and nothing has value except as it stands associated with labor, yet experience proves that the waste of generation and of life diminishes rapidly as we ascend in the scale of animals toward man; and that, in man, the more complex and diversified the system of interchange becomes, the less is the waste of life, and the larger the populations to be maintained, the greater becomes the ease of their maintenance. The diffusion of consumable wealth was formerly so imperfect that famines were frequent: now, they are confined to barbarous and sparsely populated countries. In

civilized society, commercial crisis, involving a cancellation of bankrupts' accounts without payment, and the temporary assistance of the less fortunate by public taxation or private charity, is the extreme form of distress possible. A rapidly increasing percentage of infants born reach maturity, and a steady diminution goes on in the forcible extinction of life.

But the miracle of organization which comes nearest in its quality to a special Providence is that whereby each individual in nearly fifteen hundred millions of people, aiming chiefly and almost solely to benefit or enrich himself, renders to others in so doing that endless complexity of mutual service which diffuses throughout the globe and to its most distant inhabitants the means of maintaining that diversified diet, mode of life, and relaxation which civilization requires. To the people of some portions of the world, the supply is barely up to the needs of a semi-barbarous existence. These, however, have a coarseness of appetite and dulness of sense which cause that to seem abundance which to others would be deprivation.

The socialists contend that the organization of society should be so perfect as to relieve all persons from the prospect or possibility of want. Economists teach that the prospect and possibility of want, especially when mitigated and softened by the legal right to relief at State expense which the pauper, incompetent, and suffering classes have in all enlightened countries, and when tempered by organized charities of all kinds, become the mildest stimulus adequate to keep mankind at work with the degree of industry essential to the highest average of comfort. Under this degree of stimulus, the total labor and production of society are not greater than are needed. If, therefore, it were lessened, the production and mutual service would lessen. The readiness to work would cease. And its cessation is social suicide. The substitute which socialism would be compelled to propose for the prospect of want as a coercive force to induce work would necessarily be either want itself, which would only renew the present order of things, or bodily coercion and punishment,—i.e., chains, imprisonment, the shower bath, thumb screw, and lash, which would be a *shute* backward into slavery and barbarism. It is idle to deny that, among those who fail to save money and accumulate capital, the predominant cause is: (1) animalism, the inability to abstain from a possible immediate sensual pleasure as a means to future success; (2) insubordination, or the inability to defer to the will of the organizers of labor sufficiently to make their services trustworthy and reliable; (3) lack of foresight and sagacity in the investment of their means, owing to a deficient value sense; and (4) defective nervous and mental organization. But all of these reasons, if carefully weighed, will be found to be compulsory and irresistible reasons why such persons should have as little control of capital as possible, and should be kept at work for their own sake as well as for that of society. There are far more people in the world, and especially in America, who attain money and wealth more easily than is good for their happiness than there are who attain it too slowly. It is seen in families made miserable or destroyed by sordid and infamous contests over their property; in married couples divorced by a slight increase in their wealth, perhaps, but which outruns their growth in the capacity to defer to the rights, tastes, and sentiments of others, without which wealth becomes vulgar; in a very general contempt which intellectual and polite people in all countries feel for the wealth that stands associated with dishonesty, brutal manners,

and coarse, ignorant, or mercenary meanness. That money is made too easy is true, not merely where it crops out in vast and vulgar fortunes, but among the wages-workers, where a man who has worked faithfully for years, without a spree, on two dollars a day, is made foreman of a gang in a rolling mill at \$100 a month, and after one month of prosperity, too great for his animalism, enters on a career of debauchery which speedily lands him in the hospital or penitentiary. A census of those whose prosperity is greater than is good for their peace would show that they far outnumber the righteously needy.

Pecuniary power bears no necessary ratio to intellect, culture, piety, charity, honesty, learning, or any other of the mental or moral graces. The function of all these is rather to give us dignity without wealth than to bring wealth itself. The principles of economic distribution are justified when wealth centres in those in whom the sense of value is most highly developed, and who, therefore, are able to practise greatest abstinence in its use, to keep it most profitably employed, to exact the smallest return for its service, and to diffuse its service to the greatest number.

If any economic work calls attention to the almost absolute equality in the personal consumption of all men for food, raiment, and shelter, the observation has escaped my notice. And yet a man's capacity to increase his consumption of wealth is so limited that he can as easily add to his stature as to the quantity of food he can eat, of clothing he can wear, of shelter he can enjoy. A millionaire with dyspepsia must breakfast on an egg and coffee and graham gems. A beggar in good health can consume six times more and better food. If a merchant prince build a marble palace which will last five centuries, and contain, at the average, two hundred persons, his personal use of it becomes more economical—i.e., involves less waste or destruction of the dwelling—than is involved in the use by a peasant of a hut so poor that he must build a new one every twenty years. So the deduction of capital made by the millionaire, all of whose wealth is in railways and bank stocks and whose money is on deposit in bank, where it is, of course, in circulation from the active uses of society, is less than the deduction made by the journey-worker who dare not trust the banks, but keeps the sum with which he expects to purchase a home, in gold, in his chest.

All the forces of nature and society conspire together to equalize the distribution, not merely of the consumable means of enjoyment, but of enjoyment itself. If men abhor labor and cultivate inactivity, their harvest is a loss of sleep and of digestion, which they must return to physical toil to recover. If their prosperity builds palaces, the sewer gas enters; the prince consort of England dying, prematurely by thirty years, by breathing an air more poisonous than poor Joe found in "Tom-all-Alone's." To reign over Russia is to lose one's liberty. To steal a railroad may be, as in the case of Fisk, to lose one's life. To inherit from a Vanderbilt may be to lose one's reason.

In the distribution of wealth for consumption there is a constant tendency and desire to pass from the more perishable forms of wealth devoted to mere sustentation to those rarer, costlier, and more permanent forms which are devoted to exhilaration, exaltation, and ostentation. After the needs of food, raiment, and shelter are provided for, man desires stimulating beverages, social influence and excitements, religious connections, superstitions, art, poetry, music, the drama, statues, pictures, equipages, jewelry, costly dress, libraries, diamonds. As fast as what are inaptly and

falsely called the lower passions, but which should be called the vital passions, because directly essential to life itself, are satisfied, the remoter and indirect passions call for satisfaction. These are often, in obedience to an irrational system of ethics, called the higher emotions or faculties, being social or spiritual and in no way vital. In economics, they serve at least two functions, and doubtless more. But, chiefly, they furnish forms of wealth which are permanent, and of nearly universal estimation, and which therefore become means of storing wealth for permanent preservation, and for expressing socially the completeness of the owner's triumph over property. Diamonds, coronets, crowns, palaces, pictures, church architecture, and costly shows are all of this class. But they also become a means whereby the Unconscious Will works in society as instinct works among bees, to accomplish solidarity. They push financial relief further outward and downward into the waste places of earth than it could otherwise come. When the hardy Norway or Spitzbergen savage essays to get a little nearer to the pole with his chubby wife and fur-wrapped babies, he is helped in his career by the fact that in the capitals of Europe the ermine which he takes is worn by emperors or judges, the eider down which he gathers makes the princess' pillow or lines her cloak, and the skin of the seal protects her form in winter; the negro on the Congo counts on brightening his home in the jungle with the price of the ostrich feathers which he sends to the Flora McFlimsy of civilization; the mountaineer in Peru or Hindustan knows that his herd, however small or wild, is his best reliance; but now and then one is raised to affluence by finding a crystal of value, or even a diamond. The Ceylonese with his pearl, the Parisian lace-maker, the vine-raiser on the Apennines, the Chinese silk and tea growers, the ivory hunters on the Niger, and the growers of roses in Bulgaria, all serve to illustrate the fact that luxury and ostentation are the means whereby society's Unconscious Will determines that the surplus consumable wealth of the overrich shall serve to carry relief to the more distant and more straightened of the world's workers as unerringly as their surplus of reproductive wealth gives employment and sustenance to those nearer home.

Those who are determined to see no natural or healthy laws in economic distribution will not be helped by these illustrations. There is probably some good economic reason why, in the existing order of things, they should see only discord. For, to denounce the existing order with skill and effect, they must study it at least a little; and this study, however slight, helps to cure the disposition to denounce.

WAS WASHINGTON A CHRISTIAN?

A Reply to the "Congregationalist."

Some weeks ago, in a paragraph printed in the editorial department of *The Index*, we asked, "What proof is there that Washington believed in Christ as a superhuman being?" and made a few quotations, two of them from clergymen, to the effect that he was probably what was called a Deist, and added, "Washington died without having around him any clergyman, without praying, without a word about Christ, without any allusion to the Bible, or any expression implying that he was either cheered by the promises or disturbed by the threats of Christianity."

Last week, the leading editorial of the *Congregationalist*, more than three columns in length, was directed against this paragraph, which we had forgotten, and which we had never supposed the editor of the *Congregationalist* so much as conde-

scended to read. It seems to have disturbed him greatly; and he says that, although, "had this appeared in some journals, it would not be worth serious notice," since it appeared in *The Index*, to leave it unconsidered would be "by silence to appear to assent to the theory that that overturn of so many idols—'the latest criticism'—has unearthed evidence unknown to the past, competent to reverse its judgment as to the character of patriots whose title to our veneration has been supposed to be unassailable."

The *Congregationalist* says, "Fortunately, few public men resembling him in reticence have left behind them the materials for so close an inquiry, as to such a matter, as are afforded by the journals, letters, public documents, and history of Washington"; yet the editor, evidently, after weeks of searching, is not able to cite one paper or letter written by Washington showing that he "believed in Christ as a superhuman being," unless it be, which we do not admit, his circular letter to the governors of the States,—which we were careful to mention in the paragraph to which the *Congregationalist* takes exception,—nor do the testimonies quoted establish the claim that he was a believer in Orthodox Christianity, or that he was not a Deist. That he listened, when a boy, "at his mother's knee to her readings of the Evangelical Contemplations of Sir Matthew Hale," and preserved "this identical volume" with "filial care"; that at the age of twenty-two, in the absence of the chaplain, he conducted public prayer; that he read the burial service when Braddock was buried; that he ordered "profane swearing" to be punished, although sometimes he himself swore terribly; that he was a vestryman in two Episcopal churches, helped with his money to build a church, observed the fast day appointed by the Virginia House of Burgesses in 1774; that, when Congress was opened with prayer on the 7th of September, 1774, he knelt "upon the floor of the hall"; that he pressed the matter of having chaplains "of good character and exemplary lives"; that he was opposed to "impiety and folly"; that he had "faith in God and his friendship for the cause of American patriots," and supplicated "that his Providential care might be still extended to the United States"; that he averred in his farewell address "that 'religion and morality are indispensable supports' of political prosperity, and that 'reason and experience both forbid us to expect that national morality can prevail in exclusion of religious principle'"; that he attended church during his presidency,—all these statements may be readily admitted, but they do not prove that Washington believed in Christ as a superhuman being, or that he was an orthodox Christian, or, indeed, that he was not a Deist.

The *Congregationalist* admits that, during the Revolution "and the period that long supervened," Washington did not take the eucharist. It thinks he "felt himself unfitted, and so refrained." It might have added that the rector of the church of Alexandria, in 1831, hunting for evidence that Washington was a professing Christian, and after inquiring in "every branch of his family" and of all who knew him and attended church with him, was obliged to make the admission, "I find no one who ever communed with him."

In explanation of our statement that no clergyman was present in the last hours of Washington's life, the *Congregationalist* mentions the shortness and severity of the illness and the fact that "the nearest clergyman was from seven to ten miles distant." The fact is, Washington believed, when attacked, that the disease would result fatally; and there was ample time to bring clergymen to his bedside, had he wanted them. Robert Dale Owen

wrote, fifty years ago, "It is well known that the patriot on his death-bed sought none of the consolations of religion; and it has been confidently stated to me (but, as I have not positive authority at hand to substantiate this, I state it hypothetically) that he actually refused spiritual aid, when it was proposed to send for a clergyman." According to the notes of Mr. Tobias Lear, his faithful private secretary, an eye-witness, taken down the day after Washington's death, his dying words were: "Doctor, I die hard; but I am not afraid to go. I believed from my first attack I should not survive it." According to Lear's testimony, not a word was said about religion. The *Congregationalist* admits that, in the notes committed to paper by Mr. Lear "as to the events of that eventful day, and which furnish the main staple of what is known in regard to them, it is true nothing is said about prayer, the Bible, or Christianity. It is simply said that the dying man said, 'I am not afraid to go.'" But the *Congregationalist* explains: Washington was a "silent man"; the effect of the disease upon the throat was severe; and "Mr. Lear is known to have had small sympathy with the religious views of his illustrious chief, and possibly remained ignorant of some facts which took place, or failed to make mention of them." Then follows what a clergyman, who was not present, said, and, although improbable and almost absurd, in no way affects our statement that Washington died without any reference to Christ or indication that he believed in Christianity. The manner in which he died is a strong indication that he was not a Christian, but a Deist.

But the *Congregationalist* points to his conformity to the religious observances of his day as proof that, if he were not an orthodox Christian, he was a dissembler. Doubtless there was much in the Christian worship in which he could honestly join; and he did not attach so much importance to theological doctrines and differences as does our very orthodox critic. "Nor let us," says a writer, "slander the memories of departed patriots by complaining that their creeds were breathed in the ear of private friendship alone, and not to a public that has yet to learn respect for honesty, and which may then justly challenge evasion and concealment, when it has frowned into impotence the tyranny which sits in judgment on conscience, and arraigns for the crime of sincerity."

Whether the expressions in Washington's circular to the governors of States, designed for the perusal of a Christian people, prove that Washington was not a Deist, let those judge who are acquainted with his intellectual character and with the methods of public men, especially cautious and conservative public men of all countries, who, withholding public expression of their own religious views, so far as it might lessen the weight of their words or impair popular confidence in the wisdom of their recommendations, accommodate their language to the religious condition of the masses. Not simply statesmen and rulers absorbed with affairs of State, but pious and devout divines whose business is to teach theology and ethics, subscribe to creeds at Andover and elsewhere which they can believe only by an interpretation of the language never designed by those who wrote the creeds. If Washington, in times less enlightened than these and less tolerant of heresy, did not publicly and unreservedly avow his religious beliefs, still his reputation is in no danger. He regarded himself a Christian, doubtless, according to his own interpretation of Christianity, as did Jefferson, Franklin, and other great characters of the Revolution who were Deists, as did Elias Hicks and Theodore Parker, as do eminent statesmen, authors, and ministers to-day, who have no belief in the super-

human character of Christ nor in the supernatural origin of the Bible, and who, the *Congregationalist* will admit, cannot fairly be called Christians.

In regard to Washington's religious views, Thomas Jefferson wrote:—

"Dr. Rush told me that he had it from Asa Greene that, when the clergy addressed Gen. Washington on his departure from the government, it was observed in their consultation that he had never, on any occasion, said a word to the public which showed a belief in the Christian religion, and they thought they should so pen their address as to force him at length to declare publicly whether he was a Christian or not. They did so. However, he observed, the old fox was too cunning for them. He answered every article of their address particularly except that, which he passed over without notice. Rush observes he never did say a word on the subject in any of his public papers, except in his valedictory letter to the governors of the States, when he resigned his commission in the army, wherein he speaks of the 'benign influence of the Christian religion.'"

"I know that Gouverneur Morris, who pretended to be in his secrets, and believed himself to be so, has often told me that Gen. Washington believed no more in that system than he himself did."—*Jefferson's Journal of February, 1800, Jefferson's Works*, vol. iv., p. 512.

Gouverneur Morris was in the Continental Congress of 1777–80, was one of the committee that drafted the Federal Constitution, was minister to France, was a lawyer and an author, and in politics a Federalist.

In the *Albany Daily Advertiser* of Oct. 29, 1831, was published a sermon by the Rev. Dr. Wilson of that city, in which he said Washington was not a "professor of religion," adding:—

"When the Congress sat in Philadelphia, President Washington attended the Episcopal church. The rector, Dr. Abercrombie, has told me that, on the days when the sacrament of the Lord's Supper was to be administered, Washington's custom was to rise, just before the ceremony commenced, and to walk out of the church. This became a subject of remark in the congregation, as setting a bad example. At length, the Doctor undertook to speak of it, with a direct allusion to the President. Washington was heard afterward to remark that this was the first time a clergyman had thus preached to him, and that he would henceforth neither trouble the Doctor nor his congregation on such occasions. And ever after that, upon communion days, he absented himself from the church."

The following reference to the sermon is from the pen of Robert Dale Owen, and is copied from appendix to the *Discussion between Bachelor and Owen* (p. 367):—

"As this important paragraph, being only from a newspaper report, could hardly be considered authentic, I myself called, accompanied by a gentleman of this city, on Dr. Wilson this afternoon. After giving my name and stating the object of my visit, I read to the Doctor, at his request, the above paragraph. When I had completed, he said, 'I indorse every word of that.' He further added: 'As I conceive that truth is truth, whether it make for or against us, I will not conceal from you any information on this subject, even such as I have not yet given to the public. At the close of our conversation on the subject, Dr. Abercrombie's emphatic expression was, for I well remember the words, "SIR, WASHINGTON WAS A DEIST!"' Now,' continued Dr. Wilson, 'I have diligently perused every line that Washington ever gave to the public; and I do not find one expression in which he pledges himself as a professor of Christianity. I think any man who will candidly do as I have done will come to the conclusion that he was a Deist, and nothing more. I do not take upon myself to say positively that he was, but that is my opinion.'

"Dr. Abercrombie, the associate of Bishop White," continues Mr. Owen, "in the pastoral charge of Christ's Church in Philadelphia, is now alive to corroborate the statement of his brother clergyman."

"In proof of his Orthodoxy," says Owen, "we have merely the vague opinions of certain individuals, the fact that he rented a pew, looked out a location for a church, and secretly prayed. I need not surely re-

peat that this is no proof at all of anything more than Deism; and that the lack of further evidence, so assiduously sought after, is, of itself, presumptive of Washington's heterodoxy, especially when added to the undenied and undeniable fact adduced by Jefferson,—that Washington, in replying to the clergy's address, evaded expressing any belief in Christianity, and that he never did say a word on the subject in any of his public papers except his valedictory letter to the governors of States, where he speaks of the 'benign influence of the Christian religion.'

"No clergyman around his death-bed, no protestations that in the dying hour religion afforded him aid, no praying, no repeating texts, no asking for a Bible to read a chapter; not a syllable about the redeeming blood of Christ or the saving efficacy of divine grace, or any of the rest of it; not even a straw for the orthodox to catch at and work up in a tract form as 'The Dying Testimony of that Distinguished Christian, George Washington.' True, the Father of his Country died the death of a patriot: he died as he had lived, in dignity and peace; but he left behind him not one word to warrant the belief that he was other than a sincere theist. . . . Elias Hicks, too, spoke of the 'Divine author of our blessed religion'; he, too, prayed and read from the Bible; he, too, spoke of 'the pure and benign light of revelation'; he, too, regularly attended public worship; and he, too, was a man whose integrity was proverbial. What shadow of a reason have we for believing that the religion of the hero of Mount Vernon was more orthodox than that of the philosopher of Long Island?"

As to the value of these testimonies, our readers can judge for themselves. They are sufficient to show that there were strong doubts as to Washington's orthodoxy—which the *Congregationalist* thinks beyond question—long before the paragraph which has disturbed our esteemed contemporary was written; that in his own day he was regarded by eminent men, even by a clergyman who was personally acquainted with him and was rector of the church he attended, as a Deist. Whether Washington was a Christian or a Deist, or, if a Christian, whether he was orthodox or heterodox, is a question to which we attach no great importance, and have given this amount of space to the subject only because the *Congregationalist* assumes that Washington's orthodoxy is established beyond controversy, and that our quoted suggestions that Washington was a Deist should be regarded as defamation of the noble dead.

B. F. UNDERWOOD.

CORRESPONDENCE.

WHY I BECAME A MORMON, AND WHY I APOSTATIZED.

Editors of The Index:—

I was born in Canada West, county of Leeds, March 6, 1809, of poor but respectable parents, who were able to give their children but the slight education attained by a few months' attendance at the public school. Books for instruction consisted of the Bible, Webster's spelling-book, the English Preceptor, a geography, and an arithmetic. There was but one newspaper in the county, and that not well patronized. My parents were strictly orthodox in their religion, belonging to the Methodist Church. In consequence, I was taught all the materiality of God and the devil, the endless joy of heaven and the eternal misery of hell.

This church I joined at the age of twenty-two years, and was a most conscientious member and advocate of their principles; attended the local and circuit preaching, and upheld the church with money and prayers. But I was puzzled to see some of my less zealous brothers repeatedly become drunk and beat their families, then come to church and pray for and get (?) forgiveness, and evince such ecstatic joy and peace of mind unattainable by myself, ever making the best endeavor to attain Christian perfection. I thought of the passage in the Bible where God says each one shall be rewarded according to his merits, and asked the minister for an explanation. He answered by referring to the parable of the prodigal

son, and the words of Jesus concerning "the one sinner that repenteth." But I was not satisfied. There was evident injustice in the cases at hand.

While in this state of mind there came a man into our neighborhood named Blakesly, calling himself a Mormon, or one of the Church of the Latter Day Saints, a disciple of Joseph Smith. He claimed that Smith was a prophet of God, ordained by the hands of holy angels to bring in a new dispensation of the fulness of the gospel of Jesus Christ, with all the gifts pertaining as described in the New Testament, where the Holy Ghost was given by the imposition of hands. He declared that the gifts of healing the sick, speaking in tongues, interpreting, prophesying, etc., which had been lost for centuries, were restored. At first, I doubted his ability to sustain these claims. But soon sufficient converts were made and baptized to organize a church; and when I had seen good old men whom I had known from childhood, whose veracity could not be doubted, arise and speak in unknown tongues, another immediately arise and interpret, interpret songs and sing them in the same tune as the first, and saw the sick healed, like many others I thought God had revealed himself through his servants as in the days of the apostles, and became converted.

And why should I not, being already a firm believer in the Bible? For had not Jesus said unto his disciples, "And greater things than these shall ye do, for I go to the Father"? And, after his death and resurrection, he appeared to them, upbraiding for their unbelief, saying: "Go ye into all the world and preach the gospel to every creature. He that believeth and is baptized shall be saved, but he that believeth not shall be damned; and these signs shall follow them that believe. In my name, they shall cast out devils, they shall speak with new tongues, they shall take up serpents, and, if they drink any deadly thing, it shall not hurt them, they shall lay hands on the sick and they shall recover. And they went forth and preached everywhere, the Lord working with them and confirming the word with signs following." Elsewhere we find (Cor. xii.), "For to one is given by the Spirit the word of wisdom, to another faith, to another the working of miracles, to another prophecy, to another the discerning of spirits, to another divers kinds of tongues, to another interpretation of tongues."

Here we found them fulfilling the words of Christ and the apostles, those signs following which had been said should follow the believer, all working in harmony with and exemplification of Bible teaching. How could these poor blinded Bible worshippers deny it was the true gospel and the church to uphold?

The Book of Mormon is mistakenly supposed by many to do away with the Bible. Instead, it is simply an extra addition to it, in full doctrinal harmony, teaching faith in the Lord Jesus Christ, baptism for remission of sins, and the giving of the gifts of the Holy Ghost by the laying on of hands by the authority of the priesthood, and giving the history of the ten lost tribes of Israel, said to be the aborigines of this continent. It is claimed to be a revelation from God written on plates by these aborigines, hid up, to come forth by his will to restore them, Joseph Smith being God's chosen instrument of discovery, revelation, and prophecy.

One of the prime teachings of Mormonism, for which it has Biblical authority, is the gathering together of the saints from the four quarters of the globe against the coming of the Saviour. Joseph Smith, being the prophet to guide the affairs of the dispensation, appointed Kirtland, Ohio, as one of the points of gathering, another in Jackson County, Missouri. In this latter place, some of the teachings and practices so incensed the people that they drove them out across the Missouri River into counties of Clay and Caldwell. And soon they were driven from the State by force of arms by authority of the governor, the alleged reason for so doing being that they were stealing the property of their neighbors and causing insurrections among the Indians. They then settled at Nauvoo, Ill. About this time, I emigrated from the East through Kirtland to Nauvoo.

But, previous to this, doubts had begun to arise in my mind regarding "the gifts," from the fact that many of the prophecies and warnings had proven false and unwarranted; and I had become satisfied that they were not inspired of God, but perhaps from evil or ignorant spirits. And now my doubts were

strengthened by the reports of the unsuccessful attempts to settle in Missouri. It was not in harmony with the perfect knowledge of God that he should have inspired that appointment. I now felt anxious to investigate the whole affair. And, for the purpose of learning as nearly the truth as possible regarding the finding of the plates and the translation of the Book of Mormon, I stopped at Kirtland and interviewed Martin Harris, he being one of the witnesses of the Book. I asked him if he saw the plates. He said, "Yes." Then, "Did you see with the natural eye?" He answered, "No: an angel of God appeared and showed them to me." I had read in a pamphlet that Harris claimed he had seen Christ and the devil. I now asked if this was a fact, and he said it was, —that Jesus was the handsomest man he ever saw, and the devil looked like a jackass. "Yes," interrupted his wife, "and you were fool enough to get out your hounds, and follow it for half a day."

At this time, Harris was trying to establish a claim to the leadership of the Church. He was but an ordinary-looking and ignorant farmer, whose every appearance warranted him a good dupe and fit subject for assisting Joseph in his plans. It was his money procured by selling his farm that paid for the printing of the first edition of the Book of Mormon.

I also called upon Oliver Cowdery, another of the witnesses. He was then an apostate, and advised me to go no further, and referred me to another man regarding the proceedings at far west Missouri. From that honest old man, I received an account that, together with the bad appearance of the society I found at Nauvoo, greatly increased my scepticism.

Still, I was not satisfied of entire fraud, as none had disclaimed the purity of Smith in the beginning, nor the inspiration and truth of the Book of Mormon.

After my arrival at Nauvoo, I investigated the reports of the practice of polygamy and consecration, and learned satisfactorily that Smith and other leading men did practise polygamy, it being later publicly taught; and that there was a society of "Danites" organized for carrying on theft,—or consecration, they termed it,—their work not being publicly proclaimed. These things were extremely obnoxious to me; and I openly declared them to be in violation of the laws of right, and therefore not prompted of God.

Being conversant with the book of *Doctrine and Covenants*, a book written by Joseph, I relied upon the declaration therein found, where God said of Joseph, if he sinned, "He shall be taken away, and he shall not have power, but to appoint another in his place." I believed Joseph had sinned in these things, and therefore looked for him "to be taken away." When he was killed, my belief being thus verified, I looked for the further fulfilment of the prophecy in the appointment of a successor; for it was one of the prime teachings of the Church that it could not live without a head. Sidney Rigdon claimed to be the rightful successor by virtue of his high office, he being one of the prophet's two councillors,—Hiram Smith, the other councillor, having been killed with his brother. By virtue of their office as "president," the "twelve apostles" claimed the leadership. All documents drawn up by them were signed "The Twelve Apostles, Pres."

There was still another claim made by James J. Strang, based upon the proper ground of appointment. Had he asserted his claim immediately, personally, and with the self-assurance and vigor which carries convictions, and which later characterized him, he would doubtless have won the allegiance of a large majority.

He was but slightly known, having been but a short time a member of the Church, and was not at Nauvoo at the time of Smith's death; and the other aspirants, of course, disputed his claim, and declared the letter of appointment from Joseph, which he showed, to be a forgery. A few were convinced of the genuineness of the letter and his right of succession, and became his followers. Others there were who did not deny the letter being from Joseph, but claimed it was not written in expectation of his own death, but was simply the appointment of Strang as the head of a new "stake," or "colony," to be "planted" at Voree.

His church grew to considerable strength on Beaver Island, where later they located; and there, in the year 1856, they disbanded at the time of the assassination of Strang, who made no appointment of a successor, but advised them each to take care of himself.

Rigdon retained a small following, which were soon scattered. The majority of the people supported Brigham Young, making him their leader by a vote, and basing the selection on the fact of his being the chief of the "twelve apostles."

The non-fulfilment of the prophecy regarding the appointment shattered my remaining faith in the religion. It failed at what had become for me the testing point, and must be false I now decided; and this decision necessarily included the Bible in my renunciation, for I had found them through all to be much alike and harmonious. Thus, my eyes were opened to make clear, unprejudiced investigation of it (the Bible), which has been followed by the perfect conviction of its being but accumulated works of many men, and not of God. In the workings of "the gifts" there is now evidently nothing unusual or miraculous. Speaking in tongues and interpreting is easily explained by believers in modern Spiritualism, and for disbelievers yet to be explained by science. Healing by laying on hands is but the combined effect of faith and animal magnetism.

I will add, regarding the Mormons, that they give allegiance to no people or government except their own. They believe themselves God's chosen people, and that eventually all others will be destroyed. "Go ye into all the world and preach the gospel to every creature. He that believes and is baptized shall be saved, and he that believeth not shall be damned," is essentially their motto; and, had they power, they would destroy all disbelievers, impatient of leaving that work to the Lord.

Yet we can scarcely believe them more blood-thirsty than other Christian sects, when we think of the past persecutions of Protestants and Catholics, or even of present utterances reported from these pulpits regarding the extermination of the Mormons, and of the treatment they have received at the hands of many.

Of the Church of Joseph Smith, Jr., of which he is president, and not prophet, I understand there are none of the disgraceful features of the old, and it differs but slightly from other Protestant sects. They are loyal to the government, do not teach consecration, gathering, polygamy, or present prophecy.

B. G. WRIGHT.

"A DARK SEANCE."

Editors of The Index:—

Permit me to thank Mr. Underwood for the "kindly spirit" of his remarks concerning Mrs. Lord and myself, and for the fair attitude of *The Index* toward Spiritualism, as thus indicated.

The author of "A Dark Seance" did not realize, probably, that in saying that Mrs. Lord touched him with her own hands, and handled the guitar herself till he held it securely between his legs after "it fell from the medium's hands," he was virtually accusing her of lying and forgery. Yet this is plainly so, since her assertion has been for years that whatever hands are felt in the circle are materialized spirit hands always, and never her own; and whatever movement of guitar or music-box, or rings or handkerchiefs, around the circle is a movement made by spirits always, and never by herself.

And, if Mr. Annet had observed carefully and without prejudice, he could not fail to have heard from the other side of the room acknowledgments that the hands were busy there, while yet Mrs. Lord's face was toward himself and her lips in full speech all the time. And, also, that, when her face was turned wholly away from him, certain hands, larger and smaller by turns, were busy with him and his immediate neighbors. But the trouble with Mr. Annet seems to be that he looked upon almost all the members of the circle besides himself as people without sense, "who paid their money to be humbugged and got all they paid for," so that their testimony counts for nothing with him. Not only this, but he proceeds to describe his companions, some of whom were guests of Mrs. Lord, like himself, and had paid no money at all, thus: "a poor, gray-haired sufferer," "a poor, weak, broken-hearted dupe," "almost all the rest were of the earth, earthy," "when the light was turned up, I noticed that he had a most peculiar head, with the smallest amount of forehead I ever saw so large a man have."

Moreover, Mr. Annet declares in the beginning that Mrs. Lord was introduced by Mrs. Hooker ("whose name seemed a guarantee of good faith") with many good words of commendation, which words "are in-

dorsed by almost all Spiritualists in this city, and are heartily echoed by the Spiritualistic press throughout the country." From which it appears that not only were the audience of that particular evening of the earth, earthy, poor, weak, broken-hearted dupes, or people glad to be humbugged, but almost all the Spiritualists of Boston and the contributors to the Spiritualistic press throughout the country must at one time or another have been in danger of being thus characterized, if Mr. Annet had chanced to be present at the time they were pursuing their investigations.

Had Mr. Annet called on Mrs. Lord as a gentleman sincerely desirous of knowing the truth in these weighty yet mysterious matters, and calmly stated his difficulties, even his suspicions, she would have been able to convince him at least that she was a lady, and that there was no possibility of her being able to practise such deceptions week after week and year after year in the city of Boston, and yet maintain the reputation he himself had accorded her.

For myself, I have been boarding in the same house with Mrs. Lord for several months, and have repeatedly attended her "circles," so that I knew whereof I spake, as surely might have been expected from one whose name seemed, even to Mr. Annet, a guarantee of good faith. How should he dare, then, to shake off the dust of his feet at this door, declaring Spiritualism a stupendous swindle, and wondering if that "gray-haired, strong-faced woman," "Isabella Beecher Hooker, knew what sort of a woman she had commended to the kindly consideration of a Boston audience?"

And is it not time, dear sir, that public mediums and their friends were uniformly treated with ordinary courtesy, and the phenomena of Spiritualism patiently investigated, after the manner of Wallace and Crookes and all lovers of the truth?

I am very respectfully yours,

ISABELLA BEECHER HOOKER.

Boston, May 12, 1885.

BOOK NOTICES.

SELECTED POEMS FROM MICHELANGELO BUONARROTI. With translations from various sources. Edited by Ednah D. Cheney. Boston: Lee & Shepard. 1885.

Michelangelo is so famous as a painter and sculptor that few persons think of him as also a poet. Yet a poet he was of a high order. He was a man who was great in all directions. Mrs. Cheney has done a good service in bringing together these selections from his poems,—chiefly sonnets and madrigals,—which will be greatly welcomed by all lovers of poetry and by all admirers of Michelangelo's genius. The Italian text and the English translation are given side by side. Mrs. Cheney herself contributes a large number of the translations. The poet's thought is as subtle and delicate as it is vigorous, and translation is not always easy. The difficulties are acknowledged, but they seem to have been well surmounted. Here is the rendering (Mrs. Cheney's) of a sonnet to Dante, which discloses Michelangelo's religious attitude, as well as his poetic talent and his boldness of speech:—

"What should be said of him, I may not speak;
His splendor overwhelms my blinded sight.
To censure those who wronged him is my right,
Since for his least worth my language is too weak.
He bended low where God does punish sin,
To teach us; then to God did he ascend.
'Gainst him the gates of heaven would not
defend;

Yet his false country would not welcome him.
Ungrateful country! of thy children's fate,
Nurse to thine harm, bear witness this,—
To thy most perfect comes thy greatest shame.
So, from a thousand proofs, this one I state,—
No equal exile hath there been to his:
No greater man than he on earth e'er came."

W. J. F.

PELVIC AND HERNIAL THERAPEUTICS. Principles and Methods for Remedying Chronic Affections of the Lower Part of the Trunk, including Processes for Self-cure. By George H. Taylor, M.D. New York: John B. Alden. 1885. pp. 282. Price 75 cts.

The author of this work is a physician who has had an extensive practice for a quarter of a century, and what he has presented in regard to the principal diseases to which the pelvic and abdominal portions of the human body are subject is evidently the result of the original observation and experience of a vigorous

and independent mind. His theory, briefly and imperfectly stated, is that the class of disorders which he describes originate in a weakened condition of the muscular and other tissues which uphold the interior contents of the lower part of the trunk, and keep the organs in their proper places, and in adjustment to one another. The displacement of these organs, affecting the natural ratios of their activities, breaks the rhythmic waves which are ever passing through the body when in health, and the integrity of which, when destroyed, should be restored, if possible, by exercises such as will strengthen the parts that are relaxed and incapable of performing their functions. Dr. Taylor has arranged a system of gymnastics designed to reduce the abdominal pressure sufficiently to enable the organs to recover their normal position and perform their functions regularly. Many of the exercises can be used by the sufferer without assistance. The doctor relates numerous instances of cure by his method, as to the merits of which we are not competent to judge. B. F. U.

THE story of "The Prophet of the Great Smoky Mountains," continued in the May *Atlantic*, will be read by many with unusual interest in the light of the discovery that Charles Egbert Craddock is Miss Mary N. Murfree. The two chapters contained in this readable number are among the best pieces of writing yet given us by this author. Mrs. Oliphant's serial is continued, as is "A Marsh Island." Dr. Holmes turns over some new leaves in his delightful "New Portfolio," and the genial articles on "Madame Mohl and her Salon" are completed all too soon. Important short papers of this issue are John S. Dwight's article on "Bach: 1685-1885"; Richard A. Proctor's essay on "The Misused H of England"; "Children in Early Christianity," by Horace E. Scudder; and a "Bird-lover's April,"—a pleasant talk on bird-life, by Bradford Torrey. A brilliant critique of Cross's Life of George Eliot is contributed by Henry James; and a notice of the *Literary Remains of Henry James, Jr.*, of Woodberry's Poe, and of Phillips' *Popular Manual of English Literature*, complete the book reviews. There is some excellent poetry, and the usual Contributors' Club and Books of the Month close the number.

THE *North American Review* for June, which concludes the seventieth year of the magazine whose circulation now is larger than ever before, has contributions on seven topics of great interest from twice that number of writers, not including the short contributions in "Comments." "Shall Silver be Demonetized?" is answered, *pro* and *con*, by three distinguished economists, Sumner, Laughlin, and Walker, representing Yale and Harvard Colleges and the Massachusetts Institute of Technology. "The Tardiness of Justice" is discussed by Judge W. L. Learned, and "Prohibition in Politics" by Gail Hamilton; "The Swearing Habit," by E. P. Whipple; and "French Spoliation Claims," by Edward Everett. The policy of the Roman Catholic hierarchy toward our public schools is assailed in an essay by Mr. M. C. O'Byrne, of North Carolina, and defended by Bishop Keane, of Virginia. It is a most interesting double presentation of an impending issue. "How shall Women Dress?" is answered by Charles Dudley Warner, Elizabeth Stuart Phelps, Dr. W. A. Hammond, Dr. Kate J. Jackson, and Mrs. E. M. King, the English leader of the dress reform movement.

A HYMN.

For *The Index*.

BY FRED. MAY HOLLAND.

TUNE: *Antioch*.

Our life is full of love and light,
Because our aims are high.
In Freedom's service we unite:
Her reign supreme is nigh.

Thy growth, O Science, gives us joy!
Thy victory is ours!
March on, and all thy foes destroy!
We bless thy mighty powers.

No holy sacrament we ken,
Save that of doing good:
Our faith is in our fellow-men,
Our creed is brotherhood.

We love this world of life and light;
We drink its gladness in:
The morning drives away the night,
And golden days begin!

THE FREE RELIGIOUS ASSOCIATION

was organized in 1867. Though having its headquarters in Boston, it is a national organization, and has members and officers in various States of the Union. It has the following

CONSTITUTION.

I. This Organization shall be called the Free Religious Association, its objects being to promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history; and to this end all persons interested in these objects are cordially invited to its membership.

II. Membership in this Association shall leave each individual responsible for his own opinions alone, and affect in no degree his relations to other associations; and nothing in the name or Constitution of the Association shall ever be construed as limiting membership by any test of speculative opinion or belief,—or as defining the position of the Association, collectively considered, with reference to any such opinion or belief,—or as interfering, in any other way, with that absolute freedom of thought and expression which is the natural right of every rational being. Any person desiring to cooperate with the Association shall be considered a member, with full right to speak in its meetings; but an annual contribution of one dollar shall be necessary to give a title to vote,—provided, also, that those thus entitled may at any time confer the privilege of voting upon the whole assembly, on questions not pertaining to the management of business.

III. The officers of the Association shall be a President, twelve Vice-Presidents, a Secretary, an Assistant Secretary, a Treasurer, and twelve Directors. They shall be chosen by ballot at the annual meeting of the Association; and the President, Vice-Presidents, Secretaries, and Treasurer shall hold their offices for one year, or until their successors be chosen. The Directors shall be chosen for four years, and, at the expiration of that term, shall not be eligible for reelection until after two years. One fourth of their number shall be chosen annually; but, at the annual meeting of 1882, the full number of twelve shall be chosen in sections of three respectively for one, two, three, and four years. The President, Secretaries, Treasurer, and Directors shall together constitute an Executive Committee, intrusted with all the business and interests of the Association in the interim of its meetings. They shall have power to fill any vacancies that may occur in their number, or in the list of Vice-Presidents, between any two annual meetings. Six members of the Executive Committee shall constitute a quorum.

IV. The Annual Meeting of the Association shall be held in the city of Boston, on Thursday of what is known as "Anniversary Week," at such place and with such sessions as the Executive Committee may appoint, of which at least one month's previous notice shall be publicly given. Other meetings and conventions may be called by the Committee, according to their judgment, at such times and places as may seem to them desirable.

V. These Articles may be amended at any Annual Meeting of the Association, by a majority vote of the members present, provided public notice of the amendment has been given with the call for the meeting.

Officers elected for the year 1882-83:—

PRESIDENT.

WILLIAM J. POTTER, New Bedford, Mass.

VICE-PRESIDENTS.

OCTAVIUS B. FROTHINGHAM, Boston, Mass.

FELIX ADLER, New York City.

GEORGE W. CURTIS, Staten Island, N.Y.

EDWARD L. YOUNG, New York City.

FREDERICK SCHUENEMANN-POTT, San Francisco, Cal.

THOMAS WENTWORTH HIGGINSON, Cambridge, Mass.

ELIZABETH B. CHASE, Providence, R.I.

GEORGE HOADLY, Cincinnati, O.

NATHANIEL HOLMES, Cambridge, Mass.

ROWLAND G. HAZARD, Peacedale, R.I.

BERNHARD FELSENTHAL, Chicago, Ill.

ANNIE L. DIGGS, Lawrence, Kansas.

SECRETARY.

FREDERICK A. HINCKLEY, Providence, R.I.

ASSISTANT-SECRETARY.

F. M. HOLLAND, Concord, Mass.

TREASURER.

JOHN C. HAYNES, 451 Washington St., Boston, Mass.

DIRECTORS.

Four Years.

CORNELIUS WELLINGTON, Boston, Mass.

Mrs. MARY F. EASTMAN, Tewksbury, Mass.

FRED. W. GRIFFIN, Concord, Mass.

Three Years.

Mrs. CLARA M. BISBEE, Dorchester, Mass.

J. A. J. WILCOX, Chelsea, Mass.

Two Years.

B. A. BALLOU, Providence, R.I.

BETH HUNT, Springfield, Mass.

Mrs. ANNA GARLIN SPENCER, Florence, Mass.

One Year.

Mrs. EDNAH D. CHENEY, Jamaica Plain, Mass.

ARTHUR G. HILL, Florence, Mass.

RICHARD P. HALLOWELL, Boston, Mass.

The office of the Association is at 44 BOYLSTON ST., Boston (next door east of the Public Library), where is also the publication office of *The Index*.

All letters pertaining to the business of the Association (payment of membership fees, orders for its publications, etc.) should be addressed to "Free Religious Association," at the office.

Communications intended specially for the Secretary, as well as his personal correspondence, should be addressed to him at PROVIDENCE, R.I.

SITUATION AS TEACHER WANTED.

A graduate of Harvard would like a situation as teacher, in which independent thought and honest speech would not be dangerous. For particulars and references, address M., INDEX office.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

Sent by mail, postpaid, on receipt of price by the INDEX ASSOCIATION, 44 Boylston Street, Boston, Mass.

PUBLICATIONS

OF THE

FREE RELIGIOUS ASSOCIATION.

Freedom and Fellowship in Religion.
 A volume of ten essays upon speculative and practical problems of religion, by D. A. Wasson, Samuel Longfellow, Samuel Johnson, John Weiss, W. J. Potter, F. E. Abbot, O. B. Frothingham, J. W. Chadwick, T. W. Higginson, and Mrs. E. D. Cheney, and extracts from Addresses by Ralph Waldo Emerson, Lucretia Mott, Robert Dale Owen, Dr. Bartol, Wendell Phillips, Rabbi Wise, Horace Seaver, A. B. Alcott, Lucy Stone, Charles H. Malcom, Julia Ward Howe, and others,—all given on the platform of the Free Religious Association. Price (reduced) \$1.50.
Reports of Annual Conventions of Free Religious Association, from 1872 to 1879 inclusive. These contain essays and addresses by the various distinguished men and women who have spoken on the Free Religious platform, together with yearly reports of the Executive Committee. 10 cts. each.

Nos. II., III., IV., V., VI., 10 cts. each; ten, 60 cts.; one hundred, \$3.00.

Reason and Revelation, by W. J. Potter. 5 cts.; ten, 30 cts.; one hundred, \$1.50.

Address
FREE RELIGIOUS ASSOCIATION,
 44 Boylston Street, Boston Mass.

TRACTS.

No. 1.—*Truths for the Times*, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 2.—*Fear of the Living God*, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—*Lectures on the Bible*, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 4.—*Christian Propagandism*, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Fall of Figures, Facts, and Interesting Extractions.* Price 10 cents; 12 copies, \$1.00.

No. 5.—*"God in the Constitution,"* by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.

No. 6.—*"The Sabbath,"* by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 7.—*"Compulsory Education,"* by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—*The Present Heaven*, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—*The Christian Amendment*, by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.

No. 10.—*The Impeachment of Christianity*, by F. E. Abbot. Sixth Ten Thousand. Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.

No. 11.—*The God of Science*, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.

No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, \$1.00.

No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—*A Study of Religion: The Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.

No. 15.—*The Battle of Syracuse*. Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

Address **THE INDEX,**
 44 Boylston Street, Boston, Mass.

EVOLUTION IN ITS RELATIONS TO EVANGELICAL RELIGION. Addresses of B. F. UNDERWOOD, Prof. P. A. CHADBOURNE, and Prof. ASA GRAY at a meeting of the "Evangelical Alliance" held in Boston, Sept. 10, 1882. 5 cts.

Travels in Faith from Tradition to Reason.

By ROBERT C. ADAMS.

For sale at THE INDEX office. Price \$1.25.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 insertions, . . . 10c. per line.
 " 13 " 25 " . . . 8c. " "
 " 26 " 51 " . . . 6c. " "
 " 52 " " . . . 5c. " "
 On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.
 On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the above calculated, will be made.

BY B. F. U.

POLICE-SERGEANT CROWLEY, of New York City, convicted of an outrage upon a young woman in a liquor saloon, cursed the newspaper reporters, as he stepped into the criminals' van. His remark led the New York *Tribune* to say: "This was a deserved tribute to the reporters. More than judges, prosecuting officers, detectives, or the entire machinery of justice, the reporters in a great city protect society from the assaults of criminals, and deal out punishment to those who defy the law."

A WORKINGMAN writes from Boston to the New York *Sun*: "I formerly lived in New York, where I endeavored to find exhibitions of paintings opened to the public free on Sundays, as I had no time on week days, and I wished to perfect myself in the study of drawing. I came to Boston to work. I visit the great Art Museum here every Sunday. I have been able to add to my salary by knowledge gained at the Public Library, which is open to the poorest person here. When is New York going to follow Boston's example?"

THE revision of the Old Testament, which originated with the Convocation of Canterbury, and was undertaken fourteen years ago, with a view to make it a substitute for King James' version, is now completed, and in the hands of the public. The discussion of its merits by the secular and religious papers of the English-speaking world, now begun, will continue probably for weeks and months. It is without doubt a great improvement upon "the good old version of King James," which abounds in acknowledged errors of translation; and, even if prejudice and conservatism shall prevent its general acceptance as the standard version, it is sure to be used as a commentary alongside of the old version in the pulpit and by scholars and readers generally.

IN Mauritius, formerly known as the Isle of France, and now a British colony, the worship of Siva is said to have recently been celebrated thus: An immense pile of wood burned for twenty-four hours before the pagoda of the evil god, until a bed of glowing coals was formed, measuring about thirteen feet by twenty, and some ten inches thick. Across this carpet of fire marched young Brahmins barefoot, bearing on their heads the baskets of flowers which they had volunteered to offer to Siva. Some moved quickly, and others slowly; but all kept quiet. There was not a single fall, which would have resulted in instant death. Only when they had passed over and plunged their feet into water did they break out into piteous moans. Those who did not die soon after were maimed for life. These tortures were calmly contemplated by vast multitudes of rapt devotees. Thus, at least, runs an account which may, for the credit of the British government, be hoped to contain some exaggeration.

THE passage of the bill exempting soldiers from the provisions of the civil service bill by the Massachusetts Senate, last Thursday, was a victory for spoils-seekers, office-brokers, and the enemies of civil service reform generally. As one of the soldiers of the war of the Rebellion, we protest against this demagogical attempt to paralyze, in the pretended interests of veteran soldiers, the newly initiated civil service system. The men who have been working this movement are not soldiers, nor men who would spring to the defence of their country should danger threaten it, but small politicians. The bill contains no guarantee that the deserving soldier shall be appointed in preference to an undeserving one. As one of the senators pointed out, an office-holder, if he wishes, will be able, under that bill, if it becomes a law, to pass over a dozen poor and honorable veterans, and give the place to one without any other qualification than his readiness to do dirty political work for his unscrupulous chief. The law already provides that, other qualifications being equal, those honorably discharged from the army and navy in time of war shall have the preference. Sixteen Republicans voted, be it said to their credit, against the bill: fifteen Republicans and four Democrats voted for it. If it passes the House, Governor Robinson ought to veto it; for it is a mere bid for votes and an insult to the veterans of Massachusetts.

AT the monthly meeting of the Liberal Union Club, of this city, last Saturday evening, Mr. Frank P. Crandon, in an address on "The Misgovernment of Great Cities," said, as reported in one of the daily papers, that he would confine the business of municipalities to the tax-payers. In cities like Boston, where there are two legislative bodies, he would have the legislature of the State make one of them elective by popular vote, and the other by the vote of the tax-payers only. "Then, by and by, when you shall have come to the conclusion that only one legislative body is needful, you might decide to retain the one elected by the tax-payers, and abolish the other!" Or,

as to any one who is not now a voter, it might be determined that he should not hereafter be entitled to the municipal franchise, unless he be a tax-payer. Mr. Gamaliel Bradford, in some sensible remarks in reply, asked how men could be prevented from voting for city officers, and leave all other officers under their control. It ought not to be done, he said, and could not be done save by military force. If they limited suffrage in the cities, they would carry out the same principle, and limit it for the State government, and then in the country. He was in favor of universal suffrage. The Boston *Herald* remarks, in reference to Mr. Crandon's theory, "As no good cause can be served by cherishing illusions, it may be just as well to say now as at any other time that ordinary political development does not move in this manner; and hence the change suggested could only come at the end of what might prove a bloody revolution."

Less than three months have elapsed since Victor Hugo—patriot, poet, dramatist, novelist, statesman, and philanthropist—received, on the occasion of his eighty-third birthday, one of the greatest ovations vouchsafed to any genius at this stage of the world's progress. On Friday, May 22, he died. If, as a romance writer, he had planned for any of his heroes a death-bed surrounded and followed by such dramatic evidences of national affection, such tokens of heartfelt love, such world-wide interest in the individual as was manifested at his own demise, the story would have been discarded as overdrawn. It speaks well for the humanity of to-day, and its appreciation of a sincere devotion to principle, that it is capable of such a universal and spontaneous manifestation of admiration and sympathetic appreciation of such a manly man as, in spite of his little foibles and eccentricities, Victor Hugo assuredly was. His was a stirring, active, romantic, yet rounded and complete life. If he had had the management himself of the drama of his life, the curtain could not have rung down on the final act with more dramatic effect than circumstances managed for him. The street in front of the dying poet's house was thronged for many hours before his death with crowds of grief-stricken admirers and friends. A register of the names of those who called to inquire for him was placed outside the house, and people waited in line for hours to inscribe their signatures therein. A table, placed in the street for that purpose, was heaped with the cards of would-be visitors. Although the clerical papers denounce M. Lockroy, a relative, as being the instigator of his action, it was yet quite characteristic of Hugo that, when the Archbishop of Paris sent to offer to visit him and administer spiritual aid in his last moments, he should send reply, as reported, that "Victor Hugo is expecting death; but he does not desire the services of a priest." Flowers in profusion were sent, after his death, to the house. The Academy will send, as a deputation to the funeral, the last four members elected to the "Forty Immortals." M. Maxime de Camp is to deliver the oration.

WHAT SHALL BE DONE?

As the annual meeting of the Free Religious Association approaches, a special interest appears to be awakening in its proceedings. It is to be hoped that the interest will show itself in an increased attendance, and especially at the business meeting on Thursday evening. It has been too much the habit to give that meeting up to the mere formalities of hearing the annual reports and electing officers, with such desultory discussion as might arise on these matters; and not many persons have thought it important to attend. But the meeting might be made a valuable one. That is the proper time for considering the practical work of the Association, in respect both to what it has done and what it might do, and for comparing views as regards the possibilities of increasing its usefulness. The report of the Executive Committee for the year appropriately brings up all such questions. If any member has any criticism to make on past shortcomings, that is the time for it. If any one has any plan or thought concerning an enlargement of the scope of the Association's activities, let it by all means be there introduced. That is the time and place for a full and free discussion of everything pertaining to the interests of the Association. And it is much to be desired that such a discussion might be had at the forthcoming meeting. If there be any apprehensions as to the future of the Association, any misgivings concerning the present limitations of its work, any conviction that a change of methods or even of the Constitution might lead to a revival of interest and an increase of efficiency, let them be freely uttered and canvassed in open debate.

Two or three times within the eighteen years since the Free Religious Association was organized, the question has been raised among its members whether the time had not come for some new departure, or for the adoption of some more active mode of operations; and several attempts have been made in that direction, which have, however, for some reason, not brought the results anticipated. Perhaps a more favorable time for such new activity—perhaps, indeed, a greater need of it, in order to preserve the vitality of the Association itself—has now arrived. The Association has shown itself able to stand a large amount of criticism, internal as well as external, and need not fear the frankest expression of opinion. It is not to be assumed that any one of its members is more wedded to the existence of the Association itself than to the principles it was designed to stand for. The present writer, at least, though he helped the Association into existence, and has been one of its officers ever since, has no such tenacious adhesion to it but that he would willingly see it dissolved, were he to be convinced that it is only a cumberer of the ground, and really standing in the way of some other organization that could better do the work needed at this hour. The *principles* are what we care for, not for the organization *as such*.

But the constitution of the Free Religious Association is very elastic. Its articles bear no resemblance to the laws of the Medes and Persians. They may be altered. Possibly, they were so shaped by existing conditions at the time of their origin, and such modes of activity were then imparted by the same cause, that a considerable change may now be demanded in the interest of the very principles and movement which the organization was meant to serve. Let this whole matter be candidly considered. No more valuable meeting, in our opinion, could be held than one in which each member should state freely what the Association means to him (or her), what he

thinks it ought to do, and how set about doing it. Cannot the business meeting this week serve, at least to some extent, the purpose of such a conference? Again and again has the elasticity of the Association to the free, progressive spirit of the times been declared in the annual reports of the Executive Committee, as in the report as early as 1871 as follows: "We have come to that epoch when there appear very marked signs of progressive movement in several of the world's great religions on converging lines toward a common centre of faith and fellowship. It is this grand movement of the religious consciousness to which the Free Religious Association (in this feature of its work of which we now speak) would strive in some way to give voice. The Association does not expect to shape the movement: it does not profess to organize it. It rather is shaped and organized by the movement. It simply desires in some way to represent the movement, to give it utterance, to remove artificial barriers, dogmatic and ecclesiastic, in order that it may have a freer opportunity and a more natural progress."

Thus free to the spirit of change has the Free Religious Association always held its own plan of organization and its methods of activity. And how wide was the early conception of the scope of its work may also be indicated by a lengthy extract from the report of the Executive Committee for 1870, which may be reprinted here as worthy of consideration at the present time. Referring to the plan of that year's meeting, the Committee said:—

"They wish to show how vastly more comprehensive is the aim of the Association than merely to bring together into mechanical juxtaposition for a single day of the year representatives of different sects and non-sects in or out of Christendom. They wish to show that it seeks to reveal and develop those fundamental sympathies of the human mind with Truth, Justice, and Virtue, which, lying within and below all specific forms of religious belief, are the germs of all intellectual and moral progress, and in the free development of which the limits of specific religions and sects are to be passed over and obliterated, and mankind are to come into a moral and spiritual unity that shall not be mechanical nor artificially eclectic merely, but organic,—a vital assimilation of whatever is true and permanent in the creeds and codes of all religions and all races.

"Your Committee believe, indeed, that the Free Religious Association has a great mission before it, if it only take the opportunity presented to its hands. The very atmosphere of our age is impregnated with the germs of the mightiest social and moral problems. And this country, from the freedom which it offers, seems to be the historically chosen field where these problems are to have their development. The old question of the relation of religion to civil government, which has generally been assumed to be a settled question in the United States, is coming up anew to demand a settlement on the ground of fixed, substantial principles, and not on the mere accident that a vast majority of the citizens chance to be of one form of religious faith. The question of the relation of religion to the public schools, with its still more subordinate question of the reading of the Bible as a religious exercise in the schools,—a question which is now just opening a gigantic struggle that is to extend through the country,—is but a part of this greater question of the connection between religion and the State, which lies behind, and where the real conflict must finally come. Involved with this are the minor conflicts in regard to Sunday laws, and the unjust statutes

in some of the States concerning legal oaths and the religious qualifications of jurors and witnesses in courts. Then there are the multifarious problems, speculative and practical, which are raised by modern science and philosophy, and which already, though crudely solved or not solved at all, are affecting the actual life of vast numbers of people. Add to these the great social problems that are now everywhere seeking of public opinion some solution,—as the demand for a new and more equitable adjustment of the relations between capital and labor; the agitation for a readjustment, in accordance with the new light and civilization of the age, of the relations between man and woman in the various functions of society; the search for better methods of meeting the evils of pauperism, intemperance, and crime of every kind; and, generally, the call for some more effective application of the intelligence, virtue, and culture that are anywhere stored up in individuals or families, or in favored portions of the community, to the conduct of governments, and to the improvement and elevation of society at large. And add still again the problem, both social and civil, which we in this country have to work out, of a nation which is to assimilate into its own life and institutions all religions and races of men,—which is to do justice and give citizenship to all,—to the African, the Indian, and the Mongolian, as well as to the Caucasian stock; to the Irish Catholic, the German sceptic, and the Chinese Confucian and Buddhist, as well as to the descendants of Protestantism and Puritanism. Such are some of the problems, aside from those more purely ecclesiastical and religious, which are put into the hands of America to solve. Now, if religion, out of its manifold historic career and experience, out of its claim to touch the deepest things in human nature and to represent man's grandest inspirations, has any aid to offer in the solution of these problems (and, if it has not, then it must indeed stand aside as a force that has had its day, and is no longer available in human society),—but if religion in any form can help forward the settlement of these questions, then, surely, the Free Religious Association, committed to the defence of no dogmas, untrammelled by traditions, having no lines of church authority to hold, utterly disincumbered of all ecclesiastical *impedimenta*, cordially allying itself with science, free to accept truth wherever and however found, and holding itself perfectly plastic to the spirit of the age, should be able to render some service in the struggle with these great problems whose solution is to determine the future of American government and life. Such is a hint of the opportunities which await the personal faith and fidelity that shall transform them into living forces and accomplished facts."

WM. J. POTTER.

THE CHURCH AS A MORAL AGENCY.

The miraculous basis on which the Church has rested her claims to the respect and allegiance of mankind having been pulverized and well-nigh destroyed, there only remains a moral basis on which a body can be founded. And it is obvious, if the Church is to endure and to serve mankind, that it must captivate the higher affections of men by an ethical tone and power far in advance of the current morality of average society. The Church must, in short, be an ethical pioneer, or it must cease to exist. If this is true, the attitude of the Church (under which generic term is included all the religious bodies) in England toward the great current questions is not such as to lead her well-wishers to anticipate for her any very brilliant future. In England, during the

past few years, especially during the past few months, the one great question, beyond all others, has been the question of international ethics, arising out of the relation in which England stands to so many foreign nations, and in particular to so many of the barbarous and so-called inferior peoples in different parts of the world. Unscrupulous disregard for the rights of the weak, in order to build up her empire,—this has been England's besetting sin: it is her most conspicuous crime at this hour. By this, it is not to be inferred that England is worse than other nations, that her sense of justice is less keen, that her sympathies are narrower. It may well be that, if France or Germany had played such a great part in colonizing as England has actually played, either of those countries would have violated moral law as much as England; while we know that the cruelties perpetrated by Spain have made of her a by-word and reproach among mankind. England, as the greatest modern colonizing nation, has certainly had fiercer temptations to oppression and injustice than any other country. But, still, the law of right is inexorable; and he who breaks must pay. At the bar of justice, England is a great sinner; and she cannot evade the coming penalties by urging that others would have done even worse, had they been in her place.

Perhaps the most abominable of England's crimes in modern times has been the campaign waged in the Soudan,—a campaign concerning which it is difficult to say whether even its wickedness was equal to its folly. I will not now dwell upon it, since every one is only too well acquainted with its details. It grew out of England's occupation of Egypt,—an occupation carried out by a Liberal administration in direct violation of its election pledges, and which has made of nearly every power in Europe an enemy of England. From the time when the British fleet was sent to Alexandria down to the present moment, the history of England's doings in Egypt and the Soudan has been one long record of blunders and crimes, relieved by scarcely a single bright feature. The main characteristic of this record has been its violation of justice and morality. Now, of course, this particular objection did not mean much to mere party politicians. The politician, as such, does not ask whether an action is right or wrong, but whether it is politic. He is concerned with the question of failure or success rather than with the question of justice or injustice. Few people, therefore, expected the English politicians to condemn these things: it was enough that the party chiefs approved, and that opposition would involve the downfall of the government responsible for these enormities. A few honest public men protested, but their protests were almost drowned in the meaningless shout of support sent up by the party wire-pullers and the party press.

But England is a Christian country,—save the mark!—and is filled with churches and chapels, in each of which is a pulpit with all furtherances and appliances for the teaching of moral truth. Was it not the duty of the spiritual guides in these sacred edifices to denounce the crimes of the secular rulers, and to lead the people into the paths of righteousness? We know that in the great days of the Catholic Church the spiritual leaders of the people did perform these functions. We know that in this very England Anselm denounced wickedness in high places, and Stephen Langton stood up for popular liberties against a despotic king. We know, too, that in the early days of Protestantism Latimer rebuked Henry VIII. There are some good precedents, therefore, for a precedent-loving people like the English.

And yet, from the time of the bombardment of Alexandria down to the massacre at Hasheen, nearly every clergyman—Episcopal or non-conformist—throughout England has been, as the *Pall Mall Gazette* very truly said, a "dumb dog." There have been some noble exceptions, but so few as to be quite inconspicuous. Nay, they have not been dumb altogether: it would have been a little more to the credit of some of them, if they had. For the archbishops and many of the bishops of the Anglican Church have produced what I heard Prof. Beesly describe as "disgusting effusions," giving thanks to some deity framed by their own imaginations, and presiding over British interests, for the success which he was pleased to vouchsafe to the Gardner guns and Martini-Henry rifles and other civilizing agencies used by the British troops. One bishop was considerate enough to put in a word for the brave for "rightly struggling to be free," but the majority were evidently thinking of a god who might be supposed to be closely identified with the business interests of John Bull & Co. The Archbishop of York, indeed, boldly claimed his god as a fighting agent on the British side, when Wolseley's troops decimated the ranks of the poor, yielding, terror-stricken Egyptians. And the Archbishop of Canterbury spoke as if, every time Gordon handled his "lovely Krupp guns," the Deity were employed in guiding his arm. The Anglican clergy generally have, of course, been the worst offenders in this business; but the majority of the dissenting ministers have been almost as bad. They were never tired of denouncing the hated Beaconsfield: they had not a word to say against their hero Gladstone. This seems to show that they were moved much more by mere partisan feeling than by any profound devotion to justice. Many of them shrank from offending the local tallow-chandler or cotton-spinner on whom their position depended, and who was a prominent man in the local Liberal caucus. So we see the principal religious organizations of England tacked on, so to speak, to the conventional institutions, and converted into mere bulwarks of ordinary *bourgeois* morality. These bodies speak with no power, compelling men to listen by its inherent divinity, even though the words cause terror and searching of hearts. The churches of England exist mainly to keep things quiet and to support the *status quo*.

If we want to see the noble rashness, the contempt for snug conventionalism, and the defence of simple right which characterized the Church in its better times, we must turn to the heretics. In this crisis of English history, they have, for the most part, been true to justice. While the "dumb dogs" have failed to arouse the sleeping nation, the heretical watch-dogs have been on the alert. Secularist, Socialist, Positivist, and some of the best Unitarians and liberal Christians have done good work for peace and justice. It would be invidious to name names; but I cannot help referring to the manly and devoted conduct of Mr. Page Hopps, of Leicester, and to the perpetual protests of the Positivist Society in London. They show us that there is a living church of humanity in this country yet.

