It is surprising what real gratification comes from having originated and completed some article of use or ornament one's self. It assumes a value wholly out of proportion even to the exertion necessary to produce it, and the hopeful side of the mind is thus excited forcibly.

Far too many suicides, too much nervous exhaustion, so called, with all the manifold varieties of allied troubles, are met with to-day by all experienced practitioners among the richer classes; and it is time to combat the prime cause, if it be possible, or at least the tendency, by whatever rational means can be devised and utilized. Mechanical or active labor is what seems to offer the most promising hopes for success in such cases. And this use of this form of training is quite as valuable, quite as great a good to the human race, as is the like training of the poor, that they become more self-helpful. Independent of all this, argument for such training of the rich could be made on the ground that the rich, having more leisure, are more prone to fall into evil ways in general; and all real working would be in opposition to such tendencies, and, therefore, for good.

JOHN DIXWELL.

Boston, April, 1886.

PROF. LONGFELLOW AGAIN.

Editors of *The Index*:—

Allow me to echo the surprise expressed by Mr. Potter that Mr. Kennedy should call the late Prof. Longfellow "close-fisted." It is always easy to apply the epithet to any man who pays his own debts and does not live on other people's money; but I have known few literary men who were so essentially generous, both of their time and their money, as Prof. Longfellow. Not wishing to rely on my own judgment, I asked, just now, the opinion of a gentleman who has been a conspicuous leader in all good works in Cambridge for the last forty years, Mr. F. L. Chapman. His answer was: "I have been to Prof. Longfellow with a great many subscription papers, and there was no one to whom I was more willing to go. He always responded promptly, and generally with as large an amount as was given by any one." Such is also my own experience; and I have also known of acts of private generosity, on a most liberal scale. In later years, after his daughters grew up, his charities were largely conducted through them, as was proper enough, in view of the incessant claims made upon his time. But I should say, as a long resident of Cambridge, that his generosity was as "well known" as his modesty.

T. W. HIGGINSON.

BOOK NOTICES.

WHAT IS THEOSOPHY? By a Fellow of the Theosophical Society. Boston: Cupples, Upham & Co. pp. 28. Price 50 cents.

This unique little volume, with its new and sensible departure in binding, purports and essays to bring the new science or religion, called by its followers "Theosophy," into terms suited to the capacities of youthful minds, and is dedicated by the author "To my little Boy, whose oft-repeated question, 'What is Theosophy?' has been the occasion of my attempt to put this great matter into little words." We hope the "little boy" indicated is wise enough to understand all about Theosophy after this explanation; but, if he does, he will be wiser than some adult readers. We give in brief some of the doctrines taught: "Mankind fell from their first happy state by thinking more about their *outer* bodies than about their souls." "There is only one way to get rid of sin and suffering, and that is by going back to God." "This world is one of seven planets," in all of which we are liable, at some period, to find ourselves living, in different forms, but with no remembrance of our former life; for "we have all lived many times before," and "we shall live many times again." "What we are now is the consequence of . . . what we did in our last earth life." "In your next incarnation,—many, many hundreds or thousands of years from now perhaps,—you will have to suffer for wrong-doing in this life." "The part of you that lives over and over is the soul." "The soul goes into 'Kama Loca,' which is the first spiritual world, . . . until it has learned to do without the body." Afterward, having conquered all bodily desires, the soul goes "onward to Devachan,—we call it heaven." "On the walls [of Devachan] will be pictures of our good deeds in bright and glorious colors, and we shall be surrounded by

those we love best and most wish to have with us"; but, after a while, the soul realizing even in this happy abode "that some other experiences are necessary, it returns to earth." This "is like going back to school after a holiday; and we must look forward to the time when, our education finished, there will be no more school. When that time comes, we shall reach Nirvana. Nirvana is the highest heaven; . . . and, when we reach that goal, we shall have a long and perfect holiday,—no more suffering and sorrow!" "There is no such thing as supernatural power, and there have never been living men who could do anything against the laws of nature; but it is possible to acquire a knowledge of these laws, and thus make use of forces the very existence of which is unknown to people who are uninstructed. This is what the adepts of to-day have done, and this is what may be accomplished sooner or later by any one who chooses to pursue the same system of study and self-denial." With one more quotation, we close this strange book,—"Theosophy means God's wisdom." S. A. U.

THE *Independent Pulpit* for April opens with an article entitled "Christianity vs. Secularization as a Factor in Nineteenth Century Civilization," by D. R. Wallace, M.D., which is followed by "Has Infidelity done Anything to add to Human Happiness?" by B. P. Barnum; "A Friendly Review," by Millson; "Christian Spiritualism," by Perseus; "The Demands of Liberalism," by E. Strauss; "Religion for Women and Children," by Mrs. E. C. Stanton (reprinted from *The Index*); "Political Economy," by E. Strauss; "The Edmunds Bill," by Helen H. Gardner; "A Model Liberal Association," by Charles Peters; and several other original or selected articles which combine to make a very interesting number. J. D. Shaw, Waco, Texas.

THE *Unitarian Review* for April gives its first pages to an article entitled "The Inevitable God," by J. W. Chadwick, in which he reviews some of the different conceptions of God held by the radical thinkers of to-day. Oliver Johnson criticises at some length Dr. Bartol's recent article on "Channing and Garrison." The sixth instalment of Rev. Thomas Hills' "Man Finite," "The Sufficiency of Christianity," by Rev. E. J. Young, and Mrs. Kate Gannett Wells' interesting sketch of the career of Louise Michel, in a paper entitled "The Pathos of Socialism," make up the list of contributed articles.

BEWARE of making your moral staple consist of the negative virtues. It is good to abstain and teach others to abstain from all that is sinful or hurtful. But making a business of it leads to emaciation of character, unless one feeds largely also on the more nutritious diet of active, sympathetic benevolence.—O. W. Holmes.

A STUDY OF PRIMITIVE CHRISTIANITY.

By LEWIS G. JAMES.

8vo. 320 pages. Cloth, Gilt Top. Price \$1.50.

