CURRENT TOPICS.

THE report of a Democratic Convention recently held in Indiana says, "The chaplain prayed God to 'nurture the grand old Democratic party,' and at once the convention broke out into cheers and stamping of feet."

SAYS the Ottawa (Ont.) *Free Press*: "It is useless to argue with a woman," we are told; but a woman, at the examination in moral sciences at Cambridge, in competition with males, was the only candidate who attained a place in the first class. The subject was Logic and Political Economy."

A FRIEND writes from New York: "The United States Cremation Company has just purchased eighteen and one-fifth city lots (twenty-five by one hundred) in Newtown, just outside of Brooklyn, and will proceed at once to erect a brick building and most improved Siemens furnace. Mr. Caswell tells me the stock is about all taken."

PAPERS like the *Daily Herald* of this city that oppose Blaine because he does not represent "purity in politics," and at the same time encourage slugging exhibitions and dog fights by printing detailed accounts of them in their news columns, furnish grounds for suspicion as to their sincerity. How can there be "purity in politics," unless there is purity in the people, which is certainly not promoted by disgusting descriptions of brutal sports in leading daily papers?

COL. HIGGINSON says, in the *Woman's Journal*, that he is "always a little anxious when friends of woman suffrage lay much stress upon the probable effect on woman's wages of the triumph of this cause." He mentions the steady rise in the wages of women servants who have no votes, and adds: "The moral is that women have held their own, and even made great gains in domestic wages, without suffrage; and that we must look mainly to the laws of demand and supply to regulate their wages in future. The possession of the ballot may affect them indirectly, but not closely. What employers pay is the laborer, not the voter."

DR. MONROE of the *Iron-Clad Age*, who has a decided aversion to tobacco, attended a political gathering recently at Indianapolis, and "was driven to the open street for respirable air" three times by

tobacco smoke, the last time "in a dazed condition." His experience leads him to remark: "A man may not rightfully poison the air that another is compelled to breathe. The smoker should go to the woods or the woodshed or behind the barn." He asks: "Will men never become so kind and considerate for the comfort of their fellows as to forego smoking in public places? Shall we never have a race of gentlemen with too much delicacy and taste to gratify their appetites to the annoyance of their associates?"

DURING the struggle in Norway between the king and the oppressed people, the State Church has stood by the king, and accomplished some good at least in opening the eyes of multitudes to the heartlessness and unscrupulousness of the established religion. The *Springfield Republican* mentions that "the liberal elements, in their revolt against State religion and an irresponsible king, have gone over altogether too generally to infidelity," and thinks this a "sad result." Just what it means by "infidelity" does not appear. Some regard Unitarianism and the "Concord philosophy" as infidelity. There is no danger of too much infidelity in Norway, if by it is meant disbelief in the theological dogmas of the Church which professes to be interested in the salvation of the people in another world, but uses its influence to oppress them in this.

IN deference to the yet strong popular belief in theology and reverence for the profession of its expounders, theologians, even in this so-called age of science, are generally selected as figure-heads for our colleges. The reports of two or three of the baccalaureates by New England college presidents this year, in no way distinguishable from ordinary orthodox sermons, make one wonder how long institutions of learning in which are taught current science and philosophy, in which the professors and students are largely free thinkers, will continue through baccalaureate sermons to lend their influence to perpetuate belief in unsupported theological dogmas. We hope that the day is not far distant when men renowned for their scientific knowledge rather than "zeal for Christ" will be at the head of our colleges, and that the presidents will deem it a part of their duty to present in their baccalaureates the scientific and philosophic thought of the day rather than the superstitions which have descended from past semi-civilized ages.

THE Chicago *Inter-Ocean* is warming up to the work of the campaign. The action of some of the Yale College professors in expressing dissatisfaction with the nominees and portions of the platform of the Republican Convention held in Chicago causes the *Inter-Ocean* to let loose on Yale in the following amusing style: "Yale College therefore occupies toward the rest of the country the attitude of an organized slander-mill, whose business it is to teach to youth as the demonstrated and ultimate fact in political science that the American people are all fools, that American statesmanship is a hollow sham largely tinged

with knavery, and that American history consists wholly of the record of disasters inflicted upon a nation of charlatans for having ever ventured to break away from dependence upon English ideas and commodities. All at once the Republican party, having hit several other classes of numbskulls over the scone with a club in a way that has settled them and laid them out stiff, at last turns around like a bated lion upon the little tribe of pigmy professors that have been annoying it, and strikes them a blow such as only comes from a lion's paw when his heavy-maned majesty of the desert and the plain means business. Of course, little Yale College yelps back, and between one set of frantic kiwis and the next it gathers coherence enough to say that the American lion is not pure; that the whole American people is corrupt, or it would not have struck out so, like a cyclone, with its fore paw." Where is Yale College now?

MR. LABOUCHERE has written a letter to Stuart Cumberland, "the mind-reader," as follows: "You yesterday succeeded in pointing out an article in this room which I had thought of. Your explanation of thought-reading—so called—was very interesting. As I had always supposed it to be, it is the perception of a thought in the mind of a subject by watching carefully its effect upon his muscles. In order to succeed, it is of course necessary for the operator to have trained himself to note these physical indications. I am glad that you are engaged in dispelling the nonsense which surrounded the experiments, and that you are proving that you can equal the mystic powers of the quacks who have hitherto made money out of fools, while, at the same time, you are able to give a natural and reasonable explanation of what you perform." Can Mr. Cumberland by watching the muscles distinguish between the effects produced by the thought of, say, two different chairs, vases, inkstands, papers, books, or other objects, which the subject is accustomed to seeing in rooms? Mr. Labouchère says that Cumberland succeeded in pointing out an article he had thought of. We are left in doubt whether this was done in more than one case, which would not be conclusive, or whether it was done after one or more failures, and was anything more than a happy guess. With opportunities to test several "mind-readers," we have never yet seen a person put to the proof who was able to perceive a thought without some expression on the part of the thinker. We can understand that in some cases, especially with children, the effect upon the muscles might indicate to a careful observer the thought of the subject; but we doubt whether Mr. Cumberland has powers of discrimination enabling him generally to point out objects thought of from the effects of the thought on the muscles. We are aware that multitudes are ready to tell of mind-reading feats they have witnessed; but those who have had an opportunity to test these general statements know that they have little, if any, value for the investigator who insists on careful scrutiny and verification in such matters.

NOBLE LIVES.

The Index has already given a lengthy notice of Mrs. Hallowell's *Life and Letters of James and Lucretia Mott*. But the book has suggested to us some special reflections which we wish to incorporate in this article. We cannot indeed linger too long upon literary work of this sort, nor can public attention be too often called to such lives as were those whose portraiture is here drawn.

It is, for instance, especially good to read such a book as this in these days, when the evil side of human life is forcing itself so much upon public attention. The daily newspapers of late have been surcharged with the record of man's misdoings,—with the rascalities of the business world, the downfall of trusted characters, the ravages of intemperance, the outrages of diabolical passion, the worse than beastly spectacle of prize fights between man and man, the corruption in politics, the wranglings and jealousies among public men, who, nursing their own selfish ambitions, are constantly putting in jeopardy the public good. To turn from this picture, which almost daily is forced in some shape upon our eyes, to the scenes of life which Mrs. Hallowell has admirably depicted in this volume, is to renew our faltering faith in human nature and the possible salvation of the American republic. Here is described the life of two persons who, for three-quarters of a century, were devoted above all things else to truth, virtue, and humanity; who were ready for any sacrifice of self-interest, of pecuniary prospects, of social ties and pleasures, of the world's good opinion even, if so only they could keep a conscience void of offence, an unsullied integrity, and a heart quick to feel and help another's woe. And the book not only brings before us the exceptionally strong characters of one man and one woman, but it opens for us a glimpse into many other homes besides theirs, and passes before our view more or less clearly the characters of other men and women who by family tie or philanthropic work became associated with them. A section of life is here presented not often opened to the public gaze, and it is a section of American society wherein the best hopes of our country are stayed. In such homes and characters—and they are not solitary—are the virtues that furnish the antidote for the threatened national and social ills of modern days.

Again, this book has freshly impressed us with the general truth of the wholesomeness of good biography as a mental diet. It were to be wished particularly that young persons were more drawn to such reading. Having personally always found biographies among the most interesting of books, we cannot understand the distaste which many people have for them. And when, as in this case, the story is compact and well told and full of incident, and is, withal, the picture of characters of special nobleness, it seems to us to have the elements of fascination, as well as the merit of bringing the reader into a pure and stimulating moral atmosphere. As one could not be in the company of such persons as James and Lucretia Mott without feeling the influence of their integrity and purity, so the contact with their characters gained through this memorial volume is morally inspiring and invigorating. It can but strengthen the reader's moral ideal and quicken his better purposes. It shows him the sublime possibilities of human life when consecrated to duty. These lofty, almost ideal, characters were actually embodied in visible, tangible form. They were a veritable fact. The life itself, just as it was lived from day to day, is daguerreotyped on the page.

We have nothing to say against good works of fiction. Many of them are the most truthful of

books, and there are characters drawn entirely by the faculty of imagination that will stand by the side of the historical page as masterly delineations of human nature. But none the less do we believe—believe, indeed, all the more because of our regard for the great masters of fiction—that there is to-day a good deal more of fiction-writing and of fiction-reading than is good for people. Not to speak of the sensational type of fiction, there are too many modern novels that deal with a kind of social life which, however fascinating, is certainly not elevating to those who move in it, and cannot be elevating to those who read about it. And a large proportion of these novels are saturated with demoralizing views of marriage and the relation of the sexes. Such novels enervate and waste the intellectual faculties, and taint the heart with moral poison. Would that more acquaintance with such biographies as this of Mr. and Mrs. Mott, more acquaintance with such bravely faithful and upright lives, might diminish the demand for this unwholesome type of fiction.

And, again, it is encouraging to know what this joint biography also teaches, that saintly lives are not obsolete; that they have not become wholly a matter of ecclesiastical tradition, whose chief use is now to give names to churches and hospitals, but that they have a real existence in modern communities. In the past, however, the Church has often made its saints of small materials. Some of the persons it has canonized, both men and women, were worthy of the honor. But many of the ecclesiastical saints were declared such because of their unnatural and purely technical services of devotion,—for living in seclusion from their fellow-men, for scourging and torturing their flesh, for acts of superstitious ecstasy, and for entirely imaginary and fictitious benefits to humanity. The more irrational and unnatural and unhuman they were, the more saintly did they seem to the Christian mind of their times. But there are, we venture to affirm, as genuine saints living to-day as ever lived in the world. They do not retire from the world: they live in it to make it better. They do not deem it a duty to deny and crucify the deepest instincts and affections of the human heart, but they sanctify these to noble ends of human good. They are priests and priestesses in the home, faithfully serving in all its ministrations of mutual love and obligation. They may be found even in politics and in the business world,—the rare few who have no other thought than to stand for honesty, honor, and right, let schemes of expediency, policy, and private profit come out as they will. They are at work for the world's good,—not ostentatiously, but easily and quietly as their natural habit. The cause that they know not they search out. The ear that hears them blesses them, and the eye that sees them bears witness to their virtue. They are eyes to the blind, feet to the lame, help to the poor and the needy, a resistance before the path of the wicked, and the blessing of him that was ready to perish comes upon them,—such are the evidences of the saints and their doings in the modern world. And, by this token, James and Lucretia Mott might rightfully wear the name: only, no name could give them fairer honor than the plain untitled Quaker names they always wore.

And, finally, no work of fiction could be brought to a happier conclusion than was the life of this faithful pair. It is reassuring to our confidence in the good instincts of humanity to know that, though they were compelled by conscience to walk for the great part of their lives an unpopular way which brought upon them great opprobrium, such moral faithfulness did not fail at last to win the regard and reverence even of the world that had

once condemned. They had passed through the ordeal of many trials. They had been made to feel the bitterness of sectarian strife and division, and had been subjected to the spirit of persecution even in their own peaceful sect. They had faced mobs and had their meetings broken up by violence in the anti-slavery struggle. Their Philadelphia home was well known to be one of the sheltering-places of fugitive slaves, and more than once was threatened with destruction. But the days of this evil passion passed by. With the outbreak of the rebellion and the downfall of slavery, a veil was lifted from many eyes, and heart looked into heart as never before. The prophets whom the people had stoned the people were now ready to crown. Garrison went to his grave covered with public honors, buried from a church and eulogized from a pulpit where, fifteen years before, he would not have been permitted to open his lips. A few months ago, Boston's citizens of all classes and parties filed through Faneuil Hall to do reverence to Wendell Phillips in his coffin. And, like many others, James and Lucretia Mott outlived the odium and the bitterness of the exciting struggles through which they had passed. Their last years were full of happiness and peace. Evidences of regard and gratitude poured in upon them from all quarters. And, when they died, the whole community gave judgment as with one voice, "Here was the fine greatness of noble character."

WM. J. POTTER.

WHO ARE THE FITTEST?

Weeds would be fitter than flowers to grow in our gardens, if it were not for the gardener. Mere strength of mind and body is not the only element of human fitness, for society keeps at work weeding out those men and women who will not comply with the conditions of general welfare. The people fittest for survival are those who are, not only the strongest, but also the most obedient to the moral laws. Courts and prisons are among the tools by which the most unfit are weeded out. Thus, society chooses who is fit to have more room to grow and who is to be plucked up. Looking at present condition alone, there is nobody so unfit to survive as a baby. Leave it to itself, and it would perish. But babies are not left to perish; for society looks ahead, as a gardener does, and thinks of what is to be. Beneath the baby's present unfitness there may slumber capacities and powers which some day will place it among the fittest. So the baby has a chance to show what sort of a man or woman it is going to make. Thus, we take account of the future as well as of the present, and of moral conduct as well as of natural gifts, in deciding who are the fittest.

And, from this point of view, it is plain that the future welfare of our race demands that its fittest members have every possible opportunity to flourish, and also to propagate themselves in succeeding generations. To check the development of the fit, in order to delay the disappearance of the unfit, would be a grievous wrong. Hence, the justice of Prof. Sumner's advice not to be led by our pity for the degraded and dangerous classes into giving them what would be useful to the industrious, intelligent, and virtuous. The difficulty of the case lies partly in the fact that a man who is entirely without pity for any other man, however vicious, does not himself come up fully to the moral standard of fitness for survival, and partly in the fact that it is very hard to tell whether any human being has fallen too low to be beyond recovery. What we do individually for any one ought certainly to be regulated by our

faith in his capacity for developing fitness for survival. For instance, when a drunken man asks me for money, it is my plain duty to refuse, as I could not easily do worse with the amount, and might, in many ways, use it more beneficially. What society ought to do with the habitual drunkard is another question; but whatever it gives him should be in such a shape as will be most likely, not only to check his intemperance, but to hinder his having children to inherit it. So, again, it may be our duty as a community to give every criminal a chance to reform; but honest and industrious people have a plain right to insist that the criminal, so long as he remains unreformed, shall be prevented from committing or propagating crime. Paupers who are willing to improve may claim help from society, but those who prefer to live in idleness and degradation ought not to be assisted in handing down their type of character to future generations. We cannot leave them to starve, but we need not help them to fatten in pampered idleness; and we should not suffer them to increase and multiply. The greatest kindness to paupers and criminals does not consist in helping them to remain what they are. And whatever we do to improve their condition ought to be done with due reference to the fact that there are other members of society who are already improving themselves surely and rapidly, and who could use far more advantages than they get. Charity to the unfit may be good, but better far is justice to the fittest.

F. M. HOLLAND.

THE AMERICAN UNIVERSITY.

We have come to the beginning of a genuinely scientific epoch in the history of education in the United States. The chaos of ambitious enterprise, good impulse, misdirected energy, inflation and crotchety denominational benevolences is being succeeded by definite inquiry, strict method, genuine scholarship and impatience of waste. Critical students of pedagogy have appeared among us; our larger colleges are full of men whom long experience in the European universities has cured of pride, and given higher standards; every department of our education is having sharp questions put to it; and the whole system, from the primary school to the university, is undergoing notable changes.

Of all the questions, none is more important certainly, than the question of the university. And no American scholar could address himself to the question, whose word would be likely to get more respectful attention, or to deserve it, than Prof. Burgess, whose little pamphlet upon "The American University" is just published by Messrs. Ginn & Heath. It is the work of Prof. Burgess, more than any other one thing, perhaps, which has given Columbia College its recent *renaissance*. The school of history and politics, which he has there organized, is probably doing the best work which is being done in history and politics at any of our American colleges. And this whole important work has been carried on with that combined breadth and accuracy which it is so essential to have combined here. The Columbia historical men become inspired with a dread and impatience alike of the massing of facts, uncontrolled by general principles and directed to no convictions, and of that perhaps worse thing, "philosophy of history," with no solid and reliable study of the facts of history at the bottom. Empty schematizing and blind statisticizing have both been well avoided. Warp and woof have both been well looked after, and there seems to be the "requisite wholeness of good tissue" in the result. This gen-

uine university success has been achieved by Prof. Burgess; and this achievement gives importance to whatever he may have to say about the organization and character of the American University.

He asks three questions: When shall the American University be? Where shall it be? What shall it be? His answers may be put into the three words: 1. "Now." 2. "Boston." 3. "German."

Prof. Burgess is a thorough-going advocate of the German system. "We can do no better," he says, with respect to methods of university instruction, "than follow, in the main, the German example, and should not be repelled from it by the indiscriminate charge of slavish imitation." He says substantially the same in discussing the subject of the organization of the Faculties, the system of discipline, and the relations of the Faculties to the corporation, or the government. Do as the Germans do,—not because it is German, but because it is best. "The Germans have come to the solution of the question of these relations first, simply because they are further along in the development of the true university than any other nationality."

Only in one essential particular would Prof. Burgess have the American University differ from the German in its organization. A permanent presidency is no part of the German system. A rector is chosen annually by the professors from among themselves, and a dean for each Faculty. For the American University, a president seems, to Prof. Burgess, indispensable, at least until the university is fully developed. "That necessity," he says, "springs out of the fact that the American University must be a private institution, resting upon voluntary contribution for its support. To meet this condition successfully in our American society, the university must have a permanent representative before the public,—a man who shall not only be a great scholar and a sound pedagogue, but who shall be possessed of social position, dignity of manner, and business tact, of energy, enthusiasm, and the power to inspire,—in other words, a man who can direct the surplus of great incomes into the university treasury, and give wisest counsel to the trustees in its expenditure. Moreover, in the earlier periods of the foundation and growth of the university, a president, great in scholarship and in the knowledge of educational systems, keen in discrimination and sound in his judgment and estimation of men, is the best means which a board of trustees can employ for the original constitution of the Faculties."

That the university in America, unlike Germany, must be a private institution, seems to be a foregone conclusion with Prof. Burgess. "I think we may safely assume at the outset," he says, "that the university will not now thrive here as an institution of the State. The rapidly shifting policies in legislation and the rapidly rotating *personnel* of administration render the government, either of the nation or Commonwealth, utterly unfit to direct the development of the higher education. Moreover, there is nothing which would offer to the universal demagogism of American politics so capital a point of attack as the appropriations necessary to the support of the university. . . . The American University must be a private institution, supported by private donations, and directed by an association of private persons. . . . It cannot be otherwise so long as the politic which has reigned here for a good half-century continues, and there is little prospect discoverable at this moment that it will ever cease." Here of course ground is entered where two or three subjects of controversy are at once suggested; but, although we are of those who take a more hopeful view of American politics than Prof. Bur-

gess expresses in these and other words, he is probably right in the main as to the better fortune of the American University now in substantial freedom from State control.

Prof. Burgess' Germanism appears again in his strong plea for the gymnasium. The American college, in its present form, he hopes to see become an extinct species. "I am unable to divine," he says, "what is to be ultimately the position of colleges which cannot become universities, and which will not be gymnasia. I cannot see what reason they will have to exist. It will be largely a waste of capital to maintain them, and largely a waste of time to attend them." He holds that the reformation of our system of secondary education will take the direction of an addition of two or three years to the courses of the academies and high schools, making a continuous curriculum of seven to nine years, giving the pupil a good knowledge of the languages, pure mathematics to the calculus, and the elements of the natural sciences, history, and literature. There should be such institutions in every large town, and graduates should advance directly from these to the university.

"The student should enter the university only after he has become prepared, through the variety, quantity, and quality of his discipline and knowledge, to specialize in *any* and *every* direction." The prime function of the gymnasium is discipline. "The prime function of the university is the discovery of *new* truth, the *increase* of knowledge in every direction." "Although the university should instruct as well as discover and conserve, yet its means and its energies should not be expended upon the mere *pratique* of its subjects. In theology, for instance, it should not be held to teach forms and rubrics, better learned at the reading-desk of some church." "It is possible," says Prof. Burgess, on another page, "to have a theological school which is no *university Faculty* of theology at all. In fact, most of the theological schools in the United States are not, and for the simple reason that there is no philosophical Faculty connected with them to furnish the broad basis of psychology, logic, history, literature, and philology, upon which all development and progress in theology must rest. The mere acquirement of creeds and ritual is not university theology." Prof. Burgess laments the lack of breadth and depth in so many of our American students, and the narrow manner in which so many govern all their studies by prudential and "practical" considerations, with no care for knowledge and scholarship for their own sakes. "It is disheartening," he says, "to a true lover of learning to hear the talk in which the graduates of colleges generally indulge concerning the uselessness of any study for them which does not connect itself *directly* with the practice of some profession. They will enter the law department or the medical department or the theological department of a university; but they will limit their studies to what they call the practical side of their profession,—i.e., they will eschew carefully the cognate and auxiliary studies in what the Germans call the Faculty of philosophy,—studies which lift their professions out of the condition of a mere technique into the position of a true science. They are therefore not university students in the true sense, but undergraduates of technical schools."

Prof. Burgess thinks that this is true of the mass of our college graduates. But it is not true of all. He dwells upon the wisdom and energy of large numbers who are now laying broad foundations, and the true scholastic zeal and spirit which is now so evident in many American quarters. He dwells upon the significance of the fact that

our colleges furnish annually several hundreds of students to the universities of Germany. This is one of the important facts which warrant us to believe that the time for a true university in America is now. The time for a university is "when there exists in the nation the surplus of wealth to support it, the body of scholars to form its Faculties, and the body of students qualified by previous training and acquirements to profit by university work." We possess such a body of students; American scholarship has proved itself, and we possess the material whereof to make university professors; and "the home of the greatest universities of the world, Germany, is poor in comparison with the United States."

Where? The American University must be "at or near a centre of wealth and culture." Such a centre is important for a university anywhere, because of the aid of its museums, libraries, hospitals, and varied life. Where private donation is the source of university support, it is almost necessary that the university be located near a centre of wealth. "Some individuals will indeed be found who are willing to bestow aid upon far-off enterprises, but the greatness of the amount necessary to found and maintain a university can hardly be secured without the incentive of local pride."

There is at least one centre in the United States which seems to Prof. Burgess to fulfil all requirements. That centre is Boston; and the page in which the New York professor descants upon the history, traditions, and social conditions which have created the general culture and consolidated public spirit of Boston will be pleasurable reading for the proud Bostonian. "Whether we have more than one such community," he says, "remains yet to be seen. We have other cities in which riches abound to a higher degree even than in Boston; but the reign of excessive individualism and the elaboration of private luxury have thus far largely negated the conditions for the development of a cultured community and a cultured public spirit. Where the rich man considers that he must have his palace in the city, his villa in the country, and his cottage by the sea, his steam-yacht, his coach and four and his private car, in order to be comfortable, little will remain from the largest income for the higher education of the community or the nation."

This scourging is evidently meant for New York. Or is Prof. Burgess not here beckoning to New York over Boston's shoulders, trying to provoke her to generous emulation? There is certainly much to warrant the belief that there will grow up about Columbia College, in due time, such a university as will satisfy Prof. Burgess' definition and demand. And, with Johns Hopkins University before us,—the one institution in the country where genuine university methods obtain, an institution which is rooting and extending itself with remarkable wisdom, and achieving remarkable results,—it is scarcely in order to speak of the organization of the American University as altogether a thing of the future, as Prof. Burgess seems to do. The spectacle of the really wonderful work—for wonderful it is—which is already being done by this young Baltimore university should do more than even Prof. Burgess' word to stimulate Boston to build up, in Harvard, a university commensurate with the present demands of the highest American scholarship and with the true greatness of the American commonwealth. Prof. Burgess is to be thanked for a word so simple, so pointed, and so suggestive. It would be well if the various interests of the higher education in America were in the hands of men so broad, so serious, and so competent.

EDWIN D. MEAD.

"THE BOOK OF THE BEGINNINGS."

After Dr. Newton last fall was requested by his bishop to discontinue his Sunday afternoon lectures, in consequence of the publicity given them and the excitement produced among his more orthodox brethren by the views advanced in regard to the Bible, it will be remembered that the lectures ceased. In the preface to *The Book of the Beginnings*, recently published, the author says, "For me there was but one path open,—respectful obedience. But the singular position in which I was thus put made it seem due, alike to my people and myself, that the public should be enabled to judge of the real nature of the lectures, which had called forth such a very unusual, if not unprecedented, episcopal interruption of a presbyter in the course of his parochial ministrations. Neither deference to my bishop nor the sincerest desire for peace can make it right that I and the people who have so loyally upheld me in good report and in evil report should rest under the misconstructions which have been placed upon the teachings of All Souls' pulpit."

In this work, which has been prepared for the press under great disadvantages, Dr. Newton has presented with force and clearness his views as to the character and history of the Pentateuch, and indicated his method of studying and interpreting the Bible. The distinguishing feature of the Pentateuch, he says, is that "it is not so much a history of the political or social life of the people as of their religious life." It gives "the origins of Israel as understood by the Israelites themselves." They ascribed their laws to Jehovah as other peoples claimed theirs came from the gods. The interference of Jehovah in Hebrew affairs was nothing exceptional, for this is common to the story of all early races. Discrepancies such as that Abraham on account of his age, being one hundred years of age, could not believe a son should be born to him and yet forty years later had six sons by Keturah, are thus explained in the language of Bleek: "The most probable solution is that the author of the book adopted early records wholly or in part into his work, retaining partially or entirely their original form and character, without any general attempt to connect them organically or to blend them into one whole."

The Pentateuch is disclosed by its internal structure to be, like all early histories, a composite work, welding together separate writings, "a woven tissue, three of whose strands we can fairly well pick out." The tradition which assigns the Pentateuch to Moses lacks solidity. The work as a whole appears anonymously. Dr. Newton asks, "Is it conceivable that the Divine Being who, as the narrative runs, himself gave the law here embodied to Moses on Sinai, and who was himself the chief actor in the history here given, should have left the record of his action to the authority of anonymity?" To the statement that Christ received the Pentateuch as from Moses, our author replies, "without raising any question as to the absolute accuracy of the reports of Christ's language," that Christ must have spoken down "to the level of his hearers," talked "in the current terms of the day," "accommodating his thought and language to the conceptions of his hearers." Furthermore, not "in any view of Christ are we bound to believe that he [Christ] necessarily knew that there was little ground for the tradition in which he had been nurtured. The highest thought of Christ's nature possible does not deny that he shared the limitations of his age in matters of mere knowl-

**The Book of the Beginnings. A Study of Genesis, with an Introduction of Genesis. By R. Heber Newton, Rector of All Souls' Protestant Episcopal Church, New York City. New York: G. P. Putnam's Sons, 27 and 29 West 23d Street. 1884. pp. 311.*

edge." At best, Moses could have produced only one of the strands in this composite work, of which proof is lacking, or have been an editor of other men's compositions, which "looks very improbable."

Dr. Newton shows that the Pentateuch grew with the growth of the Hebrew people, "by accumulations which we can peel off and assign approximately to their several ages." It has marks of story-tellers and poets, and contains ancient legends and nature-myths "disguised unwittingly as history, whose beauty we may freely enjoy without being beguiled into mistaking fancy for fact, poetry for prose, the drapery for the historic forms beneath it." It is evident that the author has no belief in any of the alleged miracles of the Pentateuch; and yet he touches this subject with caution, which his position probably requires. "No dogmatic denial of miracle is here made. Those who can receive these stories as in all details literal history are free to do so, and those who suspect their historical exactness are equally free thus to judge where Providence has been pleased to leave these matters to the unauthenticated testimony of anonymous books composed so many centuries after the events described."

The great historic fact, the kernel of the story, —namely, the reality of Moses and of the mission on which he was sent of God,—remains, certified as it is "by the traditions of Israel, with some corroboration from the traditions of Egypt." Our author, we judge, believes Moses was sent of God in much the same sense that he would say that Luther and Washington were sent of God. The books of the Pentateuch "were not miraculously communicated to the minds of the writers either by direct dictation from God or by any modification of such a theory of inspiration as the ingenuity of Jewish and Christian rabbins has devised." Yet to the Hebrew came "a new and higher thought of Him whom they ignorantly worshipped," and this thought was a revelation. Nurtured "in all the wisdom of the Egyptians," in the philosophy of Egyptian priests, led by Providence in "the world-old school of Spirit, the wilderness," brooding through years in the mountains of Arabia, while watching his flocks, over the problem of being till the "common bush grew 'afire with God,'" Moses came to perceive what was centuries beyond the grasp of the Hebrew people,—the truth of the unity and spirituality and righteousness of God. But since, as Dr. Newton does not fail to mention, Moses must "have been initiated into the secret philosophy of the learned priesthood, which behind the outward symbolism of an apparently idolatrous system veiled profound conceptions of the unity, the spirituality, and righteousness of the Divine Being," it is not necessary to suppose that Moses derived his thought, which became a revelation to the Hebrews, from any other than purely natural sources. It would be easy to show that Dr. Newton's criticism of the Pentateuch, in which he presents some of the results of the best Biblical scholarship, cuts away the whole foundation of supernatural Christianity; but our only object here is to give some idea of the views presented in the book and the author's method of treating his subject.

RELIGION IN THE PUBLIC SCHOOLS.

The following is an extract from an editorial in the *Catholic Examiner* :—

The Boston *Index*, which is an exceedingly able liberal journal, copies our paragraphs in reference to the recent decision of State Superintendent Ruggles that religion must be excluded from the class rooms, and says, "Evidently, the *Examiner* desires the public schools to be neither 'Protestant' nor 'Godless,' but

Catholic." Our liberal contemporary is right. The *Examiner* would have the schools "neither 'Protestant' nor 'Godless,' but Catholic." It would have them so; for it sees—as all must see who are not blind—that both "Protestant" and "Godless" schools are lacking in very essential qualities. . . . The *Index* seems to think that we would have Catholicity taught in the public schools, to the exclusion of all other beliefs. Such is not the case. We insist that it is necessary that religious instruction should be given to the children, and some of the ablest men of our time are of the same opinion. But we cannot allow that it shall be strictly Protestant, and we do not ask that it shall be exclusively Catholic. It is quite possible to allow both.

Our Catholic contemporary says that we are right, that it would have the schools Catholic, and yet it would not exclude from them "other beliefs." It cannot allow that the religious instruction shall be "strictly Protestant," and does not ask that it be "exclusively Catholic." It would admit both Catholic and Protestant instruction in the schools. Would it also agree to the instruction of children of Hebrew parents in the Hebrew religion, of children of Buddhist in Buddhism, of children of Spiritualists in Spiritualism, of children of Theists, Pantheists, Materialists, and Atheists in the religion or philosophy of these different classes respectively? Since the public schools are supported by all classes of believers and unbelievers, should the children of any class be compelled to receive religious instruction against the wishes of their parents or guardians? Why not let the public schools be devoted wholly to secular education, the importance of which is acknowledged by all? And then, if theological instruction is deemed important by some, let those who desire it sustain theological schools under their private direction and at their own expense, to counteract the injurious influence their children may receive from studying arithmetic, geography, and grammar without at the same time hearing anything about Jesus or his virgin mother, heaven, hell, or purgatory.

ALTHOUGH the *Truth-seeker*, under its present editorial management, has improved greatly, much to the satisfaction of all who wish to see the character of the liberal press in this country elevated, it still too often mistakes personalities for proofs and violence of assertion for vigor of thought. But we refer to this paper now only to copy the following extract from one of its editorials in last week's issue. It says: "Mr. Underwood at Syracuse stultified Mr. Underwood at Philadelphia. If the gentleman honestly thinks he was mistaken in 1876, he has not said so; yet respect for his subsequent attitude to the League would seem to demand such a declaration." We certainly do not think we were "mistaken in 1876" in introducing and supporting the resolutions which were adopted in regard to indecent publications. Our "attitude to the League" has never been inconsistent with those resolutions. We are willing to stand by the position affirmed in those resolutions to day. There never has been a time since 1876 when we were unwilling to defend that position. The resolutions were expressly worded to avoid objections which had prevented the adoption of a resolution introduced by Mr. S. P. Andrews. The objections to Mr. Andrews' resolution did not impress us very forcibly at the time; and we voted for it, but were much better satisfied with the resolutions which were adopted. In the light afforded by eight years' investigation and discussion of the subject, we now see that the action of the Congress in regard to Mr. Andrews' resolution was wise; and we are well satisfied with the position declared in the resolutions that were adopted,

—resolutions that we wrote, Mr. Abbot approved, and the Congress passed, if we mistake not, almost unanimously.

ADHERENTS of the late Chunder Sen, those of the Darbar party, not content with keeping vacant the pulpit which he occupied, have devised other modes of honoring him. "The *Alok*, the organ of Mr. Mozoomdar's party, informs us," says the *Indian Messenger*, "that, in their singing and preaching peregrinations over the town, our friends now carry with them the carpet-seat on which their late minister used to sit, and place it before them while singing or preaching in any place. The *Dharmatava*, the organ of the Darbar party, defends such proceedings by arguments like the following: Those objects which are specially connected with him do, by psychological laws, materially help to diffuse the influence of his life. The *vedi* and the prayer-seat of Acharyadeva especially bear this influence, hence their importance (lit., glory,—*gaurab*). What respect is paid to the sandals of saintly men! Ignorant people even worship them in some places. Who can touch those sandals with their feet? Who is there whose heart does not tremble in sitting on the seat charged with the influence of great men!" (*Dharmatava*, 1st and 16th Baisakh, article on *Our Doctrine of Resurrection*.)"

THERE is an error in the common saying that we ought to speak only good of the dead. We should say only good of any one, living or dead, unless we are compelled in the fulfilment of a real duty to say what is bad. But, whether it be good or bad, we should speak the truth, and nothing but the truth; and the fact that the subject of our words is dead does not alter our obligation to tell the truth. That the dead cannot defend themselves from the consequences of our utterances should render every chivalrous person scrupulously careful to avoid unjust or unkind speech concerning them, but it may become a public duty to hold up the past wickedness of a dead man to a justly earned contempt. A great deal of weak sentiment is afloat among men; and the old and oft-quoted Latin maxim which bids us speak only good of the dead serves a good purpose as a caution, yet none the less illustrates moral feebleness rather than either force or true charity.—*The Congregationalist*.

THE following is from an editorial in the *Presbyterian*, which does "not rejoice in defections from the Scriptural system of theology," but is "glad when the positions which men take are clearly unveiled, and their place in the contending hosts clearly defined": "Mr. Beecher has reached the same point in his serious doctrinal defection that is occupied by the Unitarian organ. In the sermon lately preached before the students of Cornell University, he is reported to have said: 'Christ's work was not to restore a fallen and lost race. There was not any fall. When he speaks of men being lost, it is the figure of a shepherd whose sheep have wandered. His mission was to raise and carry forward the ignorant, the sinful, the wretched. Neither did he come to suffer in man's place. The doctrine of original sin and that Christ suffered in man's place is a monstrosity.'"

"T. B. W." in *Man* quotes a paragraph from *The Index*, and adds: "We are glad to see *The Index* join in the protest against abandoning the word 'religion' to the theologians. The *Radical Review* has also come to the front nobly in refusing to give up this word, and in recognizing the 'Religion of Humanity' in its broadest

sense as the flower of civilization and progress. There is no other word that will express the higher integration or synthesis of science and humanity, which are the successors of the theological ideas. Fundamentally, religion means social union and obligation: the God idea was merely the incident. The religions of Confucius and Buddha had not even that incident. The old word has good meaning and metal in it. Stamp it anew, and send it down the ages again."

EDITH SIMCOX, in a letter printed in the *Pall Mall Gazette* on the rights of woman, observes: "Signs show, surely, that the workers are with us. As Mr. Conway points out, the thinkers were with us long ago. It is a curious question, What, then, can block the way? And, in truth, it is to be feared that the strength of the opposition comes from the ranks—alas! still too numerous—of those who do not work very hard and of those who do not think very profoundly."

WITH the professional party follower, everything that succeeds is success. With the citizen, whose only interest in parties is to secure decent politics and good government, much that succeeds is worse than a failure. . . . Why should any man vote the way he does not think, if a better alternative is offered to him? Should not an honest man's vote represent a principle rather than a prejudice and conviction rather than cowardice?—*Boston Herald*.

ANTEUS. For *The Index*.

O Earth! dear Earth! one touch of thy quick life!
My wings are faithless now,
My weary breast is saddened with the strife;
But thou,
Strong mother, still art bountiful and sure.
The blood thrills once again;
My pinions' trailed plumes once again are pure.
Ah, vain

The wish to float forever near the cloud!
That life alone is blest
Which serves alike the lowly and the proud.
No quest

Among the stars, no dauntless spirit-cruise,
The earthly can forego.
No strength is nobly strong that will not choose
To know

And share, anon, the burden and the grief
Of souls that cannot rise,
Or on their chained lives shed some joy or brief
Surprise!

H. T. CLARK.
FLORENCE, MASS.

THE STREAM OF LIFE. For *The Index*.

The viewless stream of consciousness,
Of thought and will and feeling
So long reflecting night and day,
Beyond their sphere is stealing,—
From mystic fount on heights of youth
Long years ago 'twas springing,
And mountain steep and piny gorge
Were with its loud glee ringing.

Dull clouds of woe, sun-gleams of joy,
Have gloomed, have glassed its flowing,—
Through headlong youth, through manhood stern,
Without a pause 'twas going:
At length, it nears the engulfing sea,
Outside of life dim heaving,
And stillier grows its current as
Its wonted banks 'tis leaving.

B. W. B.

The Index.

BOSTON, JULY 3, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, BENJAMIN F. UNDERWOOD, : : : : : } Editors.

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

Utopias, Arcadias, and Ideal Commonwealths.

BY WILLIAM S. KENNEDY.

Mr. Jowett, in his introduction to Plato's *Republic*, speaks of the remarkable philosophical breadth and religious tolerance of Sir Thomas More, as shown in his account of the religion of the Utopians,—a breadth of mind remarkable, he asserts, in such a man as More, who was a Roman Catholic of pre-Reformation times. I had never before heard of such a trait in Sir Thomas, although, as a reader of history, I had admired the sweetness of his disposition and the integrity of his character as manifested in the Anne Boleyn case. I have recently looked up the passages referred to by Mr. Jowett, and do by no means find in them or in any other portion of the *Utopia* any unusual philosophical breadth, as judged by the standards of our times at least (and such I understand to be the standard employed by Mr. Jowett in this particular case), but, on the contrary, just such religious narrowness and bigotry in the mind of the English chancellor as was to be expected from one who, like the good and loyal Catholic that he was, "spared," as Rapin says, "no pains to utterly destroy those who embraced the Reformation." More makes his Utopians worship one supreme God, called Mithras. He expresses regret that, on their showing eagerness to embrace Christianity, there were none of his company qualified to administer to them any sacrament except baptism. The sum total of his toleration consists in his making his Utopians sufferers of various religions. But they are entirely intolerant of no religion, their founder Utopus having made "a solemn and severe law against such as should so far degenerate from the dignity of human nature as to think that our souls die with our bodies, or that the world is governed by chance, without a wise, overruling Providence; for they

all formerly believed that there was a state of rewards and punishments to the good and bad after this life; and they now look on those who think otherwise as scarce fit to be counted men, since they degrade so noble a being as the soul, and reckon it no better than a beast's. Thus they are far from looking on such men as fit for human society or to be citizens of a well-ordered commonwealth, [this would apply *verbatim* to the Bradlaugh case: has English opinion, then, remained stationary for three hundred years?] since a man of such principles must needs, as oft as he dares do it, despise all their laws and customs; for there is no doubt to be made that a man who is afraid of nothing but the law, and apprehends nothing after death, will not scruple to break through all the laws of his country, either by fraud or force, when by this means he may satisfy his appetites. They never raise any that hold these maxims either to honors or offices, nor employ them in any public trust, but despise them as men of base and sordid minds. Yet they do not punish them, because they lay this down as a maxim that a man cannot make himself believe anything he pleases." Comment on such toleration as this is unnecessary. One would think that More need not have taken the precaution to publish his book abroad and in the Latin tongue, if this were all the heresy he had to utter. Yet, in an age in which toleration was unknown, it was a good deal to speak in favor of sufferance of different sects. "There is nothing," says More, "in which they [his Utopians] are more cautious than in giving their opinion positively concerning any religion." There is covered satire in this remark, too, that "their priests are men of eminent piety, and therefore they are but few."

But we may more properly glance at a few of the interesting features of the *Utopia* in its place in a roughly chronological series. Utopias may be classified into the potential and the actual, or utopias of the pen and of the plough, of the closet and the field,—the latter being the various Fourieristic communities established as experiments in various parts of the world in recent times. To these I shall merely allude later, confining my attention chiefly to the written idealisms of authors, without dwelling on the universal tendency of men to idealize some happy spot,—the various heavens of religious dreamers, fairy lands, Islands of the Blest, and Armida's islands, islands of Calypso, Circe, and the Phæaciens, and "island-valley of Avilion,"

"Where falls not hail or rain or any snow,
Nor ever wind blows loudly,"

Coming to Utopias proper (the etymology is *eu* and *τόπος*, the excellent country), it is to be noted that the prototype of them all is that of Plato, as set forth in the *Republic* and in the *Timæus*. Plato, the sublime dreamer and thinker, anticipated many of the reforms which the world is still slowly making,—such as the equality of the sexes. But his—the first—Utopia is full of the extravagances which nearly all succeeding ones have embodied,—such as communal marriage, community of property, and banishment of the poets as a pestiferous set. Plato's work contains a Utopia within a Utopia,—namely, the often-referred-to Island of Atlantis, situated beyond the Pillars of Hercules, and being the home of the descendants of Atlas, son of Poseidon. The priests of Egypt related how that, nine thousand years before Plato's time, the Athenians repelled an attack of the Atlanteans, who were then a mighty people. Shortly afterward, their island sank beneath the ocean. Poseidon had encircled the central hill of the island with alternate strips of sea and land. These his descendants cut through by

canals. The docks were filled with triremes, and the hum of commerce filled the air. By irrigation, two harvests were obtained a year. There were many elephants on the island, and there were fragrant herbs and grasses, fruits, nuts, and essences. "All these that sacred island brought forth fair and wondrous in infinite abundance."

The next Utopia in order of time is the *Cyropædia* of Xenophon, an historical romance of the life of Cyrus, composed much on the plan of Fénelon's *Télémaque*. Cicero's *De Republica* is an imitation of Plato. St. Augustine's *Civitas Dei* is a feeble idealism, a controversial work written to prove that the destruction of the Roman Empire was due to the corruption of Paganism, and not to the rise of Christianity. A more able work is Dante's *De Monarchia*, written in 1313, and published, I believe, in this century. It is in Latin, and, I think, has not been rendered into any modern tongue. It is a theological utopia, a rhapsodic dream of another Roman Empire, deriving its authority (like the papacy) immediately from God. It is an embodiment of Dante's Ghibellinism or Imperialism, and is garnished with quotations from Livy, Cicero, Virgil, Augustine, and other writers,—on the whole, a wearisome treatise to us. In the first of his three books,—that *De Necessitate Monarchiae*,—Dante tries to establish the proposition that a just monarchy would insure universal peace; and in times of peace alone, he says, can men fulfil the end of their being, which is intellectual activity. The second book treats of the way in which the Roman people rightly assume the function of Empire, and the third shows how the office of monarch or emperor depends immediately upon God.

More's *Utopia*, published in 1516, is called in an old edition "a frutefull, pleasaunt, and wittie worke, of the best state of a public weale." It is the predecessor or suggester of nearly a dozen similar treatises, some of them famous. The book purports to be based upon the conversations of a tan-faced traveller named Raphael Hythlodæ, whom More met in Antwerp, and who is said to have been a companion of Vespuccius in his voyages. Hythlodæ's island of the Utopians seems to be located somewhere in the Southern Pacific, as was afterwards the new Atlantis of Lord Bacon. The island is made to be two hundred miles in diameter, and to contain fifty-four cities. More systematizes things to death in his imaginary commonwealth: there is community of property,—no locks or thieves,—universal industry, and general content,—a kind of tame, Dutchy happiness. But it is a wooden life the Utopians live. Their clothes are all alike. They have no vices; every act of their lives is regulated by government; they make their chamber utensils of gold, and their table-service of glass and earth to avoid stimulating cupidity. "The chief and almost the only business of the Syphogrants [magistrates] is to take care that no man may live idle." Their pleasures are systematized; their cities all alike; the families counted; markets free. Good points are that they have no lawyers, and detest war and hunting. Once, ambassadors from a foreign nation came to the country of the plain-dressed Utopians. They were covered with jewels and gorgeous vestments. But among the Utopians these are the badges of slaves and the playthings of children. As the foreigners passed along the street, says More, "you might have seen the children, who were grown big enough to despise their playthings, and who had thrown away their jewels, call to their mothers, 'See that great fool that wears pearls and gems, as if he were yet a child.' While their mothers very innocently replied, 'Hold your peace; this, I believe, is one of the ambassador's fools.'"

Francis Bacon's *New Atlantis*, written in Latin, in 1624, is a fiction unfinished by its author, and on the whole most richly and massively conceived. It begins abruptly without introduction, as follows: "We sailed from Peru (where we had continued by the space of one whole year) for China and Japan by the South Sea, taking with us victuals for twelve months; and had good winds from the east, though soft and weak, for five months' space and more." Then the wind came about, and after some days of sailing toward the north they made land and a fair harbor, "being the port of a fair city; not great indeed, but well built, and that gave a pleasant view from the sea." And "straightways we saw divers of the people, with bastons in their hands, as it were forbidding us to land; yet without any cries or fierceness, but only as warning us off by signs that they made." But presently "there made forth to us a small boat, with about eight persons in it, whereof one of them had in his hand a tipstaff of a yellow cane, tipped at both ends with blue, who came aboard our ship without any show of distrust at all. And when he saw one of our number present himself somewhat afore the rest, he drew forth a little scroll of parchment (somewhat yellower than our parchment, and shining like the leaves of writing tables, but otherwise soft and flexible), and delivered it to our foremost man. In which scroll were written in ancient Hebrew and in ancient Greek, and in good Latin of the school, and in Spanish, these words: 'Land ye not, none of you; and provide to be gone from this coast within sixteen days, except you have further time given you. Meanwhile, if you want fresh water, or victual, or help for your sick, or that your ship needeth repair, write down your wants, and you shall have that which belongeth to mercy.' This scroll was signed with a stamp of cherubim's wings, not spread, but hanging downwards, and by them a cross." When it was learned that the strangers were Christians, and not pirates, they were permitted to land and make a lengthened stay on the island, being comfortably quarantined in the "Strangers' House," which had a rich revenue, no stranger having landed on the island for thirty-seven years before. It appeared from the narrations of the wise men and dignitaries of this highly civilized island that about three thousand years ago the art of navigation was more highly developed than at the time of Bacon's writing. It was the era of Atlantis and of the Aztec and Peruvian civilizations; and these mighty powers made war, they said, upon their island (called by them Bensalem). About nineteen hundred years ago, the island was ruled by a wise king named Salomona, who had a "large heart-inscrutable for good." He formed laws interdicting the entrance of strangers, "doubting novelties and commixtures of manners," yet sending out every twelve years two ships with scholars and explorers to take account of the best customs of foreign nations. "And thus," said the narrator, "you see we maintain a trade, not for gold, silver, or jewels, not for silks, not for spices, nor any other commodity of matter; but only for God's first creature, which was *Light*. To have *light* (I say) of the growth of all parts of the world." What a noble conception! It was the king just mentioned who founded the great national college of discoverers called Salomon's House. Bacon has developed this pet idea of his very minutely. It is certainly a remarkable ideal, and perhaps not impossible of fulfilment in general plan at some future time. He sets forth the new Atlantis to be a realm in which the richest, wisest, and most highly honored men are scholars and investigators of nature. Salomon's (or Solomon's) college is described as the very "eye of the kingdom," a

mighty and wealthy academy of research. In the words of one of the fathers or fellows of the college, "the end of our foundation is the knowledge of causes and secret motions of things (et motuum, ac virtutum interiorum in Natura); and the enlarging of the bounds of human empire to the effecting of all things possible."

The preparations and instruments are these: enormously deep caves in mountain and plain for the coagulations, indurations, refrigerations, and conservations of bodies; the production of artificial metals, the imitation of mines, and the curing of certain diseases; high towers for meteorological observations, some of them half a mile high (an anticipation of our signal stations); great lakes, salt and fresh, and artificial fountains; spacious houses for the imitation and demonstration of snow, hail, rain, thunders, lightnings; health-chambers and baths; gardens and orchards for experiments in grafting and inoculation; parks of beasts and birds for vivisection and experiments in cross propagations and commixtures of species; brew-houses, bake-houses, wineries, dispensatories, manufactories, optical and acoustical laboratories. The House publishes its inventions from time to time in divers cities, and has galleries for the exhibition of its new inventions. How majestic this great school, and how superior in development of the idea to Swift's snarling satire of learned men in his account of Laputa!

An idea of the honor paid to the "Fathers" of Bacon's Academy may be gained from his description of one of them: "And as we were thus in conference there came one that seemed to be a messenger, in a rich huke, that spake with the Jew: whereupon he turned to me and said, 'You will pardon me, for I am commanded away in haste.' The next morning he came to me again, joyful as it seemed, and said: 'There is word come to the governor of the city that one of the Fathers of Salomon's House will be here this day seven-night. We have seen none of them this dozen years. His coming is in state, but the cause of his coming is secret. I will provide you and your fellows of a good standing to see his entry.' I thanked him, and told him I was most glad of the news. The day being come, he made his entry. He was a man of middle stature and age, comely of person, and had an aspect as if he pitied men. He was clothed in a robe of fine black cloth with wide sleeves and a cape. His undergarment was of excellent white linen down to the foot, girt with a girdle of the same, and a sindon, or tipstaff, of the same about his neck. He had gloves that were curious, and set with stone, and shoes of peach-colored velvet. His neck was bare to the shoulders. His hat was like a helmet, or Spanish Montera, and his locks curled below it decently: they were of color brown. His beard was cut round. He was carried in a rich chariot without wheels, litter-wise, with two horses at either end, richly trapped in blue velvet embroidered, and two footmen on each side in the like attire." His chariot was resplendent with precious stones, covered with cloth of gold, and having upon it a sun and a cherub of gold. Fifty attendants preceded the chariot, and behind it came a great procession. "He held up his bare hand as he went, as blessing the people, but in silence." Perhaps the day will come when this majestic picture will be realized, and foolish humanity will wait for blessing upon its great men of science—its Humboldts, its Darwins, and its Agassizs—rather than upon its bitter and phantasmal priests and its savage conquerors of the sword and the loom.

Bacon's description of the introduction of Christianity to the New Atlantis is a pretty piece of

imagination: "About twenty years after the ascension of our Saviour," says an inhabitant of his new Atlantis, "it came to pass that there was seen by the people of Renfusa (a city upon the eastern coast of our island), within night (the night was cloudy and calm), as it might be some mile into the sea, a great pillar of light; not sharp, but in form of a column or cylinder, rising from the sea a great way up toward heaven; and on the top of it was seen a large cross of light, more bright and resplendent than the body of the pillar. Upon which so strange a spectacle, the people of the city gathered together apace upon the sands to wonder, and so after put themselves into a number of small boats to go nearer to this marvellous sight. But when the boats were come within about sixty yards of the pillar, they found themselves all bound and could go no further; yet so as they might move to go about, but might not approach nearer: so the boats stood all as in a theatre beholding this light as an heavenly sign." One more holy than the rest put up a prayer to God, and was permitted to approach softly and in silence. "But, ere he came near it, the pillar and cross of light brake up, and cast itself abroad, as it were, into a firmament of many stars, which also vanished soon after, and there was nothing left to be seen but a small ark or chest of cedar, and not wet at all with water, though it swam. And in the fore end of it, which was toward him, grew a small green branch of palm." When the devout man took the ark into the boat, it opened of itself and disclosed the books of the Old and the New Testament, and a letter of greeting from St. Bartholomew. It is to be noted the idea of the pillar of light was taken by Bacon from Plato,—the Vision of Er, I believe.

An interesting episode of the "Atlantis" is the account of the Feast of the Family made at the charge of the State, by any man who "shall live to see thirty persons descended of his body alive together, and all above three years old." The family being all assembled, the patriarch comes forth after divine service, and seats himself under a canopy composed of white shining ivy, and silk wrought by a daughter of the family. Then came two heralds, one bearing a parchment roll or king's charter, "containing gift of revenue and many privileges, exemptions, and points of honor granted to the Father of the Family," and the other carrying in his hand a cluster of grapes with a long foot or stalk, both grapes and stalk of gold. This the father delivers to one of his sons as a mark of honor, and the son is henceforth called "The Son of the Vine," and bears the cluster before his father when he goes in public. After the feast is over, the father blesses each child and gives to each a jewel in the form of an ear of wheat, which they ever after wear in front of their turban or hat.

The seventeenth century produced a number of social romances. The *Argenis* of John Barclay, published under the title of *The Loves of Polyarchus and Argenis*, is a novel and a political allegory combined, which was much admired by Cowper and Coleridge and by Cardinal Richelieu, but is now a huge fossil more unreadable than the works of the Fathers. The same is true of James Harrington's *Oceana*, a huge megatherium of a book (probably not read by ten men during the past two hundred years). It gives its author's ideal of a republican form of government. *Oceana* is England. The work reflects severely upon Cromwell's administration (it was published in 1656), and had difficulty in getting to the light. It paints an ideal commonwealth squarely opposed to that of Dante, Hobbes, and Carlyle.

In 1639, Tommaso Campanella, Italian philoso-

pher, published his *Civitas Solis*. It is accessible in Italian and perhaps in English. It is a cold abstract work imitated from Plato, advocating state control of population and universal military training. It is cast in the form of a dialogue between *Il Gran Maestro* of the Hospitallers and a Genoese admiral. The latter gives the Grand Master an account of the city of the sun, which he had visited during his travels. It lies directly under the equator (hence its name), and is strongly fortified. The chief magistrate—*sommo regitore*—is a priest named Hoh. He has under him three captains called Sapienza, Potenza, and Amore. By the educational system of the people, the boys learn as much in a year as our boys learn in ten or fifteen. There is at the close a good deal of metaphysics about final and secondary causes, etc. The short Utopia of Gaspar Gozzi—*Storia del Reame degli Orsi* (1768)—is, in one edition, bound up with Campanella's work.

To Swift's immortal *Gulliver* it is only necessary to refer. Laputa, Houyhnhnm-land, Lilliput, and Brobdingnag are all contrasted savagely with England, and pointed to as models in their several peculiar features.

The *Rasselas* of Dr. Johnson differs characteristically from all other works of the kind, being designed to show, not how happy we should all be if things were only well adjusted, but that in such case we should be perfectly miserable. His prince, in the beautiful vale of the kingdom of Amhara, "where all the diversities of the world were brought together, the blessings of nature were collected, and its evils extracted and excluded," was still miserable and restless. By his travels, he learns, it is true, the unsatisfactory and transitory nature of the pleasures of the great world; but he also learns that happiness is nowhere to be attained on this earth, not even in a Utopian valley. This is the kind of gloomy Calvinistic philosophy that we might expect from the Fleet Street leviathan; but it is not a profound philosophy, nor consonant with the lessons of universal progress, as derived from the vast intellectual field of our day.

The account of that sweet little paradise—the island home of Paul and Virginia—was written, says Saint-Pierre, "in order to blend with the beauty of tropical nature the moral beauty of a small society." But a more awedly ideal sketch is the same author's fragment, *Arcadia*, bound up with his *Studies of Nature*. Admirers of Rousseau know well the friendship of Saint-Pierre and the author of *Emilius*. In the long and meandering preface to his *Arcadia*, Saint-Pierre dwells with weak egotism on the friendship, and tells how he and Rousseau concocted the *Arcadia* in their walks in the Bois de Boulogne and elsewhere. Saint-Pierre, stimulated by Rousseau, worked for four years collecting materials for a sketch of a Utopia which he was to locate on the banks of the Amazon. But he became dissatisfied with the thing. It didn't look probable or romantic enough (he had all sorts of visionary refugees there, collected out of modern Europe): "so," says he, "I relinquished my political vessel, though I had labored upon her for several years with unwearied perseverance. Like the canoe of Robinson Crusoe, I left her in the forest where I had moulded her, for want of power to put her in motion, and to carry her along the tide of human opinions." He finally settled on *Arcadia* as the scene of his Utopia, and, after collecting out of Virgil, Pausanias, Plutarch, and Xenophon all the finest descriptions and traditions of the land, began his work. The plan was to represent in *Arcadia* a state of nature, and to contrast it with Gaul and Egypt, countries of barbarism and corruption severally. The scene opens on the side of Mt. Lyceum, fronting the Gulf

of Messina. While the shepherd Tirtaeus is watching his flocks and looking out upon the olive-colored waves, already whitened with foam by the freshening breeze, he is accosted by two travellers, Cephas and Amasis, who inquire the way to Argos. They are invited home for the night by the shepherd, whose little cottage stands by the rivulet Achelous, near where an old fallen willow, covered with convolvulus, serves as a bridge. The house is covered with thatch; and vines, loaded with purple and fiery clusters, hang upon its walls. On one side, an ivy partly covers an outside staircase. The simple-hearted, affectionate daughter of the shepherd sets supper for the guests, while they are conversing. The meal consists of cabbages, bacon, wheaten bread, a pot filled with wine, a cream cheese, fresh eggs, and some of the second figs of the year, white and violet-colored. At the sight of some household relics brought out for the guests, she is reminded of her dead mother, and bursts into uncontrollable grief. After supper, the strangers relate their travels, and so the fragment closes. It is a pretty idyllic picture, and it is a pity its author did not complete it.

I have not left myself room to speak of Mr. E. E. Hale's social Utopia, *Sybaris*, where, e.g., the courts rule that at the end of eleven minutes every visiting guest must rise and offer to go. Only allusion can at present be made to the ideal commonwealths depicted in Hall's *Mundus Alter et Idem*, Defoe's vigorous *Essay on Projects*, John Bellers' quaint booklet, *Proposals for Raising a Colledge of Industry of all Useful Trades and Husbandry*, the "colledge" being a kind of Fourieristic *Phalanstère*, Brook Farm, and technological institute combined (reminds you of Ruskin's St. George's Guild), and only reference can be made to the modern Frenchman Cabet's *Voyage en Icarie* (a socialistic work), to old Dr. Francis Godwin's funny work, *The Strange Voyage and Adventures of Domingo Gonzales to the World in the Moon*, by the several *Ganzas*, or large *Geese*, London, 1768, or to Cyrano de Bergerac's *Histoire Comique des Etats et Empires de la Lune et du Soleil* (daring, Pope-defying, free-thinking, Mirabeau-like, soldier author Bergerac, whose books, it is thought, have been suppressed and secretly bought up by Rome, so that they have been rare in libraries).

Then there is Hawthorne's *Blithedale Romance*, the experiments at Brook Farm and at Condé-sur-Vesgre (Fourier's), the schemes of Louis Blanc, Proudhon, Robert Owen, Saint-Simon, and Ruskin in his *Time and Tide*, and the sixty-nine and more communistic communities actually existing in the United States at the present time, not to mention those in other countries. Perhaps opportunity may offer at some future time for examination of the rarer foreign works just mentioned.

CORRESPONDENCE.

THE MORMON QUESTION.

Editors of The Index:—

I have been much interested in the discussions on the Mormon question, now being treated so freely and in such a fair, generous spirit in the columns of *The Index*. Here allow me to say that, for dignity, impartiality, and the largest liberty of opinion, *The Index* seems to me to be without a rival among contemporary journals. It is curious to observe the different opinions regarding the institution of Mormonism in its influence on the condition of its adherents. They remind me of the conflicting statements as to the happiness and contentment of the slaves made by visitors to the South before the war. For instance, from what different stand-points, and consequently forming what different deductions, do "H. H.," in her article, "The Bee Hive," in the *Century* for May, and Kate Field, in her letters to the *Boston Herald*, look at the state of things in Utah!

"We see only what we have the gift of seeing." Mr. Kimball's letter in *The Index* of May 1 must be a convincing proof, to a candid, unprejudiced mind, with all its array of well-authenticated facts, of the moral, educational, and industrial success, taking no cognizance of polygamy, of the Mormon experiment in Utah. According to Mr. Curtis and Mr. Holland, as stated in their articles, "The Mormon Question from a New Standpoint" and "Mormon Girls," it appears that not more "than one-tenth of the Mormons themselves have more than one wife." It would seem, then, that the practice of polygamy is fast disappearing in consequence of the example of the Gentiles among them, and the silent influence of many potent ideas from which they will in vain try to shut themselves off: as well attempt to exclude the sunlight and the air.

If they ask the protection of government for polygamy, and require every citizen of Utah to practise it, then it would be the duty of all to remonstrate against her admission as a State into the Union. We know too well that the *spirit* of monogamy is openly violated by many men of high position in all our cities and towns; but, let a petition asking that legal sanction shall be granted to such connections be presented to any legislature, what would be the result? Imagine the commotion it would produce, the remonstrances that would be poured into the legislative halls. One more strong argument would then be added to those already existing in favor of "Woman Suffrage."

Only when woman is dominated by a fanatical, superstitious religion will she consent to be one of a "plurality of wives." If the one whom she has chosen to be hers only proves unfaithful, she will, with womanly fortitude and heroism, if she cannot win him back to allegiance, endure as best she can the agony and doubt. If she has children, in loving and caring for them, she will enjoy the happiness which only mothers can. But to know that she has only the tenth part of a husband, that his fatherly love and protection are spread over twenty-five or more children besides her own,—where is the refined, intelligent woman who will willingly consent to such a life?

That the Mormons have been misrepresented and treated with illiberality is without doubt true.

Let the modern ideas of life, illuminated by science, shine into the recesses of fanaticism and religious bigotry; and slowly, but surely, they will see the impossibility of such an institution as polygamy existing in this era of light and progress. Persecution will only strengthen them in their belief. It is time that, in this age of enlightenment, the lesson of the uselessness of fighting errors with any weapons but those truths sustained by scientific facts should have been well learned.

The influence which the family circle—the husband, the wife, and the children—exert on society is the one unanswerable argument in favor of monogamy. It is, if what it *should be* and what it *is* in thousands of happy families to be found in every village, town, and city of this country, the "saving remnant" which forms the central germ, the nidus from which spring up, from seed there planted, the trees from whose fruit we can alone look for the ultimate triumph of science over superstition and falsehood. Families of this character established in Utah will soon make their influence felt. Before the advancing tide of civilization by them increased and expanded, this institution, like all others founded on ignorance and fanaticism, will disappear.

R. F. B.

THE REAL POINTS AT ISSUE ON THE MORMON QUESTION.

Editors of The Index:—

I find in *The Index* of May 22 a long letter from Mr. Kimball in reply to Mr. Potter, with the above title. Having been a resident of Utah for sixteen years, I consider myself acquainted by actual observation both with theoretical and practical Mormonism. Mr. Kimball goes over considerable ground, and thinks he makes some points against Mr. Potter's arguments; but he, like most other writers on Mormonism, misses the real points at issue, and puts theories for facts; and, if these conflict, it is so much the worse for the facts.

Mormonism as a system proposes to introduce a new order of things, which is to take control of all the relations of life socially, religiously, and politi-

cally; and, after an experiment of fifty years, it has proven itself a dismal failure, being both opposed to nature and the universal experience of mankind. I wish in this comment to confine my remarks to three or four of the main points sought to be made by Mr. Kimball.

First, I consider that Mr. Potter's point, "that the Mormons are a picked community," is well taken, and Mr. Kimball's reply does not cover the ground. Mormonism picks up religious, God-fearing people in the Old World, who are true and steadfast to their convictions, and are honest in the main. Their missionaries instruct their converts to obey the laws of the country where they live, to live above the law in fact; but tell them, When you come to America, you can do as you please: you can break the laws of America, and claim protection under the plea that your religion requires you so to do. This is the gravamen of the charge against Mormonism, it is the spirit of the system. The spirit of its founder has come down to the present time, the spirit of disloyalty to the government and opposition to the law. It has ever defied the laws of this country. Mr. Kimball does not draw any line between the Mormon people and the Mormon system. It is the utter insincerity and duplicity of the system which is the trouble all the time.

Secondly, the point made by Mr. Kimball that the majority of the crime in Salt Lake City is committed by Gentiles is easily explained. The bad reputation of the Mormons has attracted there a reckless and vicious class of persons, who imagine they can do as they please; but they are speedily clinched by the Mormon police, and made to pay dearly for their offences. I affirm, that the offences of prostitution and gambling in that city are tolerated for no other purpose than to bring revenue into the police courts; and the periodical hearings and finings have been a systematic source of revenue to Mormon officials. If Mr. Kimball calls for facts, I can produce my proofs. This has been going on for a period of thirty years.

Thirdly, Mr. Kimball objects to slavery and polygamy being designated the "twin relics of barbarism." I affirm that nothing could be more appropriate: the position taken that polygamy is a voluntary act and slavery compulsory is a distinction without a difference. I affirm that polygamy among the Mormons is always morally, and has been in too many cases physically, compulsory. Does one woman voluntarily allow another woman to steal her husband's affections away from her? Not naturally. A man sets his affections on another woman, and lecherous priests assist him to violate the sanctity of his home, and to trample on the affections of his faithful wife. The "Revelation on Polygamy" says that, if a woman refuses to minister to a man's wishes in this respect, "she shall be destroyed." Many a woman in Utah has been destroyed for this reason.

But what does a man have to give up to obtain the wretched privilege of being a polygamist? Everything that makes him a man. Can a man stand up before a priest or a justice, and say I am willing to take these two women to be my wives, and the women say we are willing to take this man to be our husband? Not by any means. He has to obtain the permission of several grades of the priesthood, and to pass through the endowment house, where he takes a series of cast-iron obligations of the most awful nature, the breach of which involves the death penalty in three different forms,—namely, the throat to be cut, the heart to be taken out, and to be disembowelled! and he wears on his garments ever afterwards the perpetual reminder of these obligations. This is no empty form, the penalty has been enacted in numerous instances. He is the bond slave of the priesthood from henceforth, and death alone can free him. Is this the kind of freedom Mr. Kimball would like to enjoy? There is no freedom, there can be no freedom in Mormon polygamy, either for man or woman.

Fourthly, about woman suffrage in Utah. This is the largest Sodomite apple of the whole outrageous swindle. It is hardly possible for a person acquainted with the facts in the case to write with any degree of patience about female suffrage in Utah. I unhesitatingly affirm that nine-tenths of the women of Utah are as ignorant of the meaning of female suffrage, as understood in the East, as are the wives of the cannibals in the Fiji Islands. All that they understand by it is the right to vote to sustain the priesthood. The ballots are put into their hands, and they vote for the

men indicated, without ever dreaming of the meaning of the act in its true sense. Sustain the men appointed to rule by the priesthood is the first and last lesson of Mormonism; and this lesson is clinched by the cast-iron obligations of the endowment house. The right of female suffrage in Utah is simply a mockery, adding insult to injury. The Mormon wife has no rights she can call her own. The right of dower is taken away by law, and every other right that belongs to woman in other parts of the land. She is a helpless, submissive slave, and has no law to protect her. She is far worse off than monogamous wives who have nothing but the law to protect them. Mormon wives have no law to protect them or stand between them and the will of their husbands. It is eternal submission on their part. Their right of voting is a farce, a delusion, and a snare; yet Eastern people, in their ignorance, swallow it down as if it was a reality.

Mr. Kimball says, Instruct the Mormon people, and do not persecute them; but he does not draw the line between the Mormon people and the Mormon system. The one is worthy of sympathy, the other utterly unworthy of it, for this reason: it is rule or ruin with it. It has no sympathy, it can have no sympathy, with free institutions. It is a "theocracy" ruling by divine right, and its existence is a perpetual menace to the government of the United States. The limits of forbearance have almost been reached; and it is fast becoming (as with slavery) a question whether political suicide should be committed, or whether the twin relic of barbarism, "polygamy," and the system which sustains it, should be eradicated,—peaceably if possible, forcibly if needs be. It is a dangerous fungous growth. It uses the forms of the Constitution to stifle liberty and make men slaves, not only physically, but morally and intellectually. If Mr. Kimball knew exactly what he was defending, I think he would be the last man to apologize for a system that has broken more hearts and blasted more lives in the last fifty years than the world has any idea of.

Respectfully yours, A. WARD.

DENVER, COL.

"THIS mistake [the action of the League in regard to postal laws of 1873] is being perceived by Messrs. Wakeman and Leland, the President and Secretary of the National Liberal League; and they consequently advocate a return to First Principles. They have expressed their willingness to co-operate in the reorganization of the National Liberal League on the platform of 1876. Fearing that their personalities might give offence, they have relinquished all claim to serve in an official capacity. We have no reason to doubt the sincerity of Messrs. Wakeman and Leland. They have taken the first step toward reconciling the foolishly hostile camps of Liberalism: let the next step be made by Mr. Underwood and his friends."

In reply to this extract, taken from an editorial in the *Radical Review*, which contains expressions altogether too complimentary to us, we have this to say: We still adhere to the preference expressed in these columns some weeks ago for an organization of Liberals, if an attempt to effect one is to be made, formed independently of and without reference to any of the existing organizations. Such a course would measurably relieve the effort of disadvantages liable to result from complications and antagonisms which otherwise, we fear, would be entailed upon the proposed new organization, and endanger success. The name of the Liberal League, by reason of the policy which it is now proposed to abandon, has become offensive to many Liberals; and this objection would not be easily overcome. Furthermore, an attempt to organize or reorganize Liberals in the midst of an exciting Presidential campaign would be attended with great difficulties. These are a few of the objections which occur to us, and which we state, not captiously, but for the thoughtful consideration of those who are in favor of reorganizing the National Liberal League this fall upon its former basis when under the presidency of Mr. Abbot. At the same time, if the proposition now made shall be carried out in good faith, in the reorganization and in the administration of the League, it will in our opinion be entitled to the support of the Liberals of the country, and will certainly have ours. We do not believe in allowing past errors or individual antagonisms to interfere with the interests of important reforms; and, as we have never had any personal ambitions in connection with the movement the National Liberal League was formed to promote, we shall be content to remain in the humble

position to which the leaders of the League are now willing to retire, and to aid, as best we can, such officers (and none others) as will, if elected, command the respect and confidence of honorable and fair-minded men and women who believe in the principles of State secularization. What other "step" need we take?

BOOK NOTICES.

THE WOMAN QUESTION IN EUROPE. A Series of Original Essays. Edited by Theodore Stanton, M.A. With an Introduction by Frances Power Cobbe. New York: George P. Putnam's Sons. pp. 478. Price \$3.50.

It speaks volumes for the righteousness of the cause which Elizabeth Cady Stanton has pleaded so long, and for which she has done so much, that so valuable an addition as this to the knowledge of what has been done for the advancement of women in Europe should come from the hands of a man, and that man her son.

Although the book, as a whole, is the result of the combined thought and labor of many brains and many hands, the idea and most of the labor were Mr. Stanton's; for, though he secured, according to his first intention, from each country (except Portugal) "the collaboration of one or more women who, in connection with a literary training, had participated either actively or in spirit in some phase of the women's movement," yet the translations from six different languages in which the contributions were originally written, the condensations of many of them, and the proof-reading of all, together with the valuable brief biographies of the various writers, the copious foot-notes, much of the long chapter devoted to France, and the arrangement of the whole into as orderly grouping as was, under this method, attainable, was the work of one who modestly styles himself "the editor." Information—much of it new to American workers in this reform—is given as to the status of women in the European countries, which are treated of in the following order: England, Germany, Holland, Austria, Norway, Sweden, Denmark, France, Italy, Spain, Portugal, Belgium, Switzerland, Russia, Poland, Bohemia, Turkey, Bulgaria, and Greece. Of these, most space is devoted to England and France. In these and some other countries, more than one writer has contributed information in regard to the several phases of the woman's movement, such as the suffrage, the educational, the medical, the industrial, the legal, the philanthropic, and the moral advancement of the sex.

This volume is a very suggestive one even to those already familiar with the work done in the same fields in this country; and it will be found deeply interesting also to those who care only for a wider knowledge of foreign laws, ways, and methods. It is peculiarly suggestive in the possibilities shown to be within the scope of work already done for women; in the hints given to the ardent spirits who look longingly and work courageously for woman's complete enfranchisement. There is an inspiring *reveille* strain running through its pages, which quickens the ardor of those who earnestly desire to hasten on the good work being done, showing as it does the possibilities for greater accomplishment in the broad field of opportunity now opening for women. The most indifferent reader cannot fail of noting the folly of any attempt at resisting a reform so wide-spread and deep-rooted as the women's movement is here shown to be. It is part and parcel of the progressional spirit of the day, and in one form or another is being agitated in every civilized part of the globe; and among its most cheering and encouraging features is the part taken in it by thinking and conscientious men of acknowledged worth, ability, and genius.

It will surprise many readers to learn of the political privileges already shared by women in countries which we have been accustomed to think of as being far behind our own in the liberty granted its people. When we find how uniform in all countries has been the opposition to thorough scientific education for the mothers and daughters of all races, we can no longer wonder at the absence of any prominence among women in discovery, invention, or art, when we find what obstacles outside of sex have been everywhere placed in the way to bar woman's right to be taught the sciences necessary for achieving such prominence. Russia, although in many respects lagging behind other nations in progressive movement, is yet (though action in this matter is of recent origin) somewhat in

advance of most countries in the educational privileges accorded its women in the practical sciences.

Mr. Stanton's book will be found of great advantage, not only to the workers in the cause of which it treats as introducing them to many hitherto unknown fellow-workers, and furnishing them necessary knowledge for that work in the array of tabulated statistics and of facts corroborative of their claims, but also to the general reader from its historical analytic aid in the study of the development in different countries of national characteristics.

For a work intended for popular use and information, this is decided in its freedom from orthodox religious bias and in its indorsement of free thought. It is appropriately dedicated to the author's "many collaborators, and above all to Marguerite Berry," his wife, "whose participation has not been limited to a single chapter, but extends throughout every page of the volume."

THE CONSOLATIONS OF SCIENCE; or, Contributions from Science to the Hope of Immortality and Kindred Themes. By Jacob Straub. With an Introduction by Hiram W. Thomas, D.D. Chicago: The College Book Co. 1884. pp. 435. Price \$2.00.

The author of the above work claims that the essential self is released by death from sensuous relations with this world and "becomes an inhabitant of another aspect or world by being sensuously adjusted thereto." Intercourse between the two worlds, he says, although difficult and rare, is still a fact, in proof of which appeal is made to mesmerism and Spiritualism. A chapter is devoted to "An Approximate Analysis of Real Life in the Land Immortal." The changes that may be and those that may not be realized in the next world are discussed very learnedly, and the author evidently thinks in accordance with the canons of science. His thought is not always well defined, and is so attenuated that whole chapters are given to what could be easily condensed into as many pages. The style lacks, not only conciseness, but directness and clearness, and often leaves the reader in doubt as to the author's meaning. The failure of the work to justify the title and the headings of the chapters is so marked that it must disappoint the careful reader who takes it up with the hope of any scientific contribution to the discussion of the old question, "If a man die, shall he live again?" But the spirit of the work is good, and we only regret that the same cannot be said of its logic.

THE MORMON QUESTION. Address by James W. Stillman, delivered in Boston, Feb. 12, 1884. Boston: J. P. Mendum. pp. 40.

Mr. Stillman takes the ground that the Constitution of the United States does not confer upon Congress any authority whatever to legislate for the Territories without their consent; indeed, that, if a Territory insists upon declaring its own independence, it is justified in so doing, and there is no constitutional authority by which the United States can compel its submission; for the Constitution, as asserted in its preamble, was established "for the United States of America," and not for contiguous territory owned by the government! On this technical ground, it is argued that Congress has no right to interfere with polygamy. The clause of Article IV. of the Constitution, which says, "The Congress shall have power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States," it is claimed, applies only to property, and gives no authority to legislate for the people. This construction, Mr. Stillman says, has been sustained by Lewis Cass and Stephen A. Douglass, Matt H. Carpenter, Lysander Spooner, and Alfred E. Giles! Senator Carpenter held that the power to legislate for the Territories arises from the clause of the Constitution which declares the power of Congress to admit new States; but, according to this view, the people of Utah are under the jurisdiction of the United States government, and this view Mr. Stillman dissents from. Our expounder of the Constitution quotes Chief Justice Waite, "It is certainly now too late to doubt the power of Congress to govern the Territories," and remarks, "It may be too late for Judge Waite, but it is not too late for me." Even granting the right of Congress to legislate for the Territories, Mr. Stillman denies that it can disturb the institution of polygamy, for the

reason that it is no crime. "If one man and two women choose to live together," he asks, "if it is a voluntary compact or agreement between the three, how are the rights of other persons infringed, I want to know?" But, even admitting the right of Congress to legislate for the Territories, and admitting that polygamy is "the blackest crime," it is still denied that Congress has "the power to abolish or punish it." The statute now in force is declared unconstitutional. Mr. Stillman's argument to show that Congress has no constitutional or rightful authority over the people of Utah seems to us mere special pleading. He says he believes in monogamy, "that every man has his natural mate and every woman has her natural mate; there is a law higher than the law of the State, the law of mutual affinity; that, when that law is discovered and observed, it supersedes all other laws; and that any attempt on the part of the State to regulate the sexual relations of men and women is an unwarrantable infringement on the personal liberty of the individual." After reading this declaration, we are not surprised that Mr. Stillman is opposed to legislation by Congress regarding polygamy; for it is clear as daylight that he is opposed to any laws by the general government or by the States in regard to the relations of the sexes, his notion being that men and women should be at liberty to live together in such relations as they choose, be they monogamic, polygamic, or polyandric, assuming new relations at pleasure without any regulation whatever by the State. There seems to be no pressing demand for argument against views of this sort.

NOTES OF A THREE MONTHS' TOUR IN AMERICA. By Ethel Leach. Great Yarmouth (England): The Mercury Publishing Co. 1883. pp. 66.

Mrs. Leach, who visited this country with Mr. Holyoake and his daughter, has given the English public a very readable description of things seen and places visited while she was here. A few sentences from her account will give an idea of the high opinion she has of the American people: "Nowhere is woman treated with greater respect than in America. This respect exhibits itself in the smallest circumstance. The moment she enters a public carriage, the men at once rise and offer her the best place; and this is done in the most unobtrusive manner. Only once throughout my entire visit and travels did I see a gentleman remain sitting in a carriage when a lady was standing; and it struck me as so unusual that I drew the attention of my friend to it, who said he could not be an American. . . . It would be impossible to see a man taking a walk with his hands in his pockets and his wife beside him carrying the baby or pushing the perambulator. . . . An American's love of freedom and respect for the freedom of others are not less remarkable in his home. There is an entire absence of the overbearing manner in which men are accustomed to speak of and to their wives in England. . . . I believe, as a whole, the American people are as well educated and have as much intelligence and manliness of character as any nation. Indeed, the thing that most impresses you is intelligence. A look of animation pervades the whole population. . . . In a country village, I once remarked upon the quantity of weeds I saw growing, and that I had never seen so many before, when I received for reply, 'I guess you haven't room for weeds in England.' This was undoubtedly the truth, but it had never occurred to me. Mr. Herbert Spencer, at a reception given him in New York, deprecated the hurry of the Americans. Mr. Holyoake said in answer that 'Mr. Spencer would be in a hurry, if he remained there six months.' An enlightened people in a new world where almost every one has facilities for making his fortune, it is not to be wondered at that the pursuit of wealth has been the leading impulse. . . . In its schools, America is incomparably at the head of civilization. . . . The rural schools are in great contrast to our own. We teach our agricultural children little less than the three R's. In the United States, they are taught, besides geography and history,—which are included in our programme,—geometry, algebra, physiology, chemistry, and natural history, the object being, not to transform them into pedants, but to develop their intelligence. 'What a pity,' said a grave Scotchman, in the beginning of this century, 'to teach the beautiful science of geometry to weavers and cobblers.' Here nothing is too

good or too high for any one tall and good enough to get hold of it. No wonder that, as Theodore Parker says, 'The best thought of France and Germany finds a readier welcome here than in our parent land.' Mrs. Leach says she spent considerable time in the public schools of America; and, in praise of them, she is enthusiastic.

IN MEMORIAM: KATE NEWELL DOGGETT.

In Havana, Cuba, on March 13, 1884, died Kate Newell Doggett, leaving the world the poorer in that so brave a soul has taken its departure from among the children of men. Mrs. Doggett was born in Charlotte, Vt., in 1827. Her early life, through no fault of her own, was very sad; and, in 1855, she came out to Chicago as a teacher. The following year, she was married to Mr. William E. Doggett, a wealthy and intelligent merchant of that city. Until the death of Mr. Doggett, in March, 1876, their life was an ideal one, with wealth, friends, cultivated tastes, and perfect love to unite them. Mr. and Mrs. Doggett were peculiarly united to each other. He was generous, brave, and patient; she was impulsive, enthusiastic, and sympathetic. A truly noble friendship existed between them. No institution for learning, art, or science in their young city appealed to them in vain. Their sympathy was ever active; and their purse open to assist in establishing everything tending to the elevation of the people, whether morally, socially, or physically. To their home came not only the celebrated and the learned, but also the homeless and the stranger. Their hospitality was gracious and open-handed, and it was incessant. The health of both Mr. and Mrs. Doggett suffered by the inconsiderate demands made on their time, strength, and hospitality.

Mrs. Doggett was a constant student, and spoke and wrote with fluency the French, German, and Italian languages. Her translation of Charles Blanc's *Grammar of Painting* is remarkable for its lucid English and faithfulness to the original. She was proficient in the study of botany, no one in the West being better acquainted with the flora of that region. She taught classes in botany for some time at the Chicago University, besides the free classes in foreign languages, which met regularly at her house.

Mrs. Doggett was a thorough American, possessing as she did in an eminent degree the old New England virtues of patriotism, fearlessness, and morality. Her love for this country was intense. There was nothing she enjoyed so much as speaking of its prosperity and prophesying its future greatness. Not that she ignored either its mistakes or dangers, but her efforts were always directed toward reform. She had but little sympathy with the large class of Americans who condemn the existing state of affairs, but make no effort to better it.

Mrs. Doggett had so high a standard of life for herself and for her sex that any frivolity or inconsistency in what a woman said or did really saddened her. Her sympathy with any one in trouble or misjudged by superficial people was very keen, especially if the sufferer were a woman. She once said: "It is useless to tell me not to take the wrongs and trials of my sisters so to heart. I never hear of a woman being wronged but that I feel as if she were my own daughter."

Her views on religious questions were extremely radical; and she possessed the courage of her convictions, always bearing testimony, whenever she thought the occasion called for it, to what she considered the truth. Mrs. Doggett was an idealist. Her standard of morals, of honesty, of justice, of purity, was unattainable in this work-a-day world. She was satisfied with nothing short of the naked truth: the smallest sham was abominable to her either in politics, morals, or religion. Even when speaking of herself, a subject which to most people admits of great latitude, she always spoke the exact truth. From first to last, through fair or dark days, she loved justice and open-dealing, and abhorred sham and falsehood. Her life was too busy in well-doing for her to leave behind any great amount of literary work. Of her, it may truly be said, "that she did their errands, entered into the sacrifices with them, was a link in the divine chain." But, alas! by bitter sorrow during the last years of her life, she could feel neither "the joy nor life of it."

Modern Thinkers,

Principally upon Social Science.

By Prof. VAN BUREN DENSLOW, LL.D. With Introduction by ROBERT G. INGERSOLL. Including critical analyses of Swedenborg as a Seer, of Adam Smith as an Economist, of Jeremy Bentham as a Law Reformer, of Thomas Paine and Junius as Political Revolutionists, of Charles Fourier as a Socialist, of Herbert Spencer and Ernst Haeckel as Evolutionists, and of Auguste Comte as a Positivist, with an Essay on Wealth in its Relations to Christian Ethics.

The Fifth Edition has just been issued

"Upon the question of money, this volume contains the best thing I have ever read."—R. G. Ingersoll (in Introduction).

"We confess that, if we stood on the ground on which Mr. Spencer stands, we should find it difficult to prevent ourselves from being pushed by the stalwart arm of Dr. Denslow's logic into the gulf of ethical nihilism."—Prof. Goldwin Smith.

"Now, the whole force of this case depends upon the assertion of Goldwin Smith that Dr. Van Buren Denslow is a disciple of Herbert Spencer. But the assertion is not true in any sense or in any degree. On the contrary, Dr. Denslow is an open antagonist of Mr. Spencer. His essay on Spencer's Philosophy, first published in the *Chicago Times*, while speaking of the man in the usual terms of perfunctory compliment, as have also Goldwin Smith and the *Saturday Review*, is adverse, carping, and depreciatory on every point that he considers. The criticism was regarded as so damaging that Spencer's friends were told they must reply to it or forever hold their peace; and we were confidently assured that the last we should ever hear of Spencer's system was the thud of the clods that Denslow had thrown upon its coffin."—Prof. Youmans, in *Popular Science Monthly* and in *Introduction to Current American Edition of the Data of Ethics*.

Stephen Pearl Andrews, as political executor of the late Thomas Paine, is as fiercely indignant at Mr. Denslow's analysis of Paine's politics as Prof. Youmans is at his assault on Spencer's Philosophy. On the other hand, George Jacob Holyoake speaks of the analysis of Paine's political philosophy as "the most masterly refutation of it extant, without showing in his words or in his mind any enmity against the great agitator whom he confutes."

The late Dr. George M. Beard, of New York, wrote to the author: "Your critique on Spencer's *Data of Ethics* has all the force of a discovery in ethics, and is of great value. It deserved to be made the subject of a separate treatise."

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price \$3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR's basis of action, and the best exertions of its management will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.
By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. ... The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript*.

Sent by mail, postpaid, on receipt of price by the INDEX ASSOCIATION, 44 Boylston Street, Boston, Mass.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions, . . . 10c. per line.
" 13 " 25 " . . . 8c. " "
" 26 " 51 " . . . 6c. " "
" 52 " " . . . 5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

BY ALL ODDS THE BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its Day Coaches, which are the finest that human art and ingenuity can create; its Palatial Sleeping Cars, which are models of comfort and elegance; its Palace Drawing Room Cars, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that it is the best equipped road in the world.

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, and take none other. All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

CURRENT TOPICS.

A FEATURE of the Fourth at Paris was the presentation of the Bartholdi statue of Liberty, Minister Morton accepting the gift in the name of the President and people of the United States.

DR. KOCH, who is at the head of the Cholera Commission of Berlin, after a careful examination of the disease in France, pronounces it of the Asiatic type, and says that, having a centre like Toulon, it is sure to spread in every direction.

LORD ST. LEONARDS, for an indecent assault upon a servant girl, has received a sentence of "seven weeks in Newgate, the sentence to date from the time of conviction." The conviction having occurred two months ago, the sentence is only nominal. A common offender would have been sent to prison for three years for the offence.

DR. WILLIAM A. HAMMOND says that the performances of Lula Hurst, the young woman from Georgia who moves heavy objects against the efforts of several strong men to press them down, are due largely to the influence of suggestion in the minds of the men, and to uncommon muscular strength. Before attempting to explain what occurs in her presence, it will be well to ascertain definitely just what does take place. Dr. Hammond is something of a theorizer, and is liable to adjust his facts to his theories rather than his theories to his facts.

PROF. A. S. HILL in the *Christian Register* says: "It is nobody's interest to expose a preacher's sophistry or to puncture his rhetoric. He may go on committing the same faults, whether in argument or in grammar, Sunday after Sunday, and incense will still rise from sewing-circles and vestry tea-parties. If criticisms are made, he is the last

person to hear of them; for the hard-headed deacon who roughly tells the truth about a sermon he has just heard exists, I fancy, chiefly in novels. In a theological seminary, as in college, a student may breathe an air charged with as much criticism as is good for him; but, when he enters the ministry, the chances are that he will receive no serious criticism unless, and until, he is so fortunate as to marry a woman who has the sense to see his weak points and the courage to point them out to him."

IN the last article in *Harper's* on the deaf and dumb schools of Kendall Green, at Washington, occurs an anecdote which affords an instance of anthropomorphism so simple and transparent as to be possible only when some of the ordinary avenues of knowledge are closed: "The pupil was telling the familiar story of George Washington and the cherry tree, and wrote out the conclusion on the blackboard thus: 'He took his hatchet in his left hand, and told his father he did it.' 'Why did he take his hatchet in his left hand?' asked the teacher, surprised at the expression; and the answer came promptly, 'Because he had to use his right hand to tell his father.'"

"A NOTABLE change in public opinion concerning Sunday observance," says the *Boston Transcript*, "is reported from Swansea, England. The town council has decided that bands should be permitted to play in the public parks on Sundays. This may not appear at all remarkable, but the reasons alleged for this course will show what there is exceptional about it. According to the religious census, 'two-thirds of the population of the borough went to no place of worship on the Sabbath,' and it was therefore clearly necessary that 'something should be done for them.' Once upon a time, when a spiritual destitution was demonstrated, a town would build a church, and make the tax-payers foot the bills. The story from Swansea indicates a very decided revolution in the way of looking at things."

LI HUNG CHANG, who is the viceroy of North China, has obtained the consent of the government to build a railroad from Tien-tsin to Peking, between which two points the telegraph is already in operation. There are populous districts in the interior of China, easy access to which from the coast would be of great advantage to the Empire and to other nations; and, as the *Springfield Republican* observes, "the fact that one railroad is to be constructed is an indication of remarkable progress, for the superstitions of the people have stood like a Chinese wall against the more important phases of Western material civilization. A working example, in the shape of a railroad train with all its conveniences, will do more to break down superstitious prejudices than any amount of lecturing or theorizing. The Chinese reason very slowly, but they have keen perceptive faculties."

THE *New Haven News* has this to say in defence of the divine right of bolting: "A party may become corrupt, may fall under the sway of bad leaders, may adopt a theory repugnant to the

citizen's views of sound public policy. If a man fails to bolt then, he becomes a bad citizen; he sacrifices national ends to party ends; he has violated, not merely the freeman's oath, but the sacred obligation that it prescribes; he has merged his citizenship in the prejudices, the frenzies, the distorted fealties of the partisan. If men never bolted, we might as well give one party or the other a permanent lease of power, or decide elections by the census. In plainer words, the term 'bolting,' which men use so derisively, means at bottom the highest form of citizenship. It implies that change of feeling and consequent change of votes which guarantees reform, progress, and civic liberty itself."

THERE are thousands of people in this country, upon whom have been conferred honorary college degrees, who are in no way entitled to them; and this fact makes the degrees almost worthless. As the *New York Evening Post* says: "Every honor in this country, where there is no such thing as hereditary honor, ought to mean as nearly as possible what it professes to mean on its face. Degrees which imply on their face the possession of some kind of learning, when given to any one, no matter how meritorious on other grounds, who has no learning at all, are a sham; and there is, or ought to be, no place in American colleges for sham. Calling a man a doctor of laws because he has been elected governor or president ought with us to be as absurd as calling him a doctor of medicine or music or divinity or a great chemist. The absurdity is, of course, all the greater when the honor is bestowed on a man who makes sport of university education, and professes to believe that a man is better without it."

THERE was a bull-fight at Dodge City, Kansas, on the Fourth. Four thousand people were in attendance. There were four bulls, only one of which wanted to fight, and five matadores, only one of whom had the courage to fight or was hurt,—a fact sufficient to raise a doubt as to the reality of "distributive justice" in the world, and to suggest the possibility of another state of being to enable the bulls to get even with the human brutes who, for mere sport, speared, lassoed, and tormented them. The *Springfield Republican*, which gives a sarcastic account of this affair, refers to it as "the first bull-fight in the United States," and thinks that now, the "thing having been tried, and a taste for that sort of thing acquired, we may expect another paragraph to our already long column of sports." We believe that such cruel and demoralizing "sports" should be prohibited in every community. It is not only the right but the duty of civilization to put a check upon barbarism. The *Republican* is in error in thinking the Dodge City affair "the first bull-fight in the United States." We witnessed one at Visalia, Cal., some eight or nine years ago, when, we remember distinctly, all our sympathies were with the brutes that were tormented by half-a-dozen Mexicans, whose effeminacy and cowardice would, in the arenas of pagan Rome, have excited derision and contempt.

THE CHURCH'S SIN AND CLERICAL UNFAIRNESS IN PALLIATING IT.

No historical fact is better substantiated than that the American churches and clergy in general, in the great anti-slavery contest, took sides against the cause of the abolitionists. Whoever questions the fact has only to go back to read the contemporary newspapers of the time, or to look into such literature of the controversy as *The Church and Slavery*, by the Presbyterian Rev. Albert Barnes, or J. G. Birney's *The American Churches the Bulwarks of American Slavery*. It is a case, too, where the exceptions distinctly and logically prove the rule; for those clergymen who identified themselves with the abolition cause lost denominational popularity and influence in consequence, were subjected to opposition and persecution, and very generally lost their pulpits. A large proportion of the original abolitionists were born and bred in evangelical churches. A very considerable number of their prominent speakers and lecturers had been ministers in evangelical pulpits or had been educated for such ministry; yet hardly one of them was able to remain in good standing with his denomination. In the course of time, the treatment which they and their cause received from the churches led them, generally, to a change in their theological views. They became liberal. But it was not this change in their views which caused them to be cast off by their churches. They were ecclesiastically ostracized before that, and because of their espousing abolitionism. This faithlessness, indeed, of the Christian Church on the greatest moral issue that has been presented to mankind in the present age has been one of the chief causes of modern scepticism in America with regard to the old theologies.

Of this guilt of the American churches in the matter of American slavery, Samuel J. May, one of the earliest converts made by Garrison and one of the fairest and most sweet-tempered of men, in his *Recollections of our Anti-slavery Conflict*, published in 1869, said: "It cannot be denied that the most formidable opposition we had to contend against was that which was made by the ministers and churches and ecclesiastical authorities. When the true history of the anti-slavery conflict shall be fully written, and the sayings and doings of preachers, theological professors, editors of religious periodicals, and of Presbyteries, Associations, Conferences, and General Assemblies shall be spread before the people in the light of our enlarged liberty, no one will fail to see that, practically, the worst enemies of truth, righteousness, and humanity were of those who professed to be the friends and followers of Christ. . . . Mr. Garrison's disappointment and astonishment were unspeakable, when he found how blind and deaf and dumb the preachers of the gospel were, in view of the unparalleled iniquity of our nation and the inestimable wrongs that were allowed to be inflicted upon millions of the people. . . . They were afraid to obey the Divine Law, and bowed rather to the commandments of men. They respected a compromise more than a principle, and trusted to that which seemed politic rather than to that which was self-evidently right." This is the testimony of one who was thoroughly conversant with the anti-slavery struggle from its beginning, and knew from experience whereof he spoke. He was himself a minister of the Unitarian denomination; and a part of the evidence he brings forward consists of accounts of the conflicts into which he was led with associations and ministers of even that generally more liberal communion, because of his abolition views.

There is no escape from the conclusion, for any

one who studies the facts, that this opinion of Mr. May, as above expressed, will be the verdict of history. Yet, naturally, the churches feel, in the new light that has come, that a heavy historical burden of guilt is thus placed upon them. At the critical hour, they were weighed in the balance, and their righteousness was found wanting. And prominent representatives of the churches have consequently made attempts, in the last few years, to explain away or conceal the bad record. The fact that, after twenty-five years of struggle, the anti-slavery reform began to take effect in a changed public sentiment, and the Free Soil and Republican parties came into politics, and the Northern conscience was profoundly stirred on the Kansas-Nebraska issue, and that then the clergy and churches began to give a better account of themselves,—this fact has been used by several apologists as a convenient cloak for covering up the previous delinquency. But, now, the venerable Doctor Austin Phelps, of Andover, comes to the defence of the Church's record with a new line of argument, or rather with the revival of a very old argument in new fashion. He makes a violent assault on the teaching and character of the abolitionists, and in a style that reminds one of the attacks made upon them in the pro-slavery press of forty years ago. The style and spirit are the same, though many of the specific charges made in Dr. Phelps' assault are such anachronisms that they could not possibly have been made then. He charges them, for instance, with being "more hostile to Christianity than to tyranny," with "maligning the name of Jesus," with teaching that "sanguinary revolutions and reigns of terror" are the necessary means to social reform, with being "destructives who would break up society itself to get rid of its abuses"; and he declares that they offered a platform at their meetings, not merely for the discussion of the slavery question, but to fanatics and cranks of all sorts to propound their various theories,—to "socialists," to "expound the inhumanity of property in land"; to "laborers on a strike," to "denounce the despotism of capital"; to "beardless boys," to "expose the blunders of Moses"; to "divorced women," to "talk of the tyranny of the marriage laws," etc. No unprejudiced person, who has any knowledge of the anti-slavery meetings, either through his recollection or his reading of them, can follow through this list of charges, made against the abolitionists by Prof. Phelps, without feeling that old age and a failing memory must be their only excuse. Yet he is allowed six columns in the *Congregationalist* for this elaborate senility.

But another thing involved in this matter reminds us of the old days of the pro-slavery press, with its gross unfairness and injustice. Mr. Oliver Johnson, who is one of the few survivors of the old guard of abolitionists, and knows thoroughly the whole history of the anti-slavery movement, wrote to the *Congregationalist* to say that he proposed to reply to Dr. Phelps' article, and naturally wished that the reply might appear in the same journal. To this, Dr. Dexter, the *Congregationalist* editor, answered that, if Prof. Phelps had made any misstatements of fact,—which he (the editor) did not believe,—the *Congregationalist* would be open "for any simple and brief correction of such misstatements"; but it would not be open for any "argument" in reply to Dr. Phelps, since, the editor added, "our intent is to disseminate what we believe to be truth, and not to edit a debating society." Narrow as these conditions were, Mr. Johnson accepted them, and sent an article which would have occupied less than two columns of the *Congregationalist's* space, and which confined itself to correcting the grossest of Dr.

Phelps' "misstatements of fact." As the long article of the latter was full of such "misstatements" throughout, even this space did not suffice for a correction of all of them. But the editor declined to print Mr. Johnson's reply, deliberately breaking his promise on the plea that this was "precisely that argument on the other side" which he could not publish! Sometimes, it is true, "a simple correction of misstatements" makes the most effective kind of argument; and it must be admitted that Mr. Johnson's article, which was printed in the *Boston Commonwealth* of June 28, was precisely an "argument" of that kind.

It is evident that, so long as Mr. Johnson survives, it will not be an easy thing for professors of theology and doctors of divinity to pursue the practice of amending history so as unjustly to befoul the abolitionists for the sake of cleansing the skirts of the American Church from the guilty blots of its complicity with slavery. Though they may have influential religious journals at their disposal and resort to the old pro-slavery tactics of hearing but one side, their efforts will be in vain. The Church on this subject has made its own history. It is already in print in its own language; and neither the special, unvarnished pleading of Dr. Phelps nor the arrogant unfairness of Dr. Dexter can whitewash the page.

WM. J. POTTER.

NOTES OF THE FIELD.

During some of the weeks of the last spring, I visited several towns in the West, extending my trip as far as Colorado, and quite lately I have spent a little time in Eastern Pennsylvania. Possibly, some of the things I have had occasion to note in these visits may be of interest to the readers of *The Index*.

There is hardly occasion to speak of the West in the large. There has been a deal said of it, and perhaps people are tired of hearing the statements thrown out in a somewhat loose and generalizing way. Certainly there are all the differences throughout the West that you find in the various communities in the East; and man is much alike, is essentially one, the world over. As a rule, it may be said, perhaps, that there is greater readiness to hear in the West than in the East. There is less tenacity of old prejudices, more readiness to yield to the progressive spirit, and so more hope held out of willing improvement here than elsewhere. But as yet there is little disposition to do anything actively; rather a disinclination to enter any organization, however simple, and unite for effort either to carry the better thought to others or to embody it more successfully and fruitfully in the individual and social life. The little that is being done in associate work is being accomplished apparently by the more liberal of the Unitarians. These are alert and active; and the societies they are planting in the new communities are, I am confident, in many instances, perhaps most indeed, on the broad basis of complete spiritual freedom.

Col. Ingersoll draws throngs, unnumbered thousands, wherever he goes. In Denver, where he spoke by invitation of leading citizens not long since, the large Opera House, I was told, was not sufficient to contain the multitudes that were eager to hear; and the same is to be said, I suppose, of every town in the West that he visits. This shows what a large ungathered congregation there is for him who can command its ear,—people that for most part are not spoken to by any of the religious organizations, whether orthodox or liberal. I wish that what the Colonel has and says might fruit in something more positive and tangible,—such mag-

nificent opportunity and such eloquent, witty, stirring utterance,—that it might show effect in making Liberalism more concentrated, articulate, and felt. But I suppose this is neither in his disposition nor in the line of his genius. Some other one must come, who will yet mass, organize this great force of outlying, unvoiced sentiment, and make it to tell in society for needed protest and reform.

Mr. Edwin D. Mead, whom I saw and had opportunity once to hear in Denver, finds, in goodly number, appreciative listeners for his thorough research and choice, quickening thought. His lectures upon the Puritans are eminently worthy to be heard in every town and hamlet through the land. They would do, they are doing, valuable work in enlightening and emancipating the public mind. Prof. John Fiske has been drawing large audiences in St. Louis, and I presume in other cities as well, to attend upon his extended courses on American history. More and more the public mind, and especially in the Western States, seems ripening for the reception of the enlarged thought of the time. Talmage, I was told, not long since in Omaha, drew but a moderate audience to hear him. Ingersoll, shortly after, was greeted with the Opera House packed.

In Greeley, Col., I found a large, flourishing society of Liberals, as broad in its basis apparently as the freest expression of universal religion would require. It is under the ministration of Rev. Mr. Gibbs, an excellent gentleman, whom I had met once before in the East. In the society, largely, as I am informed, the agnostic element obtains. I found here brainy, strong men, men of great and invincible force, toiling in their manual work, engaged, most of them, out on the prairie with their agriculture and stock-tending, yet tireless in spirit, never too weary at night for the best reading, for social converse, for the debate of the lyceum or a lecture,—eager, alert ever for what is of most worth in thought and culture. They have fully the courage of their opinions, are outspoken, aggressive, protestant, and so missionaries perpetually of the new faith in their community.

This town was to me one of the most interesting of all that I visited. Founded, as it is known, at the instance and through the influences of the *New York Tribune* and in memory of the exalted name of Horace Greeley, it was settled at the beginning by a people quite above the ordinary grade of intelligence and character. It bears the stamp of these first settlers, an impress that can probably never be effaced. No intoxicating drinks are permitted to be sold within the limits of the town, there are no saloons or dram-shops anywhere to be seen, no drinkers or idlers: it is an intelligent, industrious, enterprising, and every way prosperous community. It is an exception, an oasis in the desert. From all the region round about, the town is sought for superior educational advantages in schools and the finer elements of social life. With such sobriety, freedom, and wakeful, progressive spirit, liberal ideas cannot but strike root and grow. With opportunity, fair, free field for all, there will be survival of the fittest.

In Denver also, I found a very attractive circle of friends. The Liberals whom I met are persons of pronounced convictions, of positive character, and are felt as a potent force in the community. It would be pleasant to tell of one I found there,—well known in the community and most esteemed by those who know him best,—an industrious, hard-working artisan, to be seen every day and every hour of the day upon the bench with hammer and lap stone and awl, who is, in the broad, one of the most intelligent, clear-sighted, and upstanding Liberals I have ever seen. In his well-ap-

pointed library, you will note numbers of books among the standard works in Biological Science, Molecular Physics, General History of Civilization, of Culture, etc.; and these have been, not only carefully read, but well appropriated. Busy as our friend is with the manual labors for daily bread, he has found time ever to enrich, enlarge, and adorn the mind, time also to devote himself with a generous self-sacrifice to enterprises aiming—whether by lectures, lyceums, or what not—to instruct and to elevate those about him. It does the heart good to find here and there souls of such dedication and such quenchless, tireless energy.

I should like to speak of other places,—of Boulder, a town of but some four thousand people, where I found a large congregation freshly gathered to hear Mr. Van Ness, a young man late from Cambridge, and full of the scientific impulse of the time,—of Omaha, Kansas City, St. Louis, etc.; but the limits I must keep to here forbid.

In Pennsylvania, early in the present month, we attended—there were two of us this time, the lady being of the party—the yearly meeting of the Progressive Friends. This was held, in all, nearly four days; and the attendance throughout was good. Col. Higginson disappointed us, being unable by reason of ill health to be present; and the loss throughout was deeply felt. But we were supplied with a good array of speakers,—Revs. J. H. Clifford, C. C. Hussey, Mrs. E. D. Cheney, and others.

Mrs. Cheney deeply interested and enriched us all by a compact, lucid statement of the character and claims of art. The theme was in a degree new, and especially *here*. Most in this neighborhood, although long since freed from the dogmatic limitations of the sect, are directly of Quaker antecedents and rearing, and have inherited, and bear still in greater or less degree, whether consciously or unconsciously, the impression of that early training, which, as is well known, in the jealousy of the Quakers against idolatry and the fashions of this wicked world, was severely abstemious of any regard for the æsthetic or anything savoring of beauty in form. Indeed, the education of us all under Protestant régime has been defective in that respect, especially in reference to aught that may speak to the taste or imagination on the walls of churches or in the forms of worship. We have therefore much to learn: even the Catholic Church has lessons of value to teach us.

To find such a source of enrichment brought before us as is furnished in the grand products of art in ancient times and in modern, to learn of the office of this missionary to the mind, what education, enlargement, and exaltation through the symbolism here afforded, was doubtless a surprise to some: its presentation through the tongue of such an interpreter was a boon to all. Nothing given upon this platform for many a day has had a deeper, finer effect. It opened new views with reference to education, to methods of public teaching, the use and the mission of the expressive language of type and figure, which will not fail to bear their generous fruit.

On the whole, this meeting, with whatever drawbacks through the disappointments,—for Mr. Hinckley as well as Mr. Higginson had been expected,—was felt in spirit and interest to be equal to its predecessors. Its platform is broad, its aims catholic and universal. It should fulfil from year to year a larger and a larger service. Its constituency is gathered from wide area in Central and Eastern Pennsylvania, from Delaware and New Jersey; and it may and should be a centre of radiation for most wholesome and life-giving influences through the whole land. It has

before it an unlimited future, if it shall hold courageous and faithful to its own recognized ideal.

In Philadelphia, I was told that initial steps had been taken, looking to the establishment of an Ethical Society. There are already three liberal organizations here of Unitarian connection, all well served by ministers of exalted ability and worth. But the city is large; and there must be abundant room, doubtless, for a new society and of this type. In St. Louis, as I was informed when there, not long since, the condition is ready and waiting for such a movement. There are the people at hand, and the means to sustain it. What is wanting is the one that can lead the march, one able to speak the decisive and animating word.

The ethical movement is, to my thought, somewhat partial and incomplete in its idea, defective in important particulars, and must have supplementing before it can stand fully for the needs of the soul. But it is a beginning, and a beginning at a most essential point, in new departure. These societies as they are stand, as I believe, for the nearest approximation that we see anywhere thus far to what is to be the Church of the future. They are to be viewed, springing up as they do now in our leading cities, as one among the very significant signs of our time, and to be greeted with most cordial good-will and god-speed. We have right to draw from them omens of fresh encouragement and renewed hope.

CHARLES D. B. MILLS.

THE MODERN INQUISITION.

I.

No evolutionist looks for any radical change in a perceptible period. Though infinite variety is the universal rule, and the same phenomenon, in all its minutiae, is never repeated, there is, nevertheless, a continuity which enables the accurate observer to predict with tolerable certainty an anticipated result. But for this, science would be impossible. This rule holds good in the moral as well as in the material world.

The Romish Inquisition will probably never again dominate the world with its all-pervading terror. But they who suppose that the inquisitorial spirit has passed away, that no form of that baleful vitality is now in existence, exhibit an unfortunate lack of sagacity. The great Protestant schism and the innumerable minor schisms in the protesting body, whose culmination is free thought, have secured for the harassed and harried human race at least comparative and temporary immunity from the persecutions of the fiends whose peculiar business it has been to worry and torture those innocent people against whom no other crime could be alleged than that they would not join in the effort to destroy the human intellect and eradicate conscience from the mind of men.

Nothing in the human character is more remarkable than the persistent infatuation which leads to the belief that abstention from any given devilry necessarily implies conversion from that diabolism. The recent displays of fiendish violence in Virginia and Mississippi are cases in point. Those who are gifted with but a moderate endowment of that quality which constituted the leading trait in the character of the celebrated Mr. Gradgrind must be unpleasantly startled by the facts of the case. Theory serves two quite distinct purposes. With some, it is an instrument for the discovery of truth: with inferior minds, it is a never-failing means of confirming them in error.

Popery has had its fangs drawn and its claws cut; and its legitimate successor, Calvinism, can no longer, on the shores of the Lake of Geneva,

burn alive by slow fire, with the additional luxury of green wood, the noblest of the human race, whom its keen-scented bloodhounds have hunted down, nor gloat over the sight of an innocent girl strangled by the rising tide of Solway Firth in obedience to its fiendish order, nor even summarily expel from its jurisdiction, with an emphatic warning never to return, the uninformed seamen whom its zealous spies have detected in the crime of absenting themselves from the only true worship on "the Lord's day." Nor can the greatly lauded Pilgrim Fathers, as they once did, after a short breathing-time, to enable them to recover from the persecutions they themselves had suffered, re-establish and infuse a genuine activity into their own peculiar form of the inquisition. All these things have, for the present at least, passed away. But the law of heredity holds good here as well as elsewhere. Whatever may have been the remote beginning of the poisonous aiantus (which also is called a Tree of Heaven), the successive generations of that noxious vegetable faithfully reproduce the disgusting qualities of their progenitors. The copperheaded viper, a peculiar product of our own soil, generates only copperheaded vipers; and theological inquisition into religious beliefs perpetuates theological inquisition into religious beliefs.

When Col. Ingersoll, a few years ago, was engaged to deliver one of his characteristic lectures in the capital of Pennsylvania, the teachers in the public schools in that city were distinctly informed that any one whom the pious spies of the parsons detected in attendance at the lecture would certainly lose his place. Many who were desirous of listening to the great heretic were thereby deterred from going to hear him. The modern inquisitor cannot burn alive nor drown his victim "for Christ's sake" (for that, stated in its nakedness, is his professed motive), so he merely does his best to starve him to death. The spirit is the same; and, but for the brave and heroic hearts who are determined that these things shall no longer be, the older and simpler methods would be resumed. Those who think otherwise are deluding themselves. The resumption of the summary methods would, of course, be gradual; but those methods would be resumed.

Mr. Abbot, and others who agree with him, may be altogether right in believing that this question can be finally settled only through a great religious war. I presume that even he does not look for this result in the very near future. But there are strong grounds for his fears. The great central power, the mainspring of this inquisitorial movement, is undoubtedly the Romish Church, the wealthiest, the best equipped, and the most powerful organization in the world. She lies, like an enormous devilfish, in the gloomy and sunless deeps, and draws in, to batten on them, all the unwary who venture within the reach of her long, flexible, and slimy tentacles. She has a hold, more or less firm, of the leading evangelical Protestant churches; she has long had a most dangerous and fatal control of the Democratic party of this country, and is slowly, but surely, drawing into her embrace the Republican party. I am quite aware that all this is hooted at; but, though Gradgrind was narrow, his love of "fax" was a valuable and is, in all such cases as this, an indispensable quality. Throughout our civil war, she kept mayors notoriously disloyal in at least two of our larger Pennsylvanian cities; and, but for her, we should not now be disgraced with a copperhead governor in Pennsylvania. And she has, at last, reached the Presidency of the United States, and induced the present incumbent of that office to interfere in the internal affairs of a youthful foreign

government which is engaged in a deadly struggle with powerful and subtle enemies, in behalf of a body of men who are as thoroughly inimical to that government as those who, throughout the Slaveholders' Rebellion, kept up "the fire in the rear" were to the government of this country. And Mr. Arthur, if one may judge by his behavior, regards it as a compliment to be congratulated publicly for this violation of international courtesy by the papal representative in this country, speaking in behalf of the whole body of prelates. Here is a very bold step forward, which will, however, doubtless be passed by with the usual indifference and apathy, or even assurances from "Liberals" that alarm, in view of these acts, is characteristic of those minds only which are lacking in philosophical comprehension, and that calm serenity which is the prerogative of great intellects. But for the Irish vote, this most unbecoming interference would never have occurred.

The *Pennsylvania School Journal*, the official organ of the State schools, long since tacitly took the ground that the Christians of any given neighborhood had a perfect right to institute an inquisition into the Orthodoxy of an applicant for the place of teacher, and, if he was found to be wanting in what Lessing calls "the great duty of believing," to reject his application without more ado. This same official organ gave to the teachers, school-boards, and patrons of the public schools, from which classes are drawn the great body of its subscribers, a highly eulogistic notice of that pseudo-scientific hash which may, perhaps, without irreverence, be called the Cook-Book, and also gave currency against an emphatic protest to an anonymous paragraph which the readers of *The Index* will remember, purporting to define Carlyle's attitude toward Darwin, and which was greedily and extensively copied by the half-penny editors who are glad to play second fiddle to the twopenny parsons. The acting editor was warned that, as this anonymous paragraph came from whence none knew, it was probably (as it finally proved to be) only another example of that very common lying for Christ's sake, in which many orthodox people freely indulge. When Mrs. Lecky's authoritative exposure of the forgery appeared in the *London Times*, the editor was advised of the fact; and his informant urged him, inasmuch as he had given currency to the slander, to give equal publicity to the correction. This he positively refused to do, saying, "If Carlyle didn't say what was attributed to him, he ought to have done so." The exaggeration, suppression, misrepresentation, and downright and deliberate falsehood to which many of these people will resort is something quite startling to the unregenerate mind.

HOWARD WORCESTER GILBERT.

THE MICROMEGAS OF VOLTAIRE.

Voltaire's horse-laugh extravaganza, *Micromegas*, is a delicious satire upon pretentious humanity. He makes the earth base and ridiculous by contrasting it with society as it exists on a planet of the star Sirius, which he thereby makes his ideal land. It seems to me the *Micromegas*, would, if translated, be almost as popular as *Peter Schlemihl*, *Gulliver*, one of the *Hausmärchen* or Poe's *Hans Pfaall*.

"In one of the planets," begins Voltaire, "which revolve about the star Sirius, there was a young man *de beaucoup d'esprit*, whom I had the honor to know on the occasion of the last voyage he made to this little ant-hill of an earth. He was named Micromegas [little-great], a name very appropriate to all great persons." Micromegas was one hundred and twenty thousand feet in height. On emerging from childhood, when he was about four

hundred and fifty years old, "he dissected many of those minute insects which are only one hundred feet in diameter," a size too small for the ordinary microscopes of that planet to detect. He wrote a book about his insects, which brought down on him the wrath of the *muphti* of his country, and was banished. He was perfectly well acquainted with the laws of gravitation and the attracting and repelling forces, and made use of his knowledge so well that, setting out on his travels with his servants and baggage, he passed from globe to globe as easily as a bird glides from bough to bough. Arriving in Saturn, he made the acquaintance of the secretary of the Saturnian Academy. This little gentleman was only six thousand feet high, and contrasted with the Sirian as a very small poodle would with his master. It is understood that, in the person of the Saturnian secretary, Voltaire satirized Fontenelle, member of the French Academy. The Sirian and his dwarf (as Voltaire calls him)—namely, the secretary—hold many conversations, in which the Syrian expresses his pity for the fellow-citizens of the other.

"How many senses have you in this planet?" demands the Sirian. "Only seventy-two," says the dwarf. "We have a thousand in our world," says the other; "and we are continually filled with vague unhappiness and envy of those living on other planets who we feel sure have more."

Thereupon, the Sirian lays bare the root of all Utopia-dreaming. "I have travelled a little," he says, "in various worlds; and I have never yet seen any one who did not have more desires than true wants, and more wants than gratification." The matter of ages next coming up, it appears that the Saturnians live fifteen thousand years, and the Sirians ten million five hundred thousand. Presently, the two friends set out on an ethereal voyage together, taking with them a goodly number of mathematical instruments. Leaping to Saturn's ring, they thence voyaged from moon to moon. A comet passing by, they leap aboard with all their domestics and mathematical instruments. Passing by the moons of Jupiter, they arrive at Mars. Some years ago, on the discovery of the moons of Mars, I published a note calling attention to the anticipation of the "find" by Voltaire in this romance. But I then trusted to information at second hand (an old magazine). It is true, as I now see, that Voltaire speaks of the existence of these moons; but what he states is satirically said, I believe, in teasing ridicule of men of science.*

Our ethereal travellers fear that the planets of Mars would be too small to afford them a bed apiece, so they go on until they reach the earth, landing on the southern shore of the Baltic Sea on the 5th of July, 1737. After eating for lunch two small mountains of provisions placed before them by their attendants, they take a little walk over Europe to see the country. The Sirian, being about twenty-two miles high, could have walked around the globe in thirty-six hours; but they did not go far. They scratched their feet against the mountains as they walked, and then got to disputing as to whether the earth was inhabited, Voltaire hitting off the follies of the scientists all the while in the solemn nonsense uttered by the dwarf in the way of reasoning. In the heat of the dispute, the diamond necklace of Micromegas broke, and the diamonds were scattered over the ground.

As the Saturnian was picking up some of them,

*"Je sais bien," he exclaims, "que le père Castel écrivait, et même assez plaisamment, contre l'existence de ces deux lunes; mais je m'en rapporte à ceux qui raisonnent par analogie. Ces bons philosophes la savent combien il serait difficile que Mars, qui est si loin du soleil, se passât à moins de deux lunes." "I agree with those who reason by analogy," Voltaire would say ironically. "If the earth has one moon, our good philosophers know very well that Mars, who is so far from the sun, could not get along without two at least."

weighing each about four hundred pounds, he happened to notice that they made with their facets excellent microscopes. They take the hint, and, applying them to the eye, discover first a whale, which Micromegas takes up carefully and lays on his thumb-nail. Then they speculate as to whether the animal can reason. Presently, they espy, by the aid of the microscope, a vessel on the sea. It is filled with arctic explorers,—scientific philosophers who had been making a voyage to the North Pole. The Sirian takes up the vessel, and holds it in the hollow of his hand. The passengers think they have been caught by a hurricane and thrown upon some kind of a rock. The sailors throw over barrels and jump after them into the water which still lies in the hollow of the giant's hand. The philosophers take their instruments, and climb down upon the fingers of the hand. Micromegas felt a tickling in his index finger. It was an iron-shod staff which one of them had sunk into his flesh to the depth of a foot. He was unable to see anything, even with the glass, but concluded that some sort of atomic animal had come out of the ship, invisible to his eye. At length, to his ecstatic joy, he was able to see the mites. He shouted with pleasure, and placed a microscope in the hands of his friend. "I see them!" they cried both together. "Don't you see them here raising themselves to the deck, and there lowering themselves?" and their hands trembled with excitement.

After a while, the Sirian clipped his thumb-nail, and made a speaking-trumpet of the paring. This ear-trumpet covered the whole ship, and made the hum of its insect-men audible. The Sirian took the dwarf on his knee, held the vessel on his thumb-nail, and then said, in a very low voice, so as not to kill them with the noise:—

"Invisible insects, whom the hand of the Creator has been pleased to bring forth in the depths of the infinitely small, I thank him for what he has deigned to permit me to know of impenetrable secrets. Perhaps where I live you would be despised, but I despise no one. I offer you my protection."

"If there was ever any one astonished, it was those who heard these words. They could not imagine whence they came. The chaplain offered prayers of exorcism, the sailors swore, and the philosophers made a system; but, whatever system they made, they could not divine who it was that spoke to them." The dwarf of Saturn, who had a gentler voice than Micromegas, then told them who they (their captors) were, commiserated them on their small size, asked them if they had always been in this miserable condition, so near to annihilation, if they were intelligent and happy, and if they had souls. This last question stung one of the bolder of the crew; and, taking his quadrant, he took the height of the dwarf, and then said, "You think, sir, because you are six thousand feet high, that you are a"—"Six thousand feet!" cried the Saturnian. "Great heaven! how does he know my height? He has not missed it by an inch. He is a geometrician." "Yes, I have measured you," said the atom, "and I will measure your friend." The proposition was accepted. The Sirian lay down, and they took his measure by triangulation (in a way that the superior delicacy of this age will not allow me to translate).

The Sirian expressed his admiration of the power of God who could create such atoms in one world, and in another beings whose foot would cover our whole globe (for such he said he had seen in his planetary travels). Then they touched the subject of philosophy, and the philosophers all spoke at once in the attempt to explain their systems to their big friends. The Lockian met the

approval of these the most. But there was present a schoolman or priest (*un petit animalcule en bonnet carré*) who said he knew the whole secret, that it was all in Thomas Aquinas. He coolly took the measure of his gigantic captors, and maintained that their persons, their worlds, their suns, all were made solely for the use and pleasure of man. At this point, the giants fell into such an uncontrollable fit of laughter, their bellies and their shoulders so rising and falling in the convulsions caused by their attempt to suppress their merriment, that the ship fell from the thumb-nail of the Sirian into the breeches pocket of the Saturnian, and they looked for it a long while before they found it. The Sirian then talked kindly to the mites, and on parting from the earth gave them a book, in which he said they would find the purpose of things laid down. The book was carried to Paris, to the Academy of Sciences; but, when the secretary opened it, he found only blank leaves. "Ah!" he said, "I had my doubts about the matter." And so Voltaire closes his "history."

W. S. KENNEDY.

"SUBSCRIBER" writes: "The battle-cry of Liberalism is, Educate! Educate! Educate! Reflecting lately upon the politics of the day, I could not repress doubt. Do not our political conventions presumably represent the educated among the mass of politicians? Yet we daily read of the probabilities of this, that, or the other candidate turning over his strength or transferring his adherents to another chief, when his own chances grow hopeless, driving or leading them like a lot of cattle from one pen to another. What is the difference? And what is the matter? These cattle, these politicians, are all, from the county up to the national conventions, representative men of their respective communities. They are mostly educated men. Yet education seems to give them no moral standard, no individuality. At a wave of their chief, off they go, obeying his impulse of cupidity, revenge, or expediency. The daily records of rascality, too, bristle with the names of educated people. The treasurer of a corporation, the bank cashier, the Sunday-school superintendent, and even the truly good pastor,—these who are so pitifully often recreant to trust are all educated. The stock gamblers and manipulators, the whiskey bosses, the owners of whole blocks devoted to evil, are usually educated. The lawyers, to whose profession the word 'conscience' is unknown, are educated. What is the matter, that education yields so much rotten fruit?"

Dr. McCosh, of Princeton College, a man of undoubted ability, as all know who have read his writings, is said to be quite egotistical, without the tact to conceal his weakness, and without being aware of it even. In an exchange, we find the following anecdote of the distinguished theological professor, given as an instance of his egotism: "Some years ago, he was lecturing before the senior class. He had been discussing Leibnitz's view of the reason of evil, to the effect that mankind was put upon the earth because there was less evil here than elsewhere. One of the seniors inquired, 'Well, doctor, why was evil introduced into the world?' 'Ah!' said the doctor, holding up both hands, 'ye have asked the hardest question in all feelosophy. Sukkrates tried to answer it, and failed; Plato tried it, and he failed; Kahnt attempted it, and made bad work of it; Leibnitz tried it, and he begged the whole question, as I've been tellin' ye; and I confess (gnawing at his thumb knuckle), I confess I don't know—what—to make of it myself.'"

AMONG the excellent works, low-priced editions of which are being published by John B. Alden, is Guizot's *History of France*, which is being issued in eight octavo volumes at seventy-five cents each. Two volumes have already appeared, and the others are in press and to be issued this month. The price of the American edition of this work hitherto published—more than thirty dollars—has kept it beyond the reach of the general reader of history, to whom Mr. Alden's edition—which is printed on good paper, in large type, is neatly bound, and will sell for \$6.00—will be very acceptable.

SAYS the London *Inquirer*: "Aldis and Arnold's *Catholic Dictionary*, lately published, with all its graver matter has a humorous aspect which ought not to be ignored. For instance, under one heading we have the following: Origen [see *Hell*],—which is certainly a short and easy way of dealing with heretics. On *Heaven* there is a column and a quarter, on *Hell* no less than ten columns, the writer apparently having more information on the latter subject than on the former."

GREAT hearts alone can understand how much glory there is in being good.—*Michelet*.

EVEN genius itself is but fine observation strengthened by fixity of purpose.—*Earl Bulwer-Lytton*.

I KNOW no great men except those who have rendered great services to the human race.—*Voltaire*.

YOU cannot dream yourself into a character: you must hammer and forge yourself into one.—*Wendell Phillips*.

HOW IT comes to us in silent hours that truth is our only armor in all passages of life and death!—*R. W. Emerson*.

WHAT a woman should demand is respect for her as a woman. Let her first lesson be to reverence her sex.—*Charles Lamb*.

PERSISTENCE is the larger part of any virtue. Take grit out of in-te-grit-y, and your integrity is gone.—*Michigan Christian Herald*.

IF we recall the rare hours when we encountered the best persons, we then found ourselves, and then first society seemed to exist.—*Emerson*.

TO PRAY against temptations, and yet to rush into occasion, is to thrust your fingers into the fire and then pray they might not be burned.—*Secker*.

IT is true that genius takes its rise out of the mountains of rectitude, that all beauty and power which men covet are somehow born out of that Alpine district.—*Emerson*.

NO MATTER who lives or dies, who goes up or goes down, What is truth? must be and ever is the supreme inquiry of honest and teachable spirits.—*Joseph Parker*.

IMMORTALITY must be earned by constant vigilance and watch upon our own motives and acts. We must work for immortal life, and by slow toil grow worthy of it.—*Ella Wheeler*.

A MAN'S charity to those who differ from him upon great and difficult questions will be in the ratio of his own knowledge of them,—the more knowledge, the more charity.—*Norman Macleod*.

WENDELL PHILLIPS' GRAVE.

The noisy stream of man's affairs
Flows ever by the sacred place,
Marked by no costly monument,
Where rests oppression's enemy.

The insect's hum, the sunlit flowers,
Service of praise and incense give:
Dead though he is, his word remains
A help for all humanity.

JOHN DIXWELL.

Boston, June 21, 1884.

The Index.

BOSTON, JULY 10, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, : : : : : } Editors.
BENJAMIN F. UNDERWOOD, : : : : : }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

A Study of Primitive Christianity.

BY LEWIS G. JANES.

II.

SOCIETY AND RELIGION IN THE ROMAN EMPIRE.

At the advent of Christianity, the civilized world was at peace. A quarter of a century before the birth of Jesus, the gates of the temple of Janus in Rome, which were always open when the Empire was involved in war, were closed by the order of Augustus Cæsar, for the third time since the foundation of the Eternal City. Rome was mistress of the world, and had conquered peace by the might of her invincible arms.

During the previous century, she had extended her power in the East under the great commanders, Sulla, Lucullus, and Pompey. Asia Minor had been subdued, and all its vast territory was reduced to a tributary condition. The king of Armenia had been defeated. Syria and Palestine submitted to Pompey, and were converted to Roman provinces. On the north-east, the Parthian successors of the ancient Persian empire alone maintained their independence, having thus far resisted all attempts at Roman invasion and conquest.

Rome before the Cæsars.—The Servile Insurrection.

Rome, in the early part of the century nominally a republic, was never one in reality. While the government was republican in form, the greater part of the population of the capital and chief cities were slaves, deprived of all civil rights. In the year 73 B.C., this class rose in insurrection, led by Spartacus, a Thracian gladiator. For nearly three years, they maintained a partially successful warfare against the veteran armies of the republic, a large part of Italy being in the hands of the servile classes during this period. It was not until several powerful armies had been defeated, and forces of great magnitude were brought into the field, that the insurgents were

overthrown. Such was the might of an oppressed class, struggling for equal political rights against the most powerful nation that the world had ever known. To these people, the religion of Jesus, with its communistic spirit and its doctrine of the kingdom of heaven soon to be established on the earth,—the inheritance of the poor and the oppressed,—would come with the blessing of renewed hope and the promise of ultimate deliverance.*

Pompey, victorious in the East, and successful in his conflicts with the pirates of the Mediterranean, was master of Rome for a time, but soon had to contend with the rival talents and ambition of Julius Cæsar. The first Triumvirate, comprising Pompey, Crassus, and Cæsar, subsequently became arbiters of the destinies of the growing empire and virtual masters of the world. Cæsar, appointed to command the armies of Rome in Gaul, completed the conquest of that country, and extended his victorious arms into Germany and Britain. His subsequent history, his conflicts with and triumphs over his rivals, his final attainment of the imperial power, which he held until his assassination in the year 44 B.C., these facts are too familiar to the students of history, and too little germane to our subject, to require further elaboration.

Rome under the Cæsars.—The Jewish Colony.

Rome, the queen city of the world, at this time contained a population variously calculated at from a million and a half to eight million souls. The latter estimate is doubtless greatly exaggerated: probably about two millions would approximate the actual number of inhabitants. This population included a considerable colony of Jews, many of whom had emigrated to Rome during the earlier years of Pompey's supremacy. The Hebrew colonists dwelt in a mean quarter of the city, beyond the Tiber; and, on account of their social exclusiveness and the character of their religion, they were regarded with jealousy and suspicion by the masses of the native population. Nevertheless, they were industrious and frugal, and were generally entitled to the credit of being good citizens. Julius Cæsar recognized their virtues, and granted them many favors. This Jewish colony subsequently became the nucleus of the Christian Church in Rome, and the earliest assemblies of Christians in the metropolis were held in the Jewish quarter of the city.

Under the imperial sway of the Cæsars, Rome attained a power and magnificence never previously or subsequently equalled. Cicero, Catiline, Crassus, Pompey, the younger Cato, Scipio,—these are a few of the great names among her citizens during the century preceding the Christian era. For two hundred years, Greece had been the political subject of Rome, but had itself subjected the Eternal City intellectually, and through it the intelligence of the world, giving to the great empire its official language and its highest development of art, literature, and philosophy. Four centuries before the Christian era, the philosophy of Græce had reached its culmination in the transcendent genius of Plato, whose far-reaching thought has rendered all subsequent ages his debtors. The influence of the Platonic philosophy upon the development of Christian doctrine was not inconsiderable, and will constitute an important element in our later discussions.

Religion under the Empire.—Roman Tolerance.

Rome was more cosmopolitan and tolerant than any other nation of antiquity which had sought to

*The early Fathers of the Church, as will be seen hereafter, like the Fathers of the American republic, failed to make a practical application of these principles to the existing institution of slavery, but, on the contrary, often directly recognized and sustained it. Nevertheless, the principles existed as a leaven, working for the ultimate regeneration of society.

extend its domain by conquest. The genius of Greece, on the contrary, had been pre-eminently dogmatic and intolerant. Even her most distinguished philosophers were expatriated, or subjected, like Sokrates, to the penalty of death, if their teachings appeared to conflict with any of the leading features of the popular theology. Her religion, accordingly, did not readily coalesce with the alien faiths of her conquered provinces. The attempt to introduce it by force into Palestine had already resulted in the revolt of the Asmoneans and the final overthrow of the Greek dynasties which had governed that country since its conquest by Alexander. Rome, on the contrary, did not seek to overthrow the religions of her subject peoples, but tolerated and protected them, unless they opposed her secular dominion, often assimilating them in part into her own cultus with their foreign rites and ceremonies.*

She had early adopted the gods of Greece, whose intenser personality than that of the ancient Roman deities attracted the worship of the masses of the people; while the priests, philosophers, and educated classes were initiated into the mysteries of the "Sacred Drama of Eleusis," which promised consolations for the trials of the present life, and taught the doctrine of the resurrection and the life to come. In the Eleusinian cultus, the Greek and later Roman faith reached their highest ethical development. Promises of future reward were offered to the initiated on certain conditions, not merely of ceremonial observance, but also of personal purity and piety, of justice and right-doing between man and man. The doctrine of a spiritual, pantheistic monotheism seems to have been taught, of which the objective anthropomorphism of the popular mythology offered no suggestion. Absolute chastity was required of the priests during the celebration of the mysteries; and celibacy was made obligatory to certain orders of the priesthood, from the time of the assumption of the priestly office. Abstinence from certain articles of food was required of the celebrants. Initiation was preceded by a rite of purification resembling Christian baptism; and a sacred meal, similar to the eucharist, constituted a portion of the ceremonial. On the nineteenth day of the great annual festival, a solemn sacrifice was offered to Asklepîos, the god who had died, and was subsequently resuscitated as Iakchos. The familiar representations of Iakchos as a young child, with his mother, Persephonê,—sometimes identified with the Egyptian deities, Horos and Isis, in the later Roman period,—doubtless helped to suggest the familiar conception of the Virgin and child in early Christian art; and the mystic representation of the resurrection, long familiar to the favored initiates of Greece and Rome, prepared the way for the acceptance of the mythical legend of the resurrection of Christ. "The idea of the saviour Daimôn sprung from the mother goddess," says Lenormant, "is essentially a Pelasgic and popular conception."† It was connected with the rites of Eleusis from their earliest period, and, together with the universal belief in the incarnation of the gods, was a forerunner, if not a causal prototype, of the subsequently developed Christian doctrines of the miraculous birth and the divine incarnation of Jesus.

Oriental Influences.—Mithracism.

About the year 180 A.D., the Emperor Commodus introduced into Rome the rival mystic and ritualistic worship of the Persian god Mithra, or

*See Renan's *English Conferences* for an interesting discussion of the influence of the Roman religion upon early Christianity.

†A most complete and interesting account of the Mysteries may be found in a series of articles by Prof. François Lenormant, entitled "The Eleusinian Mysteries: A Study of Religious History," in the *Contemporary Review* of May, July, et seq. 1880.

Mithras. The new cultus speedily became popular among the literary and fashionable classes, and obtained public recognition until the time of Constantine. Subsequent even to the secular ascendancy of Christianity, it was handed down from age to age through the esoteric order of the Rosicrucians and the secret societies of the Middle Ages. The ceremonies observed in the worship of Mithra are described by Tertullian, a Christian writer of about 200 A.D., as strongly resembling the sacraments of the Church. The initiates were admitted by a rite of baptism. They worshipped in little chapels, similar to Christian churches. They made use of a species of eucharist, eating the sacred bread, draona, accompanied by solemn religious ceremonies, while the neophyte was tested by twelve consecutive penances, or tortures. As in the Eleusinian Mysteries, the doctrines of a life after death, the resurrection of the body, and a future state of rewards and punishments, were taught by Mithracism. The influence of this new religion upon the thought and literature of the time was absorbing and all-pervasive. "I sometimes allow myself to say," says Renan, "that, had not Christianity taken the lead, Mithracism would have become the religion of the world." The Gnostics doubtless borrowed largely from Mithracism; and the popular sects of Judaism are also thought to have derived many of their rites and doctrines from kindred mysteries, through Babylonia. The indirect influence of these conceptions upon the current and subsequent development of Christian doctrine was doubtless considerable.* The leading Mithraic festival, celebrated at the winter solstice, identical in time with the Roman Saturnalia, was ultimately assimilated by Christianity, and recognized as commemorative of the birth of Jesus, which the apostolic tradition had assigned to the spring-time instead of the 25th of December. The cross was a Mithraic symbol long before the advent of Christianity.† It also constituted one of the eight altar implements of the Buddhists, and from very early times had been recognized as the sacred symbol of the god Nilus in Egypt. It is also of frequent recurrence in those buried cities of the Troad which Dr. Schliemann has recently exhumed.

Decay of the Religious Sentiment.—Euhemerism.

The latter days of the Republic and the earlier decades of the Empire were noteworthy for manifest evidences of the decay of the religious sentiment. The intellectual classes in Italy and Greece, including the priesthood, had become almost completely divorced from any vital belief in the current systems of mythology, based largely upon magic and divination, which constituted the popular religion. Repelled from these superstitions, they found their solace in the pursuit of philosophy and the investigation of the esoteric doctrines of the mysteries. The theories of Euhemerus, a Greek writer who endeavored to trace the myths and stories of the gods to a natural source in purely human incidents, obtained wide acceptance among the educated classes. Euhemerus taught that the gods were originally great kings or heroes, whom their admirers had deified. All that is related of them, he said, is but the exaggeration and glorification of common events, which we may readily trace back to their historical sources. Thus, when Kronos is said to have swallowed his own children, and to have been dethroned by Jupiter, we are to understand that

we have the allegorized history of a king in ancient times, when human sacrifices were offered, who was dethroned by another king, who at the same time abolished these sacrifices. The conception of Euhemerus early passed over from Greece to Rome. His book was translated into Latin, and his views speedily became predominant. So general was the contempt for the superstitions of the popular mythology that it is reported that, when two members of the priestly hierarchy—the augurs or haruspices—met in public, it was with the utmost difficulty that they could restrain their laughter.

It was an easy transition from the doctrine of Euhemerus to the adoration of living men as gods. The emperors demanded and received divine honors, a custom which may have been suggested by a similar one long prevalent among the Hindus, and recognized in their code as a sacred obligation. We read in the Institutes of Manu: "Even though a child, the king must not be treated lightly, from an idea that he is a mere mortal. No: he is a powerful divinity who appears in human shape."* A survival of this custom, transmitted to the Eastern branch of the Christian Church, still prevails in Russia, where the czar, or Cæsar, is addressed in the popular catechism—prepared by the government and which every child is compelled to learn—as "our god on earth." The transition from these beliefs to the doctrine of the Divine Incarnation as promulgated by Christianity would evidently be easy and natural.

Revival of Paganism.—Commerce and Civilization.

This doctrine, indeed, in its pre-Christian form, appears to have been directly connected with a marked change which was observable in the tone of religious sentiment throughout the Empire from about the time of the advent of Christianity. During the years of peace which succeeded the assumption of imperial power by Augustus Cæsar there occurred a noteworthy revival of the dormant religious feeling among the people. This tended to assume the form of the veneration of the sacred city itself,—of Rome, now the mistress of the civilized world,—and of the emperor as her incarnate representative. Statues of the emperor appeared everywhere, and received the adoration of the populace. Altars dedicated to the genius of Rome were set up at the cross-roads throughout Italy and in many of the provinces. The Jews alone steadily repelled this form of worship, as they also rejected the related doctrine of the divine incarnation of Jesus.

Nor was this revival of the religious sentiment the only significant event of this long period of peace. Commerce, which had previously struggled against the conflicting interests and jealousies of alien States, now extended its beneficent influences without hindrance among the friendly provinces of the mighty empire, carrying with it material prosperity and a genuine cosmopolitan spirit, sowing everywhere the seeds of brotherhood and peace. No political economist of the "American School," fortunately, had yet arisen to sound the praises of high protective or prohibitory tariffs, or to raise a craven and selfish protest against "competition with the pauper labor" of the neighboring provinces. The only obstacles which this growing spirit of fraternity among the nations had to combat were the physical difficulties of overcoming the separating conditions of time and space, and the local prejudices, religious and political, of nations which were not included under the protection of the eagles of Rome. So important was this new impetus to the commercial spirit to the future of Christianity that

* Manu VII., iv., 8. See also *Early Laws and Customs*, by Sir Henry Sumner Maine.

it may be affirmed in general terms that the subsequent progress of the new religion was co-extensive with the limits of commercial freedom. The confines of the Roman Empire became, practically, the boundaries of Christian propagandism. The outlying nations which had not been reduced to the condition of Roman dependencies—with the exception of those whose civilization was of later growth—have never been permanently converted to the Christian faith.

The Stoic Philosophy.

The most remarkable ethical movement of the period now under consideration may doubtless be discovered in the rise and progress of the Stoic Philosophy, especially in its influence upon the lives and public careers of the "five good emperors," Nerva, Trajan, Hadrian, and the Antonines. Introduced into the Roman Empire from Cyprus by Zeno soon after the time of Alexander the Great, its germs were not improbably, like those of Christianity, of Semitic origin.* At first, it attracted little popular notice, and subsequently drew public attention only to be regarded as an enemy to the state religion, in consequence of which it experienced a period of persecution and martyrdom which preceded and temporarily rivalled that which subsequently befell the Christians. Its leading advocates and teachers were of stainless personal reputation, and its doctrines embodied the purest principles of self-abnegation and altruistic morality. Its disciples were animated by a lofty patriotism and a fine spirit of benevolence toward their fellow-men of every social condition, a spirit which conflicted with the despotic impulses of Caligula, Claudius, and Nero as inevitably as it sustained and directed the good emperors during that succeeding interval which Gibbon terms "the period in the history of the world during which the condition of the human race was the most happy." In its ethical and humane tendencies, it prepared the way for the precepts of the Christian gospel, though its noteworthy freedom from the contamination of popular superstitions and from the metaphysical mysticism of the current philosophies unfitted it for general popular acceptance in the age in which it appeared.

"Equality and the abstract idea of the rights of man," says Renan, "were boldly preached by Stoicism." The amelioration of the condition of the poor and the oppressed was an ever-present purpose in the minds of its disciples. It was Trajan, the friend of the Stoics, acting doubtless under the benign influence of the pure teachings of this philosophy, and not a Christian emperor, who first established orphan asylums in Rome. It was Antoninus Pius who founded additional asylums for poor young girls, in honor of his wife, the Empress Faustina, whom he loved so well. Christianity, in its public charities, did but assume and continue a work which had originated under the influence of Stoicism; yet we hear it proclaimed continually, and recently by a religious teacher no less eminent and liberal than Henry Ward Beecher, that the earliest institutions for public charity were established by the Christian Emperors.†

It is foreign to our purpose to present here a complete exposition of the doctrines of Stoicism. It is sufficient to direct attention to it as a

* Zeno was himself of Phœnician birth, a native of Citium in Cyprus, a city populated in part from Phœnicia. "A striking feature in post-Aristotelian philosophy," says Zeller, "... is the fact that so many of its representatives come from Eastern countries, in which Greek and Oriental modes of thought met and mingled. ... Next to the later Neo-Platonic school, this remark is of none more true than the Stoic."—*The Stoics, Epicureans, and Sceptics*, by Dr. E. Zeller, Professor in the University of Heidelberg. p. 35 et seq.

† Rev. Newenham Hoare, of London, late chaplain to the Lord Lieutenant of Ireland, is the author of an interesting pamphlet showing that hospitals for the afflicted existed many centuries before Christianity.

* Mithracism is treated incidentally by Renan, *English Conferences*, and by Dean Milman, *History of Christianity*. See also Lecky, and article in *Encyclopædia Britannica*.

† For a fuller discussion of the cross as a religious symbol, see *The Symbolical Language of Ancient Art*, by Richard Payne Knight, A.M.

noteworthy moral force in the centuries immediately succeeding and following the advent of Christianity, antedating the new religion in the promulgation of many of its humane and ethical principles. The system which proclaimed the doctrine of human equality, and which honored Epictetus, the slave, as one of its worthiest representatives and apostles, was surely not devoid of that democratic principle which afterward commended the Christian religion to the oppressed peoples of Europe. Had it presented its doctrines in a more popular form and consented to compromise with current superstitions, the face of history during the succeeding centuries might have been widely changed.*

Egypt under the Greeks and Romans.

Passing now in thought from the immediate vicinity of Rome to the shores of Africa, we find Egypt a subject nation, long shorn of its ancient pre-eminence and power. Five hundred years before, it had been conquered by the Persians; and for more than a century it remained a Persian province. Subsequently, for a second period, it was subjected by the Persian arms. Under the influence of Zoroastrianism, the latent dualism in its ancient religion had been developed. The sun-god Seth, the old-time physical antagonist of Osiris, took on the moral depravity of the Persian Ahriman, and became the prototype of the Hebrew Satan and the Christian Devil. In the esoteric doctrines of the priesthood were prefigured many of the metaphysical notions of the Gnostics and of the orthodox Christian theology.

In the year 332 B.C., Egypt was conquered by Alexander the Great; and for a thousand years thereafter, in its intellectual development, it remained essentially a Greek province. Alexander founded the city of Alexandria, which contained a composite population of Greeks, Egyptians, and Jews. It speedily became one of the great capitals of the world, and the chief centre of Greek culture and civilization. After the death of Alexander, Egypt passed under the rule of the Ptolemies,—a succession of rulers of Macedonian extraction, to which dynasty belonged the celebrated Cleopatra, who reigned jointly with her brother in the year 30 B.C., at the time of the Roman conquest.

The Greek influence effected not merely a political, but also a social and intellectual revolution in Egypt. Its religious and literary life, as well as its art and architectural development, had been hindered and restrained by the rigid sacerdotalism of the ancient régime. Together with political servitude, Egypt derived from the Greeks and Romans a larger measure of mental liberty than she had before enjoyed, the influence of which was manifested in a new and wonderful intellectual life which centred in the Alexandrian schools. The popular religion of the Roman Empire commingled with the old historic faith of the country. The gods of Egypt were identified with those of Greece and Rome, and foreign notions were projected into the ancient religion,—a tendency which resulted in intellectual confusion, and ultimately in bringing the popular mythologies into contempt among the thinking classes of the people. The fragment of the ancient Egyptian race, however, though powerless politically, still clung to their ancestral faith, which awaited the universalizing, solvent, and assimilative influence of Christianity to compel its final disintegration. The remnants of the indigenous race, known to us as the Kopts, were early converts to the new religion; and Alexandria became an important Christian bishopric.

(Continued next week.)

*An admirable popular presentation of the doctrines of Stoicism may be found in F. May Holland's *Reign of the Stoics*. See also Renan's *Marcus Aurelius*, and standard works on the history of philosophy.

CORRESPONDENCE.

THE SOCIOLOGIC SOCIETY.

Anniversary Exercises.

Editors of The Index:—

The second anniversary of the Sociologic Society occurred on May 28, and exercises in commemoration were held at the conference room of the Church of our Saviour in New York City, Rev. Dr. Pullman, pastor.

The President, Mrs. Imogene C. Fales, of Brooklyn, presided, and opened the meeting with a clear and concise statement of the formation, teachings, aims, and principles of the Society. I quote a fragment: "We hold that competition brings about a social condition where a higher principle naturally and inevitably supersedes a lower one; that, whenever in a community competition occasions combination, however small, between any two trade factors, whether it be corporations, joint-stock companies, pools, syndicates, or trades-unions, it has started a process that sooner or later is bound to replace the competitive system.

"The Sociologic Society endeavors to show that the social organism, like that of the individual, has its laws of growth, which may be accelerated or retarded, but cannot be annulled; and that the development of the principle of associated interests through the closer union of mankind is part and parcel of an organic process of social growth."

The President introduced to the audience the Rev. Dr. Rylance, who was cordially received. He made a powerful address, expressing his hearty fellowship with the sociologic movement, showing the evils of the present social system and its antagonism to the spirit of Christianity. He also portrayed the many difficulties surrounding the work in which the Society is engaged,—the organized power of the wealth of civilization, the indifference and often hostility of many churches toward any movement that tends to unsettle the present order, and the opposition of the press, which is bound hand and foot in the interests of its masters. He dwelt upon these subjects, not to discourage the workers for a new state of things, but that they might not underrate the strength of the opposition they may expect. He knew, because it could be logically and scientifically demonstrated, that the truths preached must come to pass,—a co-operative civilization was certain,—but he doubted, from the present outlook, if it was immediate. The difficulties attending its development all the more strongly showed the necessity of right instruction,—teaching was what the whole world needed to-day more than aught else. Dr. Rylance strongly condemned Mr. Herbert Spencer's views as elaborated in "The Coming Slavery"; said they were godless, inhuman, and heartless, and, if they could be carried out, would destroy civilization. He reviewed Spencer's philosophy, and traced its culmination in his article recently published in the *Popular Science Monthly*. "For the 'slavery' of the present time, which destroys soul and body, oppressor and oppressed, and renders the moral law a mockery, Spencer has not one word of condemnation. The slavery he dreads is that of the controlling power of the State over the so-called rights of individuals and corporations."

Mr. Justus O. Wood's subject was "Mutualism v. 'The Coming Slavery.'" He said: "Wage slavery is but a degree above negro slavery, but Mr. Spencer expresses no pity for it. As our social organization does not meet the requirements of natural justice, and Mr. Spencer fears the 'coming slavery,' which he sees to be the consequence of it, men like him should try by practical legislation to inaugurate one that will be based on the golden rule and the great dynamic law of producing the maximum of results with the minimum of force. There is no more slavery in co-operation than in matrimony, the Church, or in a partnership. There is no slavery where there is harmony. Mr. Spencer's fears are groundless. . . . The conservative and the revolutionary forces of society, free to work on the line of justice, will, like the centripetal and centrifugal forces of nature, evolve an harmonious organization."