Nor we cannot help concluding, from a review of this whole episode, that the ideas upon which the Church is founded have lost their hold upon the public mind. The Church as it is, with its *Aberglaube* and its relics of early Semitism, cannot cope with the difficulties, cannot meet the needs of our new civilization. I am not contending that Socialism or Secularism can do this, either. I find grave defects, as a matter of fact, in both these faiths now so energetically preached in England. But the Church has broken down, palpably and

manifestly: she is unequal to the task of guiding the conscience and thought of our time. Either the clergy ought to deal with public questions in their moral aspects, or they ought not. If they ought not, on the ground that the Church is merely an instrument for securing the salvation of the private soul and its happiness in a future state of being, then the Church must fall in pieces. It is inconceivable that an organization which does not concern itself with nine-tenths of the actual daily life and concerns of the modern man should endure. Catholicism, in its great days, claimed dominion over the whole life; and the coming faith must do so, too, only it must reconcile itself with science and democracy. It must inspire men with visions of a nobler ideal, and must endue them with power to press on to its attainment, even though that ideal should never be realized. Can the Church do this? The signs are not promising; and, consequently, it would be indulging in too great optimism to expect that new springs of life will be found within it. But, if the Church cannot, new societies, pledged to redeem man's life from fraud and lies, must arise. Transformation or revolution is at hand.

WILLIAM CLARKE.

MONSIEUR MONSABRE AT NOTRE DAME.

During Carême, a good deal of masquerading still goes on in Paris, though it steadily diminishes under the Republic. This year, we have seen antique costumes on the streets in wagons and chariots, each otherwise decorated with advertisement of its owner's business. The gods and fairies can only reappear for a utilitarian purpose; and, in some cases, the purpose seems questionable. In Berlin, I noticed architectural and other transformations, since I saw it in 1867, traceable to the tropical effect of the milliards paid by France for the late war undertaken with "a light heart." A corresponding but sadly different effect of that pecuniary transfer is visible in Paris. It has been too much pinched, and has not got over it. When M. Thiers was first negotiating about the indemnity, he said, "You may have all the money we possess, but not a foot of our territory nor a stone of our fortresses"; but, when it came to the possibility of those alternatives being actually offered, he privately said (the fact has just come out), "Let us part with our provinces rather than our money; for, if we keep our money, we can buy our provinces back." In the end, both provinces and money—most of it—had to go; and it is plain that the money was the more real loss. It has been coined out of the mirth and health of the people: it has left them with knit brows, clutching hands, and pessimistic instincts. So their fairies dance for money, their old gods advertise a new soda water or vermifuge.

The most interesting masquerade I saw during the Carême was in Notre Dame. There, an ingenious and eloquent scion of the defunct nobility, turned preacher, was evoking the dogmatic demons and cowed phantasms of the Past, and causing them to pass in weird masquerade every Sunday afternoon. There is in France still a nation in which titles are not abolished,—the nation whose presidency is in Rome. "Monseigneur" is still a big word in the French Catholic mouth; and it is not impossible that the politically annihilated caste may more and more repair to the one profession which respects hereditary title, and can offer it promotion and power in payment for service. A pulpit crossed with a coronet is yet a valuable heraldic device. This ablest and newest clerical lion, my Lord Monsabré, Carême preacher at Notre

Dame for 1885, has his reward. The Catholics fairly shout his praises; he is declared the successor of Massillon, Bossuet, and Lacordaire; his portraits and sermons are hawked about, and also something that purports to be his biography, but is only an expanded puff. However, I am far from thinking poorly of this M. Monsabré. I went to hear him, and, so far as I could follow him, was impressed by a manliness in his position, as well as a certain sincerity in his tone and treatment. He is a much more satisfactory product of Catholicism than Pere Hyacinth, who carries on here a poor trade in Catholicism-and-water, though he is not such a natural orator as the latter. Monsabré does not dilute his dogmas. As Canon Liddon in England can sway an audience better than any Broad-Churchman by having the courage of his creed, so touching the popular love of honesty, so this uncompromising French champion of discredited dogmas gains a hearing never accorded to Mr. Facing-both-ways. For the rest, he is a good-looking, good-sized, eupeptic priest, with a vigorous voice and a Methodistic manner. For many years, however, I have observed that French Catholic preachers cultivate several manners, having to make up for the lack of the sect varieties known in most other countries. They must do up the Methodism and the Quakerism, as well as the ecclesiasticism. Monsabré gesticulates rather too much, but he does not rant. The vast crowd, paying from three to six cents each for seats, waits a long time before even the music begins. It listens to the orator with silent interest, but I did not observe any indication of their feelings being touched or their fears awakened. Perhaps I may have been among those too far to be reached by the preacher's magnetism; but I suspect that the preacher is too didactic and argumentative in his tone through the greater part of his sermon to put his audience in a right frame to receive his pathos. He preaches too much about science and scepticism,—out-of-door enemies. If any unbeliever goes to hear him, it is likely to be only for the sake of studying the phenomenon of an educated gentleman, who, in this agnostic time, is perfectly familiar with all the ideas, plans, arrangements, and feelings of a completely comprehended deity. Though the Monseigneur speaks extemporaneously, his sermons are carefully elaborated. He never argues with Protestantism, passes by with contempt its efforts to harmonize the Bible with modern ideas, and frankly grapples with a dummy rationalism, not frankly manufactured, adapted to fall beneath his blows. He is essentially a man of sentiment, but intellectually a special pleader; and, though his illustrations and anecdotes are striking, they bear the marks of made evidence. They are so clever and complete and neat in every part as not to excite suspicions which chill their effect. Here, for example, is one of his stories, illustrating the sublimities of the Confessional, from a sermon I bought at the door. "At the end of the bloody Revolution which made so many victims, a beggar was dying. Till then, by his callous and savage silence, he had thrown an impenetrable veil over his sad life; but, recognizing the hour of God approaching, he believed that it was time to reveal the secrets of his conscience. He called for a priest; and there was sent him a man still young, whose austere garb covered profound sorrows. 'My friend,' said he, 'you have asked for me.' 'You or another,' said the other: 'listen to me, and try not to curse me!' Then he began the narrative of his crimes. He had been servant in a pious and noble family, which had covered him with benefits; and, when the evil days came on, his ungrateful heart had repaid them with treacheries, robberies, and cruel-

ties. He had revealed the retreat of his employers, and by infamous denunciations delivered them to the hands of the revolutionary bureau. Uttering blasphemies on the way, he had conducted them to the scaffold, and received, as the price of their blood, the property of which they had made such noble use, but which he soon dissipated. 'Monster that I am,' cried the dying man, 'so fair, so good a master and mistress!' Then he opened a medallion, and showed the priest their portraits. Horror! the minister of God recognized his own father and mother. There followed a fearful scene. The priest, erect, pale, trembling, his eyes on fire, gazed on the murderer of his parents; and the dying man, like a spectre, raised himself on his pallet, and, presenting his breast naked and emaciated, cried, 'Avenge yourself, avenge yourself!' But the priest remembered that he was more than a man. Falling with tears on the neck of the murderer, and placing a crucifix to his lips to stop the cries of his despair, he said: 'My friend, my brother, my son, you are deceived. I am Jesus Christ, and Jesus Christ pardons you.' Long did these embraces continue; and the beggar died, pardoned and blest, in the arms of him whose life he had desolated."

I have translated the preacher's words with care; and it will be seen that he would be an artist, if he only knew how to conceal art. As it is, he must be accorded the credit of a fair pulpit novelist. The plot of the above is not bad, though so improbable. The next translation I make is from a sermon on repentance. A French sermon on repentance without anything about the interesting Magdalene—almost the French Madonna—were an impossibility. Having described sin as "the offence against God," "the loss of God," the thing that "makes man an enemy of God and God an enemy of man," the preacher continues: "Oh! who would not be sorrowfully moved in beholding the depths of sin? Who would not detest it more than all imaginable misfortunes? Parents, friends, goods, peace, health, who would not renounce them all rather than commit sin? Sacred ranks of penitents, whose conversion God crowns to-day, you have comprehended sin; and therein have explained themselves this sovereign sorrow which has broken your hearts, these groans that have filled the entire world, these heroic sacrifices by which you express your supreme horror of evil. You were the dishonor of your family and the scandal of your people, O Magdalene! but, in the depths of your guilty soul made clear by grace, the deceitful love of creatures could no more find place. Riches, honors, amours, pleasures, beauty, all were cast without regret at the feet of the God you had outraged. He sees you prostrate near the Pharisees' table, the mark of their implacable railleries; he sees you bathed in tears and nearly expiring at the foot of the cross where fell the purifying stream of his blood; he sees you in that lost grotto, where, plaintive, stripped, lying on the naked ground, you passed thirty years of voluntary exile awaiting your home. Solitudes, deserts, sharp rocks, burning sands, habitable only by wild beasts, how is it that ye have heard the voice of men and been populous, to the envy of proudest cities? Horrible places! who then have been your friends? They were the fugitives of sin, the men of broken heart, full of sorrow and hatred for evil, more eager for the sufferings, because they preferred all things to the frightful calamity of offending God. They have put so much love into their repentance that it has devoured their sin as fire devours forests when the lightning has struck."

I was reminded of this passage when visiting

an exhibition of the pictures of Delacroix, now attracting interest in Paris. Among the sacred pictures was one of the crucifixion, in which the spectator's attention is equally demanded by the sufferer on the cross and (to put it mildly) an extremely *décolletée* Magdalene at its feet. This penitent Venus of the grotto, so carefully imported to supersede the cult of the pagan goddess in the south of France, has given us our word *maudlin*; but she still displays together her ever-youthful charms and tears throughout France, and carries on her pious seductions alike in pictures and sermons. This reverend Monseigneur, it will be observed, has somehow discovered that the Magdalene had, not only riches and beauty, but "honors" to lay at the feet of Jesus. The honors he alludes to have been awarded in France, where, for example, a miracle, wrought at her traditional grotto near Arles, is said to have converted an early king, and influenced all history; but what appears to me the real honor due her is not mentioned,—namely, that on a vision of hers rests the resurrection of Christ.

The congregation in Notre Dame is very large, but one wonders where it comes from. They are not, like our Salvationists, seeking a Sunday amusement denied elsewhere. They do not seem to be the poor one meets about the streets, nor yet the wealthy one sees at the opera or in fashionable companies. There is, evidently, a pretty large stratum of Catholicism in Paris, despite the fact that even a theist can hardly be found in the legislature, and a Christian scholar is liable to the suspicion of coveting notoriety. It has at least possessed sufficient social strength to bring M. Andrieux to his knees, with apologies for his official—and he pleads compulsory—part in breaking up illegal Catholic institutions. If the fallen *noblesse*, imitating this eloquent Lord Monsabré, should universally ally themselves with the slowly falling priesthood, it is possible they may yet give severe battle to the free-thinking Republic. It would be a literal battle, and a terrible one. That which is preached at Notre Dame as religion is dealt with at the college near by, the Sorbonne, as disease or insanity. At Salpêtrière hospital, Dr. Bournville has epileptic patients who weekly undergo fits of penance, crucifixion, beatitude. It is to be hoped that the number of these "possessed" ones will not greatly multiply. Dr. Laborde, in his recent work, *Les Hommes et les Actes de l'Insurrection de Paris devant la Psychologie Morbide*, shows that a people may become insane as well as an individual. The last outbreak of the Commune has supplied him with his chief illustration. Carl Vogt has given a similar explanation of the anti-Semitic frenzy in Germany and Russia. A recrudescence of anti-heretical madness in France is improbable so long as the reactionary parties are divided; but, should they coalesce, there might be danger.

MONCURE D. CONWAY.

DOES VIRTUE PAY?

The funny story called *Tommy*, which *Littell's Living Age* has recently copied from *Blackwood's Magazine*, presents some curious moral and theological problems. The hero, Robert Flopjohn, keeps trying to be as unselfish and upright as Tommy and the other good little boys in the Sunday-school books. He gives up all the property he inherited from his mother, in order to pay his father's debts. He runs away from his first place, that of private tutor, without drawing his salary, because he will not give way to his passion for a beautiful heiress who, he knows, loves him with all her heart. A second tutorship he re-

signs, because he does not succeed at once in turning his rough young pupils into scholars and gentlemen. Then he becomes head of a school where he finds all sorts of abuses established; and these he attacks so recklessly as to call out a general dislike, which at last drives him away on account of his punishing some boys with unlawful severity for an offence committed outside of his jurisdiction. The rector employs him to copy his sermons for the press; but he tries to improve them, and is at once discharged. So he is, by his last employer, a supervising architect, whom he lectures for conniving at frauds of mechanics in building a house. He has no money, no friends, and no prospects left him; and he thinks he has followed Tommy long enough. The ink-injector of the architect's stylographic pen falls in his way. Instead of returning it, he uses it to blow road-dust into people's eyes, as a remedy for all diseases. This quackery succeeds rapidly, and he becomes immensely rich.

Improbable as the whole story is, especially the conclusion, we have only to look around us to see plenty of facts almost as puzzling. We all know poor, honest Flopjohns and prosperous knaves. Useful labor is done for wages reduced almost to starvation limits; while harlots, gamblers, and rumsellers prosper, and wholesale robbery, that barely keeps within the law, makes millionnaires. It is not the hard-working farmer, or mechanic or teacher, but the fraudulent bankrupt, the extortionate contractor, the stingy manufacturer that we see living in palaces and feasting on luxuries. Socrates drinks hemlock; Joan of Arc, Servetus, and Bruno are burned alive; Madame Roland mounts the guillotine; Arnold of Brescia, Savonarola, and John Brown hang on the gallows, and Jesus on the cross; while Cæsars, Borgias, Stuarts, Bourbons, and Napoleons are exalted to the throne. It certainly does not look as if the great unknown power had any strong desire to reward virtue and punish vice. We might almost say that God and man conspire together to persecute righteousness and pamper iniquity. No wonder that Danae, the Epicurean, as she was led to execution for having saved her lover from a tyrant's wrath, exclaimed, "Men do right to despise those gods who let me die for this!"

But let us look more closely at the facts. Julius Cæsar and Napoleon Bonaparte could not have made themselves emperors, if they had not had an unusual power of dealing with men and things. Our American millionnaires became so by being uncommonly shrewd, sagacious, and enterprising. They were more successful than their neighbors in meeting the wants of people who wished to buy goods or travel on railroads. They knew how to furnish the community cheaply and rapidly with what everybody wanted. We should all be in poverty and misery, if we did not reward with riches those who know how to supply our necessities. So the world sometimes wants a strong hand at the helm so much, as to be glad to give a throne to the man who can best keep his seat there. We should all go to ruin, if practical ability were not allowed to succeed. Now, it was precisely the want of practical skill that made Flopjohn fail. All his dealings with his employers show such inability to understand human nature as must have made it impossible for him to succeed anywhere. His attempts to reform his school were carried on with a reckless indifference, not only to his patrons' prejudices, but to the laws of the land, which made his dismissal just. It was not merely because he was a Tommy that he failed, but because he was such a very soft Tommy. The only thing hard to make out is how he could possibly have succeeded by any

means, however wicked. His dusty, dirty scheme must have ended like all his other plans.

But does not this story show that there is some necessary connection between virtue and folly? No, indeed! In the first place, they have no common cause. Vice and folly may both be traced to inability to understand and obey those great laws on whose observance depends all our happiness. Read the records of crime in the *Newgate Calendar* or Dugdale's *Jukes*. These books deal mainly with those indolent, extravagant, short-sighted, self-indulgent fools, who gravitate first into pecuniary trouble and then into crime. For one Carker, or Uriah Heep, or Ralph Nickleby who commits a felony, there are a dozen Dick Swivellers, or Wilkins Micawbers. That such an addlepate as Flopjohn should finally become a professional swindler is just what was to be expected. The strangest thing, next to his succeeding so well in his knavery, is his waiting so long before taking it up. It should be noticed that he ascribes his own ill-success largely to his unpractical education. Perhaps no schooling can give any one worldly wisdom; but, certainly, our high schools and colleges might be made less likely to hinder its acquirement. We should at least take care that the graduates of these institutions are not any less able to earn their own living than when they went in. Train young men and women to support themselves honestly, and there will be little danger of their seeking vicious ways to wealth. Prof. Sophocles used to say: "Why do people praise robbers and pirates? We know better than that in Greece. We say, when a man turns robber or pirate, that he has not sense enough for anything else."

Practical training will make even stupid people useful members of society, provided they are not incurably vicious. I think I have read that

"It takes, as a general rule,
At least half a knave to be wholly a fool."

Flopjohn, though not at first to any extent a knave, was very far from being what I call a good man. Morality requires paying proper respect to the rights of others. He was acting immorally when he altered the manuscripts he had agreed to copy. So he was when he violated the laws which told him when he might punish his scholars, and when he should not. The girl who loved him and offered to marry him, had a right to expect that he should be faithful to her. When he ran away from her, he left, not only his happiness and hers, but his duty also. We certainly cannot say, as I believe Burgoyne did in a comedy acted by British officers in garrison at Boston and New York,—

"A woman should obey the moral law,
Nor dare to marry till she's asked her pa."

Our hero kept trying conscientiously to follow lofty principles; but he had set them so high that, while he was staring at them, his feet were wandering into forbidden paths. He began by recklessly sacrificing real duties to imaginary ones; and, therefore, he ended by deliberately repudiating both. Nothing does more to encourage lax conduct than preaching impossible principles. This is particularly true of self-sacrifice, as it is usually taught and as Flopjohn practised it. He was really too unselfish to be highly virtuous. No one has a right to sacrifice his own happiness except to increase that of some one else. Herbert Spencer shows that, if we all thought only of making sacrifices, there would be no one to take them, and social progress would be at a dead-lock. The actual result of the conventional demand for sacrifices is that some are constantly making them, and others are accepting them without giving any return. But making sacrifices

involves not only physical, but intellectual loss; and receiving them without return is morally degrading. If every one were either offering or receiving sacrifices, we should have one-half of the world ruining itself, physically and intellectually, in order that the other half might be ruined morally. Somewhat of this nature, though not to this extent, is the result of women's generally obeying the pulpit injunctions to self-sacrifice, which men usually disregard. Thus, women are kept half-educated and in bad health, while men remain self-indulgent and oppressive. Wisely did the suffragists vote, eight years ago, as recently mentioned in *The Index*, that the lessons of self-sacrifice taught to women by the Christian Church have been contrary to the duty of self-development and the progress of the race. I do believe in self-sacrifice, but only when the general welfare is thus increased. We are to find our own highest happiness in that of our neighbor's, and we are also to remember that one of the surest ways to make others happy is to keep so ourselves. Universal welfare is the true standard; and among the means to realize it are self-culture, respect for others' rights, and due use of all opportunities to promote our own happiness without diminishing that of any one else. Such virtue does not go without reward.

F. M. HOLLAND.

"AN AUTOBIOGRAPHY."

The publication of Charles Bray's book with this title, and the sub-title, "Phases of Opinion and Experience during a Long Life," is the more interesting from its near coincidence with the publication of *George Eliot's Life and Letters*. The side glimpse of her character and personality is aggravating in its brevity; but, so far as it goes, it is one of many contributions to our fuller knowledge that must be taken in connection with Mr. Cross's admirable book in seeking an impression of her total faculty and disposition. Mr. Bray's mention of her is in connection with Emerson's visit to Coventry in 1848, when his intimate relations with her, which were of nine years' duration, were nearly at an end. The way in which Emerson's visit is spoken of is a fair sample of Mr. Bray's manner, which is frankly egotistic, so frankly that it pleases rather than repels: "A Coventry gentleman, meeting Emerson in the north soon after his arrival in England, invited him to visit the old city. Emerson replied that, if he came to Coventry, it would be to see Charles Bray, the author of *The Philosophy of Necessity*. Emerson was seized by a party of Stratford friends, and carried off to Shakspeare's tomb. Miss Evans was one of the party, and, in one of her letters in the Cross biography, pronounces him 'the first man she had ever seen.'"

Mr. Bray found in Miss Evans (his intimacy with her ended before she was either George Eliot or Mrs. Lewes) the most delightful companion he had ever known. "She knew everything. She had little self-assertion: her aim was always to show her friends off to the best advantage, not herself. She would polish up their witticisms, and give them the full credit of them. But there were two sides: hers was the temperament of genius, which has always its sunny and shady side. She was frequently very depressed, and often very provoking, as much so as she could be agreeable, and we had violent quarrels; but the next day, or whenever we met, they were quite forgotten, and no allusion made to them. Of course, we went over all subjects in heaven or earth." Mr. Bray claims to have laid the foundations of her philosophy. In 1844, when they were both much interested in phrenology, a cast was taken of her head. Her

head was large, twenty-two and one quarter inches round. George Combe, on first seeing the cast, took it for a man's. Mr. Bray's reading of her "bumps" is nearly what it might have been if he had allowed himself to be benefited by his knowledge of her character. "The social feelings were very active, particularly the adhesiveness. She was of a most affectionate disposition, always requiring some one to lean upon, preferring what has hitherto been considered the stronger sex to the other and more impressible. She was not fitted to stand alone." It is not difficult to understand why Mr. Bray and Miss Evans had some fallings out. There was no gradation in his thought, no light and shade. He had none of her ability to see the other side, none of her patience to hear it.

"Rosehill," Mr. Bray's first home in Coventry, must have been a very pleasant place, "when the bear skin was under the acacia," or at any season of the year. For all his dogmatism, he was a hearty, genial spirit. A good many people who were wise and useful in their generation were attracted there, George Dawson among them, the lecturer and preacher, and George Combe, whose devoted wife sometimes dropped asleep in the middle of his discourse, her head inclined toward him in a reverent attitude of attention. Mr. Bray's sympathy with Combe's phrenology does not make it any easier for him to understand how he could have written his *Constitution of Man* in a "fever of enthusiasm." His own faith in phrenology did not wane nor waver with the lapse of years. He disposes of some of the common objections to the system in a satisfactory manner. Some of his phrenological readings are exactly in a line with what we know of the persons characterized from the usual sources, but others are surprising and apparently absurd. Of Dickens, we are told that "his strongest feelings were love of approbation and acquisitiveness, and he literally killed himself in their gratification, unrestrained by the controlling power and higher motives which a larger coronal region of the brain would have given." So much is proved by the last volume of Forster's sad biography of his friend. But what shall we say to the statement that Napoleon III. had a large organ of conscientiousness, Gladstone a small one? "That phrenology is wrong," suggests Mr. Bray derisively. Yes; or that the less conscientiousness a man has, the better. But Mr. Bray was a believer in Napoleon the Little and in the Second Empire to a remarkable degree.

Mr. Bray's account of his opinions and experience is so rapid that it never for a moment wearies us, except for the very reason that it is so rapid. It is never dull. He was not so much older than George Eliot as we imagined from her biography. He was born in 1811. Articled in London at the age of seventeen, he was shortly afterward "convinced of sin." Returning to Coventry, his Calvinism suddenly broke down under the influence of a Unitarian minister who was often in his father's house, but, with it, all supernatural religion. Then came a year of anarchy, and then what he denominated his "reconversion,"—namely, to the "Philosophy of Necessity." His book which bore this title was not published until several years later. This book was his *magnum opus* in his own estimation, and he insists with an amusing frankness on its relative and absolute importance. But his first publication, *The Education of the Body*, met with a more favorable reception than any of his later works. It met a popular need, and it did not obviously run counter to the prejudices of the majority. His second book, *The Education of the Feelings*, was strongly marked by his phrenological opinions. The latest edition of the book was injuriously affected by an additional

chapter on "A Moral System for Secular Schools," which was a plea for absolute secularization. But it was upon his *Philosophy of Necessity*, first published in 1841, that Mr. Bray based his claim to general recognition as a benefactor to mankind. Whatever the value of his system, it brought with it a singular peace to his own mind; and, certainly, it never made him less energetic in good works. It made him a soft creditor and a lenient judge. A more genial optimist it would be hard to find. He speaks of his system as "making known God as the Universal Father, revealing himself in a language that cannot be misunderstood or misinterpreted." It is possible that such phrases betray a certain weakness common to all innovating theorists,—a desire to make their theories more palatable than they are likely to be without some spice of old associations. Mr. Bray's most prolific correspondent for twenty years, often writing him two or three long letters in a single month, was Mr. H. G. Atkinson, Miss Martineau's friend and collaborator. Drawn together by their necessarian morality, they differed widely in their philosophy of matter, Atkinson being a materialist and Bray an idealist. We have here one of many illustrations of the comparatively formal nature of this distinction and of its moral indifference.

Mr. Bray's life was one of plain living and high thinking, if not the highest. In 1856, he retired upon a competency of £400 a year, which was afterwards considerably reduced. Nevertheless, it seems to have been sufficient for his purposes. Reading and writing, much "given to hospitality," and deeply interested in all matters of immediate local and larger public interest, he slipped down the western gradient of life with a becoming dignity and grace. His book discourses with good-tempered and serene garrulity of many things,—Mesmerism, Spiritualism, the Organization of Labor, "The Future Life." There is an appendix made up of brief and pointed utterances on a great variety of themes. Death, which he did not fear, and from which he expected nothing but eternal rest, came to him Oct. 5, 1884. Three weeks before, he had written a postscript to his autobiography, in which he had reiterated his confidence in the destruction of the individual and his opinion that nothing better was to be desired. His ruling passion as a writer was for quotation, and it was strong in death. His last quotations were certainly among the best. "We live in the Eternal Order, and the Eternal Order never dies." This is one of them, and the other is from a "Panthéist's Song of Immortality":—

"Yes, thou shalt die; but these almighty forces,
That meet to form thee, live forever more:
They hold the suns in their eternal courses,
And shape the tiny sand-grains on the shore.

"Be calmly glad, thine own true kindred seeing
In fire and storm, in flowers with dew impeared;
Rejoice in thine imperishable being,
One with the essence of the boundless world."

JOHN W. CHADWICK.

EIGHTEENTH ANNUAL MEETING OF THE FREE RELIGIOUS ASSOCIATION.

The Eighteenth Annual Meeting of the Free Religious Association will be held in Parker Memorial Building, Boston, Mass., as follows:—

Thursday evening, May 28, at 7.45 o'clock, business session for the hearing of reports, election of officers, etc.

Friday morning, May 29, at 10.30 o'clock, address by the President, followed by addresses from Mr. W. D. Le Sueur, of Ottawa, Can., and Rev. M. J. Savage of Boston, on the question, "Is a Scientific Basis for Religion Possible?" After

these addresses, the subject will be open for speeches, not exceeding ten minutes each, from the floor.

Friday afternoon, at 3 o'clock, the Rev. R. Heber Newton will address the meeting on "The Religious Aspect of Socialism." During the afternoon session there will also be ten-minute speeches from Mrs. Anna Garlin Spencer, Giles B. Stebbins, John Orvis, Henry B. Blackwell, George E. McNeill, Frederic A. Hinckley, and others.

The annual festival will be held in the Meisnau, Tremont Temple, Friday evening, commencing at 6.30 o'clock. R. Heber Newton, W. D. Le Sueur, Wm. J. Gill, H. W. Holland, Mrs. E. D. Cheney, Miss Mary Eastman, W. J. Potter, B. F. Underwood, J. K. Applebee, and G. N. Hill will be among the speakers. Music, including quartet and solo singing, will be furnished by the Temple Quartette. Mr. H. L. Bateman, first tenor; Mr. F. E. Webber, second tenor; Mr. H. A. Cook, first bass; Mr. A. C. Ryder, second bass; Mr. Howard M. Dow, pianist.

Tickets, with reserved seats at tables, at \$1.00 each, may be obtained at *The Index* office, No. 44 Boylston Street, Boston.

F. A. HINCKLEY, Sec'y.

EDITORIAL NOTES.

BY B. F. U.

ONE who has a grievance, and dwells on it, magnifies it, and talks about it to every friend he meets, is liable to become a bore.

"THE Effects on Society and the Individual of Increasing Specialization" will be the subject of an address, by B. F. Underwood, before the Parker Memorial Science Class, next Sunday at 12.15 P.M.

LILIAN WHITING, in a letter to the *Chicago Inter-Ocean*, says: "It is vaguely rumored that President Eliot's tour to Europe—where he will remain a year—is to be a graceful way of closing his connection with Harvard University. As I have written you before, President Eliot, while an accomplished scholar and most estimable gentleman, is not up to the times as a Harvard President should be." The general impression, and we think the correct one, is that President Eliot is rather in *advance* of the times.

In a letter to Mr. S. B. Weston, Mr. O. B. Frothingham writes: "Since leaving the profession, I have been more and more convinced that the era of Transcendentalism is passed, and that the social epoch has arrived. The next step, in my judgment, will be the reorganization of society under the action of purely ethical principles, of which Mr. Adler is the leading expositor. If I had the energy and courage of a few years ago, I should throw myself into this new movement; and it gives me pleasure to know that one who has listened to me has struck into this new path."

LEANDER WETHERELL died in this city last week, at the age of seventy-four. He was a teacher in Rochester, N.Y., from 1840 to 1853; editor for several years of the *Amherst (Mass.) Express*; in 1856, he was made assistant secretary of the Massachusetts State Board of Agriculture; from 1859 to 1866, he edited the *Boston Cultivator*, and for several years has been a writer on agricultural subjects for the *Boston Traveller* and *Post*. He was well known in New York and Canada, as well as in New England, as a lecturer on agriculture. He was fond of discussion, and attended and spoke at liberal meetings held at Paine Hall and other places in this city up to the time of his last illness. He possessed many estimable qualities, and will be missed by his large circle of friends.

MR. MASKELYNE, a well-known investigator of Spiritualism and "crusader against Spiritualistic phenomena," has been interviewed by a representative of the London press. Says the *Week* (Toronto): "Among the Spiritualists, he will acknowledge only two classes,—impostors and dupes. Even Prof. Crookes, who attempts to examine these phenomena with scientific exactitude, receives very scanty indulgence from Mr. Maskelyne. But, amid so vast a mass of deception and fraud, he admits that, after twenty years' experience, he cannot account for 'table-turning.' Everything else, no matter how wonderful, he has been able to produce, and even improve upon, either by leg-erdmain confederation or mechanical contrivance. But movements of the table he has seen produced, and has assisted in producing, which could not be accomplished by the same persons with the utmost exertion of muscular force. He refuses to acknowledge the explanations of Faraday as sufficient; and though, of course, he does not accept the spiritualistic explanation, he believes in some kind of psychic or nerve force hitherto unexplained."

LAST week, Rev. A. J. Gordon, D.D., Baptist, Rev. H. L. Hastings, Adventist, and several others, were before the Boston Municipal Court for preaching on the Common without a license, and were fined ten dollars each. Judge Adams said that it was not a crime involving moral turpitude, it was made a crime by the city. The prosecution was made to determine whether the city authorities can have such control as is desired over public grounds. The propriety of such an act can be seen, if the city government has the power to make it, as many objectionable people go on to the Common, and make harangues to disturb the peace. It is advisable to have some restrictions; and it is a simple thing to get a license, if any reputable person desires one. An appeal was taken in each case; and it is understood that in the Supreme Court the proceedings will be *pro forma*, in order that the point at issue may be passed upon by the highest legal tribunal of the Commonwealth. We doubt the wisdom of prohibiting speaking on the Common without a license. Addresses there are not likely to disturb the peace except in rare cases, and then the police can always be called upon.

THE eleventh general convention of the Free Religious Congregations of Germany will be held in Brunswick, June 9, 10, and 11. The first public session will be occupied with the condition and prospects of these organizations; for instance, their decline in membership, their political affinities, their legal rights, and their pecuniary losses through lack of corporate security. In the second session, the relations of morality to religion will be discussed on the basis of the following propositions, presented by the Berlin Congregation: Religion is the conscious relationship of man to what he has considered the highest (God), and which we recognize as the World, or Universal Nature. Morality is the practical realization of this conception of the Divine. Morality, or practical Religion, is a duty which we should strive earnestly to fulfil. Morality first appears in man with that stage of development at which he is able to consider himself personally responsible. Where there is no such consciousness, there can be nothing that is morally right or wrong. The individual is responsible to the community for his moral condition, but only in part; for the community also is responsible for some part of it to the individual.

THE death of La Roy Sunderland at Hyde Park, on Friday last, at the age of eighty-three (lacking three days), removes one who was prominently

before the public, in connection with various reforms, for many years. In early life, he became a Methodist minister, and was a successful revivalist. Thirty or forty years ago, he was well known as a lecturer on temperance, Mormonism, slavery, and especially on mesmerism, or, to use his own word, "pathetism," a new system of mental science, which he claimed to have discovered, and which he illustrated with experiments. He was successively editor of three papers, one of which, if we mistake not, was the first paper devoted to modern Spiritualism published in this country. The names of his last two papers were the *Magnet* and the *Spirit World*. He subsequently conceived a great aversion to Spiritualism, and, regarding it as a baneful superstition, wrote against it. He was a few years ago elected an honorary member of the London Philosophical Society, in consideration of his writings on mental science. Up to within a few weeks of his death, he was a contributor to the *Investigator*, *Monroe's Iron-clad Age*, and other anti-theological papers. Says the *Investigator*, whose editor delivered his funeral address, "He met the final hour with the composure and resignation of a philosopher; and, by all who knew him best, he will be long and kindly remembered."

AS WE suspected, the stories put in circulation by Braden, a Campbellite preacher, in regard to the immoral character of the population of Liberal, Mo., are without foundation. The statements are denied by physicians, clergymen, and others, living in Barton County, who disavow any sympathy with the religious views of the community. Rev. John A. Pool, a Baptist minister, says: "I am a minister of the gospel in the Freewill Baptist Church. I am well acquainted with G. H. Walser. He has lived in this city and county for many years; and he has always enjoyed the esteem and respect of those who know him, his best friends are those who have known him the longest. I am also acquainted with the people of Liberal; and, taking out their scepticism, they are as worthy the respect of the world as any people I know of or have ever known. Infidels as they are as to the teachings of the Bible, they have done what Christian communities in this country have failed in doing,—keeping saloons and places of intoxication out of their town. To this extent, Christian towns could well take pattern of Liberal. The charges of Clark Braden against the people are untrue. I do not believe that Christianity requires such services as rendered by Clark Braden in this respect." The *Liberal*, published at Liberal, of the 21st, contains a dozen or more similar testimonials from men who are evidently disinterested and trustworthy. Braden is an unreliable man, with a propensity for slander and abuse, which has brought him into trouble more than once in his own denomination.

For The Index.

NATHANIEL HAWTHORNE.

O rare, fine spirit, from the silent land
No message cometh, e'en from such as thou,
Who wore a crown of light upon thy brow,
And bore on earth a magic, potent wand,
Wielded with delicate and fairy hand.
Yet art thou ever with us still, I trow,
In minds, spell-bound, by fair creations now,
Who sprang to being by thy soul's command.
We call thee dead! but we who live can find
No way to send a token slight to thee,
While thou, with insight keen and matchless power,
Charmeth, through life's dull round, the weary mind,
'Tis thou who livest! Still thy witchery
Falleth on us with golden, precious dower.

ANNA OLCOTT COMMELIN.

The Index.

BOSTON, MAY 28, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, BENJAMIN F. UNDERWOOD, : : : : : } Editors.

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

The Constitution of the National Unitarian Conference.

Address at the Meeting of the Liberal Union Club, April 25.

BY EDWIN D. MEAD.

In all the editions of Channing, no doubt,—in the edition certainly circulated by the American Unitarian Association, perhaps its most representative book,—appear, as is well known to most here, certain extracts from a letter on creeds. In this letter on creeds,—I know not when written,—Channing declared that his aversion to creeds as bonds of union or conditions of fellowship constantly gained strength. "It has been the fault of all sects," he said, "that they have been too anxious to define their religion." "Who does not see," he asked, "that human creeds, setting bounds to thought, and telling us where inquiry must stop, tend to repress a holy zeal for the truth, to shut our eyes on new illumination, to hem us within the beaten paths of man's construction, to arrest that perpetual progress which is the life and glory of an immortal mind?"

"It is another and great objection to creeds," he added, "that they interfere with that simplicity and godly sincerity on which the efficacy of religious teaching very much depends. That a minister should speak with power, it is important that he should speak from his own soul, and not studiously conform himself to modes of speaking which others have adopted. It is important that he should give out the truth in the very form in which it presents itself to his mind, in the very words which offer themselves spontaneously as the clothing of his thoughts. To express our own minds frankly, directly, fearlessly, is the way to reach other minds. Now, it is the effect of creeds to check this free utterance of thought. The minister must seek words which will not clash with the consecrated articles of his Church. . . . If he

happen to doubt the standard of his Church, he must strain its phraseology, must force it beyond its obvious import, that he may give his assent to it without departures from truth. All these processes must have a blighting effect on the mind and heart. They impair self-respect. They cloud the intellectual eye. They accustom men to tamper with truth."

This is very admirable and very modern. Emerson or Parker, we say, might have said this; Mr. Potter might have said this in his address to-night; Mr. Abbot might have written this to Mr. Clarke.

But this is not the whole of Dr. Channing's letter. The objections to creeds which I have quoted are not by any means all of his objections, nor do they include his first objection. "My first objection to human creeds," he said, in his letter, "is that they separate us from Jesus Christ. To whom am I to go for my knowledge of the Christian religion but to the Great Teacher, to the Son of God, to him in whom the fulness of the Divinity dwelt? This is my great privilege as a Christian, that I may sit at the feet, not of a human, but of a divine Master; that I may repair to him in whom truth lived and spoke without a mixture of error. . . . Shall man dare to interpose between me and my heavenly guide and Saviour? . . . What is the state of mind in which I shall best learn the truth? It is that in which I forsake all other teachers for Christ. . . . Let me go to Jesus with a human voice sounding in my ears, and telling me what I must hear from the Great Teacher, and how can I listen to him in singleness of heart? All Protestant sects, indeed, tell the learner to listen to Jesus Christ. . . . He is told that Christ's word is alone infallible, but told that, unless it is received as interpreted by fallible men, he will be excluded from the communion of Christians. This is what shocks me in the creed-maker. . . . He dares not trust me alone with Jesus. He dares not leave me to the word of God. This I cannot endure. . . . I must learn Christ's truth from Christ himself, as he speaks in the records of his life and in the men whom he trained up and supernaturally prepared to be his witnesses to the world. On what ground, I ask, do the creed-makers demand assent to their articles as condition of church membership or salvation? What has conferred on them infallibility? 'Show me your proofs,' I say to them, 'of Christ speaking in you. Work some miracle, utter some prophecy, show me something divine in you which other men do not possess.'"

Here, then, is a declaration of "aversion to human creeds" as bonds of union or conditions of fellowship, and in the very formulation of the first objection a declaration of belief in Christ as the Son of God, in whom dwelt the fulness of the Divinity, who was not human but a heavenly Saviour, speaking without a mixture of error, infallible. The Bible is the word of God; the apostles are Christ's supernaturally prepared witnesses; the proofs of divinity, or infallibility, are miracle, prophecy, or something else, which man as man does not possess.

These articles of belief are all mentioned quite by the by in an argument against creeds. It does not occur to Dr. Channing, it did not occur to the Unitarianism of his time, that these articles had a "credal" nature. These articles all had place, indeed, in Presbyterianism and Athanasianism; but it was certain extra articles that had place there—articles about everlasting damnation, about the Trinity—which constituted "creeds." When men speak disparagingly of "creeds," it usually means simply disparagement of other people's creeds, of articles of belief in excess of our articles. These beliefs in the superhuman and infallible nature of Christ, and in the general miraculous character of Christianity and of the Bible, were viewed by the

common Unitarianism of Channing's time as simply the natural and necessary beliefs of every well-regulated religious man. I do not doubt that they found actual expression in the written "bonds of Christian union" or "conditions of Christian fellowship" of three-quarters of the Boston Unitarian congregations; and Dr. Channing himself might, very well have ordered them frescoed upon the wall of Federal Street Church, with no thought whatever that he was painting a "human creed."

But, to Theodore Parker and to Emerson, this fresco would have appeared very much of a "human creed." Here were many articles in excess of their articles. And to Mr. Savage and multitudes of our Unitarian friends to-day, multitudes of recognized Unitarian leaders, here is very much that is not natural and not at all necessary to the present well-regulated religious man, that is quite out of harmony indeed with the best religious thought.

This fresco could not be painted to-day in any Unitarian church in Boston. It could not be painted at Saratoga. But what I wish to say is that the difference between Saratoga and Channing, and the difference between Channing and the "creeds" for which he had an "aversion," is not greater than the difference between the way in which what I call the best thought of our time views Christ as the Great Teacher or a great master and Saratoga's view of Christ as "the Lord." This speech, I say, this article of belief, this creed, is not the natural or true expression of the best religious thought of our time. It is a speech native rather to the thought of Channing or the thought of Moses Stuart; and any attempt to make it serve for the thought of Emerson or Parker is to resort to that straining and forcing of which Channing so clearly perceived the blighting effect and which he so manfully condemned. "It impairs self-respect, it clouds the intellectual eye, it accustoms men to tamper with truth."

I do not remember that this club has ever discussed the Thirty-nine Articles. I do not remember that it has ever asked, What changes are needed in the Westminster Catechism? I do not think that it ever will ask that question. I think that, if it did, the Presbyterians might resent it. I think that Dr. Prime might write an editorial in the next week's *Observer*, to say that the Liberal Club had better mind its own business. But Mr. Barrows will not write such an editorial in next week's *Register*. The Unitarians will not resent this discussion. And the simple fact that the Unitarian housekeeping is discussed here to-night in this free manner is evidence sufficient, I suppose, that those who have brought the discussion here feel themselves somehow in the Unitarian household, or closely related to it; Unitarian matters are somehow their matters.

It is impossible that any liberal religious man should not take a special interest in Unitarian matters. Among churches, it is in Unitarianism alone that rational religious thought to-day is legitimate and free; and here—in multitudes of congregations—it is entirely so. Never, too, was Unitarianism so human, so broad, and so progressive as to-day. I do not wonder that here and there some ambiguous word persists, adhered to lest rejection of it seem more irreverence for a truth than reverence for a truth, or adhered to sometimes through the power of sheer tradition. I do wonder, as I read the Life of Parker, at the progress which this year makes Parker's sermons Unitarian tracts, at the perfect freedom of Savage and Chadwick and Hosmer and Gannett, at the impossibility that any Unitarian should tolerate the thought of their exclusion from the fellowship, and at the sense of strangeness with which most thoughtful Unitarians to-day read Channing's

Evidences of Christianity. I have seen very much of Unitarian ministers and Unitarian congregations all through the country; and my own conviction is that a *really religious* man, a man clearly devoted to the upbuilding of his people, and not simply to the salaried exhibition of his own uneasiness and dialectic process, will almost everywhere be given long rope for his radical thought.

Seeing this notable progress and this splendid spirit, I do not doubt the progress and the wise reforms of the future; and I feel, coming here to criticise Unitarians in some sort, very much in the predicament of Balaam, the son of Beor. If ever I make strictures on the Unitarians, I always praise them more. I am heartily their friend, and very much one of them myself. I frankly confess that there is almost no question in which I have less personal interest than one like this. I am the poorest of all churchmen. I am a member of no church or congregation. I have said many times that the dispensation of the Church is ceasing, and the dispensation of the Commonwealth is being born. If I have a Church, it is this American republic. And yet, when I say that, I wish to say distinctly that I am a believer, and a very warm believer, in the congregation. When I say that I am a member of no congregation, I do not say it by way of felicitation, but by way of simply stating that in the crowded and changing years since my withdrawal from the Episcopal Church, of which I was once a member, the exigencies of my own life have made it natural and perhaps necessary for me to get and to give otherwise than in the congregation. I do not doubt that this has been to my cost. I am sure that an isolated religious life is to the cost of most men, that it is not the life for best growth nor most usefulness, not in the line of truest development. I think that none of us is likely to forget Emerson's and Carlyle's lesson of individual integrity, the primacy of righteousness to usefulness, the old truth that "the wisdom which is from above is first pure, then peaceable." But our own time does not look with favor upon the doctrine that religion develops best in the woods. Henry James spoke wisely of "society as the redeemed form of man"; and the primary social form in religion is the congregation. I apprehend that every man would do well to become an active member of some religious congregation,—if not possibly under any steeple, then in the house of Aquila and Priscilla. For my own part, I think I should feel quite at home under many Unitarian steeples in the city of Boston. And, when I say at home, I do not mean that I should always necessarily think exactly with the man in the pulpit,—none of us need ever expect that in a world which is dynamic and not static, and I should take no pleasure in it: I mean that no antique doctrine would be imposed on me as a congregational condition, but that the soles of my boots would be as solid as those of the man in the pulpit or of anybody else in the congregation. I should expect to find myself free in the expression of any thought and in the exercise of any influence, and I should expect to find the general procession moving in the right direction.

I have said so much about the congregation, because I wish to say with some emphasis that I understand the congregation, and not the Saratoga Conference nor any other association, to be the unit of Unitarian fellowship. A Unitarian Church, in the sense in which we speak of the Episcopal or the Presbyterian Church, with a big C, I do not understand to exist. Unitarianism is rooted in Congregationalism, claims expressly to stand there, and repudiates everything else. If it ever fails to repudiate it strongly enough, then it is the duty

of every one who has at heart the interests of rational religion here to put in reminders. If the principle for which Robert Browne went to thirty dungeons, and for which Henry Barrow died, means anything to us; if the principle which carried John Robinson to Holland, and which planted Plymouth, still means anything in New England and America,—then liberal religious thinkers should not easily act on interpretations which allow our most liberal Congregationalism to rob itself of its birthright and initiate a Unitarian Presbyterianism. No Saratoga Conference ever had a right to impose any doctrine upon any Unitarian minister or congregation in America: the notion of such a right is a fiction, equally a fiction whether two years old or twenty. The status of no Congregational minister depends upon his relation to a conference; and he is recreant to his duty, if he views it, or permits it to be viewed, as thus dependent. He has to deal only with his congregation. If his congregation will not sustain him, then indeed he may not remain its minister, and the world is large. If he joins the Conference, accepting its standards, then he has to deal with his own conscience, not as a minister, but as a man. It is not a question between the man and Congregational Unitarianism,—and there is properly no other,—but a question between the man and a conference. A Unitarian Conference—this, of course, is what I am emphasizing—is always a thing of convenience; an accident, not an organic thing, not a unit, not a court of appeal for Unitarian ministers and congregations. If any minister or congregation is acting at any time as though it were such, it is under a fiction, which it is a right and a duty to end. No true Congregational minister will drag around the shackles of a synod. Let him not be compelled or permitted to do it.

The constitution of a conference cannot be made the authoritative test of any Unitarian church. It should have been as unnecessary to say this in Article X. as it would have been vain and ineffectual to say the contrary.

With this point clearly settled, some words may be said expressly about the articles of the Saratoga Conference. Mr. Gannett has recently compared these clumsy articles to a pyramid standing on its apex, with its broad base in the air. The Tenth Article really makes all that goes before amount to nothing, so far as matters of controversy go. This article, as Mr. Gannett well suggests, should properly be the Preamble; its purpose, that is, should have been somehow expressed in the Preamble. This was precisely what Mr. Abbot demanded at Syracuse,—this statement that the doctrinal language of the Preamble simply represented the opinions of the majority, and was in no wise a test of fellowship binding the minority. Had there been as much wisdom at Syracuse in 1866 as at Saratoga in 1882, a vast deal of bad feeling and of practical mischief might have been saved. In 1882, of course, the old Preamble could not have been adopted at all. I do not suppose that it could have been adopted at the time of Article IX., whenever that may have been. This article—rather a stepping-stone, I take it, than a stumbling-stone in the way to Article X.—is the clumsiest of the clumsy pyramid. That a conference with a Preamble affirming a certain obligation and devotion should adopt a special article to “reaffirm” its devotion would appear to be a very remarkable work of supererogation. But the allegiance of the Preamble is to “the Lord Jesus Christ,” and that of the later article to “the gospel of Jesus Christ.” A chance for this changed phrase is what I take it the article was manufactured to afford,—though I am very insecure in these Syracuse and Saratoga chapters of ecclesiastical

history,—and thus it seems a bridge. To be a disciple of Jesus Christ is certainly a very different thing from being a disciple of “the Lord Jesus Christ.” I am myself, certainly, a disciple of Jesus Christ in precisely the same sense in which I am a disciple of Emerson. I am certainly not a disciple of “the Lord Jesus Christ.”

About the term “Christian,” which has been so much talked of in this time, much talked of in connection with this present subject, it has seemed to me that there is often a shyness of it as superstitious as very much superstitious use of it. Let the term be used in the same free and rational manner as any other similar term. To single out Christ, whose life and thought have stamped themselves upon our line of civilization as no other, as the one great man who is to be denied his adjective, seems to me as silly and arbitrary as, in the nature of things, it must prove vain. “I see no objection,” Emerson said, “to being called a Platonist, a Christian, or any other affirmative name, and no good in negation.” And, again: “Always put the best interpretation on a tenet. Why not on Christianity?” But I should not think it wise for the liberal churches of the future formally to call themselves Christian churches. Such general use of personal names in the things of religion seems incommensurate.

Since the Tenth Article of the National Unitarian Conference distinctly disclaims the test character of the Preamble, and makes the basis of fellowship simply a general sympathy with the purposes and practical aims of the Conference, I do not see why, so far as conscience goes, any may not join the Conference who feel that sympathy. None others, certainly, will ever wish to; and none, certainly, who do not wish to, none who for some serious and sincere reason do not desire this fellowship, would seem to have any business to meddle with the Unitarian housekeeping, since, as I say, the world is large and the ways of service in it very various and numerous.

I do not see how the left wing of this Conference is properly subject to any present animadversion. Mill spoke somewhere of the duty of men in churches not to leave them the moment they felt a doubt as to the soundness of a doctrine. And proper patience, common sense, in dealing with organizations, is necessary, if enlightenment and liberality in organizations are ever to be hoped for. A pistareen liberalism is not Puritanism. Slavery is still mentioned in the Constitution; there has not been a rewriting with each amendment. These men have now a clear and honorable technical foothold; and it seems to me that their reading of the tendencies of the Conference is correct, and that they have good ground to hope for a consistent body of articles satisfactory to themselves. Should it prove otherwise, they must deal with that contingency; and I cannot imagine the going to any conference or the staying away from it to be a very vital matter with any very vital man.

The history of these twenty years has shown the folly of attempting to make the doctrinal basis or language of a conference narrower than that of many of the churches represented in it. Such an attempt is untrue to the genius of that Congregationalism to which liberal religion in our time is necessarily committed. The minimum of common doctrine is all that is ever legitimate or long possible for such a common conference. In the case of such an organization as the National Unitarian Conference, I think that no doctrinal statement at all is wiser. No doctrine is prejudiced by such silence, as certainly none has been helped by the course we have seen.

I wish that our Congregational churches may not forget the Puritanism of which they were

born. I wish that they may mean what they say, and say what they mean. I wish that they may have done with lumber and old clothes. I wish that they may have “spring cleanings.” Dean Stanley rejoiced that the judgment of the Privy Council in the famous “Essays and Reviews” case made it impossible to put men out of the English Church for denying the doctrines of plenary inspiration, imputed righteousness, and eternal punishment; and, fortified by this judgment, the Broad Churchmen went on preaching against the doctrines from their pulpits, while praying from their prayer-books to be delivered from everlasting damnation, through the merits of one who had made full satisfaction for the sins of the whole world,—content, when the inconsistency was urged, to point to the Privy Council judgment. There has been too much of this in New England as well as in Old, too much among the followers of John Robinson. It is to be hoped that we shall not see a Privy Council Broad Churchism in our American Unitarianism. Then let Unitarianism beware of articles of shreds and patches, dovetailed documents, nullifying, modifying, and mollifying. Let Unitarianism, if it expects to hold the reverent rational thought of the time, and occupy the ground, have the moral courage always to unsay unwise words, and to talk as little as possible of majorities. I should hope that the National Conference would quickly cease to talk at all, in official documents, of “the Lord Jesus Christ,”—not cease to tolerate and heartily welcome those who do talk so, but cease to welcome simply by supplementary articles those who do not. “By the irresistible maturing of the general mind,” said Emerson, “the dogma of the mystic offices of Christ is being dropped, and he stands on his genius as a moral teacher.” “The history of Jesus is the history of every man, written large.” “The Christian Church has dwelt with noxious exaggeration about the person of Jesus. The soul knows no persons. It invites every man to expand to the full circle of the universe.” Let Unitarianism, so quick to paint the tomb of Emerson, respect his thought and receive it. If it cannot do this, then, whatever else it has, it does not have the future. If it can stickle about names instead of things, it has not the future. “The name, the name is all their pride,” says Lessing, in the *Nathan*,—“Christianity, not manhood.” If it refuses fellowship to any man who loves and labors for the things which it calls Christian, but which he calls by other name, it has not the future. If it has not place for Francis Abbot, it has not the future. The future will pronounce Mr. Abbot’s last article, in our *Journal of Philosophy*, worth more for the cause of good religious thought in America than everything likely to be said this year by all the Unitarians who would vote to-morrow, for the first time, for this Conference Preamble.

I deem it well to say here that there are points upon which I do not agree with Mr. Abbot in the late correspondence in the *Christian Register*. I do not view the object of the soul’s supreme allegiance as an impersonal Law; I do not believe that the congregation based on that will be the best congregation of the future; and I do not view the Roman Church as the true development or expression of Christianity. If I should apply the canon which yields this to other men or movements, my work in history would, I fear, show strange results. These matters cannot here, of course, be discussed; but so much it seems prudent to me to say.

I attended recently the centennial of King’s Chapel Unitarianism. It was the celebration of a liturgy,—one of those liturgies that came into

shape by the mollifying process,—an emasculated Te Deum, rhetorical doxologies, all corners rubbed down, pronouns well shifted into harmlessness, and “the world, the flesh, and the devil” mollified into “the deceitful allurements of this transitory world,” something not so likely to disturb nervous people in the mention. But it all started with a saintly man, and a heroic one,—it stood for advanced thought in its day, galvanic as it seems in ours,—and so all honor to it! I refer to this celebration of a species of Unitarianism which I do not think has much life left in it only because it was the latest occasion where I heard said what I have heard said very often in this time,—that, with all manner of old sanctions tumbling about us, many were coming to see that the way to keep hold of religion, the way not to let religion go, was to go back to Christ,—beyond and below and behind Church and doctors and apostles and evangelist, directly to Christ. Well, I do not think that anybody can go back to Christ too often, I do not think that anything can be better for any of us than to keep in the closest contact with the mind of Christ. But let no man think that any such *renaissance* as that meditated by these “Christo-centric” men is the cure for the sick theology of our time, or the key to the religious situation. The future does not lie in retrospect. “The cure for false theology,” said Emerson, “is mother wit.” “Forget your books and traditions, and obey your moral perceptions at this hour.” The future lies with those who, with reverence for the great past, with love for the great masters, with the spirit of Christ and the saints in their midst, are standing on their own feet and going forward. “Thank God,” said Emerson, “for these good men, but say, ‘I also am a man.’” “The foregoing generations,” he said, “beheld God and nature face to face; we through their eyes. Why should not we also enjoy an original relation to the universe?... The sun shines to-day also. There is more wool and flax in the fields.”

Men talk of letting religion go. Religion will not let us go. Religion is of the constitution, the preamble to healthy, efficient, and true life. If ignored to-day, it will force itself to be remembered to-morrow. It will assuredly take care of itself; and the fewer “turbid media” and “phantasms,” the clearer the shining of the Inner Light. “Hast thou reflected, O serious reader, Advanced Liberal or other, that the one end, essence, use of all religion, past, present, and to come, was this only: To keep that same Moral Conscience or Inner Light of ours alive and shining! All religion was here to remind us, better or worse, of what we already know better or worse, of the quite *infinite* difference there is between a Good man and a Bad; to bid us love infinitely the one, abhor and avoid infinitely the other,—strive infinitely to be the one, and not to be the other. He that has a soul unasphyxiated will never want a religion; he that has a soul asphyxiated, reduced to a succedaneum for salt, will never find any religion, though you rose from the dead to preach him one.”

In saying what I do of the Constitution of this Conference, I am in no wise commending religious indeterminateness: I am simply asking Congregationalism to be true and self-respectful. I believe that men will never rally to any purpose around anything but ideas. I believe that the liberal congregations of the future will be more “credal”—if you will dignify the word aright—rather than less “credal” than to-day. They will have a clearer self-consciousness, a truer solidarity, and a more definite aim. I believe in conferences: this is a conference. It is well for men to meet to compare views. But I take it that the function of the

congregation, the function of a church,—it is a good word,—is different and more. The Church is not alone for excitation, but for inspiration and for nurture and for bringing things to pass. It will fulfil its function as its members are informed by a common idea, and that congregation will fulfil its function best which is informed by the best idea. I do not think that the best religious congregation of the future will chiefly meet to read the Journal of Paleontology, and I do not think that its hour will be spent in indeterminate “yearning” to the soft music of the organ or the harp. I do not think its basis will be jelly, and I do not think it will be sand. It will act more energetically, it will think more energetically, and it will believe more energetically than the Church of to-day; and, whatever else it believes, I think it will believe that “the Author of Nature has not left himself without a witness in any sane mind; that the moral sentiment speaks to every man the law after which the universe was made; and that there is a force always at work to make the best better and the worst good.”

CORRESPONDENCE.

A CREATIVE RELIGION.

Editors of *The Index* :—

We are not to-day ignorant regarding the various forms and doctrines of the religious beliefs, both Pagan and Christian, which find expression in civilized and uncivilized countries the world over.

The sacred books,—the Bible, the Koran, the Vedas, the Hindu Shastras,—the authority upon which religions are based, are open to all who desire to learn from their printed pages. Religious books, magazines, papers, tracts, are accessible to whomsoever will read them. Preachers and scholars proclaim from pulpit and platform, through the press and through manuscript, the word of religion that has been revealed to them. Students and travellers have opened to us a knowledge of religions other than Christian, which allows us to draw comparisons and enlarges our field of conception. With all this, yet are we looking for a creative religion,—a religion which shall create a character,—else is religion vain.

Unless the religion a man professes becomes a vital principle of his life; unless it can create that within him which shall force him to express his religion, not in words, but in deeds; unless it can lift him above the sordid hopes, selfish purposes, injustice, insincerity which everywhere abound; unless it can make him absolutely true,—he were better without a religion. A man's character is an expression of his religion,—his life is his religion. Tell me not that righteous men are found among all religious sects; that Christianity has been an inspiration, and has guided many a noble soul onward through its earthly career; that men and women have lived and died nobly in its cause: it was not the religion, but the man and the woman whose lives became ennobled in spite of their religion, that created the character within them.

We are seeking a creative religion. Is our search in vain? Nay: those who are giving voice to their religion in ethics, who hold that a man's religion should make him moral in every sense, should make him deal justly and kindly in every pursuit of life, should make him take upon himself the responsibility of his own actions, should lift him above the selfishness which is the cause of so much human misery,—in short, should make him see his whole duty to his brother man, and do it, because their religion is nothing, if it does not express itself in action,—they it is who have found that principle of life, call it religion, if you will, which makes it possible for the ideal man to exist. As yet, but few have found it: if there are more, they do not give it utterance. But those few who, leading and belonging to the Societies for Ethical Culture, have become workers in the Ethical Movement of to-day, are the nucleus of a great religious body that is to be, are pioneers in the field of a creative religion which shall at last conquer the world.

Devoid of outward form, of show, of poetic garb; devoid of all that tends to hide the real purpose of its working by its appeal to the emotions or sense of

beauty,—it proclaims in noble words and deeds its creative power, and bids men drink freely of its waters,—the waters of a religion pure and undefiled. The world calls such religious believers atheists, infidels. Blessings on their atheism, their infidelity! They shall light the world.

Christians will say that the fundamental principle of their religion is to make men pure and holy, just and merciful, true and good. We do not deny this; but the principle is so wrapped up in forms and doctrines, so urged upon men by hopes of future rewards or promises of future retribution,—fabrications of the mind, which *knows nothing* of the future,—that it is almost lost sight of, and the creative power is destroyed: else, in the eighteen hundred years that the Christian religion has been taught and preached, and with its millions of professed followers, should we not find more characters like unto that of its great Founder? Should we still see the vast amount of human suffering and misery, arising out of selfishness, which darkens so many Christian homes? should we hear of bank defaulters, of trusts betrayed by men professing the Christian religion,—if, as a religion, it can create an upright and noble character? No: it is because that religion, as it is, is not creative, that a few have broken from its bonds, and are trying to show men the reality of a religion so simple, so untrammelled, that no one need mistake its teachings; no sects arise within its domains to war among themselves in heated controversy regarding creeds and dogmas, regarding this or that form of worship, and the essentiality of this or that church rite.

The Ethical Movement, like a clarion note, in accents loud and clear, invites all men to its fold, and, holding out the possibility of an ideal life, makes that possibility real through the teaching of its religion,—a grand creative power to make man divine while yet he is human.

E. H. B.

THE *Congregationalist*, in its opposition to woman suffrage, seriously appeals to “the rib story” in Genesis, and declares that Eve was created from the rib of Adam to be his helpmeet; that the word *ezer* (“to bring aid or succor”) “involves a certain natural implication of secondariness and subordination.” It says, Adam, having seen “by actual survey the ranks of created beings below him,” “was prepared to feel the need of what the Lord was about to do, when, causing deep sleep to fall upon him, he builded a woman from one of his ribs. As to this transaction, Dr. Murphy says,” etc. The *Christian Register* is moved to comment in the following humorous manner: “The *Congregationalist* does not tell us who Dr. Murphy is; but, from the general antiquity of his argument, we may safely presume that he was the surgeon in attendance when Eve was created. His opinion on this ‘trans-action,’ as the *Congregationalist* with great felicity calls it, commands the respect which is due to age. Dr. Murphy does not say that this Adamified, sleep-born, rib-built woman must not vote; but it would not be strange if he believed so. The argument of the *Congregationalist*, then, simply amounts to this: Adam was an ‘original [our neighbor means *aboriginal*] unit.’ As an original unborn unit, he had a right to vote in the Garden of Eden, provided that he voted before the polls were closed and did not vote too often, as the old Adam in men sometimes leads them to do. Eve, on the other hand, being born of Adam, was not an ‘original unit,’ but an original cipher. As such, her political privileges may be reckoned as naught. Let it be conceded, then, that a woman who is born from a man is his inferior. It follows that every man who is born of a woman is her inferior. As the woman who is born of a man has no right to vote, so no man who is born of a woman has a right to vote either. The *Congregationalist* has thus succeeded in disfranchising, theoretically, the whole human race with the exception of the ‘original unit,’ who long since passed off the field of action. The logic of our neighbor reminds one of the logic which built ‘the one-horse shay’: it goes to pieces with the same dilapidated unanimity. The *Congregationalist* claims for this rib argument the lucidity of ‘common sense.’ ‘Common’ the argument certainly is, but the ‘sense’ of deciding a modern political question by an appeal to an old Assyrian legend is not so readily apparent.”

THERE is nothing so strong or safe in any emergency of life as the simple truth.—*Dickens*.

BOOK NOTICES.

THE FUTURE OF EDUCATED WOMEN. By Helen Ekin Starrett. Men, Women, and Money. By Frances Ekin Allison. Chicago: Jansen, McClurg & Co. Price 50 cents.

We have here two bright essays by Mrs. Starrett late editor of the *Chicago Weekly Magazine*, and her talented sister, Mrs. Allison. Both treat on subjects of great importance to the women of to-day. The purport of Mrs. Starrett's paper is outlined in the statement that "the environment of woman has changed entirely with the progress of civilization. The law of organic life is that the individual and the species constantly adapt themselves to their environment. May it not be that this law of adaptation is so mightily at work in a plastic, social condition that the changes effected by it are constantly apparent to the most casual observer? If there is a natural law of adaptation at work attempting to harmonize woman's nature with progressing and changing intellectual and social conditions, let us learn, if possible, what it is." She believes that, the sooner women's at present underpaid and unpaid labor is recognized at its proper pecuniary value, the better it will be for the race, giving men more genuine companions and better housekeepers in the wives who will be incited to understand financial economy more clearly than the majority of women now do, and to aim at better work, when such work has a distinct money value.

Mrs. Allison's essay is somewhat in the same direction as that of Mrs. Starrett, but treats solely of the differing position held by men and women in their relations toward money, and its equivalents of property and wages; the injustice and inequality of those relations, the causes thereof, and some possible remedies. Both essays are written in vigorous, earnest style, marked by good sense, and in a spirit of fairness and with moderation of statement. U.

WORKS OF JOHN RUSKIN: The Seven Lamps of Architecture; Lectures on Architecture and Painting; The Queen of the Air; The Ethics of the Dust. New York: John B. Alden, publisher.