"No fairer statement has been made of the grounds on which the anti-supernaturalist humanitarian bases his opinion of Jesus and of the origin of Christianity. . . . Its theology and Christology are of the most radical Unitarian kind; but the temper and spirit of the book are so refined, so earnest, and so fair to all opponents, that it must impress those who are compelled to disagree with its most prominent conclusions as a model of polite and generous controversial writing."—*Brooklyn Union*.

Sent, post-paid, on receipt of price. Address
THE INDEX, 44 Boylston Street, Boston, Mass.

Lectures by Rabbi Solomon Schindler.

1. INTRODUCTORY.
2. TWO THOUSAND YEARS AGO.
3. THE CARPENTER'S SON.
4. JUDAISM THE MOTHER, AND CHRISTIANITY THE DAUGHTER.
5. A GENUINE MESSIAH.

As a special inducement to Liberals to distribute these lectures, which are full of radical thought presented in the plainest language, they are now offered at 5 cents each; 10 copies for 30 cents; 40 copies for \$1.00.

Address THE INDEX, 44 Boylston Street, Boston, Mass.

WANTED, during the months of June, July, and August, the office of private secretary.

MAX knows a young woman who is not afraid of her convictions. She lives in a house where Methodism is the prevailing creed. One day, not long since, the dominie who has the care of the souls in that particular family came to make a pastoral visit. After conversing with the elder members of the family on their spiritual welfare, he turned to the young woman in question, and said with all unctuousness, "And you, my dear daughter, are you a child of God?" "No, doctor," said the young woman, "I am an Episcopalian."—*Buffalo Express*.

PROF. DAVIDSON'S lecture on "Bruno" is for sale at *The Index* office. Price 10 cents.

HUSBAND'S CALCINED MAGNESIA.—Four First Premium Medals awarded. More agreeable to the taste and smaller dose than other Magnesia. For sale in bottles only, with U.S. Government Registered Label attached, without which none is genuine, at druggists and country stores, and by Thomas J. Husband, Jr., Philadelphia, Pa.

FOR COLDS COUGHS and Consumption use Cutler Bros. & Co.'s celebrated *Vegetable Pulmonary Balsam*. "Best medicine in the world." In use 60 years. Price \$1.50, and 35c. \$1 bottle the cheapest. Be sure and get the genuine.

Has a flexible back which adjusts itself to any thickness. So simple in construction that any one can bind their own paper one number at a time. Serves for a temporary or permanent use equally well.

For sale at INDEX Office. Price \$1.00.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-ship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript*.

PUBLICATIONS

OF THE

FREE RELIGIOUS ASSOCIATION.

Freedom and Fellowship in Religion. A volume of ten essays upon speculative and practical problems of religion, by D. A. Wasson, Samuel Longfellow, Samuel Johnson, John Weiss, W. J. Potter, F. E. Abbot, O. B. Frothingham, J. W. Chadwick, T. W. Higginson, and Mrs. E. D. Cheney, and extracts from Addresses by Ralph Waldo Emerson, Lucretia Mott, Robert Dale Owen, Dr. Bartol, Wendell Phillips, Rabbi Wise, Horace Seaver, A. B. Alcott, Lucy Stone, Charles H. Malcom, Julia Ward Howe, and others,—all given on the platform of the Free Religious Association. Price (reduced) \$1.00.

Reports of Annual Conventions of Free Religious Association, from 1872 to 1879 inclusive. These contain essays and addresses by the various distinguished men and women who have spoken on the Free Religious platform, together with yearly reports of the Executive Committee. 10 cts. each.

TRACTS.

II. *The Bible and Science*, by John Weiss.

III. *The Sympathy of Religions*, by T. W. Higginson. Enlarged edition.

IV. *Transcendentalism*, by Theodore Parker. Never before published.

V. *The Public School Question*, as understood by a Catholic American citizen (Bishop McQuaid) and by a Liberal American citizen (F. E. Abbot).

VI. *How Shall We Keep Sunday?* An Answer in Four Parts: 1. Sunday in the Bible. 2. Sunday in Church History. 3. Sunday in the Massachusetts Laws. 4. The Workingman's Sunday. By Charles K. Whipple, Minot J. Savage, Charles E. Pratt, and Wm. C. Gannett.

VII. *Evolution and Religion*, by John Fiske. 5 cts.; ten, 35 cts.; one hundred, \$2.00.

Nos. II., III., IV., V., VI., 10 cts. each; ten, 60 cts.; one hundred, \$3.00.

Reason and Revelation, by W. J. Potter. 5 cts.; ten, 30 cts.; one hundred, \$1.50.

THE INDEX, 44 Boylston St., Boston, Mass.

It is singular that, in the great flood of matter recently printed about the slaughter of birds, denunciation has been so closely confined to the women who have encouraged it. The boys who steal birds' eggs by the score have gone scot free; and so have the overgrown boys and men who in so many places have what they call an annual hunt, starting off, two or three scores of them, on some fine fall morning to see which of two sides can slaughter the most birds and small animals.—*Boston Herald*.

A ST. ALBANS youngster, who is not favorably disposed toward Sunday as a day of respite from play, was told recently that Sunday was God's day, and that it was meant for a day of rest. He then asked, "What does God do Sundays?" On being told that he rested, the youngster said: "And does he have to sit in a chair all day?"

This talk of another mistress for the White House is plainly opposed to the spirit of civil service reform. Miss Rose Elizabeth Cleveland, the present incumbent, is not an offensive partisan; and there are no charges against her.—*Missouri Republican*.

FRESH FLOWERS on every occasion. J. NEWMAN & SONS, 7 Tremont Street.

CHEAP RADICAL TRACTS!

No. 1.—*Truths for the Times*, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 5 cents; 30 copies, \$1.00.

No. 2.—*Fear of the Living God*, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 3 cents; 20 copies, 50 cents.

No. 3.—*Lecture on the Bible*, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 5 cents; 30 copies, \$1.00.

No. 4.—*Christian Propagandism*, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. Full of Figures, Facts, and Interesting Extracts. Price 5 cents; 30 copies, \$1.00.

No. 5.—*"God in the Constitution"*, by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 5 cents; 30 copies, \$1.00.