Mr. John Thomson McKechnie, of *John Swinton's Paper*, made a very pertinent speech. He compared the civilization of the past with that of to-day, and with that which should be, and said, while we were singing the anthem of "peace on earth and good

will to men," we were "glorious in standing armies and immense navies, as well as in other characteristics as important and far-reaching." He referred to the low wages paid to the miners of Pennsylvania, Indiana, and Ohio, and to the spinners in New England cotton mills, where women and children must labor to eke out a scanty subsistence, and said it would not be necessary in this beautiful country that men and women and children should so wear away their lives, were it not for the greed of avaricious monopolies and of men who called themselves Christian, but who really worshipped the golden calf, which is the god Mammon. He deprecated the system of contract labor; said that the plague of the love of money could only be eradicated by a new birth, a new civilization, for which the Sociologic Society was working by teaching co-operation and the golden rule.

Letters were received from invited speakers and from absent friends. One from Mrs. Sayles was read by Mr. Henry A. Beckmeyer, the efficient chairman of the Advisory Board,—a gentleman who has long been conversant with practical co-operation, and is thoroughly imbued with a love of justice toward his fellow-man. Mrs. Sayles, in concluding a lengthy letter, complimented the President upon her fidelity and unimpaired zeal in the cause to which she is called, and said, "The blessing of those who are ready to perish shall be about you, your shield and your buckler forever."

The spirit of the entire meeting was deeply earnest and enthusiastic, all seeming to be impressed with a truly religious and humanitarian feeling.

The Society enters upon its third year with encouraging prospects and with many useful helpers.

LITA BARNEY SAYLES,
Assistant General Secretary.

KILLINGLY, Ct.

THE HISTORIC EXISTENCE OF JESUS.

Editors of The Index:—

The question whether there really was a Jewish reformer and martyr named Jesus of Nazareth is of course to be decided simply according to historic evidence.

The most important witness is Paul, who knew perfectly well whether he had had such a contemporary, and what was the origin of the religion which he was one of the first to persecute as well as to preach. All Biblical scholars, even the most independent and rationalistic, agree that this apostle wrote the first Epistle to the Corinthians, and less than thirty years after the supposed death of Jesus. We have only to read the fifteenth chapter to see that Paul thought the best proof of man's immortality was the resurrection. If Christ did not rise, neither shall we, runs this argument, which would not have been brought forward, if it had not been generally known that Jesus really lived. The early verses of this chapter contain such particulars about the last appearance of Jesus as would not have been written down, if he had been simply a fictitious character. That he did appear on earth after his death I do not myself believe, and neither do I accept much that is told of Mohammed and Chunder Sen; but I think that all three men really lived, and that their disciples would not have idealized them so much if there had not been some historic facts to serve as a foundation for all these legends and myths. That there actually was a Jesus is confirmed by another chapter, the eleventh, of this same Epistle, where Paul, in order to show how Christians ought to behave at the Communion, tells at some length how and when it was instituted by Jesus. Here, again, we have a contemporary of Jesus arguing from the fact that he really lived; and this case is somewhat stronger than the other one, because the events referred to are not in the least incredible. Other passages of the same nature will be found in this First Epistle to the Corinthians, and also in the Second as well as in those to the Romans and the Galatians. These four documents are universally admitted to be genuine. They show that contemporaries knew that Jesus had been born of a woman, and had shed his blood upon the cross. (See Romans i., 3; iii., 25; II. Cor. v., 15; Gal. iv., 4.) In Romans x., 9, we are told that our salvation depends on believing that God raised Jesus from the dead. Paul would not have said this, if he and his converts had known that Jesus never lived or died or rose again. And there is nothing in these four Epistles to warrant the supposition that Jesus was only a myth. There are

some fanciful assertions, but only such as are already being made about Chunder Sen by his enthusiastic disciples.

Substantially the same may be said of the rest of the New Testament, some other parts of which are as early and authentic as these four Epistles. The conduct ascribed to Jesus at his trial and crucifixion seems to me historic, especially his dying complaint that God had forsaken him. The parables and the Sermon on the Mount are more like their reputed author than any one else we know of. These and other passages are in precisely such Greek as would be written by men whose mother tongue was Hebraic. The foundation of the New Testament is in the faith that Jesus really lived. If this had not been firmly held by men who knew something about the actual facts of the case, I cannot account for the existence of Christianity. Even its myths are only such as gather around real characters.

Positive evidence from pagan sources there is very little, though there is no reason to doubt the genuineness of the mention of the crucifixion by Tacitus, in a passage written less than a century later, and quoted by the Christian father, Severus. There would probably be a great deal more, if Christians had not been so ready to destroy books they did not agree with. We can tell pretty well, however, from the early apologists for Christianity what was said against it, during the three centuries when its enemies could say what they liked, and could read exactly what took place in Palestine at the period of its origin. If Christianity had begun by publishing false accounts of the official acts of Roman governors, it would probably have ended there. If the Jesus said to have been crucified by Pontius Pilate had never existed, such an exposure of the falsehood would have been made by Lucian and Celsus, if not by their predecessors, as could not have been resisted or, still less, forgotten. Nothing of this sort was said, for there was nothing to say.

The Jews, too, have been so cruelly persecuted for their share in the death of Jesus that they would long ago have told of anything in their voluminous records and traditions, proving that he never lived. For their sake, I should be very glad to have this proved. Until I meet with much stronger evidence, however, than has yet appeared against the historic existence of Jesus, I must suspect those who assail it of following their own fancy without proper regard for facts. F. M. H.

SUFFERING AS A CAUSE OF ACTION.

Editors of The Index:—

The subject of the universal experience of suffering has been handled so often and from so many different stand-points that any reference to it can only be made with a certain apology. In all ages, it has been a problem for thinkers, a text for homilies, a riddle for the inquirer. The favorite view of the subject in these latter days, when belief in a chastening God is waxing faint, is that pain of various kinds is the result and penalty of the infringement of nature's laws. "Given a perfect adjustment of law," says the nineteenth century casuist, "and pain will cease to be." "Let us be born under good conditions," says the physiological reformer, "and we shall not suffer." "God makes us suffer for breaking the moral law: he is above the law, and punishes through the law," says the moralist; and the sentimental healer of men's agony goes yet farther, and sees in the eternal suffering of the race tokens of the "Eternal Goodness" which heals and soothes the suffering he occasions, and "weeps" over the stricken members of his family.

Now, the question that faces me, after a sufficiently drastic experience of life, is just this: Are any of these speculations correct? Speculations they all are, for no one knows anything about it really; and, accepting them as such, I venture to put forward a query of my own, one which I am aware has been already mooted by philosophers, but which it seems to me is rarely considered by those whom it most concerns,—i.e., those who suffer. My question then is this: Is not suffering the law of nature rather than the consequence of the infringement of law? Does not the scientific history of ages teach us that pain has a direct action in the economy of the universe, not as a moral agent (although valuable in that respect), but as an actual unavoidable necessity, that it is the indispensable element of all growth, all progress, all change, all creative impulse? Look where we will in nature's record of the ages, we find it the noiseless

agent of abiding results; study as we will in the page of humanity's history, we are face to face with suffering, not alone as a result of human action, but as the primary cause of action; and my view is that, if this lesson were instilled into the mind with half the persistency that is brought to bear upon suffering as a chastening and correcting agent, mankind collectively would be the better for it.

Suffering accepted is suffering half conquered; and, accepted as the indispensable agent of progress, it can be welcomed, not with the strained ecstasy of the sentimental believer in the chastening rod of an offended God (offended by results due to his own laws), but by the calm acknowledgment that the result of the present pain will be a future gain so far in excess of the suffering as to make it acceptable. Nature works unceasingly for results; and her principal agent is pain,—convulsion, effort, struggle. Without them, she achieves nothing; with them, she writes upon the very rocks themselves glory and an abiding beauty. Sentimentalists tell us that, if nature's laws were faithfully kept, pain would die out; that, in a natural condition of society, even the natal pangs are absent; that mankind comes into life, lives to old age, and dies without suffering.

But is this a true statement? And, if it is, what would it prove? Surely, this: that no great results, physical, mental, or moral, are attained without the element which is absent in such aboriginal life. But I contend that it never yet has been proved that in any region of the earth, or under the most perfect conditions of law, suffering has been wholly absent. On the contrary, all history teaches that from the earliest ages it has held its reign unconquered and supreme. In the geological record, we find unmistakable evidence of the sacrifice of the weak to the strong, of the reign of force paramount everywhere; and what does this imply? In what way has human action or broken law had any influence in those great convulsions of nature in which suffering has swept all before it? It is impossible in the limits of a letter to consider this great subject. I would only ask, with a keen sense of my own inability to do the question justice, whether mankind at large would not be better, greater, calmer, happier, if every child were taught, not that pain is punishment, but that it is nature's law, to be accepted and revered as the necessary agent of progress, studied for the lessons it teaches, and borne as one of life's surest blessings, without which the grandest experiences of human nature would be impossible?

JANET E. R. REES.

THREE PRAYERS.

Editors of The Index:—

As a child, the writer earnestly prayed that a painful bodily deformity should be then cured, but without success,—the teachings received up to that time at church or Sunday-school leading to the belief that such prayer would be heard and granted.

Some years ago, when present as a witness at the execution of that filthy-minded child murderer, Piper, here there was seen, just prior to the falling of the drop, plenty of praying, apparently earnest, on the part of that craven wretch. Lately, at the theatre, during the piece called "Storm-beaten," a mock prayer by a mock preacher so much impressed a number of fellow spectators that they instinctively bowed their heads as if in church.

In the first case, a reasonable request, made with all reverent ideas and with belief that promised acceptance would be found, utterly failed to obtain its object. In the second case, a professed Christian, connected with the church, in the church meanly kills an innocent child; and, when about to be killed in turn for his crime, he has recourse to prayer, for some reason, and such prayer is supposed to be genuine by lookers-on. (In fact, if a decent God, all-seeing, all-powerful, allowed him to kill the child, why should such prayers not be perfectly acceptable and genuine?) In the third case, there is no claim that the prayer is other than a piece of acting, of course; and yet the form so impresses the average mind of the spectator that it seems quite real and commanding reverence.

Thus, in these three small items of personal experience, can be seen prayer honestly made for an honest purpose, which failed to accomplish its desired end; prayer of as low a type of human being as can be met with, which passed as genuine before many witnesses who were paying close attention; prayer on a stage of

a theatre in a play, as part of that play, which seemed as real as any prayer in or out of church.

Hence, it cannot rightly be wondered at that such as have had like or stronger experiences in regard to prayer should *never pray*,—no emergency, no danger, no pain even suggesting so futile a course of thought.

JOHN DIXWELL.

BOSTON, MASS., May 8, 1884.

THE PETITION.

Editors of The Index:—

Progress has been made in the work of obtaining signatures to the Petition on State Secularization. But, as it was only started near the close of this session of Congress, it appears advisable to keep it before the public until the next session. Events which have occurred since the petition was put into circulation demonstrate more clearly than ever the necessity of action on the part of Liberals. The Republican party has just pledged itself to the "separation of the political and ecclesiastical powers" in the Territory of Utah, "by the aid of the military, if need be."

"Be we men, and suffer such dishonor?"

What is good for Utah is good for Massachusetts and the District of Columbia, and any place where float the stars and stripes. It was proposed in the United States Senate, the other day, to appoint a superintendent of the schools of Utah, in order to prevent the teaching of the Mormon religion in those schools; and this clause of the bill was only withdrawn at the last hour, or minute rather, when it was conclusively proven to that "honorable" body that no church books of any description were ever heard of in these schools. But what greater right, I ask, has the Bible than the Book of Mormon in the public school, even though it were not true, as it is, that the latter condemns polygamy, while the former sanctions and upholds it? Nay, would the teaching of polygamy in our schools be any greater crime than prayer, trinity, and blood atonement?

Here, Liberals, is your opportunity. Let us take the Republican party and the Senate of the United States at their word, and insist that "the political and ecclesiastical powers" shall be separated through the domain of this Republic, and in the doing of this that no favor shall be shown to any religion, be it "Mormon," "Christian," or "Pagan."

T. W. CURTIS.

T. W. C.

EXTRACTS FROM LETTERS.

Mr. J. A. Hallock, of Exira, Ohio, writes: "I see that some of our best educated Liberals admit that Christ was an actual entity; while others, equally profound in thought and as ripe in scholarship and experience, hold that Oriental and the Christian systems of religions have not a common origin. I would like to have you, through the columns of your most excellent *Index*, favor me and the balance of your many readers with your views on this interesting subject. If Christ was only the personification of a perfect man, having had no existence as a human being, the world ought to know it; and every intelligent thinking man and woman ought to take the time to find it out, if it is possible to do so. It occurs to me that the intelligence of the last quarter of the nineteenth century should spurn the idea of worshipping deified men and myths, as men did two thousand years ago."

"R. F. B." writes: *The Index* calls John Logan "an honest man with narrow views." Can a man be honest who attempts to rob innocent, harmless Indians, like the Zuñis of New Mexico, of the only spring from which they can irrigate their lands and thus render them fit to raise corn and vegetables for their food? Without this spring, famine and starvation would stare them in the face. Is he honest, fit for the next highest station in the power of a free nation to bestow on a man, who publicly gives utterance to low slanders about a young devoted scientist who is spending the best years of his life, submitting to privations of all kinds, to sacrifices and surrender of all present ease and fame, in the cause of ethnological research? This John Logan has done in regard to Frank Cushing and the Zuñi Indians, to whom the philanthropists of Boston paid such marked respect two years ago. From the indefatigable researches of this young devoted student of science, the future will

know of many myths and ceremonies which will throw light on the origin of much which we now hold sacred. For their traditions already exhumed from the past by Mr. Cushing are as moral and beautiful as many of our cherished beliefs.

EXTRACTS FROM INGERSOLL.

The time may come in which this thrilled and throbbing earth, shorn of all life, will in its soundless orbit wheel a barren star, on which the light will fall as fruitlessly as falls the gaze of love upon the cold, pathetic face of death.

The home where virtue dwells with love is like a lily with a heart of fire,—the fairest flower in all the world.

We do not know, we cannot say, whether death is a wall or a door; the beginning or end of a day; the spreading of pinions to soar or the folding forever of wings; the rise or the set of a sun; or an endless life that brings the rapture of love to every one.

He (Humboldt) was never found on his knees before the altar of superstition. He stood erect by the grand tranquil column of Reason. He was an admirer, a lover, an adorer of nature; and at the age of ninety bowed by the weight of nearly a century, covered with the insignia of honor, loved by a nation, respected by a world, with kings for his servants, he laid his weary head upon the bosom of the universal Mother, and with her arms around him sank into that mysterious slumber known as death.

More than a century ago, Catholicism, wrapped in robes red with the innocent blood of millions, holding in her frantic clutch crowns and sceptres, honors and gold, the keys of heaven and hell, trampling beneath her feet the liberties of nations, in the proud moment of almost universal dominion, felt within her heartless breast the deadly dagger of Voltaire. From that blow, the Church never can recover. Livid with hatred, she launched her impotent anathema at the great destroyer; and ignorant Protestants have echoed the curse of Rome. Voltaire was the intellectual autocrat of his time. From his throne at the foot of the Alps, he pointed the finger of scorn at every hypocrite in Europe. He was the pioneer of his century. He was the assassin of superstition. Through the shadows of faith and fable, through the darkness of myth and miracle, through the midnight of Christianity, through the blackness of bigotry, past cathedral and dungeon, past rock and stake, past altar and throne, he carried, with chivalric hands, the sacred torch of reason.

My heart bleeds when I contemplate the sufferings endured by the millions now dead; of those who lived when the world appeared to be insane; when the heavens were filled with an infinite horror, who snatched babes with dimpled hands and rosy cheeks from the white breasts of mothers, and dashed them into an abyss of eternal flame.

BOOK NOTICES.

In the *Art Amateur* for July, Theodore Child has a very interesting and discriminating notice of the celebrated French painter in little, Meissonier. This life is instructive, as showing how much success may be achieved by carefully choosing one's walk in art, and following it steadily and thoroughly, even though that path be neither the most lofty nor the most popular. Meissonier has never sought to win popular favor by falling in with the prevailing romantic fashion of his own time, nor has he gained a commanding expression of new thought and life, as Millet has done; but in his own line, as an archaeological painter who brings the past vividly before our eyes, not only in its outward form, but in its life and spirit, he stands without a rival. If history is a great teacher, this work is not unworthy of an artist who gives us the everlasting facts of human nature as they appeared at a special time. If, as Mr. Child suggests, he has sometimes carried nicety of finish and accuracy of detail so far as to become wearisome, he has also taught the important lesson that great qualities of art do not depend upon the size of the canvas, but there may be grandeur of composition and breadth of style on the smallest scale. The article is illustrated by woodcuts of various pictures by Meissonier, and by three very interesting pictures of the artist at different periods of his life. It is stated, in a notice of the Salon, that sixty-eight American painters exhibit there, and that their pictures speak well

for the progress of American art. When we remember how largely American artists are indebted to Europe for direct instruction, for the study of the masterpieces of the past, and for the opportunity of exhibition where they will gain the benefit of free and independent criticism, we cannot but add our protest against the short-sighted policy of our government in placing an exorbitant tax on foreign pictures. Clarence Cook has one of his usual suggestive papers on the Modern Home. We think his dicta in regard to the dining-room are rather narrow and exclusive. A small book-shelf is a very agreeable thing in a dining-room, when one is waiting for breakfast; and, in many families, the dining-room may be pleasantly used during other portions of the day than meal times. His statement that a basement dining-room was hardly known in Boston thirty years ago sounds strange to those who remember life at the West End at that period.

THE contents for the *Andover Review* for July are: "The Office of Proof in the Knowledge of God," Prof. Francis G. Peabody; "The Interpretation of the Bible and the Doctrine of Sacred Scripture," Prof. George T. Ladd; "How England is dealing with Illiteracy," Henry W. Hulbert; "Child Nurture in the Church," Rev. James W. Cooper; "The Utah Church-State," Rev. D. L. Leonard; "National Jurisdiction over Marriage and Divorce as affecting Polygamy in Utah," Edward Stanwood. Editorial: "Agreements and Differences concerning the Bible"; "The Proposed Change in Liberal Studies"; "The *Andover Review*, Vol. II."; "The Language of Nimrod, the Kashite," Prof. Paul Haupt; "An Episode of the Luther Celebration," Prof. C. M. Mead; "The Wolfe Expedition to Babylonia," Prof. John P. Taylor; Book Notices, Literary Notes, and Intelligence, Rev. C. C. Starbuck.

THE opening article in the July number of the *Popular Science Monthly* is by Herbert Spencer on "The Great Political Superstition." He shows that rights exist antecedently to any acts of legislatures, which are valid only as they possess "the ethical sanction derivable from the laws of human life as carried on under social conditions." Rev. George G. Lyon presents "The New Theology," as a development from the old, and as "reformatory rather than revolutionary in its teachings and tendencies." Prof. Woodward, of Washington University, shows what are the "Fruits of Manual Training" given in that institution. M. M. Guyau answers the question, "Are Science and Art antagonistic?" in the negative. A most satisfactory account of "The Volcanic Eruption of Krakatau" and its effects, illustrated with maps, is given from the Proceedings of the Royal Geographical Society. An important paper in the number is M. Pasteur's account, given before the French Academy of Sciences, of his discovery of "The Prevention of Hydrophobia" by inoculation. Mr. D. P. Penhallow, of McGill University, contributes a valuable article on "Diseases of Plants." The portrait and sketch are of the eminent old Arabian philosopher Averroës, the portrait being a copy of the picture in the Vatican ascribed to Raphael. Dr. S. A. Fisk appraises the merits of Colorado as a residence for invalids. The editor at his "Table" discusses "The Survival of Political Superstitions," and President Eliot's address at Johns Hopkins University on "What is a Liberal Education?"

THE contents of the *Catholic World* for July are: "Mexico of To-day," by Bryan J. Clinche; "Is the American Republic an Anomaly in History?" by Thomas Felton; "A Tragi-Comedy," by Maurice F. Egan; "The Last Night of a Martyr," by M. A. Allies; "Phyllis Wheatley, the Negro Poetess," by the Rev. John R. Slattery; "The Agotac of the Pyrenean Provinces," by E. Raymond-Barker; "A Lesson of Life," by A. Repplier; "The Irish Words in Shakespeare," by C. M. O'Keefe; "Katharine," chapters V.-VI., by E. G. Martin; "The Religion of Ancient Egypt," by the Rev. J. Nilan; and new publications.

A VERY handsome, large-sized design has been executed for Prang by Miss L. B. Humphrey in honor of Whittier, which shows scenes from his works, "Snow Bound" being the subject of the front, and "Maud Muller" and the "Barefoot Boy" figuring on the back. This is the second of a series of poet cards to be issued at intervals, one of which (Longfellow) was published last year.

Wrong is wrong, and works wide ruin for a while, but, being inherently weak, is conquered. It is only in comparison the mistake of an infinitesimal fraction, not a marring of the entities. It is only a question of time, not of the eternities.—*Susan O. Curtis.*

It is no man's business whether he has genius or not. Work he must, whatever he is, but quietly and steadily; and the natural and unforced results of such work will be always the thing God meant him to do, and will be his best. No agonies nor heart-rendings will enable him to do any better.—*John Ruskin.*

THE FLORAL WORLD.

A SUPERB, ILLUSTRATED \$1.00 MONTHLY WILL BE SENT ON TRIAL

FREE ONE YEAR!

To all who will enclose this ad. to us NOW with 12 2c. stamps to prepay postage. The *Indiana Farmer* says: "Contents interesting and to flower lovers well worth the price,—\$1.00 per year." Sworn subscription list over 12,000 in every State and Territory, Canada, Great Britain, South America, Africa, India, and Australia.

Mrs. R. A. Houk, Bingen, Ind., says: "It is the best floral paper I ever saw." Mrs. J. W. Fay, Big Beaver, Mich.: "It is magnificent!" Mrs. R. G. Stambach, Perth Amboy, N.J.: "Have never seen anything half so good." Mrs. J. L. Shankin, Seneca City, S.C.: "It is just splendid."

ADDRESS

The Floral World, Highland Park, Lake Co., Ill.

LESSONS

For Liberal Sunday Schools or for Home Use.

I. THE ORIGIN AND GROWTH OF CHRISTIANITY.

A series of Twenty Lessons by Mr. LEWIS G. JAMES, of Brooklyn. Written entirely from the Rationalistic standpoint. Prepared originally for use in Mr. Chadwick's Sunday-school. Each lesson printed in a separate slip. Twenty-five cents for the series, including postage.

II. FREEDOM, FELLOWSHIP, AND CHARACTER IN RELIGION.

A series of Five very suggestive Lessons, by Mrs. KATE GANNETT WELLS. Each lesson contains enough material for several exercises. Seven cents for the series, in separate sheets, including postage.

III. THE WORLD WE LIVE IN.

A Series of Elementary Lessons in Natural History, by Mr. FREDERIC A. HINCKLEY. Adapted both to interest and profit a class of children. In slips. Twenty-five cents for the series, including postage.

Teachers will do well to examine these lessons. A liberal deduction made for ten copies or more to one address.

Supplied at THE INDEX office, 44 Boylston Street, Boston.

Freedom and Fellowship in Religion.

This is a volume of Essays published by the Free Religious Association. It contains "The Nature of Religion," by D. A. WASSON; "The Unity and Universality of the Religious Ideas," by SAMUEL LONGFELLOW; "Freedom in Religion," by SAMUEL JOHNSON; "Religion and Science," by JOHN WEISS; "Christianity and its Definitions," by WM. J. POTTER; "The Genius of Christianity and Free Religion," by F. E. ABBOT; "The Soul of Protestantism," by O. B. FROTHINGHAM; "Liberty and the Church in America," by JOHN W. CHADWICK; "The Word Philanthropy," by THOMAS WENTWORTH HIGGINSON; "Religion as a Social Force," by EDNAH D. CHENEY. Also extracts from Addresses on the platform of the Free Religious Association, by Ralph Waldo Emerson, Lucretia Mott, Dr. Bartol, A. Bronson Alcott, Julia Ward Howe, Charles H. Malcom, Celia Burleigh, C. D. B. Mills, Horace Seaver, Isaac M. Wise, Robert Dale Owen, Wm. C. Gannett, Lucy Stone, F. B. Sanborn, Wendell Phillips, and others.

This book was published eight years ago, but is a live book still, and is a good answer to the question, What does "Free Religion" mean?

Price \$1.50. Address "FREE RELIGIOUS ASSOCIATION," 44 Boylston Street, Boston.

POPULAR BOOKS

Sent by Mail Postpaid at

PUBLISHERS' PRICES.

ANY BOOK in the subjoined List, or any other OBTAINABLE BOOK, that may be desired, will be forwarded as promptly as possible, on receipt of orders accompanied with the cash.

SPECIAL RATES will be made with persons or libraries desiring any large number of books.

Orders are respectfully solicited from all friends of THE INDEX.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price \$3.00 per annum; 75 cts. for three months to trial subscribers.

THE INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR's basis of action, and the best exertions of its manage will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

JOSIAH P. MENDUM,
 PAINE MEMORIAL BUILDING,
 Appleton St., Boston, Mass.

TRACTS.

No. 1.—*Truths for the Times*, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 2.—*Fear of the Living God*, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—*Lecture on the Bible*, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 4.—*Christian Propagandism*, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, \$1.00.

No. 5.—*"God in the Constitution,"* by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.

No. 6.—*"The Sabbath,"* by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 7.—*"Compulsory Education,"* by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—*The Present Heaven*, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—*A Study of Religion: The Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.

The Religio-Philosophical Journal.

A large eight-page weekly paper devoted to the exposition of Modern Spiritualism. Established 1865.

PRESS COMMENTS.

... Seems disposed to discuss questions in excellent temper and a spirit of toleration. ... Few care to investigate in its spirit of finding truth at any cost.—*Inter-Ocean*.
 ... Seems to have got the inside track among the religious weeklies.—*Chicago (Sunday) Times*.
 ... A paper which will command the respect of all, both friends and opponents.—*Pontiac (Ill.) Sentinel*.

CONCURRENT COMMENDATIONS FROM WIDELY OPPOSITE SOURCES.

I read your paper every week with great interest.—*H. W. Thomas, D.D., Methodist*.
 I congratulate you on the management of the paper. ... I endorse your position as to the investigation of the phenomena.—*Samuel Watson, D.D., Spiritualist*.
 You are conducting the *Journal* in the true spirit of honest research.—*B. F. Underwood, Materialist*.

All who are investigating the subject of Spiritualism will find this paper invaluable as an assistant in their researches.

Terms of subscription strictly in advance.

Address THE INDEX, 44 Boylston Street, Boston, Mass.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. ... The case against the Christian Church is a marvelously strong one. The superstitions and miseries of medievalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript*.

THE BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travelers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its *Day Coaches*, which are the finest that human art and ingenuity can create; its *Palatial Sleeping Cars*, which are models of comfort and elegance; its *Palace Drawing Room Cars*, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that it is the best equipped road in the world.

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, and take none other. All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

BY B. F. U.

The feeling of distrust, which has existed for some months in business circles, is subsiding; and, in the opinion of leading merchants who have carefully scanned the horizon, the outlook is one that gives promise of a speedy return of trade in all parts of the country.

At a "hallelujah tea fight" of the Salvation Army, at Medina, N.Y., a few days ago, were praying, singing, and exhorting by persons nicknamed by the Army as "Jumping Sambo," the "Hallelujah Canary Singer," "Joyful Jeremiah," "Happy Sal," "Smiling Mary," and "Dick, the Devil Teaser."

KARL RICHARD LEPSIUS, the German Egyptologist of world-wide fame, died last week, aged eighty-four years. He commenced the study of Egyptian antiquities when he was but twenty-six years old; and the discoveries he made during his personal investigations in Egypt are of the most important character, identifying his name through all coming time with the science of Egyptology. His numerous works will remain a monument to his industry, skill, and learning. All the statements of Humboldt in his *Kosmos*, relating to Egyptian chronology and history, were based upon manuscript information obtained from Lepsius.

The practical rejection of the Franchise Bill by the House of Lords has resulted in a grave political crisis in England, in which is raised in a very direct form the question of the continued existence of the legislative authority of that body. Mr. Gladstone denies the right of the Lords to force the ministry, with the majority of the House of Commons, either to resign or to dissolve; and the general feeling of the country evidently is that the Lords must not oppose the will of the people. The probability is that they will yield to the House of Commons, passing the Franchise Bill on condition

that the government will devote the autumn session to a measure of redistribution,—a compromise which Mr. Gladstone a few days ago offered the Lords. A large addition to the voting class of Great Britain, which is sure to be made, will tell ultimately against hereditary privileges.

In an article on the nomination of Cleveland, the *Boston Daily Advertiser* observes: "Whether, after all, the nomination is the strongest that the Democrats could have made can hardly be determined, until more is known as to the extent and persistency of the division created by the previous struggle. The nature and intensity of the opposition to Cleveland are the common measure both of his strength and his weakness. To have had the worst and most dangerous elements of his party combined against him is such a recommendation as few Democratic candidates have had; and there is no doubt that this heightened the enthusiasm with which his supporters maintained his claims, and that it was an element in the general satisfaction with which the result was received. But the concentration of these hostile elements, and of their possible future enmity or coldness at the most critical point in the field, is a fact the gravity of which Gov. Cleveland's supporters are probably considering anxiously to-day."

SINCE the weekly concerts in the Central Park have by the direction of the New York Park Commissioners been given on Sunday instead of Saturday, immense crowds have been present. The best of order has prevailed. At Fairmount Park, Philadelphia, too, the people now enjoy Sunday music, the Park Commissioners having withdrawn their opposition. On Sunday, July 6, fifty thousand people strolled through the shady walks or loitered under the trees. Here, in Boston, the Sunday band concerts on the Common are extremely popular, and attract multitudes. They were of course opposed at first by the same class that have unavailingly tried to prevent concerts in Central Park and Fairmount Park; but the talk about the desecration of the day is no longer heard here, although the programme which the Boston City Band played on a recent Sunday included such numbers as Milliken's galop, "Jolly Knights"; Fahrbach's waltz, "Frauen Liebe"; Berlioz's minuet, "Will-o'-the-Wisp"; and Meyerbeer's "Robert le Diable."

FROM an article directed against Col. Ingersoll, in a paper which has been sent to this office, we take the following sentence: "On newstands where, formerly, low, obscene literature was sold, now that the law is in force and such cannot be sold, Mr. Ingersoll's writings take their place." If it be true that there are any calls for Ingersoll's works by those having a taste for obscene literature, the probable explanation is that the orthodox clergy, by persistent misrepresentation and falsehood, have led some ignorant and low-minded fellows actually to think that in his works may be found illustrations and descriptions which will gratify their prurient tastes and morbid cravings. But the fact is the demand for Ingersoll's works cause them to be kept for sale at bookstores and news-

stands, generally, where they are displayed with other popular works. Although open to criticism in certain respects, the intimation that they pander to lewd desires, and naturally take the place of indecent literature which has been suppressed, is as mean as it is false. It is not necessary that a fair-minded man should agree with Col. Ingersoll in all his views, or admire his method of criticism, to feel indignant contempt for slanders like the above.

THE Democrats are to be congratulated upon the work they did at Chicago last week, in nominating for the Presidency Grover Cleveland, of New York, a man who, of all the representatives of his party, has been, the past three years, as the reform Governor of a great State, which contains one-tenth of the population of the United States and one-sixth of its assessed property, the most prominently identified with practical political reform. This nomination was made in spite of the machine influence of Tammany Hall, in spite of the opposition of the worst elements of the party generally, and in deference to the reform sentiment in and outside of the Democratic party. Whatever be his deficiencies, Gov. Cleveland is a man who possesses honesty, courage, independence, and great executive ability. Mr. Hendricks, the Democratic candidate for Vice-President, is more of a politician of the Bourbon type; but he is a man of stainless character, of good abilities, and large experience in political life. *The Index*, although its province does not include party politics, rejoices in every triumph of character over demagogism in the political as well as in the religious field, and in whichever party it occurs. The Democratic party has shown such an instinct for blundering the last quarter of a century that it gives us pleasure to note its action in selecting Gov. Cleveland for its standard bearer. From whatever consideration men may vote for either the one or the other Presidential candidate, intelligent and fair-minded men must be generally agreed, we think, that Cleveland represents the best elements of his party, while Blaine, although a man of more brilliant qualities, does not fairly represent the best elements of his party. Neither of the Chicago platforms is what it should be. Both lack clearness, definiteness, and straightforwardness. The dominant thought in the construction of both evidently was not to state with precision and perfect honesty principles and policies in regard to the most important questions before the country, but to produce platforms which should contain something to please almost everybody, and the least possible admitting of but a single interpretation in regard to the real issues of the hour. They remind us of propositions we once discussed with a Western preacher and college professor, who, after the discussion, when the ambiguous phraseology of the propositions was a matter of general complaint, privately informed us that there were numerous sects and many Liberals in the community, and that he had "worded the propositions so that they might cover as much ground as the exigencies of the case should require."

THE ETHICS OF POLITICAL PLATFORMS.

Both of the great political parties have now held their conventions, nominated their candidates, and declared their platforms for the Presidential campaign. Of their platforms, not in detail, but in their general import, we have here something to say.

The Index is not a political paper. It will not enter the arena of the Presidential conflict. But it believes in the application of moral principles to politics. How, indeed, can politics be more correctly defined than as the science of ethics applied to government? And it is because we believe in this kind of politics that our personal sympathies—as we have no hesitation in letting our readers know—are now with the Independents. Heretofore, we have voted the Republican ticket for President from the time we voted at all. But we cannot vote it this year. All the arguments for this change we do not propose here to give. However convincing they are to us, it is not our office to use these columns for persuading others of their force. But there are certain moral principles which appear to us to apply equally to the position in which both the leading parties have placed themselves by the character of their platforms. And on this point we wish to speak. Possibly, the Independents, when they make their platform, may fall into the same error. If so, our remarks will apply as well to them.

If any voter expected that either the Republican or Democratic platforms would clearly declare a definite body of political principles, and strike a moral note which should unmistakably appeal to that thoughtful moral sentiment of the country which is striving after juster methods of government and a purer form of administration, such voter is probably disappointed. The platforms are very long, very elaborate. But, in all their mass of verbiage, there is no moral ring, no enunciation of great political truths, no declaration of convictions showing on their face that those who wrote and adopted them would fight for them to the bitter end, and go down to defeat with them rather than conquer without them. Indeed, what must chiefly strike any reader of these platforms, who is not utterly given over to partisanship, is that they were not written for the purpose of stating any political ideas which the respective parties sincerely believe to be most conducive to the interests of the country, but for the purpose of catching votes, according to the bias of this or that locality or section of people, irrespective of political ideas or policies. Both of them have been artfully composed, not for the sake of expressing, but of concealing ideas on some of the most important issues that are now before the country. Topics are so treated in them that different classes of voters may find the meaning that they each like best. There is, in fact, no great difference between them on any of the pending political questions of the day. Both of the platforms are after the manner of an auctioneer's address. Both of them declare or withhold principles according as votes will be affected. Both are ready to sell principles to buy votes.

The platforms of the two great political parties are thus saturated with insincerity. Not only do they appeal to no moral sentiment, but they are object lessons in dishonesty. For many years now, political conventions have been falling more and more into this offence. It is an offence against both intellectual and moral integrity. They have purposely confused principles in the statement of them which ought, both mentally and morally, to be made clear and distinct. They have made promises in word which they knew would be broken in deed. They have so shaped sentences

as to deceive voters, and meant so to deceive them. This insincerity is bad enough in any party and in any State. But, naturally, it seems worse in the national Republican party than elsewhere; for that has been particularly the party that has claimed to be inspired with great moral ideas, and is really a party of great and honorable achievements. Of the Democratic party, not much of late has been expected, though it well served the country in its earlier days, when it had a very definite and, on some points, very useful political creed.

When the Republican party first arose, and for many years afterward, it enunciated principles that were in themselves a moral education for those who adopted them. They were principles that commanded respect, awoke the enthusiasm of young men, rallied an unselfish, heroic devotion, and drew into political life great souls to whom conviction was more than office or than life itself. The one distinct moral issue involved trained those who thus firmly met it to a nobler patriotism, and to broader general conceptions of the possibilities of a government of which justice and humanity should be the chief corner-stones. It was a party of moral ideas and moral purposes. It had convictions which it honestly put into its platforms, and honestly and proudly defended.

But to-day there is no national political platform before the country which is not immoral; none which does not in its very structure inculcate insincerity, deception, and dishonesty.

WM. J. POTTER.

THE MODERN INQUISITION.

II.

We have in the Pennsylvanian metropolis here, in the East, a judge who rejects the testimony of a witness solely for theological reasons; and, in our Western metropolis, an organized conspiracy for the overthrow of that religious freedom which the founder of Pennsylvania strove to secure to its citizens, an effort the justice of which Washington fully recognized when he said, in his official capacity, in a negotiation with a pagan prince, that the government of the United States was "in no sense a Christian government." This dangerous and subversive organization, the "National Reform Association," having its head-quarters in Pittsburgh, openly avows its intention to secure an amendment to the Federal Constitution which shall exclude from all participation in the civil government every one who refuses to acknowledge the divinity of Jesus of Nazareth and the plenary inspiration of the Bible. One of its most outspoken abettors, a Rev. Dr. Hill, with a coolness which must excite the wonder of inexperienced people, declares that those who refuse to acquiesce in this quite new civil provision will be allowed to seek, in some other country, the liberty of conscience and speech of which he proposes to deprive them in this. The "divinity" which this reverend person has mastered has led him to the conclusion that free thinkers have no rights which evangelical people are bound to respect. I am not advised as to the peculiar form of Orthodoxy which the Rev. Dr. Hill professes, but it is quite probably that inculcated in the suburban city of Alleghany, which has long been the seat of a Presbyterian Theological Seminary. Of the peculiar Orthodoxy recognized in that institution I am able to give some feeble portraiture.

During the anti-slavery contest, a certain Rev. Dr. Plummer, a very Calvinistic old school Presbyterian, ministered to a congregation somewhere in the State of Mississippi. Believing that the Bible was the "word of God," he was a stout defender of human or, rather, negro slavery; for

none of these pious people, from the Rev. Dr. Plummer down to the late Judge Black, advocated slavery for themselves or their own families,—it was only for other people and other people's families that they did so. Now, the Rev. Dr. Plummer, having been wrought up to a high pitch of exasperation by the abolitionists, deliberately recommended that, when any of those pestilent people were "caught," they should be burnt alive. Shortly after this utterance of his, the Presbyterian Synod called him to assume a theological professorship in the Alleghany Seminary. After instructing candidates for the ministry in that institution for some time in their Christian duties, he was invited by an evangelical congregation, somewhere among the Pennsylvanian mountains, to assume the office of religious instructor to them; and he died there, I believe, in the odor of sanctity. No orthodox body ever repudiated this man, nor any of the hundreds of others of the same character. On the contrary, "the right hand of Christian fellowship" would have been extended to them almost universally.

These are the people whose microscopic eyes are so sharp in the hunt for heresy that they are making of the public school system of the State of Pennsylvania, in connection with the judiciary and the pulpit, a modern inquisition. With the pious trickery through which the evangelicals got possession of Girard College, in open violation of the testator's will, the readers of *The Index* are familiar.* By these means, the men of brains and character are eliminated, and the public schools are gradually subjugated to the Orthodox yoke, and placed, directly or indirectly, under the control of the clergy, and thus brought into theological harmony with the American colleges, which are nearly all presided over by evangelical parsons. The fatal influence on the character of both teachers and pupils may be readily conceived, developing among the former moral cowardice and hypocrisy, and training up the latter in a narrow and hide-bound bigotry.

The only religious body from whom we should have expected any protest against these doings preserves an unbroken silence. The Quakers called by way of distinction "orthodox," are avowedly Trinitarians, and at their late annual gathering in Philadelphia showed great solicitude that the children of the sect should be carefully enjoined to make a constant practice of reading "the Holy Scriptures"; while, in the "Hicksite" branch (though, in the main, it is greatly more liberal), there is a strong influence inclining that body to assume an evangelical attitude. The tone of patronizing commiseration in which the Quakers are referred to by the general public, who habitually speak of them as "those innocent people," "that harmless sect, the Quakers," shows plainly that they are regarded as ciphers in the body politic, so far as progress is concerned. While saying this, I wish to be distinctly understood as acknowledging their exceptionally high moral character, which distinguishes the Trinitarian no less than the more heterodox branch of the society.

But I know that people who have been used to an atmosphere of intellectual freedom experience, in both divisions of the sect, a sense of stifling, which is, however, no worse than the spiritual suffocation prevailing among the fashionable Christians. Conversation is, among all these sectarians, confined within very narrow boundaries. But they do not seem to feel the want of any greater free-

*I observe in *The Index* the assertion that the founder of Girard College "provided for the education and support of all classes of orphans." This is an error. Girard excluded from his college all orphans of negro descent. And the school is open to boys solely, so that two distinct classes are denied those advantages which it offers to "poor white male orphans" alone.

dom. The Quakers are like the heir to a generous estate, who, too indolent to preserve it, even, is utterly incapable of increasing it. They are silently permitting all these encroachments which will eventually overthrow that religious liberty which the founders of Quakerism established.

Much has been said in praise of the alleged conscientiousness of the people who are attempting to establish and enforce this modern inquisition. I, for one, distinctly repudiate the assumption of lofty motive on the part of these bigots. In their conscientiousness I utterly disbelieve. We are gravely told, even by Liberals, that the Roman Catholics themselves, who openly avow their intention to put a stop, by force, to the free expression of dissent from their dogma of papal infallibility, are actuated by a high moral purpose. With an unparalleled impudence, these Romish bigots demand exemption from what they falsely term persecution, in order that they themselves may acquire a supremacy which will enable them to persecute the very men whose generous liberality has spared their bigotry.

A papist cannot be a good citizen of any country which does not acknowledge the perfect supremacy of the pope over the civil government. Romanists often meet us with the deprecation, "Do not refuse to vote for us solely because we are Catholics." My uniform reply to this is, "I shall always refuse to vote for you for that very reason, and for no other." The fact that they are not generally forgers nor thieves, that they are not without good social qualities, is utterly beside the question. The Protestant sects are not, as yet, committed to this theory of the exclusion of heretics, and are entitled to the benefit of their exemption from that disgrace.

As for the newspapers, we have, perhaps, no right to expect any very substantial aid from them. They are generally established for the purpose of making money or supporting the claims of some ambitious and avaricious politician, and cannot, I suppose, be fairly asked to enter on the battle. Logical consistency, at least, does not require them to do so. One of the most moderate and most respectable of the Pennsylvanian journals recently declared that the prevalent custom of venal writers of selling their services to any party whatever, without regard to moral convictions (avowed Democrats writing for Republican newspapers, and Republicans in support of the Democratic party) was breeding up "a class of literary Hessians." But these modern Hessians are volunteers: the original mercenaries were impressed. The custom is well known, but meets with but little disapproval. He who ventures upon energetic rebuke of it is set down as a censorious disturber of the peace of the community. However disgraceful the facts are, they are indisputable. It is not to be expected that either these venal writers or their avaricious employers will utter any protest against the encroachments of the evangelical inquisitors, whether displayed in the subversion of a liberal will like that of Stephen Girard or in the quiet heresy-hunt in the common schools.

Whether Mr. Abbot's fears are well grounded or not, it is quite certain that this bold spirit of theological bigotry will have to be met ere long with a more resolute and heroic opposition than it has with a few exceptions heretofore encountered. The amiable imbecility of namby-pamby "reformers," who are forever explaining away every infringement of our liberties, is not the quality which can successfully cope with the Calvinistic earnest of evangelical intolerance. There are several classes of people in the country who would at any time imperil the cause of human freedom and swamp constitutional government, provided

they could thereby secure the triumph of their individual crotchets for which they are ever ready to make quite astonishing sacrifices.

One sees many things in *The Index* with which he cannot unreservedly agree, and some which he is compelled utterly to reject; but while, as under the liberal management which has characterized it from the date of its foundation by Mr. Abbot to the present day, the objector himself is allowed perfect freedom of expression, he cannot but rejoice at the entire liberty accorded to others. In view of the wide-spread conservatism of the press as well as the almost complete silence of the pulpit in this battle for religious freedom (except, indeed, where they openly advocate the inquisition), the liberal men and women of the country cannot set too high a value on journals of this kind nor be too generous in their support of them, whether moral or pecuniary.

HOWARD WORCESTER GILBERT.

INSIDE AND OUTSIDE THE ATMOSPHERE.

The balloonist, after he has attained an altitude of some six miles in the atmosphere, finds himself living under difficulties, the air at that height beginning to be irrespirable, or unbreathable. Yet he has by no means reached the limits of the atmosphere, which extends many miles farther up,—up, until the luminiferous ether of outer space is reached. In the super-atmospheric heaven, or beyond the sweep of the diurnal revolution of our globe, there is neither day nor night, sunrise nor sunset, which are atmospheric phenomena in connection with the turning upon its axis of the earth. With our vision, we can travel outside of the earth and its aerial shell, but not otherwise. If we could voyage across the oceans of space which divide us from Venus or Mercury or Mars, or even reach the desolate shores of our satellite, the moon, that would be foreign travel indeed. The poet Wordsworth says,—

"The towns in Saturn are decayed,
And melancholy spectres throng 'em,"

as if he had personally inspected that gorgeously ringed planet. For purposes of travel, our earth, with the improved means of locomotion which we enjoy, is getting to be exhausted of interest. It would seem as if the isolation which keeps the planets which compose our system utterly estranged from each other, or rather their inhabitants utterly estranged, was a hard law. By means of the telescopic lens, the human eye can look in upon "the snowy poles of moonless Mars," and penetrate the star depths, traversing distances which are scarcely expressible in figures. But this space-penetrating power of the eye serves rather to excite curiosity than to gratify it. For, *bodily*, men will doubtless always have to content themselves with their little Delos-isle of earth, even thousands of years hence, when the utilization of the forces of nature shall have been carried to a point of which we cannot now dream. According to high astronomical authority, it is twenty million millions of miles from the frontiers of our solar system to the nearest star of the external universe, or the next-door neighbor of our sun, so to speak. Of course, such an isolation is scarcely thinkable, or realizable in thought. But here, at home, so to speak, within the limits of the solar system, it would seem as if there ought to be inter-planetary relations, and inter-communication between the inhabitants of the various sun-encircling orbs of our system. In the "Prometheus Unbound" of Shelley, there is a planetary chorus. The Earth and the Moon sing to each other. The Earth says:—

"I spin beneath my pyramid of night,
Which points into the heavens dreaming delight,
Murmuring victorious joy in my enchanted sleep;

As a youth lulled in love-dreams, faintly sighing,
Under the shadow of his beauty lying,
Which round his rest a watch of light and warmth doth keep."

To this the Moon replies:—

"Thou art speeding round the Sun,
Brightest world of many a one,
Green and azure sphere which shinest
With a light that is divinest
Among all the lamps of Heaven
To whom life and light are given;
I, thy crystal paramour,
Borne beside thee by a power
Like the polar paradise,
Magnet-like, of lovers' eyes.
I, a most enamoured maiden,
Whose weak brain is overlaid
With the pleasure of her love,
Maniac-like around thee move,
Gazing, an insatiate bride,
On thy form from every side,
Like a Maenad round the cup,
Which Agave lifted up
In the weird Cadmean forest.
Brother, wheresoe'er thou soarest,
I must hurry, whirl, and follow
Through the heavens, wide and hollow,
Sheltered by the warm embrace
Of thy soul from hungry space."

We have a sense of security and snugness, so far as "hungry" outer space is concerned, here on the green bosom of the earth, with its forty-miles-high ceiling of air. But all the time it is flying through space with fearful velocity, and without pause or rest, like the Flying Dutchman of nautical romance. Still, we speak of it as *terra firma*, or the steadfast earth; and such it is to us insiders, or dwellers within its atmosphere, over all its surface, with the exception of the volcanic or earthquake zone. In fact, the earth is literally "a round, sky-cleaving boat," or floating islet, of the illimitable ocean of space,

"Which never strains its rocky beams;
Whose timbers, as they silent float,
Alps and Caucasus uprear,
And the long Alleghanies here,
And all town-sprinkled lands that be,
Sailing through stars with all their history."

Thus are we afloat upon the bosom of infinity.

We gaze out over the ocean to the misty horizon, where ships sink out of sight, with a degree of awe; and we contemplate the rose hues of Mont Blanc with a similar feeling of sublimity. But each clear night we can gaze into outer space at ineffably distant and sublime objects, which make all earthly distances and objects ridiculous in comparison. The star-depths are nightly unveiled to all eyes; and, to him who properly appreciates the spectacle, travel over the surface of the earth, to gaze at famous objects, whether natural or artificial, seems absurd. Our sky proper, or atmospheric heaven, is a little bubble in the illimitable luminiferous ether; but inside of this little bubble there are day and night, dawn and twilight, sun-risings and sunsettings, dews, rains, snows, alternations of seasons, breezes, gales and storms, splendid illusions of distance, and, to us terrestrials, the *seeming* vastness of continent-shadowing forests, oceans, and kingdom-dividing mountain ranges. Above all, there is life and buoyancy for lunged animals such as ourselves, with brains and minds looking before and after.

Thus is the earth's azure, aerial ceiling a glorious pavilion and protector and isolator of sentient and intelligent conscious life from the illimitable gloom and monotony of outside space. For, though the ether, which pervades cosmical space, is luciferous, or light-bearing, or a medium of the vibrations which become through the eye transmuted in consciousness into light, it is darkness visible in fact, solid, ebon gloom, in which suns and their planets are mere sparks, scintillant points. Thus, though space may oppress us with its illimitableness, it is a Sahara without interest except

as the *place-where*, or environment, of those gorgeous oases of life and light, the suns and their retinues of planets. Space itself is mere outness or outsideness, mere capacity of holding objects. It is a necessary and universal idea, the somewhere of objects, in which we perceive them. So time, or duration, is not an entity *per se*, but only a capacity of holding events. Thus it is not incorrect to call space and time forms or modes of sensibility and perception. Subjectively, they are so.

B. W. BALL.

"THE TRUE POSITION OF MR. INGERSOLL."

A friend has sent us a copy of the Bristol (Conn.) *Weekly Free Press*, which contains a communication from one B. S. Rideout, in reply to a correspondent who it seems had denied that Col. Ingersoll was ever in favor of the repeal of the postal laws against indecent literature. Appeal is made to us for information. The spirit and purpose of Mr. Rideout's article are sufficiently evident from the following extracts:—

"If I am speaking of the influence of obscene literature upon the young, do I go out of my way when I expose the true position of Mr. Ingersoll, who is, as far as the law is concerned, one of the most powerful friends of those who are trying to scatter the poison broadcast over the whole land?" "In February, 1878, there was presented in Congress, to the House of Representatives, a petition, a duplicate of which is printed below, headed by the name of Robert G. Ingersoll." "ut he says he did not favor this movement. Did he not know that his name was at the head of the list? Did he not consent to have it put there, if he did not put it there himself? (The latter is believed to be true.) . . . Did not he put his name there and knowingly permit it to stand there, with whatever influence it might afford the movement to repeal these righteous laws?" "It is true that he resigned the Vice-Presidency of the League at a meeting held in Chicago in 1880; but I have Mr. Comstock's testimony in a letter dated at New York, June 28, 1884, saying that, 'Mr. Ingersoll, it is reported, did resign from the Vice-Presidency, but not from the organization; and not only retained his membership, but retained an active membership, as the records will show.'"

In reply to these statements, the following facts are given: In *The Index* of May 16, 1878, was a letter from Col. Robert G. Ingersoll reprinted from the *Boston Journal*, in which he said in reply to a charge that he was in favor of repealing the postal laws of 1873 against indecent literature: "No one wishes the repeal of any law for the suppression of obscene literature. For my part, I wish all such laws rigidly enforced. The only objection I have to the law of 1873 is that it has been construed to include books and pamphlets written against the religion of the day, although containing nothing that can be called obscene or impure. . . . From the bottom of my heart, I despise the publishers of obscene literature. Below them there is no depth of filth." On the strength of this letter, *The Index* of May 16, 1878, stated that, although Col. Ingersoll's name was attached to the petition for the repeal of the law of 1873, "nothing could be clearer than that Col. Ingersoll carelessly and good naturedly allowed himself to be made use of by persons whose real objects he did not understand, and who have involved him in difficulties from which it will be very hard to extricate himself. . . . Let it be distinctly and universally understood that Col. Ingersoll was ignorant of the real character of the petition he signed, that he is avowedly and publicly opposed to the main object it seeks, and that it is a gross libel on his good name to quote him as intentionally in favor of the repeal of the law of 1873." Col. Ingersoll wrote the editor of *The Index* thus: "Thank you for your splendid article in this week's *Index* in my defence."

After a personal interview with Col. Ingersoll, the editor said in *The Index* of May 30, 1878: "He [Col. Ingersoll] voluntarily explained his connection with the petition, saying that he had never read or seen or signed it. He was requested by certain parties, not mentioned by name, to help them 'modify' [that was the word used by Col. Ingersoll] the law of 1873, and that he cheerfully consented; and he added, with chivalrous generosity, that he had no idea of 'going back' on the parties who put his name to the petition, which very likely he might have signed at the time, if it had been presented. He evidently wished to avoid casting any reproach on those who had thus used his name, and we certainly intend to cast none; but the fact remains that Col. Ingersoll had never seen or read the petition down to May 19 [1878], nor personally affixed his name to it at all. This fact honorably and abundantly explains why his letter to the *Boston Journal*, which expresses his deliberate opinion on this subject, does not agree with the petition itself."

This may now be reprinted in just defence of Col. Ingersoll, since a mistake on his part at a time when there was generally no well-defined idea as to what steps were the best to take to guard against encroachments on the freedom of the press, made in the professed interests of morality, is now used for the basis of representations that he is in favor of circulating broadcast indecent literature. And this may be said without any impeachment of the motives of those even, unwisely as we think they acted, who like O. B. Frothingham, Elizur Wright, and James Parton signed the petition with a desire for the repeal of the so-called Comstock law, in the belief that the authority for the suppression of indecent literature is by the national Constitution restricted to the State and municipal governments. Yet probably not one in twenty—and it is doubtful whether one in fifty—who signed it, did so intending to ask for anything more than such legislation as would prevent the persecution of worthy men for the publication of their honest views on religious and social questions. When the objection was raised that the petition called primarily for repeal, the reply was made that it asked that the objectionable law be either "repealed or materially modified"; and thousands, indignant at the injustice which had been done to individuals under this law, put their names to the petition, even when they were dissatisfied with its phraseology. Col. Ingersoll, we have seen, was among those who, even before they had seen the petition, gave parties permission to append their names. What shall be said of the spirit of those who refer to a mistake of this kind, which is so common among people in signing petitions, as a crime, and attempt upon no better foundations to make a man appear infamous before the public with a view to neutralizing the influence of his lectures and writings on religious subjects?

That Col. Ingersoll after the adoption of the "repeal" resolution by the League at Chicago in 1884 "retained an active membership" is a statement which we believe is wholly false. "Comstock's testimony in this matter, like his testimony generally when distortion of the truth will help him to score a point against an 'infidel,' is worthless."

B. F. UNDERWOOD.

"A FORMER UNITARIAN" ON FREE RELIGION.

In the columns of the *Investigator* appear frequently, over various signatures, but evidently from the same hand, articles the object of which seems to be to convey to the readers of that journal erroneous ideas, sometimes concerning

The Index, at others in regard to the character of the Free Religious Association. The writer of the articles is not always successful in finding plausible pretexts for his fault-finding, which is often captious and sometimes frivolous; but, in his zeal for "infidelity," he keeps a sharp lookout for something that may serve as an occasion for introducing a disparaging reference to "Free Religion," or to the "Free Religious organ," or to its editors, whose movements and utterances are watched with a vigilance that never relaxes.

The latest article of this kind is signed "A Former Unitarian." The writer says that he was "once orthodox, then slid into Unitarianism, from that into Universalism," and "finally landed on the solid basis of Infidelity, with an inclination toward 'Agnosticism.'" From this fact," he says, "I had about come to the conclusion that 'Free Religion' is progressive. But, Sir," he adds, "I am sorry to say I am disappointed. Free Religion is not what I took it for,—not the progressive article I had imagined. It is simply Unitarianism under a cloak; and, for my part, I hate disguises of all kinds. But do you ask how I know what I am talking about? I will tell you. I read last week, in the *Boston Journal*, that the Rev. Mr. Potter, the senior editor of the Free Religious organ, gave a sermon at a meeting of Unitarians; and they greatly admired what he said. I think that is sufficient to show that either the Free Religionists are Unitarians or that the Unitarians are Free Religionists; but, as the Unitarians keep to their name and doctrines, and as the Free Religionists profess to be ahead of them, but take part in their meetings, I think it is plain that Free Religionists are simply disguised Unitarians, and sailing under false colors." This writer adds that "their religion may be superior to some others," but he is firmly of the opinion that a religion based upon the supernatural, as he infers from the title of the discourse mentioned above that Free Religion is, cannot be "worthy of the support of truly liberal and progressive minds."

What meaning the writer attaches to "infidelity" he omits to state. If we are not mistaken as to his identity, we have heard him extol Thomas Paine as "one of the greatest infidels that ever lived"; and, for that reason, it was that Paine Memorial Hall was given the name it bears. But Paine was a firm believer in a personal God, whose power and glory, he argued, are manifested in the universe; and he hoped "for happiness beyond this life." If Paine were alive to-day, and a member of the Free Religious Association, and should deliver the former part of the *Age of Reason* as a discourse, or repeat his address to the Theophilanthropists at a meeting of Unitarians or Spiritualists, and they should, as they probably would, admire what was said,—as, for instance, the editor of the *Investigator* has more than once been applauded by Spiritualists, when he has addressed their societies,—would it follow that the Free Religious Association would be unworthy of support?

It is not necessary here to state what was said in the address which "A Former Unitarian," without any knowledge whatever of the views advanced in it, and for no other reason than that it was "greatly admired" by Unitarians, thinks is sufficient to show "that Free Religionists are simply disguised Unitarians, and sailing under false colors." "A Former Unitarian" knows, of course, that the Free Religious Association is an organization composed of persons holding diverse views, that it affords a platform broad enough for the representatives of all classes of thinkers, including Unitarians and Agnostics, to stand upon, and that no member, in presenting his own views, can claim to speak for the Association as a whole,

except in regard to its aims and purposes, which are explicitly declared in the Constitution.

To the writer in the *Investigator*, we suggest that "criticism," like that of which we have given a sample, kept up month after month, is neither intelligent nor liberal, neither generous nor just, neither witty nor wise, and that if it be "infidelity," it is such as Paine defined when he wrote: "Infidelity does not consist in believing or in disbelieving. It consists in professing to believe what he [man] does not believe," which is about the same thing as trying to make others believe what one knows is fallacious and false; and, when this is done in a way designed to conceal the purpose of the deception and at the same time to escape responsibility for it, infidelity, to one who "hates disguises of all kinds," assumes its very worst form.

EDITORIAL NOTES.

BY B. F. U.

RENAN is one of the contributors to the *Revue de l'Histoire des Religions*, a very valuable periodical now published bi-monthly by Ernest Leroux, at Paris, for twenty-five francs a year.

THE *Herald* of this city, in referring "to the stories relating to Mr. Blaine's religion," observes, "It is not likely that his real religious views differ materially from those of other men of intelligence and education."

THE standing notice in *The Index* in regard to responsibility for the articles which appear in its columns has not entirely prevented misapprehension as to this point; and hereafter, to avoid the possibility of any misunderstanding, the authorship of all the editorials will be indicated by the names or initials of the writers.

THE notice of the work, *Man, Whence and Whither*, by Dr. Richard B. Westbrook, which appeared in *The Index* a few weeks ago, contained some errors of quotation and reference; and the opinion of the author's reasoning indicated in that notice was so largely founded upon those errors as to do him injustice. We make this statement, because it seems to be due Dr. Westbrook. The notice was written amid the hurry of Anniversary Week, when we were unable to give the book that careful examination which works reviewed in *The Index* have, with this exception, always received.

THE *Advertiser* of this city hits the nail on the head, when it says of the Chicago platforms: "They are confused and disconnected, apparently made up of fragments coming from different hands and thrown together with no thought, except that of working in something upon every topic which can safely be touched. Neither of them shows traces of any conscious effort to state a defined or definite system of political theory or policy; but in both there is the painful search for possible issues or possible popular demands, which shows that a political party has either forgotten its own meaning or is groping for a new one. The natural result of the new method of construction is that, upon many things besides the tariff, the two platforms take the same direction. . . . This singular similarity in upshot and in detail will, no doubt, have its practical conveniences for any speaker who finds this fall, when he is before his audience, that he has accidentally brought the wrong document. For many purposes, either will answer."

At Liberal, Mo., where there is a community composed mainly of Liberals, come-outers, and heretics of all kinds, a large meeting was held on the Fourth in celebration of the day, at which

Mrs. Mattie P. Krekle, the accomplished wife of Judge Krekle, of Kansas City, delivered an oration, which is highly praised by several papers that have been received at this office. An article in the *Kansas City Daily Times* says of the speaker: "She was simply master of the situation. She fully comprehended the genius of our government, and its intended application to the wants of the people in every department. Her voice was clear and musical, her bearing graceful, and her powers as a public speaker were first-class. She treated the question from a new stand-point from ordinary Fourth of July orators. She showed the evolution of government from the theocratical, monarchical, and tyrannical form up to an absolute republic, which will only have become perfect when all its subjects, having equal mental and moral endowments, have an equal voice in the management of it. She was pleasing, forcible, and logical, and, as a lady, won the admiration and hearts of the people." The oration was preceded by the reading of the Declaration of Independence, and followed by a dinner at which toasts were offered and brief responses made. In the evening there was a ball, "in which," says the *Liberal*, "old and young freely participated, and enjoyed themselves until about eleven o'clock, when they all adjourned, feeling that it was good to have been there."

It is in this evident determination to uphold Christianity and Christian institutions as the sole source of genuine morality that we find the root of the most persistent attacks by clergymen on Voltaire, Paine, Ingersoll, and all other eminent "infidels." The Church cannot afford to leave these open deniers of her "revelations" in the undisturbed and unchallenged possession of reputations as really good men. Utterly regardless of the facts, she persists in blackening their names, not so much from motives of malignity as of self-interest, partly to destroy their influence and partly to deter others from emulating it. She cannot possibly do otherwise. To admit that those who are not Christians can really be as good as those who are, inwardly as well as outwardly, would be fatal to her own claim of being the sole source of genuine morality. She must either deny the genuine goodness of all outside her own fold or else acknowledge herself not necessary to the world's salvation from sin. What wonder that she chooses the former alternative! This state of things creates special difficulties in the path of Liberals who become in any degree publicly identified with the cause of liberal principles and opinions. They are exposed to attacks from which no innocence can shield them. They need to be, not only innocent, but also bold, wise, and circumspect. They cannot afford to make grave mistakes. If they do, they are certain to be misrepresented in the worst possible manner by ecclesiastical critics,—all for the "glory of God."—*Francis E. Abbot*.

GEN. BUTLER's action at Chicago has put his Greenback friends in a quandary. He had accepted the platform and candidacy of the Greenback party; his name had been hoisted as their candidate by the Greenback papers; the nominee for Vice-President had accepted that nomination; a committee had been appointed to take charge of the Greenback campaign; campaign clubs had been formed, and meetings held to urge and influence the people to vote for Gen. Butler: yet he appeared last week as a delegate at large from Massachusetts to the Democratic Convention, and, to quote from *John Swinton's Paper*, "he took part in boosting a candidate to defeat the party that nominated him as its candidate, and he was himself an aspirant at Chicago for the nomination of a party radically opposed to the principles of the

Greenback party by which he had previously been nominated. It would be impossible to imagine anything more fantastic or more thoroughly saturated with cynicism than this." The same paper says that a meeting of the National Committee of the Greenback party must be held, and that Gen. Butler's position "must at once be defined, if the Greenback party is not to be weakened to the point of collapse." It is difficult to see how Gen. Butler, "a man of resources" as he is, can turn to his advantage his visit to Chicago last week, where his action naturally offended his Greenback friends and admirers who had honored him by making him their standard-bearer, and where his own ridiculous weakness was shown in the Democratic party whose candidate he had aspired to be.

For *The Index*.

THE PRAIRIE HEAVEN.

Why try to reach the House
Where many mansions be?
My homestead and my timber claim
Are good enough for me.

Worth more than Ophir's gold,
And spotless as a bride,—
My wheat-fields in midsummer,
My trees at Whitsuntide.

Should mortals strive to hear
The angels' glad refrain?
Here's the lyre swept by Shakspere,
And Robert Burns's strain.

What grander chance for man
Can Heaven itself provide!
My first-born, self-forgetful, sank
In Shiloh's bloody tide.

Alas! alas! the Christian's thought
That gods the joy can know
Of constant toil, of courage true,
Like mortals here below.

Here in my prairie home
The kingdom is for me,—
The sounding stream, the silent stars,
The birthright of the free.

CLEARCHUS.

For *The Index*.

THE RACE FOR GOLD.

Love of ease and grasp for gain
Yield a harvest full of pain:
Only he who sails the tide,
Heeding nought but sky and star,
Finds that light and faith abide,
Not where cushioned customs ride,
But where seas untraversed are.

Downward, downward, is the road
Burdened by the moneyed load:
Out on freedom's waves who stray
Find with gods the nobler sign
That doth lead the upward way.
Ah! who curses life and day,
Where is spread this sail divine?

Here, yea, only here, remains
Life released from loss and gains:
Here is not thy trade and hate.
Time is given here to deeds
That with conscience grown elate
Shame the pride of public state
And transfix thy worthless creeds!

Who,—ah! who is winner now?
Choose ye gold or freedom's vow!
Only seeming is the feat
Cast where fellow-mortals fall
Hie ye from the mart and street,
And till trade and justice meet
Heed ye not the backward call!

HORACE L. TRAUBEL.

The Index.

BOSTON, JULY 17, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

A Study of Primitive Christianity.

BY LEWIS G. JANES.

(Continued from last week.)

II.

SOCIETY AND RELIGION IN THE ROMAN EMPIRE.

Alexandrian Influence on Christianity.—Philo Judæus.

The subject of the relations of the religion of ancient Egypt to the Hebrew cultus is one of exceeding interest, but here calls for no extended treatment. The large colony of Jews in Egypt had long since adopted the Greek language, which they employed not only in their daily intercourse, but also in the worship of the synagogues and the ceremonies of their religion,—the ancient Hebrew faith as modified in Judaism. They had even transformed a forsaken temple of the Egyptian cat-goddess, Pasht, at Leontopolis, into a copy of the temple at Jerusalem,—a proceeding which was not regarded with favor by the Jews of Palestine, who viewed with increasing distrust and jealousy the influences proceeding from their brethren in Egypt. In Alexandria, under the patronage, it is said, of the reigning Ptolemy, the Hebrew Scriptures had been translated into Greek. This translation, the Septuagint, was frequently used and quoted by the Christian Fathers, and furnished an invaluable aid to the introduction and promulgation of the new religion. Those social and commercial influences which we have already noted as prevailing throughout the Roman Empire, that tended subsequently to promote the spread of Christianity, were notably present in this new metropolis. Alexandria was a great commercial centre, her population being mainly devoted to manufactures and trade. The common people among the Jews had learned of the skilled workmen of Egypt the secrets of their crafts, and for mutual protection had associated themselves in guilds like the mod-

ern trades-unions, the members of which engaged to support each other when out of work.*

The influence of Alexandria, in bringing together people of diverse races and religions, in promoting a cosmopolitan spirit in religion and philosophy, in sustaining commerce and thus bringing distant parts of the empire into closer relations, in hastening the decay of the ancient faiths and furnishing material and proselytes for the new, was of the greatest significance in the history of early Christianity. The Alexandrian school of philosophy, which attempted to fuse into a single system Oriental mysticism, Jewish intuitionism, —the doctrine of a divine revelation,—and the metaphysical idealism of Plato; which culminated during the third century of the Christian era in Neo-Platonism,—the final form and product of Greek philosophy,—and the influence of which was predominant in the formation of the dogmatic theology of the Christian Church, had an origin almost contemporary with the beginnings of Christianity. Its earliest representative was Philo Judæus, a Greek-speaking Jew, a Pharisee by belief and association, though by descent, it is said, of the priestly family of Aaron.† In the philosophy of Philo, Judaism first escaped from the bondage of its national exclusiveness, and admitted that spiritual truth was discoverable elsewhere than in the Hebrew writings. This admission, however, was not full and explicit, but was accompanied by the historically indefensible claim that the truths of the Platonic philosophy were themselves derived from the writings of Moses and the prophets. The philosophy of Philo was an attempt, by means of an elaborate system of allegorical interpretation, to discover these abstruse metaphysical dogmas in the Hebrew Scriptures.

Philo's teaching was based upon that Oriental dualism which, originating perhaps in the later development of Zoroastrianism, had penetrated Judaism and the religion of Egypt after the Persian conquests, and found its clearest philosophical expression in the doctrines of Plato. It conceived an absolute separation and antagonism between spirit and matter; between the Infinite High and Holy One, whose nature was purely subjective and spiritual, and the objective universe. How, then, could the universe be created, since there was this infinite separation between God and matter? This was the problem which Philo attempted to solve, in harmony with the teaching of the Scriptures and the doctrine of Plato. Upon the familiar language of Genesis, "And God said, Let there be light," he based his theory of the creative Word,—the Logos.‡ Not the infinitely pure and spiritual deity, accordingly, but the Logos, an emanation from the supreme God, was the creator of the universe. Philo did not absolutely personify the Logos, nor identify it with any historical individual, as in the later Christian development of the doctrine. His thought appears to hover between the conception of the Logos as an attribute—a purely metaphysical idea, similar to the ideas of Plato—and its more complete personification. The Logos was the Demiourgos, the shaper of primeval matter; the first begotten Son of God, the shadow and seeming portrait of God, by means of which, as by an assumed instrument, the world was made; the heavenly food of the soul, from

* It is noteworthy that many of the social influences tending to the amelioration of the condition of the laboring poor, which are commonly assumed to have received their original impetus from Christianity, are traced by the impartial historian to pre-Christian times.

† Philo was a contemporary of Jesus, born probably some twenty or thirty years before the Nazarene prophet, and dying some years later than Jesus.

‡ This doctrine, as we have seen, had already penetrated Judaism from the East, and was used by the Rabbis of Palestine in their Aramaic commentaries on the Scriptures. This use was probably known to Philo, and may have helped to suggest his theory of the common origin of the Hebrew writings and the Platonic philosophy.

whom all eternal instructions and wisdoms flow; the fountain of wisdom; heavenly and immortal nourishment: such are the descriptive expressions in the writings of Philo, many of them strikingly like the familiar teaching of the Fourth Gospel.*

"He strains every nerve toward the highest divine Logos, . . . in order that, drawing from that spring, he may escape death and win everlasting life.† . . . Nothing is more luminous and irradiating than the divine Logos, by the participation in which other things dispel darkness and gloom, earnestly desiring to partake of the living Light.‡ . . . The stamp of the seal of God is the immortal Logos.§ . . . The divine Logos is free from all sins, voluntary and involuntary. . . . Those who have knowledge of the truth are properly called the sons of God: || he who is still unfit to be named the son of God should endeavor to fashion himself to the first-born Logos of God. . . . It is impossible for the love of the world and the love of God to co-exist." ¶ It is hardly possible to conceive that the author of the Fourth Canonical Gospel was not familiar with these expressions drawn from the writings of Philo, or that his identification of Jesus with the Logos was not based upon the then current teachings of the Alexandrian philosophy. Of the further development of this doctrine in the systems of the Gnostics and the orthodox Christian theology, we shall have occasion to speak hereafter.

Carthage and Phœnicia,—their Gifts to Civilization.

Four centuries before the Christian era, the great Punic or Carthaginian empire had possessed all the coast of Africa west of Egypt, and controlled the greater number of the islands of the Western Mediterranean. It had inherited from its Phœnician founders the traits of a great commercial nation, and was one of the first countries in the world to substitute sailing vessels for galleys propelled by oars. A century and a half before the Christian era, this nation was virtually extinguished. All that remained of it was the powerless subject of Rome. So little had Carthage bequeathed to the world, that we know less of her history than of any other nation of antiquity. Her religion was borrowed from Phœnicia. Baal, Ashtoreth, and Melkarth, gods of the fierce and destructive powers of nature, were her deities; and, as in the parent country, they were worshipped with sensual and barbarous rites and bloody sacrifices, often of human victims. The gentler and humaner religion of Rome was a pleasing substitute for this cruel barbarism. The new Roman city of Carthage, founded by Augustus Cæsar, grew rapidly, but never attained the commercial prominence of its predecessor. It became an important Christian bishopric early in the third century. Among other notable names in the history of the Church, Carthagina furnished that of Augustine, whose influence was predominant in the formation of the Christian theology.**

Phœnicia, with its great commercial cities, Tyre and Sidon, had reached the zenith of its power eight hundred years before the Christian era, and had now long been falling into decay. It had been conquered by Alexander the Great, by whose armies Tyre was reduced to ashes, many of its inhabitants were slain, and the remainder were sold as slaves. Though subsequently rebuilt, it never regained its former commercial importance.

* See Mangey's ed. of Philo's Works, vol. i., pp. 308, 106, 482, 560. Compare John i.-xiv., 3; vi., 35, etc.

† Compare John vi., 40.

‡ Compare John i., 4, 9-11.

§ Compare John vi., 27.

|| Compare John i., 12.

¶ Compare John xvii., 9-14, etc.

** May not some of the barbarous features of this theology be traceable to the indefinable, but none the less positive influence of survivals of this earlier theological barbarism?

Phœnicia lacked that supreme ethical element in its civilization which alone suffices to insure permanence in the life of nations. Apart from the commercial spirit which it transmitted to other nations, there was little in its example worthy to live in history. No important remains of a Phœnician literature have been preserved to us,* though that country modified and transmitted to Europe from Egypt the vehicle of all modern literature,—the alphabet. Phœnicia was a nation of shopkeepers. Its morals, religion, official stations, as well as its goods, were for sale to the highest bidder. Conquered by the Romans in the year 64 B.C., its life and civilization were assimilated into the greater life of the Western world, and it ceased to exist as a nation.

The Keltic Communities.—The Druids and their Religion.

Spain, Gaul, and Britain, nations of Western Europe, were annexed to the Roman Empire during the half-century preceding the advent of Christianity. Spain soon became thoroughly Romanized, and remained for many years one of the chief centres of Roman literature and civilization. The Keltic element predominated in its population, as also in Gaul and Ireland. At this period, Spain and Gaul swarmed with Roman burgesses and merchants. It was almost impossible for a native of Gaul to transact a piece of business without the intervention of a Roman. Roman farmers and graziers were busy introducing improved methods of agriculture,—an occupation for which the Keltic peoples had never manifested any fondness. Their principal pursuits were navigation and pastoral husbandry. They were the first people who regularly navigated the Atlantic Ocean.

The inland Kelts, whose domains extended back into the western districts of Switzerland and Germany, were mainly occupied in breeding and rearing domestic animals. They were everywhere a people of rude tastes, and literature and the arts were in a very low state among them. The political structure of the Keltic communities was that of a loosely compacted confederation, tending to feudalism. Its basis was the clan-canton, organized with a governing prince or chief, a council of elders, and a community of freemen capable of bearing arms. All non-combatants were excluded from citizenship. Women were held in so low an estimate that they were ranked with slaves, the laws permitting the torture of these two classes, but prohibiting the torture of freemen.

The Keltic priesthood, known as the Druids, united all Gaul and the British Isles in a common religious brotherhood. It constituted a compact organization, the chief of which, a sort of pope, was elected by a convocation of priests, as the pope of Rome is now chosen by the college of cardinals. Priests were exempt from taxation and military service. They held annual councils, and administered a kind of governmental jurisdiction over the people. They were permitted to inflict capital punishment by sacrificing condemned criminals in their religious ceremonies. Bodies of human victims often smoked on the same sacrificial altars with those of beasts. The Druids thus constituted a sort of ecclesiastical state or theocracy, and ruled over an unintelligent and believing people similar to the Irish peasants of the present day. The word "Druid" is derived by the best philologists from two Keltic roots meaning "God-speaking," which indicates a belief in supernatural

*There is, nevertheless, considerable indirect evidence that Phœnicia was not without a distinctive and characteristic philosophy of indigenous growth and strong Semitic peculiarities. Speaking of the Greek and Roman Empires in the centuries immediately preceding the Christian era, Ritter declares, "The wisdom of the Magi, of the Egyptians, and of the Phœnician priests and the Jews soon became famous."—*History of Ancient Philosophy*, by Dr. Heinrich Ritter. Vol. IV., p. 18.

inspiration similar to that claimed for the Hebrew prophets. The Druidical religion inculcated the worship of one supreme Being, but encouraged also the veneration of fetiches. A sacred fire, kindled with certain religious ceremonials, was revered as a symbol of the sun. Circular temples, open at the top to admit the sunlight, were dedicated to the solar deity. Their religious rites were often celebrated in sacred groves of oak.

The Druids taught the doctrine of a future life, and a state of rewards and punishments. They professed "to reform morals, secure peace, and encourage goodness." "They assumed," says Cæsar, "to discourse of the hidden nature of things, of the extent of the universe and of the earth, of the forms and movements of the stars, and of the power and rule of the gods." They practised astrology, divination, and magic. Relics found among Druidical remains in Ireland are thought to have constituted parts of astronomical instruments designed to illustrate the motion and phases of the moon. A sacred character was ascribed to the oak, mistletoe, hyssop, vervain, and marshwort. These plants were plucked only after ceremonial ablutions and offerings of bread and wine. This primitive religion was supplanted in part by that of the Romans, and subsequently the Keltic populations easily assimilated the forms and doctrines of Latin Christianity, many of which were prefigured in the older faith.

Character and Religion of the Teutonic Peoples.

Concerning the Teutonic tribes of Northern Europe, little was known before the time of Cæsar. At the commencement of the Christian era, they constituted a horde of semi-barbarous peoples, many of them agriculturists and having some fixed settlements. Their chief occupations, however, were hunting, the care of cattle, and the pursuit of arms. They were brave and independent by nature, but given to the vices of gambling and intoxication, the evil influences of which largely counteracted the nobler traits which might have raised them earlier out of barbarism.

Their population was divided into nobles, freemen, and serfs. The freemen elected their chiefs, whom the Romans often called kings. The Teutons held women and aged people in high regard. They honored chastity no less than valor, and presented a picture of domestic life more perfect and beautiful than could be found elsewhere in the Western world. This characteristic, with a robust mentality and ingrained love of personal liberty, were the chief gifts of this people to the civilization of the future; gifts which led them as naturally and inevitably to Protestant Christianity, and through it to Rationalism, as the characteristics of the Kelts led them to Catholicism. "It was the rude barbarians of Germany," says Guizot, "who introduced this sentiment of personal independence, this love of individual liberty, into European civilization; it was unknown among the Romans, it was unknown to the Christian Church, it was unknown in nearly all the civilizations of antiquity." He might have added with truth, It is the most powerful and characteristic element of our modern civilization.

The religion of the Teutons was in part developed from the Nature-worship of the primitive Aryan peoples, with an intermixture, apparently, of Semitic or Babylonian elements, an inheritance, perhaps, from the Turanian tribes, whom they supplanted in Europe. In part, doubtless, it was of later indigenous growth. It was essentially a polytheistic system, including the worship of Odin or Thor, and his consort Fria, or Frigga, Tiu, the heaven-god, corresponding with Zeus, Jupiter, and the Vedic Dyaus-pitar, and many other subordi-

nate deities. Priests, bards, and sacred groves were dedicated to this worship. The doctrine of a future life in Walhalla was taught. The gods were considered mortal like human beings, as with the Buddhists. Domestic animals, including horses, and sometimes human victims, were offered as sacrifices. The religion of the Teutons was less influenced by the Pagan cultus of Rome than that of the Kelts, during its transition to Christianity.

Resume and Conclusion.

At the advent of Christianity, Greece, through the conquests of Alexander, had already contributed to the civilization of the future her wealth of art, literature, and philosophy, the sum of which is known as Hellenic culture. Rome, under the mighty power of the Cæsars, was bestowing upon the Western world the blessing of the most perfect code of laws which was then in being, and uniting the nations in a common brotherhood of citizenship. Phœnicia had long before communicated the commercial spirit to Carthage and to Greece, and through them to Rome, thus bringing distant peoples into closer communion; a mighty and too little recognized influence in promoting civilization and brotherhood.

Rome, with her State religion,—a hollow ecclesiasticism to the more intelligent,—stood ready, at the demand of self-interest, to dethrone Jupiter, and to pass over her gods, her images, her festivals, the paraphernalia of her priests, and the title of Pontifex Maximus, then held by Cæsar as the head of the Pagan cultus, to that new religion which, through the supremacy of the empire among the nations of the world, was soon to make such mighty strides toward universal dominion. Her sculptured heads of Jupiter were to descend to posterity, rechristened by the name of St. Peter; and her little god Vaticanus, whose function it was to watch over the first lisping of infants, was to bestow his name upon the Vatican,—the palace of the Christian popes.

The great Aryan monotheism of Zoroaster had met in Babylon the great Semitic monotheism of the Hebrew prophets, and, together with some more questionable benefactions, had blessed it with its gift of a belief in a life beyond the grave, and thus prepared the way for one of the leading doctrines of Christianity. The word "Father" as applied to the Supreme Being had entered Judaism from that other contact with the Aryan races through the Greeks, and was used by Jewish Rabbis of the century preceding the birth of Jesus. The Hebrew doctrine of the Messiah had taken a new and more personal form under the influence of contemporary Persian notions, and the stimulus of foreign oppression. Millennial expectations imported from Babylon were "in the air." The writers of the Book of Daniel and the apocryphal Book of Enoch had applied the term "the Son of Man"—a common designation of the prophets—to designate the coming Messiah. Jonathan ben Uzziel, a Jewish Rabbi and contemporary of Jesus, was interpreting various passages in the Old Testament with the phrase *Memra*, "the Word," derived probably through Babylon from India. Hillel had already proclaimed the "Golden Rule" as the substance and foundation of Judaism.

The ancient religion of Egypt was without vitality, but preserve a lingering existence. Some of her gods had passed over to Rome; the figures of Isis and Horos, and Persephone and Iakchos were prefiguring the familiar Christian representation of the Virgin and Child. The Greek gods were emigrating to Egypt, Phœnicia, Assyria, Gaul, and Spain, as well as to Rome. The Eternal City welcomed the new gods as

The Index.

BOSTON, JULY 17, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

A Study of Primitive Christianity.

BY LEWIS G. JONES.

(Continued from last week.)

SOCIETY AND RELIGION IN THE ROMAN EMPIRE.

**Alexandrian Influence on Christianity.—Philo
Judaicus.**

The subject of the relations of the religion of ancient Egypt to the Hebrew cultus is one of exceeding interest, but here calls for no extended treatment. The large colony of Jews in Egypt had long since adopted the Greek language, which they employed not only in their daily intercourse, but also in the worship of the synagogues and the ceremonies of their religion,—the ancient Hebrew faith as modified in Judaism. They had even transformed a forsaken temple of the Egyptian cat-goddess, Pasht, at Leontopolis, into a copy of the temple at Jerusalem,—a proceeding which was not regarded with favor by the Jews of Palestine, who viewed with increasing distrust and jealousy the influences proceeding from their brethren in Egypt. In Alexandria, under the patronage, it is said, of the reigning Ptolemy, the Hebrew Scriptures had been translated into Greek. This translation, the Septuagint, was frequently used and quoted by the Christian Fathers, and furnished an invaluable aid to the introduction and promulgation of the new religion. Those social and commercial influences which we have already noted as prevailing throughout the Roman Empire, that tended subsequently to promote the spread of Christianity, were notably present in this new metropolis. Alexandria was a great commercial centre, her population being mainly devoted to manufactures and trade. The common people among the Jews had learned of the skilled workmen of Egypt the secrets of their crafts, and for mutual protection had associated themselves in guilds like the mod-

ern trades-unions, the members of which engaged to support each other when out of work.*

The influence of Alexandria, in bringing together people of diverse races and religions, in promoting a cosmopolitan spirit in religion and philosophy, in sustaining commerce and thus bringing distant parts of the empire into closer relations, in hastening the decay of the ancient faiths and furnishing material and proselytes for the new, was of the greatest significance in the history of early Christianity. The Alexandrian school of philosophy, which attempted to fuse into a single system Oriental mysticism, Jewish intuitionism, —the doctrine of a divine revelation,—and the metaphysical idealism of Plato; which culminated during the third century of the Christian era in Neo-Platonism,—the final form and product of Greek philosophy,—and the influence of which was predominant in the formation of the dogmatic theology of the Christian Church, had an origin almost contemporary with the beginnings of Christianity. Its earliest representative was Philo Judæus, a Greek-speaking Jew, a Pharisee by belief and association, though by descent, it is said, of the priestly family of Aaron.† In the philosophy of Philo, Judaism first escaped from the bondage of its national exclusiveness, and admitted that spiritual truth was discoverable elsewhere than in the Hebrew writings. This admission, however, was not full and explicit, but was accompanied by the historically indefensible claim that the truths of the Platonic philosophy were themselves derived from the writings of Moses and the prophets. The philosophy of Philo was an attempt, by means of an elaborate system of allegorical interpretation, to discover these abstruse metaphysical dogmas in the Hebrew Scriptures.

Philo's teaching was based upon that Oriental dualism which, originating perhaps in the later development of Zoroastrianism, had penetrated Judaism and the religion of Egypt after the Persian conquests, and found its clearest philosophical expression in the doctrines of Plato. It conceived an absolute separation and antagonism between spirit and matter; between the Infinite High and Holy One, whose nature was purely subjective and spiritual, and the objective universe. How, then, could the universe be created, since there was this infinite separation between God and matter? This was the problem which Philo attempted to solve, in harmony with the teaching of the Scriptures and the doctrine of Plato. Upon the familiar language of Genesis, "And God said, Let there be light," he based his theory of the creative Word,—the Logos.† Not the infinitely pure and spiritual deity, accordingly, but the Logos, an emanation from the supreme God, was the creator of the universe. Philo did not absolutely personify the Logos, nor identify it with any historical individual, as in the later Christian development of the doctrine. His thought appears to lie between the conception of the Logos as a mere idea—a purely metaphysical idea, similar to that of Plato—and its more complete personification. The Logos was the Demiourgos, the creative primeval matter; the first being, the first cause, the shadow and seeming power of God, the agent of which, as by an assumption, the universe was made; the heavenly

whom all eternal instructions and wisdoms flow; the fountain of wisdom; heavenly and immortal nourishment: such are the descriptive expressions in the writings of Philo, many of them strikingly like the familiar teaching of the Fourth Gospel.*

"He strains every nerve toward the highest divine Logos, . . . in order that, drawing from that spring, he may escape death and win everlasting life.† . . . Nothing is more luminous and irradiating than the divine Logos, by the participation in which other things dispel darkness and gloom, earnestly desiring to partake of the living Light.‡ . . . The stamp of the seal of God is the immortal Logos.§ . . . The divine Logos is free from all sins, voluntary and involuntary. . . . Those who have knowledge of the truth are properly called sons of God: || he who is still unfit to be named the son of God should endeavor to fashion himself to the first-born Logos of God. . . . It is possible for the love of the world and the God to co-exist." ¶ It is hardly possible to say that the author of the Fourth Canon was not familiar with these expressions from the writings of Philo, or that the identification of Jesus with the Logos was not in the then current teachings of the Hellenistic philosophy. Of the further development of the doctrine in the systems of the orthodox Christian theology, we will speak hereafter.

The Celtic Communities.—The Druids and their Religion.

The inland Kelts, whose domains extended back into the western districts of Switzerland and Germany, were mainly occupied in breeding and rearing domestic animals. They were everywhere a people of rude tastes, and literature and the arts were in a very low state among them. The political structure of the Celtic communities was that of a loosely compacted confederation, tending to feudalism. Its basis was the clan-canton, organized with a governing prince or chief, a council of elders, and a community of freemen capable of bearing arms. All non-combatants were excluded from citizenship. Women were held in so low an estimate that they were ranked with slaves, the laws permitting the torture of these two classes, but prohibiting the torture of freemen.

Concerning the treatment of the colored and the tender Europe. The treatment of the colored people is a tender subject. At the same time, the colored people have forever constituted a part of the world before them. Many of the questions of such a kind can produce a more home-coming and burden bears. The bitterness, the cruelty, the un-derstanding, and mentally de-termined, sin, agony, and have come from ill-as-pected laws which should a healthy, in-formation, can be bound forever to a deformed, incurably, abusive, or even cruelly

Undoubtedly, licentious and evil-minded folk would take advantage of free divorce for base purposes, even as they take advantage of every relation of the sexes to work iniquity; but, to revert once more to the Spencerian philosophy, it is but seldom that we can do that which is absolutely right,—usually we can only do the relatively right,—and it is not just that the virtuous and innocent should be kept in bondage because the vicious abuse liberty.

more reasonable for the law to for-
bid persons to marry, or at least to beget
children, than it to forbid their being divorced.
If the right to remarry should be freely
granted to divorced persons capable of begetting
children, or past the age of begetting, even if
on moral reasons; for a person criminally
guilty with one partner may become virtuous if
sincerely mated to another. We have no moral
reasons more potent than happy married life.

J. WILLIAMSON

On renewing my subscription, allow me to express my approbation of the aims and purposes of the paper, and my admiration for the ability and fairness with which it is conducted.

From a fair reading of his works, I do not think he can be charged with encouraging fanaticism; and he has tried to suppress the extremisms and absurdities of many in the ranks of Spiritualists.

Very respectfully,
Ky. W. LANGLEY.

"ONE WORLD AT A TIME."

It is said of Henry Thoreau that a short time before his death, when an over-anxious theological friend hazarded some questions concerning the naturalist's preparation for the future, the latter with a simple wave of the hand silenced the troubler with the words, "One world at a time."

Now, the outside temperature being so entirely beyond individual control, and the very important practical matter of sitting, sleeping, and working in rooms of healthful temperature, with an abundant supply of pure air, being nearly altogether dependent on one's own will or judgment, it seems remarkable how

heartily as she despised them all, both new and old. The recognition of the old gods under new names—the transfer of functions and characteristics from one to another—was leading the way through scepticism to monotheism. In Rome, the gods were said to be more numerous than the people. In Athens, every street corner had its statue of a deity. The world was weary of conflict, unsatisfied with existing philosophies, disgusted with priestly arrogance, sophistry, and insincerity, but longing for a religion which would proclaim the growing faith in the Fatherhood of God and the Brotherhood of Man.

From the time of Alexander, war had been the most potent civilizer, drawing together the nations, with their diverse civilizations and religions, into a closer unity, to which each contributed its peculiar gift, which the world received and assimilated into its common life. Looking back through the centuries over the broad sweep of the entire horizon of this ancient world, above the conflict of arms, the groans of the poor, the dying, and the oppressed, the loud laughter of the Roman augurs at the absurdity of their rites, the sneers of sceptical philosophy-mongers who believed neither in the gods nor in the moral law,—may we not behold the working of that Power, eternal and invincible, that in all ages makes for righteousness, civilization, and brotherhood? Do we not perceive the growing intelligence and virtues of man, triumphing over his wrath and wickedness and folly, already building up the better kingdom of the future,—the Kingdom of God on earth, which is also the Republic of Man? Shall we not see in the peasant child of Galilee the "Son of Man" indeed,—the natural product of his race and time, participating in some of its errors and superstitions, but ready to speak the vital word for humanity fearlessly and unfalteringly, willing to die rather than falter or recant? All the circumstances of this period point to the conclusion that old uses were outgrown; a new era was about to dawn in the life of humanity,—the product of easily discernible and perfectly natural causes. A fateful hour had arrived in the history of civilization, and it did not seek in vain for its man.

For *The Index*.

"OUR PURPOSE."*

BY RABBI SOLOMON SCHINDLER.

Ladies and Gentlemen.—An eternal law forces the human mind to connect every object or action with which it meets with a purpose. No sooner comes an object within the reach of our observation than we immediately conclude upon its purpose. Never have men undertaken a thing without a purpose; and so much are we accustomed to the laws of cause and effect, of action and purpose, that we ascribe a purpose even to the creation of the universe.

I do not mean to say that the purpose for which a thing is made or an enterprise is undertaken is always accomplished. In spite of our best intentions, our most zealous works often miscarry and bear other than the expected fruit; and, likewise, our conclusions as to the purpose of a thing not seldom prove erroneous.

We find ourselves assembled here to-day to witness the commencement of a work which, as we hope, will outlive ourselves and many generations after us. We behold at present only a few rough and unfinished walls around us, the mere outlines of a building. We are about to deposit, as it is customary, into the cavity of the corner-stone various articles and documents from which future generations shall derive an idea as to our customs and general standing; and, immediately, our mind starts with electric swiftness from this one pole and goes in search of its mate, the other, asking, What is the purpose of this

*An address delivered at the laying of the corner-stone of the Temple Adath Israel, corner Columbus Avenue and Northampton Street, Boston, Mass., on July 8, 1884.

building? What is its destination? The question at first sight seems superfluous, if not silly; for we all know that we intend to erect a temple on this spot, and what the purpose of a temple is every one thinks he knows.

But I beg your pardon, my friends. There were times when magnificent structures called temples were erected, in the firm belief that they were the dwelling-places of gods. Even our own nation, when in its infancy, believed that the temple in Jerusalem was the habitation of its God, and that King Solomon had erected it in order to fulfil the obligation of the nation due to him who had delivered Israel from Egyptian bondage and had bestowed upon it the land of Canaan as an inheritance. The doleful complaint of King David that God had to reside in a small tent—while he, the king, was living in a house of cedar—was a true expression of the common belief of that time; namely, that a temple ought now to be built for the benefit of their God.

Is it the purpose of this building to become the residence of our God? Will we attempt to house the Infinite, who fills the vast universe with his glory, in the narrow space which these walls circumscribe? Do we build this structure for the benefit of God? I, for one, deny it.

The age of credulity has passed; and, in our age of reason, it would be sheer hypocrisy to uphold such an antiquated and superstitious notion.

In denying it, I am backed by the authority of the most zealous workers which Israel ever produced, by the prophets. They already turned away from that notion, proclaiming the whole universe to be the residence of God. The heavens are his habitation, and the "earth his footstool," they said; and, with the courage of their conviction, they thundered against temples, priestcraft, and sacrifices.

Thanks for their efforts. Long before the second temple was destroyed, the popular belief had undergone a wonderful change, and the nation had become ripe to abolish sacrifices and to worship God by prayers in numerous synagogues.

Is it, then, the purpose of this building to be a house of prayer, to be a place in which we are to offer our supplication to God, believing that here we are nearer to him than elsewhere?

As long as prayers were considered to be the substitute for the former sacrifices, as long as the reading of a set of ready-made prayers was obligatory to every adult Israelite, so long a house of prayer was needed and wanted. For the conscientious, reasoning man of to-day, however, religion does not consist in the rehearsal of a set of prayers. To him, true religion is an endless chain of noble actions; and, if his soul ever craves for a communion with God by means of prayer, he will pray, no matter where he is. He will express his admiration of God's power and might on mountain peaks or on the sea-shore, or pour out his troubled soul before his Maker in the solitude and seclusion of his closet. The time of prayer-books and rituals is swiftly passing away. Ready-made prayers will go in course of time the very way sacrifices went before; and, if it should be the sole and only purpose of this building to be a house of prayer and nothing else, I venture to predict that its pews would remain as empty as pews generally and in the average are.

Now, ladies and gentlemen, for what purpose do we erect this temple? What shall its destination be?

Before all, I wish it to be understood that God does not need our temples, nor that the supreme Ruler of the universe derives any benefit from our worship. We are the ones who are benefited by it; and, therefore, not for the sake of God, but for our own sake, do we erect this building. True religion has a double purpose: first, to uphold and to propagate certain unchangeable principles; second, to give to these principles form and shape in active life. We associate and form religious corporations, in order to obtain that strength which lies in union, that we may help one another to reach the highest possible standard of civilization and humanity. The temple of to-day and of the future must be a centre, the headquarters around which the members of a religious body rally, from which they propagate or defend, as the case may be, their principles, and in which they resolve upon all such actions as will tend to improve their own moral condition and that of their fellow-men. The temple of to-day and of the future must be a place in which we congregate, not to favor God, but for our own benefit; not for the sake of passing

through a tedious ritual, but for the sake of seeking enlightenment on questions which are beyond the common sphere. The temple of to-day and of the future must be a school in which the principles of a noble life are both taught and practised.

And here I stand again on strictly Jewish ground. The word "temple" may please us better by its sound, the name "house of prayer" may have a fascination for the sentimentalist; but our ancestors used to call their religious meeting places "schools," and a school this house shall be in the widest sense of the word, and nothing but a school for the development of our moral qualities. Here, the doctrine of the one God of Israel shall be taught, expounded, and defended against both of its foes, polytheism and atheism; here, the doctrine that all men are brethren and all mankind is one family shall be proclaimed; here, measures shall be resolved upon as to how to work together and hand in hand for brotherly love, charity, benevolence, righteousness, justice, and liberty.

If we band together for such a purpose in this house, it will forever command the respect of the community, and will need none of the luxurious attractions to which some churches of to-day resort, in order to draw visitors. If we band together in this building for such a purpose, I foretell that the Temple Adath Israel will grow a shining light in Israel, the pride of this city, and an honor to humanity.

This is our purpose, as I understand it.

CORRESPONDENCE.

A CERTIFICATE THAT CERTIFIES TOO MUCH.

Editors of The Index.—

I received to-day a certificate of my membership in the Free Thinkers' Association, with a request that my name be given for publication in a future number of the journal issued by them. I declined these offers, partly on the ground of not being acquainted with their aims or their by-laws, and I do not wish to belong to any organization which, like the New York Freethinkers Association is a branch auxiliary to the National Liberal League while the latter remains pledged to work for the repeal of United States postal laws against indecent literature.

There is a list of twenty-eight hundred names appended to the number of the magazine which was sent with the certificate, purporting to be those of Free Thinkers. This is largely German. Among them, I recognize but three, who are known to the public at all, who have not formerly identified themselves in some way with the schismatics of Syracuse. I am familiar with the names of all who have been prominent as workers in the liberal field, and think I am correct. I find whole families in this list, which may account for the number which has been drummed together,—the father, mother, and several children all holding certificates of membership. One Indiana father, in writing the editor, says: "Your letter containing certificate of membership for myself and baby, Robert Green Ingersoll, received." He further says that he has "seven children," and "I do not think little 'Bob' will ever return his certificate." So you will see of what antiquity a part of the owners of the names represented can boast.

The certificate sent me declares that I have "paid the regular membership fee into the treasury." This is a mistake. If it is paid at all, some other body paid it; and, if it was intended to be complimentary, it seems to me well to have so designated and recorded it. Otherwise, the treasurer will have to sound his "Bell," to make his accounts balance upon the judgment day. It is well for Free Thinkers to keep square accounts, and set church members a good example.

The mottoes of the certificate, which is quite elaborately gotten up, are from Ingersoll, Paine, and Buddha. At the lower corners are pictures of a mosaic floor, upon which rest columns. The right-hand or eastern column is a ladder. A capital of bias Greek work, with windows in it containing diamond-shaped divisions, surmounts this ladder; and on each end of this capital is poised a savage-looking dolphin, balancing on his two feet, putting out his tongue, and pawing the air with his tail,—truly fearfully and wonderfully made,—and to my unilluminated intellect as mysterious as the sublime secrets relating to another department of metaphysics (?) which in our youth we so often heard asserted were "past finding out." I give this one up. If somebody don't explain it to me, I shall

never know what these two dolphins mean, or what they are perched upon the capstone of that ladder for. Neither can I imagine the use of the ladder. No one would think it worth while to scale that capital in the face of those ferocious beasts, except it were to find out what was suspended entirely above their heads upon the top of a slender pole and at each arm of a pair of balances. It looks like a six-sided lantern and a four-sided one, at the respective arms of the balances. One of them seems to weigh just as much as the other; and it may signify that truth is the same though it assume different forms, and it may mean some very different thing. All that I can say is that a six-sided affair is never "on the square." All this while, a Japanese woman is standing on the mosaic base, doing the most natural thing which I have yet discerned, fanning herself.

At the left hand, two delicate columns spring lightly into the air, bearing upon their points, at about half the height of the ladder column, what we might term a sort of a mediæval dado, with a small pig, with ears and tail cut short, trotting complacently midway on its top. From the two ends of this dado arise two more substantial columns than we find at the foundation, as if they grew stronger as they got up higher, or progressed, or, perhaps, I do not quite understand even the symbols upon this west end, though they do not seem to be so hard to guess as the eastern portico was. Strange to say, these two columns end in a sub-capital of ivy,—the poison leaves and berries. Between these columns and below the poisonous capitals is seen a butterfly; but, sad to say, in this company, poor Psyche is flying toward the ground, instead of soaring into the sweet air as a sensible and happy butterfly would do.

These sub-capitals are again capitalized by a long, low pagoda roof, above which the sun shows half his face, which is again surmounted by a slender little flagstaff floating an ensign, on which the emblem is either a cross or a star,—I cannot decide which.

The long beam at the bottom of the design, and connecting the two masonic bases, is curiously formed in sections of regular Greek work alternated with the bias work above referred to, and above which are marshy spots, with the vegetation peculiar to those places; and some lizards are crawling along there. But, sad to say, some of the marshes have no lizards,—probably even they have sunk into the depths, and can arise no more. Taking all into account, the undesirable climbing and the six-sided truth, the pig on the dado, the lizards and the marshes, and the Psyche seeking the earth, it seems to me unattractive to pursue the subject longer, or to come into any closer rapport than I am at present. Selah.

LITA BARNEY SAYLES.

THE RIGHT OF FREE DIVORCE.

Editors of *The Index* :—

Several things have recently been said on the divorce question in *The Index*, the majority of the writers appearing to favor more stringent legislation. As I sincerely take a different view, I hope you will grant me space to state my reasons. I am well aware that I am in danger of incurring the social odium that attaches to those who meddle with the established order of things in relation to the sexes. But I do not think considerations of that sort should ever hinder a consistent truth-seeker from stating the conclusions his investigations have led to. I shall welcome all criticism, and shall not hesitate to recant my heretical views, if proved erroneous.

I have, in two previous articles, endeavored to show the applicability of free divorce as a remedy for polygamy; and in this I wish to prove it equally remedial for the evils of the current monogamy. I am a monogamist, and am not an advocate of promiscuity. I yield to no man (or woman) in my desire to establish perfect chastity. For what purpose was marriage instituted? Chiefly, I take it, for two reasons: to obtain exclusive and legal possession of the person of some individual of the opposite sex; to provide for and protect the children. The first reason I consider the primary one; but, as Herbert Spencer has shown in *Data of Ethics*, the later evolved ethical ideas are the best; and I consider the proper development and well-being of the child to be really the great purpose for which the institution of marriage stands. On this ground of the well-being of the child, too, I support free divorce. I define impurity by saying that any

thought, word, or deed, pertaining to sexuality, that is injurious to self or others, and willingly performed, is unchaste. I think I am speaking within bounds when I say that the cloak of marriage covers at least as much impurity as it leaves uncovered. Leaving out other phases as foreign to the discussion, let me say that cohabitation between those inharmoniously mated must be unchaste, because mentally and physically injurious to both. Is it chaste to compel a woman, by force of law, to submit her person to a man whom she abhors, simply because she was once deluded enough to marry him? Would it be less chaste for her to leave him, and bestow herself on some one whom she could love? I should be surprised, indeed, at the thinking woman who knows anything of married life who would hesitate to say "No" to both questions. In the interests of chastity, therefore, I say, let the inharmonious be divorced.

How does it bear on the children? All physicians, hygienists, psychologists, and scientists, who are acquainted with the laws of physiology and heredity, are aware that the offspring of the inharmoniously married is almost unavoidably deformed, mentally, if not physically. Can a mother whose days are scenes of strife and bitterness, or whose life is a burden of dumb despair, beget perfect children? Can a father, whose home is a battle-field or a cemetery of dead loves and joys, or who has taken to dissipation to purchase forgetfulness? Will such parents, can such parents, bring up children in the way they should go? I claim that probably one half of human woe and human crime is caused by marital infelicity. I do not think a single adult reader of this will find difficulty in recalling a long list of homes where divorce or death alone could make matters even approximately right. And this is only on the surface, and is as nothing to the black vortex that is covered and concealed. No slavery on earth can be more cruel than that which binds, in what should be the tenderest and most holy relations, those who have forever ceased to love. Henceforth, life stretches before them a perpetual battle-field or a dreary enduring of such heart pain and loneliness as no other cause can produce; and the more affectionate, the more home-loving, the person, the heavier the burden bears. Who can estimate the jealousy, the bitterness, the licentiousness, the dissipation, the cruelty; the unwelcome, and morally, physically, and mentally deformed children; infanticide, murder, sin, agony, insanity, and despair that have come from ill-assorted marriages. Can those be just laws which forbid the obvious remedy? Should a healthy, intelligent, moral man or woman be bound forever to a partner who is syphilitic, deformed, incurably diseased, drunken, criminal, abusive, or even cruelly indifferent?

How many young people marry from lust, from curiosity, from vanity, from ambition, from avarice, from pity, from all sorts of romantic illusions, from everything but wisdom! Can that law be right that prevents people from righting wrongs and correcting mistakes? Is it merciful to compel people to suffer for life for early indiscretions? The front door of marriage, as some one aptly calls it, turns very easily on its hinges. Shall the back door be immovably barred? Shall marriage be a trap for the unwary, the ignorant, and the innocent? Shall these young deluded ones, when the hour of repentance comes, see no hope? Shall the heiress, who finds herself married only for her gold, be bound for life to the fortune-hunter who has deceived her? Can any law be right that compels the deceived, the mistaken, the unhappy, to remain in their unfortunate position, if there is any possible escape? Remember that people cannot be unhappy and retain unimpaired health, that few can be unhappy and retain unimpaired morals, that children born in unhappy wedlock are inevitably injured, and the importance of allowing the unhappily wedded to separate is clear. Punishment enough always comes to those who have contracted a foolish or wicked match, without compelling them to stick to their contract forever.

Undoubtedly, licentious and evil-minded folk would take advantage of free divorce for base purposes, even as they take advantage of every relation of the sexes to work iniquity; but, to revert once more to the Spencerian philosophy, it is but seldom that we can do that which is absolutely right,—usually we can only do the relatively right,—and it is not just that the virtuous and innocent should be kept in bondage because the vicious abuse liberty.

Wise laws should however be made for the disposal of children, property, etc., in cases where such matters cannot be amicably settled by the divorcing parties, and to provide for the support of helpless individuals whose partners take advantage of free divorce to desert them; but the right of divorce should never be interfered with.

It would be far more reasonable for the law to forbid the inharmonious to marry, or at least to beget offspring, than for it to forbid their being divorced. I hold, too, that the right to remarry should be freely granted to all divorced persons capable of begetting healthy offspring, or past the age of begetting, even if divorced for moral reasons; for a person criminally immoral with one partner may become virtuous if more happily mated to another. We have no moral agency more potent than happy married life.

J. WILLIAM LLOYD.

ANDREW JACKSON DAVIS.

Editors of *The Index* :—

In renewing my subscription, allow me to express my approbation of the aims and purposes of the paper, and my admiration for the ability and fairness with which it is conducted.

Having been in former years very much interested in the writings of Andrew Jackson Davis, and in the man himself, nearly all whose works I have read, I would be pleased if he could be secured as a contributor to *The Index*. It was through his writings that I was led to adopt the theory of evolution, and before I had read anything of Darwin's. I cannot help feeling from my limited range of reading that Mr. Davis has not received that recognition as an independent thinker and writer, from other writers of the same class, to which he is entitled. It may be that I overrate Mr. Davis; but I would like to see a review and reply to the two chapters, in two different books of his, one entitled "The Origin of Life and the Law of Immortality," and the other entitled "God revealed to the Intellect," by some able and sincere writer, and then any rejoinder Mr. Davis might wish to make. He pledges himself to discuss the last-named chapter with any qualified respectable opponent; and I think if *The Index* or any independent journal could secure such discussion it would be very interesting to many readers.

From a fair reading of his works, I do not think he can be charged with encouraging fanaticism; and he has tried to suppress the extremisms and absurdities of many in the ranks of Spiritualists.

Another thing, Modern Spiritualism, as taught by Mr. Davis, may be an open question; but I think the attitude of many scientists and able thinkers has hardly been fair toward it. It seems to me that all such wonderful phenomena should have received a thorough explanation by science long ago, and of such a conclusive character as to compel such men as Davis, Epes Sargent, Alfred R. Wallace, and many others equally able, to have accepted it. Mr. Davis has not tried to evade, but has rather invited candid criticism; and yet, as far as I have noticed, he has been severely let alone. Why is this? Can you explain?

Very respectfully,

W. LANGLEY.

HENDERSON, KY.

"ONE WORLD AT A TIME."

Editors of *The Index* :—

It is said of Henry Thoreau that a short time before his death, when an over-anxious theological friend hazarded some questions concerning the naturalist's preparation for the future, the latter with a simple wave of the hand silenced the troubler with the words, "One world at a time."

I often lose my patience when I see men and women who are really pressed for time to read half an hour daily spend five or ten minutes in inspecting and talking over the temperature, as shown by a thermometer hung outside their door, while no attempt is made to regulate sensibly the temperature of their living rooms.

Now, the outside temperature being so entirely beyond individual control, and the very important practical matter of sitting, sleeping, and working in rooms of healthful temperature, with an abundant supply of pure air, being nearly altogether dependent on one's own will or judgment, it seems remarkable how

senselessly the great majority of men and women act in regard to thermometers.

When I hear a sermon, whose key-note is immortality, I think, "Looking at the thermometer out of doors again." There sit bedizened mothers, dressed in painful, unhealthful fashions, with wrinkles deepened by late sewing on over-trimmed garments for children whose grammar and manners, if not even morals, must in consequence be neglected. There sit negligent, ignorant fathers, who, too often, are enabled to pay pew-rent by universally looking out for the odd half-cents. There sit our bright, precocious, society-crazed boys and girls,—all being attacked from the outside, as it were. So little is being said to them in any telling way of health, truth, honor,—practical right-living, in short,—and so many words expended concerning peaceful dying and baseless speculations regarding the "life beyond"!

Instead of trying to bring tears to bereaved mothers' eyes by repeated pictures of happy meetings with children "gone before," why not try to accomplish some certain good result by rousing them to shame regarding their ignorance and carelessness in rearing their living children? Why has there been, is there, and will there be, so much time, strength, and effort wasted in useless theorizing about what we cannot conceive to be capable of logical proof? And, even if it could be proved that personal immortality were true, what possible good would be done toward giving any noble, unselfish basis for right action?

The superstition, the weak, unhealthy theology so prevalent among our intelligent classes is astonishing. But, slowly, a more rational code of ethics is teaching how much more essential is practical moral educating than visionary theorizing about a future existence and similar metaphysical ideas, which at best can only touch the masses through their emotions.

FANNY BERGEN.

PEABODY, MASS., July 3, 1884.

BOOK NOTICES.

THE CO-OPERATIVE COMMONWEALTH IN ITS OUTLINES: AN EXPOSITION OF MODERN SOCIALISM. By Laurence Gronlund. Boston, Lee & Shepard, Publishers; New York, Charles T. Dillingham, 1884. pp. 278.

This is an earnest and thoughtful book on a subject to which all earnest people must more and more give their thought. That there are volcanic elements beneath the present structure of human society, that we now and then hear their rumblings even in this country, are facts which are only too evident. The old-fashioned Fourth-of-July oratory, which represented the American republic as having solved the question of the woes and wrongs of the world, has mostly ceased. The question now is whether the American form of government can control the evils which are incident to itself; and, meantime, the problem of its having found the solution of all the political and social troubles of mankind is held in suspense. The vast increase among us of a heterogeneous mass of people gathered from all countries, and subsisting by the crudest kind of labor, the widening chasm between the rich and the poor, the growing antagonism between the laborer and the capitalist, the encroachments of moneyed monopolies on individual rights,—these, to say nothing of the enormities of degradation, ignorance, vice, and crime which our laws fail to meet, present conditions of society quite different from those that existed in this country two and three generations ago. Are the political institutions which our fathers established, the governmental machinery which they devised, able to cope with these new conditions? The author of this book says No. German Socialism is the solution which he presents for these perplexing problems of our time. He believes, he says, that "it is time that a work, containing all the leading tenets of Socialism in a concise, consecutive form, should be presented in the English language,—in the language of the two countries where the social and specially the industrial conditions are ripening quicker than anywhere else."

But let no one, frightened by this word *Socialism*, turn away from the book as that of an extravagant and dangerous *doctrinaire*. It is a strong book, full of fact and thought well digested and vigorously expressed; and, whether one shall accept all its conclusions or not, no earnest reader can fail to find in it food for much thinking and stimulus to a kind of thinking that will strive inevitably to take hold of

practical measures for the improvement of society. The author writes, he confesses, for the thoughtful few, particularly among younger minds, who may be convinced of the social principles he advocates, and who may therefore be prepared, when the present structure of society shall be broken up, it may be by revolution, to take the place of leadership to the struggling masses of the people, and lay the foundations of the Co-operative Commonwealth. Into the details of the thirteen closely packed chapters and well-sustained argument we cannot here enter; but we earnestly commend Mr. Gronlund's work to all who are interested, or who from their positions of responsibility ought to be interested, in practical sociology. Not least among its merits are its sharp thrusts, not only into the evils of society, but into some of the sham reforms proposed for them.

BROKEN ENGLISH: A Frenchman's Struggle with the English Language. A Handbook of French Conversation. By E. C. Dubois. In English and French. Boston: Lee & Shepard. 1884. pp. 77. Price 50 cents.

This little work, arranged in dialogue with English on one page and French on the opposite, gives some ludicrous specimens of the difficulties to be overcome by foreigners in learning the English language, on account of the apparent incongruities and contradictory meaning of some of its words and idioms, some of which are of as much annoyance and bewilderment to English-speaking people themselves as to those just learning the language. The book will be found useful as an aid to those desirous of improving themselves in the colloquialisms of both languages, while it is sufficiently amusing to interest either the English or French reader ignorant of any language but his own.

HEALTH BY EXERCISE. By George H. Taylor, M.D. New York: John B. Alden, publisher.

The fact that this book appears among the excellent reprints of Mr. Alden is of itself a sufficient guarantee of its worth. It has been before the public in various editions for twenty-three years, and is considered one of the best concise works in exposition of the movement cure now extant. It embraces the "history and philosophy of medical treatment by this system, including the process of Massage, also a summary of the general principles of hygiene."

THE *Revue de Belgique* for June gives the conclusion of a remarkably good story, "Claire Miramon," also the earnest appeal of Count Goblet d'Alviella for the more efficient organization of the Belgian Liberals, a minute account of the educational and political condition of Greece and Italy, a lecture recently delivered by Prof. Leo Errera at Brussels on the place of the laboratory in modern science, a long and appreciative notice of the French translation of Higginson's *Army Life in a Black Regiment*, and an attack on protection, which closes with this item about America: "The Democrats, who have gained a great deal of ground during the last few years, have nominated, as candidate for the presidency, that resolute champion of free trade, Mr. Carlisle. His election would soon cause a great reduction of the prohibitory tariff of the United States."

THE *Unitarian Review* for July contains the following: "Where are we in Religion?" by Rev. Thomas R. Slicer; "The New English Dictionary," by C. W. Ernst; "Idealism in German Ethics," by Rev. J. G. Brooks; "A Daring Faith," by Rev. John W. Chadwick; and "Relation of the Church of To-day to Education," by Rev. J. H. Allen. The Editors' Note-Book treats of "The Mormon Question" and "The Proposed American Tigris-Euphrates Expedition"; while "Studies in History" and "Anniversaries" are among the matters considered in "Things at Home and Abroad."

Among the designs for Prang just announced are a series of cards representing bird and flower life in the Japanese manner, by Miss Fidelia Bridges; a series of studies from American child-life, by Miss L. B. Humphrey; some flower studies for advanced students, by Mme. Flory; and a humorous series, representing the merry men of the fairy ring busily engaged in painting the holly berries and polishing the leaves in anticipation of Christmas jolity, by Mr. Walter Satterlee.

From the annual report of the Willard Asylum for the Insane, situated in Seneca County, N. Y., we judge that the seventeen hundred patients of that institution are well cared for and more at liberty in certain respects than some college students, since they are allowed to read *The Index*, the receipt of which is duly acknowledged. From the same neighborhood comes the report of the Syracuse Civil Service Reform Association,—an organization which has done good work in providing that hereafter not only the national officials, but those serving the Empire State, shall be chosen, not by patronage, but by merit,—a principle not yet fully adopted by Massachusetts.

THE FLORAL WORLD.

A SUPERB, ILLUSTRATED \$1.00 MONTHLY WILL BE SENT ON TRIAL

FREE ONE YEAR!

To all who will enclose this ad. to us NOW with 12 2c. stamps to prepay postage. The *Indiana Farmer* says: "Contents interesting and to flower lovers well worth the price,—\$1.00 per year." Sworn subscription list over 12,000 in every State and Territory, Canada, Great Britain, South America, Africa, India, and Australia. Mrs. E. A. Houk, Bingen, Ind., says: "It is the best floral paper I ever saw." Mrs. J. W. Fay, Big Beaver, Mich.: "It is magnificent!" Mrs. R. G. Stambach, Perth Amboy, N. J.: "Have never seen anything half so good." Mrs. J. L. Shankin, Seneca City, S. C.: "It is just splendid."

ADDRESS

The Floral World, Highland Park, Lake Co., Ill.

LESSONS

For Liberal Sunday Schools or for Home Use.

I. THE ORIGIN AND GROWTH OF CHRISTIANITY.

A series of Twenty Lessons by Mr. LEWIS G. JAMES, of Brooklyn. Written entirely from the Rationalistic standpoint. Prepared originally for use in Mr. Chadwick's Sunday-school. Each lesson printed in a separate slip. Twenty-five cents for the series, including postage.

II. FREEDOM, FELLOWSHIP, AND CHARACTER IN RELIGION.

A series of Five very suggestive Lessons, by Mrs. KATE GANNETT WELLS. Each lesson contains enough material for several exercises. Seven cents for the series, in separate sheets, including postage.

III. THE WORLD WE LIVE IN. A Series of Elementary

Lessons in Natural History, by Mr. FREDERIC A. HINGKLEY. Adapted both to interest and profit a class of children. In slips. Twenty-five cents for the series, including postage.

Teachers will do well to examine these lessons. A liberal deduction made for ten copies or more to one address.

Supplied at THE INDEX office, 44 Boylston Street, Boston.

Freedom and Fellowship in Religion.

This is a volume of Essays published by the Free Religious Association. It contains "The Nature of Religion," by D. A. WASSON; "The Unity and Universality of the Religious Ideas," by SAMUEL LONGFELLOW; "Freedom in Religion," by SAMUEL JOHNSON; "Religion and Science," by JOHN WEISS; "Christianity and its Definitions," by WM. J. POTTER; "The Genius of Christianity and Free Religion," by F. E. ABBOT; "The Soul of Protestantism," by O. B. FROTHINGHAM; "Liberty and the Church in America," by JOHN W. CHADWICK; "The Word Philanthropy," by THOMAS WENTWORTH HIGGINSON; "Religion as a Social Force," by EDNAH D. CHENEY. Also extracts from Addresses on the platform of the Free Religious Association, by Ralph Waldo Emerson, Lucretia Mott, Dr. Bartol, A. Bronson Alcott, Julia Ward Howe, Charles H. Malcom, Celia Burleigh, C. D. B. Mills, Horace Seaver, Isaac M. Wise, Robert Dale Owen, Wm. C. Gannett, Lucy Stone, F. B. Sanborn, Wendell Phillips, and others.

This book was published eight years ago, but is a live book still, and is a good answer to the question, What does "Free Religion" mean?

Price \$1.50. Address "FREE RELIGIOUS ASSOCIATION," 44 Boylston Street, Boston.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.
Volume Fifty-second.

Price \$3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR's basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

JOSIAH F. MENDUM,
PAINE MEMORIAL BUILDING,
Appleton St., Boston, Mass.

TRACTS.

No. 1.—*Truths for the Times*, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 2.—*Fear of the Living God*, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—*Lecture on the Bible*, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 4.—*Christian Propagandism*, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, \$1.00.

No. 5.—*"God in the Constitution"*, by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.

No. 6.—*"The Sabbath"*, by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 7.—*"Compulsory Education"*, by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—*The Present Heaven*, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—*A Study of Religion: The Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. ... The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript*.

BY ALL ODDS THE BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travelers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its Day Coaches, which are the finest that human art and ingenuity can create; its Palatial Sleeping Cars, which are models of comfort and elegance; its Palace Drawing Room Cars, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that it is the best equipped road in the world.

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, and take none other. All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

CURRENT TOPICS.

BY B. F. U.

THE Treasury Department, in reply to a circus manager whether he can bring to this country Chinese dwarfs and other Chinamen for exhibition, has decided that Chinese curiosities are not "Chinese laborers," and hence can come here without any violation of the Chinese immigrant law.

THE King of Norway, who has been encountering stronger popular opposition than he had anticipated, has unexpectedly made most important concessions to the people. In the latter part of May, a royal resolution was introduced to stop the trial of liberal journalists, and the King has put himself in communication with the leaders of the liberal party. The result thus far is that the leader of the opposition is made premier of the New Ministry, one of the members of which is a poor peasant, although a man whose ability in dealing with financial and other questions has raised him to a position of importance in the Storting. Already, a programme has been agreed upon, involving the admission of the ministers to sittings in the Storting, an extension of suffrage, reorganization of the army and of the jury system, and other reforms.

THE English House of Lords, having rejected Lord Wemyss' compromise resolution promising to pass the franchise bill on condition of a pledge to consider redistribution in the autumn, the next three months the agitation in favor of the bill will divert attention from all other political issues. There is a strong public sentiment that an unrepresentative body, with power to obstruct the will of the people, is an anomaly in England; and some of the more radical associations and journals urge that the agitation include among its objects the abolition of the House of Lords. The London Times supports Mr. Gladstone, and predicts that, instead of dissolving the House of Commons, he will advise the Queen to create a sufficient number of liberal peers to outnumber the votes against the ministry in the upper chamber, which would be a method in accordance with English constitutional

usage. The House of Lords stubbornly opposed the great reform act of 1832,—which Mr. Gladstone's franchise bill merely supplements,—until the king had promised the ministry that he would create new peers, when they passed the bill, rendering the exercise of the prerogative of the crown unnecessary. With or without the creation of new peers, it is pretty certain that, when Parliament meets in October and the bill is again sent to the Lords, they will pass it.

THE New York Freethinkers Association will hold its next annual Convention at Carsadaga Lake, N.Y., Sept. 3d, 4th, 5th, 6th, and 7th. On the 8th and 9th of September, at the same place, will be held the eighth annual Congress of the National Liberal League, the call for which just issued by T. B. Wakeman, President, Elizur Wright, Vice-President, and T. C. Leland, Secretary, invites "to appear or be represented" all "citizens of the United States, whether they have heretofore acted with this League or not, who believe in a secular government and a secular republic; separation of Church and State; the equality of all citizens before the law, without distinction of creed or race or sex; justice for all, and privileges and monopolies for none; the need of universal secular education, free speech, and a free press as the basis of universal suffrage." The call says, "At this Congress, it is designed to revise the basis of the League so as to make it so broad and liberal that all who sympathize with its general purpose may co-operate with it to the end that a general union of all citizens of liberal sentiment may result, and that new officers of the League may be selected without regard to past differences." There seems to be a strong sentiment among the present managers of the League for its reorganization on the basis indicated; but the proposed change is protested against with indignation, and will be vigorously opposed by an active and aggressive "social freedom" element in the organization, represented by Mrs. Juliet Severance, who says, "There will be no backward movement of the League, or I am greatly mistaken in my estimation of the metal now comprising it."

THE Catholic Review informs its readers "that while the God of Peace, borne aloft in the hands of his worthy minister Cardinal Vicar of the Eternal City, was about to bestow his Infinite Benediction upon all, worthy and unworthy alike, the all-pervading stillness was broken by rude cries of, 'Viva Garibaldi!' 'Live Garibaldi! Death to the priests!' How long will the patiently enduring mercy of God tolerate such impious deeds?" It was not in good taste to divert attention from "the God of Peace borne aloft in the hands of his worthy minister" by cries of "Live Garibaldi!" It was indeed positively discourteous to the aforesaid "God of Peace borne aloft," etc. But what would be the treatment of those who honor the memory of the red-shirted hero and liberator of Italy, if the "Cardinal Vicar of the Eternal City" had the power and authority he once possessed? The fact is the aforesaid "God of Peace borne aloft," etc., who is no God at all, represents not

"Peace," but war, war against the rights of man, against independence of thought, freedom of expression, and the progress of knowledge. The people of Italy are beginning to see this, and hence their contempt for this wafer God and the childish ceremonies performed in the name of religion by men who oppose every attempt to advance popular reform. The time will come when Italy will have no use for the hordes of ecclesiastics whose influence has for centuries enslaved and cursed that fair land. Freed from the trammels of hierarchical authority and emancipated from a faith that has paralyzed her intellectual life, Rome may yet awake from her torpor, renew her vigor, recall the glory of other days and contribute largely to the cause of mental freedom and moral progress against which her influence has so long been directed.

LAST Thursday, many hearts were saddened by the news conveyed in a despatch from Meriden, Conn., printed in the daily papers, that Miss Emily J. Leonard, of that city, was dead. She died on the 16th, of heart disease, we understand, at the age of forty-six. One of the published notices of her says: "She was widely known as a botanist, classical scholar, and writer on political economy, was greatly interested in woman's work, strongly believed in female suffrage, and was a member of the National Liberal League and Woman's Temperance Association. She was an accomplished French, German, Latin, and Italian scholar, translated Blanqui's *Political Economy*, which is now used as a text book in many colleges, and was also noted as an eloquent and interesting public speaker." In addition to this, we can, from years of personal acquaintance with Miss Leonard, aver that she was a remarkably clear thinker, and was conscientious and courageous in expressing her views on all the many subjects in which she felt an interest. Her knowledge of finance and her acquaintance with economic questions were extensive and profound. An article from her pen on money, printed in *The Index* some time ago, elicited from a thinker and a leading lawyer of this city the remark that it contained more truth and common sense on the subject than any volume he had ever read. Miss Leonard was acquainted with the best works by modern thinkers, which she read in several languages. In her religious views, she was very radical. On this subject, as well as others, her convictions were the result of careful thought and study; and she could defend her position very skilfully. In her death, *The Index* has lost one of its best friends. She was an indefatigable worker in the cause of education and progressive thought generally. Her modesty and disinterestedness were as marked as her ability and learning. She was in Boston during Anniversary Week this year, and spoke at two or three of the reform meetings. The last evening she was in the city, she attended the festival of the Free Religious Association, where the many friends from whom she parted little thought that in but a few weeks her voice would be stilled and her eyes would be closed in death.

VACATION.

The vacation season has become one of the institutions of American society. More and more people every year get, at least, a brief respite from work. More and more families close their city houses for the summer weeks, and seek refuge in the country or by the sea. Not only are the schools closed, but many churches and benevolent organizations now have a summer vacation. And the churches are closed, not primarily because their ministers want a rest, but because the congregations are not at home; or, if at home, because they, too, like to have a rest once in a while from church-going. Vacation, indeed, has become a matter that has to be taken into account in the mercantile and financial world as well as in social affairs. It has wrought change in methods of business. It has introduced new branches of business. Into multitudes of homes it has brought a new and sometimes perplexing domestic problem; and it must be admitted that it has brought also new conditions of social ethics which were undreamed of two generations ago. A great popular watering place or mountain resort presents, for instance, a standard of social morality that is, to say the least, not always above all cause for anxiety as concerns those who come under its influence.

There are evils connected with the present mode of managing the vacation. In the future, it is likely, some better way will be discovered for so mingling needed recreation with work that the long and stated season, now specially given to recreation, will either not be required or will be very much modified in character. As it is now, the American people too generally make a business of their recreation. They work hard, and then they rest hard. More natural and healthful would it be to mix work and rest amicably together.

The rest, however, is needed; and, too often, the rest that is needed means absolute cessation of effort, in order that overtaxed body or mind may recover their lost balance of health. But, more generally, the only kind of rest required is change from one line of effort to another, respite of one set of faculties and the exercise of another set, the getting out of the ruts of routine, and the freshening of energy through new scenes, associations, and subjects of thought. We once knew a school-teacher who said that she taught school for the sake of the vacations; and a very good teacher she was. She meant, by the remark, that the teacher's occupation offered this regular interval for breaking away from its own routine of special obligations and work, and thus gave opportunity for invigorating the spirit and broadening the mind by contact with different scenes and persons. And this is the great service of the vacation season. For those who live in great cities of brick and stone and hot pavements, it is, of course, a great boon to get into the country or on the sea. Nature is wholesome, even for those who have no ability to read her innermost secrets. For those who like to live near her for her own sake,—those who can hold inner communion with her,—she is more than wholesome: for such, she is restorer and inspirer. But, even saying this, we should still say that, for the majority of people, the great service of the vacation is the breaking up of the monotonous order of life, the adaptation of the faculties to other forms of exercise, and their recuperation by association with new scenes and persons.

To get more variety into life,—this is the secret of healthful recreation; and this is what the vacation season helps to supply. Rightly used, it gives opportunity for cultivating and gratifying pure tastes, for widening the range of thought and

feeling, for increasing companionship, for strengthening the faculties of observation, for studying nature by closer intimacy with her works, for securing quiet hours for reading or meditation to those who may need that change; and all this is to enrich life at its sources, and hence to give increase of power for meeting its duties. The necessity of doing over and over again the same kind of work that demands no fresh thought is deadening to the brain. The effect is as bad as when, by the opposite evil, the brain is driven from one perplexing problem to another, until it cannot cease from the work. Insanity, indeed, begins in the mind's persisting to play upon one thought-string until it is unable to play upon any other. In variety of mental exercise are mental sanity and health.

Many deeply absorbed business men, with the responsibilities and perplexities of immense financial interests resting upon them, are doubtless saved in their mental balance by their custom of breaking the severe mental strain through seasons of recreation. Abraham Lincoln was sometimes accused of heartlessness, because in the midst of the horrors of war he occasionally went to the theatre. The harsh and thoughtless accusation once came to his ears, and at a time when his great heart was well-nigh breaking for the woes of his country. A sad, hurt look is said to have come over his face at the thought of being so cruelly misunderstood, as he replied, "I believe my reason would give way, did I not once in a while thus try to forget the awful weight of responsibility that presses upon me." And thus it is that the burdens of life need to be alleviated by voluntarily turning the mind from them to other objects of feeling and thought,—not for the sake of throwing the burdens off or in any way evading them, but for invigorating the faculties better to bear them. And a good many people might learn a lesson here, even if they seldom have opportunity for a regular vacation or feel no occasion for it. They might be able to do their duties in their homes or in their business in larger and better fashion, if they would now and then relax the sense of work in recreation and widen the outlook of their lives.

WM. J. POTTER.

SPENCER, HARRISON, AND RELIGION.

I.

Of recent discussions that have invited us to temporary forgetfulness of the political excitements and financial troubles of the time, none has been carried on with so much intellectual seriousness as the discussion between Herbert Spencer and Frederic Harrison upon the "Future of Religion," and none has been regarded by the more thoughtful part of the community with profounder interest. Many have joined their strength to that of the principal antagonists upon either side, but only, in the main, to leave the principal antagonists conspicuously alone in their appeal to our sympathy or antipathy, as the case may be. Our admiration is secure for either champion. If Spencer is superior in wide intelligence and in the lucid ordering of his thought, Harrison is superior in the brilliancy and vigor of his style and in the warmth of his humanity. The great majority of Christian people will agree with Mr. Harrison that Mr. Spencer's doctrine is "the ghost of religion," but that his own is less ghostly in any appreciable degree they certainly will not allow. It is my purpose in these articles to present as briefly as may be the view of Mr. Spencer, then the opposing view of Mr. Harrison, and, finally, to mark in what degrees, respectively, they fail to

meet the obvious requirements of a religion that shall commend itself to our deepest thought and noblest aspiration, and be a natural continuation of the religious life of all the ages of the past.

That Mr. Spencer's theory of religion is a ghost theory is not to be denied. It by no means follows that his religion is, as Mr. Harrison affirms, the ghost of religion. His theory of religion is a ghost theory, because of its connection of religion in its more primitive forms with men's belief in ghosts. The development of religion proceeded *pari passu* with the development of this belief. The original ghosts were literally "such stuff as dreams are made of." Dreams argued for the primitive man another self; and death was apprehended but as a longer dream, in which the other self was "going to and fro in the earth, and walking up and down in it." But the first ghosts and the average ghosts for a long time had no staying quality. Ceasing to be dreamed about, they ceased for the primitive imagination to exist. But, gradually, the ghost became a supernatural being, various circumstances contributing to differentiate his quality from that of the natural man. Men of superior force had a persistency in the realm of ghosts that the majority had not. They lived in song and story, and their sacrifices were not permitted soon to lapse into neglect. So they were thought of as enjoying a perpetual life, and their ranks and orders were assigned after the fashion of men's mortal state. The greater ghosts grew into gods; and from the multitude of gods there gradually emerged certain great gods, and great kings above all gods. With the progress of civilization, the divergence of the ghost gods from human mortals became more clearly marked. At first, they were conceived as literally eating and drinking the sacrifices offered them. At first tangible, visible, audible, they ceased in time from all of these conditions. Simultaneously and in pursuance of these changes, there were others in the mental and the moral attributes of the "gods many and lords many." They were conceived as more intelligent than men and as less grossly passionate. "A deity who in early times is represented as hardening men's hearts so that they may commit punishable acts, and as employing a lying spirit to deceive them, comes to be mostly thought of as an embodiment of virtues transcending the highest we can imagine."

It is Mr. Spencer's conviction that there is nothing in the present state of men's religious thought and feeling which is not fundamentally accounted for by his theory of religious evolution. Such being his retrospect, what is the prospect that as in a mirror he sees, or thinks he sees, reflected there, being not less convinced than Shakspeare was that

"There is a history in all men's lives,
Figuring the nature of the times deceased;
The which observed, a man may prophesy
With a near aim of the main chance of things
As yet not come to life, which in their seeds
And weak beginning lie intresured?"

What does he prophesy? That the religious consciousness of mankind will neither cease to be and leave an unfilled gap, nor cease from the tendency to change which has been the only unchanging thing about it in the past. It will persist—this consciousness; but, in order to persist, it will undergo much further change. The acme of religious evolution, from Mr. Spencer's point of view, is reached when all minor supernatural powers have been merged in one supernatural power, one omnipotent, omnipresent deity. Integration can no further go. If there is any further change, it must be of the nature of disintegration. And such a change is seen to be already taking place. The exact word for it furnished by Mr. Fiske is a very

long one,—deanthropomorphization, the elimination of the man-like from our conception of the deity. "I will call no being good," said John Stuart Mill, "who is not what I mean when I apply that word to my fellow-beings." But no sooner has the religious consciousness eliminated the attributes of deity that make it less than nobly human than it proceeds to emphasize the attributes ascribed to it, such as omnipotence and omnipresence, that make it more than human, and to eliminate what does not agree with these. As in completed man begins anew, as Browning says, a tendency to God, so in completed God begins anew a tendency to the non-human. The methods of our human intelligence and human will are seen to be incongruous with the nature of Great First Cause. The higher man-likeness of the deity follows the lower into disrepute with the more thoughtful and intelligent, until the religious consciousness transcends all the forms of distinct thought, and confesses only an Infinite and Eternal Energy from which all things proceed.

And this is what Mr. Harrison calls the ghost of religion. The process of evolution begins with many ghosts and ends with one. And Mr. Spencer is himself aware that many will suggest that any belief, however purified, deriving from a primitive belief (that of the dreaming other-self) which is absolutely false, must be as false as that. Anticipating this objection, he meets it squarely with the affirmation that the primitive belief had in it a germ of truth; namely, "that the power which manifests itself in consciousness is but a differently conditioned form of the power which manifests itself beyond consciousness." Force as it exists outside our consciousness cannot be like what we know as force within our consciousness; but, as either can be generated by the other, they must be different forms of the same. The Power which manifests itself in the material universe is the same Power that we are conscious of in our own selves. But the validity of the religious consciousness at the climax of its evolution can be sustained in terms more apprehensible than these. There was no unreality in the primeval sense of life in the material universe. The ghostly explanation of the savage, if insufficient, was most natural and unavoidable. But it was not his explanation that he worshipped, it was the Seeming Life. And this same Seeming Life which has been interpreted in man-like terms, ever more high and pure and then subsequently in terms ever less man-like, is the same Life that is the God of scientific apprehension, and that thrills the hearts of the least theological of modern men with an ineffable sense of wonder, mystery, and awe. Wherefore, the religious consciousness of such modern men is not in the least discountenanced by any formal change through which the religious consciousness has passed. An element of reality has inhered in every step of evolution, and it is the same yesterday, to-day, and forever.

JOHN W. CHADWICK.

SUPERSTITION OR EPICUREANISM,—ARE THESE THE ONLY ALTERNATIVES?

All thoughtful people are agreed that superstition, in every form, ought, as far as possible, to be banished from human minds; but there is a wide difference of opinion as to what are the limits of superstition, and, consequently, as to what would be left, if it were removed. The pious Catholic, while classing all other religions but his own as superstitions, holds that there is no superstition in the dogmas of his Church, although these include creation, tri-unity, immaculate conception, and papal infallibility; the Protestant maintains that there is much superstition in Catholicism; the Uni-

tarian holds the same of all the forms of Protestantism that adhere to the godhead of Jesus of Nazareth; the Free Religionist asserts the same of Unitarianism; and, finally, the Secularist flings the same taunt at Free Religion. In spite of this difference of opinion, all these sects, with the exception of a portion of the Free Religionists, would, I think, agree that, if supernatural Christianity were rejected, there would be no alternative but Epicureanism, or, what is well-nigh equivalent, Secularism. In other words, nearly all persons who adopt any explicit and conscious attitude to Christianity are of opinion that, if it ceased to be regarded as, in some sense, a superhuman revelation, there would remain no solid ground for belief in the supersensuous, that all theories respecting the immateriality and eternity of the soul would be no better than poetic fancies, which, however attractive or soothing to distressed human nature, are in no way grounded upon knowledge. And even those exceptional persons who do not hold that Christian revelation furnishes the only ground for belief in the supersensuous, are often ready to confess that the supersensuous can never be the object of clear, incontrovertible knowledge, that it can be attained only by faith,—a faculty which they follow orthodox Catholics and Protestants in setting down as nobler and more sublime than knowledge. Taking the secularist's point of view, therefore, and calling all convictions not based upon knowledge superstitions, we may say generally that to the thought of the western world there seems to be no alternative to superstition but Epicureanism.

In saying this, I do not mean to be disrespectful either to superstition or to Epicureanism. By *superstition*, originally synonymous with *religion* (*religio*), I mean simply belief in the unseen not based on knowledge; by *Epicureanism*, I mean the simple rejection or ignoring of the unseen, the attempt to restrict all human interest to the seen and the temporal. The former is the religion of all the churches, from the Roman Catholic to the Unitarian; the latter, the religion of nearly all persons who stand outside of the churches, by whatever name they may call themselves,—positivists, Comtists, secularists, members of ethical societies, atheists, evolutionists, etc. My object is to show that what may be called the two great divisions of the modern world—the conservatives and the liberals, the orthodox and the heterodox—are agreed on two important points: (1) that the eternal and unseen is beyond the grasp of knowledge; and (2) that there is no alternative between faith and Epicureanism.

This agreement accounts for the two chief tendencies of religious thought at the present day,—the tendency, on the one hand, to rehabilitate and glorify faith, and, on the other, the tendency to show that life would be perfectly satisfactory and even sublime without those convictions which were once reached by faith. Both these tendencies I hold to be vain and unnecessary.

(1) They are vain, because we can never hope either to restore the unreasoning faith which alone is valuable, or to satisfy the human heart and head without a firm assurance of those things which were once, however imperfectly, grasped by faith. The former of these assertions will hardly be questioned by any one likely to read these words. The latter is equally true. For, disguise it as they may, secularists and Epicureans are not happy and contented in their creed; and no one can read their writings or listen to their talk without realizing this to be true. The leader of the French Comtists and the leader of the English Comtists both admitted this to me less than a year ago; and I believe every secularist will, in his best

moments, do the same. Such admissions are by no means discreditable to them, but the reverse, testifying to an amount of honesty and a power of sacrifice which are far from common. The unsatisfactoriness of the secular position makes it, I think, impossible that secularism, however named, can ever become the ethical or religious basis of any large number of people; and this conviction seems to be borne out by facts. Space forbids me to mention these, although I might easily appeal to the experience of the Comtists and others.

(2) They are unnecessary, and this is the point I wish to insist upon here. I wish to maintain that, besides superstition and Epicureanism, there is a third alternative, and that this alternative is knowledge. In other words, I wish to maintain that all those things which were once reached by instinct or faith may be now reached, in all essential respects, by clear knowledge of more than mathematical certainty. These things I understand to be the three facts of (1) freedom of will, (2) individual immortality, and (3) the existence of a moral order in the universe. These, it will be observed, are Kant's postulates of the pure reason, with the exception that for God is substituted moral order. For this substitution, I shall account further on. At present, I wish to assert two things: *first*, that the three facts above enumerated are not postulates at all, not mere exigencies of the reason, but real facts presented directly in consciousness; *second*, that, unless this were true, it would be impossible to find any adequate ground for an ethical system, not to speak of a religious one. This, I hold, has been sufficiently proved by the failure of all attempts ever made to construct a logical system of morals on Epicurean principles. Without freedom, moral action is meaningless; without individual immortality, it is illogical; without a moral order, it is impossible.

I do not purpose here to demonstrate the facts of freedom, immortality, and moral order: indeed, it would be impossible to do so within the limits of an article; but I wish to point out the causes which have led so many people to hold that they are not demonstrable, and the means which must be applied in order to render them self-evident. The intellectual eye is even more dependent than the physical eye upon what it brings with it.

The circumstances which have obscured the facts referred to are mainly two, both of which are philosophical, and even metaphysical, in their nature. One of them, moreover, is due to scholastic tradition, the other to the rejection of that tradition. The one I shall call "metaphysical monism," the other "irrational phenomenalism."

Metaphysical monism is the doctrine which holds that the whole universe is the expression of a single real principle, an *ens realissimum*, as the Schoolmen said. In one form or another, this doctrine pervaded almost the whole of ancient philosophy, and passed, from it through the medium of scholasticism, into modern thought, which, in well-nigh all its forms, is the unquestioning slave of monism. It is true that in ancient times a few thinkers of mark, such as Democritus and Empedocles, opposed the doctrine; and the same has been done in modern times by some few philosophers, such as Leibniz and Drossbach. But, on the whole, it may be said to have remained unassailed from the days of Thales to our own, when it exercises a sway more absolute than ever before. It matters little what form of philosophy the thinkers of our time profess: they are all equally monists, differing only in the name which they give to their one principle. Theists call it God; Hegelian idealists call it the Idea; positivists call it force or, rather, energy; Kantians call it Thing-by-itself; Fichteans call it *Ego*; Schelling-

ites call it the Absolute; Schopenhauer and Hartmann call it impersonal will or the unconscious; Spencer calls it the Unknowable, etc. Even thinkers who believe in the atomicity of matter conceive atoms to be evolved from the one, all-pervading force. In spite of this all but perfect unanimity among contemporary thinkers, the doctrine in question is absolutely without ground, either in thought or nature. There is not one fact known that would tend to prove that the world is the product or expression of a single real principle. Not only so, but many of the best established theories of modern science are absolutely incompatible with it; for example, the most popular of them all, evolution. We neither know nor can conceive any form of evolution without action and reaction,—in other words, without duality. Nothing evolves without an environment, and a single universal principle could have no environment. To talk of unity evolving into duality or plurality is to talk absolute nonsense. If we examine candidly the facts of nature and mind, we shall be driven to the conclusion that the phenomenal universe is the result of the interaction of an infinite multitude of *essentially* independent, *dynamically* interdependent entities, which we can in no way conceive except as spiritual beings, such as we recognize ourselves to be. As Drossbach somewhere puts it, "The universe is a community of gods," by which he means a community of eternal, self-existing entities, capable of infinite progress through interaction and involution. It is the traditional prejudice of metaphysical monism that has obscured this important fact.

Irrational phenomenalism is that wide-spread prejudice, maintained by several schools of thought, that our knowledge never can extend beyond phenomena to grasp substance. This position is both logically and psychologically false. Unless we know what substance is, we can never say whether it is attainable by thought or not: therefore, the assertion involves a logical contradiction. Again, so far are we from being unable to reach beyond phenomena to substance that we cannot be conscious of a single phenomenon without being conscious of substance. Say what you will, all appearances are transient relations, involving terms which are not themselves transient, but immanent; that is, substantial. And this is not a deduction from abstract principles, but a fact presented directly in consciousness, and expressed in every utterance of it. The disappearance of substance (which, under another aspect, is cause) from modern thought is due to the fact that Locke used the term *impression* to designate a fact of experience, and then, caught in the net of his own metaphor, virtually denied that what made the impression could be a fact of consciousness. This denial was explicitly developed by his successors, and particularly by Hume, from whom it passed, in one form, into German philosophy, in another, into English and French philosophy. In this way, it has become a standing prejudice of modern thought,—a prejudice from which only a few persons, mostly such as are acquainted with ancient and scholastic philosophy, are able to emancipate themselves. The result of this prejudice is that the universe has come to be regarded as a series of phenomena or relations which relate nothing, and that all notions of permanent individuals have been tabooed in modern thought. Naturally enough, if there are no permanent individuals, there is no personal immortality; and this conclusion is now so widely admitted as to be almost the characteristic mark of the "advanced thinker."

Metaphysical monism and irrational phenomenalism have together reduced science, morality, and religion to their present unsatisfactory condi-

tion. They have turned science into a mere classification of phenomena, without any underlying active principles; morality into a calculation of the probabilities of pleasure and pain; religion into a sentimental altruism, which, having no ground in reason, remains in every case a "matter of taste." They have made men believe that there is but one independent, self-subsistent being in the universe, of whom little or nothing can be known, while all the rest are mere phenomena, which rise, vanish, and give place to others more brilliant perhaps, but not more lasting.

Having thus spoken of the causes of the present pass to which thought and morals have been brought, we must now ask by what means an escape from this pass may be achieved? We may answer at once: by the rejection of all those systems of thought that are tinged and contaminated with metaphysical monism or irrational phenomenalism, and a resolute, persistent study of the beings that present themselves in consciousness. In this study, we shall not find many aids; but we shall find some, and that, too, where they might be least expected,—among the Schoolmen. In rejecting monism and phenomenalism, and returning to scholasticism, we shall have to admit that what we reject has had its use in destroying the superstition which in the Middle Age made the further progress of scholasticism impossible, and so enabling us, profiting by the labors of the Schoolmen, to carry the highest truths out of the region of faith into that of pure knowledge.

The philosophical cry at the present hour is, "Let us go back to Kant." I think we must go much farther back,—back beyond the breach in thought caused by Descartes and Locke, back to Thomas, Bonaventura, and Dante, men who, still clinging to faith with the deepest instinct of their souls, labored, with the sublime devotion that comes of faith, to pass from faith to knowledge, men who, in the words of Anselm, "believed that they might understand." Much of what these men wrote has, undoubtedly, lost all value and meaning for us; but, after all this has been subtracted, there still remains a considerable residue of accurate method, clear-cutting terminology, and even demonstrated saving truth, which will well repay any amount of labor we may spend upon their works. Much of the labor, moreover, that we might otherwise have been obliged to spend upon them, has been spared us by the writings of a man who resumed all their best thoughts and theories, correcting and supplementing them, as far as an honest Catholic might, from more modern sources,—Antonio Rosmini, who, in spite of his religion, was, I believe, the greatest thinker of modern times.