Mr. Alden is publishing a handsome edition of Ruskin's complete works, to be sold at the low price of \$18 per set of fifteen volumes, and offers this one specimen volume, containing over six hundred pages, until June 1, 1885, at eighty-five cents. Purchasers of this volume will of course be allowed to complete their sets, but not at this price. This offer is made only for the purpose of making widely known the superb quality of the work. He will also publish for those who cannot afford to possess Ruskin's complete works, even at these low rates, an edition of his select works, for the net price of \$9.60 for the set. Although we don't understand in what way Mr. Alden can be making any profit from his remarkable series of cheap publications, yet we can understand that he is doing a good work in popularizing the best literature of the age, by making it possible for people with limited incomes to become purchasers. With all the advantages of our modern free public library system, a person who owns his books is much more likely carefully to read those books which belong to him than to consult them, if only accessible in libraries. Ruskin, for instance, is so voluminous a writer, and so discursive in style, that comparatively few of the readers who depend on the public libraries for what literature they need would care to call for his works from that source; yet he is so suggestive, so thought-inspiring and instructive a writer that the possession of his works, to read at leisure or to refer to, would be an unfailing source of pleasure, profit, and intellectual uplifting to their owner. Most of Mr. Alden's publications are of the best standard literature of the age. U.

In the *Popular Science Monthly* for June, Henry Gannett opens with a brief article, in which he returns a negative answer to the question, "Are we to become Africanized?" Prof. Benedict, after his preliminary discussions on "The Nervous System and Consciousness," develops his interesting conclusions on the correlations of thought and organization; M. de Laveleye, the Belgian socialist, writes at much length on "The State vs. the Man," in answer to Spencer's "Man vs. the State." Spencer replies briefly, but very effectively. The eminent London biologist, Prof. Flower, expounds "Whales, Past and Present," with illustrations, giving much freshness to an old topic. "The Fuel of the Future," "Sulphurous Disinfectants," "Concerning Kerosene,"

and "The Mediterranean of Canada" are very readable papers. "The Ways of Monkeys" is an entertaining study in a fascinating branch of natural history, and Prof. Grote's "Moths and Moth-catchers" is a timely paper by one of our first entomological authorities. Mattieu Williams closes his valuable series of papers on "The Chemistry of Cookery," by giving us the chemical story of maltose and the science of puddings and porridges. There are a sketch and portrait of Dr. Alfred Brehm, the distinguished German naturalist and traveller, recently deceased; and the closing departments are full of critical discussion and varied miscellaneous scientific information. New York: D. Appleton & Co.

ONE of the most entertaining articles in the *Atlantic Monthly* for June is called "Dime Museums: From a Naturalist's Point of View," by the Rev. J. G. Wood, the English naturalist. Kate Gannett Wells gives a graphic description of Passamaquoddy Island and its hermit. There is an account of six months spent at Astrakhan, by Mr. Edmund Noble, and a paper on "Modern Vandalism," by Elizabeth Robins Pennell, about Staple's Inn, London, and the church of Ara Caeli, Rome, both to be destroyed. A statement as to government by committee, at Washington, by J. Laurence Laughlin, and "The Forests and the Census," by Francis Parkman, will interest students of politics. The three serials—Mrs. Oliphant's "Country Gentleman," Miss Jewett's "Marsh Island," and Charles Egbert Craddock's "Prophet of the Great Smoky Mountains"—have all their usual interest. Dr. Holmes' "New Portfolio" is also as bright as ever. The literary papers of the number are led by a sterling piece of criticism upon Mrs. Oliphant, by Miss Harriet W. Preston; and there are reviews of Baird's *Huguenot Emigration*, Allen's *Religious Aspects of Philosophy*, and recent novels. Celia Thaxter contributes a poem; and there is also some other good verse, together with the usual departments. Houghton, Mifflin & Co., Boston.

In the *Andover Review* for June is continued and completed the series of "Sermons on Social Problems," by Dr. Newman Smyth. Rev. S. W. Dike writes on "The Religious Problem of the Country Town." Prof. Everett gives a penetrating analysis of George Eliot's personal and literary characteristics. The opening article is a review of the work of the Old Testament Revisers, prepared by Dr. C. M. Mead, a member of the American Company of Revisers. In the Biblical Department there is also a *résumé* of critical discussions of "The Song of Solomon," and an able contribution to its interpretation. The editorials continue the series on "Progressive Orthodoxy," and under the title "The Needless Disparagement of a Noble Profession" treat of certain customs and habits which diminish the attractiveness of the Christian ministry; and, under that of "England and Russia in the East," of the present position and relations of these two powers, and of their distinct offices in the work of civilization. Houghton, Mifflin & Co., Boston.

Just Published: TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crapo.

PRICE \$2.00.

THE INDEX,
44 BOYLSTON STREET, BOSTON.

THE FREE RELIGIOUS ASSOCIATION

was organized in 1867. Though having its head-quarters in Boston, it is a national organization, and has members and officers in various States of the Union. It has the following

CONSTITUTION.

I. This Organization shall be called the Free Religious Association, its objects being to promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history; and to this end all persons interested in these objects are cordially invited to its membership.

II. Membership in this Association shall leave each individual responsible for his own opinions alone, and affect in no degree his relations to other associations; and nothing in the name or Constitution of the Association shall ever be construed as limiting membership by any test of speculative opinion or belief,—or as defining the position of the Association, collectively considered, with reference to any such opinion or belief,—or as interfering, in any other way, with that absolute freedom of thought and expression which is the natural right of every rational being. Any person desiring to cooperate with the Association shall be considered a member, with full right to speak in its meetings; but an annual contribution of one dollar shall be necessary to give a title to vote,—provided, also, that those thus entitled may at any time confer the privilege of voting upon the whole assembly, on questions not pertaining to the management of business.

III. The officers of the Association shall be a President, twelve Vice-Presidents, a Secretary, an Assistant Secretary, a Treasurer, and twelve Directors. They shall be chosen by ballot at the annual meeting of the Association; and the President, Vice-Presidents, Secretaries, and Treasurer shall hold their offices for one year, or until their successors be chosen. The Directors shall be chosen for four years, and, at the expiration of that term, shall not be eligible for reelection until after two years. One fourth of their number shall be chosen annually; but, at the annual meeting of 1882, the full number of twelve shall be chosen in sections of three respectively for one, two, three, and four years. The President, Secretaries, Treasurer, and Directors shall together constitute an Executive Committee, intrusted with all the business and interests of the Association in the interim of its meetings. They shall have power to fill any vacancies that may occur in their number, or in the list of Vice-Presidents, between any two annual meetings. Six members of the Executive Committee shall constitute a quorum.

IV. The Annual Meeting of the Association shall be held in the city of Boston, on Thursday of what is known as "Anniversary Week," at such place and with such sessions as the Executive Committee may appoint, of which at least one month's previous notice shall be publicly given. Other meetings and conventions may be called by the Committee, according to their judgment, at such times and places as may seem to them desirable.

V. These Articles may be amended at any Annual Meeting of the Association, by a majority vote of the members present, provided public notice of the amendment has been given with the call for the meeting.

Officers elected for the year 1882-83:—

PRESIDENT.

WILLIAM J. POTTER, New Bedford, Mass.

VICE-PRESIDENTS.

OCTAVIUS B. FROTHINGHAM, Boston, Mass.
FELIX ADLER, New York City.
GEORGE W. CURTIS, Staten Island, N.Y.
EDWARD L. YOUNG, New York City.
FREDERICK SCHUENEMANN-POTT, San Francisco, Cal.
THOMAS WENTWORTH HIGGINSON, Cambridge, Mass.
ELIZABETH B. CHASE, Providence, R.I.
GEORGE HOADLY, Cincinnati, O.
NATHANIEL HOLMES, Cambridge, Mass.
ROWLAND G. HAZARD, Peacedale, R.I.
BERNHARD FELSETHAL, Chicago, Ill.
ANNIE L. DIGGS, Lawrence, Kansas.

SECRETARY.

FREDERICK A. HINCKLEY, Providence, R.I.

ASSISTANT-SECRETARY.

F. M. HOLLAND, Concord, Mass.

TREASURER.

JOHN C. HAYNES, 451 Washington St., Boston, Mass.

DIRECTORS.

Four Years.

CORNELIUS WELLINGTON, Boston, Mass.
MRS. MARY F. EASTMAN, Tewksbury, Mass.
FRED. W. GRIFFIN, Concord, Mass.

Three Years.

MRS. CLARA M. BISBEE, Dorchester, Mass.
J. A. J. WILCOX, Chelsea, Mass.

Two Years.

B. A. BALLOU, Providence, R.I.
BETH HUNT, Springfield, Mass.
MRS. ANNA GARLIN SPENCER, Florence, Mass.

One Year.

MRS. EDNAH D. CHENEY, Jamaica Plain, Mass.
ARTHUR G. HILL, Florence, Mass.
RICHARD P. HALLOWELL, Boston, Mass.

The office of the Association is at 44 BOYLSTON ST., BOSTON (next door east of the Public Library), where is also the publication office of *The Index*.

All letters pertaining to the business of the Association (payment of membership fees, orders for its publications, etc.) should be addressed to "Free Religious Association," at the office.

Communications intended specially for the Secretary, as well as his personal correspondence, should be addressed to him at PROVIDENCE, R.I.

The Secret of the East;

OR,
 The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript*.

Sent by mail, postpaid, on receipt of price by the INDEX ASSOCIATION, 44 Boylston Street, Boston, Mass.

PUBLICATIONS

OF THE

FREE RELIGIOUS ASSOCIATION.

Freedom and Fellowship in Religion.
 A volume of ten essays upon speculative and practical problems of religion, by D. A. Wasson, Samuel Longfellow, Samuel Johnson, John Weiss, W. J. Potter, F. E. Abbot, O. B. Frothingham, J. W. Chadwick, T. W. Higginson, and Mrs. E. D. Cheney, and extracts from Addresses by Ralph Waldo Emerson, Lucretia Mott, Robert Dale Owen, Dr. Bartol, Wendell Phillips, Rabbi Wise, Horace Seaver, A. B. Alcott, Lucy Stone, Charles H. Malcom, Julia Ward Howe, and others,—all given on the platform of the Free Religious Association. Price (reduced) \$1.50.

Reports of Annual Conventions of Free Religious Association, from 1872 to 1879 inclusive. These contain essays and addresses by the various distinguished men and women who have spoken on the Free Religious platform, together with yearly reports of the Executive Committee. 10 cts. each.

TRACTS.

No. 1.—*Truths for the Times*, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 2.—*Fear of the Living God*, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—*Lecture on the Bible*, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 4.—*Christian Propagandism*, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extractions.* Price 10 cents; 12 copies, \$1.00.

No. 5.—*"God in the Constitution,"* by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.

No. 6.—*"The Sabbath,"* by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 7.—*"Compulsory Education,"* by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—*The Present Heaven*, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—*The Christian Amendment*, by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.

No. 10.—*The Impenetrability of Christianity*, by F. E. Abbot. Sixty Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—*The God of Science*, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.

No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, \$1.00.

No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, of England, analyses the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—*A Study of Religion: The Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.

No. 15.—*The Battle of Syracuse*. Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

THE

"FREIDENKER."

Freedom, Culture, and Prosperity for all!

(Organ of the Freethinkers of North America, of the Union of Radicals, and the North American *Turnerbund*.)

Editor, C. Hermann Hoppe.

TERMS, PER ANNUM, IN ADVANCE:

UNITED STATES AND CANADA:

Freidenker..... \$2.50
Turnerische Ausgabe des Freidenker
(Amerikanische Turnzeitung)..... 3.00

EUROPE:

Freidenker..... \$3.00
Turnerische Ausgabe des Freidenker
(Amerikanische Turnzeitung)..... 3.50

Sample copies sent, on application, free of charge.

In this weekly, which is now in the thirtieth year of its existence, political, social, and religious matters are discussed with a view to general enlightenment and progress. The *Amerikanische Turnzeitung* is especially devoted to the discussion of topics pertaining to physical culture and matters of interest to lovers of the gymnastical art. Since Jan. 1, 1885, the *Freidenker* has been enlarged, thus furnishing considerably more reading matter, while the price remains the same as before.

For the convenience of those of our readers who are chiefly interested in matters relating to gymnastics, the *Freidenker* and its former supplement, the *Turnzeitung*, have been consolidated into one paper, called *Amerikanische Turnzeitung*, with the sub-heading, "Turnerische Ausgabe des Freidenker."

This paper contains more reading matter than furnished by both the *Freidenker* and *Turnzeitung* heretofore. In making these changes, the publishers have incurred great expense; and we therefore solicit the hearty co-operation of all friends of the cause in securing for the *Freidenker* and the *Amerikanische Turnzeitung* a wider circulation.

We also publish

"Erziehungsblaetter,"

fuer Schule und Haus.

A Liberal German Educational Monthly.

(Organ of the German-American Teachers' Association.)

Editor:

MAXIMILIAN GROSCHMANN, Milwaukee, Wis.
 Associate Editors:
 H. H. FICK, Chicago, Ill.
 H. SCHURICH, Chicago, Ill.

16 large quarto pages, with four-page cover.
 Terms: \$2.12 per annum, in advance.

"Freidenker-Almanach"

FOR THE YEAR 1885.

The almanac, which is now in the eighth year of its existence, is devoted to the propagation of free-thought principles. Price 25 cents.

"Amerikanischer Turnerkalender"

FOR THE YEAR 1885.

This annual, which is now published for the sixth time, is principally intended to promote the culture of gymnastics, and is pervaded by a thoroughly liberal spirit. Price 25 cents.

CURRENT TOPICS.

BY B. F. U.

THE everlasting question in England regarding marriage with a deceased wife's sister will come up again in Parliament June 11, by a motion of that persistent nobleman, the Earl of Dalhousie.

REV. W. F. CRAFTS, who is in favor of a compulsory Puritanical observance of Sunday, says in a Pittsburg paper, "There is no one thing the anti-Sabbath people rejoice so much in as in Sunday papers." This is an indication that the "anti-Sabbath people" are generally intelligent and sensible people, who appreciate the superiority of the Sunday paper to ordinary orthodox sermons.

THE *Journal de Rome* is much disturbed by the announcement of the Free Thinkers' Congress in that city, which was to open May 30, the anniversary of the death of Voltaire, and to close June 2, the anniversary of the death of Garibaldi. It says that his Holiness the Pope, since losing his temporal power, has suffered many indignities; but that "the party of Satan" should hold, in Rome, a congress of the enemies of the Church "is the most odious and revolting outrage yet imagined."

SAYS an exchange: "It sounds a little queer to read that the worshippers at Dr. Sunderland's church, which the President attends, were 'indignant' and showed 'considerable feeling' when it was discovered that Fred Douglass had hired the pew usually occupied by the tenant of the White House, President Cleveland preferring one less conspicuous." Fred Douglass is entitled to any pew in Dr. Sunderland's church he can hire and pay for; but those who are acquainted with his views will wonder why all of a sudden he desires a conspicuous pew in an orthodox church, whose creed he outgrew years ago.

SAYS the *Springfield Republican*: "Clergymen and other citizens have petitioned the grand jury to indict the Boston and Albany Railroad for running trains on Sunday, and there is some probability that an indictment will be found and presented to-day. The corporation claims to operate only the through Western train, destined for Boston, and one express each way between Boston and New York, and such freight trains as are under necessity of being moved. The trial of a case of this kind will be important. Judge Gard-

ner is holding the present term of court. We do not understand that the horse-car company was also presented for indictment."

ON April 5, at the Widyoda Buddhist College, in Columbo, a young and accomplished English lady, well known in Bombay, became a professed follower of Lord Buddha, taking the "five precepts" in the presence of the Buddhist high priest. Says the *Times of India*: "It was a curious sight to see an English young lady, dressed in an elegant robe of black silk, sitting in the midst of a crowd of yellow-robed Buddhist priests, and repeating the Pansil. The ceremony began by the high priest examining the fair candidate as to the reasons that led her to desire to accept Buddhism as her faith, to which Miss Flynn answered that, after having studied the various religious systems of the world, she found the Buddhistic esoteric philosophy as being most in accordance with her own reason and common sense. Other questions having been satisfactorily answered by her, the high priest administered to her the 'five precepts,' which Miss Flynn promised to observe. The ceremony ended by the chanting of 'Ratana Sutta' by all the priests present. Besides the large number of priests, there were present at the temple where the ceremony took place many of the most prominent Buddhists of Columbo, the captain and several officers of the screw steamer 'Tibre,' of the Messageries Maritimes, and several European passengers that had arrived by that vessel."

THE eighteenth annual meeting of the Free Religious Association, held in this city on the evening of last Thursday and the morning, afternoon, and evening of Friday, was largely attended, the themes discussed were of current interest, the addresses were worthy of the subjects and the occasion, and the proceedings throughout were marked by most earnest enthusiasm. A report of the business meeting by the Secretary this week takes the usual place of the leading essay in *The Index*. The opening address by the President, printed on another page, will be read with interest. The names of Mr. W. D. Le Sueur and Rev. M. J. Savage are a guarantee of the excellence of their papers, of which, however, our readers will have a chance to judge for themselves next week and the week following. Dr. R. Heber Newton's address on "The Religious Aspects of Socialism," by its bold and radical thought as well as by its learning and eloquence, made a marked impression. It is expected that this, too, will appear soon in *The Index*. The short speeches on Socialism and Co-operation, by Mr. F. A. Hinckley, Mr. H. B. Blackwell, Mr. John Orvis, Mr. G. B. Stebbins, Mr. John McNeal, Mrs. A. M. Diaz, and two Shaker women who joined in the Friday afternoon's discussion, and whose picturesque appearance and earnest words made them objects of special attention, were brimful of thought, earnest and eloquent, and were listened to with the closest attention. At the Festival held in the Meionaon, Tremont Temple, Mrs. E. D. Cheney presided with her accustomed dignity and grace. A

sumptuous repast and an hour's social converse were followed by brief speeches. Tributes were paid to prominent friends of the Free Religious Association who had died during the year, and whose portraits were displayed in the hall. Mrs. Cheney referred to the death of Hon. Charles W. Slack; Mr. Potter related reminiscences and spoke of the exalted character of Rev. W. H. Channing; Miss Mary F. Eastman recalled the virtues and services of Miss Emily J. Leonard; and B. F. Underwood spoke of the genius and courage of Miss M. A. Hardaker. R. Heber Newton had some very pleasant words to offer in praise of the Free Religious Association and *The Index*. Kristofer Janson, author of *The Spell-bound Fiddler*, expressed in poetical and eloquent language his sympathy with the work of the Association. Mr. W. D. Le Sueur told the audience about liberal religious thought in Canada. Rev. William I. Gill showed how a Methodist minister, if he were a broad and progressive man, could be deeply interested in the Free Religious movement. Mr. G. N. Hill, president of the Ingersoll Secular Society, commended highly the efforts of the Association to secure justice to atheists in our courts, and its work in favor of taxing church property. The concluding speeches were by Mr. F. A. Hinckley and Mr. F. M. Holland. The music, furnished by the Temple Quartet, and the magnificent floral display, due largely to the efforts of Mr. and Mrs. J. A. J. Wilcox, contributed to the pleasure of the occasion, which was one long to be remembered. Everything considered, the eighteenth annual meeting of the Free Religious Association was one of the most interesting and successful ever held; and, if we mistake not, it will serve to encourage the friends of the Association to renewed efforts in its behalf.

THE Panthéon in Paris, which was secularized by the French ministry for the purpose of burying Victor Hugo in that church, corresponds in some degree to Westminster Abbey in London. It was originally the Church of St. Genevieve. It was consecrated by the National Convention, in the days of the French Revolution, to distinguished men, irrespective of their religious beliefs. Although its "sacred" character was afterward restored by the action of the State government, the crypt beneath the edifice was permitted to retain the tombs of illustrious Frenchmen including Rousseau and Voltaire who were hostile to the Roman Catholic Church, on account of their public services. Still, the priests in charge of the Panthéon, it was known, would not have permitted the burial in that edifice of Victor Hugo, who opposed Catholicism while living and refused the last offices of the Church in his dying hours. Hence, the secularization of the edifice by the official order of the ministry, which was approved by the Chamber of Deputies by a large vote. Last Saturday, a motion in the French Senate to censure the government for secularizing the Panthéon was defeated by a vote of 189 to 67. The incident shows how the influence of the Roman Catholic Church has declined in France the last few years.

WORK AND AIMS OF THE FREE RELIGIOUS ASSOCIATION.

Address at the Opening of the Annual Convention, May 29, 1885.

BY WM. J. POTTER.

Ladies and Gentlemen,—I have the pleasure to announce the opening of the proceedings of this Convention. It is also one of the duties, not so pleasant, devolving upon the presiding officer of this meeting, to make remarks during the first quarter or half hour, while people are coming in and getting still. This is our eighteenth annual meeting. Eighteen springs have come, eighteen harvests have been gathered, since that crowded assembly was held in Horticultural Hall, on Tremont Street, of which "the remnant" that survived the long session and the subsequent dinner organized the Free Religious Association. From that time, our conventions have been adopted into the regularity of nature, coming with the seasons in their order, and as punctually as the leafing of the trees and the blooming of the dandelions on Boston Common. In late years, I have noticed, by the way, that the *scavengers* of the public grounds in this city—if that be the right name for those diligent officers—carefully mow down the dandelions and set out imported flowers in artificial beds. But the Free Religious Association has not been deceived by any of these interferences with the laws of nature. Every spring-time, it has blossomed, in the natural way, into Convention and Festival.

But what have the harvests been? will perhaps be asked by some of its critics. What results has the Free Religious Association to show, to justify its existence. The Association, like any organized body, must be judged by its fruits; and it is perfectly proper that that question should be asked. "By their fruits ye shall know them" is a good test to apply to the character of any society or any person. And I know not where that doctrine has been proclaimed with more emphasis for the last eighteen years than upon this platform. But, when this question concerning results is asked, a rational and just discrimination must be made in the answer. No reasonable man expects figs from a grape-vine or a crop of corn from grass-seed, nor will he expect any fruit until the proper season of fruit. I think the biographers of Jesus in the New Testament must have got things badly mixed in that story of his cursing the fig-tree which had no figs, when the time of figs had not yet come; or else he was not the man the world has taken him for. So, in considering the results of organizations, regard must be given to their aims and objects and their methods of operation. Do they accomplish that which they set out to do? And is that which they set out to do a good and desirable object? These are the questions which must be asked and answered before the more general question as to the fruits of any organization or movement can be determined. Judged by the standard of a sectarian religious organization, the Free Religious Association, it must be frankly confessed, has little to show. It has no long treasury account of missionary funds to present, no list of societies that it has founded, no paid agents in the field, no reports from subordinate and auxiliary associations, no denominational book-publishing concern that rolls up the dollars into the scores of thousands, and possibly needs public ventilation, no large list of members even, which holds together with any strong coherency from year to year. In all such material for statistics, the Free Religious Association is wanting. In some of these particu-

lars, it is more defective, perhaps, than is good for its interests. But I name these things to indicate that this Association has not aimed to build up a new religious sect, and is therefore not to be judged by any of the ordinary standards of denominational prosperity and achievement.

The Free Religious Association is a society organized, fundamentally, in behalf of the perfect freedom of human thought in all matters pertaining to religion, and in behalf of certain subsidiary objects allied with that fundamental one; and its method is that of general agitation. Now, of a society with such objects and such a method, it is not always easy to say at any particular time just what it has accomplished. It is a general religious reform association, working for certain very radical reforms in religion; and it aims at its results through moulding public opinion. The real statistics of its results at any time are to be found in the record of public opinion, as it may be slowly affected and shaped by the utterances of this and kindred platforms. This record may have to be long waited for. I suspect that there was a time, a few years after Jesus' death, when Christianity, if asked for its statistics of progress, would have had little to offer. Wide-reaching reforms are not carried in a day. The American Anti-slavery Society, for a good many years after its organization, was not able to report any very encouraging progress in the nation at large. Yet it did not cease to agitate. *Agitation*,—that was Wendell Phillips' favorite word: if you have any object of reform at heart, do not let public sentiment go to sleep upon it. Keep it stirred up. *Agitate*. The shaping of public opinion, in the early stages especially, may seem very slow, but little by little it yields to any genuine truth earnestly urged; and, by and by, when little expected perhaps, the changed public opinion may break forth on occasion, and take a stand that tells to all the world what has been done.

Now, we might be content to say that the Free Religious Association is not old enough yet to have its history written, that no one can tell just what its contribution has been or is to be to the elements of thought that are shaping the religion of the future. But I think we may also rightfully consider certain signs as marking a progress which this Association has helped to effect. The Unitarian body is certainly moving in the direction of the principles of this Association. There seems to be, indeed, in some quarters an apprehension lest Unitarianism is going to swallow this Association, body, soul, and all. Again, it was a novel idea, when this platform was established, to see Christian and Jew standing upon it side by side as speakers, with mutual respect and as equal officers of the society, and to hear a letter read here from a native Hindu concerning reform movements in the old Brahmanistic faith of India. But when Mozoomdar was in this country, eighteen months ago,—the eloquent preacher of the Brahmo Somaj,—he was in such demand for Unitarian pulpits, and even for orthodox pulpits and meetings, that the Free Religious Association was unable to get hold of him for any meeting of its own; and Keshub Chunder Sen, the Brahmo Somaj leader, was, just before his death, the sought and welcomed contributor of a number of articles, delineating his religious views, to an orthodox journal in New York, the *Independent*; and, more recently, a Chinese scholar has been giving in the same journal a native view of Confucianism. Who shall say how much the example and teaching of this platform, with the special emphasis it has placed on the idea of the sympathy of religions, has contributed to results of which these facts are the sign? or that there was not some genetic rela-

tion, though it may not be acknowledged, between the breadth of this Association and that Congress of Christian Churches, including Unitarian, Universalist, and Swedenborgian, as well as regular Evangelical, which recently met in Hartford? That was a narrower platform than this, which does not confine itself to the Christian faith and name; yet fifteen years ago no such meeting as that Congress would have been possible among Christian churches. Even the Evangelical Alliance was looked upon with some hesitating suspicion by the stricter sectarians of Evangelical churches. I think it must be admitted, too, that creeds are not holding the same authoritative place, even in orthodox churches, which once they held, and that every year the churches are increasingly taking up works of charity and philanthropy as a part of the object of their existence. And who, again, shall say how much the Free Religious Association, which from the beginning has subordinated creed to deed, has contributed to this result? For it should be said, too, that, though this Association, being a general and national body in its plan, has not of itself established philanthropic and charitable institutions, it has aimed to inspire its constituency everywhere with a sense of not merely the importance, but the necessity of putting free religious ideas to practical work in all feasible and honest ways for the amelioration and elevation of human society. Not only has the Association sought to affect public opinion at large, but it has sought to make every member a special missionary for human welfare in whatever community he may live.

This method of general agitation for affecting public opinion is one of degrees. With more zeal, with more workers, with more money, the Free Religious Association might doubtless have accomplished much more than it has in this direction. It might have held more conventions; it might have continued and multiplied its courses of lectures; it might have issued more publications; it might have increased the efficiency of *The Index*. Give the means, and this kind of work may be indefinitely increased. Nor, because this is the general method by which the Association has hitherto worked and now works, are certain more directly practical methods of work excluded,—as, for instance, the efforts which the Executive Committee have made the past year before the Massachusetts Legislature to secure the repeal of the law exempting churches from taxation, and for rescinding that clause of the law concerning evidence in courts which permits a witness to be discredited because of his religious opinions. Increased activity of this kind, and possibly in other ways, may come in the future. But, whatever changes of method or of emphasis of methods may be adopted, I, for one, earnestly hope that the Association will never diminish by one jot or particle the emphasis it has always placed upon *thought* as a dominating element in the solution of all religious and of all social problems. There is a tendency in these days, in religious organizations and conferences (except when a body of ministers get together by themselves), to ignore the problems that require close thinking, because such problems bring up dividing issues, and to keep upon the ground of sentiment and practical work. But let there be at least one platform left in Boston in Anniversary Week that shall not be afraid of any problem of thought; one platform that shall dare to present to a popular assembly such a probing question as that which is to be discussed here this morning concerning the basis of religion. Whatever is to be said of the needs of practical work, and of the supreme importance of character and of moral and philanthropic action,—and I, at least,

would bring no disparagement upon these high aims,—let it not be forgotten what a leading place high discussion and high thinking have held in the world's history. Let it not be forgotten that this Association stands, not only for freedom in religion, but for thought in religion. Thought has been predominant in all the great reform movements of mankind. Sentiment may be the motive-power behind movements and at the bottom of institutions; but thought is the director, the controller, the builder. To thought, deep, lofty, free, daring, let this platform still stand. Let the thought which clergymen whisper to each other secretly in their libraries, which esoteric students declare in their select circles, which a bishop admonishes a too frankly speaking preacher for proclaiming in his pulpit,—let such thought have course here as free as the air of heaven, and go untrammelled and unsmothered to ears that are also free.

But some one may here say that the Association is only, therefore, a free platform, where representatives of various beliefs may freely utter their views, but that it has no aim, no distinct view and purpose of its own. Now, such a free platform may be worth having even in this advanced day of a free press. But, speaking for myself, I have never been able to define the scope and meaning of the Association as nothing more than this; nor does it seem to me that one who finds no more than this in the Constitution of the Association can have read that document very carefully. That document, for one thing, applies the method of absolutely free inquiry and thought to all the religions of the world. What happens under that treatment of the religions? What is happening as that treatment is being applied to the study of comparative religion by the scholars of the age? A body of knowledge is being gathered under which the old theories of religion as a miraculous gift to mankind from the skies are being revolutionized. Not only are we learning the sympathies and agreements of the religions, but we are learning also that their antagonisms—antagonisms which have often been the cause of bitter persecutions and wars and bloodshed—are the result of false and superstitious claims. These claims and antagonisms are accordingly falling before the searching light of free inquiry and are destined to disappear. The special religions are moving on converging lines toward a religion of universal unity. Truth, right, brotherhood—these are coming to the front as greater words than any that are stated in church creeds, and as representing a stronger power than any sectarian walls. To state it in another form, human society in respect to religion is passing through a process of organic evolution, and every organic movement is purposive. It carries its aim in its own bosom. Now, the Free Religious Association voices this progressive organic movement of the vital elements of all the specific religions forward to some finer achievement for truth and human welfare. It does not attempt to manipulate these vital elements. It seeks to put them into no close corporation. Rather does it hold itself plastic to their power. It establishes a free platform, but a platform that faces the future,—a platform which not only accords hospitality to all earnest present views, however differing, but which distinctly prophesies the downfall of the power of creeds and of the antagonistic claims of ecclesiasticism, and the coming in of the era of the commonwealth of man. Toward that end, the vital forces of religion, under the shaping constructive power of emancipated thought, are moving; and this is the significance of the Free Religious Association to at least one of its members.

ALTRUISM.

"This altruism that assumes for itself a loftier morality in its willingness to part with personality and live on simply as influence and force, sweetening human life and deepening the blue of heaven,—a view that colors the pages of George Eliot and also some unfortunate pages of science,—is one of those theories that contains within itself its own refutation."—*T. T. Munger, May Century.*

Mr. Munger has judged rashly the state of mind which he terms altruism, the disciples of which have never assumed much for it or themselves, have put forth no claim to a "loftier morality," and have been content with a waiting attitude, while patiently endeavoring by example and precept to work out the salvation of the soul, not in fear and trembling, but in the hope of good accomplished.

Theology had imbued the prose and poetry of the Old and New Testaments with its own arbitrary meaning, had wrested it from the domain of spiritual insight into that of dogmatic diction, so that the comforting and ennobling sentiments of the Christ and his followers had taken on an evangelical tone to most minds. The eternal truth of the saying was vindicated, "The letter killeth, the spirit giveth life." The world had long been watching for a new gospel; for a prophet strong and able to interpret the meaning of birth, life, death, to answer the questions of the anxious and doubting soul.

Science came to direct man's thoughts to the universe and its undreamt-of wonders. It tried with honest endeavor and in single-heartedness to assist in the solution of present mysteries, to answer the soul's cry out of darkness; and nobly has it accomplished its work, in the face of ridicule, invective, and contrary forces. Neither has nature as yet called a halt, and one of the great hopes for the world lies in the direction of what science can accomplish for the material good of humanity.

This new power to be exerted for the development of the world naturally exercised a tremendous influence over the best intellects of the day. It is not to be wondered at if a reaction took place against the form of education, from the effects of which the world is still suffering, that was manifested by an almost morbid desire to be no longer deceived, but to face the truth and accept realities in place of illusions. Goethe, John Stuart Mill, Prof. Seelye, Darwin, Huxley, Herbert Spencer, Mr. Browning, Emerson, George Sand, and George Eliot were of one mind on this point; and it is they who by their high ideals and courage have made smooth the path for Mr. Munger and his *Immortality and Modern Thought*. On the strength of their words and works, he has built the bridge over which he has crossed to the serene heights "where lies repose." Altruism led the world away from personality, with its hopes of reward and its longing for certainty, into that state of mind which waits patiently, humbly, and earnestly for the solution of its difficulties, and strives to live for posterity. Neither does it deny immortality. It does not dream dreams; but it has seen visions of progress, of unselfishness, of the future advancement of the world along the path of righteousness.

At the present period of the world, altruism is the only resource of many people who are pressed by their work and have but little leisure to devote to abstract considerations; and the day has long since passed away when people are content to see visions at second-hand.

Many men and not a few women live happily and die calmly in the belief that annihilation is their fate; and, as far as the influence of personality on society is concerned, if their deeds and words tend to morality, this belief has no effect.

Witness George Eliot,—how little weight do her personal beliefs on immortality exert, while her ever-living words are more potent for good than while she was yet alive.

The noblest thoughts of every land and of all times are being gathered together to-day, and the prophets of the past are exerting an ever-increasing power over the thought of the present. Here comes in a point which cannot be termed a minor one,—the survival of the fittest. If immortality is conceded, it must be so from the highest spiritual point attained by the human soul. What part in such a plan of creation would the bush-boy of Australia occupy? Obviously none.

The best intellects of the century have been believers in this form of altruism, with but a dim hope of a hereafter; and many among them have none. They have yet had the bravery necessary to labor for posterity, to merge their personality into the universe of which they found themselves a part. They have accomplished for the intellectual and material world what the believers in immortality were powerless to do.

Dinah has led many a soul into the light of self-conquest; "Romola, with her noble perplexities," has taken many a tempted and suffering woman into the calm of renunciation; Maggie Tulliver, sinking beneath the Floss, had many a forbidden love drowned with her; and Dorothea has made smooth the crooked path of many a despairing bride.

The world can be none the worse for such altruism. It is but honorable that the prophets of the future should acknowledge the devotion, faithfulness, and courage of the devoted few whose renunciation has rendered it possible for them to lead others up to the serene heights of certainty.

ELLEN N. HENROTIN.

FOURIER AND FOURIERISM IN FRANCE.

The anniversary of Charles Fourier's birth was, as has been the case for many years in Paris, celebrated last month at an interesting banquet held in one of the numerous restaurants that look out on the famous garden of the Palais Royal, where the French Revolution was born. Gathered around the table were about fifty men and women, all holding advanced ideas on social and political questions, discussing with the old enthusiasm and the same conviction the old problems and the same subjects as did Camille Desmoulins and his companions in the garden below during the spring and summer of 1789. The French reformers and revolutionists of to-day say to you, "Yes, we have a political republic; but what we want is a social republic." And was not this the programme of the Jacobins of the convention?

But these radicals of 1885 had not assembled at the Palais Royal to conspire against "the powers that be," but to rejoice over the good time coming when Charles Fourier's dreams shall have become realities. The bust of the noble socialistic philosopher was enthroned on a side table, and surrounded with vases filled with his favorite flower, the crown imperial (*Fritillaria imperialis*). "Did you ever hear Fourier's beautiful symbolization of this flower?" asked my right-hand neighbor, Mme. Griess-Traut, who has devoted her long and well-filled life to advancing the interests of international peace and woman's emancipation. "No," was my answer. So a waiter was told to set one of the vases before us; and, between courses, Mme. Griess-Traut repeated these words of the master: "This flower represents the patient and unappreciated *savant* and inventor who pass their lives in discovering some new law or machine, who labor in isolation and die in poverty. You notice that

the corolla, instead of standing erect as is generally the case, hangs down. This typifies modesty and a retiring disposition. The flesh-like hue of the petals is the glow of human enthusiasm. If you look into the flower, you will observe four tears at its base; and, if you touch them, your finger will indeed receive a lachrymal deposit. This signifies that in moments of despondency the neglected *savant* weeps. The corolla has no calyx: the inventor is unprotected and alone in the world. That tuft of sharp-pointed, sturdy leaves which crown the plant stands for fearlessness, activity, labor,—the best characteristics of the life of the true investigator."

This beautiful revelation of the hidden meaning of this rather coarse and gaudy lily was a new and delightful lesson to me in the language of flowers; and I was not a little sorry to have Mme. Griess-Traut's poetic narration interrupted by the announcement from the lady president of the banquet that the post-prandial oratory was about to begin.

The first speaker was M. Courbebaisse, a distinguished State engineer and ardent phalansterian of the old school, whose toast to "Charles Fourier, the most fecund creative genius the world has ever seen," was such a clear and concise statement of the doctrine that I give it in full from notes kindly furnished me by the author.

"Fourier discovered the grand law of happiness," began M. Courbebaisse, "which he proclaimed to be the accomplishment for every human being of the cycle of his destiny during his lifetime. The development and employment of all our aptitudes, both physical and moral, from the moment we enter the world until we leave it,—such is the true formula of earthly happiness. Considering man an eminently social being, who can be happy only in a society that is happy, Fourier deduced this first principle of human happiness from social science.

"The structure of society ought, therefore, to be in harmony with the human organization. Fourier, throwing aside all preconceived ideas, gave himself up to a profound study of the constitution of the human organism both in the past and present life of humanity, and derived from this fundamental examination the laws that should govern the creation of a harmonious society. This inquiry, I am ready to admit, is not complete: much still remains to be done to render it perfect.

"Fourier has characterized as follows the successive social forms of the past of humanity: Edenism, Savagism, Patriarchism, Barbarism, and Civilization. We are now in this last stage, which is to be followed by two others called by Fourier Guarantism and Harmony. We have already begun to enter upon the first of these phases.

"Carried away with his wonderful discovery, and impatient to introduce humanity into the happy stage of Harmony, Fourier believed that man could pass over Guarantism and attain Harmony through a social graft in the form of a harmonious phalanx which would permit of the immediate realization of the new existence. Fourier always entertained this hope, which was never realized, and which caused him, unfortunately, to suppress in his works everything relating to Guarantism and the social reforms that are being slowly introduced among us to-day. For do not be deceived, my friends: our disorganized school seems to have almost disappeared, and yet never before have our ideas made such rapid progress. They have forced themselves on an unconscious society, quite independent of our feeble efforts. In this fraternal gathering, for example, many of you who do not imagine that you are phalansterians are such without being aware of it and without

having suffered the bitter disappointment of those phalansterians who hoped for the prompt realization of Harmony. But, however ignorant we may be concerning the ways and means to be employed, and the time necessary for reaching Harmony, rest assured that its coming is as certain as the natural development of an organic germ.

"Permit me now to describe briefly the life of a man in Harmony. Every new-born child will be welcomed with love, cared for and brought up in the way that will best develop, integrally, all his faculties and aptitudes, both physical and moral. Growing up happily in the society of children of his own age and in the midst of the caresses of his family, he will soon be able partly to support himself by participating in the well-planned and attractive labors of his phalanx. His co-workers will be his friends, the hours of labor will be short and varied, and his industry and talent will be justly compensated. This agreeable and methodical system of work will produce a general abundance, that will make it possible to come generously to the aid of those who, by accident or sickness,—and the number will then be much smaller than to-day,—are prevented from contributing their share to the common welfare, and will guarantee to every one almost absolute liberty,—a necessary condition, if all the members of society are to enjoy a happy and normal existence.

"But, it may be asked, how many centuries must pass by before the coming of this millennium? and of what interest is it to us, if we are not to rejoice in this Harmony? The admirable cosmogony of Fourier answers these questions. It teaches us that just as our terrestrial life is composed of two alternate series of wakings, characterized by memory and motion, and sleepings, characterized by oblivion and repose, so our existence in the universe is composed of two alternate series of superior lives, characterized by memory and an untrammelled going and coming throughout space, and inferior planetary lives, characterized by forgetfulness of preceding ones and movements limited to our planet. Now, our conscience tells us that we will be treated in this double series of alternate and successive lives according to our merits, and that thus we will enjoy the happiness that we shall have prepared for ourselves, and suffer the wrong that we shall have committed, so that we will be punished and improved thereby.

"After this rapid glance at our future life in Harmony, I will close with an All Hail! to the great prophet of human happiness, the founder of social science, the inventor of the laws of universal attraction, of organized and attractive labor, of the grand law of solidarity sanctioned by his cosmogony,—to Charles Fourier, in a word, the greatest genius the world has ever seen, still, perhaps, the most misunderstood, but who will be, unquestionably, the most glorious in the most distant future."

The next speaker was M. Charles Lemonnier, one of the few living original Saint-Simonians, and the well-known advocate of peace and international arbitration. While, as a follower of Saint-Simon, M. Lemonnier could not accept Fourierism, he could, nevertheless, drink to the memory of a great and good socialist. Mr. Hodgson Pratt, of London, the Alfred H. Love of England, followed in an eulogium of Robert Owen, who, he said, drew his ideas from Fourier,—a statement, by the way, that may be questioned. All the praise that Mr. Pratt bestowed upon Robert Owen was quite deserved; but he forgot to mention what was perhaps the grandest feature of Robert Owen's life, that of having been the father and educator of Robert Dale Owen. Mme. Griess-Traut next made a warm appeal in favor of peace, although her words seemed a cry in the desert at a moment

when the most civilized nation in Europe was about to come to blows with the most uncivilized. M. Morin, the aged anti-clerical, ex-municipal councillor, stated that Col. Roudaire, the originator of the inland African sea, who died this past winter, was a phalansterian, and expressed regret that the veteran socialist, Victor Considérant, one of the earliest disciples of Fourier, felt constrained in his old age to abandon the doctrine, because its theism clashed with his materialism. M. Charles M. Limousin, the editor of the *Mouvement Social*, closed the series of speeches with a spirited description of how Fourierism is slowly, but surely making its way into French legislation. "We are entering upon Guarantism," exclaimed the orator: "our school may be disappearing, but our principles are being accepted by the political world."

The fraternity, solidarity, noble enthusiasm, and firm belief in the good time coming, which pervaded this unostentatious banquet, awakened in me a new interest in Charles Fourier; and a few days later I visited his tomb in the Montmartre Cemetery and his portrait in the Luxembourg gallery.

It was a calm, partially clouded afternoon—one of those April days when the sky is uncertain, and you cannot tell whether rain or sun is to come forth—that I wended my way through this densely peopled city of the dead. The weather seemed in keeping with the system of the philosopher whose tomb I was trying to find. At last, I discovered the broad, low-laid slab, surrounded by a simple little iron railing, with these words—which I shall not attempt to translate—boldly cut into its surface:—

Ici sont déposés les restes
de

CHARLES FOURIER.

La série distribue
les harmonies.
Les attractions
sont proportionnelles
aux destinées.

A bust of the defunct stood on a low socle at the head of the grave. The soft brown stone out of which it was made reproduced but roughly the delicate and striking lineaments of this remarkable physiognomy. The plaster copy at the banquet hall gave one a more correct idea of Fourier as he must have appeared in life. The top of the head is very broad, and the forehead wide and high. It is evident that you are gazing at a profound thinker. The lower part of the face is narrow, and comes almost to a point at the chin, this tapering effect being exaggerated by the cranial largeness. The compressed lips betoken firmness, and did indeed belong to a man who always had the courage of his convictions. There is spirituality in all the features of this face; there is nothing coarse in it; poetry shines out from it. You now understand how Fourier saw such deep and tender meaning in the crown imperial, a cluster of which flowers some affectionate hand had recently arranged droopingly over the shoulders of the bust. They were still fresh.

This touching tribute reminded me of something told me at the banquet,—how an old phalansterian, coming up a few weeks ago for the first time to Paris from the provinces, had wished to meet with some of his fellow votaries; how he took out his visiting card, and wrote these words upon it: "If any phalansterian find this card, I should like to have his city address. I shall return here in a few days, and shall hope to find his card on the tomb of the master"; how he laid the visiting-card on Fourier's grave; how he did come back again; how he did find another card there; and how, by this means, a complete stranger

in the big city, he soon made the acquaintance of all the leading Fourierites.

The day after my pilgrimage to Montmartre, I went to the Luxembourg gallery, to examine more carefully Gigoux's portrait of the founder of the Phalanstery. The well-known portrait painter has treated his subject at full-length and life size. He has placed him out of doors, seated on a bank in the very midst of that nature which the philosopher loved so dearly. The hat is off, so that the features stand out clearly. The contour is the same as in the bust at the cemetery, but the delicate brush has given color and animation and expression that the chisel cannot render. The face is turned toward you with a half-inquiring look, and a slight cloud of sadness seems spread over it. Charles Fourier must have been tall and slender, of graceful and urbane presence, with a strikingly noble, kind, and thoughtful face,—in a word, those who have learned to love him through his writings could not have received the slightest shock of disappointment or repulsion on meeting him for the first time face to face. There could have been nothing of the Dr. Johnson, Carlyle, or Alfred Tennyson in Charles Fourier. He not only practised what he preached, but he showed what he preached.

THEODORE STANTON.

PARIS, May, 1885.

NATURE AND THE INDIVIDUAL.

It seems to me that any one who to-day professes to believe in the perpetuity of the individual consciousness after death allows his or her sentiment to get the better of the intellect. Perhaps we all have occasional "weird seizures," in which, by a flash of thought, the enormous bulks of the whirling galaxy seem imponderable and immaterial as thought,—a living phantom, many-colored Being, a terrible foster-nurse; not unbeneficent,—a lion glare in its eyes, yet in its heart a mother-yearning for its whelps, its goal and end sunk beyond thought in the depths of infinite space. If we do ever have these seizures, it is then, and then only, that there comes into our mind a dawn-gleam, a meteor-flash of thought,—no, it is too brief to form an actual thought,—that, when we fade away like a wreath of mist, when, as if at some fearful summons, we grow pallid, drop our toys, and hurry away into the dark, we fade and dissolve into a substance, a something higher than our own consciousness, and yet of it. Nature is a box with false bottoms, or slides, as Emerson deftly suggests. But he might have added that it is a magical box, that only reveals its actual contents when the right key is turned. Magical? Yes, indeed! You have no name for its enchantments. You cannot degrade them by calling them miraculous, that word is so associated with wormy humbug and ghastly mummery. Do but turn the key, and peep through the aperture. What rapture, what amazement!—illimitable distances, green landscapes basking in light that streams in through the top of the box, and out of the myriad tiny granules sprinkled on the floor a thousand exquisite things rise up. Here a cell puts out wings, and flies away a brown thrush with delirious song. Here is a precisely similar cell that starts up a man. Another puts out delicate leaves: the vine spreads, it blossoms, the delicious fruit ripens before your eyes.

'Tis passing strange; yet can you find one grain of proof in it all of the survival of consciousness after dissolution? I cannot, and I think the time has come to say so boldly and unequivocally. A noble friend, our neighbor, died this winter of pneumonia. We hurried him away on a bitter day to a wintry summit. His friends were Catho-

lics, although I know him to have been an *esprit fort*. They went through their pretty and affecting little superstitions,—the sprinkling of holy water, kissing the face of the dead, the service by the shivering priest, the throwing of a handful of earth each into the grave by the relatives,—and then we came away. The noble brain, the warm heart, the cunning artist hand, they are still, still, and very white now. The curtain was rung down very suddenly. The play is ended. The plant has reached its utmost growth: the sap of life withdraws from the veins back into the ground. And it is well. Life is not dead, but surges anew in a thousand forms. What god is this imperial heat? From its hot loins the teeming fiery sparkles spring that form the world anew and anew and ever new. Let the dead leaves fall. How ridiculous they look clinging there on that old bough all a-gleam with the tender tint of the fresh-born leaves of this year! Let them fall, let them moulder. Life has not forsaken them, however: it is only latent.

"There was the Door to which I found no Key;
There was the veil through which I could not see:
Some little talk awhile of Me and Thee
There was,—and then no more of Thee and Me."

If we believe this, why should we not be brave enough to say so? Are we not men enough to go and lie down alone in our sweet sleep of death, when the time comes? Can we not bar the door upon whimpering women and sophistical priests, and go forth undiminishedly to meet our fate? I admire that lioness woman—a New England woman, I believe—who turned everybody out of her room when she was dying, that no one might make a spectacle of that sole moment of weakness in her brave life.

The most comforting text I know of for one who is, on this subject, perplexed by doubt, and cannot beat his music out, has been spoken by Marcus Antoninus:—

"THAT IS GOOD FOR EVERY PART OF NATURE WHICH THE NATURE OF THE WHOLE BRINGS, and what serves to maintain this nature. Now, the universe is preserved, as by the changes of the elements so by the changes of things compounded of the elements. Let these principles be enough for thee, let them always be fixed opinions. . . . For to be vexed at anything which happens is a separation of ourselves from nature, in some part of which the natures of all other things are contained."

In brief, if the individual consciousness passes into some other form of life, what of it? We can have the simple faith that, if such is the nature of things, it will all be for the best. I do not wish to separate myself from the nature of things. I am willing to share the destiny of the trees and the birds that build in them. Let those who like it solace themselves with the hot-colored rhetoric and stagy strut of priests with their infernal hell and the mild idiocy of their heaven: I stand by the rocks and grass and trees; I will cast in my lot with them. Rather I would that the sighing mounds of the heaving sea be my passing bells for aye, or that my body be filtered by change into the withered roots and strengthly limbs of a tree, than that I should sneak into a heaven ruled by an ogre-despot, and spend an eternity with It (the sexless monster) in gazing upon the writhings of the damned whom It had itself created.

*As a proof that there is not lacking moral support for him who speaks what he thinks on this subject, one might instance the fact that the battle of Shiloh—one-third of it—was fought on a Sunday. No army of men that actually believed in Christianity and its doctrines would so have fought, or indeed would have fought at all. The Anglo-Saxons are the greatest canters in religious matters in the universe. Two-thirds of Anglo-American men, as well as of French male peasants, are thorough sceptics, but conform or dissimulate on account of their women. (Cf. F. G. Hamerton's *Round my House*.)

To that vast, that countless crowd who fall forevermore into the black abyss of death, and think it the vestibule to a life which is a vague and undefined continuation of this, we can say, *Morituri saluamus*, and say it with a kind of noble sarcasm,—“We who are about to die salute you immortals.” Our hope is in the sweetness and sanity of nature. If you join our band, we promise you nothing. We ourselves are still in search of the first trace of a clew. We have come to the dark tower, but cannot find the door. (“God is a tower without a stair.”) Yet with us there is peace and happiness. We assume nothing: we are satisfied with nature. We believe in her, and we can live and die with her in all her metamorphoses. And some time the door may be found.

“Have the elder races halted?
Do they droop and end their lesson wearied over there beyond the seas?
We take up the task eternal, and the burden and the lesson,

Pioneers! O pioneers!

“All the past we leave behind,
We debouch upon a newer, mightier world, varied world;
Fresh and strong the world we seize, world of labor and the march,

Pioneers! O pioneers!

“O to die advancing on!

Are there some of us to droop and die? has the hour come?
Then upon the march we fittest die, soon and sure the gap is filled,

Pioneers! O pioneers!”

W. S. KENNEDY.

THE annual Convention of the Free Religious Association proved to be one of the best of the whole series; and the Festival, it was the common opinion of all present, reached the high-water mark among festivals, pleasant as they have been in the past. Had our friend, the editor of the *Christian Register*, been present at the latter, and heard the speeches of Dr. Heber Newton, Episcopalian, Rev. Mr. Gill, Methodist, Rev. Mr. Janson, Unitarian, Mr. Hill, of the Ingersoll Secular Society, together with other voices from theists and agnostics of various shades of thought, every one true to himself, yet all, without exception, striking the keynote of a common sympathy and fellowship, he would have seen that the Free Religious Association “can play together the same tune in the same time,” and that, whether “the world can be made to listen” or not, he that hath ears to hear will hear.

W. J. P.

EDITORIAL NOTES.

BY B. F. U.

THE Free Religious Association was not dead, but only taking a nap.

AN editorial in the *Boston Herald* says that “Mr. W. J. Potter, in a volume of sermons fresh from the press, which contains the finest and best expression of his thought, reveals himself as a constructive religionist of a high order.”

ALL the subscribers of *The Index* who are in arrears on their subscriptions are urgently requested to send to this office, with as little delay as possible, the money due, which in the aggregate amount to a large sum, and is needed to enable us to meet current expenses.

CROCODILES, supposed by the native of Java to be animated by the souls of his ancestors, are never molested by him; but, whenever there is a wedding or a funeral, a roast chicken is put on a little boat garnished with flowers, burning tapers, etc., and sent adrift to keep up the supply of these pernicious monsters.

THE wish expressed by Rev. Francis G. Peabody at a meeting in this city last week, that the Unit-

rians would "learn more of the fear of hell and the fear of ministers," is not likely to be gratified. Nothing so suggestive of warmth as hell will ever find favor among Unitarians. A gentleman was asked last week where and how he had taken a severe cold, from which he was suffering. "Why," he replied, "I attended a Unitarian meeting a few days ago, and was chilled through." Perhaps a little "fear of hell," as Dr. Peabody suggests, might have a wholesome effect on some of the more frigid Unitarians,—and some of our Free Religious friends also,—although the excitant is one we do not encourage. Stimulants of a less fiery nature are in every respect preferable if they will accomplish the purpose desired.

A WESTERN liquor dealer advertises as follows: "Having experienced a change of heart through the blessed efforts of Brother B. and Sister S., I desire to state to my numerous friends and patrons that at the end of the current month I shall retire from the accursed liquor traffic forever. Until that time, my stock on hand will be offered at greatly reduced rates. Come one, come all!"

Of Victor Hugo's rank and genius, the New York Sun says: "On the artistic side, unquestionably, Victor Hugo was greater than Voltaire; and, on the moral side, he was a better man than Goethe. But, rich and various as are the garnered fruits of his long life, they include no single composition worthy to be ranked with *Faust*; nor has Victor Hugo ever exercised a tithe of Goethe's influence over those who are themselves among the pioneers of thought and the shepherds of the people. But his name is known in millions of homes that Goethe's never reached; he is loved as Goethe never was. For there is nothing esoteric, exclusive, oligarchical in his intellectual posture. There is room for all his brethren in the chambers of his heart. No voice sent forth in this century, whether in prose or verse, has been more instinct and tremulous with the quick and tender sympathy that makes the whole world kin." Victor Hugo's last words were words of affection,—*"Adieu, Jeanne, adieu,"* addressed to his favorite grand-daughter.

THE editor of the *Investigator*, who sometimes reminds us of Benjamin Franklin in his practical way of looking at theological questions, thus sensibly answers an inquiry from a subscriber:—

No: there is no mention of masses being required for the dead in any of the teachings of Jesus, so far as we remember, or, if there is, he didn't charge \$25 for low mass and \$50 for high, as the Catholic Church does to-day. That is sheer priestcraft, and we advise you as a friend who wishes to help you to have nothing to do with it. Save your hard-earned money for yourself, wife, and children, and do your own praying; for Jesus says it is a personal or individual duty, as of course it must be, if there is any merit in it. A man might as well attempt to eat or sleep for another as to pray for him, because prayer is a private or personal matter, and hence each one must pray for himself; and very likely his prayer for the dead is just about as good as that of a priest's, if not a good deal better. For, when a man prays in his closet with the door shut, he is no doubt sincere; but, when he prays in public, "to be seen of men," as Jesus said, there is no knowing whether he is sincere or not. Praying is evidently an individual and private affair, and he is a careless and a lazy Christian who gets his praying done out by proxy.

ONE of the leading Catholic priests of Detroit, in a recent sermon, said some unhandsome things about the secular press, afterward repeating his charges in the *Detroit Post*, against editors and reporters in general. The same paper publishes a reply from Mr. Thomas Harding, of Sturgis, Mich., from which we take the following paragraph: "Mr. Ryan says, 'There is a great demand in this age of advanced thought for a new way'; and he complains that 'editors and reporters often enter

the field of theology.' That is part of the price which he pays for living in a free country and in the nineteenth century. If there is a 'demand for a new way,' it is because the people 'live in an age of advanced thought' that they 'inquire for it.' 'One-half the contents of penny newspapers,' he says, 'is made up of lies, one-half of the other half mistakes, and half of the remainder is guessed at.' It might not be quite polite to ask the reverend gentleman whether there are any 'lies' in his theology; but it is admissible to inquire how much of it is 'made up of mistakes,' and what proportion of 'the remainder' is 'guessed at.' The people 'of this age of advanced thought' are asking these questions; and, if Mr. Ryan will not or cannot answer them, they will answer them for themselves, and act upon their conclusions, too."

A FRIEND requests us to give what we deem the correct definition of religion. We cannot do better than reproduce the following extract from our editorial in *The Index* of Nov. 22, 1883:—

One of the most popular objections to this Agnosticism is that it involves the denial and destruction of religion. Religion is commonly assumed to be belief in, and the worship of, a personal Deity,—a being very much like man, but greater; a being in whose image man was made. But, with the progress of knowledge, men may come to see that the popular notions of religion are narrow, and that they must in time be modified and superseded by broader conceptions. . . . Our own conviction is that religion is based fundamentally upon the recognition of a Power of which, as Spencer says, "humanity is but a small and fugitive product,—a Power which was in the course of ever-changing manifestations before Humanity was, and will continue through other manifestations when Humanity has ceased to be"; a Power of our relations to which all religious dogmas, forms, and ceremonies are expressions containing, with much error, some essential element of truth. The germinal conception of religion is that of a mysterious Power behind phenomena. Superstition commences when the mind begins to form and fashion this Power in its own image. But the recognition of the Power will remain, when all existing forms under which it is contemplated shall be regarded as we now regard the mythologies of Greece and Rome. "No one need expect then," says Spencer, "that the religious consciousness will die away or will change the lines of its evolution. Its specialties of form, once strongly marked and becoming less distinct during past mental progress, will continue to fade; but the substance of the consciousness will persist." "No more in this than in other things will evolution alter its general direction: it will continue along the same lines as hitherto. And, if we wish to see whither it tends, we have but to observe how there has been thus far a decreasing concreteness of the consciousness to which the religious sentiment is related, to infer that hereafter this concreteness will further diminish, leaving behind a substance of consciousness for which there is no adequate form, but which is none the less persistent and powerful." As fast as men come to accept, understand, and assimilate this scientific conception of religion, which is logically a part of the theory of evolution, they will see the superficiality and absurdity of every species of theological anthropomorphism and the groundlessness of their foolish fears that iconoclasm will obliterate from the human mind anything that is essential and valuable in the religious systems of the world or in the religious sentiment.

THE concluding lecture of the course for the present season, before the Parker Memorial Science Class, will be delivered next Sunday at the usual hour, 12.15 P.M., by Mr. D. H. Clark, on "Joseph Priestley." This organization, which numbers some seventy members, has during the season now drawing to a close, under the presidency of Mr. John C. Haynes, done most valuable work, due in a large degree to the efforts of Mr. D. H. Clark and Miss Agnes Burke, of the Executive Committee, Mrs. Buchanan, the efficient Secretary, Mr. S. H. Roper, and Mr. Peter Annet, among others. The attend-

ance has been good, and the average quality of the lectures equal perhaps to that of any course of the same number given in the city. The following list of topics with the names of the lecturers, a number of whom brought to the treatment of their subjects the thorough knowledge of specialists, has been furnished us by the Secretary; and it will give some idea of the variety and scope of the thought which has been presented to the class since last November: "The Mechanics of the Flight of Birds," by Prof. Maynard; "Underground Wires relating to the Telephone and Telegraph," by Mr. Carey; "Swedish Bric-à-Brac," by Miss Anna Wallberg; "Electric Light," by Mr. Richards; "Atavism, or Reversional Heredity," by B. F. Underwood; "The Education of the Blind" (two lectures), by Mr. Anagnos; "The Starry Heavens," by Peter Annet; "Modern Palestine," by W. Spear; "Structure of the Organs of Digestion," by Dr. Caroline Hastings; "Is Man a Mere Organism or Something More," by Wm. Mitchell; "Our Rivers as they are and as they have been" (three), by S. H. Roper; "Sleep," by Dr. Louise Cummings; "Amateur Photography," by J. A. J. Wilcox; "The Sandwich Islands," by G. H. Brown; "Our Sense of Form by the Eye," by Dr. B. J. Jeffries; "A Constellation of Fair Astronomers," by Mrs. S. A. Underwood; "Color Sense and its Defects," by Dr. B. J. Jeffries; "The Guilds of England and Continental Europe," by S. H. Brackett; "Some Forms of Energy in Matter," by Prof. Dolbeare of Tufts College; "Missing Links," by Peter Annet; "The Southern Problem," by Archibald H. Grimke; "Mystery of a Rivalry," by Peter Annet; "Instantaneous Photography," by Prof. W. H. Pickering; "A Voyage around the World," by Miss A. E. Newell; "The Effects on Society and the Individual of Increasing Specialization," by B. F. Underwood. The only death among the members of the class the past year was that of Miss M. A. Hardaker, one of the most gifted and useful members, and whose loss is keenly felt.

ILL can he rule the great that cannot reach the small.—Spencer.

THE secret of success in life is for a man to be ready for his opportunity when it comes.—Disraeli.

IRON endurance and uncomplaining renunciation are the two poles of human force.—Marie Eschenbach.

NATURE is upheld by antagonism. Passions, resistance, danger, are educators. We acquire the strength we have overcome.—Emerson.

EVERYTHING is good which takes away one plaything and delusion more, and drives us home to add one stroke of faithful work.—Emerson.

THE main token of a strong character is not to make known every change and phase in thought and feeling, but to give the world the finished results.—Auerbach.

BUT very late in life, and that after experiencing many trials, a man learns to sympathize with a fallen, feeble brother; to help him without inwardly enjoying his own goodness and strength; to humbly understand and appreciate the naturalness, nay, the unavoidableness, of committing a wrong sometimes.—Turgenev.

STELLA AMICA.

With weary feet I passed the city wall:
The night was near, the mountains far away;
And, as the glow of full-blown rose, the day,
Too beautiful, was blushing to its fall.
I paused to rest,—the dark was over all.
Lo! one by one, from out her sable cloak,
The bright-eyed children of the night awoke,
And answered gleaming to my silent call.
Like stars of hope,—the stars that ever lift
The soul from doubt and darkness into light,—
So thou, my friend, shin'st through the woodland rift,
And, lo! I stand upon the mountain height.
Below, the valley glimmers as the deep,
Where ships at anchor ride and sailors sleep.

WILLIAM ORBWAY PARTRIDGE.

The Index.

BOSTON, JUNE 4, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion; to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

REPORT OF THE ANNUAL MEETING OF THE FREE RELIGIOUS ASSOCIATION.

The annual meeting of the Free Religious Association for 1885 opened with a business session Thursday evening, May 28, 1885, in the Parker Memorial Hall, Boston. The President, Mr. Wm. J. Potter, occupied the chair, and Mr. F. M. Holland acted as Secretary. The record of the last annual meeting was read, and approved.

The Treasurer, John C. Haynes, presented his report, as follows:—

Report of Treasurer.

Receipts.		
1884.		
May 29.	Balance on hand as per last year's report	\$24.88
" 30.	Membership and patrons' fees, and donations collected at the business and convention meetings	167.71
June 20.	From sale of tickets to the Festival	206.59
Oct. 4.	Receipts from Social Supper, above expenses	.39
Nov. 24.	From F. A. Hinckley, collections at Florence Convention	39.93
1885.		
May 28.	From sale of reports and tracts at office during year	4.70
" 28.	From memberships and patrons' fees, and donations during the year	222.10
" 28.	Dr. W. A. Rust, special donation	\$66.30
		18.51
		\$684.81
Disbursements.		
1884.		
June 2.	Travelling expenses of Convention speakers	\$82.58
" 9.	Rent of Parker Memorial, for Convention meetings	50.00
" 10.	New England Woman's Club, charge for two business meetings	4.00
" 20.	Rent of Melonaon, expense of caterer, and cost of music for Festival	206.50
July 29.	Advertising expenses of Festival	42.30
Aug. 13.	Salary of Geo. H. Foster, for May and June	66.66
Nov. 8.	J. M. W. Yerrington, for reporting	14.00
" 24.	Expenses of Florence Convention	51.00
1885.		
Jan. 8.	Rent of Woman's Club Room, for meeting	3.00
" 22.	Expense of social supper given in December, above the receipts	16.90
May 28.	Rent of office eleven months, to May 1	137.50
" 28.	Various expenses during the year	9.87
		\$684.81

JOHN C. HAYNES, Treasurer.