No. 6.—*"The Sabbath"*, by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 5 cents; 30 copies, \$1.00.

No. 7.—*"Compulsory Education"*, by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 3 cents; 20 copies, 50 cents.

No. 8.—*The Present Heaven*, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 3 cents; 20 copies, 50 cents.

No. 10.—*The Impeachment of Christianity*, by F. E. Abbot. 5 cents a doz.

No. 11.—*The God of Science*, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 5 cents; 30 copies, \$1.00.

No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman E. Abbot. Price 5 cents; 30 copies, \$1.00.

No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 3 cents; 30 copies, 50 cents.

No. 14.—*A Study of Religion: The Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 5 cents; 30 copies, \$1.00.

No. 15.—*The Battle of Syracuse*. Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 5 cents; 30 copies, \$1.00.

RELIGIO - PHILOSOPHICAL JOURNAL.

Established in 1865.

A Paper for all who Sincerely and Intelligently Seek Truth without regard to Sect or Party.

The JOURNAL, in the estimation of a large proportion of the leading authorities on Spiritualism, stands pre-eminent as a fearless, independent, judiciously fair advocate of Spiritualism. It has received more general notice, and more frequent and higher commendations from intelligent sources, regardless of sect or party, than any other Spiritualist or liberal paper ever published: the records will confirm this.

The JOURNAL is uncompromisingly committed to the Scientific Method in its treatment of the Phenomena of Spiritualism, being fully assured that this is the only safe ground on which to stand.

The JOURNAL is unsectarian, non-partisan, thoroughly independent, never neutral, wholly free from cliques and clans.

BY B. F. U.

COMMISSIONER CARROLL D. WRIGHT does not think that the social inequalities now existing will find their remedy in co-operation as a means of production; but he is a pronounced advocate of the plan of industrial copartnership, which secures to the wage-earner his weekly or monthly pay, and at the same time makes him an associate in the profits of the business in common with the one who invests his capital. An account of an experiment of this kind, inaugurated at the beginning of the present year at Westerly, R.I., was given in *The Index* some weeks ago.

MISS LOUISA M. ALCOTT, in a letter printed in the *Brooklyn Magazine* respecting the condition of her venerable father, A. Bronson Alcott, says: "He will never write or talk again, and his books are all he can offer now. He no longer cares to read, but enjoys pictures, and sits thinking for hours as he placidly waits for the great change. He often says he is tired and wants to go, but, like a true philosopher, bears the inevitable as bravely and sweetly as he has borne all the trials and joys of his long and beautiful life. He desires me to convey his thanks to the many friends who so kindly remember him, in which I very gratefully join."

It is stated, as an illustration of the superstition prevailing in the South, that a "Voodoo" doctor was lately arrested at Atlanta for selling "spells." A doctor who claims to be of "the royal blood of Africa" sold to a colored woman for \$10 a spell that failed to work. She had him arrested. He promised to come through the wall of the jail to make good his promise; but, to the astonishment of many negroes, the feat was not accomplished. This circumstance affords a glimpse of a dark superstition hanging over the colored people of the South; but what shall be said of the following from the *Springfield Republican*, relating to the American Athens? "The sublimation of the mind-cure craze in Boston is a man named Bennett, to whom patients go in and lay down \$10, never more nor less. The 'doctor' pronounces the formula, 'You

are cured'; and patient walks out again. This is humbuggery reduced to its simplest form. There is no diagnosis, no treatment, nothing but faith; and yet it is said that Bennett is making a big income, \$10 bills coming in by the mail, and requests for consultation by telegraph. He calls himself an apostle of the 'Order of the Inspirati.' He ought to be 'inspired' by his receipts."

HENRY GEORGE, in a lecture given in this city, last Sunday evening, under the auspices of the Boston Turnverein, on "Labor and Capital, or the Social Question," said that neither land nor labor alone could be capital, which was the joint product of the two,—tangible articles, consisting of natural products worked upon in such ways as to make them useful. He stated at some length his idea that the chief cause of the labor troubles to-day is land monopoly. The right of every man to land, he said, is involved in the right to life. It was not necessary to divide the land into equal shares, but simply to levy all taxes on land and none on the improvements. This would make uncultivated land undesirable property, and give to the poor man a chance to share in the natural bounty. Ultimately, ownership of the land would give place to tenancy, and all regulations as to apportionment, holdings, etc., would be under the direct control of the State or the community. Mr. George showed readiness in answering some of the questions asked from the audience; but in Mr. Edward Atkinson he found an antagonist to his theme, whose facts and figures interfered somewhat with the effect of the lecture upon the audience, which was not apparently very sympathetic, certainly not very demonstrative from the beginning. The taxation of land, and land only, considered as a panacea for labor troubles and as a means of reconciling capital and labor, does not strike the average mind as of so much value, to say the least, as Mr. George attaches to it.

NOTWITHSTANDING the fact that the Brazilian Government, under Dom Pedro, has in various ways endeavored not only to provide for the abolition of slavery, but to mitigate its horrors without offence to the slave-owners, according to reliable accounts, the institution is maintained in that irresolute country with great cruelty. It would seem that the slave-owners are trying to crowd into the period between now and the culmination of the emancipation every barbarity they can think of as a protest against freedom. According to the *Revista Illustrada*, slaves are even whipped to death with lashes, bathed in vinegar, thrust alive into hot furnaces, and plunged into caldrons of boiling water. The laws recently enacted by the Senate are practically inefficient. In the free province of Ceara, where the formal liberation of every slave was celebrated two years ago, slaves are not only now owned, but subjected to every cruelty, the same as in the undisturbed slave provinces. The small results of the Emancipatory Law of Brazil may be inferred from the statement by the *Chicago Inter-Ocean*, made on the authority of *Rio News*, "that in 1873, when the movement began, there were 1,532,926 registered slaves

in Brazil; and in 1884 there were 1,260,806, an actual decrease in twelve years of only 346,654, including 214,860 deaths, the legal manumissions being only 44,573, while the gratuitous manumissions were 87,221." These figures show that "the slave population is over 50,000 greater than it should be, or that the slave-holders are holding that number in illegal bondage. As the annual average decrease has been only 22,911, an average rate of 1½ per cent. per annum, it is estimated that it will take over fifty years under the present law to free the slaves now existing in Brazil. But, taking account of the great death rate and the hoped-for increase in the effectiveness of the fund, it is given as a certainty that twenty-five years must pass before the disappearance of slavery. The rapid extinction of the institution is not desired even by the ministry, and the Premier was at great haste recently to deny that he had in contemplation a plan for the abolition of slavery within a period of five years. The new chamber is not likely to give its attention to any remedial legislation on the subject, and altogether the present outlook is far from encouraging to the abolition party."