If we study the great Schoolmen in the light of this man's labors, and prescind from the dogmatism common to both, we shall arrive at a series of insights and clear principles upon which we may build up a system of philosophy capable of restoring, as knowledge, what modern thought has annulled as faith. By grasping the distinction drawn by the Schoolmen and sharpened by Rosmini between the ideal and the real, we shall readily come to see what dogma forbade them to see; namely, that though, on account of the nature of our knowledge, we must think the real as a unity, this unity is purely ideal, and the real itself is essentially manifold, and must be so. Moreover, by restoring the ideas of substance and cause, banished from thought by Locke's silly metaphor, to their proper place, we shall be able to recognize that every entity which is truly real is of the nature of spirit, immaterial, self-existent, and hence eternal, and that our own souls are such entities. At the same time, we shall further rec-

ognize that God, whom metaphysical monism has sometimes tried to make a person (or three persons) and always to make real, is in truth purely ideal, is simply the intrinsic moral order existing in all beings, as beings. In this way, we shall discover that the human soul is not only immortal, but also moral in its very essence and constitution. We shall learn that the true philosophy is not pantheism or atheism, but *panentheism*, that God is in every real being, the ideal law of its essence and action, the law which to follow is freedom and blessedness, which to transgress is slavery and woe, the law whose objectivity forms conscience and right.

The "religion of the future," then, will, I believe, be neither superstition nor Epicureanism, but something far higher than either and growing out of their conflict. In saying this, I do not wish to disparage superstition or Epicureanism. Both have done, and are still doing, good. But I do say that they are not capable of meeting the intellectual, moral, and religious needs of the future. Faith is plainly doomed to perish, and comfort, even though made universal, can never be the fruition of existence. Comfort and all other materialities, including even the body itself, are, after all, only means enabling the soul to come nearer and nearer to its goal, which is the realization in itself of perfect knowledge, perfect love, and perfect free activity; or, in one word, perfect holiness. For this reason, the law of all true human progress is the complete subordination of the material to the spiritual. When the highest material prosperity is attained, it may, unless it is subordinated to the spirit, become a curse and not a blessing: whereas, the true heroic spirit may reach the sublimest heights in the complete absence of almost every material comfort. Jesus of Nazareth, dying on the cross, is nearer the goal of humanity than Dives clad in fine linen and faring sumptuously every day; and this would be equally true, though every human being were a Dives.

The spiritual destitution of the world is to-day far deeper and more heart-rending than the material destitution, and calls for more immediate and more strenuous effort. Moreover, the latter can never disappear until the former is remedied; for material destitution is the result of selfishness, and selfishness is spiritual destitution. Selfishness is the devil, who wars against freedom, immortality, and moral order; against intellect, love, and beneficent energy. Cast out selfishness, and you will usher in the kingdom of heaven and its righteousness, to which all other things are added.

THOMAS DAVIDSON.

THE FIRST IDEA OF A COLLEGE FOR WOMEN.

In my paper on "Utopias," I believe I mentioned Defoe's *Essay on Projects*, published in 1697. One of his chapters is concerned with proposals for an Academy for Women. It seems to be the first account we have of such an institution. Defoe reflects unconsciously the low tone of morals of his time, and by the very way in which he half apologizes for his project of an academy proves how low an estimate of woman was prevalent in the age just preceding Smollett and Richardson.

"Some Severities of Discipline would be necessary," says Defoe, "in order to preserve the Reputation of the House."

"The Building shou'd be of Three plain Fronts, without any Jettings, or Bearing-Work, that the Eye might at a Glance see from one Coin to the other; the Gardens wall'd in the same Triangular Figure, with a large Moat, and but one Entrance. When thus every part of the Situation was contriv'd as well as might be for discovery and to

render *Intriguing* dangerous, I would have no Guards, no Eyes, no Spies set over the Ladies, but shall expect them to be try'd by the Principles of honour and strict Virtue." Every one entering the house should sign the rules or laws thereof, and no one should be compelled to remain in the institution if unwilling. No courting or sparking to be allowed. Any girl who wished to marry must leave the institution, and any other desiring to escape an importunate lover might enter the institution. "It would be cruelty to bar the sex of *Musick* and *Dancing*, because they are their Darlings. But besides this, they should be taught Languages, as particularly French and Italian; and I would venture the Injury of giving a Woman more Tongues than one."

"A woman of Sense and Manners," continues Defoe, "is the Finest and most Delicate Part of God's Creation; . . . her Society is the Emblem of sublimer Enjoyments; her person is Angelick, and her Conversation heavenly."

"Methinks Mankind for their own sakes, since say what we will of the Women, we all think fit one time or other to be concern'd with 'em, should take some care to breed them up to be *suitable* and *serviceable*, if they expected no such thing as *Delight* from 'em. . . . In short, *I would have Men take Women for Companions, and Educate them to be fit for it*. A Woman of Sense and Breeding will scorn as much to encroach upon the Prerogative of the Man, as a Man of Sense will scorn to oppress the *Weakness* of the Woman. But, if the Women's Souls were refin'd and improv'd by Teaching, that word would be lost; to say the *Weakness of the Sex* as to Judgment would be nonsense, for Ignorance and Folly would be no more to be found among Women than Men."

A quaint booklet that appeared one year before the preceding is John Bellers' *Proposals for Raising a Colledge of Industry of All Useful Trades and Husbandry*, with Profit for the Rich, a Plentiful Living for the Poor, and a Good Education for Youth, etc. The "Colledge of Industry" is a sort of Fourieristic Phalanstère, Co-operative Store, and Shaker Community, or "St. George's Guild," combined. It is "an epitome of the world for trades"; to contain a Library of Books, a "Physick-Garden," etc. "It should be called a Colledge rather than a Work-house, because a Name more grateful; and besides, all sorts of useful Learning may be taught there." The members are to wear uniforms, and there are to be distinct apartments for the men and the women. The concern is to be a sort of stock company, founded by the rich, who will make a profit from it, "part of which may be taken in Woolen and Linnen Cloth, Shooes, Stockings, etc."

There is a good, albeit unconscious, satire in Bellers' quiet answer to the supposed objection of an opponent, that the rich would have all the profit in the concern. "The Rich," he says, "have no other way of living but by the Labour of others," which reminds you of Ruskin's terrible arraignment of the English lords, calling them "strong-bodied paupers compelling their dole from the farmers." Bellers supposes that two hundred workers of all trades would be able to find necessities for three hundred, and what manufactured articles the others would make would be profit for the founders. There would be, in such an institution, a saving in shopkeepers, "lawsuites," bad debts, dear bargains, loss of time for want of work, beggars, house-room, firing, cooking, brewing, baking, etc., while clothing hurt in the making could be worn by the members of the "Colledge." All of which seems to be an anticipation of Fourier, Saint-Simon, and Brook Farm.

W. S. KENNEDY.

RESCUE OF THE GREELY PARTY.

Last week, the daily papers were enlivened and the whole civilized world electrified by a bit of sensational news which stirred the hearts of the people of two continents with one of those touches of nature which "make the whole world kin,"—news which brought tears of mingled gladness and sorrow to the eyes of strong men, and made the most thrilling pages of the last new novel seem tame by comparison even to romance-devouring boys and girls. We refer, of course, to the thrilling and pathetic account of the dramatic rescue of the Greely party, which had been for three years buried from the world in the regions of eternal snow and ice. The terrible suffering, the brave endurance, and the heroic daring of this party of twenty-five men, seventeen of whom laid down their lives in unflinching sacrifice in the cause of scientific research, has no parallel outside of the pages of romance; while no romance could so strongly appeal to our sympathies as this true recital, for, even in the most sensational fiction, the heroes in whom we are interested usually meet the reward of their heroism before the story ends. But seventeen of these heroes went to their horrible death by cold and slow starvation, without hope or reward, save the inward consciousness of what they had done and tried to do toward increasing the world's knowledge and furthering its progress. In the face of the spontaneous enthusiasm which the news of the rescue of the seven survivors (one of them since dead) of the fated Greely expedition must have aroused in the home and birthplace of its commander, we can easily understand and explain even the apparent inconsistency, noted and commented upon by one of our daily papers, of a confessed agnostic, such as the biographer of Voltaire, breaking out into the worshipful words of "Old Hundred" in joyful exultation; for we should, we imagine, under the circumstances be almost ready to sing "Praise God" or any other power which could or might make such a rescue possible, when twenty-four hours more of delay would have been fatal to those few brave men who were thus given a hope to see home and friends once more, even though, on "sober second thought," we might be disposed to wonder why the greater portion of the party, those as innocent, as self-sacrificing, as earnest, and probably as religious men, though possessing less physical hardihood than their surviving companions, should have been permitted to die unhelped and unaided in their misery, in spite of their probable prayers for such help and succor.

The old adage that "truth is stranger" (and, we may add, stronger) "than fiction" was never better exemplified than in the simply told story of the rescue of the survivors of the Greely arctic expedition. In illustration of this, we quote one paragraph from the report of an interview with the commander of the rescuing party: "On the 22d of June," he says, "while lying off Cape Sabine in Smith's Sound, . . . we sighted signals of distress at a distance of about two miles. It was about 9 o'clock P.M., and the sun shining brightly, but bitterly cold. After considerable trouble, we steamed down toward the pack ice upon which they were; and a horrible sight met our eyes. Lieut. Greely, Brainard, Fredericks, Long, Bierderbick, and Connell were crying like children, and hugging each other frantically. They seemed frantic with joy. I put off in a cutter, and after great difficulty reached them. They flew at me, and I first imagined they were crazy. They seized each of the men in the boat, hugged them, kissed their hands, and did everything one could imagine to show their joy and gratitude. All but poor Ellison: his feet and hands were so badly frozen that

he could not move. He lay still on the ground and moaned. The others of the party, also, were more or less frost-bitten; but they seemed to forget their sufferings." "Where were the remaining members of the expedition?" "Dead." And, as he said this, his eyes moistened. "Yes, dead, and of the most horrible of deaths,—starvation. The party on the ice looked as if they could not live five hours, they looked so feeble, notwithstanding the almost superhuman strength they had shown when we reached them. Slowly, one by one, seventeen of the party had yielded up their lives to the demon starvation."

S. A. U.

EDITORIAL NOTES.

BY B. F. U.

THE *Pall Mall Gazette* is very direct in threatening the House of Lords. "If," it says, "the compromise on the franchise bill is rejected, the Liberals will not sheathe the sword until they exterminate a power which is incompatible with the government of modern England."

THE INDEX will give some attention to the series of lectures on Emerson, to be delivered in the Concord School of Philosophy, July 23-30, as well as to the discussion of Immortality, in which Mr. John Fiske, Dr. W. T. Harris, and Rev. A. P. Peabody will take part on July 31 and August 1.

TWO STATUES of Diderot are now on exhibition at the Salon in Paris. The centennial anniversary of his death will be commemorated in this country as well as in Europe on July 30. The day following, *The Index* will publish an essay on Diderot from the pen of Mr. F. M. Holland, showing that, although the great encyclopaedist had his faults, there was much in him which should be remembered and honored by every friend of freedom and progress.

THE *Boston Transcript*, referring to the protests of a Sabbath committee in New York against Sunday concerts in Central Park, remarks, "As usual, the objections proceed entirely from the inability of the members of the committee to appreciate the needs of humanity." The *Springfield Republican* thinks that "there are worse offences against the sanctity of the Lord's day than giving fresh air and rest and music to people too hard-worked and too poor to find them in any other way."

MR. OLIVER JOHNSON, in the *Christian Union*, denies that there were, so far as he knows, any "infidels" among the Garrisonian abolitionists. The word "infidel," if used in an offensive sense, is certainly not applicable to any of the men and women whom Mr. Johnson has nobly vindicated from unjust charges brought against them in the *Congregationalist*; but, as the word "infidel" is now commonly used, and as defined by the *Christian Union*, it just as fairly indicates the position of Henry C. Wright, Marius Robinson, and Parker Pillsbury, in regard to the Bible and Christianity, as it does that of Thomas Paine.

THE *Catholic Mirror* says: "If Jesus Christ is God, as is plainly taught in the Bible, and Mary is his mother, does it not plainly follow that she is the Mother of God? She is the connecting link in the hypostatic union of God and Man, without which wondrous fact the universe is an absolute riddle." This reminds us of what an Irish reporter for a Portland, Ore., paper remarked of a lecture we gave some years ago in that city: "The gentleman was very abstruse," he wrote; "but it struck us that his premises were hypothetical, while his conclusions were categorical." Of course, if Christ

is God and Mary is his mother, Mary is the Mother of God. That is certain. But, if Christ isn't God and Mary isn't his mother, then what? Why, then, she is not the mother of God; and in the hypostatic union, aforesaid, there is, so far as Mary is concerned, "a missing link." But how does the imaginary "hypostatic union of God and man" solve the problem of the universe? Our quotation from the *Mirror* is in reply to the "comical infidel reasoning" of the *Investigator*, which cannot understand how "the Supreme Being, the Eternal and Infinite Spirit, the Creator and the Sovereign of the universe, as He is called, had a Mother as human beings have."

SAYS Paul Bert, in the *Fortnightly Review*: "The Church has opposed the progress, not only of liberty of thought,—that is within her rôle,—but also of popular education, of which she seems to fear the consequences above everything. She has become aristocratic and royalist, identifying her cause with that of the ancient régime, and considering the prince who has just died at Frohsdorff as the sole legitimate authority. She has again and again threatened the existence of the Republic, and has taken part in the elections against all candidates who represent liberal and democratic ideas. The charges of her bishops and the sermons of her curés have too often been filled with the protestations against the state of society that has sprung from the French Revolution, with attacks upon the government which France has freely chosen, and with insults against the representatives of the country. And, moreover, in aid of its bellicose propensities, the Church employs, not only the powerful influence which it wields over the souls of its believers, but also that which the civil power has given, either by the concordat or subsequent laws, or by its weakness and concessions in practice."

GEN. STILES, of Chicago, a lawyer of ability and large experience, and a prominent free thinker, in a recent lecture before Mr. Salter's Society, said that in his opinion "the really criminal classes are those who make crime respectable," among whom he included some of "our generous leading citizens," who in a corporate capacity set themselves up to corrupt the common council, in order to procure valuable franchises which the people would not give them, had they the power to prevent it; men who own the property that is leased for gambling houses and other disreputable purposes; who seek to gain political advantages by manipulating false ballots; who decline to help overthrow a ring or even to serve as jurors, when they can avoid it; who unblushingly engage in wholesale adulteration of standard commodities, or in spurious manufacture of them. Out of the abundant proceeds of their dishonesty, they give now and then a few hundred dollars to some well-advertised object, and receive the flattery of the people upon whose ignorance they thrive. "The howling mob which tramples upon property and rights merely does in a blind and awkward way what these men do smoothly and in the odor of sanctity." There is evidently much truth in Gen. Stiles' statements.

A PARAGRAPH in *The Index*, a few weeks ago, stated that, in the last census in France, "75,000,000 [when the number should have been 7,500,000] persons registered themselves as having no religion against 29,000,000 Catholics." The error was so palpable a misprint that we did not deem it worth while to point it out in a subsequent number of the paper. But the *Catholic Review* dances with delight at the discovery of the error, and assumes that the statement was made deliberately in ignorance as to the actual population of France. "This," it says,

"is a startling statement, but not so very extraordinary for a Protestant paper; for they (*sic*) daily publish such untruthful statements regarding the Catholic Church." It is always gratifying to learn that we have been the cause or the occasion of harmless pleasure to others; and not even pride in the typographical correctness of this paper makes us regret in the least that a misprint in its columns has afforded an esteemed contemporary the novel experience and the rare luxury of discovering, combating, and refuting,—refuting statistically, argumentatively, and overwhelmingly, with a triumphant shout of victory, an error, a gigantic error, an error with "millions in it!"—an error, too, in "that organ of light, *The Index*, published in the City of Culture." It is true indeed that

"Peace hath her victories
No less renowned than war."

SAYS the *Commonwealth* of Bradlaugh: "No reason that is a reason has in any moment been shown why the duly elected member from Northampton is not entitled to his seat. The justice of the claim is so evident to common sense, and is so certain to be in time conceded, that the denial of it now seems futile in the extreme, except as a temporary obstacle. In England as in America there are classes in which the right of a religious non-Christian to take part in government is denied. Who doubts God, it is said, doubts man and virtue; and from such a subject only ill can come. Of course, to these self-elevated judges, non-participation in the affairs of State does not mean exemption from taxation, exception from the order of the laws, or the right of inaction in time of public danger. The bigots do not thus carefully and fairly carry out their arguments. And here, we contend, is just where the weakness of this reactionary opposition is shown. If we carefully inspect its pretensions, we see how prominently the senility appears, not alone in this controversy, but as unweariedly urged against the right of woman to suffrage and legal equality. . . . A law that can stand the oath of the liar can stand the oath of the honest man. Such cases as Bradlaugh's, so soon to be beyond possible repetition, are settled in the light of this succinct statement."

A DETACHMENT of the Salvation Army, under the command of Major Moore, who is the head of the army in this country, held a meeting at Salem, Mass., last week called the "devil fight." The hall was full. On the platform were eighteen or twenty soldiers, laddies and lassies, with thirty or forty other persons. Up and down the aisles marched a number of lassies in red jerseys, shouting "amen" and "glory hallelujah" in response to remarks from the platform. In the audience, boys were selling copies of the *War-Cry* and girls were selling salvation fans. Hymns were sung, drums were beaten, tambourines, which the women swung over their heads, were played, and the soldiers shouted, stamped, and clapped their hands in the wildest excitement. The major made a speech, in which he said, "Religion is like supper: it don't do any good, unless you get some of it." At one time, the report says, "the whole hall was a sea of waving handkerchiefs." After Scripture reading, story-telling, and singing, which were almost every moment interrupted by shouts of "amen," cheers, and laughter from the Salvationists, Major Moore introduced "Jumbo," a Dutchman, who weighs three hundred pounds, and the "Yorkshire relic," who is a two hundred and fifty pound Yorkshireman. These two fellows stepped forward, hugged each other, and proceeded to give their "testimony." Banjo music and singing followed. The performance was as unique as it was lively.

THE *Catholic Examiner* says that *The Index*, "with its customary ability, has rightly interpreted

the meaning of the *Examiner* regarding the necessity of religion in public schools. Nor has it failed to notice the truly American spirit of fair dealing which we wish at all times to characterize our intercourse with our fellow-citizens. The *Examiner* does not wish that the religion of the public schools of this country should be exclusively Catholic. As Americans, we thoroughly realize that we have no right, under the Constitution of our country, to call upon the same to aid us directly or indirectly in eradicating the Protestantism of Protestant children. This we acknowledge; though, of course, in the spiritual order, we admit of no equality between Catholicity and Protestantism. Were we examining this matter as Catholics and not as Americans, we would boldly maintain that before God no man has a right to be other than a Catholic, since we believe Catholicity is the only true religion." "In the words of *The Index*," continues our contemporary, "the *Examiner* 'would admit both Catholic and Protestant instruction in the schools.' It would also agree to the instruction of children in the Hebrew religion, and, in fact, for the religious instruction of all for whom an honest plea of conscience can be presented." "All parents support the schools: all parents should therefore have the consciences of their children equally respected. In this, however, we do not include infidels and unbelievers. The Constitution is to protect conscience, not infidelity; for the latter, not acknowledging any religion, cannot claim for its followers the protection of consciences which necessarily presuppose religion." The *Examiner* adds, "We hope *The Index* does not at this late day advocate a purely secular system of education." We are left to guess how much our contemporary includes under the term "religion," and what classes of thinkers it includes among "infidels and unbelievers," by what authority it would have decided whether a parent's or child's conscience should be protected, and how different religions could be taught in our schools consistently with their harmony and efficiency. What we "at this late day advocate" is a purely secular education in our public schools, leaving all the different theological doctrines to be taught outside of them at the expense of those who believe in the indoctrination of their children in theology.

For *The Index*.

THE UNPARDONABLE SIN.

Oh, terrible the preaching of the word
Was to the tender heart in days of old,
When Sinai's thunders echoed through the aisles,
And far amid the shadowed arches rolled,
"There is a sin can never be forgiven
In this world, neither in the world to come."
Beneath the crushing horror of the thought
Many a hopeless soul was stricken dumb.

Relaxed the palsying terror of the word,
Relaxed the stern belief of elder days,
No longer yawns the dreadful fiery pit,
No longer children tremble in amaze
To hear the ways of God to men proclaimed;
For Christian charity and love have grown,
And chains no longer hold the inquiring mind,
But with the rack and stake have haply flown.

But still the everlasting truth remains,
And must remain while God himself abides;
That as a man doth sow, so shall he reap,
That God will find him out where'er he hides;
That good still follows good, and evil ill,
In this world, all worlds: oh, when man begins
To know this truth, then must he plainly see
That all sins are unpardonable sins!

HATTIE TYNG GRISWOLD.

BOSTON, JULY 24. 1884.

Finally, for this topic here, who will believe, who can believe, that the dissolution of my organism is the utter annihilation of the entire universe? No one. Yet that is the event which constitutes my extinction; for I am the universe, which is only a congeries of my subjective states, modes of the *ego*, which is the only conceivable substance of the universe, the one great force everywhere and always working and generating and destroying the myriads of forms and motions which constitute the sensible kosmos, as well as all the supersensible experience and action of feeling, thought, and volition. All are known only as the modes of the one *ego*; and, if they live, I live also, and only because I am are they possible.

The Aggregated Monadism of Leibnitz.

The monadistic, not monistic, theory of Leibnitz is so thoroughly and purely an invention, so completely unbased on observed facts, that it is a wonder how it should ever have received so much attention, though it is probably quite as much founded on fact as some other noted systems,—as, for instance, those of Schelling and Hegel. But, when such systems are at many points inconsistent with themselves, the wonder grows that they could ever have been developed to such fulness in the author's mind as well as in the interest of the philosophic public. The theory of Leibnitz is irreconcilable with any rational or scientific doctrine of individual unity. According to it, the individual, so called, cannot even admit of a collective unity, such as belongs to an army or a nation, still less of the unity of a vital organism like an animal body. For these are supposed to be the effect of perpetual interaction of part on part and on environment, so that every part and the total result are thus continuously modified, exemplifying a law of cause and effect all through. All otherwise is it with the theory of Leibnitz; for his monads are all self-sufficient, so that no one can be affected by anything beyond itself, and each is a force only for its own conservation and development, never for operation on one another or others or on aught else. Hence, it is impossible for their aggregation to be ever anything more than so many contiguous unities, like grains of sand in a heap.

Then these monads are entirely unknown, and their infinitely multitudinous and minute existence and separate action are opposed to our conviction of individual unity, and equally opposed to the known action of our modalities in causal relation to each other. Again, Leibnitz makes time, space, matter, and motion to be, not any realities, but merely phenomena; but, if these are all nothing, what is there that is real? Our thoughts and volitions are no more real than matter and motion, which in the last analysis are subjective states; and these two classes of phenomena, the sensible and supersensible, are all we know or ever can know, and so the monads are nowhere found within the range of science or philosophy or common sense or imagination.

Still further, these monads are said to be without extension, and yet are perceived only under the relation of extension because of their aggregation; but how the inextended can be aggregated, collocated, and thence seem to be extended, he does not explain.

The difference between body and mind in this theory is quite pretty,—the difference between sleeping monads and waking monads, which, in the proper place, would be as good as some poetry; and to learn how these sleeping monads may be waked into life, and to see them rising, would be very interesting.

This theory has been much noticed because of the great name of its author, because of its appeal to a certain order of religious feeling, because of its alliance with a certain kind of atomistic rigid necessity in the world, and because of its inconsistent capability of being interpreted either in accord with dualism or modern materialism by judicious selections from its incoherent materials. Besides, it has the real merit of affirming that all things are intrinsic force, though they can affect only themselves.

Organic Atomism.

Far more simple as well as more familiar is the atomistic theory of material organicism, according to Epicurus, Lucretius, and modern evolution. This makes the *ego* to be an organic evolution from the world, changing as changes the action of the evolutionary forces, and perishing with the dissolution of the organism. The human *ego* is thus only an or-

ganic mode of the world-force. It is constituted by the building up of the material atoms in certain relations to each other into the living structure of the human body; and it continues to be the same only while they continue the same forms and relations, which is never a measurable moment at once, and it ends entirely when their organic existence and relations end. Emphatically is it true, according to this theory, as Dr. Maudsley unblushingly, and without any spasm of the larynx, observes, man "never continueth in one stay." This is thorough-paced atomism. Many who reject dualism and every form of spiritual monism are unwilling to avow this; and they prefer to obscure their position and mental action, and wrap themselves in the *nimbus* of agnosticism. This may be to their credit in some aspects, but not in any philosophical aspect. From the lofty position and faculty of immortal duration and ever-rising power and felicity as a supermaterial being down to the rank and condition of a mere congeries of animated material particles, an *ego* ever changing and speedily dissolving away, the descent is awful and horrid. Those who have cherished the loftier view, whose entire moral and spiritual life has wrought in accordance with it, who have found in it an elevating and ennobling enjoyment, cannot abandon it for this low-born theory without the very strongest of reasons. That man so far above himself should erect himself through all the ages, and with growing facility, delight, and grandeur as the human race makes progress, is immensely improbable. Beanstalks do not grow up into the clouds. Heaven-invading agencies must be of stronger and more enduring quality than material atoms organized into animal consciousness, which is constantly perishing as soon as it begins its existence. Such a thing as that could not survive the night for Jack to see it in the morning, much less climb up on it to the land of the giants. "The superior man" will demand something stronger as an argument against his best thought and life than the base and impotent negative that matter cannot prove spirit and immortal life. (Whoever thought it could?) And what else is our science of objective evolution than an utterance like this? It is the evolution of sensible phenomena and of all else from sensible phenomena; but it cannot prove to us that the power which underlies all these phenomena, and gives to them all their significance and importance,—that is, the subject which experiences them,—is not itself immortal. It has no right to speak on the question at all; and, but for its infinite impudence, it deserves to gnash its empty teeth forever.

Again, this ex-animal thinker of low development needs to be reminded of the principle that transient phenomena imply a perduring *ego* as their common subject, so that there is no such constant mutation and dissolution and generation of *egos* as atomism implies; and there is nothing in the world which philosophically implies any limit to the duration of the *ego*. If the principle of subjective continuity through all known and knowable phenomenal or modal changes fail, then intellectually (and morally, too)

"The pillared firmament is rottenness,
And earth's base built on stubble."

Our opponents may retort that this may be so for aught they know, and they may be willing to believe it. But we are not, and deem we have good reason for believing better things.

It is but right to add that the doctrine we oppose is contrary to a series of facts which are attested as directly and experientially known by a vast number of witnesses in all lands and all ranks of society and all grades of intelligence and culture. Passing by the ghost stories of the olden time, which have helped to keep alive the belief of immortality in the world, the phenomena of modern Spiritualism demand at the very least a suspension of judgment concerning personal extinction by organic dissolution. That there is much fraud and folly connected with this movement there can be no doubt; but let who says there is nothing else beware, lest he be found belying the oracles of the superior gods. It is not according to the spirit of science to say that all men are knaves or fools, because some are such at times. It is not the spirit of science which refuses to analyze, discriminate, and classify, or which draws final conclusions from a few experiments which do not exhaust all the methods and conditions of testing and determining

the question under consideration, as Dr. Tyndall does in his singular paper on this subject. While I have given small attention to the phenomena in question, and have had little experience of them, I think there can be no reasonable doubt of the well-proved existence of very many facts which material atomists have not assimilated nor scarce attempted to explain in accordance with their philosophy; and, till they have done this satisfactorily, they have no right to affirm that these phenomena are not, as is claimed, indicative of supra-mundane presence and agency. Let these dogmatic scientists remember that their own utterances will be short-lived in proportion as they overlook or ignore any class of facts, and the honors of a broader as well as a profounder philosophy will be won and worn by others.

Dichotomy.

On the other hand, if evolution is required to disprove or assimilate the phenomena of Spiritualism in order to be complete, so there is a reciprocal duty binding on the philosophical advocates of Spiritualism to square themselves with evolution, which cannot well be disputed, though its special bearing on the final philosophy may be questioned. Therefore, evolution must be recognized; and all exposition must be in accordance with it. The external world is the source of our bodily organism. Of this there can be no doubt. And with this organism are vitally connected and identified an organic life and *ego*. Is this to be explained consistently with the supra-mundane theory of the existence of the individual as a self-conscious personality after the dissolution of the body?

The advocates of the theory may invent an answer which satisfies themselves. They may suppose or conjecture that, along with the grosser world of the commoner senses, there is also a finer world which the grosser senses cannot discern (except in very rare and exceptional conditions which change their nature and action), and that, out of this finer world, a finer form of the *ego* is developed, which is the real and superior *ego*; that the two *egos* and worlds coincide, so far as the inferior extends, and until what is called death; that the finer world and *ego* survive the dissolution of the grosser, and form then a more exclusively spiritual economy, with laws of action and enjoyment and expression peculiar to itself, so that it and its action can be made known to us in the gross body and world only partially under the limitations of certain poorly comprehended conditions.

Now let it be remembered that this finer *ego* and world, as co-existing along with the common world of our recognized senses, is only a conjecture. No such world is certainly known by us nor any such *ego* or evolving process. It may possibly be true, but that proves nothing. Yet, if the alleged phenomena of Spiritualism are true, and if this theory is necessary and sufficient for their explanation, it is worthy of respect. But, even in that case, it would be far better if Spiritualism could abut on a foundation of known fact, instead of resting on an ingenious theoretic invention, as it would thus become thoroughly philosophical. Here is indicated a defect which probably it can never supply.

This theory also involves a personal dualism which is irreconcilable with the unity of consciousness. It is analogous to the old dualistic doctrine of soul and body. But consciousness and science, physiological or psychological, know of no such a duality. These identify the body and the soul. As before observed, the soul identifies with itself all the motions, actions, pains, and pleasures of the body. Here, the unity is equally constant and perfect.

Further, if a part of what has ever been really *ego*, and especially so great and important a part as the body, can be separated from the *ego* and cease to be such, we may say the same of any other part and of all the parts: so that, after all, this *ego* is only an agglomeration of parts, whether organized or crystallized or merely juxtaposed. All definite conception of the *ego* thus vanishes, except as a varying aggregate of material atoms, of which we can never say it is so and so, because, before our sentence is uttered, it is, or may be, something else. We must steadily hold to an *ego* which is always one and the same through all changes, because this is demanded by experience, by logical consistency and definite conception.

Trichotomy.

All these difficulties are augmented and intensified in the theory of trichotomy. This makes the sensible

organism the outer rind and husk of the *ego*. Within this is its animating force, the soul; and then within this is the reason or spirit,—the principle of pure intelligence, which gives to body and soul the light and authority of general laws and imperative principles. Such a triple *ego* is utterly fanciful. At least, we know nothing of it in this life. We know these three great lines of phenomena, but we know them as modes of the one, indivisible, only known *ego*. This conception is clear, consistent, and ultimate and all-sufficing and the simplest possible, so that nothing more is admissible,—a simple *ego* of many modes, among which are body, soul, and spirit.

Perhaps, however, it ought to be observed that this trichotomy is incomplete. It omits the regnant element of our nature,—the will. Will is the executive faculty, and hence it is often considered as the prime element of personality. These four great classes of faculty are integral parts of our nature as now existing and known. But they are inseparable, and have not merely an organic unity, but a substantive unity, which may possibly change in form, but not in substance. Will implies intelligence and feeling, else it would have neither guide nor motive of its action; and it implies a body of some form and kind as a fasciculus of personal power. So intelligence implies feeling, else there could be no preference of one thought to another, and no comparison of better and best; and feeling may be of various forms, sensible or supersensible. These are one in many, simplicity of substance or force with modal variety.

Logical Difficulties of All Forms and Pluralism.

All the four theories of pluralism which we have criticised involve in common certain logical falsities which through all the ages have been the vampires of the philosophy of pluralistic egotism. Sir William Hamilton, in support of his philosophy of the Conditioned,—a species of agnosticism, which with the Kantians was pure criticism,—reduced these illogical dicta to fifteen, and gave them utterance; and they are all involved in all theories of philosophy except those which explain matter, time, space, motion, and all sensible phenomena as spiritual,—the modes or subjective states of a simple unitary being; and these pluralisms are adduced and adopted by Spencer in his *First Principles* in justification of agnosticism, which is a denial or doubt of the possibility of philosophy. Certainly, no theory can be perfect which does not dissipate these contradictions. As truth is always self-consistent, every theory which involves self-contradictions is somewhere false.

One of these contradictions, as given by Hamilton, is as follows: "A quantity, say a foot, has an infinity of parts. Any part of this quantity, say an inch, has also an infinity (of parts). But one infinity is not larger than another. Therefore, an inch is equal to a foot." In these days there are some who imagine that the doctrine of ultimate atoms removes this logical difficulty as far as it concerns matter, because these atoms are indivisible. But who knows that they are indivisible? No one. The assertion is merely an unverified and unverifiable theory. But, if it were a known fact, it would not remove the difficulty as a conception. It is not an actual and sensible but a theoretical divisibility about which philosophy is concerned. It is a logical necessity that no atom of matter, no quantity of space or time, considered as objective realities, can be so small but it can be conceived as divisible, so that the smallest possible may yet be smaller, and the smallest may have as many parts as the largest. By no physical or dynamic theory of atoms as ultimate actual units can we escape these contradictions. All objective non-egotism is therefore slain by these hair-fine cimeters.

The Ego of Philosophical Realism a Pure and Simple Unity.

Philosophical realism, which is absolute egotistical idealism, is invulnerable to all such weapons. This theory is the most simple and modest, because it affirms nothing but the phenomena of consciousness (including sense), and their necessary logical implications. It is therefore entirely self-consistent, as well as conformable to facts, necessary to the explanation of facts, and sufficient for that purpose.

It exemplifies, first, the unity of consciousness as of a personal individual perduring through all the many forms and conditions of experience, sensible or supersensible, organic or extra-organic or super-organic;

so that, all known things being the conscious modes of one subject, we demonstrate the unity of all at once as egotistic. As this has been previously expounded, it needs no further elucidation here.

There is a class of very striking and extraordinary phenomena which have commanded much attention in recent times, and which in such a connection cannot be wisely overlooked. They constitute what is supposed by some to indicate a change of personality. Persons have been known to forget all at once everything in their past life, so that they have had to begin their education afresh from the very bottom or thereabouts. Then, again, after a while they have suddenly changed back to their first state, and their old knowledge and feelings and habits and dispositions return. While these phenomena are very striking, they present no special logical or psychological problem any more than any other changes of feeling and disposition and lapses of memory. The individual person is the same, whatever be his modal variations, and whatever be the extent or limit of his knowledge or memory of them. That he does not know that he has done so or so alters not the fact. He is, notwithstanding everything, the very one who did it; and he has been the one, the very same, through all the changes which have intervened, however numerous or various or long-continued they may have been. We often forget what we did but a very few moments ago, and these minor but ever-recurring lapses of memory differ from the other only in degree; and as these involve the same principles, and give us no trouble on the score of identity, so neither should those. If in the morning I remember not the circumstances of my going to bed the night previous, which is quite too common with some men, that does not destroy the fact that I my very self did go to bed one way or another, and that I who thus lay down am the one who now gets up. The cases in question are simply unusual examples of modal changes in a perduring subject. For the identification of such persons we have to resort, in some degree, to the connection of circumstances. But, then, that is what we are all doing to some extent most of the time. That I am the one who did a certain act yesterday or last year, I prove to myself and others by the aid of circumstances, without which my memory would not serve me with due certainty.

But observe that I do not in any such case doubt that I am the same person I was yesterday or last year. I am only ignorant, or in doubt, concerning my own history. So, in all other cases, the only rational question is not whether any individual remains the same through successive modal changes, but only what are those changes, and how to determine that an individual now in a certain state or condition is the same individual as the one whom we knew in a very different state or condition, and this may be variously determined at different times; and whether determined or not, or how determined, does not affect the continuity of the individual himself. Every individual is a simple unity of force, a subject undergoing modal changes, the forms and extent of which we cannot anticipate. The plurality is in the modes or activities only; and, because everything is a force ever active, it is always necessarily changing its own modes.

If our personal and conscious existence continues after our bodily dissolution, which I doubt not, and if it is made known by many infallible proofs, as a large number of respectable people affirm, we have still only the same individual under different psychological or subjective states. The sloughing off of the body is only a change in the modes of the soul. It loses nothing, parts with nothing. The body is ever only a mode of mind; and, at death, the mind simply undergoes a change, so that the old bodily modes give place to other modes, just as daily one thought or experience gives place to another. We often say that at death the soul enters on another *state* of existence. That is a literal truth, the whole truth,—all that has occurred: only, the change is wholly subjective, not chiefly non-egotistic, as the vulgar suppose.

WHEN wrought up to a grand enthusiasm of soul over the records of the martyrs for truth's and right's sake, how easy does it seem for us to endure stoically even unto death for a good cause! But, alas! we step out into the street, and the very first pebble we stumble over elicits a cry of pain and a profane epithet.—*Anon.*

DEATH OF EMILY J. LEONARD.

Since the paragraph in another column, mentioning the death of Miss Emily J. Leonard, was written, we have received a letter from Meriden, Conn., from which we give an extract: "Rev. Dr. Chapin, who conducted the funeral, is President of the Scientific Association of Meriden, of which Miss Leonard had been a member from its commencement, and, as he truly said, one of the greatest, if not the greatest, in it. Dr. Chapin is pastor of the Universalist Church here; and he spoke of her attendance on his ministry some years ago and her non-attendance later, owing to the steady divergence of their religious ideas, of which they said but little to each other. He attributed the change to the influence of her studies in nature."

The following paragraphs, clipped from a Meriden paper, have come to us without the name of the journal:—

"Miss Emily J. Leonard died at nine o'clock this morning at the residence of her brother, Eugene Leonard, in East Meriden. The cause of death was heart disease, from which she has suffered about four weeks, having been taken ill suddenly, one afternoon, while visiting at Rev. Mr. Pettee's. Miss Leonard was very well known in this city, and the news of her death will be received with sincere regret. She was born in East Meriden, and was about forty-six years old. Her early education was obtained in the Meriden school. Her father was quite a prominent abolitionist; but he died about twenty-five years ago, and her mother is still living. She was largely self-educated, and had a splendid classical education, having fitted a number of boys for college, and was very much interested in the natural sciences. Her reputation as a botanist was equal to that of any naturalist in the country. She has written several interesting articles on the flora of Connecticut. She was also very much interested in woman's work, and had been connected with several societies for the advancement of the sex. She had held a number of offices in these organizations, and was a member of the National Liberal League, and also of the Woman's Temperance Association. She was a frequent contributor to *The Index* of Boston and to the *Woman's Journal*; and she was quite an authority on political economy, having written articles on this subject. Being an excellent French, German, and Italian scholar, she has made many translations from those languages, among which was Blanqui's *Political Economy* from French into English, used as a text book in colleges, Lalor's *Encyclopedia of Political Economy* from English into French, and a number of other books. Her essays, which have been read before the Meriden Scientific Association, were noted for originality and research.

"Miss Leonard began life as a teacher in the public schools of Meriden, having first taught in the Prattsville district; and for several years she had a private school here, where boys and girls were fitted for college. She was very successful as a teacher; but, of late years, she has devoted herself to scientific and literary pursuits."

"The funeral services over Miss Emily Leonard, who died Wednesday, after a four weeks' illness, took place this afternoon at three o'clock, at the residence of her mother in East Meriden. There was a large attendance of friends, including many people identified with scientific pursuits. Rev. Dr. Chapin conducted the services, and was assisted by Mrs. Isabella Beecher Hooker, of Hartford, President of the Woman's Suffrage Association of Connecticut. Dr. Chapin spoke of the deceased, and praised her work in the field of science. Her efforts were very successful, and her name was honored in scientific circles throughout the country. Her whole life was one of usefulness and activity, and her loss will be a severe one to the cause of science. Mrs. Hooker's remarks were principally devoted to Miss Leonard's work for woman. She was always in sympathy with movements calculated to better the condition of her sex. Mrs. Hooker's remarks were especially interesting from her intimate relations with Miss Leonard. There were many beautiful floral offerings, gifts of the Scientific Association. The ladies of the Association sent several wreaths of wild flowers, typical of the work to which Miss Leonard's life was principally devoted. The bearers were Dr. C. H. S. Davis, Robert Bowman, N. F. Griswold, and F. J. Seldensticker. The remains were buried in the East Cemetery."

A TOUCHING TRIBUTE.

The following touching address was read by George F. Westover, a well-known Chicago lawyer, at the funeral of his fourteen-year-old niece, Dida Westover, who died at the residence of her uncle, E. G. Comstock, of this city, and was buried at Oconomowoc last Monday. The little girl, whose parents, Mr. and Mrs. Carlos S. Westover, formerly resided in this city, but moved to Graham County, Kan., seven years ago, was brought to this city last week to receive medical treatment for her failing eyesight; and, although in perfect health on her arrival here, she died within forty-eight hours of a brain trouble that baffled the skill of the best physicians in the city. At her grave, her uncle read the following eloquent tribute to her memory: "It requires a lofty heroism successfully to meet the intricate struggles of life; but, in death, there is but one solace: it is human love. The brave man and the brave woman grow stronger and braver, when, unaided and alone, they contend with the adversities of life; but, when the end comes, they lean upon the tearful sympathy of those who are dear. To the man, the woman, or the child upon the dying-bed, and to the grief-breaking hearts that overflow with a new tenderness toward the sufferer, there is really but one present ministering God. That God is Love. The little one who has just left us lived a life of devotion to that one spirit,—the embodiment of all that is most holy and most pure,—the spirit of love. 'She knew nothing of false superstitions.' The horrors of a faith that sends grand men and sweetest women to eternal misery for the color of their opinions never for a moment blighted her fair young soul. Free from hatred, free from bigotry, free from superstition, free from sin, her angel spirit has gone to the eternal source, spotless as the infinity of love from whence it came. Since her infant days, this dear child has lived in the far frontier, on the borders of the great American Desert, with no surroundings but the wild, illimitable prairies. How meet and how pleasing that, as the peaceful end drew nigh and before darkness covered her fading vision, she was permitted to gaze upon the mighty waters, to behold the brilliant sights of the great cities, to listen to the immortal strains of grand orchestral music, and at last to lie down when the birds were singing, in a land of flowers, and to mingle her dying spirit with the breath of roses. Emulating the spirit of love and tenderness of her our departed treasure, we will now return the sweetasket to the dust of earth; but the jewel that gave it life and beauty shall ever be a star in the heavens along our journey, teaching us anew the unspeakable value of loving kindness, and assuring us of the matchless joy of a soul unburdened by superstition and unknown to sin."—*Milwaukee Evening Wisconsin.*

CORRESPONDENCE.

UNWELCOME TITLES.

Editors of *The Index* :—

Is there no means by which private students who happen to live in university towns can be saved from the title of Professor, which they must share not only with their more learned neighbors, but with pugilists and bootblacks? I saw myself mentioned in a Philadelphia newspaper lately as Professor Higinson (sic); and my neighbor Mr. John Fiske—who never, to my knowledge, was a professor anywhere, though he was for a time assistant librarian at Harvard College—has it fixed upon him apparently for life; and is now also announced, I observe, as LL.D. I do not carry my hostility so far as Dr. William Everett, who declines, I believe, to speak at public meetings, if announced as Professor; but, when those who are entitled to this prefix are generally waiving it and preparing to be called Doctor, it should certainly not be transferred to innocent bystanders.

T. W. HIGGINSON.

CAMBRIDGE, MASS.

GENERAL LOGAN AS A CHURCH MEMBER.—The general's temperament is not very devout; but he has gone through the forms of church membership, and in a peculiar way. Everybody has heard how he joined the church by telegraph. It was in 1869, when he was running for Congress. There is a strong religious sentiment in Southern Illinois, and the prevailing creed is Methodism. During that campaign, it was urged as an objection against Logan that he was

not "a professor," and had never joined the church. He was in Washington at the time; and, when he learned that the fact was strongly influential against him, he telegraphed the pastor of the church at his home in Carbondale to place his name on the roll of membership, and he would be baptized and subscribe to the confession of faith as soon as he got home. And he came very near being excommunicated for profanity. He is an excessively profane man, as everybody who associates with him knows, and violates the commandments in this particular every few minutes. After leaving Carbondale for Chicago, he and his wife took letters to the Trinity Methodist Church of the latter city, and were formally received. About four years ago, a class leader in that church remonstrated with Logan about his habitual use of profane language, and was rudely rebuffed. He wrote out a series of charges and specifications, citing all of the general's intimate acquaintances as witnesses, and filed them with the pastor of the church for presentation at the next society meeting. The pastor at that time was Rev. Mr. Crafts, an author of several well-known religious treatises, who has since gone over to the Congregationalists, and is now presiding over a parish in the northern portion of New York City, near Harlem. The matter was kept very quiet, but in some way came to the ears of Mrs. Logan, who, very much distressed, sought Dr. Arthur Edwards, the editor of the *Western Christian Advocate*, and one of the most influential men in Chicago. Edwards saw at once that the prosecution would take a political bearing, and would cause a rupture in the church, so he succeeded in getting hold of the documents and induced the author of the charges formally to withdraw them. Edwards is said to have this important historical manuscript now. Logan was badly frightened, and, being admonished, promised to quit swearing, and did so for a while.—*Chicago Cor. Boston Sunday Herald.*

BOOK NOTICES.

THE FATE OF MANSFIELD HUMPHREYS: With the Episode of Mr. Washington Adams in England, and an Apology. By Richard Grant White. Boston: Houghton, Mifflin & Co. Price \$1.25.

Most readers in perusing this book will find themselves in doubt as to whom the "Apology," followed by so portentous a dash, is really due,—whether to the English or American reader, both of whom will find things in this book to rouse their ire as well as to flatter their national vanity. Mr. White has won for himself an honorable place in American literature, both as a critic and a writer of good English; but we question whether this venture of his into the region of romance will enhance the lustre of his literary reputation. In the first place, the international motif of his story is already worn threadbare by Howells, James, Mrs. Burnett, Crawford, and others: in the second place, to the readers conversant with the people of both countries (and in these days of international travel there are few who are not so conversant), neither the American Mansfield Humphreys nor the English Lord Toppingham will be likely to be accepted as unexaggerated, unvarnished specimen representatives of their respective countries. We should be loath to believe, and regret that this book of Mr. White's may possibly give some English people the impression, that a gentleman of the highest culture and belonging to the most select society in America could be capable of perpetrating such a vulgar practical joke and piece of buffoonery as the so-called "Episode of Mr. Washington Adams"; while we very much doubt the possibility of a cultured and well-bred English nobleman's forgiveness of any such breach of good manners and good taste. In spite of the somewhat florid and effusive dedication of this work to an English countess, for whom the author apparently has much reverential admiration, we cannot resist the impression that it is as unfair and unjust in its portrayal of the "upper classes" of English society as it is to the masses in America; and even the narrow and conservative clique, moving in a confined geographical orbit, which Mr. White dignifies as the cultured class *par excellence* in this country, will not consider itself particularly benefited or honored by Mr. White's condescending exhibition of its good points, as if he were a society jockey desirous of making a good trade, and so putting his stock through its best paces in order to impress the doubtful mind of the bystander with its highest possible value, while the very intensity of his effort be-

trays to the critical eye his concealed doubt as to his own representations. For the rest, in spite of a somewhat patchwork effect, the story is charmingly told, is rather unique in some of its incidents, and is very readable, as all that Mr. White writes is, and is interesting and indeed thought-inspiring from beginning to end.

S. A. U.

TRAVELS IN FAITH FROM TRADITION TO REASON. By Robert C. Adams. New York: G. P. Putnam's Sons, 27 and 29 West 23d Street. pp. 235. Price \$1.25.

This handsome volume contains a narrative of the author's transition from the most rigid evangelical Christianity to the most radical liberal thought of to-day. The account derives added interest from the fact that the author is the son of one of New England's most celebrated orthodox divines, and was carefully reared in the faith of his father, whom he tenderly loved, and of whom he now speaks only with affection and reverence. Captain Adams is a man who has travelled extensively, and had large experience in life; and the part of this experience related is one of interest to the student of religion. The chapters that follow the one from which the book takes its title are full of thought, vigorously and courageously expressed, and indicate that the writer has read widely, and given careful and conscientious consideration to the subjects treated. The fact that the work is composed of papers reprinted from *The Index* will lead many who admire Captain Adams as a plain, forcible writer on liberal subjects to obtain them in this permanent form.

MAN, WOMAN AND CHILD. By M. J. Savage. Boston: Geo. H. Ellis, 141 Franklin St. pp. 211. Price \$1.00.

This is a volume of serious published substantially as they were delivered; and, although as the author says in his preface, "Many things are necessarily left incomplete, many positions are left apparently unguarded and open to easy attack," they are full of thought and suggestion, presented in a way well adapted to interest and instruct the common reader. The titles of the discourses are: "The Man," "The Woman," "The Evolution of Marriage," "Marriage To-day," "The Child," "The Home," "Society," "Celibacy," "Divorce," "Woman's Sphere," "Careers for Our Daughters," "The Transfiguration of Humanity."

In the *Popular Science Monthly* for August appear two striking articles on the future of religion. The first, "The Ghost of Religion," is by Frederic Harrison, and is a criticism of Herbert Spencer's "Unknownable"; and the second, "Retrogressive Religion," is Mr. Spencer's reply. The number contains other interesting papers, among which are: Grant Allen's "Hickory Nuts and Butternuts"; Dr. C. C. Abbott's "Some Rambles of a Naturalist"; M. J. Fischer's "My Monkeys"; Dr. Beale's "The World's Geysers Regions"; L. J. Vance's "Scientific Philosophy"; Frederic G. Mather's "Salt Deposits of Western New York"; and "The Morality of Happiness," by Thomas Foster. The editor discusses the relations of "Science and the Temperance Reform."

THE *North American Review* for August opens with an article by Justice James V. Campbell, on "The Encroachments of Capital"; Richard A. Proctor treats of "The Origin of Comets"; John F. Hume has an article by the startling title, "Are We a Nation of Rascals?" Judge Edward C. Loring writes on "Drift toward Centralization"; Julian Hawthorne on "The American Element in Fiction"; and Neal Dow and Dr. Dio Lewis on "Prohibition and Persuasion."

THE FLORAL WORLD.

A SUPERB, ILLUSTRATED \$1.00 MONTHLY WILL BE SENT ON TRIAL

FREE ONE YEAR!

To all who will enclose this ad. to us NOW with 12 2c. stamps to prepay postage. The *Indiana Farmer* says: "Contents interesting and to flower lovers well worth the price,—\$1.00 per year." Sworn subscription list over 12,000 in every State and Territory, Canada, Great Britain, South America, Africa, India, and Australia.

Mrs. R. A. Houk, Bingen, Ind., says: "It is the best floral paper I ever saw." Mrs. J. W. Fay, Big Beaver, Mich.: "It is magnificent!" Mrs. R. G. Stambach, Perth Amboy, N.J.: "Have never seen anything half so good." Mrs. J. L. Shankin, Seneca City, S.C.: "It is just splendid."

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.
Volume Fifty-second.

Price \$3.00 per annum; 75 cts. for three months to trial subscribers.
The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR's basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and Free Press.

JOSEPH P. MENDUM,
PAINE MEMORIAL BUILDING,
Appleton St., Boston, Mass.

TRACTS.

No. 1.—*Truths for the Times*, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 2.—*Fear of the Living God*, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—*Lecture on the Bible*, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 4.—*Christian Propagandism*, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extraneous.* Price 10 cents; 12 copies, \$1.00.

No. 5.—*"God in the Constitution,"* by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.

No. 6.—*"The Sabbath,"* by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 7.—*"Compulsory Education,"* by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—*The Present Heaven*, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—*A Study of Religion: The Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. ... The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript*.

THE BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its *Day Coaches*, which are the finest that human art and ingenuity can create; its *Palatial Sleeping Cars*, which are models of comfort and elegance; its *Palace Drawing Room Cars*, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that it is the best equipped road in the world.

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, and take none other. All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

CURRENT TOPICS.

BY B. F. U.

THE wide-spread popular agitation in England in consequence of the action of the Lords in defeating the franchise bill is taking the form of an attack on their veto power, and threatens to destroy their political power. At Manchester, where forty thousand persons attended the liberal demonstration on the 27th, John Bright denounced the House of Lords as an arrogant and unpatriotic oligarchy, at enmity with the higher interests of the nation. His speech was greeted with loud and prolonged cheering. There seems to be great confidence on the Liberal side. The Cabinet, as a whole, would probably prefer to carry the franchise bill without disturbing the Constitution, although Mr. Chamberlain is outspoken in advocating abolition.

Mrs. E. D. CHENEY, in her lecture on Emerson at Concord last Monday, said: "One of the richest treasures he found in Boston was the old sailor-preacher, Father Taylor. His *bon-mot* in regard to Emerson is here given as I had it from the lips of Gov. Andrew, to whom Father Taylor had said it. It was this: 'Mr. Emerson is one of the sweetest creatures God ever made, but there is a screw loose somewhere in the machinery; yet I cannot tell where it is, for I never heard it jar. He must go to heaven, when he dies; for, if he went to hell, the devil would not know what to do with him. But still he knows no more of the religion of the New Testament than Balaam's ass did of the principles of the Hebrew grammar.' Father Taylor seems to intimate that Emerson could enter heaven, though he did not go through the portals of Christianity."

THE second series of lectures for young people at the Old South Meeting-house are announced as follows: "Sir Henry Vane, in New England and in Old England," by Edward Everett Hale, Jr., July 30; "John Harvard, and the Founding of Harvard College," by Albert B. Hart, Ph.D., August 6;

"The Mather Family, and the Old Boston Ministers," by Rev. Samuel J. Barrows, August 13; "Simon Bradstreet, and the Struggle for the Charter," by Prof. Marshall S. Snow, August 20; "Samuel Adams, and the Beginning of the Revolution," by Prof. James K. Hosmer, August 27; "Josiah Quincy, the Great Mayor," by Charles W. Slack, September 30; "Daniel Webster, the Defender of the Constitution," by Charles C. Coffin, September 10; "John A. Andrew, the Great War Governor," by Col. T. W. Higginson, September 17. The first six lectures will begin at 3 P.M., the last two at 4.30 P.M. Tickets will be sent free to all young persons addressing Managers of Old South Lectures, Old South Meeting-house, Boston.

A WRITER in the *Indian Messenger* (Calcutta), on the Theosophical Society, remarks: "The whole culture of the Society is professed by its adherents to be based upon the teachings of some *mahatmas* or supposed sages, lurking somewhere in Thibet. But how are their wishes made known? Not to every individual member direct, but only to some advanced *chelas*,—to Col. Olcott, Madame Blavatsky, and a few others. Where is the proof that the communications that these ladies and gentlemen divulge are actual communications from the supposed *mahatmas*? Of course, their honesty is the only proof. Trusting in them, one must accept their words; and, as for the individual conscience of ordinary members, they must implicitly believe what these advanced *chelas* declare to be the truth. Is not this, I ask, creating a priesthood of the worst type? As a sincere hater of all priestcraft and an earnest advocate of the majesty of human conscience, I am deadly opposed to such doctrines."

A SOMEWHAT notable light in reform and American literature has gone out during the past week. We allude to the death of Mrs. Jane Grey Swisshelm, who died at her home near Pittsburg, Pa., July 22, 1884, at the age of sixty-nine. She was an earnest abolitionist and a reformer in every department of morals. She was one of the earliest women editors, publishing in 1848 the Pittsburg *Saturday Visitor*. She made many sacrifices in the cause of liberty, and her strength as a writer and speaker was generally acknowledged. She was among the earliest advocates of the rights of her sex to the ballot. The Springfield *Republican* pays her the following high compliment: "Nothing in the life of Mrs. Jane Grey Swisshelm, who died Tuesday, was more notable than her instant revolt from an injustice which had a general application to public policy. A visit to the Southern States made her an abolitionist as early as 1838. The attempt of her husband to make her services during her mother's last illness a charge upon the estate turned Mrs. Swisshelm into a woman's rights advocate. As such, she found her way into an editor's chair, got a recognition in the reporters' gallery at Washington, and was the first woman to be employed as a regular correspondent to a metropolitan daily. The red light on the rear of all passenger trains is said to be the result of Mrs. Swisshelm's efforts to secure safer travelling

facilities, and during the war she made a new name for herself by hospital work."

SAYS the London correspondent of the *Catholic Review*: "It must be allowed that the present trial in the Queen's Bench, in which Mr. Bradlaugh stands up singly against the whole force of the government to defend himself for having voted in Parliament, is not without a picturesque interest. The court was yesterday crowded to hear and to see the most irrepressible of modern combatants for a 'seat.' Mr. Bradlaugh looked hopefully at his case. Attorney-generals and solicitor-generals are nothing to him, for he has met them and even beaten them before. He cross-examines a witness with as much coolness and as much tact as if he had been bred up to the law. It was very amusing to hear the Attorney-general confess that he was not quite sure whether Mr. Bradlaugh was on his trial, for it was not quite certain whether there was any offence or any offender. It is certainly time that this unseemly subject were put an end to. To ordinary persons, it appears easy for Parliament to pronounce Mr. Bradlaugh not to be eligible, and to require his constituents to elect somebody else. A perpetual quarrel between the dignity of Parliament and the mere presumption of a few hundred electors is not an edifying episode in English history."

TO THE wrong done Bradlaugh and those who have repeatedly elected him to represent them in the Commons and to the outrage on justice involved in the persistent refusal to permit the junior member from Northampton to take the seat that rightly belongs to him, the *Review* writer, in his hatred of free thought, is quite indifferent. He would have the quarrel between "the dignity of Parliament" and the "mere presumption of a few hundred electors" summarily stopped by a Parliamentary declaration that Mr. Bradlaugh is ineligible, because he frankly admits his ignorance respecting matters of which he knows nothing, but of which, we may add, his ignorance is not greater than that of the Catholic Church, with all its arrogant assumption of knowledge and its bloody record of persecution for opinion's sake. What rights would the free thinkers of England have, if Catholicism were dominant there? Fortunately, the old Church, which has for centuries stubbornly opposed freedom and reform, and imprisoned and murdered their advocates, is losing its hold on the masses. Although it still has strength which may last many years and, in some parts of the world, even centuries, yet its power is fast being curbed in the more enlightened Catholic countries. Temporary reactions like that which occurred recently in Belgium are of course liable to occur in any of the old Catholic countries; but the railroad, the telegraph, the daily paper, and a thousand other secular agencies, are fast undermining the old faith, and the ecclesiastics, from the petty priest up to the pope, are alarmed at the hostility of thousands and the indifference of yet larger numbers to the claims and authority of the Church in which their fathers were faithful devotees.

AN OFF-WEEK: MONTREAL, QUEBEC, AND THE SAGUENAY.

Our subject has much the sound of an advertisement in an excursion guide-book; but it is, at least, a gratuitous piece of advertising. To see the Saguenay was our object, and two interesting cities came in the way.

Montreal is, comparatively, a modern city. Though it has a few ancient features remaining,—here and there some old specimens of architecture and old customs,—the city and its business are, generally, of recent enterprise and growth. Except for hearing the French language spoken on all sides, one might easily imagine himself in a city of the United States. Canada has been an English colony for more than a hundred years. English has been the official language of the government. The leading newspapers are in English. Many of the inhabitants are English. And the close proximity to the United States has led to close and constant social and business intercourse with the English-speaking people of the latter country. And yet the great bulk of the people of Canada still speak French and know no other language. In the principal cities, of course, both French and English are spoken. But the country people, as a rule, know only French. It is not uncommon to find even intelligent business men in the cities who have never learned English. The captains of the two large steamers in which we journeyed on the St. Lawrence could only talk in French; and, even at this season of large travel from the States, French was the prevailing language of our fellow-passengers. This persistence of the French language, in spite of the strong influences against it, is an illustration of the slowness with which social evolutions go on among the masses of people.

Both Montreal and Quebec illustrate, too, the persistence of old religious doctrines and customs. In the United States, we hear much of religious progress. We see it all about us in the Northern and Western States. A new Orthodoxy is coming. But, in Canada, the signs of progress in the churches are scanty. Montreal, especially, is a city of churches. Though the Catholics prevail in the population, the Protestants vie with them in the number and cost of their church edifices. There seems to be a church in nearly every street. And, with one exception (the Unitarian), these Protestant churches are of evangelical belief, the strongest of them being Presbyterian. At McGill University, the geological department has a Biblical inscription over the door. In the streets and on public conveyances, the Catholic priests are everywhere conspicuous throughout this region. As in the Catholic countries of Europe, they wear in public their official robes and seem to glory in them. In general, they look robust, sleek, well-fed,—especially the older ones. Not many of them, apparently, in these days do penance by tormenting the flesh. On our Saguenay steamer, a company of six or seven of them, who came on board at one of the landings, were the jolliest party on the boat. They were hilarious with jokes and laughter. After a time, they every one took a pipe from their pockets and went to smoking, emitting an incense not of the most fragrant nature. One of the company was a bishop. He led both the hilarity and the smoking. The others did not appear to be awed by his presence, after going through their obeisant ceremony of dropping upon one knee and kissing his hand at the first meeting. It looked odd to see other passengers of the boat who spoke with him—well-dressed gentlemen and shrewd business men, including the captain and steward—greeting him in

this worshipful way. It was a little thing; but it told the story of an old and powerful religious faith still existing among the people of this country.

On this same boat, we made the acquaintance of a young man who was our neighbor at table, and who in the course of conversation revealed his Catholic faith. He is clerk in a business house in Montreal, is about twenty-one years of age, and has graduated from one of the Canadian Jesuit colleges. His father, an uncle, and an older brother are all physicians, and all Catholics, as are all his relatives. This young man in character is not unlike the average young men of our time who are of good family and position. He is keen, bright, has evidently the promise of good business abilities, is fond of sports and society, and well posted in all that similar young men are most interested in. Yet, in religion, he is a mere child. He has never had a doubt or a question of the infallibility of the Catholic Church. He has never seen the inside of any kind of Protestant church. He believes that the Catholic religion was given by the Almighty, but that the Protestant religion had only a corrupt, bad man—Luther—for its originator. He believes that miracles are still performed by Catholics. He has seen persons who have been marvellously cured of various diseases at the now famous shrine of St. Anne, twenty miles below Quebec, such diseased persons, as he alleges, having merely kissed the finger bone of the saint, which is there said to be preserved as a holy relic. And he affirms that, at the Jesuit college where he studied, he has frequently seen rain produced in a dry time by a procession of devotees being formed and going to the church to pray for it. And this, we may presume, is a fair sample of an educated Catholic young man, with whom traditions and sentiment are stronger than the faculty of thought. Surely, there is much educating work still to be done before dogmatism and superstition will give way to rational thinking.

In the midst of this kind of religious belief and teaching there is at Montreal a Free-thought Club of recent origin, which is already doing a good leavening work for Liberalism. Its members are persons of intelligence and character, who cannot fail to make their cause respected. They have a small but well-chosen library, a reading-room, conversation-room, and lecture-room. The first three are open every day throughout the year; and, in the last, lectures are given on Sunday for most of the year. We had the pleasure of meeting and addressing in an informal way such of the members of the club as could be got together at short notice on a summer Sunday. So long as this club is conducted in its present judicious manner, it must have a quiet pervasive influence for good in the community.

In Quebec, it may be doubted if the word *Liberalism* has ever been heard. It is a city of unique interests. Among American cities, it is unique in its situation, in its romantic history, in the architecture of its buildings, in its streets and vehicles, in the customs of its people. It is still a walled and citadel-guarded town. To come to Quebec from the United States is really to go abroad. It is to go also into past centuries. The town still preserves features of its old French origin as well as of the graft of English life upon it. It is in its structure a combination of French and English fashions of the eighteenth century. In looking out over the city from the room in which we are writing this article, we experience something of the same sensation in writing here for such a paper as *The Index* as we once had in reading a freshly received copy of Garrison's *Liberator* in the

Vatican at Rome. It is pleasant, however, for once to sleep under the protection of a walled city,—especially as the wall now admits free entrance and exit, and never closes its gates, and hasn't even any gates to close, and so only suggests that the real protection to-day comes from those more peaceful adjustments of social rights which have taken the place of the old barbarian struggles for supremacy. And perhaps Quebec's wall, in which the gates have become free archways, may symbolize the greater change that will come to it ere long, when rational thought shall break through the cordon of its religious superstitions.

Of the Saguenay we are going to attempt no description. Had we put faith in the advertisements, that "the scenery of the lower St. Lawrence, from Quebec to the mouth of the Saguenay, is as charming as the river Rhine," and that that of the Saguenay itself is "unequaled in sublimity," we should have been inevitably disappointed. But we have learned to take any piece of natural scenery for what it has in itself, without making any invidious comparisons with something elsewhere. There are not two Rhines and there are not two Saguenays. Nature is not so poor an artist that she is obliged to copy her own works. Her pictures are all originals, and she has no chromos. And, on this principle, we have found the forty-eight hours' journey up the Saguenay and back to Quebec full of delight. The scenery is sublime, and it is charming. In spite of the cold and the rain (partly by the help of the latter), nature has lavished a whole gallery of paintings upon us, both wild and picturesque. Mounts Eternity and Trinity, nearly two thousand feet high and rising precipitately side by side from the very river, are especially noble peaks. The Catholics have sacrilegiously defaced the latter with crosses and a statue of the Madonna half way up its steep sides. But not even does this tinsel much belittle the natural grandeur of the mountain. One can look away from it. The devout Catholics on the steamer made the sign of the cross as we passed the statue. Protestant eyes were more fixed on the mountain itself. And, if it were a question of worship, which was the more worthy of adoration,—the puny, man-made statue, even with all the ecclesiastical story behind it, or the mountain itself, with the whole story of the ages sculptured in its rock-ribbed and forest-clothed sides?

WM. J. POTTER.

THE NONCONFORMIST IDEAL.

Leicester is a flourishing town, and, politically, a typical English borough, which for twenty-two years has been represented in Parliament by a typical man. Peter Alfred Taylor's resignation removes from the House of Commons a distinct personality not likely to be replaced. I have heard him compared to Joseph Hume, for whose absence or illness politicians used to watch and wait, if they wanted to carry any mean or dishonest measure through the House. Taylor is the representative of an old, educated, and wealthy English family, who in Puritan times adhered to the popular cause, and even changed their name from aristocratic Taylard to Taylor. He did not seek a seat in Parliament for any personal ambition, but in order to further the causes dear to him. He was brought up under the religious ministry of W. J. Fox, the Theodore Parker of London; he was the early and life-long friend of Mazzini; he was the foremost worker for the Poles, the Italians, and other oppressed peoples; he was a thorough republican. He is a very able speaker, acute, epigrammatic, clear, simple, and, on themes nearest his heart, he is eloquent; but he

never had any idea of speaking to show how well he could speak or for "buncombe," and he never aspired to office. Had he been more ambitious, he might have been a Cabinet Minister. But what he entered Parliament for he faithfully pursued: he challenged every magisterial oppression in the country, he advocated woman suffrage, he defended religious liberty from Sabbatarian and other oppressions; and, during the late civil war, he was the staunch friend of America and the cause of emancipation. Why has he left Parliament? Not on account of age or infirmity, for he is by no means aged or in failing health. I have just read a provincial paragraph which suggests that Taylor finds the old causes to which he devoted himself no longer actual, and that he cannot adapt himself to the new questions and party classifications. As to this, it may be said that some of the causes which inspired his early efforts are triumphant. The American negroes are free, the Italians possess their country, France is a republic, and, he might add, England is almost a democracy. I suspect, however, that Peter Taylor finds the Independent Bench in the House of Commons, on which he has always sat, virtually ceasing to exist. Radicalism had advanced so far that Gladstone incorporated it in his government, or, rather, incorporated many of its chief representatives; for, alas! it has largely turned them into Quaker guns, and one can hardly recognize on the Treasury Bench the same men that once spoke so gallantly for the rights of the weak, whether dusky tribes abroad or women and heretics at home. Gladstone's patronage even silenced John Bright's thunders against war. With Peter Taylor, the last representative figure disappears from the Independent Benches on the liberal side.

Taylor left Leicester such a stronghold of radicalism that no Tory ventured to try to succeed him. The man he was known to prefer—the Rev. J. Allanson Picton—walked over the course. Picton has no doubt been heard of in America as the man who a few years ago was expelled from the Congregational Union for heresy. He used to preach in the Congregational pulpit at Leicester; and the theological condition in which he left the chapel there may be judged by the fact that his successor therein has just accepted a call to a Unitarian church in Birmingham, much to the regret of the Leicester society, who would gladly retain his services. This preacher—Joseph Wood—says that his opinions have long been in advance of those generally held by Unitarians. His views are, in fact, Pictonian, which means that they are ultra-broad and pantheistic Congregationalism. But Allanson Picton may be regarded as the real type of English Congregationalism, just as one may regard Renan as the typical Catholic. Where Renan stands, all Catholics will one day stand; and where Picton moves, all Independents are steadily following. He is an excellent man, a vigorous thinker, a speaker whose strength, if not polished, is not without a vein of poetry as well as of humor. I have an old personal liking for Picton, which I must try to forget just now; for I wish to deal with him as the representative man that he is. He is the flower of English Congregationalism, whose anger even marks him as the successor of its outlawed founders. I find in his recent Address to the Electors of Leicester what appears to me the nonconformist ideal of England,—the New England still sought by the Pilgrims who never left their native land. It is this: Manhood suffrage; abolition of hereditary legislation; abolition of primogeniture, landed entails, and game-laws; disestablishment of the national Church, and devotion of its endowments to secular (including moral) education; education to be compulsory,

secular, and free; steady reduction of military expenses, promotion of international arbitration, and a general non-intervention policy (especially, it must fairly be added, when the intervention is by the Tory party).

A characteristic omission from this address is any allusion to the woman question. Over four hundred clergymen of the Church of England have petitioned Parliament for the enfranchisement of women, but I have not heard of any such petition coming from the nonconformist quarter. The nonconformist ideal is Salic: manhood suffrage means masculine suffrage. It is almost realized. The Franchise Bill, which the nonconformist accepts as an "instalment," gives votes to two millions, of whom half cannot write their names. The wife-beaters are included, but not the beaten. Gladstone crushed with one hobnailed heel the proposal for woman suffrage, and with the other that for a reading-and-writing test. The "instalment" certainly involves the speedy enfranchisement of all males, and, as I think, ends the prospect of female suffrage,—unless the peers rescue the English woman on whom Gladstone's hobnails are visible. Granting this a pessimist view, apart from the woman question I distrust this unfiltered democracy. There being no States in the United Kingdom, though it has room for seven or eight, the coming democracy can have no checks and balances. It will be democracy tempered by snobbery, such as I saw at the Antipodes, and didn't like. Nay, it will be worse; for Young Australia is sober, but the doom of England seems to be subjection to a popular breath heavy laden with alcohol. Last year, the lower classes alone consumed over \$400,000,000 in drink, while their families were without proper food and clothing.

The "abolition of hereditary legislation" is the natural corollary of the enthronement of numbers. The only assembly in the country that is not dependent on the popular breath is to be swept away. One who does not believe in the vulgar corruption of Hesiod's tribute to the consensus of races into *Vox populi, vox dei*, knowing that the truth is always in a minority, might be expected to try to reform the independent assembly rather than abolish it. The House of Lords rehabilitated by life-peers made of great men, rid of bishops, its English peers made representative of their class as are its Irish and Scotch peers, its veto made suspensory, would be a better institution than any of its foreign imitations. But reformation of the House of Lords is just the thing most repugnant to the nonconformist ideal. The worse that House is, the better nonconformist radicals like it. They pray for its suicide, not for so respectable a reason as that there may be one Chamber, but that they may substitute some elective Stork for the hereditary Log. They aim to make an Upper House dependent on flattery of the masses, thereby losing the one single advantage of the Two-Chamber system. In this country, the ignorant mass—for Gladstone is too near his end to wait for a generation from the new schools—will be absolute master. Manhood suffrage means that all the educated put together shall be hopelessly swamped by the ignorant millions. I cannot admire this part of the nonconformist ideal.

As to the land, it would seem that in a little country like this the only need is to tax land heavily so that every owner shall have inducement to cultivate it, and not reserve it for sport, etc. But I fear that the nonconformist ideal does not sufficiently include the picturesque and sanitary necessities of the country, and that it looks forward to seeing the land covered by one vast city.

However, I would not be doctrinaire on the land

question. I understand the next subject better,—disestablishment of the Church, and turning its funds to the work of secular (including moral) education. That is the nonconformist ideal. But, surely, if the nation were enlightened enough to adopt the policy of devoting the wealth of the Church to secular (including moral) education, it would be equally up to utilizing the admirable machinery of the Church itself for culture of the people. The Church is as much a formation here as the chalk hills; its agencies have been evolved and matured through a thousand years; it has means of reaching every cottage and hall, every man, woman, and child in the country. So long as it is established in the State, it is owned by the people. Liberal thought may fairly hope to inherit it from Protestantism as Protestantism did from Romanism, and in the end turn every church and cathedral into a centre and source of moral, intellectual, and artistic culture. But, disestablished, all this is at once sectarianized. To convert its wealth to secular education were no easier than to abolish the creeds or make them optional, and so convert and humanize the invaluable machinery of the Church. Why destroy what can as easily be utilized? The nonconformist cannot appreciate this; and no wonder,—the Church in his eyes bears the burden of its historic iniquities. He cannot see a church or parsonage without remembering the slit-noses and pierced tongues of his ancestral Independents. Those old scores have not been paid off. But, for all that, I do not like his ideal of church reform. I cannot conceive of a perfect England which should include a swarm of disestablished priests, any more than of a divine cosmos with a host of fallen angels in it. To regenerate England means to regenerate the Church also, completely to humanize it; and the clergy are far nearer to the secular ideal than are the nonconformist ministers.

With the rest of the nonconformist ideal—that education should be compulsory, secular, moral, free, that the militant age should pass away, the international tribunal arise, and every nation mind its own business—I sympathize; but the democratic avalanche in England, burying all claims of woman to equality, swamping culture, and endangering intellectual independence, seems to me one among the catastrophes which have already given the year 1884 a sinister aspect.

MONCURE D. CONWAY.

July 12.

SPENCER, HARRISON, AND RELIGION.

II.

Mr. Harrison has very little fault to find with the account which Mr. Spencer gives of the progress of religious ideas. He would prefer to call them theological ideas; but, with this abatement, he considers Mr. Spencer's statement sound and good. It is the last word of theology, its dying word. The idea of deity has now, as Mr. Mark Pattison has rather oddly said, been "defecated to a pure transparency." But Mr. Harrison contends that that which is "defecated to a pure transparency" can never supply a religion to any human being but a philosopher constructing a system. "It is quite conceivable," he says, "that religion is to end with theology. . . . But, if religion there is still to be, it cannot be found in this no-man's land and know-nothing creed. Better bury religion at once," he cries, "than let its ghost walk uneasy in our dreams." But Mr. Harrison does not believe that religion is to end with theology. He believes that Mr. Spencer's religion is no religion, but the ghost of religion. But he also believes that a religion is still possible for man, and nothing else is so important, so absolutely indispensable to

his well-being. He is a positivist, a follower of Auguste Comte, not only in his philosophical, but pre-eminently in his religious teachings; and his religion is like that of Comte, the Religion of Humanity. It has, and has had, no other expositor so earnest and so eloquent as he. "Almost thou persuadest me," I have said a hundred times, as I have read his glowing page. It is not, he insists, religion, but theology, that has avoided anthropomorphism more and more. Unless religion is to be anthropomorphic, there can be no working religion at all. It must be more than anthropomorphic: it must be *anthropic*; that is to say, not merely human in its forms of thought, but human in the objects of its thought and worship. "It must give up explaining the universe, and content itself with explaining human life." Having failed in the superhuman world, it must return to the human, here to find again all the certainty, the human sympathy, the claim to command and to reward that have made religion glorious in the past.

How shall we choose, if choose we must, between these different and antagonistic doctrines of religion that are urged upon us by two of the most conspicuously gifted thinkers of our time? However it may be with others, the balance of my own approval does not waver long. It hastens to incline to the Spencerian side. It is not Mr. Spencer, it is Mr. Harrison, who charges it upon another, who is himself justly chargeable with having sought to keep the name and save the prestige of religion for an idea and a method to which they do not properly belong. Mr. Spencer's worship of "an Infinite and Eternal Energy from which all things proceed" may be a very miserable religion, but that it is more truly a religion than Mr. Harrison's worship of humanity,—I do not see how any one who has read aright the history of religion can have any doubt of this. The right of any man to call himself religious is one I do not care to challenge, when it is seriously affirmed; but, if the worship of humanity is a religion, it is the first religion in the course of history that has not had a superhuman element conspicuously present. The early ghost worship, or ancestor worship, as it is named more commonly, had little of the nature of religion. In the strictest sense, the god-idea, the religious consciousness, was not fairly born until the world of ghosts had gradually become a vast, mysterious realm of life, an incalculable store of energy on which the savage mind could draw, in order to account for any natural phenomenon that appealed to it for a solution. From then till now (the religion of Comte excepted), religion has always had a superhuman element; and this element has been so prominent that it is a very doubtful matter whether a so-called religion which seeks to free itself from every superhuman element is, properly speaking, a religion. It may be of much greater practical value than the worship of an Infinite and Eternal Energy from which all things proceed, but is it so much of a religion? It seems not so to me.

It is not even the ghost of religion. It is a substitute for religion,—an arbitrary substitute. It is a system of sentimental ethics, borrowing the livery of Religion's court, hoping in this way to better serve mankind. The ideas of God and immortality have been too persuasive and appealing to the human mind and heart, for a void in place of them to tempt the advocacy of any, but the most heroic souls. To be able to offer men in place of them a *quasi* God, a *quasi* immortality, is vastly pleasanter than their unqualified denial. And it cannot be denied that the substitutes of positivism for the God, and immortality of tradi-

tional religion are very grand and noble substitutes. It is certainly a pleasant thought and an inspiring one that what we call death is transformation from objective to subjective life. That when we are no longer visible and palpable, we shall survive in the fond memory of those whom we have loved and who have given us reciprocal affection; and that, when we no longer survive in this way, we shall be included, if we have acted worthily, in the thought of all the multitudinous unknown who have contributed to the making of life more beautiful and blessed,—it is a more inspiring thought that having done our part it cannot be undone forever,—that it has entered into the moral substance of the world, and can no more be destroyed than the atoms that make up our material frames. George Eliot's mighty song, "Oh, may I join the choir invisible!" is at once the loftiest expression of this thought and the amplest proof that it is capable of appealing grandly to the imagination and the heart. Mr. Harrison does not and cannot overrate the inspiring quality of this thought. Nor does he overrate, nor can he overrate, the inspiring quality of the positivist thought of the great Being, collective humanity, which has been and is and is to be. In Comte's own carrying out of the details of that scheme of worship which he devised for the service of this Being, there was a plentiful admixture of absurdity; but the absurdity is not intrinsic to the scheme, and it is even less so to the fundamental thought. This is a fountain of the purest inspiration. The gist of it is here: that the immeasurable service that has been rendered us by good men and women of the past puts us upon our honor to do all we can to *earn our living*, to pass on the boon of life to those who shall succeed us, better and fairer than it came to us. Only as we do this shall we be incorporated in that Great Being which is made up of the excellent alone.

Noble and grand as are these substitutes for God and immortality which are tendered us by the religion of humanity, are they,—if less religious than Mr. Spencer's recognition of an Infinite and Eternal Energy from which all things proceed, because they have no superhuman aspect, the invariable note of all traditional religion,—are they more adequate to the demands a true religion makes upon the various life of man? So Mr. Harrison insists. Every note of a true religion is wanting, he assures us, in Mr. Spencer's scheme of thought except wonder and mystery; and these are among the lowest, not among the highest signs by which religion conquers. "The roots and fibres of religion are to be found in love, awe, sympathy, gratitude, consciousness of dependence, community of will, acceptance of control, reverence for majesty, goodness, creative energy, and life. Where these things are not, religion is not." That they are not in Mr. Spencer's worship of the unknown God he strenuously insists, and as strenuously that they are all to be found in fullest measure in his own Religion of Humanity.

But those who give the closest and the calmest possible attention to the matter will be of quite a different opinion. The rhetorical energy of Mr. Harrison's fulmination is, for the most part, addressed to one of Mr. Spencer's terms, one of the best known of the many he has made familiar,—*"the Unknowable."* His wit and fancy never tire of playing round this term and tricking it with various emblems of contempt. Not that he doubts the fitness of this term to express the mental aspect of the realm of cause,—if cause be not itself a grand misnomer,—the realm beyond phenomena, but that to him it is an absolute negative, and as such utterly incapable of exciting any of those high regards and generous emotions which

it invites in Mr. Spencer's view and which constitute his body of religion. "To make a religion out of the Unknowable," he says, "is far more extravagant than to make it out of the equator. We know something of the equator: it influences seamen, equatorial peoples, and geographers not a little; and we all hesitate, as was once said, to speak disrespectfully of the equator. But would it be blasphemy to speak disrespectfully of the Unknowable? Our minds are a blank about it." And so on. And it is not to be denied that here and there in Mr. Spencer's writings there are expressions, not a few, that seem to elevate the Unknowable *as such* into an object of religious reverence. To do this were surely as absurd a thing as Mr. Harrison has painted it. But these expressions are not representative of Mr. Spencer's most habitual thought nor of its worthiest implications. The abyss of his Unknowable is not one of total gloom. Some rays of clear light do escape from it. Some visions of solemn beauty do gleam within it. He does not fling us into bottomless negation, and leave us there. The conditions which Martineau has insisted on are realized in the completeness of his thought. There is "some alternation of light and darkness, of inner silence and a stir of upper air."

JOHN W. CHADWICK.

INTUITION.

"Sometimes," says Locke, "the mind perceives the agreement or disagreement of two ideas immediately by themselves, without the intervention of any other; and this, I think, we may call intuitive knowledge." Whewell would restrict the use of the word "to those cases in which we necessarily apprehend relations of things truly as soon as we conceive the objects distinctly." Lewes defines intuition "as mental vision or as the perception of relations."

That two objects placed beside two other objects form a group equal to four can be readily seen by the eye. If a large group, say five hundred objects, are placed beside the same number of other objects, although the mind cannot learn by the eye instantaneously that the total is equivalent to a group of a thousand, intuition sees the equivalence of the ratios with the same lightning-like swiftness in the latter case as in the former. Intuition is not limited merely to the perception of objects, nor are its decisions always demonstrable to sense.

That intuitions have a higher validity than other truths many believe, but without any good reason. The truth respecting the square of the hypothenuse in the forty-seventh proposition of Euclid is as certain as that expressed in the axiom, "If equals be taken from equals, the remainders are equals," although one truth we discover by reflecting and reasoning, the other by intuition. The axiom is self-evident, because there are no other relations implied beyond those specified in the terms of the statement; and the mind therefore, in apprehending the terms, apprehends the equations of the terms. To a mind possessed through experience of all the relations expressed and implied in the terms of its proposition, any truth is self-evident. Intuition perceives "necessary" truths, because truths so distinguished express relations which are simple, constant, and familiar, and from which therefore all contingencies are excluded. "Contingent" truths are perceived not intuitively, but by reasoning, because the relations they express are complicated, because there is a possibility of variation in the terms, because all the co-operant factors cannot be discerned beforehand. But truth is truth; and it is our discovery of it, and not the truth itself, which is contingent.

Intuition enters into all our judgments. It sees

relations which are beyond our powers of demonstration. "Intuition," says Lewes, "is of much wider range than demonstration, because the fund of experience on which we rely is too complex, and drawn too much from the forgotten past, for us to be capable of showing all the successive steps which demonstration requires." Our intuitions of space and time, to which our relations have been constant through our entire existence as a race, and to which the relations of all ancestral life were equally constant, are constructed of experiences which lie so far back in the forgotten past that their elements can scarcely be detected. We have rational intuitions and moral intuitions. The elements of which they, too, have been built up are so difficult to find in the experiences of the past that many yet regard these intuitions as primordial endowments rather than products of growth and development. Viewed in the light of modern psychology, the quickness with which intuition sees relations which do not admit of sensible demonstration is not surprising. But it is so common to mistake inference, prejudice, and even passion for intuition that we hear made for it all sorts of extravagant claims, which are by no means confined to the ignorant. What absurd speculation has not been defended on grounds of intuition?

Organic evolution makes the study of intuition a part of the study of heredity. For metaphysical phrases, like "*a priori* forms of thought," are substituted words like "aptitudes," "tendencies," "inheritances,"—words that indicate our dependence upon the past whence we derive our physical, intellectual, and moral nature. If evolution, now established upon an impregnable basis and accepted by the leading thinkers of the world, be true, then the human body and the human mind, correlated through every stage of their growth, have been evolved from lower forms of life. This clearly implies the experiential origin of all knowledge. The mental faculties as well as the physical organs are products of evolution. The ability to perceive the truth of an axiom as well as the ability to walk erect has been acquired. Neither is extra-experiential. The aptitude, the predisposition to do both, comes to the man of to-day as an inheritance. Does any one who holds to the theory of evolution suppose for a moment that man slowly learned to walk erect, but from the first possessed intuitive power by which he could perceive axiomatic and moral truths? "It is the vice," says Spencer, "of the older psychology, and of the Kantian psychology included, that it habitually deals only with the consciousness of the adult; ignoring the obvious fact that the developed apparatus of thought possessed by the adult is not possessed by the infant, but is slowly evolved; and ignoring the further fact that associations unquestionably established and consolidated by experience are so carried by us into all our thinkings that we are constantly in danger of attributing to the undeveloped mind ideas which only the developed mind possesses."

But, when Kant wrote, there was no science of psychology based upon evolution. Were he living to-day, it is altogether improbable that he would have any intellectual sympathy whatever with those who say, "Back to Kant." In the light afforded by discoveries made since he wrote, he would see the defects which make his philosophy inadequate to meet the requirements of to-day until revised and supplemented so as to accord with evolution. He would doubtless, with his great intellectual powers, see as clearly as any man living that our ideas of space and time, and our rational and moral intuitions, although irreconcilable with the experience-philosophy which he opposed, are in harmony with the larger philosophy of evolution which recognizes in the individual mind the *a priori*

element for which he contended, but instead of stopping there finds that the element which is *a priori* to the individual has its origin and explanation in the experience of the race.

No man would be quicker to see or more ready to acknowledge the great truth indicated in the following extract from Herbert Spencer:—

"Thus, the truth that a straight line is the shortest line between two points lies latent in the structures of the eyes and the nervous centres which receive and co-ordinate visual impressions. We cannot think otherwise, because, during that adjustment between the organism and the environment which evolution has established, the inner relations have been so moulded upon the outer relations that they cannot by any effort be made not to fit them. Just in the same way that an infant's hand, constructed so as to grasp by bending the fingers inward, implies ancestral hands which have thus grasped and implies objects in the environments to be thus grasped by this infantine hand when it is developed, so the various structures fitting the infant for apprehensions of space relations imply such apprehensions in the past by its ancestors, and in the future by itself. And just as it has become impossible for the hand to grasp by bending the fingers outward instead of inward, so it has become impossible for those nervous actions by which we apprehend primary space relations to be reversed, so as to enable us to think of these relations otherwise than we do."

B. F. UNDERWOOD.

EMERSON AND THE CONCORD SCHOOL OF PHILOSOPHY.

I.

On Wednesday morning, July 23, brief addresses on Concord's great author were delivered by Dr. W. T. Harris and Rev. G. W. Cooke. Passages from Mr. Alcott's diary, giving his early impressions of his friend and benefactor, were also read, with this sonnet by Miss Emma Lazarus:—

TO R. W. E.

As when a father dies, his children draw
About the empty hearth, their loss to cheat
With uttered praise and love, and oft repeat
His all-familiar words with whispered awe,
The honored habit of his daily law,—
Not for his sake, but theirs, whose feeble feet
Need still that guiding lamp, whose faith less sweet
Misses that tempered patience without flare,—
So do we gather round thy vacant chair,
In thine own elm-roofed, amber-rivered town,
Master and Father! For the love we bear,
Not for thy fame's sake, do we weave this crown,
And feel thy presence in the sacred air
Forbidding us to weep that thou art gone.

The lecture that evening on "Emerson as an American," by Mr. Julian Hawthorne, may be found in the August number of the *Manhattan Magazine*.

Thursday morning, Dr. Bartol told a large audience how religious Emerson really was, though he had doubts of the divine Personality, and broke with organized religion on account of disagreement with the forms of the Church rather than with her faith. It was by his advice that the Doctor had himself remained in the pulpit. He was extravagant in his optimism. There is not a verse of his which does not cheer and exhilarate, and never does he pander to despondency and despair. His yea was always yea, and his nay, nay; but his yea was more emphatic than his no. We see in him how the prophet must not cease to call the priests to account, how he must not break the idols, but put them out of the way. He can be popular only with a class. He lacks rush and passion, does not flame or even flow, but rather climbs where few can find a footing. His growth was not that of a flower, but of a gem. His sermons prefigured the style of his essays. All words are dynamites, few of which go

off in most hands; but Emerson always explodes his. Our three greatest characters in America have been Washington, Lincoln, that lily out of Illinois mud, and Emerson. The lecture closed thus: "Others might not agree with him. He agreed with himself, and had here below the manners of the sky."

That evening, Dr. Harris pointed out that Emerson has shown how groundless is the fancy of the unfitness of scientific ideas for poetry. Then, after a minute and masterly analysis of *Nature*, he spoke of the superiority of evolution to that view which the essay in question places in the mouth of "my Orphic poet," though the words thus quoted were really original with Emerson,—a fact confirmed by Miss Peabody and others who are the best authorities.

Friday morning, Mr. John Albee said Emerson does not climb. He alights on a summit and descends, or else he stays on the summits, passing from one to another, as in "The Over-Soul." What care he gave to revision must have been to single sentences, for the connection is in God. His *Essays* are his most characteristic works and the most read; but we could never tell from the title of any of them what we can find there. Half of them present his ideals, and the rest show how these are to be realized. No books take so much for granted in the readers. He touches on a thousand subjects, and leaves them all illuminated. A prize is in every package. The following sonnet, by Mrs. E. C. Kinney, the mother of E. C. Stedman, closed the lecture:—

EMERSON.

"Like some old Titan of majestic height
His march has been with grand and solemn tread,
The brain profoundly working, while the head,
Circled by mists, was often hid from sight.
Yet from its cloud, when great thought flashed to light,
That mighty brain by the elect was read.
The many saw not, turned away instead:
His brightness veiled to them was only night.
But, as he walked, anon on either side
Fell pregnant seeds of thought, which, being read
In minds long barren, showed the tender shoot
That later blossomed. Clouds might genius hide;
Yet everywhere the great man planted foot
His work remains, and shall through time abide."

Miss Peabody mentioned how much more rapt and impassioned Emerson's manner as a lecturer was before his visit to England in 1847 than afterward, and described his political address soon after in aid of Palfrey as Independent candidate for Congress. Mr. Charles Malloy, of Waltham, said the *Essays* had been his education. The first volume which fell into his hands he learned by heart, and other books had been only commentaries.

That evening, Mr. Edwin D. Mead showed, mainly in Emerson's own words, how completely he identified religion with morality, and justified the law of duty from the nature of man. Kant's ethics are a chronic crucifixion, but Emerson's are a joy and an inspiration. His method of ethical culture differs widely from that of Mr. Salter, "one of the finest philosophical minds in this country." Mr. S. H. Emery, Jr., Director of the School, and Rev. R. A. Holland, D.D., of New Orleans, then complained of Emerson as not sufficiently religious.

On Saturday morning, Mrs. Howe told how Emerson had been the teacher and critic of society, while not taking so aggressive a position as Margaret Fuller. Mr. Malloy described an interview with Emerson forty years ago, when a newspaper in which he lamented the indifference to his transcendent genius left out the unfamiliar adjective, and substituted "tremendous." Mr. Sanborn quoted his friend's remark about an ill-looking fellow: "In his boyhood, he fell into the fire, and somebody was misguided enough to pull him out."

Thus closed the first series of sessions.

The Index.

BOSTON, JULY 31. 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

The Diderot Centennial, July 30, 1884.

BY F. M. HOLLAND.

America still owes France a debt not to be repaid. Who can say how the Revolutionary War would have ended, if we had not had La Fayette and Rochambeau and their king's ship-loads of powder and guns, if Franklin and Paul Jones had found no welcome, if the French alliance had not finally told Great Britain that Europe would not suffer her to crush her colonies? Let us try to pay a slight part of our dues to France by gratefully remembering a Frenchman who helped us in our struggle simply because he loved liberty everywhere, and had no narrow prejudices, not even against England, whom he honored as the mother of truth, and whom he resisted only because she had become a tyrant. As early as 1769, we find Diderot assisting Franklin to make that powerful vindication of colonial rights, Dickinson's *Farmer's Letters*, known in Paris, and telling his many readers: "I know of no work better fitted to teach the nations their inalienable rights, and inspire them with a mighty love of liberty." "Fortunate it is that tyrants are even more weak than they are wicked. They disappear. The lessons of great men bear fruit, and the spirit of the people grows great." How men ought to feel toward kings, Diderot had already shown in his terrible satire, *The Political Principles of Monarchs*,—a collection of maxims, among which are these: "Keep the nation in confusion, that the throne may stand firm." "Take little care of morality, but much of military discipline." "It is expedient that one man should die for the people and all die for the king." "Woe to him who serves his king too gloriously." We shall see that some of the most famous protests in favor of political liberty, which appeared under the name of other authors, were largely Diderot's work. It is well to remember also how he said: "In almost all countries, the cruelty of the laws against women is added to the cruelty of nature. They have been treated like

feeble-minded children. In civilized nations there is no vexation which the husband may not inflict with impunity upon his wife." "Women, how I pity you! There is but one relief for your sufferings; and, had I been able to give laws, it might perhaps have been obtained. You would have been freed from all servitude, and honored everywhere."

But we cannot realize Diderot's merits, unless we understand the tyranny under which he wrote. From his birth in 1713 to his death in 1784, he was under a social system, according to which the tillers of the soil usually lived on the blackest and coarsest bread, but often had to eat grass until they starved. Taine estimates that six millions, more than one-third of the population, died of hunger and cold in 1715. All that century, down to the breaking out of the great revolution, the working classes were in a desperate struggle against famine. Every great city had frequent bread-riots, until their end was reached by that in which the starving women took their imbecile king captive. And why were these millions of frugal laborers in abject and hopeless destitution, more fatal than any pestilence? It was because more than half of the soil was owned, and most of the rest was systematically plundered, by idlers and spendthrifts, who cared for nothing but dress and debauchery. The people ate grass, in order that cardinals might have kitchen furniture of silver, and princes gorge themselves with the costliest and daintiest of viands. Millions toiled in rags; while marquises paid thousands of dollars for coats they would only wear once, and duchesses spent hour after hour at toilets in which the hair was dressed so as to make the wearers tower up into monsters. Furniture and architecture grew ever more gorgeous, but the day laborers had to lodge like swine. The peasant had to let his crops be destroyed by the game which the master wished to hunt. Children went untaught, and were stunted with drudgery and privation, in order that an army of idle menials might be marshalled and arrayed in state. We complain of our rich men; but what should we say if they paid no taxes, but themselves taxed the tillers of the soil; if they monopolized every place worth having in the Church, the army, or the state; if their main occupation was the grossest vice; and if they were above the law, even when they wantonly drove over children in the streets or took women from their husbands by force? France was a great beehive, in which all the honey was eaten by drones; while it was the workers that were stung to death. And even a swarm of bees would not suffer such repression of individual liberty and spontaneous activity. Self-government had long been abolished, and despotism was thoroughly organized to check all progress. France was beginning to struggle for more light, but the king and his bishops were leagued together to keep her in darkness. Popular education there was none. The clergy opposed all schools but their own, in which the main object was to insure loyalty and faith. Every new book of the least originality was condemned at once. No freedom, except obscenity, was permitted on the stage. An author who wrote anything worth reading was promptly sent to the Bastille. Despotism recognized in knowledge her deadliest foe.

Diderot, too, on his side saw that the only way to remove tyranny was to teach the people; and to this great work he gave his life. Vainly did the Jesuits try to enroll him among them, and his father offer to make him either a lawyer or a physician, and disinherit him when he refused. Friendless in Paris, almost penniless, sometimes having to pass a holiday without food, he went on teaching mathematics to whoever could learn, and

caring little what was paid him. Stupid pupils he never visited twice, however rich. A lucrative place as private tutor he gave up after three months, because he could not bear confinement. He had to write for pay, and even to compose sermons for a missionary. But among his earliest publications was Shaftesbury's *Vindication of the Sovereignty of Ethics over Theology*. Carlyle speaks of "its notes of anxious Orthodoxy and bottomless falsehood"; but this is utterly unjust, for Diderot takes pains to remind the reader that Hobbes was a good citizen, though an atheist, and says plainly: "No dogma which leads to gross violations of nature's laws ought to be respected by conscience. When nature and morality cry out against the word of the priest, obedience is a crime." In 1746 appeared the *Philosophic Thoughts*, wherein Diderot shows that, supposing matter to have been in existence and motion according to its own laws from all eternity, there was a greater probability that such an arrangement as the present should at some time have established itself than that chaos should last forever. Here we also find such telling sentences as: "A single demonstration has more force than fifty miracles." "If God who gave us reason asks us to give it up, he is like a juggler who tricks us out of all his gifts." "To prove the gospel by a miracle is to prove an absurdity by an impossibility." "The God of the Christians is a father who cares a great deal for his apples, but very little for his children." "Man is what God and nature made him, but neither God nor nature has made anything that is not good." Three years later, Diderot published another work which brought him the highest honor ever conferred on an author by Louis XV.,—the *dungeon*. This was really due to a contemptuous allusion to that curse of France which Carlyle, in his essay on Diderot, calls the strumpetocracy. The prisoner stanchly refused to betray his publisher. Ostensibly, these four months at Vincennes were the penalty for testing the strength of the evidence for belief in God. It is first urged that the evidence most relied on would have but little force to a man who had always been blind; and an English mathematician thus afflicted—Saunderson—is made, in imaginary quotations from a Life fabricated for the purpose, to confess his inability to believe in what he can neither see nor touch. Then the blind philosopher is made to take the much stronger position that monstrosities, malformations, and misfortunes like his own show that the world is not the result of a supernatural creation, but of a natural process of development, according to which the matter at first took on imperfect forms which have all passed away, while "those only have survived which had no important inconsistency, and which were able to support and propagate themselves." Thus is the doctrine of the survival of the fittest foreshadowed in the *Letter about the Blind*, which might be called materialistic, if it did not so fully demonstrate man's inability to understand matter, motion, or spirit, that Morley justly calls it, in his *Diderot and the Encyclopedists*, "the first effective introduction into France of these great and fundamental principles: that all knowledge is relative to our intelligence; that thought is not the measure of existence nor the conceivableness of a proposition the test of its truth; and that our experience is not the limit to the possibilities of things." France learned from England that the way of knowledge is not through metaphysical introspection, but through scientific observation of the world around us. Diderot labored as Locke and Bacon had done, and as Mill and Spencer were yet to do, to make known the great fact that it is not within a man, but without, that he must look for truth. He

meant that men should take the world as it is, and not as they had been told they ought to fancy it.

For this end, Diderot had already begun his great literary work; and imprisonment did not make him falter. He had agreed with Voltaire, Rousseau, Buffon, D'Alembert, Euler, Condorcet, and many other writers, to bring all the scientific and industrial knowledge of the age into a series of readable articles, arranged alphabetically and illustrated by whole volumes of plates. This was the great Encyclopædia. Its main purpose was to diffuse practical information, especially of the useful arts. Diderot spent day after day in work-shops and factories watching machinery work; having machines taken apart and put together; getting sketches made of looms, tools, wigs, tailors' patterns, ploughs; and writing down the way to make stockings, rouge, gunpowder, confectionery, and glass. His best preparation lay, however, in his possessing, as Carlyle says, "the most encyclopedical head that perhaps ever existed." No branch of knowledge or phase of thought was overlooked. The old fantastic systems of metaphysics were keenly criticised, but theology had to be treated very cautiously. Nothing is falselier than the common censure of the Encyclopædia as atheistic. In fact, Christianity and the Bible were spoken of with great respect; and, in the article against intolerance, it was admitted that the government might justly banish atheists. Even the celibacy of the clergy was defended in some places, though attacked in others. Scepticism was denounced as criminal, and damnation acknowledged to be eternal. Here and there, for instance, in the articles on Crusades, Epicureanism, Jesuits, and Theosophists, the tone was bolder, though not what would now be called irreligious. Boldest of all were the attacks on torture of criminals, game-laws, conscription, impressment of laborers, exemption from taxation of privileged classes, and similar abuses which were rapidly making inevitable the Reign of Terror. All honor to the Encyclopædia for saying, "Better that society produce little and distribute it equally, than that much be produced and so unequally distributed as to divide the people into two classes, the one gorged with riches, the other perishing in misery." Even before these words were published, the government found out that the people were likely to learn too much. The first volume appeared in July, 1751; but scarcely had the second been printed, when, on Feb. 21, 1752, the official censor of books, Malesherbes, went to the publishers with a warrant for seizing on all the plates and manuscripts for completing the rest of the work. He found nothing; for everything had already been deposited in the safest possible place, his own house, by his intimate friend Diderot, who had been duly warned. The Jesuits now tried to get out the next volume; but their boasted learning proved so insufficient that the government had to ask that the work be resumed by the original editors, Diderot and D'Alembert. The latter at last retired, weary of the incessant struggle against the priests and the police; but Diderot was indefatigable and indomitable. He had got out seven volumes, when, in March, 1759, his friend Malesherbes told him plainly, "To-morrow, I shall send to seize your papers." "But what shall I do with them?" "Send them to me." The four thousand subscribers were not permitted to receive the remaining copies, though already paid for, before 1765; and, then, their copies were taken away for a while by the police. The publisher had meantime suppressed all the boldest passages in the ten volumes printed after 1759, conduct for which he is not so culpable as is the leader of all this persecution of knowledge, Louis XV. Diderot knew nothing of

the mischief until it could not be undone, and then his rage and sorrow would scarcely let him sleep for weeks. But, despite these mutilations and many errors and omissions, these twenty-eight volumes of text and plates were the noblest offerings yet laid before the altars of Labor, Science, and Liberty, the holiest divinities in modern thought. We do not read Diderot's Encyclopædia now, any more than we do Garrison's *Liberator* or Paine's *Common Sense* and *Crisis*; but such authors we should not forget.

Another work of great immediate value was what Carlyle calls, "with some few exceptions in the German tongue, the only pictorial criticisms we know of worth reading." The Encyclopædia Britannica speaks of these accounts of the paintings still to be seen in Paris as "the incomparable salons," "essays which founded the art of picture criticism and which have hardly been surpassed since." Goethe says that Diderot's *Essay on Painting* is "a magnificent work, and a torch of powerful illumination." Lessing, too, learned much from this master, who taught him the fundamental idea of the *Laocoön*. Among the embattled words most successful in striking down the idols of the day was Diderot's saying, "I would give ten Watteaus for a single Teniers." Nothing pleased him better than sympathetic delineation of poverty, as nothing provoked him to sharper censure than licentiousness of purpose. And from him the artist may learn how to paint nudity without immodesty. (See Morley's *Diderot*, p. 284, Am. ed.) Moral aim is also predominant in his dramas, in fact too much so for artistic effect, though his *Father of the Family* had some success on the stage, and was translated with warm praise by Lessing, who often said that he owed his own ability to make the life of untitled people pathetic to Diderot. The latter's novels, however, were too much in harmony with the coarse tastes of his age and country. The extravagant praises of virginity and imbecile blame of marriage, common in the Roman Catholic Church, have provoked writers partially emancipated from her control to such indecency as is almost unknown in nations which have broken her yoke. The free thinker was especially tempted to protect himself from her tyranny by pandering to those passions in his readers which resisted her most persistently. Diderot paid his patrons in their own coin for protection against the Church, as Molière, Vanini, Montaigne, Rabelais, Ariosto, and Boccaccio had done before him. The free thought of England and America has been comparatively pure, even in the eighteenth century. To-day, thought is led by writers who, far more justly than any knights in history or romance, may be said to be without fear and without reproach. We must make all due allowance for the fact that Diderot wrote in an age when people were sent to the galleys for selling copies of D'Holbach, and beheaded for singing blasphemous songs and neglecting to take off their hats to bread consecrated by priests. But we cannot spend hour after hour over his novels, as Goethe did; though the most popular of them, *The Nun*, gives a powerful exposure of the evils inseparable from life in a convent.

To see how Diderot really thought about religion and politics, we must turn either to his private letters, in which, for instance, he says, "The Christian religion is, to my mind, the most absurd and atrocious in its dogmas, the most unintelligible, the most metaphysical, the most puerile and unsocial in its morality, considered not in what is common to it with universal ethics, but in what is peculiarly its own, and makes it the most intolerant of all," or in his contributions to works by friends whose social rank enabled them to publish

with impunity what he could not. For instance, it was by his aid that Abbé Raynal made himself temporarily famous, and anticipated Gibbon in showing how successfully the Church might be attacked by writing her real history. In doing this, the sufferings of Christian slaves were told with a pathos which did much to inspire Toussaint L'Ouverture and other champions in the great deliverance, which we have seen worked out so gloriously. In vehemence of protest against all tyranny in Church or State, the *History of the Indies* is far surpassed, however, by D'Holbach's *System of Nature*, where we see how Diderot was able, as he says, to sabre theology. "Il faut sabrer la théologie," are his words; and his pen was a sword smiting both priests and kings. That these oppressors were so provoked at the publication of the *System of Nature* in 1770 as to force Diderot to leave Paris until the storm blew over is easily to be explained by its saying: "Society is now in a state of war of the sovereign against all, and of each of its members against the others. Man is bad, not because he is born depraved, but because he is made so. The great crush with impunity the poor, and they in return seek to requite the wrongs which they have suffered." "Whole nations are forced to toil, to water the earth with their tears, merely to keep up the luxury, the fancies, the corruption of a handful of useless imbeciles. Thus have political and religious errors changed the universe into a vale of tears." "Nature invites man to love himself, and increase his happiness. Religion bids him love a dreadful God, really worthy of hatred, despise himself, and sacrifice to his terrible idol the sweetest and most lawful pleasures. Nature tells man to take his reason for his guide. Religion teaches that this reason is corrupt, that it is a faithless guide implanted by a treacherous God, to mislead his creatures." "Nature says to man, 'Seek glory, labor for esteem, be brave, active, and industrious.' Religion says, 'Be humble, meek, and poor of spirit; live in retirement; busy thyself with prayers and ceremonies; do nothing for thyself, and nothing for others.'" "Nature commands the wicked man to blush for his vices and crimes. Religion says, 'If thou hast sinned against thy God, remember that he is easy to appease and of great mercy, go and kneel before his priests, and wash away thy sins with prayers and offerings.'" "Nature says again to man, 'Thou art free, and no power can justly strip thee of thy rights.' Religion cries out that he is a slave condemned by God to groan under the rod of his representatives, and bound to obey these tyrants without a murmur." "If the nature of man were consulted in regard to politics, this would do more than all the religions in the world to make the nations happy." "Natural evils demand natural remedies. Ought not experience to have long ago undeceived mortals as to those supernatural remedies, those prayers, sacrifices, fastings, and processions that the peoples of the earth have so vainly opposed to the woes that overwhelmed them?" "If people consulted experience instead of prejudice, medicine would furnish morality with the key to the human heart." "Man will always be a mystery for those who insist on looking at him with the eyes of theology." "Let us recognize the plain truth, then, that it is these supernatural ideas that have darkened morality, corrupted politics, hindered the advance of science, and extinguished happiness and peace even in the heart of man." (See Morley, ch. xiv.) Of Diderot's acknowledged works, the ablest is a literary and musical satire, *Romeau's Nephew*, which the Encyclopædia Britannica pronounces "his undoubted masterpiece." Carlyle says, "It looks like a sibylline utterance from a heart in fusion."

Goethe, who translated it into German, "not merely with readiness, but with passion," remarks, "People can see, I hope, that I threw my whole soul into it." Morley, too, has translated it; but much of the fire has already burnt out. Diderot usually was so absorbed in his subject as to care little for style and even less for arrangement. His oven, according to Voltaire, was so hot as to burn all it baked. Like Margaret Fuller, he talked much better than he wrote. Carlyle calls him "the vividest, noblest talker of his time." "He who only knows Diderot in his writings," says Marmontel, "does not know him at all. When he grew animated in talk, and allowed his thoughts to flow in all their abundance, then he became truly ravishing."

This brilliancy in conversation was largely due to the fact that no one ever felt a keener and more generous interest in his fellow-men. His daughter tells us that "three-fourths of his life were employed in helping whoever had need of his purse, of his talents, of his management. His study, for the five and twenty years I knew it, was like a well-frequented shop, where, as one customer went, another came." None of these visitors brought any money, but many of them took some away. One young man handed Diderot a lampoon against himself. "Why do you show me this?" "I am starving, and I hope you will pay me a trifle for suppressing it." "I will tell you what to do with it. Dedicate it to the Duke of Orleans. He is a bigot, and will pay handsomely for having me attacked." "But I don't know how to write the proper dedication?" "I will do it for you." Thus, Diderot helped his calumniator make twenty-five louis d'or. Another visitor took leave of the benefactor thus: "Do you know the history of the antlion? It is a little insect of great industry. It digs a hole in the sand like a reversed funnel, covers the top with fine, light sand, entices foolish insects to it, takes them, sucks them, then says to them, 'M. Diderot, I have the honor to wish you good day.'" No such treatment stopped Diderot in his work of reconciling brothers, hunting up pupils for starving teachers, giving manuscripts his magic touch that turned their lead into gold, settling law-suits, writing advertisements, finding purchasers for books, doing all sorts of jobs without any pay except from his own rich heart. When we think also of his devotion to his great task of spreading knowledge and undermining tyranny, we must mourn over one sad blot on a noble life. His relations with women were too much like those of the kings and cardinals of the day, and he had to leave it for Baron d'Holbach to rise so high above the behavior then fashionable as to vindicate the moral tendencies of intellectual liberty. The temptations and dangers which beset social reformers and scientific thinkers a century ago have almost ceased to threaten us. We can walk in safe paths with clean garments. But it is because men like Diderot were ready to drain marshes and slay dragons. Thus began the work which is already seen to bless the earth.

For The Index.

A HUNDRED DAYS ABROAD.

BY GEORGE JACOB HOLYOAKE.

CHAPTER. XIX.

My first words in the Anthon Memorial Church were that "the best way to advance co-operation in America was not to attempt it,—that is, with the ideas prevalent concerning it." Within the period of my first visit, in 1879, several attempts have been made in New York, in which the expense of maintaining the shops was defrayed, not from the profits of cus-

tom, but from capital. The members who subscribed it were not pledged to make their own purchases at the stores at the peril of losing their shares. The dependence for business was upon the general public, who had no motive for buying at the co-operative shop rather than any other. There appears to have been little local propaganda of the principle of co-operation in the neighborhood previous to opening the store,—making converts who would become purchasers. A small outlay of loan capital at the beginning, leaving the growth of the store to depend upon profits created by purchasers, has not yet entered into the American mind. On this plan, failure would bring no disaster and no shame; and the experiment could be repeated in another neighborhood, where better chances of success were present. English success, I explained, was brought about by setting the purchaser above the stockholder (shareholder is the English term). It was that device which first made the stores grow.

Horace Greeley, founder of the *New York Tribune*, understood all about co-operation. He was the only master of the question among American public men. In previous writings, I have quoted evidence from his pen of this. While in America, last year, a *Tribune* was shown me of April 10, 1867, in which the Editor reviewed my *History of Co-operation in Halifax*, which, he told his readers, "was no less interesting than the account of co-operation in Rochdale noticed in the *Tribune* years ago"; and added, "if any publisher in this city will reprint Mr. Holyoake's pamphlet (*History of the Halifax Stores*) we shall be glad to give him our copy." This was a very practical proof of interest in it. No one in England—not even the great store itself, to which I had devoted time and trouble to write its history—took as much interest as this. Yet the career of co-operation in Halifax is as remarkable in incident as the career of Rochdale.

Co-operation, I maintained everywhere, was now, as in the beginning, the precursor of self-supporting—not State supported—communism. In the end, capital, accumulated by economy, would carry out what philanthropy fails in: only, social life will not begin by having "all things in common." It will end that way. Co-operation, I said, was a scheme for the redistribution of property without dynamite or petroleum, by taking care that property created in the future should come into the hands of those whose industry shall produce it.

Co-operation is not a philanthropy, nor a new scheme of benevolence, nor a form of Utopian sentimentality, but a business, which has to pay like any other business. But it is a business saddled with morality. That is why few people touch it. Co-operation is not an emotional contrivance for helping others. It is a manly contrivance for enabling others to help themselves; and, as half the world want to be helped by somebody else, co-operation is not popular, except among the independent and industrious.

With the view of giving to New York State aid-seeking socialists an idea of the practical success of this device of self-help, I said: "There is Mr. John Gledhill, our first purchaser in this country: he has lately been elected one of the Board of Managers of the New York Produce Exchange. That means known capacity of business usefulness. He has been joined in his English work by Mr. J. M. Percival, who has been concerned in co-operation from its origin. They buy American produce for us in England, to the amount of \$2,000,000 a year. In Ireland, we have several buyers, who purchase \$5,000,000 of butter and eggs. From the continent of Europe, we import \$5,000,000 worth of butter, eggs, flour, and other produce. The two buying societies of England and Scotland purchase commodities to the amount of \$25,000,000, for which they pay cash. Besides these two buying societies, we have in England and Scotland from one thousand two hundred to one thousand five hundred societies who turn over \$100,000,000 annually, nearly all of which is paid for over the counter."

In Pontiac County there is a new paper announced to be called the *Equity*. It has no relation to co-operation, but it has the true name of it. Down in Kansas and New Mexico, Colonel Johnson told me that a form of real yet simple co-operation prevailed of this kind. Persons who had no lands, and perhaps little knowledge of breeding, bought flocks, and consigned them to a farmer who had lands, but little or no stock. He reared, grazed, and attended to the increase of the stock, he taking half the lambs

and half the wool for his pains, and the other halves go to the stock-owners.

The Philadelphia Industrial Co-operative Society is apparently the most important in America. It has four stores in the city and four branch stores elsewhere. Its thirty-second quarterly report declared a dividend of six per cent., which was described as lower than their average. The society has no educational fund. This is probably because an education fund is not needed in America, where everybody is so wise that they have nothing to learn. No society which has had one ever gives it up, no society which begins without it ever goes back to it. Those who live in the dark are subject to diseases, as are those who live in cellars. There is an intellectual small-pox, as well as a bodily one; and the ignorant are very subject to it, and have it very badly. There is an art association, though it has no literature.

The students of Harvard University have set up what they call a co-operative society, which is simply a civil service store for buying cheap and selling at cost price. This is very useful as far as it goes, but is not teaching thrift to the students, which is a personal virtue, so long as there is remedial misery in the world. The virtue of wise thrift is much needed in American families, among well-to-do more than among ill-to-do persons, who often have too little to save any. This Harvard co-operation misses the morality of co-operation, and does nothing to amend the veracity of what Lord Tennyson calls "the great liar,—Trade." How can it be expected that co-operation—which is designed to save money for the purchaser—can be popular in a country where they establish protection laws to render commodities dear?

The Co-operative Dress Association in New York occupied the whole of a lofty and splendid building. The stock in the rooms showed both affluence and splendor. There were real co-operative features about the place. Its café was well devised, and its provisions were good. Soon after I saw it, word went over the land and the water also—for the news appeared in English papers—that "Co-operation had failed again." The *New York Tribune*, which remains the best exponent of co-operative principle (of which it never loses sight) in America, at once explained the career of this association, which ought to be widely read, not merely in the United States, but in Europe. The story of the *Tribune* will be useful in England. It is as follows:—

The association—we speak without disrespect for its founders and promoters—was a foredoomed failure from its beginning. It was not based upon the principles of co-operation, but upon those of competition. It was a joint-stock, competitive dry goods and millinery store, differing in no wise from other dry goods and millinery stores, except as its ownership was scattered among some hundreds of persons who gave no attention to its affairs; and its management was in the hands of either hired persons or inexperienced persons, and was a shifting management at that. There is no trade so largely dependent upon acquired skill and individual responsibility as the trade in ladies' dress goods. There is none so beset with the vicissitudes of fashion and caprice, and none, therefore, which requires such quickness of vision and firmness of nerve to meet exigencies. The grocer knows that sugar and tea and coffee and butter and eggs will always be in demand at prices something above the cost of production. The dry goods merchant never knows whether the articles on his shelves to-day will bring as much six months hence as they have cost him. Some will bring more and some less; and his success or failure depends upon his ability to get rid of the whole lot at an average profit, and keep his stock so full all the time that his customers shall have little or no occasion to go elsewhere to find what they want. The most eminent professor of this art in the United States was the late A. T. Stewart; but Mr. Stewart's skill was an acquirement, a growth, an accretion of forty-years development, and in no sense a divination.

For these reasons, the Dress Association was destined to certain failure; and it is matter for congratulation rather than regret that the capital was only \$250,000. If it had been twice as large, it might have lasted twice as long, but would have ended in the same way. It may be added that, if want of capital was the cause of the failure, it is another and signal commentary on the badness of the management, since more capital was offered in the beginning than was accepted, and a large sum was returned to subscribers after it had actually been paid in. This error, if it be one, is ascribed to the London expert in joint-stock store-keeping who was brought here to set the machinery going, and who of course brought with him only London experience, which is a very different thing from New York experience. If Mr. Pulbrook, an early manager, was wrong, those who brought him here were still more so.

This is a very instructive account. When it is added

that "six thousand leading men and women throughout the country were the holders of its capital," any reader can see how large a number of persons were interested in co-operation, and how great a pity it was that they should have reason to distrust it.

Mr. Joseph Medhill, proprietor of the *Chicago Tribune*, on giving evidence before the Senate Subcommittee on Labor and Education, thus spoke on "Co-operation as a Labor Remedy," which shows that the policy of associative production is no better understood in America than distributive:—

"At one time," Mr. Medhill said, "co-operation was hopefully regarded as the solution of the capital and labor contention; but, after many trials and failures, its advocates are becoming discouraged, and it is fading out as a feasible remedy for the ills of labor. Certain obstacles, deeply grounded in human nature, are encountered. The fundamental idea was to pay the workmen the full market price for their labor, regardless of the question of profit and loss by the manufacturer, and, if the works made any profit over interest on capital, to divide it with the operatives; but, if the factory lost money, then let the stockholders stand it. The trouble was to find capitalists who were willing to invest their money on these terms, as the final outcome pretty certainly led to bankruptcy. Where the experiment was tried, it was found that the workmen themselves soon became dissatisfied with the results of co-operation. If the mill made losses or small dividends, they found fault with the management or suspected its honesty, and appointed committees of investigation, who quarrelled with the owners. Disputes also arose as to who should be discharged in dull times, and about wages when the shop was not finding ready sales for its wares. Another source of discontent was the payment of equal wages and equal dividends to inferior or negligent workmen, who manifestly did not earn their money in the eyes of the better workmen, and thus reduced the profits and dividends of the establishment. On the old plan, the trades-union lodge insist that all workmen shall be paid alike, regardless of skill or value of service, as the loss from unfaithful or deficient work falls on the employer alone. Many other causes of weakness and disintegration manifested themselves; but, probably, the worst of all was the ignorance of the foreign workmen, which bred suspicion, destroyed confidence, and rendered harmony and steady united effort of worker and employer impossible. The co-operative experiments have therefore all failed, except in a few cases where the conditions happened to be peculiarly favorable. When these people are better educated in the future, and both sides have studied the subject more thoroughly, co-operation may succeed to some extent at least. Till then, we must wait and hope."

The wildness of idea which pervaded these efforts at co-operative partnerships would be incredible on any authority less than Mr. Medhill's. No wonder they all failed. The wonder would be if they succeeded. Associative education is widely wanted.

My impression is that there is more associative literature in America than in England. There is less co-operative practice, owing to the impetuosity of the people, which never pauses long enough to succeed in it. Of social life to which co-operation is intended to lead, there is far more in America than here, and far more books and publications concerning it. The first co-operative book of mine which was published in America was published by Samuel Leavitt. He sent me a book of his own, one of several of which he is the author, entitled *Peacemaker Grange*. The subject is really "co-operative living and working": it contains the illustrations of the Familistère of Guise, from *Harper's Monthly*,—very interesting illustrations they are.

CORRESPONDENCE.

MYTHS AND THE PERSONALITY OF DEITY.

Editors of *The Index*:—

I read, with great interest, the address on "Mythology and Religion," by C. E. Vredenburg, published in *The Index* of May 29 and June 5, and was, in the main, much pleased with it; but, on one point (where he tried to disprove a personal God), it seemed to me his reasoning was faulty. He says that mythology is "simply an explanation of the material world by ascribing personality to the objects and forces of nature. If such an explanation seems strange to us, let us remember how very slowly and painfully the knowledge has been accumulated that makes it seem strange, and that the mythical conclusion is the simple and obvious one to man in his childhood stage. The conception of an impersonal, self-sustaining universe is one which the mind is very slow to form, as may be seen by the tenacity with which the alternative belief in a personal God is retained." And,

further on, he says that, to the "myth-maker of old," "the very idea of will is unknown and unthinkable apart from the purely human will." "He knows and can know no other"; and then argues from this that a personal God is merely the human image "seen reflected from the surface of the universe," and that increasing light and knowledge will show it to have no foundation in fact.

Now, it seems to me that the only scientific conclusion, from his premises, is that it is *very probable*, if not certain, that there *is* a personal God. For man now, no less than in the myth-making age, has and can have no absolute *knowledge* of any power but the human will,—his *own* will; and, arguing from the known to the unknown, he must, so it seems to me, suppose the universe animated by a will similar to his own, but infinitely greater, since the universe is infinitely greater than he.

The "myth-maker's" mistake was not in accounting for the manifestations of power which he saw by supposing them the result of the action of will, but in ascribing *separate wills* to the different objects of nature: whereas, we have learned, through the doctrine of the correlation of forces, that there is only *one* force in nature; and I cannot see why it is reasonable or scientific to lay aside the only power we *know*, and import another idea from without, to account for the phenomena of nature.

If I am wrong, I shall be glad to be set right.

Yours, for the truth,

E. D. BURLEIGH.

PHILADELPHIA, July 13.

"H" writes, in regard to Mr. M. J. Savage's Easter sermon: "Its proof that Jesus never appeared to his disciples after his death is well stated, especially the point that 'extraordinary facts require extraordinary testimony both as to quantity and quality.' This principle the preacher follows faithfully, as he urges that Spiritualism must still be called upon to furnish adequate proof, which he thinks may yet be found. He does not mention the repeated failure of spirits to make use of such opportunities, as the sinking of the 'Florida' and the sudden deaths of so many soldiers and others at times and places never revealed. *Facts*, a Spiritualist monthly, says that if mediums do not choose to prove their honesty this is 'no reason why a circle of interested individuals should be broken up or rudely disturbed by one individual, who is suspicious of fraud, to the inconvenience of twenty others who have paid their money and are not disposed to be interrupted.' Further, to protect believers from being disturbed by exposures of trickery, much stress is laid on the difference between personation and materialization, the distinction in brief being that mediums who are caught at it personate, but those who don't get caught materialize."

FREE THOUGHT AMONG EUROPEAN REFORMERS.

In the review of "The Woman Question in Europe," which appeared in a recent number of the *Tribune*, the writer, referring to France, says: "Here we find, very frankly avowed, the free-thinking and anti-religious tendencies which are commonly attributed to the Continental advocates of female emancipation; and Mr. Stanton quotes with warm approval a very advanced leader on the movement, Mlle. Deraismes, who writes, 'Every woman who desires to obtain her rights, or who wishes to escape from tutelage, should second the free thinking movement.' The "free-thinking and anti-religious tendencies," to which your reviewer refers, are not limited in France or, for that matter, on the Continent generally to the "advocates of female emancipation." The Frenchmen, whom we, as liberty-loving Americans, admire and applaud, those who are bravely contending for Republicanism, the separation of Church and State, non-sectarian public schools, the right of association, a free press and free speech,—the foundation principles of the United States,—have, with scarcely an exception, "free-thinking and anti-religious tendencies." Even the deism of the Republicans of 1793 and 1848 died out with Laboulaye and Henri Martin. Grévy, Ferry, Brisson, Clemenceau, *et al.*,—not to speak of Gambetta and others among the dead,—who are the very backbone of the Third Republic, hold the same theological views as those "commonly attributed to the Continental advocates of female emancipation." It would be very easy to explain why it is

that the Republican leaders in France are to-day free thinkers, but that is not to my purpose. I simply wish to show your reviewer, and one or two of his *confrères* who have made somewhat similar statements in examining this book in other newspapers, that "free-thinking and anti-religious tendencies" characterize, not only the "advocates of female emancipation," but all the noble reformers and Republican statesmen of France, and, I may add, of every Continental country. So that the true American, whatever his religious views may be at home, is bound to "second the free-thinking movement" when he is on this side of the Atlantic; for, here, free thinking and progress are synonymous.—*Theodore Stanton, in New York Tribune.*

We can imagine the man who "denies his soul immortal" replying: "It is quite possible that you would be a knave, and love yourself alone, if it were not for your belief in immortality; but you are not to force upon me what would result from your own utter want of moral emotion. I am just and honest, not because I expect to live in another world, but because, having felt the pain of injustice and dishonesty toward myself, I have a fellow-feeling with other men, who would suffer the same pain if I were unjust or dishonest toward them. Why should I give my neighbor short weight in this world, because there is not another world in which I should have nothing to weigh out to him? I am honest, because I do not like to inflict evil on others in this life, not because I am afraid of evil to myself in another. The fact is, I do not love myself alone, whatever logical necessity there may be for that conclusion in your mind. I have a tender love for my wife and children and friends, and through that love I sympathize with like affections in other men. It is a pang to me to witness the suffering of a fellow-being; and I feel his suffering the more acutely because he is *mortal*, because his life is so short, and I would have it, if possible, filled with happiness and not misery. Through my union and fellowship with the men and women I have seen, I feel a like though a fainter sympathy with those I have not seen; I am able so to live in imagination with the generations to come that their good is not alien to me, and is a stimulus to me to labor for ends which may not benefit myself, but will benefit them. It is possible that you might prefer to 'live the brute,' to sell your country, or to slay your father, if you were not afraid of some disagreeable consequences from the criminal laws of another world; but, even if I could conceive no motive but my own worldly interest or the gratification of my animal desires, I have not observed that beastliness, treachery, and parricide are the direct way to happiness and comfort on earth."—*Christian Union.*

LILIAN WHITING writes to the *Chicago Inter-Ocean*: "Boston is full of pilgrims to culture from the West and South. Clergymen, teachers, students, amateur or professional writers throng here in the summer. Coming from the inland, Boston is comparatively cool,—not to say sometimes arctic, when we have a genuine, classic east wind turned on,—and there are people to whom seashore hotel life would be inanity and weakness. These pilgrims locate themselves in quiet boarding-places, get the advantage of the 'marked down' summer rates; and they haunt the libraries and investigate Harvard, and take brief trips to Nahant and Nantasket, to quaint old Marblehead and beautiful Beach Bluff, and sail down Boston Bay by moonlight. They have the liveliest times imaginable, and with economy and quiet, too, unless they are apt to go to Trinity Church to hear Phillips Brooks. The city does not know much about these true scholarly tourists, but the librarians learn to recognize them as those whom culture has marked for her own. Except the ultra-fashionable set at Newport, it is quite the fashion to do something during the summer,—to accomplish some specific intellectual work. There is little imitation of the people who make amusement a serious pursuit. They are left to their devices, but people with different tastes pursue the even tenor of their own way and work toward their own achievements."

MORAL decay in the family is the invariable prelude to public corruption. It is a false distinction which we make between public integrity and private honor. The man whom you cannot admit into your family, whose morals are corrupt, cannot be a pure states-

man. Whoever studies history will be profoundly convinced that a nation stands or falls with the sanctity of its domestic ties. Rome mixed with Greece, and learned her morals. The Goth was at her gates, but she fell not until she was corrupted and tainted at the heart. The domestic corruption preceded the political. When there was no longer purity upon the hearthstone, nor integrity in her Senate, then, and not till then, her death-knell was rung.—*Robertson.*

ALL the old abuses in society, universal and particular, all unjust accumulations of property and power, are avenged in the same manner. Fear is an instructor of great sagacity, and the herald of all revolutions. One thing he teaches, that there is rottenness where he appears. He is a carrion crow; and, though you see not well what he hovers for, there is death somewhere. Our property is timid, our laws are timid, our cultivated classes are timid. Fear for ages has boded and mowed and gibbered over government and property. That obscene bird is not there for nothing. He indicates great wrongs which must be revised.—*Emerson.*

If only we could realize the cost of any great thought to him who gives it expression, we should put an added value on that which attracts and impresses us, as we read it or as we hear it spoken. "The ink of it is a brave man's life-blood," wrote Carlyle of Hugh Miller's last work. And there is rarely anything spoken or written so as to lay hold on the life and heart of others, unless more or less of the life-blood of him who utters it has gone into its composition or its expression.—*Sunday-school Times.*

WHOSOEVER hath his Minde fraught with Many Thoughts, his Wits and Understanding doe clarify and break up in the communicating and discoursing with Another: He tosseth his Thoughts, more easily; He marshalleth them more orderly; He seeth how they looke when they are turned into Words; Finally, He waxeth wiser than Himselfe; and that more by an Houre's Discourse then by a Dayes Meditation.—*Lord Bacon.*

THOSE who, without knowing us, think or speak evil of us, do us no harm: it is not us they attack, but the phantom of their own imagination.—*La Bruyère.*

For The Index.

DIGNITY OF LABOR.

The mythic story of a race encursed
To labor, by a vengeful king, because
One rash progenitor forgot his laws,
Was held as sacred, till it grew and burst

The bounds of man's credulity. It finds
But few believers in these grander days,
When dignity of work and progress slays
The sloth engendered by ignoble minds.

The doctrine is immoral and must fail
In all society where deeper thought
Hath entered or where human love hath wrought
Its strong and living chain with most avail.

MEDORA CLARK.

MADISON, WIS.

For The Index.

THE HIGHEST LOVE.

Love lays the foundations of worlds, and her hand
Forms the billows of ocean to cradle the land;
And she buildeth the hills out of atoms of sand.

Love weaves the fair curtains looped up by the stars,
She maketh the swift wind and lightning her cars;
And the blossoming clouds of the morning are hers.

Love nothing despiseth, nor counteth as vain:
What is she improves; in her hand, loss is gain;
E'en the smoke of a battle she turneth to rain.

Love "thinketh no evil," she "seeks not her own":
From the peasant who reaps to the king on his throne,
She exacts not her tithe till the harvest is grown.

Through ages unnumbered, she plants and she sows,
Then patiently waits till the blossoming rose
And the lilies of life all their beauties disclose.

The soil planted first in each bosom is self;
And its flowers are man's pleasures, its fruits are his pelf,
While justice and truth live in books on the shelf.

But, ah! 'twill be shown in the growth of each soul
That the highest self-love seeks the good of the whole,
And this heaven-born truth every act will control.

BELLE C. BUSH.

BOOK NOTICES.

THE UPS AND DOWNS OF DANIEL W. DINGLEBE. By J. R. Munroe, M.D. *The Iron-Clad Age: Indianapolis, Ind.:* Paper covers. Price 25 cts.

This amusing extravaganza gives evidence of considerable imaginative power on the part of the author, though the part Daniel W. Dinglebe has to play in it is a very subordinate one. It purports to depict some of the possibilities of a century and more of progress in this world, and the scene is laid in the Western country in the year 1907, when woman's rights and free love (which the writer seems to think have congenialities in common) are accepted facts; and, as he is the editor of a free-thought journal, he turns the tables on Christian writers by affirming that the Church of that future sanctioned all the fashionable immoralities, and "plenty of Scripture was quoted to fortify all this"; and one of the personages of the story declares, "You'll notice now that the infidels are about the only people that are keeping up the old-fashioned homes and maintaining the old family circle." Young and handsome women are dashing members of Congress. Men do women's work; but, "as soon as this work was packed off on the men, they began inventing machines to lighten the labor. A man would rather sweat a year over an invention than to do an hour's hard work." Light is so cheapened and perfected that all the cities are at night kept light as day by means of immense electric globes stationed on high towers. Every man owns his private air navigator. "Dynamite and lightning" are the motor powers. Matches are rendered needless by pocket electric lighters. Railroads run at the rate of three hundred miles an hour. Cars are rendered accident proof by india-rubber contrivances. When by some unforeseen accident people are cut or maimed in any way, they are cured by "Dr. Stackpole's Substitute for Man's Flesh, Blood, and Bone," the "component parts of which are chemically identical with the human body"; and the inventor is experimenting in hopes of eventually turning out human beings by his process. All the necessities of life are imitated through improved chemical knowledge and improved machinery. These are a few of the whimsical ideas which enliven a rather incredible and fragmentary story with all sorts of startling episodes scattered through it.

THE August or midsummer number of the *Century* is a very entertaining one. The especially seasonable articles are "A Glance at British Wild Flowers," by John Burroughs, beautifully illustrated by Alfred Parsons; "A Summer Holinight," by Edith M. Thomas; "Americans at Play," by Edward Eggleston; and the poems, "A Song of the Mocking Bird," by Maurice Thompson, and "A Bar Harbor Idyl," by Edward A. Church. As befits a midsummer number, there is more than usual space devoted to fiction. Two new serials are begun, "A New England Winter," by Henry James, and "A Problematic Character," by Hjalmar H. Boyesen. Mr. Cable's "Dr. Sevier" is continued. Frank Stockton gives one of his characteristic stories in "The Remarkable Wreck of the 'Thomas Hyke,'" and "Ivory Black" has an artistic story entitled "An Effect in Yellow." Three timely biographical sketches are given: of "Chinese Gordon," by W. T. Stead, a personal acquaintance of Gordon's; "Carmen Sylva," the literary Queen of Roumania, by Helen Zimmern; and an authentic paper on "Gen. Sam Houston," by Alexander Hynds. Among the illustrated articles, we note the third of Mrs. Van Rensselaer's series on "Recent Architecture in America" and "On the Track of Ulysses," by W. J. Stillman. Among the more serious papers are I. L. Rice's article on "Work for a Constitutional Convention" and Washington Gladden's "Three Dangers, Intemperance, Divorce, and Business Gambling." "Topics of the Times," "Open Letters," and "Bric-à-brac" contain readable shorter articles and poems of interest.

THE *Atlantic* for August has the following table of contents: "In War Time," by S. Weir Mitchell; "The Twilight of Greek and Roman Sculpture," by William Shields Liscomb; "The Zigzag Telegraph," a contribution to the scientific mind mysteries of to-day, such as clairvoyance, mind-reading, etc., by Lloyd G. Thompson; the second number of "A Cook's Tourist in Spain"; "Dinky," a story by Mary Beale Brainerd;

a sketch of "Nathaniel Parker Willis," by E. F. Hayward; "The Edda among the Algonquin Indians," a chapter from a forthcoming book by Charles G. Leland; "Bugs and Beasts before the Law," by E. P. Evans; "An Old New England Divine," being extracts from the quaint and heretofore unpublished diary of the Rev. Ezra Stiles; "The Anatomizing of William Shakspeare," by R. G. White; and an essay by Edith M. Thomas, entitled "Where It Listeth." "Studies in History," by Henry C. Lodge, and "The Life and Times of Frederick Denison Maurice" are the books noticed at length. The "Contributors' Club" is not remarkably brilliant this month.

THE *Catholic World* for August has the following interesting articles in addition to its two serial stories by Rev. J. Talbot Smith and E. G. Martin and the legend of "Ta-wan-dah, the Last of the Pecos," by Rev. J. H. Defouri: "Phases of Faith and Unfaith," by Prof. St. George Mivart; "Two Miraculous Conversions from Judaism," by Rev. A. F. Hewitt; "Concerning Sir Walter Raleigh," by Margaret F. Sullivan; "Cattle-Ranch Life in Colorado," by W. T. Larned; "Ruskin as a Teacher," by Agnes Repplier; "The Last of the Irish Bards," by Alfred M. Williams; "The Cost of Monarchy and Aristocracy in Great Britain," by W. F. Dennehy.

THE vacation number of *Wide Awake* (August) does not show much evidence of any vacation taken by its editor or contributors. Every contribution is so excellent of its kind that it is nearly impossible to note the particularly good ones. Among the most notable, we may name the account with portraits of the children of the Prince and Princess of Wales; "Our Royal Neighbors at Sandringham," by Mrs. Raymond Blathwayte; and the ninth of *Aesop's Fables* versified; "The Shepherd Boy and the Wolf," by Clara Doty Bates. Miss Phelps' story of "A Brave Girl" comes to a satisfactory conclusion in this number.

BABYLAND for August is, like all of D. Lothrop & Co.'s publications, as perfect in its way as any magazine of its kind could be. The babies who miss seeing and hearing about their lovely companions in this number we consider have been defrauded of their legitimate "babies' rights."

PROSPERITY is consistent with intense worldliness, intense selfishness, intense hardness of heart; while the grander features of human character,—self-sacrifice, disregard of pleasure, patriotism, love of knowledge, devotion to any great and good cause,—these have no tendency to bring men what is called fortune.—*Froude.*

BELVIDERE SEMINARY.

The plan of an Industrial School which was sent by the Misses Bush, of Belvidere Seminary, New Jersey, to the widow of Wendell Phillips, has received her approval and permission to name the institution, when established, the Wendell Phillips Memorial Industrial School.

The plan has also been highly commended by some of the most eminent educators in this country, and active measures are being taken to insure its success.

Its originators respectfully solicit such aid and influence in behalf of their enterprise as the friends of Wendell Phillips may be pleased to offer. They will confer personally or by letter with any one interested in their plan, and will very gratefully receive donations, in large or small amounts, of money, books, stationery, pictures, chemical and philosophical apparatus, or charts and specimens needed in the study of the Natural Sciences. All parties responding in any way substantially to this call will be considered founders of the institution.

Belvidere, Warren County, N.J.

THE FLORAL WORLD.

A SUPERB, ILLUSTRATED \$1.00 MONTHLY WILL
BE SENT ON TRIAL

FREE ONE YEAR!

To all who will enclose this ad. to us NOW with 12 2c. stamps to prepay postage. The *Indiana Farmer* says: "Contents interesting and to flower lovers well worth the price,—\$1.00 per year." Sworn subscription list over 12,000 in every State and Territory, Canada, Great Britain, South America, Africa, India, and Australia.

Mrs. R. A. Houk, Bingen, Ind., says: "It is the best floral paper I ever saw." Mrs. J. W. Fay, Big Beaver, Mich.: "It is magnificent!" Mrs. R. G. Stambach, Perth Amboy, N.J.: "Have never seen anything half so good." Mrs. J. L. Shankin, Seneca City, S.C.: "It is just splendid."

THE INVESTIGATOR.

Published every week at the Paine Memo-
rial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price \$3.00 per annum; 75 cts. for three
months to trial subscribers.

THE INVESTIGATOR, as heretofore or since
its first commencement upward of half a
century ago, is devoted to the welfare, im-
provement, and happiness of men and
women here and now, in this world, the
only world of which there is any positive or
demonstrated knowledge. This is the IN-
VESTIGATOR's basis of action, and the best
exertions of its manage will always be
used to render it a free and independent
journal, devoted to the development and
promotion of genuine Liberalism, or Uni-
versal Mental Liberty, Free Thought, Free
Inquiry, Free Speech, and a Free Press.

JOSIAH P. MENDUM,
PAINE MEMORIAL BUILDING,
Appleton St., Boston, Mass.

TRACTS.

No. 1.—*Truths for the Times*, by F. E.
Abbot, contains the "Fifty Affirmations"
and "Modern Principles." This especially
has received great commendation from
most distinguished men for the logical
clearness of its statements. New Edition.
Price 10 cents; 12 copies, \$1.00

No. 2.—*Fear of the Living God*, by O. B.
Frothingham, exposes the debasing char-
acter of the popular notions of God, and
presents conceptions of him that are wor-
thy of the nineteenth century. New edi-
tion. Price 5 cents; 12 copies, 50 cents.

No. 3.—*Lecture on the Bible*, by the Rev.
Charles Voysey, of England, is an over-
whelming demonstration of the imperfec-
tions and errors of the Bible, both in the
Old and the New Testaments. New Edi-
tion. Price 10 cents; 12 copies, \$1.00.

No. 4.—*Christian Propagandism*, by F. E.
Abbot, is an exposure of the weakness,
costliness, and inefficiency of the System
of Foreign Missions. *Full of Figures,
Facts, and Interesting Extractions.* Price 10
cents; 12 copies, \$1.00.

No. 5.—*"God in the Constitution,"* by
Rev. Arthur B. Bradford, opposes the
proposed Theological Amendment to the
United States Constitution. Price 10 cents;
12 copies, \$1.00.

No. 6.—*"The Sabbath,"* by Parker Pills-
bury, denounces Sabbatarian superstition.
New Edition. Price 10 cents; 12 copies,
\$1.00.

No. 7.—*"Compulsory Education,"* by
F. E. Abbot, maintains the right of every
child to be educated, and the duty of the
State to ensure it an education. Price 5
cents; 12 copies, 50 cents.

No. 8.—*The Present Heaven*, by O. B.
Frothingham, treats of a subject that in-
terests everybody. New Edition. Price 5
cents; 12 copies, 50 cents.

No. 13.—*On the Vision of Heaven*, by
Prof. F. W. Newman, of England, analyzes
the Christian conception of Heaven. Price
5 cents; 12 copies, 50 cents.

No. 14.—*A Study of Religion: The
Name and the Thing*, by F. E. Abbot,
attempts to show that the popular deriva-
tion of the word Religion is incorrect; that
the popular conceptions of Religion itself
are inadequate; and that a new conception
of it, based on the Law of Evolution, con-
sistent with absolute Freedom of Thought,
and independent even of belief in God, is
the necessary condition of the perpetuity
of Religion among men. Price 10 cents;
12 copies, \$1.00.

The Secret of the East;

OR,

The Origin of the Christian Religion
and the Significance of its
Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of crit-
ical and historical ground independently of
the Buddhistic analogies; it is in fact a vig-
orous, uncompromising outline of Christian
history, with all the weakness and wicked-
ness mercilessly dragged into daylight. ...
The case against the Christian Church is a
marvellously strong one. The superstitions
and miseries of mediævalism, the woes,
tortures, burnings, rackings, and brutalities
accomplished in the name of Christianity,
are set in blackest array. The Nature-wor-
ship of the pagan Greeks and Romans is set
in contrast. Nor is Dr. Oswald very gener-
ous in admission of improvement in con-
temporary Christianity. To him, it is a
hurtful supernaturalism, impeding science,
diffusing pessimism, promoting hypocrisy,
and repressing the physical nature. His
book is remarkably well written, brilliantly
concise in style, and, aside from its special
theories, of considerable scientific and his-
torical value."—*Boston Evening Transcript.*

THE BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from
Chicago and Council Bluffs (Omaha), and
that it is preferred by all well-posted trav-
ellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short
line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison,
Fort Howard (Green Bay), Wis., Winona,
Owatonna, Mankato, Minn., Cedar Rapids,
Des Moines, Webster City, Algona, Clinton,
Marshalltown, Iowa, Freeport, Elgin, Rock-
ford, Ill., are among its eight hundred local
stations on its lines.

Among a few of the numerous points of
superiority enjoyed by the patrons of this
road are its *Day Coaches*, which are the
finest that human art and ingenuity can
create; its *Palatial Sleeping Cars*,
which are models of comfort and elegance;
its *Palace Drawing Room Cars*,
which are unsurpassed by any; and its
widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other
road anywhere. In short, it is asserted that
it is the best equipped road in the
world.

All points of interest North, North-west,
and West of Chicago, business centres,
summer resorts, and noted hunting and
fishing grounds, are accessible by the vari-
ous branches of this road.

It owns and controls over five thousand
miles of road, and has over four hundred
passenger conductors constantly caring for
its millions of patrons.

Ask your ticket agent for tickets via this
route, and take none other. All leading
ticket agents sell them. It costs no more to
travel on this route that gives first-class ac-
commodations than it does to go by the
poorly equipped roads.

For maps, descriptive circulars, and sum-
mer resort papers, or other information not
obtainable at your local ticket office, write to the

CURRENT TOPICS.

BY B. F. U.

At a conference held last week in St. James Hall, London, composed of delegates from five hundred liberal associations and clubs throughout the country, Mr. John Morley, who presided, in a speech of vigorous eloquence said, "No power on earth can henceforth separate the question of mending the House of Commons from the question of mending or ending the House of Lords." The statement brought the thousands present to their feet with enthusiastic cheers. Sir John Lubbock moved a resolution condemning the action of the Lords. This and other resolutions, including one declaring it to be necessary to destroy the power of the Lords to thwart the will of the people, were carried unanimously. The Tories are not idle; and their programme, it is affirmed, is to fight the Franchise Bill during the autumn session in the Commons, and not to allow it to reach the House of Lords before Christmas.

Mr. JOHN FISKE's lecture before the Concord School of Philosophy last Thursday, instead of forming a part of the discussion of the doctrine of the immortality of the soul, was devoted wholly to an exposition of the theory of evolution, in its physical, psychical, and social aspects. The discourse was, it is unnecessary to say, able and brilliant, although it contained nothing new for those who are acquainted with the literature of evolution, including Mr. Fiske's own published works. But as Mrs. Harriette R. Shattuck, in her report in the evening *Transcript* of this city, says: "Those of the audience who expected to hear from Mr. Fiske either a refutation of immortality or an argument for it were equally disappointed. At the close of his fine exposition, he merely stated his own belief as a matter of faith, not pretending to deduce it from the theory of evolution." It is probable that the directors of the school desired and expected a discourse in which should be presented Mr. Fiske's views as to the teachings or implications of evolution regarding immortality; but Mr. Fiske had his own tastes and preferences, and he followed them. Rev. A. P. Peabody, Rev. R. A. Holland, Prof. Davidson, and Dr. W. T. Harris read elaborate and brilliant papers in defence of immortality.

JOHN STUART MILL said that the kind of testimony on which men were declared insane was ludicrous and frightful. According to a London despatch, on July 28th, in the court of the Queen's Bench, a verdict of £1,000 was rendered in favor of a Mrs. Weldon in a suit for damages against a physician who had signed a certificate for her seclusion as a "person of unsound mind, a fit subject for care and treatment," under which an attempt had been made to take her to an asylum. Mrs. Weldon conducted her own case in court. "A recent trial in England," says the London *Inquirer*, "shows that there are psychological experts—as 'mad-doctors' are now called—who can see undoubted proofs of insanity in what common-sense people regard as more or less harmless eccentricities. And, in some cases, the experts themselves are not free from suspicion of lunacy on their own principles. There is no doubt that some of the private lunatic asylums are presided over by men of the highest character and professional skill, but the dangers of abuse through the lax administration of the Lunacy Commissioners are admitted; and the remedy, as we ventured to point out in a recent review of Mrs. Lowe's *English Bastilles*, is to abolish private asylums, and to allow none but public institutions under careful government inspection."

A FEW weeks ago in the *Herald* of this city appeared a notice of Capt. R. C. Adams' *Travels in Faith*, which, unlike the reviews one is accustomed to read in the columns of that paper, was grossly unfair, unjust, and false. Whatever the reason or motive of such a notice, it is evident that, screened behind the impersonality of a daily journal on which many editorial pens are employed, the writer indulged in recklessness of statement which would have been guarded against, had the article appeared over his own name. The notice says: Capt. Adams "has been not a little notorious for articles in the religious press, both orthodox and liberal, in which he has cast severe reflections on his father and mother, and emptied the cesspool of his own coarseness and blunders into the lap of the public." One of these falsehoods is particularly atrocious, when the fact is considered that Adams' references to his parents in this volume, and in all his writings in which allusions to them occur, are marked by affection and reverent regard for their memory. Compared with such slanders as the above, mere depreciation of the book—such as the statement that it "is a reckless and luckless jumble of notions and opinions which are of value to nobody, and which, as a New England man, he ought to be ashamed to have written"—need not be noticed. In another column may be found a very fair review of *Travels in Faith*, copied from the Boston evening *Transcript*.

In his essay read at the Concord School of Philosophy last week, Rev. Dr. Peabody argued for immortality from the alleged fact of the resurrection of Christ. Prof. Thomas Davidson, in some remarks following the essay, regretted that, in support of the doctrine of immortal life, an appeal had been made to a doubtful historic event, when

the doctrine admitted of *demonstration* on purely philosophical grounds. We were assured by persons present that Prof. Davidson would undoubtedly keep good the promise he had made to demonstrate immortality with mathematical certainty. Those who spoke thus did so, it seemed to us, in the exuberance of their zeal from lack of acquaintance with the theories and the history of speculative philosophy during the past twenty-five centuries. We were not therefore surprised to read the following in a report of Prof. Davidson's essay by an intelligent member of the school and a disciple of Dr. Harris: "If proof can be conclusive when the argument from which it results is based on premises which are an assumption, and which need as much proof as the conclusion, then his [Prof. Davidson's] proof was conclusive. Prof. Davidson's logic seemed a chain of definitions with no fact as their basis. One felt inclined to apply to it the reply of Hamlet to Polonius, 'Words, words, words.'" From the abstract reports of Prof. Davidson's lecture which have appeared, it is of course impossible to judge as to the fairness of these strictures. It would be interesting to know what he thinks of the "demonstrations" of Rev. R. A. Holland and Dr. Harris who thought his reasoning inconclusive.