BOSTON, May 28, 1885.

Voted, That the report be accepted.

The report of the Executive Committee was then read by the Assistant Secretary, F. M. Holland:—

REPORT OF THE EXECUTIVE COMMITTEE.

The past year has been one of intense political excitement, involving some unusual differences in opinion among people who had hitherto agreed substantially. Our work could not therefore be begun as early or continued as actively as would otherwise have been the case. One field has, however, been entered with some success.

Secularization.

The annual business meeting for 1884 resolved, "That the Executive Committee be recommended to labor in protecting witnesses in court from molestation on account of theological disbelief, as well as in otherwise secularizing the State."

The sub-committee intrusted with this duty found such preparations already made in Massachusetts that they concluded to present a petition to the Legislature of that State, asking for a repeal of the law discrediting witnesses. This received five hundred and sixty names, but was rejected by the Senate on February 17. The Legislature appeared less favorable than a year ago. Fearing that this petition would not by itself attract sufficient notice, it was thought best to ask also for the taxation of the churches in Massachusetts, and one thousand and sixty signatures were obtained accordingly. This request also was refused; but two full hearings were given by the taxation committee of the General Court, and so fully reported in the daily newspapers as to present the arguments on both sides to many readers who had thought little on the subject. Similar attention was given to the speeches in the Senate about the repeal of the statute against atheists. The New York Nation published a strong editorial in favor of this reform, as did other influential papers. The addresses delivered in support of these petitions were published in full, not only in *The Index*, but in the *Investigator*, the *Agnostic* of Philadelphia, the *Freethinkers' Magazine* of Salamanca, N.Y., and the *Religio-Philosophical Journal* of Chicago. Many comments from various points of view appeared in the religious as well as the secular press. Much time was devoted to the subject, not only in the convention of this Association at Florence and its December supper in Boston, of which events full notice will be given later, but also in the regular meetings of the Liberal Union Club and the Ingersoll Secular Society. For the aid rendered by these organizations and many individuals we now express our thanks.

This method of attracting public notice to our great principle—namely, that government ought not to interfere with religious belief or disbelief—proved so efficacious that we resolved to bring out next year the defects in the Sunday laws. An article on those in Massachusetts was prepared at our request, by a lawyer, and published in *The Index* for February 26. It was thus found that two decisions of the Supreme Court of that Commonwealth are still in force,—one preventing the collection of damages for fraud committed on Sunday, the other permitting any one who purchases property on that day to keep it, without paying for it.

The annexed petition was accordingly prepared, and signatures are now solicited. Copies for circulation may be obtained at *The Index* office, or by addressing Box 61, Concord, Mass.

COMMONWEALTH OF MASSACHUSETTS.

To the Honorable, the Senate and House of Representatives, in General Court assembled:—

Your petitioners, citizens of Massachusetts, respectfully represent that the Supreme Judicial Court of

this Commonwealth has decided that "an action cannot be maintained for a deceit practised in the exchange of horses on the Lord's day" (*Robeson v. French*, 12 Met. 24), and also that payment cannot be enforced for goods sold and delivered on Sunday, even though kept by the purchaser. (*Myers v. Melnrath*, 101 Mass. 366, and *Cranson v. Goss*, 107 Mass. 441.) To prevent repetition of such injustice, your petitioners ask that a law may be enacted substantially as follows:—

"1. The provisions of chapter 98 of the Public Statutes, relating to the observance of the 'Lord's day,' shall not constitute a defence to an action for damages for fraud committed on that day. 2. The provisions of chapter 98 of the Public Statutes, relating to the observance of the 'Lord's day,' shall not constitute a defence to an action for the value of real estate or personal property, sold and delivered on that day and afterwards retained by the buyer. 3. This act to take effect upon its passage."

An organization in active sympathy with this Association will, we hope, petition the next General Court to amend the law against Sunday amusements. Some attempt has already been made to induce friends in other States to petition either for changes in the Sunday laws, for the taxation of churches, or for the protection of witnesses against discredit or exclusion on account of unbelief.

We cordially invite all interested in these reforms to correspond with the secretaries of the Association. We hope for such a response as will enable us to take some steps toward carrying out more thoroughly than ever before a plan adopted by this committee more than four years ago, as follows:—

Voted, That a committee be appointed to have charge of all measures, including the appointment of sub-committees in different cities, looking to the emancipation of the public schools and the purification of the laws from all sectarian influences.

Such work can be done by no one so well as by this Association, and we now call upon our friends in all parts of the country to help us extend it far and wide.

Conventions.

The regular annual convention was held on the morning and afternoon of Friday, May 30. The first session was devoted to a description of the Ethical Culture movement by Messrs. William M. Salter, W. L. Sheldon, and S. B. Weston. Various phases of religious thought were presented that afternoon by Prof. William T. Harris, Mr. C. D. B. Mills, Mrs. Clara M. Bisbee, and Capt. Robert C. Adams.

A convention was also held in Florence, Mass., by the invitation, and at the expense of, the Free Congregational Society of that place. On the evening of November 19, "The Religion of the Nineteenth Century" was set forth by Mr. Potter, who was followed by Rev. J. C. Kimball, of Hartford, Ct. The next morning, addresses on "Secularization" were delivered by Messrs. F. M. Holland and B. F. Underwood. That afternoon, the management of liberal Sunday-schools was fully discussed by Mrs. Spencer and Mrs. Bond, of Florence, and Messrs. Hinckley, Underwood, and Lilly. All the speakers agreed that doctrinal instruction should not be given in schools supported even in part by agnostics. The evening session brought out an essay by Mr. Hinckley on the "Human Question," another by Miss Eastman on "Our Duty to speak our Utmost Thought," and a plea for philanthropy by Mrs. Diaz.

Those of our friends who wish for conventions near their homes during the coming year will find us glad to make any arrangements not likely to throw too great expense upon the Association.

Social Suppers.

In compliance with the vote at the last business meeting, suppers were held in Parker Fraternal

Hall on Wednesday, October 1, and Wednesday, December 10. On the former occasion, Mr. Potter presided. Miss Eastman showed our duty to speak our utmost thought, remarks on the same subject were made by Messrs. Hinckley and Applebee, and much time was given to social intercourse. In December, the secularization movement was discussed by Col. T. W. Higginson, the chairman, Messrs. Holland, Hinckley, Babcock, and Cobb, and Mrs. Clara M. Bisbee. The plans for holding a similar meeting during the spring could not be carried out successfully. We recommend that a similar supper be held next fall in Boston, to be followed by others as may be found expedient.

"The Index," and Other Publications.

No concerted action in behalf of *The Index* has been necessary during the past year. We take great pleasure in mentioning that this paper is still admirably conducted, as it has always been, and that it has recently received several important articles, especially from new contributors. We cordially recommend it as the ablest utterance of advanced thought.

No other publications have appeared under the direct auspices of the Association. The great principles of religious freedom and mental progress have been advocated during the past year by many authors on their own responsibility. Among these new books of value to our cause, we will only speak of Johnson's *Persia*, the continuation of a great literary work.

Finances and Membership.

One reason that more was not attempted during the year is the low condition of the treasury. Twelve months ago, the balance on hand was less than \$25. Now there is a deficit, as will be seen from the treasurer's report.* Our expenses were but slightly in excess of those for the previous year. Our receipts were more than \$150 less. In fact, they are less than those reported for any other year during our whole history. Five years ago, we found that our receipts and collections amounted to nearly four times as much as we have to account for now. It is true that our membership was then but slightly larger than at present. In fact, it depends mainly on how much special effort is made in that direction at our conventions and festivals. We desire to make it clearly understood that we are always ready to welcome accessions to our ranks. For the next year, we shall have to increase our receipts at least fifty per cent., in order to wipe out this deficit, and avoid another. If we are to hold any conventions but the annual one, or publish any more pamphlets, we must be helped accordingly. The officers of this Association will gladly and promptly use all the funds which our friends will place at our disposal. We recommend that greater efforts than before be made, not only to enlarge our membership, but to procure contributions during the Convention and Festival to-morrow, as well as throughout the year.

In Memoriam.

While we mourn, in common with all free souls, over the irreparable loss of Victor Hugo, we must also remember some sad gaps in our own ranks. Among the speakers at our last business meeting was Miss Emily J. Leonard. But little more than a year previous, she read a paper on the "Relations of Church and State in Connecticut," her own State, at our convention in New Haven. *The Index* and the *Woman's Journal* have often been en-

* This report was prepared while the amount of receipts for the year seemed likely to be much less than finally proved to be the case. In fact, the treasurer's report did show a deficit when it was first presented; but this lack was made up during the meeting by the gift of W. A. Rust, M.D.

riched by her earnest and thoughtful essays. Political economy she treated with especial power; and her translation of a French work on this subject, now assuming unprecedented importance, has become a text-book in American colleges. Her researches and discoveries as a botanist had won the admiration of scientific men throughout New England. Her study of Mill, Spencer, and Huxley, led her to desire ardently, as she said herself, "to substitute knowledge for ignorance, right for wrong, truth for superstition, freedom for slavery, character for creed, catholicity for bigotry, love for hate, humanitarianism for sectarianism, devotion to universal ends for absorption in selfish schemes." With these views, she became an agnostic. Not long before her death, she wrote thus to a friend: "I am more and more sensible, as I recede from the active scenes of life, of the surpassing value of a philosophy which is the natural growth of experience and study,—perhaps I may be allowed to say, the progression of a life. While, conscious as I have been of being encompassed by ignorance on every side, I cannot but acknowledge that philosophy has opened my way before me, and given a staff into my hand, and thrown a light upon my path, so as to have long delivered me from doubt and fear. It has, moreover, been the joy of my life, harmonizing and animating all its details, and making existence itself a festival." She was still in full mental vigor when she was taken from us last July, and "laid to rest beneath the wild flowers which she loved so well."

Early last autumn, another student of Herbert Spencer, Miss Martha A. Hardaker, closed her labors as a brilliant and fearless journalist. Great attention had been excited by her powerful articles in the *North American Review* and *Popular Science Monthly* on woman suffrage, in regard to which she took the opposite side from that held by Miss Leonard. The criticism on Emerson and Matthew Arnold, which she published in the *Transcript*, as literary editor, was widely praised as a masterpiece. Many essays of great value came from her pen to *The Index*, one of whose editors remarks that she was better entitled to the degrees she held, of M.A. and Ph.D., than are the majority of men on whom these honors are bestowed. He also says, "Of the Parker Memorial Science Class, she was an active and leading spirit," and adds, "A more thorough-going materialist than was Miss Hardaker we never knew, nor expect to meet." It is pleasant to remember that her death was brave and calm, as had been all her life. She, too, passed away in the prime of mental activity, leaving a gap among our active supporters which we cannot easily fill.

Winter, too, silenced an earnest voice, not unfamiliar or unwelcome to the friends of progress. William Henry Channing was then in his seventy-fifth year, having been born exactly seven years later than Ralph Waldo Emerson, who once spoke of him as

"The evil time's sole patriot."

His birthplace, Boston, was always dear to his heart. After graduating at Harvard College and the Cambridge Divinity School, he abstained from taking a parish until doubts, which he was too loyal to truth to drive away, had been laid to rest by his admiration of the philanthropic influence which he saw exerted by Christianity. His scepticism was soon reawakened by the great Transcendental agitation; and he was man enough to leave his pulpit at Cincinnati, and devote himself for some years wholly to social reform. He became an active advocate of peace, temperance, and Fourierism, a leader at Brook Farm, and a mighty assailant of slavery. Col. Higginson says

he was the most eloquent of Abolitionists, except Wendell Phillips. Curiously enough, the great anti-slavery movement, which swept so many other men out of the pulpit, carried Channing back into it, and enabled him to do peculiarly good service toward the final emancipation while Unitarian pastor at Washington. When he came back from England, and spoke at our Convention in Parker Memorial Hall five years ago, he still seemed much more at home with us than with the Unitarian organizations. At this last visit, he was working for a new reform, and trying to raise men to a higher standard of purity. We have still his memoirs of his saintly uncle and his noble friend, Margaret Fuller; but his best legacy is that of a life spent in tireless self-sacrifice for the poor, the oppressed, and the fallen. No one whom he met, even at the Five Points in New York, seemed to him sunk too low to be lifted up; and, even to the last, his faith in progress kept him ever young.

Each of the four seasons found a victim among our best friends. We need look back only to April 14 to see the last honors paid in Parker Memorial Hall to one of the most active and influential supporters of the society which meets there, as well as of the principles embodied in this Association. Charles W. Slack had labored, like Channing, for the slave, and in close sympathy with Parker, Sumner, and Andrew. For the past twenty years, he had presented advanced ideas of religion, morality, and literature, as editor of the *Commonwealth*, and had also done much for social progress in the Art Club, the Massachusetts Charitable Association, the Press Association, and the General Court. He had also held an honored place in the civil service of the United States. His sixty years had not taken away his vigor, and his loss was widely and keenly felt.

Nothing shows better the width of our platform than the cordiality with which we can lament at once the early Free-Soiler and the early Abolitionist, the Transcendental Unitarian and the scientific materialist, the advocate and the opponent of woman suffrage, the politician, the clergyman, the journalist, and the botanist. They were all faithful servants of humanity.

Voted, That the Report be accepted.

The committee on nominating officers reported through Mr. H. P. Hyde; and the officers named were elected, as follows: President, William J. Potter, New Bedford, Mass. Vice-Presidents, Octavius B. Frothingham, Boston, Mass.; Felix Adler, New York City; George W. Curtis, Staten Island, N.Y.; Edward L. Youmans, New York City; Frederick Schuenemann-Pott, San Francisco, Cal.; Thomas Wentworth Higginson, Cambridge, Mass.; Elizabeth B. Chace, Providence, R.I.; George Hoadley, Cincinnati, Ohio; Nathaniel Holmes, Cambridge, Mass.; Rowland G. Hazard, Peacedale, R.I.; Bernhard Felsenthal, Chicago, Ill.; Annie L. Diggs, Lawrence, Kansas. Secretary, F. M. Holland, Concord, Mass. Assistant Secretary, Miss A. A. Brigham, Boston, Mass. Treasurer, John C. Haynes, 451 Washington Street, Boston, Mass. Directors, *Four Years*: F. A. Hinckley, Providence, R.I.; W. A. Rust, M.D., Boston; Mrs. Phoebe M. Kendall, Cambridge. *Two Years*: to fill a vacancy, D. G. Crandon, Chelsea, Mass.

Messrs. J. L. Whiting and G. A. Stevens and Miss Helen M. Ireson were appointed a committee to choose a nominating committee for next year.

The Report of *The Index* Trustees was presented by their President, Mr. Potter, and accepted.

The President of the Association then asked if there were any further business, and suggested

that any member was at liberty to propose changes in the Constitution or bring forward any plan he might think important for increasing the efficiency of the Association. Mr. B. F. Underwood moved that the Executive Committee be requested to consider the propriety of altering the first article of the Constitution, so as to make it read as follows:—

This organization shall be called the Free Religious Association, its objects being to encourage the scientific study of religion in all its aspects, to increase fellowship in the spirit, and to promote the practical interests of morality.

In support of the motion, Mr. Underwood said:—

This proposed substitute recognizes the existence of religion as a fact, differing from the first article of the Constitution, as it now stands, in avoiding possible implications to which objection may be and have been made. The words "pure religion" seem to imply that the Association distinguishes between religion that is pure or genuine and religion that is not pure or genuine, especially since it declares that one of its objects is to "promote the practical interests of pure religion." But, since it does not attempt to state what "pure religion" is, since it allows every member to define the word "religion" to suit himself, there seems to be a manifest impropriety in the statement that one object of the Association is to promote the "practical interests of pure religion." The Association, as such, cannot declare what "pure religion" is; for article second says that "nothing in the name or Constitution of the Association shall ever be construed as limiting membership by any test of speculative opinion or belief, or as defining the position of the Association, collectively considered, with reference to any such opinion or belief," etc.

Whether religion should be defined as "the expression of man's relation to the universe," as I think it should, agreeing here with Mr. Potter, or "the effort of man to perfect himself," as Mr. Abbot defines it, or belief in and worship of a Supreme Intelligence; whether the object of religion should be regarded as a personal creator, as is commonly believed, or as the ultimate Mystery of being, as Spencer holds, or as Humanity, as Positivists teach, the Free Religious Association does not undertake to say. Why, then, should it in its Constitution speak of promoting "the practical interests of pure religion"? If it be said that "the practical interests of pure religion" are identical with the practical interests of morality, I must say that that depends altogether upon the definition given to the words "pure religion"; and, by the terms of its Constitution, the Free Religious Association is debarred from giving any definition. If the words "practical interests of morality" cover the actual meaning of the Association, why not use them instead of using the expression "the practical interests of pure religion"? If the words "the practical interests of morality" do not mean all that is meant by the expression "the practical interests of pure religion," then there should be an unambiguous statement of just what more is implied in the latter statement.

An implication in the Constitution of a theory or doctrine, assent to which is not required as a condition of membership, is less excusable in the Free Religious Association than in the American Unitarian Association. This Association should contain nothing in its Constitution to prevent the consistent membership of men like Darwin, who said there were two things in the world that he could not see the need of, one of which was religion. A deficiency this indicates, some of you may say; but his definition of religion did not probably include what you mean by the word. Indeed, it may be affirmed that any religion, the teachings of which he did not embody in his character and illustrate by his long and useful life, marked by unsurpassed love of truth, rare modesty and magnanimity, generous regard for others, fondness for nature and knowledge of her curious ways, as well as by vast services to the cause of human enlightenment and progress,—any religion, I say, the essential elements of which were not embodied and illustrated in such a character and life, the leaders of the Free Religious Association can hardly consider "pure religion" or religion worthy their encouragement.

Miss Emily J. Leonard, one of the clearest thinkers and one of the bravest, most just, and most conscientious women I ever knew, although heartily in sym-

pathy with the work of the Free Religious Association, which she generously aided with her voice, her pen, and her money, could not join the Association because of the very article for which I have proposed a substitute. She was present at the business meeting one year ago; and some of you may remember her remarks, urging some of the objections I have mentioned. She regarded the first article of the Constitution as a statement designed to be broad, and actually so from a theological stand-point, but from which the founders of the Association had not been able to keep out entirely their theology, since they had assumed that there was a "pure religion" the "practical interests" of which should be promoted, although endeavoring to make the assumption undogmatic and colorless by saying, virtually, to the members, "This expresses our meaning; but it doesn't commit you to anything, for you are at liberty to define religion to mean anything you choose."

I express not only my own wish, but I believe that of many, when I say I should be pleased to see the first article of the Constitution so modified as to remove the objection which kept from joining the Association so intellectual and worthy a woman as Miss Leonard, and which keeps from us others who are quite as desirous as any among us to encourage the scientific study of religion, and to promote Righteousness, Brotherhood, and Truth.

If the Association is true to the letter and the spirit of the second article of its Constitution, it can make no distinction either in the language of its Constitution or in its management between religious liberals or liberals who are not religious; i.e., if the word "religious" is used to distinguish any class of speculative or theoretical beliefs. In so far as any such distinction is made, the Association must fall short of realizing that freedom of thought, liberality of sentiment, and impartial fairness to all its members, which are declared in the Constitution to be its governing principles.

The Constitution of the Free Religious Association represented a decided advance when it was adopted; and the influence of the Association under this Constitution has, without doubt, contributed to broaden and liberalize Unitarianism, and to make possible such a congress of churches as was held in Hartford this month. But, if the Association is to continue a radical and progressive body, it is time now to make another advance, and preparatory thereto the proposed revision of the Constitution seems to me demanded by common fairness as well as by the interests of the Association.

Mr. Holland, Mr. Hinckley, Mr. Ballou, and Mrs. Bisbee urged the desirability of the motion, which, however, was opposed by Messrs. Whiting, Whipple, Applebee, and Henshaw. The last-named gentleman proposed a substitute, allowing the Executive Committee to consider any suggestions offered. Mr. Hinckley moved an amendment authorizing them to consider Mr. Underwood's plan and any other suggestions. This was adopted, and the meeting adjourned at 11 P.M.

F. M. HOLLAND, *Secretary.*

For The Index.

THE DEATH OF RAFAEL.

Translated from the German by GOWAN LEE.

Cardinal Bibieno describes to his niece Maria (the affianced bride of Rafael), in a letter, the death of the immortal master as follows:—

"Out of a twofold night,—a darkened earth and a darkened soul,—I send to thee these lines. The wreath which our dear friend on that memorable evening handed to thee lies withered, like himself. It lies like a symbol of resignation at the foot of the crucifix, before which thou prayest daily. That painful presentiment of thine has been fulfilled. Rafael has left us. Thou, who wert appointed to be a true companion unto him, art now the bride of heaven. Rafael is dead! His burning soul consumed all that was mortal of him, leaving to us only that which is immortal. Good Friday was his birthday: it is also the day of his death. In the flower of life and in the midst of happiness to have been thus snatched away!

"When I think of all that he did in these seven and thirty years for the glory of the Church and of the nation, I am filled with devout reverence for the

human soul. Look at the picture of the Madonna which he but recently painted for the monastery of the holy Sixtus in Piacenza; look into the eyes, into the eyes of the young Saviour. It was painted, like any other picture, by means of the hand and the brush; but the sublimity of the heavens meets you in these eyes. He who had the power to paint them belonged no more to this earth.

"My letter of yesterday informed you that for three days we feared the worst. Rafael himself was the most composed among us. He spoke of time and eternity with the utmost calm. Then, having tried to comfort us, he made his will. As I walked this evening from his Holiness to Rafael's dwelling, a soft light and a sweet fragrance seemed to fill the air. The peace of God had fallen upon the solemn city of Rome; and, as I entered the house, hope was renewed within me, and I felt strengthened.

"In the sick-chamber, I found Count Castiglione, the fathers Antonio and Domenico, the painter Giulio, and others. Rafael's couch had been moved to the window, which stood wide open. Never before had Rafael appeared so beautiful. Could it have been the effect of the evening light, or was it his near victory over earth? The skin was more transparent, the brown artist-eyes more brilliant than ever. He was holding some spring flowers, but laid them to one side when I handed to him thy wreath of roses. Then he raised the cross to his lips as he murmured, 'Maria.' Though his voice was clear, the words seemed breathed rather than spoken. Then I communicated to him the message sent by his Holiness: 'Dear Rafael, let the sympathy of the highest as well as of the lowest be to thee a motive to linger longer among us.' He smiled mournfully.

"Castiglione then spoke: 'Thou shalt, thou must live. Through that which thou hast done hast thou awakened in us the desire for that which thou canst accomplish. Thy favorite thought—that ancient Rome with its palaces and marble temples, its triumphal arches and statues, be reconstructed—is not yet realized.'

"Yes, I wished it rebuilt,' answered he; 'and, if God had granted me longer life, my wish would have been realized.'

"Do not speak," said I, almost reproachfully, 'as if recovery were hopeless.'

"Father," replied he, 'to leave this earth is not easy to me. Could I but describe to you the longing which takes hold of me as the daylight disappears! My soul clings to yonder sunbeam which lingers upon the hill. How beautiful is the world! How lovely is the human countenance! Ah! to take leave of all this without a hope of awaking on the morrow!' 'Beloved,' cried I, 'forget not that the Saviour died, that we are going from the darkness of earth to meet an eternal day.' 'How could I forget that?' said he; 'but the earth is wonderfully beautiful!'

"A pause ensued. Castiglione took hold of Rafael's hand, while the latter gazed through the open window to the hill upon which the soft radiance of the departing day seemed to rest. Then, turning his glance upward to where Hesperus like a messenger of heaven shone, 'I shall see Dante!' he exclaimed.

"At this moment, some one drew the curtain from Rafael's last picture, the 'Transfiguration.' We wept aloud as we looked at the immortal work of the mortal hand. Rafael's features changed suddenly. He began to speak with difficulty. Twice I heard that saying of Plato's, 'Beautiful is the reward of victory, and hope is great.' He supposed that thou wert present, and begged thee to lay thy hand upon his forehead. Giulio threw himself down upon the couch, and sobbed aloud. I called upon all to kneel and to pray for the passing soul. Helped by two of us, he raised himself, and, with his now lustreless eyes staring into vacancy, asked, 'Where does the sun shine from?' 'Rafael,' I cried, 'do you know me? How do you feel?' At first, he appeared not to have heard. Then he whispered, 'Happy.' The peaceful expression of his countenance corroborated the speech. He said no more, but quietly passed through the final struggle.

"Night had come, when the long, solemn stillness was broken by the words, 'He is dead!'"

A GREAT many things we say can be made to appear contradictory, simply because they are partial views of a truth, and may often look unlike at first, as a front view of a face and its profile often do.—O. W. Holmes.

CORRESPONDENCE.

WASHINGTON NOT A BELIEVER IN CHRISTIANITY.

Editors of The Index:—

In *The Index* of May 21, Mr. Underwood has an excellent article, in which he argues against the *Congregationalist* that Gen. Washington did not believe in Christianity as a revelation from heaven, but was a Deist. He quotes from Jefferson's works, where the author says that "Dr. Rush told him [Jefferson] that he [Rush] had it from Asa Green that when the clergy addressed Gen. Washington," etc.

Now, if there ever were such a man in existence as Asa Green at all, he occupied no position of prominence in that day. But there was such a man as the Rev. Dr. Ashbel Green, who began his career as a soldier in the Revolutionary army, studied divinity afterward under the Rev. Dr. Witherspoon, the President of Princeton College, and who was the only clerical member of the Congress which signed the Declaration of Independence. Dr. Green was pastor of the Second Presbyterian Church in Philadelphia, was elected and served as chaplain to Congress during the eight years that body sat in Philadelphia, afterward became the President of Princeton College, New Jersey, and by his high character and benefactions was spoken of for half a century, till he died, as the "Father of the Presbyterian Church." Dr. Green was my great-uncle, he having been the brother of my father's mother. It was during his long residence in Philadelphia that I became intimately acquainted with him, as a relative, a student of theology at Princeton, and a minister of the same presbytery to which he belonged. In the annals of the Presbyterian Church in the United States, no name shines more illustriously for all the virtues and for his devotion to the interests of that body than that of Dr. Green. I say this, which every Presbyterian will gladly acknowledge, because his testimony is so valuable in settling the question in debate,—whether Washington was or was not a believer in the Christian religion. Many an hour during my student and clergyman days did I spend with him in his study at 150 Pine Street, Philadelphia, listening to his interesting and instructive conversation on Revolutionary times and incidents. As chaplain to Congress, he was well acquainted with Washington; and, upon the General's invitation, very frequently dined with him, and was always requested to "ask a blessing," which he always did. I recollect well that, during one of those interviews in his study, I inquired of him what were the real opinions Washington entertained on the subject of religion. He promptly answered pretty nearly in the language which Jefferson says Dr. Rush used. He explained more at length the plan laid by the clergy of Philadelphia, at the close of Washington's administration as President, to get his views of religion, for the sake of the good influence they supposed it would have in counteracting the infidelity of Paine and the rest of the Revolutionary patriots, military and civil. But I well remember the smile on his face and the twinkle of his black eye, when he said that "*the old fox was too cunning for us.*" He affirmed, in concluding his narrative, what, from his long and intimate acquaintance with Washington, he knew to be the case,—that, while he respectfully conformed to the religious customs of society by generally going to church on Sundays, Washington had no belief at all in the divine origin of the Bible or of the Jewish or Christian religions. If he had any religion at all, it was that of Deism.

Another man's authority is quoted in Mr. Underwood's article to the same point. It is that of the Rev. Dr. Wilson. This gentleman also I knew personally; and he was a welcome guest under my roof, when he officiated on a "sacramental occasion" at a church in my neighborhood. Dr. Wilson was a very learned, pious, and zealous minister in the Reformed Presbyterian, or, as we would now say for sake of distinction, the God-in-the-Constitution Church, called *Covenanters*. These men were the immediate descendants of those persons who came from Scotland to this country on the accession of William and Mary to the English throne. These sovereigns and their Parliament refused to recognize the binding obligation of the solemn league and covenant which had been taken and subscribed several times by King Charles II., and by all ranks in the three Kingdoms of Scotland, England, and Ireland, and, because of

that refusal, migrated to this country, and have ever since, with their descendants, been struggling to get this nation to re-enact substantially the Solemn League and Covenant. Dr. Wilson travelled much all over this country, and made it his particular business to become acquainted with the persons and religious views of our leading statesmen and politicians, so as to form a judgment as to the prospect of getting the republic to change its Constitution and acknowledge Christ as king *de facto* as well as *de jure* of this and all other nations, as the people of England and Scotland did in the seventeenth century. The doctor was an eccentric man; and on a certain communion occasion, which was always a great time for testimony bearing and renewing the oath of the covenant, during the "log cabin and hard cider" campaign in 1840, he prayed most earnestly that the officials of this government might be converted to God, and "if they did not repent of their infidelity, and do works meet for repentance by acknowledging God and his Son Jesus Christ in the organic law, he would sweep them out of existence, one and all, Tippecanoe and Tyler too."

As no man in the world ever knew who "Asa Green" was, and not one in a thousand now know who Dr. Wilson was, although a distinguished man in his day; and as the weight of their testimony upon the point in dispute depends on their character and knowledge as witnesses, I have given you some facts concerning them, which ought to settle the question in dispute.

When a churchman, instead of giving substantial proofs of the truth of his religion, goes round begging and even claiming the indorsement of great names outside of the Church, as the religionists are now doing in the case of Washington and Lincoln, it seems to betray a consciousness that their religion needs bolstering up. Truth stands self-respectfully and independently on its own legs, scorns all compromise, and asks no favors except a candid hearing of its proofs. Error hobbles along on borrowed stilts, and, conscious of its weakness, looks out all the time for some extraneous support to keep itself from falling.

A. B. BRADFORD.

ENON VALLEY, PA., May 22, 1885.

THE HARTFORD CONGRESS OF CHURCHES.

Editors of The Index:—

The widely heralded Congress of Churches convened in our fair city last week, and spent nearly three days in discussion. Its ostensible object was to promote a union of all Christian Churches; but, as a local journalist remarked, "If the Congress was compared to the proverbial 'mountain in labor,' the apparent result was something much less than a mouse"—for each member of it departed clinging as unyieldingly to his own creed and sect as when he came. Though each reverend divine expressed a fervent desire for the proposed union, yet it was obvious enough that he would be loath to accept such a union, other than based on his own sectarian views. Every prominent Protestant sect was represented in the Congress, even the Quakers; but there was one class of Christian people, who compose two-thirds of all the membership of the Churches, and without whom there would be no Protestant Churches, the women of them, who were represented neither by person nor proxy. They were utterly ignored. There was no intimation that women were a part of the Church, or that a Christian woman ever existed. Indeed, they forgot or neglected woman more completely than did a former convocation of Christian priests and bishops in the sixth century; for they recognized woman's existence by discussing the question of her being classed as human or having a soul, which some of them denied.

Not one woman was tolerated on this platform, though one well-known Christian woman, member of a distinguished family of eminent clergymen, and herself a popular speaker, besought the council, that consisted of the leading members of the Congress, to permit her to make a ten minutes' speech on the platform. She was answered that, "according to the rules adopted by which to govern the Congress, no woman could be allowed to speak"; yet women are the most important factors of the Church. A majority of the few men in its congregations are there only through the influence of women.

No allusion was made to the helpfulness of women in the Church, though they toil and beg for it, doing all its drudgery and disagreeable work. Yet woman has been so long accustomed to this mental and sub-

ordinate condition in the Church, that she meekly accepts the situation and often bequeaths her property to it, while it teaches her subjection, and moulds public opinion, and shapes legislation against her enfranchisement.

Our ecclesiastics seem determined to verify Mrs. Stanton's assertion, that the Church and the pulpit are the worst opponents of woman's advancement and elevation.

E. P. C.

HARTFORD, May 18, 1885.

SILVER COINAGE.

Editors of The Index:—

The silver question, sure enough, is on us again, and overtops all other questions of federal legislation in importance. The arguments of Profs. Sumner and Laughlin in the June *North American Review* are in their main points so fallacious and, where they are not false outright, are so exaggerated and distorted in statement and collation of facts, I am constrained to offer some comments and criticism. I must, I am sorry to say, pass over many minor errors, and address myself to the central fallacies.

Value is a word or idea which, although the crudeness and stupidities of popular usage have dulled its edge and blurred its outlines, is yet capable of such a rigid exactitude of definition as to make it at once a subject and an instrument of scientific treatment scarcely less severe than a geometric figure. Let us try to polish up and sharpen it.

Value is market equivalence between two commodities or transferable objects of desire. As a quantity, it is as unstable and unfixable as human caprice. From its very nature, it can never inhere in any one thing out of market relation to all other things. The idea of value emerges in thought only as an exchange of two commodities is contemplated; and, when an exchange takes place, the measuring, or valuing, is a mutual, perfectly reciprocal process. This is so where one of the terms is money (purchase and sale), as where both terms are commodities (barter). If a bushel of wheat exchanges for a dollar, the wheat measures, defines, expresses, is the value (purchasing power) of the dollar, exactly as the dollar is the value (price) of the wheat; and when, afterward or elsewhere, two bushels of wheat should be the market equivalent of a dollar, that change of the market ratio would be as accurately described, as truthfully stated, by saying that the value (purchasing power) of a dollar has doubled in the wheat market as by saying that the value (price) of wheat had fallen one-half in the money market (price). When I say the fact would be accurately described by either of these modes of statement, I mean the fact is both these things. Whichever phase of the fact you explicitly affirm, you implicitly, but just as positively, affirm the other. Value being in the nature of a ratio between two terms, to be a change in value at all, it must be a change in each and in both alike, to the full extent of the change affirmed. If from a market equivalence of one bushel of wheat to two of corn, there is a change of that equivalence of one to three, then the corn value of wheat has raised fifty per cent. and the wheat value of corn has fallen one-third. So, too, if, from one dollar a bushel, wheat becomes worth only half a dollar, then wheat has fallen one half in value expressed in money (price), and money in the wheat market has doubled in value.

If, now, such a change being considered a misfortune, the question arises which has misbehaved, money or wheat, no answer is possible except by reference to some other commodity for mutual comparison.

Now, no one understands the truth and importance of these propositions better than these professors; and yet, without any reference to the relation of either gold or silver to commodities in general or in particular, but from the mere fact that, whereas in 1873 one ounce of silver was the market equivalent of $\frac{3}{4}$ ounces of gold, while in 1885 one of silver equals $\frac{1}{4}$ in gold, and between those periods that ratio wildly and rapidly fluctuated, as shown by a diagram of fluctuation in price (gold) of silver bullion, the professor (!) says that silver is shown to be of very fluctuating value, so unstable as to be no good as a standard! Such an argument from a broker or from an editor would not astonish me, but from a professor of economics puts a terrible strain upon my respect for the proprieties of discussion.

The least reflection will show that the same diagram shows and affirms the wild fluctuations and steady rise in the silver price of gold, which, for the

purposes of this discussion, is a perfectly legitimate putting of the fact, and indeed for every and any purpose, as before shown, is strictly and exactly true. Statesmanship, however, is not content with the broker's view nor the mere travelling in a circle, which the comparison of the two metals alone essentially is. Assuming that one of these metals has been misbehaving, as evidenced by a departure from their ancient value ratio, the legislator appeals to cotton, iron, lumber, wheat, and petroleum,—in short, to the aggregate of the products for effecting the exchanges in which money is the instrument,—and, lo! the fact is disclosed that the misbehavior has been all in gold, and all since the competitive check upon its value has been removed by shutting the mints of the world to silver. You ask, How does that appear? I answer from the simple fact that the value (purchasing power, market equivalence) of money to-day (gold), in Europe and America, has increased since 1860 (a point below, if anything, the average of prices prior to that date, certainly below the average of aggregate prices since),—has increased 25 per cent., which is, as before shown, the same as saying prices have fallen 20 per cent. during the very period while silver has been going down 18 per cent. I affirm, therefore, that silver has remained approximately true, steady, and uniform to products, and gold, under mono-metalism, has been a false and widely variable measure. Assuming, then, the criterion of honest payment to be dollars of the same purchasing power at the time of discharging as at the time of contracting obligation, then all debts, except perhaps those made within the last year or two, are overpaid by the "eighty-two cent silver dollar." But I repudiate that criterion *in toto*. It is wild and impracticable. It is not an ideal, uniform value unit contracts are made in terms of, however much such a unit is the ideal which statesmanship desiderates in monetary legislation; but it is the precise coin defined by statute, whatever value it takes on,—the thing nominated in the bond. Of course, the value may be wickedly tampered with by legislative increase or diminution of the metal composing it. But, if you would see the very rap-rasing of refined villany only reached by the financial inventiveness of recent times, behold the "bulling" of all our coins into an abnormal and oppressive increase of value by legislative limitation of coinage of standard dollars.

I must postpone to another paper the further criticism of the arguments of the professors.

E. D. STARK.

CLEVELAND, May 19, 1885.

BOOK NOTICES.

HINDU PHILOSOPHY POPULARLY EXPLAINED. The Orthodox System. By Ram Chandra Bose, A.M., of Lucknow, India, author of *Brahmoism*, etc. New York: Funk & Wagnalls, 10 and 12 Dey Street. London, 44 Fleet Street. 1884.

Within a recent period, great interest has been awakened in the peculiar religious and philosophical doctrines of the Eastern world, and many books have been published on this subject; but there is probably none that gives a greater amount of information in regard to the religious philosophy of India in the same space than does this. The author has spent a lifetime of study and research into the religious and philosophic thought of a race and people who seem to have a genius for metaphysical inquiry, and the extent and fulness of these speculations are something that strikes the Western mind with wonder. There is hardly an idea or theory enunciated by the greatest metaphysical thinkers of Christendom, and made the bases of their philosophical systems, but the same can be found in the thoughts of Hindu philosophy; and, at the present time, many minds of culture and acumen are accepting a system of theosophy gathered from the speculations of these Eastern thinkers.

The object of this work is to give a comprehensive view of the whole field of Hindu philosophy included in the six different Orthodox systems (so called). The Heterodox systems are to be treated in a future volume, should sufficient encouragement be given. The first two chapters are devoted to an inquiry into the sources of these philosophies, and the third to their age. In the succeeding chapters, each of the six great systems is taken up and treated separately; and, in them all, light is thrown on subjects upon which the Western mind has been very imperfectly informed. And the author has so happy a faculty of condensing the information he imparts that his work is very

interesting reading and free from anything like dryness, notwithstanding the abstruse nature of his subject. The closing chapter contrasts Hindu and Christian philosophy, and the author estimates their comparative value from the latter's stand-point. Minds with proclivities toward a broader view of the universe would take some exceptions to his estimate, and see in the readiness with which these ancient Eastern thinkers faced the great problems of existence, which force themselves on the candid and unbiased truth-seeker, in this respect, at least, a superiority over the dogmatic, philosophic thought of many Christian sects. But their speculations generally, however much of truth may be involved in their fundamental ideas, lacking any basis in positive science, were overlaid in human thought with much that is, no doubt, fantastic and fanciful in the extreme.

THE opening article in the *Freethinkers' Magazine* for May is "Secularization in Massachusetts," by F. M. Holland, an able and earnest plea for the taxation of church property, and for the repeal of the statute discrediting witnesses on account of disbelief in God. Other articles are on "The Freethinkers' School," by Miss Helen H. Gardener; "Rationalism and Ritualism," by Rev. E. P. Powell; "Spiritualism," by John W. Truesdell; "A Critical Letter," by Therese Sobieski; "Child Life in Liberalism," by Miss Susan H. Wixon; "Bigotry," by John George Hertwig; "An Open Letter," by Mrs. E. D. Slenker; "Bigotry in Canada," by Allen Pringle, an article reprinted from *The Index*; "New Thanatopsis," poem, by Welcome Spencer; and extracts from letters, editorials, book reviews, etc. This magazine improves with every number. Salamanca, N.Y.

Just Published:

TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crago.

PRICE \$2.00.

THE RISE OF INTELLECTUAL LIBERTY FROM THALES TO COPERNICUS.

By FREDERICK MAY HOLLAND,

Author of *The Reign of the Stoics*. Price \$3.50.

The author of this book has chosen a magnificent subject; and, although it is formidable in extent and much of it involved in obscurity, and all of it complicated with great questions of history and human progress, he has yet been able to throw much new light upon that liberalization of thought which went very unsteadily forward during twenty-two hundred years, before the great modern movement of the development for intellectual liberty. The work is a delineation of tendencies, a series of sketches of the great minds who at different times and under varied circumstances, and with unequal effect, have struck for independence of thought, a presentation of the counter-forces that have antagonized intellectual liberty, and an account of the working of all those larger agencies which have in different degrees hindered or promoted freedom and independence of thought. Without having subjected the work to critical scrutiny, we are much impressed by the evidence it shows of extensive and conscientious labor, the freshness and interest of its chief subject-matter, the untrammeled treatment of the subject, and the vigor of the portrayal of that long and agonizing conflict with bigotry and intolerance, religious and political, public and private, which is the price of our modern liberty of thinking.—*Popular Science Monthly*.

The volume shows remarkable research, keen powers of analysis and comparison, close reasoning, and fairness of judgment. It will be found an invaluable help to the student, who will be glad to learn that the author contemplates a second volume, which will bring the subject down to the time of the French Revolution.—*Boston Transcript*.

THE FREE RELIGIOUS ASSOCIATION

was organized in 1867. Though having its headquarters in Boston, it is a national organization, and has members and officers in various States of the Union. It has the following

CONSTITUTION.

I. This Organization shall be called the Free Religious Association, its objects being to promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history; and to this end all persons interested in these objects are cordially invited to its membership.

II. Membership in this Association shall leave each individual responsible for his own opinions alone, and affect in no degree his relations to other associations; and nothing in the name or Constitution of the Association shall ever be construed as limiting membership by any test of speculative opinion or belief,—or as defining the position of the Association, collectively considered, with reference to any such opinion or belief,—or as interfering, in any other way, with that absolute freedom of thought and expression which is the natural right of every rational being. Any person desiring to cooperate with the Association shall be considered a member, with full right to speak in its meetings; but an annual contribution of one dollar shall be necessary to give a title to vote,—provided, also, that those thus entitled may at any time confer the privilege of voting upon the whole assembly, on questions not pertaining to the management of business.

III. The officers of the Association shall be a President, twelve Vice-Presidents, a Secretary, an Assistant Secretary, a Treasurer, and twelve Directors. They shall be chosen by ballot at the annual meeting of the Association; and the President, Vice-Presidents, Secretaries, and Treasurer shall hold their offices for one year, or until their successors be chosen. The Directors shall be chosen for four years, and, at the expiration of that term, shall not be eligible for reelection until after two years. One fourth of their number shall be chosen annually; but, at the annual meeting of 1882, the full number of twelve shall be chosen in sections of three respectively for one, two, three, and four years. The President, Secretaries, Treasurer, and Directors shall together constitute an Executive Committee, intrusted with all the business and interests of the Association in the interim of its meetings. They shall have power to fill any vacancies that may occur in their number, or in the list of Vice-Presidents, between any two annual meetings. Six members of the Executive Committee shall constitute a quorum.

IV. The Annual Meeting of the Association shall be held in the city of Boston, on Thursday of what is known as "Anniversary Week," at such place and with such sessions as the Executive Committee may appoint, of which at least one month's previous notice shall be publicly given. Other meetings and conventions may be called by the Committee, according to their judgment, at such times and places as may seem to them desirable.

V. These Articles may be amended at any Annual Meeting of the Association, by a majority vote of the members present, provided public notice of the amendment has been given with the call for the meeting.

Officers elected for the year 1882-83:—

PRESIDENT.

WILLIAM J. POTTER, New Bedford, Mass.

VICE-PRESIDENTS.

OCTAVIUS B. FROTHINGHAM, Boston, Mass.
FELIX ADLER, New York City.
GEORGE W. CURTIS, Staten Island, N.Y.

TRACTS.

No. 1.—*Truths for the Times,* by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 2.—*Fear of the Living God,* by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—*Lecture on the Bible,* by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 4.—*Christian Propagandism,* by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. Full of *Figures, Facts, and Interesting Extraneous.* Price 10 cents; 12 copies, \$1.00.

No. 5.—*"God in the Constitution,"* by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.

No. 6.—*"The Sabbath,"* by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 7.—*"Compulsory Education,"* by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—*The Present Heaven,* by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—*The Christian Amendment,* by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.

No. 10.—*The Impachment of Christianity,* by F. E. Abbot. Sixth Ten Thousand. Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.

No. 11.—*The God of Science,* by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.

No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, \$1.00.

No. 13.—*On the Vision of Heaven,* by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—*A Study of Religion: The Name and the Thing,* by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.

No. 15.—*The Battle of Syracuse.* Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

CURRENT TOPICS.

BY B. F. U.

MR. F. M. HOLLAND will address the Society for Ethical Culture at the Parker Memorial, Sunday, June 14, at 3.30 P.M., on "The Sunday Law."

A SOCIETY for Ethical Culture has been formed in Philadelphia. Mr. S. B. Weston, we understand, will be the speaker. The Society should, and we trust will, have the support of the earnest Liberals of that city.

REV. J. P. NEWMAN was invited to offer the prayer at the opening of the meeting of the New York Undertakers' Association, last week. He prayed that the Lord would prosper the association! If we lived in New York, and believed in the efficacy of prayer, we should leave for some place where the prosperity of that Undertakers' Association would not be directly promoted by our death.

M. GOBLET, the French minister of Public Instruction, in reply to Archbishop Guibert's protest against the "desecration" of the Panthéon by its secularization, says that the archbishop had exceeded the rights of his episcopacy in the feelings he exhibited at the determination of the government to restore the Panthéon to its original purpose, that of a receptacle for the remains of the really great men of France. He concludes by reminding the archbishop that his present attitude "is not likely to render more harmonious than they now are the relations of Church and State."

THE London Society for the Conversion of Jews report that, last year, it succeeded in bringing twelve Jews to the baptismal font; while three other Hebrews had expressed a willingness to become Christians, "if they could induce their wives to follow their example." Considering that the annual income of the society is £35,000, the number of conversions is surprisingly small. If the agents of the society made any effort at all, the small results of their labors are proof of their main dependence upon theological arguments or of the invulnerability of the Jews to the force of other arguments, which appeal powerfully to the avarice and greed found among people of every faith.

THERON C. LELAND, former secretary of the National Liberal League, died in New York on the 3d inst. He was one of the earliest phonographic reporters in this country. He reported the proceedings of the Forrest divorce trial, and many speeches by Webster and other distinguished orators of the past. He was one of the contributors to the *Dial*. Some years ago, *The Index* received occasional contributions from his pen, which were usually marked by an independent spirit and sprightly style. When the controversy arose which resulted in wrecking the National Liberal League, Mr. Leland became one of the most active supporters of the "repeal" policy, and one of the most prominent leaders of the League. He lacked the judicial spirit, and wrote as a partisan; but his independence in defending his views, however unpopular they might be, and however objectionable his methods of defence, was very marked.

RECENTLY, a young lady, who said she had been without food for twenty-four hours, and without work or money for a week, threw a brick into a window of a jewelry store in St. Louis, and took out some jewelry, under the eye of a policeman whom she knew to be looking at her, in order that she might be arrested and sent to the penitentiary. She said that she had been unable to obtain employment, and that her sole aim was to escape the tortures of hunger by doing something that would compel the State to take notice of her starving condition. It is strange that in St. Louis, where there are official charities, endowed asylums, and churches doing charitable work, a young woman should be driven to such an extremity. A Western paper inquires "whether all these institutions present a visage of sheet-iron to a person seeking relief at their hands. Or is human nature cast in so proud a mould that many of the persons who are reduced to suffering would prefer to incur the guilt and ignominy of crime rather than apply for and accept charitable relief? And, if human nature be so proud as this, how little real acquaintance can those ethical theorists have with it, who imagine that any considerable share of the duties of life can consist in relieving the poor, when there is placed in every poor person's breast a monitor which bids him spurn and scorn all such relief!"

WILLIAM A. HAZEL, in a letter printed in the *Cambridge Tribune*, says that it is "virtually impossible for a colored man or woman to hire a house in Cambridge outside of the two or three colored settlements," no matter how incontestable are the proofs of his character or responsibility, because the agents refuse him "in obedience to instructions from their clients, and in deference to the expressed objection of 'the neighbors.'" Mr. Hazel affirms that it is no hardship for him to live in colored neighborhoods because they are such, but because they are always the least desirable portions of a city, "which are usually settled or occupied by the masses of colored people, sometimes from choice, but oftener from necessity arising from limited means." He protests against the compulsion of every colored person to live in such a locality, in spite of the fact that his means enable him to

live in a more desirable locality. He admits that some, that many colored people have habits that are offensive to refined and cultured people, but that the same is true of some white people also. To the statement that the presence of colored people "in a good community depreciates values," that "with their advent a neighborhood begins to deteriorate," Mr. Hazel replies by pointing out the absurdity of proscribing all colored people, the educated and refined as well as the ignorant and the gross, if character and not color is the test. He says that no colored person has ever been permitted in Cambridge or elsewhere in New England "to enter a neighborhood while it was yet decent without protest; nor can it be proved that, when they have entered, any subsequent deterioration was due to their presence." "It is a fact well observed," he adds, "that the first encroachments upon 'genteel neighborhoods' are usually in the shape of the corner grocery or butcher shop. Afterward comes the unsightly and often unsavory tenement block, built by white people, and occupied by white people,—Dutch, Irish, Scandinavian, Italian, and Blue-nose,—a Chinese laundry perhaps the one clean spot in the whole mass. The soap factory and rum shop come next; and then, but not till then, colored people become eligible, and the process of deterioration begins (?)." Mr. Hazel simply asks that, when a colored man desires admission into a desirable neighborhood, his fitness be determined by the same tests as to moral, intellectual, and financial status which are applied to white people; and he appeals to the conscience and sense of fair dealing of the community to rebuke the unjust and heartless discrimination that is made in this respect against colored men. Shall such an appeal pass unheeded in *Cambridge*?

THE owners of factories at Hamilton, Mass., the papers state, have imported three hundred and fifty French Canadians to work in the mills, when there are hundreds of the native population who have been idle for weeks, and ready and anxious to work at what they consider a fair price. It is natural that employers should get the best labor they can at the lowest rates; but facts like the one mentioned are difficult to reconcile with the statement often made, that the New England manufacturers of textile fabrics are so deeply interested in the welfare of their workmen that they are opposed to having them brought into competition with the poorly paid labor of the Old World. It is estimated that, of the operatives in the cotton mills of New England at the present time, less than twenty per cent. are American born. A quarter of a century ago, the men and women working in these mills were Americans. The interests of the manufacturers have been protected; and they have obtained labor as cheaply as possible, and have become rich. Meanwhile, the class that operated the mills a few years ago have been forced out of this kind of employment, and their places are filled by operatives willing to work for lower wages,—wages which intelligent, independent, and self-respecting Americans regard as insufficient for a comfortable livelihood.

ETHICAL SOCIALISM.

The address of Dr. Heber Newton on Socialism before the Free Religious Association has deservedly attracted wide attention. It brings especially before churches and religious organizations the question of their responsibility for the condition of human society; and, if we mistake not, this question, in the future, cannot so easily be pushed aside by religious bodies as it has been in the more recent past. We do not understand that Dr. Newton brings forward any specific plan of socialism as a remedy for the social troubles which have come with modern civilization; but he presents a most forcible plea why religion, which has always kept prominent the ideal of social harmony and happiness, should make it a duty to take up the grave social problems of the time with a serious effort to find some solution. The practical application of the Golden Rule, or of the old Hebrew law, "Thou shalt love thy neighbor as thyself," to the mutual relations of people in human society,—this appears to be the fundamental principle which he would bring to the front, and have the Churches proclaim with such emphasis that people should begin to see and practise it as the really vital law of social prosperity. The problem is to preserve the needed stimulus to individual exertion and enterprise and the consequent intellectual and moral robustness of self-reliance, which are the peculiar characteristics of modern civilization, and at the same time to make the welfare of each member of society a means of advancing the welfare of all. To effect a just reconciliation between egoism and altruism would be to establish socialism on a firm ethical basis.

Both self-love and neighbor-love are inherent principles of human nature. The love of the neighbor, or the impulse that seeks others' good, is not, on the one hand, to be reduced to a refined and euphemistic form of self-love, or to a circuitous way of seeking one's own remote interests: it should stand for just what the words say,—the love of one's neighbor, the seeking and working for another's welfare by as direct an interest as one seeks and works for one's own good. "Thou shalt love thy neighbor as thyself,"—not thyself in thy neighbor, nor beyond thy neighbor; but thou shalt love thy neighbor *equally* with thyself. We are to regard and guard others' rights and interests as strictly as we do our own. But, on the other hand, self-regard and self-love are not to be wholly sacrificed and abased before the love that is due to one's neighbor. Egoism is not to be obliterated by altruism. Moral self-denial does not require the absolute abdication of these individual prerogatives which pertain to independent personal character. The love of one's neighbor and all due care for and interest in his well-being are perfectly consistent with the proper maintenance of one's own rights and with all needful pursuit of one's own interests and welfare. The inherent impulse of self-love—a form of the instinct of self-preservation—is, indeed, often debased into a miserable selfishness. But this is not a necessity. The self-love which only leads to proper care for one's own life and health, and which seeks, at no cost to others' interests, the cultivation and growth of one's own faculties, and instinctively endeavors to acquire enough of outward property to insure individual independence, is not a selfishness to be denounced, but a virtue to be encouraged.

The self-regarding motives appear first in the order of time, because they are all-important to the sustenance and preservation of personal being itself. Nature, therefore, makes them very strong. They begin as instincts with the beginning of life, and they continue with more or less of force until the physical organism yields to dissolution. Nature

wants individual men and women as agents of her purposes; and it is through the instinctive self-regarding propensities that she develops strong organisms of personal character, by means of which the higher mental and moral work of life is to be done. But, later, the other-regarding, or altruistic, sentiments awake. There comes a time in individual life; as once there came a time in the historical development of the human race, when the mental perception arises that our neighbors have equal natural rights with ourselves, and that we are under obligation to respect their rights as we would claim respect for our own. This is the root of the Golden Rule and of the old Hebrew precept of neighbor-love,—the root, indeed, of all social ethics. This moral perception is not confined to the Hebrew and Christian religions: it appears in all historical religions, and is indigenous to the human race. When this perception dawns, it takes the reins, or should do so, by its own inherent sovereignty, to control and guide the self-regarding propensities, so that their power may be turned to serve general rather than merely selfish ends. It is this moral sense of what is due to our neighbors as well as to ourselves that rightfully bids the self-regarding propensities halt in their activities, when they proceed to the selfish accumulation of property and power, regardless of others' rights and others' wants and woes. And it is the neglect of this moral command which causes a large part of the social misery among mankind.

Dr. Newton is doubtless right in urging a fresh, vigorous, and thorough application of this old ethical principle of the Golden Rule as the key to the solution of the social problems that are pressing their claims upon the attention of the modern world. Just how this is to be done he does not indicate farther than that he would have religion specially and distinctly turn its forces to that end. He does not expect that the work is to be done in a generation. But he is right in the assumption that, if the pulpits, the churches, the religious press, can be persuaded to press home constantly upon the hearts of people this fundamental principle of social ethics as enunciated in both the New and Old Testaments, they could not fail to have a powerful effect in changing public sentiment; and the changed public sentiment would in time devise all needed instrumentalities for embodying itself in improved social conditions and habits.

But this principle may also be urged on the ground of ethics alone, irrespective of the teachings of this or that religion. As already noted, the principle is not the exclusive possession of any one religion: it belongs to humanity. There was no real morality among men until there came the idea that one's neighbor had as good a right as one's self to life, property, and happiness. Without such a common standard of rights, might would be the measure of right, as too often it has been and is; and the weak would be the prey of the strong. There would be no check to self-aggrandizement, except what should come from the competition and strife of similar self-seeking. Had mankind continued to develop exclusively by the impulse of self-preservation, on the line of the struggle for existence with the survival of the fittest, even though high intellectual acumen had been produced, it may be greatly doubted whether man would have ever become a moral being. All his morality dates from the dawn of that perception within him that between two neighbors there are common rights and common interests, of which each must respect and cherish the other's share as faithfully as his own. Neighbor-love must equal self-love,—there is the germinal principle of ethical society.

WM. J. POTTER.

THE NEW OLD TESTAMENT.

Take it for all in all, the Revision must, I think, commend itself to liberal and honest minds. There are particulars in which the American revision is much to be preferred, and there is nothing to prevent a thrifty publisher from publishing an edition in which these shall be observed. The negative improvement, corresponding to the omission of the old page and chapter headings, is by no means small. Thousands of indifferent blunders have been corrected, and some not indifferent. If here and there the new phrasing seems and is less happy than the old, it is certainly not those who read *The Index* joyfully that need be troubled. They will still be as free as ever to use the older phrasing. It is only those who still imagine they are dealing with a supernatural book who will experience any loss. It is only these who are obliged to think that "Behold he will slay me; I have no hope," is more inspired than "Though he slay me, yet will I trust in him," because the former is a correct translation (according to the American revisers), and the latter is not. For us, the most inspiring is the most inspired, in the Bible or out of it. And they can have no fears of openly preferring man's to God's who believe that "every good and every perfect gift is from above and cometh down from the Father of Lights, with whom is no variation nor shadow cast by turning."

It is surprising that, among those who have taken part in the work of revision from its inception to its completion, one can still be found speaking of the Old Testament or New as if there had been at some time a copy written to all intents and purposes by the Almighty's hand. But that more than one such can be found is sure: that a dozen might be is probable. Dr. Alexander Roberts, one of the New Testament revisers, complaining of the made-up Greek of Erasmus, a mere translation of the Vulgate, on which the King James translation was occasionally formed, says that in the "professed original" are "words for which no divine authority can be pleaded." What is the inference, if not that a divine authority can be pleaded for the original text when this is actually discovered? The same author says in another place, "Every loyal Christian heart should surely rejoice to have access, in as pure a form as possible, to the message sent to us by our Father in heaven"; and, again, he speaks of "the privilege of reading God's word in the form in which it came from himself." In the same manner and spirit, Dr. Chambers, one of the Old Testament revisers, says that "the revision we must choose is that which we have reason to think best conveys the meaning of its divine Author." It is astonishing that men of their ability and earnestness can use such language. Doubtless, the hope of coming face to face with Deity, of listening to his identical words, has nourished the sweet patience of many a scholar in the past, while seeking to attain unto a purer text or a more accurate translation. But the scholar of to-day knows, or he ought to know, that it is not to a series of divinely inspired writings that he is brought more near by anything his scholarship can do, but only to a series of purely human compositions, the expression of a marvelous development of the religious life, for the most part anonymous, but not on this account less valuable as exponents of an important factor in the fortunes of mankind. Our oldest manuscripts of the Old Testament and New are still far removed from the original documents; and in the interval between them there was time and opportunity for many errors of transcription, many interpolations, much tampering with the text. And we know the time was well employed, the opportunity was not

thrown away. Nevertheless, if we could finally attain to the absolute original of every part of either Testament,—a thing impossible, especially with the New,—we have no reason to believe that it would in any case be anything but purely human. We have a thousand reasons for believing that it would be human utterly.

But, when I said in my heart I would write an article upon the new Old Testament, it was not merely the Revision that I had in mind. This indeed is a new Old Testament; but there is a new Old Testament which is of vastly more significance. The revisers have done a microcosmic work. But, in the mean time, a macrocosmic work also has been done. The revisers have stood too near the object of their study to see its grand proportions and its relations to other objects. They have not been, as the proverb goes, to see the forest for the trees. They have been like the old lady, who insisted that she could see a needle stuck in a barn across the street. Yes, there was the needle; but where was the—barn? They, too, have seen the needle; but they have not seen the barn. They have seen the smaller, not the larger thing; the meaning of the individual atomic parts, not the organic parts and their relations to the living, breathing whole.

But, if they have not done this, it has not gone undone. For while the work of translation has been going on these fifteen years, and for a longer period, a work of *transposition* has been going on, of infinitely more importance. Books that appear as wholes, alike in the King James translation and the Revision, have been shown to be the work of different authors, and of periods sometimes widely separated from each other. Take Isaiah for an example: there probably was not a scholar of the forty-two engaged from first to last on the Revision who had any doubt that the book as it stands in the Bible, revised and unrevised, falls into two great parts; and that, while the first forty chapters are for the most part actually Isaiah's, the last twenty-seven are from another prophet, a Great Unknown, who lived two centuries later. Yet there is not a hint of this in the Revision. There is no break of any sort to indicate the lapse of centuries between the thirty-ninth chapter and the fortieth. I find no fault with this. If the revisers had begun to introduce the element of criticism into their work, where could they have made a stop? Not short of many erasures of names that now stand printed as the authors of various books; for the Lamentations are not Jeremiah's, and the book of Daniel is not Daniel's, and the Proverbs are not Solomon's, nor is Ecclesiastes, nor the Song of Songs, and, if any of the seventy-three Psalms ascribed to David, not more than two or three. But, of the New Old Testament of Criticism, the particular traits that I have named, and many others of like character, are but the least important. The Old Testament literature is, for the most part, resumed under three principal classes,—Law, Prophets, Psalms. The order of their arrangement in our Bibles, revised and unrevised alike, is Law, Psalms, Prophets; and the implication is that this was the order of their appearance,—the Law 1200 to 1500 years B.C., the Psalms about 1000 B.C., the Prophets from 800 to 450 B.C. What is the order of arrangement in the new Old Testament of the critics? The Prophets come first instead of last, the Law comes second instead of first, the Psalms come last instead of second,—Prophets, Law, Psalms. Again, the Law (*i.e.*, the Pentateuch and Joshua) which implicitly, as it stands now in our Bible, belongs in its entirety to the same historic period, and that from 1200 to 1500 B.C., has been shown to belong to three distinct periods,—a prophetic part to the

eighth century, a priestly-prophetic compromise part (Deuteronomy) to the seventh century, a priestly part (the Book of Origins) to the middle of the fifth, after which the Psalms were mainly written. And this transposition gives to a mass of literature, which was before a baffling mechanical riddle, a vital and organic unity. In the traditional view there is no correspondence between the literature and the life. An elaborate ritual is credited to a barbarous age; the Psalms, the most spiritual part of the Old Testament, as near to Jesus and his thought as May to June, are credited to an age hardly less barbarous and to a man of blood; and the Prophets, the most rude and primitive part, are credited to the nation period of highest civilization as compared with the Davidic and Mosaic. Once rightly classified, the Old Testament literature reports a progress from a savage worship and morality to a spiritual worship and a morality of almost Christian tenderness. But there is no hint of this in the present order and arrangement of the various parts.

The New Old Testament of Criticism has as yet only an ideal existence. And not for many a day, if ever, will the Old Testament in common use be one which has respect to this ideal. But the time will come, and it should not be long delayed, when either individual scholars, or enterprising bodies of enlightened men, will publish an Old Testament in which the present order shall be wholly broken up, and to the music of historic evolution the parts shall rearrange themselves, and grow, as the obsequious stones of Thebes to the music of Amphion's lyre, into a high consenting symmetry and grace. Such a work is made more consciously necessary by the removal from the revised translation of so many of the old interpretative signs. Irrational and misleading as they were, they introduced a certain artificial cosmos into the otherwise chaotic mass. But now chaos is come again.

Until the voice, "Let there be light!" shall come, it is for those of us who love this noblest literature that ever has proceeded from the mind and heart of man to bring to its appreciation all of the helps the higher criticism has to offer; and remembering that as it stands, even as faithfully revised by the most learned scholars of our time, because they have translated simply what they found, it contains innumerable things which cannot be believed, which are not true, it is for us to hasten, if we can, the time when there shall be an Old Testament, concrete and tangible and legible, that shall embody the results of that higher criticism which has hardly left one stone of the traditional structure on another, but from the ruins has evoked "a city that has foundations," orderly and beautiful as that New Jerusalem which the Man of Patmos saw descending out of heaven from God, prepared as a bride adorned for her husband.

JOHN W. CHADWICK.

MONCURE D. CONWAY ON EUROPE.

Mr. Moncure D. Conway spent several weeks in Paris during the months of February and March, when he left for London in order to deliver a series of farewell lectures throughout England. I learn that the tour has been most successful and gratifying. On the 12th of this month, Mr. and Mrs. Conway were offered a good-by reception by the South Place Society, over which he has presided for so many long years with credit to himself and benefit to the congregation; and, at 3 o'clock on the 23d, father, mother, and children are to sail from Liverpool for their native land. May wind and wave favor them, and may you of America welcome home in safety these high-minded wanderers, weary of the shortcomings of the Old World!