JEFFERSON DAVIS recently described the attempt to found a Southern confederacy as the "glorious dream of idealized liberty." And yet of that confederacy human slavery was to be the corner-stone. He refers to the rebellion as "a holy war of defence," when he knows that it was offensive against the Union from its first act of aggressive warfare,—the firing upon Fort Sumter. Davis had a greater love of power than of country; and the price of his ambition and that of his fellow conspirators was hundreds of thousands of precious lives, and an amount of poverty, desolation, and suffering beyond the power of the finite mind to compute. Only by the wonderful magnanimity of the nation he had sought to divide were his life and liberty spared at the close of the war; and now, after twenty years and more have elapsed, this old man emerges from the obscurity which was so befitting to a defender of slavery and a defeated leader of a wicked rebellion against a great republic, and parades himself before the people as a martyr to "idealized liberty," a representative of truth and justice "crushed to earth," the personification of a righteous but a "lost cause." It was announced that Davis would, last Tuesday, address the school children and probably review the troops at Savannah. Is the man who violated his oath and kindled the fires of civil war, who, with the brand of treason on his brow, remains the sad and disconsolate relic of a bad cause which ended in disaster and humiliation, a good example to hold up to school children or to receive honors from military bodies in this republic? It may be, and we are inclined to believe, that the attachment of the South to the collapsed confederacy is chiefly one of sentiment; but there has been an absence of good taste and of wisdom, if not of fealty, to the government he sought to destroy, in the recent honors showered upon Jefferson Davis by Southern people.

THEOLOGY AND TYPHOID.

The growth of sanitary science is one of the recent achievements of modern civilization. It is not many years ago that Boards of Health were unknown. Now there is hardly an enlightened community without such a body. There are, in this country, State Boards of Health, and there are City and Town Boards; and these committees are given immense authority, both in judgment and execution. In respect to power, Boards of Health stand only a little below the assessors,—assessors coming about as near to supreme sovereignty as any persons in the United States.

This change indicates a change in theological opinion. The time was not far back when disease was very generally regarded as specially sent by the Almighty as a chastisement for sins or for spiritual discipline. Only the past year, the larger part of the Catholic population of Montreal revolted against the authority of the Board of Health in that city in the matter of vaccination against the small-pox. To these ecclesiastical devotees, small-pox was a plague which the direct act of God had visited upon the city for its sins; and the cure was not to be found through vaccination or the physician's arts, but through prayers and ecclesiastical processions. And, even as lately as the time when a Board of Health was provided by Act of Congress for the city of Washington, pious Protestant people of the national capital objected that it was interference with the laws of God. An orthodox deacon, who was one of the city commissioners, went so far as to express his belief that it was little short of a blasphemous flying in the face of Divine Providence to seek by such means to avert even the threatened cholera, which was the immediate cause of enacting the law creating a Board of Health. The cholera, he said, if it were to come, would come by the will of the Almighty for a purpose of his own; and it was not for puny man to attempt impiously to evade or prevent Heaven's will. The attempt would only draw down more dire disaster. But the orthodox deacon's protest was only regarded as a survival of a strange creed of the past, and did not stay the creation of the beneficent institution of the Health Board.

The truth is, enlightened people of all sects have got far away from the time when it was believed that any supernatural power is concerned with the cause or the cure of sickness. Good Christians may read in their New Testaments: "Is any sick among you? Let him call for the elders of the church, and let them pray over him, anointing him with oil in the name of the Lord; and the prayer of faith shall save the sick, and the Lord shall raise him up." But, though reading this, very few believe it; and still fewer—only a few fanatics—act upon it. A small sect in England, the "Peculiar People," have tried to practise this New Testament doctrine in regard to sickness in their own families; but English law has interfered, regardless of the cry of religious liberty, with such a practical illustration of the fervid faith of these disciples. And then, too, "the Lord" has not always seen fit to "raise up the sick": the "prayer of faith" has sometimes failed to be followed by their recovery; and such failures are calculated to excite a sceptical feeling, even in the most faithful disciples, about the method being adapted at least to modern times. A few years ago, George Müller's famous Orphan Asylum, which Müller and its managers allege to be supported entirely by prayer (albeit, a report of its excellent work and pecuniary needs is printed annually, and the public is continually informed

that Müller is praying for money for it), was ravaged by an epidemic of typhoid fever. It must have been a severe test of faith to many devout people of old-fashioned theological convictions, when they tried to think what purpose the Lord could have in bringing this scourge upon a community of innocent children and upon so noble a charity, which the Lord himself was sustaining by his own answers to prayer. Why should he thus bring destruction upon his own work? But the government of Great Britain did not stop to solve these puzzles of theology, but sent its health inspectors into the asylum, who discovered at once that defective drainage of a gross nature was the cause of the scourge, and directed that, whatever devout praying might have accomplished for creating the institution, sound plumbing must be resorted to for saving it.