A CORRESPONDENT of the Boston *Advertiser* casts doubt upon the genuineness of the "Teachings of the Twelve Apostles,"—the famous manuscript which Bishop Philotheos Bryennios, metropolitan of Nicodemia, claimed some months since to have found ten years previous in the library belonging to the Holy Sepulchre in Constantinople. It was published last year by Bryennios with preface and notes; and the claim made for it was that it was a manuscript of the eleventh century, restoring to history a treatise belonging to the early part of the second century, which was quoted from and valued as high authority by early Fathers of the Christian Church. Hitherto, scholars have expressed surprise that the document, if genuine, was not discovered until 1873, since the library in which it was alleged to have been found had been ransacked by many scholars for years; but the *Advertiser's* correspondent, while forbearing to pronounce the work a forgery, gives some additional reasons for regarding its genuineness with suspicion, which he says is common among the scholars of the East. He thinks Bryennios competent, as respects ability, learning, and position, to construct such a work. He thinks American theologians have been too much in haste to credit the testimony of the metropolitan of Nicomedia. Prof. E. C. Smyth, of Andover, in a letter to the *Advertiser*, expresses the opinion that Bishop Bryennios' "conduct and character alone should shield him from suspicion, unless there is evidence against him very different from anything suggested by your correspondent." As the Springfield *Republican* remarks, "Whether this remarkable treatise is to pass into history as a true copy of one of the most interesting primers of the Christian faith or as one of the most ingenious of pious frauds yet awaits for further evidence."

WORK AND REST.

It has been calculated that if every human being of suitable age were to work four hours a day, the aggregate result would be amply adequate to supply all the needs of human life, even according to the most civilized standards of human need. Possibly, this calculation implies some curtailment in the matter of certain so-called luxuries; as, for instance, it might shorten the wine and cigar bills of some men, and cut down the extravagant ornamentation of dress indulged in by some women. Yet all wholesome wants and elevating tastes might still be supplied.

But suppose such a change in the industrial habits of people were to be at once inviolably decreed and that every capable person were to be compelled accordingly to work four hours a day, no more and no less, would the change be a benefit? Most probably not. And for the reason that the great majority of people would be entirely unprepared for such a momentous revolution in their methods of living. They would have a large amount of time thrown upon their hands, which they would be unable to put to any profitable use. Three-fourths of the active hours of every day would be holiday. And multitudes of people have not yet learned how to use aright the few holidays we have in this country. On the evening of the last Decoration Day in Boston, the day of all days that should be holily kept, we saw in half an hour's walk on two of the most frequented streets several badly intoxicated men, and this though the liquor saloons were ostensibly closed. In the present condition of society, leisure hours to very many people are either a burden or a moral peril. People either suffer ennui and lassitude on account of them, or else, their appetites being sensual, they indulge in animal gratification, and call that having a good time. To use leisure time well requires a certain amount of mental and moral education already. To limit work to four hours daily would mean for large numbers of people merely idleness for the remainder of the present working-day. They would not need the time for rest, and they would not be capable by their mental tastes and habits of using it for any other good purpose. Before they could profitably employ so much time, their mental and moral natures need to be much more effectively developed. And this is the general work of education,—a work which doubtless requires for its objects the gradual lessening in many cases of the hours of physical toil in order to secure the needed time for intellectual culture.

But idleness is never the kind of rest which human beings in general stand in need of. Where there has been overwork, it may sometimes be necessary as a medicine,—necessary for restoring the proper conditions of health. But, in a normal, healthful state of things, idleness, or the condition of nothing to do, has no place. Sleep is the natural mode of rest for the human faculties, when tired. But for the faculties to be awake and yet not active is something unnatural, monstrous. It betokens either disease or imbecility. The trouble is that, in idleness, the faculties usually are active, and that, not being turned by inward disposition to good, they easily slip to the wrong. Idleness is the bane of humanity. It is the season when temptations entrap their prey. Occupation is salvation to thousands of souls. Nor does it matter whether it be the poor or the rich who have this misfortune of idle hours. The kind of temptations may be different for the two classes, but the result is much the same. Some of the newspapers have recently reported the sad fate to which a number of wealthy young men of good families in New York have, in recent years, been brought

through the misfortune of having nothing to do. Several of them have gone from one gilded form of dissipation to another, until they have become common sots of the bar-rooms and streets. Genteel leisure may have more refinements surrounding it, but it is as full of danger as plebeian leisure.

Fortunate are they who, having no need to earn their daily bread, have yet resolved to earn the right to life by making their lives useful to their fellow-men; who, able to live without a single day's labor, have yet fixed upon some noble purpose, and voluntarily marked out for themselves a career to which they have heroically adhered, as if their daily sustenance depended upon it. Fortunate, too, are they who are kept in pure and honest ways by the necessity of honest toil. If they are deprived of some of the opportunities of those who are not necessitated by their lot to a life of toil, they escape also the peculiar perils of that kind of leisure.

Work will doubtless become more equalized among different classes of society as the world progresses, and some species of drudgery, it may be hoped, may be abolished by improved facilities and methods. But work in itself is the condition of human progress. It holds the warp and the woof of human destiny. Worth, character, success, happiness, all depend upon it. Nature offers its bounties to man, but as it were in the rough ore. If man would secure the full benefit of them, and attain to the full measure of his possible power, he must put forth his own energy of body and mind, in order to supplement and fulfil nature's purpose. And there is honor in all honest and needful work to this end. The leisure that is wanted is only leisure from excess of hard physical toil, so that mind and heart may more equally share in the productive and beneficent activity.

WM. J. POTTER.

THE COST OF MY ORANGE.

Every fruit, nut, or berry is an invitation. The invitation is not to man, but to birds and to lower mammals. Looking at the feast which Nature spreads, man might say that no seat at the table was reserved for him. If the vision which Peter saw had been a bloodless feast of fruits from Nature herself, the voice which he thought a voice from heaven would have been an invitation spoken in colors and odors to birds and bears and apes. And, if the man Peter had reached forth his hand, an uninvited guest, he would have seized an apple as bitter as a crab and an orange as unsavory as the wild apple. There is nothing good but a good man, and very little good for man except what he has made good.

My orange is very good. What was its cost? To make it an orange was the cost to Nature of countless forces and countless ages. To make it a good orange was the cost to man of incessant battle for a thousand years against Nature. My orange was not one of the fruits of paradise, if paradise was Nature in the morning flush. Bons passed over the globe before there was flower or fruit. Ethereal pulsations which our senses translate into heat and light beat against the world, and translate themselves into animals and plants. We all sit on the same throne with the Emperor of China, who calls himself "the Son of the Sun." Now, it appears from recent investigations that short and quick pulsations poured into space by a young sun are potent for the building up of weeds that do not flower, and that longer and slower pulsations issued from an older sun are more potent for the creation of flower and fruit. In corroboration of this view of the chemistries of the sunbeam, the geologic record tells us that

the morning of Nature had long passed before the earth was gemmed with a flower. The ancestor of my orange tree was a pre-carboniferous cryptogam. In the age which followed the carboniferous, it was a succulent weed bearing a yellow flower. Grant Allen has shown that yellow was probably the color of all primeval flowers, and that the yellow buttercup is probably very near to the pattern of the primeval flower. The parts of the flower, as every one knows, are modified leaves. The inner whorl of leaves forms the pistils. Now, in the buttercup, the pistils do not coalesce, but remain separate. This condition is very simple. It is called "*apocarpous*." The remote ancestor of my orange flower was probably yellow and certainly apocarpous.

The buttercup has no fruit. The seed is packed in a close-fitting pod, which does not split. Seed and pod seem as one. This form is called "*akene*." The ancestor of my orange, when the seed was evolved from the flower without an encasing rind of fruit, was an akene. The akene is prophetic of the legume. The pea is later than the buttercup.

In the struggle for life, plants have come to have something like rational beings. Why is it that in early spring so many weeds push into flower, only to have their bloom nipped by the frost? If the weed were rational and vocal, would it not say: "I have all the days of summer before me. I can ripen my seed and cast it into the ground, and see myself in weedlets long before the coming of winter. Why then should I not patiently wait the going of winter?"

This is not the voice of the weed. Its conduct, seemingly irrational, is prompted by a deep vegetable philosophy. Put in a human way, the language of the weed is this: "The struggle to live and the struggle for room to live in are very sharp. The willow stands at the water's edge, not from choice, but for sanctuary, driven there by competition. I want room. The plot of earth which I have pre-empted is not enough for my progeny. My neighbors, too, need room. Every weed wants to pre-empt the ground about it for its seeds. Now, we have found by experience reaching through many ages that the battle is to the swift, and that possession is nine points in our law. I find it better to incur the risk of frost, if I can gain time and cast my seed into the ground before my neighbor."

In struggle for room was the first impulse toward fruit. That plant or shrub which can disperse most widely its seeds has the advantage. For light seeds, the wind is a carrier. For seeds of greater bulk, other carriers are wanted.

The most fascinating chapters of botanical science are those in which Darwin and others have shown how flowers secure the attention of insects, and their service in impregnating the stigma with pollen. Equally fascinating would be the chapters in which another Darwin would show the many contrivances by which seeds have drafted the bird or mammal into service to secure their dispersion. To make the wind a servitor required only the evolution of a little sail or tuft of floss. To make the animal an unwilling servitor required only the development of little spikes, barbs, hooks, or harpoons. Sandspurs, burs, and beggarlice are as cheap, physiologically, as they are mean.

No animal will knowingly serve a plant for nothing. Nor will the plant serve the animal gratuitously. Now, the delicious pulp of my orange is of no immediate use to the tree. To produce it is a heavy draft on the tree's vitality. It were better for the tree as an individual to bear its seeds, as it did bear them once, in a pod. It were physiologically cheaper to arm them with spikes or barbs,

and thus send them abroad in the hair of mammals. But a time came in the history of the orange-tree when neither of these methods would secure the dispersion of the seeds. An investing rind of fruit was developed, an invitation to hungry mouths. The fruit was digestible, the seeds were not. Dispersion of the seeds was secured at the expense of growing the fruit.

The orange passed from the apocarpous condition through "variation" and "survival of the fittest." The seed-vessels coalesced, thickened, and became a sort of berry.

This is not a conjecture. The grape, too, is formed by a thickening of the seed-vessels; but, unlike the orange, it carries no vestige of a pod. The thin, longitudinal segments are the heirlooms an orange holds from a remote podlike ancestor. If proof were wanting, we have it in the tendency of all oranges to "split," and in the atavism seen now and then in an orange with the segments more or less completely separated at the apex. This is a lapse toward the apocarpous condition.

The orange which came from the labors of Nature to the quadrupedal and quadrumanous mammal was only "the promise and potency" of our orange. We know where Nature left off, but we do not know when man began. Prof. Heer has shown that the lake-dwellers of Switzerland in the times we call "Neolithic" and "Bronze" cultivated wheat, barley, oats, peas, and beans very inferior to those cultivated now in Europe. The Romans cultivated the pear; but, from Pliny's description, Darwin infers that it was such a pear as we would hardly tolerate now. DeCandolle has found in an ancient mosaic at Rome the representation of a melon; but, as the Romans say nothing about the melon, Darwin is led to infer that it had not yet become a delicious fruit.

The palate of paleolithic man, perhaps, was satisfied with the paleolithic orange. But, as man improved, his senses improved. When he rose above nature, his chief industry was to lift nature to the level of his improved tastes. He had a hard task with the orange. Fertilization and the plough and hoe and rake and pruning-knife have wrought a slow amelioration in the ill-flavored fruit. Sports of better flavor came; and these were "selected" by man, as long before the pulpiest pericarps had been selected by nature.

As man was working upward, Nature was increasing her enemies, and launching them against his work to thrust downward. The wild apple-tree has hardly an enemy, while ours has a hundred and seventy-six enemies. I do not know of any mortal enemy to the wild orange of Florida. Count the enemies of the Homosassa or Jaffa, and you are counting one item of cost, in human toil, of my orange. Nature is against it. Florida receives it into her sandy bosom with reluctance. She gives it room, and that is all. Her gopher burrows for it. Her white ant, a lapsed species, kills it by subterranean bites. Her "scale," another lapsed insect, fastens in countless billions on its leaves and bark, and sucks its life-juices. It is a fact of deep significance that all the deadly foes to the tree which is rising above its old level are species which have sunk below the level held by their ancestors. A heavy item in the cost of my orange is the killing of what, in a beneficent order of things, would never have lapsed, or lapsing would not have lingered to torment other organisms. The vilest superstitions—that is, things that "stand over" beyond their time—are infestations.

Another item, which scores high in the cost of an orange, is the correctives applied to the tree itself. I know something of

but no intelligence moves with the sap of an orange. The treelet has no idea that it will ever be a tree. Its growth seems a reminiscence. Its young shoots are angular, succulent weeds, which stop to rest before they round out and grow firm. They droop and sprawl, as if they were components of a vine. Most of them must be removed, and what is left must be directed.

With enemies in the ground and enemies in the air, the tree is an enemy to itself. Its thorns are terrific. They are simply aborted branches, and are not developed as an armor of defence to the tree. They spear and tear the leaves. They spear and spoil the fruit. They might have wrought for the very destruction of the tree. Here is a fact significant alike to the naturalist and the orange-grower.

During a wind storm last October, a large number of oranges were speared by thorns. The exuding juices attracted swarms of insects, and the insects attracted wood-peckers. The birds, in taking the insects, got incidentally a taste of orange. They liked it. A woodpecker discovered this luxury something as a Chinaman discovered roast pig. And it reasoned better than the Chinaman is said to have reasoned. It saw that the pulp had exuded from thorn-wounds, and it inferred that its place was inside the rind. A few birds, more progressive than the rest, were observed to peck unthorned oranges for the pulp. The habit cannot become general, as the anatomical structure of the woodpecker is fixed and is not adapted to orange-eating. If this habit had been acquired in early times, it might have deflected the lines of evolution, both of woodpecker and orange. If any case occurs in which birds devour the fruit without scattering the seeds, the end for which the fruit is would be defeated.

And, now, you have the delicious orange at a cost to you of three or five cents. But, if you have followed me through this paper, you have counted costs which may modify your views of nature, and shape in you a better philosophy. If the religion-makers of the race had been tillers of the soil and growers of fruit, all religions would have been what Buddhism is,—pessimistic.

W. D. GUNNING.

EMERSON AND THE CONCORD SCHOOL OF PHILOSOPHY.

II.

On Monday morning, July 28, two remarkably interesting essays were read by Mrs. Cheney and Miss Peabody. The former spoke of Emerson in Boston: first, as a school-boy, taking out the first volume of a novel for six cents from a circulating library, but never reading the second, because his aunt told him his mother could not afford such an expense; then, as a pastor; and, finally, as the lecturer, exercising an immense influence over the city's growing mind, though at first often undervalued. Thus, a young lawyer said to a lady, "I don't remember a word of Mr. Emerson's lecture last night, do you?" "Oh, yes: he said that shallow brains have short memories."

Miss Peabody opened her treasure of reminiscences by relating how Emerson said: "Without much faculty of verse, I am a poet; and I can't live anywhere but in the country. . . . My holiday home was always in Concord." She once asked him whether he would have developed as he did, if he had not had his Aunt Mary; and he answered: "Oh, that would have made a difference. Aunt Mary? Why, she was as great an influence as Greece or Rome." When nineteen, he gave lessons in Greek to Miss Peabody, who was a year younger; but scarcely a word beyond what was absolutely necessary passed between the shy stu-

dents, until she asked for his bill. Then, he called on her with his brother William, and said he had no bill; for he found he could teach her nothing. A dozen years later, when she told him how his hearers at East Lexington said, "We are a simple people; and we cannot understand any preacher but Mr. Emerson," he answered: "If I had not been cut off entirely from the pulpit, perhaps I might have made something of the sermon. Henceforth, the lyceum must be my pulpit." As he was correcting the proof-sheets of his Divinity School Address, she advised him to use a capital, when calling Jesus the friend; but he replied, "No: directly I put that capital F, my readers go to sleep." She also advised him to insert a passage which had been omitted in delivery, and would have disarmed some of Dr. Ware's objections; but he said: "No: it would be shabby to spring this passage now upon Dr. Ware. I must abide by what I delivered." Among his other sayings were these: "Whoever would preach Christ in these times must say nothing about him." "I feel myself to be in the midst of a truth which I do not comprehend, which comprehends me." When Miss Peabody asked him if there were not something in God corresponding to our human sensibility, he answered, "No."

That evening, Mr. Sanborn spoke of Emerson's equality as a poet with Dante, Shakspeare, and Milton. His prose, like Milton's, is the prose of a poet. In purity of will, also, he resembles Milton, who excelled in verse as he did in prose. Matthew Arnold's estimate of Emerson is peculiarly incorrect, in putting his poetry below Gray's, to which Mr. Sanborn considers it far superior.

Mr. Mozoomdar had been promised for the next morning; but he did not come over from Calcutta or send a word to be read aloud. So the lecturer was Dr. Harris on Emerson, Goethe, and Carlyle, preachers of the nineteenth century doctrine, which is the rise of the individual out of prescription into self-determination. Goethe looks at man as the result of institutions, and recognizes self-renunciation of the individual to the universal, which idea Carlyle accepts also. Emerson puts man above institutions. Our piercing seer discovers in Goethe only the self-seeker, and thinks him incapable of self-surrender to heroic devotion. Emerson could forgive things in Burns that he could not in Goethe, and was impatient of his velvet way of living. He sees clearly enough the place of Goethe in literature, but is not able thoroughly to account for it. Goethe alone has seen the contrast of the modern to the middle age. Carlyle spends his entire literary career in favor of individualism, as manifested by men in power or supported by institutions. Emerson, on the other hand, upholds personal morals.

Mr. Snider then spoke of Goethe as the emancipator of men from the modern Mephistopheles of negative culture. His life was inadequate to his works; but Emerson's life was above his works, though he was the fountain of American literature, and there are more centres in him than in any other man of the nineteenth century. He is our highest example save one.

That evening, Prof. René de Poyen Belleisle spoke extempore in French with great enthusiasm, and with remarkably thorough knowledge of Emerson's works. Referring to Mr. Burroughs' complaint of lack of unity, he made prominent the fact that Emerson was ever faithful to the highest of unities, that of aim. He always spoke as a reformer, and every word was meant to make men better. "Whenever I read *Nature*, I feel as if I were looking at the glory of the dawn," said the lecturer, whose own translation of "The Rhodora" into French was especially charming.

"The mind which stirs between
The wings of bees and building wasps";

Walt Whitman, H. G. O. Blake, and W. E. Channing all failing to appear or contribute anything for the next morning, a long hour was occupied by readings from Mr. Channing's generally ignored poems and accounts of Thoreau. That Transcendental Robin Hood was then portrayed in his relations to the Emerson household. These grew more intimate after the death of Charles, its most practical member, and then again during Mr. Emerson's journey to Europe. This last was the cause of his leaving the Walden hermitage. Little as Thoreau cared about money, no one could get the better of him when he was making bargains for others. Seldom was he false to his own words, "Staying at home is the heavenly way." He once wrote to a publisher: "I can sympathize with the barberry bush, whose business is solely to ripen its fruit, not to sweeten it. I mean only to earn enough to purchase silence with." Equally characteristic is Emerson's saying to Miss Peabody, when he had to go out to look at a load of wood, "We must see to those things, you know, as if they were real." Dr. Harris gave a powerful and lucid exposition of "Uriel," "The Elements," and "*Brahma*," which he illustrated by parallel passages from the Bhagavat-Gita. Mr. Sanborn closed by reading a poem sent for the occasion by Miss Amélie Veronique Petit, of Cornell University, and containing the following lines:—

"Great with the greatness of a gentle life,
Great with the greatness of a true, pure heart,
And of the spirit that upholds the right,
He lived; and, now, a grand, benignant teacher
Of highest truths, he sleeps as Plato sleeps.

... He lives,
Ever will live while thought immortal is,
While spirit outlasts sense, and truth supreme
And purity and love outshine the stars."

The last lecture of the Emerson week, that written for Wednesday evening, July 30, by Rev. G. W. Cooke, of Dedham, told how the Concord philosopher looked at nationality. Emerson was at once American and cosmopolitan. To him, all the nations were parts in the great anthem we call history. Nothing was dearer to him than his own country; and he created her literature through his appeal for insight into to-day. Zealous as he was that America should be American, he was equally desirous that we should not be partisans for her, but that she should remain the universal benefactor, hospitable to all the nations. To be true Americans, we must be faithful to humanity. Genuine democratic spirit bids us consider the rights of all men.

In this series of lectures, very little was said of Emerson's views of art or his relations to scientific thought, but otherwise his position was elaborately defined in every respect. Mr. Mead and Mr. Albee spoke in full sympathy with his views; but other speakers were unwilling to accept his antagonism to the Church, and inclined to suppose that he went backward in later years. It may be well to remember that he kept his place to the last among the Vice-Presidents of the Free Religious Association, that he published that extremely radical essay, "The Preacher," in 1880, and that, less than eighteen months before his death, he read carefully his Address at the Divinity School in 1888, and said he thought so still. When asked in his closing years what his views were, he would simply point to his books. It is best to do so now. Brilliant, learned, and reverential as are the men and women who have spoken and written about him at Concord and elsewhere, they have only made plainer the fact that he is his own best interpreter. The commentators can do nothing better than collect parallel passages from his own works. All that is necessary for any reader to understand him is to keep on reading.

The audiences have been much larger this summer than in previous years; and the school is certainly to be congratulated on having ceased to waste its time on childish fancies or meaningless abstractions, and presented so interesting and inspiring a theme.

F. M. HOLLAND.

SPENCER, HARRISON, AND RELIGION.

III.

The last word of Spencer is that "we are ever in the presence of an Infinite and Eternal Energy from which all things proceed." There is no absolute negation here. Though unknown, yet well known, is that Unknowable of which we can predicate eternity and infinity and the origination of all things that are. Mr. Spencer does but give a negative answer to the Old Testament demand: "Canst thou by searching find out God? Canst thou find out the Almighty to perfection?" But too often he has seemed to claim for the Unknowable as such religious inspiration. It is as devoid of it as Mr. Harrison contends. "The doctrine of evolution asserts, as the widest and deepest truth which the study of nature can disclose to us, that there exists a Power to which no limit in time or space is conceivable, and that all the phenomena of the universe are, whether they be what we call material or what we call spiritual phenomena, manifestations of this Infinite and Eternal Power." * Surely there is no lack of knowledge here. We cannot know anything aright without knowing it of God. The old claim of theology to be *Scientia scientiarum*, the Science of the sciences, was never made so good before as it is now. And it is what we know that makes the Unknown and the Unknowable the boundless continent of religious sentiments and aspirations. What makes the unknown so quickening to our awe, our gladness, and our trust, is that the little we do know is so wonderful, so marvellous; and we proceed to people all the vast unknown with the benignant forms and forces that have been openly revealed to us. When Charles Lamb was fifteen and Mary twenty-six, they saw the sea for the first time, and were not a little disappointed because they expected to see "all the sea at once, the commensurate antagonist of the earth." But, when we stand on the sea-shore and look seaward, is it only, as he said, "a slip of salt water" that we see, or only

"Eastward as far as the eye can see,
Eastward, eastward endlessly
The sparkle and tremor of purple sea"?

It may be all we see, it is not all we feel. Surely, what fills us with a joy so keen that it is almost pain is not alone the flashing tumult of the great expanse of waters: it is also that beyond where sky and water meet, with the mind's eye, we see the ocean reaching on and on, and beautiful with the same unspeakable beauty as the little space that lies within our field of actual vision. It is the beauty of the known that makes the beauty of the unknown so sure and so entrancing. And, just as surely, the soul's normal delight in the infinite God is not produced by any purely negative unknown. No more is it by any positive known. No, but by our warrantable conviction that all the infinite unknown is, equally with the little territory that we know, the haunt of beauty, order, symmetry, and law.

Of such an Unknowable as this, unknown in itself as all things are, not less Mr. Harrison's Humanity than Mr. Spencer's Infinite and Eternal Energy, but known as infinite and eternal, known as the Source of everything that is, known as it manifests in all things we can see or hear or apprehend in any way with sense or mind, better and

better known with every new advance of science, —of such an Unknowable as this it is hardly so allowable to speak disrespectfully as of the equator. To make a religion out of our relation to it is hardly as extravagant as it would be to make a religion out of our relations to the equator. There is nothing sweet and good in Mr. Harrison's Religion of Humanity that is not here as well. George Eliot's "Choir Invisible" is here, "whose music is the gladness of the world." The motive, "other men have labored," is here to shame our negligence in entering into their labors; but, with more generous inclusions, all souls, not merely all saints, accounted parts of that Grand Humanity which demands our highest service and our deepest love. Herbert Spencer's *Data of Ethics* is but a single chapter in his doctrine of religion, and Positivism is not a whit more exigent than that in its demands for sympathy and mutual furtherance between man and man. All that is valuable in ethical Positivism is in ethical Evolutionism too. But the Religion of Humanity does not involve all that is best in the religion of the evolutionist, save when it lapses into some woful inconsistency, as it does when Mr. Harrison declares: "Humanity is the grandest object of reverence within the region of the real and known. *Humanity with the world on which it rests as its base and environment.*" "You should see Vich Ian Vohr with his tail on," says Evan Dhu to Waverley, in Scott's romance. And here is humanity with a tail on, such as no comet ever swung through heavenly spaces,—the world on which it rests as its base and environment." With this trifling addition of the infinite and eternal universe to Mr. Harrison's Humanity, it answers quite as well as Mr. Spencer's "Infinite and Eternal Energy, from which all things proceed," for the principal object of religious admiration, awe, and trust.

The God of Evolutionism does not invite to wonder and to mystery alone. It does invite to these, as Mr. Harrison allows; yet not for a mere unknown, but for an Unknown shot through and through with gleams from the great sun of knowledge which is mounting steadily the morning sky of human history. It invites to these with a persuasion that grows every day more irresistible. But it invites no less to every one of those attitudes and beatitudes of mind and heart which Mr. Harrison declares to be the roots and fibres of religion, and, to a degree, toward which the Religion of Humanity, without its universe annex, must ever strive in vain. It invites to "love, awe, sympathy, gratitude, consciousness of dependence, ... reverence for majesty, goodness, creative energy, and life." It is not "a religion only to stare at." It is a religion that is a principle that responds to Mr. Harrison's demand that it shall be capable of "affecting human life by acting on the human spirit," and capable of expressing itself in institutions looking to these ends.

It is Mr. Harrison's insistence that a religion is worthless which does not directly concern itself with human conduct. And Mr. Matthew Arnold has told us, with considerable iteration, that conduct is three-fourths of human life. If it were seven-eighths, or even a larger fraction, a religion that had no concern with human conduct, if such a thing were possible, might not be worthless. It might "sustain and harmonize our thoughts about the world we live in and our place in that world," and this alone would be no trifling boon. The religion of evolution does exactly this; for it is part and parcel of a science and philosophy that exhibit all the parts of the great whole of things as linked and orderly, so that, as George Herbert sang,—

"Each part may call the farthest brother."

* *Excursions of an Evolutionist*, John Fiske, p. 301.

A religion that did no more than so sustain and tranquillize our thoughts upon the bosom of an everlasting faithfulness,—which Science names the invariable law,—would not, I think, be wholly unconcerned with human life. But the religion of evolutionism is concerned with human life in a more obvious manner. "For clearly, when you say of a moral belief that it is a product of evolution, you imply that it is something which the universe through untold ages has been laboring to bring forth, and you ascribe to it a value proportionate to the enormous effort it has cost to produce it."* There are those who consciously oppose themselves to evolutionism, who claim for ethics a religious source and aim, and imagine that in doing this they are antagonizing the philosophy of evolution. But never has a system of ethics been conceived that is more fundamentally religious than the ethics of the consistent evolutionist. He is not talking rhetoric, but science, when he declares that the distinction between right and wrong is rooted in the deepest foundations of the universe. When Wordsworth in his "Ode to Duty" sings,—

"Thou dost preserve the stars from wrong,
And the most ancient heavens through thee are fresh and strong,"

he is not more poetical than scientific. For the same Unending Genesis that evolved the original nebula into suns and stars has wrought into the inmost substance of the universe the principles of right and wrong. "Human responsibility," says Mr. Fiske, "is made more strict and solemn than ever, when the Eternal Power that lives in every event of the universe is seen to be in the deepest possible sense the author of the moral law that should guide our lives, and in obedience to which lies our only guarantee of the happiness which is incorruptible,—which neither inevitable misfortune nor unmerited obloquy can ever take away."

It is no ghost of religion, that appeals to us with thoughts and sanctions such as these. It is a veritable religion, capable of "affecting human life by acting on the human spirit" as no substitute for religion can do, even one so high and noble as the so-called Religion of Humanity. For it not only gives to moral sanctions

"an equal date
With Andes and with Ararat,"

but, seeing that the moral law is rooted in the foundations of the universe, the universe is moralized by this perception: the infinite dark of the Unknown orbs itself into a Sun of Righteousness with healing in its wings.

JOHN W. CHADWICK.

EDITORIAL NOTES.

BY B. F. U.

MR. CHARLES WATTS informs us that he expects to arrive in America the first week in September; and he wishes applications for lectures to be addressed to him at 248 Yonge Street, Toronto, Ont., care of Mr. A. Piddington.

The *Sunday School Times* remarks that "what is wanted for keeping the world moving is not the capacity for finding easy ruts, but the quick eye and skilled intelligence which will enable one to break new paths where necessary, and to lead wisely rather than to be led unwisely."

In a recent speech, Col. T. W. Higginson said: "Many think that it is easy to get out of a party, but very hard to get in again. The reverse is true. It is hard to get out of a party. We have to sever old ties and read newspapers. But to get in again is easy. It is like going through an oiled door."

* *Excursions of an Evolutionist*, John Fiske, p. 303.

"Not as adventitious, therefore," says Spencer, "will the wise man regard the faith that is in him. The highest truth he sees he will fearlessly utter; knowing that, let what may come, he is thus playing his right part in the world,—knowing that, if he can effect the change he aims at, well; if not, well also, though not so well." Nobler far are these words than any that defend or excuse a temporizing policy.

In his *Outlines of Psychology with Special Reference to the Theory of Education*, Mr. James Sully relates that a little girl less than five years old, after watching her father, a clergyman, some time while he was writing a sermon, put to him the following question, "Papa, does God tell you what to write in a sermon?" With some little hesitation, the father replied in the affirmative. Whereupon, he was ignominiously nonplussed by the further question, "Then, papa, why do you scratch it out again?"

MR. BLAINE'S proposed amendment to the Federal Constitution—presented by him in the House of Representatives in December, 1875—was as follows: "No State shall make any law respecting an establishment of religion or prohibiting the free exercise thereof; and no money raised by taxation in any State for the support of public schools, or derived from any public fund therefor, shall ever be under the control of any religious sect, nor shall any money so raised ever be divided between religious sects or denominations."

THE *Indian Messenger* says: "True leadership and true faculty of organization are always to be tested by two things: first, by the leader's ability to develop and foster real individual worth within the community; secondly, by his tact and ability to utilize all the available worth for the continued progress of the movement. But these were just the two things in which the late Mr. Sen was deficient. He strenuously opposed the idea of a constitutional mode of church government, which, perhaps, is the best means of fostering individual worth in a church; and he also pursued a policy of keeping at a distance every one who had intelligence and independence, and who dared to signify his dissent from his views."

THE *Haverhill Laborer*, published in the interests of the Knights of Labor, Frank K. Foster, editor, says: "The way of reform is through knowledge. The philosophy of progress must be made to supplant that of fossilism. The labor press must do its share in effecting this revolution. The results of competition must be exhibited in all their foulness, the possibilities of existence under a just system of distribution and exchange be pictured in their full beauty. Our earth sweeps through its orbit with almost inconceivable force and velocity, yet so nicely adjusted are the elements of nature that we perceive no motion whatever. So also may it be in the world of social change, that because of our finite perception we can hardly comprehend the velocity with which the race moves on toward new conditions and new possibilities."

In England, the same as in this country, the Protestant clergy, as a class, oppose every effort to increase opportunities and means of popular Sunday enjoyment, without going either to church or to the dram shop. In Swansea, after permission had been obtained from the town council for the band to play in the afternoon, and when the police reports bore unequivocal testimony to the improved conduct of the lower classes from the time the playing commenced, the local clergy, church and nonconformist, put their heads together, got up a demonstration against the open-air concerts, and brought sufficient influence to bear upon the town council to secure the reversal of its decision.

It is fortunate that they cannot stop the singing of birds and the blooming and perfume of flowers on Sunday. The fact that they are a source of pleasure to those who go through the parks, and in the fields and woods on that day, would be a great temptation to the orthodox clergy to suppress them, if they had the power.

FANNIE BRIGHAM WARD writes from Mexico to the *Springfield Republican*: "They mix religion with their drinks, as with everything else in this Catholic country, in a manner which elsewhere would be considered somewhat sacrilegious. Every pulqueria has a picture of the Blessed Virgin or its patron saint hung up above the barrels; and a little shrine, with crucifix and burning candles, is crowded among the bottles. The names of these shops are frequently more religious than appropriate. For instance, one opposite my window is called *La Cantina del Merced*,—the saloon of mercy: that on the nearest corner is christened 'The True Faith,' and a little further down the street is another dedicated 'To the Mother of God'! Another rejoices under the rather ambiguous title *Vamos al golfo de Mexico*,—'Let us go to the Gulf of Mexico'; and scores of them are dedicated to Jesus, St. Joseph, St. John, St. Peter, St. Paul, Santissima Maria, and all the other virgins, saints, and angels known in the calendar."

MR. B. W. BALL writes us in regard to a colored artist: "Providence, R.I., is proud of her colored artist, Mr. E. M. Bannister, and has reason to be. He would be a man of mark personally in a group even of distinguished men. His head is simply superb,—the head, in one word, of an artist and poet. Genius beams from every lineament of his face. His portraits and landscapes indicate his capabilities as an artist. I am no art critic, and therefore can only express a sort of indiscriminate and indiscriminating admiration of several portraits and landscapes which Mr. Bannister was kind enough to exhibit to me at his studio, No. 2 College Street, Providence. I particularly remember a flock of sheep in a secluded nook, looking across the water to Newport. The artist's talk was as interesting as his pictures. Mr. Bannister is not only a credit to his own people, but he is a credit to the country also.

"Up! and the dusky race
That sat in darkness long,
Be swift their feet as antelopes,
And as Behemoth strong."

A FRIEND who was active and prominent as an abolitionist, in a letter referring to some statements recently made in regard to the religious belief of abolitionists, writes: "If being 'of the Garrisonian school' means, as I think it does, insisting on the duty of an immediate and unconditional abolition of slavery, Theodore Parker belonged to it, as he held that position from the beginning. As to the Garrisonian abolitionists agreeing with Parker in theology, I don't see how any general statement can be made. Some agreed with him, and some did not. Most of the abolitionists, having been born and educated under the orthodox faith, naturally adhered to the traditions of the elders, and did not venture to think for themselves about theological matters. But, of those who did venture to inquire about the foundations of Orthodoxy, I feel sure that the majority found Parker to be right, as I did. I feel sure also that those church members who became abolitionists became so through outside influence, and in spite of vehement opposition from church and clergy."

WE have the writer's permission to give the following extract from a private letter from Mr. Charles Froebel, of New York (243 East 19th Street), whose fine essay in this number of *The*

Index and another from the same pen, to appear next week, will command wide attention and be read with great interest by many thinkers: "In the course of a changeable life in the Old World and in this, no more than three consecutive years of which—between my tenth and thirtieth—were ever spent in any one place; in the alternate occupations of a student of nature, mining adventurer, day laborer, merchant's clerk, soldier, and during the last ten years teacher of chemistry,—in personal intercourse with all classes of society from the man of standing to the outlaw,—I have had considerable opportunity for study and observation. Undoubtedly, the formation of my mind has been most powerfully influenced by the writings of Goethe and Spencer (and, of course, Darwin). But, next to these, I feel sure, I owe more to the literary works of my father [Julius Froebel] than to any other living author. The list of my most valued teachers would still be incomplete, were I to leave unmentioned the name of a well-known American scientist, James D. Dana. It was, if I recollect aright, in some of the older editions of his *System of Mineralogy* that I found the germs of far-reaching views in regard to the laws of form and isomorphism,—the very laws which, when fully developed, will be required to complete the laws of evolution."

THE *Independent*, commenting on the action of the mayors of Toulon and Marseilles in refusing the petitions of the Catholics for permission to parade the streets and have public prayers for the abatement of the cholera, remarks that the "influence of an organized gathering, in a solemn procession of ten thousand people, all earnestly believing in prayer, and beseeching God to remove the plague, would, we believe, be more helpful than harmful. Even those who do not themselves do much praying would get the impression of a mysterious force of some sort that was being invoked against the pest, and would themselves be encouraged to resist the contagion. . . . The prohibition also assumes that prayer is a feeble influence, or, perhaps we should say, God is a feeble factor in controlling pestilence. That means, of course, that God takes very little interest in pestilence; that he sits on a distant and desert throne in the undiscovered polar regions of the universe, where no explorer's fleet, however freshly its sails may be filled by the breath of prayer, can reach him, and whence no message goes forth to control the execution of the laws of the universe, which he may once have imposed, but has now forgotten. We can take no such view." Another and a more sensible view is that of the *Springfield Republican*, which thinks the prohibition simply "means that the mayors in question think that great congregations of excitable and terror-stricken people in times of infection are dangerous, and that the efficacy of prayer can be resorted to in the stated places of worship or in separate residences. A deacon, in an obscure church in the interior of New York State, once began his prayer in this way: 'O Lord, thou hast doubtless read in yesterday's papers,' etc. The deacon's assumption was perfectly correct; and there is no doubt that the Lord has heard of the cholera plague, and does not mind a public procession in the premises."

We have never seen any of the performances of the "Georgia wonder," Miss Lulu Hurst; but not a few who have, and after reading numerous "scientific" expositions of her powers, are of the opinion that the notoriety she has gained is due to her physical strength and dexterity, the extravagant claims of her managers, and the superstitious credulity of the people. Says the *New York Times*: "The present 'Georgia wonder' is now

fairly well understood. She is a strong girl, with a knack, greatly increased by practice, of twisting umbrellas and billiard cues out of the hands, and chairs from under the bodies, of weaker and less wary persons. The interest, however, of seeing an 'investigator' stood on his head in the flies of a theatre, or a cotton broker sitting on the floor with unexpected precipitation, is not a scientific interest, but an interest of the same kind as that which attends a competitive examination in climbing a greased pole or catching a soaped pig, or the running of a foot-race by pedestrians whose bifurcation is dissembled by bags. It is perhaps well that we should be occasionally reminded what abysses of gullibility are yawning all around us. When we are too prone to forget it, some 'Georgia wonder' appears, and by brandishing a cotton broker in the faces of a theatre full of people brings out in full force the human capacity for belief. The more credulous write letters to the newspapers, explaining that the cotton broker was brought to grief by 'odid force,' or that the muscular power which enables a girl to smash an umbrella is not her own, but that of her deceased grandmother. It has been sufficiently shown that, when the Georgia wonder encounters a trained athlete who is stronger than herself and equally quick, neither odid force nor the spirit of her grandmother has the slightest effect upon him. In the mean time, her season in New York has had the effect of bringing out the latent credulity of a large part of the public."

A MONUMENT, erected to Nathaniel Sylvester, shipmaster, merchant, and banker of two hundred years ago, was unveiled recently on Shelter Island, N.Y., which is opposite the town of Greenport, L.I., in the presence of five hundred spectators. Among the inscriptions on the stone are the following: "Of the sufferings for conscience' sake of friends of Nathaniel Sylvester, most of whom sought shelter here, including George Fox, founder of the Society of Quakers, and of his followers, Mary Dyer, William Robinson, Marmaduke Stevenson, and William Leddra, who were executed on Boston Common; Lawrence and Cassandra Southwick, despoiled, imprisoned, starved, whipped, banished, who fled here to die; Daniel Gould, bound to the gun-carriage and lashed; Edward Wharton, 'the much scourged'; Christopher Holder, 'the mutilated'; Humphrey Norton, 'the branded'; John Rous, 'the maimed'; Giles Sylvester, 'the champion'; Ralph Goldsmith, 'the shipmaster'; Samuel Shattuck, of 'The King's Missive,'—these stones are a testimony. The Puritan in his pride, overcome by the faith of the Quaker, gave Lexington and Concord and Bunker Hill to history. The blood and the spirit of victor and vanquished alike are of the glory of Massachusetts." Prof. Louis Dyer of Harvard College, a descendant of Mary Dyer who was executed on Boston Common, read the following original sonnet, dedicated to his famous but ill-fated ancestor:

"Long shalt thou live, who wert in haste to die;
In law's despite was shown thy loyalty;
In love's defiance stood thy constancy;
Thy weakness lent thee strength and voice to cry,
'Silence no earthly price from me shall buy!'
Most pleased in prison, in straitest bonds most free,
Thy death was life, defeat was victory:
The truth was with thee, God thy strong ally,
When right, outraged, required thy wrongful death;
When mercy was for mercy's sake denied;
When cruelty to earth called kindness back;
When even for those who most thy name deride,
Freely for freedom spending thy last breath,
Dying thou bought'st what living thou didst lack.

"Because for liberty thou didst forget
Thyself and thy dear life, shall we no more
Remember thee? Can we, who careless live
This life of freedom which thy death did give,
Who see this sun which saw the slain of yore,
Thy debtors still can we deny the debt?"

The Index.

BOSTON, AUGUST 7, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, : : : : : } Editors.
BENJAMIN F. UNDERWOOD, : : : : : }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

The Religious Confession of an Evolutionist.

BY CHARLES FROEBEL.

The True Relation of Religion to Science, Metaphysics, and Esthetics in Human Nature.

The human intellect demands a positive knowledge, the human heart a positive faith. A momentous discussion—borne on one side by the loyal defenders of a time honored religious belief, on the other by the aggressive warriors of scientific thought—is permeating the literature of our time. Deny it we cannot. We are living in the midst of a mental war of such magnitude, and having for its objects of contention possessions of such vast psychic interest, as to make it impossible to overestimate the importance of the struggle. For, although hostile intentions have been on both sides disavowed, though the churchman has declared his respect for "real science," and the scientist his reverence for "true religion," yet the "real" science of the former would be regarded by but few of its calmest thinkers as anything but a crushed and humbled science, despoiled of its fairest, rightful possessions; while the "true" religion of the scientist would be rejected by the generality of the most dispassionate votaries as scarcely more than the disembodied shade of a religion robbed of its most cherished treasures, in fact but a philosophical system, and no religion at all.

The animating spirit of the opposing armies, though masked by pretended concession, is thus discovered to be one of uncompromising hostility, explicable only on the hypothesis that each power is endeavoring to occupy domains which are rightfully subject to the sway of the other,—that the priest is arrogating to himself the function of the scientist, and the scientist is seeking to usurp the office of the priest.

At present, science occupies seemingly impregnable positions. The power of the churches, imbued with the spirit of perhaps valiant but strategically incompetent commanders, stubbornly refuses

to change its base of operations to that vantage-ground directly opposite to the weakest defences of science, which but awaits unopposed occupation. This vantage-ground is that of a truer appreciation of the relations subsisting between certain "psychical phases of being," among which religion and science are to be classed as divisions. This appreciation, with the proper recognition of the further fact that, besides these two, there are other phases, between-lying philosophical domains,—which religion and science must, in the course of their struggle for supremacy, alternately invade,—is as yet wanting. When it shall prevail, it will inevitably lead to a complete change in the relative position of the contending powers, and before long to the conclusion of a lasting, beneficent, and honorable peace.

It will hardly be disputed in our day, by either sincere priest or scientist, that the entire range of man's psychical life is the resultant of relations subsisting between his essential nature and its environment. What our personal religio-partisan view of the true character of that nature (or soul) and its environment may be—whether the latter be thought of as a state of human consciousness, or a condition of the universe or deity, limited or unlimited in extent, finitely or infinitely near or distant in space or time, or both—is of no consequence in this connection. But what these *relations between man and his environment necessarily* must be may serve as a sound basis for their proper definition and classification.

The essential nature (soul, etc.) of the human being is manifested solely through the influences which it receives from or distributes to its environment. In the course of this process, the—always more or less complex—influences involved may or may not be subjected to a disturbance of their integral character. Coming from without, they may be integrally received or synthetically combined by the feelings to unconscious (aesthetic or religious) impressions of the beautiful, or, passing through the analytical prism of logical cognition, they may appear in consciousness as (scientific or metaphysical) spectra of the true. Proceeding from within, they may be analytically and consciously dispersed (by the will) or synthetically and unconsciously gathered (by impulse), and projected into the focus of action. Evidently, therefore, we must assume the existence, on the one side, of an unconscious, emotional, synthetical phase, and, on the other, of a conscious, logical, analytical phase, of human existence.

The power of understanding (*i.e.*, of entering into relations with) the "infinite" has been generally held to be denied to finite human nature. But, when we consider that the infinite differences of magnitude necessarily existing between infinitely small and finitely large portions of psychical processes constitute an incontrovertible fact of that nature, we may certainly question whether these very differences ("innate non-relations") do not furnish a reliable set of measures for any infinite environments. Be this as it may, the higher mathematics holds itself competent to deal with the powers of the infinite, and has therefore actually brought us into relations with these. And, for these reasons, we cannot forbear to assert the existence of not only a finite, but likewise of an infinite phase of psychical being, all forms of finite, logical, and emotional life inhabiting the domains of science and aesthetics proper being assigned to the former; all infinite forms, citizens of the empires of metaphysics and religion, to the latter phase.

To recapitulate, we emphatically claim that all psychical phases of human life consist of sets of relations subsisting between the essential nature

of man and an environment which may be finite or infinite in extent, and that these relations are mediated either by the unconscious synthetical action of the feelings or by the conscious analytical activity of thought. We are thus compelled to recognize four fundamental phases of psychical life:—

RELIGION. (Infinite Synthetical Phase.)	METAPHYSICS. (Infinite Analytical Phase.)
ESTHETICS. (Finite Synthetical Phase.)	SCIENCE. (Finite Analytical Phase.)

Each of these phases may evidently appear either in a receptive or expressive mood.

The Duties of Religion and Science.

All religious creeds which would sway humanity are bound to the eternal obligation of presenting plausible explanations of the ultimate origin and destiny of things. But, in faithfully performing this duty, they must necessarily bring an infinitely remote origin and end into relations with present finite existence, and thereby enter the sovereign domain of science. They can only approach its confines by a system of logically connected explanations of the various aspects of the infinite,—a road traversing and lying wholly within the empire of metaphysics. Or when, as often happens, this highway is impassable, they are compelled to seek expression for the intangible infinite meanings of their system through the tangible finite symbols of art, for this purpose occupying more or less permanently portions of the realm of aesthetics. Thus it would appear that the religious power has not only at all times encroached upon the legitimate domain of science, but that it has likewise frequently occupied the intermediate sovereign territories of aesthetics and metaphysics, drawing therefrom auxiliary support against its hereditary enemy. Such has been the aspect and condition of psychical affairs at various times in the world's history: such it must be again and always, whenever a vigorous faith in the strength and beauty of early youth enters the field of the present.

But when, in the eventful course of human development, the aggressive *ethical* spirit of creeds is broken by opposing *natural* forces, there comes a change. No longer able to sway men's hearts with the magic spell of an enthusiastically felt faith, the hand of religion falls powerless by her side. No longer able to sustain men, in the midst of their life's wreck, by a beacon of transcendent hopes,—waning day by day in spiritual strength and the number of its adherents,—a creed exists only because that stronger, bolder, purer belief, which sooner or later must seize upon a throne so unworthily occupied, has not yet been born or attained its maturity. And we need not be astonished to behold at such times psychical forces other than religious, extending the limits of apparent sovereignty beyond their legitimate boundaries. No wonder that even now the scientific power, overrunning the territory of metaphysics, is making inroads upon the religious state. No wonder that political effort is now but exceptionally directed in the interest of the Church. No wonder that an emotionally chilled art no longer tenders her devout interpretations. And no wonder that religion has been compelled either to surrender the greater part of her dogmatic claims or at least to abstain from openly asserting much upon which she may still in secret insist. For just so long as she endeavors indiscriminately to maintain possessions to which she has no title, as well as of those to which she has, her efforts will be so enfeebled by the extent of the psychical territories she seeks to control that she will find herself despoiled of everything, till she is poor indeed,—in fact, no religion at all, but the mere dethroned claimant of a metaphysically garrisoned dependency of science.

To avoid this disaster, religion must acknowledge her limitations. She must admit that while she claims that region which science terms "the unknowable," as her legitimate inheritance, yet the forms dwelling in this region are for her no more knowable than for science: she must acknowledge that on this field, not science only, but she as well is agnostic,—unable to know. For it is in the form of *belief* and not in that of *knowledge* that she must and can maintain her rights. To the charge of science, "You do not know!" she must reply, "My cognition springs from sources of higher authority: I believe!" When science insists that she has no tangible reasons for her beliefs, she must answer that she has more tangible wants, affections, and desires. And, when she occupies that position, religion will no longer be vulnerable. Like the wonderful shadowy form of some oriental tale, the arrows of science will pass through her leaving no wound; the sword of reason may seem to cleave her; but she will stand there still unharmed,—the eternal! the mysterious! the all-beautiful!

From the vantage-ground now held by science, she has been able not only to reasonably state the natural laws which have directed the evolution of still prevailing religious creeds, but even to indicate the critical conditions which scientific thought will in the near future be prepared to dictate as ultimate terms of peace to her antagonist. This much science has accomplished, but she can and must do even more before she lays down her arms. She must demonstrate to the churchman not only to what *external* laws of the great analytical power of thought he must conform his creed, but also what *internal* laws of the equally great synthetical power of feeling must inform his system of beliefs, if he would desire it to further dominate mankind. This latter internal law is that of the duty which religion owes to humanity,—that of supplying the means of consolation for the defeats of intellectual and physical power.

The first-felt wants of the human being seek for immediate physical satisfaction. The babe's tiny hand clutches at the object of desire, be it bottle or moon; and, only when unconscious impulsive effort at physical acquisition has proved a failure, thought is born. The integral impressions received from the environment are analytically broken, and philosophically dispersed in that wonderful spectrum of conscious knowledge ever growing in complexity, and the range and delicacy of distinction of its component tints. Then, by the application of this "spectrum of the tangible" to technical invention, the domain of physical power is slowly but surely extended, until, when the latter's necessities limits are reached, thought continues on alone, carving out of the physically unapproachable regions of desire an independent state. Then logical cognition is added to cognition, truth to truth, until even here an impassable barrier cries, "Halt! thus far shalt thou know, and no further!" But, beyond this barrier, the human heart still feels a claim: belief takes the field, and does not stay its advance till it has extended man's psychical sway to those remotest confines of possible dominion never trod by physical or intellectual force.

While the victorious advances of physical, intellectual, and even emotional prowess are each in their turn checked by barriers insurmountable to their power, in the reverse order this is not the case. Knowledge may enter the domain of physical possession when and wheresoever it pleases, for the latter is but its most powerful vassal. Belief may pass at will over the territory of both: it but confirms their title. Its authority is the highest, it is supreme.

To restate our position. The external condi-

tions of peace with science, to which religion must conform, are those of the former's fundamental primary ideas. Without her sincere acceptance of the scientific premises of the indestructibility of matter, the persistence of force and the continuity of motion, and of their first logical resultant, the thesis of evolution, religion will not be permitted to recuperate her power. The internal conditions which, if she would re-establish her sway over the human heart, must inform religion, are those of a promised satisfaction of the ultimate wants, affections, and desires of humanity,—infinite power, infinite wisdom, and infinite love and happiness. The beacon of religion must light the path where the rays of knowledge can never penetrate.

The Relation of the Evolutionist to Ultimate Religious Parties.

In the consideration of the questions here discussed, let it not be forgotten that science herself has been but lately transfused with the blood and spirit of evolutionist ideas. Hence all this heat and enthusiasm of the young convert:—

"Dies ist der Jugend edelster Beruf!
Die Welt, sie war nicht, eh' ich sie erschuf."

Hence these assaults on even those religious citadels which are in reality impregnable; hence, in short, this not unfrequently maintained opinion that all forms of mental life but those of science are to be forever swept away.

As it is susceptible of proof that absolute falsehood is but a negation, and therefore never met with in any system of opinions, we may here inquire upon what misinterpretation of fact the above error is founded. In order to accomplish this purpose, we must cast a passing glance at the constitution of those ultimate religious parties which have no special relation to ephemeral denominational issues, but are characterized by their attitude toward the central ideas of all creeds,—those of a supreme power, of an immortality, and of a moral law. The first of these three is the most important, and must evidently be taken as the psychographical standard in the survey of creeds.

While it is not the intention, in this article, to enter upon a detailed discussion of the origin of beliefs, yet their genetic relationship must be cursorily taken into consideration. Proceeding from the thesis that the human race are the descendants of a base animal ancestry, it necessarily follows that the dark ground from which all religious beliefs sprang must have been that of an unconscious atheism. At a later stage, that of the savage mind swept and swayed by the ever-changing beneficent or injurious action of nature, a chaotic form of pantheism ("palæo-pantheism") necessarily prevails. Later still, with a higher civilization, the abstractions of the original pantheistic chaos arrange themselves in accord with the musical rhythms of trained sympathies, and subject to philosophic law and order,—a poly-pantheistic divine hierarchy. And, with the birth of this conception of divine organization there likewise springs into being the idea of the essential unity of all these abstractions in the form of one supreme God. But, at this stage of development, a curious phenomenon occurs, due, apparently, to the first great widening of the intellectual gulf between the highest and the lowest minds. For, as all are not able to assimilate this philosophic conception of a divine unity composed of an organization of personified abstract powers, those who are not are compelled to choose, according to their affinities, between a polytheistic system, deprived of the tie of personal unity, and a monotheistic creed, in which the abstract forms of natural power, robbed of their life to enrich God, become mere dead instruments in his creative

hands. Of such character appears to have been the process by which the polytheism of the Greek and the monotheism of the Hebrew were differentiated from the poly-pantheism of the Egyptian. This differentiation carried in its train the fateful consequence of the expulsion of the monotheistic deity from the material universe. Thus, while the Egyptian and Greek, holding to a material world, animated by the divine principle, were *endocosmic theists*, the Jew and his religious descendants became *exocosmic theists*, and introduced the antagonism between God and his creation. Thus arose the two great ultimate religious parties, which still divide the religious world between them.

The European and American religious world has been retarded in its development by the exclusive domination of one of these two systems; and, as this no longer performs its duty to the heart of humanity, we are growing weary as death of its senile rule; and a radical change is impending, in which the other ultimate party, which has been out of power for nearly two thousand years, may again be called to the council chambers and throne of the religious state. For nothing is more certain than that the religious ideas of the entire world are now undergoing the throes of a revolution, in the course of which all forms unfit for further life must inevitably perish, while some shadows of beliefs may rise from the past to ephemeral existence, others to know the bloom of a second youth; and the new faith of the future is born to a promise of blinding glory.

Protestant Christianity is no longer a "ditheism." At least, I believe, the devil and the torments of hell are now but rarely appealed to even from the orthodox pulpit. Along with the disappearance of the evil principle, the belief in the divinity of Christ and in the necessity of his redeemership for the salvation of mankind has faded considerably in the mind of the liberal Christian illuminated by modern ideas. The faith in the "exocosmic" god is fading away much more slowly, yet even atheism has in these days made rapid advances. The want of an individual personal immortality such as has ever been taught by the Christian priest is still strongly felt even by those who, like many of our Spiritualistic friends, have broken with the Satanic, divine, and redeemership elements of the Christian creeds. Yet there are not few who already turn from this dogma with a feeling of relief to the Nirvāna-doctrine of the Buddhists. Last of all, the moral law of Christianity is adhered to still by a large majority of even the most liberal of those who in all other things are no longer Christians.

Regarding the thesis of evolution as the very soul and essence of modern scientific thought, it is plain that the mind which projects it has a pantheistic bent and that either the lens of this thesis must be broken, or that only those religious forms which are synrhythmic with its ideas can live within the intense heat and light of its focus. Of all the forms now prevailing in Europe and America, but four—"Atheism," "Spiritualism," "Western Buddhism," and "Unitarian Pantheism"—deserve our consideration. It is certainly a most remarkable fact that all of these modern "heresies" are essentially pantheistic in character and for this reason perfectly compatible with evolutionist ideas. Their pantheism is the sun around which they revolve, the planets of a new religious system.

The atheist denies the existence of the exocosmic God of the Christian and places his dependence on those scientific "rocks of ages," the conceptions of matter, motion, force, space, and time. But the atheist is apt to forget that with the first advent of favorable emotional conditions these

very "rocks" may take upon themselves an independent religious life of their own, leading him through a pseudo-scientific polytheism nearly akin to that of ancient Greece, into a poly-pantheism similar to that of the Egypt of old. For the Christian doctrine of immortality the atheist substitutes a firm faith in the indestructibility of matter, the continuity of motion, and the persistence of force, scientific conceptions undoubtedly capable of assuming a high order of religious value. His moral law finds its expression in the doctrine of action for the greatest happiness of the greatest number.

All those whose mental inertia compels them to adhere to the belief in a personal continuous immortality, when they have broken with the other elements of the Christian creeds, instinctively turn to Spiritualism. And probably no other phase of modern religious development is more deserving of philosophic analysis and interpretation. Swedenborgianism, to which it bears a close relationship, is, I believe, the only Christian form which attaches great importance to the observation of Nature. Spiritualism, pursuing allied paths, appears to be a case of mental reversion (atavism) to a chaotic pantheism, nearly related to the ancestor-worship and fetichism of the savage. The latter, being distinguished as "palæo-chaotic," the former should be designated as neo-chaotic pantheism.

As already stated, the religious development of Europe and America has been retarded by the exclusive authority of "exocosmic theism." But, even as in the Middle Ages the study of the Greek and Latin classics contributed materially to the renaissance of independent thought and the advent of the Protestant Reformation, so also in our day does the study of the Indian classics contribute no inconsiderable influence toward the further emancipation of thought from its dependence on modern Orthodoxy and the advent of a new *pantheistic reformation*. The two prevailing religious forms of the Indian classics—Brahmanism and Buddhism—are both pantheistic. And, as the latter contains philosophical and ethical treasures, which may well accord with some of the views of our most advanced Liberals, it is not at all improbable that a "Western Buddhism"—a Buddhism freed from all those elements of belief which are in too great discord with our thought and feeling—may soon attain to great prominence in modern life.

Unitarian Pantheism.—An Evolutionist's Creed and Hymns.

None of the creeds of antiquity, let it be distinctly understood, can return and hold its own among us in its original form; for religious beliefs, like all other forms, are subject to the law of change, and

"Like suns and motes are borne afar
Past thoughts ne'er visited anew.
No form to its full like returns:
The soul but to its change is true."

The modern beliefs, sketched in the preceding portions of this article, will all undoubtedly play an important part in swaying the hearts and minds of a large portion of humanity for some centuries to come. But to the select few who, recognizing the eternal truth that man is but a part of universal living nature, feel their hearts swell in sympathy with her purpose,—the ultimate happiness of all being,—to those whose love goes forth to the meanest thing that breathes, who in the trees and flowers greet their slumbering sisters, and who tread tenderly on the rock lest they give it pain,—a system of "Unitarian Pantheism," closely assimilated to that of the "Creed" and "Hymns" here following, can and must be the only enthusiastically acceptable form of belief.

I have pondered the truths of my faith—for

such I hold them to be—for years, before attaining to the crystalline clearness of my present convictions. To say that I am ready to defend them, by word and deed, against the assaults of all who may DARE to accept my challenge, is but a faint echo of the strength of my feeling.

Creed.

I. I believe in a *Universal Being*, manifesting itself to Human Cognition through the following Attributes:—

1. A presence in each point and immensity of space, and therefore *Infinite, Omnipresent, and Omniform*.
2. An existence in each moment and æon of time, past, present, and future, and therefore *Eternal*.
3. An ultimate cause of all causes and an ultimate end of all ends, present in each special cause and end, and therefore *Free and Omnipotent*.
4. A self-perception of all change and motion, past, present, and future, all eternally persisting with like distinctness, and therefore *at Rest*.
5. An ultimate difference in all likeness, and therefore *Omniquality*.
6. An ultimate likeness in all difference, and therefore *Omniconcrete*.

II. I believe in an *Immortality* of all things and relations that have been and shall be; that the entire past persists through the remotest future, and the entire future existed through the remotest past; that these things and relations are removed from simultaneous and equivalent human cognition only by the unequal distinctness of their persistence,—a defect and limitation of human consciousness. And I believe that the entire present is but a negation,—a gate through which the waves of the universal being flow from the eternal future into the likewise eternal past, and from the eternal past into the likewise eternal future.

III. I believe in an immutable and eternal *Moral Law*, not a mere matter of individual opinion or interpretation, but inherent and innate in all things and relations; eternally binding on all parts of the universal being; manifested to human feeling (emotional cognition) as a system of hopes, desires, and purposes,—memories of the future more or less distorted by imperfections of emotional power,—to human thought (logical cognition) as a system of relations subsisting between the compelling causes of the past and the liberating purposes of the future,—between beauty, truth, and happiness in existence. And I believe that the release and redemption from evil of all parts and portions of the universal being is only possible through the universal (pan-empneustic) cognition of this law:—

1. Thou shalt love above all things *Beauty*, her "daughter" *Happiness*, and her "servant" *Truth*, and worship them in each thought and feeling, word and deed, of each moment of thy life.
2. Thou shalt own the sway and yield undivided allegiance to *Liberty*, ruling by the divine right of the future, and bear her standard and sword in her eternal strife with Compulsion, the illegitimate usurper from the past.

Hymns.

UNIVERSAL BEING.

"I, the All-Being's spirit, free,
Omnipotent,—revealed in thee,—
From every point of boundless space,
From every tiniest atom's face,
Shine forth! In all existence cast
Eternal,—present, future, past,
Cause and effect, mean-purpose, linked,
Each self-perceiving, like-distinct;
Unceasing change, fore'er at rest;
A difference on all likeness pressed;
A likeness in all difference seen;
A love, all that I am, between;
My forms infinite, unperceived;
And yet but One,—Myself believed.

IMMORTALITY.

The spoke the wheel, revolving, whirls;
The chord vibrating music-pearls;
The flash the cloudy anger hurls!
My sense, for one brief moment free
From reason, feels in unity
Past, present, future states combined,—
A part of the All-Being's mind!
Change's all-blinding lightning-flash,
Unceasing motion's thunder-clash,
Life's never-ending billow-dash,
In the All-Being's spirit free,
Are but as one in unity;
A rest eternal, never stirred
By motion, change, thought, deed, or word.!

BEAUTY.

Mysterious force! all-ruling through desire,
A burning passion's voice, I call on thee.
Breathe in me, spirit of eternal fire:
With flame-acords make thou my being free.
Instill each moment, every passing hour,
Each thought and feeling, word and deed elate
With holy grace and virtue of thy power,—
All that I am to thee I consecrate!

LIBERTY.

Beneath the future's standard, sworn
Her rights' divine defenders,
Down from her heights we flash the morn
That heralds freedom's splendors!
From dark abyss, up nature's steep,
The tyrant past arises,—
A cause-chained host of shadows deep
That sacred rights despises!
Upon life's plain, avast and far,
In battle's clash e'er meeting
(First sun beheld, last dying star,
Shall see, the deadly greeting),—
The war eternal never dies:
The battle rages ever,—
Yet, while its billows fall and rise,
Our courage wavers never!

CORRESPONDENCE.

A LETTER FROM MILWAUKEE.

Editors of The Index:—

Austin Bierbower, in an article entitled "Secular Security for Morals," in the *American Monthly* for May, speaks in the most positive manner of the present decline of belief in the Christian religion, and the loose hold it now has upon the people. Rationalists are well satisfied of this fact, and also well satisfied with the work they are doing in various ways,—very quiet ways, for the most part. But the fact of a declining belief in Christianity is patent also to believers. At the council of the Protestant Episcopal Church, held in Milwaukee recently, the Rev. William Bliss Ashley, in the opening council sermon, said: "The principal danger of the time is an over-estimation of human powers. Rationalism is now more manifest than ever before. Atheism, positivism, agnosticism, and other like creeds, have referred the precepts of God to the reasoning powers of men. These are some of the dangers of the day. Armed, not with the philosophy of Herbert Spencer and those of his kind, but with the divine philosophy, this Church sends us forth to battle against the decrees of rationalism. Priests and people have need to take on the armor of God, if we would be equipped to do battle with the enemy."

Priests and their people are evidently alarmed, and are looking to their old weapons with which to combat the ranks of reason. The result is already prognosticated with the substantial data of increasing rationalism which even its enemies acknowledge.

Twenty-five years ago, I heard the Rev. Mr. Ashley in the pulpit of St. Paul's Church admonish his congregation not to read the *Atlantic Monthly*. If the mild heresies of that magazine in that day excited priestly timidity, what wonder that their present alarm urges strong words inciting to vigorous action, when the literature of to-day, aside from that which is under strict sectarian control, is pervaded with rationalistic ideas, and when the newspaper press, no longer subsidized by Christian patronage, prints all the news it finds, whether it be favorable or unfavorable to churches and their members, and, if under intelligent administration, speaks boldly for the side that represents justice, though its standard-bearers be positivists, agnostics, or even atheists and free thinkers! The Reverend Doctor's "armor of God" and "sword of the spirit" will prove powerless against the hosts whose weapons are the pen and the printing-press, marching forward to the battery of "Freedom of thought!" The Milwaukee newspaper press has been very outspoken in regard to a reported movement of the Milwaukee Citizens' League to enforce a law prohibiting the sale of liquor on Sunday. The Milwaukee *Sentinel*, in a leading editorial, stigmatizes this as "an unwise Sunday movement," and echoes the prevailing sentiment that, "as such a movement cannot succeed, its only effect will be to set two elements by the ears, disturb the peaceful relations of the community, and do vastly more injury than is done by the present suspension of the law."

The Citizens' League, organized in the interest of

law and order, undertook to enforce the law against the sale of liquors to minors and drunkards. In this, it has had the sympathy of the community; but this Sunday movement is generally felt to be one which will do harm rather than good. Already, the spirit of opposition has been aroused, and several German societies have called a meeting for the purpose of resisting "a puritanical interference with personal liberty."

The interest of Milwaukee people has been largely centred the present week in the proceedings of the National Educational Association, held at Madison. Prominent educators and thousands of teachers have been in attendance upon the Convention, and its deliberations have been marked by a broad and progressive spirit. The value in the cause of educational progress of the work done in this Convention is inestimable. It has been a source of much gratification to myself to note the topics chosen and their far-reaching and intelligent discussion. The emphasis has been distinctively upon such methods of reform as are deemed essential by the most advanced educators. Industrial education and manual training have received a large share of attention.

The kindergarten has been a prominent feature of the Convention. The extensive exhibit of kindergarten work has admirably illustrated this method of teaching. Prof. William Hailman, President of the Froebel Institute of North America, has by his indefatigable efforts brought this institute into such recognition in this National Teachers' Association as may well be gratifying to him. Prof. Hailman initiated the kindergarten in Milwaukee, and it was very up-hill work. He was earnest, however, and enthusiastic. He and his wife, who co-operated in the work, were forced to make many personal sacrifices, as are most persons who champion a new idea. It is but a few years since Prof. Hailman made an urgent plea for the adoption of the kindergarten in the public schools of Milwaukee, and received little but sneers by way of sympathy. He gave a course of admirable lectures in the basement of the Unitarian Church to a handful of people on "The New Education." This week, the press report of the proceedings of the Froebel Institute contains a eulogy on the "splendid part taken by Prof. Hailman in the initiatory work in the West," and says, "The rank of the kindergarten work in fostering the new education is at the top."

Prof. James McAllister, of Philadelphia, our former superintendent of public schools, and who labored resolutely against the bias of school boards to establish the kindergarten in our public schools, urged, in an address before the Convention, the extension of the kindergarten principle into the higher departments.

A paper was read on "Technical and Art Education in Public Schools as Elements of Culture," which was prepared by Prof. Felix Adler, and contained a detailed statement of the scheme of technical instruction in the workman's school in New York.

There were papers urging the instruction of social and political science in the higher schools and universities, the instruction in art for its aesthetic as well as economic value, the teaching of the industries for their ethical value. There were several papers on the development of individuality in pupils, and urging upon teachers to invent methods of instruction adapted to each child's mind, and to discover a discipline that would develop character.

I have not space to note the many other kindred topics of discussion. These are sufficient to indicate the tendency of effort in educational matters by the most eminent teachers in our country. In these efforts, we see the dawning of a new era in education. It has seemed long in coming, this hopeful sign of a larger interpretation of the meaning of education, whose scope was so grandly outlined in the little work on Education written by Herbert Spencer over twenty years ago. Reading and reflecting upon the plain and practical suggestions on "what knowledge is most worth," contained in this work, and contrasting them with what passes for knowledge taught in our schools, and proves but little worth in the child's relation to the affairs of after-life, I have waited, not always patiently, for some such proof as I have seen in recent efforts of educators that education was beginning to answer the question, "How to live?" "for," says Mr. Spencer, "to prepare us for complete living is the function which education has to discharge."

Mgr. Capel caused a sensation in the Convention on Friday evening by endeavoring to explain his position and the position of the Catholic Church toward our

public schools. He said the press had reported words he never said. He eulogized the common school system of America, and bade it God-speed. He denounced the published statements that the Catholic Church was prepared to rise *en masse* against the public school system as a gross slander upon himself and the Catholic Church, that the only objection of the Church to the public school system was that they did not train the heart, only the head. If the American schools would introduce religious training to-morrow, the Catholic Church would work with them hand in hand. (Great applause.)

This generous applause was doubtless the effect of spontaneous sympathy with a taking phrase conveyed in the wily Catholic's happy manner, rather than the result of a thoughtful consideration of the consequences which would certainly follow this "hand in hand" work.

"Till then," concluded Mgr. Capel, "the Catholic Church will build its own schools, employ its own teachers, and train its people in a way similar to the public schools, with moral culture added."

This closing thrust should have been counted an insult to that body of educators who were earnestly directing their efforts toward a scheme of education which should promote ethical culture. But Mgr. Capel does not mean morality when he says morality. He means "the practice of certain virtues under dogmatic teaching, that teaching which says this is right and that is wrong, but does not show why it is right or wrong, or that widely related evils will be the result of certain sins." These educators, in their endeavors to establish manual training, industrial and art education, are laying the groundwork for the security of morals in the public schools.

It is very pretty talk, this "training of the heart"; but it is simply sentimental talk. The training of the hand is of much more importance in moral culture than is the training of the heart. Heart means emotion in the crude thought. The Catholic Church does desire to train the emotions of children, for these are the fruitful soil wherein to sow the seeds of superstition. It will build its own schools, and also compel its people to send their children to them; and in Milwaukee, this summer, action has been taken to make its schools free, so that nothing may stand in the way of the religious training of its people.

An informal meeting has been held to take preliminary steps for a general mass meeting in Milwaukee to protest against the proposed action of Italy in the confiscation of the missionary college. It is announced that this meeting will not be denominational, but presumably it will be very one-sided.

MILWAUKEE, July 19, 1884.

THE CONCORD SCHOOL.

Editors of *The Index*:—

Two statements in *The Index* report of the first week of the School of Philosophy were incorrect, and would convey a false impression. As they were plainly misunderstandings, will you allow their correction in the interest of truth?

The first was that Dr. Bartol told us that "Emerson had doubts of the divine Personality." On the contrary, the outcome of Dr. Bartol's lecture was that Mr. Emerson was essentially a believer in God as a real personality and not at all as a vague impersonality; and the one most clear lesson learned here about him has been his firm belief in the reality of the Supreme Being.

The other statement is that Mr. Emery and Dr. Holland "complained of Emerson as not sufficiently religious." What these two gentlemen really objected to was the position claimed for Emerson by Mr. Mead, as an advocate of the substitution of morals for religion. This claim of Mr. Mead was held by them and others to be a misunderstanding, the right reading of Emerson's works, as a whole, establishing the opposite of this. Not the substitution of morality for religion, but the union of morals and religion they conceive to be Emerson's teaching; and they see that religion was his chief inspiration and its reality his supreme insight. Both Dr. Holland and Mr. Emery recognize this; and neither they nor any one else, during the whole week, complained of his lack of religion. It is not always necessary or best to correct misstatements; but, in this case, the writer has felt that a true understanding of the position of the School on this question has demanded it.

H. R. SHATTUCK.

A RELIGIOUS AUTOBIOGRAPHY.

Travels in Faith is the rather misleading title of a very fascinating and important work. But the inner page gives a full title, *Travels in Faith from Tradition to Reason*. This provides a large psychological and intellectual field to glean in; and the author has gathered into terse but generous narrative a large amount of simple but very interesting matter, showing up the spiritual strivings of piously bred children who long and pray for the emotional state called "conversion." The author, Capt. Adams, is the son of the Boston preacher, Nehemiah Adams, and was one of a considerable family. These children began at eight and ten years of age to torture their natures in the usual way. An elder brother announced himself as converted at least six times before arriving at a reliable state of mind. These conversions occurred between the ages of ten and sixteen. A sister reached church membership at the age of twelve. Our author found it impossible to conjure up the feeling of guilt which he was assured was necessary; and, after a two hours' struggle on his knees, he decided that he had done his part, and that, if God would do his, all would be well; if not, he must conclude that he was not one of the "elect," and must take the consequences of his exclusion. Nothing happened: the Holy Spirit did not move his soul, and he fell into melancholy. At sixteen, his father spoke to him of union with the Church; but there was no "conversion" to justify it. The father then asked a written statement of his son's convictions and feelings. This was furnished and handed to an examining committee. To his amazement, he was pronounced a proper candidate for membership. The amount of strictly religious instruction, of the orthodox kind, which environed these children, is hard of belief. He read Spencer, Lecky, and Theodore Parker; but these authors were not the sole stimulators of his reason. As captain of foreign ships, he saw the swarming millions of India and China. These coolies at the wharves showed a better morality and better manners than the wharfmens of Liverpool, San Francisco, and New York. At the mission stations, he found little collections of twenty or thirty pupils snatched from the millions who were to burn forever. Let no one for an instant suspect this autobiography of dullness. It is the record of a powerful reason veiled by a life of antagonistic teaching. There is no affectation. One falls at once into a quick sympathy and sincere respect for the author, and lays down the book as unwillingly as a first-class fiction. Capt. Adams has made the stride from traditional Orthodoxy, even of Calvin's sort, to the open land of scientific freedom. He cannot be attached to any leader; for he knows them all, and quotes as instructively from Haeckel as from Lecky. An admirable part of the book is its wise and sensible treatment of the Bible and of Christianity. Most especially good is his exposition of the more natural life that we shall lead, when science shall control health and conduct more closely. If those who have laughed over Col. Ingersoll's irreverent exegesis of things would place their mind under the influence of this popular and delightfully written book, they would soon gain a more sanitary moral attitude.—*Boston Evening Transcript*.

BOOK NOTICES.

THE CONVENTIONAL LIES OF CIVILIZATION. From the German of Max Nordau. Chicago: L. Schick. 1884. pp. 364.

This book is a fierce assault upon hypocrisies of every kind by a writer who is impatient and indignant at the persistence of anomalies in our modern civilization, of absurdities still strongly entrenched side by side with disbelief of the intelligent classes in their utility and justice. The author is a German, and views the world and examines social, political, and economic institutions through the spectacles of a radical whose views have been formed in a situation such as presents itself only in Germany. The Imperial Council of Austria has prohibited the further sale of the work, which has been in disfavor with the Austrian government from its first appearance. This fact, however, seems only to have increased the demand for it; for it has gone to its seventh edition in as many months. It touches upon all the political and social problems of the day, and arraigns the "Lies of Civilization" with boldness and

audacity. It denounces the tone and tendency of our age. The chapter, "The Lie of Religion," criticises religious worship in all its forms. "The Lie of a Monarchy and Aristocracy" will not shock any readers in this country, although, probably, to the Austrian government the most offensive chapter in the book. "A Political Lie" deals with a trouble which is fundamental even in our politics, the inability of the people to get a true expression of their will through their representatives. "The Economic Lie" traverses the field of political economy, advances some startling paradoxes, and exposes anachronisms and faults with much ability. The "Matrimonial Lie" vigorously denounces the matrimonial system of Europe, pointing out the deplorable physical, mental, and moral deterioration which must result when material interests arrange marriages. The chapter, however, contains statements that are extravagant and inferences not warranted by facts. Another chapter contains severe stricture on the press, which it is claimed is devoted chiefly to propagating lies. In fact, the author finds society and all social institutions permeated and swarming with lies. On every page, the author shows himself to be a partisan; and his extreme bitterness unfits him for a judicial view of the subjects he discusses. At the same time, a book like this, one-sided as it is, compels the reader to see evils which are real, although not often acknowledged, and to respect the sincerity and courage of the writer who points them out.

B. F. V.

THE *Art Amateur* for August has complimentary notices of several American paintings, by both men and women, in the English and French exhibitions, although it sustains its character for impartiality by pretty severely snubbing others. The biographical sketch is of one Frank Myers Boggs, who is a clever young American marine painter. It is interesting in this, as in many other cases, to see how the patron of the modern artist is not the nobleman or millionaire, but the newspaper publisher. The article by Russell Sturgis on the "Restoration of Ancient Statues" gives a great deal of valuable information in regard to the familiar statues we have so long known by many reproductions. He treats the subject very judiciously, by showing that restorations are very rarely admissible, and that the real interest of a fragment is destroyed by attempting to complete its design. It is strange how easily one becomes accustomed to the sight of an unrestored fragmentary statue. The want of certain parts, as the arms of the Milo Venus, is forgotten; while one can never forget the impertinent presence of such restorations as deform the Medicean Venus. Even the mutilated head of the Psyche of Naples is forgotten in the perfection of the beautiful features. Some excellent wood-cuts illustrate the sketch of Mrs. Emily J. Lakey, the New York painter of cattle. What perverse creatures women are! One would predict that they would excel in miniatures and pictures of sentimental misses and pretty children, and here we have Rosa Bonheur in Europe and Mrs. Lakey in America taking the first rank as cattle painters. Clarence Cook's contrast between the drawing-rooms of the old time and the new will amuse many readers, as will also his dictatorial assertions in regard to the proper ways of living. I cannot see why a family should have the labor and expense of using candles and moderator lamps in a drawing-room instead of gas, more than anywhere else. As usual there are many varied designs and much instruction for those interested in decorative art.

E. D. C.

THE FLORAL WORLD.

A SUPERB, ILLUSTRATED \$1.00 MONTHLY WILL BE SENT ON TRIAL

FREE ONE YEAR!

To all who will enclose this ad. to us NOW with 12 2c. stamps to prepay postage. The *Indiana Farmer* says: "Contents interesting, and to flower lovers well worth the price, —\$1.00 per year." Sworn subscription list over 12,000 in every State and Territory, Canada, Great Britain, South America, Africa, India, and Australia.

Mrs. R. A. Houk, Hingen, Ind., says: "It is the best floral paper I ever saw." Mrs. J. W. Fay, Big Beaver, Mich.: "It is magnificent!" Mrs. R. G. Stambach, Perth Amboy, N.J.: "Have never seen anything half so good." Mrs. J. L. Shankin, Seneca City, S.C.: "It is just splendid."

Draw Bills of Exchange on England, Ireland, and other points in Europe. Agency for the American Line of Steamers.

Modern Thinkers,

Principally upon Social Science.

By Prof. VAN BUREN DENSLOW, LL.D. With Introduction by ROBERT G. INGERSOLL. Including critical analyses of Swedenborg as a Seer, of Adam Smith as an Economist, of Jeremy Bentham as a Law Reformer, of Thomas Paine and Junius as Political Revolutionists, of Charles Fourier as a Socialist, of Herbert Spencer and Ernst Haeckel as Evolutionists, and of Auguste Comte as a Positivist, with an Essay on Wealth in its Relations to Christian Ethics.

The Fifth Edition has just been issued.

"Upon the question of money, this volume contains the best thing I have ever read."—*R. G. Ingersoll* (in Introduction).

"We confess that, if we stood on the ground on which Mr. Spencer stands, we should find it difficult to prevent ourselves from being pushed by the stalwart arm of Dr. Denslow's logic into the gulf of ethical nihilism."—*Prof. Goldwin Smith*.

"Now, the whole force of this case depends upon the assertion of Goldwin Smith that Dr. Van Buren Denslow is a disciple of Herbert Spencer. But the assertion is not true in any sense or in any degree. On the contrary, Dr. Denslow is an open antagonist of Mr. Spencer. His essay on Spencer's Philosophy, first published in the *Chicago Times*, while speaking of the man in the usual terms of perfunctory compliment, as have also Goldwin Smith and the *Saturday Review*, is adverse, carping, and depreciatory on every point that he considers. The criticism was regarded as so damaging that Spencer's friends were told they must reply to it or forever hold their peace; and we were confidently assured that the last we should ever hear of Spencer's system was the thud of the clods that Denslow had thrown upon its coffin."—*Prof. Youmans*, in *Popular Science Monthly* and in *Introduction to Current American Edition of the Data of Ethics*.

Stephen Pearl Andrews, as political executor of the late Thomas Paine, is as fiercely indignant at Mr. Denslow's analysis of Paine's politics as Prof. Youmans is at his assault on Spencer's Philosophy. On the other hand, George Jacob Holyoake speaks of the analysis of Paine's political philosophy as "the most masterly refutation of it extant, without showing in his words or in his mind any enmity against the great agitator whom he confutes."

The late Dr. George M. Beard, of New York, wrote to the author: "Your critique on Spencer's *Data of Ethics* has all the force of a discovery in ethics, and is of great value. It deserved to be made the subject of a separate treatise."

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price \$3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR's basis of action, and the best exertions of its manage will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript*.

Sent by mail, postpaid, on receipt of price by the INDEX ASSOCIATION, 44 Boylston Street, Boston, Mass.

BY ALL ODDS THE BEST EQUIPPED

RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its *Day Coaches*, which are the finest that human art and ingenuity can create; its *Palatial Sleeping Cars*, which are models of comfort and elegance; its *Palace Drawing Room Cars*, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that it is the best equipped road in the world.

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, and take none other. All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

CURRENT TOPICS.

BY B. F. U.

THE Tories are beginning to understand that there is intense feeling underlying the present reform agitation in England; and, instead of continuing to disparage it, they are now trying to meet it with counter demonstrations.

THE Springfield *Republican* mentions an important advantage the supporters of the Prohibition party have over all others in the contest for the Presidency: "They can, by a simple adaptation of the 'temperance lecture,' everywhere hold Sunday campaign meetings, and are beginning to do it."

A NEW street in Paris has been named after Darwin, the ninth Englishman whose name has thus been honored in that city, the others being Byron, Fulton, Jenner, Newton, Milton, Stephenson, Harvey, and Sir Richard Wallace. Washington, Franklin, and Lincoln are the Americans after whom streets have been named.

A CALIFORNIAN who was "raised on earthquakes," and claims to be an expert in such matters, scoffs at the earthquake which occurred in the Eastern part of the country on Sunday last; but the large area over which the shock was felt, showing, too, that the centre of the disturbance was very deep, may be mentioned as proof that our Eastern earthquake was no petty affair. And there was nothing spiteful about it, as is often the case with the little earthquakes which shake up the people of 'Frisco. The inhabitants of the Eastern section of the country are rather more moderate and quiet than those on the Pacific Coast, and an earthquake of the sort that our California friend boasts of would be not only inconvenient, but entirely out of place in New

England and the Middle States. Let not the Californians speak slightly of our Eastern earthquakes; and we will not disparage theirs, nor laugh at their calamity and mock when their fear cometh.

REV. R. G. McDUFFY, a Cleveland clergyman who was arrested recently for riding a bicycle on a sidewalk, pleaded guilty, and in extenuation of his offence said: "My parish is a very large one. I am often called to the bedside of a sick or dying person, and must get there as fast as I can. I hope I am a law-abiding citizen; but, when I receive a call of this kind, I am going to respond at all hazards. I consider that, in following my calling as a minister, I am obeying the law of humanity, a higher law, even though I violate the law made by man." The justice, who took an untheological and unsentimental view of the case, in fining the offender, spoke to him in the following plain fashion: "When the laws of humanity, or higher laws, as you call them, conflict with the laws of this State and city, the higher laws are going to come off second best. I respect your calling,—it is a noble one; but the laws to enforce which I am placed here are applicable to everybody without distinction as to person or occupation. For the present, I'll stand by the ordinance. My advice to you is to 'keep in the middle of the road.' If you take to the sidewalk, you must go afoot."

ACCORDING to a correspondent of the *London News*, the King of Abyssinia, although absolute in power, is a slave to ecclesiastical authority: "The priests of that country are men whose intellectual and moral character is such that their influence must be bad on a ruler who looks to them for counsel and instruction: "The priests are allowed to marry, if they choose; but the majority lead a life of gross immorality. The confessional itself is the easiest means for gratifying their desires, and also for obtaining the liquor that cheers. They are veritably 'Friars of Orders Grey.' The priest is always the most drunk and noisy at wedding feast or burial. He wears a turban of white cotton cloth, made up to resemble the shape of the Greek pope's hat; and this, with the exception that he is generally more inebriated than his congregation, is his only distinction. The church in this country is almost as profitable a profession as that of the soldier. There is no regular pay attached to either, but the followers of both loot and live upon the people. There is no encouragement to ambition or advancement; for, as soon as a man begins to grow rich, he is spiritually robbed by the one and materially by the other."

ACCORDING to the fifteenth Annual Report of the Bureau of Statistics and Labor, of which Col. Carroll D. Wright is chief, there are in Boston, exclusive of domestics, some twenty thousand working-girls. Of these, about 68.7 per cent. live at home with relatives, 15 per cent. in boarding-houses, 15 per cent. in lodging-houses, and 5 per cent. in private families. Their ages average about twenty-five years, and their wages a little less than

\$5. More than 85 per cent. do their own sewing or housework, 76 per cent. are in fair health, about one-fifth are allowed vacations, and 3 per cent. with continued pay. Through ill-health or failure of work, three-quarters of the girls lose an average of three months' time a year. The report is very creditable to the moral character of the working-girls, to the investigation of which much attention was given. "We can most freely and positively assert," it says, "that the working-girls of Boston are making an heroic, an honest, and a virtuous struggle to earn an honorable livelihood, and that it is rare that one of them can be found following a life other than one of integrity. . . . We, of course, do not wish to be understood as asserting that the working-girls are any better than the same number of girls in any other calling,—for the amount of private immorality in any community or among any class cannot be traced,—yet they come out of this investigation with as good a name as that which can attach to any class."

THE *Independent* says "that the Christian religion stands the test of pestilence and death better than frivolous unbelief." In proof of which, it quotes the statement that "migration from Toulon has been going on at an unparalleled rate. Of course, all those who occupy posts of authority and responsibility remain; but the common people are fleeing wildly. . . . I do not hesitate myself to ascribe this excessive fear to the recent progress of materialism and decay of faith in God." The flight of "the common people" from Toulon during a terrible epidemic is evidence simply of their intelligence and common sense. If they were ignorant, credulous devotees, they would remain in the city, and put their faith in prayer and religious processions, and die like so many sheep. We were in Memphis a few years ago, when the yellow fever, which had raged with great mortality, was subsiding, and when every train brought to their homes in safety and health hundreds who had fled from the danger of the epidemic, including nearly all the Protestant clergy of the city. The Catholic priests, consistently with their faith, remained to perform their offices to the dying, many of them falling victims to the pestilence. Were the people who were able to leave Memphis and did so less wise or worthy than those who, with opportunities to leave, remained without any good reason, only to become victims of the fatal disease? Does the man who exposes himself fanatically, ignorantly, or recklessly to danger show greater wisdom than he who, with regard for his own life and the happiness of those dependent upon him, takes all proper precautions against pestilence? It is admitted that those who "occupy posts of authority and responsibility remain" at Toulon; but the fact that "the common people" have become sceptical and intelligent enough to rely on their own efforts to escape from pestilence rather than trust in the mummeries of superstition, and needlessly sacrifice their lives here to please God and secure exemption from his vengeance hereafter, seems to disturb greatly the writer from whom the *Independent* quotes.

NATURE'S TRUSTWORTHINESS.

There are some things in nature which man, doubtless, would have ordered differently, if he had had the opportunity. Earthquakes and tornadoes, cholera germs, rattlesnakes, he very likely would have left out of the plan of the universe. The weather, too, he might have tried to fix by some more regular and intelligible law. Mosquitoes he would have quickly evolved out of existence, and flies he would have provided with such an instinctive fondness for out-of-door life that they would never enter human dwellings.

Yet it by no means follows that man's plan would have been, as a whole, an improvement on nature's. Certain it is that man has himself learned to overcome many of nature's evils, and has discovered that what once appeared to him as only evil was but the necessary condition of some good. It is certain, too, that man's own progress, that the sharpening and strengthening of his intellectual faculties and even his moral advancement, have been largely conditioned on this struggle to get the better of the evils of the natural world. And so, possibly, the evils that remain unconquered, and that seem indeed unconquerable, may not be so in any absolute sense, but may be only useful enticements for evoking to still higher stages of development the mental and moral ability of the human race.

Even John Stuart Mill, who drew such a terrific indictment against nature's cruelties, also wrote: "No one whose opinion deserves a moment's consideration can doubt that most of the great positive evils of the world are in themselves removable, and will, if human affairs continue to improve, be, in the end, reduced within narrow limits. . . . All the grand sources, in short, of human suffering are in a great degree, many of them almost entirely, conquerable by human care and effort." Considering, indeed, what man has already achieved in the reduction of nature's evils, why should we use Mr. Mill's modifying phrases of what may be reasonably expected in this direction in the future? It may seem a wild prediction, but in this vacation month we venture it, that man will yet discover some way of mastering the hurricane and the earthquake. He may yet learn the science of meteorology so accurately that he will be able to foresee and evade the most furious tempest. And is it wholly a fanciful guess, would it be a greater marvel than some things man has already achieved, if we were to imagine our distant Yankee posterity inserting huge safety-pipes into the bowels of the earth in the region of earthquakes, and thus innocuously drawing off and perhaps even utilizing the rebellious subterranean force for the turning of their factory wheels? As to venomous beasts, they need not be feared so long as we have a race of Barnums in the world; and diseases the most deadly and the most difficult to cope with are already admitted to be the result of some violated law, and no scientific man will affirm that the broken law may not be ferreted out, however obscurely hidden it may now be, and the dire consequence prevented.

Science everywhere declares that nature is not man's enemy, but his friend. She is ever working for him; but he is to meet her half-way, in order to secure the full beneficence of her work. And, if she sometimes seems to be playing with his hopes and fears and balking his efforts, it is only to stimulate his mental cunning and impel him to some greater audacity of endeavor. She never meant him to live in a Garden of Eden, where her fruits should be showered upon him without thought and without toil. If she cursed the ground with barrenness, the curse turned to bless-

ing upon the soil of his mind. The conditions of Eden would have produced only another race of comfortable animals, not all-mastering man. Compelled to struggle for existence by rough encounter with natural forces,—to earn his bread by the sweat of his brow,—man has filched nature's friendly secrets from her and thriven on the very forces that threatened to extinguish him. If here and there she seems to falsify his expectations or to forget her own laws and act capriciously, let not his complaints over the temporary failure unjustly blind his eyes to her constant and magnificent benefactions. Possibly the disappointment may bring forth some good which shall dwarf the ill to its proper pettiness. Against all drawbacks, nature generally manages to get in her work at last. Let man get in his, and all will be well. In spite of cold and wet and frosts, New England is teeming with abundant harvests at this glorious midsummer. When the heavy frosts came the latter part of May, it was dolefully prophesied that the New England strawberry crop had been destroyed and its apples ruined. But never were New England strawberries more abundant or more delicious than this year; and the laden orchards before our eyes as we write, in this hill-town of Western Massachusetts, prove that the apple-trees have not lost their cunning. When the June frosts came, there was again a wail. Huckleberries and blackberries would be killed, and garden vegetables were irretrievably cut off! But the faithful berries are here in their season, to be picked by the handful from the bush, and to be bought in all the markets; and the farmers who did not succumb to the frost, though their vegetables did, will yet reap the reward of their second planting.

It may be, after all, that nature knows what she is about. At least, it is hasty to assume that man's ignorance or incapacity is the limit of her trustworthiness. Her enviroing conditions and forces have furnished the medium through which man has progressed from animal savagery to mental and moral civilization. The more he has learned and trusted her, the better she has served him and the faster he has advanced. Even her seeming freaks pique his intellectual curiosity to find a solution and remedy. And though intelligent design to serve him may not be found, after the manner of the old teleologists, in her arrangements, yet, by his intelligent adaptation of conduct to her ways, the same beneficent result has been achieved. The design is, at least, on the human side. And, if the evidence does not permit us positively to affirm that it is also on nature's side, there is, on the other hand, no adequate evidence to compel a denial of the many hints that both man and nature are in the sweep of some larger and grander design; that, with mutual adaptations to each other, both are borne forward on one stream of energy, which has intelligence at its source and for its end an harmonious order, variety, and beauty of life fairer even than all man's dreams.

WM. J. POTTER.

DISCUSSION OF IMMORTALITY BEFORE THE CONCORD SCHOOL.

The discussion had been opened from the Biblical stand-point by Rev. A. P. Peabody, D.D., on Thursday morning, July 31. That evening, a crowded audience, composed of residents of Concord to an unusual extent, gathered, despite the heavy rain, to hear Mr. John Fiske unfold the Origin and Destiny of Man. He began by showing how needlessly man's importance in the universe was once supposed to be in danger from the Copernican system, the greatest scientific achievement of the human mind. The resulting revolution in

religion has not dethroned humanity. Neither will that still greater revolution, by which man is no longer a creature apart by himself zoologically, but is a member of the Catarrhine family of apes. This truth is not to be overthrown; and, by its aid, we can now prove, as could not have been done previously, that there is no possibility of the evolution or creation of any higher being than man. His superiority to the apes has been owing to the increase in surface of his brain, as well as to the prolongation of his infancy. To the latter fact, we owe our social relations, and especially that necessity of subordinating individual conduct to the welfare of the family, whence arises the idea of duty. Man is less selfish than other animals, for the length of human infancy produces altruism. The first men had no bond of union but blood relationship, and so were always at war. This strife was intensified by the difficulty of getting food enough for all. Those savages who have enough to eat are peaceable. Agriculture and manufactures, by making life easier, made large communities possible. Local self-government is so important an element of national growth that the pacific principle of federation must ultimately reign supreme. Increase in power to sympathize with others is also promoting the ultimate triumph of peace over war. Evolution is showing so plainly the high place of man as the goal of nature that it is a most gigantic assumption to suppose that the life of the soul ends with that of the body. It is not probable that immortality can ever be demonstrated by science. The belief must be an act of faith. Disbelief in heaven has always accompanied those low views of man which evolution has made obsolete.

Mr. B. F. Underwood, after praising the ability with which the lecturer had shown that the lowest human mind has been evolved from the intelligence of the brute, asked how man could have a consciousness, by virtue of which he is immortal, not possessed by creatures of which he is a modified descendant. "If," said Mr. Underwood, "the human mind forms part of a sequent order in which there have been what we call cause and effect, antecedent and consequent, with no supernatural force introduced anywhere along the line of evolution, if the mind of man, as well as the physical structure with which in every stage of development it is correlated, has resulted from innumerable modifications of animal life, how can man have come to be an immortal being? How can he have an essential quality forming no part of the mental constitution of the ape, of which his own constitution is a natural modification? In a word, how can the mortal produce the immortal?" Mr. Fiske replied that he had not claimed that immortality could be proved by science. He had spoken of it only as a faith, a religious hope, a moral probability. How do we know that the ape is mortal? It may here be noted that the immortality for which he contended was not expressly said by him to include the conscious continuance of individuality. Brilliant and powerful as were his declarations of our nobility, they might all be accepted easily by those who expect no survival but that of our race, and who look at our minds as only temporary forms of a power which is eternal and incomprehensible. As a demonstration of the natural foundation of morality, independent of theology or metaphysics, the lecture was a magnificent success; but it scarcely touched the question of survival of conscious personality.

There was no lack of definiteness on this point in the metaphysical arguments presented on Friday morning by Rev. R. A. Holland, D.D., and that evening by Prof. Davidson. The latter brought up a dazzling array of propositions, so

original and so concisely expressed as to make an accurate summary almost impossible. His fundamental definitions were these: The soul is the principle of instinct, feeling, thought, and will. The eternal or immortal principle is that to which all succession of time is present at once, and which cannot change. The verb "is" means analysis of a mental object. Kant's mistake, that the mind constructs its own object, led to all the vagaries of German thinkers. Is the soul immortal? And, first, is the principle of intellect and will eternal? We can never get beyond experience, and should not try to infer from it what is not in it. Intelligence is the act by which feelings are referred to agents and principles are grasped as principles. The essence of intelligence is that it grasps entity or object. Even the ego may be objectified. True object is unchangeable, hence eternal. We must go behind all that is changeable to have the real, unphenomenal object. Science refers phenomena to causes not ultimate, but partly phenomenal; philosophy, to causes ultimate and not phenomenal. The object of intellect is eternal entity, which cannot be grasped but by an unchanging act. The principle of intelligence must be eternal. We can only will the eternal, not the phenomenal. Every true act of will grasps the eternal. Hence, intellect and will are immortal. Their principle is the same as that of instinct and feeling, which are also immortal. This last brings in personality and consciousness. The soul is eternal. It is not in the body, but the body is in the soul. If men used their bodies only for thought, they might keep them as long as they chose. Contact with outward reality is so important that Christians have insisted on the resurrection of the body. The denizens of hell appeared with their bodies to Dante. Even disembodied spirits must continue to feel, though we can hardly conceive the nature of the soul's sensibility. To all eternity, the soul exists, possessing the vision of eternal being. Even the lower animals may have immortality. The life-giving principle of no creature can cease to exist. If the worm had the body of a man, it would be a man. Not one life shall be destroyed. Consciousness is not possible, unless it is eternal. The catechism of positivism, and of all theories which deny immortality, really teaches that man's chief end is to glorify the devil. If the soul is not immortal, virtue can have no adequate reward. High ideas of morality are impossible without belief in immortality. Evolution, as understood at present, is a baseless myth. The individual is pre-existent to the whole. It is a prejudice to suppose that the world is evolved from any principle or that one phenomenon is the cause of another.

If this lecture proved anything, it is the necessity, in order to demonstrate our immortality, of taking for granted paradoxes far more incredible,—for instance, that we can will only the eternal. If the best road to faith is that just described, it is a very straight and narrow one in which but few can walk. It was particularly plain this evening that, if believers and unbelievers could agree about what men are here on earth, there would be little difference of opinion as to the probability of a hereafter. Disbelief in immortality rests on conviction that man does not grasp the eternal, or attain in this life any such intellectual independence of the environment as was claimed as evidence for the future life by Dr. Harris. This was in the closing lecture on Saturday morning, when he gave a remarkably able account of the origin of language as indicating capacity for immortality. In concluding, he censured the positivists for going so far in waiving all reward for virtue that it would be but one step further in the irony of self-renuncia-

tion for them to prefer hell to heaven. Such a preference might, however, be justified by the way in which these places are usually described. Previous to the final discussion, the following letter was handed to Prof. Davidson:—

CONCORD, Aug. 2, 1884.

Dear Mr. Davidson,—Please say something this morning on these two points in last night's lecture. I. I understood you to rest the soul's immortality largely on her power to grasp the eternal entity. That which has the eternal for its object must itself, you say, be eternal. My question is whether the eternal in itself is an object of our thought, or only the eternal in its temporary manifestations. You say every true act of will grasps the eternal. I should rather say that the eternal is so much stronger than we, that we can only hope to influence its temporary embodiments by any act of will, however true. Some of the ablest students of mental phenomena, like James Mill, John Stuart Mill, Sir William Hamilton, and Herbert Spencer, have been unable, I think, to see any ability of the mind to reach the eternal as eternal. I should like to hear why you think these high authorities mistaken.

II. You paid particular attention to the crucial point, the continuance of consciousness after death. I notice, in doing so, you said, "Consciousness is not possible unless it is eternal," or words to that effect. Now, my own experience is that, when I sleep soundly, I lose all consciousness for the time. I can always tell after an afternoon nap whether it has really been a sound one by noticing whether I know what time of day it is when I awake. It seems to me, as it does to Maudsley and other able specialists, that sleep interrupts consciousness. How then can consciousness be eternal? Why may not death interrupt it forever? Yours truly.

F. M. HOLLAND.

ANNUAL MEETING OF THE NATIONAL EDUCATIONAL ASSOCIATION.

Madison, Wis., whose limpid lakes have been immortalized by a Longfellow; Madison, called by Miss Ella A. Giles, in the illustrated *Wisconsin State Journal* for July 14, "one of the brightest jewels in the setting of the brilliant crown of the North-west," seems destined to become the centre of religious, intellectual, and political reunions. Perhaps the most important assemblage that ever took place in this town, as it certainly was the most colossal teachers' convention ever held in this or any other town, significant alike in the history of Madison and in the history of education, was the annual meeting of the National Educational Association that has recently been held here. From North, South, East, and West, came the band of teachers, six thousand strong, each and every one eager to gain new light upon methods of instruction, to compare notes on work already accomplished, and to gain profit for future endeavors from the words of wisdom that might be expected to fall from the lips of the most noted educators of our land.

The weather was of the most ideal kind, dazlingly bright and sunny, and just cool enough to be exhilarating, and truly seemed as if made to order. The lakes sparkled in the sunshine, displaying their most varied hues, their most bewitching radiance to the beholder's eye; and the whole town, with its gay decorations, wore a festal air that reminded one of the Philadelphia of centennial memory. Private homes, hotels, and boarding-houses were all placed at the disposal of the guests, the rightful occupants showing a cheerful readiness to move out, or at least tuck themselves away in the least inviting corners of their dwellings, that those whom they delighted to honor might be made comfortable. The beautiful State capitol was transformed into an exposition building for the display of the school exhibits from various States, all but the Assembly and Senate

Chambers, which together with the churches of Madison were thrown open for the public addresses.

Think of the expenditure of time, strength, and money, the fatiguing journeys undertaken, the weary toil undergone, in the preparation of those school exhibits; think of all the hopes and expectations on the part of entertainers and entertained. And was the result satisfactory? Let us see.

The first thing noticeable to the impartial observer was the fact that, owing to the vast crowds, the many good things pressed into the same hour at different places of assemblage, and the slight confusion in the arrangement of the programme, which made it difficult to ascertain the place and hour appointed for some of the finest addresses, many aspirants after knowledge lost the opportunity of enjoying the speaker of all others whom they desired most to hear. It next became evident that some of the special conventions and counsels were flat, stale, profitless; that words were wasted on petty questions of routine and discipline that each individual teacher, or, at most, each individual school principal, could best settle in accordance with surrounding circumstances; that dry bones were dealt with rather than flesh-and-blood, breathing, palpitating realities, in an unfortunate number of instances. Nevertheless, there were men and women present who came seeking the complete substance, and would not be content with the shadow or the skeleton,—men and women whose horizons were broad, who viewed all life questions from an elevated standpoint, and whose words and whose whole beings were fraught with an earnest resolve to strike the death blow to the great curse of illiteracy wherever found, men and women who deemed it the business of our schools to build up the characters of the pupils committed to their care, to mould them into valuable forces for the years to come, not into mere unthinking, unreasoning receptacles of dates and rules; and such men and women gave tone to the entire gathering. There was the Rev. A. D. Mayo, whose grand ministry of education in our Southern States aims at helping our brothers and sisters of the South to help themselves in casting off the burden of ignorance that oppresses certain portions of their population, and preys like a hideous cormorant on the whole body politic. And one's heart went out to him on learning that he had so convinced the Southern people that his work was for the good of all that he had won the warm friendship and appreciation of all classes of people. A devoted Unitarian, and always ready to lend a helping hand to struggling Unitarian societies, his work is by no means a sectarian one, for he labors with the ministers of all sects and creeds in lifting up the masses; and, when in one of his addresses he spoke of the North-west as the sounding-board of the nation, we hoped that his plea for government aid to the Southern common school fund might so reverberate throughout the land that the money desired would be promptly forthcoming. There was William T. Harris, one of the ablest thinkers in the country, and one of the most zealous workers in the cause of education, whose strong words in favor of all systems that tend to train and develop child-nature to the utmost are always so wide-reaching in their influence; and, as ever, he cast light on many dark places. There were women like Mrs. May Wright Sewall, of Indianapolis, Miss Sarah E. Doyle, of Providence, Mrs. Louise Hopkins, of New Bedford; and many other grand women and men, who added to the interest and importance of the occasion. As the hours and the days wore on, new life seemed to come to the tired teachers, whose care-worn mien and bearing had impressed so many observers at

first that there must be something wrong in the workings of a profession that so drained the vitality of its adherents. Thomas W. Bicknell, president of the association for 1884, who seemed imbued with such thoroughly wholesome views of life, called attention to a part of that something wrong, when he said that our public school teachers were at present compelled to devote too much time and strength to harassing examinations and petty routine. There is every reason to suppose that this something wrong is now deeply felt, and that measures are under way to right it. But there is something else out of joint that was not touched upon; and this is the small pay awarded teachers, and the uncertain tenure of office. If the teacher be a man, he is apt, after a few years' experience, to look for some position that yields a better pecuniary reward; if a woman, with still smaller salary, she plods on, in the event of her not marrying, liable to too frequent change of position, with income so slender in many instances that she is utterly unable to make suitable pecuniary provision for old age. No wonder, then, that, in spite of all the enthusiasm naturally called forth by a profession that to a true woman is second only to the office of a mother, we see so many anxious, troubled, piteous faces among our teachers, more especially our women teachers.

But these lines are not meant for the vehicle for expressions of dissatisfaction. There were too many signs at the educational convention of the dawn of a higher appreciation of the teacher's calling, and all that this inevitably implies, to render grumbling warrantable. Let us rather dwell upon the grand illuminations at Madison. That there were mental and spiritual illuminations has already been indicated; but there were also brilliant visible illuminations each evening, that lent to the night the lustre of day. The capitol dome was crowned with a circlet of electric light, two thousand radiant Chinese lanterns decked the grounds, swung between the noble trees; while the gateways were each surmounted with an archway of brightly lighted colored glass globes. Most of the homes, too, shed upon the streets a flood of gas-light at night, and were gayly decked with flags all day long. The great social event of the week was the governor's reception at the executive mansion, once the Western home of Ole Bull, whose splendid reception parlor was the private music hall of the Northern magician of the bow. Wisconsin's good Gov. Rusk, wishing to give expression to the profound respect entertained by himself and the people whom he represents for the guild of teachers, whose grand work it is to mould the rising generation, invited the entire Teachers' Association to his home, where he and his wife and family heartily shook hands with five thousand, and no one knows how many more, people. The pleasant lawn, sloping down to exquisite Lake Mendota, the Lake of the Great Spirit, was radiant with Chinese lanterns and locomotive headlights, and made gay with sounds of music and the human voice. Human forms flitted to and fro, groups of people in gala attire were dotted about or seated at the long refreshment tables outside of the dining-room windows, where six hundred gallons of ice-cream, together with cake and lemonade in like proportions, were served to the mighty concourse of people. The well-lighted billiard house, where Ole Bull used to pass so much time with his chosen friends, and the busy figures inside of the pretty building, added to the picturesqueness of the scene. Well-trained ushers prevented all confusion in the mansion or on the lawn. All the windows were open, and many paused outside of the reception parlor to watch the gracious, graceful hospitality betokened in face, form, and man-

ner of the governor and his amiable wife and daughters. There were illuminations on the neighboring lawns, too, and in the neighboring houses for blocks around; and the streets were alive with people, one long, densely packed column of humanity, reaching far, far down the hill to the capitol. And from the roofs of the capitol wings and from the capitol dome there were fireworks which filled the air with splendor. Wonderful night, that of July 17!

Still more wonderful night that of July 18, when the convention was in session for its final meeting in the Assembly Chamber, and the huge numbers of people that failed to gain admission adjourned to the steps and grounds without, where several of the prominent addresses of the evening were repeated. It will suffice to report the proceedings in the Assembly Chamber, where the Unitarian missionary, Rev. A. D. Mayo, and the Catholic missionary, Monsignor Capel, sat together on the platform with President Bicknell and others; and the friend of the public school and he who, while professing to be its friend, plainly indicated his intention of working for the establishment of a sectarian school, were granted equal freedom of speech. The audience had assembled to hearken unto all, and to hold fast to that which had the ring of genuine helpfulness. And how fully the spirit of the week was exemplified in the general character of the remarks and manifestations of interest of the evening! What magnificent resolutions of thanks to every person, place, and thing in the city of Madison were adopted by the guests! What superb expressions of regard were offered to the latter by the townspeople! No more sublime good will between entertainer and entertained could well be imagined. Representatives from each State were called upon for brief remarks, and nothing could have more fully indicated the growth of a grand national sentiment than the tendency of the responses. Such national assemblies cultivate the interest felt by different portions of our country in all other portions; they nurture and cement friendship. The man from Virginia declared that he had learned to be ashamed of having once boasted of old Virginia hospitality as something unusual, for he had been taught to believe in American hospitality; the woman from the far West and the woman from the South each testified to the grand purpose of her people to press onward and upward, and enter heart and hand into the universal good work. The heart bounded with joy at the general helpfulness of the occasion, and new means of growth seemed to be indicated in the desire expressed for an International Teachers' Convention. Whatever the necessary limitations and failings of such gatherings, no fair-minded person could have attended the educational convention at Madison, Wis., without rejoicing over the educational outlook.

AUBER FORESTIER.

ASGARD, MADISON, WIS., July 29, 1884.

"PRECISELY THE DOCTRINE HELD AND TAUGHT BY MR. SPENCER."

A correspondent of the *Boston Evening Transcript*, after giving the substance of Mr. John Fiske's lecture on evolution before the Concord School of Philosophy, and the gist of some remarks that we made at the close of the lecture, adds: "To this, Mr. Fiske replied by asking the question how any one knows that the ape is mortal. But this was an inadequate reply; and the truth is that, from his stand-point, immortality cannot be proved, as he himself stated. It can be, however, by philosophy, which reconciles the seeming conflict, and establishes immortality as a sci-

tific fact. Mr. Fiske's belief is that that psychical power which is in the lower world wells up in us in the concentrated form of consciousness. Consciousness is a divine effluence, not the product of the collocation of forces. It will be seen by this that Mr. Fiske is far above Herbert Spencer and many of his disciples, and on his way to that intellectual certainty which must come of such a willingness to believe."

This statement called out from Mr. Fiske a reply in the same journal, from which the following is taken:—

"This remark does me too much honor, and is unjust to Mr. Spencer. What I really said was as follows: 'In my opinion, the infinite and eternal power which is manifested in every event of the universe is not material, but psychical in its nature; and it wells up in us in the form of consciousness, which is thus a divine effluence, and not the product of an ephemeral collocation of particles of matter.' Now, this is *precisely* the doctrine held and taught by Mr. Spencer. Much in my paper was entirely original with me, but this point was not."

While Mr. Fiske's testimony as to what he said is without doubt correct, his statement, "Now, this is *precisely* the doctrine held and taught by Mr. Spencer," made as it is by the author of the best exposition of Mr. Spencer's philosophy that has been published, and by an author of great ability, who is accustomed to weigh his words, and to state usually with impartial and judicial fairness the theories which he defends or opposes, is most surprising. For the truth is Mr. Spencer teaches, with so much clearness, with so much fulness and even repetition of statement as to admit of no doubt whatever, that the "infinite and eternal power which is manifested in every event of the universe" is in its nature *inscrutable*, and that we are unwarranted in declaring it either psychical or physical, since these words have meaning only as terms designating two classes of phenomena, which may bear no resemblance whatever to the "infinite and eternal power," of which both mind and matter are but phenomenal manifestations as revealed in consciousness.

This, too, is the position maintained by Mr. Fiske in published philosophical essays, in some of which his views on the point in question are given at length. The letter published in the *Transcript* must have been very carelessly written, and possibly mistakes its writer's own position, as it certainly does that which Mr. Spencer maintains in his numerous works.

It would be easy to show from Mr. Spencer's own works the correctness of our statement regarding his philosophy; but our purpose will be better served by giving a few extracts from *Outlines of Cosmic Philosophy*, which will exhibit the views that Mr. Fiske has maintained touching the point referred to in his letter, and at the same time exhibit the views of Mr. Spencer, of whom Mr. Fiske has justly been regarded as the ablest disciple in this country, and to the illustration of whose philosophy the admirable work above named is mainly devoted:—

"Our conclusion is simply this, that no theory of phenomena, external or internal, can be framed without postulating an Absolute Existence of which phenomena are the manifestations. And now let us carefully note what follows. We cannot identify this Absolute Existence with Mind, since what we know as Mind is a series of phenomenal manifestations. It was the irrefragable part of Hume's argument that, in the eye of science as in the eye of common sense, Mind means, not the occult reality, but a group of phenomena which we know as thoughts and feelings. Nor

can we identify this Absolute Existence with Matter, since what we know as Matter is a series of phenomenal manifestations. It was the irrefragable part of Berkeley's argument that, in the eye of science as well as common sense, Matter means, not the occult reality, but the group of phenomena which we know as extension, resistance, color, etc. Absolute Existence, therefore,—the Reality which persists independently of us, and of which Mind and Matter are the phenomenal manifestations,—cannot be identified either with Mind or Matter. Thus is Materialism included in the same condemnation with Idealism." (Vol. I, p. 88.)

"The definition of intelligence being 'the continuous adjustment of specialized inner relations to specialized outer relations,' it follows that to represent the Deity as intelligent is to surround Deity with an environment, and thus to destroy its infinity and its self-existence. . . . Nor can the theologian find a ready avenue of escape from these embarrassments in the assumption that there is such a thing as disembodied intelligence which is not definable as a correspondence between an organism and its environment, and which is, therefore, not a product of evolution. Experience does not afford the data for testing such an hypothesis, and to meet it with denial would accordingly be unphilosophic in the extreme. That there may be such a thing as disembodied or unembodied Spirit will be denied by no one save by those shallow materialists who fancy that the possibilities of existence are measured by the narrow limitations of their petty knowledge. But such an admission can be of no use to theologians in establishing this teleological hypothesis. . . . When we speak of 'intelligence,' we either mean nothing at all or we mean that which we know as intelligence. But that which we know as intelligence implies a circumscribed and limited form of Being adapting its internal processes to other processes going on beyond its limits." (Vol. II, pp. 395.)

"It is not the intelligence which has made the environment, but it is the environment which has moulded the intelligence. In the mint of nature, the coin Mind has been stamped; and theology perceiving the likeness of the die to its impression, making Mind, archetypal and self-existent, to the die." (Vol. II, 402.)

"We are, therefore, forced to conclude that the process of deanthropomorphization, which has from the first characterized the history of philosophical development, must still continue to go on; until Intelligent Will postulated by the modern theologian shall have shared the fate of the earlier and still more imperfect symbols whereby finite man has vainly tried to realize that which must ever transcend his powers of conception." (Vol. II, 410.)

Mr. Fiske says that, if "we proceed to the outermost verge of admissible speculation, and inquire for a moment what may perhaps be the nature of that Inscrutable Existence of which the universe of phenomena is the multiform manifestation, we shall find that its intimate essence may conceivably be identifiable with the intimate essence of what we know as Mind." In order to show this, a passage is quoted from Spencer; but this passage, far from indicating belief in the psychical nature of the Inscrutable Power, says: "While, however, it thus seems an imaginable possibility that units of external Force may be identical in nature with units of the Force known as Feeling, yet we cannot by so representing them get any nearer to a comprehension of external Force. For, . . . supposing all forms of mind to be composed of homogeneous units of feeling variously aggregated, the resolution of them into such units leaves us as unable as

before to think of the substance of Mind as it exists in such units; and thus, even could we really figure to ourselves all units of external Force as being essentially like units of the Force known as Feeling, and as so constituting a universal sentience, we should be as far as ever from forming a conception of that which is universally sentient." (Vol. II, pp. 448.) Far from teaching that the Ultimate Reality is psychical in its nature, Mr. Spencer claims that this proposition is one which does not admit of proof, and of which, properly speaking, no conception can be formed.

With this view, Mr. Fiske's statement following the quoted passage agrees. Were he compelled to choose, he says, between the hypothesis that the Inscrutable Power in its nature is quasi-material or quasi-psychical, the latter is the one he would adopt. But no such alternative presents itself, since it is open to him "to maintain that the Unknown Reality which is manifested under both aspects cannot legitimately be formulated in terms of either aspect. The unconditioned Source of the phenomena which we distinguish as psychical and of the phenomena which we distinguish as material may well be neither quasi-psychical nor quasi-material."

The expression "God is Spirit," Mr. Fiske thinks, is better than the expression that "God is Force." "But," he adds, "in thus consenting to adopt a term [Spirit] about which quasi-psychical connotations have clustered, we do not implicitly consent to the clothing of Deity with definable psychical attributes. The moment we use the words 'intelligence' and 'volition,' we are using words which have distinct meanings, as descriptive of certain circumscribed modes of psychical activity in man and some other animals. Except as descriptive of these circumscribed modes of psychical activity, they have no meanings whatever; and to seek to apply them to the unlimited activity (whether quasi-psychical or not) of a Being that is not circumscribed by an 'objective datum' of any sort is simply to call into existence a number of illegitimate propositions, which, if dealt with as legitimate, would entangle us once more in the network of absurdities from which we were set free by the chapter on Anthropomorphic Theism." (Vol. II, p. 450.)

Whether Mr. Spencer's and—as defined in the above passages—Mr. Fiske's position is one that can be successfully maintained by the highest reason is a question which it is no part of our present purpose to discuss, our object here being only to contribute to a correct understanding as to what the position of an eminent thinker really is.

B. F. UNDERWOOD.

EVERY subscriber who is in arrears for *The Index* is requested to send the amount due to this office with the least possible delay. We are in especial need of money during these summer months to meet current expenses,—which we shall be abundantly able to do, if our friends will promptly remit the sums they owe us on their subscriptions.

EDITORIAL NOTES.

BY B. F. U.

MR. FREDERIC A. HINCKLEY has occupied the desk of the Progressive Friends' Society, at Longwood, Penn., during the month of July, and will continue through August. His regular work in Providence begins with the first Sunday in October.

THE *Presbyterian*, noting the announcement of the *Revue Chrétienne*, a French Protestant magazine, that, in the hands of a new editor who has taken charge of it, "all purely theological articles will be omitted," says, "The Protestants of France should remember that theology is the first of the sciences."

THE *Nation* says very properly that the Concord School of Philosophy "is not a school of philosophy in the old and accepted sense at all. It might just as well be called the Concord Summer Lyceum or the Concord Lecture Bureau. It serves to protract the New England lyceum period, hitherto confined to the winter months, into the hot weather; but it does not undertake to develop a philosophical system of any kind."

THOUGH I have argued that, in ascribing to the Unknowable Cause of things such human attributes as emotion, will, and intelligence, we are using words which, when thus applied, have no corresponding ideas, yet I have also argued that we are just as much debarred from denying as we are from affirming such attributes. Since, as ultimate analysis brings us everywhere to alternative impossibilities of thought, we are shown that, beyond the phenomenal order of things, our ideas of possible and impossible are irrelevant.—*Herbert Spencer*.

LILIAN WHITING, referring in one of her weekly letters to the *Chicago Inter-Ocean* to the apotheosis of Emerson at the Concord School of Philosophy, makes this suggestion: "The programme, so far as a mere ordinary conscious entity like your correspondent can discern, is a very complete one with a single exception. Would it not be well to invite the classic Matthew to 'pull himself together,' and come over with an address on 'The Limitations of Emerson, with a Revised Catalogue of the Things that Emerson was not'?"

MR. F. M. HOLLAND writes: "It is but simple justice to Mr. Mead to say that no one who spoke at Concord strove more faithfully and successfully to give exactly what Emerson said and thought. The lecture showed that they both revered religion deeply, that they thought morality incomplete without it, but that they both knew that a religious life ought to consist of virtue rather than of ceremony. It was inability to agree with either of them on this last point that prompted all the criticism made on the lecture that evening and the next morning. I speak here as I did when I quoted Dr. Bartol, on the basis of notes made on the spot."

THE *Boston Sunday Herald* has this to say in regard to religious life in the country towns of New England: "The testimony is everywhere to the fact that the country is overrun with meeting-houses, and that the rural population is less and less inclined to go to church. The evil exists, and is deplored. It is one of the outgrowths of our voluntary ecclesiasticism, and is not to be overcome without long and persistent endeavor, and a considerable reconstruction of the ruling ideas in our different religious organizations. The most serious thing is not so much the number of these societies as their essential weakness, their inability to deal with the religious life of the community, their want of scope, influence, attraction, vitality. There are so many of them, the congregations are so small, the expense of keeping them up is so large, the drag upon the public is so great, that they exhaust the community without rendering it a suitable equivalent. Worst of all, they are like enraged rattlesnakes in a bushel basket: they bite and destroy one another, and leave the part of the community that most needs religious instruction to take care of itself."

LAST week, we gave an extract by permission of the writer from a private letter from Mr. Charles Froebel, of New York (243 East 19th St.), whose second essay appears in *The Index* this week. The following additional paragraph is from the same letter: "When I lately called your attention to the literary works of my father, Mr. Julius Froebel, it was, I assure you, not from any feeling of family pride. During my last fifteen years' residence in this city, I have often had occasion to resent and object to being introduced as 'the grand-nephew of Frederick Froebel, the originator of the kindergarten schools,' because I felt myself entitled to some regard on my own account. While there could be no possible reasons for being ashamed of such relationships, no greater cause could there be for founding a structure of pride upon such mere accidents. I have had my objections to the above style of introductions met by references to the fact that the supposed 'heredity of genius' makes the coupling of an introduction with an allusion to a man's distinguished relations a passport to a favorable reception. But the true man no more covets a favorable than an unfavorable reception: he demands only a just one. I believe that no man, however inferior in power or limited in the range of his mental life, can ever be entirely indebted to others for his ideas and ideals. But neither can the most adventurous of conquerors of the worlds of truth and beauty advance upon any *terra incognita*, the mysteries of whose hills and valleys, forests and cities, have not been even long before, by some great man from the dawn-clad heights of his mental elevation, for a moment beheld. Original and derived mental forms must, therefore, necessarily mingle in the minds of all, the former to lead in the martial explorations of the ever-receding cloud-land of general doubt, the latter to repeat over and over again deeds of valor in the growing mind:—

'To measure arms their birthdays' knowledge wrought
Anew on younger battle-fields of thought.'

Conceding, therefore, like others before me, the impossibility of purely original thought, I also have to acknowledge a debt of gratitude to those whose work has made my most advanced mental steps possible, or at least smoothed the road."

GOOD IN ALL. For The Index.

Some minds are like streams flowing on to the sea,
Through fields where the sunshine lies placid and free,
Where the clover, wind-wafted, coquets with the bee.

Some are like mountain rills, dashing along
Over rocks and through valleys with laughter and song;
But, checked, they plunge on down abysses of wrong.

But some, like great rivers too closely confined,
Fret the rocks that oppose them, or silently find,
Or make in their progress, grand canons of mind.

Deep, dark, and mysterious, wild gorges of gloom
They may seem; and yet in them sweet wild flowers may
bloom,
And gems and pure gold in their caverns find room.

No depths of man's nature are barren of good:
Over desolate rocks swept the winds and the floods,
And the forests arose that for ages have stood.

Over all their fair tresses the summer had care,
Her soft breezes fanned them, and birds of the air
Made nests in their branches and warbled love's prayer.

So over men's hearts let the sweet waters flow,
And the rocks shall be softened now hardening below;
And the vine and the roses will cling there and grow.

BELLE C. BUSH.

BELVIDERE SEMINARY, BELVIDERE, N.J.

The Index.

BOSTON, AUGUST 14, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, : : : : : } Editors.
BENJAMIN F. UNDERWOOD, : : : : : }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

The Moral Function of Socialism in its Relations to Property.

BY CHARLES FROEBEL.

The Black Cloud.

The states of Europe are alarmed at the mutterings of a cloud. A large and rapidly increasing number of our race, for whom not only the promised sunlight of happier days in this world, but also the hope-shedding beacon of Christianity, appear lost in impenetrable darkness, call out for justice, and, failing to find it, for revenge! Now and then, a far-seeing mind, like that of the first living statesman of our time, discerns

"Upon the east a lurid ray
Write forth its flaming warning,"

and fully realizes that

"This is not smile of new-born day,
This is the fateful morning."

The air is sultry with rumors of plots and conspiracies that seem to herald the approach of a social cyclone

"That on and on, o'er all beside,
The entire world illuming,
Resistless sweeps; with burning tide
All wracks of wrong consuming."

A spirit speaks in all that is. What does it say in socialism?

The attacks of socialism are directed against all defences of the fortress which, under the name of "the social order," is generally held to constitute the moral citadel of our civilization. For not only is the legal tenure of property thus attacked, the entire system of laws, under the protection of which we live and prosper, is likewise assailed. The socialist strikes at the relations now subsisting between laborer and employer. He seeks to subvert that between the citizen and the state. He demands the destruction of the present basis of family ties.

In spite of the black plots and conspiracies now gathering in the anarchy-charged clouds of Europe, it may yet be most emphatically asserted that the

true socialist is absolutely indifferent to what are properly termed "the forms of government." He would no more hesitate to found a despotically governed Empire of the United States upon the ruins of its houses of Congress than he would be at all scrupulous about establishing a Red Republic of Russia upon the grave of the Czar. Forms of government—republics or despotisms—are in his eyes but instruments by which he would refashion the nations in the image of his ideals.

The close of the struggle of thousands of years against feudal privilege is but the dawn of another struggle, possibly of like duration, against the privilege of wealth. And, as the religious creed, which has swayed the western world during the period of feudalism, has utterly failed to make good its socialistic promise, so this dawn of a "plutoclastic" war is likewise the dawn of a new religious faith. For it is a characteristic trait of the early manhood of belief that it cherishes a hope of the realization of its ideals in the immediate present. Seeing too clearly into the heaven of the future, it beholds its forms, not distant, but near by. Therefore, all young creeds are intensely socialistic in their tendencies and directly political in their action: true churches militant. Only when disappointment upon disappointment in their millennial expectations has hurled the aggressive fanatics of the new faith back upon themselves do they seek consolation for the defeat of their hopes either in the resignation of all desire or in the transfer of its objects to another and ideal world. And not until even these springs of consolation, dried at their source by the fierce heat of the sufferings of centuries, cease even for a time to relieve the unquenchable thirst of desire, does the rage-laden cloud of despair loom upon the historical horizon:—

"A vague and shadowy terror of the soul,
A gloom unfathomable, gathering form
From hate's abyss,—a mother of the storm
Who sets her tempests on to thunder's roll."

The Nihilist is the despised and jilted lover of mankind. When, in the course of humble, daily life, we see the devoted love of the youth turned to such bitterness that he can destroy the life of her whom he would have given his all to possess, what fierce hells of hate must at times burn in the heart of him who has offered a sacred passion to humanity, and was with undeserved contumely rejected! What wonder if the sense of such injustice and insult breaks forth in a whirlwind of passion, and he seeks to strike, in the social order of our time, at the life of that humanity whom, in his younger days, he so fondly loved! And, if he should succeed, what then? When the now hated one falls at his feet, and he has thrown the torch into her home,—the state,—he shall stand gloomily by to see the ruins of his betrayed hopes sink into dull gray ashes, refusing all consolation. But see! What lithe form of beauty comes bounding down the hillside in graceful maidenhood, crowned with the roses of the dying flame's red gleam? It is a new humanity. From her eyes shines the light of the social order of the future. To see her is to love. And the Nihilist beholds her; and, carefully putting away his daggers, pistols, and bombs where they will do the least harm, he vows to her the same devotion which he but lately pledged to the one whom he destroyed. The new humanity smiles, and together they lay the foundations of a new and better state, governed by purer laws and sanctified by nobler altars.

The Fact of Evolution in the High Court of Morality.

There was a time when there were questions to which science did not propose an answer. The phenomena of life—the countless absorptions,

transmissions, reflections, and refractions of reality effected by the human mind, and the sociopathical events which change the rhythm of political vibrations and the constitutions of states—were all once regarded not so much as of too complex a nature for immediate practical investigation, than as entirely and forever foreign to its sphere by virtue of an inherent qualitative difference from all those phenomena which were then conceded to be governed by the operation of natural laws. But, in the course of the current century, science has fashioned the lens of a new thesis of extraordinary power. Viewing nature in the light of its focus, day by day there has been attained a clearer perception of the fact that all that is, is but a growth, a development, a process of universal life. On the specifically organic field of research, the logical results attained have assumed a remarkable distinctness of outline. Not only are we now cognizant of the fact that all life's myriad forms are but the effect of a differentiating evolution, but also of the further fact that the multiplication of specific differences and the relative advance made by different species have been due to a never-ending competitive strife for the necessitous objects of desire,—food, safety, and reproduction,—an unceasing struggle for existence, in which the fittest must surely survive, the unfittest inevitably become extinct.

This struggle for existence must necessarily entail a vast amount of suffering, falling least on those who are fittest to live, and scarcely more heavily on those who, being unfittest, must speedily die, but with extreme severity on all who, being of mediocre capacity for adaptation to circumstances, are compelled to linger in weary agony equally fit as unfit for life as for extinction. And of this suffering, this agony and pain, a heavy weight bears down upon humanity. But the prolonged agonies endured by a large body of the human race cite the facts and law of evolution before the judgment-seat of morality; and—let it be well remembered—not the special case of its pain-fraught operation only,—no, the entire law in its entire bearings!

But can a fact or law of nature be cited to appear in the "high court of the universe," can it be there tried and acquitted or convicted? The spirit of asceticism once condemned all that is beautiful as ministering to the lusts of the flesh, and therefore evil: it branded all that is natural as, for that reason alone, intrinsically wrong. That was the view fostered by Christianity during some of the earlier phases of its development, and is the view still held by a number of its adherents. But, with the gradual decay of ascetic orthodoxy, a reaction has set in in the current of opinion, carrying those who but float upon its surface too far in the opposite direction. As the natural was formerly held to be intrinsically bad, so it is now declared to be intrinsically good; while that which is artificial—the work of man's brain and hands—is now frequently for that reason only falls under the ban of condemnation. But, if the happiness produced be accepted as the only true moral measure of action, neither of these two views can be wholly right or wrong. The mere fact that any thing, relation, or event, is natural or artificial, is not sufficient to impress it with the stamp of infamy or goodness: it may serve to explain, but it can neither justify nor condemn its existence. The happiness or misery produced must be the test; and hence the fact and law of evolution may be charged with the guilt of cruelty, and tried in the high court of morality.

It may be claimed that the suffering entailed by the eternal struggle for life is unavoidable. It has even been held that the total amount of net happi-

ness in the universe must ever remain equal; that, whenever it anywhere rises above the average level, it must necessarily somewhere else fall below; that the appearance of an excess of it at any one point of space and time must involve the development of a corresponding excess of misery at some other point of existence. What, then, we must ask, should be our individual attitude toward this suffering? If it is unavoidable, why should we unnecessarily concern ourselves about it? Why darken our own existence with its hopeless contemplation? If, as is now frequently done, happiness is accepted as the only true measure of morality, should not, after all, our own self receive the first consideration? Should not our own well-being be our only aim? Can we not well afford to leave the happiness of others to be worked out by the necessitous causal action of those natural forces which effect the development of human society? That is to say: "Shall we not leave it to be worked out by those very natural forces to the unfeeling action of which all human misery is due?" And yet we might exclaim: "I do not care!" We might selfishly withdraw ourselves into the shell of our personal interests, and, though leaving others to their pain, the efforts for our own happiness might accomplish something, were it not for the attendant fact of sympathy. Sympathy is the detective who spies out the rightful and wrongful actions of nature, cites her to appear in the high court of absolute justice, and seeks to check the evil effects of misdirected activity. All misery arises either from direct causes or as the result of sympathetic induction through the sufferings of others. So it is a consequence of this sympathetic induction that not only those who, before passing away forever, are doomed to the lingering tortures of the struggle for existence must suffer, but that also those whose superior fitness enables them to survive must sympathetically partake of their pains. And this fact is not without far-reaching consequences.

All mental as well as bodily qualities of the human race are either the result of inheritance or experience (adaptation), and, of whichever origin, in their turn transmissible to our descendants. And, as it must necessarily happen in the course of long periods of time that experience is piled upon experience and inheritance upon inheritance, there cannot fail eventually to result in certain favored individuals a most wonderful accumulation of inherited mental wealth, an all but incredible mass of condensed intellectual and emotional power. Thus it is that the great man, the genius, the hero is born,—the philosopher who fashions the lens of his thesis for a clearer insight into the nature of things; the artist who breathes a higher and more potent beauty into his symbolic forms; the statesman who recasts the nation in the mould of his political convictions. And thus the religious reformer, for whose mental endowment all the highest moral qualities—masses upon masses of sympathy, pity, love, and justice—have, during thousands of years, been gathered in the life-press of his inheritance, stands forth in sacred passion, declaring his burning hatred of wrong, his divine law of right through which pain and suffering may be laid aside, and his undying faith in the ultimate reign of voluntary obedience to love, beauty, truth, and happiness.

The Genesis of Privilege and the Plutocratic Demands of Socialism.

As already stated, every young and vigorous religious belief is essentially and necessarily socialistic. No more disposed to sink its hopes in the unconscious depths of the resignation of desire than to behold them soaring beyond its reach

away to the ether of another world, it chains them to this earth, and seeks their immediate realization.

"The first felt wants of humanity seek for direct physical satisfaction. The babe's tiny hand clutches at the object of its wishes, be it bottle or moon; and only when unconscious impulsive effort at physical acquisition has most signally failed thought is born. The impressions received from the environment are analytically broken and dispersed in that wonderful spectrum of conscious knowledge ever growing in complexity and the range and delicacy of distinction of its component tints. Then, by the application of this knowledge spectrum of the tangible to technical invention, the domain of physical power is gradually extended until, when the latter's necessitous limits are reached, thought continues on alone, carving out of the physically unapproachable regions of desire an independent state. Then, by the arms of logic, truth is added to truth, until even here an impassable barrier cries: 'Halt! Thus far shalt thou know, and no further!' But, beyond this barrier, the human heart still feels a claim. Belief takes the field, and does not stay its advance until it has extended man's psychical away to those remotest confines of possible dominion never trod by physical or intellectual force."

The genesis of individual possession as here sketched constitutes the "embryological parallel" of the historical development of possession and privilege from the remote past to a still far distant future. The purely animal principles that "might makes right," and "when you want anything take it," had been long dominant before they became symbolized in the brutal ideal of Herculean heroism. Such a basis of title to possession was necessary in the earlier stages of man's struggle for the subjugation of nature, and is even at this day the only title respected by large numbers of men by no means all savages. But from this root there has grown a hereditarily privileged class. The effeminate descendants of the heroic robber-chief, no longer able to maintain possession by the strength of their good right arm, seek to do so by an appeal to a divine right claimed to be derived from this brutally heroic ancestry. Thus arose the system of feudalism, some of the most evil fruits of which—serfdom and slavery—have only partly fallen in our day, while its last aristocratic branches are still green throughout the Old World.

The social ground from which these children of privilege sprang is no longer productive. Though it may be that now and then some exceptional military prowess still plants the germ of a new noble house, yet it is no longer the success of personal bravery, but that of the skilful general which is so rewarded. The admiration for the strength of arm of the individual hero has given way to that for the strength of mind of the leader of hosts. The maintenance of armies demands the control of such vast wealth that it can be accumulated only through the individual activity of the citizens of a nation. But upon these the state can call for pecuniary aid only when its needs are urgent and their satisfaction essential to its very existence; for, without such limitation, the citizen ceases to exert himself, and, wealth being no longer accumulated, the resources of the nation are sapped at their fountain head,—a disaster said to have even now overtaken the Turkish Empire. Individual wealth thus constituting the foundation of the modern state and therefore protected by it, carrying in its train a more than equitable share of political power and freedom from compulsion, has, in our time, so rapidly developed as to become a fertile ground for the growth of a nobility of wealth, a "plutocratic" privileged class. The weight of oppressive law,

of personal service due the state, and of taxes, falls heaviest upon the poor. The rich are to a considerable extent *de facto* exempt from their operation. The weak and poor, though no longer subject to oppression by the physically strong, are still at the mercy of the wealthy.

As the shadow attends the light, so the sense of want follows the sense of possession. And out of this magic shadow arise the forms of desire,—those forms so unceasing in their strife for the acquisition of the unpossessed. But when, in the course of this strife, the advance of these desires is opposed by the power of established privilege, there sweeps forth from among them the sinister emotion of envy. Envy assails privilege with varying purpose. At one time desiring nothing better than her self-immolation upon the throne of the most privileged, she at another time, in the wild fury of despair, seeks to hurl privilege into the dust and to annihilate all traces of its existence.

As already stated, the attack of socialism upon plutocratic privilege is merely the continuation of the struggle against an older feudal (sthenocratic) prerogative. In this struggle, the selfish expectation of being themselves able to rise to the distinction and advantages of the plutocratic nobility still dominates a vast majority of the envious. A strong hope to be ranked among the wealthy still animates large masses of mankind. But, even now, the fierceness of economic competition already foretells the time when this struggle, if not checked by the operation of certain moral forces, will convert the entire world into *one single, huge, seething, "black hole of Calcutta"*! It is therefore most fortunate that failure in economic competition always develops in the human heart these moral forces of "plutoclastic envy,"—this reverberating cry for the elimination of personal wealth from the economic system of society.

Let it not be for a moment supposed that the triumph of these moral forces will be a peaceful one. As the feudal aristocracy of the past has fought for the retention of every inch of its privileges, so also the plutocratic nobility of the present will dispute step by step the advance of a better social state. It will dispute it with all its vast resources; it will drown it in the voice of the servile orator; it will stifle it in the anaconda-like embrace of a hostile press; it will not hesitate to appeal to the basest passions; it will bribe and bully and betray; it will fill prisons, lunatic asylums, and suicides' graves; and it will not shun to call forth the tread of glittering armies nor to deluge many a battle-field with the blood of the suffering and rebellious poor.

The Prospects of Socialism and After.

All action, be it that of individuals or that of masses, is productive of effects. But as the foresight which seems to direct private effort is as frequently subject to distorting refraction by its transmission through the "medium of the future" as our memory is apt to be by its passage through that of the past, so public foresight is also quite generally at fault. The objects aimed at by masses of mankind are not attained: those not sought for spring into being.

The demands of socialism for the elimination of personal property from our economic system admit of two modes of theoretical satisfaction,—periodically recurring equitable redistribution or permanent absorption by the trustee state. In regard to the former mode, much uncertainty has until lately prevailed. It is now generally conceded that the redistribution of property would have to be almost of daily recurrence to maintain the results sought; and, as new citizens are continually born, the state would be compelled to perma-

nently control a large trust fund for their endowment when of age, and till then to act *in loco parentis*. The system would therefore ever tend to pass into that of a state trusteeship for all property. If the latter system were fully tried, there would at once arise the question of administration and control. This question is in itself so vast that no party of men, however wise and bold, can undertake simultaneously to cope with all its detailed propositions. It must concentrate its efforts on one form of property at a time, as it is even now in a measure doing.

As so far indicated, the elimination of personal property in all its forms from the economic system of the modern state is an impossibility. And even comparatively slight changes in the tenure or control of wealth must be the fruit of so slow a process of historic ripening as severely to try the temper of the calmest and most patient socialist. Nevertheless, such changes, expressing radical modifications of our conception of the ultimate moral aspects of title to property, are now being developed.

All title to property in our day rests mainly upon its derivation. When we wish to know whether anything is rightfully owned, we ask "Did the possessor acquire it honestly?" But with constantly increasing density of population, property is legislatively subjected to continually narrowing limitations of the liberty of control and use. And, with these limitations, a new moral element is introduced into the composition of title. When we inquire into the rightfulness of ownership, on the ground of the mode of acquisition, we are searching its foundations in the *depths of the past*; when we limit the liberty of its use, we are suspending title from the *heights of the future*! For it is only in this future that the voluntarily sought objects of our desires dwell, and use is but an instrument fashioned under their influence and for their attainment.

All human misery and pain, all evil which afflicts us, is indissolubly linked with the unattainability of our desires. So far as we know, our objects are good. Could we under all circumstances attain these, we would be, even as the gods, morally responsible for all we know to be, omnipotent, and free. But as the realization of these objects dwelling within the yet unborn years is our inalienable birthright, we must unceasingly strive for their possession. The evil power which ever opposes itself to their attainment is that of the unsubdued natural forces, the enslaving causes which, from their lurking places in the caves of the past, sinistrally affect the present. We—the human race—can attain to moral dignity only in so far as we avow ourselves the champions of the future. Though bound by our line of descent to a base animal ancestry, we are yet waging an eternal war with that dark and shadowy army of the past, the host of causes which chains and limits our physical powers, sense, and reason. And, in the light of this truth, we can understand that the gradual transfer of title from its foundation upon acquisition in the past to its suspension from use in the future is but a passing step in the never-ending struggle of humanity for liberty and omnipotence, their unremitting contention for the supremacy of ideal purposes and desires over the facts of reality. And this is the moral function of socialism in its relation to property.

The here indicated transfer of title from past to future conditions will be but the transition to the absorption of all property by the trustee state. But when this great purpose, the mission of socialism, shall have been accomplished, when its historic record is closed, what then? Humanity will still be agitated by questions of control. All cannot

administer the communal wealth, nor could its equitable distribution be maintained. Each individual citizen has an undivided, inalienable interest in the common property; but who shall be intrusted with its care? All must have some share in its administration, but who shall occupy the highest places in the socialistic *bureaucracy*? The most intelligent and best, of course. But what will be the consequences, if intellectual and moral excellence should not always be found united in the same persons? In that case, it is highly probable that the most intelligent will manage in some way to lay the foundations of an intellectual privileged class,—a hereditary '*logocracy*,' which will ascend to the social throne, of which the *plutocracy* has been dispossessed. Under this system, education, becoming the all-dominating source of political power, may be made the exclusive prerogative of a hereditary nobility of intelligence, and the intellectually weak may still be trod in the dust by the superior power of knowledge.

But, in the midst of such conditions, sympathy and the wisdom of love can grow unchecked in the heart of the "logocratic noble." Himself free in a sense never before known, he will throw fewer and fewer obstacles in the way of his weaker brother. And, under such conditions, finally, millions of simultaneously rising "religious reformers,"—the conservers of the past sympathies of an ancestry extending through all historic time,—all of one mind, the wisest, and of one purpose, the best, will guide humanity one step further to a social order in which the relative power of the citizen shall depend upon moral excellence alone.

A thousand years or more may well pass over this world before the nobility of wealth—the "plutocracy" of our time—shall have withered roots and branches. But to believe that a nobility of intelligence—a "logocracy"—can run its course within twenty thousand years would be bold indeed. Yet the time must surely come when government shall fall into the hands of a nobility of the truly good,—a *charitocracy*,—and

"Majestic justice! truth supreme!
The future's rights' defender!
The herald of all beauty's gleam,
Descends in radiant splendor."

For The Index.

SPIRITUALISM IN THE CONCORD SCHOOL.

The discussion on Immortality at the Concord Summer School of Philosophy was opened Thursday morning, the 31st ult., with a paper by Dr. Peabody. During the discussion which followed, Rev. Mr. Bush, an Episcopal minister residing in the village, spoke on the subject, but not on the essay, and during his remarks said:—

"I think that wretched delusion called 'Spiritualism' is a failure in its prying into what God has not revealed. Those inquiries of how we shall live and what we shall be in the other state are valueless, in view of the fact that God has not revealed it as his will that we should know."

On the following morning, before Dr. Holland began his essay, Prof. Harris went to Mr. J. C. Bundy, editor and publisher of the *Religio-Philosophical Journal*, and cordially invited him to take part in the conversation of the session. After Dr. Holland had finished and several had spoken, Mr. Bundy took part in the discussion. His remarks, as well as those of Dr. Bush, were taken down by his own stenographer, and were as follows:—

"I have enjoyed, as all present have evidently enjoyed, the splendid essay of the morning. The sincerity and enthusiasm of the speaker delighted me. But I want to inquire, in all candor and earnestness, what comfort the essay could be to a mother who had lost her darling child, or to a husband standing by the bedside of his dying wife? How much of what has been said in the essay or during this discussion could they take in that would give them any clear conception or knowledge of a future life? It is my opinion that to a great majority

immortality is of interest as a matter of fact and not of philosophical speculation. The very point in the consideration of this subject which should have been brought into this discussion has been studiously avoided, except as it was brought up by a speaker yesterday for the purpose of sneering at it. Here in old Concord, upon this historic ground, where was 'fired the shot heard round the world,' there should be moral courage to investigate candidly these phenomena. They are here, and here to stay, and must be met in a spirit of honest inquiry.

"To some philosophers present, this 'wretched delusion,' as it was termed yesterday, seems a most annoying and intolerable thing. Spiritualism, as it is called,—I don't like the word particularly,—I mean those facts which are classed as Spiritualism, are as well attested as any other facts of human experience. I can name hundreds of lawyers, men trained in the rules of evidence, who firmly believe in Spiritualism; judges of the Supreme Court, of the Appellate Court of Illinois, and courts of other States, who have long been believers in spirit return, whose testimony admits of no denial.

"That these phenomena do occur, millions of intelligent men and women affirm. You cannot ignore Spiritualism. It won't be put down: it cannot be sneered out of existence. Scientific men like Crookes, Wallace, Zöllner, and others, after many cautious experiments, long and close observation, testify to the reality of these phenomena. The subject is entitled to attention at your hands in considering the continuity of life beyond the grave. Spiritualism is a synthesis of well-attested facts, and affords a scientific basis for belief in a future life.

"The statement was made last night by Prof. Fiske that the question of a future life was a question of religion, and not of science. This was a strange remark for a man of science to make. To me, it is a matter of science, and affords a basis on which to build a religion.

"In spite of the vagaries of some Spiritualists, and of the cranks who have attached themselves to Spiritualism, despite the fact that of mercantile Spiritualism, which is peddled about the country at prices ranging from a postage-stamp to twenty-five dollars, fifty per cent. of which is fraud, and that twenty-five per cent. more can be accounted for on another hypothesis than that of spirit return,—despite all this, there still remains a large residuum which can be explained in no other way than that of spirit return and manifestation. The whole matter should be considered in its entirety, and judged upon its merits. It has a right to demand that it shall be fairly treated.

"I would like to see here in Concord a Psychical Research Society, either in connection with this School or independent of it, where this subject could be carefully and patiently studied. If it is not undertaken here, it will be elsewhere. A movement is already on foot looking toward the establishment of such an enterprise. It is your duty as philosophers, it seems to me, to look into these phenomena. If the claims made for them are not true, let us know it. If they are true, add your confirmation to the accumulating testimony in their favor. Truth, and truth alone, is what we want."

Remarks by Prof. Harris.

Prof. Harris then spoke of Mr. Bundy as the editor of the *Religio-Philosophical Journal* and a representative of clean Spiritualism. Though he [Harris] did not admit and believe all Spiritualists claim for their belief, yet he thought there was a great deal in Spiritualism to be found out. If a man can manifest himself here, he can, under certain conditions, hereafter. "We are coming," said Prof. Harris, "to an age in which we are going to take it [Spiritualism] up scientifically. It is an age of development and liberty." The professor commended the work of the London Society for Psychical Research, and recommended his hearers to procure and study its reports. He encouraged scientific investigation of the phenomena, but said substantially that there were different ways of studying immortality, and each person would follow his own bent. He referred very briefly to obsession and possession, and said he would touch upon Spiritualism in his essay the next morning. He then introduced

Mrs. Isabella Beecher Hooker,

a sister of Henry Ward Beecher, who proceeded to give a graphic account of her own experience as a medium. While in Paris, some years before, she had some wonderful manifestations through her own me-

diumship, receiving at that time and later convincing messages from her father and mother. Samuel Bowles had been the intimate friend of her husband, and often came to them, establishing his identity beyond question.

The Boston *Herald* of Saturday, the 2d inst., in its report of the session, says of Mrs. Hooker: "Mrs. Hooker, who in the opinion of many seemed more fit for the insane asylum than for the platform, made an earnest, touching, and painfully interesting speech, chiefly concerning her own beliefs and doings as a Spiritualist, but did not go beyond the woman's reason,—her personal experiences. She is a specimen of the diseased individuality that always more or less gathers around any company of honest people who are trying to do real thinking in the world."