Before Mr. Conway came to Paris early in the spring, he had been sojourning for several months in the German, Russian, and Austrian capitals. While he was in this city, I met him several times, both in public and private; heard him speak on his feet at banquet tables, and converse in his easy-chair at his writing-desk; listened to him philosophizing in a theatre-box, on the top of an omnibus, and on the platform of a workmen's meeting; and followed in the drawing-room his disputations with some of the ablest thinkers of this intellectual centre. Hence it is that I venture to report to you, who know so well his views, some of the conversations of this progressive cosmopolitan, this scholarly author, and this observant journalist. The opinions of such a man are always worth recording, and are always read with interest and profit.

One Sunday afternoon in February last, the peace advocates of Paris met in a public hall—or rather in a ball-room, for such a thing as a hall for meetings is still unknown in France—to welcome an English delegation holding tenets similar to their own. A member of the House of Commons, two members of the Chamber of Deputies, a Paris municipal councillor, Mr. Hodgson Pratt, of London (the Alfred H. Love of England), and Mr. Conway, all sat on the platform. Here was material for a brilliant meeting. But a score of "anarchists"—a body of hot-headed young men who say that society wants no government, but who are sadly in want of it themselves—had decided that there should be no serious discussion. They hooted, stamped, and finally took forcible possession of the platform; and the assemblage dispersed in the greatest confusion, without having accomplished the purpose for which it had been convened.

As we left the building, Mr. Conway simply remarked, "Think of this occurring on Washington's birthday!" for it was indeed February 22. There was a volume of thought and suggestion in this short phrase. We soon reached the Place de la République, formerly called Place du Château d'Eau. The towering statue to the republic had been erected there since Mr. Conway's last visit to Paris. A series of spirited bronze bas-reliefs, depicting the great historical events of the last one hundred years, encircle the big pedestal. Every armed effort that France has made in favor of republicanism is here commemorated. We went the rounds and examined each one; and, as we turned up the Boulevards, Mr. Conway said, "I may seem very pessimistic, but I have no faith in the regeneration of Europe." (The anarchists had evidently made a deeper impression than the bronzes.) "These old societies that have come down from feudal times," continued Mr. Conway, "resist reformation in a most obstinate fashion. Their progress toward the ideal is so slight that I see nothing in it to rejoice me. In young America alone is there any hope; only in the United States is there genuine progress. I return home, therefore, with enthusiasm."

"This so-called French Republic is no republic. I have known France and Paris for many years. I have visited this country scores of times, both during the Empire and during the Republic. Everything seems to be about the same to-day under M. Grévy as twenty years ago under Napoleon III. The Mexican expedition finds its counterpart in the Chinese-Tonquin imbroglio, and the prevailing thirst for colonial possessions is as dangerous to French interests as was Napoleon's aggressive continental policy. Almost the only redeeming feature of this Third Republic is the greater liberty that it accords the grand scholars of the College of France and the Sorbonne. Renan and Oppert and

Réville and Gaston Paris are the glories of the France of to-day.

"The saddest sight that Europe presents at this moment is the immense standing army which each nation keeps up. The frontiers bristle with bayonets, and everybody holds his breath lest the bugles sound the charge. The Alsace-Lorraine problem is not solved. France still hopes to get back her 'Lost Provinces,' but she cannot do so. Germany will never give them up. They are a part of her national history. They are necessary for her protection against French aggression. The modern German is not bellicose, while the Frenchman by temperament is pugnacious and military. The Germans have now all that they want,—national unity, a strong frontier, and peace. They are making money, and are happy. They hold war in horror. I believe that Germany would take a slap or two before she would have recourse to arms. More than this: I am certain that she will prevent other Powers from unsheathing the sword. But, if France should attempt to reopen the questions settled in 1871, she will surely find the whole German nation to a man eager to defend the territorial integrity of the Fatherland.

"The religious condition of France is most unfortunate. The French mother hesitates, very naturally, to depart from the course pursued by her own mother and her mother's mother. She shrinks from the responsibility of educating her children differently from what she was educated. So the boys and girls are sent to church. It is only when they are grown up that the brother turns his back on the priest, and leaves his sister in the lurch. French children are passed through a religious sieve: the boys get through the interstices, but the girls are caught. This divorce of the sexes in religion is disastrous in more than one respect. This disassociation of men and women is not limited to spiritual matters, but shows itself to a greater or less extent in all the occupations of life. Renan once said to me that it would be a blessing if Paris possessed a chapel like that of South Place, where men and women could meet, where both fathers and mothers could bring their children, and where a pure religious sentiment, free from all sectarian dogmas, could be inspired.

"But to return to Germany. I studied with some care during my sojourn in Berlin the anti-Semitic agitation; and, although the Jews are still heartily detested by the Teutonic Christians, I think I discovered an abatement in the popular hatred. But I must say that, while I do not at all approve of persecutions of this kind, the Jews have themselves principally to blame for it. In the first place, they are not patriotic. As a rule, they do not care a whit for Germany as Germany. Their souls are never stirred by the "*Wacht des Deutschen Vaterland*." And, in the second place, like the Jews all the world over, they remain a caste. They have their peculiar religion; they do not intermarry with other sects; they build up a social wall that hedges out the rest of mankind. It is China in Europe. This attempt to preserve in the last quarter of the nineteenth century the traditions and customs of the pre-Christian era is the main cause of the despised position which the German Jew occupies in the eyes of his fellow-countrymen.

"In Russia, I found the condition of the Jews much worse than in Germany. The ill-treatment of them is not limited to those of native origin: Jews from foreign lands sojourning in Russia are subjected to the same vexations. I was informed that the diplomatic representatives of the various nations at St. Petersburg, discouraged by repeated rebuffs, no longer try to protect their citizens, if of Hebraic birth.

"Another feature of Russian society which struck me oddly at every turn was the complete absence of a middle class. There was no lack of nobles and aristocracy and peasants, but I always looked in vain for people of my own rank. In the streets, at the court balls, in the hotels, in the railways, it was ever the same,—there was no sturdy middle class.

"At Vienna, I was invited to the ball of the Concordia,—a society composed of the literary element of the Austrian capital. Journalists, authors, and poets, whose names are famous throughout the breadth and length of the 'Dual Monarchy,' were there. I talked with some of them. None had ever heard of James or Howells or Stedman; nor, probably, have James or Howells or Stedman ever heard of any of them,—a remarkable example of how limited is the horizon of even the most intelligent of men. The Archduke Rudolf, heir-apparent, attended this ball; and I noticed that he went the rounds, greeting every writer of any distinction with some appropriate remark. I made the same observation in Berlin, where the Crown Prince is never weary of attentions to men of letters. At every public gathering of scholars and thinkers, both in Germany and Austria, you are sure to find the heir-apparent exchanging compliments and participating in the conversation. This is a very significant fact. It shows that the Hohenzollerns and the Habsburgs fully recognize the influential part which intellect plays in modern civilization, and thoroughly appreciate the value to monarchy of the good will and support of literary men. The king of the nineteenth century knows right well that the pen is indeed mightier than the sword.

"In England, the Prince of Wales does not feel called upon to court so assiduously the powerful literary guild. The English throne is strong because it is a shadow: giving it substance would only weaken it. The Prince might better, perhaps, turn his attention to the English democracy, the new and dangerous element about to enter into English politics as the result of the recent Reform Bill. The advent on the public stage of this illiterate and groggy class—for ignorance and intemperance are its predominant characteristics—forebodes no good to England. I believe in democracy and universal suffrage as practised in the United States, where, on account of our highly organized system of government, the thoughtless masses cannot swamp the thoughtful *élite*, and government is not wholly at the mercy of a popular whim or momentary burst of passion. But such will not be the case in England. The ungoverned and untrained masses will have a direct and immediate voice in the most delicate and complicated questions of state. 'An appeal to the country' will, henceforth, be fraught with perils that Great Britain has never dreamed of. If the kingdom were a confederacy; if there were parliaments, like our State legislatures, in Scotland, Ireland, and the north and south of England,—I should not consider this influx of new voters so full of danger; for they would participate not so much in national politics as in provincial politics. But it is not probable that such a radical remodelling of English institutions will occur in our day, although the plan is advocated by many thoughtful Englishmen, and notably by Mr. Goldwin Smith. England, therefore,—monarchical, conservative, old-fashioned England,—is to be the first among Anglo-Saxon States to present to the world an example of what I can only call a jelly-fish democracy.

"And this innovation has been brought about by Gladstone, or at least with his sanction. Now, I have never been an admirer of the 'People's William,' I have never been fascinated by his soph-

istry. In my opinion, he is at present too old to be at the head of public affairs. His mental powers are, I think, unequal to the strain put upon them by the duties of the premiership of a great empire like that of England. To speak, in a word, my whole mind concerning the Right Hon. W. E. Gladstone, I should pronounce him an unconscious humbug.

"The separation of Church and State in England is one of the problems which must sooner or later come to the front for solution. You may think it strange that I, a radical, am opposed, for the present at least, to the disestablishment of the Anglican Church. My reasons for taking this view of the case are easily given. When England broke with Rome in the sixteenth century, the episcopacy became the successor of the papacy in the usufruct of the ecclesiastical property, of which the revenues have been estimated at about £8,000,000. If the Established Church were to be deposited, this immense sum of money would be frittered and doled out to the various denominations, so that Orthodoxy would be strengthened rather than weakened by the change. More than this: at present, a goodly portion of the revenue of the Anglican Church is devoted to education. After disestablishment, it would be employed almost wholly for religious purposes.

"And then there is still another reason why I am opposed to the separation of Church and State in England. Just as Anglicanism was the heir of Catholicism three centuries ago, so I believe that Liberalism is sure to inherit the immense fortune of the Established Church, if we are patient. And, when that day comes, I wish the principal to be intact."

Mr. Conway's last remarks suggest a comparison. In France, too, disestablishment is one of the burning questions; and here, also, we find free thinkers advocating the *status quo*. But how different are the arguments used on the two sides of the Channel. To be sure, the situation is not the same. In France, a foreign element—the Vatican—enters into the dispute; while, in England, it is a purely English controversy. M. Paul Bert and his friends hold that Catholicism is less dangerous under the rule of the Concordat than it would be if exempt from State control, that the union of the civil and religious powers acts as a salutary check on the Jesuits. Financial considerations play a subordinate part in the French discussion. The chief object that the Republicans have in view is to minimize clerical influence in French society. M. Paul Bert and Mr. Moncreux D. Conway, too, for that matter, are "opportunists": they advocate a patient and politic sufferance of momentary evil in the belief that they will finally gain a more complete victory. Although radicals, they think it wiser to be conservative in their dealings with priests, whether of French or English birth. In this way, Mr. Conway hopes to inherit their riches and M. Bert to limit their mischief.

THEODORE STANTON.

PARIS, May, 1885.

WHAT IS IT TO BE GREAT?

It is to be cognizant of great things. Greatness perceives greatness. This is the difference between man and low orders of life. From the polyp up, growth in greatness is simply increase in perception of great things. Man is but as much greater than the zoöphyte as cognizance of space, of time, of thought, of love, of religion, surpasses hunger and the perception of eddies in water. In a like way, the philosopher reflected on the fly walking on the pillar of a cathedral. To the insect, the vast and glorious building was no more than a small surface, whose roughness per-

haps plagued the delicate structure of its feet. To the eye of the man, the inequalities disappeared, which to the fly were great pits and hills; but the column itself and all its fellows and the dome and spires were gathered into a glorious creation of devout mind. This cognizance of the greatness above the little hollows in the pillar constitutes the human greatness above the insect. Carlyle defines a hero as "a great soul open to the significance of life." But this itself is greatness,—this openness to the appearance of divinity. Simply, it is the power to see what is to be seen. What makes an eye a strong and fine eye? The measure of its capacity to do the eye's work; that is, to behold. And what makes the excellence of the whole man? Power to discern what it belongs to the whole man to discern. Marcus Aurelius says we shall be helped to do well, "if we remember that what does the work of a fig-tree is a fig-tree, and that what does the work of a dog is a dog, and that what does the work of a bee is a bee, and that what does the work of a man is a man." A very great power of eye to see may be an endowment of nature: only two or three eyes are known which, naked, have seen the crescent of Venus. Or seeing power may grow from trained and industrious effort. When, by exquisite skill, a delicate object is placed under a microscope, perhaps there are not a dozen eyes in the whole great city that can see what nevertheless lies there visible, to the ecstasy of the mind equipped with the eye to behold it. So with the harmonies that besiege the ear. They scale not the ramparts of all ears. So with the exceeding delicacy of the sense of touch, and with knowledge of color and of shape and of the objects of all the senses. But the soul is the seeing behind the eye, the hearing behind the ear, the tangibility of things touched, the percipiency of shape and color in beauty. Mind is great only as it perceives those things which are great; and mind is greater as it knows what the greatness of things is, and this is their co-operation in one thought and the contribution of each in its own place to the one perfect idea and meaning. Two things we must consider: that things often seem not as they are, and, still more, that they often seem as they are not. It is greatness to correct the seeming, to be cognizant of the reality. This truth takes hold of daily life, and has deep moral meaning.

In what need we so much real greatness of mind as in our moral judgments, our estimates of the value of human deeds and feelings? We do not see things as they are, seeing but in part, and failing to glorify what in reality is grand, because we see but a little corner of it; and we see things as they are not, not only not exalting the good, but praising the ill, and choosing the little, the bad, the perishing, when the grand, the good, and the everlasting are close by us. The humane Beccaria, when he changed some views which first he had expressed, but which afterward he thought too severe, added in a note: "I am ashamed of what I formerly wrote on this subject. I have been accused of irreligion without deserving it; and I have been accused of disaffection to the government, and deserved it as little. I was guilty of a real attack upon the rights of humanity, and I have been reproached by nobody." A noble avowal for Beccaria, who thus corrected himself; but a reproach to the world which had not corrected him. Better than all genius, whatever that may mean, than all the scope and power of mind, better than all art, than all learning, is the true greatness of seeing greatness where it is, and of putting things in their true relations by our moral judgments. And the

more cloaked by lowly conditions and unattractive forms, the poorer in shape or position or power, the less conventional, the less expected the greatness is, the greater is the soul which perceives and uncovers the divine, and declares that it is shining there in whatever lowliness of fortune. This greatness is really cognizance of God. There is a way of looking at God and thinking not of glory; for we may take the conditions about us and not interpret them, or see them in their place in the universe of stars whose infinity makes any point a centre. Also, we are to remember this: that the human will in the mystery of its actions, which is called freedom, is mingled with divine acts to their obscurity; so that, thus mingled, it is the office of a great soul to perceive divinity clear and in itself. It is great, therefore, to see the trend of the shore of life, not disconcerted by inlets or jagged points or scattered pebbles, which are but the coast of the present jutting into the sea which is eternity. It is great to see what is coming in what now is; the triumph yet to be, the victory, the divine operativeness in all things. In sum, greatness is not power to tell what we see, not eloquence, not the cunning of the eye or the hand on canvas, marble, or tuned strings; but it is to see the one in all and all in one, for in this unity is the greatness of creatures and of the Creator. "The man to whom all things are one, who bringeth all things to one, who seeth all things in one, he is able to remain steadfast of spirit and at rest in God."

J. V. BLAKE.

EDITORIAL NOTES.

BY B. F. U.

MR. SAVAGE's address which appears in *The Index* this week is also printed in the June number of the *Unitarian Review*.

A PROPOSITION introduced at a recent meeting of the Republican organization of Ward 9, Brooklyn, to treat Rev. John W. Chadwick as a deserter, and to decline further fellowship with him politically, he having admitted that he had voted and worked against Mr. Blaine "because he did not want to see the banner of true Republicanism trailed in the dust," was rejected by a vote of 25 to 18.

MR. M. D. CONWAY has returned to this country with his family. He will, it is stated, make his home in New York, and devote himself to literary pursuits. He is reported as saying: "I see no prospect of building up a congregation. Besides that, my inclinations are to give up the cares of a congregation. I have been preaching since I was nineteen years old, and I think it is time now to rest."

THE Parker Memorial Science Class, at its meeting Sunday, the 7th, the last of the season,—at which Mr. D. H. Clark read a very interesting and instructive paper on "Joseph Priestley,"—voted to have a picnic at Waltham, Sunday, June 21. The Parker Memorial Society was unanimously invited to join the Class on this excursion. We may here mention that the name of Mr. W. S. Kennedy, whose address was on "Some Social Views of Ruskin," was inadvertently omitted from the list of speakers for the class which appeared in *The Index* last week.

"A MODEL HOUSE," a copy of which we have received from the author, is the title of a comedy written some years ago by Judge E. P. Hurlburt, of Albany. The title-page bears the words, "Not published, but communicated confidentially by the author," from which we infer the work was printed for private circulation only. Those who know the

distinguished jurist only by his serious writings, as *Human Rights and their Political Guarantee*, have but a faint idea of the sarcastic and humorous side of his character with which his more intimate friends are familiar, glimpses of which are caught in reading "A Model House."

LILIAN WHITING, in a letter to the *Chicago Inter-Ocean*, mentions the large and appreciative audiences in attendance at the annual convention of the Free Religious Association this year, and adds: "They were people whose names stand for something, who represented ideas and their expression in word or action. In fact, the Free Religious Association was the intellectual focus of the anniversaries; and its sessions offered more of vigorous and vital thought than those of any other assembly of the week. These are not the times that try men's souls with the thrilling issues of the days of Parker and Garrison; but there are great intellectual movements in the air, and toward these this Free Religious body of thinkers and scholars is most receptive. . . . Comprehending, of course, many shades of belief, it is, as a body, eminently intellectual, refined, and spiritual, in the truest sense of the term."

THE editor of *Liberty* says that the liberal papers, among which *The Index* is mentioned, "and all the Free Religionists, agnostics, and materialists, and other infidels, so called," although opposed to the ecclesiastical machine, "when asked to confront exactly the same situation in the political sphere, are stiff-necked Presbyterians, hard-shell Baptists, and straight-laced political orthodox of a very fanatical type. When I meet them, they politically invite me to rise for prayers, seek Jesus, and flee from the wrath to come." Whenever we have had a chance to refer to the anarchistic views of the editor of *Liberty* in his presence, instead of inviting him "to rise for prayers," etc., we have pointed out the absurdity of his notions, and asked him to meet certain objections, and to show any error in the reasoning which demonstrates that anarchism is a wild dream impossible of realization. On such occasions, his attitude has been as diffident as his spirit in the paragraph quoted from above is confident and courageous.

IN *The Index* of June 4, we quoted from a daily paper to the effect that worshippers at Dr. Sunderland's church in Washington were "indignant" and showed "considerable feeling" when it was discovered that Fred. Douglass had hired the pew usually occupied by the tenant of the White House, the President preferring one less conspicuous. We remarked that Mr. Douglass was entitled to any pew in Dr. Sunderland's church that he could hire and pay for, but expressed a little surprise that he should care for a pew in an orthodox church, whose creed he had outgrown years ago. Mr. Douglass writes us that the paragraph "illustrates the lamentable tardiness of truth in comparison with the fleetness of falsehood; for, outside of the simple fact that I attended one service in Dr. Sunderland's church four weeks ago, there is not one particle of truth in the story referred to above. I have neither rented a pew in that church nor attempted to do so, nor did my presence cause any visible sensation or indignation. The whole story originated in the fertile brain of malignant correspondents, in greedy pursuit of sensational matter for their hungry journals. I contradicted the whole story on the same morning of its utterance, and I regret that this contradiction should have escaped the vigilance of the usually clear-sighted editor of *The Index*. You are quite right in representing me as having outgrown the orthodox creed; but I have not outgrown my right to enter an orthodox church and listen to an ortho-

dox sermon, when I may please to do so. I hardly think that such occasional attendance will be likely to endanger the stability of my convictions, or compromise my position as a free and independent thinker." We are glad to publish Mr. Douglass' correction, regretting that, misled by a paragraph which appeared in many papers, and the contradiction of which we did not see in any, we did injustice to our honored friend. It is said that a lie will make its way around the world while a truth is putting on its boots; but, when the truth gets its boots on, the lie, as in the above case, is pretty sure to be severely kicked, if not killed. Mr. Douglass' right to attend any church he chooses, and as often as he sees fit, is beyond dispute; and nobody who knows him imagines that listening to any amount of orthodox preaching would either revive his belief in Orthodoxy or compromise his position as a free and independent thinker. Supposing that he had become a regular attendant at Dr. Sunderland's church, we merely wondered how he could have the patience to hear so often the old story over and over again.

Says the *Week*: "A social journalist at Toledo, for assailing private and domestic character, has been tarred and feathered. This was a highly irregular proceeding; but how is society to defend itself, when the purveyor of slander has neither money wherewith to pay damages nor any character to forfeit by a legal conviction?" If society were what it should be, it would be less ready to listen to unsupported attacks upon character by irresponsible persons. The fact is, such attacks are often encouraged in the supposed interests of religion and of political parties by men whose standing is good in Church and State. It is not strange, therefore, that so many unscrupulous journalists take advantage of their position to traduce those who have offended them. "A purveyor of slander" is no more entitled to the respect of honorable men and women than is a thief; and the more frequent the prosecution of those who invent and circulate lies in regard to individuals, whether to gratify personal revenge or to weaken the influence of public opponents, and thus to repel people from the party or principles they represent, might serve as a wholesome restraint on those given to slander "who have neither money wherewith to pay damages nor any character to forfeit by a legal conviction."

THE Concord School of Philosophy, which will open this year July 16, and continue three weeks, will discuss Goethe and the question, "Is Pantheism the Legitimate Outcome of Modern Science?" The lectures on Goethe will comprise these:—

"Goethe and Religion," by Rev. Dr. R. A. Holland; "Goethe's Relation to Kant and Spinoza in Philosophy," by F. L. Soldan; "Goethe's *Faust* and the Novelets in *Wilhelm Meister*," by Prof. Harris; "Goethe's Youth," by Prof. H. S. White, of Cornell University; "The *Ewig-Weibliche*," by Mrs. Ednah D. Cheney; "Goethe's *Faust* and *Wilhelm Meister* as a Whole," by D. J. Snider; "Goethe's Relation to English Literature," by F. B. Sanborn; "Poésies Lyriques de Goethe," by René de Poyen Belleisle; "Goethe and Schiller," by Rev. Dr. Cyrus A. Bartol; "The Women of Goethe," by Mrs. Julia Ward Howe; "The *Elective Affinities*," by S. H. Emery, Jr.; "Goethe's Titanism," by Thomas Davidson; "Goethe's Self-culture," by John Albee; "Child-life as portrayed in Goethe's Works," by Mrs. Caroline K. Sherman, of Chicago; "Wilhelm Meister and Hawthorne's Donatello," by Julian Hawthorne; "Goethe as Playwright," by William A. Partridge.

There will also be readings from Thoreau and from Mr. Alcott's diaries. In the symposium on Pantheism and Modern Science, Rev. A. P. Peabody, Mr. John Fiske, Prof. W. T. Harris, and Prof. Howison, and others, will take part in papers or by speech.

The Index.

BOSTON, JUNE 11, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, : : : : : } Editors.
BENJAMIN F. UNDERWOOD, : : : : : }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

Is a Scientific Basis for Religion Possible?

An Address delivered before the Free Religious Association at Parker Memorial Hall, Boston, May 29, 1885.

BY M. J. SAVAGE.

The whole wide field of the modern world is but one grand scenic display in illustration of the conflicts and conquests of science. Always has her flag led the way to victory; and no weapon turned against her has prospered.

It is not so long ago that this earth was the universe; while the sun, moon, and stars were only "appurtenances thereunto belonging." God, angels, and devils were chiefly interested in a struggle going on here, recently begun, soon to be ended, when time was to be no longer, and eternity was to become all. But science, like a young demiurgos, has touched, transformed, and re-created all things. And now we see "a new heaven and a new earth; for the first heaven and the first earth" are "passed away." The word has gone forth, "Behold, I make all things new."

We talk to-day with a friend in a distant city as familiarly as two neighboring gossips used to converse with each other from opposite windows, across a narrow street. And, each new wonder becoming a commonplace in a week, we are apt to forget how very modern all these things are. So we lose the marvel of what science has done in two hundred years.

The little flat earth plain of the ancients, flowed round by the ocean stream, domed by a solid concave as real as the cover of a dinner-platter, ruled by Jehovah or Jove, covering a cavern peopled by the shades of the dead, a scene of magic and marvel, the battle-ground of deities, demigods, heroes, and monsters of every kind,—all this is not so very far away. The "ancients" themselves were very modern, as compared with our present conceptions of the beginnings of life on earth. And Dante's world, a Christian crystallization of many preceding speculations, is hardly more than five

hundred years old. While, even since Boston was founded, Milton wrote his great epic. He knew of the ideas of Copernicus; though, for the purposes of his poem, at any rate, he rejects them. His whole universe is not so large as the now known orbit of the moon.

So recently, then, has Science given us our present universe for a home. She shattered the crystal spheres of Ptolemy, and turned the "firmament" into "the blue dome of air." She set the stationary earth in motion, and sent it spinning about the sun. And now our earth, instead of being the centre, is found to be only one little planet,—a subordinate part of one little system, itself a subordinate part of an infinite order. For our whole tiny group is so far away from even its nearest neighbor that a little fleet of yachts alone in the centre of the wide Atlantic, with no sign of life nearer than the far-off shores, could only faintly figure forth its startling isolation. It takes light about eight minutes and a half to reach us from our sun; while this same ray, in order to reach our nearest next-door neighbor outside our system, would have to travel about one million eight hundred and forty thousand minutes. And, even then, the white-winged messenger would only be standing on the threshold of infinity.

Is it any wonder that the science that has done all this should expect to change a good many things more?

But we need to glance for a moment a little nearer home than the stars, and obtain a glimpse, at least, of the extent to which science has changed the conditions of our daily life. Until very recently, men have postulated a miraculous origin for humanity only about six thousand years ago. The Garden of Eden has faded into the cloud-land of mythology; and science asks us to look down a vista of at least two hundred thousand years, to see our half-human ancestors cradled in a jungle, with the bestial cries of the forest for lullaby; and then to note how, with slow and painful steps, our race has struggled up a pathway wet with tears and blood to its present vantage-ground of civilization. And it is only in these recent years, by the help of this same science, that our race is gaining its conquest over the earth. Science found man timidly creeping along the river-banks and the ocean shores, shaping with clumsy hands and crude, flint implements a crazy "dug-out" in which to venture a little way over a sea peopled with monsters, and with all imaginable threatening horrors on every hand. She built for him the steamship, and turned the widest oceans into common ferry-ways. She found him toiling a few miles a day on foot or horseback or in some springless cart, and she built him the railway and the Pullman car. She found him sending a courier with a notched stick for a message to some other tribe, and she gave him the lightning for a post-boy, and turned the world into a whispering gallery. She found him living in little isolated and hostile groups, imagining the world beyond his narrow limits peopled with barbarians and monsters; and she gave him the printing-press, whose scattered leaves alight on every breakfast-table, and so gives us the sense of common interests, common wants, common sufferings, common aims, and a common brotherhood. Wherever the most careless eye rests to-day, it looks on some gift of this wondrous, omnipresent, all-conquering, all-generous science.

So much has this "science" thus wrought that we have come almost to look upon the word as though it stood for an entity, a demigod, a genie of some Aladdin's lamp. No wonder if the men of science are proud of the past! No wonder they hold the most extravagant views as to what the

future may unfold! No wonder they borrow the feelings, if not the words, of him who sung the triumphs of steam, and sometimes say to humanity,

"By and by, you may go and play,
While I manage the world myself."

Is it to be expected that, in a world so transformed, any class of human ideas is to escape the general transformation?

The religions of the past, whether true or false, have been held on grounds that science cannot recognize. Hence the inevitable "conflicts" and "warfares," whose history and principles have been so ably, if not completely, set forth by such men as Dr. John W. Draper and President Andrew D. White. But the warfare of science has not been confined to the old religion as an antagonist. Science has also had to war against the old history, the old philosophy, and even against the old science. The fact of it is that bigotry and conservatism are not all in the Church. They are too human, and there is too much of them, to be shut up in any one enclosure. There can be a scientific bigotry as well as one that bears the label of Presbyterianism. Witness the attitude of all the older physicians in England toward Harvey's discovery of the circulation of the blood. It is said that no one of them who had passed the age of forty ever got his eyes open wide enough to see the new light. Witness the purely scientific authority of Newton, which eclipsed the glory of Young, as the discoverer of the true theory of light, for a century. Witness Agassiz and evolution. And the list might be indefinitely extended.

But because Science carries on her warfare against the old theories and supposed facts of history, philosophy, and science in the past, no one supposes that any one of these—history, philosophy, or science—is to be slain, or must of necessity cease to exist. No false theory about the stars ever endangered the light of any single one of them. So it seems to me quite possible that false theories about religion, or the discovery that supposed religious facts are without foundation, may not hinder its continued career, any more than false theories about the earth are likely to hinder its continued circuit about the sun.

A little clear thinking and some good definitions ought to bring some help to those who do a good deal of ill-digested talking about science, as well as to a similar class that endangers religion by its unwise defence. Let us then try to get our bearings and find out just what it is that we are talking about. We will then examine the two great supposed antagonists, and see if we can find out what they are.

I. What is Science?

To hear people talking about it, you would suppose that it is a *thing*, an entity, that can be in favor of or opposed to some other *thing*. But science is only *man thinking*,—one of the functional activities of humanity, as religion is another of its functional activities. Instead of being a *thing*, it is only a *method* of dealing with things. It is the way—and, I believe, the only way—of rational study, of the discovery of truth. I hold that no man ever did discover any truth, or ever will, except by the use of the scientific method. That men used this method before they thought of it, or formulated it, is nothing against this position. Men spoke grammatically before they formulated grammar; and they used their eyes for ages before they dreamed about any theory of vision. But men can use their eyes much more effectively, and can more easily distinguish between hallucination and reality, since they understand the laws of sight. So, since they have formulated the laws of investigation, they can make more rapid and sure advances in the discovery of truth.

What now is this method of science? It consists in three distinct and separate steps of investigation.

1. The first step is *observation*. This is the simple looking at a supposed fact. But the impression one gets from this first looking may be a quite erroneous impression. For the eyes alone may send up a false report to consciousness. The eye tells us that the earth is flat; that the moon is only a few miles away, and is no larger than a platter. Different eyes do not agree as to colors. A movement may be made so rapidly that the eye shall misreport it completely.

In a similar way, the reports of all the other senses are liable to be mistaken. It is not enough then to see a thing or hear a thing or feel a thing. The one testimony must be checked off by other testimonies. The report must be corroborated. So 2. We must take the next step, that of *verification*. To do this, we repeat the observation. We call in the aid of the other senses. We check off or modify one report by another. We compare them; we try to eliminate sources of error; we apply one method of explanation after another, until we feel reasonably sure that we have found the only one that is adequate. Then, for the first time, we have a right to say that we know that fact. Then

3. We are at liberty to take the next step, *deduction*. We have verified a large number of facts that are similar in their general characteristics, and we put them together in a class by themselves. Now, we have a right to go on and deduce a theory as to their relations to each other. And these constant relations we speak of as the law that underlies them, and by which they are what they are. This is what is meant by a scientific theory or hypothesis. And, if no new fact is discovered that our theory cannot make room for or explain, as we say, then we consider our hypothesis established.

And, just here, we need to bear in mind another thing,—that what science speaks of as a law is not a thing or force or entity any more than science itself is. It is popularly spoken of as though it were a statutory enactment or a positive force that was capable of doing things. It is nothing more than our way of saying that the relations between certain phenomena are constant and are changing.

Now, then, after science has taken its third step,—deduced its theory,—its triumph is attained, and its power becomes manifest. Taking its stand on the observed constancy of nature, it can reconstruct the past and predict the future. It can talk of eclipses and conjunctions of the planets five hundred years ago or five hundred years to come. So it can reconstruct history, or discover and explode ancient errors in philosophy, religion, and science. So, with astonishing accuracy, it can foresee the issues of our present political and religious tendencies. And, if the world be wise, it will use its light in guiding and shaping the forces now at work so as to determine a better future for man.

It is apparent, then, that science is only organized common sense. It is only man rationally trying to rid himself of his errors and to find out what is true in every department of thought and life. It is man in the light of past experience trying not to repeat his blunders, but to find out the reality of things, so that he may rightly adjust himself to them. Science never destroyed a fact or discredited a truth; and it never will. Those who are afraid of it only reveal their lack of knowledge as to what it is, or else their distrust as to the soundness of their own positions. Its only office is to clarify the present of its errors inherited from an uncritical and unscientific past, and to go on to new conquests of the undiscovered.

We have come now face to face with a question that is central to our whole discussion. On account of its importance, it has a right to ask your most careful attention. When may any institution be said to have a scientific basis? There can be but one answer; though it seems to me that people hold the most confused and absurd notions about it. An institution has a scientific basis, when the thoughts, the emotions, the rites or customs, and the actions involved in it are found to accord with the scientifically ascertained nature of things. And any institution, being a fact, has a prescriptive right to exist until by the use of the scientific method it is proved not to be in accord with the nature of things. That is, science has no right to demand the surrender or abolition of all things that do not happen as yet to have been demonstrated. He would not be an over-wise man who should propose incontinently to pull down all houses whose foundations are not already proved to be secure. When he has carefully examined and proved, in the case of some particular one, that it is not secure, then is the time for his work of demolition to begin. But there is a certain class of dynamite scientists who propose to blow everything up first, and examine them afterward.

One other point needs to be made clear; that is, the range, the scope of science, or the proper field for scientific investigation. There are many who would say to Science, Your instruments and methods of investigation are the proper ones for certain departments of study or life; but, by the very nature of things, they are excluded from others. Some self-appointed keepers of certain alleged truths would say, Hands off! my realm is too sacred or too subtle for science to deal with. Others—and these perhaps among men of science themselves—are ready to pronounce certain departments of thought or life unreal, because they do not lend themselves to the cruder methods of research with which they happen to be familiar. But we all need to learn, once and for all, that whatever is true, and at the same time touches in any way the life of humanity, is capable of being scientifically investigated. Undoubtedly there may be many things true in distant parts of the universe, or even near at hand, that do not touch human life, and so do not concern us. For example, perhaps we shall never find out very much about the back of the moon; and perhaps it will not trouble us much, if we do not. Perhaps there are inhabited worlds whose suns even are beyond the range of our largest telescopes; and perhaps we shall never know much about such worlds. But if a thing does not touch, and so does not influence or modify, our lives in any way, it is no matter whether we know about it or not. The things then that are beyond our reach and so beyond our knowledge are the things that it does not concern us to know. But whatever does touch us is thereby proved to be within our reach; and all such things we can investigate by scientific methods.

Science has achieved its most dramatic triumphs, so far, in the field of material facts; and I suppose it is on that account that many set up the claim that it ought to confine itself to these, and that nothing else is real. But, though there is about them none of the characteristics or qualities that we associate with what we call matter, a feeling, a fitting fancy, or even a dream, is a fact as much as a boulder, a glacier, or the remains of a megatherium. As a fact, it must be dealt with and accounted for by any one who undertakes to set up a comprehensive theory of the world. What we call the emotional, the mental, the spiritual,—the whole psychical life of man,—these are facts. The inclinations that constitute the bonds of so-

ciety are facts. Because they are immensely more difficult to deal with than physical facts does not put them beyond the range of science, nor absolve science from the necessity of dealing with them. There is no other possible alternative: either all things are orderly—that is, under law—or else the universe is a mad-house. And whatever is under law, and that at the same time touches and so concerns us,—this can be investigated.

The outcome of our definition of science, then, is this: 1. It is a method, and not a thing. 2. Its scope includes all that it concerns us to know. 3. By any thing's having a scientific basis, we mean that it is found, on investigation, to be in accord with the discovered nature of things.

Now let us turn to the other great factor of our theme, and ask,

II. What is Religion?

In general, then, and before coming to particulars, I would define religion as man's effort to express and interpret the greatest and most inclusive of all human relations. And, in the nature of things, it must be as permanent as that relation itself. Or, to state it in another form, so as to open the way for a natural and needed analysis, I would say, Religion is man's thought concerning the relation in which he stands to the universe, or to the powers or power that he recognizes as outside himself and as controlling his destiny. Of course, his thought is accompanied by appropriate emotions. And, of course, the thought and the emotion will find external expression in what are regarded as fitting rites, services, and courses of conduct; while the one purpose in it all will be the establishment of what is looked upon as desirable relations between man and this external power.

I put the thought first, because an intellectual perception of this relation must precede all conscious feeling on the subject; while the thought and the feeling must precede the external expression in altars, temples, or services of any kind. The purpose—which is the motive force of it all—will be seen to permeate, run through, and mingle with all the other elements of religion.

Religion, then, upon analysis, may be resolved into these four elements:—

1. It is thought,—the creed, the theology.
2. It is emotion,—fear, awe, reverence, hope, love, worship.
3. It is ritual, however elaborate or however simple it may be.
4. It is purpose,—the endeavor of man to adjust himself to his supposed environment; to get into right relation to the Power not himself; or, in New Testament phrase, to become "reconciled to God."

To see how true and real this all is, let us glance at a few concrete illustrations drawn from the different religions of the world. Begin with a fetich worshipper. In some way,—no matter how,—he has come to stand in awe of some mysterious power supposed to reside in or be connected with a stick or a curious stone. Now, he thinks of a power here, external to himself, and as able in some way to hurt or help him. He will naturally feel afraid of this power. Then, by some rite or ceremony, an offering or a prayer, he will try to placate its anger or win its good will. And his purpose will be, in it all, to establish what he regards as desirable relations with it.

Pass from the fetich worshipper to the Jewish high priest in Solomon's temple. His thought of the power not himself has grown to the dimensions of Jehovah, the God of Israel, or, as in later times, the God of the whole earth. His emotions will correspond to his intellectual conception. His

ritual will take such shape as he supposes his god to desire. And his purpose will be the establishment of what are regarded as desirable relations with this dread Power that is supposed to hold the destiny of Israel in his hands.

Now, precisely similar things are true of the Buddhist, the Mohammedan, and the Christian.

And, even if you drop the name of religion, you do not escape the thing itself. Every man capable of thinking does think and must think of a power external to himself. If capable of emotion, he must have feelings that respond to the manifestations of this power. By his thoughts and feelings, his actions must be influenced and moulded. And, knowing that his life, his prosperity, and happiness depend on his knowledge of and obedience to this power, the purpose to be rightly adjusted to it must be the aim of every intelligent and sane human being. For this religious search is nothing more nor less than the search for the secret of life. The essentials of religion, then, are the essentials of all sane and healthy human living. The same religious elements that we discovered in the fetich worshipper are vital to-day in Huxley, in Herbert Spencer, in Haeckel, and in Colonel Ingersoll. Even atheism itself is only the obverse side of the current coin of religion. And these essentials of religion must remain just so long as there is a universe, and a man in it capable of thinking and feeling about it. Get rid of all the temples, churches, priests, and ministers, and you would not get rid of religion any more than, by abolishing the weather bureau at Washington and destroying all the weather-vanes and thermometers, you would get rid of the weather. And, even if the climates themselves should all change, some kind of climatic conditions would remain.

It seems to me that, in this matter, people allow themselves to be deluded by superficial appearances. Because a large part of any old religion will not bear scientific investigation does not seriously threaten religion itself any more than the stars were endangered by the overthrow of the Ptolemaic system of astronomy. That the thought elements, the emotional elements, and the ritualistic elements of religion in the past should have been found to have been erroneous or partial is a matter of course, and goes without saying. For a scientific man to discover and announce these facts should startle no one, any more than the statement parallel to this, and equally profound, that a boy's trousers and jacket are not large enough for him when he gets to be a man. It is doubtless true, but not important enough to make a great deal of fuss about. Put a finite being in the midst of an infinite universe and tell him to grow, and results like these are to be expected. And they are as inevitable in regard to religion as they are in the matter of clothes. Our religious beliefs, like all the rest of our ideas, may always be partially untrue; and they must always be at least inadequate. And yet they may be relatively right enough at any special stage of human development. I suppose that, at any particular epoch of the world's advance, the people then living did just what we are doing now. That is, they thought as correctly as their brain power, limited by tradition and inherited prejudice, would let them. To ask them to do more would be like asking the Swiss lake-dwellers to build the Parthenon.

But while the creed, the emotion, and the ritual are subject to perpetual change and growth, the purpose remains forever the same. The body may grow old and die; but the soul ever reincarnates itself in some more fitting form. Orders and types of life perish; but life goes on. And this eternal purpose of religion is one of reconciliation. It is the progressive endeavor to reconcile man with

himself, man with his fellow, and man with the external conditions of his life.

III. Where are We Now?

Let us now look a little at the condition of religion at this present stage of the world's advance. We will do this with two questions in mind: first, as to what religious principles or beliefs have a distinct and definite scientific basis; and, secondly, as to what principles or beliefs, though not yet demonstrated to be true, have a right to remain,—for the present, at least,—because they have not been demonstrated to be false.

What, then, are some of the elements of religion—truths that may well enough be called doctrines—that are capable of demonstration?

1. I would set down the existence of "an Infinite and Eternal Energy from which all things proceed." This is as much more certain than any phenomenal fact whatever as is the general fact of seeing more certain than anybody's report of any particular thing stated to have been seen.

For my present purpose, I care not by what name you call this Power, or, indeed, whether you name it at all; for any finite name must be utterly inadequate as a designation of the infinite.

But, unless Science is to stultify herself and deny her own essential postulates, she must admit that "nothing comes from nothing," and that "a stream cannot rise higher than its source." If, then, I may not talk of this Power as thinking or planning or loving or as personal,—because all these are finite terms,—still, by all the canons of science, I am bound to regard it as at least equal and adequate to these; for these are some of its finite manifestations. This Power, then, is at least as much as we mean by intelligence and love and personality. Or, as Herbert Spencer said to me one day, "I see no reason why we should not regard this Power as being as much above personality as we are higher than vegetable growths."

And I, for one, see no good reason for our being so afraid of being anthropomorphic. Whether afraid of it or not, we must be anthropomorphic until we cease to be *anthropoi*, men. And, if we were anything else, we should still be limited to the stand-point of our natures, whatever they were. We are just as anthropomorphic in chemistry as we are in theology. So long as we speak at all, we must use terms derived from our own experience. And even a partial expression may be more nearly correct than silence or no expression at all. And it is just as possible for one to be negatively dogmatic as to be positively so; and the former may be even farther from the truth than the latter. He who asserts mere force may be as dogmatic as he who asserts God. He cannot prove that he is any more nearly accurate. And, if he tells the theist that he does not know what God is, the theist has a perfect right to retort that he does not know what force is.

This Power, then, is not only real, it is the one great reality.

2. Man is the product of, and is dependent on, this Power. If, then, one grand element of religion is "the sense of dependence on an unseen Power," as it has been called, then, in so far, it has abundant scientific justification.

3. In this infinite and eternal Power is the law of man's life. This law was here before man came, and it will be here after he departs. In entering life, he comes under its jurisdiction. This sense of being amenable to a higher law has always been an essential part of every religion. It is no necessary part of this truth that this law should always have been looked upon as what

would now be called good, or moral. It is enough that he should always have regarded himself as subject to a Power above him that demanded his allegiance, and attached to his conduct or character reward or punishment as the result of obedience or disobedience.

This belief, instead of being weakened by the advance of science, is now established as one of the most incontrovertible of all truths.

4. In this fact, that the laws of this infinite Power are the inexorable conditions of life and death for man, lies the mightiest conceivable motive force for conduct. To know and obey these laws is at once the only true self-interest and the highest duty.

5. These laws, discovered and verified, constitute the one book, the sacred Scripture. And, while Science is calling them the "laws of nature," I see no reason why religion should not call them the "word of God," written on "tablets of stone," and on the "fleshy tablets of the heart," by the very finger of the Highest.

6. On the emotional side, the teachings of modern science seem to me to furnish unspeakably grander occasions than were ever known before for the feelings of reverence, awe, humility, admiration, and all the nobler emotions that have always been associated with the attitude of worship. Indeed, take the worshipful element out of human nature, and the very noblest attribute of manhood is gone.

7. All rituals; all services that are living expressions of live thoughts and feelings; all that serve to teach, to impress, to inspire, to lead to righteousness (rightness) of thought or life,—find ample warrant in the light of the best knowledge of the modern world. Indeed, so far as they are efficacious in these directions, they are the most important of all occupations. The highest and most important use of this world is the development of a noble man. All that science is worth is to serve as a torch in his hand to show him where to walk. The most of that which passes under the name of science to-day is of a very subordinate value as compared with that which shall teach him how he ought to feel, and conduct himself, as a man.

8. I fail to see, then, what Science can have to say against the Church as a permanent institution. It may undermine and overthrow, if it pleases, any number of false or partial theories as to the Church's origin, nature, prerogatives, or powers. But against the Church as a voluntary organization of men and women seeking to find the art of true living and to help others find it, in its endeavors to study and practise the best religious life, a sensible science can raise no objection that would not be equally valid against an art association or a scientific society; while the aim of the true Church is as much more important than either of these as life itself is more important than its embellishments or assistants.

9. The actual history of the past shows fear and hate decreasing and love and trust increasing; and this both in relation to man and also as toward the Power manifested in the external world. This, being exactly in line with the great, distinctive work of religion,—which is one of reconciliation,—reveals a demonstrable and demonstrated ground for her noblest expectations; and it also shows that those expectations are being progressively realized.

10. On the basis of the past there is laid a solid foundation of fact on which Religion is justified in building her loftiest structures of hope. Since the laws of this universe are now known to be the laws of human life, prosperity, and progress, it is seen that what Religion has called "the kingdom of God" is identical with what scientific

philanthropy would call "the kingdom of man." In the light of modern knowledge, we are justified in hoping for such a kingdom here on earth. This is one of the great hopes of Religion. It is the natural and necessary outcome of her work of reconciliation and adjustment, which—however wisely or unwisely sought—is her universal and eternal purpose.

But she cherishes one other hope. And this hope is so paradoxical, so audacious, so magnificent, that the mere fact of its being cherished at all, if untrue, is almost more wonderful than that it should be true. Almost every religion in the world has confidently promised even its humblest adherents that they should somehow successfully overleap the apparently bottomless chasm of death, and, dowered with immortal youth, start out on a career of eternal life.

This practically universal hope is a fact as real as a granite cliff. It is a product of this universe, on any theory you choose to hold. In some way, science must deal with it.

Suppose we start with the picture of human life so pessimistically pictured by the Persian poet, Omar Khayyám,—

"Into this universe, and why not knowing,
Nor whence, like water willy-nilly flowing;
And out of it, as wind along the waste,
I know not whither, willy-nilly blowing."

Now, if man be only that, a pinch of dust caught by a passing wind and whirled into fantastic form for a moment, only to be scattered again aimlessly to the waste,—on that theory, how did it happen that he took up with this most stupendous lie, whispered to him by a universe more crazy than himself? They tell us that dream and trance and subjective vision will account for it. Perhaps; but who will account for the dream, the trance, the subjective vision? All that is only covering a mystery with a phrase. It is only a stake set up by wise men to mark the boundary lines of their ignorance.

It may be true that the Power manifested in the universe blows sun and planets and moons like soap-bubbles, only that they may swell and glitter and burst, all unmindful of the intensity of human love and hope or the intensity of fear and despair. But, if so, then it must be Hartmann's "Unconscious" or Jonathan Edwards' "Devil." But, in that case, who knows that he can rely on the reason that comes to such conclusions? In a universe like that, reason itself may be either meaningless or only one of a devil's freaks of fancy. But, until we get something better, perhaps the most rational way is to rely on reason. On any theory, reason is a product of the universe. The universe, then, must be as much, as high, as reason. If, then, the conclusions of reason are valid, there must be an outcome of this world-drama great enough and good enough to justify the process. An age-long progress that ends in "a hole in the ground" does not seem to me quite worthy of a Power capable of building the world for a stage, curtaining it with clouds, doming it with the sky, and lighting it with stars. A cheaper play-house would have been good enough for so pitiful a tragedy or so poor a farce. For one,

I cannot think this world shall end in naught,
That the abyss shall be the grave of thought;

That e'er oblivion's shoreless sea shall roll
O'er love and wonder and the lifeless soul.

I do not claim on behalf of this hope of continued existence that it has as yet a demonstrable scientific basis. But I do claim that, for anything Science can say to the contrary, Religion has a clear and rational right to cherish the hope. The hope is a fact; it exists; and no knowledge, ancient or modern, is capable of proving it to be un-

founded. It is not only a rational hope, but, on the supposition that the universe means anything, it is more rational than the opposite. If any man tells me that he does not want a future life, I will tell him in return that I do. If Mr. Frederic Harrison says I am selfish in wanting it, my reply is that logically he ought at once to commit suicide. For, if it is selfish to wish to be alive a hundred years from to-day, then it is also selfish to wish to be alive next week. The only difference is that my selfishness asks for a little larger quantity of that which both of us desire.

Where, then, do we stand at the outcome of our discussion? We have found that religion is here, and that it is a world-wide and age-long fact. In studying the nature of that fact, we have discovered it to be only man's attempt to express and perfect an eternal relation,—a relation that inheres in the very nature of the universe and of man. The changes that have taken place in the past are only the natural results of a better understanding of that relation. Should the time ever come when, through increasing knowledge and goodness, these relations should be instinctively and automatically maintained, and all outward institutions of religion be no longer needed, this even would not be the destruction of religion, but its perfection. Education is not abolished, when a man has learned all that the schools can teach, and has ceased to attend them. The essential thing in government is the securing justice and order. Should the time ever come when this became a wholly internal thing, and outward laws and officials were not needed, would government have ceased? Because there is no visible Supreme Court to lay down the law for the planets, is there no law or order among the heavenly bodies? So the essence of religion being its purpose to secure this perfect reconciliation, it can be lost to sight only in its own perfect realization.

And what is our last word about science? Being as it is only a method of study, the way to the investigation of truth, its highest office can only be to make a pathway for human advancement, and hold the torch by which we may see our road. And since religion is, at any special stage of the world's growth, man's best endeavor to give body and form to that which is the highest object of human concern,—the art of life itself,—it follows that the noblest office of science must be to serve as the helper of religion.

Humanity progressing may be likened to a train of cars *en route*. The religious motive—the hunger for life, for life larger and fuller—is the steam in the engine. Science teaches man how to survey and build the road, and then places her torch of truth for a head light to shine out over the track that leads on toward the future.

CORRESPONDENCE.

MESSIANIC PROPHECY: THE FULFILLED AND THE UNFULFILLED.

Editors of The Index:—

Whether or not the Messianic prophecies of Hebrew Scripture were spoken with intended reference to Jesus of Nazareth, it is unquestionable that, according to the gospel narratives of the New Testament, a considerable number of the incidents there predicted did have their fulfilment in his life. It is also universally admitted that some of those prophecies have not yet been fulfilled. It may, perhaps, be instructive to classify the Messianic predictions, and see which of them were fulfilled in Jesus and which thus far remain unaccomplished. In the Gospels ascribed to Matthew and John, the following things are said to have taken place, "that the scriptures might be fulfilled":—

1. The birth in Bethlehem of the child Jesus, the carrying him into Egypt by his parents, and their

residence in Nazareth after returning from Egypt. Matt. ii., 1-6, 15, 23.

2. The fact that Jesus preferred to teach by parables. Matt. xiii., 34, 35.

3. The riding of Jesus upon an ass into Jerusalem. Matt. xxi., 1-7.

4. The division of the garments of Jesus by lot after his crucifixion. Matt. xxvii., 35.

5. The fact that thirty pieces of silver was the price of the betrayal by Judas. Matt. xxvii., 9.

6. The fact that, in a certain place, the people "believed not on him." John xii., 37, 38.

7. The casting of lots for the seamless coat. John xix., 24.

8. The declaration of Jesus on the cross that he was thirsty. John xix., 28.

9. The fact that the legs of Jesus were not broken. John xix., 33-36.

On the other hand, the following Messianic predictions were in no manner or degree fulfilled by Jesus during his life, nor has he fulfilled them since in any manner or degree.

1. Isaiah declared (ix., 6, 7) that the Messiah was to sit on the throne of David, ruling the Hebrews as David did, and moreover securing to them peace and a just government forever.

2. Jeremiah declared (xxiii., 5, 6, and xxxiii., 14-18) that the Messiah, a lineal son of David, was to reign forever on the throne of David, and was so to execute justice and judgment in the land of Palestine that, under his rule, "Judah should be saved, and Israel and Jerusalem should dwell safely."

3. Ezekiel declared (xxxvii., 21, 22, 25) that the children of Israel should return from their dispersion, and settle as one nation in the land of Palestine, and be ruled there forever by a prince of the house of David.

4. Amos declared (ix., 14, 15) that the house of David should again rule Israel, and that, under its government, that people should enjoy permanent peace and prosperity in their own land.

These four, Isaiah, Jeremiah, Ezekiel, and Amos, ranked by both Jews and Christians as among the highest of the Hebrew prophets, agree in the confident prediction that the Messiah will rule in the land of Palestine, not only executing judgment and justice there, but establishing permanent peace and prosperity for the returned and reunited tribes of Israel.

Whenever a descendant of David shall accomplish these things, he will have fulfilled the prophecies above quoted, and will be rightfully called the "Messiah." But not one of them has yet been fulfilled. So far from enjoying permanent peace and prosperity in their own land, the Jews have not yet returned there: they are still scattered among all nations, and still persecuted by many. Though a people, they are no longer a nation. They have no common language, and, if they could now be transported to Palestine, they would be unable to understand each other: their speech would match the fabled confusion of tongues at Babel.

But, according to the four prophets above cited, the permanent reunion of the Jews in Palestine, under the peaceful and righteous rule of a descendant of David, was the great, the essential, the principal work assigned to the Messiah. This most important part of the Messiah's function was not at all performed by Jesus, and he no more performed it figuratively than literally. The Jews no more accepted him as a reformer than as a king.

Looking back now at the list of incidents in the life of Jesus which are claimed in the New Testament as a fulfilment of prophecy in the Old, we find that very few of them are acts done by Jesus himself, the majority being things done to or for him by others. We find, moreover, that the acts in question, far from requiring the eminence or sanctity of character implied in the Messianic office, are of a trivial and superficial sort, such as could be done by any person; and we find besides that these trivial things were done for the purpose of fulfilling Scripture, and thus of proving Messiahship. But, if Messiahship had consisted mainly in being born in one town rather than another, or in teaching by parables, as Æsop and Jotham had done long before, or in riding into Jerusalem on an ass, it would not have been worth either predicting or accomplishing.

The four great prophets above quoted really expected that Jehovah would reward righteousness with present temporal prosperity. They therefore urged upon their countrymen the duty of working

righteousness and forsaking iniquity, and promised in recompense deliverance from oppression and permanent prosperity in the land of Palestine under the rule of a prince of the house of David. As the carpenter Joseph was descended from David, if his son Jesus had shown himself disposed and competent to lead a successful revolt against the Roman power, the Jews would gladly have accepted him as the Messiah, and fought to establish his kingdom. But, as he showed neither the power nor the disposition so to deliver them, there was not the slightest reason why they should recognize in him the Deliverer of whom Isaiah, Jeremiah, Ezekiel, and Amos had spoken. They were quite right in seeing that the ministry of Jesus was not Messiahship: their error—and a very great error—was in not seeing that ministry to be vastly better than Messiahship. C. K. W.

REV. JASPER NOT ALONE.

Editors of The Index:—

It has long been something of a mystery to me why the Rev. Jasper should be so extensively noticed for promulgating the once world-wide theory that the "sun do move." As a minister and an avowed teacher in the Church, his position may be a little out of the usual line; but, certainly, such views are not so extremely rare in the Christian Church as the frequent allusion to this one specimen might lead us to suppose.

Within the past two weeks, I have met and conversed with two church members with whom the Rev. Jasper ought certainly to share his laurels. One, a man of fair intelligence, a notary public and real estate agent in active business, declares that he totally disbelieves in the diurnal rotation of the earth, and asserts that day and night are the result of the daily circuit of the sun around the earth. He bases this assertion partly upon his own superficial observations, but chiefly upon what he believes the Bible to teach upon this subject. He frequently refers to modern science in a slighting manner as "men's doings," contrasting it with "God's work," which latter designation he gives to the Bible. He admits in most instances the reasonableness of scientific views, but declares that we have "no right to trust to reason, when reason conflicts with God's word."

The other is a physician of the Eclectic school, although not a regularly educated one,—a man of wonderful popularity among his church people, possessed of considerable wealth, good mental capacity, and altogether quite a lion among his set. This man openly ridicules some of the fundamental principles of modern physics, and substitutes in their place various theories of his own; for instance, that atmospheric pressure has nothing to do with the action of the ordinary pump, but that the water is lifted solely by the adhesion existing between the bottom of the "plunger" and the top of the underlying column of air or water. He also frequently refers to modern scientific investigations in a contemptuous way as "men's doings," and is never tired of eulogizing the "grandeur of the prophecies." Although he generally remains discreetly silent when such subjects as the diurnal and annual motions of the earth are mentioned, it is generally understood that he does not regard with favor the modern views. These people are already sufficiently numerous here to contemplate building a church. The two I have selected are only those who have expressed their opinions in my presence. That there are at least some others among them I have not the slightest doubt. It is also possible that some who publicly assent to modern scientific views rather than incur notoriety by dissent will, in the privacy of their own homes, and when brought face to face with "that infallible Book," read the story of Joshua, and insert the mental reservation that "the sun do move just the same."

There is nothing strange or unaccountable in this tendency to the production of an unprogressive type of mind. We need not trace the Christian Church many centuries back to find when it consisted of a brotherhood of Jaspers who never dreamed of questioning the supposed fact which our Virginia enthusiast is now ridiculed for asserting. The Jaspers of to-day are one and all simply loitering around the well-worn camp which the great bulk of the Church has abandoned for a better field.

Certainly, the Church ought to deal with only the greatest kindness with these poor benighted laggards whose present position is the direct result of her own fostering care. In a religious organization led by

ministers well versed in combining theology and science in proper proportions to make a palatable mixture, such woful laggards as our colored enthusiast may not be found; but place the Bible in the hands of men not under such leadership, and not having the time to cultivate those hair-splitting distinctions by which alone it is possible to harmonize science and orthodox theology, demand of these people an unreasoning mental submission in those instances in which reason and revelation seem to conflict, and there can be but one result,—namely, the multiplication of Brother Jaspers in abundance.

J. M. LATTI.

MILLETON, KAN., April 16, 1885.

THE following allusion to the Unitarian National Conference is from a sermon by Rev. J. W. Chadwick, which we find printed in *Unity*: "But, surely, it is not enough that the inevitable drift of our experience should be from doctrines to principles, from dogmas to ideals: we live a double and divided life until we frankly place ourselves upon the platform of our principles and our ideals, and say we will be true to these, whatever happens to our doctrines. Then I believe that thousands who are now indifferent to our function will come and range themselves with us, and march with us from victory to victory and from joy to joy. And, to this end, I trust the National Conference will not always be contented with the 'good God, good devil' Preamble and Constitution with which, for the present, it confronts an unbelieving world. But let it stop patching its patches, and, sweeping away its present mass of contradictions, put in the place of them something like this, which has been suggested by William J. Potter as the reconciling word: 'The churches and societies, Unitarian and other, here assembled, reserving to themselves the right to hold and proclaim such other religious principles and beliefs as may seem to them individually to be reasonable and true, but agreeing together that freedom of thought is a sacred and inalienable right of the human mind, and that true character is of vastly higher moment than any uniformity of creed, do hereby unite themselves in a common body to be known as the American Conference of Unitarian and other independent societies, to the end of energizing and stimulating one another to the largest exertions in behalf of the important interests which they have at heart for the promotion of righteousness and truth.' Channing! in whatever robe of light you may be flaming now, would it not give you some increase of joy to know we had attained to this?"

THE editor of the *Religio-Philosophical Journal*, in a letter to his paper from New York, writes: "One afternoon, I took the cars on the Long Island railroad and went out to Garden City, in response to a note from R. Heber Newton, D.D., who had cordially invited me to visit him at his country home. Here he spends most of his time, going to New York on Sundays to preach and upon other occasions as required. Here, far away from the turmoil and confusion of traffic and commerce, fanned by the bracing breezes from the ocean, and surrounded by those whose love makes duty a pleasure in helping him in his work, he can study and grow as he could not in the city.... I found Dr. Newton at the station awaiting my arrival, and seated with him in his carriage the venerable Elizabeth Peabody, whom I had last seen on the platform of the Concord School of Philosophy as one of the most active participants in the proceedings. Though eighty-one years of age, quite feeble of limb and nearly blind, her brain is clear and her interest in current matters of philanthropy and literature as keen as ever. A drive of less than half a mile brought us to Dr. Newton's spacious house, where I was cordially greeted by Mrs. Newton, several manly sons, a beautiful daughter, and at least four fine hunting dogs, who, I was glad to see, regarded themselves as part of the family and made as free in parlor and library as does a Scotch cousin of theirs in my own house. Familiarity with Dr. Newton's pulpit utterances had brought me to respect him and admire his ability and courage; but it only required five minutes in his library to warm me to a sincere and, I believe, lasting affection for the man. I found him much younger than I had supposed: he is forty-four, and looks six years younger. During the three hours spent with him, he impressed me as earnest and thoughtful; full of buoyant hope, yet well poised; courageous, but modest, ingenuous, and

receptive, yet with keenly analytical mind and highly trained reflective faculties; caring nothing for religious forms and ceremonies merely as such; with a profound respect for truth and an unflagging desire to find it; slow to reach final conclusions; intrepid in maintaining a position so long as he deems it correct, but ever ready to change when once his judgment is convinced; a logical and well-trained mind, in a sound and finely formed body."

TO F. H. S. *For The Index.*

I saw a rainbow,
It was fleeting;
But that rainbow,
Ever meeting,
Crosses still my upward look.
Once beholding it, forsook
Me all my cares.
Written in its lines of glory,
Underneath, another story
Answering all my prayers.

Now, my soul forever sayeth,
What is sorrow, that bewrayeth?
And my feet a lightness borrow
Of the morrow;
For that rainbow then will shine,
And its shining shall be mine.
O my friend, draw nigher now!
With the rainbow on thy brow;
Still my life upon the earth
Groweth worthier in thy worth.

On the easel of my grief,
Shadow of a parting brief,
Grows and grows the expectation,
Grows the sweet anticipation,
Ever brighter, of the love
That embraceth from above,—
Arching o'er me,
Circling round me,
With a peace that ever fills,
With a joy that constant thrills;
For a nobler soul enfolds me.

O my sorrow! now I praise thee!
O my grief! a song I raise thee!
For the parting sad
Maketh gladness glad;
Adding hope to joy that is,
And the yearning that is bliss.
Bend the bow of strong desire!
Draw the arrow tipped in fire!
Longing, loving, doth inspire.

E. P. POWELL.

BOOK NOTICES.

TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS. By William J. Potter. Boston: Geo. H. Ellis. 1885. pp. 417.

In these days, a volume of "sermons" is more likely to repel than to attract, by such title, the general reader; and a volume of sermons by one who, through his reverence for truth, has discarded the prefix "Rev." which custom attaches to the names of those in his profession, seems somewhat anomalous. Yet these twenty-five discourses are sermons in every sense of the term; and, in spite of the—to some—distasteful "odor of sanctity" about the word, there is no better name by which to designate their character.

But those who may be deterred by its title from opening this volume will make a mistake by which they will be deprived of a fine intellectual treat; for, accustomed as we have been for years, through the columns of *The Index*, to the clear statement of advanced thought and to the elevated morality characteristic of Mr. Potter's writings, yet we confess that the perusal of these "twenty-five sermons" has been somewhat of a surprise to us,—a surprise, a pleasure, and a source of inspiration,—surprise at the wide range of thought on so many differing topics, pleasure in the sympathetic insight as well as brave candor with which those topics are discussed, and inspiration from the unvarying reaching toward the highest moral ideals, and courageous utterance of his

most advanced intellectual convictions, which rings through every sermon of the whole series.

This book is the outcome of a wish on the part of the members of Mr. Potter's congregation suitably to commemorate, in some abiding form, the twenty-fifth anniversary of his acceptable ministry,—an anniversary which they celebrated by a public reception tendered to him, with poem, speeches, etc., on Dec. 29, 1884. In the letter from his parishioners requesting him to oblige them by compiling and editing this souvenir of his appreciated work among them, which they wished, also, to contain his portrait and autograph, no limitation or hint of the number of sermons is given; and it was a happy thought of Mr. Potter himself to select one sermon from each year of his pastorate, by which could be marked what changes, if any, had taken place gradually during those years of study and observation in his views.