We have been led into these remarks by looking through the Annual Report of the State Board of Health of New Hampshire, which has recently come to our table. There is no State, perhaps, where the work of such a Board was more needed or where the good effects of the work are already more manifest. On account of the very large number of summer hotels and boarding-houses in the State, and the immense amount of travel through it in all directions, it is of great importance that the sanitary conditions of house-construction and housekeeping, drainage, wells, springs, etc., should be scientifically considered and made as far as possible a matter of public knowledge. We remember once hearing some religious people devoutly wondering why divine Providence had so grievously afflicted a family in their circle of friends, who, after a series of misfortunes and trials at home, had got away to a fine hill town in New Hampshire for a summer's rest and recreation, but upon whom the typhoid fever had fallen, taking down one member of the family after another and bringing two of them nigh to death's door. These friends, like Job's, supposed that there must be some "hidden cause" for the affliction in the counsels of heaven; but they confessed that God's ways with the sorely tried family were not as their ways would have been, if they could have directed affairs: they would have been more merciful, and distributed affliction more evenly. But investigation showed that there was no inscrutable mystery of divine Providence behind the event. The fever was an epidemic in the village, and was traced to bad drainage or no drainage at all. At that time, it was customary, in the country towns and villages of the State, for thousands of people to spend the summer months amid the same primitive household arrangements under which ordinarily only as many scores of people lived. Great improvements in sanitary matters have been made in the summer resorts in that State in recent years, though there is still room for progress. The Board of Health has been largely instrumental, doubtless, in causing this improvement. Such papers as are contained in their reports on "Water Pollution" (the cause of forty-five cases out of eighty-seven of typhoid fever reported for 1884), "Restriction and Prevention of Disease," "Sanitary Engineering," "Lead Poisoning," "School-house Hygiene," "Diphtheria," etc., if circulated in pamphlets through the State, would not only impart knowledge, but give practical directions how to use knowledge. The people of New Hampshire, because of their State's great attractions to summer tourists and guests, have a special interest in learning and keeping sanitary laws.

In this matter of disease, Humboldt once put the case between theology and science in a nutshell. The great scientist, then very aged, was

convalescing from a severe illness which it had been thought would terminate his life. A conference of evangelical clergymen, that was in session at the time in Vienna, sent a telegraphic despatch to him, conveying their congratulations that, "by the grace of God," his health was so far restored. Humboldt caused a despatch to be forwarded in response, thanking the clergymen for their interest in him, and adding the further intelligence that, "by the skill of his good physician and the natural strength of his constitution," he was then well on the road to entire recovery.

WM. J. POTTER.

ARCHBISHOP GUILBERT AND DEMOCRACY.

The Paris *Temps* calls attention in a long editorial to a recent pamphlet of the Archbishop of Bordeaux, M. Guilbert, entitled "La Démocratie, son Avenir Social et Religieux." The French journal is astonished to hear an ecclesiastic of the Catholic Church speak almost with enthusiasm of the approaching universal reign of Democracy. The bishop's outspoken language is indeed a sign of the times. Pere Hyacinthe said to me the other day that he saw marked progress toward Liberalism in the Catholic clergy, and this last utterance from the diocese of Bordeaux proves the truth of the assertion. Let me give you one or two extracts from this suggestive pamphlet.

"The democratic movement," says the author, "is carrying the modern world along with it; and nothing can check its irresistible force. . . . This spirit of democracy, these aspirations after liberty, equality, fraternity, have penetrated everywhere, and manifest themselves more and more among all the civilized nations of both hemispheres. It seems certain to us that, at the rate at which things are moving, there will be no place left for despotism in the near future. . . . On every hand, in England, Spain, Germany, Belgium, Austria, we see the democratic element gaining ground every day. The governments of those countries are constitutional or representative, and are based on universal suffrage or on what will soon be universal suffrage, as the result of incessant electoral reforms. This is, then, more or less, the government of the people by the people, whatever be its official name, whether it be called republican or monarchical."

The archbishop is not a lauder of the past at the expense of the present. He not only believes in the approaching triumph of democracy, but he considers that the revolution will be a happy one. "If one compares the present epoch with those that have preceded it since the Christian era, what progress has been made," exclaims the ecclesiastic author, "what prodigious changes in the condition of humanity among all the nations of old Europe and especially in France! . . . No human force can stop this current, which we believe is providential; for, with the means of propaganda that democracy enjoys,—our modern scientific discoveries, our industries, our commerce, bringing together both thoughts and peoples,—ideas advance more rapidly than ever before. And, now, can you check them? They are scattered to the four winds of heaven by the printing-press and the newspaper, they speed through the telegraphic wires, they are carried by steam on our railroads and ships, they burst with the bombs on all our battle-fields. Yes: we are firmly convinced that within a few years—we cannot say just how many, but the event is surely not far off—democracy, in the form of our Christian civilization, will have made the tour of the world, putting new life into old or barbarous peoples, and lifting them up from their grovelling and servitude."

Every reader of *The Index* will say, "Amen," to this part of the archbishop's pamphlet. It is only the second part that will call forth objections. With Montesquieu and Tocqueville, he affirms that virtue is more necessary in a democracy, and especially in a republic, than under any other form of government; and he then goes on to say that this virtue must be sought after in the Catholic Church. It is only natural to expect such a conclusion from an ecclesiastic. But this conclusion does not detract from the significance of the first part of the pamphlet, where the archbishop places himself squarely on the side of democracy. In America there would be but little importance to be attached to such a declaration from such a personage. But here, in France, the whole situation is different. The full bearing of this voluntary confession is pointed out by the *Temps*.

"Ah, if the whole French episcopate would only think and speak like M. Guilbert, or even like Leo XIII." exclaims the writer of the *Temps* editorial in closing. "It is true that, by so doing, they would run the risk of losing their popularity with the opponents of democracy and the republic. It would indeed be an edifying spectacle to see our reactionaries brought face to face with a clergy honestly and frankly republican. Perhaps, we would then witness once more, even among the well-intentioned upper classes, that indifference to religious matters that characterized the years that immediately followed the revolution of 1830. The clergy no longer laboring in the interest of the reaction, the reaction would cease to labor in the interest of the clergy, would throw overboard the fashionable and artificial piety that it now makes such a show of, and would go over boldly to incredulity, which is in the air and in men's minds."

It will have been seen that the archbishop's pamphlet proves two very interesting things: in the first place, that democracy and republicanism are sure to triumph the world over; and, in the second place, that free thinking, in France at least, is to follow in the wake of this democratic and republican evolution. The archbishop asserts the first fact squarely and with evident satisfaction, but you must read between the lines to discover the second fact. He says that the Church, and the Church alone, can furnish that moral virtue that the new order of things must have, if it is to live and develop. But the good archbishop knows perfectly well that republican France will never seek its morality in the Catholic Church. He sees now that the republic is separating itself every day more widely from dogma and approaching more closely to philosophy; and he must feel what he cannot admit,—that, when the restless democratic wave of which he speaks shall have spread over the world, sweeping away old prejudices, religious, as well as social and political rot, will be borne away on the current.