Of Mr. Bundy, the same report says: "Yesterday, Spiritualism was alluded to as tending to degrade immortality [referring to Rev. Bush's remarks]; and Mr. Bundy came in to-day all bristling for the fight, as if he had been insulted and must vindicate himself and his cause. He spoke defiantly, and challenged the School, forgetting entirely the proprieties of the place and the character of the discussion."

On the morning of the publication of the *Herald's* account, Prof. Harris said to Mr. Bundy that he was sorry the reporter had made such a statement, and that it was unwarranted. He disclaimed for the School all thought of defiance or impropriety on Mr. Bundy's part. Mr. Bundy is understood to say he received the most courteous and friendly treatment at the hands of the management of the Concord School of Philosophy, as well as from all with whom he came in contact in that delightful village. The writer of the *Herald's* report is said to be Rev. Julius H. Ward, an Episcopal minister.

CORRESPONDENCE.

BLAINE'S CONSTITUTIONAL AMENDMENT.

Editors of *The Index* :—

I wish you would reprint J. G. Blaine's proposed Constitutional amendment, having for its ostensible object the secularization of the United States government, and also *The Index's* comments upon it made at that time. Liberals are anxious to know how far J. G. Blaine can be trusted as a Liberal. Some of my liberal friends think he is just the man Liberals should vote for: others think that, even if he is a free thinker (as his associations with R. G. Ingersoll have led some Liberals to infer), he cannot be trusted. Now since J. G. Blaine has been nominated on the Republican ticket for the office of President, we want to know what *The Index* thought of him long before he was prominently talked of as a candidate for that office. I do not see how any one can take offence at what *The Index* said of his amendment at the time he introduced it in Congress. So, if you think it expedient, let us have it again in *The Index*.

Very respectfully yours,

H. NYE.

ENON VALLEY, PA.

[From an editorial in *The Index* of Dec. 16, 1875, the following is an extract, and is probably what Mr. Nye desires reprinted: "Mr. Blaine's proposal that 'no money raised by taxation in any State for the support of public schools, or derived from any public fund therefor, shall ever be under the control of any religious sect, nor shall any money so raised ever be divided between religious sects or denominations,' would still leave Bible-reading and Protestant Evangelical worship in the public schools undisturbed, unless the word 'sect' should be construed a great deal more strictly than it is popularly, or in all probability would be legally, interpreted. . . . But a complete, satisfactory, and thorough-going form of constitutional amendment, so far as the secular character of the public school system and the very important matter of sectarian appropriations in general are concerned, was proposed as long ago as 1870 by Hon. E. P. Hurlburt, of Albany, formerly a judge of the Supreme Court of the State of New York, in the following explicit terms, which we quote with admiration: 'To the end that the functions of civil government may be exercised without interference in matters of religion, neither the United States nor any State, Territory, municipality, or any civil division of any State or Territory, shall levy any tax or make any gift, grant, or appropriation for the support, or in aid of, any church, religious sect, or de-

nomination, or any school, seminary, or institution of learning in which the faith or doctrines of any religious order or sect shall be taught or inculcated, or in which religious practices shall be observed, or for the support or in aid of any religious charity or purpose of any sect, order, or denomination whatsoever.' Judge Hurlburt explicitly intended to make his proposed amendment such as to secure the total exclusion of the Bible from the public schools, and his phraseology is transparently clear and precise in expressing that intention. Now that his wise and long-unheeded measure is half adopted by statesmen in high official place, let all due honor be accorded to him for his early and patriotic foresight. He was the first to propose a constitutional amendment making the public schools absolutely secular, and the form he proposed is still the only one before the public which carries out the principle of non-sectarian public instruction in rigorous accordance with the logic of liberty. Let not Judge Hurlburt's name be forgotten, or the superior wisdom of his proposed measure be overlooked in the now inevitable discussion of the subject."—B. F. U.]

A LETTER FROM OLIVER JOHNSON.

MR. B. F. UNDERWOOD :

My dear Sir,—In *The Index* of July 24, you say, "Mr. Oliver Johnson, in the *Christian Union*, denies that there were, so far as he knows, any infidels among the Garrisonian abolitionists." You are mistaken: such was not my denial. The *Christian Union* had affirmed that the Garrisonian abolitionists abandoned the Bible because it permitted slavery, and "set themselves at work to abolish Christianity with one hand and slavery with the other." I said in reply: "I am positively unable to recollect even one man or woman among them who was 'carried away into infidelity' by the path indicated, or who ever abandoned the Bible or lost faith in Christianity." I did not mean to be understood as saying that no infidel took part with the Garrisonian abolitionists. Infidels as well as Christians were invited to join the movement, and were always welcomed when they came. There was Mrs. Ernestine L. Rose, an earnest Garrisonian, though an avowed infidel. She often spoke from our platform, and I can call to mind no instance in which she ever attempted to use the movement to promote her infidelity. She criticised the Church, as we all did, for its pro-slavery position, but never, so far as I can remember, assailed it upon any other ground whatever.

The word "infidel" is very loosely employed by different writers; but I do not think that either Henry C. Wright, Marius Robinson, or Parker Pillsbury ever accepted that epithet as applicable to themselves, and I certainly do not think it was applicable to them. And I am not by any means prepared to admit that, rightly considered, it was applicable even to Thomas Paine. What the *Christian Union* affirmed and what I denied was that the Garrisonian abolitionists in large numbers abandoned the Bible on finding that it permitted slavery. So far as I know, there is not one example of this sort that can be named. The Garrisonians, in their individual capacity, represented every phase of religious sentiment, from soundest Orthodoxy to the broadest liberality, and included among them were a few avowed infidels. But the vast majority of them believed in Christianity and the Bible under definitions which satisfied their own judgment and conscience.

OLIVER JOHNSON.

104 EAST 23d STREET, NEW YORK.

[Our reference to Mr. Johnson was based upon the following, which appeared as an editorial paragraph in the *Christian Union* :—

Mr. Oliver Johnson writes us a second letter at some length to show that Garrisonians were not infidels. He insists that Theodore Parker never belonged to the Garrisonian school, but was "one of the founders of the Republican party," and that he never brought his peculiar theology to the anti-slavery platform, "so that no one listening to the speeches and knowing nothing else of his sentiments would have seen any reason to suppose him a heretic at all." In this last statement, Mr. Johnson is certainly at fault, since the Hon. S. P. Chase wrote to Mr. Parker a letter of kindly but earnest remonstrance against his introduction of his theological views into his anti-slavery speeches. Mr. Johnson insists, however, that the Garrisonian abolitionists did not agree with Theodore Parker in these views, and says: "I do not know or remember one of them who would not have said, with Garrison: 'In a true estimate of the divine authority of the Scriptures, no

one can go beyond me. They are my text-book, and worth all the other books in the universe. My trust is in God, my aim to walk in the footprints of his Son, my rejoicing to be crucified to the world, and the world to me. I stand upon the Bible, and the Bible only. If I cannot stand triumphantly on that foundation, I can stand nowhere in the universe."

Mr. Johnson does not think the word "infidel" applicable to Henry C. Wright, Maricus Robinson, or Parker Pillsbury; nor is he satisfied that it was applicable to Thomas Paine. Very good. "Rightly considered," the epithet should not be applied to any man on account of his honest convictions. As Paine said: "Infidelity does not consist in believing or in disbelieving. It consists in professing to believe what he [man] does not believe." The *Christian Union*, however, did not use the word in any offensive sense, but to designate men like Paine and the others mentioned above who do not believe in Christ as a superhuman being or in the Bible as an inspired and authoritative work,—a revelation from God. Now, from the time of Paine, who was one of the earliest abolitionists in this country, to the date of the Emancipation Proclamation, men such as the *Christian Union* designates as "infidels" were prominent in opposing slavery. Many of the Garrison abolitionists were such men, and not a few of them are still living and are among the most radical free thinkers. We have spoken for free-thought societies, East and West, in which the leading members were, years ago, active Garrisonian abolitionists. We have heard many such say that the Bible teachings in regard to slavery first led them to doubt the divine origin and authority of the book, and that they lost faith in Christianity through their anti-slavery experiences. Will Mr. Johnson inform us where can be found in the writings or speeches of Garrison the quotation from him in the above paragraph copied from the *Christian Union*?—B. F. U.]

A CORRECTION BY MR. MEAD.

Editors of The Index:—

In a communication to *The Index* of this date, Mrs. Shattuck represents me as claiming for Emerson, in my recent lecture on "Emerson's Ethics" at the Concord School of Philosophy, the position of an "advocate of the substitution of morals for religion." This is a misunderstanding. The doctrine stated is neither my own, as those familiar with my thought well know; nor is it Emerson's. The purpose of my quite extended remarks upon this portion of my subject was the farthest possible from that indicated. It was to show, to use Emerson's own words, that "the progress of religion is steadily to its identity with morals," and that "theology" (by which Emerson here means the creeds and cults) "is the rhetoric of morals."

"The popular religion," says Emerson, "echoes an original conscience in men. The commanding fact which I do not see is the sufficiency of the moral sentiment. We buttress it up, in shallow hours or ages, with legends, traditions, and forms, each good for the one moment in which it was a happy type or symbol of the Power; but the Power sends in the next moment a new lesson which we lose while our eyes are reverted and striving to perpetuate the old." "The life of the once omnipotent traditions was really not in the legend, but in the moral sentiment and the metaphysical fact which the legends enclosed." "The creed, the legend, forms of worship, swiftly decay. Morals is the incorruptible essence." "Ethics are thought not to satisfy affection. But all the religion we have is the ethics of one or another holy person." "The first position I make is that natural religion supplies still all the facts which are disguised under the dogmas of popular creeds." "All the dogmas rest on morals; and it is only a question of youth or maturity, of more or less fancy in the recipient. The stern determination to do justly, to speak the truth, to be chaste and humble, was substantially the same, whether under a self-respect or under a vow made on the knees at the shrine of Madonna." "Men will learn to put back the emphasis peremptorily on pure morals, to make morals the absolute test, and so drive out the false religions."

These passages were read in my lecture almost in the above order; and they would seem to leave no doubt as to Emerson's real position, which is also my own position. The endeavor is to show that the progress of religion is to a point behind the traditional

symbols,—a point where the soul "finds itself face to face with the majestic Presence, reads the original of the Ten Commandments, the original of Gospels and Epistles." The relation in which the soul thus finds itself, consciously adopting the Conscious Universal Law as the law of its own life, is what Emerson calls the moral relation; and religion is "the emotion of reverence which the presence of the universal ever exerts in the individual." I cannot think that the meaning of my lecture was generally misunderstood, but I am glad of any occasion to repeat and enforce these fundamental principles.

EDWIN D. MEAD.

Boston, August 7, 1884.

DEATH OF A NOBLE YOUNG MAN.

Editors of The Index:—

I hope you will excuse the liberty I take in writing to inform you of the death of our friend, Thomas Pettigrew, who was a subscriber and an occasional contributor to *The Index*. By occupation, he was a coal miner; although, had his life been spared for a few years, he would have succeeded in working himself out of the mines into some higher calling for which his natural abilities qualified him. Fifteen months ago, he—in company with his younger brother, Robert—left Illinois to try his fortune in Western Montana. Finding the conditions of existence there undesirable, he concluded to give the British provinces a trial, where he met, in a gas explosion, that fate which his numerous friends deeply mourn. Deceased was a young man, twenty-six years of age, unmarried. The prominent traits of character for which he was chiefly noted were moral courage, unusual intelligence, a strong love for truth, and a readiness to defend whatever appealed to his judgment as right, no matter what the consequences, together with a loving disposition that found its fullest and truest expression in liberal thoughts and industrious habits. These are a few of the excellent qualities which elicited the admiration of those favored with his acquaintance.

His premature demise has brought to a sad and unexpected termination a life which constituted an unbroken series of magnanimous acts. Although a disbeliever in personal immortality, he has obtained admittance into that heaven, that sphere of everlasting life of which George Eliot loved to sing. His life will be perpetuated in the thoughts and affections of "minds made better by his presence here." Reference to the communications he sent to *The Index* will serve to indicate the drift of his religious thought. He had no faith to invest in the supernatural and less time to waste in dreaming of a perfect state of bliss located somewhere in the skies. He believed that, if earth was ever to be converted into a paradise, such changes would be introduced and established only through the instrumentality of human effort; and, to this end, all his life's energies were charitably devoted. I may add in conclusion that he never ceased to praise *The Index* for its culture and broad spirit of liberality.

I feel that his friends would like to see the announcement of his death in the columns of his favorite paper.

Yours,

DAVID ROSS.

OGLESBY, ILL., July 25, 1884.

In his autobiography, Frederick Douglass, says: "In my communication with the colored people, I have endeavored to deliver them from the power of superstition, bigotry, and priestcraft. In theology, I have found them strutting about in the old clothes of the masters, just as the masters strut about in the old clothes of the past. The falling power remains among them long since it has ceased to be the religious fashion of our refined and elegant white churches. I have taught that the 'fault is not in our stars, but in ourselves, that we are underlings'; that 'who would be free, themselves must strike the blow.' I have urged upon them self-reliance, self-respect, industry, perseverance, and economy; to make the best of both worlds, but to make the best of this world first, because it comes first; and that he who does not improve himself by the motives and opportunities afforded by this world gives the best evidence that he would not improve in any other world. Schooled as I have been among the inhabitants of New England, I recognize that the universe is governed by laws that are unchangeable and eternal,

that what men sow they will reap, and that there is no way to dodge or circumvent the consequences of any act or deed. My views at this point receive but little indorsement among my people. They, for the most part, think they have means of procuring special favor and help from the Almighty; and, as their 'faith is the substance of things hoped for and the evidence of things not seen,' they find much in this expression which is true to faith, but utterly false to fact."

BOOK NOTICES.

THOUGHT GERMS FOR THINKERS. By R. F. Judson. Kalamazoo. 1884. pp. 148.

The author commences by thanking "the many thinkers who have helped him to think, and whose thoughts may be herein embodied." The work consists of proverbs and remarks relating to every aspect of thought and conduct, and contains a great deal of wisdom and common sense tersely and comprehensively stated. Its object "is to inspire thought." It is not free from commonplace sentiments and expressions; but it inculcates on every page a high morality, and is pervaded by a reverent love of truth and justice. A better title for the work than "Thought Germs for Thinkers" would be "Flowers of Thought for All."

B. F. U.

A CONCORD LOVE SONG.

Shall we meet again, love,
In the distant When, love,
When the Now is Then, love,
And the Present Past?
Shall the mystic Yonder,
On which I ponder,
I sadly wonder,
With thee be cast?

Ah, the joyless fleeting
Of our primal meeting,
And the fateful greeting
Of the How and Why!
Ah, the Thingness flying
From the Hereness, sighing
For a love undying
That fain would die!

Ah, the Ifness sadd'ning,
The Whichness madd'ning,
And the But ungladd'ning,
That lie behind!
When the signless token
Of love is broken
In the speech unspoken
Of mind to mind!

But the mind perceiveth
When the spirit grieveth,
And the heart relieveth
Itself of woe.
And the doubt-mists lifted
From the eyes love-gifted
Are rent and rifted
In the warmer glow.

In the inner Me, love,
As I turn to thee, love,
I seem to see, love,
No Ego there.
But the Meeness dead, love,
The Theeness fled, love,
And born instead, love,
An Unness rare!

JAMES JEFFREY ROCHE.

—Boston Evening Transcript.

BELVIDERE SEMINARY.

The plan of an Industrial School which was sent by the Misses Bush, of Belvidere Seminary, New Jersey, to the widow of Wendell Phillips, has received her approval and permission to name the institution, when established, the Wendell Phillips Memorial Industrial School.

The plan has also been highly commended by some of the most eminent educators in this country, and active measures are being taken to insure its success. Its originators respectfully solicit such aid and influence in behalf of their enterprise as the friends of Wendell Phillips may be pleased to offer. They will confer personally or by letter with any one interested in their plan, and will very gratefully receive donations, in large or small amounts, of money, books, stationery, pictures, chemical and philosophical apparatus, or charts and specimens needed in the study of the Natural Sciences. All parties responding in any way substantially to this call will be considered founders of the institution.

Belvidere, Warren County, N.J.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—Boston Evening Transcript.

THE BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travelers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its Day Coaches, which are the finest that human art and ingenuity can create; its Palatial Sleeping Cars, which are models of comfort and elegance; its Palace Drawing Room Cars, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that it is the best equipped road in the world.

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, and take none other. All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

CURRENT TOPICS.

BY B. F. U.

AN exchange mentions the fact that sixty thousand people attended a recent Sunday concert in Central Park as an indication of a popular verdict that "Sunday was made for man."

"FROZEN devilry" is the latest name for ice-cream smuggled into a religious camp-meeting in New Jersey, in defiance of a resolution that it "shall not be sold to the people for recreation purposes." Its cooling effect is what seems to be dreaded.

THE President of the Council of State in Brazil has declared that a bill will soon be brought in by the Government requiring that slaves be confined to their provinces, imposing a national emancipation act, liberating slaves of sixty and upwards, obliging free men to work, and preventing abuses of valuations for emancipation.

THE following paragraph is taken from a Catholic exchange: "Of the five thousand students in Belgium," says the *Etudiant*,—"supposing the Catholic University to be entirely theistic,—we can count two thousand atheists." Then this college journal proceeds to applaud the situation, and points how these two thousand young men will be scattered throughout the country to spread the poison of atheism. Such is the infernal work now going on in Belgium."

RECENTLY, while several Mormon elders were assembled in the house of a Mormon in Lewis County, Tenn., they were attacked by twenty-five masked men, and four of the elders and one other Mormon were killed; and still another, a woman whose husband had been shot dead, was fatally wounded. This is bad business. It will tend to

unite the Mormons more closely, make them more determined, and give them the argument and advantage which always come from martyrdom, unless the persecution succeeds in completely destroying the hated heresy, as, for instance, the Inquisition crushed Protestantism in Spain.

THE *Christian Register* says that the discovery was made at the Concord School of Philosophy that Emerson was orthodox. "Some of the most ardent disciples of Emerson there are orthodox themselves, and that is the way the discovery was made. It is possible that Emerson's Orthodoxy was extracted from his famous address before the Cambridge Divinity School in 1838. We expect to learn eventually that John Calvin was a Unitarian, Servetus a Calvinist, and Laud a Puritan. Prof. Patton, however, continues to believe that 'the unstinted praise of Emerson, which even Christians have not hesitated to indulge in, is an insult to Christianity.'"

THE cholera scare in Paris has had the effect to lessen drunkenness in that city. It is stated that in June the daily average of persons arrested for drunkenness was 170. The number fell to 104 on July 1, and to 54 on July 12, the latter being the lowest on record since the police regulations on the subject of street drunkenness have been in force. It is further stated that the smallness of the attendance at the theatres has been unprecedented during the last quarter of a century. Will the *Independent*, having quoted a statement that the flight of people in large numbers from Toulon was because of the progress of atheism and materialism, please state whether the improvement in the habits of the Parisians since the appearance of cholera is due to the same cause?

THE Irish wit which we find in some of our Catholic exchanges is much better than their theology. The following paragraph from the *Catholic Examiner*, in reply to a well-meant expression in the *Investigator*, must be enjoyed even by the editor who wants to see Col. Ingersoll at the head of a funeral procession as well as by the witty Colonel himself: "A correspondent writes to the Boston *Investigator*, the organ of the infidels: 'Our Colonel Ingersoll is "some." May he live to see the funeral of superstition.' To this, the *Investigator* replies: 'May we live long enough to "see the funeral of superstition," and may the Colonel head the procession.' Our infidel contemporary evidently intends that its chief apostle shall occupy the hearse at the 'funeral' in question. Well, it is its own funeral; and we will not object. But it is rather hard on the Colonel."

WE are not among those who have unqualified admiration for the public life of Mr. Blaine, but we do not hesitate to say that he should have the undivided sympathy of all fair-minded men in defending his private character and the honor of his family against mean and malicious slander. Hardly less atrocious are some of the stories which have been put in circulation respecting Gov. Cleveland, even though it be conceded as it now is by his supporters that in some of his past per-

sonal relations he is justly open to censure. When a man is nominated for a high public position, his private as well as his public character becomes of course a matter of general concern; and it cannot and should not escape scrutiny. But the circulation of vile slander against a candidate for office is cowardly and mean; and all unsupported accusations against such a candidate, especially during the heat of a political campaign, should be discredited and discouraged by all honorable men, to whatever party they belong.

THE *New York Times* and other papers have published many columns professing to give detailed accounts of the practice of cannibalism by the Greely party. That some of the men, impelled by the unconquerable pangs of hunger, did eat the flesh of their comrades who had succumbed to cold, hardship, and want, may be true; and, if so, the desperate condition to which they were reduced, involving mental derangement as well as physical torture, is the justification of acts incomprehensible to a normal mind and odious to healthful thought. But what has been published on this subject has not come from any authoritative source, and may be mainly the speculations of newspaper correspondents and the guesses of persons not in a position to know the facts. Lieut. Greely says that, if any of the men ate human flesh, he was not aware of it. The mutilation of some of the bodies may be explained by a statement made that cut flesh was used for bait. But, whatever be the truth, what end is subserved by the publication of such disgusting horrors as appeared in some of the daily papers last week, in advance of any official statement?

"MAN," the organ of the National Liberal League, is mistaken in saying that the postal law against indecent literature has become, through the influence of that organization, a dead letter. The law is rigidly enforced and with good results. We are informed by publishers and book-dealers that the business of obscenity venders has been almost entirely destroyed in this country. It cannot be denied that this has been done in part by the exclusion of vile prints and pictures from the United States mails. But it must be admitted in all fairness, we think, that the discussion, which originated in the National Liberal League and has been going on the past half-dozen years, has contributed largely to enlighten the public in regard to the practical issues involved. Judges and juries now discriminate between works that are actually obscene and those that are simply coarse or contain merely incidental indecencies of expression; and they interpret the law, in the trial of persons charged with offences under it, intelligently, fairly, and justly. Many of Comstock's cases are, as they long ago should have been, thrown out of the courts; and the salutary effect of the law now, when it is no longer made to serve a purpose for which it was never originally intended, is most conspicuous in preventing a traffic to which all decent people are opposed, and with which, of course, the Liberal League never had any sympathy, whatever be thought of its policy respecting laws designed for its suppression.

AN ANTI-PESSIMISTIC VIEW.

George Fox, in describing certain experiences connected with the awakening of his religious consciousness, said, "I saw that there was an ocean of darkness and death, but an infinite ocean of light and love which flowed over the ocean of darkness." The dark side of human life, in modern days, is turned so much to the public eye that it is often not a little difficult to keep faith in the superabounding light beheld by the founder of Quakerism in his vision. The attention of people is called so constantly to acts of violated trust and of moral degradation and violence that it is becoming quite easy as well as fashionable to accept the pessimistic belief that mankind, if not originally created in a condition of total depravity, are at least now rapidly on the way to such condition. The telegraphic and local columns of the daily newspapers teem with reports narrating with sickening detail facts of individual dishonesty, defalcation, burglary, brutality, fiendish outrage, diabolical murder, and all the intermediate shades of vice and criminality. Corruption in business, corruption in politics and political administration, corruption in social life,—this is the disheartening cry everywhere saluting our ears. And, as if nature were not to be outdone by man, she parallels the telegraphic despatches of criminal horrors with the chapters of her catastrophes by cyclone or flood or fire or wreck; though not a few of her so-called accidents, with all their attendant distresses, are to be traced directly to human carelessness or ignorance or wanton ambition, and hence only add force to the indictment which is brought against human nature. Considering the picture of human society that is thus flashed over the electric wires from community to community, and that is printed daily in the newspapers, and too often with coarse touches added by sensational reporters, there need be little wonder if many persons should begin to feel that the future of mankind is enveloped in darkness rather than in light.

But a little reflection would serve to convince that such a conclusion is based on insufficient evidence, and that George Fox's vision of an ocean of light overflowing the darkness may, after all, be nearer the truth. For how is the telegraphic column which presents this picture of human society made up? It is the concentration into one focus of all the extraordinary and startling events which the magnetic wires have collected from all countries and corners of the civilized world. A hundred or even fifty years ago, nothing of this kind was possible. Crime and vice necessarily remained more private. There were no means to carry such news, no newsmongers to gather it. But, now, what took place in San Francisco or London last night we may read this morning in Boston. These startling horrors, therefore, whether of crime or catastrophe, which make the modern picture of human existence so black, have not happened in the juxtaposition in which they appear to our vision, but have been separated by hundreds and thousands of miles. Perhaps they are some half-dozen or dozen in number, and not every day do we read so many as that of the worst things. But these have been gathered from the whole of our vast country, or perhaps even from the whole domain of civilization. The list, black and foul and long as it is, represents nearly all the excessive disorder, moral and physical, that may become known anywhere in a large part of the world.

In order to get, therefore, a real description of human society, readers of this daily black record of man's wrong-doings and woes must read also

between the lines and all around it another record of virtue, security, and peace, which represents much more truly the average lot of civilized man, but which is likely to be lost sight of in presence of the dark picture that holds the vision. The peaceful homes upon which no shadow of disaster or crime has fallen, the common honesty and fair dealing and mutual confidence of ordinary citizens, the daily little acts of kindness, good will, and charity which are occurring in every community, the united, affectionate, and happy households everywhere to be found,—these find no mention in the news columns of the journals. Yet how many communities and large sections of population there must be where items of this character would make up the description of any day, or, at least, where no wickedness or calamity of a kind sufficiently startling to be reported could be found. The telegraphic picture is composed of the dark occurrences collected from many and widely separated communities; and, thus massed together, they are dark indeed! But, if all the bright and joyous occurrences in these same communities, and in the many other communities where nothing has happened which the electric wire has caught, could be added to this view of human society which the telegraph brings us with our morning paper at our breakfast tables, we should have a veritable repetition of Fox's vision of an "ocean of light" overflowing and submerging the "ocean of darkness."

And, if the question be asked why it is that the evils of human life get reported so much more than their opposites, the answer will give us another encouraging fact. The news-collectors and news-publishers report only the *startling* occurrences, the *extra-ordinary* events, or those things which from their *rarity* will receive attention or gratify curiosity. These things are what the readers call *news*; while the things that are happening around him every day in his own and other families, in his own and in all communities, there is no occasion to give to a telegraph operator or to a newspaper reporter. These are so common that they are not salable goods. No newspaper takes such facts for publication, because everybody knows them already. It follows, therefore, that the horrible events which take up so much space in the newspapers of the day, and which are published because they are *extra-ordinary*, so far from representing the things which make up the warp and woof of human society, represent rather a break in some single thread or a disarrangement in some one piece of social machinery, stopping temporarily, perhaps, a single loom in the vast operations of the human world. The newspapers themselves furnish the proof that their daily register of dark deeds is no true sample of the general social and moral condition of mankind, but rather that the ordinary tenor of society has a character quite the opposite. The flagrant crime is telegraphed throughout the country, while the virtue of the twelve honest men who may be summoned as the criminal's jurors will get no notice in any journal. A collision occurs on a railroad or on the sea, and the dreadful narrative is spread out in our newspapers in the most harrowing detail; but the thousands of trains and of vessels that on the same day are carrying their countless multitudes of human lives in perfect safety attract no attention.

Such facts prove that virtue and security are the common order of things and are taken for granted. Were there as many defaulters and burglars in the community as honest men, were acts of outrage and violence as common as are lawful and virtuous acts, the dishonesties and crimes would cease to have any special attraction to the newsmonger. Should the newspapers in Boston to-morrow morn-

ing print the names of men in this city who had *not* in the last day or two committed theft, but had lived honestly with their neighbors, and contain a despatch from New York stating that such and such bankers, merchants, railroad-managers, had *not* defaulted nor forged nor swindled nor run away in the last twenty-four hours, and another from San Francisco to tell how many persons in that city did *not* yesterday commit murder, such a column of intelligence might at first sight seem pleasanter reading than that which is now likely to meet our eyes. But, to second thought, what would such a newspaper column betoken? The utter demoralization and disruption of society. Were matters to reach such a pass that it were possible for a newspaper to present intelligence of this description among its attractions, the time would also doubtless be speedily at hand when no newspaper would be left nor any other institution of civilized society. At present, the daily newsgleaner selects the dark facts (though he might, it must be admitted, select and use them much more judiciously), because of the dramatic contrast which they afford by their rarity to the pervading and abounding light of the common intelligence, virtue, and happiness.

WM. J. POTTER.

THE LIBERALS IN RELIGION AFRAID OF US.

The woman suffrage movement in America has arrived at the point where it was supposed that success would be assured. At one time, only the most liberal men in politics and religion were favorable: the press, the church, the bar, the bench, the world of fashion, were all against us. Now, our leading journals generally treat the question with respect. Popular reviews and magazines entertain it quite hospitably in their pages. Scientists write voluminously on the difference of sex. Judges and lawyers have come to discuss our political demand as one of constitutional law, and the clergy are giving us new interpretations of Scripture in harmony with the spirit of the age. And now, just as all these classes are advancing in one direction, lo! our Liberals come to a dead stand. They say they are in favor of woman suffrage *per se*, but they are afraid of the practical working of the principle. They say women are naturally so conservative, so entirely under the control of their priests and bishops, that, if the right of suffrage were conceded, they would use their political power to destroy the secular nature of our government. This objection to woman's enfranchisement is made alike in America, England, and France.

Well, suppose by way of argument we admit that women in general are narrow, bigoted, and timid; that their influence would be uniformly against every step in progress; that, if they had political power, they would use it invariably to reinforce the conservative party. The question naturally arises, If this would be their direct influence, is not their indirect influence precisely the same to-day? Whether for good or for ill, the influence of woman is ever insidiously doing its work,—either drawing man upward to the sublimer heights where he can behold all things in their true relations, or holding him down in the valley of humiliation, where the narrow horizon bounds every outlook. The bigotry and superstition of the mothers are sedulously infused into the minds of the children, reappearing in every legislative assembly and in every ecclesiastical council generation after generation, wasting the time and patience of our liberal thinkers in combatting the old worn-out systems of political economy and

theology in the men believing what their mothers taught them.

How seldom you meet a man whose ideas on all subjects are clear and consistent, in harmony with one another, and resting on some grand principle, so that his opinion on one question gives you the key to his opinions on all. His manly endeavors in the world of thought are blocked at every turn by the prejudices and superstitions of his mother, wife, and sister. His honest inquiries when a boy into the soul of things were never answered. Instead of instructing him in those things he could understand pertaining to this life, his mind is bewildered with fears of the mysterious life beyond, of which his teacher knows nothing. In later years, the social code of morals teaches him to echo popular opinions and not combat the evils of his day and generation, if he would insure personal success and family aggrandizement. Policy, expediency, manœuvring, stratagem, are the weapons of oppressed classes in life's battle; and these are the weapons our mothers are compelled to use at the fireside and in such tactics they drill their sires and sons.

Now, our Free Religionists might safely let the women alone, if they could hedge them off by themselves, limit their influence, and free the minds of the sons of Adam from all feminine prejudices. But this cannot be done. You cannot combat these insidious influences that cannot be traced to their real source. If women had a voice in the State and Church, they would be directly responsible for their own actions and opinions, and the men of their households would have an opportunity to see from an objective point of view how well or otherwise they could maintain their position in fair argument. But, so long as we allow women to skulk behind irresponsible power, they will dispense with logic and reason.

I have often talked with husbands who were liberal in their religious ideas, who would stop the conversation the moment they heard their wives coming, by saying: "I do not discuss these questions before Mary. She is happy in her religion, and I do not know but a religion of authority and fear is good for women and children, it makes them more patient of control; and the same might be said of the laboring masses. We should never have been able to hold them in subjection as long as we have, had they not been taught the divine authority of the upper classes."

I think much of this fear I hear expressed among Liberals as to the danger of destroying the secular nature of our government by extending the suffrage to women has its root in man's love of authority. Could we appreciate what an insurmountable obstacle to a high civilization the theological faith of the women of a nation may be, we should see that sound ideas for them on this subject is the first consideration. I remember some years ago reading an able pamphlet by Gladstone on Catholicism. In deploring the spread of that faith, he said, "As might be expected, its most ready victims are women, they being influenced by their emotions rather than their reason." A writer in the *London Times*, speaking of Egyptian civilization, said, "The greatest obstacle in the way of progress there is the condition of the women; and their improvement is hopeless, because they are taught by their religion that their condition is in harmony with the will of heaven." And this idea is responsible everywhere for the apathy and indifference of women under the most adverse circumstances. If we could substitute logic for emotion, reason for blind faith in the traditions of men, women might propose a significant question to themselves, seeing that their condition differs essentially in every country, which one is

according to the divine will,—as toilers in the rice swamps and cotton plantations of the Southern States of America or as teachers and professors in the schools and colleges of the North, as beasts of burden in Germany and France and petted slaves in Turkish harems (wearing masks and veils), or in Girton College contending for Greek and mathematical prizes, or in Windsor Palace Queen of an Empire, head of the army and navy of the mightiest nation on the globe.

Seeing these vast differences, we cannot logically ascribe any one of them to a direct fiat from heaven, but to human laws and customs which we ourselves have the absolute right to modify, improve, and change altogether. It is only through the utter perversion of the religious element in her nature that woman is made the patient, hopeless slave she is. The loss to herself of the highest development of which she is capable is sad; but when this loss involves a lower type of manhood, a lower tone of civilization, it is lamentable indeed. The primal work to-day in every country to secure the progress of the race is the freedom and education of its women. Seeing that her indirect influence is generally acknowledged to be all-powerful for good or for evil, there is only one road to safety; and that is to accord to woman all the advantages and opportunities for higher development, and thus enlarge her sympathies, clear her vision, and strengthen her judgment, that the race may be lifted up a few degrees. Galton, in his work on Heredity, says, "With the tangled problems of our present intense civilization, the brain of man is overweighted; and, as in the nature of things more complex questions will come up in the near future, something must be done to lift our statesmen a few degrees higher, that they may meet successfully what lies before them." And where shall we look for this new power but in a higher type of womanhood?

ELIZABETH CADY STANTON.

AN EXTINGUISHED LIGHT.

Conceding that this universe is by some great Designer based upon a wide-reaching plan, whose ultimate purpose is good and wise, with our senses ever on the alert to discover, if possible, the evidences of such purpose in our own little world,—we are often balked in the search by countless seeming contradictions of our theory of goodness and wisdom; and among the most puzzling of the contradictions are those presented by the phenomenon of death. The weak, the wicked, the suffering, the incompetent, the selfish, and the cruel often live out the full term of days allotted to humanity; while the strong, the pure, the healthfully active, the wise, the philanthropic, and the disinterested man and woman are snatched away in the full vigor of their powers,—at the very moment, perhaps, when their best work is about to be accomplished or their best services imperatively required for the good of their fellows. This fact has been bewailed since man began to observe and to think. Says the poet Young of death,—

"His joy supreme

To bid the wretch survive the fortunate,
The feeble wrap the athletic in his shroud,
And weeping fathers build their children's tombs."

I have been led to these reflections just now by the sight of a package of letters, written in a clear, bold chirography, peened within the last two years by a hand that has done its last earthly work, and inspired by a vigorous brain whose brilliant emanations for us ended,—the hand and brain of Emily J. Leonard, whose recent death has been already commented upon in the columns of *The Index*.

Noting the range of subjects touched upon in

these friendly letters, written without any attempt at careful writing, and only designed for the eyes of her correspondents (my husband and self), and noting also her thorough acquaintance with those subjects and the authorities in regard to them, I am impelled to add my mite of evidence in regard to the public loss sustained in the death of this brave, bright, earnest, active, unselfish, and remarkably modest thinker and worker. With her manifold gifts as linguist, botanist, political economist, and speaker, her untiring literary work as translator and teacher, her earnest activity through numerous channels in behalf of her sex, her generous contributions toward every cause with which she was in sympathy, there was neither in her private conversation nor correspondence the slightest trace of that "mountainous Me" which so often mars philanthropic and reformatory work. But, modest as she was in speech and manner, this modesty did not detract from her firmness of conviction or clearness of emphatic statement of opinion upon any subject on which she professed to hold opinions at all.

In these few letters, out of a correspondence of several years, now lying before me, I am struck, as I glance through them, with the ring of thorough acquaintance with the subjects touched upon (necessarily in a cursory manner) by her versatile pen. These include finance, vaccination, woman suffrage and kindred matters, Sunday laws, intuition, heredity, Spencer's philosophy, and Swedenborgianism. There is a page or more devoted to the question of barbed wire fences in their relation to cruelty to animals. I find also criticisms of Hamerton's *Intellectual Life*, Taylor's *Diegesis*, Mary Wollstonecraft's *Rights of Women*, and other works. In support of her positions on all these questions, she quotes pertinently from many writers, such as Herbert Spencer, George Eliot, John Fiske, Maudsley, Francis Walker, Blanqui, Ricardo, Huxley, Bastian, and others, showing an encyclopedic acquaintance with literature. As an instance of her economic use of time and wonderful memory, I may refer to one of these letters, filling six pages of large note-paper, and treating of the relative brain-power of women compared with that of men, which was written while waiting for a train in the Boston and Albany depot, without books or references of any sort, and yet giving mathematical demonstrations of weight and measure, quoting from memory the published opinion of others. Whatever subject was introduced, she had always stimulating suggestions and criticisms to offer,—and they were offered always in a kindly spirit. There must be many besides the writer of this who owe to this noble woman an indebtedness of gratitude for her kind words of appreciation and encouragement in their work. That recognition of others was not among the least of her many virtues.

The limits of this article forbid much quotation from her letters, but I venture to transcribe several short characteristic paragraphs. In instance of her industry, I quote: "If I can get time to-day, after translating a cyclopædia article on Fourier I have on hand, I will see what I can do about Miss H.'s article." "I have not had time to tell you. . . . Every moment is so full of work." "If I were not so crowded with work, I should be tempted to say something more on the subject." Of her conscientious study: "I read such books slowly, a little at a time, and stop all the way to verify everything I can, particularly when statements are so startling as those of T—." Her interest in women is shown when, writing of the action of one Christian woman, she says: "The bold stand she has taken for freedom in the Church (the most difficult of all kinds of freedom to obtain) makes

her entitled to be ranked with the heroines of free thought. I admire her." "I am moved to write you thus, because I know that you feel, as keenly as I do, anything that tends to retard woman's advancement to her rightful position."

Miss Leonard was a Liberal in the truest sense of that much-abused word. While appreciating the worth and sympathizing with the position of many inside the churches, she was yet a confessed agnostic, with a desire for a life beyond this, which she thought unprovable, but not impossible. She was an admirer of the philosophy of Herbert Spencer, whose works she had studied carefully and understandingly. Knowing this, I was interested, on hearing of her unexpected death, to know whether, in the face of dissolution, she had made any statement or expressed any opinion as to the future. I was enabled to learn from a conversation held recently with Mrs. Isabella Beecher Hooker, who spoke at her funeral, and from other sources, something of the facts. She was taken suddenly ill with heart disease some four weeks previous to her death, and, so far as is known, only spoke of her possible death twice. Once she remarked rather abruptly to the sister who was caring for her, "What, in your opinion, is the life beyond this,—an entire cessation of our life as we now know it and beginning anew, or will it be a mere continuance of this life under different conditions?" Her sister assured her that she felt it must be a continuance of this life with all its individualities and knowledge. "I think that must be so," she assented, musingly. Another time, she was asked if she had any wishes in regard to the disposition of her belongings, to which, after a moment's reflection, she replied that her friends could do what seemed best to them in the matter, from which it would appear that she met death as philosophically as she had encountered life. Once, when in comparative health, she had been discussing with a friend in Meriden the common fashion of funerals, she made the remark that, when she died, there were two things she would like to have remembered: that she wanted no regular funeral service in the shape of a sermon, though, if any clergyman who was a personal friend wished to speak as a friend in an unclerical capacity, she would not object; and, "above all things else, she would like at least *one woman's voice* to be heard on the occasion." Mrs. Hooper, who went to the funeral without intending to take any active part therein, was asked to fulfil this part of Miss Leonard's desire, and did so gladly, feelingly, and appropriately; and, singularly enough, the other hope was fulfilled, when the Rev. Mr. Chapin, of Meriden, her friend and the President of the Scientific Association, of which she had been a member from its commencement, conducted the funeral services.

I have thought so much in regard to one who was an earnest and active friend of *The Index* and of the Free Religious Association from their beginnings might be of interest to the readers of this paper. The last evening she spent in Boston was at the festival of the Free Religious Association, and the news of her death was peculiarly saddening to those of us who were privileged to spend that evening in conversation with her. I particularly recall her tenderly expressed regret that evening on hearing of another woman worker of about her own age, whose earnest life-work was at an end, that such a busy, needful life should so soon close. The very last call Miss Leonard made before leaving this city was at the office of *The Index*,—a paper in whose work she was deeply interested, and to whose principles and objects she gave much valuable missionary labor.

SARA A. UNDERWOOD.

PHILOSOPHIC ASSUMPTIONS.

The Index of June 24 contains two philosophical essays written from the metaphysical stand-point, which, coming from men of culture and schooled in metaphysical thinking, deserve more than casual attention. But each of these exponents of philosophic thought makes some statements in support of their respective theories, which, it seems to the writer, in the interests of philosophic inquiry, should not pass unchallenged.

The essays alluded to are "Superstition or Epicureanism: Are these the only Alternatives?" by Thomas Davidson, and the "Permanence and Simplicity of the *Ego*," by William I. Gill. These essays take diametrically opposite views of the ultimate origin of things, although both denying that this origin is "unknowable."

According to Mr. Davidson, the great stumbling-block in the way of arriving at a knowledge of the ultimate principles of things is the universally accepted doctrine of monism, or that all things and beings sprang from one unitary principle or cause. Although he admits that this doctrine pervaded almost the whole of both ancient and modern philosophic thought, yet he says, "In spite of this all but perfect unanimity among contemporary thinkers, the doctrine in question is absolutely without ground, either in thought or nature." It is held by both theists and atheists, spiritualists and materialists, metaphysical philosophers and scientists. It would seem that a doctrine so universally accepted by all classes and diversities of thinkers must have some foundation in truth, although this fact is no positive proof, when we consider that the whole human race believed that the earth was the centre of the universe, and that the sun and stars revolved around it every twenty-four hours, until the discoveries of modern astronomy demonstrated it to be erroneous; and, doubtless, many other notions universally accepted, in physical science and in theology and moral science, will be found equally erroneous.

But all the facts and operations of nature tend to prove that the world is the product or expression of a single principle, or *substance*. The most obvious phenomena of our world,—the infinite diversity caused by one and the same element (water) in the changes of weather and temperature, in its manifold influences upon everything on our globe through its changes of condition between the three states of solid, liquid, and fluid or gaseous,—perpetually expanding from liquid to aerial, and contracting again in clouds, fog, rain, and dew, in a vibratory movement whose laws are doubtless as mathematically rigid in their operation as those governing the vibrations of light and sound,—the part which these interchanging conditions of water play in all the phenomena of the weather bears a striking analogy to all the great processes of nature. The structures of vegetable formation are built up by the condensations of substance from extremely rarefied conditions, and physiological investigations have shown that the whole animal kingdom is constructed from matter sublimated entirely beyond the reach of our senses. The formation of all organisms in the vegetable and animal kingdoms, and all the phenomena of life in both, appear to consist of nothing else but the perpetual vibration of the same materials between imponderable and solid conditions; back and forth in a continual circuit, together with the wonderful variety of substances which the changes in condition of a very few chemical elements produce, and the homogeneity of all the varieties of electrical phenomena in the part which they play in the complex operations of both inorganic and organic life, all point unmistakably toward the existence of

a common, homogeneous substance, whose changes of condition and vibratory operations constitute all the diversified phenomena of the universe.

To say that "there can be no evolution without action and reaction—in other words, without duality"—is no argument against monism; for it is as easy and even easier to conceive of one substance acting and reacting upon and within itself, than to conceive of two entirely different substances performing the same operation. It is doubtless true that "nothing evolves without an environment," but it does not follow that a single *substance* could have no environment. A change in condition in the same identity might easily be conceived to constitute an environment. Indeed, it is impossible to conceive how we can ever cognize any environment without some interaction between two conditions.

The essay under consideration claims that the doctrine of monism is answerable for what Mr. Davidson terms "irrational phenomenalism," "that wide-spread prejudice, maintained by several schools of thought, that our knowledge never can extend beyond phenomena to grasp substance," which he declares to be "both logically and psychologically false." The theory with which he displaces monism is "that the phenomenal universe is the result of the interaction of an infinite multitude of *essentially* independent, *dynamically* interdependent entities." But, unless this "multitude of *essentially* independent entities" derive all their attributes and qualities from their "interaction" with other entities, they would each have to act within and upon itself, the same as a monistic substance. If they do derive their properties and qualities from interaction with other entities, they would be just as unknowable in their condition of *essential* independence as in the monistic view which he so strenuously combats.

Mr. Gill, in his essay, assumes that all things sprang from an utterly simple, homogeneous entity or substance, and this substance without parts or organs is the *Ego*, meaning, of course, by that term, a self-conscious individual. But this last assumption is in direct contradiction with the whole of our knowledge in relation to the underlying conditions of conscious intelligence. All evidence goes to show that all individual intelligence is the result of great organic complexity, and that the amount of intelligence possessed by any being is in exact ratio with its organic complexity; and any assumption of a consciousness apart from a high condition of complexity is in direct violation of all we know of mental processes and of psychological inquiry in relation to them. In this respect, all unprejudiced introspective and metaphysical thinking coincides perfectly with all objective investigation. It is impossible to conceive an utterly simple homogeneous entity possessing any properties, much more so complex an affair as any consciousness of ours.

This fact does not at all invalidate a future state of conscious existence for human beings, as matter in a condition so fine as to escape our physical senses may easily be conceived to be adapted to still greater complexity of arrangement and organization than any with which our senses acquaint us. It has been pertinently remarked that it would be difficult to conceive of any arrangement of grindstones that should evolve mind.

It was the great merit of the German metaphysicians, Fichte and Hegel, to discover that pure, simple, homogeneous being could possess no qualities or attributes, and would be the same as pure nothing, and that all Reality consisted in opposition, otherness, and difference: albeit, they both contradicted this greatest of insights into the nature of consciousness, in their assumption that

pure being could *consciously* determine itself into difference and opposition, the *very condition* on which all consciousness *priorly depends*. By their efforts to make their great metaphysical discovery into systems that should square with the prevailing *unscientific* theological notions of the nature of mind, they infused the greatest jumble into most metaphysical thought, inquiry, and discussion since their time, and led their followers into a fruitless and barren chase through the dismal swamps and tangled mazes of theological metaphysics.

FRANKLIN SMITH.

ETHICAL CULTURE.

"Emotion gives, Justice sells."

Mr. Cable, in his admirable novel *Dr. Sevier*, has given us no truth of more importance than this. It is an axiom which should be studied in reference to our religious and benevolent institutions. No emotional religion, which puts off the day of judgment to another world, will satisfy the wants of society or avert the dangers which threaten our national and social life. Ethical culture in the family and the schools can alone effect this. With warm appreciation I listened to the presentation of the objects and claims of the schools for ethical culture, as given by their eloquent young advocates at the annual meeting of the Free Religious Association.

Our clergymen are now tacitly admitting by their practical sermons that the teacher of the future must confine himself principally to the affairs of this world, if he would preach to well-filled instead of empty pews. Mr. Washington Gladden, in his thoughtful and timely paper in the current number of the *Century*, "The Three Dangers," says, speaking of gambling in margins: "The gambler in margins is a plunderer. He may be a pillar in the church, he may hobnob with college presidents, he may sit on commencement platforms and be pointed out to young men with notes of admiration as one of our merchant princes; but he is a plunderer." Again, he says, "It may be doubted if this class of our teachers [alluding to ministers] have borne witness as they ought to have done against this iniquity." "Clearly," he says, "there is need of a great deal of elementary teaching on this subject, in order that a public sentiment may be created which will deal with this evil in an effective way."

Where then shall we look for this teaching but to the schools of ethical culture? All hail then to the earnest men of high thoughts, like Messrs. Adler, Salter, Sheldon, and Weston, who have left the theology which has signally failed in its efforts to purify society, and have joined the young and valiant army of brave men and women who ask not if one believes in God, immortality, or the sacredness and infallibility of the Bible, but if his character is irreproachable and the progress and elevation of the men, women, and children around him the objects for which he would labor!

More and more we are brought to see that a religion of emotion, sentimentalism, and supernaturalism, has proved to be of little effect in stemming the tide of immorality and dishonesty everywhere confronting us. In view of the inefficiency of these so-called spiritual and religious doctrines to produce any effectual reforms, we feel like exclaiming with Thoreau, "One world at a time."

We must begin with the children, not, as in the past, with the fear of an angry God, but with the fear of wronging their own natures; that love of self is only wrong when it results in wrong to others. Mr. Gladden says, "When self-love and benevolence are perfectly balanced in human conduct, we shall have on earth the beginning of the

one thousand years of peace." There is benevolence enough in the world; but to put its efforts in the right direction, helping the unfortunate to help themselves, "selling rather than giving," individuals as well as organizations need wise and intelligent discrimination.

To judge of the inadequacy of the lessons taught by the popular churches and their Sabbath-schools, we have only to look at the increasing numbers of gamblers and defaulters who have had this training, thus retaining their so-called respectable positions in society till some crisis and consequent disclosure of their selfish deeds reveal their true characters. When the time comes when the fitness of a man to fill a responsible situation is determined, not by his church standing, his religious professions, but by his known integrity of character irrespective of his belief in any book or creed, then, and not till then, will the work of the Free Religious Association be finished.

The schools of ethical culture, beginning with the kindergarten and combining industrial with moral and intellectual training, are the great necessities of the present time. They should be established in all our cities, towns, and villages, thus sending forth annually an army of men and women who will fight bravely the battle of truth against falsehood,—their watchword, "Truth though the heavens fall."

R. F. BAXTER.

EDITORIAL NOTES.

BY B. F. U.

SAYS an exchange: "Mud thrown freshly may stick; but mud thrown a second time never does."

DAVID HUME, the distinguished philosopher and historian, who is the subject of Mr. Ball's essay in *The Index* this week, was born April 26 (O. S.), 1711, and died Aug. 25, 1776.

LONDON is still too good to allow restaurants to be open on Sunday, so that the stranger within her gates whose lodging mistress does not feed him, and who has no club privileges, must fast. But the popular goodness has not yet extended to shutting up the liquor shops except during the hours of morning service.—*Boston Transcript*.

WE regret two or three typographical errors in Mr. Mead's communication, printed in *The Index* last week. Every reader probably corrected them for himself, but we call attention to one particularly. The sentence in the quotation from Emerson in the second paragraph should read, "The commanding fact which I *never* do not see is the sufficiency of the moral sentiment."

A FRIEND writes: "I suppose it is not wasted energy to spend as much time discussing the infidelity or Orthodoxy of Garrison, Emerson, and Phillips as you New England people (or some of you, rather) are doing, since many are greatly influenced by the views, the mere 'opinions' of such men. But I was positively astonished at Mr. Johnson's assertion; and there are few things that can astonish me in a country like this, which seems to be in a condition to abandon or adopt anything without the least reason. I write only to say that I hope some one will run over the files of the *Liberator*,—files of the later years,—where Garrison unquestionably, and in his usual perfectly distinct manner, boldly repudiated the Bible as authority. I am sure of this, but cannot give the date. There ought to be Bostonians who know the fact."

WE learn from Monroe's *Iron-clad Age* that some of the Western Campbellite preachers are

trying to impair the force of Ingersoll's influence by circulating a slanderous pamphlet by Rev. Clark Braden, entitled "Ingersoll Unmasked." Pretty small business this! Assaults made upon him in this way Ingersoll can easily afford to treat with silent contempt. Whatever this man Braden says or writes about a free thinker, or even about his own brethren when they differ from him, or when he thinks it to his personal advantage to injure them, is not entitled to the least credit. He takes to abuse and blackguardism as naturally as a duck takes to water. He seems to be devoid of a sense of honor. Some years ago, he met a free thinker in a public debate in a Western city. His brethren were so disappointed with the result that they immediately commenced making arrangements for another debate, in which their side should be represented by Rev. John Sweeny, a debater of some reputation among the Campbellites. Braden revealed his baseness in a letter which he wrote and addressed to the free thinker, informing him as to the weak points of Mr. Sweeny as a debater, and telling him the best course to pursue in order to "defeat him." For years, Braden has tried hard to get Ingersoll to engage in controversy with him, or to notice him in some way that would bring him into prominence; but he has been persistently ignored. And, instead of coming to Boston to "demolish infidelity" and give the clergy of this city lessons in logic and Christian evidences, as he intended, he has been down to Texas repeating his platitudes, depending mainly upon personal assaults upon Ingersoll and boastful claims as to the number of victories he has had in debate, to attract the attention of the natives. We know of several Western preachers starting for Boston, but, not receiving the encouragement expected, abandoning the route marked out before bidding good by to their friends in "Sugar-tree Hollow" and other localities, and bringing up in Texas. A common expression once was, "Hell or Texas." With the great Western champions of theology and demolishers of "infidelity," who, like Braden, complain of inappreciation in Western communities, the cry now seems to be, "Boston or Texas"; and, somehow, it turns out to be Texas every time. The amount of theological talent and learning in the Lone Star State must be enormous. This may account for the unsurpassed acquaintance of the Texas herders with the expressive and euphonious language of theology.

FACES. For *The Index*.

In the eye that lights to meet us and the face that smiles to greet us
Are the shadow of the future and the impress of the past;
And the cheek that, in its dawning, flushed as rosy as the morning,
Shows the outline of its beauty as it fades away at last.
And the little children's faces,—'mid their dimples are the traces
Of the maiden's glowing beauty and of manhood's brow of care;
And the horoscope of gladness and the shadow of the sadness,
To the thoughtful eye that gazeth, are they lurking ever there.
But the faces that are nearest and the faces that are dearest
Are the true, the tender faces that our trust and loving win:
Then, when comes to them the shading, when the roses shall be fading,
Like the vase, with light illumined, shall we see the soul within.

ANNA OLCOTT COMMELIN.

The Index.

BOSTON, AUGUST 21, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, BENJAMIN F. UNDERWOOD, : : : : : } Editors.

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

DAVID HUME, OR SCEPTICISM.

(1711-1776.)

BY B. W. BALL.

Hume was truly a philosopher, as well by temperament as by irrepressible mental tendency. He had the metaphysical, if not the perfervid, genius of his race in larger measure than was ever exhibited by any other personality of that race. He was of a constitutionally kindly and cheerful disposition. The only disappointment which he seemed to take seriously to heart was his failure to achieve fame at once in the beginning of his literary career. Under the gloomy impression that his intellectual power was not equal to his ambition and purposes,—an impression which has so often darkened the hopes of genius at the outset,—and that he was destined to ill success as an author, he determined to abandon the authorial career on which he had entered, and, changing his name, to hide himself and his chagrin in exile. But his failure at the start was more imaginary than real. He was too impatient. Renown came to him, the renown which he craved with all his heart and soul, as large a measure of it as ever fell to the lot of historian or reflective thinker. Nobody but his own mother—and she was no fit judge in the case—and his own morbid misgivings ever hinted a doubt of his great mental qualities and genius for reflective thought, in which he so early gave unmistakable evidence of his unequalled acuteness and originality. For, in the History of Philosophy, as Tennemann says, "the philosophical scepticism of Hume stands forth with a power, depth, and logical consistency such as had never before appeared," although the same authority says that "modern science, transcendentalism, and the philosophy of intuition demolish at once the unnatural fabric of Hume's scepticism." Thus was Hume the greatest of all Pyrrhonists,—even greater than Pyrrho himself. Like Shakspeare, he acquired a fortune, or what he deemed such, al-

though he was a born student and averse to following any of the ordinary gainful pursuits. As Shakspeare became rich through his dramatic works, so Hume finally reaped a golden harvest from the ultimate success of his philosophical works and history. He also was the subject of several lucrative official appointments, the successful discharge of the duties of which showed that he was not without practical ability and a knowledge of human nature in its living aspects and manifestations. Doubtless, he was not without the proverbial Scotch thrift, devotee though he was of a contemplative life.

The only unphilosophic mood which he exhibited was his hatred of Englishmen, whom he regarded as a pernicious people. He would have been delighted to have lived to witness the successful revolt of the North American colonies against the mother country, and he would like to have seen India also disencumber herself of English rule. He said that the Englishman was too rude a beast to enjoy the perfect liberty which he did. The popularity of the famous demagogue Wilkes was then at its height. Doubtless, John Bull was in his worst and most unamiable mood in the days of Hume. The hideous pictorial delineations by Hogarth of the English life of that day and the grossly sensual novels of Fielding and Smollett alike witness to a degree of brutality, insensate cruelty, sensuality, and arrogance, and the domineering spirit such as the England of to-day fortunately shows not. But Hume, as for a long time the historian of England *par excellence*, should have kept his hostility to the people and country with whose annals he had forever intertwined his own name to himself.

Hume's life was included between the dates 1711-1776. Thus, he belonged wholly to the old régime and the eighteenth century, as did his co-workers and contemporaries Voltaire and Rousseau and his fellow-historian Gibbon,

"Who sapped a solemn creed with solemn sneer."

His style has all the formalism and colorlessness of his period, although it is perfectly clear and lucid. Of course, he was intellectually the superior of Macaulay and Lecky and Green, current historians of England; but one, after an indulgence in their rich pages and picturesque narrative, finds Hume's and even the more ornate Gibbon's style insipid and scarcely readable. Hume was himself a conservative in politics, notwithstanding his determined freedom of thought and investigation; but his scepticism led as directly to the overthrow of the old-fashioned Church and State as did the sentimental nature-worship and the sentimental politics and social theories of Rousseau and the indignant and blasting wit, sarcasm, and irony of Voltaire. Hume's life was uneventful, as an intellectual life is apt to be, although he held high positions occasionally. In 1763, he found himself secretary of the British embassy in Paris, and, if not exactly the glass of fashion and the mould of form, at least the observed of all observers and the flattered of fair women and brave men, such as shone in the galaxy of the unequalled society of the old régime in the France of that day. Hume's essays on moral, social, political, and theological topics had been translated, and attained to a remarkable currency in that country, which was fast approaching the Niagara of an unparalleled revolution.

Hume was personally almost as awkward and grotesque as his contemporary, Dr. Samuel Johnson. Hence, he must have been a laughable figure in a papilionaceous environment of gay patrician dames and damsels and fastidious cavaliers, whose idolatry of the obese and clumsy Scotchman must have been largely qualified with furtive smiles and

fun. Still, intellectually, he deserved all the homage which he received. Nobody could deny that. Rousseau says that Socrates died like a philosopher, and so did his contemporary and at one time personal friend, Hume. But, unlike Socrates, Hume cherished no pleasant illusion of a happy hereafter or of happy hunting-grounds awaiting him at the conclusion of his mortal career. But still he went untrifled into what he believed would be a gulf of night. The anticipation of a speedy dissolution, when he was at the height of his renown and good fortune, and surrounded by all things that make life enjoyable, did not depress him in the least, or quench his good humor and literary zeal. His death was by the consent of all his intimate acquaintances an euthanasia, and not even theological bigotry ever dared so much as to hint to the contrary. Thus died a great thinker, calmly and unreluctantly, without any expectation whatever of a continuance of his personality in some other state of existence. On the contrary, in one of his most remarkable essays,—namely, that on "Immortality,"—he had elaborately demonstrated the idleness of such an expectation. Nay, more than that, he avows his inability to find in himself the immaterial entity or conscious subject which is the germ in us of immortality. He says: "For my part, when I enter most intimately into what I call *myself*, I always stumble on some particular conception or other of heat or cold, light or shade, love or hatred, pain or pleasure. I never can catch *myself* at any time without a perception," or naked, as it were,—that is, he could never find within anything else than some particular mental mood or state of consciousness. "When my perceptions are removed for any time, as by sound sleep, so long am I insensible of *myself*, and may be truly said not to exist. And were all my perceptions (or thoughts, feelings, and volitions) removed by death, and I could neither think nor feel nor see nor love nor hate, after the dissolution of my body, I should be entirely annihilated: nor do I conceive what is farther requisite to make me a perfect nonentity."

It is said that our knowledge is relative and not absolute; that is, we know appearances or phenomena, but not substance or the bottom fact. But Hume denies that there is any substance, soul, or conscious subject, which is the ground of the mental phenomena which make up our conscious existence. Our thoughts, volitions, and feelings, which are constantly changing, and in perpetual flow, are all there is of us mentally or spiritually. When we look within, we can find nothing but some changing mental mood or state of consciousness, but nothing permanent or substantial. These varying inner moods, it is true, are strung together on a thread of memory, so as to have a certain continuity; but, so far as we know or can know, they have no adherence in a soul or personality. The personal pronoun "I" is simply the sum of these mental phenomena. But it is said that it is a mental necessity that there should be a substantial entity or personality below the hurrying tide of mental phenomena to uphold them. But Hume treats this mental necessity as an imagination merely. He denies that there is any substance or soul in the case of the phenomena of consciousness, as Berkeley had denied that there is any substance in which natural phenomena inhere. As matter is the sum of material phenomena, so soul is the sum of mental phenomena. The word "substance" is a metaphysical term for we know not what, or for things-in-themselves or noumena, which, if they exist, exist outside of our comprehension. Thus, Hume only treated the spiritual phase of life, just as his pious and orthodox fellow-metaphysician, Berkeley, had treated the material

side of it. What was sauce for goose was sauce for gander.

Cousin, in his now forgotten *Elements of Psychology*, sums up the nihilism of Hume as follows: "Matter is really nothing else than the succession of external phenomena attested by the senses. Spirit, or mind, is nothing else than the succession of internal phenomena attested by consciousness. The mind is the bond which we imagine between these latter phenomena. This is all the substratum there is: this substratum is a word. It is absurd to inquire whether this imaginary subject is endowed with immortality. It is equally absurd to inquire whether beyond all phenomena there is a time or a space which we cannot represent to ourselves, or which we do represent to ourselves on condition of reducing them to a series more or less considerable of phenomena external or internal. It is more absurd still to inquire whether there is or is not a primary cause and substance, since no cause and no substance are really known to us. . . . There exists neither spirit nor matter. There exist only ideas without subject and without real connection, vain shadows, which the imagination alone holds suspended, so to speak, over the abyss of universal nothingness."

Further on, in his essay on "Immortality," Hume says, "The soul, if immortal, existed before birth; and, if the former existence concerned us not, neither will the latter,"—a proposition which is based on no system of metaphysics or theory of ideas, but which is plain and comprehensible by the ordinary mind not versed in metaphysical terms and subtleties; for, if our personalities or individualities began to be once on a time, they are likely to cease to be at some future time or at death.

Then again, as to the allegation that this present life is an arena too narrow and limited to call out all the faculties which are latent in us, and therefore that fresh fields and pastures new in a higher sphere are due to us, he affirms that we are tasked to the utmost capacity in fencing against the miseries of our present condition, and that we need every resource that we find in ourselves to make a success of the life that now is. As for the heaven and hell of the creeds and theologies and mythologies, he says that "they suppose two distinct species of men, the good and the bad; but the greatest part of mankind float between vice and virtue. Were one to go round the world with the intention to give a good supper to the righteous and a sound drubbing to the wicked, he would frequently be embarrassed in his choice, and would find the merits and demerits of most men and women scarcely amount to the value of either righteousness or wickedness." Hence, the theological scheme of eternal bliss for one moiety of mankind in a future state, and of eternal woe for the other moiety, if it were true, would be simply an exhibition of almighty arbitrariness and injustice. The different races and branches of mankind are creatures of heredity and environment or of circumstances of place and time. Born in one place, a man is a barbarian and cannibal; in another, a philanthropist or brilliant genius. Thus does the philosophy of Hume, by dissolving self into a streamlike succession of mental states that are never exactly the same, but forever undergoing modification, place before his readers an ultimate prospect of the annihilation of this individual being to which we so fondly cling. It was, doubtless, the nihilistic scepticism of his great countryman to which the poet Campbell makes reference in the following lines of his "Pleasures of Hope":—

"Oh, lives there, Heaven, beneath thy dread expanse
One hopeless, dark idolater of Chance,

Content to feed with pleasures unrefined
The lukewarm passions of a lowly mind?
Who, mouldering earthward, rest of every trust,
In joyless union wedded to the dust,
Could all his parting energy dismiss,
And call this barren world sufficient bliss?
There live, alas! of heaven-directed men,
Of cultured soul and sapient eye serene,
Who hail thee, man, the pilgrim of a day,
Spouse of the worm and brother of the clay,
Frail as the leaf in autumn's yellow bower,
Dust in the wind and dew upon the flower,
A friendless slave, a child without a sire,
Whose mortal life and momentary fire
Lights to the grave his chance-created form,
As ocean wrecks illuminate the storm;
And, when the gun's tremendous flash is o'er,
To night and silence sink forevermore.

Ah, me! the laurel wreath that murder rears,
Blood nursed and watered by the widow's tears,
Blooms not so foul, so tainted, and so dread
As waves the night-shade round the sceptic's head."

The above lines are sonorous and spirited,—in one word, highly rhetorical, like the same poet's verses on anarchic and factious, incurably factious, and therefore dismembered, Poland. Meantime, Hume was not a poet or a mystic, but a determined seeker after truth and investigator of the actual state of the case, irrespective of rhetoric or emotion or obloquy or consequences. Neither was he a pessimist, or did he rejoice in throwing a wet blanket on our spiritual hopes, illusions, and aspirations. He simply sought the truth. He was neither a fanatic nor enthusiast, but of a provokingly cool and rational temperament,—a *terrac filius*, or Son of Earth; and so he emphatically says, "If any purpose of Nature be clear, we may affirm that the whole scope and intention of man's creation, so far as we can judge by natural reason, is limited to this life." Thus speaks the acutest of intellects, as if he was so much in love with this green earth that he regarded it as treason and disloyalty in us to wish for or expect a continuance of existence in any other scene or supernatural environment, and thought that we should be content to fall back into the bosom of our all-bearing mother when the fitful fever of life is over, and sleep the sleep that knows no waking. Hume was so happily organized that he enjoyed this brief existence with an exquisite relish. He loved the still air and retirement of the student's cloister. He was fond, too, of "the delicious juices of meats and fishes," as his portly corporeity made evident, and enjoyed the fame of high intellectual achievement which he had fairly won.

But, regarding as he did the elysiums and paradises of theology and mythology as the illusions of enthusiasts and dreamers, and the Christian City of God as the creation of the fervid imagination of a saint, who was first a sensualist and libertine, and who then went to the other extreme of asceticism and devotion, he could not look in such directions for consolation or hope. He was an inexorable positivist and rationalist. Meantime, his disciple Shelley—for, singular as it may seem, it is evident, both from his poetry and his prose essays, that Shelley was deeply imbued with Hume's philosophy—was not so happy in accepting its conclusions as Hume himself had been, although he did accept them, repugnant as they were to his glowing ideal nature. In one of his essays entitled "Life," Shelley speaks of himself as "an assemblage of thoughts," as a modification or brief individualization of the one universal mind which pervades the universe. In an essay "On a Future State," Shelley adopts the conclusions of his metaphysical master, Hume, and finds "convincing evidences that, so soon as the organs of the body are subjected to the laws of inanimate nature, sensation and perception and apprehension are at an end." But Shelley did not know that there may be a psychical state, in which the antithesis of conscious

subject and object is unknown; in other words, that there may be higher modes of spiritual being than knowledge or intelligence and will. In the essay under consideration, he reiterates the remark of Hume,—that, "if there are no reasons to suppose that we have existed before that period at which our existence apparently commenced, then there are no grounds for supposition that we shall continue to exist after our existence has apparently ceased." In his "Adonais," the most beautiful of elegiac poems, he says, lamenting his friend and fellow-poet, Keats:—

"Alas! that all we loved of him should be,
But for our grief, as if it had not been,
And grief itself be mortal. Woe is me,
Whence are we and why are we? Of what scene
The actors and spectators?"

Elsewhere, he says, speaking of consciousness, or the soul,—

"The intense atom glows
A moment, then is quenched in a most cold repose."

Per contra, elsewhere, yielding to the unearthly instincts of his ideal nature, he says:—

"Peace, peace! he is not dead, he doth not sleep,
He hath awakened from the dream of life.

He hath out-soared the shadow of our night;

He is made one with Nature, there is heard
His voice in all her music, from the moan
Of thunder to the song of night's sweet bird;
He is a presence to be felt and known
In darkness and in light, from herb and stone.
Spreading itself where'er that Power may move,
Which has withdrawn his being to its own,
Which wields the world with never wearied love,
Sustains it from beneath and kindles it above."

This is pantheism, and Shelley was a pantheist. And Hume does not deny that a spiritual substance may be dispersed throughout the universe. He says: "As the same material substance may successively compose the bodies of all animals, the same spiritual substance may compose their minds. Their consciousness, or that system of thought which they formed during life, may be continually dissolved by death; and nothing interests them in the new modification. The most positive assertors of the mortality of the soul never denied the immortality of its substance." In his exquisite verses entitled "Mutability," Shelley indicates the phenomenal, unsubstantial nature of the thoughts, volitions, and emotions which, according to Hume, constitute our inner selves:—

"We are as clouds, that veil the midnight moon!
How restlessly they glance and gleam and quiver,
Streaking the darkness radiantly! Yet soon
Night closes round, and they are lost forever.

"Or like forgotten lyres, whose dissonant strings
Give various response to each varying blast,
To whose frail frame no second motion brings
One mood or modulation like the last."

Hume's scepticism, which was a needed corrective of the arrogant and persecuting dogmatism which was embodied in the despotic Church and State systems of the old-fashioned Europe of his day and generation, is not at all offensive in the present agnostic mood of the human mind, when tradition and authority are of so little account, and when "The Existence of the Deity, his Providence, and the Immortality of the Soul," the subjects against which Hume directed his sceptical objections, are relegated to the domain of the unknowable. It is needless to say that, in this era of "Natural" as against "Supernatural" Religion, the incredibility of miracles goes without saying. We require not the logical refutation of them, which Hume furnished; but we treat them scientifically, as absurd traditions handed down from days of primitive ignorance and gross credulity. But Hume's summary refutation of them was a blow struck in behalf of that mental freedom and emancipation from superstition which we enjoy

to-day. In Hume's essays, the germs of all our current thought can be found. He was a forerunner of current science. His atheism was far preferable to the orthodox theism or gross anthropomorphism of his time.

His scepticism, taking for its point of departure the current system of philosophy of his day, reduced the God and heaven and hell of the arrogant Church of the time to the shadows and things of the imagination which they really are, by showing that outside of the human imagination they have no reality. Thus, although in the civil and political order he was a conservative, in the domain of thought, opinion, and belief he was a revolutionist of the most radical, even of the nihilistic type; and thus, to borrow the phrase of Heine, he was a true soldier in the war of liberation of humanity from a superstitious and priest-fostering supernaturalism.

Carlyle says that the two persons who exercised the most remarkable influence upon things during the eighteenth century were unquestionably Samuel Johnson and David Hume, two summits of a great set of influences, two opposite poles of it. "There is not such a cheering spectacle in the eighteenth century as Samuel Johnson." One cannot help remarking on this statement of Carlyle, that, while Hume was a European, even a cosmical thinker, Johnson was merely an Englishman of more than usual insularity. Carlyle goes on to say that "Johnson contrived to be devout in the eighteenth century." Would it not be more truthful to say that he contrived to be morbidly superstitious? "He had a belief and held by it," proceeds Carlyle: "a genuine inspired man, Hume's eye, unlike Johnson's, was not open to faith, yet he was of a noble perseverance, a silent strength." "It is very strange to contrast Hume, the greatest of all the writers of his time, and in some respects the worthiest, with Dante,"—to contrast *scepticism* with *faith*. Dante saw a solemn law in the universe, pointing out his destiny with an awful and beautiful certainty; and he held to it. Hume could see nothing in the universe but confusion, he was certain of nothing but of his own existence. Yet he had instincts which were infinitely more true than the logical part of him; and so he kept himself quiet in the middle of it all, and did no harm to any one. But scepticism is a disease of the mind, a fatal condition to be in, or at best useful only as a means to get at knowledge; and to spend one's time reducing realities to theories is to be in an enchanted state of mind. Morality, the very centre of the existence of man, was in the eighteenth century reduced to a theory,—by Adam Smith to a theory of the sympathies and the moral sense; by Hume to expediency, the most melancholy theory ever propounded. Besides morality, everything else was in the same state. A dim, huge, immeasurable steam-engine they had made of this world; and, as Jean Paul says, "heaven became a gas, God a force, the second world a grave."

Hume, like all those great original minds who give a new departure to thought, was isolated by his very intellectual greatness and superiority to his contemporaries. Occasionally, when returning from his profound excursions into the realm of speculative ideas to the every-day realities of ordinary life about him, he would feel a keen pang of loneliness and desertion, as it were. He thus describes his feelings at such times: "I am affrighted and confounded with that forlorn solitude in which I am placed in my philosophy, and fancy myself some strange, uncouth monster, who, not being able to mingle and unite in society, has been expelled all human intercourse, and left utterly abandoned and disconsolate. Fain would I run into the crowd for shelter and warmth, but

I cannot prevail with myself to mix with such deformity. I call upon others to join me, in order to make a company apart; but no one will hearken to me. Every one keeps at a distance, and dreads that storm that beats upon me from every side. I have exposed myself to the enmity of all metaphysicians, logicians, mathematicians, and even theologians; and can I wonder at the insults I must suffer? . . . All the world conspires to oppose and contradict me; though such is my weakness that I feel all my opinions loosen and fall of themselves, when unsupported by the approbation of others."

Hume, withdrawn far aloof from his fellow-men on the cold heights of abstract contemplation, might have been addressed by them, from the plane of every-day life, in the language of Tennyson:—

"Come down, O sage, from yonder mountain height.
What pleasure lives in height (the shepherd sang),
In height and cold, the splendor of the hills?
But cease to move so near the heavens, and cease
To glide a sunbeam by the blasted Pine,
To sit a star upon the sparkling spire;
And come, for Love is of the valley; come,
For Love is of the valley, come thou down
And find him; by the happy threshold he,
Or hand in hand with Plenty in the maize,
Or red with spiced purple of the vats."

But isolation and loneliness have always been the penalty of ascent above the dead level of vulgar beliefs and superstitions, so far as the revolutionary thinker has been concerned.

CORRESPONDENCE.

MISS SALLIE HOLLEY AND HER WORK IN VIRGINIA.

Editors of The Index:—

What a loss it would have been to the world, had it been denied that beautiful Bible myth of the Garden of Eden! Where would have been the inspiration of Milton? Where would have been the ideal man and woman with their sweet, tender surroundings,—all befitting creatures in the glory of their strength and beauty, searching out the mysteries of their being, and asking the Why of their own consciousness?

These questions and innumerable others course my brain, as I write this in a quaint, out-of-the-way place in Virginia, so secluded, green, and blooming that I go to old associations, and call it a "lodge in a garden of cucumbers,"—an Eden of fruits and roses and asphodels; of grape vines, flaunting their luxuriance in prelude to the purple harvest; bowers of wisteria, pine trees, whispering their loves by aromatic aromas; and catalpas, scattering petals like a carpet of velvet; pretty lizards sliding under green leaves, and portly toads hiding their jewelled heads; but never a snake to tempt the Eve of this little Eden, who holds her undivided state with nothing in the shape of Adam to relieve the solitude.

The woman I shall describe is not one of the Immortal Forty. She is not a woman to be strung on a string like a bead. She must be accepted outside of all conventionalism, as we accept Thoreau. She is unique in person, in voice, in large, open, prophetic eyes; full of candor, full of a penetrating, unflinching purpose to do what she esteems to be right, no matter what may be the consequence; large, clear-cut features, over which brow and eyes so overlook that you hardly note them, and yet they are of the fine, antique mould, such as Socrates might honor or men of the Cromwellian stamp bow before; a shape artistically left to its own proportions, light and intensely active, responds obediently, healthfully, to a strong, well-disciplined will. She would have been fitting companion to Anne Hutchinson. In the days when the Smithfield fires blazed in England, and the beautiful Anne Askew was burned at the stake, had this woman then lived, she, too, would have died for her convictions. At a period that tested the sincerity and courage of convictions, this woman renounced home, friends, society, that she might create this oasis in the desert, and carry to their ultimate opinions for defence of which she had already sacrificed much. And a woman of this kind, the Eve of this garden, doubtless rejected much, put far from her

many a sweet, tender intimation, in her stern resolve to work out fully her convictions; made sacrifices for the promotion of a great truth in life, which left her alone in the world; from no necessity, but because, like the great Elizabeth, she is wedded elsewhere, to no human sweetness of individual affection, but to that larger kind that embraces human good in a god-like sense, before which individuals, personal likes and dislikes, loves or hates, dwindle into petty nothingness.

She is no contemner of these tender affections that mingle in the sweetness of a household, whose vines and olive branches are beautiful children; but to this heroic woman great humanizing ideas are not mere theories, but facts not to be trifled with or put aside, any more than we can put aside the everlasting hills.

To my shame, let it be said, while I lay upon my pillow dozing to the tune of the mocking-bird and the sound of the cool breeze in the pine-tops, this fine specimen of womanhood was up before the sun (as she always is), and, like our ancient Eve of Milton, tying up the too redundant vine, giving drink to the thirsty asphodel, and, "on hospitable thoughts intent," gathering sweet fruits for the early repast. This restoring the ideal life to the practical life wins my admiration.

I may see the homeliness of all about me, but I penetrate the sweetness of Herbert:—

"Who sweeps a room, as for Thy laws,
Makes that and th' action fine."

And I know that, underlying every toil, is a conscientious bending of every trivial duty to what shall best in itself be orderly and best promote the growth of the beautiful; shall most help on the people amid whom she has cast her life,—the struggling, impoverished white as well as the blind, ignorant black. Hence there is a touching significance in the smallest thing,—in the most casual word spoken by the clear, firm voice, that gives out no uncertain sound, but speaks manfully the needed word of rebuke, or in subdued motherly wise the kind, sympathetic one, that falls a gentle dew upon the sinking, nearly famished heart for lack of human kindness. Verily, it must be said, in the highest sense, in every way, she has made her wilderness to blossom like the rose.

I am not describing a model woman, one for the sex to take to heart and imitate. Few of us would be equal to it; she is too large. We cannot put a gallon into a quart measure. But I am talking of a woman who has a right to be supremely herself, to obey her own intimations; whose impulses are good and true and to be trusted; a woman to be held in all honor, and whose example is worth more than any gold or silver to the world,—the example of unflinching courage, high endeavor, and a reverent listening for the divine voice, "Where art thou?" and she gathered up her robe and stood in the door of her tent, and to hear was to obey. This human singleness, this self-abnegation, this entire unworldly self-consecration to the ideal work of a lifetime, is what I wish to describe; and these are facts of character which all may strive to acquire and imitate. To me, it is more ideal than the dreamy, poetic life of Thoreau, because it is an acted heroism,—a consecrated life for the redemption of the down-trodden and ignorant; and this Christ-like work of doing good is the great life.

Fifteen years ago, Sallie Holley came to this secluded spot, and set up her altar in the wilderness. She had lectured, and achieved a reputation as one who spoke much and well in behalf of equal human rights,—the injustice of slavery, and the turpitude of a system that oppressed the slave while it demoralized the master.

The war was then at an end; and at the South was a mass of white population, humiliated by defeat, impoverished by the loss of what they had hitherto regarded as property, and embittered at finding themselves placed upon a level with those regarded hitherto as their chattel property, placed side by side with them at the ballot-box,—man for man,—not as heretofore the master owning five slaves carrying for them two votes,—that is, it took two and a half of a slave to be equal to one man,—the master counted one vote, as man or woman should, despite of sex or color; but now all this mass of colored population was raised to the dignity of citizenship, with all their ignorance and utter unfitness to appreciate the solemn boon thrust upon them.

Of course, in such a state of things, there would be bitter hostility to a woman who should come among

them to teach the old chattel the sense of manhood and the rights of citizenship, forgetting that every step taken to elevate the colored man was a step in the direction of safety, good order, and wholesome law, would be a check to the natural vagrancy of the black as well as an aid to the advanced intelligence of the white, and by precept as well as example would exhibit "the dignity of labor."

Never did human being work more faithfully with good, resolute hands and brain than this woman has worked. It was not enough that she took the unaccustomed brain of the colored child, void of all hereditary proclivities toward the mysteries of a, b, c, or any written language, and showed to his poor, wondering eyes how these symbols could be made the source of infinite mental growth and the purest delight; it was not enough that she brushed aside the thick films that obscured his moral sight, and showed him the just relations of man to the social compact: but she took him under her own eye, and taught him the best processes of toil and thrift and remunerative labor,—to a creature now owning himself, and responsible to a conscience, to society, and to God.

For fifteen years, she has been doing this work, and already may be witnessed the reward of her toil in the neatness, good order, intelligence, and reliability of this class for many, many miles in her vicinity.

With an eye that accepted all the great progressive ideas of the period in which she lives, she conscientiously felt that the men and women who had sought to work out the problem of the emancipation of the slave were morally bound to continue their work by so educating the negro that he should be a desirable element in the new system of things, be an honest, willing, remunerated workman upon the acres on which he had hitherto done the work of a serf. The final labors of Miss Holley culminate here. She is revered by her sable followers, to whom she has been sight to the blind; and a large following of the white population indicate a respectful appreciation of what she has done by her teaching, not only for the colored people, but for themselves also.

And how did Miss Holley do her work? She took the earnings of many years, the results of her public speaking, and, coming here, purchased three acres of unoccupied land, once belonging to a Virginia plantation. While the whites were disheartened, the colored people clung around their old associations. While the former witnessed her advent with bitter jealousy, the latter turned instinctively to her as a helper. There was much hostility, many threats; but Miss Holley is not a woman to flinch in a course of duty. She had a clear brain, an easy flow of words pertaining to her knowledge of human rights and responsibilities. She met threats with a cool incredulity or dauntless courage. She went with a negro disciple to see that he was properly registered, his age ascertained, and his vote cast. She might fail again and again; but her persistency finally conquered, and the end was gained,—a step in the path of freedom and honest morals, secured by a woman no more to be pushed aside than was Garrison or Phillips.

These three acres, of which I have spoken, included a beautiful pine grove. This she spared, and it is the great charm of her place. Then followed the laying out of the barren spot,—the planting of trees and vines and shrubbery and the building of a house for herself and another for her assistants,—white women from the North. These are airy and convenient for the purpose designed; no architectural elegance attempted, but rude timbers and plain boards, the interior roughly plastered, and the walls papered with engravings cut from newspapers and magazines. Nor is the general effect devoid of picturesqueness. The exterior walls are embellished with the wisteria, climbing rose, and an ivy brought from Shakspeare's Stratford-upon-Avon.

Miss Holley is now eating the fruit of trees planted by her own hand,—apples and peaches and pears and cherries. Grape-vines festooned over rude arbors yield abundantly, and offer cool retreats that might set the hearts of lovers aglow. Strawberries and raspberries and blackberries season her frugal meals, all of her own planting; while beautiful roses and lilies greet the eye on every side. Truly, the place is a marvel of beauty; but it is also a marvel of toil. She has not stood aside, and said, Do this, and do these. Work must be paid for, and her purse has been mostly an empty one. Her own hands have wielded the spade, the rake, and the hoe,—hard work to beautify a spot

of earth in the intervals of teaching the beginnings of knowledge.

The school-house has a cheerful, airy aspect, covered as it is with roses and vines. It is vacation just now; and the rows of desks and seats have an almost pathetic aspect, as I figure to myself the little black heads and white-nailed hands striving to conquer the difficulties of learning.

On Sunday, I took a class in the Sunday-school, and was interested to observe the eager desire to learn manifested by the pupils.

In proof that Miss Holley has conquered her way, that prejudice and hostility have yielded before her, allow me to say that yesterday (Sunday) I spoke before a goodly assemblage of white listeners who awarded me the grace of rapt attention. These were mostly men, for it was raining all day; and there was the prejudice, strong in this region, against the speaking of a woman in public.

After years of toil and manly effort, Miss Holley has been able to enclose with a rough, compact fence her little acres of ground, with a gate at which comers may enter through the grove of pines. To one like myself, leaning to the social and family side of life, this utter isolation of Miss Holley, this quiet, solemn, awe-striking solitude which I note and realize as I rise at night, and hear the wind sigh through the pine-tops with the note of a startled bird, all deepened by the soft down look of the scintillating stars, is well-nigh appalling; and I feel I should have to "follow afar off" so consecrated a leader.

ELIZABETH OAKES SMITH.

THE INQUISITION REVIVED.

Editors of The Index:—

In the London organ of social democracy, *Justice*, its Austrian correspondent, Andreas Scheu, writes June 7, 1884, concerning "men who, under the designation of anarchists, have attacked some of the organs of a most infamous police system. . . . The charge against Schafhausen and Ondra of complicity with Kammerer in the murder of the detective Bloch could not be maintained, for which case, as usual, the public prosecutor had provided by putting a good many minor questions for the verdict of the jury to answer. Ondra was in this ingenious fashion found guilty of having known of the murder before its commission, without having given due notice of it to the police, and punished with two years' imprisonment.

Stellmacher, who is suspected of several crimes, and who would not confess, was, during his preliminary examination, subjected to tortures of such a frightful character that he is said to be unable to speak, if he would; and that he will not be producible in court for some time to come, and then probably only in secret, sitting before a select audience of votaries of the law, the press, and the police, which unholy trinity will take charge of the intelligence wherewith the world is to be provided. I know not to what "fiendish outrages in Virginia and Mississippi" your correspondent, Mr. Gilbert, alludes; but evidences of the general fact in question are but alarmingly frequent. Ferry's government in France is passive under the authority of Bismarck, who has been arresting German socialists in Paris; while, in Spain, fifteen persons have been condemned to death simply as members of the secret society called the Black Hand, whose objects are reputed the same with those publicly avowed in the United States, and which here as yet openly aspire to influence government. In Prague (Bohemia), four imprisonments have been recently made for discussion of social topics in public; while the condemnation of Bradlaugh for administering to himself a form of Parliamentary oath in conformity with his private conscience, and expulsion for this offence, shows Great Britain closing up the darkness in the rear of the continent of Europe. Switzerland vainly pretends to react against the Bismarck despotism. Church and State the world over are virtually one; and, both wedded to the same principle of arbitrary authority, prepare to intimidate free thought by persecution.

Among these sinister indications of the impending moral cataclysm, the most formidable is the corruption of the French republic. Not merely passive toward despotic powers, its own judiciary, in the city of Lyons, is accused by Léo Taxel, editor of *La Revue anti-Cléricale*, of a deliberate perversion of judgment persisting in an error due at first to the fact of the name "Fouillaud" being common to the man per-

secuted with the other who had struck a policeman in a street quarrel. The court refused to hear the witnesses of the accused, and deliberately contrived to deprive him of the benefit of legal counsel, the ground of this animosity probably being that the accused had been a member of the workingmen's congress at Roubaix. By a procedure of the most utterly arbitrary character, and in the teeth of even the usual forms of law, this Fouillaud, who was at first condemned for the fault of another Fouillaud to twenty days' imprisonment, had this term prolonged for a whole year on the pretext of contumacy, because he demanded a second trial and the citation of witnesses to prove his alibi.

We refer to the distinguished counsel César Bouchage, of Lyons, for confirmation of these facts. The court contrived to fix the day of trial on the 5th of May, when it was known that Mr. B.'s engagements peremptorily required his presence at Paris. By the forms of the court, it was for him to have demanded the hearing of his client's witnesses. When an iniquity has been resolved upon, forms only add to the odium of hypocrisy. The exactitude of the facts thus resumed is guaranteed by the danger of publishing them right under the nose of government and its secret police, which forms virtually one body with that of Lyons.

M. E. LAZARUS.

ANOTHER LETTER FROM OLIVER JOHNSON.

MR. B. F. UNDERWOOD:

*My dear Sir,—*If I were not ill, I would go to the Astor Library, and procure an exact reference to the passage I quoted from Garrison. As it is, I can only say that it is taken from an editorial article in the *Liberator*, published some time in 1841, in reply to accusations brought against him by an American clergyman in England. There is a similar passage in an article on the "Divine Authority of the Bible," in his *Writings*, published in 1852, p. 229:—

"I am fully aware how grievously the priesthood have perverted the Bible. . . . Still, to no other volume do I turn with so much interest; no other do I consult or refer to so frequently; to no other am I so indebted for light and strength; no other is so identified with the growth of freedom and progress; no other have I appealed to so effectively in aid of the various reformatory movements which I have espoused; and it embodies an amount of excellence so great as to make it, in my estimation, THE BOOK OF BOOKS."

I am surprised that you should say, "The *Christian Union* did not use the word [infidelity] in any offensive sense." No orthodox newspaper or person ever uses the word in any other than an offensive sense. It is an opprobrious epithet, which the ecclesiastics have contrived to get defined in the dictionaries in a way to make it most effective in their hands. As the true meaning of fidelity is faithfulness, so the true meaning of infidelity is unfaithfulness. The dictionary, no more than the Bible, is infallible.

That there are many Garrisonians who now rank themselves among the free thinkers I do not doubt, and I believe them worthy of all respect; but they do not belong to the class referred to by the *Christian Union*, and in behalf of which I spoke. Free thinkers were as welcome as Christians on the anti-slavery platform. It is still true, however, that those who led the Garrisonian movement, except possibly with here and there an exception, never threw away the Bible, but used it to the end as a mighty weapon against slavery. Equally true is it that they did not attack Christianity, but fought the Church on Christian and Scriptural grounds.

Yours truly,
OLIVER JOHNSON.
New York, Aug. 15, 1884.

A CORRECTION.

Editors of The Index:—

Whenever I am tempted to correct a typographical error, I am always reminded of Lowell's words regarding the criticised author:—

"Let him only keep close in his snug garret's dim ether, And nobody'll think of his critics—or him either."

But, when the natural depravity of types makes me do an injustice, or to seem to fall in the reverence I feel for so grand and noble a man as Dr. Phillips Brooks, I must venture to beg space to correct it. In an extract from one of my letters to the *Chicago Inter-Ocean* presented in *The Index*, one sentence is

made to read, regarding the scholarly class of summer tourists in Boston: "They have the liveliest times imaginable, and with economy and quiet, too, unless they are apt to go to Trinity Church to hear Phillips Brooks." Whereas, I wrote: "They have the loveliest times imaginable, and with economy and quiet, too. Usually, they are apt to go to Trinity Church and hear Phillips Brooks."

The error was made by the *Inter-Ocean*, and so naturally reappeared in *The Index*. Acknowledging your many valued courtesies, I am,

Sincerely, LILIAN WHITING.
HOTEL VENDOME, BOSTON, Aug. 18, 1884.

A PLEA FOR TOLERANCE.

In the "Master's Oration," given by Miss Florence Finch of the Boston *Globe*, at the last commencement of her *Alma Mater*, the University of Kansas, we find this vigorous plea for tolerance and freedom of thought: "And now may I step aside for a moment and make a special plea for a special tolerance,—a plea which, remembering as gratefully as I do the years I spent within these halls, it would be well-nigh impossible to refrain from making? There has been much criticism of this university from those who support it, and therefore have the right to criticize, because it is believed to be too tolerant, too liberal, is thought to teach some things which many of the people of Kansas do not believe, to foster disbeliefs and doubts and heresies and dangerous isms of many kinds. Now, I do not know for a certainty, but I believe that I voice the loving gratitude of every graduate who has gone out of these doors, when I say that not one of us all was here taught to believe, induced to believe, one thing in any branch of study that any citizen of the State would think wrong or harmful. O citizens of Kansas, you greatly mistake the spirit of this gentle goddess of wisdom that you have set high upon this hill, if you think that she attempts to lead her pupils in any direction. She says to them, 'Investigate all sides of every question, and choose that which seems right and reasonable.' You could not find in any educational institution a body of men and women more ready to sink their own beliefs and encourage the freest and fullest investigation, whether it leads to their own convictions or in the opposite direction, than those who compose the faculty of this university. If your sons and daughters come home with strange new ideas about society, morals, government, come home free traders when you sent them out protectionists, the college is not to blame. They have discussed those things here as they must discuss them, if they know what is going on in the world; but they have been directed neither way. They have been told to study, investigate, prove all things, and hold fast to that which seems to them good. These things are all in the winds; and the college that pretends to be a college of to-day—the college that is of any use to the rising generation, that hopes to teach them anything they want to know—must keep its doors and windows open. If you want your university to be a college of to-day, and not a crumbling monument to the things which were of moment years ago, don't shut its doors and windows."

BOOK NOTICES.

SIGNING THE DOCUMENT, the Laokoön, Chopping Sand, and Other Essays. By Wheelbarrow. Chicago. Published by the *Radical Review*. 1884. pp. 132.

About half a century ago, English workmen formed themselves into a trades union organization to resist the exactions of capital and to promote their own interests. This led employers to combine on the basis of an agreement that all their employes should sign a document promising not to join or remain members of the trades unions or any similar societies. The great majority of workmen refused to sign the document. To those who yielded was attached a stigma which lasted through life, and from the effects of which their children even did not escape. "His father signed the document" was a reflection and a reproach cast upon children a quarter of a century after the event occurred. A parallel instance in this country the author of this little volume finds in the humiliating end of the strife of the telegraphers, which prompted the first of these essays. "Labor," he says, "was robbed of its dignity and subjugated, while monopoly was correspondingly

strengthened and exalted, when the telegraph operators signed the document."

No definite plan is suggested whereby disagreements and difficulties may be settled between employes and great corporations that do work the uninterrupted and faithful performance of which is demanded by the interests of all. A summary of Carl Schurz's contribution to this most important part of the subject would make a fitting supplement to *Signing the Document*.

Some of the chapters not indicated by the title form the best portions of the book, which really contains more common sense in regard to the rights, the mutual obligations, and just requirements of all classes who work for their living than any other little book with which we are acquainted. The author has been a close observer, and has had large experience among workmen. Many of his facts and illustrations are drawn from his own life. Thus: "I have four sons, all free-born Americans, so called, and all now grown to manhood. I tried to give them trades, as they respectively reached the proper age; but, in every instance, I was forbidden to do so by the laws of the trades. All four of them are now men; but not one of them was permitted to learn a trade in the land where they were born, and which they have been taught to call a land of freedom. . . . That all four of them didn't become hoodlums and tramps is not the fault of the unions. A man with a heart in him, even if he has no brain at all, must see in a moment that the policy which robbed those boys of their right to learn a trade cannot be right; and, not being right, it cannot be either economical or wise." "I hope," said a workman to the author, "the operators will win; but I am not anxious either way. It is a choice of monopolies, and I side with the weaker. The companies monopolize the profits of telegraphing, and the operators monopolize the art. They forbid one another to teach the trade; and, if their monopoly is beaten by the other, it will be no more than the big pike swallowing the little one." "I look upon it that way myself," says the writer; "and it appears to me that, if the policy of shutting up one trade in order to prevent competition is good for that, it must be good for every other calling or profession; and, all the trades and occupations being closed, the people outside must be either rich or tramps or thieves."

In reply to the proposal to remedy the alleged wrongs of journeymen mechanics resulting from competition of convict labor by making the convicts work upon the public roads, the author declares that laborers have just as much right to protection against convict picks and shovels as the mechanic has to protection against convict chisels, awls, and jack-planes. Most degrading to labor, he thinks, is the assumption that "the hosts of workmen of Illinois cannot stand the competition of a couple of thousand prisoners bungling at the tasks imposed on them for punishment." The convicts, whatever useful work they do, must be in competition with somebody. They must either live in idleness and be supported by the community or earn something; that is, add to production and to the wealth of the people. The trades which pay the highest wages can best afford to stand the competition. If the object is to keep the convicts employed, solely to punish them, without producing anything, the author suggests they be put to "chopping sand." "To work and produce nothing is torture. The divine quality of labor is proved by the pleasure its products bring."

The chapters devoted to the discussion of "The Shrinkage of Values," "The Working Man's Dollar," and "Over-production" expose some popular fallacies in a very happy manner.

Although the author calls himself "Wheelbarrow,"—"because," he says, "that is the implement of my handicraft, or was when I was a strong man,"—he has evidently seen much of social and industrial life, is a reader and thinker, and has pondered long questions to which American workmen are but just beginning to give their attention. In style, he is clear and terse, and, in a chapter on the "Poets of Liberty and Labor," rises to a simple eloquence which must touch the heart of every reader who is in sympathy with the toiling millions. B. F. U.

WONDERS AND CURIOSITIES OF THE RAILWAY; OR, Stories of the Locomotive in every Land. By William Sloane Kennedy. Chicago: S. C. Griggs & Co. 1884.

In this handsomely bound book of two hundred and

fifty-four pages, Mr. Kennedy has compressed a vast amount of valuable information, including considerable scientific knowledge, with many odd incidents and interesting details in regard to railways. The subject is not one which would be likely to attract the attention of the majority of readers, at least not of those who read more for amusement than for information; but the author has so spiced his array of statistical and technical knowledge with pertinent stories, illustrative anecdote, and remarkable incidents, gathered from a variety of sources, that even the mere amusement-seeker will be tempted to learn from this book something of the history of locomotives for the sake of the sugar-coating in which this dose of knowledge is enwrapped. Dickens, Thackeray, Erasmus Darwin, Walt Whitman, Gail Hamilton, and Fanny Kemble are among the lively writers who help in the sugar-coating process. We give the titles of several of the fifteen chapters of which the book is composed: "Beginnings in Europe," "First American Railroads," "The Banding of the Continent," "Mountain Railways," "The Vertical Railway," "Tramways," "The Track," and "The Train." The chapter on "The Vertical Railway" is a succinct history of the elevator system from its beginnings; and the chapter on "Tramways" is the first full account ever given of the origin and growth of street railways. The best authorities have been consulted in the make-up of this book; and over a score of reliable illustrations are given with it, explanatory of the progress that has been made in railway travel from its beginnings, two-thirds of a century ago, until now, when, as we learn from the daily papers, on Monday of this week, the Pullman Car Company of Illinois constructed and painted all complete one hundred cars within the regular working-hours of that day. S. A. U.

THE September *Atlantic* has more than usual variety. Two additional chapters are given of Dr. Michell's excellent serial story, "In War Time." Richard Grant White concludes his papers on "The Anatomizing of William Shakespeare." Francis Parkman contributes an essay upon "Wolfe on the Plains of Abraham." Prof. E. P. Evans has a curiously interesting article on "Medieval and Modern Punishment." Herbert Tuttle has a timely Paper on "The Despotism of Party." E. W. Sturdy writes of "The Volcanic Eruption of Krakatoa." Eleanor Putnam describes "Old Salem Shops." Charles E. Pascoe tells "The Story of the English Magazines." Miss C. F. Gordon Cumming relates "A Legend of Inverawe." An anonymous writer describes the "Lakes of Upper Italy." There are poems by Lucy Larcom, Mrs. Julia C. R. Dorr, and Paul H. Hayne.

THE opening article in the September number of the *Catholic Review* is "Contemporaneous China," by Alfred M. Cotte, which is followed by "My Staff of Age," by Alfred M. Williams; "Philista," by Maurice F. Egan; "Unitarian Belief," by H. L. Richards; "Solitary Island, Chap. V.-VIII.," by Rev. J. Talbot Smith; "With the Carlists," by John Augustus O'Shea; "The Oratory in London," by Mrs. Charles Kent; "Katharine, Chaps. X.-XII.," by E. G. Martin; and "The Liquefaction of the Blood of St. Januarius," by L. B. Binsse.

THE *Unitarian Review* for August is an interesting number. The leading articles are "Ezra Abbot, D.D., LL.D.," by Prof. Joseph Henry Thayer; "The Prolegomena to Tischendorf's New Testament," by Rev. A. P. Peabody; "Personality in Theism," by Rev. B. R. Bulkeley; and "Education of Women in France," by D. Charrnaud.

BELVIDERE SEMINARY.

The plan of an Industrial School which was sent by the Misses Bush, of Belvidere Seminary, New Jersey, to the widow of Wendell Phillips, has received her approval and permission to name the institution, when established, the Wendell Phillips Memorial Industrial School.

The plan has also been highly commended by some of the most eminent educators in this country, and active measures are being taken to insure its success.

Its originators respectfully solicit such aid and influence in behalf of their enterprise as the friends of Wendell Phillips may be pleased to offer. They will confer personally or by letter with any one interested in their plan, and will very gratefully receive donations, in large or small amounts, of money, books, stationery, pictures, chemical and philosophical apparatus, or charts and specimens needed in the study of the Natural Sciences. All parties responding in any way substantially to this call will be considered founders of the institution.

Belvidere, Warren County, N.J.

Vol. IV.—INGERSOLL ON TALMAGIAN THEOLOGY. (New.) 443 pages. Cloth, gilt top, \$2.00; plain cloth, \$1.25; paper 50 cents.

WHAT MUST WE DO TO BE SAVED? 89 pages, 12mo. Paper, 25 cents.

THE CHRISTIAN RELIGION. A series of articles on the Christian Religion, by Col. ROBERT G. INGERSOLL, Judge JEREMIAH S. BLACK, and Prof. GEORGE P. FISHER. The only complete and authorized edition. One volume, 8vo, 143 pages. Cloth, \$1.00; paper, 50 cents.

VINDICATION OF THOMAS PAINE, from the attacks of the *New York Observer*. By ROBERT G. INGERSOLL. Paper, 25 cents.

Just Published:

Ingersoll's Lectures Complete.

In one superb volume, 1306 pages, octavo, half calf, gilt, mottled edges. Price, postpaid, \$5.00.

PROCEEDINGS OF THE CIVIL RIGHTS MASS MEETING, held at Lincoln Hall, Washington, D.C. (October 22, 1883). Containing the speeches of Hon. FREDERICK DOUGLASS and Col. ROBERT G. INGERSOLL. Large size, octavo. Paper, price 15 cents.

PRONE-POEMS AND SELECTIONS from the writings and sayings of Col. ROBERT G. INGERSOLL. Embellished with a steel-engraved portrait of the author. Beautifully printed on elegant white paper, and in every way a splendid book for the centre table. Price \$2.50.

For sale at THE INDEX office, 44 Boylston Street, Boston.

THE PROBLEM OF POVERTY. A Lecture delivered before the Society for Ethical Culture of Chicago. For sale at THE INDEX office. Price 10 cts.

THE ABSENCE OF DESIGN IN NATURE. By Prof. H. D. GARRISON. A Lecture delivered before the Philosophical Society of Chicago. Price 10 cts. For sale at THE INDEX office.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions, . . . 10c. per line.
" 13 " 25 " . . . 8c. " "
" 26 " 51 " . . . 6c. " "
" 52 " " " . . . 5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

Man --- Whence and Whither?

By RICHARD B. WESTBROOK, D.D., LL.B.

Price \$1.00.

For sale at THE INDEX office.

THE ETHICAL MOVEMENT:

Its Philosophical Basis; Its General Aims; Its Relation to Christianity, Unitarianism, and Free Religion.

THREE ADDRESSES BEFORE THE FREE RELIGIOUS ASSOCIATION, BOSTON, MAY 30, by Messrs. W. M. SALTER, W. L. SHELDON, and S. B. WESTON.

For sale at THE INDEX office. Price 15 cents.

EVOLUTION IN ITS RELATIONS TO EVANGELICAL RELIGION. Addresses of B. F. UNDERWOOD, Prof. P. A. CHADBOURNE, and Prof. ASA GRAY at a meeting of the "Evangelical Alliance" held in Boston, Sept. 10, 1882. 5 cts.

NATURALISM vs. SUPERNATURALISM. By B. F. UNDERWOOD. 10 cts.

WHAT KIND OF MORALITY DID JESUS AND THE APOSTLES TEACH? By F. M. HOLLAND. 5 cts.

GOD OR THE GALILEAN? By FELIX L. OSWALD. 5 cts.

THE SCIENTIFIC AND METAPHYSICAL METHODS IN PHILOSOPHY. By LEWIS G. JAMES. 5 cts.

THE RELIGION OF HUMANITY. By WILLIAM FREY. 15 cts.

AN AGNOSTIC VIEW OF THE DOCTRINE OF VICARIOUS ATONEMENT. By W. H. SPENCER. 5 cts.

AGNOSTICISM AND RELIGION. By W. H. SPENCER. 5 cts.

Address THE INDEX, 44 Boylston Street, Boston, Mass.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of medievalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a harmful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript*.

THE BEST ALL ODDS BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its *Day Coaches*, which are the finest that human art and ingenuity can create; its *Palatial Sleeping Cars*, which are models of comfort and elegance; its *Palace Drawing Room Cars*, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that it is the best equipped road in the world.

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, and take none other. All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

CURRENT TOPICS.

BY B. F. U.

The *Catholic Review* invites the attention of Irishmen to "the present remarkable and edifying spectacle of two great parties struggling for precedence in the honor of kissing Pat's Hibernian and Papal great toe."

According to a London paper, a man at West Somerset, Eng., broke his neck while drunk not long ago. It happened that his grandfather did the same thing, and the intelligent coroner's jury brought in a verdict of "Died by the hereditary visitation of God."

Last week, Gov. Murray, of Utah, sent a caustic note to Gov. Bate, of Tennessee, saying: "The despatches indicate that you are exerting yourself to vindicate the laws in the matter of the murder of the Mormon missionaries in Tennessee. I thank you for this action. Charges of preaching polygamy do not excuse murder. I trust that you may bring the guilty to punishment, thereby preventing such lawlessness in Tennessee or elsewhere. Lawlessness in Tennessee and Utah is alike reprehensible; but the murdered Mormon agents in Tennessee were sent from here as agents, and have been sent for years. I submit that, as Tennessee representatives in Congress are, to say the least, indifferent to the punishment of offenders against the national law in Utah, it is a cowardly outrage for their constituents to kill emigration agents sent there from here."

In one of her letters to the *Chicago Inter-Ocean*, Lillian Whiting goes into raptures over "the wild, picturesque loveliness of the Maine coast": "What can words do to tell you about that day as we sailed the Vesuvian Bay? Was it fair Ischia smiling before us? But we need go to no foreign waters for our poetry and romance. The wild, picturesque loveliness of the Maine coast still animates her poets and her prophets. She is supreme in her marvellous and magical enchantment. Poet and artist of yet unborn generations

shall draw their inspirations from her grandeur; the novelist shall set it in romantic story; the statesman shall cherish her noble courage and endeavor; the scholar shall preserve her record; the moralist shall point with pride to her loyalty to grand ideals; the nation shall treasure this, its Pine Tree State, its hundred-harbored Maine!"

A COMMUNICATION in the *Medium and Day-break*, an English spiritualist paper, conveys the impression that cats bear us company in the spirit land: "A much loved daughter of mine (Laura), who passed away last April, was very fond of domestic animals, and had a favorite black cat. A few nights ago, a good clairvoyant medium visited us, and after a while said: 'I see Laura sitting in her usual place. She has a black cat in her arms: she is pointing down the garden: What does it mean?' We then told our friend that the cat had not been seen since the day of the funeral, and we should like to know what had become of it. Our friend then said, 'She still points down there, and I think she wants to say it is somewhere next door' (which has been empty some time)." A few days subsequently, the "remains" of the cat were found at the place indicated by the spirit.

The following is from an editorial in the *Medical Record*, which takes a view at once charitable and sensible of the case of the survivors at Cape Sabine, who, when found, it will be remembered, were reduced by famine, cold, and exhaustion to a state of mental collapse: "Is cannibalism ever justifiable? Was it justifiable at Cape Sabine? Every right-minded person will, we think, say, 'Yes!' If the question of *irresponsibility* is settled in the affirmative, then all discussion of the moral aspect of cannibalism is foreclosed: there can be no immorality in the case. If any or all of this band of devoted heroes, who so barely escaped being *martyrs* to science, were saved by eating the dead bodies of their comrades, with a deliberate suppression of an irrational sentimentality, and not without due reverence for the dead, we say that we regard the act under the circumstances as justifiable. We believe that no pretence has ever been made that those men murdered any of their companions for such a purpose. That we have not misrepresented the terrible state of mental dilapidation of the party at the time they were found is apparent from all the testimony."

A SLUGGING exhibition was recently given in this city "as a testimonial to Councilman Denney." From the *Boston Herald*, we learn that "in the audience were sporting men from all the Eastern States. Boston's city government was well represented." . . . Mike Gillespie, of Philadelphia, and Walter Ramsey jumped into the ring at eight o'clock, followed by Billy Mahoney and Tom Delay. Time was called by Mahoney, who acted as referee; and the men went to work, and gave a fair exhibition. . . . Sweeny got blood in the first round. In the next round, Collins went for Sweeny like a battering ram, and pounded him all over the stage and through the ropes. Sweeny was ready to fall down, when time was called. In

the next and wind-up, Collins mauled Sweeny right and left, but in mercy did not knock him out, as he could easily have done. . . . When Billy Mahoney introduced Sullivan as the 'champion of the world,' a perfect thunder of applause rolled up from the audience. . . . In the first round, McCaffery drew the 'claret' from Sullivan's nose. . . . The last set-to was between the beneficiary, Thomas J. Denney and John L. Sullivan. Denney, upon his appearance, was warmly greeted. He was presented with an enormous triple-headed stand of flowers by Councilman Rosnosky, in behalf of the members of the city government. Sullivan returned thanks to the city government for the present, and the audience for their attendance. The bouts followed, Denney making a good showing." This exhibition, which occurred in Boston "in the year of our Lord 1884," is but one of the many indications of increasing ruffianism in this city, which the intellectual and educated classes living at their ease and standing aloof from practical affairs—with some noble exceptions, we admit—are doing but little to check.

THE strangling of a murderer in Brooklyn, to the great horror of all who witnessed or even read of the execution, was the occasion of an editorial in the *New York Tribune*, from which the following is an extract: "If it is desirable that the infliction of capital punishment should be terrifying, then there ought to be systematic arrangements to that end. In such case, the old method of drawing and quartering might be revived; or we might torture our criminals slowly at the stake, as the Indians, our predecessors, used to do. Indeed there are many ways by which the infliction of capital punishment could be rendered more terrifying, if that is really the wish and desire of the public. On the other hand, if the American people have ceased to believe that mere rigor and cruelty are deterrents; if they have come to believe that the protection of society is the only justification for taking human life by legal process, and that, when society deems such taking of life necessary, it is bound to perform the disagreeable duty as swiftly and painlessly as possible,—then beyond doubt society is under obligation to see to it that capital punishment is not lingering torture." The *Tribune* thinks that the guillotine is, except in one respect that it mutilates the body and sheds the blood, the ideal instrument of justice. But science, it says, can provide us with a number of expeditious, neat, and non-disfiguring homicidal methods by which the death of the murderer would be instantaneous, and into which neither the horrible nor the grotesque would enter, which, while it would be freed from the horrible accessories of the gallows, would impress upon the public the one important thing, the swift and sudden deprivation of life under circumstances of decorum and quiet. Such a change, it thinks, is demanded "in the name and interests of civilization." In the justice and wisdom of this statement, we fully concur. If the infliction of capital punishment is to continue, let the method be at least as decent as possible.

COUNTRY-RELIGION.

There is, of course, no difference in essence between religion in the country and religion in the city. It might be supposed *a priori* that people living in the country would keep closer to natural ideas of religion—that they might retain, in fact, more of the elements of nature-worship in primitive form—than do dwellers in cities. But, in general, so far as our observation goes, average country people have about as little regard for nature as city people. Families are born and grow up in the midst of the grandest natural scenery unmoved by it. Familiarity with nature, perhaps, breeds something like contempt for it,—unless there be, as now and then there is, an outcropping of the poetic faculty in the midst of rusticity. People in the country, too, are apt to catch city ideas and fashions, and try to imitate them as far as they can in their different circumstances.

This attempt at imitation shows itself even in religious customs. If the city church has an organ and a paid choir, the country church must at least have a melodeon and a volunteer quartette, instead of the old way of the whole congregation singing under the lead of a precentor. If the city church has a fair to get funds for its organ, the country church must have a picnic to secure the more modest sum for its melodeon. A number of years ago, a new railroad crossing brought a little New England country meeting-house in the neighborhood of a promised village. The little meeting-house had previously been lighted for evening services by tallow candles in tin candlesticks, and it had been customary to give notice of an evening service by saying, in the primitive New England phrase, that it would begin "at early candle-light." The congregation marked the epoch of its prospective rise in the world, on account of the railroad, by discarding tallow candles and procuring a chandelier for oil lamps; and the next Sunday the minister announced that the evening service would begin "at early chandelier-light." So, at unequal steps, the fashions of religion in the country have followed those in the city. There have been essentially the same doctrines, the same divisions in respect to doctrine, and the same artificialness in forms and methods.

But the result to country churches has been quite different from the result in cities. In large centres of population, the churches can afford to divide by the line of doctrines or rites or ecclesiastical administration, and still exist, however deleterious the division may be in other respects. Possibly, the competition may even increase their activities; and there are people and wealth enough to support them all. But, in the country towns, this division has been a source of weakness and of the gradual decay of the church both in influence and respectability. So far as the church has upheld bigotry and superstition and opposed progress, this of course is a result to be only welcomed. Yet it may be doubted whether, in our New England country towns at least, anything has yet come or is in prospect for taking the place of the old parish church, with all its deficiencies, as a stimulus to the thinking faculty and for a certain social and humanizing influence which it had, and, more than all, for a certain robust vigor which, when at its best, it imparted to character. At present, in large numbers of country towns, the question is, What is to become of the churches? There are too many of them to exist together; and none of them seems to be strong enough to survive or so prepared to meet modern demands as to draw the sustenance of the others to its own support. If they keep up the forms of service on

Sunday, they yet do not draw the people. The pews are empty, the financial receipts small. The few devout souls, mostly women, who undertake the task of seeing that the minister's salary is paid, find the burden a heavy one, even with the help of donation parties and picnics. The majority of the people stay at home on Sunday. They get rest and change, but little other benefit from the day.

In the little town from which we now write there are but two churches. But even these are too many for the small and sparse population,—only about three hundred persons, all told. One of these churches is Orthodox Congregational,—lineal descendant of the old Puritan stock. But the blood appears to have died out, and there is no Orthodox society left that is strong enough to maintain services. The use of the meeting-house is accordingly given to the Second-Advent people, who only have occasional services, which some of the old Orthodox society attend, chiefly from the habit of going to their old pews when the meeting-house doors are open. The other church is Methodist, and is preached in every Sunday morning by an itinerant clergyman of that denomination, who lives in another town twelve miles off and preaches on Sunday afternoons in a third town, and thus has to ride twenty-six miles every Sunday to take care of his scattered flocks, small as they are. In the church here, he has to lead the singing, and even do most of it himself as well as preach. The few who attend his ministrations evidently do it because they think it is the proper thing to go to church on Sunday, and not because of any benefit his services give them. A worthy man, it is fortunate for his livelihood that he follows another profession, dentistry, between the Sundays. Of the seventy or eighty families in this town, not more than twelve or fifteen appear, on the average, to be represented on Sunday in any church. And this is but a sample of the religious condition of things in a large number of country towns.

Is there any prospect of an institution arising to take the place of these dying and defunct country churches,—an institution based on modern demands, but standing to people in the country in the position occupied by the old parish church in New England, when the town and parish were one? The present prospect of such an institution, it must be admitted, is slight. It cannot come from the old Orthodoxy in any of its forms. For it was the dogmatic preaching of its doctrines that brought the divisions and consequent enfeeblement; and now, too, these country people, though they have not been reading the modern theological books, yet have passed the point of intellectual interest in the old theological questions. Nor will the desired reformation come from the so-called New Orthodoxy: it is too subtle and vague for common-sense farmers and their practical wives. Unitarianism and Universalism, as at present generally administered, do not stand any better chance. They represent old doctrinal issues, of which not a little traditional bitterness survives, though the issues themselves may be practically dead. The country churches, too, of these liberal denominations, are apt to be as weak as any in the ecclesiastical group.

We should like to see a genuine, earnest, non-sectarian, comprehensive Liberalism try its hand at the problem. We see no other ground on which the necessary conditions of unity and co-operation could be secured. Of course, it must be a constructive Liberalism. It must have passed beyond the stage of ridicule of the absurdities of the Bible. It must find something else to do than to denounce the old theological dogmas or to announce any new

anti-dogmas of its own. While recognizing the right of the freest inquiry and the importance of correct views, it must be *practically* agnostic; that is, not insist on making any set of views a basis of union. Its primary and controlling purpose would be moral, mental, and social culture,—*spiritual* culture, indeed, in the sense of subordinating man's lower faculties to his higher. And, to this end, it would institute methods adapted to the conditions of a country population,—such as reading clubs and a good circulating library, popular scientific and sanitary lectures, social meetings for recreation and home culture, district organization for the improvement of the schools and for any benevolent work needed; these in addition to the more specially moral and spiritual agency of the Sunday service and school.

But we are not sure that Liberalism will ever be able to solve the problem. To do it, it must have more zeal and a good deal more constructive ability than it has yet shown. But we should like to see some earnest young man (or woman), thoroughly infused with liberal ideas, ready to labor hard and to sacrifice a good deal for them, having a clear head and a genius for moral and social work, start out on the lines indicated above, in a field such as is presented in a country town like this, and see what might be accomplished. Possibly, he might fail, because of the ghosts of old theological creeds not yet laid. But we are sure that that one of the churches which shall first and most effectively take hold of this kind of work will prove itself the fittest, and will survive. Yet, meantime, an earnest Liberalism, though itself failing, might show the country churches the way where a new life and success are to be found.

WM. J. POTTER.

JUDAISM.

I.

The Jews are an interesting race, deserving of study and contrast with other civilizations, because for eighteen centuries they have been only a people deprived of nationality; and yet their individuality asserts itself in commerce, literature, and science in every quarter of the globe, and probably in every nationality.

No people deprived of nationality could attain to these proportions, as a race, unless possessed of some inherent force of character entering into and guiding the career of each individual. What has been this all-permeating influence? Is it patriotism? While they loved their country with an intensity which induced them to sacrifice blood and treasure with a desperation so sublime that we cannot withhold our admiration for an infatuation of bravery in a hopeless struggle for freedom from the yoke of the oppressor, which is the highest type of patriotism, it will hardly do to accord patriotism or love of country to a denationalized people, as they are at present. It cannot be patriotism, in the sense of that word as generally applied, which sustains the Jews in a civilization and culture which enables them to enter into successful competition with the most enlightened peoples of the world. It may be said to be the poetry of patriotism, begotten of veneration, kept alive by intelligence, the result of education; for the Jews have never deserted the traditions of their fathers, but ever hold up to their children the glories of Zion, taught to them by their mothers in their own vernacular. And until this century a Jew unable to read the Pentateuch in Hebrew must have been the victim of suffering which precluded the possibility of approach from his brethren, because, among the other virtues of the Jews, they have a sort of free

masonry, so sacred that they dare not resist its influence, but aid and assist each other under all circumstances. They pay their taxes* to support the churches, as we all do, and to keep up the poor-houses; but, go from Saco in Maine to Sacramento in California, no Jew is an inmate, unless he be so imbecile as to have forgotten the shibboleth, or perhaps it may be that individuals can become so debased that humanity is not called upon to respond to their distress, but it becomes the duty of humanity to leave them to their fate. I doubt, however, whether a Jew dare desert a brother Jew, under any circumstances; and this goes a great way toward accounting for their prosperity, because each one always has a chance to be self-supporting.

It would be impossible to review Judaism in the allotted space, in the sense of giving a history of those people; and there is no intention to contemplate them except in the attribute they present at this time, under such adverse influences bearing upon them for the past eighteen centuries.

Eighteen hundred years ago, Pagan Rome was the mighty conqueror of the nations that accepted her yoke with marvellous complacency, most of them Pagans like herself, and Rome was not exacting upon questions of sentiment or superstition. Her conquered colonies were indulged in any local prejudices in regard to their gods, and even in their modes of government, provided they paid tribute punctually and responded when called upon for men to fight her battles. It was not a great hardship for Pagans to submit to subjugation to a power ever ready to protect her subjects on the least provocation; but, with the Jews, it was entirely different. They had been an arrogant nation, guilty of treacheries and the excessive use of power equal to any great government which had ever existed; and their contempt for Pagan nations and Pagan people was so intense as to be a principle. Their Roman conquerors were not a cultivated people, as the ancient Grecians were who had attained to a degree of culture not yet equalled by any nation. But, now, Greece had fallen from her high estate as the result of internal strife, which had made her an easy prey to the vigorous energy of the youthful state of Rome, which could claim nationality only as far back as between seven and eight hundred years; but, from the start, conquest and successful subjugation was her career, and to annex and absorb other nations her destiny. The hardy warrior was the venerated citizen, and war and strife the national occupation, leaving little opportunity for culture and refinement.

What of cultivated intelligence existed in Europe and Western Asia centred in the Jews, far below the culture of ancient Greece, but sufficient to make the contrast between ignorance and education.

Could a proud and haughty nation be in greater humiliation than the Jews were, under the Roman yoke? They could not endure it, but struggled with such desperation that Rome was compelled to make Palestine a camp of soldiers and governors were so surrounded by dangers that fear possessed them; and they became, that monster of all that is horrible, cowardly tyrants, surrounded at all times by minions to do their deeds of vengeance, sometimes in the mere wantonness of power to carry terror and a sense of hopeless subjugation.

Just when the oppression was at its height, an event occurred which was the forerunner of catastrophe to the Jews. The secrets of the temple leaked out, and were thrown broadcast among the people. These secrets of the temple were the records of intelligence, the accumulation of the

wisdom of the centuries, as securely guarded from the people as treasure is now secured in safety vaults. Nothing which could convey to the minds of the people the sayings of wisdom and messages of philanthropy that emanated from sages for all time was permitted to escape, for fear the knowledge would open their eyes to a sense that they were human beings, possessed of a right to live for themselves and humanity; but, all the while, the undivided effort of priests and rulers was exercised to debase and degrade humanity, so that men would be willing slaves, mere beasts of burden. Precisely how these secrets of the temple were extracted from their hiding-place is not known. It may have been the doings of one man, as many think it was; and it resulted in establishing the system known as Christianity,—a system of no spontaneous growth, emanating in the brain or brains of no man or men then living, but it was a gradual systematizing and bringing together the best teachings which the world had ever known. The sages of Greece, Persia, India, and China, contributed their messages, which each separately or in a perfected combination of excellence of thought taught man to see himself as a man in the fulness of the rights of humanity. At first, this knowledge was intoxicating, leading to every excess of fanaticism.

Mankind had been so completely enslaved and borne down by oppression that life was of no account: they threw it away for the gratification of proclaiming to their fellow-men the new knowledge. Boldly to denounce oppressors of humanity was the highest virtue; and, when it invited martyrdom, hundreds rushed in willingly to give up their lives that their fellow-men might know the rights of man; and thus was Christianity inaugurated, the result of the bursting of fetters upon the mind and body which had been strained beyond the limit of continued tension. The attendant commotion brought calamity to the Jews, who saw in each bold declaimer a hope that he was their leader, under whom they would successfully drive the invader from their midst. They had become so desperate that they fought with bravery, intensified by frenzy, until, after slaughter upon slaughter, Rome became convinced that subjugation was impossible; and, in her power, she attempted to extirpate the Jewish race, and she destroyed Jerusalem, and the people were compelled to wander forth in every direction.

It is amazing that the intention to annihilate Judaism, as a civilization, did not succeed; but we see them to-day, a distinct people, exercising the influence of their civilization as positively as the most prosperous nations. It is wonderful to contemplate how it was possible that under such adverse circumstances the sacredness of the family tie is preserved; but it is, and no civilization can present the evidence of enlightenment and culture more beautifully developed than in a Jewish home. Nowhere can be found a stronger attachment between the members of the family nor a more gentle affection toward each other; and this has been preserved during privations and sufferings which would justify any race to give up its identity and cease to demand recognition of its civilization. But the civilization of Judaism demands and commands respect throughout the world; and this result exists in spite of every force possible to be brought against it, from the most powerful governments withdrawing all protection and originating the worst prejudices which could be invented to the caricaturist and the writer of drama and fiction.

The Romans evinced no magnanimity, for they keenly felt a humiliation that a race existed which they could not subdue. They everywhere pro-

claimed the Jews as outcasts, and as such they went forth upon the face of the earth. Excess, profusion, and waste prevailed among all the nations; and the Jews more than subsisted on this improvidence. They prospered in the manner which always results from superior intelligence, when brought into contact with ignorance; for learning was despised even to the extent that a scholar was treated with ignominy by both sexes. Animal meat was consumed to an enormous extent, but the skins were thrown away; and the Jews turned these to commercial account, which explains the fact that they are to this day largely engaged in the fur trade, to the extent that they control the market in some large centres.

In the same way, the explanation of the fact that they are financiers becomes simple, because extravagance often compelled the necessity for a loan; and the thrifty Jew was always ready to meet the demand upon good security, sometimes resulting in calamity to himself, as in the case of Isaac of York who made an advance to the crown, resulting in the discovery of the fact that the Jews of York held mortgages to such an extent that the land would soon be theirs, and the cry went up of unbelieving Jew usurers, creating an excitement which ended in a massacre of the Jews. And we cannot suppress a suspicion that it was instigated by the king, in order to settle the claims by getting rid of the mortgagees and their heirs at one blow, causing the incumbrances to revert to the crown. In more recent years, such assistance has received a more generous acknowledgment.

About forty years ago, Hamburg was devastated by a fire, unparalleled previously to the Chicago conflagration; and Solomon Heine went on 'change and took the responsibility that no paper should go to protest, and reduced the rates for money, when he could have made enormous sums by taking advantage of the situation. And Sir Moses Montefiore, who will be one hundred years old in a few months, has lived so long that he sees one of the most beneficent acts ever known stand a record of history.

Jews were held in bondage by the Algerines in Northern Africa, and Sir Moses determined to release them by indemnification; but his bounty extended to all nationalities, and through his efforts there was a combined action of the nations, resulting in the suppression of Algerian pirates.

J. F. WETMORE.

MYTHOLOGY.

VII.

I am strongly tempted to dwell a few moments longer upon the topic touched upon in former articles on mythology (see particularly *Index* of May 15),—the mythological *survivals* that are still to be seen in the current thought and expression in society.

Allusion has been made to the belief in wraiths and fetches, the appearance under some circumstances of the apparitional presence or "spirit" of the departed. This impression is so widely prevalent it may be termed almost universal. There are few indeed who do not share it in greater or less degree. Spiritualism, so termed, is a conspicuous example of it under one form. And the votaries of this faith are probably to be numbered in this country and in Europe by many millions. It is not a new doctrine: it has had numerous believers in mediæval and in ancient time. As we have it, it appears a renewal or revival of what, in some degree forgotten, has been familiar in the experience of mankind for untold ages.

A kind of planchette, it would seem from the

*Church property released from taxation is an unjust burden upon tax-payers.—J. F. W.

accounts, was known in Europe in the seventeenth century. Spirit-rapping has been known all over the world. Dayaks in Borneo, Siamese and Singalese agree with the Esthonians in holding full faith in it. Germans believe in the *Poltergeist*, who knocks and routs about the house in the night, an old and familiar character in European folklore. In Swabia and Franconia, knockings are always expected on *Anklöpperleins-Nächte*, i.e., "Little Knecker's Nights." Welsh miners get the "knocks" under ground, as they think, pointing out the places where are the veins of gold and silver.

The Chinese have spirit-writing, and get communications from a god, through a professional medium by inscriptions wrought with a pencil on a tray of dry sand. Among the Mandan Indians, a widow will thoroughly believe and insist that she meets and holds converse by the hour with her deceased husband. Indeed, with rude races, generally, the view is held most literally true, which is stated by Milton:—

"Millions of spiritual creatures walk the earth,
Unseen, both when we wake and when we sleep."

Only, with those on the lower grades, the belief is that the spirits are *seen*, that the apparitional presence is cognized and apprehended strictly by the senses.

One of the most remarkable instances on record of the return of the spirits from the world of the dead is given in an account of the Nicene Council, early in the fourth century. Two bishops, it seems, died during the sessions of the council. The acts of the fathers were duly adopted and witnessed, but the signatures of the dead bishops of course were lacking. So the documents were brought to the tomb where they were buried, left there over night, and, lo! in the morning, it was found that they were duly signed and certified by the hands of the dead, as follows: "We, Chrysanthus and Mysonius, consenting with all the fathers in the holy first and oecumenical Nicene Synod, although translated from the body, have also signed the volume with our own hands." It is pleasant to know that we have the doctrines of the Nicene Creed, decrees for the *homoousion* of the Son, and the condemnation of Arius attested from so lofty and infallible a source!

In our own time, Baron de Guldenstubbé has written a book in which he has brought forward many alleged facts to show that the spirits of the dead hover about their old homes, and manifest themselves by writing, etc. Louis XV. and Marie Antoinette roam about the Trianon; and, if pieces of blank paper be suitably placed, they will form written characters upon them by electric currents. Julius and Augustus Cæsar, Juvenal, St. Paul, write their names to show that they are still interested in sublunary affairs, and are accessible to the living. Héloïse at Péré-la-Chaise writes in modern French to tell that she and Abelard are united and happy. Guldenstubbé gives a mass of fac-similes of these spirit-writings. Finally, Hippocrates, the physician, gave to our author at his lodgings a signature, which of itself cured a sharp attack of rheumatism in a few minutes.

All this sounds much like what we hear and witness in large measure in our own country. And what is remarkable is that, the farther we go back in the history of civilization, the ruder the condition we reach, the more of this thing comes to view,—namely, the belief in the appearance and intervention of spirits from the world of the dead, and the relation of the wonderful feats they perform. Introduce a North American Indian to a spiritual séance in London, and, as Mr. Tylor well says, he would see nothing there that is not familiar to his savage philosophy, save the spelling and

writing; these belonging to a state of civilization beyond his own.

The phenomena, as they are called, of Spiritualism lie to be examined on their merits. They should be explored dispassionately and with perfect candor, and doubtless they will some day be illumined fully by science. The belief and emphasis upon the doctrine as we have it to-day seem much like a survival from the mythic dreams and superstitions of savage and barbaric ages.

There are multitudes, however, who have never given formal acceptance to the theories of Spiritualism, that yet believe in the appearance of the spirits of the deceased or the dying under certain circumstances. Mrs. Child relates in one of her letters an account of the experience of Hannah Adams in this sort, imparted to her many years before by Miss Adams herself. Numerous stories are on record, and very many more unrecorded, current in the common speech, of the appearance of the spirit, or phantom, of one about to depart, to the eyes of some distant friend. Thus there is an account given by an English lady to Mr. Tylor, who "saw, as it were, the form of some one laid out," and at just about that time, as was ascertained, a brother of hers died at Melbourne. She told of another case known to herself of a lady who saw, as she thought, the face of her own father looking in at the church window. At that very moment, he was dying in his own house. A similar instance is reported in connection with the name of George Smith, the celebrated Assyriologist. This eminent scholar died on Aug. 19, 1876, at Aleppo, at or about six in the afternoon. A friend and fellow-worker of his, Dr. Delitzsch, was walking at the time, as it happened, near the house in which Mr. Smith lived while in London. Suddenly, he heard his own name uttered in "a most piercing cry,"—a cry that, as the *Daily News* says, Sept. 12, 1876, "chilled him to the marrow." He was so impressed that he took out his watch and noted carefully the hour, yet said nothing to any one of it, but in due course heard of his friend's decease at that very time. Many such relations probably are current in all communities in our own country. I know persons of much more than usual intelligence and mental freedom who put full faith in them, at least in some of them.

Communications from the world of spirits in regard to one's future, especially in regard to approaching death, are not seldom spoken of; and the belief in their actual occurrence is, if not universal, quite general. I recall in early childhood to have heard of such an experience in the life of a gentleman widely and favorably known throughout the region of my home (Central New York) for his devoted and very fervent piety. It was said among my seniors, and appeared thoroughly believed by them,—they were people of profound religious earnestness, more than the ordinary intelligence, and of sterling moral worth,—that this man had had distinct communication through vision from the spirit-world of the period of his remaining life, the time, and perhaps the manner of his death. He had seen the phantom or the wraith that had told him this; and it came while he was in health, and no such prospect apparent before him as the vision indicated. A like thing I remember was said and, if my impression is right, published in regard to J. R. McDowall, the prominent and well-known champion, some fifty and more years ago, of "Moral Reform." Intimation clear and distinct was given to him touching his future, the months that he had yet to live, and especially the determinate time at which death should come. The communication was through apparition, or at least some phantom appearance. Nor are such isolated or, in any sense, remote

cases. Like instances could be gleaned in considerable numbers everywhere (outside the realm called Spiritualism) from the beliefs and imaginings current in the present.

What are such but cases of survival, coming down from that state of mind that has been so long prevailing in past ages, in which there has been no close discrimination between a fancy and a fact, a dream of the imagination and a truth of the intelligence,—no line drawn, or attempted to be drawn, separating fiction and illusion from reality and knowledge? Subjective and objective were hopelessly mingled and confounded together, a vivid subjective fancy taken into full confidence as a solid and very practical reality of experience.

Few, indeed, there are among us, very few to-day, who do not deem that at some times they receive messages and monitions from the world of the departed. None, perhaps, to whom the cemetery does not carry something still of its drear and ghastly associations, and bear, especially in the night time, its spectral suggestions. Not only must the schoolmaster be long abroad, but education in all senses must be imparted and impressed, best books, lectures, the preaching that shall be teaching, must have free course and win their conquests for generations to come, doubtless, ere the last traces of superstition touching death and the grave shall be extirpated.

The spirits are widely believed to have much power for harm to those who remain behind in the flesh. This is held universally with rude races, and it comes up into present civilization. In Australia, Sir George Grey used to see the bush around the encampment dotted at night with little moving points of fire,—firesticks carried by the old women to guard the younger ones against invasions from the malevolent ghosts. It is a Scandinavian custom to carry fire for such protection. The old Norse colonists in Iceland bore fire around the lands they intended to occupy, in order to expel the evil spirits. Till a child is baptized, the fire must never be let out, lest the trolls should steal the infant; and, when the mother goes to be church, a live coal must be thrown after her, for protection from the fell spirits. In the Hebrides, mother and child must have fire carried round them, to keep the sprites from taking them. The custom of the burning of candles in the Catholic Church, and especially beside a corpse as it lies in the home, has beyond question its origin in the same belief. It is a survival. As is declared in the Roman Ritual that, "lighted or placed wherever these candles be, the powers of the shades shall be compelled to depart; shall tremble, and fear-stricken fly, with all their minions, from within those dwellings." In Russia, the watcher beside a corpse is armed with a potent charm against attack from it at midnight.

The dead are thought to draw after them the living, and so not seldom do exert fatal effect on household and friends. Facts sometimes come to our knowledge in this sort, that astonish at the depth and power still of that old superstition, even in our own communities. In Chicago, a few years since, Mr. Conway was credibly informed by a physician there—himself personally cognizant of the fact,—that the body of a woman who had died of consumption was taken from the grave, and the lungs were burned, from a belief that she was drawing after her into the grave some of her surviving relatives.

Are we not reminded perpetually of the pointed monition of John Randolph in old days to the lady who was so zealous and insistent in behalf of the distant sufferers in the Morea,—*"The Greeks madam,—the Greeks are at your own door!"*

CHARLES D. B. MILLS.

EDITORIAL NOTES.

BY B. F. U.

MR. OLIVER JOHNSON's recent statements in regard to William Lloyd Garrison's views of the Bible have naturally enough surprised and perplexed some of the readers of *The Index*. The fact is, Mr. Garrison was reared in the strictest Orthodoxy, and, since he (although an immediate emancipationist for others) emancipated himself but gradually from the bonds of the Baptist sect, it is not difficult to quote passages from some of his earlier works which are decidedly Orthodox, if one chooses to do so; but, in view of his decided and acknowledged change of theological views, it is no more fair to quote expressions from his early writings to define his matured convictions than it would be to refer to his enthusiastic advocacy in his youth of the protective system as evidence of his matured views on this subject, when, in later years, he became through conviction a radical free trader. We honor Mr. Garrison for the purity of his life, his lofty conception of duty, and his disinterested devotion to the cause of the oppressed rather than for his theological views or any contributions he made to religious thought. But, in justice to him, when his views respecting the Bible and Christianity are stated, they should be so stated as not to mislead. The following, copied from the fly-leaf of a large family Bible presented to his son William Lloyd Garrison, Jr., on his thirty-seventh birthday, may fairly be regarded as expressing the views of the distinguished abolitionist in regard to the Scriptures, and is here printed for the benefit of those who have been perplexed by some of the citations made from his early writings by Mr. Johnson:—

WILLIAM LLOYD GARRISON, JR.

ON THE COMPLETION OF HIS THIRTY-SEVENTH BIRTHDAY,
JANUARY 21, 1875.

FROM HIS AFFECTIONATE FATHER,

Who presents it not as "the Word of God," as it is by many dogmatically assumed to be (for that is from everlasting to everlasting), but as a volume to be studied, criticized, and judged, without prejudice, credulity, superstition, or regard to any popular or prevailing interpretation thereof, and with the same freedom as any other book or compilation of ancient manuscripts; in which case, reason and conscience holding mastery over it, it will still be found deserving of the highest consideration for its incomparable truths, solemn warnings, and precious promises.

A ZEALOUS writer in a paper named *Lucifer*, of which he is one of the editors, stops abusing *The Index* long enough to give the leaders of the National Liberal League to understand that, if that organization holds its next congress at Cassadaga, N.Y., he and others will form a "Western Free-thinkers' Association." He says: "The idea of holding a National Congress or Convention of any kind in New York is absurd. Do New York Liberals imagine that the centres of population and of radical thought are east of Ohio? . . . Has it never occurred to them that it is possible for us to form a Western Free-thinkers' Association, or North-western and South-western Free-thought Societies? Have they never heard of the Brotherhood of Humanitarians, with head-quarters at Liberal, Mo., which is rapidly spreading, and needs but the adherence of Western Leaguers to enable it to smother out every League west of the Mississippi?" If this writer's ability, eloquence, and influence were equal to his zeal and ambition, the excitement of the Presidential contest would be small in comparison with the enthusiasm he would arouse "to smother out every League west of the Mississippi" (which is pretty well "smoth-

ered out" already), and to get "Western Leaguers" to join a Brotherhood, "with head-quarters at Liberal, Mo." The desire to be at the head is not confined to great minds nor to great movements, but is found in all sorts of agitations, and among men of the most narrow, crude, and cranky notions. When so-called liberal papers pander to such men, as some do, they forfeit thereby the respect of intelligent and considerate Liberals, and soon become the organs and instruments of the various classes that take advantage of their flexibility, and make them mediums of all sorts of vagaries, destroying alike their independence, character, and influence. We are pleased to see that the *Liberal*—published at Liberal, Mo., and the organ of the Brotherhood referred to above—does not indorse the wild social theories of the writer from whom we have quoted. In reply to one of his pleas for greater "social freedom," the editor of the *Liberal* says: "We are free to confess that we do not place ourself in opposition to everything the Church does. We hold ourself open to embrace every good thing there is in the Church or in the Bible. We recognize good wherever we find it, without first asking if it is believed in or practised by the Church and church people. One thing can be said in honor of Orthodoxy: it does not openly advocate a doctrine which may be construed into the practice of varieties, and there is not a church paper that advocates such an ism. Though individual practice is quite different, we find there is quite enough variety in the world without openly championing it as a proper rule in domestic life."

OUR esteemed contemporary, the *Catholic Review*, declares that *The Index* "goes out of its way to indulge in cruel blasphemy against God present in the Eucharist." After quoting a few sentences from an editorial paragraph which recently appeared in this journal, the *Review* says: "We shudder at the mere thought of having reproduced these blasphemous words; but they go far to show how greatly opposed to Light, Liberty, and Right are those whose constant clamorings are for what they are pleased to term a Free Religion. *The Index* should note that only one religion enjoys Light, lumen mundi, encourages Liberty, born of the truth, that makes men free, and defends the Right as heavenly revealed. That religion would speedily become free, were the God of Peace removed from our tabernacles." Our good-natured comments on our contemporary's statement regarding "the God of Peace borne aloft in the hands of his worthy minister," was not designed to be blasphemous; nor is our suggestion now, that, if a religion which "enjoys Light," "encourages Liberty," and "defends the Right," would "speedily become free, were the God of Peace removed from our tabernacles," then every possible effort should be made by our Catholic fellow-citizens, and all others in favor of light, liberty, and right, to have the aforesaid "God of Peace removed from our tabernacles." Assuming the premise to be true, the conclusion is necessitated by common sense, logic, political economy and a common regard for the welfare of man.

THE *American Journal of Education*, to illustrate the absurdity and nonsense of "show" questions asked by inexperienced teachers and examiners, gives the following jargon as the reply of a boy who "seems to be smart, seems to know several things, but cannot, like many others, tell what he knows,—if he really does know anything more than a jargon of words":—

"Who was Moses?" He replies: "He was an Egyptian. He lived in a hark maid of bullrushers, and he kept a golden carl and worshipt brazen snakes, and he het nothin but qhales and manner for forty years. He was kort by the air of his ed while ridin under a bow of a tree, and he was killed by his

son Abslon as he was hanging from the bow. His end was peace." "What do you know of the patriarch, Abraham?" "He was the father of Lot, and had tew wives. Wun was called Hismale and tother Haygur. He kept wun at home, and he hurried the tother into the dessert, where she became a pillow of salt in the daytime and a pillow of fire at nite."

SAYS the *Springfield Republican*: "The *Catholic Review* goes into solemn hysterics over the rowdiness of some fellows who yelled 'Viva Garibaldi' in the Church of Santa Maria sopra Minerva in Rome the other day. The *Review* says this happened 'while the God of Peace, borne aloft in the hands of his worthy minister, the Cardinal Vicar of the Eternal City, was about to bestow his infinite benediction upon all, worthy and unworthy, alike. The Roman Church's description of a little wheaten wafer in such awful terms is perhaps as offensive to the Italians as their patriotic improprieties are to the Church."

"POLAR BEAR" writes to the *Springfield Republican*, "My honest conviction is that even an editor of one paper would, if placed in position of the Greeley party, have eaten up the editor and printer's devil of another paper, if thereby he could have saved his own precious life."

EVERY subscriber who is in arrears for *The Index* is requested to send the amount due to this office with the least possible delay. We are in especial need of money during these summer months to meet current expenses,—which we shall be abundantly able to do, if our friends will promptly remit the sums they owe us on their subscriptions.

For *The Index*.

THE TASK OF CIVILIZATION.*

O Civilization, what is now thy task?
E'en this, to recreate the multitude,
From animalism low to lift the throng
Of men up to the lofty human plane,
Whereon the sense of beauty, justice, truth,
Beholds in prospect fair the ideal world
And weans from brutish instincts of the flesh.
Thus lifted to its glorious birthright high,
The mob shall cast its grimy slough away,
The low-browed countenance shall flash with gleams
Of rational consciousness, and bestial appetite
And base desire be tamed. The Demagogue
No more shall with his sophistries mislead
The vulgar mind, the Plutocrat no more
Pervert to his enrichment, selfishness
The popular strength; the Priest no longer fill
His coffers with superstition's offerings
For absolution and indulgences
And passports to pretended bliss. O Day
Of liberation of the multitude
From thralldom to the past, arise and shine
O'er all the sorrow-stricken fields of earth,
And be the herald of a just society,
Wherein man shall not prey on man, but all
Co-operate to noble, generous ends!
And lies the route to such millennial state
Of general justice, plenty, happiness,
Through Nihilistic hate and Dynamite
And violent erasure of all the past?
No: by degrees and through the gradual lapse
Of mellorating years shall justice come,
And on this earth at length be realized
The bright Atlantis of the sage's dreams,
The City of God, whereof Augustine wrote.

Aug. 15, 1884.

B. W. D.

* These lines were written after reading the two admirable essays recently published in *The Index* from the pen of Mr. Charles Froebel.

The Index.

BOSTON, AUGUST 28, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

A Study of Primitive Christianity.

BY LEWIS G. JANES.

III.

SOURCES OF INFORMATION.

Like Zoroaster, Buddha, and the great religious teachers of India, Jesus of Nazareth left no written word. Absorbed in the pressing labors of the moment, anticipating no extended future for the existing order of society, knowing, probably, no language but his native Galilean tongue, his impassioned appeals, his charming illustrative parables, his brief and sententious aphorisms, have been transmitted to us through the medium of oral tradition, collected and put in writing some time after his death. In the extant documents, the original tradition is intermingled with a mythical and legendary accretion of subsequent origin and development, and translated into an alien tongue. We have absolutely no contemporary record of the life and teachings of Jesus, either in or out of the writings of the New Testament.

Early Christian Literature.—The Story of the Manuscripts.

The earliest of these writings, in the order of their composition, are the Epistles of Paul. These and the other genuine Epistles of the New Testament and the Apostolic Fathers throw valuable light upon the primitive phases of Christian belief; but, beyond the mere fact that they assume the previous existence and tragical death of Jesus, and give currency to the early tradition of his resurrection, they afford us absolutely no information concerning him. Paul quotes but once the language of Jesus,—a single phrase in connection with a reference to the commemoration of the last supper: "This cup is the new covenant in my blood: this do ye as often as ye drink it in remembrance of me." (I. Cor. xi., 25.)

For information concerning the life and teach-

ings of Jesus, therefore, we are confined exclusively to the four Gospels.* Testimony, corroborative of his historical verity, may, as already indicated, be derived from the New Testament Epistles and the writings of the early Christian Fathers, who everywhere assume it as an unquestioned fact, and also from a few fragmentary allusions in the works of Jewish and Pagan writers in the first and early part of the second centuries. The destructive theory which doubts the existence of Jesus as an historical personage, and regards the gospel stories as entirely mythical, has no support whatever in the history and literature of the early Christian centuries. Of the reasons for the lack of frequent allusions to Jesus by Jewish and Pagan writers of the period, we shall have occasion to speak hereafter.

For testimony concerning the date and reliability of the gospel histories, apart from the internal evidence of the documents, we must depend almost exclusively upon the writings of the early Fathers of the Church, sustained or corrected by such pertinent facts as may be derived from the secular history of the period. We have also certain extant documents, mainly anonymous or pseudonymous, known as the Apocryphal Gospels† and Epistles, which were regarded as genuine by some portion of the early Christian communities, and which are valuable for comparison with the books of the New Testament. Some of them are doubtless as old or older than our canonical Gospels, and they throw considerable light upon the development of doctrine and the differentiation of heretical sects from the main body of Christian believers during the earliest Christian centuries. In this lecture, it is proposed to examine the bearings of this literature in all its branches upon the question of our actual information concerning the life and teachings of Jesus and the character of the earliest Christian tradition. A tolerably clear comprehension of this subject appears to be absolutely essen-

*Perhaps an exception should also be made in favor of the recently published *Teaching of the Twelve Apostles* and the extant fragments of the "Gospel of the Hebrews," which are doubtless as old or older than the Gospels, and in general confirm the testimony of the Synoptics. Reference will hereafter be made to these documents.

†The names of some of the early Apocryphal Gospels, as preserved to us in the writings of the Fathers, are as follows: 1. The Gospel of the Birth of Mary. "In primitive times," says Hone, "there was a Gospel extant, bearing this name, attributed to Matthew, and received as genuine and authentic by several of the ancient Christian sects." The extant copy was preserved to us in the writings of Jerome, who lived in the fourth century and the early part of the fifth century of our era. Other versions, apparently differing somewhat from Jerome's, are quoted by early writers. 2. The Protevangelion, or "First Gospel," sometimes called the Gospel of James, the brother of Jesus. From internal evidence, this Gospel must probably be regarded as of later date than any of those subsequently declared canonical, save, possibly, the Fourth. It was frequently alluded to in the writings of the Fathers. 3. The Gospel of the Infancy of Jesus Christ, received by certain Gnostic sects of the second century; 4. A Second Gospel of the Infancy, attributed to the Apostle Thomas; 5. The Gospel of Nicodemus, probably written during the third century; 6. The Gospel of the Egyptians, of very early date; 7. The Gospel of Peter; 8. The Gospel of Paul; 9. The Gospel of Andrew; 10. The Gospel of Apelles; 11. The Teaching of the Twelve Apostles. This important document, recently discovered by Bishop Bryennios in the Greek quarter of Constantinople, in a manuscript of the eleventh century, from internal evidence must be adjudged as old or older than any of our canonical Gospels. Its Christology is not more developed than that of the Synoptics. It terms Jesus "the servant of God," and contains no allusion to the stories of the miraculous birth or to Jesus as the Son of God. 12. The Gospel of Barnabas; 13. The Gospel of Basilides, a Gnostic work of the second century; 14. The Gospel of Cerinthus, also a Gnostic writing; 15. The Gospel of the Ebionites, said to have been written in Aramaic, and sometimes identified with the Gospel of the Hebrews; 16. The Gospel of the Encratites; 17. The Gospel of Eve; 18. The Gospel of Hesyclus. These, as well as the most of the following, were Gnostic works. 19. The Gospel of Marcion. Some orthodox writers regard this as a mutilated form of our Third Gospel, but it was doubtless of considerably earlier date,—as old or older than any of our Gospels. 20. The Gospel of Jude; 21. The Gospel of Judas Iscariot; 22. The Gospel of Matthias; 23. The Gospel of Merinthus; 24. The Gospel according to the Nazarenes; 25. The Gospel of Perfection; 26. The Gospel of Philip; 27. The Gospel of Scythianus; 28. The Gospel of Tatian; 29. The Gospel of Thaddeus; 30. The Gospel of Truth, used by the Valentines, a school of the Gnostics; 31. The Gospel of Valentinus; 32. The Gospel of Life; 33. The Gospel of Longinus. These and other unenumerated Gospels were all certainly in existence before the synod of Laodicea, 365 A.D., "the first Christian assembly at which the canon was made the subject of a special ordinance." Some of them are unquestionably of as early or even of earlier date than any of those subsequently called canonical.

tial to a true historical estimate of the beginnings of Christianity.