The quarter of a century whose lapse these pages mark was a period of wondrous growth and advance in religious thought and knowledge. In these discourses, though there are intimations of gradual enlargement of scope of view and some modification of earlier religious stand-points, yet these are not so marked as might be expected; for one of the surprises of the volume is in finding how bold, decided, and advanced in freedom of thought Mr. Potter was, even at the beginning of his long pastorate. It is delightful to find him declaring in his very first address before his New Bedford congregation: "I do not come among you to help build up a sect, or to fill your pews, or to perform merely the priestly offices in your homes. I come to speak to you whatever of truth may by God's grace be shown to me." And, again, "Wherever a single soul bows with more passionate devotion to truth, and resolves to follow the truth wheresoever it may lead, through whatsoever road, and though losing all things else, even life itself, there is a member of Christ's Church, and a true minister in the line of his priesthood." The sincere, truth-loving spirit in which he entered upon his life work is indicated in the following passage from the same sermon: "The elevation of the soul, the enlargement and quickening of the truth-seeing faculty within us, is, in fact, the test of the growth of character. And as not even Omnipotence can make the blind see without first opening their eyes, so he cannot reveal truth to the soul, unless the soul be first opened to receive it; and as the soul in the natural order opens by gradual development, so the revelation must be gradual and progressive."

There is not one of these sermons which will not interest and well repay perusal, even by readers who generally avoid sermons. They contain a large amount of radical thought; but the language is always moderate, and the tone conservative. The spirit that pervades the entire volume is predominantly judicial. Upon the ethical aspects of his subject, the author always lays the greatest stress. As a philosophic thinker, he appears at his best, perhaps, in the sermon entitled "The Glorious God," and in the portion of "A Twenty-five Years' Ministry" in which he traces the development of his thought from New England Transcendentalism to the views he now holds, and states comprehensively his present "creed." While every discourse contains gems of thought and expression, we may mention among those we found the most inspiring and attractive "The Religion of the Affections," "Endurance," "Thoughts and Conduct," "The Permanence of Morality," and "Waiting for One's Self." That on "Self-sacrifice," a war sermon, is remarkable, as coming from a preacher of Quaker descent and of apparently pacific, serene, and equable temperament and character, for its eloquent patriotism and true soldierly and liberty-loving spirit. The portrait of Mr. Potter, which as frontispiece adorns this neat-looking volume, is an excellent and faithful representation of the original. S. A. U.

ETHICAL CULTURE. I. The Need of an Ethical Religion; II. Why Christianity does not Satisfy us? III. The Success and Failure of Liberalism; IV. The Meaning of a Society for Ethical Culture. Four Lectures by Samuel Burns Weston. Philadelphia, 1885. pp. 70.

In these four lectures, Mr. Weston has presented much timely thought in clear language and in an independent spirit. The insufficiency of theology as the basis of morality, and the importance of bringing the moral life to the foreground in religion, are shown, attention is drawn to some of the defects of "Liberalism in its more limited, its sectarian sense, if you please," and the origin, principles, and aims of the

Ethical Movement are stated and explained. Near the close of the last lecture, Mr. Weston says:—

I have tried to show that it means, in the first place, a society which makes the moral life the object of fundamental importance in religion, making that the sole basis of its religious work and fellowship; secondly, that it means engaging as a society in such works of philanthropy as shall help toward the realization of a far higher social order than at present exists; thirdly, that, in our efforts to reform society, we shall not forget the more important and even more difficult work of self-reform; fourthly, the formation, so far as possible, of adult classes, or ethical sections for the study of the ethics of the different professions and occupations of the members, and the maintenance, if possible, of a Sunday course of lectures; and, fifthly, and finally, it means providing a course of moral instruction for the young.

THE *Art Amateur* for June contains less solid matter in biography or criticism than usual; but it is full of bright, interesting paragraphs about the exhibitions and contemporary art. A little word of the late artist Le-Page about his "Joan of Arc," still in our own Art Museum, gives his theory of art, and explains the painful realism which shocks us in a picture which shows much artistic power and feeling. There is also a curious advertisement asking for information about the art of "tattooing." We knew that this practice was still in vogue, but were not aware that it was classed among the fine arts. We are glad to hear of a successful new American play called "Sealed Instructions," although the account of the plot shows nothing very original or American. The illustrations are very pleasing. The "Matins," by H. Winthrop Pearce, is full of tender feeling; and the "Rough Day," by Frank M. Boggs, is vigorous and effective. We should like to see the original picture of the "Sweet Girl Graduates." It is good if the artists are beginning to recognize the new beauty of woman developed by the higher education and greater sense of responsibility.—E. D. C.

THE *Journal of Speculative Philosophy* is rather behind the times, the latest number, bearing date of October, 1884, having only recently appeared; but it contains several articles of interest to philosophic thinkers. Its opening paper is "The Problems of Anthropology," by Ludwig Noiré (translated); "The New Argument from Experience against Idealism," by George S. Fullerton; "A New Theory of General Ideas," by Payton Spence; "A Popular Statement of Idealism" (II.), by William M. Salter; "Bradley's Principles of Logic" (II.), by S. W. Dyde; "A Study of the Iliad: Book Fifth," by D. J. Snider; "Notes and Discussions," including Sentences in Prose and Verse, selected by W. E. Channing, and the programme of the prize essay on Hegel's method offered by the Berlin Philosophical Society. D. Appleton & Co., New York.

THE leading articles in *Christian Thought* for May-June, 1885, are "Genesis, Scriptural and extra-Scriptural," by Jesse B. Thomas, D.D.; "A Half Hour with the Evolutionist," by Dr. Abraham Coles; "Faith as the Basis of Science and Christian Philosophy," by C. S. Towne; "The Involuntary Life," by E. P. Thwing, Ph.D.; and "Monthly Meetings of the Institute," by Charles M. Davis, Secretary.

Just Published:

TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crapo.

PRICE \$2.00.

For sale at the bookstores. Also sent, postpaid, on receipt of price, by

THE INDEX,
44 BOYLSTON STREET, BOSTON.

TOKOLOGY A Book for every woman. Alice B. Stockham, M. D.
A COMPLETE LADIES' GUIDE.
 30,000 Sold in Little Over a Year.
 Agents find it the most popular work on the market. The very best book to put into the hands of a girl or woman. — M. HALE, M. D. Cloth, postpaid \$2.00; Morocco, \$2.50. Circulars Free. Sanitary Pub. Co., 159 La Salle St., Chicago, Ill.

TRACTS.

No. 1.—*Truths for the Times*, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 2.—*Fear of the Living God*, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—*Lecture on the Bible*, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 4.—*Christian Propagandism*, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, \$1.00.

No. 5.—*"God in the Constitution,"* by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.

No. 6.—*"The Sabbath,"* by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 7.—*"Compulsory Education,"* by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—*The Present Heaven*, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—*The Christian Amendment*, by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.

No. 10.—*The Impeachment of Christianity*, by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—*The God of Science*, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.

No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, \$1.00.

No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—*A Study of Religion: The Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.

No. 15.—*The Battle of Syracuse.* Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

Address THE INDEX,
 44 Boylston Street, Boston, Mass.

EVOLUTION IN ITS RELATIONS TO EVANGELICAL RELIGION. Addresses of B. F. UNDERWOOD, Prof. P. A. CHADBOURNE, and Prof. A. GRAY at a meeting of the "Evangelical Alliance" held in Boston, Sept. 10, 1882. 5 cts.

NATURALISM vs. SUPERNATURALISM. By B. F. UNDERWOOD. 10 cts.

HAT KIND OF MORALITY DID JESUS AND THE APOSTLES TEACH? By F. M. HOLLAND. 5 cts.

GOD OR THE GALILEAN? By FELIX L. OSWALD. 5 cts.

THE SCIENTIFIC AND METAPHYSICAL METHODS IN PHILOSOPHY. By LEWIS G. JAMES. 5 cts.

THE RELIGION OF HUMANITY. By WILLIAM FREY. 15 cts.

AN AGNOSTIC VIEW OF THE DOCTRINE OF VICARIOUS ATONEMENT. By W. H. SPENCER. 5 cts.

AGNOSTICISM AND RELIGION. By W. H. SPENCER. 5 cts.

Address THE INDEX, 44 Boylston Street, Boston, Mass.

Frothingham's Sermons.

The sermons are neatly printed in pamphlet form, and our friends who wish to do missionary work for the Liberal cause will find them admirably adapted to that purpose. To such as order them in lots of 25 or more, the price will be reduced to 3 cents. Single copies 5 cents.

CURRENT TOPICS.

BY B. F. U.

THE *Spectator*, referring to the political situation in England, says that the Tories are "between the devil and the deep sea."

Gov. HILL of New York, has signed the bill imposing a tax of five per cent. on collateral inheritances of over \$500. It is estimated it will bring \$1,000,000 into the treasury annually.

It is announced that the memoirs of Darwin, including copious correspondence with Huxley, Spencer, Lewes, and Lubbock, will be published in London about the last of July.

NONE will rejoice more heartily than the intelligent and self-respecting veterans of this State at the defeat in the Massachusetts Senate last Monday of the bill providing for the exemption of soldiers and sailors from civil service examinations.

HON. HUGH McCULLOCH, in recollections of Mr. Lincoln in the *Sunday Herald*, says of him, "He was a man of strong religious convictions; but he cared nothing for the dogmas of the Churches, and had little respect for their creeds."

In Ecuador there is a church, it is said, for every one hundred and fifty inhabitants; and ten per cent. of the population are priests, monks, or nuns. The priests control the government in all its branches, and two hundred and seventy-two days of the year are observed as feast or fast days. One-fourth of all the property belongs to the Church. Seventy-five per cent. of the people can neither read nor write.

SAYS an exchange, "That Mr. Beecher and his friends make a great event of his promulgation of the principles of the doctrine of evolution, which is now almost as generally accepted as the law of gravitation among the educated classes, should be a reminder to the more intelligent part of the community of the service such popular teachers as Mr. Beecher render, and the absolute need of such mediation between them and the masses."

AMONG the events of last week was the unveiling of a statue of Charles Darwin in the Kensington Museum of Natural History. Among those present were Spencer, Browning, and Prof.

Owen. Huxley delivered the dedication address. The most noteworthy feature of the occasion was the acceptance of the statue for the Museum by the Prince of Wales in a speech recognizing the greatness of Darwin and the value of his services. The opinion of the Prince of Wales as to the great naturalist and his labors is of no scientific importance whatever; but, when we consider the position of the Prince in a country with a State religion, whose ministers only a few years ago spoke the name of Darwin only with derision and contempt, his prominent participation in the ceremonies has peculiar significance.

THE death of Archbishop Bourget last week will remind many of his excommunication about ten years ago of the *Institut Canadien*, for the alleged reason that it had on its shelves books dangerous to youth and "indexed" at Rome. It will be remembered that one of the members, Guibord, who had purchased a lot in the Catholic cemetery, was not allowed by Bishop Bourget to be buried there, although he had sent for a priest and confessed to him some time before his death. Unable to secure his burial in his own lot, Guibord's widow appealed to the courts. The decision, which was in her favor, was appealed from, and reversed. The widow subsequently died; and the *Institut* took up the case, and, through Mr. Joseph Doutre, Q.C., carried it to the Privy Council, which decided that Guibord must be buried in his lot in the cemetery, which was accordingly done on Nov. 16, 1876, in the presence of a strong military escort.

THE following is from the *Springfield Republican*: "The sort of folks who rejoice when a ministerial candidate avows his belief in a personal devil are pleased with the choice of a new professor at Columbia (S.C.) theological seminary to succeed the Darwinian heretic Woodrow. Dr. Hersman is a fine scholar, says the *New York Observer*, and has not the remotest idea that Adam was evolved from a beast. He can read the Bible in the revised and authorized version without seeing any such nonsense in it. We earnestly hope that Mr. Vos, of Princeton, will also see his way clear to go to Columbia. He recently obtained a fellowship, his examination theme being a long dissertation in defence of the Pentateuch against the modern criticism. If Dr. Hersman and Mr. Vos both go to Columbia, the *Observer* concludes, we shall expect to see the seminary, like Zion, 'arise and shine.'"

A SECULAR journal thus hits off the recklessness of patent medicine advertising in religious journals: "An Arizona man, who subscribed for a religious paper some time ago, sent a letter to the editor to stop it, in which he said: 'We find the *Gila Howler*, our local paper, much livelier than your old milk-and-water affair. Besides, you haven't played a square game in your "ads." My wife bought a pair of the corsets you advertise, and blamed if they didn't bust in three weeks; and we use them now to mend the chicken coop. I took half a dozen of the dead-shot pills you puffed up in

a reading notice week before last; and the next day I was so sick that all the doctors in the town published bulletins about my approaching death, and the boys said I had the jim-jams. For these reasons, I have determined to quit your paper and read the *Howler* only. As I know it always lies, unless it is paid to tell the truth, it can't lead me into temptation.'"

SO FAR as Scotland and Wales are concerned, the controversy in regard to disestablishment is virtually ended; and what is being waited for now is simply action. A minister of the Established Church of Scotland, who is a candidate for the County of Argyll, Rev. Donald M'Craig, comes out strongly in favor of putting an end to union between Church and State. Mr. W. Bright MacLaren, the accepted Liberal candidate for the Inverness burghs, maintains that the national funds now applied to stipendiary maintenance of the two Established Churches should be directed to educational or other benevolent and national purposes. In England, the majority of the Liberal party apparently regard disestablishment as a matter of course. The whole question of disestablishment is rapidly entering the region of practical politics, and the people at large are more and more regarding it as a scandal that the wealthy members and adherents of the Established Churches of England and Scotland should insist on maintaining their religion from sources by which taxation might be relieved.

AFTER waiting nearly a quarter of a century, Miss Anna Ella Carroll, of Maryland, has received justice, the court of claims having decided in favor of her claim for recompense for services during the war of the Rebellion, including the writing of important papers and the planning of the celebrated campaign up the Tennessee River, which led to a series of brilliant victories, the value of which cannot be overestimated. Miss Carroll's distinguished services should long ago have been officially recognized; but as the gentlemen who presented her case before the court said, "Two formidable obstacles have ever been in the way; namely, the unfavorable attitude of the military mind toward what emanates from outside circles, and what, indeed, Miss Carroll was not responsible for,—the fact that she is a woman." Mr. Lincoln—who, B. F. Wade, chairman of the Committee on the Conduct of the War, says, was "opposed to its being known that the armies were moving under the plan of a civilian," for he "wanted the armies to believe that they were doing the whole business of saving the country"—wrote thus to Miss Carroll: "The country, almost in her last extremity, was saved by your sagacity and unremitting labor. Indeed, your services were so great that it is hard to make the world believe it. That all this great work should be brought about by a woman is inconceivable to vulgar minds. You cannot be deprived of the honor of having done greater and more efficient services for the country, in the time of her greatest peril, than any other person in the Republic; and a knowledge of this cannot be long suppressed."

ETHICAL CULTURE SOCIETIES.

It is pleasant to hear that another Society for Ethical Culture has been organized. Its location is in Philadelphia; and its organizer and chosen leader is our old friend, Mr. Samuel B. Weston, formerly of Leicester, Mass. Mr. Weston, it will be remembered, after graduating from the Harvard Divinity School, was settled as pastor over the Unitarian Society at Leicester. He was more interested in Free Religious ideas than in denominational Unitarianism. Yet, to the majority of the society, he was a most acceptable preacher. Unfortunately, however, the salary of the preacher was derived in considerable part from the income of a legacy to which certain doctrinal restrictions were attached; and the trustees of this fund, supported by the opinion of the Council of the National Unitarian Conference, to whom the question had been referred by both parties for decision, held that the money could not be legally used for the support of such views as were preached by Mr. Weston. Since leaving Leicester, Mr. Weston has spent two years in study in Germany, and as much more time in New York, studying and assisting in Dr. Adler's work. In the Ethical Culture movement, he has found a field for labor congenial to his intellectual views and to his moral enthusiasm; and we sincerely hope that the society which has now been organized by him in Philadelphia will prove in every respect a successful enterprise.

As we have previously stated in *The Index*, the Society for Ethical Culture, in our opinion, presents the most promising form of organization that has yet appeared for that kind of Liberalism which has entirely broken from all the forms of church organization, and is inclined even to regard all religion as a superstition. Prof. Adler and his co-laborers do, indeed, use the word "religion," and increasingly. They have a distinct philosophy of religion. In a series of discourses the past year on this very matter, Prof. Adler made this significant statement: "I wish to emphasize the religious aspect of the ethical movement more than I have done before; not because I have changed my opinions,—on the contrary, I hold substantially the same views as I did nine years ago,—but because I think—at least, I hope—that we have advanced far enough to be ripe for a new statement, to be ready for a new start." He had previously said, as leading to this statement, that, in one element, "a large number" of the ethical society members are "plainly lacking,"—the element of "religious feeling"; and the purpose of this series of addresses was to show how this element of religious feeling might exist and be cultivated in connection with a rational philosophy of religion. He disclaimed any thought of introducing any of the forms of expressing religious feeling—such as prayer and hymns of adoration to a personal Deity—which are in customary use in churches; but he clearly intimated that in time some kind of expressive forms might come, created by the new religious life itself. Nevertheless, for the present, the Ethical Culture movement is bare of such forms. It brings ethics to the forefront, and makes that the grand aim in life. That is the emphasized and defining word of the movement. And, for this reason, the ethical society may appeal to a class of minds that have become sick of religious forms and doctrines, and do not want on Sunday to go to any place resembling a church, and yet do want to do some earnest work for humanity and to associate with other people for the sake of doing such work better through a common sympathy and effort. Liberalism has a good many such minds. They are earnest and true, but feel

that their moral purpose and energy are not put to such effective use as they might be, because of the attitude of isolation and individualism into which their intellectual opinions have thrown them. If the Ethical Culture movement can draw these minds into a common organization for the improvement of personal and social morality, it will do a noble work.

This movement, to some of us, may not cover all that seems important. Those who hold a somewhat different philosophy of religion, or who think that religious feeling, being an inherent part of religion, should be allowed some special expression now, even though the form of it be not perfect, may naturally desire some different kind of organization. But, for those Liberals who do not feel these objections, the movement should be commended as one that will give opportunity for all the moral earnestness they are capable of. It is a movement that is affirmative and constructive. It has the advantage of a definite purpose and a clearly stated method of local work for the amelioration of human society. We wish that ethical societies might be established in all our large cities under such able and earnest leadership as now guides the few that have come into existence. Though not, in our view, presenting the final form of religious organization,—and this their leaders do not claim for them,—in the emphasis they lay upon ethics and upon practical philanthropy and moral education of the young as essential objects of their corporate work, they are an excellent tonic in any community, and set an example which the churches—and they are already taking hold of such work—will increasingly follow. Secularism, pure and simple, has not yet shown itself capable of effective organization to any great extent. "The Nine Demands of Liberalism" present very important conditions of religious liberty, but do not in themselves offer a constructive basis for a permanent society. Of the Ethical Culture movement, the central, vital impulse is the principle of "morality suffused with emotion"; and this should be able to organize the unchurched Liberalism, if anything can.

WM. J. POTTER.

THE ETHICAL AIM WITH CHILDREN.*

To-day, I speak of children. No other subject so awakens my enthusiasm. I think it is the fact (profoundly impressed upon me) that the child of our human race is the possible germ of all that we call ideal in that race,—it is this fact which wins me to childhood in its every phase. Yet I am no believer in that *quasi* beautiful theory that the child is like a white unwritten page. I believe his birth determines many a significant mark (though small) upon that page. Environment will train, this way or that, each native tendency. It is then for education, the "drawing out" process, to enlarge the life. My purpose is to state briefly "The Ethical Aim with Children."

The words themselves imply that education of some sort is to be attempted; and, allowing the words their fullest meaning, it will be seen that conduct, as a whole, is implied. Conduct means the adjustment of act to end. With children, this adjustment is more or less conscious; and I take it the business of education is to make the best possible adjustment of acts to ends, first conscious and then unconscious, so that the human may store away the happy outcome of accumulated experiences, and thus transmit it unimpaired as moral intuition to new races. A great deal is said to-day about the religious education of the young

* Read before the Boston Society for Ethical Culture, June 7, 1885, and in response to William Lloyd Garrison's paper printed in *The Index*, April 30, 1885.

and about the most approved method of educating the children of Liberals. The Sunday-school which was founded in London, Eng., by a poor cobbler, for instruction of his neighbors' children in reading, writing, and arithmetic, has culminated in our crowded, wealthy, and fashionable modern Sunday-school for doctrinal teaching,—quite a perversion of the original idea.

Let me state, first of all, that, just as I believe in the regular meeting and co-operation of adults for the benefiting of this world, so do I believe in like meeting and co-operation of children, with this single difference: that special effort must be made to train the impressible child to reverent and independent thought. Here I cry, Death to dogma! and set myself in permanent antagonism to the Church of Rome. Before I note what to me are faults in every church I know (as well as in some schools instituted for children on Sunday outside the church), let me speak of that long-suffering word "religion." People who grow dissatisfied with ecclesiastical nurture of the young are apt to rush to the other extreme, and forget the immutable fact for which religion (not theology) has stood. They also actually shrink before the name of Jesus, an interpreter of that fact and founder of a faith which certainly has its side of good, however perverted by Christian adherents.

Now, because religion has become so sadly confounded with superstition, I feel myself great sympathy for those who can conceive the word only in that light. But, again, let us remember that no word of man can eradicate the fact of man's relation to the infinite (however termed); and then let us abandon conflict about what word will best describe this relation. Perhaps for the "reality"-trusting but "religion"-denying atheist, a new word will be coined more exactly adapted to his needs. For myself, "religion" answers very well, and the prefix "free" for an association of children or adults would practically stand for freedom to think as one must about "religion." "Regard for the All-important Reality" human beings are forced to hold; and this fact, it seems to me, every society must tacitly, if not openly, admit. I like silence for its recognition in a public meeting of adults or children.

Having postulated so much, I reach the distinctive work to be done by the children of an ethical society. I claim, of course, that all Sunday-schools ought to be ethical classes. Education should be so directed as to give the broadest possible culture; and the child, just as the adult, on Sunday, should receive a stimulus to the knowledge and the love of right, and the one great danger (as also, under certain conditions, it is the one great safeguard) is the extreme susceptibility of the child nature. Parents and teachers may well tremble before the responsibility of their charge. I know that the Romanist glories in this docility for ends of his own (which, so far as conscientious, I respect); and every church, as it stands in the procession of diluted Romanism, has conscious gladness in the receptiveness of its young toward its peculiar doctrine. The Unitarian, least of all, pre-establishes dogma in the untrained mind of childhood. To offset child proselytism, the Spiritualists have organized a "Children's Lyceum"; but this (so far as I understand) deals more in readings and recreation than in the solid work of character-building.

All schools which offer the semblance of child culture do good doubtless, and those with competent teachers and doctrinal instruction at the minimum have in some cases produced marvellously fine results. But I am convinced that the kindergarten theory in complete elaboration must finally supplant every other in the Sunday as well as day school. I believe in Sunday as a day for rest and

stimulation to all good (where such stimulus is not derived from the ordinary work and study). The time may come when our children will get from the day school all the stimulus to a rounded life necessary. Until then, and until parents shall themselves see their imperative duty to children as parents of a new generation, I think there is vast need of the Sunday Ethical Class. Here, the younger pupils should be incited by narrative to knowledge and love of the right. The beautiful should be set before them in thought and act. The cardinal virtues—reverence, self-denial, justice, truth, love, purity, patience, progress—should be constantly illustrated and discussed by the class individually. Children quickly seek the truth, when a loving personality stands before to inspire; and nothing is more productive of fine thought in the teacher than a row of bright young faces. Children are poetical. Through pictures or symbols, they best read the reality. So flowers connected with the virtues of life are a perpetual incentive to right doing.* In my own home, from morning to night, reference is made to the "flowers" which grow in my boys' "heart garden"; and these have correspondence with flowers of the field. Children from an early age can be led to a critical study of motives, a habit which will hold them to reverence of the ideal in after years. The older pupils of an ethical school should work similarly to the younger; and, as graduates from the lower classes, they will doubtless find the study of life's problems irresistible. Pupils in the teens are generally ready for an outlined course as follows:—

1. Why have you come to this class? Recognizing the All-important Reality, to secure good conduct, or "ethical culture."

2. What are the means to this? Knowledge and stimulus of the will.

3. What (according to Herbert Spencer) are the kinds of knowledge essential to good conduct? (1) That bearing directly on self-preservation; (2) That bearing indirectly on self-preservation; (3) That bearing on marriage and parentage; (4) That bearing on the proper social and political relations; (5) That bearing on the leisure of life as related to taste and feeling.

4. What kinds of will stimulus have prevailed in the past? Political, theological, and social. What kinds do we as a class seek? "Personal friendship" and "reverent free thought."

5. Through what stages must we pass before ethical culture can be assured? (1) The circum-spect (of slight acquaintance), wherein we naturally display our best to one another; (2) The self-revealing (of further acquaintance), wherein we show ourselves more as we are, for better or for worse; (3) The ethical (of more intimate acquaintance), wherein mutual love determines mutual growth.

To continue. Each pupil in turn should, on successive Sundays, select and treat a subject bearing on the welfare of the race. Thus, each is forced to think; and thought is the mother of action. Biography (which we largely use) is an able guide to ethical growth. Nothing can take the place of aspiration through song in the education of the young. When music shall be adapted to words indicative of trust in the infinite and love of the good, simply, then we may hope for something like a larger sympathy in adult as well as child congregations. One word more, and I am done. Older pupils in my school have already criticised the existing modes of education. My young ladies have been forcibly impressed with the discriminations made in favor of the opposite sex, and together we have deplored the inaccessibility of industrial training for boy or girl. I propose, then, to this society that it direct its first great practical

labors in the direction of educational reform. The school here to be stimulated on Sunday ought to number no less than a hundred; and the outcome of its thought should be a co-educational industrial school, which through the week shall complement the work done by the Boston public schools. The Unitarians are ahead of us in the industrial, though I think not in the co-educational idea, which would permit a girl to become a machinist or carpenter, and a boy to learn the culinary or sewing art. Moreover, we have the absolutely uncreedal platform from which to draw recruits. My recommendation is that every one of our society constitute himself a committee, first to add at least one member to our school, and, secondly, to guarantee his or a substitute's service in a co-educational industrial school, to be founded in due time for the benefit of these self-same scholars. I will now illustrate briefly what we do here on Sundays with our little ones, and then submit my plan for what I hope will meet the full approval of our members.* All interested are invited to aid in the work proposed. In the spirit of Froebel:—

Come, let us live with our children,
Earnestly, holily live,
Knowing ourselves the sweet lessons
That to the children we give.
Come, let us live with our children,
Leading them tenderly on
Into the fields that pure love-light
Ever shines brightly upon.
Then, when our feet grow too weary
For the safe guidance of youth,
We shall be led, like the children,
To rest in pure goodness and truth.

CLARA M. BISBEE.

OF WHAT USE IS THE CHURCH?

So long as churches are exempted from taxation, we who lose money in consequence have a right to ask whether this privilege is just. While people who do not want to go to church are forced there by public sentiment or domestic pressure, so that even Harvard students are not allowed to spend Sunday as they choose, we must insist on being told what peculiarity there is about meeting-houses which makes the right of individual liberty become null and void before their doors. So long, again, as the way to church is hedged in by laws against travel, public amusements, and honest industry, it is the duty of the clergy to prove their title to legal protection against competition.

We are answered by appeals to what the Church is doing for morality. But look at the facts. Examine the course of study in the divinity schools and theological seminaries, and see how much pains is taken to make the graduates understand the laws of virtue and distinctions between right and wrong, any better than people do generally. For all these clerical candidates, theology is the main study; and next comes ceremony; while morality is merely a side issue. Nothing shows better what has always been considered of most importance among Christians than the names of the churches and sects. Some, like the Congregationalists, Presbyterians, Episcopalians, and Roman Catholics, are called so on account of their peculiar habits of church government. Others, like the Unitarians, Universalists, Swedenborgians, Lutherans, Spiritualists, and Adventists, owe their names, as well as their existence, to their respective theologies. The Baptists, again, stand simply for a difference about ceremony. The Friends and Methodists are almost the only instances of sectarian appellations with even the slightest moral meaning. It is creeds,

*Introduction of a class exercise by six young children.

and ceremonies, and offices that churchmen have cared enough about to differ irreconcilably. Have Christians agreed about moral duty all this time? If so, they cannot have thought much on the subject. Surely, the duties of an American citizen are different from those of the subjects of Charlemagne or of Nero. In the onward march of the nations, new stars of moral obligation rise above the horizon, and old ones disappear. Nothing worse could be said against the clergy than that they teach no better morality than they did a thousand years ago. I make no charges so unjust. I admit that the character of pulpit teaching has greatly improved from the time when its influence was mainly directed to sending off crusades, putting girls into nunneries, and getting thinkers burnt. But I insist that this improvement has not been due to the action of the clergy as a body, but to that of a small minority, which would have been powerless, if it had not had mighty help from without. What would have become of the Reformation, if its preachers had had no aid from the Electors of Saxony, the Landgrave of Hesse, or the Lords of the Congregation, from Henry VIII., Elizabeth, William the Silent, or Henry of Navarre? Whom are we to thank for the change in the teaching of the American pulpit about the moral relations of whites and blacks? The clergy as a body have not led moral progress, but brought up the rear. What else could we expect, when we know how dependent the average clergyman is on his parishioners? How can he stand up before his patrons, and speak to each of them about his or her individual sins? Nathan said to David, "Thou art the man"; but there are more Davids than Nathans now. Perhaps the clergy do as well as they can under the circumstances, but their position is such as to make anything like personal rebuke almost impossible. Such rebukes are sometimes administered in private, but it is not every minister who can afford to take even this step toward losing his parish. The Catholic priest is comparatively independent of the people, but he is sadly hedged in by the low moral standards which have become traditional in his Church. He can preach freely against theft and drunkenness, but not against formalism, or promiscuous almsgiving, or lack of courage to think for one's self. But suppose a preacher to have the highest moral wisdom of the age and the broadest possible liberty of applying it to the members of his congregation: even then, he has to deal with such differences in age, culture, character, and quickness of comprehension among his hearers, that what is a dangerous paradox or an insoluble riddle for some is an uninteresting truism for others. He is like a teacher of an ungraded school, who has to teach all his pupils in one class, and merely by talking to them all at once. Imagine such a teacher first speaking an hour about the alphabet, while only a-b-c-darians listen, then trying in vain to keep their attention while addressing their elders about the multiplication table, and at last yielding to the entreaties of the scholars in partial payments, and winding up with a lecture which every one admires, but scarcely anybody understands. The most advanced ministers are fortunate enough to have picked congregations; but, usually, the difficulty of teaching from the pulpit is even greater than it would be in such a school, for the churchgoers are so well aware of these differences among them that each feels sure that the minister in his exhortations is aiming at some one else. Pulpit usage does not, however, permit the clergyman to take direct aim at any member of the congregation, but makes him, like Mr. Pickwick's friend, Tupman, shut his eyes before he lets off his gun.

Is that method of teaching morality a good ground for exemption from taxation?

Let us suppose again a school-teacher with no text-books except what were written two or three thousand years ago. If he kept at work pointing out the mistakes and deficiencies which necessarily exist in all old books, the pupil would either throw away her books as worthless or, if she thought she could not afford to do that, would make complaint against her teacher as a mischievous crank, who ought to be turned out. But, if fear of this should make the teacher use all his ingenuity to cover up and explain away the mistakes in the text, and let the pupil graduate with the belief that her book was absolutely free from error and always to be taken on trust, then he would simply be a propagator of ignorance and a traitor against truth. Just this unfortunate alternative is forced on almost every minister by the popular view of the Bible as infallible, and the time-honored custom of reading portions in the pulpit, without note or comment, as statements in which everybody must believe. When we find the Bible set up thus for worship, we have to ask whether it is worthy of its place. Nobody would have thought of sending Charles I. or Louis XVI. to the scaffold, if they had not been kings; but their title necessitated their fate. This pulpit-worship of the Bible forces us to notice that many of its chapters are too indecent to be read aloud, that many professed statements of fact are too absurd to be believed without mental injury, and that much of its teaching about morality is simply pernicious. What else can be said of a book which is the open enemy of knowledge, which treats thinking for one's self as worthy of capital punishment and endless damnation, which enjoins absolute monarchy and the subjection of women, which commands giving money to every beggar, and which encourages the Christian to scorn family, social life, and everything else that is worldly in hope of making himself worthy of a future heaven! Is this taking the Bible too literally? A book which cannot be taken literally is no authority. The whole question about the Bible is whether it should be followed literally. I am willing enough to admit that it should not. Nay, I go further, and say that the Bible is so unfit to be taken literally as an authority that the minister who tries to have people take it so is, to that extent, preaching immorality. Does any one urge that some parts of the Bible ought to be taken literally and not others, and therefore it is vitally necessary to have ministers to tell us how the Bible is to be understood? Those who think so had better notice how widely the real facts about its various books and people as given in any scholarly book, for instance the last edition of the *Encyclopædia Britannica*, differ from the way ministers usually talk on such subjects. The clergyman who preaches about the authorship of the Pentateuch or Daniel, or Hebrews or the Fourth Gospel, is apt to appear more like a criminal lawyer seeking to cover up the evidence against his client than like a champion of truth anxious to give his hearers all the light he can get. Theodore Parker was the first clergyman in America to tell the people what scholars knew about the Bible, and we remember how the other ministers treated him. How few of the clergy can be trusted even now to speak of the Bible as it really is! Can morality be taught by a teacher whose main effort is to keep his pupils from seeing the faults in the books for which he is retained as a special pleader? What peculiar privileges can such faithless teachers justly claim?

And the work of the clergy does not consist mainly in preaching morality and expounding

Scripture. Most of them are much more busy in performing ceremonies and inculcating creeds. Here they are not helping morality, but rather hindering. A ceremony is simply a substitute for a moral duty. Every wise friend of virtue comes out against forms, as the Hebrew prophets, Jesus, the mediæval mystics, Parker, and Emerson did. To confess that baptism regenerates is to deny the necessity of daily goodness. And what is a creed but a usurper of the throne that belongs to virtue? He who says that faith in the atonement is all that is necessary to please God and save the soul is an infidel to the only true and saving faith, that of man in man. This it is which keeps the soul safe and turns earth to heaven. Our daily life is full of real opportunities of growth. Why let ourselves be drawn aside after visionary dogmas? One of the most universal of doctrines, that of immortality, is often so zealously cherished that preachers say he who cannot believe it has no sufficient motive to do right. I have heard even Unitarians speak thus. But this is simply denying that virtue is worth following for her own sake. It is really preaching immorality. What infidelity can be so dangerous? How common it is, too, for preachers to attack openly and consciously the sacred duty of self-culture, by insisting that no one should trust his reason or value knowledge in comparison with Orthodoxy! How many steeples are only guide-posts pointing away from earthly duties! How often have wrongs to man been overlooked in the vain attempt to set forth right views of God!

We should not forget that there are ministers who know of no creed but truth, and no sacrament except practical goodness; who do their best to make their hearers see the Bible as it is, and think independently, and who give their main strength to denouncing iniquity in high places, breaking the chains of the oppressed, and leading the people on toward higher life than has ever yet been reached. All honor to those men who are working thus, under whatever name and on whatever platform! But it is not they who are striving to keep their churches exempted from taxation, to have the Sunday laws enforced, and to compel people to attend public worship against their will. Ministers who are really doing good to the community know they can afford to let themselves be treated as they deserve, without the help of legal or social pressure. Far be it from any friend of progress to put a stumbling-block in their way! I would not even interfere with those who go to church to be told what to believe, or to have their salvation worked out for them by ceremonies, or to hear other people's sins rebuked, or to keep in good society. They may use their churches as club-houses, or arsenals of dogmas, or theatres of formalism, if they know no better. All I ask is that no man's taxes be increased by the exemption of such property.

FREDERIC MAY HOLLAND.

FIRST ARTICLE OF THE AGNOSTIC CREED.

Agnosticism knows some things, and believes as well as doubts some things. It has, therefore, a creed, which is becoming more familiar than the old Apostles' Creed, so called. I wish to study it a little; and if, by telling how it appears to me with my present light, I can elicit help from those who understand it better, its trained advocates, I shall not write in vain.

The first article of the Agnostic Creed, I believe, affirms the existence of an infinite and eternal energy. To this article, I, for one, give my unqualified assent. There is certainly a very vast

energy everywhere manifest, to which we can discover no limits; and though we do not certainly know that it is absolutely infinite, yet its known vastness entitles us to use the greatest word in describing it. From this, probably, no one will dissent; and the Church of this faith is commensurate with the thinking world.

What is this energy? Here is the gateway through which enter agnosticism and various forms of gnosticism, or, at least, dogmatism, into an arena of conflict. Nor can agnosticism avoid conflict by an eternal repetition of "I do not know." It is bound to show that all the assertions of the dogmatists are baseless and empty words, and this has been the agnostic course; but it has been able to convince very few, and, as one of the many, I rejoin in a few words.

Some interpret this infinite energy as personal, and others as impersonal. The agnostics, who are theological as well as ecclesiastical non-jurors, affirm that we cannot philosophically affirm either. But both the other parties reply that we must affirm one or the other, because what is not personal is impersonal (not-personal), and what is not impersonal is personal. We feel the necessity of logical consistency here as much as anywhere. To affirm that the energy is not personal is to affirm what has always been understood as atheism, while its opposite is theism; and the agnostics are subtle enough to occupy a spaceless point between them. Thus there are already three different denominations, or churches, standing on this article.

Which of these is the best? This question we cannot ignore. We are bound to give it due attention, and decide according to our best judgment, which each of the three parties already formed must be supposed to have done. We are all able to see that this article of agnosticism is not necessarily agnostic; and that, however consistent it may be with the old notion of atheism, it is certainly consistent with the old notion of theism, as the Infinite Power who is in and over all things. But, against this, we are unanimously admonished by atheists, agnostics, and pantheists that personality and consciousness imply limitation, and cannot belong to any infinite energy.

On the other hand, experience and the conceptions which grow out of it are our ultimate guide; and, from these, we are compelled to consider personality as the highest form of being with largest definite, coherent heterogeneity. While it is true that human personality is limited, that is no proof that all personality is limited or must be so conceived. Can we not conceive a personality larger than ourselves? If so, where shall we fix the limit of conception? There is no limit short of infinite. As to consciousness, this is knowledge; and infinite knowledge is just as conceivable as infinite energy, for we know energy only as a mode of consciousness.

Man, indeed, is not conscious all through. Consciousness may be, as some think, only the surface of his being, a series of bubbles from the vasty deep of the unknown. But this is a recognized limitation, a limitation of self-knowledge. Vast would be the elevation of man, were he raised to the knowledge of himself in his whole nature, history, processes, state, and relations, to be wholly self-luminous in every detail, and always and altogether. Now, it seems to me that an unconscious infinite energy would be infinitely exalted to become thus perfectly conscious of itself, and by will direct itself. To reverse or question this would be to reverse or question all the laws and principles of thinking known to man. Would it not?

WILLIAM I. GILL.

EDITORIAL NOTES.

BY B. F. U.

THE money due *The Index* is needed to enable it to meet current expenses, and those in arrears on their subscriptions are requested to send to this office the sums due with as little delay as possible.

IF the novels of Smollett, Fielding, Sterne, and Balzac have been withdrawn from circulation by the authorities of the Public Library, it is to be hoped that we may have revised editions of these classics suitable for the readers of this age. And would it not be well to include the Bible and Shakspeare?—*The Sunday Herald*.

LILIAN WHITING, replying to journals that have taken exception to her statement in the *Inter-Ocean* that the President of Harvard University was "behind the times," explains that she referred to his disapproval of co-education and refusal to open the doors of Harvard to women, while admitting that he "is on radical ground regarding systems of education and college curriculums." Thus explained, Miss Whiting's statement is, we believe, correct.

DR. B. A. GOULD, recently from South America, where he has spent the last fifteen years, told the following story at the Unitarian Festival in this city, last month: "It so happened that I once detected a native employé of the observatory in a flagrant iniquity, and of course discharged him immediately! But he remonstrated: 'Sir,' said he, 'I acknowledge and confess that I am a vile sinner, that my life is immoral, and my misdeeds are continual. But, thank Heaven, I have religion. I repent of my sins, confess them conscientiously, and am absolved. So that I know all will be pardoned to me. Will you insist upon punishing what God himself forgives?'"

SAYS *Unity*: "A prominent Boston Unitarian is reported to have said recently: 'The West is nothing to me. When I speak of the United States, I have in mind simply what lies east of the Alleghenies.' It would be well for this excellent gentleman to make a journey across the continent, and thus broaden his ideas concerning his country and nation. Such Unitarians, it is to be feared, look upon the liberal faith as merely a New England notion." It is surprising how little some prominent men in the East know or care to know about the great West, where there are about as many New England born men and their descendants as there are left behind in the New England States, besides quite a number of intelligent and respectable people from other sections of the country, who ought in fairness to be regarded as belonging to the United States.

MR. FRIEDRICH SCHUENEMANN-POTT, one of the Vice-Presidents of the Free Religious Association, in an article contributed to the *Freidenker* of May 31, says that Lincoln is generally acknowledged by his friends at Springfield, including his partner Herndon, to have been, throughout his residence there, an unbeliever in Christianity. He is also generally known to have written a book like Paine's *Age of Reason*, which he would have published, if it had not been for the entreaty of his friends. Some think that it was burned, others that it is still kept under lock and key. His private secretary, John G. Nicololay, is of opinion that he never changed his views after leaving Springfield. His widow also stated that he cared little for Christianity, and that one of his favorite sayings was: "What must come, comes. No prayer is of any use."

THE *Christian Statesman* speaks of Victor Hugo as the "idol of the French people," and says that he was "a thorough infidel. With his dying breath, he refused to see a priest who offered to visit him." And yet the truth compels two Christian journals to speak as follows of this "infidel." Says the *Independent*: "The red blood of health and purity never flowed stronger in the veins of the Saxon than in his. He was one of the great souls who successfully exemplified that dignity and worth of human nature which he taught." And to this same "infidel" the *Christian Union* thus refers: "Liberty was a passion to Victor Hugo, but even more a principle. He loved humanity. Its sorrows lay on his spirit, and penetrated his work with a tragic pathos. No such plea for the outcast, the poor, and the desolate has ever been made as *Les Misérables*; and the reverence in which the French people have long held their great man—a reverence absurdly idolatrous in some of its expressions—was genuine, unaffected, and heartfelt. It was the response of France to its greatest heart even more than to its greatest mind."

DR. J. R. MONROE, of Indianapolis, who is a "regular" physician and surgeon, says in his heterodox paper, *Monroe's Iron-clad Age*:—

It is our belief that medicine as practiced in this entirely too free country in our time, taken as a whole, is productive of more harm than good, so large is the class of ignorant pretenders and men with some knowledge, who are yet disqualified by nature from making it available for anything but mischief. But there are a large class of well-qualified and capable physicians who are useful to their fellows, who are indispensable to society, and benefactors of their kind. In this free country, every ignoramus has a right to preach or practise law or medicine. The people must be left free to accept his doctrine or reject it. The Catholic Church requires an educated clergy,—educated in priestcraft and in classical literature. There are no quack priests. But Protestantism, in accordance with the genius of our institutions, leaves every man free to follow the avocation of his bent, with or without qualification or fitness. Hence, those callings formerly designated as the learned professions have grown into contempt. Speaking broadly and making due allowance for numerous worthy exceptions, it is disreputable to be a doctor of medicine, of law, or of divinity.

We have received from Dr. R. Heber Newton the paper on "The Religious Aspects of Socialism," read before the Free Religious Association in this city May 29; and it will appear in *The Index* next week. In an editorial on this paper the day after it was read, the *Boston Herald* said:—

This diagnosis of the socialistic tendencies of the hour, this affiliation of them with the aims that are conspicuously Christian, this illustration of their aim at the expression of an ethical defect in our modern Protestant religion, will be widely read, and ought to draw attention to two things. It ought to make the Christian Churches more careful to understand and promote the social life of the people on its ethical side; and it ought to teach men who are possessed by this social unrest that their best friends are to be found among the ethical and spiritual teachers of the day. The effect of this paper read by him yesterday will be to show those who become acquainted with his thought that the socialist movement, so far as it is related to economic and industrial agencies, has an honest basis in our present life as a people, and that the religious teachers of the country will prove remiss to a great opportunity, if they do not consider what the socialists are driving at, and do not conserve their purposes into what is best called Christian socialism.

SAYS the *Nation*: "The restoration of the Panthéon at Paris to its original use, as a monument to illustrious Frenchmen, is a fresh illustration of the hostility of the Republic to the Church, as well as of the political imprudence of the clergy. The building was begun as a church by Madame

de Pompadour; but it was not finished until the Revolution was at its height, in 1790, and was then dedicated to the memory of great men. The Restoration, however, had not the good sense to let it alone; and, when the Clerical and Royalist reaction set in in 1822, Louis XVIII. gave it back to the clergy, who converted it once more into a church. After the expulsion of the Bourbons, in 1831, it was again secularized, and remained secularized until after the Coup d'Etat. The new Emperor, who was then currying favor with the Church, in 1853 converted it again into a place of worship. The Republic has been much more patient than its predecessors; for it has waited since 1877, when the Conservatives finally went out of power, before again compelling the clergy to vacate it, which they were, it is reported, required to do within forty-eight hours."

THE *Spiritual Offering* represents *The Index* as unfair and bitterly hostile to Spiritualism. This is not true. If we mistake not, more space has been given in this journal the past year to articles in defence than in opposition to Spiritualism. Within a few weeks, articles in favor of Spiritualism have appeared in *The Index* from three writers, two of whom have a reputation among Spiritualists. The editorial opposition to Spiritualism which seems to have offended our Western contemporary has consisted of a few paragraphs referring to the exposure of fraud, demonstrated to be such, practised in the name of Spiritualism. A statement by "a crusader against Spiritualistic phenomena," copied from *The Index* by the *Spiritual Offering*, and made the occasion of complaint against us, was given to show that an investigator of Spiritualism, who has strongly opposed it, conceded he could not account for the movement of tables without contact, which he admitted to be a fact; that he refused to acknowledge the explanation of Faraday, and thought there was some kind of psychic or nerve force not understood. Was not our contemporary greatly in want of a pretext to find fault with *The Index*, when it used that quotation as an illustration of our unfairness to Spiritualism? When we wish to discuss the claims of Spiritualism, we shall do so, and with independence as well as courtesy, we trust; but we would rather not have our encouragement of the *Religio-Philosophical Journal* in its efforts to get at the actual facts of Spiritualism, separated from trickery and fraud, construed into hostility to Spiritualism or lack of due respect for its adherents, among whom we have many friends.

For *The Index*.

MANHOOD'S TEST.

Not ascetic self-denial
In the lonely desert waste,
Or in solitary cell,
Of man's nobleness doth tell;
But to pass through fiery trial,
Bitterness of loss to know,
Every acrid drop to taste
Poured from envy's venom'd vial,
The full scale of human woe
With the quivering heart to sound,
And yet let no evil throw
Hope and honor to the ground.
'Tis a weak and craven bent
Life's unkindly strife to shun:
Better were the being rent
By much sorrow than by none.
Would'st be forceless as a shade?
Then life's crucial tests evade.
Strong and wise thou can'st not be,
Knowing naught of agony.

TUDOR WILLIAMS.

The Index.

BOSTON, JUNE 18, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, : : : : : } Editors.
BENJAMIN F. UNDERWOOD, : : : : : }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

Is a Scientific Basis of Religion Possible?

An Address delivered before the Free Religious Association at Parker Memorial Hall, Boston, May 29, 1885.

BY W. D. LE SUEUR.

Mr. President,—It is not without a considerable sense of responsibility that I approach the execution of the task assigned to me to-day. I am asked to speak on the question, "Is a Scientific Basis for Religion Possible?" The question is a difficult and a critical one: difficult, among other reasons, on account of the uncertainty attaching to the definition of the word "religion"; and critical, because whatever touches religion touches one of the most vital of human interests. If I have undertaken what I thus acknowledge to be a difficult task, it is in the hope that I may at least be able to deal with the question candidly, seriously, and in a spirit of sympathy with all who cherish any true or worthy type of religion, or into whose conception of religion there enters any true or worthy element. We can bear, it seems to me, with one another's errors, if they are manifestly associated with right intentions; and I even believe that no one, however mistaken he may be, can utter his sincere thought without some benefit to others. The earnest thinker, on any subject, may therefore take courage, knowing that whatever of truth he may have grasped will stand; while his errors will in some measure be redeemed by his sincerity of purpose.

The question before us is one which it is eminently proper that this Association should grapple with, and, if possible, bring to a distinct issue. The very title which the Association bears indicates that, in the opinion of its members, the true type of religion is not commonly recognized. Our contention is that religion is a part of human nature, and that its connection with this or that theological system can only be of an incidental

and more or less temporary character. Holding these views, however, we owe a justification of them to the world,—a justification partly theoretical or logical and partly practical. We are called upon to demonstrate by argument that religion is not dependent upon doctrinal systems. We are called upon to demonstrate by practice that free religion, as we understand it, has all the properties and qualities of true religion. We are not called upon, so far as I can understand, to show that the theologies of the day are false, except in the one point of claiming to be severally essential to the true conception and right practice of religion. There we do join issue with them: we hold that whatever of religion stands associated with them can be disengaged from the connection, and can by itself be made a vital power. Apart from this, I do not see that we have any quarrel with the creeds; and, for my own part, I should be disposed to treat them all with the respect due to opinions believed in, and cherished by, larger or smaller bodies of our fellow-men.

The times are propitious for a free and earnest treatment of the deeper questions of religious philosophy. It is not trenchant criticism of errors that is needed, so much as the effectual exposition of positive truths. Errors, in the long run, refute themselves: they die out through the gradual acceptance of principles with which they cannot be reconciled. The earliest attitude of Christianity was not one of violent aggression upon existing systems of religion, but one rather of earnest devotion to the propagation of the new truth which it claimed to possess. Similarly, the Buddhist missionaries went forth, less as destroyers of polytheism than as heralds of a new life, or at least a new mode of deliverance from the evils of existence. There is a lesson, I think, in these facts for us to-day. If we have new truths to proclaim or old truths to rescue from oblivion and neglect, let us attend to that: and let the antagonist errors pale in the glowing light. It was "by manifestation of the truth" that Paul claimed to commend himself to every man's conscience; and to him, as we know, it was given to lay the foundations of Christianity throughout the whole gentile world.

There is urgent need for another Paul to arise to-day to spread abroad the elements of a new faith,—a faith that the world has never explicitly held, that in general it has explicitly repudiated,—the faith in human nature. To some, this may seem a stereotyped phrase; but it is stereotyped only to those who have never fathomed its significance, and who know nothing of the light that is thrown upon it by the facts of history and the laws of human life. The doctrine of the degradation of human nature has heretofore been far more acceptable to the multitude than the doctrine of its dignity and value. Men have, in general, been perfectly willing that infinite ill should be spoken of their common humanity. There is a reason for this: let it be admitted and settled that man by nature is vile and base, and a low standard of conduct is at once established. There are thousands of men who do not want to hear any special good of humanity, knowing instinctively that they would thereby be summoned to live very different lives from what they are doing. It is much more convenient and comfortable to go to church, and hear that they are miserable sinners, for whom no punishment would be too severe, but for whom a way of escape from all the consequences of ill-doing has been supernaturally provided. It may be that they are not evil-doers in the ordinary sense, but simply followers of what Jesus would have called the "world,"—men whose morality is of a thoroughly conventional type,

and whose hearts respond to no high ideal of truth or of virtue, who take the world as they find it, and make the most of it for their individual purposes. Even so, to such men, not less than to positive evil-doers,—more, indeed, than to some evil-doers,—the doctrine of the inferiority and depravity of human nature is sure to be welcome, seeing that it exempts them from all reproach, save for not having attained a supernatural grace. In some cases, the supernatural grace—or a persuasion of it, at least—comes to smooth over any little difficulties that conscience may raise in connection with defects of conduct or lowness of moral aim. Manifestly, there is need for a doctrine that will cut the ground from under the hypocritical, or at least half-hypocritical, pretences by which men reconcile themselves to inferior standards of conduct. The times are propitious for teaching of this kind, and it seems to me that this Association is eminently qualified to lead in the movement. We need, however, for that purpose to feel the ground very sure under our feet; and, that this may be the case, we must make a constant and progressive study of all that concerns the moral life of man. The question before us to-day is, from this point of view, one of much practical importance; for, upon the definiteness of the answer we are able to give to it will largely depend the influence we shall be able to exercise upon the religious thought, and, through the religious thought, upon the moral life of the community.

Let us without further delay proceed to consider: 1st, the word "religion"; 2d, the thing religion in some of its leading historical manifestations; 3d, some of the principal definitions that have been given of the term; 4th, the essential nature of religion, so far as we may be able, with these aids, to determine it; and, 5th, the support which religion, in the sense so arrived at, derives from the constitution of nature.

The word "religion," as every one is aware, has been borrowed by us from the Latin. In that language, however, its meaning and use were very much restricted in comparison with what they have become in the modern and Christian world. Cicero, in one place, speaks of religion as that which prescribes the proper ceremonies to be observed in the worship of the gods. In the estimation of Lucretius, religion and superstition were almost synonymous terms. He speaks, in the opening of his first book, of human life lying crushed *gravi sub religione*, "under oppressive religion," which he proceeds to describe as revealing its hideous head from the skies, terrifying unhappy mortals. He tells his friend Memmius that he need not fear, in entering upon a free study of nature, to land himself in impiety, seeing that it is religion, on the contrary, that is the mother of crimes and all unholy deeds. He instances the sacrifice of Iphigenia by her own father Agamemnon, to secure a favorable wind for the Grecian fleet; and ends with the oppressive and, no doubt, perfectly sincere exclamation: "Tantum religio potuit suadere malorum!"—"Such grievous things could religion persuade men to!" Such an application of the word "religion" was not common among the ancient Romans; but, at the same time, the term had not the sanctity which would have made the expressions of Lucretius as painful to their ears as similar expressions would be to the ears of most in the present day. In general, it was used to express a scruple or whatever caused a scruple. It was a grave and serious word, admirably suited to the prevailing tone of Roman religious sentiment. The Greeks had no equivalent word. They had a word, *εὐσεβεία*, for piety, or reverence, and a word that expressed fear of the

gods (not, however, in any specially moral sense), *δεδαιμονία*, and another word that expressed religious fear, but with a slight suggestion of mummery about it, *θρησκεία*; but they had no word that expressed, as *religio* did, a certain careful, thoughtful, attitude of mind toward the objects of worship. The Roman term has been preserved, while the Greek ones have been forgotten; and to-day we find that no other word will express for us so well that sense of relation to some higher law which is rarely, if ever, entirely absent from the human mind.

We may now proceed to glance at a few of the historical manifestations of the religious sentiment. The Roman type of religion was, as it seems to me, a very instructive one for our present purpose. According to Mommsen, it was marked by "a peculiar narrowness of conception and, at the same time, a deeply rooted earnestness." The Roman deities were, most obviously, mere personified abstractions. "The State and the clan, the individual phenomena of nature as well as the individual operations of mind, every man, every place and object, every act even, falling within the sphere of Roman law, reappeared in the Roman world of gods. . . . Conceptions such as Sowing (*Saturnus*), Field Labor (*Ops*), Blossom (*Flora*), War (*Bellona*), Boundary (*Terminus*), Youth (*Juventus*), Health (*Salus*), Faithfulness (*Fides*), Harmony (*Concordia*), were among the oldest and most sacred of Roman divinities." (Mommsen.) Jupiter and Juno were the abstractions of manhood and womanhood, and Minerva of the power of memory. The Greek theology was an inexhaustible source of myth and fable: the Roman was a *hortus siccus* of abstractions, around which no myths were allowed to gather. What the Roman wanted was the *idea* in objective, but not, strictly speaking, in corporeal shape. His deities were without parts or passions, simply representative of the permanent realities of life; occasionally, too, as Mommsen shows, of fleeting realities. The effort of the Roman evidently was, by the aid of these personified abstractions, to realize things in their essential nature. The Greek, combining æsthetic pleasure with edification, always introduced an element of lighter thought into his religious conceptions. It was characteristic of the difference in this respect between the two races that the Greek, in performing religious rites, looked up to the heavens, while the Roman covered his head. The former wished to impress on his mind the concrete reality of the universe, the latter to meditate without distraction on the idea he was placing before his mind.

The Roman religion is especially instructive in this sense: that it shows us the process of the manufacture (so to speak) of divinities among a people not at all given to imagination, a people eminently prosaic and practical. The art which conceals art was wholly lacking to the Roman, and thus we easily discover the whole method by which his pantheon was called into existence. His gods have no individual character: we cannot for one moment imagine them as distinct external existences. They sprang from his brain as fully developed as they were ever destined to be: they were only his own ideas set opposite to him, as it were, that they might be the better contemplated. The Greek gave such distinctness and individuality to *Here*, *Pallas Athene*, *Dionysus*, and *Hermes*, that sometimes we feel as if we could almost believe in them ourselves; but *Janus* is no more divine to us than a door, or *Terminus* than a mill-post. And yet, to the Roman, these were gods entitled to all reverence and held in all reverence. Now, the more imagination and mobility of temperament any race possesses, the more will the process by which divinities are created be con-

cealed; but the honest, prosaic Roman has really, if I mistake not, let us into the secret of the formation of all theologies. The idea will not stay in the human mind: it will posit itself objectively, and thus gains, first personality, and then divinity. In connection with this, we may quote the remark of William von Humboldt, that "pure ideas, visible only to the inward eye, are, of all things that men can know, the most beautiful." Who knows, therefore, what severe and serene joy the ancient Roman may have had in contemplating the pure ideas of *opening* and of *boundary*, represented to him by the gods *Janus* and *Terminus*? And who is prepared to say that these important and indeed profound ideas were not worthy of the divine honors accorded to them?

The ancient Egyptian religion reminds us a little of the Roman in the simplicity of its theological creations. One god, as we read, represented the creative mind, or the thought of creating; another, the creative hand, or the act of creating; a third represented matter in general; a fourth, the reproductive power of nature; others, the principal heavenly bodies; and others, again, the abstract qualities of wisdom, goodness, and unknowableness. "It may not be always possible," says Rawlinson, "to say what is the exact quality act on the part of nature which is represented by each god and goddess; but the principle was clear, and beyond a doubt." The principle is undoubtedly clear that, at a certain stage of intellectual development, men cannot rest in the subjective. As fast as they form distinct abstract conceptions, they must render these objective by some form of personification; and the imaginary beings thus called into existence begin to be recognized as external powers, just as the abstract ideas themselves are rulers in the domain of thought.

Among the ancient Iranians, we find one of the most remarkable distinctions which it was ever given to any people to establish; that, namely, between *Ahura-Mazda* (*Ormuzd*), the much-knowing or much-giving spirit, and *Angro-Maiyus* (*Ahriman*), the darkened intelligence, or spirit of evil. From knowledge or intelligence, as they conceived, flowed all good; from ignorance and darkness of mind, all evil. These two powers they regarded as in continual conflict. Sometimes one was victorious, and sometimes the other; but, conquering or conquered, *Ahura-Mazda* was the deity whose claims upon man were always paramount. It is quite in harmony with this fundamental religious distinction that the virtue of truth-telling, as we are informed by Xenophon, should have been held in the highest honor by the ancient Persians. But what is worthy of special attention is the virtual identification by this early race of truth or knowledge with all good and of darkness or ignorance with all evil. It would be a happy thing, indeed, if all men, in our own advanced and professedly enlightened age, could seize the same point of view, and regard it as their bounden duty to fight the battle of Light against Darkness,—to labor for a true intelligence of things and for the overthrow of ignorance and confusion. Alas that in our day tradition should so largely be set above truth, and submission to authority above the love of truth,—that *Ahriman* should rule in minds in which *Ormuzd* should have full sway!

The Iranians, it may be remarked, were to the Indians, or Hindus, very much what the Romans were to the Greeks. In comparison with the lively and, so to speak, concrete polytheism of the Hindus, the religion of the Iranians was sober and abstract. The thought of the Hindu was subtle, his imagination quick, his impressions variable; and these qualities we find reflected in the ethereal and somewhat unstable character of his theology.

"Their gods are like unto them," said the psalmist, who perhaps did not know quite how wide a truth he was uttering. The names which the Hindu applied to his gods were always tending, as Rawlinson tells us, "to float away from the objects or powers which the gods represented; and the objects then received fresh names, which in their turn were exalted into gods, so that the pantheon was receiving continual additions." Almost every important deity is represented in turn as supreme and absolute, just as in persons of mobile temperament different ideas or emotions in rapid succession seem to dominate the whole man. The gods of the Hindus were derived mainly from the greater phenomena of nature; and, in the extreme hyperbole of the language in which they are addressed, we seem to catch a reflection of the majesty, grandeur, and beauty of Himalayan scenery, to feel the force now vivifying, now destructive, of the sun in his glory, and to listen to the thundering of the torrent and the terrible fury of the wind-storm. It is no wonder that the ancient Vedic worshipper was at a loss, amid so many forces of overwhelming potency, which he should recognize as supreme,—that at one time it should be *Agni*, at another *Indra*, at another *Varuna*, and at another *Mitra*. The contemplation of any one of the powers which these names represented was sufficient to fill his soul with emotions far beyond his power to express.

Before passing to the next division of our subject, let us consider for a moment what lesson the few general facts we have gleaned in our rapid glance at some of the religions of the past are adapted to teach. It seems to me to be this: that theologies are the product of the human mind, and that they vary just according to the character and environment of the peoples among whom they spring up. They do not require to be revealed: they reveal themselves. Their relation to religion, considered as moral discipline, is a varying one, sometimes favorable and sometimes, as all authorities agree, the reverse. At the same time, it seems to be unquestionable that moral ideas more and more seek to connect themselves with theological systems; and that from the connection they derive, together with more or less of perversion, a certain increase of force and authority. The infinity of the moral law is, in a manner, rudely expressed by the infinite or, at least, transcendent attributes of the gods who come to be regarded as its authors and vindicators.

Proceeding now to the definitions of religion, let us first take one or two that express what may be called the standard orthodox view. The celebrated Bishop Butler treats of religion under two heads, *Natural* and *Revealed*; and, though I cannot find that he anywhere pointedly defines religion in general, his views in regard to the nature of religion are expressed at large in his work. He tells us in one place that "the essence of natural religion may be said to consist in religious regards to God, the Father; and the essence of Revealed Religion to consist in religious regards to the Son and the Holy Ghost." It is a little singular to find the word "religion" explained by the word "religious"; but we learn, further on, that "religious regards" are "regards of reverence, honor, love, trust, gratitude, fear, and hope." Butler holds that reason reveals the relation in which we stand to God, the Father; while revelation was necessary to indicate our relations to the Son and the Holy Spirit. What we distinctly gather from this great writer's treatment of the subject of religion is that he considers it as depending essentially upon the recognition by man of a relation subsisting between him and a personal Divine Being, and the performance by man of the duties prescribed by that

relation. Canon Liddon expresses the same idea, when he says that "religion consists fundamentally in the practical recognition of a constraining bond between the inward life of man and an Unseen Person." Prof. Pfleiderer, of Berlin, defines it as "that relation of life to the Power that rules the world which seeks to end in communion with it." Prof. Caird, of Glasgow, speaks of religion as "bearing witness to an essential relation of the human spirit to the Infinite,"—a definition which almost coincides in terms with one given by Prof. Max Müller. "Religion," says Mr. Goldwin Smith, "teaches that we have our being in a Power whose character and purposes are indicated to us by our moral nature, in whom we are united, and by the union made sacred to one another; whose voice conscience, however generated, is; whose eye is always upon us, sees all our acts, and sees them as they are, morally, without reference to worldly success or to the opinion of the world; to whom at death we return"; and who will cause it to be well or ill with us "according as we promote or fail to promote his design by self-improvement and the improvement of our kind." I do not know that Mr. Goldwin Smith has anywhere said that these propositions can be proved; but, provable or not, he regards the acceptance of them as of the greatest consequence to the well-being and stability of society.

We may turn now to another class of definitions. In the view of Kant, religion is founded on morality. To be religious is to have such a sense of the absoluteness of the moral law that we regard all duties as divine commands. "In no way may religion first incite us to virtue, for the idea of God may never become a moral motive" (Schwegler), the idea of God being itself a product of the free activity of the moral consciousness. Hegel held that religion was moral freedom attained through the reconciliation, in some measure, of the human with the divine. The Christian religion, he taught, established a positive and complete reconciliation by exhibiting the actual unity of the human and the divine in Christ. I need hardly add that it was the conception of this unity to which Hegel attached so much importance. Whether such a union had, as a matter of historical fact been accomplished, was, from the point of view of the philosophy of the absolute, quite a secondary matter.