THEODORE STANTON.

PARIS, March.

EDUCATION.

There appeared, in a late number of *The Index*, an article on education, which contained a suggestion as valuable as I believe it practicable. For myself, I know that, could I have met in my school-days some of the thought-awakening tracts which subsequently fell in my way, it would have saved me from the necessity of unlearning much, as well as prevented the inrooting of prejudices that often influence conduct when intellect affords no sanction. "Many a time and oft," I have listened to a lecture or talk on physical science which, to my "straight-acting" mind, was irrecon-

cilable with the chapters of Genesis read in the morning; but scarcely were my sceptical reflections under way, when the professor would anticipate and kill them off by means of an ambiguous but Orthodox statement. When I reflect how my earlier ratiocinative processes were abused in this respect, I feel for the moment something like resentment. But, as the editor of *The Index* recently said, teachers hold their places during the approval of the public. Freedom of thought and original inquiry will not be encouraged in our schools until there is a liberal public to desire it. Surely, there is no better way to hasten this desired consummation than for Liberals to invade the schools with an enthusiasm, as Mr. Dana suggests, and by the judicious distribution of various thought-inspiring articles and arguments to liberate the young mind from routine methods and veneration for precedent, simply because it is precedent, by which it becomes an imitator ever after, testing all things by principles or theories in vogue in childhood, without a sufficient personal responsibility for what is believed. Of course, such pamphlets should be entirely free from the proselyting character,—simple stimulants to thought on the part of the pupil; and, also, there might well be an occasional hortative to candor on the part of instructors. To a generation thus educated, discourses on ethical culture would be welcome. As it is, not one in a hundred cares to read them, or would grasp their meaning, if he did.

Was the spirit of imitation and subservience ever greater than at the present hour? The virulence of partisanship at the last presidential election made the position of a man of independent views very unpleasant. The extreme pandering of the daily press to the lowest instincts of the community shows for how little moral considerations count with their publishers. The latest phase of business morality is that manifested by the managers of the Gould railroad system. Jay Gould makes an agreement with the delegates of the Knights of Labor, on the strength of which the master general of the organization advises the employés of company to resume work. Subsequently, his subordinates refuse to carry out Gould's agreement. This breach of faith, having a tendency to weaken the position of the strikers, has exasperated them. If, in their ignorance and passion, these ill-used men should begin a war of destruction on Gould's property, it would be the duty of the United States government to stop it. But, in such an event, at whose door would rest the responsibility for the lives lost?

At the risk of being criticised for bad "form," I shall briefly relate an incident which illustrates the "way of the world." Some half-dozen years ago, I had a chum, a bright, high-minded young fellow, poor, but ambitious. At the age of eighteen, he left home, and struck out for himself. For years, I had not heard from him. Not long since, he called upon me, improved, if possible, in personal appearance, and having the air of one who has succeeded in forcing the world to deal graciously with him. In the course of conversation, I reverted to the topics which we were wont to discuss. For a time, he evaded me. At length, he laughed outright, and said: "The one great lesson I have learned since I left school is to get money,—get it honestly, if one can, but get it. The question is not where or how, but have you got it? If you have, you are the *stuff*: if you have not, you are of no use." He was in earnest. His tone and expression were those of appeal. I realized that my friend was dead,—not less so than if his body were lying at the antipodes. Poor fellow, I fear that he read my thoughts. I cannot doubt

that he gave me a true description, so far as it went, of the business world as he had found it; and he had chosen to be a man of the world. One is reminded of the young Napoleon, the writer of sentimental novels, of prize essays on happy government; the enthusiast and dreamer; the prater about liberty, equality, and fraternity. He is carried to Paris by adversity. While there, he writes to his brother Joseph of life as a "flimsy dream, soon to be over." Jostling with the world soon drove the "nonsense out of him." Here he saw men intent only on their personal aggrandizement. In this strange atmosphere and oppressed by poverty, his generous emotions withered; and he plunged into the vortex of affairs, with the result that the remotest generations will marvel to know. To my mind, the hour of Napoleon's best greatness was when he wrote his essay on "Happy Government for Men," as no doubt his happiest was when he learned that it had won for him the prize.

When, in the fall of 1882, Gov. Pattison, then a man of thirty-two years, came to speak in my college town, the meeting was attended by a large body of students,—a fact which probably somewhat determined the matter of his address. In language which, while it showed him to be no college man, revealed the earnestness of his character, he cautioned young men to beware of the corrupting influences of the world. He told of the many young men he had known who had started out in life with bright prospects, pure and high ambitions, but had since become moral wrecks.

'Tis hard to raise the fallen. If it is true that an ounce of prevention is better than a pound of cure, the school-room is the place for ethical culture. There it may work its mission by fortifying the young mind in the practice of righteousness for its own sake, not leaving it to discover the true helm of life when whirling in the vortex, where failure to grasp it means confusion, suffering, ruin. In a word, the problem of social regeneration is that of moral regeneration. The child has the qualities of the good man. To nourish and develop in strength all these qualities is the burden of true reform.

In the mean time, let it be made a felony to give intoxicants to a minor in a bar-room.

H. T. BERNARD.

FREE THOUGHT IN SCOTLAND.

By the side of the Firth of Forth there stands the city of Edinburgh, famed in song and story. Few cities in the world have such a romantic history as "Auld Reekie," and few will better repay a visit.

Here the mists of the early days cover the land with magic story; here the gods walked the earth; here the men of the bronze age left their metallic records; here smoked the altars of Jove; and here the fierce Caledonian tribes banded together to resist the Roman invader.

The Castle Rock towers five hundred feet above the sea level, and the quaint old castle itself frowns down on a progressive modern city. The faulted trap rock on which the castle stands bears record of a troublous time in Scotland long ago, ere yet the sons of men had entered the world's arena; but the story told to the geologist by the rocks is scarcely as interesting as that which the crumbling walls of the castle have for the pilgrim. Ages ago, the rock was fortified; and savage chiefs played games with human lives for its possession.