Character and Origin of the Four Gospels.

The four canonical Gospels are preserved to us in extant manuscripts of the fourth, fifth, and later Christian centuries. All of them were originally written, probably, during the second century of our era. Their authorship is unknown, and, with the possible exception of the Third Gospel, it cannot even be conjectured with reasonable probability. Renan supposes that Mark and Luke were written in Rome and Matthew in Palestine; but for these hypotheses we are obliged to rely mainly upon uncertain traditions, sustained or corrected by the known character of the documents themselves. Tradition also asserts that the Fourth Gospel was composed at Ephesus, but it presents strong internal evidence of Alexandrian origin or influence. Prof. Robertson Smith terms them all "unapostolic digests of the second century." In the extant Greek version of the earliest manuscripts, we undoubtedly possess the original form of these documents with but little modification. There is no probability that any of them were translated entire from the Aramaic or Hebrew languages. Certain memoranda in the Aramaic tongue, however, doubtless existed prior to the composition of our Gospels; and one or more of the so-called Apocryphal Gospels appears to have been written in Aramaic. Among these memoranda, there seems to have been a very early collection of the *logia* or sayings of Jesus, unaccompanied, probably, by any historical data, the compilation of which was currently attributed to the Apostle Matthew. The First Gospel presents strong internal evidence of manufacture or composition out of several primitive documents, and it is probable that its author incorporated a translation of this early collection of the sayings of Jesus nearly or quite entire in his manuscript. Ewald, one of the most acute and thorough of our modern Biblical critics, distinguishes no less than twelve documents which he believes to have been worked up into our Synoptical Gospels.

Divergent Traditions of the Fourth and the Synoptical Gospels.

In the first three Gospels, we find many points of agreement,—a general concurrence as to the leading features in the public career of Jesus, and a marked similarity, often amounting to identity, of language, which indicates the common use, in part, of an earlier oral or written tradition. Between the synopsis or concurrent testimony of the first three Gospels and that of the Fourth Gospel, however, there is a divergence so complete as often to amount to irreconcilable opposition. It is impossible to harmonize the manifest and radical differences of these two traditions. All attempts in this direction involve the greatest violence to the natural dictates of the rational judgment.

The Synoptical Gospels represent the public labors of Jesus to have occupied a period of only about one year, giving an account of but a single visit to Jerusalem during his ministry. The Fourth Gospel extends the period of his public ministrations to more than three years, and represents him as frequently travelling back and forth between Galilee and Judea. The synoptics assume that nearly all of his miracles were wrought in Galilee, only one or two being assigned to his final visit to Judea. The Fourth Gospel expressly limits the number of his miracles in Galilee to four, and assigns nearly all the more important ones to the vicinity of Jerusalem. The synoptics assume the prevalence of the belief in obsession or possession by evil spirits among the Jews,—a fact which is abundantly confirmed by extra-Biblical

evidence. Many of the miracles of Jesus, as therein reported, consist of the alleged exorcism of these personal demons. The Fourth Gospel hardly contains a reference to this current superstition, and reports no miracle of this character. The Synoptical Gospels contain no reference to the miraculous transformation of water into wine at Cana of Galilee or to the resurrection of Lazarus, though these most marvellous of all the wonderful works attributed to Jesus are made the corner-stone and key-stone of the superstructure of the Fourth Gospel narrative.

More significant even than these differences is the marked divergence in the reports of the conversations and teachings of Jesus in the two traditions. The synoptics report his words in brief and forcible aphorisms, illustrated by the apt and striking use of the parable. The style and language employed are as individual and characteristic as those of Shakspeare.* The chief burden and subject of his discourse is the explanation and illustration of his doctrine of the coming kingdom of heaven. In the Fourth Gospel, he is made to discourse in long, mystical disquisitions, largely devoted to the exaltation of his own personality, in style and matter wholly unlike that of the synoptical reports. None of the characteristic parables of the first three Gospels appear in the Fourth, which, indeed, contains no proper example of this allegorical method of teaching. In the synoptics, particularly in the first two Gospels, the Jews appear as the kin and people of the writers, differing only as those who rejected the Messianic claims of Jesus would naturally differ from his disciples and followers. They are represented everywhere with entire naturalness. Their different sects, customs, and beliefs are truthfully described, as we know them from independent sources. The Fourth Gospel, on the contrary, is manifestly the product of one who was not himself a Jew. The Jews are spoken of in the third person, as an alien people, and in a contemptuous tone as children of the Evil One. The scribes, Sadducees, and Herodians, so often introduced in the synoptical narratives, do not appear at all in the Fourth Gospel. The natural and human Jesus of the synoptics is displaced by one who seems rather like a ghostly apparition, flitting aimlessly to and fro between Judea and Galilee. He is no longer the "Son of Man," moving naturally among his people, and speaking the language of their daily concern, but the pre-existent Logos, whose human parentage was an illusion, who existed even before the creation of the world, co-eternally with God himself. The representation of God as "our Father" and of all mankind as his children, so characteristic of the humane teaching of Jesus in the synoptics, is supplanted in the Fourth Gospel by the everywhere intruded assumption of a special and supernatural relationship between Jesus and the Deity. The inclusive "our Father" gives place to the exclusive "my Father."

Artificial Theology of the Fourth Gospel.

The theology of the synoptics is natural and simple, though embodying the current anthropomorphic conceptions of the divine nature. That of the Fourth Gospel, on the contrary, is artificial and dogmatic. Its dualism is especially prominent and characteristic. Jesus, as the divine Logos, wages war against Satan and his emissaries, as Ormuzd against Ahriman in the Persian system. Faith in his supernatural character and mission is essential to salvation instead of conduct only, as in the synoptical tradition. The last supper, in the Fourth Gospel, loses its natural interpretation as

the paschal feast of the Jews, and takes on a character which prefigures its subsequent dogmatic importance as a Christian sacrament. To divest it of its Jewish characteristics, it is removed from the day of the paschal feast, the fourteenth of the month Nisan, to the preceding day; and Jesus himself appears as a substitute for the paschal lamb, sacrificed upon the anniversary of the Passover, instead of a day later, as represented in the synoptics. There are evidences, also, that the writer of the Fourth Gospel was even unacquainted with the topography of Palestine, which strongly favors the conclusion that the Apostle John neither wrote nor directly inspired it.

These considerations, which might be strengthened by other internal evidence, appear to render it impossible for us to accept the Fourth Gospel as a correct representation of the life, character, or teachings of the Prophet of Nazareth. For a true historical basis, we must "search the Scriptures" of the synoptics; relying mainly upon that consensus of testimony—those facts, ideas, and traditions which the three writers report in common—known to Biblical students as "The Triple Tradition." I have read with care, and with the respect due to so able and eminent an authority, the defence of the theory of the early appearance and Johannine authorship of the Fourth Gospel by Prof. Ezra Abbot; but his arguments, though subtle, refined, and exceedingly ingenious, are insufficient to my mind to explain away these very plain and evident discrepancies between this and the synoptical tradition. The only portion of the Fourth Gospel narrative as presented to us in the accepted version of the New Testament differing from the synoptics, which instantly appeals to all readers as bearing the impress of the Jesus of the parables and the Sermon on the Mount, is the story of the woman taken in adultery; and this is known and admitted by the learned revisers of the New Testament to have formed no part of the original version of this document. It is omitted from the oldest extant manuscripts. It is, however, quoted by early Christian writers from the more primitive "Gospel of the Hebrews," and doubtless constituted a part of an older tradition than that originally drawn upon by the writer of the Logos epic.*

The Patristic Literature and Early Apocryphal Gospels.

A correct understanding of the nature of our material for the study of the life and teachings of Jesus necessitates a brief inquiry as to the age and comparative reliability of the gospel narratives. The sources of our information in this investigation, in addition to such internal evidence as the documents themselves may furnish, must be sought in the writings of the Christian Fathers of the first three centuries. It is claimed by those who maintain an earlier authorship of the Gospels than the first quarter of the second century that they are recognized and quoted by the earliest non-canonical Christian writers. From a careful study of the patristic literature, however, it becomes evident that the narratives or memoranda thus quoted were never regarded as sacred Scripture in any such sense as were the writings of the Old Testament. It is also clear, upon examination, that the passages referred to are in no instance exact and literal excerpts from any extant manuscripts of our Gospels. Previous to the last quarter of the second century, moreover, no one of the canonical Gospels is identified in the writings of the Fathers by the titles now prefixed to them: so

that, even were the alleged quotations in complete agreement, it would be impossible to determine with certainty whether the excerpts were taken from our Gospels or from other documents whose language was in part identical with them.

Certain non-canonical writings, on the other hand, were undoubtedly extant, and were quoted by their titles before any of the canonical Gospels were so identified. One of the earliest of these writings was the "Gospel of the Hebrews," fragments of which have been preserved to us in the writings of the Fathers recently collected and collated by Dr. Nicholson. The "Gospel of the Infancy," preserved to us among other of the so-called "apocryphal" writings, was also so quoted at a very early period, and was accepted by a Gnostic sect of the second century as of equal authority and authenticity with our Fourth Gospel. Beside the writings of this character which we still possess, many others were doubtless in existence which are now lost. In support of this fact, indeed, we have the testimony of the New Testament itself. The writer of the Third Gospel declares: "Forasmuch as many have taken in hand to set forth in order a declaration of those things which are most surely believed among us, . . . it seemed good to me also, having had perfect understanding of all things from the very first, to write unto thee in order, most excellent Theophilus."

Besides forty or more primitive Gospels, the most of them known to us by their titles, there were also extant at a very early day a vast number of Epistles attributed to the apostles and early Fathers of the Church, together with such documents as the Acts of Peter, the Acts of Paul, the Acts of Andrew, the Acts of Paul and Thecla, the Revelations, respectively, of Peter, Paul, Bartholomew, Cerinthus, Stephen, Thomas, Moses, and Esdras, the sibylline oracles, and the Epistle of Christ to Abgarus, King of Edessa, and the reply thereto. Many of these documents are quoted as genuine and authoritative in the same writings of the Fathers from which are derived the supposed evidences of the early existence of our Gospels. Some of them are now known to be spurious. Others are doubtless genuine. A number of these extant writings have been published together as the *Apocryphal New Testament*, constituting, as affirmed by William Wake, the late Archbishop of Canterbury, "a complete collection of the most primitive antiquity, for about a hundred and fifty years after Christ." Whatever may be the adjudged value or worthlessness of this extensive literature in other respects, it is important, as testifying to the universal belief in the historical verity of Jesus of Nazareth during the earliest Christian centuries.

For The Index.

A HUNDRED DAYS ABROAD.

BY GEORGE JACOB HOLYOAKE.

CHAPTER XX.

It is because the "politician" in America works mainly for spoils that the name is in disrepute. The system which gives all offices over to the winning party at an election of president attracts venal politicians and causes the politicians of probity to stand aloof from duty to the State. Artemas Ward said: "I am not a politician, and my other habits air good. I have allus sustained a good moral character. I was never a railway director in my life." In America as in England, the sense of responsibility for morality in public affairs is increasing among men of culture and wealth. It is coming to be regarded as criminal in them to stand aloof from municipal and national life. Republicans in America relate of one who, being neutral, when action for principle was needed, was accused of having gone over to the opposite party:

* Compare, for example, the parables of Jesus with those of Buddha or Buddhaghosa, or with those preserved to us in the Talmud and the Old Testament.

* Renan, speaking of the irreconcilable difference between the Fourth Gospel and the synoptics, declares that he would "stake his future salvation upon it without the slightest hesitation."—*Recollections of my Youth*, by Ernest Renan.

he denied being a Democrat, but admitted that he had the symptoms. In like manner, indifference to the honor of public life is now understood as connivance in its corruption; and they who do nothing personally to purify the State by their own action may deny their guilt, but they cannot deny that they have all the symptoms of participation in it. The decay of right principle in the mind is quite as obvious in persons as the decay of physical health. The consumption of honor, good faith, and reverence, has its signs in speech and action as plainly as the pale face and hectic flush pertaining to consumption of the lungs. The doom of immorality of mind is the same as the doom of disease,—death,—unless the symptoms are radically checked. Both forms of disease are equally manifest to the eyes of any practised observer. The only difference is that those who die physically are buried; while the morally dead still walk the past or the street, but their decayed souls nevertheless poison the circumambient air.

The principle of inculcating a sense of responsibility of some kind on the part of voters was undermined in the American mind by a famous speech of Franklin's, which was repeated to me in the Hall of Independence in Philadelphia, by one who regarded as conclusive his argument, which decided the open suffrage of the country. "If you give a vote to property," said Franklin, "suppose a man's qualification is the ownership of an ass,—when the ass dies, does his citizenship cease?" The story was a century old; but it had perfect freshness in the mind of the reciter of it, who considered the absurd-looking issue as warranting the non-provision of any qualification for citizenship. I confess it seemed to me that Franklin's argument of the ass was only fit to impose upon one of that species. The possession of property is thought by all communities to be a guarantee that he who has it is more likely to vote for its security than he who has none. If he who possessed only a five-dollar donkey was considered to have the sympathy with property (without which no civilization is possible), when the donkey died, the sense of property died in the owner, if he had no other possession. If, instead of a five-dollar ass, the voter's qualification was a five-pound note, if some one stole it from him or the bank broke in which he had deposited it, and he was left penniless, the sense of possession of property would be no longer left to him, and he might become reckless, as penniless men usually do. There may be other things higher than the possession of property which should constitute the qualification for citizenship. It may be education in the duties of citizenship, it may be mere womanhood or mere manhood; but, if the condition taken as sufficient is that of property, the possession of a donkey or a pig is as good a qualification as the possession of a donkey-house or a pig-house, of a hunting stable or a mansion. I am one of those who think manhood or womanhood a sufficient qualification for citizenship in any State, where social education, by precept and example, is strenuously maintained, and all the conditions under which private interest can be pursued at the expense of the State rendered, as far as they can be, impossible.

Mr. John Gledhill, representative buyer in New York for the English and Scotch Wholesale Societies, gave important evidence before the Senatorial Committee on Education and Labor on the "benefits to be derived from co-operation." As an exposition of the economic, social, and pacific force of co-operation, Mr. Gledhill's testimony is a distinct and authoritative addition to the national knowledge of America upon this subject. I have sufficiently expressed in these pages my opinion that co-operation is a new force in civilized States, introducing equity in industry and rendering morality profitable in commerce. There is a mineral now found in Missouri, called Adam's cobite, so hard that it will cut steel without losing its edge. Co-operation is the "cobite" stone of social progress, which will cut through competition where it is hardest and its own quality remain undulled.

By securing to industry the fruits of its labor, it alone promises to restore labor to honor. This is the need of England as it is in America. This has been shown with insight and force by Mr. Medill, of the *Chicago Times*, whose evidence before the Senatorial Committee (where Mr. Gledhill gave testimony, as I have said) was as follows. The reader need not be dismayed: it is the last passage from others I shall cite. Relevant quotations, I hold, are like stars in the

firmament of an author's statement, and are often the only bright parts in it. What Mr. Medill said was this: "The educational system of America—that practised by high schools and colleges—certainly does not train our youth in habits of useful industry. Its purpose is not to increase the effectiveness of labor, to make 'Two blades of grass grow where only one grew before.' It does not show a pupil how, by acquiring a manual art, he can double or treble the value of his labor. It does not teach art or science in a practical way. On the contrary, college instruction is conducted with the view of imparting dead languages, elegant literature, and higher mathematics to the students, which is all well enough for the boys of the wealthy leisure classes, but is not best suited to equip the future bread-winners for their work. These academies attract hundreds of thousands of our youth, whose purpose is to acquire the art of living by their wits and avoiding manual labor; and this, too, is the purpose of their parents in sending them there. These schools have flooded the professions with men destitute of natural capacity for them, and have swollen the ranks of office-seekers and speculators and professional sharps who subsist by pilfer and pillage. The American system of education has pretty nearly destroyed all desire on the part of our youths to learn trades and become artisans, and it has crowded the ranks of the middlemen with swarms of seekers after genteel employment at wretched wages. Multitudes of farmers' and mechanics' sons seek to be salesmen, clerks, bookkeepers, or agents; and, failing to find or retain those situations, they become 'sports,' billiard-players, bartenders, confidence-men,—anything, in short, but hand-soiling laborers. With the exception of a few special branches of industry, Americans have surrendered the mechanical field to foreigners; and, when more artisans are needed, they are imported like other commodities. Every institution of learning should teach art practically, every college should have a technical department. We need industrial schools in every city, where the youth can learn trades that will equip them for the struggles of life, and increase the productiveness and power of labor and elevate it in the eyes of the rising generation. They must be taught to respect rather than despise handicraft, and to hold in higher esteem the working bees than the drones in the human hive."

The modern folly of parents hurrying competition and foregoing all wise leisure themselves, in order to amass money that their children may do nothing, breeds contempt for labor. The remedy for this is industrial education, and especially of that sort which fits the young for the inevitable emigration which awaits them in over-populated countries.

If a mechanic wants to emigrate, he will be the better if he has a friend who can procure him a situation, or ascertain himself in what district persons of his trade are needed, otherwise he will do well to get what knowledge he can, which a settler on the land may need.

Tell farm laborers that they should leave the fields for Clerkenwell, to make watches, or go to Northampton to make ladies' boots, they would be discouraged exceedingly, and delay their going. But, to become farmers, they would go gladly. I have known watchmakers and shoemakers go out to farm work in foreign lands, for which they were no more fit than ploughmen are to make watches or wagoners to be tailors.

The Canadian Government Guide Book, as the reader is aware, has already conferred great advantage upon intending settlers. It commences by wise and candid sentences, explaining who are the fit and the unfit, and advising the unfit to stay where they are. As I stated (Jan. 21, 1883) in a letter to the *Times*: "The Canadian Guide Book is written by Mr. John Lowe, Chief Secretary of the Department of Agriculture, whose inexhaustible and exact knowledge of every species of information needed by emigrants I had means of judging by observation and report of those who knew more than myself. Before long, the remaining sheets will reach me. The luminousness of the narrative, the variety and newness of the information conveyed in the first sheet, will not less interest than surprise the reader. Few are aware that Canada is larger than the United States, and has resources of health, fertility, and riches inconceivable to those who know it only through artists who paint its snows and not its harvests and wondrous scenery."

"It is amazing that England should send out millions of her sons to 'fight the wilderness' in America and Canada, and never give attention to emigrant education at home. If Lord Derby should give heed to this neglected question, emigration would need no votes to promote it in the next generation."

We read in the history of ancient races that it was a practice to bury a faithful dog in the grave of its master, under the impression that, as a dog finds its way about better than a man, it would be useful in the next world as a guide to its owner. Every man who goes to bury himself in America or Canada would be the better for a dog guide book, to lead him safely about the new and pleasant world in which he will find himself.

Though I have admitted that there are things, both in Canada and America, that might be changed for the better, I do not conceal from myself that there are many things in England that require amendment,—political, moral, and social. Yet I am persuaded that great waves of improvement are sweeping over the world. Even within the period of my own life, changes for the better have been so much greater than I expected to see that this seems like a new world to me. The eternal transition which is the law of all things, great and small, inanimate and human, is the result of the unseen forces which, never resting, never hasting, advance the affairs of men. Every system which has fallen, every creed which has been superseded, has, in every age, filled good men with dismay, as that which they thought perfect has been forsaken for new ideals, and that upon which alone they were able to rely for security or consolation has glided silently away before them. The wail of alarm has been heard in every age in the rear of the march of progress. I have no transition terror. There is ever struggle and pain and conflict going forward; but there is greater peril in lingering in the darkness of decay, when experience and science and truth open new paths of life and light before us.

My story of the "Hundred Days among the Canadians and Americans in 1883," is ended. Like its predecessor, "Among the Americans in 1879," it has been written without any ambition other than that of usefulness. Both narratives might bear the one title of "Travels in Canada and America in search of a Settlers' Guide Book." Of some three hundred persons who have written to me for copies of the Guide Book since issued by the government of Canada, most have taken occasion to say that they have been interested in reading these chapters on their periodical appearance. Carlyle, in his earliest letter to Emerson, relates that "one Irishman in Cork wrote a letter to another in Edinburgh (Fraser read it to me without names) containing the friendliest possible recognitions of me. One mortal then says I am not utterly wrong. Blessings on him for it." Thus, I have more encouragement to issue this story in a separate form than fell to the author of *Taufelsdröckh*. Though I am a cosmopolitan and believe in universal principles, I do not believe in universal buyers, and therefore print only five hundred copies. As I shall probably give away one hundred copies, there will remain four hundred for sale. As there are one million and a half of co-operators, I calculate that each ten thousand, by co-operating together, may take one copy among them. That, if it comes so to pass, will carry off one hundred and fifty copies. Mr. Mullins, of Birmingham,—it being my native town,—may buy one for the free library, of which he is custodian. And Mr. W. E. A. Axon may do the same for the free library of Manchester. In Leicester, where I have a friend who is a bookstore keeper, another copy may be disposed of; and in Liverpool, Edinburgh, and Glasgow, one may be got into the market in each of those places. In the American cities of New York, Springfield, Florence, Boston, and Washington, one copy each is sure to be sold; and not less in the Canadian cities of Hamilton, Toronto, Ottawa, and Montreal. Probably, the Pueblo Indians, who come into Santa Fé to sell wood, may take a copy; and one I feel sure will be bought in Calcutta. Since Mr. Nuttall has gone to Melbourne, I count upon one being sold in Australia. I am told I might put down two copies for the nine American and Canadian cities I have named, making twenty-seven copies in all. Thus, one hundred plus one hundred and fifty plus twenty-seven make the disposal of two hundred and seventy-seven almost certain. As neither the *Co-operative News* nor the *Boston Index* (which have issued these chapters) is

able to supply any complete sets of them, there will remain two hundred and twenty-eight copies for what are called the "general public"; namely, for those rash, curious, irresponsible, and venturesome readers happily to be found in the six nations named, who, being without fear or discretion, are the ultimate friends in whom an author puts his final trust for means of paying his printer's bill. Their day of reward comes when the second-hand bookseller's catalogue marks the book "very scarce" at four times its original price.

CORRESPONDENCE.

ANOTHER LETTER FROM OLIVER JOHNSON.

MR. B. F. UNDERWOOD:

My dear Sir,—My last letter to you was not intended for publication, but I am not sorry you printed it. If you publish this, I shall be glad.

To the anonymous "friend" who says he "was positively astonished" at my assertion as to Mr. Garrison's estimate of the Bible and his attitude toward Christianity, and who "hopes some one will run over the files of the *Liberator* in later years, where Garrison unquestionably, and in his usually perfectly distinct manner, boldly repudiated the Bible as authority," allow me to say that, if time and health permitted, I would gladly make the desired examination myself, reporting every word that Garrison uttered on the subject down to the day the paper was discontinued. I shall be glad if any one else will perform this task, being sure the result will only confirm what I have said.

Meanwhile, perhaps I shall oblige your "astonished" friend as well as some others, and do something to settle the question at issue, if I furnish you with an utterance of Mr. Garrison's, made in December, 1863, at the third decade meeting of the American Anti-slavery Society. This, you will observe, was just before the final end of the anti-slavery conflict, when his views had attained their most radical shape. The passage I shall quote presents both sides of the shield, the positive as well as the negative, and was very deliberately uttered:—

Allow me to take this opportunity to say that there is one interpolation in the Declaration of Sentiments which I did not like at the time, and which I have never liked since. An esteemed friend in the Convention thought it would take off the edge a little of one of the allegations, if we would verify it by a reference to Scripture. As originally written, it stood thus: "That every American citizen who retains a human being in involuntary bondage as his property is a man-stealer." But this was amended so as to read: "That every American citizen who retains a human being in involuntary bondage as his property is (according to Scripture, Exodus xxi., 16) a man-stealer." That weakens instead of strengthening it. It raises a Biblical question. It makes the rights of man depend upon a text. Now, it matters not what the Bible may say, so far as these rights are concerned. They never originated in any parchment, are not dependent upon any parchment, but are in the nature of man himself, written upon the human faculties and powers by the finger of God. It matters not, though all the books in the universe, claiming to be never so sacred and holy should declare that man has not a natural and inalienable right to himself. Those books would only deserve to be given to the consuming fire. [Applause.] We do not base this cause upon any book. We base it upon man, upon God in man; and it will stand invulnerable, whether we can prove it or not by mere texts of Scripture, that a man has a right to his own body and his own soul. I believe that, if the Bible denounces any one sin more than another, it denounces the sin of oppression; if it represents God as being particularly incensed in his moral nature, it is in view of the treatment of the poor and the needy and the outcast. "Wash you; make you clean; put away the evil of your doings from before mine eyes. Cease to do evil, learn to do well; seek judgment; relieve the oppressed; undo the heavy burden; break every yoke, and let the oppressed go free."

I have never refrained from making use of the Bible as a mighty weapon to batter down slavery; but not to settle the question of the right or wrong of slavery by the Bible or any other book. Slavery is a self-evident wrong.

If the *Christian Union* had said simply that Mr. Garrison repudiated the doctrine of plenary or infallible inspiration as neither contained in the Bible itself nor sanctioned by common sense, I should not have contradicted it. What it did say was that he and his associates "abandoned the Bible and set themselves at work to abolish Christianity with one hand and slavery with the other." This was a libel, calling for contradiction; and I set my heel upon it

accordingly, quoting Garrison's own words as a sufficient refutation.

The passage above quoted is in perfect harmony with those I have cited heretofore. And, in truth, Mr. Garrison's use of the Bible as a weapon against slavery was just as persistent after he gave up the doctrine of plenary inspiration as it was before. At every anniversary of the American Anti-slavery Society after he became President until the day of his retirement, he never failed to open the book and read from it passages that made the ears of oppressors tingle, while his speeches bristled with quotations from it of the same kind. As he himself says above, he "never refrained from making use of the Bible as a mighty weapon to batter down slavery"; and this is all that I have asserted or claimed. I have again and again heard him say that the doctrine of plenary inspiration, instead of augmenting the power of the Bible for good, was a dead weight upon it; and that, when that doctrine should be universally repudiated, the moral influence of the book would be vastly increased.

NEW YORK, Aug. 23, 1884.

OLIVER JOHNSON.

EGOISM UNSATISFACTORY.

Editors of *The Index*:—

I always hail with pleasure any effort to unravel the mystery of the universe, and especially anything that promises to throw any light on the origin and destiny of humanity. For that reason, I was particularly interested in an article which appeared in *The Index* of July 24 on the "Permanence and Simplicity of the Ego," by William I. Gill.

Mr. Gill as a philosopher is both analytical and synthetic, both destructive and constructive. After disposing in a summary manner of Epicurus, Lucretius, Leibnitz, Hegel, Schelling, Kant, and Hamilton, he pays his addresses to Maudsley, Tyndall, Spencer, etc., and informs us that modern evolution has been weighed in the balance and found wanting; that it is, in fact, but "a low-born theory," and does not meet the requirements of the case; that requirement is immortality, and no system of philosophy can pass muster that does not include immortality for the ego. That is a *sine qua non* upon which Mr. Gill insists, and without which he will not be satisfied.

I confess that I sympathize with the gentleman in his "longing after immortality"; but, with me, the idea is only entertained "subject to the action of nature's convention."

As I hold it, it is no Procrustean bed, to which all philosophies and even science itself must be made to conform. We are much obliged to Mr. Gill for pointing out the weak points in other systems, but did it never occur to him that his own pet monism might have some "logical difficulties"? He says, "I am the universe, which is only a congeries of my subjective states." That is certainly simple enough and comprehensive enough for any purpose. The ego, the all in all, that resolves the non-ego into nonentity, the "objective" into the "subjective," and leaves no room for matter in the universe except as a mode of the ego, "the only conceivable substance of the universe, the one great force everywhere and always working." So, then, matter and force are one: that one is the ego, and the ego is Mr. Gill. That seems to be the inevitable inference from his language. That I do not misrepresent him is plain. "Thoughts and volitions are no more real than matter and motion, which in the last analysis are subjective states. Rocks, clouds, and stars are equally sensations." "I am the universe." I would like to ask Mr. Gill a few questions. If you are the universe, then you must be infinite; and, if so, where is there any room for the rest of us? Billions of individuals have lived and died on this planet alone, each an ego in the ordinary acceptance of the term. How can the ego be a unit and at the same time multiplex? Are you not involved in the same difficulty with the Trinitarians? If your existence did not begin with your birth, then you may be immortal; and the same may be true of all other beings. But, if so, it is certainly curious that no remembrance of any former state of existence adheres in us. If identity is continuous,—and without that there can be no immortality,—how is it that memory as to our antecedents is a perfect blank? You say, "Without a perduring permanent, there is no possible change, but only successive annihilations and creations." True enough. Matter is that "per-

during permanent," and it presents itself to our consciousness in an infinite variety of forms. Matter itself is indestructible, but its individual forms are

"Like the snow-fall in the river,—
A moment white, then melts forever";

or "inseparably connected with matter, and moving in the same never-ending cycle, is immanent force."

While force itself is indestructible, it presents itself to our consciousness in an infinite variety of modes, these modes eternally changing and evolving,—becoming individualized,—but none of them permanent. Force is only known to us as it manifests itself through matter. This is the dictum of science, which Mr. Gill thinks "has no right to speak on the question at all."

I recognize the claims of the spiritual philosophy upon our attention, and acknowledge our inability to explain scientifically all its phenomena; but, if I must "choose this day" my guides to truth, I will accept chemistry, evolution, the conservation of energy, and spectrum analysis in preference to an egoistic Fichtean philosophy, which is, to say the best of it, an unverified and unverifiable hypothesis.

HARRY HOOVER.

PITTSBURGH, PA., Aug. 3, 1884.

SUNDAY PIETY IN LONDON.

Editors of *The Index*:—

In the "Editorial Notes" of this week's *Index*, I note an extract from the *Boston Transcript*, containing one of those senseless untruths about London, to the effect that "London is still too good to allow restaurants to be open on Sunday," which appear to be published for the mere purpose of gratifying that hatred of my countrymen which seems to be the strongest feeling in a certain class of Americans.

The simple fact is that many restaurants are closed in London, because it would not pay to keep them open on Sundays; and, surely, the waiters are entitled to one day's holiday in the week. I know from personal experience, extending over thirty-one years, that it is easy to obtain a good and well-cooked meal at all hours of the day on Sundays, and that the only restaurants which are closed by law on Sundays are those which, having a license to sell liquors, are obliged to close during the hours of religious service. I have often dined at such houses on Sundays between 1 and 3 and after 6 P.M.

I have had occasion to note how such erroneous statements arise, and am therefore very careful, in writing to England on American affairs, to avoid anything derogatory to America, because I know it will do no good; and, as *The Index* is the standard bearer of principles which I would gladly see promulgated on both sides of the Atlantic, any error therein touches me more than it would do in most papers.

Yours truly,

JOHN FRETWELL.

PROVIDENCE, R.I., August 21.

IRRELEVANT REFUTATIONS.

Editors of *The Index*:—

The respectful and able critic of my article on the "Simplicity of the Ego" has erroneously described my doctrine, and then thoroughly refuted the falsity. That leaves me really intact; but, as others may think with him that it is my death, I will give a sign to the contrary.

Mr. Smith assumes that the simple being or entity of which I speak in said article is the same as the German "pure being," which is described as devoid of internal differences and qualitative marks, so that it is *nil* to conception and equal to nothing, whence Hegel drew the absurd conclusion that being and nothing are one and the same, and on this absurdity built a huge and monstrous fabric called philosophy. This "pure being" I repudiate as an empty phrase. My simple being, as all being must be, is qualitative. In previous articles of this series, I have explained (as well as in my "Evolution and Progress" and in my "Analytical Principles") that substance, quality, and force are one, so that no being can be devoid of quality, or be "pure being," so called. Hence, my monism is so far just like that which Mr. Smith affirms against Dr. Davidson, when he says that "all the facts and operations of nature tend to prove that the world is the product or expression of a single principle, or *substance*."

But the simplicity of which I have spoken is very complex, as I have explained. However simple,

everything is necessarily complex. Its simplicity consists in a logically disruptible unity of forces. Nitrogen, for instance, is called a simple force or substance; and from this, it has been hinted, the kosmos may have been evolved. But this simple substance is very complex. It is a congeries of qualities, such as extension, weight, expansion, contraction, and power of motion, with affinities and diffinities for various other bodies. Infinitely more complex is the simple *ego* which I have defined. It is a unitary complexus of force, which admits neither of diminution nor increase nor disruption, though in its modes it is multiplex and forever changing, because forever acting on itself.

But I do not hold that "all things spring from" this entity or *ego*, but that it comprises all things, because all these are the modes or states and forms in which it exists and operates. These things are not something different from it (the *ego*); and they spring from it only as thought springs from mind or waves from water, the waves being water and thought being mind. The *ego* is the cosmic force, which is ever the same in its essential nature and degree, but forever changing its modes by a law of self-evolution. It is thus seen that I differ, as before explained, from other evolutionists only in that they make the cosmic force *non-ego*, and I make it *ego*. I am a subjective evolutionist, and they are objective evolutionists, to which class, I suppose, belongs my critic.

WILLIAM ICRIN GILL.

WILLIAM LLOYD GARRISON.

Editors of The Index:—

My own opinion is that, when Mr. Garrison laid himself down in Humanity's lap to rest, he had no "faith" in the Bible as a supernal "revelation," none whatever. I knew him as a brother. I read each number of the *Liberator*, from the first one in 1830 to the last one. And we always pulled together, and on all the aspects of theology. He assured me, when he began the publication of his paper, that he had felt friendly toward the Hicksite or "progressive" Quakers; but he was not a Christian. I was at his funeral, and do not remember that Wendell Phillips uttered a word as to any "faith" Mr. Garrison had in mysticism.

Moreover, we might, to serve a purpose, quote extracts from the early writings of any number of Liberals, now dead, to show that, in their early manhood, they took favorable views of the Bible. Horace Seaver, Elizur Wright, and numerous other Liberals were once believers in the Bible. When I was thirty-four years of age, the American Anti-slavery Society published a volume I wrote, with the following title, *The Testimony of God against Slavery*; and, in seven years after,—that is, in 1836,—I discovered that there was more in that book in favor of slavery than there was against it. Whereupon, my Methodist coat fell from my shoulders at once and forever.

Faith in the Bible is often imposed upon children by Christian parents. And yet what we may have believed when green in youth should not be quoted against us after we have been matured in manhood. My opinion is that Mr. Garrison, at the close of his life, had a hope of a better future; but he was not a Christian nor a believer in the supernatural inspiration of the Bible.

QUINCY, MASS., August 24.

LA ROY SUNDERLAND.

A GOOD book, whether a novel or not, is one that leaves you farther on than when you took it up. If, when you drop it, it drops you down in the same old spot, with no finer outlook, no cleared vision, no stimulated desires for that which is better and higher, it is in no sense a good book.—*Anna Warner*.

My dear Mr. Gimp, when you tell me that you have a mysterious revelation that a mysterious power will punish me and cast me out from happiness because I make myself glad on a certain day of the week, you are talking nonsense! You are telling me something that might do for the Middle Ages, but that will not do at all now. I do not believe your story. You never have been able to substantiate it, even from your own records. And, even if you brought me a stack of Greek and Hebrew manuscripts as high as the tower of Babel, I should not believe it. I should tell you that you were flying in

the face of a greater revelation than was ever written in books,—the revelation of the changing seasons, of the winds, of the waves, of the green things of the earth, and of the life of the earth and air and sea,—the eternal revelation of wise and kind Nature. The maker of all these things never made laws that stultified and outraged his own creation.—*Puck*.

BOOK NOTICES.

THE DEVELOPMENT THEORY. A Brief Statement for General Readers. By Joseph T. Bergen, Jr., and Fanny D. Bergen. Boston: Lee & Shepard. 1884. pp. 240.

The doctrine of evolution has now become so well established among scientific thinkers, exerts so powerful an influence on the general thought of the day, and is destined to become so far-reaching in its results in modifying systems, theories, and methods, that no person who has an intelligent interest in his race and age can willingly remain ignorant of this great scientific generalization. But the majority of readers have neither the time nor the acquaintance with science to read and understand readily the works of the great original thinkers and expounders in this province of thought. They need works containing outlines of the theory, presented briefly, clearly, comprehensively, free from technicalities, and with numerous, simple, concrete illustrations. Such a work is the one whose title is given above. The preface says: "By reason of their very fulness and wealth of illustration, as well as from the necessarily frequent use of technical terms, the classic works of Darwin and the other great founders of the modern view of the origin of species fail to command the attention of the non-scientific reader. The lack of simple and inexpensive illustrated books, which place the outline of the evolution hypothesis clearly before the general reader, has aided in continuing popular ignorance concerning the theory. To assist in supplying this want as well as to furnish to those who require it an elementary text-book on the subject is the task which the authors of the present little volume have set for themselves." The authors have performed their task in a very creditable manner. Their statement of organic evolution, with proofs, arguments, and illustrations in support and exposition of it, is one that any reader of ordinary intelligence can understand. The work evinces acquaintance with the best writers on the subject, and much discrimination and skill in presenting essential and omitting unessential parts of the theory, in the selections of examples and illustrations, and in the general arrangement of material. The demand for works of this sort is one of the very encouraging signs of the times; for it shows a desire for something more than a mere exposure of fancies and fallacies that originated in the intellectual childhood of the race, a desire for ascertainable information respecting the natural history of life on this planet,—information which, once acquired, with its implications understood, will forever destroy all special creation hypotheses, and render unnecessary and a waste of time and effort all arguments against the "mistakes of Moses."

B. F. U.

THE WIND AND THE WHIRLWIND. By Wilfred Scawen Blunt. Boston: Benjamin R. Tucker, publisher. Paper covers. Price 25 cents.

This poem of thirty pages has neither preface nor note explanatory of its author's whereabouts or nativity or the why and wherefore of the poem. It appears to be a somewhat morbid arraignment of the government of England for its action in regard to Egyptian affairs and its culpability in the matter of the War in the Soudan. In spite of the tragic and prophetically dismal tone of the poem, the verse is smooth and flowing, and the thought often vigorous and not lacking in poetic merit. But it is not to be one of the great poems of the day; nor will it materially hasten on that dissolution of the English nation which it so fiercely prophesies in verses like the following:—

"The nations of the East have left their childhood.
Thou art grown old. Their manhood is to come;
And they shall carry on earth's high tradition
Through the long ages when thy lips are dumb."

We give a further specimen verse or two:—

"Nay, here, by heaven,
This task at least a poet best may do,—
To stand alone against the mighty many,
To force a hearing for the weak and few."

"And who shall say that this year's cause of freedom
Lost on the Nile has not as worthy proved
Of poets' hymning as the cause which Milton
Sang in his blindness, or which Dante loved?"

S. A. U.

THE leading article of the September number of the *Popular Science Monthly* is "Scientific Culture: Its Spirit, its Aim, and its Methods," by Prof. J. P. Cooke, who, taking his illustrations from chemistry, aims to show that scientific study may be most valuable in training the mind in inductive reasoning. The portrait of the number gives the features of Prof. Lesley, chief geologist of Pennsylvania, of whom a biographical sketch is also given. "The Upper Missouri River System," by Lester F. Ward, describes the action of the Missouri and Yellowstone Rivers in continually cutting away one side of their valleys and building up the other. "Where and How we Remember" is by M. Allen Starr, M.D. "The Astronomy of Primitive Peoples" and "Chinese Coroners' Inquests" are interesting. In "National Health and Work," Sir James Paget presents an additional reason for sanitary activity. The "Chemistry of Cookery" and "Morality of Happiness" are continued; and other articles are: "Aims of the Study of Anthropology," "Sorghum as a Source of Sugar," "Hygiene for Smokers," "How the Dodder became a Parasite," "Sun-Kinks," "The Problem of Population," and "Protection against Lightning." The editor writes on the coming meetings of the British and American associations, and discusses "The College Fetish Once More."

THE leading article in the *North American Review* for September is by Bishop J. Lancaster Spalding, who insists that the only sure "Basis of Popular Government" is morality, not culture of the intellect, nor universal suffrage, nor the development of material resources. The policy of "The Exclusion of the Chinese" is advocated by John H. Durst, who presents a striking array of arguments against Mongolian emigration. Four distinguished writers on political economy—namely, David A. Wells, Thomas G. Shearman, J. B. Sargent, and Prof. W. G. Sumner—set forth, from nearly every conceivable point of view, the "Evils of the Tariff System"; and it is announced that in the *Review* for October several writers of no less distinction will exhibit the "Benefits of the Tariff System." The other articles in the current number are: "The Demand of the Industrial Spirit," by Charles Dudley Warner; "Inspiration and Infallibility," by Rev. Dr. J. H. Rylance; "The Need of Liberal Divorce Laws," by Elizabeth Cady Stanton; and "Our Remote Ancestry," by Prof. Alexander Winchell.

THE FLORAL WORLD.

A SUPERB, ILLUSTRATED \$1.00 MONTHLY WILL
BE SENT ON TRIAL

FREE ONE YEAR!

To all who will enclose this ad. to us NOW with 12 2c. stamps to prepay postage. The *Indiana Farmer* says: "Contents interesting and to flower lovers well worth the price,—\$1.00 per year." Sworn subscription list over 12,000 in every State and Territory, Canada, Great Britain, South America, Africa, India, and Australia.

Mrs. R. A. Houk, Bingen, Ind., says: "It is the best floral paper I ever saw." Mrs. J. W. Fay, Big Beaver, Mich.: "It is magnificent!" Mrs. R. G. Stambach, Perth Amboy, N.J.: "Have never seen anything half so good." Mrs. J. L. Shankin, Seneca City, S.C.: "It is just splendid."

ADDRESS

The Floral World Highland Park, Lake Co., Ill.

BELVIDERE SEMINARY.

The plan of an Industrial School which was sent by the Misses Bush, of Belvidere Seminary, New Jersey, to the widow of Wendell Phillips, has received her approval and permission to name the institution, when established, the Wendell Phillips Memorial Industrial School.

The plan has also been highly commended by some of the most eminent educators in this country, and active measures are being taken to insure its success. Its originators respectfully solicit such aid and influence in behalf of their enterprise as the friends of Wendell Phillips may be pleased to offer. They will confer personally or by letter with any one interested in their plan, and will very gratefully receive donations, in large or small amounts, of money, books, stationery, pictures, chemical and philosophical apparatus, or charts and specimens needed in the study of the Natural Sciences. All parties responding in any way substantially to this call will be considered founders of the institution.

Belvidere, Warren County, N.J.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—Boston Evening Transcript.

BY ALL ODDS THE BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travelers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its Day Coaches, which are the finest that human art and ingenuity can create; its Palatial Sleeping Cars, which are models of comfort and elegance; its Palace Drawing Room Cars, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that it is the best equipped road in the world.

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, and take none other. All leading ticket agents sell them. It costs no more to travel on this route than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

CURRENT TOPICS.

BY B. F. U.

A CHINESE translation of Mr. Herbert Spencer's *Education* has just reached England. The book has been translated into every living language of Europe, into Japanese and Chinese, and, it is believed, into several of the vernacular languages of India.

COMMENTING upon the aggressive spirit with which the Salvation Army seems to fill the public wherever its soldiers appear, the *New York Tribune* remarks that this antipathy "is to be regretted, because it is perhaps the only influence which can keep the Salvation Army as a movement alive. Nothing that is persecuted perishes during the persecution. That is the rule as regards all organizations; and therefore this craze, which is vulgar, profane, sensational, unintellectual, and utterly delusive as to its spiritual consequences, may be kept from dying, and given a foothold at last, through the stupidity of those who cannot restrain their inclination to make targets of the hallelujah lads and lassies."

THREE Milwaukee lawyers having charged \$25,000 for settling an estate worth \$32,000, Judge Drummond, of the Federal Court, expressed himself in regard to this "piece of rapine" as follows: "How much more are your services worth to your clients than mine to the people? You have charged \$25,000 for sixty days' service. Could you not be content, each of you, to take my *pro rata* for the same time? These charges are infamous. They are such as scoundrels and thieves at heart would make. This charge of \$15,000 is cut down to \$1,500, those of \$5,000 each to \$500. Repeat such a piece of rapine in this court, and I will debar every one of you."

THE *Ottawa Free Press* says that a large number of free thinkers from all parts of Ontario assembled recently at Alton, Ont., "to celebrate laying the corner-stone of a free-thought hall, for the meeting of local free thinkers." As this is the first hall of the kind ever built in Canada, the

affair attracted much attention. The same paper states: "By an early steamer, Charles Watts, formerly an associate of Charles Bradlaugh, having disposed of all interest in his English publications, arrives in Canada to reside permanently at Toronto, where a weekly organ is to be started and a magnificent lecture hall erected. A guarantee fund has been subscribed to keep Mr. Watts steadily employed lecturing throughout Canada."

"THE abolition of public or official prayer," says the *Nation*, "by the French Legislature has led to much very heated discussion. Its authors maintain that it means simply that the State has no religion and has nothing to do with religion. But some of the bishops declare that it is a formal repudiation of God or a denial of his existence by the State. M. Paul de Cassagnac, who says he is a pious man, sides with the unbelievers or 'laicizers,' as they prefer to be called, but for a reason peculiar to himself; namely, that he does not pray for the Republic, lest his prayers should be answered, and a form of government which he hates should profit by them. This is probably the oddest expression of belief in the efficacy of prayer yet produced."

FROM a paragraph in the *Banner of Light*, we take the following: "Prof. Tyndall has been quoted as saying to a London thief, 'You must not steal; not because it is immoral to steal, but because society, the State, cannot stand, cannot endure, unless there is an observance and enforcement of the laws of common honesty.' The obvious error lies in the fact that, without certain fixed moral purposes, neither society nor the State could endure. The laws of common honesty of which Prof. Tyndall speaks are but the laws of common morality." Our contemporary's criticism of what "Prof. Tyndall has been quoted as saying to a London thief" is sound; but the most "obvious error" is in assuming that Tyndall ever spoke to a thief as represented.

THE committee appointed by the French government, at the request of M. Pasteur, to verify his experiments in treating hydrophobia by inoculation, have reported that inoculation with the attenuated virus of hydrophobia gives a dog immunity from the disease, just as similar treatment preserves a sheep from charbon. All the twenty-three dogs submitted by M. Pasteur as having been thus inoculated have resisted the strongest virus on inoculation, whereas the majority of the nineteen non-inoculated dogs have succumbed. Of the latter, six were bitten by mad dogs, three of them becoming mad; eight were subjected to intravenous inoculation, all becoming mad; and five to inoculation by trepanning, all becoming mad. The committee will now inoculate a large number of fresh dogs, and will compare these with an equal number of dogs not inoculated. It will likewise investigate the question whether, after a dog has been bitten, inoculation with the attenuated virus will prevent any consequences from the bite. M. Pasteur will lay before the International Health Congress at Copenhagen results which, as

the committee remark, "are so honorable for French science, and give it a fresh claim on the gratitude of mankind."

THE difference of views as to the merits of existing political parties and their Presidential candidates seems to be as great among Liberals as among other people. Truly liberal are they only who recognize and respect the right of members of all parties and of no party to express and defend their views on the political issues of the hour as well as on subjects of a religious and speculative nature. To the moral aspects of our Presidential contest, none of our readers can be indifferent; and, since their discussion is within the province and germane to the object of *The Index*, the editors of the paper would neither be true to their liberal professions nor faithful to their trust, did they exclude such discussion from these columns. But, since the subject is one on which there is a variety of opinions, it is not unlikely that those who cannot agree with Mr. Potter in his view of the situation presented this week will, before the discussion is ended, find their own positions stated in these columns with a clearness and force which will gratify them quite as much as they may now be annoyed by strictures on their parties and candidates. As Liberals, we should all divest ourselves of an unreasoning, bigoted, partisan spirit, and, agreeing to differ where we cannot agree, frankly discuss our positions, dominated by love of truth and a generous spirit toward those from whose opinions we are obliged to dissent.

IN a letter to the Committee of South Place Religious Society, Moncure D. Conway writes: "My wife and I have both and equally endeavored to prolong our stay in England for the sake of our work in South Place, but have now made up our minds that we cannot remain in Europe longer than next year, if so long. If you should desire me to speak again at South Place in the early part of next year, and I am able to do so, my present resignation will not prevent it. Meanwhile, after August, the society will again have the opportunity of listening to my colleague, to whom I have been looking, and still look, to commend himself to you as one able to carry on the work which I must leave. It is unnecessary that I should say more concerning the reasons that have impelled me to this decision than that they are of a purely private and domestic character, and include no dissatisfaction with South Place or with the country in which I have so long and happily resided. My residence in England was never pleasanter; and my relations with South Place, so far as I know, were never happier than at present. The giving up of South Place will mean for me giving up the ministry altogether. I have no intention of ever again taking charge of a congregation. It seems a kind of death to leave the work to which twenty-one years, representing the heart of one's life, have been devoted; and, as the time of my departure draws near, I trust it may be attended with kindly sentiments, and that I may have the consolation of passing away amid peace and friendship."

PUBLIC AND PRIVATE MORALITY:

A Question of the Presidential Campaign.

Probably in no former Presidential contest in this country have so large a proportion of intelligent and conscientious voters been perplexed with the question how to vote as in the pending political campaign. Party ties have been weakening now for a number of years, in spite of the annual or quadrennial plying of the party whip. Between the statements of principles of the two leading parties, one of whom, most probably, will win, there is not sufficient difference to prevent a very considerable number of voters from passing easily from one side to the other; and neither of these parties presents now in its platform a central moral principle of predominant authority. As between these two great parties, consequently, the contest turns almost wholly on the personal character and competency of the candidates whom they have respectively nominated for the Presidential office. And, unfortunately, it happens that both parties have nominated candidates of such questionable moral character that the conscientious voter, feeling very sure that one of them must be President, is put to great stress to decide to which he shall give his aid.

Into the question of the serious charges which have been made against the characters of Mr. Blaine and Mr. Cleveland, we do not propose here to enter farther than this: Mr. Blaine is accused of official immorality, or of using his high office as speaker of the national House of Representatives for purposes of private gain; and on this charge his own letters offer the most damning evidence of their truthfulness,—evidence which no partisan explanations have succeeded in so washing away that the letters shall seem to the eyes of the voter of ordinary intelligence merely to refer to a clean business transaction. We chanced to hear their author's own memorable defence of these letters in the House of Representatives at Washington. As a piece of skilful and passionate oratory, the defence was a masterly success. The chairman of the investigating committee seemed to cower and sink into his seat under the blows of the speaker's invective, and the galleries vociferously applauded. But the more sober-minded among the throng of auditors, as they came out, said to each other, "After all, he has not answered the charges: he has only thrown dust over them." And it is in this way that the non-partisan, clear-headed voter views all present campaign attempts at excusing these letters. Mr. Cleveland is accused of private immorality, or of once living in illegitimate connection with a woman not his wife. The grossly exaggerated charge of general and notorious profligacy, at first published, has been sifted down to this admitted and perfectly authenticated fact. We may here say that, when this original charge was published, we were on a distant excursion, and did not see it, nor have we ever seen it. We only saw brief and veiled references to it, and were disposed to dismiss it as wholly and only a vile campaign slander. It was not until we saw the detailed account of the facts of the case, as given in the *Nation* of August 7, which were further authenticated by Dr. Twining's subsequent statement in the *Independent*, after a thorough investigation, and by the statement issued by prominent citizens of Buffalo, that we formed any conclusion as to the bearing of the charge on the moral duty of the voter; that is, we came to our conclusion in the case on statements intended to be a defence of Mr. Cleveland against the original charges, and which did disprove the grosser part of those charges. In other words, we have formed our

own conclusion as to the moral issue involved in the problem presented to the voter in the pending campaign on the so-called Mulligan letters written by Mr. Blaine, and impeaching his official integrity, on the one hand, and the one admitted fact of private immorality in the character of Mr. Cleveland, on the other hand.

And what is that conclusion? It is, in brief, that neither of these leading candidates is worthy to be placed in the office for which he has been nominated. And though, in the natural course of events, it is altogether probable that one of them will be placed there, we have ourselves too much respect for the Presidential office personally to help, by vote or voice, in elevating either of these men to the high position. Our motto is not, "Of two evils, choose the least," but "Of two evils, choose neither." Nor does the citizen who takes this ground throw away all his influence and make himself a political nonentity. Possibly, his vote may not be anywhere effectively counted this year. But his position will be marked, and his influence may tell on party nominations in the future. Indeed, if all those voters and political leaders who, irrespective of partisan considerations, have at any time, months ago or this present hour, openly or tacitly confessed themselves dissatisfied for moral reasons with these nominations, were now to withdraw their support from them and unite on a new ticket free from such reproach, they might have it in their power even now to prevent the election of either of the objectionable candidates. The weakness of the moral element in politics is that it too easily submits to party discipline, and thus loses its own opportunities. It, at least, behooves the party of the Independents, who started their separate organization on the avowed ground of a more strenuous application of moral principles to political action, now to reconsider their position, declare their distinctive platform, and name their separate candidates. That which seemed to us from the first their better course becomes now their urgent duty for the sake of simple consistency and self-respect. It were a pitiful conclusion to a moral-reform movement in politics that its first effort should aid in placing in the White House a man in whose private career there is an admitted immorality of a kind which cannot be discussed in the family circle.

We are well aware of the reasons on which it is claimed that the candidacy of Mr. Cleveland may still be supported in spite of the moral defect in his private life; that, for instance, private immorality, particularly of the kind of which Mr. Cleveland is admitted to have been guilty, may co-exist with the strictest official integrity and with great public usefulness, and should not therefore debar from public office; that the offence belongs to his past career, and should now be overlooked and forgiven on account of his upright public service; that, just now especially, there is much more danger in America from the kind of immorality of which Mr. Blaine is guilty than that with which Mr. Cleveland is burdened, and hence more evil would result from the example of elevating the former to the Presidency than the latter; that, if none but men of perfectly immaculate virtue were to be elected to public office, the offices would have to go vacant; and that even the moral test by which it is proposed to exclude Mr. Cleveland from the Presidency, were it impartially applied, would leave few public men untouched either in past or modern times. We have read all these arguments, some of them *ad nauseam*; and they all appear to us cases of patent and mischievous special pleading. Had the blot on the personal character of Mr. Cleveland been publicly known before the time of the convention which nominated him, we

do not believe that one of these reasons would have been urged in favor of his nomination, notwithstanding the exposure. They are the after-resorts of expediency, and some of them very desperate ones, to shore up a bad cause.

It is true that there was a lower acknowledged standard of private character for public men a century ago than exists to-day, and there is a lower standard in some countries to-day than in the United States. The improvement that has been wrought in this respect, and particularly the increased demand that those who stand in high official positions shall not be violators of the sacred obligations and rights of the institution of the family, are among the most important marks of moral progress. Let there be no retrograde in this feature of social ethics; no resuscitation of the lower obsolescent standard of virtue by knowingly placing in the highest office in the land—an office equal in dignity to that of any sovereign in the world—a man whose reputation is stained with this offence against chastity. Surely there is no such dearth of able and pure men in our country that such a choice has become a necessity. We do not believe that men of good private morals are so rare in the public service as some of the defenders of Mr. Cleveland's candidacy would have us think. But, if they are so few as is alleged, then it is all the more important, with a view of reforming this state of things, that the highest office in the country should be reserved for one whose character in this particular is without a spot. It is not, of course, to be expected that an absolutely perfect character will be found every four years for President; but social morality has at least advanced far enough to demand that no one shall be made the administrative head of the nation (and head, by consequence, of the most conspicuous home in the land), who would not be freely admitted as a moral equal in the most virtuous circles of American society. As to Mr. Cleveland's offence being a thing of the past, to be condoned, it is, unfortunately, not so far in the past—only ten years—but that the question will necessarily arise in the mind of the non-partisan voter whether it must not be regarded as marking a habitude of the man rather than as a youthful ebullition of passion which has been outlived and put away. Nor is it so certain that the faults of Mr. Blaine, though they undoubtedly represent a grave moral peril to which the young men of our country are peculiarly exposed at this time, that of making haste to be rich at whatever cost to honor or integrity, need to be more vigilantly guarded against than does the kind of moral frailty of which Mr. Cleveland has been guilty. There is just now a tendency to loose views in respect to the marriage institution and the relation of the sexes; and it can but increase this tendency and set a most harmful lesson to the more than one and a half millions of young men who will vote this year for the first time, to appeal to them to elevate to the greatest office in the gift of the people a man who has been guilty of practical laxity on this central point of social morality. Both the leading candidates for the Presidency represent dangerous evils that beset our country at the present time: therefore, we repeat, choose neither.

We have spoken plainly, as we did a few weeks ago concerning the platforms of the two parties. Doubtless, we have expressed opinions with which many of our readers will not be pleased. We write, however, not to please, but to utter what seems to us important truth; and, as most of the readers of *The Index* are Liberals, we give them credit for wishing us to utter our own opinions instead of echoing theirs. This article we have

felt specially impelled to write as a needed sequel to the former one. We believe, moreover, while we have no intention of turning *The Index* into a political paper, that thoughtful discussions of political issues from a moral point of view are always in place in its columns. It is in this way that we have approached the subject here treated. We, at least, have no interest nor faith in any Liberalism or Free Religion which does not involve—nay, necessitate—the earnest consideration of all questions of political and social morality. And we would remind our readers that in the standing prospectus of *The Index* one of the special objects of its publication, as of the Free Religious Association, is represented to be the promotion of “a higher Morality and an improved Social Welfare.” It is with this object that we have here spoken. In a subsequent paper, we expect to consider the Temperance issue in politics and the Prohibition party.

WM. J. POTTER.

“PRECISELY THE DOCTRINE HELD AND
TAUGHT BY MR. SPENCER.”

In *The Index* for August 14, Mr. B. F. Underwood calls attention to a recent remark of mine with reference to the precise doctrine held and taught by Mr. Spencer as to the nature of the Infinite Power manifested in the universe; and he cites from my *Cosmic Philosophy* several passages which seem inconsistent with that remark.

The remark in question was as follows: “In my opinion, the infinite and eternal Power which is manifested in every event of the universe is not material, but psychical in its nature, and it wells up in us in the form of consciousness, which is thus a divine effluence, and not the product of an ephemeral collocation of particles of matter. Now, this is precisely the doctrine held and taught by Mr. Spencer.”

In the August number of the *Popular Science Monthly*, p. 453, Mr. Spencer makes a remark of similar purport: “The final outcome of that speculation commenced by the primitive man is that the Power manifested throughout the universe distinguished as material is the same power which in ourselves wells up under the form of consciousness; and the ‘necessity we are under, to think of the external energy in terms of the internal energy, gives rather a spiritualistic than a materialistic aspect to the universe’; at the same time, the ‘phenomenal manifestations of this ultimate energy can in no wise show us what it is.’”

I do not happen to have any of Mr. Spencer's works at hand; but this remark of his, juxtaposed with mine, will serve to explain what I meant to say. Mr. Underwood suggests that the letter in which my remark occurs may have been carelessly written. It was hurriedly written, and I freely admit that in one important particular the form of expression might have been more accurate. I ought to have said: “We are obliged to think of the infinite and eternal Power which is manifested in every event of the universe as psychical rather than material in its nature, and as welling up in us in the form of consciousness, which thus appears as a divine effluence,” etc.

As thus modified, my remark becomes substantially identical with Mr. Spencer's. The necessity we are under, to think of the universal energy as psychical rather than as material, is set forth in his *Principles of Psychology*, vol. i., pp. 159-161,—a wonderful passage,* which I have cited in *Cosmic Philosophy*, vol. ii., pp. 446-448, accompanying it with the following comment: “The unconditioned Source of the phenomena which we

*The passage referred to may be found on page 118.—ED.

distinguish as psychical, and of the phenomena which we distinguish as material, may well be neither quasi-psychical nor quasi-material. Whichever set of terms we use, we are using symbols the values of which are determined by our experiences of conditioned existence, and which must therefore be totally inadequate to express the characteristics of unconditioned existence. Nevertheless, in so far as the exigencies of finite thinking require us to symbolize the Infinite Power manifested in the world of phenomena, we are clearly bound to symbolize it as quasi-psychical rather than as quasi-material.”

See also my remarks on Clifford's theory of a universe of mind-stuff in *Excursions of an Evolutionist*, pp. 327-336.

With regard to the passages cited by Mr. Underwood from *Cosmic Philosophy*, vol. ii., pp. 395, 402, 410, 450, they were all directed against the teleological doctrines of Paley and the Bridgewater Treatises, according to which the universe was manufactured by a God external to it, who “contrived” things,—i.e., had a limited quasi-human intelligence.

Now, I believe it is possible consistently to hold these three positions:—

1. The Universal Energy is in its intimate nature inscrutable.
2. We have no good reason for believing that it contrives, or is angry, or otherwise thinks and feels, after the fashion of the human mind.
3. But the conditions of human thought are such that we must either refrain from thinking of the Universal Energy at all, or think of it as in some inscrutable way psychical.

I held these positions ten years ago, when the *Cosmic Philosophy* was published, and hold them now, and hope some day to elucidate them in an essay entitled “A Defence of Theism.”

From the passage above cited from Mr. Spencer, from other passages not here accessible to me, and from the side-light thrown upon his works by innumerable conversations during a friendship of many years, I believe there is substantial agreement on this point between Mr. Spencer and myself.

JOHN FISKE.

PETERSHAM, MASS., Aug. 24, 1884.

STONES FOR BREAD.

It would seem to be the plainest duty of every man laying claim to honesty to express his opinions truly, and in the clearest way he can, every time he feels called upon to utter them at all. This would seem to be especially true, when the opinions relate to the most momentous of subjects, and when the person uttering them is a professional and accepted teacher. It is hardly possible to conceive circumstances in which it is more incumbent upon a man to utter the truth, as he believes it, than when, standing before a congregation who have chosen him as their teacher in morals and religion, he speaks to them on these subjects. Here, where political dishonesty, commercial dishonesty, and every other kind of dishonesty are, and ought to be, exposed and branded, we have a right to look for entire honesty and exemplary uprightness, implicit as well as explicit. The accepted moral and religious teacher is the salt of the earth; and, if the salt has lost its savor, we may well ask, How shall it be salted, and how shall the moral and religious world be held back from corruption? Thus, we have a right to demand of the religious teacher that he shall use every word in the sense which it bears in the current language of those to whom he is speaking, or, if he feel compelled to employ any word or form of words in a new or unwonted sense, to make his meaning as clear as possible. Moreover,

if, after due consideration, he finds himself compelled to change any of his views, we have a right to demand of him that he shall speak out his new convictions, and do his best to justify them for the good of his hearers and for the cause of honesty. In moral teaching there ought to be no play-acting, no reciting or declamation of a part committed to memory, but a simple, straightforward uttering of heart-felt convictions. This is the only thing that will ever raise preaching above the teaching of the scribes and Pharisees, and lend it authority and power to stir the hearts of men to purity and action.

But how do matters stand with the moral and religious teachers of our day? Do they speak out their inmost convictions with absolute truth and simplicity? It is sad that we must answer, For the most part, no. In no reputable profession in the world perhaps, not even in politics or commerce, is there so much dishonesty as among the very men whose professional duty it is to inculcate honesty and stigmatize dishonesty. There is more disingenuousness, more equivocation, more sanctimonious paltering with a double sense among the clergy of our time than there is among men of any other profession.

In the first place, their entire creed is, for the most part, dishonestly held. Few of them have examined their creed with sufficient care to have earned the right to hold and preach it. They have learned it by rote, “as children learn to spell, by reiteration chiefly,” and repeat it or act it out in a more or less unintelligent and perfunctory way. The fact that they hold it at all is due to a mere geographical accident. They would have held a different one, had they been born in India or Turkey. When this truth is forced upon them, they congratulate themselves upon having been placed by an inscrutable Providence at a point on the earth's surface where truth can be learned by rote, and does not require to be carefully thought and felt out.

But, after all, it is entirely possible for a man to commit a creed to memory, and then really think that he honestly believes it. Many Catholics who have abdicated their right, and denied their power, to comprehend certain doctrines, nevertheless, sincerely think that they believe them, and hold them to be of the utmost importance. Whatever act of dishonesty they are guilty of lies in accepting the principle that they have any duty, or even right, to hold a doctrine of whose content they have no experience or demonstration. Having once admitted this, they have reached a position from which their entire subsequent course may be honest.

What is true of Catholics is true in a less pronounced way of very many Protestants, whose dishonesty lies in believing certain doctrines on frivolous grounds, without dutifully inquiring into their origin and bearings. Such acceptance certainly argues a sad want of intellectual thoroughness, courage, and spirituality; but this want is so common among all but the highest type of men that it causes little surprise, and must be accepted with little rebuke. We have to accustom ourselves to the disagreeable fact that the great majority of men are naturally unintellectual, uncourageous, and unspiritual.

But there is something to which we cannot so easily accustom ourselves, to which we ought upon no condition to accustom ourselves; a far more flagrant kind of dishonesty, based upon meaner and more conscious motives than the other,—a dishonesty that is every year becoming more common among the professed teachers of morality, and threatening to introduce coarse, conscious falsehood into the very inmost shrine of the soul. This

dishonesty consists in cowardly, self-interested equivocation and paltering with the sense of doctrines which a man professes to hold, and which in many cases he accepts money for teaching. Historical criticism and philosophical discussion have rendered it almost impossible for any intelligent and unprejudiced person to accept the cardinal teachings of Christianity as they were currently maintained three hundred, or even two hundred, years ago. No man or woman who has, with candid mind, followed the criticism of the last twenty years, any longer believes that Jesus of Nazareth was begotten without a human father, that he was God, that his teachings have divine authority, that his death made atonement for the sins of the world, that belief in these facts is necessary to salvation, or that he shall one day appear upon condensed vapor to judge mankind and consign the greater portion of it to eternal, nameless agony. No one, moreover, who is at all familiar with the present state of philosophic thought, can any longer accept the capricious, short-sighted, incapable, narrow-minded, transcendental God whom Christianity inherited from Judaism, and who still figures largely in Orthodox pulpits. Under these circumstances, the professed teachers of Christian religion and morality are compelled to adopt one or another of three possible courses: (1) They either ignore criticism and philosophy altogether and stick doggedly to their old-fashioned notions; or (2) they calmly accept the results of criticism and philosophy, honestly declare their beliefs, and preach only what they can candidly affirm, if they find it possible to preach at all; or (3) they privately give assent to these same results, and yet go on preaching the old doctrines, trying, for the low motives of money, position, and popularity, to convince themselves and others, by means of vague, equivocal language, that they still adhere to them. The first of these courses is vulgar and borders upon dishonesty; the second alone is entirely honest and manly; the third is altogether dishonest and unmanly.

And yet this last course is one very frequently pursued and even defended. I was recently denouncing it to a well-known Episcopalian clergyman, when, to my surprise, he placed himself in direct antagonism to me, and warmly defended it as not only honest, but even as highly conducive to the interests of religion. "The Episcopal Church," he said, "does indeed insist that her ministers shall use certain symbolic forms of speech to express their religious beliefs; but she allows every one to interpret these forms as he sees fit. She insists upon no particular interpretation. She is liberal and large-minded, and at the same time by the use of certain uniform formulæ, attains outward harmony and extensive influence." "But," said I, as soon as I recovered myself, "your interpretation of these formulæ must be very different from that of the majority of the persons who listen to your sermons at any given time: do you then use these formulæ without telling them that you mean by them something very different from what they mean?" "Of course, I do," he replied: "I am not bound to tell them what I mean. I have a right to my interpretation, just as they have a right to theirs. In this way, we attain entire freedom of thought and avoid disputes." "In other words," I said, "you attain these results by using said forms of speech to conceal your real thoughts from those to whom you are speaking." "This may be so at first," he replied; "but, after I have used them for a while, my meaning gradually filters into the minds of my hearers by implication; and they come over to my views almost without knowing it. This is the only way in which the generality of men can be made to imbibe new

ideas." "For example," said I, "when you use the word *God*, you mean by it the Hegelian *Idea*, which evolves itself into the universe, while at the same time you know that nearly all, if not all, your hearers understand it as meaning the transcendental God of Jesus and Paul and Cranmer, the God who created the heavens and earth out of nothing." "Yes," he answered; "but they will in time come round to my view, and then my words will mean to them what they mean to me. Are you sure," said I, "that they will all come round?" "Well, if they don't, they ought to: I do my best," was the reply. "That does not seem very satisfactory," said I; "but, supposing they all did come round in the end, do not simplicity and plain dealing suffer in the mean while?" We were here interrupted, so that I received no reply. I was almost glad; for I felt myself becoming dizzy, as one does who suddenly finds himself upon the edge of an abyss. Here was a professed teacher of Christian morality openly admitting that Sunday after Sunday in the pulpit he acted the part of an insidious, Jesuitical impostor, instilling into the minds of his hearers doctrines which, if professed openly and in plain language, would be received with amazement and horror. And why was the confession made to me? Simply from intellectual vanity. The reverend Christian gentleman wished to impress me with the fact that he was abreast of modern thought, that he was an apostle of the most recent science and philosophy. What he did impress me with was that he was a true apostle of the most recent morality.

Perhaps few persons would allow their intellectual vanity so to overcome them that they would make such a brazen confession as the gentleman referred to did; but his case is, unfortunately, only one among many. I know some persons who loudly profess, without explanation, the doctrine of the tri-unity of God, and yet, when closely pressed, do not dare to say that they believe Jesus to have been the sole incarnation of the second person of that tri-unity. In this way, they are able to impose upon, and gain popularity among, simple, unsuspecting Christian people, who would loathe their views, if openly expressed.

The truth is, the Christian ministry is, at the present day, one of the most effective schools of deceit in existence. Many clergymen, knowing the truth about Christianity, but dependent for their means of livelihood upon congregations wedded to the old beliefs, have entered upon a systematic course of disingenuousness and deceit, which places them upon a lower level than that to which the corrupt politician, the cheating merchant, or the unfaithful contractor has sunk, and renders their entire influence baneful and degrading. Our country needs, above all things, honest teachers. Without these, we cannot have an honest people; and, without an honest people, no republic, no system of free government, can be permanent. It is inexpressibly sad to think that very many of our teachers—of those, too, who are called to deal with the most sacred and vital subjects—are, for the sake of a little gain or popularity, doing their best to undermine our national existence and break down the mightiest bulwark of human freedom, upon which so much other good depends.

In spite of all our boasted liberality and freedom of thought, it perhaps requires as much moral courage at the present day as ever it did to be a free thinker, and to express one's convictions freely. The retailers of traditional formulæ do not now burn the heretic; but, as a worthy heretic said recently, "they tell lies about him." They whisper about in the ears of friends and newspaper reporters that his doctrine is atheistic, and pretend

to refute it with mysterious, cabalistic phrases, which they know have a lien upon the popular ear. The man who has no other claim to be called a thinker than that, in the face of all reason and common sense, he maintains the universe to be a self-unfolding anthropomorphic idea, floats on the tide of popular applause by calling this idea God, and wins laurels by branding as atheist the man who finds the universe real and moral, not through the will of any anthropomorphic being, but in its very essence, and who speaks out frankly what he means, without seeking shelter under the prestige of any popular mythology. Fortunately, there are some men with moral courage still left in the world; and, however much they may suffer from the slander of interested and dishonest men, they have at least this consolation: that the truth which they have loved and served will in the end prevail, for the very reason that the universe is moral in its very essence. Truth is the bread of spiritual life, the bread for which the souls of men to-day, as much as ever, are hungering,—the only bread that will satisfy them. He who has no bread, but only stones, to feed them with, and offers these stones as bread, is doing what in him lies to starve and destroy the souls of his fellow-men, to make them impotent slaves of his own vanity, mere pariahs in the world of spirit. How long shall this be?

THOMAS DAVIDSON.

THE YOUNG GOD.

Beside the Jumna, the young herdsman, Krishna, played his flute and charmed the cow-maidens; and, when he danced with them, each believed that she alone had him for a partner. This, indeed, is the subtle art of young gods. As it was beside the Jumna, so it is beside the Thames, where there are over one hundred and forty religious sects and societies, each of which believes that it has the young god for its partner. It is not the English way to part with old names; but that there is a new deity wandering about is sufficiently proved by the determination with which the sects are showing their Christ and God to be quite unlike their Biblical and ecclesiastical portraits. Each is angry if their divinity is confused with that of Moses or Jesus, Paul or Athanasius, Calvin or Wesley, or even with the god of Channing. This improved and polished deity has to be reckoned with by the philosophers. Each thinker is impelled to make his theory into a religion. Why could not Comte invent a new social and scientific system without making it into a church? Why could not Herbert Spencer say his say about the unknowable without writing it with a capital U, and suggesting its divinity? Ah, artful Krishna! still do you go about fooling us with the belief that, in the cotillon of creeds and theories, we alone have Thee for a partner!

So long as the old sacerdotal and infra-human deities maintained any real hold on the heart and brain of England, sympathy in earnest negations was enough to keep heretical societies and schools of thought. But the verdict against Orthodoxy has been so completely gained that the liberal philosophers begin to criticise each other; and a remarkable encounter, with serious results, has recently occurred. Herbert Spencer, who insists that the young god is with him under name of the Unknowable, and Frederic Harrison, who maintains that the same divinity is with him under name of Humanity, have crossed pens; and the result of the duel has been summed up by cynicism in the robes of Mr. Justice Stephen. Mr. Harrison declares that Spencer's religion of the Unknowable is the ghost of a religion: Mr. Spencer declares that Harrison's religion of Humanity

is a relapse into the ancestor worship of primitive man. Mr. Justice Stephen decides that both have proved their point.

Mr. Justice Stephen has fortunately decided on the subject as a philosophical critic, not as a justice; for he has already announced that, if he were compelled to deal with them officially, he would have to sentence them to prison for heresy. This learned judge has done noble service in exposing the nefarious character of the laws against heresy and blasphemy, and bringing them near their end. But, as a thinker and writer, he is cynically impartial between Christianity and its critics; and, after reading his statement on the recent controversy, my first impression was that of having witnessed a philosophical duel of the Kilkenny kind: Positivism and the Unknowable were visible as two tails alone surviving from imposing movements.

Herbert Spencer's blow at Positivism is certainly damaging. Not only were Comte's estimates of the relative value of great men and movements too eccentric to form a cosmopolitan calendar of Saints, but his Great Being, Humanity, repeats too faithfully the faults of other great beings, natural and revealed, to evoke the enthusiasm essential to religious sentiment and service.

On the other hand, Mr. Harrison's remorseless criticism has compelled the confession that the Unknowable has nothing necessarily moral about it, nothing human or humane, nothing practically useful. It is to be feared that those theologians who have sought shelter for their creeds in the Unknowable, as the only ark afloat on the flood of scepticism, must now feel the waters rolling over them again. If hereafter they write about the unknowable, it is likely to be with a little *u*. Mr. Spencer is vexed that Mr. Harrison should say his Unknowable is of no more religious importance than if one should conceive it as electricity; but, surely, one may feel more veneration for electricity than for a Somewhat of which we can only know that it isn't something else. Mr. Spencer is so in love with his pet abstraction as to be unaware, no doubt, that it has been made into a theological imposition. Mr. Justice Stephen's criticism shows the utter worthlessness of this much-raunted generalization concerning the Infinite and Eternal Nothing-at-All.

Mr. Justice Stephen is apparently indifferent between all the claimants to possession of the true faith,—Christian as well as other. He is an intellectual Gallio, and represents the type to which England is steadily moulding the younger generation. He is not in the least upset by the alternative of unbelief. If there be no deity and no future life, he holds that life would still be found variously interesting and well worth living. No doubt, and the testimony is valuable; but the cynicism of Mr. Justice Stephen's criticism of those who seek to preserve the religious sentiment has a counterpart in vulgar indifferentism.

Even Prof. Huxley has shown unwonted warmth of affection for his word "Agnosticism." He claims to have coined it, but some day he may not felicitate himself about it. Agnosticism is but the epitaph of theology. Having of old assumed a place among the sciences, claiming basis in a revelation of equal authenticity to the subject-matter of other sciences, theology readily consented to the methods and tests of other sciences. For some time indeed it has been trying to escape them, but it cannot be done. Theology is in the position in which palæontology would be, if all the fossils could be proved to have been carved by men. By the laws of science, theology ends. In its place there remains only mythology. But the scientific sisterhood are tender-hearted: they hate to banish Theologia suddenly from their company, and are

compassionately deluding their dying sister. "Oh, of course, we cannot say but what you may be right: nobody can prove there isn't a God somewhere, and a heaven of bliss" (adding, *sotto voce*, "And nobody can prove there isn't a sky-blue peacock with a hundred heads and a million eyes on the other side of the moon!")

Agnosticism may have a temporary value as kindly "notice" given theology to quit the region of actualities. Into the fairyland where previous theologies have passed, Christian theology must now follow. It may henceforth concern itself with speculations about the possibly-existent inconceivable realms (whether Weissnichts, Erehwoses, or other unknowable universe), but must no more meddle with the real interests and urgent necessities of human existence.

Exit theology, and one more is added to the seven sleepers! Enter religion, and a leader appears for the seven champions! Detached finally from that crude science of primitive man called theology, religion for the first time is enabled to bring its influence to bear upon the actual world. Religion has nothing to do with the origin of nature or its destiny. It is in no sense a science. One important distinction is that, while in science not to doubt is the unpardonable sin, religion is essentially that which never doubts. Science regarding an unknown universe which it must try to make known must on one side be agnostic, but religion is gnostic. It cannot act where it does not know. Its knowledge has indeed no full expression in words; for religion is that profound passion for the best—for what is best in and for ourselves and others—that it expresses itself in the whole life, conduct, and influence. If a man knows (*i.e.*, believes without the least doubt) that there exists an omnipotent Deity, and a future hell and heaven to reward disobedience and obedience to that Deity, such knowledge will organize that man's religion, which may lead him to burn a fellow-man or to be willingly burnt himself; and if, at length, the knowledge becomes limited to the world of sense and experience, religion will fill these with its spirit, its emotion, its moral enthusiasm. For religion is a passion that needs only a recognized best to be loved, and basest to be abhorred. It inspired the psalmody of Israel while that tribe foresaw no future beyond the grave. It bore its great world-flower, Buddhism, out of atheistic negations and hope of the eternal sleep of consciousness. Nay, this day,—if the *Schwarmerei* of numbers is left out of consideration,—religious enthusiasm gathers to the side of antichristian as much as to that of Christian convictions. And these are equally constructive, for what is sometimes sneeringly called "mere negation" is but the other side of affirmation: to deny $2 + 2 = 5$ is affirmation that $2 + 2 = 4$. There is no doubt in religion. One cannot fall in love with an unknown quantity. Theology having committed suicide in agnosticism, religion is left to be devotion to the best. The "faith" that Tennyson finds in "honest doubt" is religious, but not by reason of the doubt: it rests on the unquestioned belief that it is best to confess the honest doubt at every cost. Religion is compelled to abide in the known world, and invest with its consecration the actual life and daily duties of men. It must now restore the union of *believe* and *belove*. There is faith, which accepts a basis on trust without knowledge; and hope which raises personal desire into proximate accord with universal law; but by these man knows only in part, or sees dimly, as in a mirror: when that which is perfect is come, that which is in part is done away. This "perfect" Jesus and John and Paul called love. And who can give us a better name for the soul of religion? The great-

est of all is love; for that alone is beyond dispute, free from doubt, casts out fear, and is the supreme joy of life.

MONCURE D. CONWAY.

THE NEW ORGANIZATION.

A National Liberal Organization is needed for the diffusion of those principles which underly the movement called Liberalism. It is in the power of Liberals to prevent or precipitate one of the bloodiest revolutions or greatest social catastrophes in all history. A revolution there must be; and the only question is whether it shall be peaceful or violent, whether it shall be short or protracted, and what the measure of success shall be. If Liberals cannot work out the problem of reconciliation among themselves, then it is doubtful what the issue will be. Their influence can be made a potent—yes, a dominant—factor in the creation of the new social order, the new political dynasty. *Can be made*, I say, for it will not make itself. But, before Liberals can act as an integral force, they must meet together in general council, and prove by their fraternization that truth has unity, man a soul, and that liberty is the atmosphere that envelops both. Public spirit and private integrity must organize the army of freedom, and lead it to battle against the hosts of bigotry and selfishness, superstition and hypocrisy, whose purpose is to amend your laws in the interests of the Church and monopoly (whose interests are one), until the reins of power will be found in the hands of a priestly oligarchy. Is not this very day incense offered in the Capitol to the one God, Christ and mammon? A new political party will soon arise: it is forming; but what shall be the character of its forces, and to what tasks it shall bend its energies when in power, depends much on the temper and the wisdom displayed by Liberals.

There needs to be a league formed between head, heart, and hand. That is the great truth that is to usher in the dawn. It is what the world needs. It is where Liberalism should place its emphasis. We want an organization built, not on a religion nor a philosophy, but one that shall treat both of these as open questions. Its supreme aim will be truth; its guide, reason; its object, human welfare. Its sympathies will be for men as well as for ideas. It will be democratic; it will attract common as well as uncommon folk; it will win people by drawing near unto them. Its symbol will be the hand-clasp as well as the torch. It will unite in itself the elements of thought, feeling, and action. It will be a discernor of spirits, of good and evil, whatever their guise. Its interest will be in the present, while it will own its indebtedness to the past and its obligations to the future.

And what organization answers to this description? It does not exist. And who will say it is not desirable? I believe it both desirable and possible. The country is full of people ready to be converted, if rightfully approached or approached at all. The fault is our own as much as theirs. Liberalism is one-sided in its aims, half-hearted in its endeavors. These tendencies it must conquer before it conquers the world. There is a necessity for uniting not only Liberals of different isms, as Spiritualism, Materialism, Theism, Atheism, etc., but those who profess no ism, and who in their labors for the salvation of others' souls have forgotten their own; yes, and for the salvation of others' bodies have even forgotten their own. There are societies of great variety in the land that are aiming at the same thing, if they did but know it or had the courage or opportunity to

declare it. They are to be brought into correspondence by actual contact, and learn to co-operate. I will here give a rough draft of the principles and form of this organization:—

Principles. 1. Truth, freedom, humanity; 2. Associative effort in the work of reform; 3. Study and dissemination of the truth regarding religion, ethics, and man's political, social, and industrial relations.

Form. National and auxiliary societies. The national society to be composed of representatives from local societies, whatever their name or specialty, in sympathy with its spirit and aims, and to be organized into four committees representing those societies whose objects come under the four departments of study embraced in its constitution; namely, religious, political, social, and industrial. And to these committees are to be referred all matters which call for definite action, whose privilege it will be to report the result of their deliberations, accompanied by suggestion and appeal; but sympathy or aid in behalf of any project of a practical nature between the sections must be voluntary, and not by any official act of the parent society. Besides the annual congress, there will be a bureau of information, missionary agents, and a newspaper organ. Each section of the society is to have its full share of representation in the bureau, the missionary force, and the newspaper, and its management.

This, it seems to me, is the way to reap the best thoughts and impulses from the best minds and hearts on the highest themes and of the greatest practical value, and to return these rich gleanings as a thank-offering to the Giver of all good, the commonwealth of man.

T. W. CURTIS.

THE POSITION OF HERBERT SPENCER.

Although Mr. Fiske in this number of *The Index* corrects the main statement regarding Mr. Spencer's position to which we took exception, the correction, in one respect, seems hardly less open to criticism than the original statement which he qualifies and supplements. This we say reluctantly, and only after full consideration of the subject, because there is no thinker in America whom we have regarded as the equal of Mr. Fiske as an expounder of Mr. Spencer's views.

It is hardly necessary to call attention to the vast difference between the assertion of Mr. Fiske in the *Transcript*, that "the infinite and eternal power is not material, but psychical in its nature," and that of Mr. Spencer, that "the Power manifested throughout the universe distinguished as material is the same power which in ourselves wells up under the form of consciousness," together with the statement that "the necessity we are under, to think of the external energy in terms of the internal energy, gives rather a spiritualistic than a materialistic aspect to the universe"; that at the same time the "phenomenal manifestation of this ultimate energy can in no wise show us what it is." The former statement seems to us a mere theological assumption: the latter statements we regard as profound philosophic truths logically and clearly proven by Mr. Spencer's matchless reasoning.

It is true, according to Mr. Spencer's philosophy, that we must "think of the external energy in terms of the internal energy"; that is, that we must think of matter in terms of mind, and that this necessity "gives rather a spiritualistic aspect to the universe." It is equally true that we must think of mind in terms of matter. There is no necessity (according to Spencer) that we think of the Universal Energy, the Ultimate Reality, as psychical. This great thinker observes that "it continually happens that

propositions which cannot be rendered into thought at all are supposed to be not only thought, but believed. The proposition that Evolution is caused by Mind is one of this nature. The two terms are separately intelligible, but they can be regarded in the relation of effect and cause only so long as no attempt is made to put them together in this relation. . . . If I am asked to frame a notion of mind divested of all those structural traits under which alone I am conscious of mind in myself, I cannot do it. I know nothing of thought save as carried on in ideas originally traceable to the effects wrought by objects on me. . . . If, then, I have to conceive evolution as caused by an 'originating Mind,' I must conceive this Mind as having attributes akin to those of the only mind I know and without which I cannot conceive mind at all. . . . I will ask, What happens if we ascribe to the 'originating Mind' the character absolutely essential to the conception of mind, that it consists of a series of states of consciousness? . . . If, to account for this infinitude of physical changes everywhere going on, 'mind must be conceived as there under the guise of simple dynamics,' then the reply is that, to be so conceived, mind must be divested of all attributes by which it is distinguished; and that, when thus divested of its distinguishing attributes, the conception disappears, the word 'mind' stands for a blank. . . . Clearly, therefore, the proposition that an 'originating Mind' is the cause of evolution is a proposition that can be entertained so long only as no attempt is made to unite in thought its two terms in the alleged relation."—*Essays*, Vol. III., pp. 246-249 (1874).

Just as, by the necessity we are under to think of matter in terms of mind, the material universe is given a spiritualistic aspect, so by the necessity we are under to think of mind in terms of matter gives to mind a materialistic aspect. "We can," says Spencer, "form no notion of a substance of Mind absolutely divested of attributes connoted by the word 'substance,' and all such attributes are abstracted from our experiences of material phenomena. Expel from the conception of Mind every one of those attributes by which we distinguish an external something and an external nothing, and the conception of Mind becomes nothing. . . . We can think of entities that differ from one another and from nonentity only by bringing into our thoughts the remembrances of entities which we distinguish as objective and material. . . . We can think of Matter only in terms of Mind. We can think of Mind only in terms of Matter. When we have pushed our explorations of the first to the uttermost limit, we are referred to the second for a final answer; and, when we have got the final answer of the second, we are referred back to the first for an interpretation of it. We find the value of x in terms of y , then we find the value of y in terms of x , and so on we may continue forever without coming nearer to a solution. The antithesis of subject and object, never to be transcended while consciousness lasts, renders impossible all knowledge of that Ultimate Reality in which subject and object are united."—*Principles of Psychology*, Vol. I., pp. 626, 627.

And so Mr. Fiske argues "that to represent the Deity as intelligent is to surround Deity with an environment, and thus to destroy its infinity and its self-existence" (*Cosmic Philosophy*, Vol. II., p. 395). "In ascribing intelligence to unembodied Spirit, we are either using meaningless jargon, or we are implicitly surrounding unembodied Spirit with an environment of some kind, and are thus declaring it to be both limited and dependent" (p. 396).

Mr. Spencer, in the paragraph following that

copied into *The Index* this week from his great work, *Principles of Psychology*, adds: "Hence, though of the two it seems easier to translate so-called Matter into so-called Spirit than to translate so-called Spirit into so-called Matter (which latter is, indeed, wholly impossible), yet no translation can carry us beyond our symbols. Such vague conceptions as loom before us are illusions conjured up by the wrong connotations of our words. The expression, substance of Mind, if we use it in any other way than as the x of our equation, inevitably betrays us into errors; for we cannot think of substance save in terms that imply material properties. Our only course is constantly to recognize our symbols as symbols only, and to rest content with that duality of them which our constitution necessitates. The Unknowable as manifested to us within the limits of consciousness in the shape of feeling, being no less inscrutable than the Unknowable as manifested beyond the limits of consciousness in other shapes, we approach no nearer to understanding the last by rendering it into the first. The conditioned form under which Being is presented in the Subject cannot, any more than the conditioned form under which Being is presented in the Object, be the Unconditioned Being common to the two."

The passage from Mr. Spencer's *Principles of Psychology* does not, in our opinion, or in the opinion of the author, so far as we can judge from his writings, contain any theistic or spiritualistic implications. He supposes that mind is composed of units of feeling, similar in nature to those we know as nervous shocks, and that these answer to the waves of molecular motion that traverse nerves and nerve centres. Now, units of feeling are the only units of which, strictly speaking, we are or can be cognizant. Whatever be the nature of the units of external force, it must be more easy to conceive them to be of the nature of the units of feeling, the only entities of which we are directly conscious, than to identify them in thought with units which we cannot cognize, and of which conception is therefore impossible. As Mr. Fiske says, we do not "know force, but we know continual modifications of our consciousness, which we are compelled to regard as the manifestations of force." The activities not included in the circumscribed aggregate of activities known as Mind "can be thought of only in terms furnished by this aggregate,"—terms of Mind. Ideas of Matter and Motion are "complex states of consciousness built out of units of feeling."

It is, of course, more easy to conceive what we do not know as resembling what we know than to conceive what we know to be like something that we do not know. To translate units of feeling into units of external force is to "translate" (to quote from Spencer) "the known into the unknown, which is absurd." But there is no proof, no indication, that the units of external force and units of feeling are identical or similar in their nature; nor does Mr. Spencer find anything in these speculations to warrant the inference that the Universal Energy is psychical.

Conceivability is no test of truth here, wherein is involved the inconceivable relation that exists between subjective and objective existence. "Though I have argued," says Spencer, in the August number of the *Popular Science Monthly*, "that in ascribing to the Unknowable Cause of things such human attributes as emotion, will, and intelligence, we are using words which, when thus applied, have no corresponding ideas, yet I have also argued that we are just as much debarred from affirming such attributes; since, as ultimate analysis brings us everywhere to alternative impossibilities of thought, we are shown that, beyond the

phenomenal order of things, our ideas of possible and impossible are irrelevant."

The phrase "Cosmic Theism," which Mr. Fiske uses to define his view of the Unknowable,—of which he affirms neither personality nor intelligence,—belongs to a terminology which has never received the approval of Mr. Spencer, and, as we endeavored to show in an essay published a few years ago, is a kind of Theism which postulates that only which is common to all philosophic thinkers, be they called theists or atheists, who hold to the doctrine of the relativity of knowledge.

B. F. UNDERWOOD.

EDITORIAL NOTES.

BY B. F. U.

THE National Woman Suffrage Association of Massachusetts have issued a circular, which says:—

A woman over twenty-one years of age who has a receipted tax-bill for a tax assessed upon property anywhere within the State for 1883 or 1884, either in her own name or that of her guardian, by presenting this tax-bill herself, in person, to the board of registrars (in cities) or the selectmen (in towns), can have her name put on the voting list as a voter for school committee without paying a poll-tax. A woman not paying any tax on property must apply to the assessors of her town or city on or before September 15, to be assessed a poll-tax of fifty cents. After paying this, she can, by presenting the receipted bill to the registrars (or selectmen), have her name put on the list. By preserving her receipted tax-bill (on property or poll) and presenting it the next year following the date of the bill, she can also have her name registered,—the law allowing women to vote two years on one tax-bill. The last day on which application for assessment can be made is changed from October 1 to September 15.

A few weeks ago, two or three excited partisans among our subscribers discontinued their subscriptions, because, they said, *The Index* was supporting the Democratic party,—a statement that was without truth. About the same time appeared in *The Index* a passage from Robertson, which was, we think, in type for this paper before any of the Presidential candidates was nominated, and certainly was not quoted with special reference to any of them. The passage was as follows:—

Moral decay in the family is the invariable prelude to public corruption. It is a false distinction which we make between public integrity and private honor. The man whom you cannot admit into your family, whose morals are corrupt, cannot be a pure statesman. Whoever studies history will be profoundly convinced that a nation stands or falls with the sanctity of its domestic ties. Rome fell not until she was tainted at the heart. When there was no longer purity upon the hearthstone nor integrity in her senate, then, and not till then, her death-knell was rung.

In a New York political paper, we find the passage reproduced, with the following comment: "This passage from Robertson is used by the Boston Journal in the evident hope to catch the favor of the Broad Churchmen. But it will be noted that it credits its original quotation to *The Index*. This fact is the only one which we need to know. *The Index* is the special organ of the Liberals and free thinkers of the country, and as such is justly the object of the distrust of all moral and conservative citizens. The people of America will not readily believe that a journal which never scruples to speak with wanton profaneness and disrespect of their most holy religion and of the clergy can be inspired by a good motive in quoting such passages as this at this time. Whatever such sheets may echo or invent, militate it for Mr. Blaine or against him, can only prejudice his case with all conscientious men." The reader may form some idea of the "mixed" character of the foregoing extract, and the confused condition of its writer's mind, when we state it is copied from an article in the New York Tribune.

The Index.

BOSTON, SEPTEMBER 4, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, BENJAMIN F. UNDERWOOD, : : : : : } Editors.

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPEES are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index*.

A Study of Primitive Christianity.

BY LEWIS G. JANES.

III.

SOURCES OF INFORMATION.

The Probable Age of the Canonical Gospels.

In regard to the testimony of the early Fathers of the Church, as bearing upon the probable age of the canonical Gospels, Prof. Davidson * asserts that "Papias (150 A.D.) knew nothing, so far as we can learn, of a New Testament canon. . . . He neither felt the want, nor knew the existence, of inspired Gospels. . . . Justin Martyr's canon (150 A.D.), so far as divine authority and inspiration are concerned, was the Old Testament. . . . In his time, none of our Gospels had been canonized, not even the synoptics, if, indeed, he knew them all. Oral tradition was the chief fountain of Christian knowledge." Clement of Rome, the earliest of the Christian writers outside of the New Testament, quotes freely and frequently from the Old Testament and from other writings, probably apocryphal books now lost. His Epistle to the Corinthians, generally recognized as genuine, contains no quotation from the New Testament. It alludes, however, to certain "words of Jesus, our Lord," which are nowhere to be found in our canonical writings, and which must have been derived from lost Gospels or from oral tradition: "Remember the words of Jesus, our Lord, for he said: Woe unto that man. It were good for him if he had not been born, rather than that he should offend one of mine elect. It were better for him that a mill-stone were hanged about him, and he cast into the sea, than that he should pervert one of mine elect."† The superficial verbal resemblance

* *The New Testament Canon*. By Samuel Davidson, D.D., LL.D. See also article in *Encyclopædia Britannica*.

† The Epistle of Clement to the Corinthians may be found entire in the recently published *Christian Literature Primer*, No. I., "The Apostolic Fathers."

of this passage to a familiar New Testament quotation, and also its notable variations therefrom, are evident at a glance. The so-called Clementine Homilies and Recognitions, documents of doubtful date and authorship, contain no New Testament quotations, or passages claimed to be such. The Apostolic Canons and Constitutions, formerly attributed to Clement, are now known to be of much later date, probably as late as the sixth century.

There are several extant versions of epistles ascribed to Ignatius of Antioch, who suffered martyrdom, as alleged, about 116 A.D. They are, however, of doubtful authenticity. The shorter and more probably genuine collection contains a few quotations which bear some resemblance to New Testament passages; but the language is not wholly identical with that of the Gospels, and no claim is made by the author that they are quoted therefrom. The Epistle of Polycarp to the Philipians, generally conceded to be genuine, contains numerous passages which conservative apologists regard as quotations from the canonical Gospels. In every instance, however, there are obvious deviations from the New Testament phraseology. A few instances will enable the reader to compare and judge for himself:—

"Judge not, that ye be not judged; forgive, and it shall be forgiven you; be pitiful, that ye may be pitied; for with the measure that ye mete withal, it shall be measured to you again. . . .

"Not rendering evil for evil, nor railing for railing. . . .

"Blessed are the poor, and they that are persecuted for righteousness' sake; for theirs is the kingdom of God."

These passages, like those contained in the first chapter of the recently published *Teaching of the Twelve Apostles*, present satisfactory evidence of the existence of a very early tradition, in many respects similar to that embodied in our Gospels; but the manifest differences in language, together with the fact that they are nowhere referred to the books of the New Testament, forbid us to receive them as quotations therefrom.

Justin, who suffered martyrdom in the year 167 A.D., evidently knew nothing of our Gospels, though he quotes from certain *Memoirs of the Apostles*, of uncertain authorship and contents. The only genealogy of Jesus which he recognizes is traced through the Virgin Mary, whereas the genealogies of Matthew and Luke are both traced through Joseph. The only writing of the New Testament certainly identified by him is the Apocalypse, which he attributes to "a certain man whose name was John, one of the apostles of Christ, who prophesied by a revelation made to him." Unlike Papias, however, and the earlier Fathers, whose reliance was placed mainly on oral tradition, Justin evidently depends upon writings which he deems authoritative, and which contained much that our Gospels present, in a slightly modified form. His account of the occasion of the alleged birth of Jesus in Bethlehem agrees, in the main, with that of the Third Gospel, and ignores the totally irreconcilable tradition of the First Gospel. It differs from Luke, however, in representing Jesus to have been born in "a cave near the village," instead of in a manger near the inn in Bethlehem. This tradition is also preserved in some of the Apocryphal Gospels, but in none of those declared canonical. A comparison of many parallel passages from the writings of Justin and our Gospels, made by the author of *Supernatural Religion*, demonstrates that Justin's version is almost always the terser and more abbreviated, which indicates that he drew probably from a more primitive tradition than that of the canon-

cal Gospels.* In the writings of Hegisippus, a contemporary of Justin, there are a few similar verbal resemblances to the language of the New Testament. In no instance, however, is there absolute identity of expression.

Papias, bishop of Hieropolis, in Phrygia, during the first half of the second century, who died about 167 A.D., and who wrote, probably, about the middle of the century, was the first to mention a tradition that Mark and Matthew composed accounts of the life and teachings of Jesus. We have already quoted the opinion of Dr. Davidson that he knew nothing of inspired Gospels or of a New Testament canon. It is evident also, from his descriptions, that he could not have known our First and Second Gospels as at present constituted. The writing of Mark, as described by him, was an Ebionitic document, more like the pseudo-Clementine Homilies than like our Gospel; and that of Matthew he asserts to have been written in Aramaic, whereas the original of our First Gospel was undoubtedly written in Greek. The writing known to Papias was probably the *Logia*, or record of the teachings of Jesus, ascribed to Matthew, or some similar primitive document which may have served as the basis, in part, of our First Gospel. Papias placed little reliance on these writings, whatever they may have been. "I held," he says, "that what was to be derived from books did not profit me as that from the living and abiding voice."

The limits of this discussion forbid a detailed examination of all the passages which throw light upon the questions of the age and authenticity of the canonical Gospels. The author of *Supernatural Religion*, whose treatment of this subject is most thorough and exhaustive, and whose facts have never been successfully impugned, has placed side by side, in the original Greek, all the excerpts from the writings of the Fathers supposed to bear upon this question, with the corresponding New Testament passages. We may safely adopt, as our own, his conclusions: "After having exhausted the literature and testimony bearing on the point, we have not found a single distinct trace of any one of those Gospels during the first century and a half after the birth of Jesus. Only once during the whole of that period do we find any tradition even that any one of our Evangelists composed any gospel at all, and that tradition, so far from favoring our synoptics, is fatal to the claims of the First and the Second. . . . There is no other reference during the period to any writing of Matthew or Mark, and no mention at all of any writing ascribed to Luke. . . . Any argument for the mere existence of our synoptics, based upon their supposed rejection by heretical readers or sects, has the inevitable disadvantage that the very testimony which would show their existence would oppose their authenticity. There is no evidence of their use, however, by heretical leaders, and no direct reference to them by any writer, heretical or orthodox."

The Earliest References to the Four Gospels.

Irenæus, bishop of Lyons in Gaul from 178 to 200 A.D., was the real founder of the Christian canon. He was the first to use our four Gospels exclusively. He also accepted the Acts of the Apostles, thirteen Epistles of Paul (rejecting Hebrews), the first Epistle of John, and the Apocalypse. Some of the remaining books of the New Testament he published in an appendix as of less authority, and some he ignored entirely.

*Dr. Ezra Abbot argues learnedly that our Gospels, and especially the Fourth, were known to Justin Martyr. His arguments, however, do not appear conclusive. The numerous alleged resemblances to the Fourth Gospel in Justin's writings are more reasonably accounted for on the supposition of his acquaintance with the writings of Philo.

Irenæus thus explains why he accepted the four Gospels and no others:—

"It is not possible that the Gospels can be either more or fewer in number than they are. For, since there are four quarters of the earth in which we live and four universal winds, while the Church is scattered throughout all the world, and the 'pillar and ground' of the Church is the gospel and the spirit of life, it is fitting that she should have four pillars breathing out immortality on every side and vivifying men afresh. . . . Therefore, the Gospels are in accord with these things. . . . For the living creatures are quadriform, and the gospel is quadriform. . . . These things being so, all who destroy the form of the gospel are vain, unlearned, and audacious,—those, I mean, who represent the aspects of the gospel as being either more in number than as aforesaid, or, on the other hand, fewer." The argument is certainly a remarkable, if not a convincing, one!

The Canon of Muratori, of uncertain date, but believed by conservative scholars to have been contemporary with the writings of Irenæus, also recognizes the four Gospels, and no others. Clement of Alexandria, Tertullian, and the Christian writers of the third century generally did likewise, though they differed greatly among themselves as to the authenticity of other books afterward pronounced canonical. The four Gospels are also found in the ancient Syriac version of the New Testament, known as the Peshito, which Dr. Ezra Abbot* assigns to the latter part of the second century; and they were probably current in North Africa about this time, as is evidenced by their existence in the old Latin version. The genuineness of the Fourth Gospel, however, was still denied by a considerable section of the Christian Church, who are mentioned, and of course condemned, by Irenæus and other writers for their heresy. Epiphanius calls them, in contempt, *'Αλογοι*,—a term which has the double meaning of "deniers of the Logos" and "men without reason."

The rational conclusion upon the whole matter appears to be that the four canonical Gospels became generally recognized as exclusively authoritative in orthodox circles during the last quarter of the second century. Though we have no positive evidence of their existence before this time, it is reasonable to presume that they were compiled, and existed pretty nearly in their present shape, some years previous to their general acceptance, having originally been used by different and widely separated communities, and, therefore, on account of their local use and origin, not being generally known. At the same time, there were other Gospels, some of them of earlier origin, which were similarly regarded as authoritative by certain sections of the Church, though neither these nor our canonical Gospels were at first looked upon as sacred or inspired writings like the Old Testament, or even as of equal value with oral tradition. None of them probably existed during the lifetime of any of the Apostles, nor can be traced with certainty to their personal influence or inspiration.

From the general consent of the tradition preserved in the first three Gospels, and its agreement, in the main, with the information transmitted to us from other sources, such as the primitive Gospel of the Hebrews and the *Teaching of the Twelve Apostles*, we may conclude that the main features of the picture of the life and teachings of Jesus which they present to us, when freed from its evident mythical accretions, may be

*Dr. Abbot quotes approvingly from Norton's *Genuineness of the Gospels* the opinion that at least sixty thousand copies of our Gospels were extant during the last quarter of the second century; but, since not a single copy of this period has descended to us, we may safely regard the opinion as baseless and extravagant.

accepted as historically trustworthy. The numerous though minor differences in the synoptical narratives which forbid the conception of collusion between their authors, and the consequent rational probability that they originated in diverse localities, and reported a generally prevalent and universally accepted tradition, renders them in the main reliable, though anonymous, witnesses. Yet we must admit, in all candor, with a recent able writer,* that we cannot affirm, with absolute certainty, of any single word attributed to Jesus that he spoke it exactly as recorded. With the author of *The Cradle of the Christ*, we may recognize the fact that the features of the historical Jesus have been so obscured by legendary accretions, which enter into the popular evangelical conception of the ideal Christ, that it is a problem for the nicest and most accurate critical analysis to separate the one from the other, and thereby reveal the truth of history. Fortunately, however, the accurate scholarship of the present generation has furnished us with a rational clew to the legendary labyrinth of the Gospels.

The Testimony of Josephus and the Pagan Historians.

Of contemporaneous references to Jesus, as has been remarked, there exists not a single one. Josephus, the Jewish historian, writing at about the close of the first century, possibly alludes to him in a passage where he is reported as referring to "James, the brother of Jesus, the so-called Christ." The longer passage, written in the tone of a Christian believer, in strong contrast with every other portion of the writings of Josephus, is now admitted by all candid critics, whether of the orthodox or the liberal faith, to be an interpolation. Josephus, however, gives us an interesting account of the character, preaching, and death of John the Baptist in passages of unquestioned authenticity, tending to confirm the impressions of that remarkable man obtained from the glimpses of him afforded by the gospel narratives, and thus, indirectly, to confirm the general truth of the Christian tradition.

The earliest references to Jesus in the writings of the Roman historians date from the early part of the second century, and are exceedingly brief and unsatisfactory, tending only to confirm the facts of his existence and of his tragical death. Suetonius alludes to him as "one Chrestus, a Jew, who stirred up tumults in Rome" at the time of the Emperor Claudius. A longer passage from Tacitus,† of doubtful authenticity, but generally accepted as genuine by Christian historians, adds but little to our information, and is valuable only as confirmation of the general belief of the period in the existence of Jesus as an historical personage. The younger Pliny, about 104 A.D., writes from Bythinia, of which province he was the Roman governor, an interesting account of the Christians who resided in that neighborhood, but adds nothing to our knowledge of the life and work of Jesus.‡

We must turn then to the Synoptical Gospels as our only reliable source of information concerning the religion of Jesus. We may recognize the probability that the author of the Fourth Gospel built up his doctrinal system around an extant local tradition of the life of Jesus, differing in some respects from that of the synoptics, and in others confirming the testimony of the first three Gospels. The additional features, however, which

*Rev. John W. Chadwick, in *The Bible of To-day*.

†Tacitus speaks of the Jews as a people "without religion," and regards Christianity as *extitabilis superstitio*,—"a miserable superstition." He says that Jesus was "executed, in the reign of Tiberias, by the procurator, Pontius Pilate," thus confirming the gospel narrative.

‡He speaks of Christianity as *prava et immodica superstitio*.

constitute the main part of this Gospel, for reasons already given, we cannot regard as trustworthy. To the Epistles of Paul, we may go for a history of the remarkable development of doctrine and expansion of the universalizing tendencies in the new religion which occurred under his leadership and inspiration, to the Apostolic Fathers for the succeeding phase of the growing faith, and to the Christian writers, the Gnostics, and the contemporary pagan historians and scholars of later periods, for its subsequent development.

The Relative Age and Tendencies of the Canonical Gospels.

Concerning the relative age, purport, and reliability of the Gospels, widely different views have prevailed in the past, and still prevail, among Biblical scholars. The most rational conclusion appears to be that which regards Mark, our Second Gospel, as the earliest in composition, Matthew the second, and, but little later in time, Luke the third, and John, or the Fourth Gospel, the last in the order of time. Those critics who consider that the exaltation of the personality of Jesus, and the more frequent use of the term, "the Son of God," in Mark, indicate a later development of Christology, would place Matthew before Mark in chronological order, as does Keim.* Those who regard Luke as merely an expansion of Marcion's Gospel would place the Third Gospel before either Mark or Matthew. This view is adopted by Waite, Keeler, and other recent liberal writers. The arguments in favor of the priority of Mark, presented by Dr. E. A. Abbott, the writer of the article on the Gospels in the *Encyclopædia Britannica*, by Renan, and other able and competent critics, appear to me, however, to be conclusive and unanswerable. Dr. Abbott regards this view as the most satisfactorily demonstrated proposition in New Testament controversy.

The principal reasons for accepting the priority of Mark may thus be briefly stated:—

1. Its style is more crude and primitive than that of either of the other canonical Gospels. Its Greek is more corrupt. It reports certain of the sayings of Jesus in the original Aramaic in which they were spoken. It was written probably by a Jewish Christian, of no great pretensions to scholarship, but familiar with both the Greek and the Aramaic languages.

2. It is the shortest and least systematic in its arrangement of all the biographies of Jesus. It contains only twenty-four verses not also found in Matthew and Luke. This would naturally be the fact, if the last-named Gospels were written later, using either Mark, or the material from which Mark was compiled, as a basis. The later writers would naturally use much of the material of the earlier, adding to it such facts or modifications of these original statements as they should deem important.

3. Luke and Mark contain matter in common which is not found in Matthew; Matthew and Mark also contain matter in common not found in Luke; but Matthew and Luke contain no matter in common which is not also found in a slightly modified form in Mark. This condition of affairs is hardly explainable upon any theory save that of the priority of Mark.

4. The supernatural element is less developed in Mark than in either of the other Gospels. The stories of the miraculous birth are wholly wanting, and also the story of the resurrection and ascension; the final verses of the concluding chapter not being found in the earliest manuscripts, and being, doubtless, a later addition by a different author.

* *The History of Jesus of Nazareth*, by Prof. Theodor Keim,—one of the most valuable and interesting historical studies of the New Testament period.

5. The term "Son of God," as applied to Jesus in the Second Gospel, is not, as some assume, an evidence of developed Christology, but the contrary. It was the common designation of the members of the "kingdom of God," the regenerate Jewish state. It is used in this natural sense in the Fourth Gospel, in some of the Epistles, and in early Hebrew writings.* "The genesis of Jesus as Son of God," says Prof. Allen, "precedes his genesis as the Messiah of the Jews."†

The Gospels are all what are known to scholars as "tendency writings"; that is to say, they have each some ulterior motive and object beyond that of making a clear and succinct statement of historical truth. Thus, the writer of Mark aims, above all, to exalt and magnify the human personality of Jesus. The tradition which refers its authorship to a personal follower of the Apostle Peter is significant and not improbable. Its character is such as we would naturally anticipate, if inspired by contact with one who had seen and known the Master.

The writer of the First Gospel (Matthew) aims to present Jesus in the character of the Messiah of the Jews, fulfilling the alleged Messianic prophecies of the Old Testament. Its style of composition is less natural and more mechanical than that of Mark. It presents distinct evidences of manufacture, and the free use of older documents which are apparently wrought into its structure with little alteration. Some of them even embody contradictory traditions, as the genealogy of Jesus, which names Joseph as his father, and the inconsistent birth-story of the early chapters. The short sentences and aphorisms scattered through the Second and Third Gospels are collected into the "Sermon on the Mount," in Matthew. The story of the birth of Jesus and the reports of his public career are arranged with special reference to the fulfilment of Messianic prophecies.

The author of the Third Gospel presents Jesus as the Saviour of both Jews and Gentiles, emphasizing his relation toward the latter. He traces the genealogy of Jesus not only to Abraham, the father of the Hebrews, as in Matthew, but back of him to Adam, the father of the human race. He also relates the story of the healing of the Syro-Phœnician woman and the parable of the good Samaritan, illustrative of the universal or Pauline tendency of this Gospel. He makes Jesus send out not only the twelve apostles to the twelve tribes of Israel, as in Mark and in Matthew, but also seventy others, to every nation of the earth. The style of the Third Gospel is more finished and elegant, and its contents are more orderly in their arrangement than either the First or the Second.

The writer of the Fourth Gospel presents Jesus as the eternally existent, incarnate Logos, the maker of the world, and its supernatural redeemer. To this end, he omits the birth-stories as unnecessary to his purpose, and completely subordinates historical accuracy. A ghostly apparition, exalting his own spiritual office and supernatural power, and placing supreme emphasis on dogmatic statements of truth, takes the place of the living man, calling his fellow-men to salvation through righteousness.

In their quotations from the Old Testament, the gospel writers most frequently make use of the Septuagint version, as would be natural in a Greek writing. Mark and Matthew, however, sometimes vary from the renderings of the Septuagint, making, apparently, a direct translation from some extant Aramaic version of the Scriptures, either

* Notably, in the writings of Philo, of earlier date than any of the New Testament literature.

† *Christian History*, by Joseph Henry Allen, Professor in Cornell University, late lecturer in the Harvard Divinity School.

oral or written. Mark's renderings of Scriptural passages are freer and less literal than those of Matthew.

Bearing in mind the nature of these, our only sources of information concerning the life and teachings of the Nazarene Prophet, we will attempt hereafter to draw therefrom a just and true conception of his work, his doctrine, and his personality. If, haply, beneath the legendary accretions of an unscientific age and an uncritical people, through the false lights of a tendency literature, the composition of which was instigated by other aims than that of historical accuracy, we shall nevertheless be able to discover the features of a man in all respects like unto such as we are, but with a soul on fire with a righteous and unselfish purpose to elevate and save his fellow-men,—then, in the satisfaction and encouragement of this discovery, we need not repine at the vanishing of a god.

CORRESPONDENCE.

WHY ARE MEN AFRAID OF WOMAN SUFFRAGE?

Editors of The Index:—

Mrs. Stanton tells us that the woman suffrage movement, having arrived at the point of seeming success, is met with an objection which is alike in America, England, and France; and she substantially admits that the objection is well founded. This opposition is exactly what was to be expected the moment the question came to be a practical one, and not merely a theoretical or sentimental one. Probably the men who advocate woman suffrage do it because they believe that women have precisely the same rights that men have. But, when it comes to facing the actual voting of women, the instincts of the men tell them, even if they have never reasoned it out, that the government by majority is only one form of the government of force, and is not one of the rights of MAN, in which all share alike, but "has its root in man's love of authority." No matter what they may say, men who think (or merely feel) know that our government is no more based on the consent of the governed than is that of the Czar of Russia. The majority govern, because they have the power and know of no better way of preserving social order; and the minority submit, because they, too, know no better way, and are the minority.

Men know, if women do not, that the vote does not lessen "bigotry and superstition" in men, and would not do so in the case of women. The freedom of men from bigotry and superstition has not been gained by taking part in Church and State or by the teaching of Church or State, which, as organizations, are the right and left hand of oppression, but in direct opposition to both.

What both men and women need is to be taught to discover the eternal and immutable laws of the universe, not to attempt the futile task of making laws which require to be tinkered and unmade every year. If women would study those living laws which carry their own enforcement and do not need to be backed by constables and votes, and would teach them to their husbands and children, political governments would soon become extinct, and a true society would have room to grow; and the only government would be the self-government of every individual with his own consent.

If the noble, devoted, and persevering women suffragists will take this work in hand, all the good which the most ardent of them vainly hope to gain by restrictive legislation will be realized; and perhaps, so rapidly do things move nowadays, much sooner than we may think. At any rate, this is the first step, and one which no power can prevent, if the women will to take it. There is no permission required from men. No change in laws or customs needs to be made. This is the highest work a woman can do. Why should she try to emulate the tyranny of man and do wrong because he does, when she has the field clear before her to do right, and so help him out of his wrong? Choose ye!

F. S. C.

THE SOLIDS AS SUMS OF DYNAMIC ENTITIES.*

[ACCORDING TO FARADAY.]

The vulgar and prevailing opinion, says this famous scholar, in regard to the composition of matter from atoms, evidently considers the atom as something material, endowed with certain forces, by means of which it joins with others in groups, thus forming the various substances with their various properties. Since pressure and cold contract the solids into a smaller space, and heat and escape from pressure expand them, transform them into their liquid and gaseous state, where the atoms are united so loosely that they can move about each other freely, it is generally suggested that these atoms do not touch each other, but have a space between them which is smaller in solid bodies, but considerably larger in those of a liquid and specially of a gaseous state. Hence, as the atoms are thus in a greater or lesser distance from one another, in each body this space is the uninterrupted part pervading the whole bulk like a net. Then space alone is coherent, and by it the atoms are isolated from each other, as the grains of sand in the mortar are isolated by the lime.

Taking now a solid that is not conducting electricity,—for example, a piece of rosin,—we must consider the space within it as non-conductive; for, if the space which percolates the rosin coherently could conduct electricity, the rosin could not be non-conductor. Again, let us take a conductor, say copper. Also, in metals, space is the coherent part, as in all bodies; consequently, copper were likewise to be non-conductor, since, as we have learned from the rosin, space is non-conductive. Notwithstanding, the metals do conduct electricity. Hence, the space in the rosin would have to be non-conductor, and in the metals conductor! Kalium (potassium) and natrium are as well conductors as the other metals. One atom of potassium forms with one atom of oxygen potash; one atom of potash plus one atom of water, which consists of two atoms of oxygen and hydrogen, forms one atom of hydrate of kali, whence one atom of hydrate of kali contains four elementary atoms. The specific gravity of kalium is 0.865, its atomic gravity 40; the specific gravity of molten hydrate of kali almost equals 2, its atomic gravity 57. From this can be seen that a piece of kalium contains less kalium than an equally large piece of potash which is composed of the former and oxygen. If we combine kalium or potassium with oxygen, atom by atom, and then these two with hydrogen and oxygen in a double number of atoms, the substance will, in spite of all these additions, become less and less, until it possesses not quite two-thirds of the original bulk. If a given quantity of potassium contains 45 atoms, the same quantity of the hydrate of kali contains almost 70 atoms of the metal potassium, and, besides this, 210 atoms of hydrogen and oxygen. Ergo, according to the common atomic doctrine, the atoms of potassium would have to be in a considerable distance from each other,—there would be more space than matter in the body. As potassium is a good conductor, also the space in the same must be conductive; but why is this same space in non-conductors—as sulphur, rosin-lac, which according to the theory are also filled by space—non-conductive? This contemplation contributes to the argument that there is no space as a thing self-existent in the bodies; that, moreover, *all what we call bodies, matter, etc., is in its very essence nothing else but the manifestation of a plurality of dynamic entities, and space nothing else but the result of the interaction of the forces which these entities exert to certain distances.* Matter, therefore, consists not of solid particles and intermediate space; but there is no empty space within matter, as the atoms, which are but sums of activities, touch and penetrate each other. The centres of these atoms lie in different distances, the latter being in proportion to the greater or lesser density—from the solid to the liquid and gaseous state—of the bodies. It is the properties of the atoms which we perceive within and at the bodies, and from their nature depends the electric conductiveness or non-conductiveness of the bodies.

Space in itself is as little perceptible as light in itself, as electricity, heat, gravity in themselves. Gravity itself would never drive a mill, but the water, which, besides the power of being heavy, possesses

* From the German of M. Drossbach, translated for *The Index* by F. W. Opp.

the faculty of occupying a certain space, of acting chemically, of refracting the light, etc.; nor can space in itself conduct electricity, etc. We could in the same manner urge that space exists not, unless combined with the other properties (forces), as we must deny the absolute existence of gravity outside of the combination with the other forces. Spacialness can be as little separated from matter as the remnant of its activities. No space can only be occupied by a thing which has no activities; but a thing without activities is a no-thing.

A PASSAGE FROM SPENCER'S "PRINCIPLES OF PSYCHOLOGY."*

"Mind, as known to the possessor of it, is a circumscribed aggregate of activities; and the cohesion of these activities, one with another, throughout the aggregate, compels the postulation of a something of which they are the activities. But the same experiences which make him aware of this coherent aggregate of mental activities, simultaneously make him aware of activities that are not included in it,—outlying activities which become known by their effects on this aggregate, but which are experimentally proved to be not coherent with it, and to be coherent with one another.† As, by the definition of them, these external activities cannot be brought within the aggregate of activities distinguished as those of Mind, they must forever remain to him nothing more than the unknown correlatives of their effects on this aggregate, and can be thought of only in terms furnished by this aggregate. Hence, if he regards his conceptions of these activities lying beyond Mind as constituting knowledge of them, he is deluding himself: he is but representing these activities in terms of Mind, and can never do otherwise. Eventually, he is obliged to admit that his ideas of Matter and Motion, merely symbolic of unknowable realities, are complex states of consciousness built out of units of feeling. But, if, after admitting this, he persists in asking whether units of feeling are of the same nature as the units of force distinguished as external, or whether the units of force distinguished as external are of the same nature as units of feeling, then the reply, still substantially the same, is that we may go farther toward conceiving units of external force to be identified with units of feeling than we can toward conceiving units of feeling to be identified with units of external force. Clearly, if units of external force are regarded as absolutely unknown and unknowable, then to translate units of feeling into them is to translate the known into the unknown, which is absurd. And, if they are what they are supposed to be by those who identify them with their symbols, then the difficulty of translating units of feeling into them is insurmountable. If Force, as it objectively exists, is absolutely alien in nature from that which exists subjectively as feeling, then the transformation of Force into Feeling is unthinkable. Either way, therefore, it is impossible to interpret inner existence in terms of outer existence. But, if, on the other hand, units of Force, as they exist objectively, are essentially the same in nature with those manifested subjectively as units of Feeling, then a conceivable hypothesis remains open. Every element of that aggregate of activities constituting a consciousness is known as belonging to consciousness only by its cohesion with the rest. Beyond the limits of this coherent aggregate of activities exist activities quite independent of it, and which cannot be brought into it. We may imagine, then, that by their exclusion from the circumscribed activities constituting consciousness, these outer activities, though of the same intrinsic nature, become antithetically opposed in aspect. Being disconnected from consciousness or cut off by its limits, they are thereby rendered foreign to it. Not being incorporated with its activities, or linked with these as they are with one another, consciousness cannot, as it were, run through them; and so they come to be figured as unconscious,—are symbolized as having the nature called material as opposed to that called spiritual. While, however, it thus seems an imaginable possibility that units of external Force may be identical in nature with units of the force known as Feeling, yet we cannot by so representing them get any nearer to a comprehension of external Force. For, . . . supposing all forms of

* Referred to in Mr. Fiske's article in *The Index* this week.

† See, in this connection, *First Principles*, pp. 143-156.

Mind to be composed of homogeneous units of feeling variously aggregated, the resolution of them into such units leaves us as unable as before to think of the substance of Mind as it exists in such units; and thus, even could we really figure to ourselves all units of external Force as being essentially like units of the force known as Feeling, and as so constituting a universal sentience, we should be as far as ever from forming a conception of that which is universally sentient." (Vol. I., pp. 159-161.)

An interesting collection of the originals of Prang's publications, to be opened at the exhibition of the Massachusetts Charitable Mechanics' Association, which will begin in this city September 10, will contain pictures by Thomas Moran, Murphy, Miss Bridges, F. S. Church, J. W. Champney, Jean Robie, and many others, with their reproductions. Another collection will show the development of chromo-lithography in this country, and will consist of a comparative exhibit of works issued by Prang & Co., from the very first colored plate published up to date, and will comprise a complete set of Prize Cards. Studies from artists by Mrs. E. T. Fisher, Murphy, and others, will be shown; and not the least interesting exhibit will be that of a picture in every stage of reproduction by lithography. The Satin Prints, from original works by leading artists, will include a copy of F. S. Church's "Lion in Love."

EVERY subscriber who is in arrears for *The Index* is requested to send the amount due to this office with the least possible delay. We are in especial need of money during these summer months to meet current expenses,—which we shall be abundantly able to do, if our friends will promptly remit the sums they owe us on their subscriptions.

JAMES KAY APPLEBEE

is open to accept engagements for the delivery of SUNDAY EVENING LECTURES at towns within reach of Boston by Sunday afternoon trains. For terms and subjects, address JAMES KAY APPLEBEE, Boston, Mass.

MRS. EMILY J. F. NEWHALL'S

School for Girls and Young Ladies will reopen Oct. 1, 1884.

As heretofore, its management will be conducted upon the basis of EDUCATION rather than INSTRUCTION. The proper use of English will be made an especial feature of the daily work. Under the direction of John Storor Cobb, LL.D., from London University, this branch will comprise a thorough study of the English language, as well as Latin and mathematics. The illustrated lectures upon the great tone-masters, the use of the lantern, and attendance at the Art Museum, will be continued. For catalogue, address No. 91 Newbury Street, Boston; or apply between 11 and 1, after September 15.

THE FLORAL WORLD.

A SUPERB, ILLUSTRATED \$1.00 MONTHLY WILL BE SENT ON TRIAL

FREE ONE YEAR!

To all who will enclose this ad. to us NOW with 12 2c. stamps to prepay postage. The *Indiana Farmer* says: "Contents interesting and to flower lovers well worth the price,—\$1.00 per year." Sworn subscription list over 12,000 in every State and Territory, Canada, Great Britain, South America, Africa, India, and Australia.

Mrs. R. A. Houk, Bingen, Ind., says: "It is the best floral paper I ever saw." Mrs. J. W. Fay, Big Beaver, Mich.: "It is magnificent!" Mrs. R. G. Stambach, Perth Amboy, N.J.: "Have never seen anything half so good." Mrs. J. L. Shankin, Seneca City, S.C.: "It is just splendid."

ADDRESS

The Floral World Highland Park, Lake Co., Ill.

BELVIDERE SEMINARY.

The plan of an Industrial School which was sent by the Misses Bush, of Belvidere Seminary, New Jersey, to the widow of Wendell Phillips, has received her approval and permission to name the institution, when established, the Wendell Phillips Memorial Industrial School.

The plan has also been highly commended by some of the most eminent educators in this country, and active measures are being taken to insure its success.

Its originators respectfully solicit such aid and influence in behalf of their enterprise as the friends of Wendell Phillips may be pleased to offer. They will confer personally or by letter with any one interested in their plan, and will very gratefully receive donations, in large or small amounts, of money, books, stationery, pictures, chemical and philosophical apparatus, or charts and specimens needed in the study of the Natural Sciences. All parties responding in any way substantially to this call will be considered founders of the institution.

Belvidere, Warren County, N.J.

POPULAR BOOKS

Sent by Mail Postpaid at

PUBLISHERS' PRICES.

ANY BOOK in the subjoined List, or any other OBTAINABLE BOOK, that may be desired, will be forwarded as promptly as possible, on receipt of orders accompanied with the cash.

SPECIAL RATES will be made with persons or libraries desiring any large number of books.

Orders are respectfully solicited from all friends of THE INDEX.

Fast Potato Digging

SENT ON 60 Days' Test Trial.

Write postal card for FREE elegantly illustrated Catalogue, in Six Brilliant Colors, that cost us \$2000 to publish.

206 State St.,
Monarch Manufacturing Co., CHICAGO, ILL.

BY ALL ODDS THE BEST EQUIPPED RAILROAD IN THE WORLD

Let it be forever remembered that the
**Chicago & North-Western
RAILWAY**

is the best and shortest route to and from
Chicago and Council Bluffs (Omaha), and
that it is preferred by all well-posted trav-
ellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short
line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison,
Fort Howard (Green Bay), Wis., Winona,
Owatonna, Mankato, Minn., Cedar Rapids,
Des Moines, Webster City, Algona, Clinton,
Marshalltown, Iowa, Freeport, Elgin, Rock-
ford, Ill., are among its eight hundred local
stations on its lines.

Among a few of the numerous points of
superiority enjoyed by the patrons of this
road are its **Day Coaches**, which are the
finest that human art and ingenuity can
create; its **Palatial Sleeping Cars**,
which are models of comfort and elegance;
its **Palace Drawing Room Cars**,
which are unsurpassed by any; and its
widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other
road anywhere. In short, it is asserted that
it is the best equipped road in the
world.

All points of interest North, North-west,
and West of Chicago, business centres,
summer resorts, and noted hunting and
fishing grounds, are accessible by the vari-
ous branches of this road.

It owns and controls over five thousand
miles of road, and has over four hundred
passenger conductors constantly caring for
its millions of patrons.

Ask your ticket agent for tickets via this
route, and take none other. All leading
ticket agents sell them. It costs no more to
travel on this route that gives first-class ac-
commodations than it does to go by the
poorly equipped roads.

For maps, descriptive circulars, and sum-
mer resort papers, or other information not
obtainable at your local ticket office, write to the

GEN'L PASS. AGENT, C. & N-W. RY
CHICAGO, ILL.

THE PATRONAGE of the liberal ad-
vertising public is respectfully solicited for
THE INDEX. Though the paper must not be
held responsible for any statements made
by advertisers, the attempt will be honestly
made to keep the advertising pages in en-
tire harmony with its general character and
principles. To this end, all improper or
"blind" advertisements, all quack ad-
vertisements, and all advertisements believed
to be fraudulent or unjust to any one, will
be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 insertions, . . . 10c. per line.
" 13 " 25 " . . . 8c. " "
" 26 " 51 " . . . 6c. " "
" 52 " " " . . . 5c. " "

On half-column advertisements, a discount
of 10 per cent. will be made; on full-column
advertisements, a discount of 25 per cent.
On all advertisements for which cash is
paid in advance, a further discount of 25 per
cent. on the total, as above calculated, will
be made.

\$500 CASH, FREE!

We offer the above amount of money and **THIRTY-FIVE GOLD WATCHES**, Free to
the first 148 persons answering the following Bible question: **Where is the word God-
mother found in the Bible?** Mention the Book, Chapter and Verse.

The first person answering this question correctly, on or before October 15th, will receive \$75 cash.
If we receive more than one correct answer, the second will receive \$70; the third, \$65; the fourth, \$60;
the fifth, \$55; the sixth, \$50; the seventh, \$45; the eighth, \$40; the ninth, \$35; the tenth, \$30; the eleventh, \$25; the twelfth, \$20;

A DESPATCH states that, at a conference in Edinburgh with ministers of the Free Church of Scotland, Mr. Gladstone promised them that, if a distinct majority of the Scotch members returned to the House of Commons at the next election were pledged to disestablish the Church of Scotland, the government would carry out the popular will.

A MONTREAL friend writes: "The meeting of the British Association just closed has been one of extraordinary interest. Prof. Felix Adler gave a free lecture last Sunday in Queen's Hall, completely filling it. His subject was the 'Ethical Movement.' He had carefully prepared himself, and made a good impression. A number of our British visitors were present."

On the 6th inst. there was an immense demonstration at Glasgow in favor of the Franchise Bill. Fully seventy thousand persons were in the procession, which was ten miles in length. Numerous banners were displayed, bearing legends attacking the House of Lords or caricatures of Lord Randolph Churchill and other conservative members. Large Liberal demonstrations occurred also at Carlisle and Swansea on the same day.

DR. J. J. WOODWARD, whose death occurred recently, was the leading spirit of the Army Medical Museum, and author of the *Scientific Medical History of the War*. His scientific labors, especially his microscopical investigations, are highly valued among scientific men. He was a brother of the well-known writer, Auber Forestier, whose distinction has been won in another field of thought, and whose name, by her recent contributions to *The Index*, has become very familiar to all our readers.

The Longwood Society of Progressive Friends

in Chester County, Penn., have been in the habit of holding one meeting in each month on the fourth Sunday. During July and August of this year, however, they have been addressed every Sunday by Mr. Frederic A. Hinckley, of Providence; and now, in addition to their usual work and his, an arrangement has been completed by which Mr. Hinckley will speak for them during June, July, August, and September of next year. The Free Religious Society of Providence will open its meetings for the season with the first Sunday in October, and close them with the last Sunday in May.

THE fear of lightning is intense and wide-spread, and nobody ever wishes or thinks of a stroke as a remedy against disease. Yet the papers state that, at Port Jervis, N.Y., during a terrible thunder-storm, a man who was regarded by his physicians, as well as by those who knew him generally, as a hopeless paralytic, was rendered unconscious by a stroke of lightning, and afterward came to himself to find that he was entirely free from paralysis. The account says that "he regained the use of his limbs, and is able to walk and talk as usual. His natural appetite has also returned; and he now eats his meals, and says he enjoys them." If one could learn how to be struck by lightning so as to be benefited by it as this Port Jervis man was, instead of being blasted by the stroke, the dread it excites might, among invalids, give way to a desire to have it administered in proper doses. Until this knowledge is acquired, however, lightning is not likely to take a place among the popular "curatives," although of some of the latter it may fairly be said, as of lightning, the chance of being killed by them is greater than that of being cured.

THE following paragraph from an article in the *Springfield Republican* on "Sunday Excursion Riots" is worthy of consideration: "The Sunday excursion on the waters is a principal feature of the summer in the large sea-side cities of our Northern coasts, and in many respects it is a good one; for, to the working people who are its common patrons, it affords that change of scene and that refreshment of air which give them rest and zest for work. It must be recognized that the weight of constant work in the crowded cities cannot be thrown off by church-going in the same cities, and that it may be valuable and praiseworthy for hard-pushed laborers to take a sail down the bays and among the islands to music and with social cheer. But it is certain that such excursions need regulating in a way that has not yet been attempted. There should be no bars allowed on these occasions, in the first place; and there should be an adequate police protection. A dozen policemen, or perhaps even less, would have been enough when the row began, in either case cited, to have quelled it and kept peace. This is the practical consideration. In general, such occurrences tell us how every city is built upon a foundation of criminal elements, whose presence cannot be disregarded and is a constant menace."

SAYS the *Boston Herald*, referring to Mrs. Stanton's article in last number of the *North American*

Review: "Mrs. Stanton's argument in favor of easier divorces has occasioned a good deal of discussion. 'Liberal divorce laws for oppressed wives,' she declares, 'are what Canada was for Southern slaves.' 'No words,' she adds, 'can describe the infinite outrages to which women are subject in compulsory relations for which the law gives no redress.' And she holds that a contract, which may be so easily and lightly entered into, should not be so disproportionately difficult to annul. 'A legal marriage,' says Mrs. Stanton, 'in most of the States, may be contracted between a boy of fourteen and a girl of twelve without the consent of parents or guardians, without publication of banns, without witnesses, without even the signature of the parties, the presence of a priest or of any officer of the State.' The *New York Sun* remarks that this may not be a good argument in favor of easy divorce; but it does suggest that the marriage laws need reforming, and that 'agitation for the mending of the divorce laws should rightly be accompanied, if not preceded, by efforts for the improvement of the marriage laws.' Perhaps, if the legal unions were compelled to be more deliberate, formal, and public, there would be less call for easy separation. A system of easy marriage and hard divorce is certain to lead to much misery."

THE *Western Watchman*, in reply to an allusion of the *St. Louis Christian Evangelist* to the "pagan" ceremony of kissing the bishop's ring, as described in the press reports of the enthronement of Archbishop Ryan at Philadelphia, says of Protestants: "They are notorious kissers. They kiss anything in the heaven above, in the earth beneath, and in the waters under the earth that wears petticoats. They are shocked at seeing Catholics kissing the hand of a successor of the apostles, but they think it right and proper to kiss a fair woman's hand in love or religion. There is not a preacher in Christendom who has not some time in his life kissed a lady's jewelled hand, even on bended knee; but the worship the preachers give to woman Catholics bestow on the ministers of Him who was and is to us 'father, sister, and mother.' The *Christian Evangelist* says kissing a bishop's hand is pagan. The seven wise men who edit that paper are bald about the chin from excessive osculatory exercise, and they gabble about the paganism of kissing! The Old Church an apostate! All the apostates who have gone out from her were of the kissing kind, from Martin Luther down to Hyacinthe. If she had allowed more latitude and promiscuousness in kissing, Protestantism would never have been." "The seven wise men who edit that paper" have not been heard from in reply up to date. Each may readily admit that he has "some time in his life kissed a lady's jewelled hand, even on bended knee"; but how will the admission of a natural and proper "exercise" like that lessen the folly of "kissing the bishop's ring"! We may add that a truthful comparison of Catholic and Protestant ecclesiastics in the respect mentioned would not be greatly to the credit of the former. Read Gibbon and Lecky.

THE TEMPERANCE QUESTION IN POLITICS.

The Prohibitory party has gone into the national political campaign with a more aggressive zeal and a more buoyant hope than at any previous Presidential election. And, whatever may be said of the fundamental right of bringing the temperance issue into politics, it must be admitted that the platform of the Prohibitory party has the advantage of the platforms of the two leading parties of the country, in that it distinctly enunciates a great moral principle, and makes a ringing appeal to the moral sentiment of the nation.

All earnestly moral people, it may be assumed, believe in temperance: the only question among them is with regard to the best method of promoting temperance. There is a difference, too, among moral people in the amount of serious attention they give to temperance in its public aspects. But, with every year, this view of the temperance problem is receiving wider consideration. Increasingly it is seen that alcoholism is not simply a personal and domestic evil, but an evil that is far-reaching in its social, public, and even governmental relations,—the prolific cause of a vast proportion of the crime, vice, poverty, degradation, disease, insanity with which governmental and philanthropic agencies have to deal. Here, therefore, is a question well calculated to arouse the conscience of the country. The Prohibitory party, moreover, has named national candidates against whose moral characters, public or private, no charge or suspicion has yet been cast. And, since the platforms of the two great parties now present no distinctive moral issues, and there is little difference between them even in the statement of political principles, and since their candidates for the Presidential office are both unsatisfactory from the highest moral stand-point, it will undoubtedly happen that the national Prohibitory ticket will receive this year a large accession of votes,—some of whom probably, cannot be counted upon to remain with the party permanently. Not a few voters, who may not be wholly ready to make temperance a political issue, seeing that the practical issue this year is chiefly concerned with the personal character of the several candidates, will vote for St. John in preference to either Blaine or Cleveland, and thereby rebuke the nominating conventions of their own parties.

Yet, to the conscientious voter, such a position cannot be entirely satisfactory. He wants to vote for principles that have won his convictions as well as for men to whom he can give his moral approval. And one good result of the vigorous canvass which is being made by the Prohibitory party will be the wider dissemination of facts on which the temperance problem is based, and the awakening of a fresh and more general interest in the question of the best methods of promoting the temperance reform. As these facts become known, they are evidently making one deep impression on the mind of the average common-sense American voter, who stops to think of them without partisan bias; and this impression is that, since the liquor traffic is a drain upon the industrial wealth of the nation at the rate of \$800,000,000 annually, and since the indirect cost to the country is nearly as much more each year on account of the prisons, almshouses, and governmental machinery made necessary by the evil results of intemperance, the temperance question becomes not simply a moral question for the Sunday-school, the pulpit, and the reform-meeting, but a question of political economics, that is reducible at last to one of simple taxation. And this feature in the political agitation of the temperance reform is likely to come more and more to the front, and to offer to many per-

sons who think temperance in itself may be too personal a matter to take into politics a really legitimate basis for a political party and for legislative interference with the commerce in liquor.

It may be said with truth that Liberals in general set an example of practical temperance. Not a few of them have been prominent workers in the temperance reform. But, in regard to the best methods of promoting the reform, they are divided; and in recent years there has doubtless been a tendency among them to oppose the principle of the Prohibitory law. Such legislation appears to many of them to violate personal liberty, and to be inconsistent with those methods of moral education and self-control which they maintain to be the chief reliances in the development of sound character. They would have as little legislation as possible with regard to personal morals, and none at all on questions of personal hygiene, under which they claim that the use of alcoholic beverages should be classed. On the other hand, there has been of late a growing tendency in the Prohibitory party to narrowness and sectarianism,—a disposition to rule out of the temperance movement all who do not adopt their methods and pronounce the shibboleth of their one idea; and, still more recently, an inclination manifests itself in their declarations and conventions to take a certain theological and religious attitude, which commends their movement to the favor of the party that is seeking an amendment to the United States' Constitution in the interest of evangelical Christianity. This feature in the present attitude of the national Prohibitory party is a stumbling-block in the way of some Liberals who otherwise might join the movement.

In our own view, intemperance is an evil so dire and vast that all arms of the reform service are needed in the war against it,—moral suasion, legislation, Holly-Tree Inns, temperance-instruction in the schools and at home, Law-and-Order Leagues for better enforcement of the laws, etc. Every volunteer should be welcomed who can anywhere and in any way deal an earnest blow against the monster iniquity. With regard to legislation, which presents the issue on which the political battle is fought, we think the temperance reform has been much damaged by a badly chosen and really misappropriate nomenclature on both sides. There has never been a prohibitory liquor law which did not in terms admit a number of exceptions wherein the sale of liquor was allowed. Nor has there ever been a liquor license law which did not admit the principle of certain restrictions in the sale of liquor. Yet the word "prohibition" has been a bugbear to many good people who are sensitively jealous for individual liberty, and the word "license" has been equally offensive to many good people on the other side whose consciences rebel against the very suggestion of guaranteeing security by law to an admitted evil. Thus, these two extreme words, which, after all, do not accurately represent the principles they are used for, have tended to keep people apart in hostile camps who might otherwise have been brought together in a common cause. A *regulative* law with regard to the sale of liquor is what both parties are aiming at, and the difference between them is with regard to the method and stringency of the regulation. Suppose that the Prohibitory party had called their law a *stringent regulative* law: much opposition would have been disarmed by the very change of name, while the chances, we believe, would have been greatly increased for securing an effective law which could have been enforced.

And the rational ground for a stringent regulative law concerning the manufacture and the sale of alcoholic liquors is not far to seek. Society

has the same right to guard itself against the deleterious traffic in such liquors as it has in respect to the storing and selling of a poisonous drug or gun-powder or dynamite; nay, a better right, since the annual damage to life and property from the unrestricted sale of alcoholic liquors is greater. It is no more interference with individual liberty to prevent by law a free sale of whiskey than to prevent by law a free sale of fire-crackers; no more despotic for the law to say who may and who shall not sell intoxicating liquors and under what restrictions individuals must buy such liquors, if they buy them at all, than it is for the law sharply to define the conditions under which commerce in any explosive compound may be carried on.

Yet, though the temperance reform may be legitimately and greatly aided by such stringent legislation in its behalf (and to this extent the temperance question has a rightful place in politics), it were folly not to remember that at the source of this gigantic evil of intemperance is an imperious appetite unfortunately possessed by a great multitude of people. There is no such general appetite demanding corrosive sublimate or nitro-glycerine; and hence there is no such resistance to the making of laws for stringently restricting their sale and no such attempts at evading the laws when made as any kind of stringent temperance legislation will have to meet. And, hence, legislation alone, however legitimate and necessary, will not solve the temperance problem. No method will solve it which does not in some way reach and annul this appetite. This is the office of moral education in temperance work. It is an office which has manifold forms; but they are alike in this,—that they aim at engrafting upon character the power of self-control and at cultivating a pure appetite in the place of an evil one. Behind the ramparts of the law which political victory may win and place on the statute-book, there is need sedulously to continue the drill and discipline of this moral battle for temperance, or else the political victory may fail to reap the consequence of its own success.

WM. J. POTTER.

D'ALVIELLA'S DEFENCE OF HERBERT SPENCER.

It is some consolation for the victory of the Belgian Romanists to find that their brilliant opponent, Count Goblet d'Alviella, will be enabled by his release from labor in the legislature to deliver a course of lectures in the university of Brussels on the History of Religions, as well as to write more frequently for the press. The July number of the *Revue de Belgique* contains a luminous account of the reaction against Protestantism, which has just been described in M. Philippson's history, *La Contre-Revolution Religieuse au XVI. Siècle*. The Count has also recently contributed to the *Revue de l'Histoire des Religions*, a Parisian magazine carried on by Renan and the Révilles, a defence of Spencer against Harrison, in which the religious sanctity of the Unknowable is vindicated with a warmth equal to that of Mr. Chadwick's recent articles in *The Index*. After arguing that the conditions essential for the object of religious worship may be found in the Unknowable as easily as in the Eternal, the Highest, and other equivalents of the Divine, D'Alviella says: "The last word of evolutionism agrees with the definitions of those most refined forms of theology which have risen above the vulgar symbolism, and have always recognized not only God's reality, but also his incomprehensibility. It may be added that, before this conception became the scientific faith of Spencer, Huxley, and Haeckel, it proved sufficient for men of the most lofty spirit and most

religious imagination, like Giordano Bruno, Spinoza, Kant, Goethe, Shelley, Wordsworth, Carlyle, Emerson, and Renan. It is capable of leading not only to religion, but even to mysticism." "In the exalted expressions of Keshub Chunder Sen there is not a word which contradicts the religious ideas of Herbert Spencer." "Mr. Harrison says that the Unknowable can never have temples, or rites, or priests." "His assertion is disproved already by the facts. Not only are Protestant theologians laboring to bring the doctrine of evolution into harmony with the Christian faith, but above all would we speak of those independent and Unitarian churches, both in England and America, which have henceforth no theology but the doctrines of Herbert Spencer, and have no hesitation to say so openly. Let Mr. Harrison take the trouble to visit them, and he will find that those who have given up all the old creeds have been able to make the Unknowable serve as a foundation for worship."

It may be urged that religion is already assuming in these societies, as it did in the great men mentioned, more of a moral character than of a ceremonial. The more exalted the conception which we form of God, the harder it is for us to understand how our worship can really give him pleasure or do him honor. No good and wise man could wish to be addressed and discussed in any way like that in use throughout the churches. A being infinitely better and wiser than man could scarcely find our worship anything but repulsive. If Spencer's views fail to give an adequate basis for devotion, this may be fully explained by the mere fact of their elevation and their truth. The religion of the future is going to express itself in love to man rather than in praise and prayer to God. The only religious organizations of whose permanent value I feel certain are the ethical societies and other philanthropic associations. The social nature of men is so strong that we shall always be glad to work together for our highest good. And what really is our highest good has as yet been so imperfectly known that evolutionism has a great work to do in teaching those moral ideas which must form the basis of all religion worth keeping up. Valuable as the discoveries of the Utilitarians have been, there is still a general unwillingness to accept happiness in any form, even the greatest happiness of the greatest number, as our highest end and aim. Nothing would be more useful than to have the moral standard made plainer and more inspiring; and this can best be done by showing, as Mr. Fiske did recently at Concord, how plainly the history of human evolution brings out the loftiest ideas of justice, purity, and love. Whether the idea of the Unknowable is of much moral value in itself is sharply questioned by Mr. Harrison. Count d'Alviella, too, remarks that, "In reducing religion to a sort of mystical contemplation, Mr. Spencer leaves out those moral sentiments and practical applications which constitute, as Mr. Harrison justly observes, the chief and true sphere of religious activity." Mr. Spencer himself says, at the close of his own rejoinder, called "Retrospective Religion": "Lastly, let me point out that I am not concerned to show what effect religious sentiment, as hereafter thus modified, will have as a moral agent; though Mr. Harrison, by ridiculing the supposition that it will make good men, seems to imply that I have argued or am bound to argue that it will do this. If he will refer to the *Data of Ethics* and other books of mine, he will find that modification of human nature, past and future, I ascribe in the main to the continuous operation of surrounding social conditions and entailed habits of life, though past forms of the religious consciousness have exer-

cised, and future forms will, I believe, exercise co-operative influences."

This amounts, I think, to an admission that Mr. Spencer's critics are right in complaining that his presentation of the Unknowable is too barren of moral significance to possess much religious value. He himself, or some of his adherents, may yet supply the deficiency. Whether this work can be done is, however, of little importance in comparison with the brilliant success already achieved by evolutionism in establishing morality on a scientific foundation, independent of all theology, even the Spencerian.

F. M. HOLLAND.

"MORE," BUT NOT BETTER.

Christianity, says Rev. Rufus Ellis, in the *Christian Register* of August 21, is more than Theism. This is true, just as it is true that Roman Catholic Christianity is more than Protestant Christianity, and orthodox Protestantism more than Unitarianism. But the "more," in all these cases, is gained by accretion of assumptions, none of which can be proved, though some of them can be disproved.

Theism assumes the existence of God.

Christianity assumes the existence of God, *plus* the doctrine that Jesus of Nazareth was the Christ of Old Testament prophecy, and thus the Lord and Master of mankind in things moral and spiritual. (This is the position of that portion of the Unitarian body to which Dr. Ellis belongs, and which, in virtue of this belief, is appropriately called Christian.)

Orthodox Christianity assumes all the doctrines above mentioned, *plus* the fall of Adam, the total depravity of his posterity, the doom of damnation impending over all of them who have ever sinned, the need of intercession to appease the wrath of God, and a release from the consequences of that wrath provided, through the crucifixion of Jesus, for those who accept his intercession and worship him.

Roman Catholic Christianity assumes all the doctrines above mentioned, *plus* the delegated spiritual rulership of the Church (meaning the clergy), the merciful arrangement of purgatory for millions who would otherwise be doomed to hell, and the opportunity of obtaining powerful intercessory influences by worshipping the Virgin Mary and the saints as well as Jesus.