"The essence of religion," says Feuerbach,—whose powerful work, *The Essence of Christianity*, translated into English, as you all know, by George Eliot, is not so widely known as it deserves to be,—is the immediate, involuntary, unconscious contemplation of the human nature as another, a distinct, nature." "The essence of religion," he elsewhere says, "is the identity of the divine being with the human; but the form of religion or its apparent conscious nature is the distinction between them." From the *essence* of religion, or the identity of the human and divine, springs love; from the *form* of religion, or the distinction and separation between the human and the divine, springs faith, which at bottom, he affirms, is a malignant principle, the source of all spiritual pride, of all superstition, and of all religious hatred and persecution. God, he further tells us, is nothing else than "the idea of the species invested with a mystical form." One more quotation: "The necessary turning point of history is the open confession that the consciousness of God is nothing else than the consciousness of the species; that man can and should raise himself only above the limits of his individuality, and not above the laws, the positive, essential conditions of his species; that there is no other essence which man can think, dream of, imagine, feel, believe in, wish for, love

and adore as the *absolute* than the essence of human nature itself."

It would be easy to show how the views of Feuerbach blend with those of both Kant and Hegel, but time presses. Let us, making a long step from Germany to New England, inquire next how Emerson, *clarum et venerabile nomen*, regarded this subject of religion. I have read somewhere in his writings—though I cannot now lay my finger on the passage—that religion arises from the contrast between the greater and the less. To this Feuerbach would assent: the greater, he would add, is humanity in its fulness,—all the fulness it is capable of,—and the less is the individual nature or character with its necessary limitations. If we turn, however, to the memorable essay "The Over-Soul," we shall find how nearly Emerson approached both the Kantian and the Feuerbachian stand-points, as above described. "We distinguish," he says, "the announcements of the soul, its manifestations of its own nature, by the term *Revelation*. . . . This communication is an influx of the divine mind into our mind. It is an ebb of the individual rivulet before the flowing surges of the sea of life." Again, "Revelation is the disclosure of the soul." Yet again: "The simplest person who in his integrity worships God becomes God. . . . When we have broken our God of tradition," what Feuerbach would call the God of faith, "and ceased from our god of rhetoric, the god of too many modern pulpits, then may God fire the heart with his presence." Have we any explanation of this? Yes: in the very next sentence, we read, "It is the doubling of the heart upon itself, nay, the infinite enlargement of the heart with a power of growth to a new infinity on every side." Once more: "Let man then learn the revelation of all nature and all thought to his heart. This, namely, that the highest dwells with him; that the sources of nature are in his own mind, if the sentiment of duty is there."

The subject of religion has been copiously treated in the fine collection of essays published a few years ago by this Association. Mr. Wasson has there defined religion as "the sense of relation of unity with the infinite whole"; Mr. Weiss, as "the recurrence of human nature to the facts of the universe." We are indebted to Mr. Abbot for the definition of religion as "the effort of man to perfect himself." All these definitions, it seems to me, can be perfectly harmonized with the utterances of Emerson; and Emerson would appear to be substantially in harmony with the Germans. Mr. Arnold's definition of religion as "morality touched with emotion" has all the sparkle of an epigram, and expresses, no doubt, a truth. We do not feel, however, as if it gave us the truth, the truth we are in search of. It rather describes one aspect that religion wears than tells us what it is.

We have still to deal with two thinkers of the first importance, who have put forward opinions of a very decided character on the subject of religion. I refer to Auguste Comte and Herbert Spencer. I do not know that Comte has anywhere tried to express for us wherein the essence of religion consists. He was not fond of discussing essences, preferring to take things in their concrete or historical reality. He saw that religion existed in the world, and that its principal character was one of service and adoration directed to some supernatural power or powers. Disbelieving himself in supernatural powers, and believing (with Feuerbach) that a large part of the moral emotion connected with religious service was the direct product of—or, as we might say, a warmth generated by—the internal movements of the social mass, what he proposed was that the devotion of mankind should

transfer itself to Humanity. He then entered upon a profound and original study of the whole circle of human knowledge, in order to determine the true bearing of each separate science or study upon human life, and so to lay a scientific basis for his proposed religion of humanity. It is of course utterly out of the question that I should attempt on the present occasion to give even the barest outline of the Positivist system. I may say, however, that Comte has laid us under a deep obligation in this: that, by his sympathetic study of history and of the laws of social life, he has been enabled greatly to enlarge our knowledge of the moral resources of humanity, and has done much to raise our confidence in the possibility of a real and efficacious religion springing from the constitution of human nature and appealing for its support to verifiable facts.

In Mr. Spencer's opinion, the idea of transferring to humanity the devotion heretofore accorded to supernatural beings is nothing less than a chimera. It is in the *mystery* of the universe, in the absolute unknowableness of the Cause underlying phenomena, that he finds the main, and indeed the only source, of religious feeling. The sense of this mystery is the legitimate representative, to-day, of the primitive belief in ghosts. Mr. Spencer states, however, that he does not expect religion—shrunk or expanded, as we may choose to regard it, to the dimensions of a belief in a world-ghost—to have any great efficacy in future as a moral regulative principle. He looks to the natural course of social development to raise men gradually to a higher moral level.

Enough of definitions and opinions. The question for us to decide is by which, if by any, of the many senses and applications thus given to the word "religion" we are ourselves prepared to abide. We inquire whether religion can be placed on a scientific basis. What religion, or what kind of religion, is it that we are interested in? And what are the grounds of our interest in it? It may be assumed that we are not interested in the creed of any particular church, and cannot be seeking a scientific basis for any conception of religion that is bound up with a system of theological doctrine. No: what we are interested in, I take it, is this. We know that the religions of the past, steeped as they have been in intellectual error, and associated as they have not unfrequently been with much of false morality, have, to a greater or less extent, accomplished the deliverance of man from himself; that is to say, that they have strengthened him to resist his lower impulses and to rise to a certain elevation and disinterestedness of life and character. Mr. Goldwin Smith, who has written somewhat gloomily on the "moral interregnum," nevertheless assures us that, should the worst come to the worst, "the milkman will still go his rounds." This is consolatory so far, but we want to know a little more. We want to be assured that, in the days to come, high ideals will still be possible for men; that enthusiasm will not have vanished from the world; that our morality will still occasionally be touched with emotion; that the charities of life will not be less sweet, nor its harmonies less delightful, than they are to-day; that man will still have access to fountains of inspiration, and still be able to recognize spiritual good—the progressive purification of thought and feeling—as the highest of blessings and the worthiest object of pursuit. What Feuerbach calls "the form of religion" (faith in the theological sense) is disappearing from the world. What we are concerned about is the preservation of the essence or content of religion,—love.

It may be asked, at this point, whether the essential idea of religion does not at least include

the theistic principle. To this, I should be disposed to reply that in the Kantian sense it does, and that in the Emersonian sense it does; but that, in the interpretation given by the majority of Christian writers to that principle, it does not. Make such a conception of the Deity as was present to the mind of Bishop Butler, for example, an integral part of religion, and we should have to deny the possibility of religion to all who were unable to persuade themselves that over against man there stood a Being, so distinct from man that all human canons of judgment fail when applied to his actions. Such a Being can only be known by man through a special revelation, and such a revelation requires for its due interpretation a living priesthood. One of two things,—either God is the highest revelation of human nature or he is an incommunicable Being of whom men can only know what the priesthoods choose to tell them. Once place God in the hands of a priesthood, and there is no knowing what may be promulgated in his name, possibly with perfect sincerity on the part of the priests themselves. Common human morality must henceforth take an altogether inferior place. Its dictates may be traversed at any moment and to any extent by a decree from heaven. This, no doubt, was what Lucretius felt, when he said that religion was the mother of all unholy deeds. This, too, was what Condorcet had in view, when he said that whatever was worst in the morality of a people was generally the product of its theology. To every objection that natural morality or humanity could raise to an alleged divine edict there would always be the answer ready that the ways of God were not as the ways of man, and that to judge his revealed commands by any human standard was at once impious and absurd. How often has this very position been taken up, to ward off objections to the morality of certain portions of the Bible? If the Deity, whose ways are not as our ways, has not a priesthood who can tell us what those ways are that do not agree with ours, he might as well be non-existent, so far as we are concerned.

I cannot see, therefore, that we can safely or properly incorporate into our definition of religion any form of the theistic principle which calls for the services of a specially illuminated priesthood, or for the recognition of an infallible revelation consigned to a book, or, above all, for the dethronement of the natural moral law. There is, however, a form of theism to which these objections do not apply, that which consists in attaching the highest possible sanctity to the moral intuitions and making them our type of the divine. It strikes me that this is the kind of theism we discover in the poetry of Arthur Hugh Clough, particularly in such verses as the following:—

"O Thou that in our bosom's shrine
Dost dwell unknown, because divine,
I thought to speak, I thought to say,
'The light is here,' 'Behold the way,'
'The voice was thus,' and 'Thus the word,'
And 'This I saw,' and 'That I heard,'—
But from the lips that half essayed
The imperfect utterance fell unmade.

"O Thou, in that mysterious shrine
Enthroned, as I must say, divine!
I will not frame one thought of what
Thou mayest either be or not.
I will not prate of 'thus' and 'so,'
And be profane with 'yes' and 'no';
Enough that, in our soul and heart,
Thou, whatso'er thou mayest be, art."

It is the same note we catch in Goethe's *Faust*, where Faust, in answer to some pressing questions from Margaret, tries to define his position in religious matters:—

"Misunderstand me not, thou best beloved!
Who can name Him, and, knowing what he says,
Say, 'I believe in Him'? And who can feel,

And, with self-violence, to conscious wrong
Hardening his heart, say, 'I believe Him not!'
The All-embracing, All-sustaining One,
Say, doth he not embrace, sustain, include
Thee?—Me?—Himself? Bends not the sky above?
And earth, on which we are, is it not firm?
And over us with constant kindly smile
The sleepless stars keep everlasting watch!
Am I not here, gazing into thine eyes?

And does not all that is—
Seen and unseen, mysterious all—
Around thee and within,
Untiring agency,
Press on thy heart and mind?

Fill thy whole heart with it,—and when thou art
Lost in the consciousness of happiness,
Then call it what thou wilt,
Happiness!—heart!—love!—God!
I have no name for it—Feeling is all;
Name,—sound and smoke,
Dimming the glow of heaven!"

The poets are our best teachers. Wordsworth's "Ode to Duty" is one of the finest examples of what may be called the divinization of the moral sentiment. "Stern lawgiver!" he exclaims:—

"Stern lawgiver! yet thou dost wear
The godhead's most benignant grace;
Nor know we anything so fair
As is the smile upon thy face.
Flowers laugh before thee on their beds,
And fragrance in thy footing treads.
Thou dost preserve the stars from wrong
And the most ancient heavens through thee are fresh and strong."

To the rapt vision of the poet, the stability of the whole universe is guaranteed by the moral law, that law which reveals itself to our hearts, and which is the expression of the perfect human life.

We need not, however, confine ourselves to the poets, if we are in search of declarations that the true divine, *τὸ θεῖον*, as the Greeks called it, is to be found in the heart of man. I open a well-known volume, the *Scotch Sermons* published about five years ago, and there I find such expressions as these: "There is one great lesson to be learned from the text; namely, that our common human nature is the most perfect revelation of God." "It is our bounden duty to reject any view of the relations between God and man which is at variance with the primary moral instinct of the human soul." Here is a statement that cuts the ground from under all priesthoods and all infallible scriptures. It seems as if especially designed to enforce Feuerbach's criticism of the text that declares that "God is love." Love, here, says Feuerbach, is only the predicate: God is the subject. God therefore is love and something else besides. What is that something else? We cannot feel safe until the proposition is reversed, and we are told that "love is God." The Scotch divine says in effect, "Accept no statement regarding God that does violence to your moral instincts." In other words, he throws out of the conception of God all that the human conscience cannot assimilate to itself. We further read,—I shall only give one more out of many passages I could produce from the same volume, all expressing the same fundamental thought,—"God is within us as well as without, the soul of our souls, the life of our lives, the substantial self that underlies the surface, evanescent self."

But what text was it that one of the preachers referred to in the first passage I quoted? It was this: "Philip saith unto him, Lord, show us the Father, and it sufficeth us. Jesus saith unto him, Have I been so long time with you, and hast thou not known me, Philip? He that hath seen me hath seen the Father; and how sayest thou then, Shew us the Father?" Here we have Jesus expressly claiming to have shown the Father to his disciples. What, then, did he actually show them? Was it a type of virtue not only transcending average human attainment, but transcending also

all power of human comprehension and sympathy? Not at all. He simply showed to them—and, through them, to mankind at large—the latent capacities of human nature. He knew, as we are told, what was in man; and he presented, in his own life, a moral ideal to which all subsequent ages have paid homage. This he called "showing the Father."

It seems to me, therefore, that we are entitled, putting all systems of doctrine aside, as well as all dogmatizings in regard to a Divine Personality, to conclude that there is an attractive and binding force in the true ideal of human nature which may properly be called religious, and that the action of that force may be spoken of as religion. Certainly, he is a religious man, in the best sense, who holds himself bound to govern his life by the highest law which his nature can recognize. It may be granted that religion, understood in this sense, would lack for many the energetic sanctions of the prevalent forms of theological faith; but it may be added that, whatever is more than this, "cometh of evil." He who refrains from evil simply because God's eye is upon him—God being recognized as an external Person, whose office it is to punish evil-doers—is not governed by a moral motive. It may be presumed that, if God could not punish him, he would commit the evil deed. *The only possible way of making the idea of God a moral one is by absolutely identifying it with man's highest nature.* Short of this, we simply enthroned force,—decree divine honors to the policeman's truncheon. It may take courage to adopt and carry out consistently the idea of religion here presented; but my conviction is that, if it were taken up and unflinchingly advocated by some coherent body of persons, it would begin to make its way in the world. It could always challenge comparison with the older conceptions of religion. It would have nothing to conceal, nothing to extenuate, nothing even to explain, whereas the older religions conceal much, extenuate more, and are constantly explaining. It would address every man in very simple terms: "Are you prepared to be true to yourself, to your own best nature? Do you feel in your heart the everlasting distinction between right and wrong? And are you prepared to be loyal to the right, because it is the right? If so, you are on our side already. If not, you had better, for your own sake and society's, try to cultivate a wholesome dread of the divine thunderbolts." A religion in which there are any non-human elements, which sets up standards of judgment to which the heart does not respond, or which either threatens or promises consequences that are not implicit in human conduct itself, cannot be a true searcher of hearts. Take a religion, some of the most solemn prescriptions of which are of a purely ceremonial or formal character, and we see at once that any self-examination which the believer may undertake must turn very largely upon matters of no essential, moral significance; and that just so far as this is the case will the secrets of the moral nature be left undiscovered. But religion, as we are now conceiving it, being embarrassed with no non-human elements, goes straight to every man's heart, and asks him what manner of man he is, not in relation to meats and drinks or the observance of new moons and sabbath days, or attendance at church, or the rigid holding of a creed and the stern disapproval of all heterodox persons, but in relation to love of truth, to charity in thought, word, and deed, to purity of life, to respect for his own nature, physical, intellectual, and moral, to general love of good and hatred of evil. It makes every man judge in his own cause, and leaves him without excuse, if judgment goes against him.

We must, of course, be prepared for the objection that but few would be influenced by this type of religion, and that, were the dread of encountering eternal penalties for temporal sins and the hope of reaping an eternal recompense for temporal righteousness once removed, men could give way without check to their lower impulses. How many, we might ask, by way of reply, are now Christians more than in name? The non-human elements in Christianity, appealing powerfully to men's hopes and fears, to their love of mystery, to their love of authority, to their sense of weakness, to their sense of sin and their desire to find a scapegoat on whom their sins can be laid, have gathered millions into the Christian fold; but, were Christ now to return to the earth, how much faith—as he understood it, not as the theologians understand it—would he find among all those who bear his name? I venture to say that such faith as he found would for the most part be discovered among those to whom the non-human elements of Christianity are of least and the human elements of most account. "The love of Christ constraineth us,"—that is a purely human sentiment, and that is the watchword of all the noblest workers in the ranks of the churches to-day. We, too, could say, "The love of Christ constraineth us"; but we should not have to confine ourselves to that motto. We could say: "The love shown to humanity by all who have ever lived and died nobly in its service constraineth us. The knowledge we possess of the infinite benefits we derive from the organization and consolidation of society constraineth us. The demand which we instinctively make upon our fellow-men for truth and charity in their dealings with us constraineth us. Our innate perception of a lower and a higher constraineth us. The beauty of the world constraineth us; the order of the universe constraineth us; and the consciousness that it is our own thought which interprets the world as beautiful and the universe as orderly constraineth us. We are constrained by the love of Christ. We are constrained also by the limitless sympathy of Gautama. We are constrained by the truth-loving and fearless spirit of Socrates, by the noble dignity and high-mindedness of Plato, by the purity of Sophocles, by the tenderness of Virgil, by the hunger and thirst after righteousness of Marcus Aurelius. The universe is full of voices calling us to choose the path of life, and reminding us that no man either lives or dies to himself. A true philosophy teaches that we are as leaves on the great secular tree of humanity, but that to us it is given to realize, during the brief summer of our existence, our true relation to the parent organism, to feel that by its life-giving currents we are fed and by its mighty strength uplifted to the sun. The voice of philosophy is not a compulsory one: we may refuse to heed it, if we will. Humanity pleads with us in tones rather tender than severe or minatory. It promises nothing but that, if we walk through life nobly, we shall be at peace with ourselves, and that our lives will go to swell the sum of good influence by which others after us will be helped to rise in the scale of being. It threatens nothing but that, if we live to self, we shall be smitten with inward barrenness,—even though our outward estate may be flourishing,—and that our influence will be one to be counteracted by the better efforts of worthier men. It is quite true that some may smile at such promises and laugh at such threats. But what said Christ? "Ye will not come unto me, that ye might have life." All any teacher can do is to proclaim his doctrine and live it, to sow by all waters and hope for the harvest.

Shall we now press the inquiry respecting the "scientific basis" of this religion of faithfulness to

our highest moral intuitions? What we can say on that subject is this: that the course of nature shows that, in the development of conduct, to use Mr. Spencer's phraseology, a time comes when men more or less habitually seek their happiness through the happiness of others. In certain relations of life, the spirit of self-sacrifice is at times hard to hold in check. This is especially the case in the female sex, in whom the emotional nature is more developed than in man. It is fully understood that man can live no well-developed life apart from society, and that to live happily in society requires more or less subjugation of self. The true laws of individual life are given to us by a study of the laws of society. This was the conclusion arrived at by Comte, and this is the conclusion which Mr. Leslie Stephen iterates in his recent book on the *Science of Ethics*. In other words, we cannot tell what man is adapted for, or how his happiness can best be secured, until we see him in society. That life in others—life enlarged so that the happiness of others gives depth and volume to our own happiness—is the highest kind of life may be said to be abundantly demonstrated. No one at least who has ever tried it has any doubt about it. Those who have doubts about it have never tried it. The course of nature, we may therefore say, makes provision for the highest kind of life; does not force every man to embrace it, but at least places it at the end of a path in which all men's feet are set. Here, then, we may say is a scientific basis—a basis of fact and of law—for a religion such as we have spoken of which consists in obedience to our highest moral impulses, the whole drift of which is toward the subordination of our individual desires to the laws of social well-being.

How much could or can be done toward extending and giving efficacy to this conception of religion, through individual or corporate efforts, remains to be seen. "The foolishness of preaching" did much in a certain age of the world; and it is quite possible that preaching, which some would regard as foolish, would do much to-day. Certain it is that to-day, as ever, the people perish for lack of knowledge. The shadow of Angro-Mainyu, or the darkened intelligence, is upon the world. Men do not know the vocation wherewith they are called. They do not know what harmonies of life are possible to them. They do not know how much of idle struggle they might cast aside, and how much of co-operation and good-will they might put in its place. They do not know how powerfully intelligence is aided by simple goodness, or what an unsealing of the eyes it brings once honestly to desire to know the truth. They do not know how rich, how life-giving, how sustaining are the moral forces of humanity. In a thousand ways, men do not know the advantages that are their birthright, the privileges that belong to them as men. They do not know that, buried in the heart of each, is an image of the perfect human type, and that the true glory of the individual, his true redemption from the bondage of self, lies in becoming more and more conscious of that image, and setting it up as a pattern for the life. This is the thought which penetrates in many places through the verse of that great artist-soul, Michel Angelo; but nowhere more distinctly than in lines that have been most felicitously translated for us by the skilful hand of a member of this Association. You will allow me, I am sure, the pleasure of quoting them:—

"As, Lady, when we hew away
The rugged outer stone,
A living form is shown,
Which, as the marble wastes, grows more defined;
So does our fleshly hull of clay,

That harsh and rude and savage rind,
Conceal the impulses of right
Of the weak soul that trembles still.
Thou only canst unbind
This veil which hides my inner light;
For I alone have neither strength nor will."

So, too, Matthew Arnold discerns a certain essential purity and truth in the soul of man, in what may be called his generic nature. He speaks, in *Empedocles on Etna*, of

"Our own, only true, deep-buried selves,
Being one with which we are one with the whole world."

"Once read thy own breast right," exclaims *Empedocles* to his friend *Pausanias*,—

"Once read thy own breast right,
And thou hast done with fears;
Man gets no other light,
Search he a thousand years."

Again, in the language of confession:—

"Who can say: I have been always free,
Lived ever in the light of my own soul?
I cannot! I have lived in wrath and gloom,
Fierce, disputatious, ever at war with men,
Far from my own soul, far from warmth and light."

It seems to me, therefore, that, if long centuries ago the Buddhist missionaries could go abroad, preaching with zeal and devotion the doctrine of the misery of human life and of escape therefrom by the annihilation of desire, earnest men might to-day take up the nobler theme of the regeneration of human nature through knowledge and love. It is a true gospel; and, rightly presented, it will stir men's souls. As Emerson said, we have disputed long enough: the time has come for simple "manifestation of the truth."

"Thus the apostles tamed the Pagan breast:
They argued not, but preached; and conscience did the rest."

The appeal is not to human pride. Rather is it to each man's sense of the poverty of his individual life, unless fed continually from a larger and richer life. The facts of nature are on our side; the aspirations of the heart, the whisperings of conscience, are on our side. Why should we not go boldly forward, and speak the word and do the deeds that the times require?

CORRESPONDENCE.

"THE MATERIALIZATION OF SPIRITS."

Editors of The Index:—

Prof. Ernst Haeckel, that great force in the scientific world, has written of our time as the "age of natural science," and has given proofs that he has rightly named the era. As the materialization of spirits is offered as an attraction to the curious, the credulous, and the ignorant, who are willing to hire a seat at a séance or accept an invitation to attend, as one would for the theatre or a lecture, with the reserved privilege to pass either written or verbal opinion thereon, it is only natural that an earnest scientific mind should bring that high intent of purpose—even in an investigation of "A Dark Séance"—which Prof. Huxley has powerfully expressed in these words, "In scientific inquiry, it becomes a matter of duty to expose a supposed law to every possible kind of verification, and to take care, moreover, that this is done intentionally, and not left to a mere accident."

In the first chapter of Prof. Haeckel's *History of Creation* is written: "It no longer occurs to physicists, chemists, mineralogists, or astronomers to seek to find in the phenomena which continually appear before them in their scientific domain the action of a Creator acting for a definite purpose. They universally, and without hesitation, look upon the phenomena which appear in their different departments of study as the necessary and invariable effects of physical and chemical forces which are inherent in matter. Thus far, their view is purely materialistic, in a certain sense of that word of 'many meanings.' When a physicist traces the phenomena of motion in electricity or magnetism, the fall of a heavy body or the undulations in the waves of light, he never, in the whole course of his research, thinks of looking for the

interference of a supernatural power." Perhaps some of the "public mediums" or "their friends" might find, through a study of Charles Darwin's works or of the writers of the above-quoted passages, that they have assumed more than it proved by science, and if they will patiently consider the words of scientific men to best widen their knowledge, they must grasp the force of the statement, "*Where faith commences, science ends.*"

Among the writer's well-wishers are many who claim to be Spiritualists, and their beliefs are as varied as their temperaments. One among them looks upon "materialization" as phenomena below a truly spiritual nature; another claims to see "spirit forms" in her own home; and one even hears the spirits rattling in vases too small to hold a newly born child. At the risk of sending a compilation to *The Index*, I cannot forbear quoting directly from men whose words are so simple and trustworthy that to act as interpreter to them seems to lessen their demand upon the consideration of those unacquainted with the truths which they have advanced. The greatest German scientist has said: "Natural science teaches that matter is eternal and imperishable, for experience has never shown us that even the smallest particle of matter has come into existence or passed away. Where a natural body seems to disappear, as, for example, by burning, decaying, evaporation, etc., it merely changes its form, its physical composition, or chemical combination. . . . But never yet has an instance been observed of even the smallest particle of matter having vanished, or even of an atom being added to the already existing mass." The slowly changing forms of matter must be considered by all who zealously claim affinity with matter, even by those who strive to prove Spiritualism through materialization; and there is no known scientific basis on which to found the belief that a man having ceased to perform his organic function, and dissolving in the water or in the earth or crematory, can in any one of these conditions assume "the same figure like the king that's dead," though a Bernardo and a Marcellus—and too many such there are—proclaim it in every street of every city. Their kind can only spur imagination and baffle reason. They cannot give a convincing proof to the scientist any more than a goat can cause an earthquake. It is admitted that the animal can cause a commotion above ground, and exhaust himself. A conscientious, studious, and reflective man, Charles Bray, said, "If it were possible for the mind's identity to be continued after death with a different body, it would not constitute the same person, as our identity or personality is made up of our body and mind." Is it not time, when an enlightened man, a lover of truth and justice, attempts to prove that reason should be guided by research, not by imagination, that those capable of denouncing error and pleading for the right self-government of each individual should take a stand by the side of such a man, though he possess strength of purpose, bent of mind, and other qualities fitting him to stand alone in whatever cause he feels is the right one? He dared to say what he believed, and pray let there be added another name to that too small list, though it be less known.

JOHN KOBOLD.

BOOK NOTICES.

THE SPIRIT OF THE NEW TESTAMENT; or, The Revelation of the Mission of Christ. By a Woman. Boston: Press of Rockwell & Churchill, 39 Arch Street. 1885. pp. 525.

The author's aim in this volume is to show that the Christ symbolizes the divine spirit of man, and to prove from the historical and epistolary records of the New Testament that the mission of Jesus of Nazareth was consecrated to the most pure and perfect liberty, that the purpose of his life was to break down creed and caste, to establish fraternity, to reveal to the multitude the power of the soul, and to illustrate profound spiritual truths which had everywhere been secretly or dimly recognized, but never before so fully embodied in the life of man. He represented the spiritual forces of the planet in their perfection, unveiled the esoteric mysteries of the old religions, and revealed in his own unique personality the immortal strength and power of the human soul. He was the prophecy of the coming race, when "the interior life will have become perfect and in harmony with the divine laws,"—the "one far-off divine event, to which the whole creation moves."

The mother of Jesus "was chosen for her pure and psychic organization," and her motherhood was the motherhood of inspiration. "No man was sufficiently interiorly developed to become the father of the child. The parentage was immortal, and expressed a divine power which exists in that rare marriage not of earth, in which the masculine and feminine souls are one spirit. The sustaining friendship of Joseph was necessary to protect the virgin mother around whom beautiful influences circled, and who was kept apart from the world." All this being assumed, the author proceeds to explain many of the teachings and actions of Jesus, claiming that those so-called "miracles" which seem to us so incredible were performed in accordance with spiritual laws. Thus, after stating the case of the daughter of Jairus, the author says: "How many, after a severe illness, might have been rescued from premature interment through the use of interior vision, such as that possessed by Christ!" In the case of the widow's son at Nain, it is observed "that the body was that of a young person whose vital forces had not been slowly exhausted by old age, but arrested in their action by some curable disease; secondly, that, although the spirit had left the form, it was still in close connection with it; thirdly, that there is no evidence that the body had succumbed to the disintegration of corruption, which would resolve it into decaying matter and into the active condition of death." The process of decay after the death of Lazarus, the author says, "must have been arrested by some natural force, on which a coming science will throw a perfect light, and the nature of the illness must have been such as to have left the form in a condition to be thus acted upon."

What Jesus did all men might do, did they possess his spiritual insight and purity. The evolution of man's spiritual power will go on in the future. For a long time yet, highly spiritualized organizations will be born through superior unions; but the transition of the spirit from the body will in time cease to be a struggle, and be merely a translation. Then will occur those incarnations and unions of the dual soul which defy space and time, and are eternal. There will be no suffering in child-birth: the body of the infant will be, not internally developed, but "materialized from that wonderful laboratory of nature which will be the building chamber of soul as well as matter; and motherhood will be the hope, joy, and desire of womanhood." "The survival of the fittest" will mean the survival of the most spiritual man,—the man in harmony with nature's inner forces, capable of "breathing the very soul of the atmosphere," and living on "the sun-ripened fruits and grains." "His blood will be a spiritual essence, his substance as pure as that of a spirit, his body free from waste and rejection, since nothing will be absorbed into it but what is transmuted into living particles. He will be completely liberated: it will be the completion of the journey from the lost paradise of unconscious repose to the paradise regained, which is the conscious rest of Love and Wisdom."

Man has a fourfold expression of being, the writer claims: first, the physical body; second, the astral soul, the product of the body which it resembles, which is possessed by animals, and is subject to disintegration, although it may survive bodily dissolution for a considerable period; third, the "immortal soul," which is dual, and may be incarnated in two forms outwardly expressing itself as man and woman; fourth, the divine spirit, which is "the eternal, informing, and angelic agent, which, in close union with the soul, elevates it above all that is material, endows it with the strength of its age-long upward struggle, memory, and experience, and inspires it with all that is godlike." "Hence, the conscious union of the two-in-one lifts marriage to a plane in which the life and light of the Eternal has the power of direct operation, and is not only able to sustain, strengthen, redeem, and illuminate the twain thus united, but to generate truth and regenerate offspring. It is the 'holy spirit' and the 'immaculate conception' scientifically developed." This is not entirely clear.

The author says that "the elemental, elementary, astral, immortal, and angelic spirits" are "variously attracted to various individuals and conditions," and that the spirits of darkness at times assume the names and forms of the spirits of light. The seer, in proportion as he is developed, is able to distinguish between these spirits. How "a woman" found out all these things, and what proof in support of them she has to

offer the sceptical mind, cannot be learned from these pages.

In her expressions of dissatisfaction with some of the laws and usages of the existing social order, the author is very pronounced. For woman, she asks greater freedom. "The freedom she demands is something more than that which confers a vote, sits in a presidential chair, wears a crown, or studies art, literature, or science. It is the freedom of maternity in a marriage which may celebrate its honorable social custom, but refuses to be bound by legal obligations. Nothing else, and nothing less, will liberate womanhood. Nothing else, and nothing less, will liberate the human race and inaugurate the age of the soul." The children of such unions should, she says, be "legally registered, provided for, and named; but the woman should, at all costs, be sovereign over her own being," etc. But she says, "Believe not those who teach that mankind can be regenerated or even benefited by passion and its free expression; for true love, which is of the soul, is continent, and its liberty is of a pure order, which recoils from miscellaneous caresses."

The author seems to live in an ideal world, and has apparently given but little attention to the practical difficulties in the way of realizing some of her social theories in a world like this. But, in spite of its vagaries, the work is characterized by an earnest and candid spirit and by purity of purpose; and on almost every page is enjoined an elevated, spiritual life. Although the theories are generally mystical, the style is usually clear, and the work has considerable literary merit. It is the work of a person of deeply religious nature and philanthropic disposition, who believes she has discovered valuable truths, and is desirous to make them known, but who, unfortunately, is so devoid of the scientific spirit and disregardful of the scientific method that she fails to distinguish between propositions that admit of proof and mere theories and fancies that we have no means of verifying.

B. F. U.

Just Published: TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crapo.

PRICE \$2.00.

For sale at the bookstores. Also sent, postpaid, on receipt of price, by

THE RISE OF INTELLECTUAL LIBERTY FROM THALES TO COPERNICUS.

By FREDERICK MAY HOLLAND,

Author of *The Reign of the Stoics*. Price \$3.50.

The author of this book has chosen a magnificent subject; and, although it is formidable in extent and much of it involved in obscurity, and all of it complicated with great questions of history and human progress, he has yet been able to throw much new light upon that liberalization of thought which went very unsteadily forward during twenty-two hundred years, before the great modern movement of the development for intellectual liberty. The work is a delineation of tendencies, a series of sketches of the great minds who at different times and under varied circumstances, and with unequal effect, have struck for independence of thought, a presentation of the counterforces that have antagonized intellectual liberty, and an account of the working of all those larger agencies which have in different degrees hindered or promoted freedom and independence of thought. Without having subjected the work to critical scrutiny, we are much impressed by the evidence it shows of extensive and conscientious labor, the freshness and interest of its chief subject-matter, the untrammelled treatment of the subject, and the vigor of the portrayal of that long and agonizing conflict with bigotry and intolerance, religious and political, public and private, which is the price of our modern liberty of thinking.—*Popular Science Monthly*.

The volume shows remarkable research, keen powers of analysis and comparison, close reasoning, and fairness of judgment. It will be found an invaluable help to the student, who will be glad to learn that the author contemplates a second volume, which will bring the subject down to the time of the French Revolution.—*Boston Transcript*.

Worth many times its cost to any Superintendent. Price, postpaid, 25c., or will send free to any one sending us names of Sunday-schools of all Sunday-schools in his place. Address, **DAVID C. COOK**
 PUB. CO., 18 & 15 Washington St., Chicago.

The Secret of the East;

OR,
 The Origin of the Christian Religion
 and the Significance of its
 Rise and Decline.

By **FELIX L. OSWALD, M.D.**

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of medievalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript*.

TRACTS.

- No. 1.—*Truths for the Times*, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.
- No. 2.—*Fear of the Living God*, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.
- No. 3.—*Lecture on the Bible*, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.
- No. 4.—*Christian Propagandism*, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. Full of Figures, Facts, and Interesting Extractions. Price 10 cents; 12 copies, \$1.00.
- No. 5.—*"God in the Constitution"*, by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.
- No. 6.—*"The Sabbath"*, by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.
- No. 7.—*"Compulsory Education"*, by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.
- No. 8.—*The Present Heaven*, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.
- No. 9.—*The Christian Amendment*, by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.
- No. 10.—*The Impeachment of Christianity*, by F. E. Abbot. Sixth Ten Thousand. Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.
- No. 11.—*The God of Science*, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.
- No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, \$1.00.
- No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.
- No. 14.—*A Study of Religion: The Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.
- No. 15.—*The Battle of Syracuse*. Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

THE

"FREIDENKER."

Freedom, Culture, and Prosperity for all!

(Organ of the Freethinkers of North America, of the Union of Radicals, and the North American Turnerbund.)

Editor, **C. Hermann Beppe.**

TERMS, PER ANNUM, IN ADVANCE:
 UNITED STATES AND CANADA:

Freidenker.....\$2.50
Turnerische Ausgabe des Freidenker (Amerikanische Turnzeitung)..... 3.00
 EUROPE:
Freidenker.....\$3.00
Turnerische Ausgabe des Freidenker (Amerikanische Turnzeitung)..... 3.50
 Sample copies sent, on application, free of charge.

In this weekly, which is now in the thirtieth year of its existence, political, social, and religious matters are discussed with a view to general enlightenment and progress. The *Amerikanische Turnzeitung* is especially devoted to the discussion of topics pertaining to physical culture and matters of interest to lovers of the gymnastical art.

Since Jan. 1, 1885, the *Freidenker* has been enlarged, thus furnishing CONSIDERABLY MORE READING MATTER, while the PRICE REMAINS THE SAME AS BEFORE.

For the convenience of those of our readers who are chiefly interested in matters relating to gymnastics, the *Freidenker* and its former supplement, the *Turnzeitung*, have been consolidated into one paper, called *Amerikanische Turnzeitung*, with the sub-heading, "Turnerische Ausgabe des Freidenker."

This paper contains more reading matter than furnished by both the *Freidenker* and *Turnzeitung* heretofore. In making these changes, the publishers have incurred great expense; and we therefore solicit the hearty co-operation of all friends of the cause in securing for the *Freidenker* and the *Amerikanische Turnzeitung* a wider circulation.

We also publish

"Erziehungsblaetter,"

fuener Schule und Haus.

CURRENT TOPIOS.

BY B. F. U.

THE General Assembly of the United Presbyterian Church, at Topeka, Kan., on the 3d inst., declared that "the Grand Army of the Republic is a secret organization, and an oath and an obligation are taken. We think it wise and proper to counsel the members of the United Presbyterian Church to stand aloof from this and similar organizations."

EX-MINISTER ASTOR says that the only unpleasant question between Italy and the United States is that relating to our duty of thirty per cent. on foreign pictures. Italy declines to retaliate, hoping that Congress will soon remove the ridiculous duty, against which American artists generally protest. Ours is the only civilized nation that levies a tax on art.

SAID Henry Ward Beecher, in a recent sermon: "I used to love to go to church, because I did enjoy walking down the half mile of street, and hearing birds and hearing the winds in the trees; and, when I got into church, I didn't dare stir, and so I went to sleep largely, with an occasional rap of grace on my head. But the church was always cold and unsympathetic to my young nature,—the old Litchfield church, mounted on that high hill standing in the middle of the green, a hill on which all the winds swept, and swept always from every direction apparently,—that great, old, shackling building whose pulpit is now in the Brooklyn Historical Society, and in which my father used to preach. I can't remember one single thing in my young history inside of that church that ever touched either my imagination or my heart, except the flying in of swallows once in a while, that would come in of a summer when the windows were open: that was a means of grace to me."

In an editorial entitled "The Constitution," our German weekly, *Bostoner Rundschau*, remarks: "Those who receive their education here—equally the natives and early immigrants—go out into public life with the uniform idea that all men are born free and equal. This idea is the cornerstone of the American Constitution, and was undoubtedly conceived and declared by the fathers of this republic, in their old, pious honesty, as

something infallible. But these fathers had thereby most assuredly suggested that *men* signifies not only *homines*, but *viri*, and that each individual also must acquire, that he may possess, both freedom and equality through conduct worthy of man. . . . The immigrants have to put their entire care upon the preservation of life; and, even in times of prosperity, only a few are willing to sacrifice their share, that they may, at their death, leave the land better than they found it. All enjoy the freedom of speech, press, and commerce; but, as a rule, it is overlooked, how those treasures, won only through most persistent struggles, are being forfeited through general passiveness."

THE *Banner of Light* refers rather deprecatingly to "societies" that are "slowly plodding their way with great reluctance toward a conclusion they see to be inevitable, but which, dreading to approach, they are belaboring their brains to devise, if possible, some means to avoid," and, by way of contrast, says that "twelve men with no scientific prestige, sworn to render a verdict in strict accordance with the testimony presented them, have, by their acquittal of Mr. J. H. Mott, on May 2, declared the materialization of spirit forms to be a fact; in this, on the principle that the greater includes the less, other spirit phenomena are also pronounced true." Our contemporary is here in error as to facts. There was no acquittal by twelve men. The case did not come before a jury at all. The trial was merely a preliminary examination before a justice of the peace to determine whether there was legal ground on which the defendant could be held to await the action of the grand jury. Mr. Clayton, the justice of the peace before whom the examination took place, simply discharged the defendant on the ground that the false pretence of the medium was not relied upon by the party claiming to have been defrauded as true. In his opinion, which is printed nearly in full in the *Religio-Philosophical Journal* of the 20th, from which the above facts are taken, Justice Clayton said that the parties who made the exposure "demonstrated beyond the possibility of a doubt that defendant was a fraud"; but he added: "All of the witnesses testified that they believed him a fraud from the first, and disbelieved his representations made to them at defendant's house, where they went of their own free will, and not on any solicitation by the defendant. Taking the law and applying it to the evidence, the court is of the opinion that no offence has been committed. The defendant will, therefore, be discharged." In view of the above facts and quotations, our neighbor even must see that, whatever be the character of Mott's performances, his "acquittal" cannot be fairly adduced as a virtual declaration, by twelve men "sworn to render a verdict in strict accordance with the testimony presented them," of the "materialization of spirit forms to be a fact."

A two and a half column letter recently appeared in the *London Times* entitled "Mental Healing in Boston." In the same paper appeared an

editorial of a column and a half on the same subject. Some of the Boston journals treat these articles as though they were without any foundation in truth. They certainly do contain exaggerations which amount in some instances to downright misrepresentation, but they contain also a large amount of truth. The *Boston Evening Traveller* of May 18 said: "No subject, probably, has been the theme of so much discussion in Boston during the past few months as the new school of healers who profess to treat their patients by many methods, but to all of which the popular fashion of generalizing has applied the comprehensive term the Mind Cure." This "new school of healers" may be divided into different classes, known as Mind Curers, Faith Curers, Christian Scientists, Metaphysical Healers, etc.; but they all claim to heal without the use of medicine,—that is, without giving any physic to be taken internally or applying to the skin any lotions, ointments, or plasters. In spite of the fact that there are many who are quite ready to discredit all statements made in regard to the results of the mind cure method, the article in the *Traveller* says: "Boston is coming to be quite full of honest people who say very positively that they have been cured in this way of very serious and painful afflictions. The volume of their testimony increases daily, so that, on every hand, the inquiring man, who seeks to try all things and hold fast that which is true, meets men and women who say not only that these strange feats of healing can be done, but that they have in their own persons seen and felt them performed. . . . Certain it is that such witnesses are multiplying fast in this city; and, in the spirit of investigation simply, a *Traveller* representative has been looking into their statements a little." Then follows a lengthy statement in regard to the method and work of Dr. E. J. Arens of Boston, "to the success of whose treatment a large number of our citizens, many of them well known and highly respected, bear personal witness." This Dr. Arens is author of a work entitled *Old Theology in its Application to Healing of the Sick, the Redemption of Man from the Bondage of Sin and Death and his Restoration to an Everlasting Life*. He claims that the power to heal the sick may be exercised to-day as it was by Jesus and his disciples, by those who understand the relations between God and man as taught in the Bible. He has classes which he instructs in his philosophical and theological doctrines and in his methods of curing disease, and his rooms are thronged by applicants for "treatment." He is but one of many. These healers are not agreed in their theories. Indeed, some of them laugh at the philosophy expounded by others who are as successful as themselves in effecting cures. [That there is a modicum of truth in the claims made by or in behalf of the "mind curers," and an essential and important principle in their methods, we do not doubt. But the object of this paragraph is only to show that there is a large amount of truth in the article in the *London Times* in regard to belief in, and the practice of, "mental healing" in this city, whatever be the significance of the facts.

A SCIENTIFIC BASIS FOR RELIGION.

The two notable essays that were given at the morning session of the recent annual meeting of the Free Religious Association on the question, "Is a Scientific Basis for Religion Possible?" have now been put before the readers of *The Index*, and deserve a careful perusal. They arrive at essentially the same conclusion, though by quite different pathways. No two writers, perhaps, could have been chosen who would have so entirely complemented without overlapping each other's treatment of the theme. Each essay is complete in itself: each of the writers conceived a distinct method of argument, and logically pursued it; yet it requires both essays to cover the great question, and both together do cover it very fully.

Mr. Savage took up the question in the most obvious popular interpretation of its meaning, and considered the bearings of the progress of natural science upon religion. His argument, with its clean-cut definitions and logically mortised paragraphs, went to show that the wonderful modern advance in natural science does, indeed, make immense havoc in the theological creeds that have been commonly regarded as necessary to the existence of religion, but that it not merely leaves unharmed, but directly substantiates certain fundamental conceptions which are the germs of all essential religious beliefs and institutions. He does not, however, though thus specially considering the relations of religion to the discoveries of science in the popular significance of the word, fall into the common error of limiting science to material phenomena. He distinctly declares that science must also take account of such facts as emotion, aspiration, the moral sense, or "the whole psychical life of man," as well as of the metamorphoses of matter; and it is psychical facts that appear especially in the domain of religion.

Mr. Le Sueur scarcely alludes to science, in the narrow, technical sense of the word, except under the general terms of knowledge and advancing reason. But, evidently assuming the word to have that wide meaning to which Mr. Savage refers in a single paragraph,—that is, as covering the psychical life of man as well as material nature,—he chose for his line of procedure the development of religion in its human aspects, as traced in the intellectual and moral perceptions of mankind, and as expressed especially in literature. The very facts, emotional, mental, spiritual, to which Mr. Savage briefly alluded as facts with which science must necessarily deal in order to be a whole science, were the facts to which Mr. Le Sueur directed his entire attention, in an essay not wanting in logic, but replete with learning and with discriminating, subtle thought. Though having nothing to say of the great work of science in the material world, or of its consequent bearing upon theological cosmogonies, his essay was none the less a strict application of the scientific method to the problem he had in hand.

This unity in respect to method and result between the two essays, though the treatment was so different, will be especially evident by a single illustration. Mr. Savage, in his definitions, says: "By anything's having a scientific basis, we mean that it is found, on investigation, to be in accord with the discovered nature of things." And Mr. Le Sueur's final point, after having arrived through his historical survey at what he calls the essential nature of religion, is to consider "the support which religion, in the sense so arrived at, derives from the constitution of nature." These statements mean substantially the same thing, and

show the two essayists agreed on the important point of what constitutes a scientific basis for religion.

In saying that the two essayists came also to the same result, we mean simply that they both gave an affirmative answer to the question, Is a scientific basis for religion possible? They might not wholly agree in specification of the separate points which each would include in his idea of essential religion. Here, Mr. Le Sueur shows much more reserve than Mr. Savage. The latter draws out into a series of definite propositions the substance of the religious beliefs which science, as he has defined it, seems to him to justify. Most of these, probably, Mr. Le Sueur would have no hesitation in accepting, while at some of them he might demur. But, in any event, he is evidently more inclined to identify essential religion with man's moral ideal of perfection, and to be content with that as both the simplest and the most comprehensive description of religion. He says, "The only possible way of making the idea of God a moral one is by absolutely identifying it with man's highest nature." To theism in the Kantian sense or in the Emersonian sense, he does not object. Such a theistic principle, he thinks, the essential idea of religion might include. Yet he is apprehensive of the dogmatic habit even on this point; and, when he comes to the conclusion of his argument, derived from his wide survey of the phenomena of religious history, he states it thus: "The course of nature, we may therefore say, makes provision for the highest kind of life; does not force every man to embrace it, but at least places it at the end of a path in which all men's feet are set. Here, then, we may say, is a scientific basis—a basis of fact and of law—for a religion such as we have spoken of, which consists in obedience to our highest moral impulses, the whole drift of which is toward the subordination of our individual desires to the laws of social well-being." And this conclusion is almost identical with one of the most important of Mr. Savage's propositions. The latter says: "Since the laws of this universe are now known to be the laws of human life, prosperity, and progress, it is seen that what Religion has called 'the kingdom of God' is identical with what scientific philanthropy would call 'the kingdom of man.' In the light of modern knowledge, we are justified in hoping for such a kingdom here on earth."

There are two common errors in discussing the relations of religion to science, which both of these able essays avoid. The first error is that of the theologians who affirm that the truths of religion are revealed to faith, and are not amenable to the method of science: which is equivalent to saying that the truths of religion are not capable of becoming systematized knowledge; and, without this quality, it might be asked how religious truths can possibly be adapted to the orderly sequences of man's rational and moral life. The second error is that of those materialistic thinkers who affirm that, because science has overturned most of the theological doctrines which have been associated with religion, it has therefore overturned religion itself; which is not unlike saying that, because modern science has destroyed astrology, it has put out the stars. Both of these errors originate in a too narrow view of science, and in a corresponding misapprehension of what is meant by a scientific basis of religion. Some persons appear to imagine that those who use this phrase are expecting to find a basis for religion in the stratified formation of the earth or in a chemist's retort. They seem to forget that man himself—and man in his mental and moral development—presents a subject for scientific study quite as much as the earth on

which he dwells or the atmosphere by which he physically lives. There can be no possible fact whatever, whether a fact of matter or a fact of thought and feeling, which does not come within the domain of science; that is, is not a proper subject on which man may attempt to observe, and to increase, rectify, and systematize his knowledge. And, however inimical and destructive science may be to theological systems which have appeared in the past, there are certain facts of relation between man and the universe which remain and are incontrovertible. These facts are the substratum of all religious thought, feeling, and institutions. To give a rational interpretation of them is to create the Science of Religion. But the facts exist before the Science, and do not depend upon it for validity. What the scientific mind does is to ascertain whether a given interpretation of the facts is in accord with the known "nature of things" or with "the constitution of nature" in general. If so, such interpretation may be rightly said to have a scientific basis.

WM. J. POTTER.

THE ORDER OF THE ARTS.

Strange that the word Art, which now suggests the names of Raphael and Brunelleschi, Shakspeare, Michelangelo, and Beethoven, is from a root which either means to plough or to put two things together! But there is no highest thing in all the range of civilization which has not had an origin as humble. Wherever there is the direction of energy to an end, be it the building of a fire or the building of a cathedral, so that the end inspires the action consciously, there is art. The most popular division of the infinite variety through which the arts of man have ranged is into the useful arts and the fine arts. It is valid enough, though it requires considerable qualification. Of the arts considered useful, the most humble can be fine. Are there not tonsorial artists? Did not George Herbert sing,—

"Who sweeps a room, as for thy laws,
Makes that and th' action fine?"

There are many useful arts that have a fine-art side. The useful arts in general are those by which men are sheltered, fed, and clothed. What one of them cannot take on an aspect ulterior to the immediate necessity? Witness our domestic architecture and domestic furniture, which would often be more useful if it were not so fine. Witness the caterer's appeal to the æsthetic eye. Witness the meeting of two ladies, one of whom has a new bonnet, and the other says: "What a horrid little fright it is! Do you suppose I could get one like it?" It may be doubted whether there is any art we now consider fine, which was not originally useful. Architecture has never lost its useful implication. Sculpture and painting were evidently language arts at first, their object not æsthetic, but to record events. The first poetry was a mnemonic artifice. It was easier to remember the rhythmic form. So, nowadays, we set geography to rhyme.

"Singapore, Singapore,
One and a third, a hundred and four."

There is one bit of latitude and longitude fixed in my memory forever. The origin of music was, no doubt, merely utilitarian. On the other hand, the fine arts are often useful: orators, when the orations of Demosthenes make men say not merely "What a fine oration!" but "Let us go and fight Philip"; music, when it sustains the soldier on the weary march or bears him on its tide into the surge of battle; poetry, when it

"Softlier on the spirit lies
Than tired eyelids upon tired eyes";

painting, when its archæological fidelity brings back to us the aspect of the past; sculpture, when it instructs the coming generations not only how our great men looked, but what intolerably ugly clothes they wore.

Distrusting very much my own ability in such a delicate matter, I fall back on Mr. Sidney Colvin, a writer upon art matters second to no other of our time. His definition of the Fine Arts is: those, among things done by men only because they like, whose results afford to many permanent and disinterested delight, and whose performance, calling for premeditated skill, is capable of regulation up to a certain point, but, that point passed, has secrets beyond the reach and a freedom beyond the restraint of rules. If this definition does not strike us at first as being sufficient or as being over-nice, I am persuaded that the more we think of it, the more we shall incline to absolute approval. But, the fine arts once defined, a new difficulty arises in determining which they are and their relative order and value. It is generally agreed that they are architecture, painting, sculpture, music, and poetry. These are the primary fine arts. The secondary are dramatic art and allied forms correlated with poetry; vocal and instrumental music correlated with music; drawing and painting from the round; and copying in the round correlated with sculpture. The secondary art of painting has an immense variety of forms,—engraving, woodcutting, lithography, etc.; and all architecture is a secondary art, where there is no wide departure from some previous development.

The most obvious omission in these classifications is that of prose composition and oratory. These are related to each other, I am obliged to think, as a primary and secondary art. If they are so, it would seem to follow that the standing of a primary art does not determine the standing of its secondary concomitant. I should not hesitate to accord to poetry the highest rank as a primary art. And yet I must consider oratory, which is secondary to prose composition, as a much higher art than the dramatic, which is secondary to poetry. Even Mr. Irving's acting of Louis XI. seems to me a very little thing in comparison with Mr. Gladstone's recent speech upon the Russian complication. To this, one may object that, in the case of Gladstone, the primary and secondary arts were both united in a single personality. Therefore, the final truth would seem to be that oratory is a composite speaking art, always uniting a primary and secondary aspect in the same individual. As such, its place among the arts is near the highest. What it lacks is persistency. It is for the hour. No report of it can reproduce the first impression or a thousandth part of it. To repeat the music of an organ out of church were easier than to report a great oration.

As for the five arts we commonly enumerate as fine, a better classification than any that should fix their relative values would be one that should distinguish their particular functions. And there is no single classification that is able to do this. They can be classified as speaking and as shaping arts, as imitative and non-imitative, as serviceable and non-serviceable. The shaping arts are architecture, sculpture, and painting. The speaking arts are poetry and music. This classification, which again is Mr. Colvin's, seems to be much superior to Mr. Ferguson's, in his *History of Architecture*. The imitative arts are painting, sculpture, and poetry. The non-imitative arts are architecture and music. The serviceable art *par excellence* is architecture, unless we declare with some that, in so far as it is serviceable, it is not an art. It is plain that architecture is, of all the fine

arts, most closely allied to the useful arts. It is clearly differentiated from all the other arts in this respect. It is very seldom art for art's sake.

Seizing upon a single point in any of the great arts and keeping every other out of sight, it is easy to make out a case for each in turn as the highest art of all. It is true of every one that it has its special advantages. As Mr. Hamerton has shown of the graphic arts, that even the feeblest of them can do one thing or another which is denied the greatest, so is it here. Painting and sculpture, especially, have the defects of their qualities. The directness and completeness of their imitations narrow their possible range. A thousand and ten thousand avenues are open to poetry that are closed to sculpture and painting. It has a million-fold suggestiveness beyond the limits of its imitative sphere. On these accounts and because of its persistency, I must place it in the foremost rank, and next to it prose composition. The *French Revolution* of Carlyle is the most epic production since *Paradise Lost*. A million epics like the *Henriade* of Voltaire, albeit in verse, would not be commensurate with it or with the *Decline and Fall* of Gibbon. Oratory might well dispute the second place with prose composition, were it not for its intrinsic evanescence. Music would come next in a hierarchy of my own construction. It can express no thought, however much may go to the construction of the score; but it can express and it can excite emotion as can no other art, oratory alone excepted. When it is married to the noblest words,—a rare occurrence,—the emotions born of such a union are almost intolerably sweet.

Next, painting, and, next, sculpture. The relations of these arts to poetry, once so confused, were declared by Lessing in his *Laocoon* so clearly that they can never be again confused. If architecture must bring up the rear, it is not as if there were not many a church and temple which excites more pleasurable emotions than any pictures or statues, except such as rank with the most beautiful of all.

Shall we finally declare that the only standards in these matters are subjective? For each, that art is highest which yields for him the most enjoyment. No, not the most, but the *highest*; and by this sign the subjective standard falls. We are sent back to discover which is the highest by objective standards.

JOHN W. CHADWICK.

CHRISTIANITY AND LEGISLATION.

I.

"The end of all political struggle," says Emerson, "is to establish morality as the basis of all legislation." It seems like a mere truism to say that, upon the whole, Christianity represents, and always has represented, the strongest moral impulses of its time; and, moreover, that the law is the code of practical rules in which the State enforces its views of right and wrong. Our legislation, then, should be the embodiment of Christian morality. That seems to follow directly. And yet it is not and it has not been, and we are not trying to make it so. That is the puzzling fact to which I am going to call attention, throwing upon it what light I can by a review of the effect which Christianity has had upon law in the past.

And, first, I must say a word of definition. Both the words "law" and "Christianity" are used in many meanings. By law, I mean the rules of conduct which are enforced by the State, excluding not only natural laws, but customs and instincts. By Christianity, I mean, in the same way, what actually was accepted as such at the times of which I shall speak, and not of what ought to have

been. For most of the purposes of common speech, it is better, no doubt, to use the name in a broader sense, and make it cover all righteousness, not only such of Christ's teachings as have been urged by the Church, but all the other truths that we believe he would have sanctioned, if he had sought to meet our modern needs.

That is a more unsectarian and more vivifying use of the word; but, for these historical researches, that is quite too vague. It would mix the whole subject up inextricably.

With every precaution, it is not easy to say just what part of legislation is due to our religion. It will not do to assume that every step of progress in Christian countries has been due to Christianity. This, evidently, is unreasonable; for many of them would have taken place any way. And it would be equally unreasonable to treat Christianity as a constant impediment, only powerful at *autos-da-fé*. The main line of distinction between those legal changes produced by Christianity and those not due to it must, I think, be drawn by selecting those alterations which the Church urged or educated public opinion to urge, as distinguished from the general tendencies of the time.

Since the birth of Christ, four great systems of legislation have taken a definite shape,—the Roman, the Mohammedan, the Feudal, and the Common Law.

The Roman law had, it is true, reached a considerable degree of development before Christianity became very influential. It had passed out of the barbarous condition, and become a business law, suited to regulate the rich commerce of the mistress of the world. Under the influence of luxury, the gentile system of groups of relatives and the patriarchal family system had both weakened, and a concentrated despotic government had become necessary to control her vast possessions. Still, great changes took place after the Christian era, both by way of development and by the incoming of the barbarian; and the code was not drawn up until some centuries after Constantine's conversion had made Christianity the State religion, so that there was room enough for interaction. Compared with other departments of Roman work, her law took an extraordinarily scientific and beautiful shape, because it was mainly the work of experts. The Romans did not share our *penchant* for going over the whole code every year or two. Their feeling was more akin to that of the Locrians, who made the proposer of a new law wait in the market place with a rope about his neck, so that speedy justice might be done him, if the law was rejected. A primitive nation always likes to keep to the customs of its forefathers, and Rome did. But she was helped out of this rut by the endeavor of her prætors to adapt her laws to her foreign dependencies through the fertile, philosophical fiction of an underlying law of nature common to all races; and they united with this the all-important principle of precedent, moving forward by extending to new cases the principles involved in prior decisions. The philosophy of Aristotle had a great influence upon Rome; and Stoicism had far more, the Stoical doctrine of a law of nature involving self-sacrifice and human brotherhood appealing to the Roman lawyers strongly. But the influence of Christianity upon them, previous to Constantine, was almost nothing. They looked upon the new religion with contempt. They were Romans, and felt a general repugnance to Oriental cults. They were aristocrats, and felt a special dislike to the humble character of the new zealots. Among the marked characteristics of the new faith were: doctrines of non-resistance, which would

have depleted her armies; community of property and refusal of interest on money, which would have arrested her trade; asceticism, which would have undermined her society; and humanitarianism, which would have destroyed the slavery upon which her system rested. Neither of these views of war or trade or society met with any sympathy in Roman lawyers. But the power of the new faith could not be neglected. Constantine adopted it; and, in the splendid outburst of enthusiasm that followed, the millennium seemed for a time at hand. When this had settled, it was found that it was Christianity, and not the Roman law, that had been altered by the union. The Church became autocratic in form; and, as her courts received State support, they adopted the Roman law as a basis. The opposition to war was abandoned speedily by the Church, and the measures adopted looked to strengthening her power and increasing her revenue. Her doctrine of celibacy came forward to increase the public dislike to marriage and parenthood, which emperor after emperor tried in vain to stem. For many generations, the family tie had been weakening under more luxurious customs. It had been singularly close in primitive Rome, when the family was a unit with the paterfamilias at the head, owning all the property, and clothed with the power of life and death. The institution had its savage side; but, as long as it kept its full vigor, there was no divorce. The population was kept up, simple ways of living prevailed, and despotism was prevented by the resistance of these powerful social units. Its decay, like that of the earlier organization upon the basis of blood relationship in the gens, had nothing to do with Christianity; but it brought free divorce and a long string of other evils, which the Church was quite powerless to arrest. The legislation increased against divorce, illegitimacy, infanticide, and those hideous forms of sensualism which nowadays we do not even name; but it was a dead letter, for the social disease grew fatal, the better class decayed, and the slave class grew. Charity increased, but it was a distinctly debauching influence in Rome, fostering the idle at the expense of the industrious, until all work was left to slaves; and slavery seemed incurable. Both Stoicism and Christianity opposed it, but neither had any very important effect, for, to the end of the empire, the marriage of a slave was impossible; his evidence was admitted only under torture, and he could be whipped to death by his master with impunity.

On certain minor points, the Church was successful. She increased the observance of religious holidays to a degree which would have been excessive, if it had applied to the working class. She diminished suicide. She put down the cruel sports in the arena, which exhausted the treasury and debauched the public with a fierce lust for blood, unknown to all but the Pomeroyes of modern civilization. But, on the other hand, she gratified the same cruel passion by persecuting for religious opinion, which was previously unknown. As the disease spread, the principle of human brotherhood disappeared from law. Sects massacred each other for trifling differences of opinion about the election of bishops or the light that shone from Calvary, and heresy was death. Simony prevailed; and the rule of clerical celibacy, which had come in soon after the establishment, brought a frightful train of vices, one of which was met in Italy by forbidding priests to visit unmarried women. The outburst of asceticism made the breaking of family ties so frequent and so vicious that laws were passed to restrict the separation; and further laws had

to be passed, regulating death-bed gifts to the Church. The period of the greatest extension of the Church was a period of legal decay. In spite of high hopes and noble aspirations, society fell to pieces from its vicious construction; and a period of the most hideous anarchy and debauchery ensued, in which law was forgotten and history stopped. And it must be acknowledged that Christianity, which had influenced Roman society greatly, both for good and evil, had left almost no mark on its law, which was to the end despotic, military, according no rights to strangers, encouraging marriage and divorce and money-making and slavery. The fatal defects of the Roman constitution Christianity had not corrected.

H. W. HOLLAND.

EDITORIAL NOTES.

BY B. F. U.

A NUMBER of valuable articles are crowded out this week, to make room for Dr. R. Heber Newton's eloquent paper on "The Religious Aspect of Socialism," which, although longer than is usually printed in *The Index*, we are confident our readers would not wish divided, but will, when they commence reading it, read through to the end.

MR. AND MRS. SCOVELL, formerly of Columbus, Kansas, have assumed editorial charge of the *Liberal*, published at Liberal, Mo. "In the new phase of editorial management of the *Liberal*," the number of June 11 says, "it will be the desire of those connected with the paper to represent the higher element of Rationalism in its columns; and we hope to receive sufficient encouragement to warrant us in the work to be done."

REV. E. P. POWELL, a "broad-gauge" minister, in a discourse given at Utica, N.Y., which we find printed in the *Olive Branch*, says: "The reformer of or against a book always was denounced as an enemy of the gods. He is to-day. But Robert Ingersoll is no more an atheist than Dr. Talmage. He has as many gods—that is, ideals—as the rest, and is a stout defender of them. The secret of his terrible lectures is that he is defending his gods. And he believes, as I believe, that his gods are better than those he tumbles down. . . . He is to be, above all, pitied who knows no saints less than five hundred years dead; and no God but one that he never sees, and whose voice is heard only in the conflict of warring preachers."

It gives the *Spiritual Offering* much satisfaction to be able to say: "The so-called exposés have, in almost every case, added to the popularity of the medium; for every noted medium has hundreds of friends ready to testify to the genuineness of his or her mediumship." This statement is quite correct. The exposure of mediums, however fraudulent their performances, usually adds to their reputation and their business. It does not disturb the faith of any considerable number who believe in the spiritual character of their doings, and helps advertise them among thousands of credulous people, who, but for the exposure, would never hear of them. By not a few, they come to be regarded as martyrs. We are not among those who regard all the phenomena of Spiritualism, so called, as either fraudulent or fanciful, or all mediums as dishonest; but, of those that are such beyond reasonable doubt, "the so-called exposés have, in almost every case, added to the popularity of the medium; for every noted medium has hundreds of friends ready to testify to the genuineness of his or her mediumship."

REV. GEORGE L. CHANEY, of Atlanta, Ga., in a discourse on "Unitarianism in the South," printed in the *Christian Register*, after saying that "Dr. Channing's sermons are more frequently called for and more gratefully acknowledged than any other publications of the association," and that "the word that lifted Boston, fifty years ago, out of its bondage to the letter and the institution, is the word which to-day is called to do the same uplifting and emancipating service at the South," adds:—

But I question if Channing himself could have stated his belief in terser or truer shape than one of these up-country Georgia farmers has put it: "I believe in one God, and no more. I hope for happiness beyond this life. I believe the equality of man. I believe that religious duties consist in doing justice, loving mercy, and endeavoring to make our fellow-creatures happy." "Therefore," he says, "my neighbors call me an infidel." (This is the usual name at the South for all who do not accept some conventional, evangelical creed.) But, says our Georgia Protestant, "My understanding is that an infidel is one who proposes to believe in a thing he does not believe." (Could there be a finer definition?) "Therefore," he shrewdly adds, "there are more infidels in the Church than out. They subscribe to a creed they do not believe, and one-half do not know what they do subscribe."