The Christian kings and queens lived, loved, warred, and hated here; and many a quaint record have they left. One of the most touching

of all is perhaps that of the good St. Margaret, whose little chapel stands on the top of the towering castle rock even unto this day. She was a woman of lovely character, an Englishwoman, a grand-niece of Edward the Confessor. Driven from her own home to find a refuge in a foreign land, her ship was wrecked in the Firth of Forth, at the place called even now Queensferry. The King of Scotland, Malcolm III., heard of the fair lady who had been cast on his shores, and went to meet her. He found that she was the sweet princess who had befriended him when he visited England some time before. So he took her to his castle in royal state, and, like a brave king, married her. She must have been a good woman, and he a good man; for she tried to train him in good ways, and to improve his manners, and he submitted to being improved. If all tales are true, she taught him to wash himself, and to eat his food, like a Christian, off gold and silver plate. She gave to the poor, and fed a large number regularly, washing their feet and doing other things, as commanded by the Bible, which have gone out of fashion.

The king could not read, but he used to kiss the holy missals given to him by his fair-haired wife, and perhaps that did them both quite as much good; for, if he had been able to read, he might not have made so good a husband. She introduced the manners and customs of her Saxon kindred among the people, and doubtless made Scotland better by her life; and many a monkish legend has woven itself about her. About 1093 A.D., the English made a raid on Scotland; and King Malcolm went out to meet them. By a piece of treachery, Malcolm and his brave son were slain; and his discouraged soldiers fled northward, with his body. Then followed the death of the sweet queen, saying as she passed away, with eyes uplifted to her God, "Praise and blessing be to thee, Almighty God, that thou hast been pleased to make me endure so bitter anguish in the hour of my departure, thereby, as I trust, to purify me in some measure from the corruption of my sins; and thou Lord Jesus Christ, who through the will of the Father hast enlivened the world by thy death, oh, deliver me." Poor Queen Margaret was no doubt a good Christian woman; but she was good in spite of her Christianity, not by virtue of it, for her kinsmen were also Christians, and a blood thirsty, evil lot they were. King Malcolm's brother besieged the castle, intending to put the orphan children of Margaret to death, just as many another Christian emperor and king had done; but they escaped by a postern gate.

A larger education has modified the barbarous Christianity of that olden time, and made it a respectable creed; but it sounds odd to hear the Christians claim that it has educated us, and modified our barbarism.

Standing on the lofty castle rock beside St. Margaret's chapel, one is carried back in spirit to the evil days of Scottish history. Every tower has its story to tell of cruel hatred and bitter persecution. The castle has run red with the best blood of Scotland, and on every side are the records of a dark and priest-ridden past. Looking down from the storied walls of the castle, the equally storied streets are seen,—streets rendered famous to later days through Scott's novels. Down in the Grass-market stood the city cross, where thousands of the brave went down to death in cruel ways. The smallest crimes were treated with a barbarism that makes one's flesh creep. In an old diary there are entries which open our eyes to what was done under the shadow of the cross. One entry says that in September, 1652, two "Englisches" were found guilty of drinking the king's health, for

which they were bound at Edinburgh Cross and received thirty-nine lashes on their naked back and shoulders, after which their ears were nailed to the gallows. Then "ane had his lug [ear] cuttit from the ruit with a razor, the uther being also nailit to the gibbet had his mouth skobit, and his tong, being drawn out the full length, was bound together betwix twa sticks, hard togedder, with an skainzie thrid, for the space of one-half one hour thereby."

The sons of God had barbarous ways of impressing themselves on those who differed from them, and the history of the entire country is a history of cruel things done in the name of good or of God. As Buckle points out in his history, the Scotch people were the most narrow-minded, bigoted, and intolerant people on the face of the earth; and the old leaven has not all worked out yet. The land of Knox is true to its old traditions, for religions die hard; and the spirit which wrought out its will in the tortures at the market cross still lives in Edinburgh. Just as bloodshed and religion were mixed in the olden time, so are ignorance and religion mixed to day. The power to torture the heterodox has passed from out the hands of the clergy, but a powerful spirit of intolerance still prevails.

The "Sawbath" in Edinburgh is clouded with puritanical view; the liquor saloons are closed, the museums, art galleries, libraries, are all closed, and the "gude folk" go to the kirk; but the spirit of true religion is dead. The churches are honey-combed with "scepticism." Ministers of good standing are advanced free thinkers, and are quietly pointing the way to their weaker brethren; but public opinion is strong, and the old, narrow, cruel creed is deeply graven on the hearts of the people, and it takes a great deal of moral courage to face the scorn that comes from the pious for any fall from grace. For, as our great historian has said, "in no other Protestant nation, and indeed in no Catholic nation except Spain, will a man who is known to hold unorthodox opinions find his life equally uncomfortable"; and this is as true of Edinburgh as it was meant of Scotland as a whole.

In the midst of the prevailing Sunday wickedness there is an intensely strong Sabbatarian feeling prevailing in all ranks; and the wicked people are, the more they seem to love the "Sawbath." Of course, among the upper classes there are few restrictions, and they can afford to smile at the popular superstitions, just as the priests of Athens did, long ago, at the superstition of the masses; but, in such a city, free thought has a hard struggle.

It is gratifying to a free thinker to find that there is a Secular Society in Edinburgh, and that their principles are spreading slowly, but surely. A few faithful souls bear the burden and the heat of the day, as in all societies; but they have a pleasant hall and a united company of workers.

Last Sunday, I had the pleasure of lecturing, in this priest-ridden city of my birth, to as pleasant a company of secularists as ever I faced; and the kindly reception and hospitable treatment I received made a deep impress on me. At the close of the evening lecture, two gentlemen claimed my acquaintance, though they assured me we had never met before. They were subscribers to *The Index*, and they spoke so highly of that paper that I felt my heart glowing with pride on the editors' behalf. It was, indeed, passing strange to meet two Scotchmen in their own city who discussed Boston and its people with so much readiness and knowledge.