Of those who read the above, a large proportion will be disposed to say, Then, by your own admission, Theism is founded on assumption as much as the more elaborate religious systems with which it stands in competition!

It is so. Let us not fear to confess the truth. My rejoinder is that the single assumption made by Theism is rational and probable, the necessary antithesis to the absurd assumption that we and our environment are products of chance and not of intelligent purpose. Moreover, if we cannot prove the existence of God, at any rate no one can disprove it; while the very corner-stone of the other systems above named can be shown to be untrustworthy, because unreal. I refer to the doctrine that Jesus of Nazareth was "the Christ"; that is to say, that in him the Messianic prophecies of Hebrew Scripture were fulfilled.

It seems plain, from the testimony of the first three Gospels, that Jesus did, in the latter portion of his career, claim the title of Christ or Messiah. How he felt justified in doing so, even under strong solicitation from his disciples and others, knowing as he did what Isaiah and Jeremiah had represented as the main function of the Messiah, is rather mysterious. I see no explanation of it but in another fact vouched for by the same evan-

gelists; namely, that Jesus really expected, after his own death, but within the lifetime of some who heard him speak, to come again in the clouds of heaven, with power and great glory, thenceforth to rule, not only over the Jews, but over all nations. Paul, whose Epistles were the earliest written of the documents ultimately brought together to form the New Testament, confidently expected this second coming all through his life, and was constantly warning the churches to which he wrote to watch for it, to be vigilant in preparation for it. We now see, as the Christians of the second century ought to have seen, that this expectation was delusive; that the hoped-for second coming never appeared; that the Jews have never been delivered from Gentile oppression, still less brought back in triumph to the land of Palestine, there to be ruled in peace and righteousness by a Prince of the house of David. Since, then, Jesus fulfilled the function of conquering deliverer and triumphant ruler no more after his crucifixion than before it, no ground remains for ranking him either as Christ or Lord. Let it suffice that he was the greatest of religious teachers, and that Theism, after the research of eighteen centuries and the opportunity of comparison of him with all other religious teachers, can ascribe to its God no higher attributes than some of those which Jesus ascribed to him in the ears of an unappreciative generation.

C. K. W.

JUDAISM.

II.

The dispersion of the Jews occurred something more than a half century after the commencement of the commotions incidental upon dawning intelligence; and no attempt appears to have been made to condense any account of the events until about the same period, when Christianity assuming such evidences of being a new civilization chroniclers attempted to reduce the occurrences to a record. They all unite in tracing the movement to a man named Jesus, surnamed The Christ,—hence the name Christianity.

It is not strange that there is no tangible contemporaneous history of the scenes and incidents attending the outbreak of Christianity, because historians were very rare at that time; and nothing languishes more than literature during the commotions incident upon warfare, particularly a war of invasion, which was the situation of Palestine until the final catastrophe to the Jews. None of these writers give Jesus Christ any characteristics but those which pertain to humanity; and for more than three hundred years Christianity progressed until it became a power to antagonize Pagan Rome, to the extent that the emperor was convinced that secular power alone was not sufficient to contend successfully with the tide of intelligence, which would be fatal to Pagan rule, if not overcome. Wherefore, he invented a superstition which he hoped would entice all the Christians and even the Jews.

This superstition was organized by merging Jehovah, the God of the Jews, with the memory of Jesus Christ, who was declared to have been God, with other attributes creating a co-partnership Godhead. The plan did not work; for the Jews were outraged that their Jehovah should have his attributes as the one and only Supreme Ruler questioned by introducing other persons into the Godhead, especially Jesus Christ, whom they looked upon as the worst of the many impostors who had deceived their hopes; and the Christians would not tolerate the idea that Jesus, whom they honored and venerated, had any but human attributes. To meet this emergency, a ritual was prepared, which every one must indorse or be de-

stroyed. This ritual was the declaration of a belief of the very things in regard to Jesus Christ which the Jews as well as the Christians abhorred, and they were both given over to destruction as heretics; but, as usual, the Jews had an extra prejudice thrown upon them by this superstition, which was the Church, for they were accused of having crucified God in the person of Jesus Christ, who is said to have met his fate upon the cross, the then mode of capital punishment, resorted to by the authorities almost daily. The Jews had no authority, and it is preposterous to suppose that any government would permit any but those in authority to use their implement for execution; but, even if a Jewish rabble lynched Jesus, the Romans alone can be held responsible, as they were the power of the land. But this cruel superstition, the Church hesitated at no fallacy, however preposterous, if it could arouse hate and vengeance against the Jews. Wherefore, to this day, many believe that the Jews were the original "Christ-killers," and hate the race and even individual Jews, their neighbors and fellow citizens, which was the intention of the Church.

This "Christ-killing" accusation has sealed the fate of many Jews, against whom no blame could rest before the magistrate; but this outcry would paralyze authority, and an angry mob was left to do vengeance upon an unoffending man, often extending to broad-spread massacre. If pestilence fell upon a community, it would be laid to the "dirty Christ-killers," in ignorance that Jews are cleanly by and through the force of a religious ordinance evidently established in the knowledge that diseases of the skin are induced by negligence, and Rachel must stand at the marriage altar free from a cutaneous blemish and Isaac must show a cuticle untarnished by so much as a pimple to enable him to enter into marriage.

Then, again, we sometimes hear the expression "drunken Jew"; but I have looked around for more than forty years to find a Jew who was an inebriate, that dreadful thing known as an habitual drunkard, but have never seen one, although most of the time in large cities where Jews are sure to be found, because they thrive upon commerce.

The claim that Jews are distinctly temperate as a race will surprise some persons. Wherefore, I will narrate the incident which caused the writer to make the subject an actual investigation.

A little more than forty-four years ago, when in the city of London, I was in the court room of the city magistrate, who held his court in the Mansion House where the mayor of London resides; and Sir Francis Hobhouse said: "I discharge these three young Jews upon general principles. They are accused of having been drunk and disorderly; and I have sat upon this bench for twenty years, and in that time have not had more than three indisputable cases of drunken Jews." Said he, "Jews may drink, but they do not get drunk." My experience of forty-four years justifies what I thought a remarkable judicial action at the time, but I now think that it was influenced by wisdom and justice. I will remark that these young men were not Rothschilds nor Montefiores released by influence, but they were from Petticoat Lane, Shoreditch, the old clothes exchange of London.

If philanthropists, statesmen, and philosophers could learn the secret of this inherent temperance among the Jews, the vexed question of intemperance might find a solution. That it is not merely incidental can be discovered by all, if they will investigate their Jew acquaintances, whom they will find entirely free from the curse of drunkenness; and yet they are convivial, certainly by no means ascetic.

I said that caricature worked to keep up prejudice against the Jews. The 5th of November in England is a great event, upon which occasion a celebration takes place to commemorate the attempt of Guy Fawkes to blow up the Houses of Parliament; and, after a sort of 4th of July carousal, the children carry an effigy, stuffed with straw and loaded with fireworks, which go off as the effigy burns, and this image is an unmistakable "Judy-Jew-Jew," which is the refrain of the boys while the effigy consumes. Do not suppose that the veritable Guy Fawkes was a Jew. He was a bigoted papist; but, as the ceremonies take place in charge of the church beadle, it looks suspicious of an intention to teach the youth of England that Guy Fawkes was a Jew. Wherefore, they must learn to hate the Judy-Jew-Jew.

Shakspeare intends to convey a truthful moral in all his writings, which fact convinces me that in the "Merchant of Venice" he intended to portray through Shylock the cruel wrongs inflicted upon the Jews, more than to indicate that Shylock is a type of the Jewish race; but I cannot pardon his erroneous conception of Jessica, the daughter of Shylock, whom he makes a betrayer of her household, which is almost inconceivable as within the possibility of crime that a Jewish maiden could be guilty of such an act, and he makes the matter worse by laying her conduct to the infatuation of love. Now, while I do not say that Jewesses are deficient in sentiment or sensibility, I do say they are wonderfully discreet in affairs of the heart, and love wisely rather than too well; while the inference, if we take Jessica as a model, is that they are trifling and giddy-headed.

Dickens in his *Fagin*, the Jew, receiver of stolen goods, is so graphic that unthinking readers jump to the conclusion that these receivers are necessarily Jews; while I am convinced that they would only be found in the same proportion as other nationalities, in any large city.

I will now ask, What has been the influence which has supported Judaism through such assaults from every possible source which could deter or interfere with progress, unless fortified by a civilization of a high order, aided by a cultivated intelligence, worthily commanding respectful esteem? I remember only one instance where a people have acknowledged that the Jews are possessed of an intelligence beyond their own civilization, and this was done unwittingly. In Germany, a year or two ago, an outbreak against the Jews as a race was imminent; and the inhabitants, in their petition to the crown that a burdensome license should be laid upon them, based the demand upon the fact that the Jews were invading every branch of industry, even to manufactures and agriculture, and it was impossible for the Teutonic race successfully to compete with them. As every citizen of Germany is supposed to stand upon an equal footing, it is a rather broad acknowledgment that intelligent Judaism is in advance of enlightened Teutons.

Retributive justice works compensation to balance arbitrary persecution. The Jews had inflicted upon them a proscription which compelled them to reside in a separate quarter from the rest of the community, which afforded opportunity to cultivate the rising generation more effectually in their own traditions than could otherwise have been possible; and thus their distinctive race characteristics were preserved. Deprivation from ability to learn artistic trades was conceived in a spirit of cruelty; but this drove the Jews to apply their intelligence to commerce, and thus become almost intuitively developed for finance and all branches of a commercial career.

This subject has been considered solely from the

point of civilization, without considering the question of religion; but, if I understand the matter, the Jewish belief in regard to that which is generally understood by the term "religion," and that enlightenment of cultivated intelligence inseparable from civilization, are so interwoven that it may be said that their religion is the basis which influences their conduct more forcibly than is the case with any other religion.

A high standard of morality is inseparable from cultivated civilization, and a system of ethics is necessary to formulate and control this morality.

The American system of ethics is the Declaration of Independence, correlated by the Constitution; and, if we influence our actions by those teachings, our morals and our civilization will attain the highest possible perfection.

It is generally assumed that the ethics of Judaism are recorded in the Pentateuch, the first five books of the Old Testament; but it seems as if there must be some other inspiration, if the translation be truthful, for I should as soon think of basing a system of ethics upon Dean Swift's *Gulliver*, a work conceived in a spirit of unbounded exaggeration with the intention of lampooning the court and society, and so coarse in language that it cannot be read in a mixed company, but full of moral teaching of the highest order.

The Pentateuch is full of assertions which cannot be made consistent with the intelligence of the present time, besides abounding in details as coarse as the worst of *Gulliver's*; but that is no reason for discarding all that is sound and consistent with our present knowledge. And this applies to the entire Bible, from Genesis to Revelation, from which a system of morality can be deduced such as will be an intelligent guide to the highest culture of which man is capable; and we are all justified to accept every teaching which is good, from whatever source it may come.

It is reasonable to suppose that Judaism is based upon that which is good in the Pentateuch, or it could never have supported its follower in a course of morality controlling intelligence to a standard of civilization which commands the respect of the world, in defiance of obstructions which would have overwhelmed any system not based upon great excellence.

It was assumed that Jews are an interesting race. I close in the conviction that Judaism is a high order of civilization, as it has been for centuries.

J. F. WETMORE.

EDITORIAL NOTES.

BY B. F. U.

THE *Rise of Intellectual Liberty*, a History by Frederic M. Holland, is among the announcements of Holt's latest publications.

THE meetings of the Boston Ethical Society, under the direction of Mrs. Clara M. Bisbee, will be resumed in Rev. M. J. Savage's church, Sunday, September 28, at three P.M.

THE Free Religious Association will have a social supper at Fraternity Hall (Parker Memorial) Wednesday evening, October 1. Mr. W. J. Potter will preside. Miss Mary F. Eastman will give an address. A pleasant time is anticipated. Tickets, at fifty cents each, can be had at *The Index* office.

THE *American Literary Churchman* remarks, "If every nominee for high office in the State—or even in the Church—is to be required to prove a large number of universal negatives, and to be held up to public odium as a filthy scoundrel if he fails to perform this impossible feat, high offices will soon be appropriated by the offscouring of society."

MR. T. W. CURTIS, who attended the convention of the New York Free-thinkers' Association, and

the congress of the National Liberal League which were held at Cassadaga, N.Y., the former September 3-7, the latter September 8-9, has promised to favor *The Index* with some account of what was done at both these gatherings, which will probably appear in the next issue of this paper.

LITTLE Willie was fond of throwing stones at the passing school-boys, and then taking refuge behind the hall door. One day, he did not get away so easily; and, faring pretty badly, he burst into his aunt's presence, with the tears running down his cheeks, and sobbed out in great wrath, "I just wish I was an angel 'way up high, where the policeman couldn't catch me, with my pocket full of rocks, if I wouldn't give it to them boys!" —*Harper's Bazar*.

MASSKS for the dead are now celebrated in the Church of England, but are called "Celebrations of the Blessed Sacrament on behalf of the Faithful Departed." The "Guild of All Souls" is an association formed for the purpose of extending this particular Romish rite in the English Church. And an English bishop has just declined to interfere with a rector who has celebrated a mass, although he acknowledges that an "illegal ritual is used." —*Presbyterian*.

"A SUBSCRIBER" writes from Cleveland: "I have always looked to *The Index* for everything in the way of reform. Why do you ignore Prohibition and Mr. St. John?" That temperance is a virtue all admit; but whether Prohibition, as commonly understood, is practicable and wise, and whether St. John and his party should be supported in the present Presidential contest, "A Subscriber" will probably admit are open questions. However, by reference to the first article on the second page this week, which was in type before the above inquiry was received, it will be seen that *The Index* does not "ignore Prohibition and Mr. St. John."

THE editor of the *Christian at Work* takes advantage of a disposition of many of the admirers of the public life of Gov. Cleveland to condone an admitted immorality in his private life to say the following of three ancient Jewish celebrities: "Samson was not an exemplary man in his private life, yet his great services as a judge were commended by the apostle. David committed a sin, which, had the scandal-mongers of to-day had their way, would have driven him from his throne; and Solomon, too, would have been forced to abdicate." Samson and Solomon, considering the ideas and practice of their times, should be regarded with much indulgence; but David, judged by the record of his life, fell so far below the morality of his day and was guilty of so much perfidy and crime that the people *should* have "driven him from his throne" and excluded him from decent society. But let us hope that he was not so bad as represented in the accounts that have come to us.

A FRIEND writes: "Miserable beyond compare is the life of the sincere, far-seeing radical. Surrounded by weak-hearted conservatives, the gates to literary utterance are rarely open to him; and, when he speaks, his words fall upon clods and empty air. If, on the other hand, he turns to those who cannot be justly charged with the cowardice of conservatism, he is met by a crowd of 'cranks,' each one of whom is wearing his special individual sectarian motley of radical orthodoxy. But yet, even under such conditions, the true, liberal radical's pessimistic melancholy is but a sign of his moral and mental immaturity,—moral, because he is not yet ready to leave all considerations of coward prudence behind him; mental, because he allows the moving mists of present history to dim his faith in the historic perspective

of the What-shall-be. Shallow or visionary are those who deem the golden day now upon them. But not unhappy is he who, knowing it to be thousands upon thousands of years away, yet

"Sees, fleet as night o'er snow-clad height
Flees when the day is breaking,
With future gray another day
Draw near to eyes awaking.

"The eyes that see illusion free
Behold it near and nearer:
Like unknown star long felt from far,
It groweth dear and dearer,—

"Till red its morn, and onward borne
With power beyond all story,
Like feathers frail before the gale
We're swept into its glory!"

MR. GEORGE CHAINEY, who was converted from Methodism to Unitarianism some years ago, and afterward from Unitarianism to "Ingersollism," announces now that he is a Spiritualist. He was converted to Spiritualism a few days ago, at the Spiritualists' camp-meeting held at Cassadaga, N.Y. He had, he states, "been for the last year" in "a constant state of disquietude"; but he is now as happy apparently as when he was first converted under Methodist influences, and as confident that there is a future state as he was a year ago of exactly the opposite. But, without further comment, we quote the following sentences from the account of his experience which he has seen fit to give to the public: "I am absolutely sure that this earth-life of ours is but the shell of things, the chrysalis of the ultimate end of organization. I know it. I ask for no more proof. If it comes, I am willing to receive it; but, for knowledge of the fact, I need it not. . . . Last Sunday night, I had fully resolved to leave the ground the next day. But, as I lay in bed, a sweet presence seemed to impress me that I must stay until every dark cloud was cleared from my mind. Long I reasoned against it. When I at last resolved to be guided, a soft hand was placed upon my fevered, aching brow, and lay there caressing it with touch as light as down and softer than velvet. I could not move hand or foot. Then through all my being seemed to course streams of life,—vibrations of ecstatic joy. The hand then seemed to change into a focus through which rays of light pierced and illuminated my brain, clearing it of all the haunting shadows of doubt and despair. Since then, my mind has been flooded with a wondrous sense of luminosity, and my heart brimming over with joy. The sky seems to attract me. I feel as though I had wings; I am all heaved up,—in other words, I am in heaven."

THERE is no reason to doubt that the great mass of Spiritualists are honest and worthy people, and among their representatives are certainly men and women of ability, character, and worth. But there is a vast amount of twaddle uttered in the name of Spiritualism; and the amount of fraud practised under its cover is discouraging to many Spiritualists and non-Spiritualists, who wish to see the subject fairly treated, and judged on its merits. One difficulty is in distinguishing, under the ordinary conditions of investigation insisted upon by mediums, between "genuine" and "spurious" manifestations. We extract the following from a letter in the *Springfield Sunday Republican* in regard to Lake Pleasant matters:—

Col. Bundy, Dr. Beals, and other leaders of the body, say they are working for the elevation of the standard of the organization; and what perhaps may be a long step in the right direction has been taken this week in holding the first annual convention of the American Spiritualists' association, an organization that aims at the union of the better elements of the order in one fairly cohesive body. This is the first time that the association has been brought prominently to the attention of the great body of Ameri-

can Spiritualists. Still, sensible people will be rather slow to take much stock either in the honesty or sense of those who, while claiming to be working for the extermination of all frauds and humbugs among mediums, continue to support J. Frank Baxter in his pretended and often exposed communications, and place him on the platform as a leading light of the sect. Cephas B. Lynn's address Sunday was rather remarkable for the boldness with which he spoke out against the frauds and mercenarily inclined among mediums; and that his words struck home is shown by the commotion that has been raised in the camp by them. "Angel ministry," said he, "cannot, in my humble opinion, be reduced to a cut-and-dried programme. . . . The theory of spirit communion has been largely overdone. It has been cheapened. Mediumship, in some places, has been put upon the plane of a county fair or a Saratoga race course." And there was "loud applause" when he repeated his statement, made five years ago, that, "with the average Spiritualist, inspiration is dirt-cheap, and angels are as common as tramps."

"Col. Bundy, Dr. Beals, and other leaders of the body," deserve credit for their successful efforts at Lake Pleasant, even though their judgment regarding mediums is sometimes at fault, and they are prevented by circumstances accomplishing all they desire.

DR. T. L. BROWN, the President of the New York Free-thinkers' Association, opened his address, which was published in advance of the annual meeting, held at Cassadaga last week, as follows:—

The science of human existence began with our knowledge of a cell. The religion of superstition began with our want of knowledge of a sell. One is spelled *cell*, the other *sell*. By the former, we find all vegetable and animal life sustained. By the latter, all the fictions and follies of religion are especially maintained. All physical and mental well-being depends upon the scientific cell.

In these statements there is more slang than truth. "The science of human existence" did *not* begin "with our knowledge of a cell." "The religion of superstition" did not begin "with our want of knowledge of a sell." It is not true that "we find all vegetable and animal life sustained" by a cell. It is not true that, by a "sell," "all the fictions and follies of religion are especially maintained." "All physical and mental well-being depends upon the scientific cell" no more than "the scientific cell" depends upon physical and mental well-being, both being dependent upon a common basis and a more ultimate existence. The only true sentence in this paragraph of Dr. Brown's opening address is the following: "One is spelled *cell*, the other *sell*." If Dr. Brown would but study the history of science and of intellectual development, he would learn that science began with the earliest observations and classifications of knowledge (which did not include "our knowledge of a cell"); that superstition began in man's ignorance and efforts to understand and explain phenomena which were above his comprehension; and that, while much deception and fraud have been practised in the name of religion, it was not originated by them, having had, with all its "fictions and follies," a natural evolution, in which "sells," as in the development of all systems of thought or activity, have been only incidental in their nature. The philosophy (?) of religion, exhibited in the above extract, belongs to the past, being no longer in favor among the representatives of any modern school of thought. Dr. Brown's theory is on a par with that which explained language by saying that certain men came together and agreed in convention that certain words should stand for certain objects and ideas. The President of the New York Free-thinkers' Association ought to acquaint himself with modern thought, and keep abreast of the age.

The Index.

BOSTON, SEPTEMBER 11, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

MORMONISM IN A NEW LIGHT.

BY T. W. CURTIS.

I.

Statement of Question.

On a former occasion, I asserted the threefold aspect of the Mormon problem,—the religious, social, and political,—which seemed to have been, as a rule, lost sight of or but faintly apprehended. The political aspect has been freely discussed in *The Index*, which gave for the first time, I believe, in the history of this controversy, an opportunity for the expression of views so diverse and antagonistic. It is my purpose now to invite attention to the religious side of the question, by making the theme of a series of short articles the character and following of the Mormon faith. This is not a personal narrative. It may be that a passage from my life may find a fitting place in the series, but my object is not to make the public the confidant of my woes nor the avenger of my wrongs. The only confession or complaint I have now to make is that I find myself at odds, almost equally so, with Mormon and Gentile (and, I may add, with all previous writers on this subject). Though born and bred in the Mormon Church, its doctrines stand no longer identified in my mind with the truth. I am an apostate. I have either lost my reason or found it. And though I have now mingled with the world, and cherish deep in my inmost soul a love of free institutions, and look to the spirit that created them as my guide and tutor in all things, I am far from being *en rapport* with the public on this Mormon question. How much my thought is influenced by early associations I do not pretend to say; but that influence was not all of one kind, and soon met its rival. I have looked at Mormonism from the inside and from the outside, in the attitude of belief and of unbelief. But now, to get at the merits of this question, I know it to be my duty to forget myself and address the understanding, and not the prejudices of the reader. I must slight no fact and dodge no issue.

The fact that my audience is Gentile and not Mormon must make a difference in the manner of dealing with the subject. The existing state of the public mind is really a factor in the problem. Definite conclusions are supposed to have been arrived at, and the resulting estimate seems to be a condensation of the world's scorn and hatred, which can neither be acquiesced in nor ignored; for that would take away the need of investigation, the stimulus to inquiry. This opposition to Mormonism, it is important to observe, is not only pronounced, settled, and almost universal, but consists of verdicts on matters of fact and belief, character and creed. This would imply some one standard of appeal, whereas the opponents of Mormonism differ widely in this respect. Mormonism is a product of our age. In judging it, we judge ourselves. In this sense, it is a revelation, it is providential. To misjudge it is not only to deceive ourselves, but to aid its success. For persecution, which may take a thousand shapes, is a proof of conscious weakness and demerit, and makes the persecuted cause appear divine from very contrast. Truth only can conquer falsehood. It is therefore proper to ask, What is the tribunal before which Mormonism is to be tried; what are the scales in which it is to be weighed?

There are two sides to every question but one,—religion, for which the interrogation point was never invented: so, at least, history seems to say. A dogmatic faith assumes the certainty of mathematics without its demonstration, and the authority of intuition without its power. Not professing to be based on reason, it will have no parley with it. Not originating with man, it is above and independent of the human. Born of heaven, it is in no wise beholden to earth. Its author is God, whom not to know is proof of total depravity, and whom to deny is the seal of eternal perdition. The rulers of earth have sought alliance with this king of heaven, in order that their power may be as plenary and absolute as his. This is the secret of the hostility of sects and of religions, and shows why religious heresy has been treated as treason, blasphemy, and immorality. Every form of dissent from the prevailing belief, from the mildest heterodoxy to the boldest infidelity, has been confronted with this accusation in its triple form; and, since rack and fagot have gone out of use, slander and misrepresentation have taken their place, construing word and act of the offender into a confession of dark design and conscious guilt. And the rehearsal of these facts concerning religion explains the double origin of the opposition to Mormonism in Liberalism and Orthodoxy: the first looking on it as a self-consistent form of the theocratic idea, which it hoped was rapidly dying out of the world; and the latter regarding it as a caricature of that idea, under whose true yoke, as fashioned by itself, it still expects the world to bow. But, however much the Liberal and Orthodox mind may differ in their reasonings, they have been practically in accord in the anathematizing and outlawry of the new creed and its devotees. The charges are many, and it is at this day an unsolved problem on which of them the arraignment of Mormonism is chiefly based. Though parties differ as to emphasis, there appears to be a tacit agreement that there is to be no falling out on that account, as the deep-rooted conviction of nearly all is that Mormonism is heathenism, or but one remove from it. To demur to this charge is to throw suspicion on one's own mental or moral soundness. And I think it safe to say (and, if true, what a significance there is in the fact!) that on no question exciting so wide an interest does there exist at once such an amount of misintelligence and positive assertion, of itera-

tion of freedom of thought and a general conspiracy to keep the avenues of knowledge closed. Press, pulpit, and people seem to have formed a solemn league and covenant to continue the assault until Mormonism is hurled down the abyss whence it sprang. But that verdict which has been rendered, and meant to anticipate the final judgment, I will give in other language than my own.

The Hon. John Cradlebaugh, in a speech before the United States Senate in 1883, said: "The remoteness of Utah from the settled regions of our country, and the absence of any general intercourse between the Mormons and the masses of our people, have served to keep the latter in complete ignorance of the character and designs of the former. That ignorance, pardonable at first, becomes criminal, when the avenues to a full knowledge are open to us. Mormonism is one of the monstrosities of the age in which we live. It seems to have been reserved for the model republic of the world, where the light of knowledge is more generally diffused than ever before, . . . to produce an idle, worthless vagabond of an impostor, who heralds forth a creed repulsive to every refined mind, opposed to every generous impulse of the human heart, and a faith which commands a violation of the rights of hospitality, sanctifies bloodshed, enforces the systematic degradation of woman, not only permits, but orders the commission of the vilest lusts in the name of the Almighty God himself, and teaches that it is a sacred duty to commit the crimes of theft and murder. It is surprising that such a faith, taught too in the coarsest and most vulgar way, should meet with any success. Yet, in less than a third of a century, it girdles the globe. Its missionaries are planted in every place. . . . It was reserved for Mormonism, far off in the bosom of our beloved land, to rear its head, naked in all its hideous deformity, and unblushingly, yes, defiantly, proclaim a creed without the least redeeming feature, and of such character that the Thuggism of India cannot match it."

It is indeed surprising that such a religion, taught in such a way, should not only meet with success, but in "less than a third of a century girdle the globe" with its missionary posts! This speech was accepted as an authentic portraiture of Mormon faith and practice. And why? Because it was only the echo of beliefs and prejudices already existing which formed its warp and woof, in which were some scattered threads of isolated utterances from Mormon discourses. And this story, with scarcely any change of emphasis, has the credence of the public at this day. Want of space only prevents me quoting a similar passage from the speech of Senator Cullom in the very last session of Congress. A Methodist minister, who preaches to one of the largest congregations in the Eastern States, said to me, "It is plain the Mormon people must be either a very ignorant or hypocritical sect to believe in such doctrines." A leading light in the Unitarian denomination said to me, in reply to the remark that I had a little the best of him, as he was once a Baptist and I a Mormon, "Why, I always looked on Mormonism as a fraud from beginning to end." A Liberal of world-wide fame said to me: "What man or woman with the least intelligence can believe in that Book of Mormon? The Church pretends the Bible does not uphold polygamy, when it knows it does. We may yet have to drive these Mormons out of the country." In a late number of the *Catholic Quarterly Review*, I read: "Christianity and the Christian idea of the family are wholly repugnant to them. Their intellects are warped as completely by Joe Smith and the Book of Mormon as are

those of the Mohammedan world by the Arabian False Prophet and the Koran." The *Christian Union* speaks of it as "a despotism, compared with which Romanism is an embodied Sermon on the Mount." The *Independent* and other papers, religious, semi-religious, and "irreligious," utter views as extreme and in language as strong.

"The remoteness of Utah from the settled regions of our country," to quote again the oracle of the Senate Chamber, I am afraid is not the only cause tending to keep "the masses of our people" "in complete ignorance of the character and designs" of the Mormons. It is misleading, it is expunging half the record, to say, "It was reserved for Mormonism, far off in the bosom of our beloved land, to rear its head," etc. I met a gentleman the other day from Chicago, of social and business standing. We talked about the prospects of religion in that wonderful city, and passed from this topic to Mormonism. "What do your people think of this question?" "Oh, I can't say: the papers discuss it now and then. Of course we are in favor of putting a stop to polygamy." Was this gentleman aware that, nearly a generation back, the centre stake of the Mormon Zion was in this very State of Illinois, in Nauvoo, "the beautiful city," the largest city then in the State of Illinois? Was he aware they came hither from Missouri, whence they were driven *en masse* by mobs assisted by the State militia? Was he aware that, before this, they had settled in Ohio, where their first temple was reared, and which stands even now? Was he aware that, during the period covered by these persecutions, polygamy was no part of the Mormon creed? Was he aware that the Mormon prophet was assassinated at Carthage, Ill., after having surrendered himself to the State authorities with a pledge from the Governor for his safety, while not one of the perpetrators of that deed was ever brought to justice? And, finally, was he aware that the Mormons were expelled from the State, and forced to seek a home in the wilderness, leaving their city with its magnificent temple a prey to a Vandalism supposed to have died with the ages of barbarism?

But these things are of the past. Yes, though not quite so old as the capers of Joe Smith's boyhood, the story of the Spaulding manuscripts, etc., which seem to be abundantly remembered; nor quite so old as the persecutions of the early Christians, which are still fresh in the memory of the Church. I say nothing now as to the cause of these "persecutions," as the saints call them. My aim is to show that the opposition to Mormonism dates from its first appearance, and has been bitter and unrelenting; and that its first appearance was not "far off in the bosom of our beloved land" (more literally, the heart of the great American Desert), but here in the centre of our New England civilization. And it had grown to a sect before foreign immigration began to swell its numbers. The *Leeds Times* of 1840 says: "The most recent exhibition of fanaticism is the appearance of a new sect in many parts of England, called 'Latter Day Saints'; and it goes on to tell the manner of its rise in America and what its teachings are. The *Millennial Star*, a Mormon periodical just then started in England, said in reply, "We see nothing of the appearance of fanaticism in the doctrines described in the foregoing article, excepting that part of it which is not true." This little passage at arms illustrates the beginning of the contest between the new sect and Christendom. The Mormon takes courage from the fact that his belief is no more fanatical than what is professed by his Christian neighbor, and that, to bring it into contempt, either ignorant or wilful misrepresentation is indulged in. John Stuart Mill, in his

work on *Liberty*, speaks of "the language of down-right persecution that breaks out from the press of this country [England] whenever it feels called on to notice this remarkable phenomenon of Mormonism." What would he have said, had his eyes fallen on these utterances from the two leading journals in America? The *New York Herald* recently said, "There is a chance that blows at the church organization, which do not depend upon a jury for their execution, may tumble down the whole fabric of Mormonism, if they are dealt with all the vigor of which the government is capable." The other extract is from the *New York Tribune*, commenting on the murder of the five Mormon elders by twenty masked men at Cane Creek, Tenn., this last August. After deprecating the crime in a single sentence, the *Tribune* adds: "But it should be a warning to the polygamists of Utah that the propagandism of their odious doctrines will not be patiently allowed in any part of this country. They seem pretty well convinced of this, as far as the Northern States are concerned; but, for two or three years past, they have been trying to insult the intelligence and morals of the South by trying to make converts there. Last year their missionaries got into trouble in North Carolina, now they have been shot in Tennessee. These are hints that even thick-skinned sensuality ought to understand." The reader's attention surely needs not to be called to the not very remote connection between this deed and the doctrine of the *Herald*, and the identity in spirit between that doctrine and the sage reflections of the *Tribune*; and, still further, to the bearing of this incident on the discussion in hand. Two such journals, on opposite sides in politics, would scarcely indulge in such a strain, if it did not chord with the dominant feelings or sentiment of the time.

But this incident even has other phases equally significant. It is not surprising to hear that there is no clew to the slayers of the elders, and that the authorities have taken no effective steps in the matter, the governor even giving to the public rumors tending to palliate the deed; while all the facts, as far as known, show it to have been without any kind of provocation. It is not surprising that, since this affair, another Mormon missionary has been shot at Nashville, Tenn. Any one may become the intimate of a future yet unborn by pondering these words which passed between the Mormon elder and his interrogator, the other day: "What were you doing, when attacked by these men?" "We were preaching the gospel of Jesus Christ as we understood it." "Do you expect to continue the work in that locality?" "Most assuredly: others will be sent to take the place of those that were killed."

I propose now to try to bring Mormonism to the test of facts and reason, and, if possible, to adumbrate its future by ascertaining the proportion or disproportion between its virtues and defects, as compared with the same in other sects and religions. I shall begin with the story of the Spaulding Manuscripts and of the Golden Plates.

A CORRESPONDENT of the *Boston Transcript* writes thus in regard to the word "agnostic": "Undoubtedly, as its root implies, it signifies 'a religious know-nothing'; but are not you wrong in giving it the further definition of one who 'cannot believe'? I may know nothing of a subject, religious or secular; but I may believe a great deal. There is no bound to human credulity. We know nothing of the future world, but our beliefs regarding it are as different as our temperaments. I know nothing about the formation of the centre of our earth, but may have a belief as to its composition."

CORRESPONDENCE.

THE AGNOSTIC.

Editors of The Index:—

The word "agnostic" is from the Greek adjective "agnostos," of which the passive meaning is "unknown"; the active meaning, "not knowing," "ignorant of." Hence, the literal meaning of agnostic is one who does not know or does not claim to know. Perhaps the definition "one who neither affirms nor denies anything" (*Index*, Jan. 11, 1883) is as good as one so short well can be. But definitions have to be modified. Everybody both affirms and denies many things. We might modify the definition thus: an agnostic is one who neither affirms nor denies the truth of unprovable statements.

But, as knowledge is progressing, any question of science, though difficult now, cannot be said to be unprovable. Unprovable questions belong to that class of conceptions which are beyond human observation and experience. The existence of a conception does not prove its truth, for an idea does not always represent an objective fact. For instance, our present existence causes the idea of future existence, but does not prove its truth. Our definition needs a further amendment. An agnostic, then, is one who neither affirms nor denies the truth of propositions about anything beyond human observation and experience.

To illustrate, when an orthodox person wishes to annihilate a sceptic, he exclaims, "What absurdity, design without a designer!" But that is just the point at issue. If anything is designed, of course it had a designer. That little *if* again! A man designs a machine. There is an observation of certain facts, a molecular motion of the brain in combining them as antecedent, and the machine follows as consequent. But the man did not invent the matter of the machine. Just here the agnostic says: There may or may not be a designer of this great machine, the universe. I never saw any matter created. Neither did any of my ancestors. Nor has any of the human race even seen any matter created or any world designed. How, then, should I know? I had rather not dogmatically affirm either way.

But this does not preclude the agnostic from having an opinion more or less strong. He may either take the peasants' view in the anecdote given by Prof. Lange, or the contrary. "Indeed, sir, and there is a horse inside," cried the peasants at X., when their spiritual shepherd had spent some hours in explaining the nature of the locomotive.

If, after balancing the probabilities, it seems to him more probable that mind generated matter than that matter produced mind, or if he wonders with Prof. Tyndall whether there is not some infinite Mind capable of understanding the universe, or if the universe is not great enough for him, if he wants something greater than this world and humanity to love and worship and lean on, then the agnostic will say, I think it was designed, but I do not know that it was.

On the other hand, he might say this. Only carry the design argument back far enough, and you come to something that was not designed, or else your series is infinite. Why not stop with matter and say (also with Prof. Tyndall) that it carries within itself the form and potency of all life. Many other considerations, too abstruse to be popular, induce him to say, gravely and soberly and without intending disrespect to anybody: I see what appears to me to be a self-working machine. I do not think there is any horse inside of it. I do not affirm that there is not, but it does not seem to me that there is.

It may not be out of place here to note the true province of science. Science proper is the observing, knowing, and recording of the operations of Nature. The scientific methods of studying phenomena do not apply to finding out the origin of matter. By observing nature, science may show and in a great measure does show that matter does possess the form and potency of all life, and how that life has been developed; but why it possesses that form and power cannot be shown by the experimental methods of science, because it is with existence and not origin that science has to do. But just here where the orthodox says, I know, the scientific agnostic says, I do not know.

As it is with respect to origin, so it is in regard to supernatural interference with the order of nature.

Or, rather, we might say that, while science may not absolutely prove that there *cannot* be such interference, it proves that there *is* not. Science, which is the result of a long-continued observance of natural facts, does not furnish the least evidence that there has ever been any interference or break in the course of events. All proceeds by unvarying natural law. But it may be asked, Whence the law? The agnostic replies that, as the groundwork of existence must be eternal, these laws are part and parcel of that groundwork, and, further, that instead of being separate entities are the different modes in which nature acts. What the agnostic knows is nature and its actions. If there is anything which is not nature, it is unknown to him.

These theoretical ideas of course influence practical life. Perhaps the first result of agnosticism is that mere belief, disbelief, or neutrality in respect to unproved ideas, is in no sense a crime or disgrace. *Dubitatio non crimen est.* It is conduct and motive that should be judged.

Those who lead a moral life do so mainly through one of two motives. They either obey supposed supernatural commands or they strive to do right because the principles of right conduct can be and are discovered in the nature of things and the needs of life. The latter is the agnostic. Also, all rationalists get their authority for morals from the same source. So far from knowing nothing, he believes in knowing everything that can be known. He bases his conduct on what he does know. Still less does he attempt to regulate the conduct of others by what can only be matter of opinion.

The agnostic lives in this world here and now, and aims to live by what is known. He may not believe in a future life, but he does not dogmatically say that there is not and cannot be one. If he believes in it at all, he probably hopes that there is some law in nature by which consciousness and matter are carried over together. But, doing as well as he can in this life, he has no fears for the next, if such there be.

From individual right conduct or ethics, we come to combined or political conduct in the formation of the State. As the function of the State is in a measure to control its members, if we want freedom and not tyranny, great care should be taken in regard to the basis of authority. In past times, and even to this day in this country, the basis of authority was and is thought to be the doctrines of the Church. We are told that this is a Christian country, and there is a society whose object is to introduce church dogmas into the Constitution.

Here, the principles of the agnostic and of all liberal thinkers give rise to secularism or the complete separation of Church and State.

The fact that many of the people are Christians in belief does not make this a Christian country in the sense of giving Christians the right to enforce their opinions by legal enactment. The individual has a perfect right to regulate his conduct by supposed supernatural commands, so long as he does not interfere with the rights of others thereby. But, whenever and however church doctrines which are believed in by only a part of the people are forcibly made the rule of conduct for the whole people, to that extent does tyranny reign.

The supposition that the majority believes them, and that the majority has the right to go behind human experience, thereby claiming a source of authority which is unproved, is to remove the basis of law from the world of known fact to that of uncertainty. In such cases, the real authority is arbitrary human will. A republic with a majority ruling by church dogmas would be one only in name. By experience as referred to above, we mean the objective facts of life, and not subjective feelings which may or may not be founded in reality.

In the United States, we have chiefly to guard against the revival of partially obsolete laws, and against those political reversions whose tendency is to retrograde toward an inferior type of statesmanship by putting church dogmas into the Constitution. There has lately been a case in point. In Pennsylvania, the testimony of a witness was admitted in court. But, because the witness admitted that he "did not believe in God as commonly understood by the people," Judge Briggs ordered a new trial. The attempted revival of the Sunday laws is another case of reversion to the old Puritan type.

In England, the secularists, led by Mr. G. J. Holyoake and others, have plenty of practical work.

They see that the condition of the people is far from perfect, and that the nobility with their vast landed estates, combining with the powers of Church and State, have grown up a powerful trio together. They believe in the complete separation of Church and State, and in applying the facts of the here and now to government as to private life. They are not wild anarchists, but believe that no government is too sacred to remain unmodified, until it fulfils the end for which it was made,—the welfare of the great mass of the people. The State idea of the agnostic may be thus expressed:—

"By the human mind alone
States are made; and States decay
When, the transient shell outgrown,
Freedom marches on her way."

An able liberal writer in defence of modern thought, in *Popular Science Monthly* for April, 1884, objects to the term "agnostic," as a general name for Liberals. The main objection is that the word defines our belief in terms of negation instead of affirmation. The criticism is good; but still, as it is well-nigh impossible to find any name which will accurately describe both the positive and negative belief of all Liberals, it answers very well to denote a certain mode of thought. The term was first used to denote the attitude of certain thinkers toward some questions which are beyond experience,—questions which the mind can raise, but cannot positively prove either way. Prof. Huxley himself says (as quoted in *Index* of Dec. 20, 1883): "Some twenty years ago or thereabouts, I invented the word 'agnostic' to denote people who, like myself, confess themselves to be hopelessly ignorant concerning a variety of matters about which metaphysicians and theologians, both orthodox and heterodox, dogmatize with the utmost confidence. Agnosticism simply means that a man shall not say he knows or believes that which he has no grounds for professing to know or believe. Agnosticism simply says that we know nothing of what may be beyond phenomena."

It is plain that the term "agnostic" refers to positive belief and practical conduct by implication. It leads to the separation of Church and State on the plain principle that no person has the right to regulate another's conduct on "grounds" which lie "beyond phenomena" or human experience.

JOSEPH EYLES PECK.

ANOTHER WORD FROM OLIVER JOHNSON.

MR. B. F. UNDERWOOD:

My dear Sir,—Permit me to thank you for publishing what Mr. Garrison wrote on the fly-leaf of a Bible which he presented to his son, William Lloyd Garrison, Jr., in 1875. If the inscription had been known to me, I should have been swift to quote it in my sketch of his life, and also in reply to the charge of the *Christian Union*,—namely, that the Garrisonians "abandoned the Bible" on account of its teachings in respect to slavery, and "set themselves at work to abolish Christianity with one hand and slavery with the other." Of all the quotations I have made from Mr. Garrison, not one would have served my purpose better than this. It embodies the identical view of the Bible in which all my quotations originated, and which he held from about 1841 to the day of his death, as I am able to testify from personal knowledge. Indeed, as early as 1836 he ceased to regard or to speak of the Bible as "the word of God," but he did not therefore "abandon" it. On the contrary, he clung to it, if possible, more tenaciously than before, his "reason and conscience" pronouncing it "deserving of the highest consideration for its incomparable truths, solemn warnings, and precious promises." Or, as he said in 1863, "I have never refrained from making use of it as a mighty weapon to battle down slavery."

You speak of my citations as made from Mr. Garrison's "early writings," meaning, as I understand you, that they were written before his departure from Orthodoxy. This seems to imply a purpose on my part to conceal his change of views, than which nothing could be more unjust. Every one of my quotations represented the period subsequent to his open rejection of the doctrine that the Bible is "the word of God." Moreover, I took the latest expressions that I could find at the moment, intending to represent his latest view of the subject. There is a perfect harmony, moreover, between those quotations and the one that you present from the fly-leaf

of his son's Bible; and, from my knowledge of his sentiments from 1841 to the day of his death, I am prepared to say that his views of the Bible at the former date were exactly the same as at the later.

Mr. La Roy Sunderland thinks Mr. Garrison had no faith in the Bible as a "supernal" or "supernatural" revelation. Who says he had? Certainly, I have made no such affirmation. Again, Mr. Sunderland says, Mr. Garrison "was not at the close of his life a Christian." According to orthodox creeds, he certainly was not; but, according to a better and truer definition, he was one of the grandest Christians that ever lived. So that he was able to say, with profound sincerity, in 1851, years after he had discarded the doctrine of the infallible inspiration of the Bible: "I am a Christian: why do you represent me as an infidel? I am a lover of Christian institutions: why do you accuse me of seeking their overthrow?" I was far more intimate with him than Mr. Sunderland was, and I know that he regarded himself as a disciple and follower of Jesus in the later years of his life. A more profoundly religious man, a firmer believer in God and a future life, I have never known. Mr. Sunderland's intimation that my quotations from Garrison are only such as might be made from Horace Seaver, Eliza Wright, and other avowed infidels, and that they were made "to serve a purpose," is an imputation that surprises me. It is most uncandid and unjust.

It is very true that Wendell Phillips, in his address at Mr. Garrison's funeral, said nothing as to any faith he (Mr. Garrison) had in "mysticism." But he said this, which is far better:—

"Believing at the outset that America could not be as corrupt as she seemed, he waits at the door of the churches, importunes leading clergymen, begs for a voice from the sanctuary, a consecrated protest from the pulpit. To his utter amazement, he learns, by thus probing it, that the Church will give him no help, but, on the contrary, surges into the movement in opposition. Serene, though astounded by the unexpected revelation, he simply turns his footsteps, and announces that 'a Christianity which keeps peace with the oppressor is no Christianity,' and goes on his way to supplant the religious element which the Church had allied with sin by a deeper religious faith. Yes, he sets himself to work, this stripling with his sling confronting the giant in complete steel, this solitary evangelist, to make Christians of twenty millions of people."

These words of Phillips are a correct representation of Garrison's attitude and spirit from first to last. He never ceased to regard the anti-slavery movement as in the truest sense of the words a religious and Christian enterprise. He never saw a day when he did not regard the epithet "infidel," which a pro-slavery church hurled at his head, as opprobrious and false.

OLIVER JOHNSON.

NEW YORK, Aug. 31, 1884.

[We had no intention, in the editorial paragraph above referred to, of charging Mr. Johnson with conscious unfairness, even by implication. He is doubtless correct in claiming that Mr. Garrison did not "abandon" the Bible. What he abandoned was the belief in which he was educated that the Bible is a special revelation from God, attested by miracles, to be accepted as authoritative because of its origin. This belief, and not the Bible itself, is what Hume, Volney, and Paine abandoned, what Strauss and Renan abandoned, what Kneeland, Frances Wright, Judge Herrtell, Judge Hurlburt, George Jacob Holyoake, Theodore Parker, Ralph Waldo Emerson, Elizabeth Cady Stanton, Marius Robinson, Ernestine L. Rose, Henry C. Wright, Parker Pillsbury, Eliza Wright, Frederick Douglass, and C. K. Whipple abandoned. If respect for the character of Jesus as a human teacher and reformer, and a high estimate of the moral worth of portions of the Bible considered as a collection of ancient writings, human in their origin and nature, and therefore marked by many errors, make one a Christian, then Mr. Garrison was undoubtedly a Christian, as was also Thomas Paine, who made use of the Bible as a "mighty weapon" in attacking hereditary monarchy and urging American independence, expressed admiration for the character of Jesus and the morality he taught, and for portions of the Old Testament, and who was, too, like Mr. Garrison, a devout believer in God and in a future state. But if belief in the Bible or any portion

of it as a work of superhuman origin and of divine authority, because communicated from God to man in a miraculous or exceptional manner, together with belief that Jesus was more than a man, and a saviour in a sense in which a man cannot be a saviour, constitute one a Christian, then Mr. Garrison, during the latter part of his life, was not a Christian. He was not a Christian in the sense in which this word is commonly understood by the great mass of Catholic and Protestant Christians. He was an "infidel" in the sense in which that word is now often used by Christians in referring to those who do not believe in Christ as a supernatural being, and in the Bible as a series of divinely inspired and authoritative communications to man. He was not an "infidel," if by that word is meant one who is unfaithful to his convictions, or who is so ignorant as not to be able to appreciate the excellences of the Bible, so unfair as to be unwilling to acknowledge them, or so undeveloped morally as to wish to "abolish" any moral truth expressed in the Bible or in any other book. What Mr. Johnson has to say of Mr. Garrison in his way is perhaps substantially the same in meaning that we affirm in these remarks.—B. F. U.]

MORMONISM.

Editors of The Index:—

Rather late has *The Index* of May been presented to me; but I shall, nevertheless, express myself concerning an article called "Gentile Testimony to Mormon Worth." The writer quotes Bishop D. S. Tuttle's words on the subject thus: "I know the people of the East have judged them unjustly. We are accustomed to look on them as either a licentious, arrogant, or rebellious mob, bent only on defying the United States government. This is not so."

I was connected with Mormonism for about ten years, and spent nearly half of that time in Utah, and profess to know the system very well. I have no ill feelings against the Mormons as a people more than I have against the people of any other denomination. But, for the sake of truth, I must testify contrary to the statement above. I know of no people, not even in monarchical Europe, who are defying and undermining the United States government as much as the Mormons. John Kimball writes, "What the evidence of apostates is worth history has long ago told us." I am an apostate to Mormonism; and, as long as I live, shall I continue to apostatize from any snare or trap that cunning men possibly might get me into, and shall not at all hesitate to give my testimony on Mormonism and the Mormon priesthood, who are no less cunning than the most crafty Jesuit, who are no less despotic, cruel, and licentious than David and Solomon of the Jewish dispensation. In Europe, the Mormon missionaries tell the ignorant and fanatical people that God himself has been down on this earth speaking to their prophet, that holy angels daily communicate with the saints,—the Mormons,—which stories take like hot cake. As the case was with myself, so with others. As children, we are forced to study Bible stories, have to learn them by heart mechanically. At the age of fourteen years, the school is left; and children of poor parents are left to themselves too, as a prey for cunning Mormons or others that may come along. Only sixteen years old I became a Mormon, and was happy in the belief that God was again speaking to his children on earth as in olden days; but can you imagine my disappointment, after a fifty-six days' voyage in a sailing vessel across the Atlantic, a two weeks' ride on cattle cars through the Eastern States (when no trains were ready to transport us, we had to camp here and there until one came along), and a seven weeks' journey on foot across the plains, and arriving at Salt Lake City at last, toiling hard to get bread and molasses for me and my wife to live on; and then one fine day I was sitting in the tabernacle listening to Brigham Young, the prophet, who spoke thus: "There was a time when a great many Gentile preachers came through our country. One of them who called on me said, 'Do you have revelations, Mr. Young?' 'Yes,' said I: 'I have them every day.'" Continuing his discourse to the congregation, he said further: "You reveal to me, and I to you. We are revelations to each other. The best revelation I ever have had is good sound sense!" This last sentence knocked Mormonism out of me. The man spoke a truth which condemned himself and his own system.

Hence I became an apostate; and, according to Mr. John Kimball, my evidence is not worth much.

A short time before listening to this sermon on revelations, I was initiated in the secrets of Mormonism,—got my endowments,—believing that the prophets, whom God thus honored with frequent visits, could endow me with gifts that I did not already possess; but I found out, after the priesthood had told me that I should be a god on some distant orb after the resurrection, that the so-called endowment consisted mostly in swearing obedience to the Mormon priesthood to *obey them in all things*, and promising under oath again and again that I should willingly let my throat be cut from ear to ear, my breast be cut open so that the heart could be taken out, if I neglected to revenge myself on this damnable government which had persecuted the saints, and shed the blood of the prophet Joseph Smith; and, if I could not myself show revenge on this government, then to teach it to my children on my death-bed. From 7 o'clock A.M. till 3 P.M., the time was mainly occupied in swearing obedience to the Mormon Church and its priesthood, and defiance to this government which God himself in a very short time would send to hell.

If a thousand men should get up and bear testimony to "Mormon worth," my testimony is that the Mormon priesthood is a band of bitter enemies to the United States government, and the Mormon system a black and bloody spot on the pages of our history.

LOS ANGELES, CAL.

CHARLES MICHELSEN.

THE METAPHYSICAL EGO.

Editors of The Index:—

Mr. Gill claims that his "Simplicity of the Ego" has been erroneously described. There is but one proper meaning to the term "ego," and that is the sense of identity of our self-consciousness. The subject for which this sense of "I" stands, according to Mr. Gill, embraces all things and all reality. But here arises a difficulty. The absolute condition of this I sense requires that there should be *something* in existence that is not I, as a prerequisite condition. How, then, can "I" include and embrace the all, the whole of things, when the not I is the very ground and condition of my sense of I? Hence no *conscious ego* can embrace all reality. The moment it does, it must cease to be ego.

Mr. Gill describes this *ego* as absolutely homogeneous, without parts or particles, its complexity consisting in its qualities and modes. But the great trouble in this case is that no qualities involving modes are conceivable by our minds without divisions, separations, and parts. He speaks of "congeries of qualities, such as extension, weight, expansion, contraction, and power of motion, with affinities and diffinities for various other bodies." These qualities all involve parts, and can have no existence without them, as he has himself shown in the above quotation. There can be no affinity nor diffinity, no attraction nor repulsion, no motion nor weight, without parts and heterogeneity. His "simple homogeneous substance" can have no "complexity of qualities." Mr. Gill says that qualities are identical with force (which I believe), but there can be no such thing as "force" without an opposite force to resist it; and hence force is never single, but always plural. "A simple unitary force" has no existence. Non-recognition of this fact has been the stumbling-block in the way of most modern philosophizing from the scientific standpoint.

The attempt to deduce all things from an absolute ego, which should include the universe, was made by one of the profoundest metaphysical thinkers, Fichte; but he was forced to admit that the ascription of any self-consciousness to this ego was inconceivable. He showed that "the mutual opposition of ego and non-ego, and the limitation of each by the other, is of the very essence of all conscious intelligence. Through this limitation and opposition (the ground of all will and force), both are something; without them, neither qualitative distinction nor intelligence could exist; all would be a pure blank." In an ego that did not involve these opposite processes, "there would be no distinction of subject and object, and consequently no self-consciousness." Without these, the impossibility of distinguishing consciousness from its object, he says, "makes it inexplicable and incomprehensible."

sible." Where the ego is "all in all," it is, "for that very reason, nothing."

The final outcome of all Fichte's philosophizing showed that his absolute ego was no ego at all, and had no right to the name, but was simply a *potential substratum*, out of which issued the divisions and separations—the heterogeneity—which constituted the properties and qualities, the non-egoness and the egoness, on which all conscious experience depends. The attempt to rehabilitate this ego as the sole, original, and all-embracing substratum of things and phenomena, when it proved such a failure under the hands of its great champion, is not likely to become a logical success.

FRANKLIN SMITH.

DEDHAM, MASS.

EGOISM INEVITABLE.

Editors of The Index:—

I wish to suggest that my critics should not judge my philosophy from one article, as each article, except the first, presupposes some things found in previous articles. I will answer those which have not been answered in those previous articles.

Mr. Harry Hoover says, If I am the universe, I am infinite, and asks where is there room for anything else. That the universe is infinite is an assertion without any proof, and in the nature of the case admits of no proof. On the other hand, its finity is susceptible of proof, because it is a mode of the ego, a congeries of conscious states, and as such bears all the marks of limitation. As the universe known to me and of which I speak is comprised within myself and my conscious states, there may be, for ought I know, universes beyond me next to infinite in number and variety; and of these I propose to treat in due time. And then also I shall answer Mr. Hoover's questions on the logic of pre-organic and post-organic existence and memory.

Mr. Hoover allows my statement that "without a perduring permanent there is no possible change, but only successive creations and annihilations"; but he says, "Matter is that perduring permanent." I agree with him entirely on that point, and adopt his assertion heartily. I differ from him in defining matter, *known matter*, the sensible world, as all philosophers of our time define it, as a congeries of subjective states, the ego existing in such modes. No less heartily than my critic do "I accept chemistry, evolution, and spectrum analysis," and several other things of modern science which seem to escape his notice.

Respectfully,

WM. ICKEN GILL.

A WORD REGARDING SOCIALISTS.

Editors of The Index:—

Your issue of August 14 contains an elegant article by Charles Froebel, the son perhaps of childhood's eminent friend, in which, even because of its unquestioned fairness of intention and amiable spirit, I find the more objectionable the ascription rather implied than asserted of equalitary aims to *Socialists* without distinction of school. Whether this view be correct for all *State socialists* or not I care not to discuss. It is certainly not for the school to which I belong,—the Phalansterian,—sleeping perhaps, but vivacious, and which I prophesy will yet flower and fruit upon the crumbling mould with which the social crudities of to-day are manuring the soil of humanity. It is not my purpose to tax the hospitality of *The Index* for a positive exposition of our social conception. Suffice it that the truth of my phalansterian repudiation of social equality, as a monstrosity in nature, is well known to all who choose to know.

M. E. LAZARUS, M.D.

To see what is right and not to do it is want of courage.—*Confucius*.

The plain doctrine of integrity is rarely found purely practised nowadays. It is easy to pick out plain men, geniuses, martyrs; but integrity is rare. The gods approve the depth, and not the tumult of the soul.—*R. W. Emerson*.

WHEN God has a great work for any one to do in the world, he usually gives him a peculiar training for it, and that training is just what no earthly friend would choose for him; and sometimes it is so long continued that there seems to be but little time left for work.—*Anon*.

EVERY subscriber who is in arrears for *The Index* is requested to send the amount due to this office with the least possible delay. We are in especial need of money during these summer months to meet current expenses,—which we shall be abundantly able to do, if our friends will promptly remit the sums they owe us on their subscriptions.

For *The Index*.

IN THE WOODS OF ST. LEON.

Let who will sing of ocean grand,
Give me the woods, the endless shade
Of trees on which no man e'er laid
A ruthless hand.

What peace, what blissful quietude
The rustle of these polished leaves
Around my dreamy spirit weaves
In this green wood!

Why have I fretted so and striven
In populous towns among my kind,
Where men who think they see are blind
And prate of heaven?

Here in this forest breathing spice,
And love-lorn odors, born of flowers
That woo me to their secret bowers,
Is paradise.

The droning of the humbebee,
The sighing of the wind that stirs
These pine-tops and aspiring firs,
Bring joy to me.

Stretched on this knoll of soft brown spines,
Let me life's true elixir drink,
Nor even tax myself to think,
Till day declines.

GEORGE MARTIN.

For *The Index*.

THE ORACLES OF THE OAK.

'Tis glorious to live in an age like this
And dwell in a land like ours,
Where ripen the seeds
Of the loveliest deeds
And the fairest of human flowers.

'Tis glorious to feel in our inmost soul
The wine of a higher life,
Though it bubble up
To the heart's deep cup
Through agony, toll, and strife.

The flowers that bloom in the month of June
Are beautiful things to see,
But the noble forms
That endure the storms
Are dearer than those to me.

The lily may smile and the rose may blush
And the violet cheer our way,
But the oracles spoke
By the stately oak
Have a mightier power than they.

They tell of years that have glided by
Since it lay in the acorn's shell,
A tiny thing
That the elves of spring
Guarded and tended well.

They tell of seasons of light and love,
When birds in its branches sung;
Of summers brief,
When every leaf
Was a musical lisping tongue.

They tell of surly November blasts,
When the Angel of Death swept by;
Of its vernal pride
That in glory died
As calmly as heroes die.

In crimson and gold, each leaf went down
To its grave on the forest floor;
But the stately oak
Stood firm, and spoke
To the winds with an answering roar,

Saying to them in a kingly voice,
"Ye may rob me of beauty's crown,
But in the path
Of your awful wrath
I fling my gauntlet down.

"For I welcome the winds and the wintry storms,
And I gather a strength from each;
And the lay I sing
As I wait for spring,
A lesson to men may teach.

"Oh! would it might reach to the hearts of all
And bid them be strong and true
To the brotherhood
Of the brave and good
Till right shall the wrong subdue."

The lily may smile and the rose may blush
And the violet cheer our way,
But the oracles spoke
By the stately oak
Have a mightier power than they.

BELLE C. BUSH.

BELVIDERE SEMINARY, NEW JERSEY.

BOOK NOTICES.

STEPHEN GROVER CLEVELAND. A Sketch of his Life, to which is appended a Short Account of the Life of Thomas Andrews Hendricks. By Deshler Welch. New York: John W. Lovell Co. Price 20 cts.

This paper-covered campaign book devotes twenty-three chapters and one hundred and seventy-four pages to a sketch of some incidents in the private life of one of the Presidential candidates, and a more extended review of his public services; while about twenty pages are given to a consideration of Mr. Hendricks' political career. "Appendix A" gives the platform of the Democratic party for 1884, "Appendix B" gives the speech of Carl Schurz before the meeting of Independent voters in Brooklyn, N.Y., Aug. 5, 1884, in favor of the election of Cleveland to the Presidency, and "Appendix C" contains the letters of acceptance of their nominations by Gov. Cleveland and Mr. Hendricks. The volume in addition has woodcut portraits of these gentlemen, with pictures of Cleveland's birthplace, etc.; also fac-similes of the handwriting of Schurz and Cleveland.

BLAINE AND LOGAN SONG-BOOK. Cleveland, Ohio: S. Brainard's Sons, publishers. Price 10 cts.

In addition to over a dozen new songs, adapted to old tunes and to the campaign for Blaine and Logan, this little book contains about fifty of the old favorites of war-times, such as "Marching through Georgia," "Tramp, tramp," "Vacant Chair," "America," etc. Accompanying these, rules are given for the organizing of "Blaine and Logan" clubs.

SEVEN HUNDRED ALBUM VERSES. Original and Selected. Compiled by J. S. Ogilvie. New York: J. S. Ogilvie & Co. Price 15 cts.

These selections are varied, and suited to all moods, ages, conditions, and seasons. Many of them are of excellent literary merit, and most of them in good taste.

"MIND," the English quarterly, edited by George Croom Robertson, devoted to Psychology and Philosophy, is by far the best exponent of the most recent thought on these subjects published in the English language; and its columns are filled with the conclusions of the ablest and most advanced thinkers in the realms of psychologic and philosophic inquiry, both in Europe and in this country. It deserves to be better known and more extensively read than it is; and it does not speak well for the intellectual status of the American mind that there is no more demand for so valuable a publication. There has been an increasing interest in the character of its contents from its commencement in 1876; and the recent numbers (for January, April, and July of this year) contain some especially important essays, which cannot fail to

enlist the attention of all unprejudiced inquirers in the sciences of which it treats. In the July number, the first essay, by Mr. Charles Mercier, furnishes a new classification of feelings based on a deeper scientific principle than those heretofore made, and narrowing the chasm between feelings and their external objects by showing the nature of the relations between the two. His illustrations by analogies drawn from external nature are singularly beautiful and striking in their aptness. Dr. Edmund Montgomery, of Hempstead, Texas, whose essays in this review of two and three years ago elicited high praise for their profound penetration into mental and physiological phenomena, has a lengthy essay on "The Object of Knowledge," in which he contrasts the transcendental with what he would term the organic view of life and sentient phenomena. H. Havelock Ellis gives an account of the later views of James Hinton, whose unique philosophic works, especially the later ones, are of much interest and value. Francis Galton gives some introspective observations drawn from his own experiences, and inferences therefrom, on "Free Will." D'Arcy W. Thompson contributes an interesting paper on "The Regeneration of Lost Parts in Animals," as having an important bearing on some recent speculations of the idealistic school of thinkers, in an essay in *Mind* for last January, on "Life and Mechanism," by J. S. Haldane, and in other works. Edmund Gurney has a criticism on some novel ideas advanced in an essay in April *Mind*, by Prof. William James, on "What is an Emotion?" which is very interesting. The other critical essays are upon James Sully's "Outlines of Psychology," by Robert Adamson; "Leibnitz," by W. R. Sorley. "The Objectivity of Truth," by George Stokes, is reviewed by Andrew Seth. The other works reviewed are Miller's Lectures on the "Philosophy of Law," by F. Pollock; and Wundt's Logic, by John Venn. The notices of new books, English and foreign, bearing on subjects akin to the review, are, as usual, very full.

AMONG the extra attractions of the September *Wide Awake* are the narrative poem, "The Little Lion Charmer," by Harriet S. Fleming, and its accompanying beautiful frontispiece engraving by W. T. Smedley; Mrs. Frances A. Humphrey's story of "How Dolly attended the Convention"; the "Old School-Days" of Amanda B. Harris; Lucy Barri's "A Matinee"; "Intimations of Immortality," from Wordsworth; and Mrs. Clara Doty Bates' delightful versification of the fable of "The Fox and the Stork." These, with the many other excellent stories and poems which make up the number, are as usual profusely and handsomely illustrated by the best of artists, which in these days is saying a great deal for the high standard of this excellent magazine for young people.

JAMES KAY APPLEBEE

is open to accept engagements for the delivery of SUNDAY EVENING LECTURES at towns within reach of Boston by Sunday afternoon trains. For terms and subjects, address JAMES KAY APPLEBEE, Boston, Mass.

MRS. EMILY J. F. NEWHALL'S

School for Girls and Young Ladies will reopen Oct. 1, 1884.

As heretofore, its management will be conducted upon the basis of EDUCATION rather than INSTRUCTION. The proper use of English will be made an especial feature of the daily work. Under the direction of John Storer Cobb, LL.D., from London University, this branch will comprise a thorough study of the English language, as well as Latin and mathematics. The illustrated lectures upon the great tone-masters, the use of the lantern, and attendance at the Art Museum, will be continued. For catalogue, address No. 91 Newbury Street, Boston; or apply between 11 and 1, after September 15.

BELVIDERE SEMINARY.

The plan of an Industrial School which was sent by the Misses Bush, of Belvidere Seminary, New Jersey, to the widow of Wendell Phillips, has received her approval and permission to name the institution, when established, the Wendell Phillips Memorial Industrial School.

The plan has also been highly commended by some of the most eminent educators in this country, and active measures are being taken to insure its success.

Its originators respectfully solicit such aid and influence in behalf of their enterprise as the friends of Wendell Phillips may be pleased to offer. They will confer personally or by letter with any one interested in their plan, and will very gratefully receive donations, in large or small amounts, of money, books, stationery, pictures, chemicals and philosophical apparatus, or charts and specimens needed in the study of the Natural Sciences. All parties responding in any way substantially to this call will be considered founders of the institution.

Belvidere, Warren County, N.J.

Monarch Manufacturing Co., 206 State St., CHICAGO, ILL.

THE BEST EQUIPPED RAILROAD IN THE WORLD

Let it be forever remembered that the
Chicago & North-West
RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches**, which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars**, which are models of comfort and elegance; its **Palace Drawing Room Cars**, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that it is the best equipped road in the world.

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, and take none other. All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

GEN'L PASS. AGENT, C. & N.-W. RY
CHICAGO, ILL.

2,000

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quick advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 insertions, . . . 10c. per line.
" 13 " 25 " . . . 8c. " "
" 26 " 51 " . . . 6c. " "
" 52 " " " . . . 5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent. On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

\$500 CASH, FREE!

We offer the above amount of money and **THIRTY-FIVE GOLD WATCHES**, free to the first 148 persons answering the following Bible question: **Where is the word Grandmother found in the Bible?** Mention the Book, Chapter and Verse.
The first person answering this question correctly, on or before October 15th, will receive \$75 cash. If we receive more than one correct answer, the second will receive \$70; the third, \$60; the fourth, \$55; the fifth, \$50; the sixth, \$45; the seventh, \$40; the eighth, \$35; the ninth, \$30; the tenth, \$25; the eleventh, \$20; the twelfth, \$15; the thirteenth, \$10; the fourteenth, \$5. To the next thirty-five correct answers, and one dollar each to the next one hundred people answering it correctly. If you are not first, remember that you may be second or third, so you stand a good chance for a large prize. Each competitor must, in every case, send 20 cents for Sample package **ROYAL TEA** with their answers.

THE PURE, UNADULTERATED, UNCOLORED ROYAL TEA is such as the crowned heads of Europe use. Imported direct. The first time the Royal Tea has ever been introduced in America. A revolution to American tea drinkers. Only Nature's Coloring is used in the Royal Tea. The fresh leaves are dried and prepared in such a way as to retain all their delicate aroma and flavor, together with strength and body. One trial of Royal Tea and you will forever do away with all impure, high colored and poisonous articles. **SPECIAL OFFER!** To introduce this Tea in America we will, for a limited time, (until October 15th,) send (sample box) one half-pound of Royal Tea, prepaid, to any address on receipt of only 50 cents, one pound-box, prepaid, \$1. 50 cents is cheap for sample box Royal Tea so you pay nothing for competing for one of the above prizes. In addition to the other prizes, we offer \$500 more to be divided equally: (\$5 each) to the first one hundred persons sending us the correct answer to the above question and sending \$1 for one-pound sample Royal Tea. The money will be promptly sent to the successful ones. Send one dollar in P. O. order, postal note, or registered letter. Don't wait, but send your answer at once. Postage stamps taken. Full instructions to agents how to make \$10 a day introducing the Royal Tea given with each sample box.

THE BIG CLOCK
IN FRONT OF OUR DINING ROOMS

The Secret of the East;

OR,
The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of medievalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a harmful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—Boston Evening Transcript.

CURRENT TOPICS.

BY B. F. U.

It is stated that the Board of Trustees of the Pennsylvania University are making arrangements for a careful investigation of Spiritualism in compliance with the conditions of the Seybert legacy.

A RADICAL demonstration at Victoria Park, London, last Saturday, was attended by fifty thousand persons. Resolutions were adopted in favor of the franchise bill and of abolishing the House of Lords. Bradlaugh and other speakers made addresses.

THE French divorce laws recently passed are by no means lax; but they have given great offence to the leaders of the Roman Catholic Church, which recognizes no divorce under any circumstances. The fear of the Vatican, which has forwarded a letter on the subject of divorce to the French government, is that civil laws, in opposition to the teachings of the Church, will lessen her authority; and that these divorce laws in particular will induce many Catholics to forsake their religious allegiance in order to obtain the relief which these enactments, sanctioned by the State, afford. Since the Church cannot recognize a divorce, however legal, all Catholics who avail themselves of the French divorce laws will be forced from her communion. Hence, the official letter from the Vatican. *Hinc illae lachrymae.*

THE people of Italy are wild with enthusiasm over the heroism of King Humbert, who, in visiting the cholera hospital of Naples and other cities, and scattering money and kind words right and left, has contributed largely in preventing a panic, and made himself, as one despatch says, "the most welcome royal picture Europe has looked on for years." The Catholic and Democratic papers join in bestowing upon him the highest praise for the course he has pursued. Humbert's visit to Naples recalls that of his father, Victor Emanuel, who, when Garibaldi had driven out Bomba and the Bourbons, found many of his army attacked by cholera, went among the sick, where his presence and encouragement did much to stem the course

of the epidemic by restoring confidence to the faint-hearted or panic-stricken.

SAYS an exchange: "It appears from a correspondent of the Newark *Daily Advertiser* that there is an Agnostic town, New Ulm, in Minnesota; and the Agnostics there in some particulars are a shining example to Christians. Here is a town of thirty-five hundred population, and with but a Marshal to keep the peace; and yet there has not been a street fight in New Ulm in fifteen years. Mr. J. C. Rudolph, one of the shining lights there, says that occasionally a young fellow from the country comes to town and takes more beer than he ought; but one of the old inhabitants will go to him and tell him that New Ulm wants no noise in the streets. And, added Mr. Rudolph, one of our citizens, looking squarely in the man's face, generally brings him to his senses. The people of the city and country are kept in their senses in a city that has four breweries and thirty beer saloons, without powder and shot and iron bars. The Agnostics, too, set a good example in the charities."

THE Ottawa *Free Press*, which generally discusses the political affairs of the United States fairly and intelligently, says: "In November next, 10,418,000 electors in the United States will elect a king, to whom they delegate for four years the right of administering public affairs by cabinet ministers, not one of whom is elected by the people. Under the British system, we have a king or queen nominally for life, but really at the pleasure of Parliament, all of whose advisers must be members of Parliament, and the majority members of the popular chamber. They can be made or unmade at the will of the people as expressed through their representatives in Parliament. Under the American system, the president or king is for four years almost an autocrat; but, under the British system, the electors hold the check rein directly upon the majority of the cabinet ministers. The fact is that the Americans, a century since, started with a measure of republicanism, which has never expanded; while the British people were oppressed by a monarchy which has progressed into republicanism."

SEVERAL Swiss cantons have petitioned for legislation against the liquor traffic. The petitioners give statistics to show that the consumption of alcohol in Switzerland is greater per head than in any other European country, that the consumption of brandy is increasing, and that, parallel with this, is an increase of mental diseases and of misery and want. The Federal Council declines to recommend restrictive legislation against the sale of liquor, which, it says, represents an annual return of 150,000,000 francs. To the surprise of the country, the Council, in its report, speaks in defence and encouragement of the practice of social drinking. The following is among the statements contained in one clause of the report: "The practice of social drinking of spirituous liquors brings a cheerful temper into society, effaces the traces of daily labor, opens the heart to other impressions, and is intimately associated with the

development of public life. The public house fosters intellectual activity, and is a remedy against misanthropy, egotism, vanity, narrowness of ideas, and extravagance of imagination."

THE terrible cholera scourge at Naples, which is carrying off its victims with almost incredible rapidity, is the occasion of some strange freaks of superstition. A despatch says that the gambling spirit has received a great impetus; that, one day, fifty-two mothers rushed to a school and took away fifty-one children, and everybody played these numbers in the government lottery and all won; that, on another day, the numbers three, four, and twenty-two corresponded to current events in the streets, and were played extensively, and all three came out. The result was a loss of two million francs by the government, a general debauch of the lucky inhabitants, and a violent increase of the cholera. "There has been," says the London *Times*, "an enormous revival of religious sentiment in Naples. The street shrines, which were walled up by Garibaldi in 1860, have all been opened, and the whitewash scraped off the holy pictures. Crowds, wild with joy, watch the work, and hail with shouts each restoration. The processions are continued in the poorer streets, chiefly by women. The churches are thronged, and street altars are erected. The police do not dare to interfere with the altars. Most extravagant stories of miracle work are received with credulity by the populace."

IN his paper read before the Science Association last week, Prof. Bell opposed the existing arrangements concerning the deaf and dumb in this country, which make them a separate class, and especially objected to their continual marriage with one another, which, he said, would ultimately evolve a race of deaf-mutes. He had found in one family ninety deaf-mutes in four generations connected by blood or marriage. Of deaf-mutes, forty-five per cent. marry, and with each succeeding generation the tendency to the infirmity increases. Of two thousand one hundred and six pupils in the National Deaf-Mute Asylum at Hartford, thirty-three per cent. had relatives afflicted in the same way. Of the forty-five per cent. of deaf-mutes who marry, eighty per cent. marry deaf-mutes. To remedy the evil, he said, we must separate the deaf-mute as much as possible from other deaf-mutes during the time he or she is being educated. They should not be sent to asylums. They should be taught English instead of the sign language. They should associate during play-hours with children not similarly afflicted; and they should be taught here, as they are in Germany, to enunciate artificially. Deaf-mutism, the speaker declared, is increasing here at an alarming rate. There is now one deaf-mute for every fifteen hundred people in the country. If the State were anxious to perpetuate a deaf-and-dumb variety of our race, it would not treat the deaf and dumb otherwise than it does. The local, State, and national associations of deaf-mutes, Prof. Bell said, bring the young people of both sexes together, and lead to marriages between them.

THE NATIONAL UNITARIAN CONFERENCE:

Will It Take down the Bars?

The "National Conference of Unitarian and other Christian Churches"—so the uselessly cumbersome name still runs—is to meet at Saratoga next week. The published programme of the sessions does not promise an occasion of very exciting interest. So far as advertised, there is no topic of especial significance to the public to come up for consideration, excepting the report of the committee on the proposed Wade School at Cleveland. We await the report of that committee and the action of the Conference upon it with great interest.

But Unitarian meetings are not always run according to printed schedule, and opportunity may be allowed at Saratoga for considering other questions than those announced. We should be glad to think that the Constitution of the Conference would this year be thoroughly overhauled, that its theological preamble would be abolished, and the curious mosaic of articles which has been added to explain it (and to explain it away) would be cut off, and all necessity of further addenda of the same sort be radically obviated. It is, perhaps, too much to expect that this step will be taken at this meeting. But it is not too much to urge it; and we hope that those who are dissatisfied with the theological character of the Constitution will not let the occasion pass without, in some form, renewing their protest against it. It is probable that Mr. Savage—whom we understood to propose the new article, which was adopted at the last Conference, as a provisional platform for giving him standing-room in the organization, from which he and his radical friends could afterward work for a thorough reform of the Constitution—will hardly think it becoming in him to begin his assault so soon. The very readiness with which the conservative section of the Conference accepted his article makes it all the more difficult for him to declare battle against them.

Nevertheless, it seems to us very important that the radicals in the Conference should this year make it known that they do not acquiesce in the new tenth article to the Constitution as a final settlement. If they can do no more, they might at least unite in presenting to the Conference a brief, strong, and earnest statement of what changes, in their view, should be made in the Constitution, in order to make it a perfectly just and fair instrument, representing and guarding impartially the equal rights of all members. And let them add that, though they may not press the case this year, on that ground will inevitably come a future demand; that nothing is settled permanently which is not settled justly; and that it is an act of injustice for a portion of the Conference, whether a majority or a minority, to persist in keeping their theological views in the Constitution when another portion of the Conference, equally invited and enrolled as members according to the same Constitution, cannot conscientiously assent to those views, and, if they enter the Conference at all, can only do so under protest against a prominent feature of the very instrument by which they are organized. Thus much, it seems to us, the radicals who do not believe the theology of the Constitution, and yet take part in the Conference, are bound to do for the sake of intellectual and moral consistency.

Whether the radicals of the Conference will take this or any step in the matter, we, of course, do not know. We are an outsider, belonging to the small party of those who decided after the

battle was fought and lost on the preamble itself that the most consistent and effective protest could be made by staying away from the Conference; and, perhaps, therefore our right to express any opinion as to what should be done by those who remain in that body may be disputed. We have, however, never lost our interest in the Conference nor in many of the subjects it discusses; and, seeing the progress which Unitarianism is making toward positions which we have advocated in the organization and work of the Free Religious Association, we have in latter years not been without some hope that the Conference would yet remove entirely the theological bars which exclude us from its fellowship.

Perhaps the next and final move for theologically purging the Constitution of the Conference may come from the conservatives of the body. Such a step would not greatly surprise us. We have reason to believe that some of them are beginning to see the great injustice which the Constitution now is to many of their brethren. Since the last meeting of the Conference, the Memoir of Dr. Dewey has been published, revealing by his letters that he took the ground that the original position of the minority in protesting against the theological preamble should have been conceded on the ground of common fairness and equality. This was the position which Unitarianism, to be consistent with its professions of intellectual liberty, was bound to take. And the opinion of so eminent and sound a Unitarian as Dr. Dewey can but have weight in the denomination. Others, again, are sagacious enough to see that half measures, supplementary and explanatory articles, will not permanently satisfy the protesting party; that the disturbing question will not be removed and peace be established until all theological dogma be exorcised from the Constitution. There is, too, a growing dissatisfaction with the curious intellectual and literary medley which the Constitution, with its various amendments, now presents. For these and other reasons, it would not be surprising if the conservatives should now move in the matter. It would be a gracious act for them thus to make the proffer of relief to the consciences of their brethren. Thoroughly done, extending even to amending the awkward name of the Conference, it would knit the ties of fellowship in a lasting bond.

Will our Unitarian friends forgive us, if we add a homely illustration which has sometimes occurred to us, as we have thought of the present uncertain aspect of the Constitution of their Conference and of the various contests over it, in their struggles to make it express the mental attitude of their body concerning Christ and the Christian religion? There is a familiar children's play, which is also sometimes resorted to among mature persons in a despairing parlor circle of summer boarders, in which a leader, suiting his own action to his word, directs the company thus: Simon says, Thumbs up; Simon says, Thumbs down; Simon says, Wiggle-waggle. Which he is going to say the company never know, and they have difficulty accordingly in adjusting their thumb-movements to his swiftly recurring orders. Will the Unitarian Conference at Saratoga next week, with regard to the long-disputed theological phrases of its Constitution, say, "Thumbs up," or "Thumbs down," or (as two years ago) "Wiggle-waggle"? Our hope is that they will stop the child's play, and declare evermore for a frank, open hand, adjunct of a free mind, innocent of all mere sectarian imitation or manipulation, and ready to clasp fellowship with any earnest worker in any earnest work.

WM. J. POTTER.

THE SCIENCE MEETINGS IN MONTREAL AND PHILADELPHIA.

The idea of the British Association for the Advancement of Science was a happy one,—the formation of a body interested in science, popular in its character, easily joined by all who wish to do so, and migrating yearly from city to city and town to town. Its open parliament has given the ablest students of nature in Great Britain an opportunity to publish their researches, with all the advantages of face-to-face free and competent discussion. Nor has it denied the same privilege to unknown men of merit. At the Association meetings, friendships are formed and cemented, which but for these gatherings would never do their work of cheer and stimulus. The suggestions of thoughtful men thrown out in conference often prove to their hearers the seed of fruitful experiment and research. The specialist brings his fact to the common storehouse, and the philosopher and generalizer enounce the laws and principles according to which exploration may most profitably be extended. An entomologist or chemist finds that many worlds exist besides the one in which he toils, and grows to respect men in other fields, animated by his own care, patience, and faithfulness in the search for truth.

The American Association, based on the lines of its British prototype, has done similar good work. Its independence of popular prejudice is, however, less striking. Evolution was proclaimed as the key to the interpretation of nature by the British Association years before its American offspring dared the statement. In the matter too of cur-tailing camp-following, we have much to learn from our kin beyond sea. Our British brethren suffer from the difficulty presented by keeping a popular organization free from the parasites who are attracted by its picnic elements. Yet they exercise a watchfulness in this direction which we might well copy. Many of the best students and thinkers among us are repelled from our Association by the rabble who gather at the receptions, excursions, and the entertainments provided gratis by an unwise hospitality. A rigid contraction in this department would do great good. So also, perhaps, would the requirement of some original thesis, experiment, or research to qualify for such full membership as might entitle a student to the privileges of the Association year by year.

Crossing the Atlantic to hold a meeting of the British Association in Montreal marks a new era in science. Steam has bridged the ocean which hitherto divided the two halves of a great people. Montreal was visited during its meeting by many eminent American scientists, and the visit was returned by a goodly company of their British and Canadian brethren, who went to Philadelphia. At Montreal there was disappointment at the absence of Sir John Lubbock and Sir John Dalton Hooker, who were to have attended; but a galaxy of scientific stars were there to interest and instruct vast audiences. Among these may be named Sir William Thomson and W. H. Preece, the two first electricians living; Sir Frederick Bramwell, the projector of the Dover-Calais tunnel and the Manchester and Liverpool canal; George H. Darwin, as eminent as his father was at his age, but in mathematics instead of natural history; Dr. E. B. Tylor, first of living anthropologists and author of *Primitive Culture*; Sir Richard Temple, heir to a famous name, great as an administrator in India, and an authority in all matters of state, economics, and finance; Lord Rayleigh, who has chosen the better part of science to the idle splendors of a peerage, and instead of dawdling about London devotes himself to

original research and teaching in Cambridge University.

Besides these were John Couch Adams, who directed observers where they should find Neptune from calculations worked out from the perturbations noted in the orbits of its neighboring planets; Prof. Geikie, foremost of British geologists; Sir Charles Roscoe, perhaps the leading mind among English chemists; James Glaisher, famous both as astronomer and aeronaut; and Capt. Bedford Pim, arctic explorer, and the man of all others who brought the Association across the ocean, and made its meeting in Montreal a success.

Perhaps some readers of *The Index* will ask, Were there no distinctively radical thinkers present to show how inimical is science in result and drift to the superstitions still so well entrenched in America? Prof. Felix Adler, of New York, was perhaps the only one present who might have satisfied the demand here supposed to be made. On the Sunday afternoon of science week, he filled the large hall where the public meetings of the Association were held to hear a masterly exposition of the ethical movement which he has established, and which he conducts with so rare a union of the enthusiasm of an idealist and the common sense of a man of business. His discourse was an appeal to conscience, and did not deal with the oft-fought battle of science against the theologies. Far more potent than any such attack was the atmosphere of the Association and the fundamental principles on which its work moves forward. Every student and experimenter present thinks and works in the faith that nature is inviolable, that law reigns, and that neither miracle nor supernatural interference shall perturb the results of observation and careful deduction. The economists who discussed the problems of property, the betterment and relief of man's estate, did not take account of any other than natural forces and human motives. These, perhaps implicitly by many of the Association, stand for manifestations of the divine mind and intent. No one for a moment, however, mentioned any Force or Design which science is not privileged to investigate, nor the necessity for believing anything not to be understood. The faith which seemed to animate the meeting was the faith that happiness is the aim of life, knowledge its means, and morality its price. All this is vastly more destructive of the baneful elements of theology than direct assaults, which may not always discriminate between the wheat and chaff of organized religions. How can dogma and assumptions of infallible finalities survive the spectacle of conceptions of truth presented modestly for correction, comparison, and indefinite enlargement,—this, too, by the foremost living authorities in their several departments? How striking, too, the rigid truthfulness of men who, basing their life-work on the great finder thought that development is the law of life, still openly declare the gaps where evidence for their faith is lacking, and proclaim, for example, that spontaneous generation is as yet unknown to their observation! The disinterestedness, too, of the students of pure science is not without its beneficial effect on their entertainers. No merchant prince can be the host of a man devoted to original research and patient abstract thought without being in some measure aroused to the responsibilities of wealth in endowing the work which has no direct money value, but an immeasurable indirect value to mankind. Little did the old Greek geometers think, when they studied ellipse and parabola, that they were founding sciences of astronomy, navigation, and engineering! But so it was; and the students of to-day who are endeavoring to map out molecular paths, and discern the genesis of life at the limits

of microscopic observation, are doubtless building better than they know structures for human use and elevation, defences against the evils which still beset mankind.

G. I.

MONTREAL, Sept. 11, 1884.

PYTHAGORAS.

Occasionally, it is salutary to revert to the dawn of civilization, to go back far enough to find ourselves under that "distant Grecian sky" of which Schiller speaks, which overarched the island-cradles of primitive reflective thought, art, poetry, and rational inquiry and curiosity as to the phenomenal world, such as Samos, Teos, Chios, and the other members of the famous old Panionian confederacy in the eastern Mediterranean. There the world of the West first became reflective and philosophic as well as poetical. There the blind old man of Scio's rocky isle was beguiled by immortal dreams; and there the Samian sage, Pythagoras, had his birth, so that the region mentioned seems to be overhung by the eternal morning-red of primitive genius. Pythagoras looms vaguely from the remote Ionian past as a primitive astronomer, mystic, ascetic, social reformer, and far-travelled sage and thoughtful spectator of, rather than participant in, the Olympic games of life. He is also represented as having been a charlatan and miracle-monger. But such a reputation invariably attached itself in primitive times to all men of superior wisdom, knowledge, and insight, as all such were supposed by their barbaric contemporaries to exercise a magical power over nature,—Pythagoras flourished some twenty-five centuries ago. He first called the universe Kosmos, implying by the name that *natura rerum* was throughout a law-regulated system. In thus designating nature, he was the forerunner of the science of to-day, and of Humboldt, the grandest summarizer of the results of modern scientific research. He also is said to have invented the words "philosopher" and "philosophy,"—words which properly and modestly indicate the limitations of the human intellect in the presence of the mystery of existence, characterizing the efforts of that intellect to penetrate to the reality of things as rather indicating a love of truth and pursuit of it than an ability to attain to it. Pythagoras and his disciples were devotees of the Apolline worship,—the most beautiful, significant, and widely influential branch of Grecian polytheism. Apollo was in a special manner the presiding deity of Grecian civilization and Grecian genius. He was the god of light and poesy and rational forecast,—the deity of that oracle religion, whose priesthood professed to be able to foretell the events which constituted the historic evolution of primitive mankind. "In the entire religious life of the Greeks," says Ernst Curtius, the latest and best of the historians of primitive Greece, "no great epoch is more clearly marked than the first appearance of Apollo. It resembles a second day of creation in the history of their spiritual development. In all the Greek towns, from which a rich treasure of myths has been handed down to us, there attaches itself to his blessed arrival a lofty revolution of the social order of things, a higher development of life. The roads are levelled, the quarters of the towns are marked out, the castles are encircled with walls, things sacred are separated from things profane, the sound of song and stringed instruments is heard, men approach nearer to the gods; Zeus speaks to them through his prophets; and guilt, even the guilt of blood, no longer rests inexpiable like a leaden weight on ill-fated man,—no longer drags itself as a curse from generation to generation. . . . The dread power of the Erinnyes (the Furies, the avengers of the

outraged conscience) is broken; and a world of higher harmony, a reign of grace, is founded. As the Pythian god Apollo sits enthroned at Delphi, the god of light and right." In spring, Apollo was fabled to return to the steep of Delphi, his oracular See, in a car drawn by swans from the mysterious land of the Hyperboreans, who knew not old age or death, according to the myth concerning them as handed down to us by Pindar. At the approach of the Delphic deity, the Grecian olive groves, meadows, and thickets burst into song; and so did the disciples of Pythagoras, who were wont to sit in a group, while one of their number sang to the music of a harp what they called their vernal psalm, or spring carol, in celebration of the advent of the god of "sweetness and light." "The music of the spheres" is a phrase said to have been originated by Pythagoras, who inferred from the fitness and proportion which everywhere reigns in nature that the result of the cosmic movements must be a perpetual melody, but audible to soul rather than sense. Longfellow has a fine allusion to Pythagoras, as the inventor of the seven-stringed lyre:—

"I saw with its celestial keys,
Its chords of air, its frets of fire,
The Samian's great Eolian lyre
Rising through all its seven-fold bars
From earth unto the fixed stars."

As has been said, Pythagoras was an Ionian Greek, which was the democratic, progressive, rational, artistic, commercial branch of the Hellenic family. Of this branch, Humboldt says in the second volume of his *Kosmos* that it was remarkable for "a mobility which, under the stimulus of an eager spirit of inquiry and an ever-wakeful activity, was alike manifested in a faculty for mental contemplation and sensuous perception. Directed by the objective bent of their mode of thought and adorned by a luxuriance of fancy in poetry and art, the Ionians scattered the beneficent germs of progressive cultivation wherever they established their colonies in other countries." (Humboldt's *Kosmos*, Vol. II.) The first historic explorer of the western Mediterranean Sea was a Samian, like Pythagoras, namely, *Kolæus*, who was blown by a tempest in primitive times through what are now called the Straits of Gibraltar into the great outer-ocean. The Ionian Greeks were the original free thinkers and scientists of the West. Democritus and Herakleitos were Ionians, as well as Anaxagoras of Lampsaehos, who was the friend and instructor of Perikles, Euripides, the scenic poet, and of Aspasia, the Ionian charmer by her beauty and wisdom. Frederick von Schlegel says that Pythagoras and his followers held the same system of the universe which modern astronomy teaches. By the phrase "kosmos," Pythagoras defined the universe as an harmonious whole. The tyranny which reigned over his native Samos drove Pythagoras to Crotona in Italy, where he established, according to Tennemann, a species of philosophic congregation called the Italian School. As another authority says, "By forming an enlightened aristocracy of highly cultivated minds, of men of scientific attainments and of pure and noble morals, he hoped to establish a new and better polity, such as might check the reigning anarchy and revolutionary spirit of democracy" which distracted all the little factious city States and Republics into which Greece, both Greece proper and the outside Hellenic world, were then divided. But it was a hopeless task which the Samian and his disciples undertook,—to hush and allay the rivalries and factions of the Hellenic world, which were inextinguishable. By attempting to interfere with matters outside of his life of contemplation and reflective and scientific thought and to pour oil on the turbulent waters of Greek po-

litical life, Pythagoras perished. He is represented to have been an ascetic and vegetarian. In the fifteenth book of the *Metamorphoses* of Ovid, we have a vivid picture of him haranguing his school of pupils and disciples at Crotona, who listened, hushed into the profoundest awe and silence, to the words of the master (*ipse dixit*). He is reported by the Roman poet as opening his discourse with a special exhortation to his pupils to confine themselves to a bloodless, vegetable diet. "Oh, pollute not your bodies," he exclaims, "with hideous viands of flesh and blood, with a loathsome animal diet! Let such be prohibited articles, so far as your boards are concerned. Are there not luscious fruits, which make the boughs of the trees droop by their weight? Are there not grapes swollen with delicious purple ripeness on the vines? Are there not nutritious garden vegetables, culinary herbs, which can be rendered edible by fire? Are there not milk and honey fragrant with the scent of thyme? The earth, prodigal of aliment, sets forth a table for man amply provided with dainties which require not the hand of the slayer and drip not with blood. Wild beasts appease their hunger with flesh. But the tame animals, such as the horse, flocks, and herds, are vegetarians."

Passing from the topic of diet to physics, Ovid represents Pythagoras as teaching the doctrine of the conservation and transmutation of force. For he makes him say that nothing perishes, but things and forces are undergoing a ceaseless round of transformations and changes, or, in other words, in this phenomenal world

"Naught may endure but mutability."

All mundane things are in a state of perpetual flux. "I have seen," says Pythagoras, in this Crotona discourse, "what had once been solid land turned to sea; and, on the other hand, I have seen the sea turned into dry land. Sea shells are found lying far from the beach. An old anchor has been found lying high and dry on the summit of a mountain. What was once plain has been furrowed into a valley by the descent of waters." Apropos of the above quotation, Pythagoras was represented in his character of thaumaturgist, or miracle-monger, as having lived many lives in the bodies of various heroic personages, and as having retained a vivid memory of the incidents of each of these lives, so that his own multi-personal experiences would give him an extensive geological perspective, such as is implied in the above quotation, which reminds us of Tennyson's lines:—

"Where rolls the deep, there grew the tree,—
O earth, what changes thou hast seen!
There, where the long street roars, hath been
The stillness of the central sea.
The hills are shadows, and they flow
From form to form, and nothing stands;
They melt like mist, the solid lands,—
Like clouds they shape themselves and go."

It seems that the Pythagoreans were communists. The sayings attributed to Pythagoras and the anecdotes of him are numerous. By intently gazing, one seems to see, through the haze of time and tradition, a splendid Ionian-Greek primitive thinker, scientist, poet, and traveller, with much of the sacerdotal, mystic, and ascetic in his mind and appearance, a worshipper of light, a rationalist, and discernor of the true system of nature or the phenomenal world, whose mode of designating it (*kosmos*) is current at this day. Dr. Oswald, in his book called *The Secret of the East*, alleges that Pythagoras intended to introduce the superstition of the Hindu Gnostics into Greece, but that he succeeded only in reforming the hygienic habits of his countrymen. The vegetarianism of the Samian sage would seem to imply that he travelled

beyond Egypt to India, where he, doubtless, became inoculated with a Brahminical kindliness for the lower animals and a horror of utilizing their flesh for food. Pythagoras was, during a part of his life, a contemporary of Buddha. At any rate, it is manifest that his scientific Ionian mind had contracted a deep taint of Oriental mysticism, probably in India, the cradle of religious mysticism and asceticism; possibly by communion with "the Light of Asia" himself, for he might have seen the Hindu prophet in the early part of his career.

B. W. BALL.

THE FAMILY UNIT.

The New York Sun of August 10 publishes a column from the triennial charge of Bishop Littlejohn, under the title "The Church and the Family."

In this charge, so remarkable for its retrogressive philosophy, the bishop deplors the spread of the great Protestant and republican idea of individual conscience and judgment, undermining, as he thinks it does, the authority of the Church and the unity of the family, and tending to social disintegrations and political anarchy. And the pivot of all these pending calamities, the bishop evidently thinks, is the growing independence and higher education of woman. Hence, he is opposed to co-education, and all the liberal legislation that for the last forty years has secured to married women their wages, children, property, and the right to escape from the conjugal yoke whenever galling and oppressive.

"Practically," says the bishop, "we have reached a point where the wife may cease to have property interests in common with her husband, may control absolutely her own means of living, and determine for herself the scale of expenditures that will suit her tastes or her caprices." The man is no longer the head of the household, the husband. It has been made "an open question whether the man or his wife will fulfil that function," and "a community of interests, with the recognized authority of the husband to rule the wife, and the recognized duty of the wife to obey that authority, is no longer deemed expedient or necessary." This rebellion against the old view of marriage is so strong that in many cases the word "obey" is omitted from the marriage service.

Well, good bishop, that is what we have been laboring for nearly half a century; and, if it is practically accomplished, there is no reason why married women should desire to return to the "family unit" idea, as set forth in the old common law of England. If men who are so afraid of "divided interests" would prefer to bury themselves in the "family unit" rather than have that time-honored idea sacrificed, if they wish to be under the absolute control of their wives, to have no right to their property, wages, children, no name even, if they really think slavery in the "family unit" is more blessed than individual freedom, no doubt wives generally would consent to let them try it for a season, feeling assured that in due time they, too, would assert themselves as equal factors in the conjugal problem.

If we should make this proposition to these clerical gentlemen, they would probably decline it on the ground that God had ordained them for other spheres of action, and fitted woman for a condition of subjection.

If this is so, it is very remarkable that, according to the bishop, woman should have practically set the whole plan at defiance and shattered the "family unit" into fragments. If the "family unit," in which the husband is endowed with absolute power and the wife made a mere subject, is "God's ordinance," it is somewhat remarkable that the woman should not have been so constituted as to accept the situation.

We find the birds, the fish, the trees, the flowers, the stars, all alike moving on in harmony and order in their appointed spheres of action, showing that a wise brain planned the natural world and a skilled hand carried out the design. But the "family unit" never did run smoothly: the silent partner, without property or name, has always been in a condition of chronic rebellion. Hence, we may rationally conclude, Bishop Littlejohn to the contrary, that it is not "God's ordinance," but "man's contrivance," to get all power into his own hands. Again says the bishop:—

Individualism resents the restraints and the authority of the Church. Men and women consider it their "indefeasible right to believe as much or as little as they please, to arrange their own church fellowships," and refuse to recognize the dignity and authority of the sacred ministry. Denying authority in the Church, they deny authority in the family. "The transition is easy from heresy in doctrine to heresy in morals, from schism in the Church to schism in family and in the State."

The preservation and protection of the family he regards as the peculiar duty of the Church, which is especially called on at this time to guard the sanctities of the home, because they are so seriously threatened by present secular influences.

Again, the Church must strictly enforce her doctrines as to marriage and divorce, clash as they may with the spirit of the time and the laws of the State. "If it be outside the province of the State to treat marriage as more than a contract between a man and a woman, the Church must make it understood, as it is not, that it is inside her province to treat it as a thing instituted of God."

In a series of lectures last winter during Lent, when even men are supposed to be in a humble frame of mind, Rev. Morgan A. Dix elaborated similar ideas, to which crowds of worshipful women listened with pious resignation and becoming respect. In one breath these bishops tell us that woman owes all the freedom and dignity of her present position to the Church, and in the next breath that the higher education she now enjoys and all the civil rights now secured are "opposed to the laws of God and the teachings of Christianity."

Whether woman, with her own unassisted common sense, will ever be able to find out the natural laws of her being, her rights and duties, under the steady outpouring of these clerical assumptions, is a serious question.

The above quotations are a fair sample of the false and degrading teachings of the pulpit to-day in regard to woman. The Catholic Church in its palmiest days never made a more audacious statement of its authority over the opinions and acts of the people than this bishop here does in claiming the absolute control of individual faith, of family life, of the civil laws regulating the marriage institution, and the right to enforce the doctrines of the Church, "however they may clash with the spirit of the age and the laws of the State." The Free Religious movement to uphold the secular nature of our government and to resist all encroachments of the Church beyond its legitimate domain has been inaugurated none too soon to preserve the individual freedom of our people. In the growing intelligence and independence of woman, the Church sees the end of authority and superstition, and hence of her power to mould the institutions of the family and the State to her will.

Every step that woman has taken thus far in the march of progress, she has encountered the serious opposition of the Church, alike in her demands for social, civil, and political equality.

To all our earnest appeals for personal and property rights, for higher education, for an honorable place in the world of work, the reply of the sectarian press has ever been "Infidelity!" "Free love!" "The destruction of the family unit!"

But, while these ominous words have served the purpose for those who had no arguments, they have no special significance to us who for over forty years have listened to the sad refrain, so out of tune with the times in which we live.

ELIZABETH CADY STANTON.

IN MEMORIAM:

Miss M. A. Hardaker.

It is with deep regret that we record the death of Miss M. A. Hardaker, which occurred on the 9th inst., at Canton, N.Y., whither she had gone, a few weeks previous, with the consumptive's illusive hope of soon regaining health and strength. When she left this city last June, she spoke with confidence of her recovery and return; but her physical condition, indicating plainly the progress the insidious disease had made, only impressed her friends with the painful conviction that her work was done, and that death would soon end her earthly hopes and ambitions. Miss Hardaker was born at Warren, Me., in 1845. She was educated at the Canton University. After her graduation, she taught for some time, and then went to Germany, where she studied, and also taught a private school for the children of American residents. Returning to this country in 1876, she accepted the position of a high school teacher in Chelsea. Soon afterward, she made writing for the press a profession; and her articles, which were marked by vigor of thought, analytical ability, and a fine and rather unique literary style, commanded the attention which they justly merited. Her name was brought into peculiar prominence by her articles published in the *North American Review* and the *Popular Science Monthly*, in opposition to woman suffrage, which called out numerous replies, and excited very general discussion of the subjects treated. Between three and four years prior to her death, she was attached to the *Boston Evening Transcript*, and was the writer of many of the ablest and most brilliant editorials which appeared in that paper. Her article on Emerson and Matthew Arnold—which, in our opinion, was the best reply to Arnold's lecture on Emerson that was published in this country, not excepting E. P. Whipple's paper in the *North American Review*—attracted wide attention, and brought her from literary critics many words of approval and praise. She had a large acquaintance with literature, was a good German scholar, was deeply interested in and acquainted with physical science, and fond of philosophical discussion. From her Alma Mater, she received about three years ago the degrees of Ph.D. and M.A., to which she was more entitled by her talents and attainments than the majority of men upon whom these honors are bestowed. She was aggressive, independent, and courageous, and, although small and frail physically, she was intellectually more masculine than feminine. Social, cheerful, and self-contained, with an easy command of language, of which deliberateness and precision of statement were prominent characteristics, she was always instructive and entertaining in discussion and conversation. Of the Parker Memorial Science Class, she was an active and leading spirit; and, from that body, her familiar face and voice will be sadly missed. A more thorough-going materialist than was Miss Hardaker we never knew, nor expect to meet; and she never hesitated to express her philosophical views plainly and frankly when the occasion required or she felt disposed to speak of them at all. For Biblical criticism she had no taste, and attacks on theology she regarded as a waste of time and strength. In her death, *The Index* has lost one of its valued con-

tributors. Her death will be mourned by numerous personal friends, and not least by those who differed from her in some of her theories, but esteemed her for her many admirable qualities of head and heart.

B. F. U.

OUR SOCIAL SUPPER.

Members of the Free Religious Association and all other friends of free thought are cordially invited to the Social Supper in Parker Fraternity Hall, corner of Berkeley and Appleton Streets, on Wednesday, October 1. The doors will be open at 6 P.M., and the repast will be followed at 8 P.M. by an address by Miss Mary F. Eastman. Mr. W. J. Potter will preside. The last hour, from 9 to 10 P.M., is to be given to social conversation. Friends are requested to apply early for tickets, which will be for sale at fifty cents each at *The Index* office.

F. M. HOLLAND,
Assistant Secretary.

THE OCTOBER SOCIAL MEETING.

The appropriate committee of the Free Religious Association have already given notice of the proposed social and literary meeting to be held at Parker Fraternity Hall on the evening of October 1. But we desire to call the attention of our readers, particularly of those in Boston and vicinity, to the occasion, and bespeak their interest in making it a success. This meeting is the first to be held under a plan that was adopted at the last annual meeting of the Association, according to a resolution as follows: "That (in order better to promote the objects of the Free Religious Association) a series of four meetings shall be held in Boston near the first of the approaching months, October, December, February, and April; that the programme for these meetings consist: first, of a simple repast, 7 to 8 P.M.; second, of a half-hour's dissertation, followed by five-minute addresses by chosen speakers, 8 to 9 P.M.; third, of informal conversation, 9 to 10 P.M." The Committee are making preparations that will insure an interesting and profitable evening. They have been fortunate in securing Miss Mary F. Eastman for the dissertation, and there will be no lack of good five-minute men and women to follow. Tickets for the evening, including the supper, are put at the low price of fifty cents, and can be obtained at *The Index* office. The Association does not expect to make any money out of this enterprise, but it does hope that the interests and objects of the Association will be advanced; and that the liberal-minded people, who are near enough to come together in these companies, will not miss the opportunity thus to cultivate acquaintance, and to receive new invigoration at this expected symposium of ideas.

W. J. P.

EDITORIAL NOTES.

BY B. F. U.

MR. JOHN FISKE's paper, read before the Concord School of Philosophy, will soon be published in book form by Houghton, Mifflin & Co.

A RELIGIOUS journal confesses, in view of the cycle of defalcations and stealings through which the country is passing, that "our morality is breaking down before temptation rather discouragingly." Perhaps it would have been better if morality had been preached more and dogmas less.—*Boston Herald*.

IN a speech delivered in this city last week, which we find printed in the *Commonwealth*,

Emory A. Storrs spoke of the Independents as "an assorted lot of gentlemen, half of whom deny the existence of a God, and the other half of whom believe that mankind, themselves included, were developed from an ape."

MR. T. W. CURTIS, whose letter in regard to the Convention of the New York Free-thinkers' Association, held at Cassadaga September 3-7, may be found on another page, will favor us next week with a report of the proceedings of the National Liberal League, whose Eighth Annual Congress was held at the same place September 8 and 9.

THE "Appleton Street Chapel," after a year's prosperous experience, is now holding Sunday afternoon meetings in the Parker Memorial Fraternity Rooms. Mr. W. G. Babcock, the regular speaker, gives special attention to the culture of the young, a work in which he delights, and for which he is remarkably well qualified. He informs us that two new teachers for the study hours, from 2 to 3 P.M., would be welcomed by him and his society.

WE shall soon print Mr. Moncure D. Conway's "Apologia" (closing discourse in review of his ministry of thirty-three and one-third years), which the author has revised for *The Index*, and which, when published, will serve to correct certain misrepresentations that have appeared in American journals regarding it. A cable despatch stated that Mr. Conway said he had been overthrown by Orthodoxy, when his actual statement was that he had wrestled with his fears of Orthodoxy, and overthrown the phantom. In a business letter, Mr. Conway writes: "I see that some of the American zealots are trying to make me out a reactionist in religion. The reverse is the fact. I become more unorthodox every day of my life."

THE *Meriden Press Recorder* of September 13 contains papers read on Monday evening, September 8, by members of the Meriden Scientific Association, in memory of Miss Emily J. Leonard. From some of those papers, we shall give extracts in another number of *The Index*. The same journal contains the following resolutions, which were adopted by the Association July 21, 1884:—

WHEREAS the botanist of this Association, Miss Emily J. Leonard, has been laid to rest beneath the wild flowers which she loved so well, therefore,—

Resolved, That we recognize in Miss Leonard a woman of rare intellectual endowments, a fine classical scholar, a most devoted and enthusiastic student of nature, and a most faithful and laborious member of this Association.

Resolved, That, in her favorite field of botanical research, in town or State, Miss Leonard had few superiors. Our own herbarium attests the accuracy of her botanical knowledge, no less than her untiring industry; while the recognition of her personal discoveries by eminent botanists of this and other States shows the appreciation of her collections abroad. And, now that her last collection has been made, our fields and mountains will miss her familiar footsteps, our wild flowers will weep, and Flora herself mourn for her loved disciple.

Resolved, That, as members of the Meriden Scientific Association, to which Miss Leonard was so devoted, and to whose exercises her carefully prepared papers contributed so much of knowledge and interest, if we may not hope to equal her in the richness and originality of her contributions, we will endeavor to imitate her in her zeal and devotion to truth, and in the promptitude with which she responded to all the calls of the Association.

Resolved, That, at the next meeting of the Association, Monday evening, September 8, Dr. C. H. S. Davis be requested to present a sketch of the life and scientific labors of Miss Leonard; that other members be invited to speak in memoriam; and that the meeting itself be memorial, with reference to her life and death.

The Index.

BOSTON, SEPTEMBER 18, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, : : : : : } Editors.
BENJAMIN F. UNDERWOOD, : : : : : }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

A Study of Primitive Christianity.

BY LEWIS G. JANES.

IV.

THEOLOGICAL ASPECTS OF THE RELIGION OF JESUS.

It is our purpose, in this and the succeeding lecture, to give as clear and distinct a presentation as possible of the salient points in the life and teachings of Jesus. As has already been foreshadowed, our chief, I may almost say our sole, reliance will be placed upon the Synoptic Gospels, especially upon that consensus of statement known as the Triple Tradition. Next to that, we shall accept as most reliable the separate statements of Mark and Matthew, and, after them, of Luke. The Fourth Gospel will be deemed of value to us only in so far as it confirms the synoptical tradition in certain particulars, and also in so far as it throws light upon the question of the natural growth of Christian doctrine, and of the mythical and miraculous legends which gathered around the human life of the founder of Christianity, as they have also gathered around and partially obscured the lives of other religious teachers. Omitting this portion of our subject for the present for separate treatment hereafter, all that we really know of the life of Jesus and of his theological beliefs may be briefly sketched.

Unhistorical and Unreliable Character of the Birth Stories.

Of his early history, our information is extremely limited. He was born, doubtless, in Nazareth,* a small hillside town in Galilee, from three to eight years before the first year of our era, as at present improperly reckoned. Herod the Great died about four years before the commencement of the Christian era; and, if the tradition, which assigns the birth of Jesus to his reign, can be deemed reliable, the question of his earlier birth is definitely settled. The exact year, however, or time of the year, is absolutely unknown. The earlier tradi-

* Mark: i., 9, 24; vi., 4; x., 47; xiv., 67; xvi., 6; Matt.: iv., 13; xxi., 11; xxvi., 11; Luke: iv., 16, 23, 24; xviii., 37; xliii., 6, 7; xxiv., 19; John: i., 45, 46; iv., 44; xix., 19, etc.

tion fixed the spring as the season of his birth. The final acceptance of the 25th of December, some centuries later, grew out of the substitution of the Christian festivities for the Roman Saturnalia and Mithraic festivals, which occurred at the period of the winter solstice, and celebrated the triumph of the god of light in the growing day. This day had long been known among the Romans as *dies natalis solis invicti*,—the birthday of the conquering sun.

The stories of the birth in Bethlehem are mutually contradictory and irreconcilable. They are not even mentioned in Mark, the oldest of the Gospels, or in the Fourth Gospel. They are alluded to nowhere in the other Gospels except in the contradictory accounts of the opening chapters. Matthew* states that the family of Joseph first lived in Bethlehem of Judea, fled to Egypt to avoid the massacre of infants ordered by King Herod, and on their return thence chose Nazareth in Galilee as their home, from fear of Archelaus, the son and successor of Herod. Luke,† on the contrary, represents them as dwelling originally in Nazareth, and going to Bethlehem, the home of their ancestors, to be enrolled for taxation. He knows nothing of the journey into Egypt reported by Matthew. There is no historical evidence of any enrolment or assessment of taxes at the time alleged by Luke, or of any custom which required families to be enrolled at the home of their ancestors instead of their own dwelling-place.‡ The only assessment of which we have any information occurring near this period took place ten or more years subsequent to the death of Herod, and not until after the deposition of Archelaus. The massacre of the children is also a wholly unhistorical and improbable legend. Josephus, who willingly records everything which bears against the character of Herod, knows nothing of this occurrence. Similar stories are related of Krishna, one of the avatars or incarnations of the Hindu god Vishnu, of Moses, the Hebrew law-giver, and of Sargon, an Akkadian king,—all probably referable to current solar mythologies for their explanations. The legend of the birth in Bethlehem grew, probably, out of a misrepresentation of a passage in Micah (v., 2), erroneously supposed to be a prophecy of the Messiah.

The Parentage and Ancestry of Jesus.

The parents of Jesus were Joseph and Mary,§ humble Galilean peasants. Except in the contradictory legends of Matthew and Luke, and in the still more extravagant and incredible stories of the Apocryphal Gospels, we have no confirmation of any contemporary belief in the miraculous birth of a virgin. This story conflicts with the genealogies contained in these early chapters of the First and Third Gospels, which trace the lineage of Jesus through Joseph as his natural father. The Nazarenes, or Ebionites,—a very early sect of Jewish Christians, who numbered among themselves the descendants of the family of Jesus,—rejected this legend, which doubtless grew out of the misinterpretation of an Old Testament text.||

Joseph and Mary probably had a considerable family of children, the brothers and sisters of Jesus,¶—a fact frequently recognized by the Evangelists, and also by the writers of the Apocryphal Gospels. James, the brother of Jesus, subsequently became a recognized leader of the Nazarenes, or Jewish sect of Christians. Some

|| Isaiah vii., 14. The word mistranslated "virgin" means literally "young woman." The text has really no Messianic significance or reference to any event in the remote future. See Kuenen, *Bible for Learners*, etc.

¶ Mark vi., 3, etc.

early writers suppose Joseph to have been a widower with children before his marriage with Mary; others, that the brothers and sisters of Jesus were all younger than himself. But these suppositions are wholly conjectural: we really know nothing in regard to the matter.

We have no reliable evidence that Jesus bore any relationship to David or the royal line of Israel. His birth and residence in Galilee, out of the region allotted to the tribe to which David and Solomon belonged, would tend to discredit this tradition, which doubtless grew up after the rôle of the Jewish Messiah had been assigned to Jesus. In the Triple Tradition, indeed, he appears expressly to disclaim this ancestry, arguing in favor of his own Messianic pretensions that, since David called the Messiah his Lord, he could not therefore be his son or descendant.*

His Early Life and Occupations.

The father of Jesus was a carpenter; and early traditions, both of the canonical and Apocryphal Gospels, represent Jesus as working with him at his trade.† With the single exception of the story of his contest with the rabbis in the temple, recorded in the Third Gospel,‡ which reminds us of a similar legend in the life of Buddha, we have absolutely no reliable tradition of his early life. The early maturity of Jewish youth makes this legend not wholly improbable, though it would appear more reasonable to assign the locality of the occurrence, if it ever happened, to some Galilean synagogue, rather than to the temple at Jerusalem. At the synagogue and the schools connected therewith, Jesus was doubtless instructed in the Law and the Prophets, according to the uncritical methods of interpretation then in vogue; and here also he may have learned something of the disputations of the rabbis of the different Pharisaical schools. There is no evidence, however, that he received any general or secular education, or that he knew any language save his native Syro-Chaldaic tongue.

The Relations of Jesus with John the Baptist.

The oldest Gospel opens with a brief account of his conversion and baptism by John the Baptist, an episode in his life which is confirmed in the triple tradition, as well as by the character of his subsequent teaching, and may be accepted as historical.§ The stories of the Third Gospel concerning the birth of John the Baptist, and the assumption of his relationship to Jesus,|| must, however, be rejected,—not merely because of their miraculous implications, but because they are irreconcilable with the more reliable account of the later relations of John and Jesus contained in the synoptics. The tradition that John recognized Jesus at the time of his baptism as one greater than himself—as the Messiah of the Jews¶—is wholly discredited by the consenting testimony of the synoptical writers. If these legends had had any foundation in fact, John, when in prison, would never have had occasion to send his disciples to Jesus with the question, "Art thou he who should come, or do we look for another?"**

We must believe that Jesus was profoundly impressed by the teaching of this remarkable man. His impassioned exhortations to repentance, his announcement of the speedy coming of the Messianic kingdom, his stern denunciation of the Pharisees and Sadducees as "a generation of vipers," his condemnation of riches and extortion, his advocacy of a simple communistic life, are all notably characteristic of the subsequent life and

** Matt. xi., 2-6; Luke vi., 18-23.

public teachings of the Prophet of Nazareth.* His initiation to discipleship by the ceremony of immersion, preceded by a confession of sins, to which Jesus himself submitted, though not administered thereafter to others by the founder of Christianity, was adopted by his disciples, and became a solemn rite of the earliest Christian communities.†

The public career of Jesus, according to the synoptical writers, lasted only about one year. The Fourth Gospel would extend this period to more than three years; but, brief as the former time appears, we have no rational option but to accept the necessary inference from the consenting accounts of the synoptics. It is of the theological or religious aspect of his teaching during this short period of his public labors that we propose now to treat, leaving its social and ethical phases for subsequent consideration.

The Story of the Temptation.

We may infer from the legend of the temptation that Jesus withdrew into the wilderness after his baptism, as was the custom of the Essenes, the disciples of John the Baptist, the Buddhist monks, and Hindu ascetics, for a period of fasting and solitary meditation. That he should there be tempted "of Satan," and ministered unto by angels, as briefly reported by Mark,‡ was quite in concurrence with the popular beliefs of his time and people. This general and indefinite statement of the oldest Gospel, confined to two brief verses, is expanded into the long and circumstantial accounts of the contest between Jesus and the devil, in eleven verses of Matthew and thirteen of Luke,§ wherein the enemy and Saviour of mankind are made to quote Scripture at each other with the facility of modern antagonistic sectarians, the only evident point of superiority lying in the fact that Jesus has the last word, and his antagonist retires discomfited. The growth of the longer and less natural version of the story out of a possible and natural fact introductory to his career as a public teacher, and its consequent legendary and unhistorical character, are too reasonable and apparent to require more than the simple statement of the record in confirmation thereof.

It is natural to suppose that the contact of Jesus with the Baptist, and his subsequent solitary meditations, greatly intensified certain convictions and impulses which had long been growing within him. His belief in the speedy coming of the heavenly kingdom—an event everywhere anticipated in the synoptics as about to occur in the then living generation—dominated his thought and controlled his life thereafter. It involved the current conception,—derived, probably, from the Persian popular belief,—that the old order of things was to pass speedily away, the world was to be renovated by fire, and a new and eternal kingdom was to be established, wherein the just would live forever in perfect security and happiness. God himself, the "heavenly Father," would be the ruler of this heavenly kingdom. The Messiah, or Deliverer, would sit at his right hand and render judgment to all mankind according to the deserts of their past lives.

Jewish Conception of the Character of God.

The conception of the Deity popularly held among the Jews at the time of Jesus was still strongly anthropomorphic, though less grossly so than that which we find exemplified in the earlier writings of the Old Testament. The harsher elements in the character of Yahweh had been modified, and the conception of his nature broadened

and spiritualized by the experiences of the Jews during and subsequent to the Babylonian captivity. Doubtless, something of this result is due to the exalted spiritual conception of Ahura-Mazda held by the Persians, and perhaps also in some degree, though less evidently, to the broadening and liberalizing influence of Hellenic culture. The stern, jealous, tribal God of the Old Testament, resembling an Oriental despot in his character and dealings with men, had given place to one who was the God of all the earth, the Father of his chosen people, and, through their exaltation and supremacy among the nations, some time to be recognized as the Father and Ruler of the world. In its loftiest phase, as illustrated in the teachings of the later prophets and the more enlightened of the rabbis, the highest service of this heavenly Father was made to consist, not in sacrifice or ceremonial, but in the doing of righteousness.

Jesus' Doctrine of the Heavenly Father.

More fully than any of his contemporaries did Jesus inherit the spirit and sublime ethical purpose of the prophets. He regarded the Pharisaic formalism of the times as superficial and displeasing to the heavenly Father, and sought to bring his people to the heavenly kingdom by stimulating them to live righteous and true lives. He believed firmly in the special, watchful providence of God. Yahweh, in his thought, had a loving, personal care over all his children. Not even a sparrow could fall to the ground without his notice. He dealt blessings upon all with an even hand. He made his sun to rise upon the evil and upon the good alike: he sent his rain upon the just and upon the unjust. Whatever of estrangement there was between men and the heavenly Father was due, therefore, not to the harshness and severity of his government, but solely to the wickedness or wilful perversity of man.

The Character and Efficacy of Prayer.

The God of Jesus is omniscient, knowing all human needs without man's solicitation. Yet he delights to hear and answer the prayer of faith. Whatever is asked of him in a childlike and submissive spirit, in a spirit of utter self-abnegation and trust, he will grant, though it involve such a physical miracle as the removal of a mountain. Yet, though Jesus held this perfect faith that the Father would answer the sincere prayer of a trustful heart, the long prayers of the Pharisees in the synagogues and public places, their "much speaking" and "vain repetition," were held by him in abhorrence. It was only upon the importunity of his disciples that he consented to give them that simple formula for supplication known to us as "the Lord's Prayer." Even this was not to be used in public or formal repetition. The disciples were commanded to retire into their closets, to pray in secret, that the Father who seeth in secret might reward them openly.*

This habit of complete privacy in prayer, which he commended to his disciples, was evidently in accordance with his own consistent practice. He sent away his disciples, and "departed into a mountain" to pray. He knelt alone in the wilderness and in desert places; and only in a few short ejaculations, drawn from him as in the agony of crucifixion, do we find him giving utterance to supplications to God in the presence of others.† The differentiation of modern Christianity from the religion of Jesus is in no respect more notable than in its universal custom of formal praying at set times and in public places.

The Unitarianism of Jesus.

In his thought of God there is nothing of polytheistic or trinitarian implication. He accepted fully the lofty Unitarianism* of the Hebrew law-giver from whom he quotes, "Hear, O Israel, the Eternal our God, the Eternal is one."‡ To this high and lofty One, merciful as well as just, all-seeing, caring for the humblest of his creatures, was due the love of the whole heart of man, his child. The conception of himself or of another as a Son of God in any exclusive or supernatural sense, of a God coming upon earth in human form, would have been as abhorrent and unnatural to Jesus as it has ever been to his people. The trinitarian dogma is a belief as impossible to the true Israelite as any other form of polytheism or idolatry. In its later Christian development, it is a purely Aryan philosophical conception, and entered Christianity from other than Jewish sources. In this respect, there is no reason to believe that Jesus was anything but a Hebrew of the Hebrews,—"an Israelite indeed in whom there is no guile." God alone is good, he said, rejecting the appellation "Good Master." Yet he held up the perfections of the divine character as a model and example for human endeavor in that most exigent and lofty exhortation to noble living,—“Be ye therefore perfect, even as your Father who is in heaven is perfect.”

Jesus' Doctrine of the Future Life.

The thought of Jesus concerning God, however, has another side than this attractive and winning one,—the side of inexorable justice and severity toward the wrong-doer, which is involved in his conception of the future life. The modern doctrine of a spiritual immortality for all men is nowhere explicitly taught by him; nor does he anywhere definitely describe the state of the righteous after death. We are left to infer his belief from the character of his allegorical descriptions, and from information elsewhere derived of the current conception of his time and people. His kingdom of heaven was evidently an earthly kingdom,—no far-away abode of the sublimated spirit apart from material conditions, no misty Nirvāna like that of the Buddhists. Accepting the current Pharisaic notion of a future life upon the earth, involving the conception of a bodily resurrection, he believed not only in the establishment of the heavenly kingdom, with its joys ineffable for the righteous, but also, if we may accept the record, in the eternal punishment of the unrepentant sinner in the fires of Gehenna. Nay, more. He taught that the few only were destined for salvation and happiness. The many would "depart into everlasting punishment, prepared for the devil and his angels." The dread abode of the wicked is sometimes characterized as "eternal fire," sometimes as "outer darkness," in which there would be "weeping and gnashing of teeth."† These expressions, similar to those which we find in the later Egyptian inscriptions, descriptive of the place of future punishment, may possibly be regarded as strong figures to describe a condition of torment which would otherwise be inconceivable, though they appear to have been interpreted very literally by the early disciples and Fathers of the Church. The physical character of his entire conception of the life hereafter, moreover, would appear to discredit this more lenient interpretation. Whatever the exact nature of the future state of the wicked might be, it was evidently one of conscious, unlimited suffering in the thought of Jesus. I would willingly accept, if

* Matt. iii., 7-12; Luke iii., 7-18.

† Mark i., 4; Luke iii., 3, et seq. † Mark i., 12, 13.

§ Matt. iv., 1-11; Luke iv., 1-13.

* Matt. vi., 5-15; compare Luke xi., 1-13, etc. See also Mark xi., 22-26.

† Mark: vi., 46; xiv., 32-40; Matt. xxvi., 36-45; Luke: ix. 18; xxii., 41-45, etc.

* It need scarcely be said that we use this word with no narrow or sectarian meaning.

† Matt. xviii., 8, 9; Mark ix., 45, 46; compare Luke xvi., 19-27; also Matt.: xx., 16; xxii., 13, 14; xxiii., 34; xxv., 30, 41-46, etc.

it were possible, the ingenious explanation of our Universalist friends, who interpret the teaching of Jesus as to the duration of this suffering as meaning "age-long," or for the length of an æon,—a long, indefinite, but limited period,—but this modification of the terrible sentence of the wicked from the mouth of Jesus rests solely upon the doubtful interpretation of a word in a language which he neither wrote nor spoke. In the absence of any explicit doctrine of ultimate restoration, and in view of the general consensus of opinion in the Church in all ages of the world, the Universalist interpretation scarcely appears rational or acceptable.

The salvation of men, however, in the teaching of Jesus, depended upon the acceptance of no dogmatic standard of truth, but solely upon righteous living. "Unless your righteousness exceed the righteousness of the scribes and Pharisees, ye can in no wise enter into the kingdom." "This do," not *this believe*, "and ye shall be saved." Herein, Jesus stood upon both Jewish and rational ground; for it is the teaching of the highest ethical philosophy of the present day, as well as of Israel's prophets, that supreme happiness is possible only to those who "cease to do evil, and learn to do well." The popular Christian doctrine of a vicarious atonement and substituted righteousness has no place either in the teachings of the Nazarene prophet or in the ethics of Kant or Spencer.

Jesus' Belief in Demoniacal Influences.

Together with the doctrine of eternal punishment, Jesus also accepted the current superstitions of the existence of a personal devil, and of the possibility of possession or obsession by evil spirits. The word "devil" is doubtless of Aryan origin. It is not found in the Old Testament. The devil of the later Judaism was identified with the Hebrew *Shethan*, or Satan, a mythical personage who first appears in Job as one among the "sons of God," a trusted messenger and servant of Yahweh. From his early character of adversary or accuser, a sort of prosecuting attorney of Yahweh's court, he had fallen, under the influence of the Persian dualism, to the position of an arch-enemy of God and man. His prototype, Set or Seth, in the Egyptian mythology, experienced a similar deterioration after the Persian conquest of Egypt.

The alleged facts which have been held to justify the belief in demoniacal possession, which the Jews brought with them from Babylon, doubtless find their rational explanation in the phenomena common to certain nervous disorders, such as epilepsy and hysteria, which prevail in a more aggravated form among a rude, ignorant, and superstitious population than under more favorable social conditions. It is this class of disorders which is especially susceptible to the influence of a powerful will, or that little comprehended but very positive agency popularly known as hypnotism, or "animal magnetism." We shall treat this subject hereafter in our discussion of the mythical and miraculous elements in the gospel narratives. It is sufficient at present merely to allude to these facts as the probable natural basis for the belief honestly held by Jesus and many of his contemporaries in demoniacal influences, and in the efficacy of his own power for their cure or amelioration.

The Relation of Jesus to the Current Messianic Expectation.

In the earlier part of the public career of Jesus, he appears to have been moved solely by the profound necessity imposed upon him by the belief in the speedy advent of the heavenly kingdom, and

by his perception that the masses of his people were totally unprepared for this great change. He took up the message of John the Baptist, "The kingdom of heaven is at hand," and preached it to the common people, the despised "people of the land," who, neglected by the more rigorous Pharisaic teachers, appealed strongly to the sympathetic nature of the Galilean prophet. Such as these eagerly listened to his teaching, and "heard his message gladly." By parable and apt illustration, he described his vision of the heavenly kingdom, and impressed upon his hearers the duty of instant preparation in view of the immanence of the great change. He appears to have had little thought at first of the Messianic expectation as being fulfilled in his own person. He was the prophet of the heavenly kingdom,—the "Son of God," which meant simply the faithful citizen and messenger of God's kingdom.

The people, however, full of the hope for a coming deliverer, impressed by the earnestness of his appeals, the depth and purity of his moral nature, his strong, magnetic personality, soon hailed him as the Messiah. The thought grew upon him. What if he was indeed the chosen one of Israel, the "anointed of Yahweh," the immediate herald of the coming change? When the populace greeted him as the Son of David, in accordance with the popular expectation that the Messiah would spring from the royal line of Israel, he at first questions his disciples: "But whom say ye that I am?" Upon their recognition of him as the Messiah, he does not indeed directly repel the honor, but cautions them that they tell no man of this thing. A little later, we find that the idea has taken full possession of him; for we discover him arguing in favor of his own Messianic pretensions that the Messiah cannot be the "Son of David," since David calls him his Lord or Master.

At the time of his final journey to Jerusalem, he has become fully convinced of his Messianic mission. He accepts the plaudits of the people during his triumphal entry into the city, and his subsequent bearing before and during his trial and crucifixion likewise attests the sincerity of his belief. It is not impossible that he expected some miraculous interposition to prevent the final catastrophe, as would be indicated, apparently, by the despairing cry, "My God, my God, why hast thou forsaken me?" Mark, who comes nearer to the primitive tradition than either of the other evangelists, reports this and certain other notable expressions of Jesus in his native Syro-Chaldaic tongue. This agonized expression, so natural and human, but so unlike the supernatural Jesus of the Fourth Gospel and our popular Christian conception, could hardly have crept into the gospel narrative, unless it had some foundation in the actual occurrence. The writer of the First Gospel confirms the tradition of Mark; but Luke, illustrating an advanced development of Christology, omits this human cry of almost despairing agony, and substitutes for it the calm acceptance of the inevitable in the final words, "Father, into thy hands I commend my spirit." The still less natural and more dramatic writer of the Logos epic makes Jesus die with the dignity and supernatural endurance of a God, fully self-conscious to the last, and deliberately conforming his actions on the cross to the fulfilment of Scripture:—

"After this, Jesus, knowing that all things were now accomplished, that the Scripture might be fulfilled, saith, I thirst. Now there was set a vessel full of vinegar; and they filled a sponge with vinegar, and put it upon hyssop, and put it to his mouth. When Jesus, therefore, had received the vinegar, he said, It is finished; and he bowed his head, and gave up the ghost."

Concluding Thoughts.

In this lecture, we have attempted, fairly, with no bias of preconceived opinions, to set forth the leading features in the teaching of Jesus on its theological side, as reported in the Synoptical Gospels. While recognizing the fine humanity of his doctrine of the fatherhood of God and the profound sincerity of all his beliefs, there is evidently much in this teaching which the liberal and cultured thought of modern times has forever discarded, much that bears the impress of a primitive and ignorant age and of a narrow and restricted intellectual environment. For us there is no encompassing host of demons, no personal prince of evil, no bodily resurrection, no eternal kingdom of immortals to be established upon the earth. If we still hold to the fatherhood and personality of God, it is in quite a different sense from that embodied in the simple, anthropomorphic conception of Jesus. The Messianic doctrine of the Jews is to us a beautiful dream, which the Prophet of Nazareth did not fully realize either according to the popular expectation or his own more spiritual interpretation. Not in any of these theological conceptions do we find the secret of the influence of Jesus upon the life and thought of later generations.

In this brief review, we have discovered no striking deviation in the thought of Jesus from the current beliefs of his time and people. Herein, at least, there are none of the distinctive features of the peculiar philosophy of Buddhism,—no hint of Hindu agnosticism or of the doctrine of the Nirvāna as the *summum bonum* of human aspiration. The entire atmosphere of the primitive tradition of the synoptics, after eliminating such of its supernatural and mythological elements as are not confirmed by the consent of the three writers, is Hebrew, and Hebrew only. The Prophet of Nazareth moves naturally in the Palestine of eighteen centuries ago: he breathes its peculiar religious and social atmosphere, and incarnates its loftiest moral and personal characteristics. Though transcending the ritualistic formalism of his time and the traditional limitations of his national religion, we may, nevertheless, repeat as a truth of history his own judgment of his relation to the law and religion of his people,—He came not to antagonize or to destroy, but to fulfil.

For The Index.

REFLECTIONS BY THE WAY.

BY MONT E. COLLINS.

IV.

The mind is to be measured by the quality of its thought, not by the quantity.

Youth is the dawn, manhood is noon, old age is evening,—all are required to make a perfect day.

He who knows most of man knows most of God, since in man the highest revelation of the Infinite Life is sought and found.

Life is haunted by the reflection of our own moods into everything around us; but he who faces the light will never thus be frightened by his own shadow.

When a wise man hears a person vehemently condemning certain faults in others, he watches him very closely; for there is his weakness. If this very condemner is not already guilty of the same sins himself, he at least is strongly tempted in that direction, since we always possess to a certain degree those qualities we most abhor in others.

If the universe is eternal, and at the same time exists only as a state of consciousness, then the doctrine of immortality is removed from the realm of speculation, and becomes a truism. Either the universe is not a mode of conscious existence, or else conscious existence is necessarily eternal.

No soul can claim to be the only originator of those thoughts of life and duty common to all ages and all people; and to charge a man with plagiarism for

burnishing one of these immortal gems, taken from the casket of his own consciousness, is like charging Nature with folly for bestowing upon each of her children those priceless gifts which, more than all else, prove her to be, in every land, the loving mother of all.

Christianity, in so far as it represents the thoughts and aspirations common to the great universal heart of man, can never pass away, but will flourish green with age and live immortal through all the coming years of time; but, in so far as it represents the belief and teachings of a portion of mankind only, and stands as the embodiment of an intolerant creed, it is destined ere long to vanish like some troubled dream from out the waking mind of man; for those feelings that are called into being under special influences only are mortal, while those that are born of the mysteries, that ebb and flow forever on life's wild changing shore, can never die.

CORRESPONDENCE.

THE FREE-THINKERS' CONVENTION AT CASSADAGA, N.Y.

Editors of *The Index* :—

"What is the fare to Cassadaga?" "Where?" "Cassadaga." "Where is that?" "Somewhere in Western New York, I believe." The railroad agent looked at his maps, but in vain. "I am going there to attend the Congress of the National Liberal League." The agent stared. "It is the place where the New York State Free-thinkers' Association holds its Convention this year." His face was as blank as before, but soon became lit up by a smile caused by a happy discovery, "Oh, you mean Chautauqua; there's where these religious conventions are held." I could not help then but smile myself. "No, no! The convention I mean is infidel, infidel as you would call it: we don't care for the Bible any more than any other book." "But, see here, you ought to know where you are going." "You are right; but it is Cassadaga, and not Chautauqua. It is near Dunkirk; have you any excursion tickets to that place?" "No." "To Buffalo?" "Not to-day." So I left New York at eight P.M. on Friday, September 5, and reached Cassadaga Saturday afternoon. The road for a quarter of a mile was lined with new arrivals and their friends coming to meet them. But all were friends. Everybody speaks to everybody. If your face is toward the camping-ground, that is enough. You pass through a large gate, where each pays twenty-five cents toward the fund for general expenses. Cottages, tents, and hotels are scattered about in beautiful disorder in a clearing in the woods, the encampment being encircled by forest trees and the waters of the lake. Cassadaga Lake has two outlets, one to the north and the other to the south, suggestive of the bond between mind and heart, a sign given to the seeker of the truth. These grounds belong to an Association of Spiritualists, the pioneers, in these days, of Arcadian bliss.

This was the last day but one of the Free-thinkers' Convention. A large crowd was gathering. There was dancing until midnight. A new element had entered camp. Able speakers had occupied the platform during the week, it is true; but the thoughts of the people were becalmed, owing to the smallness of numbers and that spell-bound feeling peculiar to Spiritualist gatherings. Rev. A. B. Bradford had delivered a lecture on Mormonism, his views on this question proving him, as I am happy and proud to say, a man after my own heart. Miss Gardner, whom Ingersoll introduced to the public in Chickering Hall, N.Y., had made a fascinating speech. George Chainey had also lectured, one week as an agnostic, the next as a Spiritualist.

At ten A.M., Sunday, September 7, the bell called the people together in the centre of the grounds under a pavilion sheltering, perhaps, not less than one thousand persons. There was music from three vocalists accompanied by the organ. Mrs. Krekel, from Missouri, was the first speaker. Her subject was "Right, Human and Divine." Many Liberals, said the speaker, have much to say about absolute mind and absolute right, and have mouthed and babbled in this way until some tongue struck fire. The special weakness of Liberals was their failure in practical work. The work that many delighted in was of little use, as the setting up at all times and seasons the tombstone of Moses, to be read over and

over again. Moses has been dead a long time: let him alone. The Church with all its sham and hypocrisy is creeping close up to us. The lady instanced two lectures given in Kansas City recently, one by Col. Ingersoll and the other by Henry Ward Beecher. Divine right, said the speaker, was born of ignorance and assumption; human right, of knowledge and intelligence. People had supposed that the getting of truth was like spreading the apron for the ripe fruit to fall into it; but all our gains have been the fruit of toil and struggle, and by this means the unknown has been districted and peopled by man. That past is worthy our regard, when the lamp of reason was first being lit in the world of mind. Every age is to be judged by its opportunities. Institutions must be measured by the right, and the right by institutions. The divinity of all rights was human rights. But the world seemed not yet aware that human rights included woman's rights, as many of our customs plainly show. How is it we hear so much about fallen women, so little about fallen men, when for every one fallen woman there are a thousand fallen men? We hear much about the sacredness of motherhood, why so little about the sacredness of fatherhood? The speaker pointed out an inconsistency in the practices of the Free-thinkers' Association in excluding woman from its offices or committees. It was time, the speaker thought, to put in the plough and the pruning-hook. She told of some systematic efforts being made in Liberal, Mo., to make Liberalism a part of real life. She hoped next year to have some report of her own to make. When the lady had finished, Dr. Brown arose and said he thought woman ought to have equal privileges in the Association, but he thought it would be well if those who talk so much about women's rights would do their own plain duty first in raising a family of children. "There, sit," said Mrs. Krekel, "you have made yourself liable just where I want you. I am the mother of six children, and some of my sons are old enough to vote."

The next speaker was Mr. George Chainey. He said: "I know, if I know anything, that unseen influences had brought me to Cassadaga. I have felt here the joybells of the soul ring out wildest, sweetest melody. There are things too sacred and marvellous to be told: it would be like throwing pearls before swine. I know beyond the power of doubt or argument to disturb that there has come to me proof of immortality. The mind without this hope becomes weary and jaded, and sinks into sensualism. It seemed, if this life were all, that one would be a fool to make a martyr of himself for Liberalism." Mr. Chainey kept up a constant fire at Agnosticism and Liberalism, at both their theories and practices, from which he would disengage himself as from the corpses of that life which was without life or holiness: such seemed to be his meaning, though not his exact words. Liberals would not support their principles. "Why did my subscribers leave me with a three-thousand-dollar debt to hang like a millstone about my neck?" Liberalism was not fructifying. He has in a not very long period passed from Methodism to Unitarianism, from this to Agnosticism, and from this to Spiritualism; and his last leap, like each of the others, has been straight to glory, into the heaven of heavens. He knows now he is right, and is as positive of it as the divorced woman is that she will never marry again.

On Sunday afternoon, Secularism had the platform, Mr. Courtland Palmer and T. B. Wakeman being the speakers. Mr. Palmer's philosophy appeared to be thoroughly humanitarian, making of life one organic whole, linking together the past, present, and future, the material, animal, social, and moral worlds. He believes, with Mill, in "the religion of duty." "The highest right of man," he said, "is to do his duty."

But the speech of the day was delivered by T. B. Wakeman. Only the faintest outline can be given here, of course. "Secularism up to Date" was his subject. Secularism is philosophy put in practice. From its heart comes the strain of "Home, sweet Home." This world is man's home: it covers and satisfies all the wants and demands of his life. The speaker referred to two magazine articles, which had drawn the attention of the world, being a controversy between Herbert Spencer and Frederic Harrison on the subject of religion. Spencer's affirmation and Harrison's denial of the Unknowable can be reconciled; and this had been shown by an article from the pen of Stephen Pearl Andrews. Mr. Andrews had

shown that these giants of thought of the old world meet as engineers tunnelling the Alps from opposite sides. Scientists are themselves generally one-sided. Only specialists were heard from at the congress just held in Philadelphia. The world is to have its religion, but religion must have a scientific basis.

Our knowledge may be said to have five grand divisions, all falling within the sphere of observation and experience, and represent things and not words. These divisions you may call so many worlds, each of which contains infinite treasures of knowledge. To aid the memory, let them be counted on the fingers of the left hand: first, the cosmos; second, the material world; third, the organic world; fourth, the human world; fifth, the ideal or spiritual world. The last verdict of science is that the Unknowable has no personal quality at all. The universe is a *plenum*, or fulness, a continuation of the changes of the Knowable. This is Spencer's eternal "Yes." We can affirm only its existence: any attempt to read this Infinite brings back the eternal crushing answer, "No." The material world is an energy, correlation of forces or, which is better, of phenomena,—an equivalence of changes. Only in the last fifty years has this world become really knowable to man. The organic world we know through the law of evolution. This is the daylight of knowledge. The human world we know through the laws of co-operation, solidarity, and continuity, which are the basis of all reforms. The ideal world we know is also governed by law; but here the most differences arise, because it has been the least studied.

No moral or spiritual change is known to take place without a corresponding physical change. Life in its beginnings, and in its latest manifestations, is a correlation of changes. Mind is a process, a mode of the sensations of the highly organized nervous forces of a man's bodily system. Does not this put an end to the belief that mind is a separate entity? Thus has human life been merged into one realm of thought and feeling, a personality that lives forever, and makes man one with the gods our ancestors believed in. How long has the world believed that the sun rises and sets? It is the mission of science to reverse the decision of the senses. Every solution of the past has been reversed. And so must this one, that you have a spirit that goes out of your body. There is not a hospital in the land that will admit a physician who believes in a spirit. It is all nonsense that you are going to be dominated by the heart. Truth is your master. The Catholic Church is built on the spook solution of things. It represents the high tide of "spiritualism." Since the advent of science, this tide has begun to recede. George Eliot's "Choir Invisible" touches the greatest height of spirituality. It is one speaking with the glowing ecstasy of a living angel. Those who cannot stand on these heights must be allowed to have their idols on the plains below. They need them, and they are right enough in their place. Yes: Secularism has its religious side, which is the binding of men together under the influence of a common conviction. Thus, in the march of history, each god in his turn falls into insignificance; but the social unity—the collective man—is more and more. Much of our Liberalism is pitched in a very low key; and some of our leaders whom we all applaud fail to rise to the height of the ideal, the unselfish life. The higher register is wanting in them; and it is a positive pain to listen to them, however brilliant they may sometimes be. We must come up higher. The speaker's own personality gave to the address much of its grace.

Sunday evening, Mr. Charles Watts, the English secularist, who has decided to make America his home, was given the floor. He had been invited to review Mr. Chainey's lecture of the morning. Mr. Watts made some pretty sharp criticisms. It was not Mr. Chainey's conversion, but the mode of it, and the course taken, that he wished to criticise. He charged Mr. Chainey with misrepresenting the agnostic as wanting in affection, purity, sobriety, or benevolence of character, or as being without those inspirations that tend to strengthen, refine, and elevate mankind. He advised him to look at home, to the new quarters to which he had betaken himself, before criticising so freely the beliefs and acts of Liberals. He insisted it was the head, and not the heart, that should take the lead. Convert the head, and it stays converted; but the heart you have to convert over and over again. He was surprised to

find that Mr. Chainey represented the ultra-orthodox spiritualist. He had spent five years studying Spiritualism, and found nothing in it.

It should be mentioned that Mr. Watts had been preceded this evening by Mr. Putnam, with a few words on harmony between Materialists and Spiritualists, saying they had a common work to perform and should emphasize the grand unities, and look on these differences that spring up only as lovers' quarrels. We all wanted to be free from spirits, whether they were in the church in this or in the other world who tyrannized over the mind. Let us rally under one flag. But how we are to "rally" Mr. Putnam did not say. And it might be a pertinent question to ask, Where is that "flag"?

My next letter will relate to the National Liberal League.

T. W. CURTIS.

THE following is from an article entitled "Justice to Men," by Col. Higginson, in the *Woman's Journal*: "The whole theory of Woman Suffrage is that woman is a responsible being: 'co-equal with man,' as the old Woman's Rights Conventions were fond of saying. To share responsibility is to share the power of doing wrong. Society, in time past, committed the absurdity of throwing the main responsibility, or at least the main penalty, of all joint sexual offences upon the woman. In their just reaction against this, many reformers go so far as to throw almost the whole responsibility and, as far as they can, the whole penalty upon the man. One act was a cruel injustice to woman: the other is equally cruel to man. Either is fatal to Woman Suffrage. If woman is so hopelessly weak that she is not to be treated, at any age, as a moral agent in her relations with men, she is unfit to vote. Making every allowance for the fact that, by natural constitution and by training, man may fairly be regarded as the more frequent and culpable offender, the fact remains that wrong is wrong, whether for a man or for a woman; and we must never lose sight of the fact that woman must be held as a responsible being, if she is to be treated as 'co-equal with man.' . . . It is idle to appeal for sympathy in behalf of Cleopatra as 'somebody's daughter.' So was Mark Antony somebody's son. It is useless to say that every woman was first misled by some man: it is the testimony of the police that multitudes of poor girls are so reared that they have never even learned what modesty means. Of those fallen women whom Col. C. E. Wright questioned, fifty-nine testified that they engaged in that life from choice (mostly through love of ease and of dress), twenty-six from poverty, nineteen from unhappiness at home; while only forty-six pleaded seduction, although this would be the most tempting and flattering of all excuses. Nobody doubts that the sexual sins of men are far greater than those of women. The theory which I oppose is that which assumes men to be the only sinners and exonerates women, as being, at any age, an absolutely helpless and irresponsible class of beings. If they are nothing more than that, they should be disfranchised forever."

WANTED,—

"Men whom the spoils of office cannot buy;
Men who can stand before a demagogue,
And damn his treacherous flatteries without winking!

Tall men, sun-crowned, who live above the fog
In public duty and in private thinking;
For, while the rabble, with their thumb-worn creeds,
Their large professions, and their little deeds,
Mingle in selfish strife, lo, Freedom weeps,
Wrong rules the land, and waiting Justice sleeps!"

MEN must be true to their principles, and, as long as there is difference in these principles, there should be separate action; but in things that are common, and where all can act together with advantage, our policy should be to unite. Nothing is easier than to cause divisions, but the soul of wisdom lies in union and charity.—*Indian Messenger*.

To LIVE on your own convictions against the world is to overcome the world. To believe that what is truest in you is true for all; to abide by that, and not be over-anxious to be heard or understood or sympathized with, certain that at last all must acknowledge the same, and that, while you stand firm, the world will come round to you,—that is independence. It is not difficult to get away into retirement, and there

live upon your own convictions, nor is it difficult to mix with men, and follow their convictions; but to enter into the world, and there live out firmly and fearlessly according to your own conscience,—that is Christian greatness.—*F. W. Robertson*.

AN honest man is believed without an oath, for his reputation swears for him.—*Anon*.

"THEY are slaves who fear to speak
For the fallen and the weak.
They are slaves who will not choose
Hatred, scoffing, and abuse
Rather than in silence shrink
From the truth they needs must think.
They are slaves who dare not be
In the right with two or three."

For The Index.

DOUBT.

Though faith may hold the binding rope,
Like tempest-beaten ship
My reason breaks away from hope,
And all my anchors slip.

On chartless seas, with doubting mind,
I float without an oar,
And helpless drift where undefined
There lies an unknown shore.

No star is fixed to guide our ships
On spirit's mystic sea,
Where voyagers pass with silent lips,
Obeying death's decree.

And, like a bird storm-driven out
Far o'er the treach'rous sea,
The foaming crests of wav'ring doubt
Can give no rest to me.

Rebuild your towers, ye men of facts,
And let your beacon shine,
And show how mind through matter acts,
Displaying true design.

A. D. MARCKREES.

BOOK NOTICES.

THE STORY OF DR. CHANNING: Written for Young People. By Frances E. Cooke. London, Eng.: Unitarian Sunday School Association. 1884. pp. 124. Price 1s. 6d.

This book is from the same sympathetic pen which wrote the admirable synoptic biography of Theodore Parker, issued by the London Unitarian Association, and reviewed in these columns some time since. Miss Cooke is doing excellent work in writing these brief biographies of men like Channing, Parker, Savonarola, Latimer, Sir Thomas More, and others, setting before young people in appropriate words brilliant examples of pure lives and unselfish devotion to noble principles and high aims. She has the faculty of noting in few words the salient points in the characters of the moral heroes of whom she writes; and, though she professes to write only for the young, the biographies will be of much use and interest to older persons who have not time to read more prolix books treating of the lives of these men.