It is not strange that "one of these up-country Georgia farmers" is called an "infidel" by his neighbors. The man whose words he uses to express his religious belief has been characterized as an "infidel" by all the Christian sects, the Unitarians included, for nearly a century, and is so spoken of generally to-day, not only "at the South," but in the East and throughout Europe as well as America. The writings of men outside of and in advance of all the Churches, like Paine, have contributed to modify theological creeds wonderfully; and the more radical of the Unitarian ministers to-day occupy substantially the same position that Paine did a century ago, although able, of course, to trace and interpret religious systems in the light of historic and scientific knowledge which no writer possessed at that time. Would it not be well for the Unitarian Association to republish, or to obtain from Mr. Mendum of the *Investigator*, a cheap edition of the first part of *The Age of Reason*, and circulate it as the work of a heretofore unrecognized representative of Unitarianism?

"I BELIEVE in one God, and no more; and I hope for happiness beyond this life. I believe the equality of man; and I believe that religious duties consist in doing justice, loving mercy, and endeavoring to make our fellow-creatures happy. . . . I do not believe in the creed professed by the Jewish Church, by the Roman Church, by the Greek Church, by the Turkish Church, by the Protestant Church, nor by any church I know of. My own mind is my own church. . . . Infidelity does not consist in believing or in disbelieving: it consists in professing to believe what one does not believe. . . . Nothing that is here said can apply even with the most distant disrespect to the *real* character of Jesus Christ. He was a virtuous and amiable man. The morality that he preached and practised was of the most benevolent kind; and though similar systems of morality had been preached by Confucius and by some of the Greek philosophers many years before, by the Quakers since, and by good men in all ages, it has not been exceeded by any."—*The Age of Reason*.

In proportion as a man is brought into conjunction with heaven, the superior parts of faculties belonging to his mind are opened, he sees what insincerity and injustice are: and, in proportion as he sees them, they are capable of being removed from him; for it is impossible for any evil to be removed till after it was seen.—Swedenborg.

The Index.

BOSTON, JUNE 25, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms—Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

The Religious Aspect of Socialism.

A Paper read before the Free Religious Association at Parker Memorial Hall, Boston, May 29, 1885.

BY DR. R. HEBER NEWTON.

A more appropriate phrasing of my topic would, to most minds, be "The Irreligious Aspect of Socialism." The ordinary notion of Socialism is that of a revolt of fools and madmen against the order of society, a conspiracy against the sacred rights of property. If religion be the recognition of the bonds of a Divine Order and the obedience thereto, then to those who identify our existing human system with that Divine Order there would seem to be little of religion in the chaos which apparently opens before us in Socialism.

Socialism presents itself to many minds as the direct outgrowth of a decay of religion. Dr. Draper, in an article on "The Political Effect of the Decline of Faith," places it among the *sequelae* of unbelief: "What is it that has given birth to the Nihilist, the Communist, the Socialist? It is the total extinction of religious belief. With no spiritual prop to support them, no expectation of an hereafter in which the inequality of this life may be adjusted, angry at the cunningly devised net from which they have escaped, they have abandoned all hope of spiritual intervention in their behalf, and have undertaken to right their wrongs themselves."* In that remarkable book, *Underground Russia*, Stepiak inclines to the same conclusion: "Absolute atheism is the sole inheritance that has been preserved intact by the new generation, and I need scarcely point out how much advantage the modern revolutionary movement has derived from it."†

There can be no question that, as socialistic ideas spread, workingmen experience an aliena-

tion from the recognized forms of religion. Senator Blair, chairman of the Senate Committee on Labor and Education, told me that it was the almost uniform testimony of such representatives of the labor movement as came before his committee that the workingmen of this country were becoming increasingly estranged from the churches. This, I believe, is the conclusion of most of those who have studied the problem of the attitude of labor toward religion, in our own country or in other lands. There is even apparent, on the part of socialistically inclined workingmen, a positive antipathy toward every traditional form of religion. The more out-spoken representatives of the movement violently, and even blasphemously, repudiate all religious faith. One of the most radical of the socialistic papers of our country, in an article upon the "Fruits of the Belief in God," exclaims: "Religion, authority, and State are all carved out of the same piece of wood. To the devil with them all!"* The extreme wing of Socialism—that represented by Bakounine—gives utterance to similar delightful sentiments: "The old world must be destroyed. . . . The beginning of all those lies which have ground down this poor world in slavery is God."

It is not necessary for me to argue before this Association that such language does not prove any real anti-religiousness, or even any real irreligiousness; that it may simply signify a needlessly violent reaction from the false forms of religion, a shockingly coarse protest against the corruption and perversion of the faiths which it would sweep off the earth. There is oftentimes manifested in such language a feeling as of a suppressed bitterness toward a supposed friend that has proven faithless,—as when a certain socialist declared, "We are not atheists, we have simply done with God." The miseries and wrongs of the existing order appear, to those who suffer from them, to deny the reality of a Divine Providence; and the fading out from so many minds of the belief in immortality seems to rob them of the one hope of reward for the toils and privations of the life on earth. When Paradise looks to such sufferers like the hope of a future held forth to keep them patient under their present hopelessness, it is not wonderful that such a paper as the *San Francisco Truth* should cry out, "Heaven is a dream invented by robbers to distract the attention of the victims of their brigandage."† The very violence of the denunciations of religion may, then, simply prove the depth of feeling which has been outraged, the intensity of the loss which appears to have been sustained.

He who rightly gauges the depth of the religious nature in man will not believe it possible that any class of men can be experiencing an exhaustion of this sacred life. What seems to be such an exhaustion must to him appear simply as the winter that follows summer and autumn, only to make ready for another spring. This very movement which appears to have divorced itself so completely from religion, and to have arrayed itself so inimically toward that ancient spirit, is already manifesting the action of forces which are not distinguishable from the forces of the religious sentiment. Among the ignorant, this feeling takes some curious expressions. German workingmen, who had ceased to go to church, developed a generation ago a *cultus* of Lassalle; and a belief was for a while quite wide-spread that their great champion, who had lost his life in a duel, had died for them, and that he was to return again to save them. Among the more intelligent classes of labor, the old religious senti-

ment seems to be renewing its action in the passion of enthusiasm which inspires them as with the ardor of a new hope and a new faith.

The earlier forms of modern Socialism were very strikingly characterized by a religious spirit. There was a glow and fire of enthusiasm, a sweep and reach of imagination, a pure and lofty passion of idealism, in which none could fail to recognize the essential spirit of religion. Saint-Simon saw in his teaching the long-awaited-for realization of essential Christianity. His doctrines were to constitute "the New Christianity." One who visited the communistic organizations of Paris in 1850 would have found in many of their halls a picture of a sacred form labelled "Jesus Christ, the First Representative of the People." The little communistic societies which dot our own shores were mostly founded in a spirit of simple and devout piety. Whatever success has attended any of them, with one or two exceptions, has been due to the force of the religious inspiration working in them. The members of Brook Farm felt, as one of the community wrote, "a more exquisite pleasure in effort from the consciousness that we are laboring, not for personal ends, but for a holy principle."*

Even that Jacobin of Socialism, Proudhon, closed his *mémoire* on property with this noble invocation: "O God of liberty! God of equality! Thou God, who hast placed in my heart the sentiment of justice before my reason comprehended it, hear my ardent prayer! Thou hast formed my thought, thou hast directed my studies, thou hast separated my spirit from curiosity and my heart from attachment, in order that I should publish the truth before the master and the slave. I have spoken as thou hast given me the power and talent: it remains for thee to complete thy work. Thou knowest whether I may have sought my interest or glory. O God of liberty! may my memory perish, if humanity may but be free; if I may but see in my obscurity the people finally instructed, if noble instructors but enlighten it, if disinterested hearts but guide it! . . . Then the great and the small, the rich and the poor, will unite in one ineffable fraternity; and all together, chanting a new hymn, will re-erect thy altar, O God of liberty and equality!"†

The later forms of Socialism, whose origin is found in Germany, however lacking they may be in the conventional expressions of religion, are not without marks which betray the workings of the old force. The German is naturally religious; and, when that religiousness turns aside from ecclesiasticism, it does but breathe out secularism with a spirit not to be distinguished from religion. That spirit pours itself into art and philosophy, and gives us, in Beethoven or in Hegel, music and metaphysic which are intensely religious. It pours itself into social science, and gives us a socialism which, without knowing it, is fervently religious. Lassalle had all the fiery enthusiasm of a new crusader. He closed his famous lecture upon "The Workingman's Programme" with such a passage as this: "You are the rock on which the Church of the present is to be built. It is the lofty moral earnestness of this thought which must, with devouring exclusiveness, possess your spirits, fill your minds, and shape your whole lives, so as to make them worthy of it, conformable to it, and always related to it."‡ Even amid the horrors of Nihilism, which is at once a political revolt and a social revolution, there is a lurid light as of the kindling of those mystic forces which have so often burned, like the fire

upon Abraham's altar, in clouds of smoke, shaping dreadful visions.

In such self-abnegating enthusiasm there breathes the essential spirit of religion, however unconscious it may be of its own nature. That this enthusiasm may pass very rapidly into the consciousness of its own religiousness we may see strikingly illustrated in the remarkable work of Mr. Henry George. *Progress and Poverty* fairly glows throughout with the passionate conviction which the author thus expresses toward the close of the book: "It will be read by some who in their heart of hearts have taken the cross of a new Crusade."* This passion of justice has resolved itself in the author's soul into the newly kindled fires of religion. The book is a cry of the soul as much as an argument of the mind. That singular conclusion to a work on political economy, the chapter on Immortality, is a fitting end to a book which breathes throughout the aspiration of a noble nature after social righteousness. Those who know Mr. George personally, know the deep and genuine religiousness of the man, and are aided in interpreting the social movement, which he has so mightily quickened, from his personal experience, as he passes out from the traditional forms of the religious life, thinking that he has lost religion itself, only to find it once more awaiting him at the conclusion of his studies of social science, in the enthusiasm of humanity enkindled in his soul as the very love of God.

What, then, are the elements in Socialism gendering this passionate aspiration, which takes on the tones as of a new inspiration? We must needs define Socialism. Socialism is not to be identified with any special form which it assumes. Its essential idea is larger than any specific theory of a particular writer or than any platform of a local movement. It is not to be shut up to its French or German or Russian translation. It is more than the Phalansterianism of Fourier, the People's Banks of Proudhon, the Political Organization of Labor of Lassalle, the elaborate system of Political Economy shaped by Karl Marx, the Anarchism of Elise Reclus or Bakounine, the Communal Proprietorship of the land which is exercised by the Mir, the Land Naturalization of Henry George, or the State Ownership of the Means of Production of the German school. Each of these systems and theories and institutions forms a variety of the species Socialism, which in turn is a division of the genus Political Economy,—a very black and altogether heterodox member of the family, but still a legitimate scion of the stock.

What is there, then, that is found in these various forms of Socialism which is common to them all, which is therefore to be considered its essential idea? Speaking generally, it may be said that Socialism is the "ism" of a more social society, the "ism" which seeks an industrial order that shall be a real commonwealth, and which seeks that order rather through social action than through individual action; which finds the radical evil of our present system in its excessive development of individualism, and which proposes to correct that evil by the alternative of a larger mutualism; which would balance the unregulated action of free competition by some co-ordinating power, either from great industrial and trade associations or through such agencies from the State; which would ensphere private property within a vast body of common property, whether vested in huge co-operative societies or in the State itself; which would guard against the evils of our present system by holding the raw material of wealth, land, and the means of production of wealth, machinery,

* p. 499.

as the common property of the labor which is to create that wealth. Socialism is not anarchism, nor yet is it communism. It does not propose simply to overturn the existing order and let civilization lapse back again into chaos. It does not dream of unwinding the mainspring of society, individualism, and of abolishing private property. It believes, whether rightly or wrongly, that it is endeavoring to carry on the social organization higher, to hasten sorely needed developments of the historic progress of industry, to lead up our most imperfect system into more perfect forms, to master the anarchic disorders of the industrial world and to bring thereout a real order, to push forward the political revolution of the eighteenth century into the economic revolution of the nineteenth century, to crown the government of the people by the people and for the people in an ownership of the people by the people and for the people. The leaders of Socialism do not expect to find a speedy realization of these aims, though the rank and file of their followers may doubtless lose the time-perspective and look in the foreground for the scenes that really lie in the shadowy background of their alluring vision. Rodbertus allowed five hundred years for the realization of his ideas. Lassalle distinctly warned his followers against the illusion that the social revolution could be precipitated immaturely upon civilization. A sane Socialism expects to realize its dream only through the slow evolution of society. The co-operative State is to be the flower of the process of integration that is now going on in society; the government's necessitated co-ordination of the associative action which is developed voluntarily among the people on an increasingly large scale; the ultimate generalization from co-operative trade and industrial organizations; the body of public property growing around the public spirit fostered in the reign of "the Commons"; the republic which is to be a commonwealth governing itself.

In such a dream, whether it be an illusion or a true prophetic vision, we can readily enough discern the forces which are feeding this new and somewhat strange manifestation of the old religious spirit.

Socialism is thus seen to be a protest against the injustices of our existing system, an indignant repudiation of the sophisms which have been palmed off on men as exculpating the disorders that abound to-day, a cry of those who feel themselves oppressed and wronged for justice. It is not merely the private protest of individuals: it is the protest of a large class, whose members feel themselves drawn into a living fellowship as they rise to assert their common rights. The sense of fellowship is most real, even though the rights sought may be more or less unreal. In this new-found community, the political boundaries of the earth disappear, and men of mutually hostile nations and races find themselves bound in a solidarity of interests. This glowing sense of a common life sublimates all mere selfish instincts into a generous ardor, an unselfish devotion to a commanding cause. Nor is this new-found solidarity merely that of a class, however large. The cause of labor seems to these laborers, rightly or wrongly, the cause of humanity, the cause of civilization. To their eyes, the worst evils which are found among all classes of society are bred by the existing industrial order. To it, they attribute not only the characteristic vices and crimes of poverty, but the characteristic vices and crimes of wealth. All these evils they expect to disappear, one after another, as the industrial system is changed. It is thus no less glorious a vision than that of a perfected humanity which allures them on in aspiration and endeavor. It is no wonder

that such a vision calls forth the most ardent enthusiasm, the most entire self-abnegation.

Lecky tells us that "it is always extremely important to trace the direction in which the spirit of self-sacrifice is moving; for upon the intensity of that spirit depends the moral elevation of an age, and upon its course the religious future of the world."* He who is familiar with the thrilling examples of heroic self-abnegation, of complete self-sacrifice, which the annals of Nihilism record, will not wonder that Stepniak declares of the earlier period of this appalling revolt: "It rather resembled a religious movement, and had all the contagious and absorbing character of one. People not only sought to attain a distinct, practical object, but also to satisfy an inward sentiment of duty, an aspiration toward their own moral perfection."† He, indeed, thus characterized only the earlier period of Nihilism; but, in his own record of the continuance of these lofty impulses to enthusiastic self-sacrifice, we find that which compels us to question his characterization of the later Nihilist as having "no longer any religious feeling in his disposition." Stepniak writes concerning these men of whom we are accustomed to think as simply assassins: "Everything that is noble and sublime in human nature seems concentrated in these young men. Inflamed, subjugated by their grand idea, they wish to sacrifice not only for it their lives, their future, their position, but their very souls."‡ He gives us a graphic picture of the millionaire Demetrius Lisogub passing to his execution: "At last, he could satisfy his ardent desire to sacrifice himself for his cause. It was perhaps the happiest moment of his unhappy life."§ He tells us how, before the heroism of these monsters, as we think them, the cry was wrung from unsympathetic witnesses, "They are saints!" In the sight of such scenes, we recall those other words of Lecky: "The very men who would once have been conspicuous saints are now conspicuous revolutionists; for, while their heroism and disinterestedness are their own, the direction these qualities take is determined by the pressure of the age."||

In seriously setting itself to correct the disorders of the earth, Socialism affirms its faith in the reality of a true order, and in the possibility of realizing it. He who struggles deliberately against a wrong declares therein his conviction that it can be righted; he who tries to transform a chaos confesses that he believes in a cosmos. If it be impossible to establish an order upon earth, why should one essay the thankless task of grappling with the disorders of earth? However little consciousness of the fact there may be in the breasts of Socialists, their fundamental conviction—a conviction which is unquestioningly held, which is expressed in childlike simplicity of confidence, a faith which literally removes mountains—is none other than the ancient belief in God. Mr. Mill characterized the socialists as having "moral conceptions in many respects far ahead of the existing arrangements of society."¶ They have caught sight of the ideal social order. Its beauty has inflamed their souls. Its splendors have dazzled their eyes, until they no longer can see some hard, prosaic facts of earth. In shirt-sleeved Jack and barefoot Tom there glows the vision which was in the soul of a Plato. The best exposition of German Socialism in the English tongue, *The Co-operative Commonwealth*, by Laurence Gronlund, strikingly illustrates this characteristic of the move-

ment. It is in reality almost as ideal a sketch as the Utopia of Sir Thomas More; yet it is seriously written as an outline of the actual changes which are to result shortly, through the transfer of the ownership of the means of production from a few hands to many hands. With a pathetic simplicity of faith, the author expects the regeneration of all things, the transformation of human nature itself, to follow an economic rearrangement of society which, though greater in degree, is not different in kind from the rearrangements which have been gradually taking place through several centuries,—not indeed without substantial benefits to mankind, but without dispossessing the old Adam from the race. When surplus profits are done away and labor owns its tools, the millennium is to open! One who desires such a change in industry and who believes that it is coming, surely though slowly, cannot but sigh, while he smiles, at this invincible belief of the human soul in “the good time coming,”—always just round the corner. We can all readily enough see through the illusion of Socialism, but we must none the less allow for the full force of the illusion when cherished as a faith. Illusions have had far more power over man than facts. They have sustained men in efforts on which they would not have ventured, but for this kindly craft of Mother Nature. Illusions are the guides to revolution. The force of this particular illusion of Socialism is nothing less than the power of the mightiest aspiration, the most irrepressible hunger which has ever stirred in the human soul. It is the very force which fired the soul of the Hebrew prophets, which fashioned the vision of the great unknown who wrote the Revelation of St. John the divine, which opened before the soul of Augustine the city of God, which breathes in the peaceful war song of the Societies for Ethical Culture, “The City of Light,”—the passion of human nature for justice, the longing of the soul of man after the ideal order.

We have thus reached a point where we can see another phase of the religious features of Socialism. It is not alone wage-workers, nor those who would own themselves socialists, who are feeling the forces of the new enthusiasm which is rising in this movement as the ground swell of a mighty ocean. Men in all callings, men who would disavow any affiliation with Socialism, sympathize more or less strongly with this movement, and are conscious themselves of the glow of a new and holy passion in the ardor wherewith they espouse the cause of social reform. The fathers of Socialism have been men who had nothing to gain through it. Owen was a rich manufacturer. Lassalle was a luxurious German gentleman, whose brilliant opportunities promised him, even when he was “das Wunderkind,” a distinguished career. Karl Marx was of a family whose social standing was excellent in Germany, and life opened to him fine political prospects. Elise Reclus is a famous *savant*. The leading spirits of Nihilism are men and women of rank and wealth. In every land in which Socialism is working upward through the lower social strata, from the upper crust of society there is a motion toward it, though often unconscious of its aim. Along every line of life, men of high power and character are being resistlessly drawn into the currents of this social movement. Ruskin has for many years been preaching a thorough-going Socialism with the fire of a new faith. Carlyle was the prophet of this Titanic upheaval. Matthew Arnold is uttering, in his aristocratic manner, the most unaristocratic sentiments concerning our present civilization. William Morris, painter and poet and manufacturer, has thrown himself heart and soul into Socialism, and is lecturing to the West End on the redemption of art

through an industrial reorganization, while he is spreading through the East End leaflets containing his impassioned Chants of the Revolution, and is preaching in his shirt-sleeves to gatherings of hard-fisted artisans the gospel of Labor. Alfred Russell Wallace leads the movement in England for the nationalization of land. Renan, whose calm superiority to all illusions allows of no such folly as enthusiasm, evidently looks forward through the winding up of the era of individualism to an era wherein some life in common may be possible upon our earth. He writes:—

The Psalm, “Behold how good and joyful a thing it is for brethren to dwell in unity,” has ceased to be ours. But, when modern individualism has borne its last fruits; when humanity, dwarfed, dismal, impulsive, shall return to great institutions and strong discipline; when our paltry shopkeeping society—I say, rather, when our world of pygmies—shall have been driven out with scourges by the heroic and idealistic portion of humanity,—then life in common will be realized again.*

These men are not simply puzzling exceptions among mankind. Their tendencies are more than the erratic movements of genius. Back of these illustrious figures there is a large following of men who are pressing on after them, in line with the social movement,—men who have come under the spell of this new enthusiasm, whether it be a good spell or a most bad spell. A magazine in London, of a very radical character, is edited by young Oxford men. Practical men, men of affairs, millionnaires, are avowing their sympathy with this movement. Only the other evening, in New York, one of our first citizens gave the inaugural address before a newly formed institute of social science, whose principles were so radical as to win the hearty applause of leaders of labor organizations who had come in a spirit of captious criticism. And this lecture was pervaded by a lofty spirit of enthusiasm, by a noble idealism, whose religious fervor was unmistakable. Next week, in a Western university, an oration is to be given by one of the foremost men of the Republican party, in which, with clear, strong thought and with frank, out-spoken words, the Industrial Problem will be discussed in a way which is likely to furnish food for thought to politicians and the press. The speaker, himself a successful man of affairs, told me lately how his study of the social problem had drawn him to the conclusion that there was but one solution of it, that which is known as Christian Socialism,—which is to say, the spirit of Brotherhood and of Justice, the Law of the Golden Rule.

“Amateur economists,” some one will say, “all of them; sentimental tyros in a science whose masters know no such pretty dreams!” Well, precisely the most surprising aspect of this trend, which is making itself felt through all cultivated circles, is the fact that political economy is pouring a very perceptible and steadily rising current of thought into this stream of tendency. No conservative priest could feel more aghast at some of the utterances of your Association than many learned professors must do at the wild radicalism that is broached in the sacred name of political economy. John Stuart Mill’s posthumous chapters on “Socialism” showed clearly, that which his great work had hinted, that this set of our age was strongly working in him. Cairnes has avowed his sympathy with the general aim of Socialism as an ideal. Thornton long ago planted himself squarely on the side of Labor in its contest with Capital. Thorold Rogers, from his chair in aristocratic Oxford, unmistakably reveals his profound interest in the essential principles of the movement, challeng-

* Quoted in the *Christian Socialist*, October, 1883.

ing the very axioms of the Manchester school, and denouncing the present state of things most roundly. Even Fawcett—heroic struggler with a cruel fate—forgot his own book when he became the head of the postal department, and managed that department as though the function of the State was not to do as little as possible, but to do all that was necessary for the welfare of the people, as fanatics had taught. On the Continent, the socialists of the chair have been, for well nigh a generation, inculcating the general aims of Socialism and instilling its essential principles. Even now Laveleye is engaged in an interesting tussle with Herbert Spencer over the question whether the socialistic idea of the State involves the slavery or the freedom of mankind. In Germany, the school which is coming to the forefront in political economy has so far lapsed from orthodoxy as to draw upon it that last crowning argument of scorn from all professors who are “sound in the faith,” with which it is disposed of forever in the crushing sentence, “Sentimentalism!” Such men as Schäffle and Wagner are not likely, however, to be silenced thus summarily. These masters are finding no less influential a pupil than Bismarck, who is already reducing some of their theories to practice in an astonishing manner. From Johns Hopkins University, an able disciple of the new school is turning his attention to the study of Socialism in a fashion which shows plainly enough the working of this new spirit. The change in political economy is nothing less than a revolution. The time has come when Sissy Jupe would not need to tremble over her stupid mistake as to the thundering question, What is the first principle of political economy? She should answer again, “To do unto others as ye would they should do to you.”

The careful observer need not then be surprised at noting the further fact that the fresh religious forces of our age are rekindling the enthusiasm of social regeneration as a sacred passion. This is notably the case within the lines of Orthodoxy. Mr. Rae has clearly pictured this trend of life in the Catholic Church upon the Continent. I have seen lately letters from prominent prelates of Ireland, which show them in complete sympathy with the anti-rent agitation of that country. It need surprise no one who has watched the developments now going on within this mighty Church, and who knows the sagacity with which it has generally met great crises, to see it step to the forefront of the social movement, and avow itself the champion of the people. A similar movement is quietly going on within Continental Protestantism. In England, the sympathy of a large section of the National Church is very strongly with the efforts at social reform; and an earnest fraction is heartily working for the social revolution. A generation ago, Maurice and Kingsley threw themselves into the uprising of labor, and called themselves “Christian Socialists.” They led off in the co-operative movement, imparting to it a religious spirit which it has never thoroughly outgrown, which breathes still strongly in men like Thomas Hughes and Vansittart Neale. “There is no fraternity,” said Maurice, “without a common father.” Within a half decade, in the land where Socialism was deemed an impossibility, a serious socialistic movement has developed; and, running parallel with its rapid spread among the working classes of England, there has been an equally remarkable change among the cultivated classes. The old name of the *Christian Socialist* reappears upon a little paper which avows the principles of Karl Marx. The *Church Reformer* agitates nearly as thorough-going measures in the name of the English Church. Mr. George told me that, during his late tours through Great Britain, he attended

many large meetings of clergymen of the Established Church, which were full of enthusiasm concerning his book. In more than one instance, ritualistic clergymen are known to be in the habit of gathering classes of workingmen on Sunday evenings, in order to expound to them the principles of *Progress and Poverty*.

The Protestant Episcopal Church of this country manifests less radical, but no less earnest tendencies in the direction of social reform. At a congress of that Church held four years ago, very out-spoken opinions were met most cordially; and, in the last congress at Detroit, stirring appeals to the Church to champion the wrongs of labor were received with profound feeling, so that, as a result of the congress, in that city there has been a perceptible drawing of the workingmen toward this supposed aristocratic Church. In the city of New York, next fall, most of the leading churches of that denomination are to unite in a series of parish services, having as one of their chief aims the awakening of public interest and the education of public opinion upon the responsibility of capital toward labor.

The same movement shows itself in other churches. The *Christian Union* has had lately a series of very remarkable editorials, presenting an impassioned indictment of our present industrial system, prophesying a social revolution, and with the fire of a holy enthusiasm appealing to the Christian Church to lead this revolution into peaceful success. The new theology is unmistakably making in the direction of Christian Socialism.

We thus seem to be at the meeting of the waters, the movement from below and the movement from above uniting in a current which is setting in the direction of Socialism, and which is speeding forward with the rush and sweep of a religious enthusiasm. That pregnant word of Mazzini finds a remarkable realization,—“Every political question is rapidly becoming a social question, and every social question is as rapidly becoming a religious question.”

II.

Had this stream of tendency come now for the first time to the surface of society, we might well suspect the depth of the springs from whence it issues, the force of the current which it is setting in motion. It is, however, a very ancient trend of thought and feeling. When we go below the surface of history, we find, in the far back past, these same springs welling up as from the deep heart of religion, a stream which has always set in this direction. In every new creative period of religion, we discover a movement similar to that which we observe in society to-day. Let us take a bird's-eye view of some of the leading epochs of religion, especially of such as have had a place in the line of progress up through which our own historic evolution has proceeded.

Outside of Christianity and Judaism, this phenomenon shows itself. When Buddhism arose in India, society had stereotyped, under Brahmanical influences, into hard, rigid castes. The high-born Brahmin held himself aloof with proud superiority from all other castes, while he looked down upon the Sudra with a scorn and contempt which is hard even for us to realize, which it is impossible for us to feel toward any human being. No human relationship could be open between the son of heaven and the accursed children of earth. Their very touch was pollution. The poor Sudra, thus humiliated before the spiritual Brahmin, was ground into the dust by the temporal Powers. The courts of the Rajahs swallowed up most of his hard-earned profits of farming, and the merciless

rack-renting of the Zemindars completed the solution of the problem. On how little can the peasant live? The customary daily wage of the laborer was then, as it is now, an incredibly small pittance, a day's wage of a skilled artisan here representing well-nigh a month's pay of the human beast of burden in India. So nigh to starvation did the mass of men live that every few years a famine would sweep them off like flies before an autumnal frost.

Amid such an inhuman society arose the saintly Buddha; and, when through terrible struggles he won the secret of peace himself, he turned to breathe it upon his brothers of India. It proved not only a gospel for the individual soul, but a gospel for society. The mighty tide of religious life which, drawn by his great soul, rose over India, swamped for a while the abhorrent social castes, and mingled all men in a common Brotherhood, in which there was neither Brahmin nor Sudra, high nor low caste, but Humanity was all and in all. Around the holy Master gathered a vast order, a true Brotherhood, in which, renouncing all earthly possessions, men gave themselves up to the service of mankind, and “had all things common.” Wherever these holy brothers went, they carried a gospel of humanity which lifted the poorest to the level of the prince and the pariah to the side of the twice-born son of the skies; while it seated on the throne of the Rajahs, for a while at least, the august form of justice.

We miss the clew to the original Buddhism, unless we keep in mind the fact that it was not only a spiritual revival, but a social enthusiasm.

Turn now to the more familiar story of the great prophetic reformation of Israel. It was a revival of personal religion, which breathed at once a new enthusiasm of social justice, and bodied itself later on in economic institutions of a most radical kind.

When the great prophets arose, the civilization of Israel had already passed through the stages of development common to all early human societies. The earlier Hebrews had been communists. The household, the local community, the tribe, held pastures and fields and woods as the property of the family, the village, the clan. Each separate family received its due share of the soil for cultivation in annual or other periodic distributions, after which all land lapsed back to the commune for redistribution. Such an economic state of society produced its natural good and evil results. Life was simple, peaceful, brotherly. There was no poverty and no strife. But there was also no development. One generation remained pretty much where its predecessor had been. There was no room for individualism, the force of progress. Man was contented and stupid, virtuous and uninteresting. Nature, which works the growth of man even through moral evil, began the usual process by which ambition, selfishness, and greed gradually broke up this primitive communism in ways we can well enough understand, if we choose to study the enclosure of the ancient common lands of England by her nobility, and the gobbling up of the people's land by great corporations in our own country. By the time of Isaiah and Micah, the whole face of early Hebrew society had changed. Land had passed into private property. The free and sturdy yeomanry of ancient Israel had been dispossessed from their homesteads, which had been run together into big estates or turned into sheep-walks. They had thus come to be tenants under landlords instead of being independent peasant proprietors. They had gradually deposited, at the bottom of society, the sediments of their class, a stratum of lawless, helpless, shiftless people, a veritable proletariat. Powerful barons had arisen, lordling it in a high-handed manner on their big estates; while great traders had amassed in the

cities huge fortunes, of which the mass of the people got the crumbs which fell from their tables. In the midst of this state of things, with its oppression of the mass of mankind, the great prophets arose to revive religion by touching the conscience and by opening the senses of the soul to the eternal realities. They were “men of the spirit,” who, out of their profound inward experiences, came forward, preaching a spiritual gospel to the worshippers before the “bloody shambles” of the Hebrew heathenism. They were men of mind, who felt the forces of the intellectual renaissance opening upon Israel, the forces of the mental awakening which led to the development of Hebrew literature; and they brought to the birth a new thought of God, and opened the age of reason in religion. But they were also, for the most part, men of the people, who felt the undercurrents of social dissatisfaction, whose hearts heaved in sympathy with the unrest of the poor, whose moral natures revolted against the thoughtlessness and greed of the talent and wealth and power of the nation. Upon these conscious or unconscious oppressors of the people, they poured out the vials of their righteous indignation, in words too familiar to need repeating.

Their spirit of enthusiasm for humanity breathed itself into the better natures of the nation, and charged the reformed religion which they awakened. When this Reformed Religion came into power as the established religion of Israel under Josiah, it sought to bring in many changes looking toward the correction of the exaggerated individualism of society, as we see in the confession of faith which it then put forth,—the Book of Deuteronomy. When, much later on, the Reformed Religion, elaborately organized into an ecclesiastical institution, fell heir to the Hebrew State, whose independence was lost in the overthrow of Judah by the Babylonian Empire, it developed the most remarkable social legislation of which we have any record in history. That legislation was a genuine socialism. It naturalized the land of Israel, and vested the title in Jehovah. Leases ran for fifty years, when they were all to revert to the State, to be by it reissued. Interest, as intrinsically unethical and unbrotherly and as always tending to reduce the debtor class to slavery, was prohibited by law. All debtors were in the same jubilee year to pass through an act of bankruptcy; and those who had, according to the ancient custom, fallen into bondage by debt were to go forth free men.

By such sweeping measures, bodied in laws and institution, did the Reform Religion of Israel seek radically to guard against any monopoly of land and any tyranny of capital, and thus to emancipate and ennoble labor. Whether this remarkable legislation was ever carried into operation or whether it was ignored by the nation, it shows very strikingly the socialistic character of Hebrew Prophetism.

After this somewhat full outline of the Hebrew Religious Socialism, it is unnecessary to do more than point out briefly the similar character of original Christianity. As a scion of Judaism, it must needs have followed in the footsteps of its parent. We miss the secret of original Christianity, if we do not find back of that mighty spiritual revival as mighty a social aspiration. We have perhaps suspected the truth before our day; but we are now getting light—as yet dim enough, however—upon the inner character of this social movement which was aroused by the preaching of the gospel of the kingdom of God.

Christianity arose in an age when the mass of men led a wretched life. In Rome, the encroachment of the patricians upon the ancient common

lands of the State had broken up the old free farm life of Italy; while the steady growth of vast landed estates had, in their turn, destroyed the prosperity of the tenant farmers and revolutionized the social system. Crowds of dispossessed peasants flocked to the imperial city to swell the vast host that bade against each other in the labor market, and to become more dependent and helpless with each new generation. So great had become the pauperism of Rome that, to keep the vast host of discontented from open outbreak, a system of State alms on a gigantic scale had grown up. Slave labor was introduced upon the farms of Italy in place of the old free labor; and slaves from every country under heaven filled the palaces of Rome,—the absolute chattels of their patrician lords, whose heads might be forfeit for the breaking of a dish, who might be thrown into the fishpond in the garden court to feed the carps, if they chanced to wait upon their mistresses awkwardly. Throughout the Empire, the state of things was quite as bad in other ways. The Provinces were used by Rome, mainly, as so many feeders of the patrician coffers. The subject-peoples were taxed unmercifully, exhaustingly. Their revenues were farmed out to court favorites and influential politicians; and every agent in the long line, from the Emperor down, having his own special profits to look after, had his own private extortion to add to the official tariff. The industry of the Empire was prostrated, its poor were plunged in debt.

In Judea, it was as elsewhere. The demands of the Roman State were heavy. The Emperor had his private levies. Every procurator felt that his fortune had to be made quickly before his office should be lost. Herod the Great had carried out a gigantic series of so-called improvements at enormous cost, and his court was lavish in the extreme. Each war—and there was war all the time somewhere—laid its extortionate tax upon the people. The land-tax alone equalled one-tenth of the corn. There were also extra imposts when scarcity prevailed, and tolls on bridges and roads and markets. All these taxes were farmed out, yielding huge profits to their collectors. As a consequence, the poor staggered under crushing burdens. These economic conditions of society have to be taken into consideration in trying to understand the attitude of Jesus toward the civilization of his day. Such oppressions must have aroused his keenest sympathies. That they did so is evident from the gospel records. Making all needed allowance for the Essenist tendencies of the Gospel which bears the name of Luke, the fact remains that Jesus followed in the line of "the goodly fellowship of the prophets" in their socialistic tendencies. The general tone of his teachings upon this point is unmistakable. His life confirmed his words, as he established a little peripatetic communism among his disciples. Prince of idealists as he was, he taught the principles of the unworldly, unselfish life in common, and exemplified their practice, never pausing to care about their applicability to the average man in the existing stage of social development. He felt that it was for him to embody the human ideal, and leave it to work slowly through the ages. The folly of translating an ideal into a law, ethical principles into an economic scheme, was not his mistake, but that of his followers.

The inspiration of such a life naturally stirred the social aspiration, which for a brief moment triumphed over every lower force, and created that joyous life of the first Christian community, a religious socialism, where "all that believed had all things common."

In that waking dream, we see the natural expression of the social spirit of the new religion.

If we ever find access to the buried records of original Christianity, there is little doubt that we shall come upon traces of many such Christian communities, embodying a religious socialism,—that is, a socialism not of theory, but of brotherly impulse. One secret of the rapid spread of Christianity lay in this character of the new religion. The oppressed free laborer and the dishonored slave laborer of the Empire were alike restless and discontented. Aspirations that found no vent heaved the souls of myriads of men. Secretly, with fear and trembling, under cover of the night, in out-of-the-way places, in cellars and catacombs, these oppressed and despairing men came together, as by instinct, seeking the fellowship of societies and orders, in which they should feel themselves brother-men, out of which they should draw present help and hope of future redress. Secret brotherhoods sprang up as by magic through the Empire, forming burial-clubs, securing some simple mutual assurance, celebrating a common meal,—world-old symbol of the life in common. Amid this yeasty mass of social aspiration, the ideas and ideals of Christianity entered, with quick and astonishing results. In those strange subterranean gatherings was whispered the good news told by certain Jews of one Christus, a carpenter's son, a Son of God, who had taught men to live as brothers,—the children of one good and gracious All-Father, sharing with one another his bountiful gifts,—and had bidden them to prepare for the speedy coming down upon the weary earth of the kingdom of heaven. A Brotherhood of the All-Father, knowing no want in the community wherein the rich shared their wealth with the poor,—this was the secret good news which, below the surface, shot electric thrills throughout a suffering world. Into these Brotherhoods flocked the slave and the poor freeman, the outcast and the oppressed, everywhere. The ancient vision of "a good time coming," a millennium of peace, prosperity, and plenty opened from the clouds over earth. The city of God hung low above the wretched Roman world, as though coming down out of the skies at last.

The taunt of the cultured classes of Pagan Rome is explained to us. Christianity was the social aspiration raised by the leaven of the gospel of the kingdom of God at hand, a socialism whose inspiration was religion. We have forgotten the origin of our own Christianity, which, winning success, became the Church of the wealthy and the noble, and buried behind it the records of its own obscure birth.

Were there time, I might trace the working of this religio-socialistic tendency through the after periods of Christianity,—in the monasticisms of the Middle Ages, in the societies and orders that rose through Europe with the first stirrings of the new spirit which was awakening to the Reformation,—one and all seeking to embody a life in common. I might trace, along each line of the Reformation period, the inevitable tendency of the new religious forces into a new social movement. Our late studies of Wiclif and Luther must have cleared before our eyes the fact of a convergence of religious and social forces in England and in Germany five hundred and three hundred years ago, similar to that which we are now witnessing in our own age. Lollardism and Protestantism found a social revolution progressing, and from natural sympathy drew into the currents of those movements, feeding their forces with the fervor of religious enthusiasm.

From the age of the Hebrew Prophets down to our own day, every fresh creative period in the evolution of religion has witnessed a renewed action of the social forces toward a better and

nobler order. Every revival and renaissance has tended to a reformation or a revolution. "And all have failed," coolly observes the sarcastic practical man. "Yes," I reply, "as the rash blossoms fail when tempted out in April by some summer days; proving thereby not that they were no prophets of the autumn's fruitage, but only that they were in too much of a hurry." The ideal is to be approached only through slow, successive steps. We cannot leap into the good time coming. The kingdom of heaven is not to be precipitated upon a worldly society. Civilization must ripen gradually into the sweetness of a Brotherhood. We cannot force Nature's seasons. Society is a growth, and only through patient evolution can an order be outworked in which kings shall reign in righteousness and princes decree equity; in which truly free peoples shall lift to the throne of earth the holy form of Justice. One and all, these revolutions came to naught or but reached to partial reforms, and so they failed; but, renewing themselves again and again, they have surely taught us to see in them true efforts of human nature, and to recognize back of them, in the deep life of man out of which they have sprung, the resistless impulse which is none other than the will of God, sure one day of success. Under crude forms, the soul of man was dreaming a true dream; through mistaken methods, it was seeking a real ideal. The kingdom of God is not an illusion, but the Divine Order slowly coming forth upon our human society. The aspiration for it is none other than the deepest inspiration of religion. Religion does indeed lay its foundations, deep and firm, in a scientific basis: it towers also into a high and noble social ideal, toward which its life must forever strain as the plant strains toward its flower.

III.

Again that prophetic word of Mazzini rings in our ears, as repeated through the lips of Renan,— "The political problem is, in our own time, inseparable from the social problem; and the social problem is a religious one."* The historic tendency of the social aspiration to kindle into a religion is flaming forth once more with an intensity never known before, at the very moment when the historic tendency of the fresh, free forces of religion toward the social ideal is reasserting itself with an unprecedented emphasis. The social movement which is now mounting into a tidal wave of reform or of revolution, according as it finds yielding channels or resisting dikes, is the cresting of a billowy agitation which has been long gathering force in the "vast deep" of humanity. The political movement in the last century burst the barriers which had through ages restrained and repressed the social agitation. Labor now has in our land the political freedom and power which are the essential conditions of a successful struggle for economic improvement and for social elevation. The scientific transformation of industry and trade has precipitated upon our generation the inevitable crisis that might otherwise have been much longer delayed. The greatest economic reconstruction and the most important social uplifting which the world has yet experienced are unquestionably now preparing. The Fourth Estate is coming into power. Our institutions will have to readjust themselves to the change.

Our age is also the period in which the river of the water of life is at length finding its natural outlet from the artificial channels which antiquity dug for it, and is seeking to spread itself over into the broad fields of the secular life as the fertilizing, purifying, reconstructing force under which

* Preface to *Life of Jesus*.

the desert is to blossom as the rose. Religion must find some sphere of action for its forces. So mighty a power cannot be inactive. In the realm of thought, religion has overflowed the dikes of Biblical revelation, and no longer narrows itself to speculations upon the contents of a book. It pours itself into the revelation of nature, and busies itself with the contents of creation. Religious thought is found to-day wherever truth is learned, and, being learned, leads man upon his knees in worship of the Infinite Power and Wisdom. In the sphere of action, religion is no longer shut up within the narrow confines of an ecclesiastical kingdom of God. With the falling away of those ancient walls which separated the Church from the State, religion pours itself into secular affairs, flooding them with fresh inspirations, tiding through every sluggish current the aspiration after the divine ideal of politics and industry. The spirit which of old moved upon the face of the waters is once more brooding over chaos, to bring forth a beautiful order. This action of religion is to be seen now wherever honest and earnest effort is being made to lift the life of the brute-man into the life of the spirit-man; to rank the forces of the flesh by the forces of the soul; to bring economics under the authority of ethics; to reveal above the natural laws ruling in the Market the spiritual laws of the Mount; to lead competition on into co-operation; to conclude the long strife of capital and labor in the peace of industrial partnership; and to end the irresponsible tyrannies of the reign of Supply and Demand in the sovereignty of conscience.

The inspiration to this transformation of society is the mission of religion. What a grave and weighty task! How delicate and difficult a mission! On the one hand, this labor is clogged and thwarted by the mighty *vis inertiae* of civilization. Traditional notions, conventional theories, social prejudices, vested interests, sacred rights of property,—these well-nigh omnipotent forces of society form an unholy alliance, and array themselves against such a transformation. The institutions of religion are maintained by the very classes whose interests are identified with the existing order. How great the danger that the prophet's lips may be silenced by the hand of the priest before the altar! The sincerest minds, under such circumstances, cannot fail of being more or less affected in their judgments quite unconsciously. Religion may in good faith encourage an unjust conservatism, and thus abet wrongs and endanger its own hold upon the heir to the throne, now coming of age, and already none too well disposed toward the spiritual power. Here is the opportunity for that free religion which in the past of our country proved ready to speak forth the unpopular word when the churches were timorously silent, and which may once more fulfil its prophetic function, and rouse the priesthood of our land to the duty pressing upon it. But, if the prophet would call the priest up to this task, he must be in a hurry, or he may find his slow-going brother already wide awake and at his work.

On the other hand, there is at least an equal danger for religion in the opposite direction. From the fact that religion has such natural sympathy with the social movement, and that its own forces of enthusiasm and aspiration are the very forces which are unconsciously working in Socialism,—from this fact it is in danger of losing itself in this movement, of being lifted off its feet and carried away by the popular current instead of keeping its poise and aiding to guide the seething waters into the channels where they may prove a blessing and not a blight, enriching civilization rather than impoverishing it, becoming a system

of irrigation in place of a freshet. It does not follow that, because the aspirations of Socialism are high, its theories must be sound; that, because its aim is noble, its methods cannot but be wise; that, because its ideal is true, its schemes for realizing that ideal are practicable. It was the noblest of our idealists who reminded us that the inspired man may be "the fool of ideas." Inspired fools,—ah! we may well kneel before them in reverence, but we may not follow them unquestioningly in practical affairs. Even inspiration has its dangers. The head must be kept level while the soul glows. Of the highest prophet it is ever true:—

"The spirit of the Lord shall rest upon him,
The spirit of *wisdom* and *understanding*,
The spirit of *counsel* and *might*,
The spirit of *knowledge* and of the fear of the Lord."

The ever-recurring problem is how to surrender one's self to the ideal, with childlike trust in its reality, and yet not let one's self be made "the fool of ideas"; how to be obedient to the heavenly vision, and yet preserve the cool judgment and the calm wisdom of the practical man who will not run after the pot of gold at the foot of the rainbow. History leaves us in no doubt that the finest enthusiasms and the noblest aspirations may work mischief in society, if they lack the guidance of practical wisdom. Even conscience must not take the bit in its teeth and plunge ahead blindly. Simply to go ahead in the right direction too fast is to derail progress and block the road with the debris of ruined hopes, even if a frightful catastrophe be escaped. Nature moves slowly, one step at a time. When there is an eruption such as the French Revolution, it always means that there has been some enforced arrest of progress, some stoppage of the natural outlet of the volcanic forces of society. It is only the ice blockade which makes the mountain gorge a source of danger. The secret of safety is steady motion.

As of old, in pathetic reiteration, so again the social movement may wreck itself, if it is in too much of a hurry, if it mistakes an ideal for a reform bill, if it loses the time-perspective and rushes ahead to reach the millennium in a spurt. Its sense of high inspiration must not cause it to spurn the cold counsels of science. Though its eye be on the heavenly vision, let its ear be open to the voice of experience; and, while its head fronts the skies, let its feet keep hard hold of the solid earth.

With you, I rejoice to believe that man is rapidly moving forward into a truly free religion,—a religion whose energies are being quite fast enough emancipated from the tasks of building card-houses of dogma only to be knocked over as soon as builded, and of constructing sheep-folds which, far from keeping the flocks from getting mixed, only prompt them to jump the fences; a religion whose thought is to be always at home to new knowledge, and whose forces are to follow their natural impulse to action in the great world's affairs, as therein discharging the true and only service of God. In this liberation of the mighty forces of religion for the inspiration of a nobler civilization lies the hope of earth. That hope, however, casts its shadow in a fear. Will religion be wise enough to recognize its own limitations? While it inspires man to mount after the social ideal, will it hearken to science as it coldly points man to the steps he must cut, one after another, in the glacier up which he is to climb toward the mountain crest? Then may it trust its inspirations fully, and cheer the weary toilers with its song of "the good time coming." Then may it fearlessly summon the ethical forces of man to rouse for the toilsome ascent; wakening conscience, quickening the sense of justice, stirring discontent,

stimulating aspiration, and fearing no ill from the action of these unchained genii of the soul. Then *must* it even thus call upon the soul of man, if it is to be true as well as free. For what other work has it to do in the world than to bring in the kingdom of God, to throne above the forces of the world the eternal laws of right, to make our earth an order, beautiful, divine? In the preamble to the articles of association of the great industrial company at Guise, whose fame is world-wide, Mr. Godin makes his confession of faith,—the Golden Rule as the law of the heavenly Father for the human brothers. To affirm this revelation with her most solemn sanctions, to persuade men really to believe it, and to induce men to act upon it,—this is the mission of Religion to-day. By whatever name it may be called, the religion which is to lead the future is that which will give effect to the faith which great-hearted Thomas Hughes lately professed, and up to which he has so bravely lived,—“We have all to learn, somehow or other, that the first duty of man in trade, as in other departments of human employment, is a following after the Golden Rule.” If it can inspire this faith, religion may contentedly leave to political economy the task of adjusting the relationships of industry to this eternal law. Thus will humanity move safely after that ideal whose alluring vision feeds the social movement with its religious aspiration, climbing, step by step, out of the valley where the chill shadows lie and the noxious vapors stifle, toward the mountain brow, over which will be seen, through the clouds, the city of God coming down out of heaven upon earth.

No man of our race better types the spirit of our age than Mr. Matthew Arnold. The roots of his religion run back into the faiths of his father, up from which he sucks to-day unsuspected juices, while, in the upper air, he shakes out his branching thoughts to every wind of heaven, free as those winds themselves. We may well look to him to find the characteristic fruitage of religion in these strange days; and, so looking, we cannot mistake its nature. He writes: “The great popular ideal is an immense renovation and transformation of things, a far better and happier society in the future than ours is now. Mixed with all manner of alloy and false notions this ideal often is; yet, in itself, it is precious, it is true. And let me observe it is also the ideal of our religion. It is the business of our religion to make us believe in this very ideal. It is the business of the clergy to profess and to teach it. . . . This gospel (the fundamental matter of the primitive gospel, the ‘good news’ which Jesus himself preached) was the ideal of popular hope and longing, an immense renovation and transformation of things, the kingdom of God. . . . Whoever reverts to it reverts to the primitive gospel, which is the good news of an immense renovation and transformation of this world by the establishment of what the Sermon on the Mount calls ‘God’s Righteousness and Kingdom.’” And, thus, Religion may apply to Socialism the words he wrote to a friend concerning Republicanism:—

“God knows it, I am with you! If to prize
Those virtues, prized and practised by too few,
But prized, but loved, but eminent in you,
Man’s fundamental life; if to deprecise

“The barren optimistic sophistries
Of comfortable moles, whom what they do
Teaches the limit of the just and true
(And for such doing they require no eyes);

“If sadness at the long heart-wasting show
Wherein earth’s great ones are disquieted;
If thoughts, not idle, while before me flow

“The armies of the homeless and unfed,—
If these are yours, if this is what you are,
Then I am yours, and what you feel I share.”

CORRESPONDENCE.

ORTHODOXY AT SEA.

Editors of *The Index* :—

Never has the faith of the Fathers appeared in a more unfavorable light than during the last trip of the good ship "Catalonia," of the Cunard line; for we had seven ministers aboard, and we had a fair chance of seeing exactly what Orthodoxy meant.

We had over two hundred steerage passengers, and among them some of the strangest faces and the saddest stories that ever crossed the sea. There were men returning to the "old country" who had made a failure of life in America, and women going home to find shelter with the friends of their childhood. There was a party of mill hands from Worcester, Mass., consisting of some twenty-two women (nearly all English), who were going across to revisit their old homes, for a summer vacation. They were all neighbors in Worcester, and members of the Episcopal church, good singers, and well-mannered folk. The Irish were well represented; and the Romish element was very strong, though the dominant faith seemed to be a careless Methodism. Everybody aboard seemed to be familiar with Moody's and Sankey's hymns, and we were soon at home with one another on that basis.

We left Boston Harbor on Saturday afternoon; and on Sunday nearly everybody was seasick, saints and sinners alike. Preachers and people all seemed under the curse, with a few sinful exceptions.

Early in the week, however, thanks to a smooth sea, the sickness passed away, appetites returned, and we began to enjoy ourselves. We played all sorts of games, got up a dance on deck, and did the best we could for one another; but no preacher ever put in a word,—no word of prayer, no grace before meat, no sign of Christianity, and only one "outward and visible sign" in the shape of a white necktie, to tell of the ministers were bearing across to preach to the English people. I found that several of these preachers were going across under the auspices of the Advent Church; and they appeared to be fair representatives of the craze that had the people, with white robes on, waiting on the hillsides, in the State of Maine, a few weeks ago,—for they were as ignorant and crude as men could be. One of them was a brown-whiskered little man, with a long leg and a short one, and a celluloid collar which had once been white; but long service had turned it yellow and cracked its once fair surface. As the sailors knew naught of celluloid, they said it was a "second-hand paper collar"; and, as he wore no necktie with it, he had a most unkempt, corner-loafer look. Another one looked like a burly Western farmer; while a third was like one of those gaunt sea captains one meets round Nantucket, who has had command of a schooner in the far-away past, and has lived ever since on that glory. Poor, gray, gaunt, old man! Another was a dark faced man, who wore glasses, and seemed to carry the brains of the crowd; but he had a thin, tin-whistle sort of a voice, that was exceedingly disagreeable. Another was a quiet, gray-bearded old man, a member of the Methodist Episcopal Church, who was going to his native country for his health. Then we had Brooke Herford, too, who was the man who wore a white tie, and was the only clerical-looking man aboard. How many of these people were "Advents," we never found out; but one thing we did discover, and that was that they hated each other, with a perfect hatred; and, though they soon discovered my lack of "faith," and some of them "strove with" me, yet the "Advents" informed me in strict confidence that the "Orthodox" hated them more than they did such as I. Soon, I found that, while the Romanists were willing to bear with me, they hated the preachers heartily, and would very willingly have burned every one of them; but, alas! the days of burning the heretic have passed away, even though the spirit still lingers with us. When it came to Wednesday, and we had tried a great many schemes to pass the time, it seemed advisable that we should have some preaching, especially as many of the poor steerage passenger women seemed anxious for it, and said bitter things against the parsons for their neglect. So I said to the little man with the celluloid collar what I thought concerning the neglect of the clergy; and he made a great many excuses, but said he would willingly preach the "Word" on the morrow, if I would first give a lecture on science.

I agreed to that, and invited the parsons down to the "intermediate" cabin, where we had as pleasant and attentive an audience as any man could desire. At the close, we had a kind of a concert, and the very jolliest sort of an evening. The parsons were so delighted that they beamed all over, and promised to preach whenever we would let them. The next night, we had a full house; for we invited the steerage passengers as well as the saloon, and the preachers were there in force. I led the singing and acted as usher, enjoying the position. The little celluloid preacher then "opened the Word," and gave us one of the most diaphanous sermons to which I ever listened. To say it was *thin* fails to express it; for it was both ungrammatical and illogical, the production of an ignorant mind and the outcome of a false and foolish creed.

At the close, I said, "We have seven preachers aboard, and this meeting has shown them how willing every one is to hear the gospel preached, so we will have preaching on deck at three o'clock to-morrow afternoon," to which the preachers assented; but they soon showed the cloven hoof by putting it to the vote as to whether we would prefer it in the intermediate cabin or on deck. I spoke for the company, and said we wanted no more preaching in our cabin at present, but, when we did, we would send for them. Whereupon, they attacked me with a virulence worthy of the Middle Ages, and called me terrible names. One of them accused me of being an "infidel," which seems to be a terrible epithet to the ignorant mind; but it amused the intelligent part of the community, and I offered to fight the matter out on its merits on deck, and the "intermediates" hurrahed. So the parsons retired, and we were masters of the situation. We resolved, almost unanimously, that we would have no more preaching in our cabin; and we kept the resolution, too. We had concerts and lectures and little "tea-parties," but no more preaching. The next day, the parsons were all very civil. So I offered to help them hold services on deck. The girls from Worcester made an excellent choir, and all who desired to hear gathered round; and the first service on deck was a great success.

Fancy the grandeur of the opportunity! A great steamer ploughing her way through the rippling, emerald sea; overhead, a cloud-bespangled blue sky; and all around us the ring where sky and sea meet, with its voiceless suggestion of infinity,—while the thought would come to every one that only an iron plate stood between us and eternity, that only the thin shell of the steamer was between us and the fathomless depths of the broad Atlantic. Surely, no preacher could desire a more fitting place to preach the gospel which tells of a life beyond this life, of time and a place when death and sorrow should be no more; for in no place in the world are human hearts more susceptible to the supernatural than on the sea, for there man feels his utter helplessness and his littleness. For the sea and sky proclaim their vastness; and the ship, which seemed so large and powerful as it lay beside the works of man in the harbor, dwindles to a mere cockle-shell tossed on the restless sea and measured by the sun and the sky.

There we sat, then, to hear the "old, old story"; and never could preacher find a better field on which to sow good seed, inasmuch as there were weary men and women there to whom life had proved a blank, and for whom earthly things seemed to have lost their charm. They were far from friends and home, far from the lures and pitfalls of daily life, and surrounded by every influence which would lead them toward the "gospel of God." The men and women sat quietly around on chairs and stools, on hatches and "spare spars." Some sat or reclined on the clean white deck, while the little children tossed and tumbled and crowded all among them; and even the Romanists, with their degraded faces and the mark of the priest in their sneer, came and stood quietly round to hear what these men had to say, and they missed their opportunity!

Instead of preaching that "everlasting gospel" which appeals to all hearts, and has forever appealed to mankind, both "Greek and barbarian, bond and free," they preached their poor little creed, and talked about the vision of Daniel and the bear that carried its own ribs in its mouth, and of the dyspeptic vision of John after he had eaten the book, and the fashion of this world after it shall have been "renewed," and we shall all have gotten new forms on the recooked earth. Never, surely, was so grand an opportunity thrown so wilfully away! They have tried

several meetings since, and I have led the singing, for I am willing that all should have a good time in their own way; but, from that time, we have had very poor meetings, for ignorant people have an instinct which makes them keen critics of a sermon. So the parsons have about come to the conclusion which a parson's wife expressed. Her husband had not been asked to "speak his piece," and a man asked her why her husband didn't preach, and she answered that he didn't want to "cast pearls before swine." Which saying has gone forth amid the "swine" and has done more harm than all the preaching has done good. Now, it would seem that the most godless people on the ship were the best-hearted and the truest; for, while the "people of God" have made it hot for one another, the "sons of Belial" have grown to love the little children aboard, and have tried to make it pleasant for everybody, and the "infidels" came out of the ordeal of a sea trip with the cleanest records. And the net results of the voyage of the good ship "Catalonia" seem to have proven that the less creed a man has, the better neighbor will he be. I can honestly say that the best-hearted, truest, noblest men I met aboard that steamer were the men who had the least of what is commonly called religion; and the meanest were among the self-styled followers of the "lowly Nazarene."

PETER ANNET.

RESPICE FINEM!

[Addressed to the recent Papal Encyclical against Socialism.]

What is threat of death to him
Who hath conquered dragons dim?
What charms in thine idle words
Stay the wings of wandering birds?
Life is won of battle's fire,
Law is wrought of chaos dire:
Rose of fields unkempt of man
Hath its orbit in the plan.
On and on, unshaken, real,
Lights of wiser-motive steal;
Ages go, and prophets last
Smiling on the dangers past:
What is threat of death or hate
To the children loved of fate?
Thou, O Chant, couldst wiser hail
Time to change its written tale!
Every hour of cosmic pain
Man hath turned to sweeter gain
Bids thee hold thy peace, and find
Lessons in the days behind!

HORACE L. TRAUHEL.

THE *Popular Science Monthly* for July opens with "A Great Winter Sanitarium for the American Continent," by Prof. E. B. Trankland, F.R.S. The other articles are, "Recent Progress in Aerial Navigation," by Prof. W. Le Conte Stevens (illustrated); "Archaeological Frauds," by Charles C. Abbott, M.D.; "Railroads, Telegraphs, and Civilization," by Herr C. Herzog; "Diet in Relation to Age and Activity," by Sir H. Thompson; "An Experience with Opium," by S. T. Morton; "Some Self-made Astronomers," by E. Lagrange; "On Leaves," by Sir John Lubbock (illustrated); "Earthquake Phenomena," by Ralph S. Tarr; "Curiosities of Star-fish Life," by F. A. Fernald (illustrated); "Ethics and the Development Theory," by Georg von Gitzky; "Moths and Moth-catchers," II., by Augustus R. Grote, A.M.; "Hygiene of the Aged," by L. H. Watson, M.D.; "The Oldest Air-breathers" (illustrated); "Sketch of Prof. S. P. Langley," by Edward S. Holden (with portrait); "Editor's Table," literary notices, popular miscellany, notes.

A SEASIDE RETREAT.

Ocean Cottage, on Horseneck Beach, is situated about thirteen miles south-west from New Bedford on the open sea. Those wishing a pleasant and quiet summer resort, with all the accommodations of a first-class hotel without the restraints of a fashionable watering place, will be pleased with our home. We have one of the finest beaches in the country, with the surf at our door; excellent bathing and fishing; an inlet close by for those wishing to sail in smooth waters. Seldom any mosquitoes about the hotel.

For particulars, address
JOSIAH WOOD,
No. 84 ALLEN ST., NEW BEDFORD, MASS.

TOKOLOGY

A Book for every woman. Allee B. Stockham, M. D.
A COMPLETE LADIES' GUIDE.
20,000 Sold in Little Over a Year.
Agents find it the most popular work on the market. The very best book to put into the hands of a girl or woman. E. M. HALE, M. D. Cloth, postpaid \$2.00; Morocco, \$2.50. Circulars Free. Sanitary Pub. Co., 159 La Salle St., Chicago, Ill.

AGENTS WANTED for Twenty Years of Congress, 1861-1881.

by James G. Blaine.

Hon. J. S. Wise of Va. says: "Whoever takes it up, no matter whether he be Mr. Blaine's friend or enemy, will never put it down until he has read the whole." Agents make from \$200 to \$1000 per month. Address, The Henry Bill Pub. Co., Norwich, Conn.

H. T. MARSHALL'S

PATENT
ADJUSTABLE
LACE
CONGRESS

Is easily adjusted to fit any instep or ankle at any time, and will not uncomfortably draw the ankle, like ordinary congress. It has the stylish appearance of a lace boot and all the convenience of any congress in putting on or off the foot. Marshall's Pat. Pat'd May 13, 1884, woven in the front strap or stamped on the shank of each shoe. If your dealer does not keep them, send postal for directions how to get them to the Patentee and Manufacturer of Men's, Boys', and Youth's Fine Boots and Shoes. Tennis Shoe for Ladies and Gents a specialty.
H. T. MARSHALL,
BROOKTON, MASS.

COOK PUB. CO., 15 & 16 Washington St., Chicago.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of medievalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript*.

TRACTS.

No. 1.—*Truths for the Times*, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 2.—*Fear of the Living God*, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—*Lecture on the Bible*, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 4.—*Christian Propagandism*, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, \$1.00.

No. 5.—*"God in the Constitution,"* by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.

No. 6.—*"The Sabbath,"* by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 7.—*"Compulsory Education,"* by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—*The Present Heaven*, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—*The Christian Amendment*, by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.

No. 10.—*The Impeachment of Christianity*, by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—*The God of Science*, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.

No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, \$1.00.

No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—*A Study of Religion: The Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.

No. 15.—*The Battle of Syracuse.* Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

Address THE INDEX,

Address THE INDEX,
44 Boylston Street, Boston, Mass.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 insertions, . . . 10c. per line.
" 13 " 25 " . . . 8c. " "
" 26 " 51 " . . . 6c. " "
" 52 " . . . 5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent. On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the above calculated, will be made.

RELIGIO - PHILOSOPHICAL JOURNAL.

Established in 1865.

A Paper for all who Sincerely and Intelligently Seek Truth without regard to Sect or Party.

The JOURNAL, in the estimation of a large proportion of the leading authorities on Spiritualism, stands pre-eminent as a fearless, independent, judiciously fair advocate of Spiritualism. It has received more general notice, and more frequent and higher commendations from intelligent sources, regardless of sect or party, than any other Spiritualist or liberal paper ever published: the records will confirm this.

The JOURNAL is uncompromisingly committed to the *Scientific Method* in its treatment of the Phenomena of Spiritualism, being fully assured that this is the only safe ground on which to stand.

The JOURNAL is unsectarian, non-partisan, thoroughly independent, never neutral, wholly free from cliques and clans.

THE ABSENCE OF DESIGN IN NATURE. By Prof. H. D. GARRISON. A Lecture delivered before the Philosophical Society of Chicago. Price 10 cts. For sale at THE INDEX office.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price \$3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR's basis of action, and the best exertions of its manage will always be used to render it a free and independent journal devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.