THE *Art Amateur* for September is refreshingly lively during the wilting heat of summer's last days. The anecdotes of frauds in art, from M. Paul Edel's recent book, are amusing, if not reassuring. Why do we always relish a joke upon the collector? Is it because he so often places a false value upon mere rarity and neglects real merit, or is it because we all have a little of the spirit of the collector ourselves, and envy the success of others? The suggestion of Greta, that Mr. Parker left \$100,000 to the Art Museum because he thought it tended to increase the business of hotels, has at least the merit of novelty. We are glad to hear, however, that the Art Museum propose to invest it as a permanent fund for the maintenance of the institution. It is always easier to obtain money from the public for special objects than for current expenses, and yet the success of the Museum depends as much upon the proper care of our treasures as upon the acquisition of new ones. The Museum has succeeded in making its works of art readily accessible to students, while its galleries are delightful places of recreation to the amateur. But, to sustain this order and care, large expenditures of money are necessary. The account of "The American Art Club at Munich" is full of interest, and shows what good work the American colony are doing there. The article on "Greuze" seems to us to do as little justice to this charming painter as the wood-engravings do to

his pictures. One of his representations of "The Dead Bird" was long ago engraved for one of the popular souvenirs, and a comparison of the two reproductions will show how entirely the wood-engraver has failed to reproduce the *naïveté* and tenderness of the original. The *Art Amateur* is warmly welcomed itself; and it can well afford to extend a cordial greeting to a new weekly, the *Studio*, edited by one of its favorite contributors, Clarence Cook, for which it predicts well-deserved success. E. D. C.

THE *Andover Review* for September well sustains the reputation it has earned as an exponent of advanced thought from the religious stand-point, and some of its essays would reflect credit upon periodicals of the highest culture by their completeness and clearness of statement on some of the great questions that are agitating religious thinkers at the present time. The contributed articles are: "The Eschatology of the Psalms," by F. B. Bittinger; "The Rationale of Russian Socialism," by Edward Kirk Rawson, is a very fair and impartial account of Russian Nihilism; "Buddhism and Christianity," by William M. Bryant; "Modern Glimpses of Assyrian Art," by Prof. John Phelps Taylor; "The New Psychology," by John Dewey, is a concise account of some of the main features of this (in its present form) new science. It contrasts the new psychological method of studying mental phenomena with the old metaphysical method, much to the disparagement of the latter, and shows up clearly its manifest inadequacy to deal with the great problems of life and mind. Its editorials are: "Social Classes and the Church"; "The Logic of Hermeneutics"; and "A Battle of the Skeptics," giving an account of the controversy between Herbert Spencer and Frederic Harrison, which was reprinted in the August number of the *Popular Science Monthly*. Several pages are devoted to Biblical and historical criticism, theological and religious intelligence, and book notices.

MR. W. D. HOWELLS will contribute to the *Century*, during the coming year, a series of descriptive papers on the life, society, customs, etc., of the cities of Northern Italy, beginning with several on Florence, to be entitled "A Florentine Mosaic." The *Century's* woodcuts, after the etchings of Whistler, Haden, and others, are already well known; and it is announced that Mr. Howells' series will be illustrated with reproductions of etchings by Joseph Pennell, who accompanied the author through Italy during the preparation of the series.

AMONG fascinating books for young folks, by authors of reputation, D. Lothrop & Co. announce as nearly ready a large list, among which are *Æsop's Fables, Versified*, by Clara Doty Bates; *Plucky Boys*, by the author of *John Halifax, Gentleman*; and *Anna Maria's Housekeeping*, by Mrs. S. D. Power.

PHILIP BOURKE MARSTON, the blind English poet, has a rose poem in the October *Wide Awake*, which is accompanied by illustrations by Alfred Brennan. Mrs. Helen Hunt Jackson, "H. H.," has a serial story running in the autumn numbers of *Wide Awake*.

MARGARET SIDNEY's busy pen has produced a new and delightful book of travel for young folks, entitled *How They Went to Europe*. D. Lothrop & Co., Boston.

SOME notable training schools for neglected or unfortunate children are interestingly and profitably treated with illustrations in the graphic volume issued by D. Lothrop & Co., *How to Learn and Earn*.

JAMES KAY APPLEBEE

is open to accept engagements for the delivery of SUNDAY EVENING LECTURES at towns within reach of Boston by Sunday afternoon trains. For terms and subjects, address JAMES KAY APPLEBEE, Boston, Mass.

MRS. EMILY J. F. NEWHALL'S

School for Girls and Young Ladies will reopen Oct. 1, 1884.

As heretofore, its management will be conducted upon the basis of EDUCATION rather than INSTRUCTION. The proper use of English will be made an especial feature of the daily work. Under the direction of John Storer Cobb, LL.D., from London University, this branch will comprise a thorough study of the English language, as well as Latin and mathematics. The illustrated lectures upon the great *tone-masters*, the use of the lantern, and attendance at the Art Museum, will be continued. For catalogue, address No. 91 Newbury Street, Boston; or apply between 11 and 1, after September 15.

Sawing Made Easy.

MONARCH LIGHTNING SAWING MACHINE

For logging camps, wood-yards, farmers getting out stove wood, and all sorts of log-cutting—it is unrivaled. Thousands sold yearly. A boy of 16 can saw logs fast and easy. Immense saving of labor and money. Write for elegantly illustrated catalogue in 6 brilliant colors, also brilliantly illuminated poster in 5 colors. All free. Agents Wanted. Big money made quickly. MONARCH MFG CO., (A) 206 State St., Chicago, Ill.

BY ALL ODDS THE BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches**, which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars**, which are models of comfort and elegance; its **Palace Drawing Room Cars**, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that it is the best equipped road in the world.

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, and take none other. All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

MARTIN LUTHER:

A Study of Reformation.

By EDWIN D. MEAD,

Author of *The Philosophy of Carlyle*, etc.

An essay upon the significant phases of Luther's life and work, with special reference to present problems of reform; discussing the principles of Individualism, Intellectualism, and Rationalism for which Luther stood; and the Liberalism, the Old Orthodoxy and the New Orthodoxy, with which he came into conflict.

Cloth, 12mo, 194 pages. Price \$1.25.

Sent, postpaid, on receipt of price, by

THE INDEX,
44 BOYLSTON STREET, Boston.

2,000 PHOTOGRAPHS OF WORKS OF THE OLD MASTERS.

Large Copies only 20 cents each.

The following examples are from the so-called "Twelve Great Pictures of the World." The Last Supper, LEONARDO DA VINCI; The Last Judgment, MICHAEL ANGELO; Descent from the Cross, VOLTERRA; Assumption of the Virgin, TITIAN; The Transfiguration, RAPHAEL; Sistine Madonna, RAPHAEL; Holy Night, CORREGGIO; Aurora, GUIDO; Beatrice Cenci, GUIDO; Last Communion of St. Jerome, DOMENICHINO; Descent from the Cross, RUBENS; The Immaculate Conception, MURILLO.

Excellent unmounted copies of all these will be sent by mail on receipt of \$2.40; or any one or more at 20 cts. each (with Catalogue when desired). Address

W. H. SHERMAN,
455 Jackson Street, Milwaukee, Wis.

Travels in Faith from Tradition to Reason.

By ROBERT C. ADAMS.

For sale at THE INDEX office. Price \$1.25.

THE ETHICAL MOVEMENT:

Its Philosophical Basis; Its General Aims; Its Relation to Christianity, Unitarianism, and Free Religion.

THREE ADDRESSES BEFORE THE FREE RELIGIOUS ASSOCIATION, BOSTON, MAY 30, by Messrs. W. M. SALTER, W. L. SHELDON, and S. B. WESTON.

For sale at THE INDEX office. Price 15 cents.

Robert G. Ingersoll's Writings.

Only authorized editions.

Vol. I.—THE GODS, and Other Lectures. Contents: "The Gods," "Humboldt," "Thomas Paine," "Individuality," "Heretics and Heresies." 12mo, 253 p. ges. Cloth, \$1.25; paper, 50 cents.

Vol. II.—THE GHOSTS, and Other Lectures. Contents: "The Ghosts," "The Liberty of Man, Woman, and Child," "The Declaration of Independence," "About Farming in Illinois," "The Grant Banquet Toast," "The Past rises before me like a Dream," "Tribute to Rev. Alexander Clark," "Tribute to Ebon C. Ingersoll." 12mo, 243 pages. Cloth, \$1.25; paper, 50 cents.

Vol. III.—SOME MISTAKES OF MOSES. 12mo, 278 pages. Cloth, \$1.25; paper, 50 cents.

Vol. IV.—INGERSOLL ON TALMAGIAN THEOLOGY. (New.) 443 pages. Cloth, gilt top, \$2.00; plain cloth, \$1.25; paper 50 cents.

WHAT MUST WE DO TO BE SAVED? 89 pages, 12mo. Paper, 25 cents.

THE CHRISTIAN RELIGION. A series of articles on the Christian Religion, by Col. ROBERT G. INGERSOLL, Judge JEREMIAH S. BLACK, and Prof. GEORGE P. FISHER. The only complete and authorized edition. One volume, 8vo, 143 pages. Cloth, \$1.00; paper, 50 cents.

VINDICATION OF THOMAS PAINE, from the attacks of the New York Observer. By ROBERT G. INGERSOLL. Paper, 25 cents.

Just Published:

Ingersoll's Lectures Complete.

In one superb volume, 1306 pages, octavo, half calf, gilt, mottled edges. Price, postpaid, \$5.00.

PROCEEDINGS OF THE CIVIL RIGHTS MASS MEETING, held at Lincoln Hall, Washington, D.C. October 22, 1883. Containing the speeches of Hon. FREDERICK DOUGLASS and Col. ROBERT G. INGERSOLL. Large size, octavo. Paper, price 15 cents.

PROSE-POEMS AND SELECTIONS from the writings and sayings of Col. ROBERT G. INGERSOLL. Embellished with a steel-engraved portrait of the author. Beautifully printed on elegant white paper, and in every way a splendid book for the centre table. Price \$2.50.

For sale at THE INDEX office, 44 Boylston Street, Boston.

THE BIG CLOCK
IN FRONT OF OUR DINING ROOMS

The Secret of the East;

OR,

The Origin of the Christian Religion
and the Significance of its
Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsome bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. The case against the Christian Church is a marvelously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its social theories, of considerable scientific and historic value."—*Boston Evening Transcript*.

CURRENT TOPICS.

BY B. F. U.

SAYS an exchange: "The Bible Society has determined to stop putting Bibles in railroad cars. One of its officers said, 'Of a thousand distributed, we believe that but ten were read; while three hundred were so mutilated as to be worthless, and four hundred stolen.'"

THE Cleveland *Sunday Sun* contains woodcut portraits of some of the speakers at the Cassadaga meetings, but the artist seems to have "mixed these babies up" considerably; for with the other portraits appears a very good one of our correspondent, Mr. T. W. Curtis, with the name of Charles Watts under it.

ACCORDING to an English paper, the vicar of St. Margaret in Barking, Eng., evidently thinks that the words of Jesus, "For such is the kingdom of heaven," applies to such little children only as have been baptized. "A man and wife who were members of his church in good standing lost a little son lately; and, because it never had been baptized, the vicar refused to officiate at the funeral, and had the church-yard gates shut during the special services which the parents were compelled to get, so that the coffin could not be carried in."

WHATEVER be thought of the theology of the *Catholic Review* in the following statement, it is undoubtedly sound: "No greater tyranny, it seems to us, exists than that which, 'for the good of the party,' obliges honest men to swallow candidates whom they ought to loathe, and whom indeed, before the nomination, they declare they do hate. So long as voters are bound by this superstition to ratify the selection of the machines, so long will the machinists be indifferent to the merits or

demerits of the candidates they present. All they will look to is the bargain about the division of the spoils."

L. A. WATKINS writes to the *Denver Rocky Mountain News*: "There are thousands of people in this city who cannot afford to see the Exposition except on Sundays. Most mechanics and laborers having families to support cannot afford to lose a day's work. They cannot attend at night, being too tired after a day's toil. They look upon Sunday as a day of recreation and rest. Then why should they be denied the privilege of improving their minds and studying the many beautiful and instructive exhibits at the Exposition? Give the workingman a chance by making it half fare on the railroad and to the Exposition. In doing this, you confer as great a blessing on the masses as by preaching."

IN one of our exchanges, we find the following: "The evening before Daniel Webster died, his physician repeated to him the words, 'Thy rod and thy staff they comfort me'; and Webster replied, as if in sympathy, but too weak to complete the sentence, 'Thy rod and thy staff—the fact—the fact—I want.' Here the matter rested as at first reported. A Bostonian now gives what he declares is the true account, as it came to him very directly. Webster asked whether he was likely to live till morning. Dr. Jeffreys, not willing to give a positive answer, repeated from the twenty-third Psalm. Webster saw the evasion, and in a clear and rather severe tone said: 'Thy rod and thy staff—the fact, the fact I want!' He desired an answer to his question."

A WRITER in the *New York Tribune*, to illustrate the absurdity of our libel laws, after remarking that it is "only the reckless, irresponsible, and characterless men who are engaged in printing disreputable newspapers, who persist in libels, and who, being sued civilly, take advantage of the rule of pleadings and insert new calumnies to sustain the old," adds: "They do it because there is no adequate punishment for such original offences, and none at all for those subsequently committed in sustaining the first. Under our laws, you may sue and punish by damages a man for calling you a thief; but he may put in his pleadings that you are also a murderer, and you have no remedy as against that. You may ask the jury to take it into consideration as increasing the damages, but that is all the remedy left you. If you get damages against the average wilful libeller, you can collect nothing, as the professional libeller is usually careful to possess nothing in his own name. If you take his body, he can swear himself out of jail on the ground of his absolute worthlessness. I meet scores of men found guilty civilly and criminally of libel, but I have never seen one in jail or heard of one paying damages."

THE following is taken from an article in the *American Catholic Quarterly Review*: "The Italians show very little love of the [Roman Catholic] faith, and very little knowledge of it. Far different from the humble Irish, who, years ago, laboring on the

great public works, always welcomed a priest and helped to erect churches as they moved along. The Italians neither frequent the churches now accessible to them, nor exert themselves to erect others where they can hear the words of truth in their own tongue. The Italian churches are few compared to the Italian body, and they are not maintained exclusively by them. In many cities there are quarters occupied by Italians who seem to have lost all religion, so that when zealous priests, speaking their language, give missions in order to revive their faith, they find but a score of listeners, the very women having apparently lost all attachment to religion." Since the Italians have for centuries been educated in the faith and trained under the influence of Romanism, their present indifference to it would seem to indicate that it has been tried by them and found wanting. Catholic writers often declare that "Protestantism naturally leads to infidelity." It would seem that the absurd teachings and childish ceremonies of Romanism, continued unchanged in a period of rapidly increasing intelligence, are having the effect to disgust millions even who have been reared in this faith.

SOME weeks ago, Charles Fouilland was returned at the head of the poll at Roanne. He had been sent as delegate to the Roubaix conference by all the workingmen's groups and syndicates of his native town. According to a statement in *To-day* by Eleanor Marx, he was immediately arrested after his return, by mistake, for assaulting a *gendarme*. "It was pointed out," says this writer, "that the real culprit was another person altogether, whose only connection with Charles Fouilland is that he bears the same surname. But no notice was taken of this; and, in order to get rid of Fouilland during the electioneering campaign, the adjournment of the trial that was asked for was refused, and the innocent man condemned to twenty days' imprisonment. This is bad enough, but not all. Fouilland 'appealed.' On the 5th of May, the case was heard at Lyons. The court refused to hear witnesses, refused to adjourn at the request of the barrister, César Bouchage, retained at Paris, and augmented the penalty from twenty days to twelve months' imprisonment. And so this man, guilty of no crime save that of being a well-known Socialist, and whose old father is entirely dependent upon him, will for twelve months have to bear the horrors of the 'Central prison'; for he is not even looked upon as a political prisoner. 'We have no words,' says Jules Guesde in the *Cri du Peuple*, 'to stigmatize this double judicial murder: a moral murder of the most estimable of workmen, condemned to the disgrace of the "Central Prison"; a physical murder of the poor old father whom Charles Fouilland supports. Charles Fouilland has nothing, and can have nothing, to do with the act for which he is to be buried alive: it is only because he is a workingman, a member of the "Parti Ouvrier," that he has been struck down by the magistrates.' Such an act of injustice seems incredible in an enlightened country. Whether any important facts of the case are suppressed in the above account we are unable to say.

IS IT COLLAPSE OR ABSORPTION?

A writer who signs himself "A Yorkshire Lawyer" has an article in the *Christian Life*, London, under the title, "A Story of Collapse." The *Christian Life* is the organ of the most conservative wing of English Unitarians; and the purpose of its contributor in the article referred to, which is given a conspicuous place in the journal, is to make out that the views represented by Theodore Parker are practically obsolete, and that the movement he inaugurated among or in opposition to Unitarians has collapsed without leaving any permanent results. He begins thus: "The policy which was victorious in the Parker controversy of ten years ago has now met its inevitable fate. It proclaimed the only bond of cohesion among Unitarians to be, not a belief, but the criticism of a belief. Under the promise of attracting to our cause crowds of outsiders by thus repudiating all doctrinal limitations, it acquired a momentary popularity; but, now that experience has shown its true result to be, not to attract new friends, but only to dishearten old ones, it is sinking fast into disrepute. Pushed for a brief space into adventitious popularity through the magnificence of its prophecies, it is disappearing into deserved oblivion through the worthlessness of its performances."

The writer brings two witnesses to substantiate his position. The first witness is the *London Inquirer*, a more liberal as well as more able Unitarian journal. The *Inquirer*, some little time ago, had something to say of the difficulties which "ministers of the advanced school" among Unitarians have to contend with in building up or retaining societies. And some of its sentences "A Yorkshire Lawyer" now quotes to show that the "advanced school" of Unitarianism, or the Parker element, is not a constructive, but a disorganizing power, and is continually digging its own grave. The second witness summoned is *The Index*. The writer quotes, apart from its connection and purpose, a statement which we made in an article written three or four years ago, wherein we referred to the fact that the several independent societies which arose in this country on the wave of Theodore Parker's protest against the Unitarianism of his time had all ceased to exist, excepting Mr. Parker's own, the Twenty-eighth Congregational, in Boston, and that even that was then in a critical condition,—from which, however, it has now happily recovered. From this statement "A Yorkshire Lawyer" argues that Theodore Parker's influence can no longer be counted as a factor in the Unitarian movement and churches. And this use of *The Index* to support his proposition is the one point in his article which makes it, for us, worthy of note.

We are disposed, indeed, to agree with the "Yorkshire Lawyer" that "a church of mere free thought" would not have the elements of permanence; and the position which we took in the article from which he quotes was that the societies named had not sufficiently taken up the new constructive work demanded by their new ideas and the new times: hence, their dissolution when the one thing for which they originated had been accomplished. They came as a protest: they made their protest, and passed away. But we never thought nor intimated that Theodore Parker's work was only critical and negative. There was the atmosphere of perfect freedom of thought in the great Music Hall of Boston, when its thousands of hearers thrilled to his words. But he sent his hearers away much more than merely free thinkers: he inspired them with heroic moral purposes, with loftier ideals of character, with enthusiasm for great ideas and noble deeds. Theo-

dore Parker was one of the genuine religious prophets,—a man of the type of Isaiah, of Paul, of Luther. And, even though he had organized no society, and no church were anywhere remaining that nominally continued his work, such a fact might be no proof whatever of the cessation of his power. He was one of those characters whose vitality survives any institutions they may have created or beliefs they may have taught.

And, again, if "A Yorkshire Lawyer" were to visit this country, he would find the essential teachings of Theodore Parker largely permeating the Unitarian denomination. He would find, we think it may be said with entire safety, the great body of Unitarian ministers much nearer to Parker's position than to Channing's. He would find many Unitarian ministers and societies advanced beyond Parker's position. He would find the ministers of the Western Conference, with very few exceptions, advocates of the purely natural view of the character of Jesus and of the genesis of Christianity; and he would find a large number of the Eastern ministers not a whit behind their Western brethren in this respect. He would find a considerable number of these ministers members of and in full sympathy with the Free Religious Association. He would find the Unitarian Sunday-school Societies issuing books for the use of the young, that are in entire accord with the standpoint and general views of Theodore Parker's "Discourse of Religion," and these books in use as text-books in the Sunday-schools of some of the oldest Unitarian societies. He would find the communion service dropping out of use in not a few of the older societies in the Eastern States, and its observance in the Western societies the exception rather than the rule. In a word, our Yorkshire friend would learn that, though here and there the echoes of the old controversy may still linger, yet Theodore Parker's name will be spoken amid general respect and even reverence in Unitarian assemblies to-day, where a generation ago it would have been received only with bitter scorn, and that, though there may be but one society distinctly recognized as Parker's followers, there is little need of any others now, since Parker's spirit and teachings have been so largely imbibed by the Unitarian societies. If Parkerism as a distinct movement has collapsed, it is because Unitarianism has absorbed it into its own living fibre. Nor is it the first time in religious history that an old organization has been revitalized by eating the mental flesh and drinking the spiritual blood of its alleged enemy.

WM. J. POTTER.

THE GHOST OF THEISM.

The battle of those who cling to the ghost of anthropomorphism, or theism, should be fought, it seems to me, in the field of teleology,—the dim region of the unconscious, the marvellous realm in which Darwin and Von Hartmann, working by different methods and with diverging aims, yet often move in parallel lines, Von Hartmann going deeper than the English scientist, and asserting that what to Darwin seems the work of pure chance is really the work of a Universal Unconscious Will.

But even if, in the sphere of organized life (vegetable and animal), an "Inscrutable Power" should be proved to be performing what we may call sub-psychical acts of the most marvellous kind, and all mutations of species should be shown to have teleological origin, yet, after all, by what warrant shall we say that those sub-psychical acts, interpreted as they must be in terms of matter, can bring true tidings, adequate measurement, exhaustive inventory, of the nameless Being? Its Appa-

rition has a million tongues, but dare one of them breathe the everlasting secret?

"Ask on, thou clothed eternity,
Time is the false reply."

The sooner we give up the attempt to project our own nature into the extra-human sphere, the better it will be for our peace of mind. Five thinkers of modern times have contributed to make anthropomorphic theism as obsolete as astrology: they are Berkeley, Hume, Kant, Spencer, and Darwin. It is in vain that we attempt to escape from the charmed circle of our limitations. Of the nature of the universe we can but know that we know nothing. Drop our earth into the solar fires, and the moon, if revolving at its present distance of two hundred and forty thousand miles from the earth, would find its orbit still bathed in the iron vapor of the sun, so vast is that globe of fire. Can the Power that sweeps through the universe, terribly clothed with that solar glory, and filling besides the fathomless interstellar gulfs of icy blackness with its mysterious energy,—can that Power ever be understood by such organic motes as we, swarming, basking here in the storm of heat that beats upon the shore of our little watery sphere, our spinning fire-ball draped in green for a day, curtained in liquid transparencies for an hour, balanced by the juggler's hand in its soundless flight for a brief æon of time? No: let the old Norse heroism, the masculine strength of our fathers, nerve us to cut loose once and for all from the profitless dreams of sophistical philosophies, and set our feet firm upon the twin rocks of Nescient Reverence and Moral Action.

I know that it is only through a process of agony and sorrow that the religious mind finds itself at last compelled to camp on this *ultima thule* of philosophy. But I also know that there alone can deep peace of mind be found, there alone the strength of the stag in its inaccessible fastness,—

"The hills, like giants at a hunting, lay
Chin upon hand, to see the game at bay."

At bay, but undaunted, and strengthening the thews for a nobler course.

Who is it that has not a profound sympathy for the honest thinkers trembling on the shore of the dark river of nescience and doubtful of the plunge? It cuts deep into our pride to confess our insignificance in the scheme of things. We thought ourselves in special favor with the King, and now know not whether he has even noticed us. How mortifying that the universe seems unconscious of our existence! We have never seen our Father. He put us into the box of the great foundling hospital, left us a few toys, and then travelled into a distant country. He gave us little wills and little minds,—wonderful little automata we,—but *did* he in truth make us "in his image"? That is just what we cannot tell, and bootless is it to waste our lives in guessing.

But to leave generalizing and get some practical point out of this train of thought, to which I have been led by a word of conversation with Mr. Edwin D. Mead. Mr. Mead justly says that Emerson believed himself to be in an intellectual relation to the universe; but, when he also says that he was a theist, I hesitate. He is theistic in his prose and in many parts of his poems; but, in most of the more inspired and impassioned portions of the philosophical poems,—in other words, in those portions written when his faculties were aroused to their highest pitch of seer-vision,—he clearly soars clean beyond theism into what we may call pantheistic nescience. In his "Song of Nature," in "Brahma," "The Sphinx," "Initial, Dæmonic, and Celestial Love," and elsewhere, he rises in thought above the gods themselves into the region "where the sunny Æon sleeps." It is above the realm of

daimons, which lies, indeed, close to men like undulating layer of air. It is a point from which one looks down upon men and gods alike, and sees that the real God is the universe in its totality, sometimes called by Emerson Fate, sometimes Brahma, and sometimes Pan, or the Rock of Ages. In the "Song of Nature," it is the universe who is the real creator. I, Nature, formed the world out of the nebulous mist (stanza seven), while the forces men call gods were masking in saurian, star, and flower. I, Fate, will whirl the wheel and mix the bowl, and man shall be born. In "Celestial Love," it is stated that, when mind rises into the realm of absolute vision, it sees that

"The race of gods,
Or those we erring own,
Are shadows flitting up and down
In the still abodes."

What better incarnation of pure pantheism can be found than the third stanza of "Brahma"?

"They reckon ill who leave me out;
When me they fly, I am the wings;
I am the doubter and the doubt,
And I the hymn the Brahmin sings."

Then ponder again the following from "Woodnotes":—

"Onward and on, the eternal Pan,
Who layeth the world's incessant plan,
Halteth never in one shape,
But forever doth escape
Like wave or flame, into new forms
Of gem and air, of plants and worms."

Here you have the Universal Entity or Power likened to flame or water-waves, taking on always new forms, but remaining the one substance. Is this theism?

A poem of Emerson's called "Spiritual Laws" has these remarkable pantheistic lines:—

"The living heaven thy prayers respect,
House at once and architect,
Quarrying man's rejected hours
Builds therewith eternal towers."

These lines evidently teach the identity of matter and mind, and that the one substance works, somewhat after the manner of Von Hartmann's Unconscious, with ceaseless urge; and yet, doubtless in Emerson's view, not blindly, but with purpose or foresight.

In a fragment recently published by the literary executors of Mr. Emerson, in his collected works, occurs this stanza:—

"Ever the Rock of Ages melts
Into the mineral air,
To be of the quarry whence to build
Thought and its mansions fair."

Both the brain and the mind are here said to be born of material substance, or, as Emerson rightly regarded it, psycho-material substance, "the eternal Pan." The following again is a magnificent pantheistic passage, only recently published in the collected works above alluded to:—

"O what are heroes, prophets, men,
But pipes through which the breath of Pan doth blow
A momentary music....

... Ebbs the tide, they lie
White hollow shells upon the desert shore.
But not the less the eternal wave rolls on
To animate new millions, and exhale
Races and planets, its enchanted foam."

Such are some of the poetical passages clearly pantheistic in their meaning. Still, as I said, it is only in these supreme and impassioned moments that Emerson rises out of the anthropomorphic cloud above the "flickering Dæmon film." And I readily admit that out of both his prose and his poetry can be gleaned a thousand theistic passages. In his "Woodnotes," a few lines below the very passage just quoted, he falls into the anthropomorphic vein from which it is all but impossible for any one to escape, and speaks of the eternal Pan as imparting energy, or the wine of his power, to the various organic forms, making them such and

such by drops of the enchanted wine in differing measure, until into the last drop "himself he flings," and forms man. This is pure theism. In the same poem are the lines,—

"Ever fresh the broad creation,
A divine improvisation,
From the heart of God proceeds."

Finally, in "The World Soul," it is said of Destiny, or the Inscrutable Power, that

"The seeds of land and sea
Are the atoms of his body bright,
And his behest obey."

This, too, is pure theism, or the doctrine of a universal soul distinct from matter, and animating it with its presence.

It seems to me hopeless to attempt to reconcile the various passages I have quoted; nor should I, for one, wish to do so. The pantheistic portions of Emerson's poems will live for ages as a witness to the power of this keenest of intellects to rise above the limitations of the prevalent philosophy of his day.

W. S. KENNEDY.

GERYON.

One of the worst of the fiends whom Dante meets in the pit is Geryon, the spirit of fraud, with his smiling face like that of an honest man, and his snaky body, ending in a scorpion's tail. It is he who carries the poet down to see how horrible are the punishments of thieves, seducers, peculators, coiners, forgers, false prophets, unjust judges, and traitors. More than half of the *Inferno* is devoted to these sinners, who are said to be much worse punished than misers, sensualists, or even murderers. And so they ought to be. Even in Dante's time, society was much more in peril from crimes of fraud than from those of self-indulgence or violence. All our institutions are founded on the mutual confidence of man in man. It is faith that other people mean honestly toward us which feeds all industrial prosperity and social life. The new gospel the world needs to-day is a gospel of justice. The old parable, in which men are rewarded and punished according to their generosity merely, might well be rewritten so as to show that on the right hand of the throne of judgment must stand those blessed ones who have bought and sold honestly, kept their promises, paid every man his due, and set their faces against all corruption; while on the left hand, doomed to burning flames of public indignation and secret shame, are the fraudulent bankrupts, the traders who have deceived their customers, and the office holders who have sacrificed the nation's interest and honor to their own private gain. Not only the life and property of each individual, but our common liberty as a people is guarded by the sword of justice. Faith of man in man is the pillar of the State. That is the faith by which America has been saved. Neither tyranny nor anarchy can get a footing in a nation whose citizens know they can trust each other. All our political safety and prosperity rests on this foundation. The worst of public enemies is the man who deliberately practises secret fraud. The corrupt politician who betrays a public trust in order to make money, and then shields himself by lies against exposure, is the only kind of traitor or rebel who is at present dangerous.

The patriotic citizen is always watchful to keep cheats and liars out of office and put honest men in. And this duty is peculiarly pressing just now, when one of the foremost candidates for the presidency is charged with systematic fraud and falsehood. This is not the place for me to say whether I think these charges true. No man has a right to take another's opinion on such a point as this.

To say, "The editors of my newspaper and the president of my college think these charges true, and so I shall vote against Blaine"; or "Senator this and General that say the charges don't amount to anything, and so I shall stand by the good old party," is as contemptible as to say, "My pastor and his bishop believe in the Athanasian creed, and I am going to believe just as they do." Our country calls for patriotic and intelligent voters, who will look with their own eyes, and act according to their own consciences. And a patriotic conscience must consider the charge of dishonesty, which directly affects fitness for office, and which is made against only one of the possible Presidents, much more important than another charge, which does not absolutely incapacitate a man for public service, and which unfortunately is pressed against both the leading candidates. Even a lower tariff has no such dangers as a lower standard of morals. The good old party I believe in myself is that which is for justice and honor against fraud and falsehood. We have a plain issue before us, not to be explained away or covered up or put out of sight. Those charges against Mr. Blaine rest on evidence of whose strength every reader can judge for himself, and those charges are either true or false. Men whose dispassionate investigation of the facts has led to a conscientious conviction that Mr. Blaine's integrity is spotless cannot easily express their opinion too warmly. But he whose reason and conscience tell him that the charges are just is solemnly bound to ask himself what he can do to save our country from a corrupt ruler; to keep that great line of Presidents, which began with the man who could not tell a lie, from being polluted by a name stained with falsehood and fraud; to prevent Geryon from making the White House black.

F. M. HOLLAND.

VOTING POWER AND ELIGIBILITY TO OFFICE IN LIBERAL ORGANIZATIONS.

In *The Index* of September 4, under the title of "The New Organization," Mr. T. W. Curtis has issued what might be termed an informal call for the formation of a National Liberal Organization.

As there are associations already in the field which the new body would be intended to occupy, it must be presumed that there are weighty reasons why many radicals persistently decline joining their efforts with those of already existing societies. Indeed, it appears evident that, along with the forces which tend to separate the Liberals of our day from their opponents, other forces of almost equal potency tend to disintegrate the liberal columns themselves.

The National Liberal League originated chiefly through the efforts of Mr. F. E. Abbot and his friends. Its purposes were announced in the Liberal platform adopted at Rochester, N.Y., Oct. 26, 1876. Its constitution, adopted July 1, 1876, may be considered a model document. And yet it was but two years later that the founders of the League, believing that the association was about to become unfaithful to its proper ends, withdrew from the organization. But is not a change of policy a necessary consequence of any society's extension of its membership by the accession of so heterogeneous elements as was apparently in this instance the case? In the Constitution of the Liberal League, Article IV., it is provided that "any person who shall pay one dollar into the treasury shall be entitled to a certificate, signed by the President and Secretary, as an annual member of the National Liberal League." I notice that the Constitution of the Free Religious Association is equally liberal in its provision

for the admittance of total strangers to membership.

This liberality in not only opening the gates, but, as it were, *taking them off their hinges and reducing them to kindling wood*, appears to me a great mistake in political practice. So long as their opponents are accustomed to accomplish their ends more frequently by unfair than by fair means, the gates of liberal associations should be carefully guarded. As the Constitution of the Free Religious Association now stands, what is to prevent a sufficiently large body of its opponents from rushing in, political heeler fashion, making themselves voters by the payment of that one dollar, and then perverting its name and prestige to some base purpose directly opposed to the spirit in which the organization was conceived? So long as the "crank" (generally, as I understand it, a sincere fanatical "Liberal" of great narrowness of mental horizon) seeks admission to all liberal organizations, the relative rights of members should be surrounded by safeguards and restrictions.

A natural law seems to operate against the steadfastness of purpose of all liberal societies, nay, against their very liberality itself. And this is to be expected just so long as each member has equal voting power, regardless of his or her relative breadth of views and cultivation. It is this equality of voting power which, in my estimation, not only ruins liberal associations, but is also instrumental in blasting the political health of the nation. It is this equality of voting power which deters many able men from joining liberal organizations, as well as from performing the so-called "duties of citizenship." It is this equality of the most ignorant with the wisest which prevents the "consensus of the competent" from directing human affairs. That our entire system of social and political organizations sadly needs recasting will be admitted by all Liberals. And I believe that this can be best accomplished by the preliminary formation of a number of liberal societies to serve as models upon which the nation may be remoulded.

Equal universal suffrage is an evident failure: *unequal universal suffrage* remains to be tried. "Intelligence qualifications" of the right to vote have been before this proposed; but, so far as I am aware, these were all in the direction of the entire exclusion of the illiterate, and never in that of a *gradation* of voting power and eligibility to office on the basis of the systematically ascertained range of information of each citizen and candidate.

In the proposed liberal model organizations, the *inequalization of voting power and eligibility to office* should be conditioned by the constitution and by-laws, and carried into effect by an elective committee charged with the periodical examination of members.

To illustrate what should be done, let us suppose A. B. and C. D. to have been recently admitted to membership. Until examined, they have no vote. After a careful examination by the committee, it is found that, compared with certain ideal standards, A. B.'s information is to C. D.'s information as 12 to 17. Then these two numbers will represent the respective voting power and eligibility of the two members. On all questions and in all elections, A. B. casts 12 votes and C. D. 17. Should A. B. and C. D. be candidates for office, the former's vote must be multiplied by 12 and the latter's by 17. If the former received 40 votes, $12 \times 40 = 480$ is counted for him: if C. D. received 30 votes, $17 \times 30 = 510$ is his number; and, in this case, not A. B., but C. D., is elected. Evidently, under this system, the well-informed would have considerable political advantages over the

less informed; and the danger of the latter's vote throwing the society's government into the hands of the ignorant "crank" or unscrupulous demagogue, even if not entirely eliminated, would certainly be very much lessened. At all events, the attempt deserves to be made.

I do not in any sense mean to assert that the here proposed amendment to the methods of social organization would carry in its train overwhelming revolutionary successes. But I do most sincerely believe that an experiment in association of the kind indicated would slowly but surely lead to the most beneficial results,—the foundation of a social structure destined, in the course of years, to assume noble dimensions,—a temple of Liberalism upon whose model, illuminated from within, the nation could be reformed.

The experiment can be made whenever, in any of our great cities, a nucleus of thoroughly sincere and serious Liberals can be found who are convinced of the value of the plan. With such a body, I for one should gladly unite my efforts.

CHARLES FROEBEL.

NOT "THE BEGINNING OF THE EVIL."

Mr. J. K. Applebee, in a recent discourse, referring to the resolutions relating to laws against indecent literature, adopted at the first congress of the National Liberal League, says: "There was nothing which I, as an individual, could object to in Mr. Underwood's resolution; but, as a member of the League, if I had been such, I should have objected to it entirely." To this statement, no reply need be made. But Mr. Applebee goes farther, and says: "This" (the resolution referred to above) "was the beginning of the evil. From that unhappy moment, the seeds of decay set in, and the League began to die." To this statement, we take exception. The adoption of the resolutions referred to, as Mr. Abbot who at the time approved them said two years subsequently, settled the question which had been brought into the League by Mr. Andrews "*wisely and well*." At the next annual congress there was an increased attendance, the proceedings were harmonious, and the work done, as reported in *The Index*, was very satisfactory. The League showed no signs of decay; and there was no contention or trouble whatever resulting from, and no reference to, the resolution, on the adoption of which, Mr. Applebee says, "the League began to die." The issue of repeal or reform did not arise until the arrest of Messrs. Heywood and Bennett and the circulation of a petition for the "repeal or material modification" of the postal laws of 1873,—circumstances that led to a controversy in liberal papers, which was carried into the next annual congress held at Syracuse in 1878, when the first division of the League occurred. Mr. Applebee says that, at the time Col. Ingersoll left the League, "next to congratulating Col. Ingersoll on leaving it, I felt inclined to congratulate myself at never having belonged to it." But, if those "religious Liberals" like Mr. Applebee, who, when the League had adopted a ruinous policy, congratulated themselves "at never having belonged to it," had taken some interest in the organization before the disaster occurred, it could easily have been averted, and the League could have been kept to its original purpose. "The present disgrace," wrote Mr. Abbot, soon after the Syracuse congress, "could never have been inflicted upon the liberal cause, had it not been for the abstention of the better class of Liberals." What was done at the Liberal League Congress in 1876 was done without the light afforded by the discussion and experience of the past eight years, and doubtless mistakes were made; but Mr. Applebee, whose opinion as

to the merits of the discussion between the two factions of the Liberal League we now learn for the first time, and who might, had he been with us at Philadelphia in 1876, have given needed assistance, has not succeeded, we think, in pointing out any of those mistakes. As to the point mentioned, the judgment of Mr. Abbot may be accepted as correct, when in 1878 he said, "At the time of its birth, the League assumed a firm and wise position on this 'obscene literature question'; and it needs now to maintain this position with increased clearness, vigor, and emphasis." There are several statements in Mr. Applebee's discourse to which exception may fairly be taken, and the severity with which he condemns all who have joined in the demand, the most unwise demand, we believe, for repeal of the so-called Comstock laws, is so undiscriminating that it is likely to do more harm than good to the side in defence of which it is used.

The Liberal League movement had its beginning in *The Index* in an appeal published in 1873, accompanied by "The Demands of Liberalism," one of which is "that all laws shall be conformed to the requirements of natural morality, equal rights, and impartial liberty." "The idea which created the Natural Liberal League," as Mr. Abbot said at its first congress, "is that of a free State absolutely independent of the Church and founded on the equal natural rights of all individuals." But the equal natural rights of all individuals do not imply the right or the obligation of the government of the United States, whose only powers are those delegated to it by the several States, to be a carrier of indecent publications which are prohibited by all the States and condemned by all decent men and women, irrespective of their views on religion or other disputed questions. The Liberal League, therefore, in demanding the repeal of postal laws against the transmission of such literature through the mails made a grave mistake, a virtual admission of which is involved in recent declarations of its leaders. The sentiment worked up among the subscribers of a few papers in favor of "repeal" by two or three persons,—with the co-operation of their friends and sympathizers,—who were identified with the liberal movement, and who, whatever may be said of them personally as to their lack of propriety and taste, were undoubtedly victims of religious bigotry and unfair legal interpretation, is subsiding; and those who were the most instrumental in producing this sentiment are willing and anxious to discontinue the agitation. They see that, with a better understanding of the objects of the postal laws of 1873, people are more discriminating and just, and that now judges and juries have learned to discriminate between really obscene publications, which we are glad to say are pretty effectually suppressed, and works like Heywood's pamphlet, for circulating which Heywood and Bennett were a few years ago unjustly imprisoned, and of which Mr. Abbot well said, "To confound this book with that vile class of literature which alone ought to be suppressed is a monstrous injustice, and we protest against it with irrepressible indignation." It is seen, too, by those who have opposed "repeal" that they should condemn, to quote the words of Mr. Abbot, "Anthony Comstock's absurd fanaticism, which not only makes him procure the imprisonment of mere social theorists as criminals, but also moves him to declare war against the historical paintings of artists of high reputation like Hans Makart on the ground that they are indecent." "When men are punished for promulgating their mere opinions as a crime, and when this oppression is a direct interference of the Church with the State, who shall say that it is an issue foreign to the objects of the Liberal League?"

B. F. UNDERWOOD.

DESPOTISM IN RUSSIA.

It is not strange that there are Nihilists in Russia secretly at work to destroy the government. The wonder is that the number is not larger, and that acts of violence by them are so few. Of the despotism that prevails, of the corruption pervading every department of the government, of the cruelty of sub-rulers, of the policy of suppressing all independence of thought and freedom of expression by the knout, by imprisonment, by exile, by murder under the forms of law, many writers have given us full statements and convincing proof. One of the indications of the purpose and spirit of the tyrannical government of Russia is the system of censorship over literature which it has established. An imperial decree prohibits translations from Huxley, Spencer, Mill, Lubbock, Bagehot, Agassiz, and Lyell. Booksellers are forbidden to sell the second volume of Lecky's *History of Rationalism in Europe*. If a publisher of any works is suspected of holding unsound political or religious views, his business is stopped by official authority. Ignorant men are often appointed as censors, with authority to proscribe any magazine or paper in which they imagine there is anything offensive. A Frenchman, who had lived in Russia nearly his whole life, and who was extensively engaged in the book trade, was arrested on suspicion and kept in prison nearly a month without examination. He declared that he had carefully avoided dealing in any forbidden literature, and there was no evidence to the contrary; but after a hearing, which was a mere form and farce, he was sent to St. Petersburg, and there kept in jail seven months. Through the influence of the French consul into whose hands he had managed to get a note, he was given a hearing before the chief of police, who, in reply to his declaration that he had sold no contraband literature, said: "That I know quite well. You have done nothing openly illegal, I admit; but that only shows how very prudent you are, and, therefore, all the more dangerous. It is true, also, that we have found no forbidden literature in your possession. All the same, we know quite well that it is possible so to arrange an assortment even of authorized books as to spread subversive ideas quite as effectually as if they were revolutionary pamphlets printed at Geneva." The consul demanded that the prisoner be at once put on trial or released. He was promised release on condition that he would leave the country. Being given only twenty-four hours in which to dispose of his property at Karkoff, whither he was taken under strong guard, he was obliged to leave his stock in the hands of an agent, who disposed of it at a quarter of its cost. Is it surprising that, under a system of repression such as these facts indicate, there are men and women in Russia who hate the Czar, and would gladly put an end to his despotic reign? Is it strange that, when he visited Warsaw lately, the railway was guarded by thousands of soldiers who had orders to shoot any persons who approached within three thousand feet of the track, or that there were, as a despatch stated, "a thousand arrests in connection with the Czar's visit"? In no part of his empire is his life safe. It looks now as though revolution, which is often necessary to the process of evolution, would alone save Russia from the continued existence of a most grinding despotism.

B. F. U.

In regard to the doctrine of immortality, Mr. John Fiske wrote in 1877: "Scientifically speaking there is no presumption either way, and there is no burden of proof on either side. The question

is simply one which science cannot touch. In the future as in the past, I have no doubt it will be provisionally answered in different ways by different minds, on an estimate of what is called 'moral probability,' just as we see it diversely answered in the 'Modern Symposium.' For my own part, I should be much better satisfied with an affirmative answer as affording perhaps some unforeseen solution to the general mystery of life. But there is one thing which every true philosopher ought to dread even more than the prospect of annihilation, and that is the unpardonable sin of letting preference tamper with his judgment. I have no sympathy with those who stigmatize the hope of immortal life as selfish or degrading, and with Mr. Harrison's proffered substitute I confess I have no patience whatever. This travesty of Christianity by Protestantism seems to me, as it does to Prof. Huxley, a very sorry business. On the other hand, I cannot agree with those who consider a dogmatic belief in another life essential to the proper discharge of our duty in this. Though we may not know what is to come hereafter, we have, at any rate, all the means of knowledge requisite for making our present lives pure and beautiful. It was Jehovah's cherished servant who declared in Holy Writ that his faith was stronger than death. There is something overwhelming in the thought that all our rich stores of spiritual acquisition may perish with us. But the wise man will cheerfully order his life, undaunted by metaphysical snares that beset him; learning and learning afresh, as if all eternity lay before him; battling steadfastly for the right, as if this day were his last. 'Disce ut semper victurus, vive ut cras moriturus.'"

REV. JAMES FREEMAN CLARKE in the *Christian Register* says: "May there not be some specimens of human nature, who, having been from the beginning under good influence and guidance, have never deliberately gone astray? For my part, I not only believe in the sinlessness of Jesus, but in that of numbers of others. And I believe in the progress of the race, that the time will come when the majority will lead sinless lives." Commenting on this article, the editor of the *Register* remarks: "The goodness of Jesus is thus assumed to be natural, not miraculous, an experience in the line of our human development, and not outside of it. To some, this admission seems to rob Jesus of that uniqueness of character which both the Arian and the orthodox view of his nature ascribed to him; but this uniqueness meant also the isolation of Jesus from human history, and nullified to a great extent the force of his example. The assumption of the miraculous birth of Jesus, like the Roman Catholic assumption of the miraculous birth of Mary, was an endeavor to cut them off hypothetically from the line of human sinfulness; while it equally excluded them from receiving any of the hereditary benefits of human virtue. If we may now believe that men and women born under natural human conditions have been sinless, it no longer becomes necessary to suppose that Jesus needed the advantage of miraculous conditions of birth, in order to attain what others have attained without it. Instead of being a violation of physiological law, the birth and life of Jesus are seen to be a beautiful sanctification of it."

In the *Religio-Philosophical Journal*, Mrs. Hester M. Poole thus refers to one of our valued contributors: "One of the most venerable and respected of all is Elizabeth Oakes Smith, now active and brilliant, at the age of seventy-eight. A graceful yet stately form, with that dignity and sweet-

ness which come from genuine culture of all the powers of mind and heart, Mrs. Oakes Smith is a golden link uniting this to a preceding generation. The wife of Seba Smith, the journalist and humorist, who is remembered as the author of *Jack Downing's Letters*, she has bravely borne her part in the battle of life. Thirty years ago, she was the centre of a distinguished literary coterie in New York City, and even then occupied the platform which women, at that period, seldom mounted. Mrs. Oakes Smith, from an early age, has written much and well. Some of her poems are genuine inspirations, informed with that subtle spiritual quality which can never be simulated. Tender, winning, and varied are the images which she embodies in felicitous forms; and it is a pity that the public have not the opportunity to read her productions more frequently. So true a reformer should not be allowed to sit in silence and isolation. Mrs. Oakes Smith is spending the summer with Sallie Holley, that good Samaritan of Lottsburg, Va., where all the region round about receives daily blessings from the hand of the friend of the freedmen."

SUPERSTITION consists essentially in putting in things, or back of them, wills like ours. Animals are not superstitious, because they do not try to comprehend. Man, on the contrary, tries to account for the phenomena he perceives, and, in order to do this, projects himself in a fashion into them. This first attempt to systematize the universe had a kind of grandeur, even in a scientific view, and had also its poetry. But its myths of the ancient ages can no longer be seriously regarded in the age of science. Is this to be regretted for the sake of art? Yes, they say; for it was more poetical to put wills like ours behind exterior objects than to submit them to the hard laws of science: a law is not as good as a god. But we answer to this, that a law in itself has something of the divine. As one of the characteristics of divinity is infinity, a law connecting phenomena one with another, and inviting us unhaltingly to ascend the chain of causes, opens immense perspectives to the mind, and gives to whoever investigates it a view of infinity in the smallest objects, or, we might say, makes the infinite present in every phenomenon. . . . From this arises a new kind of poetry, more austere, perhaps, but more profound and more lasting.—*Revue des Deux Mondes*.

AN exchange says: "The American people, with an honorable, manly, and generous sense of what is due to family life, have during the last hundred years, in spite of the savage bitterness of political contests for a prize so great as the Presidency, abstained from dragging women into the arena; and they have recognized the fact that, though all 'charges' of a disgraceful nature wound a man's family and friends, there is only one charge which necessarily imputes guilt to others than himself, and that no woman can either publicly defend herself against such a charge, or sit silent under it, without suffering in social estimation in a way which to most women is almost worse than death. Political managers have not the reputation of being very scrupulous, and probably are no worse in this respect now than they were eighty years ago; but they have always recoiled until now from carrying their warfare into people's homes, and making female shame or misfortune a stock topic on the stump or in the campaign documents."

MUCH reliance has been placed upon the oath as a practical security by politicians and moralists, ancient and modern; but, on the other hand, there is a growing feeling that only the ignorant and

superstitious are bound by it; that it is an evil, as increasing temptation to perjury, and still more as encouraging the inference that a man need not speak the truth, unless he is upon oath. The more the subject is considered, says the *Christian World*, the more surprise must be felt that a practice so manifestly arising out of the barbarism of long past ages should survive amidst the light, the knowledge, and the moral development of the present day. "Whatever may be the issue of the present miserable struggle, which is more a conflict of personal animosities and prejudices than of principles, the day cannot be far distant when these misleading and empty ceremonies will give place to simpler, manlier, and more Christian practices in harmony with the teaching of our Lord."—*London Inquirer*.

A FRIEND in a distant city in a letter relating mainly to business, thus refers to his experience: "That men of sincerity, depth of thought, and refinement of purposes, should be intensely repelled by the coarse and vulgar flippancy of a certain wing of radicalism, I can readily understand. I, at one time, was a member of the Liberal Club in this city, but left it, because in all its discussions it seemed to be governed by the 'consensus of the incompetent.' The recognition of this fact induced in me a serious spell of transient but almost suicidal melancholy. For what I asked was 'liberty of speech,' and echo seemed to answer 'liberty to screech.' I have since that time held myself aloof from radical societies. Lately, however, I have seen cause to modify somewhat my views on 'crankism.' It is an open question whether these persons have not, after all, a mission to fulfil, though of course not the one they themselves imagine."

THE *Independent*, in a notice of Capt. Adams' *Travels in Faith from Tradition to Reason*, says: "Mr. Adams is the son of the late Rev. Nehemiah Adams, D.D., of Boston, minister of the Essex Street Church, pastor of Rufus Choate, whose eulogy was pronounced by that eloquent preacher. His high Calvinism and *South Side View* made him famous in his day. His second son, we believe, Robert C. Adams, took to the sea, and for many years was known as a Christian master and a model sailor. Later, he settled in Montreal, began reading Theodore Parker, and drifted into these *Travels in Faith*, which do not seem to have ended until they had carried him clear over and beyond the limits of the subject. The present volume contains the story of his believing days, the history of his lapse, and the exposition of his present opinions."

HERBERT BANCROFT, in referring in his great historical work (vol. xxii.) to early missionary labors on the Pacific coast, says:—

Speaking generally, all missionary effort is a failure. Such, history pronounces to be its fate. Missionary effort seeks to lift the savage mind from the darkness of its own religion, which God and nature have given it as the best for it, and to fix it on the abstract principles of civilized belief which it cannot comprehend. It seeks to improve the moral and material conditions of the savage, when its very touch is death. The greatest boon Christianity can confer upon the heathen is to let him alone. They are not ready yet to cultivate the soil or learn to read, or to change their nature or their religion. These ends the Almighty accomplishes in his own good time and way, unfolding their minds as from a germ of his own implanting into the clearer light as they are able to receive it.

MISS EASTMAN's topic at the Social Supper next Wednesday evening will be "Our Duty to Speak our Uttermost Thought."

OUR SOCIAL SUPPER.

All who wish for the frequent social intercourse of believers in Liberty of Thought, as well as for the active co-operation of women with men in solving the great moral problems now urgent, are cordially invited to the Social Supper in Parker Fraternity Hall on Wednesday evening, October 1. Full notice has already been given in *The Index*, at whose office tickets, at 50 cts., may be procured. Our friends are earnestly requested to apply early.

The first of the hymns which will then be sung, and which are printed below, was written for the Festival of 1877, and the second for this occasion.

E Pluribus Unum.

BY MRS. E. D. CHENEY.

(Air, *Marlow*.)

Many in one, our fathers said;
Many in one, say we:
Of different creeds, of differing forms,
Love brings us unity.

Let Science scan the open page
Of sky and sea and land,
And tell the secrets written there
By Time's mysterious hand.

Let Art reveal the inner thought
In Nature's forms of Grace,
And feel God's presence everywhere,
See everywhere his face.

Let Faith attune the hidden strings
That Science cannot sound;
And Future, Past, and Present bind
In one harmonious round.

From each, from all, may life outflow,
To each and all flow in:
It needs us all to swell the chords
Of life's triumphant hymn.

Our October Supper.

BY F. M. HOLLAND.

(8s and 7s.)

Creeds and ceremonies perish,
Fallen leaves that must decay:
Ours the living Truth to cherish;
She can never pass away.

Freedom holds her firm dominion
In this land of equal rights:
Science spreads her mighty pinion
Every day for higher flights.

Faith in Man grows stronger, clearer,
As we see our neighbors' worth:
Duty's ancient laws are dearer;
New ones have their holy birth.

Ours to keep this sacred treasure
Open for the use of all.
In the hour of social pleasure
Hear the Future's bugle-call!

THE moment we feel angry in controversy, we have already ceased striving for truth, and begun striving for ourselves.—*T. Carlyle*.

HE who is dear to the heart is near, though far as far can be: he whom the heart rejects is remote, though near as our very self.—*Hindu*.

IN all the superior people I have met, I notice directness, truth spoken more truly, as if everything of obstruction, of malformation, had been trained away.—*Emerson*.

WHEREVER in the story of mankind a grand epoch or movement is seen, there we have passionate devotion working with an overpowering belief at the bottom of it.—*F. Harrison*.

STATE a new thought in five words, and you will be entitled to rank among the great benefactors of the race. That is where the proverbialist has the advantage over the philosopher. A great thought stated diffusely may be understood by one person in a hundred: make it an epigram, and you reach the other ninety and nine. A system is mastered in a year, a proverb in a lightning flash. There is a hint in this truth for preachers and teachers. The world has no lack of elaborate systems: what it more wants is the result of systems condensed into sentences of less than thirty words each. So, when you have said a thing in ten sentences, say it over again in ten words; and many will understand the ten words who failed

to understand the ten sentences. Limpid brevity is the mother of understanding as well as the soul of wit.—*Sunday School Times*.

JULIAN AT EPHEBUS.*

Through strong compulsion have I hitherto
With tongue and knee adored or seemed to adore
The poor, dead God of Galilee, and thus
Been made against my will a hypocrite.
Not long will I be such, but soon my voice
Shall truly announce the feelings of my heart,
Which hitherto repressed have burned within
Indignantly. Soon armed with might imperial
Will I confront the throngs of filthy monks
And warring factions, who in name of Christ
Each other would exterminate from earth,
And world-wide tolerance proclaim of all
Religions, whatsoever their name or origin,—
Such tolerance, as erewhile was enjoyed,
Before the faith of Christ became supreme.
Still over all the Grecian world intact
And glorious the temples of the gods
Stand in their many-columned majesty,
The matchless fanes of that primeval cult
Which sowed the earth with shapes of carven beauty,
All Hellas filling with a populace
Of heroes, laurelled athletes, bards in bronze;
Each vale and every mountain glen adorning
With beauteous shrines and forms of loveliness.
These glorious relics of the Sacred Past
Have long been menaced by fanatics vile,
Haters of Art and Poesy, to whom
Beauty and harmony and wisdom high
Are an offence, abomination.
My power shall make innocuous their threats.
Hail, temple-city fair of Ephesus!
Midnight now reigns above your shrine colossal.
While arrow-loving Artemis, aloft
Over her altars here, seems lovingly
And luringly from cloudless skies to shine.
Virgin August, rejoicing in thy shafts,
Co-regent with thy brother Sun of heaven,
The forest solitudes filling with sudden
Irruption of hounds and shouting Oreads,—
Must thy divinity wane, as wanes thine orb
At intervals, but with full sheen to shine
Again as bright as ever? Thus kneel I
In thy midnight beam and swear, when sceptred
Power shall make me strong, my strength shall
In thy service wielded be against all who
Would thy glorious empery overthrow.
Mother of months, star-sandalled, chaste, and fleet,
Henceforth thy votary I am by rites
Of mystical consecration, henceforth
Thy fulgent face shall be my sign in heaven,
Whether a plenilune or crescent bright
It shines o'erhead,—my sign, by which I'll conquer
More surely than imperial Constantine,
My uncle, did, when saw he in the sky
The crucified Judæan's Cross or feigned
He saw at noonday on the battle's edge.
No base, fanatic cult from Palestine
Shall from my heart dislodge the festal gods
Of bright Olympus,—Zeus, lyred Apollo,
Violet-crowned Athênê, patroness
Of that fair city, eye of sacred Greece,
And Greece of Greece in genius, sanctity,
The immemorial seat of art and song
And high philosophy, where learned I lore
Of sages of the past, lore to my soul
More dear than crown and sceptre, baubles bright
Of that imperial sovereignty which soon
I shall inherit and wield in cause
Of reason, wisdom, tolerance, and truth.

B. W. BALL.

* In the middle of the fourth century of the Vulgar Era reigned Julian, surnamed the Apostate, because he endeavored to inaugurate a general reaction against Christianity in the interest of the old Olympian Polytheism. Julian was educated at Athens, and there imbibed a profound enthusiasm in behalf of the fair humanities of the old religion of Greece. In the twentieth year of his age, he was, according to Gibbon, delivered into the hands of Maximus, a pagan philosopher and mystagogue, who made him secretly the subject of an initiation into the chief pagan mysteries. In the caverns of Ephesus and Eleusis, Gibbon says, the mind of Julian was penetrated with sincere, deep, and unalterable enthusiasm. From that moment, he consecrated his life to the rehabilitation and restoration of the sway of the gods of the Olympian dynasty, of the deities of Homer and the Scipios, as against the new faith which his uncle Constantine had established in the Roman Empire. But, though he wielded the whole power of that empire in behalf of his reactionary movement, it was too late. Mount Olympus had to succumb to Mount Zion. Julian was a scholar and a voluminous "literary fellow," his writings still surviving. But his attempt at a polytheistic reaction failed, as the attempt at an ecclesiastical reaction of the Puseys and Mannings and Newman of the current century will fail. The *Zeitgeist* invariably plants its foot upon all such attempts at reaction, which are simply endeavors to put back the hands upon the dial-plate of Time.

Sept. 7, 1884.

The Index.

BOSTON, SEPTEMBER 25, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

Necessity of Reform in Public and Private Schools.

BY ELLEN M. HENROTIN.

A sentiment of Carlyle's sums up what educational reform should be: "Education is beyond so much as being despised. We must praise it when it is not Deducation, or an utter annihilating of what it professes to foster. The best educated man you will often find to be the artisan, or at all rates the man of business. They have put forth their hands and operated on Nature: they have obtained some true insight. . . . A Burns is infinitely better educated than a Byron."

It is within the memory of the present generation that educational theories commence to attract universal attention; and such books as Abbott's *Gentle Training for the Young*, etc., aroused a suspicion in the minds of thoughtful parents and teachers that, after all that could be said in their favor, the common school and Sabbath-school combined did not always bring about the most perfectly satisfactory result. This suspicion once aroused, it fast became a certainty. It is imperative, in order to understand the present aspect of the educational question, to throw a hasty glance back over the systems of education of the four nations of antiquity that have influenced modern thought,—Egypt, Judea, Greece, and Rome. The schools of Judea and Egypt were ecclesiastical, were taught by the priests, and were established for the purpose of training boys in the ceremonial of worship. The system of the Roman Catholic Church is modelled on that of those countries. Those of Greece and Rome were secular, for the priests did not form a separate caste in those countries. Of the education which a Greek boy received in Homer's time, Mr. Gladstone says that "it was an education fit for a civilized man, even though he never saw a book in his life; the bringing out and developing of all the faculties of his body, mind, and heart until he became

at once a reverent yet a self-assured, a graceful and yet a valiant, an able and yet an eloquent personage." The Roman lad was instructed in military discipline, jurisprudence, and in everything calculated to make him a good soldier and citizen. The artistic side of his nature was ignored, for the result sought for was a self-denying and self-controlled being.

The Greek ideal, self-culture, and the Roman, self-sacrifice, are still ours: we but endeavor to combine them. It is a strange and startling fact that education as a science made no progress for over one thousand years after the introduction of the Christian religion. The struggles for conquest, liberty, or existence, which characterized the Middle Ages, pushed all other considerations aside; and the Church took possession of the child. Harsh measures of government were employed both in the home and the school, the acquisition of knowledge was rendered as painful and difficult as possible, inquiry was stifled and originality condemned,—a system which brutalized not only children, but parents, and the legitimate results of which were the Inquisition, slavery, and fanaticism. The Reformation, the French Revolution, and all the modern philosophers have not been able to abolish many of the abuses of the Middle-Age system of instruction. We suffer to-day in our methods of teaching and training the young from the cruelty of that era.

There were, however, a few men even in that era who recognized the falsehood of the saying that "there is no royal road to learning"; and the five great leaders of the Modern Reform of Education are John Comenius, J. J. Rousseau, Pestalozzi, Froebel, and Herbert Spencer.

John Comenius was born in 1592, and was the last bishop of the Bohemian Brothers. When exiled from his native land, he travelled through Europe, endeavoring to interest people in his school reform. Among other lands, he visited England, but failed to accomplish anything while there. Had he succeeded, how potent for good would it have been for this country, the direct heir of Anglo-Saxon traditions! Comenius divided his method of instruction into four periods, the Maternal, the Vernacular, the Latin, and the University. Above all, he insisted on a practical scientific and moral training. J. J. Rousseau was the forerunner of Herbert Spencer: their methods and theory are nearly identical. Rousseau says, "Let us learn of Nature: let us follow her dictates, and develop the individual soul." Pestalozzi, Froebel, and Herbert Spencer have gathered up the tangled threads of educational science, and between them have elaborated a system so clear, so natural, and so scientific that it excites the greatest admiration.

The United States have been made pre-eminent during the last few years by the ability of the leaders in the teaching profession; and such men as Charles Leland, of Philadelphia, and Francis Parker, of Chicago, and others, of whom lack of space prevents a personal mention, have made the great advance of putting their theories into practical work, and have avowed the Socratic theory as theirs: "to encourage a craving for knowledge of the unknowable; to be dissatisfied with all received opinions until their truth could be demonstrated; and to arouse in the pupil a curiosity which only the solution of each new mystery could satisfy." A republic form of government makes more exact demands on its members than does any other, as such a form presupposes that each person composing the same is able to come to a correct decision as regards important issues, and to cast a decisive vote. Caroline Fox represents Sterling as saying that "in the parts of the United States settled by the Anglo-Saxons, and where

the Common School system has long prevailed, no police force is needed."

The readers of the daily papers can easily judge for themselves whether the present descendants of the Anglo-Saxons have been taught to use their judgment or to put what education they have received to its highest use. The aim also of a republican form of government is to enable each individual composing it to reach an untrammelled development, and so to foster the moral character that each individual has an "eye to reason and not custom, to right rather than fact." Does the education given to boys and girls produce this result? A healthy and moral public opinion is the only bulwark of this government, so the questions are immediately presented as to how general is education in this country, and what kind and of what quality it must be to make useful and efficient citizens out of the children of the republic.

In answer to the former demand, it is safe to say that education is not nearly so general as it is supposed to be. The reports of the school boards of the large cities make a lamentable showing in this respect. Twenty per cent. of the population of the States are illiterate. The President, in one of his recent messages to Congress, calls the attention of the nation to the startling statistics in illiteracy,—notably where the settlements are at great distances apart and where immigrants form the bulk of the settlers. This is not surprising, as the largest immigration to this country is from England, Ireland, Germany, France, and Belgium; and one third of the inhabitants of each of those countries can neither read nor write. The large number of children who do not avail themselves of the advantages of the public or other schools is easily ascertained by reference to the reports of the school boards of the cities.

As concerning the amount of intellectual training and the quality of it, it is safe to assert that the public schools are overcrowded, and by their routine hamper the individuality of both teacher and pupil, while their conservatism destroys all originality in both. Even the advanced classes are rarely instructed in the important problems of social science, and are ignorant of the methods and functions of government, the duties of citizenship, the laws of supply and demand, the relations of employer to employé, and these of producer to consumer. As to the instruction given in parochial schools, it is always two or three hundred years behind the age in its spirit, neither do the private schools lead the vanguard in improved methods of teaching.

For the preservation of such a government as this is, it is imperative to have a compulsory educational law, and to fine every person who breaks it. To render the public school system efficient, it will be necessary to incorporate into it the kindergarten and moral and industrial, not technical, instruction. The kindergarten is the logical method of training the young child. It obviates the great evil of allowing a child to reach its sixth year, the age at which children are admitted to the public school, without some systematic training; for by that time habits of indolence, disobedience, and restlessness have been so firmly established that it requires several years of patient care to correct them. When leaving the kindergarten and entering the primary department, the child, having already acquired habits of observation, order, and obedience, is prepared to profit immediately by the instruction it receives.

Industrial training should form a part of the education given to all children. The class who obtain a livelihood without labor, who exist without visible means of support, present a sad problem for society to solve. It is not surprising

that, while practical education is ignored, in times of scarcity a great number of unemployed, helpless, and reckless men and women should threaten to overrun the centres of culture and progress. In Europe, where this complex modern civilization presses so closely on all classes, practical education has been incorporated into most of the national school systems. The benefit of such wise precaution is apparent in the great demand for skilled foreign labor among American manufacturers. It is in connection with the criminal classes that industrial training is seen in its brightest light. In the last report of the Prison Congress, it was stated "that, where industrial training and moral instruction go hand in hand in the reform schools, eighty-three per cent. of the pupils, when discharged, become decent and self-supporting members of society." Not alone should the mind of the child be cared for, but the body should receive its full share of attention. Good ventilation, frequent change of position, and short hours should be insisted on. There is an ever-increasing demand for perfect physical development; and school-life, both in public and private schools, is too sedentary, the hours are too long, and the system is so monotonous that it is surprising that more teachers and pupils do not break down under it.

It is imperative that some system of ethics should be taught in both public and private schools: it is possible to do this without introducing sectarianism. The history of morals proves nothing more conclusively than the possibility of inculcating moral instruction apart from so-called doctrinal truths. The moral should always with children precede the spiritual teaching. This order is often reversed, and the child is required to lead the higher spiritual life before acquiring the first rudiments of morality. The history of the world has shown that a "high degree of spiritual attainment is consistent with a total lack of moral basis." It is very dangerous to the moral well-being of a child to encourage the emotions and make them the springs of action in place of correct principles, to teach him to depend on words instead of the high order of character, "which makes for righteousness." The child relies on his fine sentiments, sensitive emotions, and beautiful words instead of on just deeds and perfect truth. It is of the greatest importance to use economy of sentiment with children. This precaution is doubly necessary with girls, whose future is shaped by their surroundings and who are by the nature of things unable to control circumstances. It is, therefore, of the greatest importance to them to prefer the reality to the seeming.

It is wise and just to give to girls the same facilities for attaining the higher education which boys have, but it is an open question whether in co-education the girls do not profit at the expense of the boys. The feminine element predominates in modern republics, so it does not seem advisable that boys should be left after passing their twelfth year to the exclusive care of women. Under that age, women are their best teachers and wisest guides; but, after that, a man is usually better fitted to take charge of them. Women are rarely satisfied with a free development of the individual child. They are more inclined than men are to formulate theories about boys, and then endeavor to fit the boys into their theory. It is also charged that women overcrowd their pupils and push them faster than men do.

The instruction given in the private schools is open to the criticism of being too diffuse, which partly arises from the fact that there exists no standard of education in this country. The private schools should be under the supervision of the local school boards, and no one should be

allowed to teach without a certificate from the board of examiners. This system has been carried out with the greatest success in France, and it adds great dignity to the profession. Children often change from one school to another, so no plan of education can be carried out to its logical sequence. They often study Greek and Latin before they can write and spell in their own language, and know the history of foreign lands before studying that of their own country. The mania for learning foreign languages might with advantage be controlled in both public and private schools. Especially is this the case with girls. It is truly the work of a lifetime to learn to speak and write a foreign language correctly, and it seems advisable to devote some of this precious time and energy to acquiring some more valuable knowledge. A few simple rules might be laid down for the guidance of teachers and parents. One of them will be "not to teach so much of everything and more of what is taught," not to burden the memory with trivial details, and not so much learning by heart.

To teach by lectures, the pupil taking notes when sufficiently advanced to do so, is a great saving in time, as so much information can thus be gained outside of books. Teachers are also, by this method, made more or less of specialists: it is therefore far less monotonous. Nothing so fatigues a child as to be always taught by the same person, neither can one teacher impart all knowledge equally well. Herbert Spencer has divided all education into five parts: first, that which relates to self-preservation; second, that relating to self-support; third, that relating to paternity; fourth, relating to citizenship; fifth, to accomplishments,—which he calls everything tending to render the leisure part of life agreeable. Spencer further explains that love of life is an instinct, the knowledge pertaining to self-support, to citizenship, and to paternity is usually relegated to chance, while the period set aside for the acquisition of knowledge has been devoted to those accomplishments which are to fill up the leisure part of life. In his broad and general way, Spencer gives the following principles to be carried out in all instruction:—

"Teach to think, and not to repeat.

"Principles, and not rules.

"Systems, and not detail."

He should have added, "Remember that all knowledge must be transformed into skill."

Too strong a plea cannot be made for a public school education, and it is greatly to be regretted that the common schools are not in all ways so superior that there would be no demand for private schools. The highest type of American manhood has been developed under that system,—the men who, from mingling among their fellows, have acquired that insight into the needs of the country which has enabled them to carry it on to the great degree of prosperity to which it has attained. Such men are free from the "caste feeling" which is so fast gaining ground in this country, and which threatens to endanger that simplicity of life and manners which constitutes the true dignity of a republican form of government.

A complete philosophy of the education adapted for this country has yet to be written and promulgated. Spencer and others have given the result of their observation and study; but it remains for this profession to combine and secure a system of education more universal and better adapted to this progressive society,—one that will replace the vanishing religious sentiment among the people by a moral principle of action. European methods of training the young are not suited to this want. Out of the necessities of the country must be

evolved one suited to the realization of so grand an ideal as the harmonious development of the moral individual.

CORRESPONDENCE.

THE EIGHTH ANNUAL CONGRESS OF THE NATIONAL LIBERAL LEAGUE.

Editors of The Index:—

The National Liberal League held its eighth annual Congress on Sept. 8 and 9, at Cassadaga, N.Y. The "Call" contained these words:—

"All citizens of the United States, whether they have heretofore acted with this League or not, who believe in a secular government and a secular republic, separation of Church and State, the equality of all citizens before the law without distinctions of creed or race or sex, justice for all and privileges and monopolies for none, the need of universal secular education, free speech, and a free press as the basis of universal suffrage, are invited to appear etc. . . . At this Congress, it is designed to revise the basis of the League so as to make it so broad and liberal that all who sympathize with its general purpose may co-operate with it to the end that a general union of all citizens of liberal sentiments may result, and that new officers of the League may be selected without regard to past differences."

On Monday there were about three hundred persons present. The meeting was called to order by Mr. T. B. Wakeman, President of the League, who at the same time stated the purposes of this year's Congress. The censorship of the press had been fought by the League until there could not now be found a single judge to entertain a suit of the kind which had so roused the Liberals of the country. There is now no imminent danger from that source. A change of officers is proposed this year. We go out of office for the very purpose of furthering the objects of the League. The present aim is to consolidate the whole liberal sentiment of the country, to extend the Leagues for social and educational work, and plant ourselves on the "Nine Demands of Liberalism." After the appointment of committees, the Congress adjourned till 1 P.M.

The election of officers was the first order of the afternoon. The name of Robert G. Ingersoll was presented for the office of President: it was received with enthusiasm, and he was elected by a unanimous vote. The name of Charles Watts was presented for the first Vice-President, and elected. It was understood that Mr. Watts intended to make America his home. In case Col. Ingersoll could not accept the position of President, it would of course fall to Mr. Watts; and, as Ingersoll had not been communicated with, Mr. Watts was virtually the President of the League. It will be a surprise to many, to all Liberals in fact who were not on the spot, to hear of Mr. Watts being placed at the head of the National Liberal League. Upon the election of officers was supposed to hinge the future welfare of the League. Placing a stranger who has had scarcely a day's residence among us at the very helm of affairs must be construed more as a confession of weakness than as an act of hospitality; and this, together with the unexpectedness of the move, will most likely give umbrage to a large class of Liberals who cannot be accused of narrow provincialism, and who, conceding merit to Mr. Watts as an individual, cannot regard him as the selectest person for the position, owing to the fact of the dissimilarity of methods, and to a certain extent of aims also, between English and American Liberalism. What Liberal Leaguer would feel himself competent to take the Presidency of the British Secular Union? Mr. S. P. Putnam was elected Secretary of the League.

The ceremony of electing a long list of vice-presidents was then gone through with. Some of the names offered seemed to threaten a rupture of the kind spirit that up to this moment had borne sway. "I object," said one member, when Mr. Underwood's name was proposed, "to any act here to raise the devil among us." "But who is the devil?" asked the President, with imperturbable dignity. Elizur Wright disapproved of the objections raised against the name. We want to unite our forces new. The President, Mr. Wakeman, rose and said, "I appeal to these three gentlemen to let this vote of the majority pass: it is not a question of principle that you raise." The

objectors were silent, and the vote was carried. When the names of Abbot and Bundy were proposed, then some one proposed the name of Chainey, following which a member got up and proposed Jesus Christ and the Almighty, to which last suggestion Mr. Wakeman replied by saying, "The chair is not assured of their personality." The first mentioned names were not pressed any further, the general impression being that their presentation was not with the full purpose of having them elected. At any rate there was a pause, a silence in heaven for the space of a few seconds, as if waiting for the spirit to dictate. This was the only time the name of the founder of the League was mentioned. No reflections were indulged in; but one or two members could not refrain from paying their compliments to Underwood and Bundy for alleged abuse of the League, and their opposing instead of co-operating with it, but they stopped with the mere assertion. Nothing was said about "repeal" in this connection: the obstructive element professed to be inspired by the considerations, already mentioned.

A resolution was passed expressing the deep indebtedness of the League to the President and Secretary, now retiring from office, for their great services and matchless devotion to the cause. Mr. Charles Watts pronounced an encomium on their labors, and paid a fine personal tribute to Mr. Wakeman.

At the evening session, the Committee on Platform and Work reported, through its Chairman, Mr. Bradford, of Pennsylvania, who read a series of resolutions which led to a lengthy discussion. The "Nine Demands of Liberalism" were reaffirmed, as "defining our mission as free-thinkers and reformers." The "Rochester Platform" was readopted, which declared for "national protection for national citizens in their equal, civil, political, and religious rights," and "universal education as the basis of universal suffrage," etc. Some one asked if this was a part of the Constitution of the League. The answer was that it had been so considered. Another member said he did not know that the League had declared for equal rights "irrespective of race or sex," as the resolution was made to read. He was informed that it had, but not when or where. This "race or sex" clause was inserted at Cincinnati, at the instance of Col. Ingersoll, who said: "All people will agree that women are citizens. Citizens are voters. Some people might think that it was not expressed in the second plank of the platform of previous years, and so I added these words." At the same time, on the motion of Mr. Sotheran, of New York, the word "industrial" was added to "civil and religious liberty." But nothing is heard now of the industrial liberty. But this matter was not discussed, though I heard prominent members of the League say between meetings that they were opposed to parts of the Rochester Platform, and did not consider it as a part of the basis of the League. It is certainly not expressed in the "Nine Demands of Liberalism." So it would appear that the League has two platforms. Another resolution declared in favor of Sunday-schools, kindergartens, and lyceums for scientific and secular culture, etc. This was evidently a tub thrown to the whale. Some good sister on the committee had managed to squeeze it in, but it is no part of the "Nine Demands." It elicited not a word from any one, pro or con, while every other resolution brought the whole house to its feet, even the one asking that the bodies of Liberals when dead be saved in some way from falling into the hands of the clergy. Mr. Baldwin, of Linesville, was in favor of fewer resolutions, his idea being that the average reader would find it hard to tell just what the aims of the League were and where it stood.

There was no hint in the resolutions of any attempt to "revise the basis of the League," as the "Call" had announced as part of the programme, excepting it were in a proposed change of name from the Liberal League to the Secular Union. The reason given for this change was that it would help to bring about co-operation between Liberals of the United States and their brethren in Canada who were organized under that name. It was at once objected that this could not be acted upon now as being an amendment to the Constitution: it should have been published beforehand. It was urged by Mr. Wright that a change of name was not a very important matter anyway. Mr. Wakeman seemed to be of opinion that it would "change the entire object and general intention of the League." The League, he said, was

American; and its work was confined to the United States, to the secularizing of our republic. It was claimed that the "Call" was wide enough to authorize a step of this kind. "I understand," said a member, "that the power is given us by the 'Call' to reorganize the League." "Yes," said another member, "to remodel the whole League, if we desired to do so." "But," said another, "the very issuing of this 'Call,' so extraordinary in itself, on your independent authority was unconstitutional. And we know there are persons on this floor now not members of the League." The decision reached finally was to refer the question to the next Congress, with a recommendation in favor of the change.

The League was then taken somewhat by surprise by a motion to strike off all the vice-presidents excepting the first three. The reason which appeared to be given in favor of the motion was that "a fire-brand has been thrown in here, which will burn more and more when it goes out from here." One suggested it would be a dangerous precedent to cut off these names. "What right have we to turn these men out of office?" Mrs. Krekle, of Missouri, thought the striking off of these names a great mistake. "What," she asked, "if some do take offence at things as they now stand? It may be that just as large a proportion of the Western element will be won back by letting them remain so." She was positive that matters thus far would prove satisfactory to those who still kept aloof. It was a welcome discovery when some one stated that the economy of the Constitution limited the number of vice-presidents to six. This took the responsibility from the shoulders of every one. A vote was taken: nineteen favored reconsideration, and fifteen opposed.

From Mr. Bradford, it will be remembered, emanated the first suggestion of a move toward reconciliation, which made it seem as if he were now the executioner of his own darling scheme, Abraham offering up his son Isaac, or rather (as his own name was on the rejected list) the Hindu widow throwing herself on the funeral pile of her husband. But I am convinced that, while he felt the pressure of the faction which had doubtless put that fiery trope into his mouth,—"firebrand,"—he took a broader survey, and felt that the error was in placing names on the Vice-President list that were offensive not to a faction merely, but to each other, and, like oil and water, would not mix; and so, to save the League from the disgrace of their public declination of these honors, thought the wisest course was to rescind the ill-advised action of the League.

"I shall regard the whole work of this League as nugatory, if there be no regular contributions required of its members," said Mr. Bradford. A resolution had been passed at Milwaukee, last fall, to tax the local Leagues, but the plan had not been carried out. The question of a salary for officers now came up. The proposition was made to raise a five thousand dollar annual subscription for general expenses and three thousand for salaries, fifteen hundred for the Vice-President and the same amount for the Secretary. The proposition was finally agreed upon in this form, after being put in various other shapes. These two officers were to devote the whole of their time to the interests and work of the League, and they were to be entitled to as much more than fifteen hundred as they could earn by lecturing. Each League was to be assessed a certain amount. A thousand dollars was pledged by those present. The concluding speech was by Mr. Watts; and, as a matter of course, it was brief.

My aim in this report has been justice, which is the true basis of harmony. I felt that everything done at that Congress had its significance and should be made public. As a spectator of the doings of the Congress, it seemed to me that its secret prayer was for harmony. I believe the majority would have been glad to see repealers and modifiers clasp hands over the "bloody chasm." The League, it may be, was not willing by any formal action to reverse its position on certain matters that had bred dissension; but it seemed ready to cancel past differences by silently ignoring them. And, though it was disposed to affiliate with those with whom it had been at war, it did not care to put them immediately into places of prominence, nor did it ask that its own favorites be exalted. The League did, however, take credit to itself, whatever share it had in causing the split, for keeping the organization on its feet, and for now trying to rally all its forces for a new start. To be sure, cer-

tain things attempted and done show small appreciation on the part of some of the grandeur of the occasion; and the duties of the hour, and the activities of some, after being stripped of their selfish or partisan bias, would show but a small nucleus of noble intent. Certain measures succeeded, because none others were proposed. In a certain sense, one party ruled because it was not met with any challenge. A beginning has been made, pacific councils prevailed, fresh efforts were made. One more Congress, friends, to mould the new purpose and fashion the new agencies. "May they meet with us often yet in this work of crowning our nation with the glory of another great act of emancipation." T. W. CURTIS.

[According to the report we find printed in the *Truth-Seeker*, there were present at the Congress forty-eight authorized delegates, several of whom were proxies. There was no reorganization, no return to the basis of 1876, no rescission of repeal resolutions affirmed and reaffirmed at previous conventions, and nothing done, that we can see, to make it possible for those whose co-operation was, we believe, sincerely desired by some to join the League. What Mr. Curtis calls the "obstructive element" is evidently the dominant power in the organization, and the influence of those who have the intelligence to see the folly of persistence in the repeal agitation is powerless now to control the element which was attracted to the League solely by the position it took respecting the "Comstock laws." It is the story of Frankenstein repeated. We learn from private sources that leading members expressed themselves greatly disappointed with the results, and indignant at the bigotry and illiberality exhibited by the "obstructive element." There were, of course, honest, honorable men and women present; but the League never can accomplish much valuable work while it is so largely controlled by such characters as compose the "obstructive element." To mention only one, and by no means the most objectionable of those who were indignantly opposed to any action that would "raise the devil" in the League, the Milwaukee delegate is a man who keeps standing in several papers the following advertisement: "If you are in trouble; if you are diseased; if you wish to marry; if you are living in unhappy married relations; if you wish to consult your spirit-friends upon any subject pertaining to practical life, send lock of hair or handwriting and one dollar. Address——, Milwaukee, Wis." An organization in which such a man can pose as a reformer, and in which the name of a man like Mr. Abbot is extremely offensive to the majority, needs considerable reconstruction. Letters we have received speak in praise of the efforts of Messrs. Wakeman, Palmer, Wright, and others, to secure such action as would encourage those who cannot support the repeal policy; but it seems that but little was accomplished in that direction. If our judgment shall in the light of fuller information prove to be wrong, we shall be glad to make any correction the truth requires. It is hardly necessary to say that, until it is considerably reorganized, we could not accept an office in the League. At the same time,

"Since so quickly I was done for,
What on earth was I begun for?"

B. F. U.]

THE PRESIDENTIAL ELECTION.

Editors of *The Index*:—

In the event that no other correspondent gives a clearer and abler expression to the views I aim to present, this may be printed in *The Index*, if the editors think proper to admit it.

I cannot agree with *The Index* on the Presidential question, but am not so illiberal as to refuse to read it and to recommend it because of this difference of opinion. And, while I am a constant reader and generally an admirer of the *New York Tribune*, I do not agree with it when it charges that "*The Index* is justly the object of the distrust of all moral and conservative citizens"; and that "it speaks with wanton profaneness and disrespect of the people's most holy religion and of the clergy." The *Tribune* in its partisan zeal has done *The Index* injustice, according to my view after reading *The Index* for more than a year. So much for this.

I do not wish to support an immoral or corrupt man for the Presidency, but am not yet convinced that Mr. Blaine is unworthy. As to the charge of

corrupt practice against Mr. Blaine in the matter of the Little Rock Railroad, I have considered his vindication by William Walter Phelps as complete, who quotes the late Judge Black—who, of all men, would strike hard at a political opponent and leading Republican—as giving the opinion that no case could be made out against Blaine. The charge, I think, rests upon a forced and unjust inference from some phrases in Mr. Blaine's letters. As to the charge of immorality in early life against Blaine, it has, to me, the look of improbability, is flatly contradicted, and made the ground of a libel suit against an Indiana paper.

Doubtless, it is true, as Mr. Potter says, that "between the statement of principles of the two leading parties, one of whom most probably will win, there is not sufficient difference to prevent a very considerable number of voters from passing easily from one side to the other."

But is there not some difference of opinion, even among Democrats, as to the true meaning of the Democratic platform upon the subject of the tariff? Is there not some evidence to believe that the true meaning on the tariff was intended to be concealed, when such extremes as Randall and Watterson pretend to be satisfied? Again, is there no difference between the tendencies, aims, and inspirations of the two great parties? Are their past record and achievements to go for nothing, as of no account and not to be considered?

If Mr. Potter had been born a slaveholder, as I was; had always resided in a slave State till emancipation, as I have; if he had worked himself out of pro-slavery ideas against the most merciless opposition, resting upon and backed up by "Bible defence of slavery," as I have,—he could never go for the Democratic party, at least while such men as Tom Hendricks, of Indiana, are honored leaders of the party. No. Give us a good, honest Southern rebel, and we may know what to expect, rather than a Northern dough-face and dirt-eater, who will ever be an obstruction to the progress of true liberal republican principles.

I am sixty-four years old; have always opposed the Democratic party. I know it to the core, and believe it to be utterly incapable of reform, at least for a generation to come; and it should be forever distrusted until its reformation is beyond dispute.

I live in Kentucky, which is solid for the Democratic party, as are all the Southern States; and I know the influences that keep them solid, and they are the same influences that will stand solid against every reform and progressive step *The Index* favors.

SAMUEL W. LANGLEY.

HENDERSON, KY.

THE PRESIDENTIAL QUESTION.

Editors of *The Index*:—

While I sympathize fully with the tone of Mr. Potter's article of September 4, so far as it goes, it seems to me that he overlooks some considerations which are in my mind decisive as to my own action in the present election.

In the first place, the way in which the nominations were made. Mr. Cleveland was nominated on his record as a reform governor, as an able and upright administrator. In carrying his nomination, the better elements of the Democratic party fought earnestly against the two worst elements of the party, Tammany and Butler, and beat them. Whatever there was discreditable in Mr. Cleveland's life was not known: it had not stood in the way of his being elected Governor of New York, and administering that office well. On the other hand, Mr. Blaine's nomination was forced by the worst elements of the party, and was a triumph over the whole reform sentiment of that party. There was a certain reckless defiance in the way in which he was nominated in the face of his record; and public opinion was further affronted by the nomination, along with him, of the one candidate who, next to him, was most obnoxious to the reformers.

Secondly, in the attitude of the men themselves. Throughout the whole history of the case, Mr. Blaine's demeanor has been that of a guilty man who has aimed rather to avoid investigation than to establish innocence. Mr. Cleveland, on the other hand, has behaved like a man. When asked by his friends what they should say in regard to the charges against him, he answered, "Tell the truth." When did Mr. Blaine ever ask his friends to tell the truth about him?

In my opinion, the one thing for the American peo-

ple to do in this Presidential year is to administer a crushing defeat to a candidate who chooses to occupy the position that Mr. Blaine occupies, and a nomination made as his was made. Whether this can be best done by voting for Cleveland or for St. John, or by staying at home, is a thing for each voter to determine for himself. For my own part, I believe the thing to be done is to vote for Cleveland; and I say this as a Republican,—one of the few Independents who sympathize with the Republican party on what appears likely to be the leading issue between the parties, the tariff question.

WILLIAM F. ALLEN.

MADISON, WIS., Sept. 16, 1884.

[The two letters printed immediately above might well be left to balance each other. We wish simply to say to our Kentucky friend that we formed our own opinion of Mr. Blaine's conduct in the railroad transactions, not from any of the labored defences of him or their answers, though we have read them, but from Mr. Blaine's letters themselves, and after his own defence in Congress, which we heard. We would advise Mr. Langley to read these letters again, in the order written, and all of them, including those printed recently since his communication was written,—read them without anybody's comments upon them,—and then ask himself whether, with their repeated injunctions of secrecy, they can refer merely to honorable and innocent business transactions. Still, in rejecting Mr. Blaine as a candidate, we do not fly to our friend Mr. Allen's horn of the dilemma, and adopt Mr. Cleveland. We have considered the points he names; but it seems to us, looking not only at immediate but future effects, that it is of vastly less consequence which of the two leading candidates shall be elected than that both political parties shall be unmistakably warned to nominate hereafter Presidential candidates of clean characters.—W. J. P.]

BOOK NOTICES.

CAPTAINS OF INDUSTRY; or, Men of Business who did Something besides making Money. A Book for Young Americans. By James Parton. Boston: Houghton, Mifflin & Co. 1884. Price \$1.25.

"In this volume," says Mr. Parton, in his preface, "are presented examples of men who shed lustre upon ordinary pursuits, either by the superior manner in which they exercised them or by the noble use they made of the leisure which success in them usually gives." The book contains over forty brief biographies, written in the author's well-known succinct and interesting style, of such men as Elihu Burritt, Peter Faneuil, Israel Putnam, Gerrit Smith, Robert Owen, John Bright, Richard Cobden, Horace Greeley, Peter Cooper, and Sir Moses Montefiore. Full-page portraits are given of Ichabod Washburn, Chauncey Jerome, Gerrit Smith, Myron Holley, John Bright, John Duncan, Peter Cooper, and Sir Rowland Hill. These sketches, written originally for the columns of the *New York Ledger* and the *Youth's Companion*, "represent," says their compiler, "more labor and research than would be naturally supposed from their brevity." Such a work as this cannot fail of proving an inspiring incentive to hundreds of ambitious young business men, wherever it is read.

THE LIFE OF JESUS. For Young People. By Howard N. Brown. With eight illustrations. Boston: Unitarian Sunday School Society.

This book is designed for Sunday-school study, and a series of questions on the subject of each chapter forms the appendix to the work. The aim of the author, as stated in the preface, "is to furnish an outline of the life of Jesus in such manner that the picture may be presented to the mind of a child with some degree of entirety. From reading the Gospels themselves, children are apt to derive only a mass of incidents which bear little relation to each other, and fail to make a clear or continuous story." While keeping to the text of the gospel story of Christ, the writer has given in many instances rational explanations of the so-called miracles of the New Testament. He writes in a familiar, clear style.

THE high character of the *Popular Science Monthly* is well sustained by the October number. The first paper, by Dr. F. J. Shepherd, on "The Significance of Human Anomalies," is an illustrated timely exposition of those aberrations of structure which for centuries were the puzzle of anatomists. Francis Galton's paper on the "Measurement of Character" is a skill-

ful attempt to bring the higher human characteristics within the pale of quantitative science. Lord Rayleigh's survey of "The Recent Progress of Physical Science," which was his presidential address before the Montreal meeting of the British Association, is given in full. A biographical sketch and a fine portrait of Lord Rayleigh are also given. "Diet for the Gouty," in Prof. Williams' series on "The Chemistry of Cookery"; "Wages, Capital, and Rich Men"; "The Physiological Aspect of Mesmerism"; "The Morality of Happiness" (conclusion); "Protection against Lightning"; "The Cholera-Germ"; and "The Origin of Cultivated Plants,"—are all able papers. Prof. J. P. Cooke contributes "Further Remarks on the Greek Question," and the editor keeps up his lively fight with the classicists for more room and higher consideration for science in education.

THE leading article in the *North American Review*, "Moral Character in Politics," by President J. H. Seelye, is an exposition of the ethical principles involved in the popular election of candidates to high station in the government. "Benefits of the Tariff System," a sequel to the article in the September number on the "Evils of the Tariff System," is a symposium consisting of three articles, written respectively by John Roach, Prof. R. E. Thompson, and Nelson Dingley, Jr., who advocate the policy of protection of American industries with ingenuity of reasoning and abundant citations of statistical facts. In addition to these timely discussions of high political issues, the *Review* has an article by the Rev. Dr. Augustus Jessop, entitled "Why I wish to visit America"; "The Philosophy of Conversion," by O. B. Frothingham; "The Origin of Yellow Fever," by Dr. C. Creighton; "Shall the Jury System be abolished?" by Judge Robert Y. Hayne; "The Genesis of Tennyson's 'Maud,'" by Richard Herne Shepherd; and "The Development of Machine Guns," by Lieut. C. Sleeman.

AMONG the many excellent contributions to the *Century* for September, we have space only to call attention to the following: Charles G. Leland's "Legends of the Passamaquoddy," with unique illustrations drawn on birch bark by a Passamaquoddy Indian; "On the Track of Ulysses," by W. J. Stillman; the beginning of a series of articles, with illustrations, on "The New Astronomy," by S. P. Langley; a sketch of the life and work of Emile Littré, by "Y. D.," accompanied by a full-page portrait of the French scientist. "The Foreign Elements in our Population" are considered and explained by Joseph Edgar Chamberlin. Newman Smyth contributes an article on "The Late Dr. Dörner and the New Theology." "The Rescue of Chinese Gordon" and "The Appeal of the Harvard Annex" are among the topics treated of in the "Open Letters."

THE title "Babyland" was brought into use by D. Lothrop & Co. for their charming magazine *Babyland*, the bound volume of which is each year a delight in many thousands of homes. Its great reputation has been won by intrinsic merit of exquisite adaptation, by the purity and delicate humor of the text, and the charm of its beautiful and amusing pictures. It has been edited during the eight years of its publication by the editors of *Wide Awake*. Its great and well-earned reputation has induced certain publishers to attempt imitations. It becomes necessary, therefore, to warn the public against these inferior books issued under similar titles, and to state that there is but one genuine *Babyland*; and this always has the imprint of D. Lothrop & Co., Boston.

JAMES KAY APPLEBEE

is open to accept engagements for the delivery of SUNDAY EVENING LECTURES at towns within reach of Boston by Sunday afternoon trains. For terms and subjects, address JAMES KAY APPLEBEE, Boston, Mass.

MRS. EMILY J. F. NEWHALL'S

School for Girls and Young Ladies will reopen Oct. 1, 1884.

As heretofore, its management will be conducted upon the basis of EDUCATION rather than INSTRUCTION. The proper use of English will be made an especial feature of the daily work. Under the direction of John Storer Cobb, LL.D., from London University, this branch will comprise a thorough study of the English language, as well as Latin and mathematics. The illustrated lectures, upon the great tone-masters, the use of the lantern, and attendance at the Art Museum, will be continued. For catalogue, address No. 91 Newbury Street, Boston; or apply between 11 and 1, after September 15.

Sawing Made Easy.**MONARCH LIGHTNING SAWING MACHINE**

For logging camps, wood-yards, farmers getting out stove wood, and all sorts of log-cutting—it is unrivaled. Thousands sold yearly. A boy of 16 can saw logs fast and easy. Immense saving of labor and money. Write for elegantly illustrated catalogue in 6 brilliant colors, also brilliantly illuminated poster in 5 colors. All free. Agents Wanted. Big money made quickly.

MONARCH MFG CO., (A) 206 State St., Chicago, Ill.

BY ALL ODDS THE BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travelers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches**, which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars**, which are models of comfort and elegance; its **Palace Drawing Room Cars**, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that it is the best equipped road in the world.

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, and take none other. All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

GEN'L PASS. AGENT, C. & N.-W. RY

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript*.

CURRENT TOPICS.

BY B. F. U.

An incident in the celebration of the anniversary of Auguste Comte by his disciples in Paris was a visit to the cemetery Père-la-Chaise, to place a wreath of flowers upon the philosopher's tomb.

At the meeting of the American Historical Association, recently held at Saratoga, Prof. Moses Coit Tyler read a somewhat laudatory paper on "The Influence of Thomas Paine on the Popular Resolutions for American Independence."

If the British House of Lords reject the franchise bill this month, the opposition is likely to be overcome by the creation of liberal peers. The lords must yield or lose their power, if not their existence as a body. The recent great liberal demonstrations in England have been marked by a strong feeling against hereditary legislation.

It is now stated that in the latest *Index Expurgatorius* of the Russian Government Agassiz, Bagshot, Huxley, Emile Zola, Lubbock, Lecky, Louis Blanc, G. H. Lewes, Lyell, Marx, Mill, Reclus, Adam Smith, and Herbert Spencer are among the foreign authors, whose works are forbidden to the public libraries either in the languages in which these works were written or in translation. In fiction and belles-lettres, there is a long list of forbidden books.

At the assizes court held at Pictou, Ont., last Friday, a Church of England clergyman was fined \$25 and costs for assaulting one of his parishioners, a mason by trade, who was severely punished by his spiritual adviser. The account says the clergyman is "reported to be a pugilist of some note," and it concludes thus: "He is the hero of the town among the sports, having knocked his antagonist, who is considered a hard hitter, out in two rounds."

The board of directors of Columbia Theological Seminary have rendered their decision as to the address of Prof. Woodrow, president of the insti-

tution, in support of evolution. They have decided by a vote of eight to three that the theory as qualified by Prof. Woodrow is not one to be condemned as heretical, although they say they cannot agree with the views advanced. The minority report pronounces the theory decidedly bad and dangerous to the Christian faith.

At Brussels, on September 23, the anniversary of the great Revolution of 1830, a procession of the veterans was formed, which marched through the streets and deposited wreaths on the monument of the Revolution. The streets were lined with people, and the veterans were cheered with enthusiasm. The event was made an occasion for a demonstration against the new government. At the monument, a veteran made a speech, in which he said: "Our ancestors fought to make Belgium free. She is no longer so. Belgians will never be Romanists." A dense crowd followed the procession as it returned from the monument, singing the "Marseillaise" and other hymns.

At a public meeting in this city last week, Mrs. S. M. Warner, in behalf of the women of the State, as she said, presented Gen. Butler with a floral horseshoe, in receiving which the ex-Governor of Massachusetts and Presidential candidate of the People's Party responded in the following felicitous words: "Madam, I thank you for this most beautiful gift of kind remembrance from the women of Massachusetts; and I take leave to assure you, what you well know now, that on the question of the equal rights of suffrage to all the citizens of the United States, without any distinction, I have been for years pledged. When the sister and the wife and the mother go to the polls, then indeed shall the whole country rejoice in the new force that shall be given to people's rights and the new power that shall crush out all the people's wrongs."

THE Pope's encyclical letter "To all Our Venerable Brethren and Patriarchs, Privates, Archbishops, and Bishops of the Catholic World in the Grace and Communion of the Apostolic See," is a remarkably foolish document. A single paragraph is enough to indicate the character of the letter: "With respect to Italy, it is now most necessary to implore the intercession of the most powerful Virgin through the medium of the Rosary, since a misfortune, and not an imaginary one, is threatening—nay, rather is among—us. The Asiatic cholera having, under God's will, crossed the boundary within which nature seemed to have confined it, has spread through the crowded shores of a French port and to the neighboring districts on Italian soil. To MARY, therefore, we must fly,—to her whom rightly and justly the Church entitles the dispenser of saving, aiding, and protecting gifts,—that she, graciously hearkening to our prayers, may grant us the help they besought, and drive far from us the unclean plague." Wherever it is lawful, the Pope wants "the local confraternity of the Rosary" to make a procession through the streets. A portion of the letter consists of promises of indulgence,—an Indulgence of seven years and seven times forty days, a "Plenary Indulgence"

for recital of the Rosary, expiation of sins by confession, etc. He also grants full forgiveness of sins and plenary remission of punishment to all who "shall have washed the stains from their souls, and have holily partaken of the divine banquet, and shall have also prayed in any church to God and his holy Mother for our good intentions."

MR. J. K. APPLEBEE, in a recent discourse delivered at the Parker Memorial and printed in the *Commonwealth*, one or two errors in which we pointed out last week, advanced views touching the distinction between vice and crime which will not bear careful examination. He said that he would not ask the law to prevent the publication, sale, and transmission through the mails of Mr. Heywood's paper. "But," he added, "if he [Heywood] ventured to send his paper into a household, the recognized legal authority of which had not previously ordered it to be sent, I would be down heavily on Mr. Heywood. His vice would then ripen into a crime. He has no right so to invade the sanctity of a man's home. I think that six months at the penitentiary for a first offence, six years for a second offence, and the choice of being hung outright or imprisoned for life for a third, would about to meet justice and mercy of such a case." This is a strange view to take of the subject, for which Mr. Applebee may perhaps claim originality, but nothing more. The circulation of a paper not prohibited by law is no crime, nor is it a crime to send such a paper unrequested into a household, whatever be the vice or folly of such an act. It is no more criminal to send such a publication as the one referred to, when the law permits its circulation, than it is to send the Bible, a religious tract, one of Mr. Applebee's lectures, or a copy of Longfellow's poems into a household, without asking the head of the family. To the moral quality of the act, of course, we do not here refer. A vice, to become a crime in the sense in which dictionaries define and Mr. Applebee means to use the word, must involve a violation of a legislative enactment. But how can sending to him or his wife by mail, or handing to his servant at the door of his house, a paper, the circulation of which the law does not forbid, and he would not have the law forbid, be construed into a crime? On second thought, he must himself see the absurdity and incongruity of imprisoning and hanging a man for sending into a household, unforbidden by "its recognized legal authority," a paper which the publisher and editor have an undisputed legal right to publish and sell, and to circulate through the mails and otherwise. The fact which Mr. Applebee failed to see is that a paper, the introduction of which into a family is an offence so great that it should be punished by imprisonment and death, is a paper so bad that its publication should be prohibited by law and thereby made a crime. We say this without pronouncing any opinion as to the character of the particular paper Mr. Applebee mentions, which, if it be as objectionable morally as the reasoning to which we have referred is illogical and unsound, must be a decidedly bad publication.

THE LIMITATIONS OF SCIENCE.

In the fall of the old theologies, the unsettled disputes between different systems of philosophy, and the decline of the religious doctrine of a special authoritative revelation of truth, many people are turning to science as the evangel of the modern age,—by which is usually meant natural or physical science. Science, they say, deals with certainties. It brings facts, and not mere guesses. Science alone can tell what is truth. They turn, therefore, with ardor to the scientific publications,—to the books that pour from the press, the journals and magazines that record the researches and conclusions of scientific men. And they say, Here is something to rely upon; here are the facts of the universe; here are explained the laws and forces amid which we live every day and which we know are something substantial; and here are practical rules for taking care of our bodies and our houses, our cities and our farms,—rules of immense use in the progress of civilization and in securing the education, prosperity, and happiness of the human race.

And all this is rightly said. Science *does* deal with facts. Science concludes nothing without facts for an impregnable basis; and the importance of its work for human benefit and progress can hardly be overestimated. Our inquirer, however, soon discovers that science goes but a little way, after all; that, on many of the problems which beset his mind, the learned scientific writers are in vigorous dispute with each other, and have yet given no conclusive answer; and that not infrequently they deal in conjectures and speculations which seem nearly as wild as those of the metaphysicians. He finds, too, that there are large sections of human life, embracing matters with which man has daily to deal and amid which he must shape his conduct, which natural or physical science as yet barely touches. There is the domain of the emotions, the affections, the aspirations,—the entire moral, affectional, and so-called spiritual nature of man, the seat of impulses, temptations, hopes, deeds, and historical movements innumerable,—which science as yet has not considered at all or only in the most indirect way. Yet here is the very centre of the questions that most seriously perplex and tantalize mankind. Here are the questions that concern man's gravest interests,—the questions that reach into his deepest life as a social, ethical, loving, aspiring, desire-impelled, and rationally acting creature. These, therefore, are the questions where there is the greatest danger from a wrong answer or from that mood of sceptical indifference to all answers which is worse than a wrong answer.

Let science treat the story of the creation of the world as it may and must, no matter what may happen to the Biblical story of Genesis; let it put the Bible among human books; let it disprove all miracle in the birth of any religion or of any being who ever existed in the form of humanity on earth; let it trace man's genesis to a common ancestry with that of the brute creation; let it even show that mind has only been manifested with the physical evolution of brain-cells, and that the faculty of conscience was not an outright gift to man when he first appeared on earth, but a sense and power that gradually came with increase of intelligence and under the discipline of experience,—let all these great questions be settled by science, and its solutions be put away, never more to be disputed. Still, momentous as these problems are, they are not of such vast moment as are certain other questions which persist in demanding an answer. Now that this creature called man is

here, with his manifold capacities for sensation, feeling, thinking, desiring, loving, hating, willing, doing, no matter by what long and tortuous avenue of evolution he came, nor in what successive forges of experience his faculties have been hammered and shaped to their present uses,—now that he is once here, a creature all alive with energies, pressed to action by these multitudinous impulses, how shall he so think, feel, and act as most worthily to perform his part, present and future, in working out the plan of the universe, which has given him birth and sustenance? That is, the most important questions in life concern character and conduct,—not man's genesis, but man's present activities; and science—physical science—goes but a little way in the solution of these questions. It must be a larger science that reaches them, a science that embraces practical ethics. In the wide range of action which man may traverse between the extremes of blackest vice and whitest virtue, he may make his world a hell or heaven; and the only science which can turn the scales to the heavenward side in the manifold forms of this problem is that which not only increases knowledge and clarifies mental perception, but heightens and purifies moral sensibility and purpose, and strengthens moral will.

It is evident, then, that those inquirers who are turning to science for something of that satisfying and saving certainty of truth which was once believed to be the attribute of an authoritative religious revelation will be disappointed, unless they give to the word "science" a large meaning, covering all mental and moral functions of man's nature. The saving assurance of truth is not to be found in any particular scheme of truth, drawn out into the articles of a creed, whether theological or scientific, but rather in a recognition of moral obligation as paramount over every other, and as determining man's place in the universe. The saving truth is to see, not how man's moral nature has been produced, but that, being produced, it is the culmination of the creative process in that part of the universe which comes within human cognizance, and should therefore dominate man's entire being. The saving truth is to see and practically acknowledge that, though man is animal and physical, he is also rational, ethical, spiritual, and that the rational, ethical, spiritual element in him, call it by what name we will and hold whatsoever philosophical theory we may concerning it, legitimately carries with it the rights of sovereignty in the shaping of conduct. It is not this or that theory of morality that humanity most needs, but morality itself. It is not any theory of the outward universe, however scientifically established, that is going to solve life's deepest questions. Those questions can only be reached and answered through the perception, made practical, that man attains his truest value and dignity in seeking and observing the rightness of his own relations to the universe. Science, as ordinarily defined, deals with the finite and phenomenal. But there is a science of character and conduct which has infinite relations and deals with absolute realities.

WM. J. POTTER.

OUR PERSONALITY.

I.

I am I; just this one particular and peculiar being; self-centred, self-determining; singular in body, singular in mind.

Behold this my individuated form, strikingly disparate from the rest of things; wholly detached, sharply defined, moving in clear-cut independence wherever I choose. My body it is, be-

longing to me only, its free sovereign ruler, who can dispose of it as I please.

And the rest of things, these manifold and shifting appearances within my consciousness, which I call the outer world,—but which subsist as those same conscious phenomena assuredly nowhere but in my own exclusive mind,—if they at all signify any foreign existents, these also are subject to my will. I use them, shape them, transform them to suit my purpose.

Indeed, bearing along with me in the luminous seclusion of my individual soul the wondrous medium in which alone the world stands revealed, I am in verity the sole immediately and unquestionably realizing agent in a universe of merely surmised subsistence. Within the ever-welling spring of my own inner life, in unblurred splendor, my searching spirit meets truest reality; outside, only a doubtful conjecture of shadowy semblances; nothing in truth but unnamable, unknowable quiddities of school philosophy; so-called things-in-themselves, the bare negation left when sensorial matter is stripped of all its qualities.

Let me then for good exclude the noise and bustle of distracting influences, the glare and clamor from beyond. Entering fervently the mystic porch of Inwardness, I am admitted to share deep and deeper the all-comprising wealth and glory of the realm of eternal ideas.

There, ecstatically fused in the blended unity of vision, knowledge, and love, I feel merged in the great ocean of being, in which all reality is one. Under the identifying sway of spiritual insight, "mine eye and the eye of God are one eye, one vision, one knowledge, one love" (Meister Eckhardt).

Whenever, steeped in the ineffable profundity of universal being, I grow capable of sustaining this Oneness of intuitive apperception, then my autonomous personality will have reached its final goal, its fated destination, its yearning aspiration. Then, at last, my being will rest in blissful consummation, in quietistic fixedness with everlasting truth, reidentified with the One-and-All.

All manner of striving will be appeased then, all estrangement solved. From the perfect completion of All-Being no desire strays, no throb of recognition stirs the balanced repose of its all-comprehensive fulfillment, no sense of otherness feeds within it the devouring flame of love.

There abides only saturated subsistence in eternity of the Ever-unconscious; only the original One of Plotinus, which is neither intelligence nor idea, nor the world, only quiescent nonentity, *das stille Nichts* of Jacob Boehme; *Natura naturans*, containing neither thought nor will nor desire nor love, according to Spinoza; the eternally unconscious of Schelling and Hartmann; the permanent Life-negation of Schopenhauer.

So also the Hindu sages, so Christian mystics and Mohammedan sufis. Of whatever time or race, all intent seekers of innermost individual thought revelation unavoidably land where, at last, everything is nothing, where being is identical with non-being, lost in the nameless plenary void beyond the veil of Maja.

This, in truth, is the inevitable doom of those creeds which attribute spiritual personality to us lofty earthlings, lordlings of this planetary creation.

Let us now contemplate somewhat more soberly the veritable nature of our mystic being.

I have a feeling of myself. I am inwardly, mentally aware of my bodily existence and form; and the latter from top to toe accurately fits my mental representation. My eyes are shut, nothing touches my hand, yet within the ideal play of my individual consciousness I know exactly where

and in what posture it is held. I have a distinct and immediate sensation of its surface and its position in space.

In this knowledge I am not mistaken; for my hand has not been amputated, when indeed I might have the very same sensations and no real hand there to verify them. A part of my being must evidently subsist here as something not identical with the sensations I am thus experiencing; for, exploring with my other hand, I discover once more the felt form just as I inwardly realized it. I open my eyes, or first one eye and then the other, and, behold! here again it is,—the same hand occupying the same space.

All this seeming confirmation of a reality different from my sundry transient feelings coming to me, however, within my own individual consciousness, there remains a remote chance that, contrary to instinctive conviction, the whole conscious procedure may have been, after all, nothing but a subjective phantasmagoria. But then, you and you, and indeed all who can manage to see me, do you not likewise perceive this my hand in the same spatial position as felt by me within my own inner sense? Surely, not those hidden individual feelings of mine are the cause of your perceiving my hand. Something entirely different, but emanating from the same existent, must have the power of arousing within your mind the same definite and congruous set of percepts as in mine.

Of course, becoming myself aware of your whole being and its perceptions solely through the medium of my own consciousness, there is still left a bare, logical possibility that this additional foreign corroboration of the extra-mental subsistence of that which in so many various ways is appearing to us as a peculiar member of mine may, in spite of it all, be likewise only the product of a subjective phantasmagoria, taking place exclusively within my own mind. Under this violent and most unnatural supposition, which would annihilate the value of all verification, it must be held a mere fancy on my part that you are really there perceiving my hand. For, if my hand, which I see and touch, is nothing but an idea of mine, then you yourself, whom I realize in exactly the same manner, are also only an idea of mine. To be sure, you are pretty certain to return the compliment. But what do I care? I know positively that I am existing independently of any idea of yours.

Well, then, here it is that for philosophizing mortals the roads separate for good. Once for all, we have to choose,—Idealism or Realism? Either there is nothing at all subsisting outside our mind and compelling its definite perceptions, or these perceptions are actually aroused by extra-mental powers, whose existence and disposition they are thus signaling.

We have already traced the outcome of the former idealistic way of thinking. We will now endeavor to see where the latter realistic road leads to.

EDWARD MONTGOMERY.

THE TWO CANDIDATES.

An Open Letter to William J. Potter.

My dear Sir,—In an article printed in *The Index* for September 4 you express the opinion that Blaine and Cleveland are equally unfitted by their vices for the office of president. Now, I have much respect for your opinion. Always I find in it that first condition to all deep and true seeing, entire veracity of mind, while I seldom fail to find also a good breadth of view and genuine penetration, joined with a fine temperateness equally of thought and expression, which is to me peculiarly attractive. In the present case, however, you fail I think to seize the right point of view. What is

our object in selecting a chief magistrate? It is not to confer upon him an honor, but to obtain from him a service. We are not to set him up as a model of behavior and a symbol of all the virtues, nor in voting for any man do we express an opinion that he is at all fitted to serve as such a model. We choose him as we would choose the cashier of a bank or select an engineer to build a railroad bridge. A certain important work is to be done on behalf of the nation. We seek a man who may be trusted to perform it faithfully, efficiently, and in all respects well. Whatever virtues and whatever abilities this may imply he must possess; but having found in him these virtues and abilities, we have no occasion to look farther. Virtues, great virtues, are required, and first of all, an incorruptible and indomitable integrity, proof at once against inside seduction and outside pressure, as little to be bribed with votes as with money, and still unshaken though menaced by majorities and the "people's will." But I need not enlarge on this topic. You will easily distinguish those moral qualities which are pertinent to the duties of a chief magistrate. Now, your argument would run thus: Grover Cleveland is not fitted for the work of such a magistracy, since he once had an amour with a loose widow. Is not that a singular *non sequitur*? If we were selecting a Sunday-school teacher, the case would be different. Even then a sexual irregularity so long past might perhaps be overlooked, but it would be clearly pertinent to the question of one's fitness for that particular work. Suppose, however, that a great general was about to be placed in command of the national army in time of war, and that such a dereliction were urged as a reason for his exclusion from that place of trust: would not the most exacting moralist pronounce the objection pointless? Surely the moralist being a man of sense, would say, That offence lies against his estimation as a man, but not against his qualifications as general; he may still be such a military commander as his country may trust and its enemies fear. But a chief magistrate is as truly as a general selected for a particular service, duty, *officium*. Everything in his character which bears upon the question of his qualification for that work is in point, and nothing else is in point.

You are too clear-sighted not to observe that I here make no sweeping distinction, or at least no separation, between public and private morality. No such separation exists in the nature of things, and none such can exist. A rogue in private will be the same man and still a rogue in public station; the slave of cupidity, the trickster, the liar, the cunningly masked self-seeker will, on being transferred from private to public life, find only more of invitation and opportunity for their vices. In short, all the virtues, all the morals which will be actively engaged in the performance of a definite public service, must be found as inseparable elements of his personal character. So far as concerns these, the most rigorous inquest into the private life of a candidate is wholly in place and cannot be too searching. But not all possible virtues are engaged in, or related to, every public office or any public office. Charles I. of England was a chaste husband, and none the less an unconscionable king; Henry IV. of France was a very unchaste husband, and perhaps the best king, or at least among the very best, that France ever had. The same rule that would exclude Mr. Cleveland from public service would, and with much greater force, have excluded Benjamin Franklin, Alexander Hamilton, and—if the uncontradicted statements of the scalawag Callender, who certainly did not speak in ignorance, may be believed—Thomas Jefferson, not to speak of ex-

amples more recent. Imperfection clings to mortals. I have been young and now am old, but I have never found a man without his infirmity, though some with very innocent infirmities. If an angel came from heaven, said Emerson, he would steal gingerbread or do some naughty thing or other.

In view of this universal imperfection, I rejoice with all my heart when I can vote for a man in the assured confidence, not that he is and has ever been a perfect model of behavior, but that his infirmities lie outside that field of service for which he is proposed, and that within this field he is complete. To make sure of this, I resolutely shut my eyes to all else. Even with this restriction of inquiry, I am too often deceived. I voted, not very willingly, for John D. Long, and he made me ashamed of having done so. I voted, not only willingly, but most gladly, for George D. Robinson, and already before the year is out he also has made me ashamed of having done so, especially by that speech of his in Fanueil Hall where he appeared as the companion and competitor of Gen. Butler, to compromise the dignity of the Commonwealth, and to pour out flattery upon a class of voters in need more than most of faithful admonition. I am often deceived. But I will not become a candidate for deception by allowing my attention to be distracted from the real question. And the real question is this: has the man proposed for a certain public service a sufficiency of those qualities which will necessarily be engaged in that service, and will assure a faithful performance of it? Whoever can answer that question in the affirmative with regard to Gov. Cleveland may vote for him with a clear conscience, however disapproving of some things in his past. Not that I would vote for an habitual profligate, whatever his recommendations, for the reason that such profligacy must in the end infect and corrupt the whole character. I find upon my tree a pear which is fair to the eye, but there is a worm at the core, and on being opened the fruit is found to be extensively decayed within, a mere shell. I find another which has been assailed by an insect, but by a vigorous growth, it has pushed the intruder out and healed over the hurt. It is a little disfigured, but is sweet, sound, wholesome fruit nevertheless. Habitual profligacy is a worm at the centre, and it promises a core-rotted man; but a particular dereliction may be overgrown and leave the man sound, though scarred. And if this dereliction be of such a nature as to indicate no infirmity of any quality or power which will be engaged in a given public service, it may, in selecting a man for that service, be very properly dismissed as irrelevant to the question of his fitness.

Let us turn now to the case of Mr. Blaine. He has brilliant powers and fine qualities undoubtedly. His literary ability is very considerable and unusual in an American politician; he is a powerful orator, a skilful parliamentarian, a bold and persuasive party leader, captivating in conversation, amiable in all private relations, spotless in his domestic manners, and, like Thomas Jefferson, he has that subtle, indescribable something, not the same with either intellectual capacity or moral stamina, which constitutes an impressive, magnetic and dominating personality. But he is charged with having as holder of a high public trust made an unpermitted and illicit use of his position to obtain riches. Numbers of intelligent and unprejudiced persons, having listened to his defence, read his letters and considered carefully all the attainable evidence, find themselves unable to acquit him of this charge. Therefore they cannot vote for him. At this juncture, when jobberies multiply, when notorious plunderers of the national

treasury cannot be brought to justice and when thousands, professing a belief that all our public men are tarred with the same stick, scarcely think the worse of them for being so, it would be fatal, they say, to clothe with the highest powers of the nation a man who has shown himself infirm at the very point where, if anywhere, a chief magistrate should be unconquerably strong. Now, these men may be wrong as to the facts and have formed an erroneous judgment. It is human to err, and the best of men can only try not to err. But their objection is very clearly relevant, and, if sustained, should be conclusive. It does not import that he is in all respects or in most respects a bad man; it imports only that, as a man who can be tempted by great opportunity and the love of gain to forget his official obligations, he lacks the first, the most essential and altogether indispensable qualification for the service he would undertake. In short, that which is objected to Mr. Blaine is incontestably relevant to the question of his fitness for the work of an American chief magistrate, while that which is objected to Mr. Cleveland is as clearly not relevant. And that is the difference.

Yours very truly,

D. A. WASSON.

COMMENT ON MR. WASSON'S LETTER.

We assure Mr. Wasson that he cannot read anything that we write with more appreciation than we have for whatever is published—now only too rarely—from his pen. The argument advanced in his letter we had already considered, but we have now reviewed it with the respect due to his statement of it. We cannot, however, give our assent to it. The central point, or major premise, on which it all depends, does not appear to us to be well taken. It is true that a President is elected to perform certain governmental duties, and not to have an honor conferred upon him nor to be a moral example. But it is equally true that an election to the Presidency is regarded as a very high honor, and is the highest which the people of the United States can confer upon any one of their number; and it is also true that any one elected to it does become, by his position, an example in morals. Though these are incidental results of an election, they are results so important that they cannot be left out of the problem. It would not be a wholesome public lesson that the honor and dignity of the Presidential office should be cheapened by placing in it a man of gross immorality, even though his immorality might not be of a nature likely to interfere with his public duties. Nor ought it to be forgotten that, in proportion to the greatness, conspicuousness, and responsibility of the public office held by any citizen, will his personal character and conduct have weight as a moral factor in influencing others. Moreover, the President, *ex officio*, is brought into intimate social relations with a great multitude of people; the White House is the central home of the nation, and its hospitalities are extended to all citizens. There is, therefore, a special reason why a President should be clean in respect to that vice of which it is admitted Mr. Cleveland has been guilty. The people are not called to elect a railroad engineer, but to elect the highest officer of a great nation.

In our view, therefore, the charge against Mr. Cleveland, as well as that against Mr. Blaine, is entirely relevant to the question the people have to consider. And this relevancy cannot be destroyed by opening the graves of the dead and exposing the immorality of eminent public officials of a century or more ago, or even of later date. The moral standard in this respect should have

advanced, and doubtless has advanced. But it would be perilously debased again in this country, if either Mr. Cleveland or Mr. Blaine were to be elected to the Presidency without a loud protest. We wish that protest might even now be definitely organized on a new candidate. A correspondent from New York writes that he knows a large number of young men who earnestly desire that this should be done.

W. J. P.

NORMAL SCHOOLS IN ITALY.

We have received from Rome some very interesting publications of the "Ministero della Pubblica Istruzione," giving the programmes and regulations of the schools, especially the normal schools. These show a most enlightened and liberal spirit in the Italian government, and the general course and management of the schools are not so dissimilar to ours as to require special comment.

One feature is peculiar, however. The government has a certain degree of control over the private schools, requiring that they shall be registered, and that their sanitary and moral regulations be approved. The same rule applies to the "Convitti," which, I presume, answer to our boarding-schools. There is also an intermediate class of schools between those wholly free and the private schools in which the pupils pay a small tax. In the free schools, a very small subsidy is paid to assist needy and deserving pupils.

The examinations in the lessons of religion are made by the pastor of the parish. Pupils belonging to other than the Catholic churches are exempted from religious examinations.

Kindergarten methods are used in the children's schools; and some industrial work is introduced, especially drawing for all and sewing and knitting for the girls.

All controversial theological teaching seems to be carefully avoided; and the religious studies are confined to Bible history and catechism, which are generally accepted.

The following extract will show how skilfully difficulties are avoided in what might seem passages of history hard to treat of to such a mixed assembly of pupils:—

Normal Course. First Class.—The teacher will take occasion, from the interweaving of events which Italian history presents with that of other nations in modern epochs, to throw light by opportune digressions upon the principal parts of European history. And, to give an example which may serve as a guide in respect to the method to be followed in these historic excursions, an opportune occasion will be given to the teacher to treat a picture of the religious reformation from his discourse on the Italian Renaissance, which, worked out by us principally in the field of art, in Germany took instead a speculative, theological direction, and in this direction was found the intrinsic genesis of the reform, as in this speculation was its animus. And the teacher, in running over the leading facts of the great event, will omit the exposition of any judgment upon its dogmatic or theologic part, both in order not to trouble the religious conscience of his pupils and still more to hold all their attention fixed upon the great end of the reform, which is, as is well known, the consecration of the principles of freedom of conscience and free examination.

E. D. C.

THE POSITION OF MR. JOHN FISKE.

A friend asks us to "explain how Mr. John Fiske can call himself a theist, when, as in the passages you recently quoted from his writings, he rejects the belief in a Being back of phenomena who possesses intelligence and will." From another letter, this passage is taken: "I am surprised at the reported sayings of Mr. John Fiske. I remember that, two or three years ago,

he lectured in Princeton at the gatherings of the Unitarians. It was then reported that he 'handled the materialists without gloves,' or words to that effect; and, at the Concord School last summer, he was reported as 'giving it' to the agnostics. I do not rely on mere newspaper reports; but, making all allowance, I must say I do not understand Mr. Fiske's position. I have thought him, at least, agnostic; but I may be mistaken."

Mr. Fiske claims, in his *Cosmic Philosophy*, that the purification and refinement of theism consists in a continuous process of "deanthropomorphization," in which are discarded one after another the human qualities with which man has invested Deity. But theism, if we mistake not, commenced by ascribing natural phenomena to personality and intelligence, and has always recognized them as the essential attributes of Deity. When these attributes are discarded, the very basis of theism is abandoned. When Mr. Fiske purifies and refines theism by totally abolishing every anthropomorphic element and limits himself to the postulation of an Ultimate Reality, self-existent and eternal, of which all phenomena as presented in consciousness are manifestations, but which we can only know through the manifestations, he excludes that which is fundamental in the conception and theory of a Deity, and affirms that only which may be and is affirmed equally by the theist, pantheist, and the atheist.

Mr. Fiske says that "to represent the Deity as intelligent is to surround Deity with an environment, and thus to destroy its infinity and its self-existence." (*Cosmic Philosophy*, vol. ii., p. 395.) "It is not the intelligence which has made the environment, but it is the environment which has molded the intelligence" (p. 402).

"If there exist a personal Creator of the universe who is infinitely intelligent and powerful, he cannot be infinitely good; and if, on the other hand, he be infinite in goodness, then he must be lamentably finite in power or in intelligence" (*Ibid.*, p. 495).

"With Mr. Mill, therefore, 'I will call no being good, who is not what I mean when I apply that epithet to my fellow-creatures.' And, going a step further, I will add that it is impossible to call that being good, who, existing prior to the phenomenal universe and creating it out of the plenitude of infinite power and foreknowledge, endowed it with such properties that its material and moral development must inevitably be attended by the misery of untold millions of sentient creatures for whose existence their Creator is ultimately responsible. In short, there can be no hypothesis of a moral government of the world which does not implicitly assert an immoral government. As soon as we seek to go beyond the process of evolution disclosed by science, and posit an external agency which is in the slightest degree anthropomorphic, we are obliged either to supplement and limit this agency by a second one that is diabolic or else to include elements of diabolism in the character of the first agency itself" (*Ibid.*, p. 408).

"*Personality and infinity* are terms expressive of ideas which are mutually incompatible. The pseud-idea 'infinite person' is neither more nor less unthinkable than the pseud-idea 'circular triangle.' As Spinoza somewhere says, '*Determinatio negatio est*,'—to define God is to deny him; and, such being the case, what can be more irrational than to insist upon thought and volition, phenomena only known to exist within quite narrow limitations, as the very nature and essence of the Infinite Deity" (*Ibid.*, pp. 408, 409).

How evident that Mr. Fiske's "Divine Power," as he sometimes characterizes the "Unknowable," without goodness, without personality, without in

telligence, does not correspond with what the people or thinkers generally mean by the word "God"!

Anticipating criticism, Mr. Fiske says it will "be asserted, with vehemence, that, in place of a father whom men can love and venerate, we are giving them a mere philosophical formula, calling for no warmer feeling than calm, intellectual assent. Granting that our doctrine is philosophically the reverse of atheism, it will be urged that here extremes meet, and that an infinite and therefore unknowable God is practically equivalent to no God at all" (pp. 468, 469).

In reply to this criticism, Mr. Fiske reminds his readers that "the early Christians were called Atheists by their pagan adversaries"; that "as we proceed to take away, one by one, the attributes which limit Deity and enable it to be classified, we seem, no doubt, to be destroying it altogether"; yet "the symbolization of Deity indicated by the profoundest scientific analysis of to-day is as practically real as the symbolization which has resulted from the attempts of antiquity to perform such an analysis, and is in every way more satisfactory alike to head and heart" (p. 469).

This reply cannot be satisfactory either to the careful thinker or the religious devotee. There was no logical or verbal propriety in calling the early Christians atheists, because they recognized in God that which is the very essence of theism, *personality and intelligence*, and the contemplation of which as the cause of phenomena was the beginning of theism; but the stripping of Deity of these qualities as is required, in the terminal phase of Mr. Fiske's process of "deanthropomorphization," does not simply purify and refine the conception of Deity: it divests it of its essential nature. It is not true, therefore, that Mr. Fiske's theism "is philosophically the reverse of atheism." It is, on the contrary, in every important respect identical with what is regarded as Atheism, the belief in the eternal self-existence of an ultimate reality,—whether it be the universe or that from which the universe has proceeded,—accompanied with disbelief that this Ultimate Reality is a Being possessing intelligence, will, and purpose.

Prof. Huxley, who says: "Some twenty years ago or more, I invented the word 'agnostic,' to denote people who, like myself, confess themselves to be hopelessly ignorant concerning a variety of matters about which metaphysicians and theologians, both orthodox and heterodox, dogmatize with the utmost confidence," adds, "Agnosticism simply says that we know nothing of what may be beyond phenomena." According to this definition, Mr. Fiske's position, as defined and explained in all his philosophical writings, is that of an agnostic, in common, in this respect, with the position of Spencer, Huxley, Tyndall, and other acknowledged agnostic writers.

Mr. Fiske is not a materialist, and his criticism of materialism as a philosophic system is entirely consistent. But it should be said that he restricts the word "materialism" to "certain abstract theories of metaphysics" that are really obsolete among great thinkers. The materialism he "handles without gloves," a crude theory, which ignores the principle of the relativity of knowledge, is indeed held by no one, so far as we know, who is acquainted with modern philosophic thought. It is not, therefore, to be confounded with the so-called "Scientific Materialism" of Tyndall. Mr. Fiske holds that both mind and matter are phenomenal, and two different aspects of an Ultimate Reality, the absolute nature of which is inscrutable.

The majority who hear a man criticise materialism, knowing nothing about fine philosophical distinctions, infer that he must be defending their belief in God and immortality, when, in fact,

between his own system and the one he vigorously assails, much to the satisfaction of the adherents of theology, there may be no difference whatever in which those adherents can feel any interest.

B. F. UNDERWOOD.

EDITORIAL NOTES.

BY B. F. U.

MISS LILIAN WHITING, in a notice in the *Boston Evening Traveller* of the late Miss M. A. Hardaker, with whom she was well acquainted, but from whom she differed on many subjects, says: "While Miss Hardaker was intellectually aggressive, sometimes to almost an extreme point, she was always honest and sincere. Her limitations were less of intention than the result of temperament; and her inflexible honesty and uprightness of purpose and kindness of heart are qualities that will remain in pleasant remembrance."

THE papers state that a religious sect has lately been discovered in the Crimea, which sincerely and earnestly declares its intention "to be to kill all who do not accept its doctrines." The sect in the Crimea is not the first one that has had this "intention." A number of sects have worked the idea with considerable success for a while; and some of them that can no longer kill heretics and heathens, still persist in declaring that all who do not accept their doctrines God will not merely kill, but torment forever in hell.

ACCORDING to the *Catholic Review*, the number of Protestants in France is 580,000. Of these, 350,000 belong to the Reformed Church and 50,000 follow the Confession of Augsburg, while 150,000 "form part of the free churches, Independents, Baptists, Methodists, Evangelicals, *et hoc genus omne*." The same authority says, "According to the last official census of creeds, the number of Catholics in France is 35,387,703; that is to say, for every Protestant there are 61 Catholics." Our esteemed contemporary does not state what proportion of those put down as Catholics when the last official census was taken are in fact free thinkers.

A FRIEND of the *New York Tribune* writes: "Your correspondent, Mr. Samuel W. Langley, in his note upon 'The Presidential Election,' published last week, says, 'While I am a constant reader and generally an admirer of the *New York Tribune*, I do not agree with it when it charges that "The Index is justly the object of the distrust of all moral and conservative citizens," and that "it speaks with wanton profaneness and disrespect of the people's most holy religion and of the clergy." The *Tribune* in its partisan zeal has done *The Index* injustice.' Mr. Langley will find that the *Tribune* never made this charge. It put it into the mouth of others in one of its mock-heroic articles, but Mr. Langley may be quite sure that it does not share the opinion."

IN mentioning the presence of King Humbert at Naples during the virulence of the cholera in that city, as a cause of unpleasant comparisons by the Italians between his course and that of the Pope, who remains in his luxurious palace isolated from pestilence and scenes of suffering, the *Nation* observes: "The difficulty the Pope has to contend with in going about is that it exposes him to insults from persons who do not believe in him; and this to good Catholics is something too shocking to be thought of. If he were to start out as a philanthropist, however, Naples would be a good place to begin; for in no other part of Italy are the people so faithful to the Church. One of the

great difficulties of the existing situation there is the difficulty of getting the people to resort to any better mode of defence against the plague than religious processions in the streets and offerings at the shrine of saints."

SAYS the *Radical Review*: "A few weeks ago, we reported on the case of Emile Francois, who had been imprisoned four years in the Texas penitentiary on the charge of miscegenation, and who now, on obtaining his liberty, was about to bring suit against the State of Texas for illegal imprisonment. At the close of the paragraph, we expressed our surprise and indignation that anybody should suffer imprisonment on so flimsy a charge. With that bait thrown out, we caught a fish whose species we have considered long extinct; for one of our subscribers wrote thus to us: 'Your last issue says, "Is it not almost incredible that a white man should suffer imprisonment in any of the States for marrying a negress?" No man ever did. Only some long-haired radical who would not hesitate to cross with the monkey to carry out his drivelling theories. Stop the *Radical Review*.' A curious specimen this, that in some miraculous way has come up to our time from the very beginning of the Devonian age,—long, long ago."

IN the same discourse referred to in another paragraph, Mr. Applebee says: "It is a crime against the government of America to smuggle an English edition of the Bible into this country without paying duty on it; but, I think, the strictest protectionist would hesitate to characterize such an act a sin. I am rather inclined to think the sin would rather consist in *not* smuggling the Bible or any other useful book in, if one could get the chance of doing it." On the contrary, a man, whether he be a protectionist or a free trader, with correct ideas of a citizen's duties and obligations to the government under which he lives and to which is due his allegiance, would not, it seems to us, hesitate a moment to characterize as a sin the act of a man who should "smuggle an English edition of the Bible into this country without paying duty on it." In importing books, the obligation of the citizen to the government is the same, whether they be the works of Darwin, Dean Stanley, Spurgeon, or the Scriptures. An attempt to gain an advantage over other importers and dealers and buyers of books, and to defraud the revenue department of the government by smuggling foreign publications into the country in violation of law, is plainly both a crime and a sin. If we think the law is not a wise one, we should, as citizens of a republic, use our influence in favor of its repeal or reform, and not secretly violate it when a chance is offered by smuggling into the country a book, even though it be a book the assumed sacredness of which might in the eyes of the superstitious divest the act of criminality. Bibles can be bought cheaply in this country; and, if an English edition is desired, the payment of a few cents' duty cannot involve in the purchaser any sacrifice of moral principle. The claim that there is no sin in smuggling books into the country, but that "the sin would consist in not smuggling the Bible or any other useful book in, if one could get the chance of doing it," implies the right and the duty of secretly violating any law with which we may not be satisfied; and the notion carried out in practice would make laws useless and government impossible. This is a truth which remains unaffected by the fact that men have at times, under exceptional circumstances, acted wisely as well as bravely in resisting some outrageous law which reduced them to the alternative of either consciously dishonoring themselves by violating their highest convictions, or boldly defying the law and taking the consequences.

The Index.

BOSTON, OCTOBER 2, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER,
BENJAMIN F. UNDERWOOD, : : : : : } Editors.

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

Moncure Conway's Farewell Discourse.

APOLOGIA.

t the Close of a Ministry of Thirty-three and One-third Years.

(Revised for The Index by the author.)

Just one-third of a century has passed since I started out to save souls. I had been studying law; but what had I to do with Blackstone and Coke, when all around me were souls blindly plunging into hell? I laid down my law-books, became a Methodist itinerant at nineteen, mounted a horse, and went forth into the highways and by-ways of Maryland, warning people of the wrath to come, and preaching the gospel of salvation by the blood of Christ. Methodism has been rightly called "Christianity in earnest." But a thing needs to be very true, if one takes it terribly to heart. The theological doctrines of Methodism are substantially those of the Church of England. The tendency in the Church was to shelve them for Sunday use, to glose them over, to adapt them to worldliness, to explain them away. But Methodism took them seriously, accepted those dogmas in all their awful import as the revelation of God. If they were true, they were tremendous truths; they palled the universe with Jehovah's wrath; they revealed millions perishing in eternal torments. For more than a year, I did my part toward terrifying people; and I can now see that dead self of mine, dressed in mourning, going about certain villages and homes in Maryland, bearing a blight for all things glad and beautiful. The smiles of children disappeared as I passed; the dances of young hearts stopped at my approach. Flowers must have bloomed there, birds must have sung there; but I never saw them, never heard of them,—not for a long time. But my way of pressing every doctrine and everything in the Bible to a realistic extreme distressed my hearers. I preached to ten different congregations,—preached every day, and twice or thrice on Sundays,—and some complained to the presiding

elder that I mystified and alarmed them by bringing out everything in the Bible too plainly. I was advised to be more discreet. It dawned upon me that it was necessary to take God's word under wise supervision, to correct its tendency toward plain-spokenness. The first chill fell on my ardor. I was yet in my teens, and very crude, but old enough to feel the inconsistency of becoming a critic of God's revelation.

However, soon I had a revelation of my own. There was a settlement of Hicksites—a variety of Quakers not known in this country—through which I often had to pass. It was a beautiful settlement, mile after mile of pretty homes, each in its smiling field, nowhere a weed or bramble, and everywhere well-dressed negroes working along with the farmers. It was in strong contrast with any place I had seen at the South, almost to be described as an oasis in that poorly cultivated region. When I admired, my Methodist people shook their heads, and said: "They are all infidels over there. One of their preachers said the blood of Christ could no more save men than the blood of a bullock." I also found that those Hicksites had a bad name among politicians for something worse: they were opposed to slavery. Those negroes I saw working in their fields were free, they were paid for their labor. Because the negro could smile there, the fields also smiled. From that oasis of freedom I passed again and again into the land of bondage, and repassed, and my eyes were opened to the great wrong of my native country. As I rode my lonely circuit, I saw, for the first time, with human recognition, slaves at their drudgery,—men, women, and children, toiling in ignorance and hopelessness, never knowing in any hour but that husband, wife, or child might be sold at auction, to be no more seen.

I had started out from home to save souls from damnation: now here were the damned under my eyes. They were fettered by some who helped to support me; by those who labored for the salvation of souls from God's wrath; by people holding in horror the unbelief of Hicksites, who paid workmen their wages, had good schools and happy homes, but did not believe in the Trinity. My Orthodoxy caught fire: it was consumed by a great cause. The hope of seeing slavery lifted from the land, and the beauty of that oasis of free culture spread through my beloved South, rose within me, filled my horizon, until the old heaven of faith was forgotten, Jerusalem receded into antiquity, the dogmas became dry bones. I had not consciously rejected the old theology, but it got outside me.

However, I was not to be rid of the past so easily. My new cause cast a black shadow. On my long rounds, a huge phantom was sure to meet me with warning that, if I parted with my Orthodoxy, it would cost me every friend, every relative; and, if I added to it disloyalty to slavery, the South would banish me, if not worse. This phantom filled me with fear for some months; and I went about preaching, with an effort to satisfy my conscience by infusing a little rationalism or philanthropy into my sermons.

Once, after I had met my formidable phantom, an angel came. It was Emerson,—a little book of his which had found its way into my hands. It came to me when I was low enough,—sick at heart, fearful, without health or courage. As the hart pants after the water-brooks, so had I longed for this living water, this fountain from the pure soul of a saviour sent to my own need. That book I read on horseback. I read it along lanes, amid forests once darkened with divine wrath, and now for the first time saw the flowers blooming, heard the birds sing: the black veil was removed

from the fair face of nature. I was strong again. When the phantom came once more, I wrestled with him. I wrestled and prevailed; withdrew from the Methodist Church, declared my heresy, affirmed my opposition to slavery, and then found that the phantom could not crush me. He could only lame me. That he did. I have never quite recovered from the wrestle with Orthodoxy. The loss of early loves and friendships, exile to a life of poverty among strangers, the critical years of youth—each hour a lost opportunity—wasted on dogmas, are serious injuries, however they may be mitigated or whatever the compensations. My knowledge has always lacked those years given to struggle instead of study, and in various ways the excessive pietism of my early life has been avenged too sharply; for I was brought up half in college and half in prayer-meeting. My usual Sunday through boyhood was Sunday-school, two or three sermons, and a prayer-meeting to close with; and this while during the week I was studying Greek and Latin beyond measure. Six days did I labor, but on the seventh toiled on a treadmill of services; and to this day it gives me a keen delight to see anybody breaking the Sabbath, especially if it is with games and amusements. My secret hope concerning these early losses of mine is that they may have saved some young people from the like,—young people whose parents may have listened to me. I have a brother who fought bravely through a four years' war, and now he will not let his children kill a mosquito. I suppose I am like him in my horror of all that I know can kill the happiness of youth or that can chill the affections of life. Others may dislike dogmas because they are erroneous: I dislike only the dogmas that freeze hearts against each other. My rejection of Christianity is not the result of criticism, but because I know that, as it has steeped the earth in blood, so this day it can make loving hearts turn to stone against those to whom they owe love, if these do not share their dogma. The soul of theology is hatred, and there is no demon that can produce so much anguish as hatred. This is my experience. I have lost many sweet intimacies, have suffered years of solitude, all because I could not agree with the metaphysics of preachers who happened to have in their keeping the consciences of my early companions. Happily, there are ties too strong and sacred for even Jahvé to break. In my Virginian home, love remained, though for a time draped as for one dead; and one heart even believed in me, I suspect at the cost of her strict Orthodoxy. But such inviolable ties are few. As a rule, it is nearly impossible for a pious soul to love anybody its God is believed to hate. They can love the supposed prodigal so long as they hope for his conversion, and love him through immoralities; but, when they find that he will never believe their doctrines, they deliver him over to God's wrath with cynical hardness. Of course, from their point of view, all that is logical and natural. This life seems to them such a mere point compared with the ages of eternity that its happiness is nothing, its human affections little, compared with the vast future. But already this earthly happiness seemed to me vast, the joys of youth wondrous, the blooms of affection divine. The little I had of healthy human pleasures and social gayeties in early youth has made me rate them so highly that the pursuit and culture of the joy and sweetness and humanities of life have become to me as a religion. It may be that in my ministry I have not made enough of the stern duties and sacrifices of life: if so, it is because love has seemed to me the fulfilling of the law. Love carries all duties and sacrifices, making its labors so light that they cease to be sacrifices.

For a time, I left behind me all the region of dogmatic discord. I joined the Unitarian body, and went to prepare myself for the new ministry in their Divinity School connected with Harvard University. There all was congenial study and liberality. There were struggles going on in some cities between the old Unitarianism and the new, but these were at a distance. Here, in the centre of Unitarian culture, such disputes were known only as agreeable interchanges of opinion. In addition to that of our worthy and liberal professors, I enjoyed the friendship of Emerson, of Parker, of Longfellow, of Garrison and Phillips, and other great men. Having declined proffered paternal assistance in a course disapproved at home, I was very poor; yet my life at Harvard University was happy. When I left it to take charge of the Unitarian church at Washington, I found that, despite the general liberalism of the congregation, slavery was still too potent at the capital to tolerate my anti-slavery discourses; and, after a few agitated years there, I was compelled to leave. Then I was chosen minister of the Unitarian church at Cincinnati, and there had some happy years. But, at length, my disbelief of miracles brought on a struggle. The Unitarians who believed in miracles seemed to hate me more than the orthodox did when I left them. They also expected me to be more puritanical in my ways than was possible just after I had risen from the grave of Methodism into a glad world never seen before. Although the Cincinnati congregation stood by me against the opposition, I foresaw that I would soon have to settle up my accounts with Unitarianism.

Then the war broke out, and we threw ourselves into the anti-slavery cause; for I now had a helper at my side. There was a powerful interest which aimed to secure slavery from the conflagration it had kindled. Every anti-slavery man and woman had to enlist for that moral struggle. I was then, as now, radically opposed to war, but not to wresting a great compensation from it. The anti-slavery men did not care in the least about my theological opinions. While I was editing a paper in Boston, and writing books, and lecturing, all against slavery, it seemed to some friends that I might influence opinion in England which was going wrong on the subject, Palmerston and Gladstone being against us. It was thought the English might listen to an anti-slavery Southerner. I came over, and spoke and wrote a good deal. While so engaged, I was glad to preach again, especially as I was invited to a chapel here far advanced beyond care for Unitarian or other dogmas.

That chapel is the one in which we meet to-day. I began preaching here in September, 1863, so that it is now just twenty-one years since I became your minister. The Unitarians of London never liked us. During those years, I have been treated in a friendly way by some Unitarian societies in the provinces,—Edinburgh, Glasgow, Aberdeen, Newcastle, Preston, Bradford, Godalming, Liverpool, Nottingham, Huddersfield, Croydon,—but have received the cold shoulder from the Unitarian Association. London being its denominational centre, our penalties had to be suffered here. I do not complain of the inhospitable treatment received from that quarter, for I long ago recognized the compulsory cause of it. I know that chill theological *aura* of old: the breath of pious hatred is just the same, whether it comes from orthodox or unorthodox people. Unitarianism, despite the generous hearts it includes, taught me, as it had taught my teachers in America, Emerson and Parker, that, wherever even the ghost of a shibboleth is retained, the old intoler-

ance and unkindness will be preserved in it. If the Christian name be the only shred of a creed left, then men will say all manner of things against you for Christ's sake, if you do not agree to that shred.

Freedom of thought had gradually taken the place in my religion which freedom of the slave occupied before it was secured. Freedom of thought does not mean that man can think and speak his honest thought without physical harm. It means that his thought and speech can be free without bringing upon him ill-will, unkindness, alienation of what is necessary to his or her happiness. It means that every honest thinker shall be the reverse of discouraged,—shall be encouraged. The leading Unitarians showed me that, whatever might be the case with individuals, no organization bearing the Christian name could treat generously a man who did not accept that name. They might do it, if he were very far off, or after he was dead, but not while he was living and preaching among them. A few years ago, the Unitarian body authorized the circulation of Theodore Parker's works. But, when I settled here, my views were not more heretical than Theodore Parker's. If I have gone farther, it may be partly due to the instructive illiberality with which they treated me for holding views they now circulate.

Well, these are old scores, and I gladly leave them. I was still hoping for a faith which would work by love, and next looked to Theism for it. Francis William Newman, one of the best men living, had shown that Theism naturally associated itself with high ideas of justice and equality; Miss Cobbe, that it harmonized with profound religious sensibility. I saw Theism grow into a promising movement; but I have seen its decline, and we now hear little of it. This, as I think, is not because Atheism has superseded it, but because Theism aspired to make itself a finality,—because it could not take by the hand with cordiality any one who had doubts concerning divine personality, however religious those doubts, however earnest his spirit. But no deity can stand being made a fetter on minds that have thrown off every other fetter. A deity for whom belief is exacted as the test of friendship is by that spirit proved a fiction. A Theist who dislikes an Atheist because he is an Atheist shows that his Theism doesn't bear as fine fruit as Atheism,—that is, if the Atheism be humane and magnanimous. Doctrines can easily be put into plausible words, but by their fruits they are really known. Theism bore few fruits of any kind after it became a quasi-organized movement, and those fruits were every year more sour.

It became plainer to me by that movement that the virus of theology lurked even in Theism. It seemed to think that what people believe or say about God is of immense importance to God. The important point was whether such belief could enlarge the heart, ennoble the spirit, increase the happiness of man. That it did not prove or attempt to prove. Consequently, it appeared that Theism was but a modified belief in the same old deity that had been the source of superstition and intolerance: the advance of knowledge had taken away his thunderbolts, and then taken away the keys of heaven which followed them; but his egotism survived, and his theologic spirit; and if, for not believing and worshipping him, he no longer burnt men or locked them out of heaven, he was still prepared to lock them out of theistic hearts, and sit silent while they were deprived of their freedom and their rights.

Fourteen years ago I had hope in Theism. I then wrote in my book, *The Earthward Pilgrimage*: "Simple Theism has but few churches now: it

is a newly discovered and as yet unexplored continent, but so was America a little while ago. They who, like Plymouth Pilgrims, have settled in the winter time on its rocky verge, know little as yet of its prairies, savannahs, and eldorados; but they already see that it is to be the next great home of human hearts and thoughts." But, even then, I remembered that other hopes as large had been disappointed, and on the next page I wrote: "That which passes, passes because it is no longer necessary. The traditional creed passes with the need which formed it. Every fossil in the earth tells its story. It is not necessary. Men are virtuous without it. It no longer implies self-denial or any divine passion to believe it. The cross has become golden, and may be coined into money. The virtues it once implied gather with the free thinkers and reformers who will not bow to it. The impulse which separates them from Christendom is the centre of a new creation. What that new creation will be we can, indeed, only imagine; but we know that the spirit which built Christianity when Judaism fell, which built Protestantism when Romanism crumbled, cannot be crushed under the ruins of any temple."

Here rise together from an old phase of faith the hope that Theism is to be the next great home of the human spirit, and a contemplation of the possibility that it may not prove so, but that a farther shore may appear. To-day, I am bound to say that it is not the hope, but the misgiving that has proved true. For what has happened since? Theism means belief in God; and, since then, the name of God has been legally and politically defined. The nation has been authoritatively given to know what God means. It means a proud monarch, for not believing in whom a parent must be deprived of a child, men must be dragged from their families and shut up in gaol, members of Parliament must be deprived of their seats and constituencies dishonored, and ladies refused admission into seats of learning. No: Theism cannot stand that. No religion can inherit the future which does not bear in it the highest and holiest spirit of our time,—its freedom, its justice, its science, its humanity. The name of God has been of late so degraded, it has been so adduced to label public meanness and wrong, that it can never be utilized for any organization that shall represent the supreme ideal and aim of a free and civilized people.