They spoke of Mr. Underwood, and wished he would publish in pamphlet form his articles on

John Fiske. They spoke of Mr. Potter, Mr. Abbot, Mr. Holland and his book on the *Rise of Intellectual Liberty*, of "S. A. U.," and many another name that has grown familiar to readers of *The Index*.

As we walked out under the starry sky, under the shadow of the castle, past the beautiful churches which have cursed their land, these Scotchmen talked in glowing terms of the power wielded by Mr. Bradlaugh, and his influence in setting them free from the bondage of the Scotch Church; and I felt as we walked that the labors of all the faithful workers in the vineyard of free thought are bearing rich fruit, and the brave words that are going out to the world week by week through the columns of such papers as *The Index* and the *National Reformer* are bound to find a resting-place in human hearts, and accomplish that whereunto they are sent.

The market cross, the rack, and the stake have disappeared before the rolling tide of free thought; and it must surely be that the envy, malice, and uncharitableness, which everywhere mark the path of "the gospel of God," will also flee away before the holier thought which is slowly growing in the world. We who toil to-day will never see that better time; but we can labor on in the sure knowledge that we are helping forward the time of which the poet sings, when

"The common sense of most shall hold a fretful realm
in awe,
And the kindly earth shall slumber, lapt in universal law."

PETER ANNET.

A MORAL INCIDENT AND ITS LESSON.

Thinking, last night, of the school days and school companions of my boyhood, I was led to retrace the short and sad career of one of those companions; to wonder how many of her whilom associates could look back upon her as I could; and question, too, whether, in the clearer light of the life which we all hope lies beyond, she saw in her own earth-life matter for sorrow or self-pity. Such a sad life it was! Shaped and controlled by circumstances, trained toward all evil, cut off from the attainment of the goal which every pure soul seeks, how few lives, thus conditioned, would have equalled hers in suggestiveness and promise!

Picture a girl possessing "the fatal gift of beauty," having a warm heart and an ardent mind, desiring knowledge, craving sympathy. Give that girl an ancestry of drunkards and prostitutes, extending downward even to her father and mother. Place her in a New England village, where Pharisees pass by her on the other side because of her environment, and where liars and hypocrites help to tighten the chains of that environment. Then tell me what the end will be, and, in the telling, fling, if you dare, one stone at her!

I count it chief among the gracious influences of my life that I could be her friend. I have never ceased to mourn the adverse fate which took me from our village, leaving her quite alone to fight the temptations which met her on every hand. But it was written. When I next heard of her, years after, she had fallen, sore beset in the deadly struggle; and she fills an unknown grave.

I wonder if the wives and mothers who were girls at school with her remember how they shut her from their games, and visited her with the scorn which their parents had bequeathed to them. I wonder if the husbands and fathers remember how, as boys, they hooted her, and tried to drag her down to her own mother's level. I wonder if they teach their children the same devilish lessons that the parents learned.

Oh, the pity of it! that we are such willing slaves to the edict of the Jewish Jehovah as to

not merely permit, but to *cause*, the sins of the parents to be visited upon the children! that we should bind a soul, rich in all known and unknown possibilities, and cast it into hell!

The gospel, say the preachers, *has* superseded the law. But more than eighteen hundred years have passed since the Giver of good-tidings said to the woman taken in adultery, "Neither do I condemn thee: go, and sin no more"; and the righteous folk who shut my friend from sympathy and aid had listened to that instruction from their youths up. Let us hope that the future holds the promise of a gospel which shall heal and save the wandering ones.

The "fallen woman" falls because she is a loving, trusting woman. Is the world so rich in love and trust that it can afford to smile at its hourly sacrifice? This we do; and from the first misstep, even from the parent's first false step, we doom a soul to death. And thereby perishes, perhaps, an unborn poet or painter or singer, who would have made the nations glad.

The child is its parent's legacy to the State. If we, who are the State, neglect any means by which that child might be helped up to useful and happy womanhood, are we not recreant to our citizenship? Ay! we have no right to suffer that perversion of faculties, misuse of talents, crushing out of virtues, which, to-day, under the shadows of the churches, is going on in a thousand wretched homes, that the saloon and the brothel may recruit fresh victims!

Generations to come will see these things as some of us see them to-day. But, ah! for the unhappy of to-day,—

"How long and for what is their patience abiding?
How oft and how oft shall their story be told,
While the hope that none seeketh in darkness is biding,
And in grief and in sorrow the world groweth old?"

WALTER S. SAWYER.

FREE RELIGIOUS ASSOCIATION.

The Annual Meeting of the Free Religious Association will open on Thursday evening, May 27, with a business session in Fraternity Hall, Parker Memorial Building, corner Berkeley and Appleton Streets, Boston, at 7.45, for hearing reports, electing officers, and considering any resolutions that may be offered. The executive committee authorize the presentation for rejection or adoption of an amendment to the Constitution, according to which present Article I. would be divided into two Articles, which would read thus:—

CONSTITUTION.

ARTICLE I.—This organization shall be called the Free Religious Association.

ARTICLE II.—The objects of this Association are to encourage the scientific study of religion and ethics, to advocate freedom in religion, to increase fellowship in spirit, and to emphasize the supremacy of practical morality in all the relations of life. All persons sympathizing with these aims are cordially invited to membership.

The other articles to remain as now, but to be numbered respectively III., IV., V., and VI.

The public convention will be held as usual in Parker Memorial Hall, Friday morning and afternoon, May 28. The opening address, at 10.30 A.M., will be made by the President, Mr. William J. Potter. Mr. Moncure D. Conway will then give an address on "The Coming Cosmic Calvinism." Mr. B. F. Underwood will speak on "An Unclerical and Untheological View of Religion." One or two brief speeches will follow, and probably a letter from Dr. Edmund Montgomery.

In the afternoon, a discussion of the Labor Movement will be opened at 3 P.M. by Rev. J. G. Brooks, of Brockton, Mass., who will speak on "Ideals and Realities in the Social Question," and

be followed by Hon. Carroll D. Wright and other speakers. All interested in these subjects are invited cordially.

The Meisonaon will be open for our festival on Friday, the 28th, at 6 P.M. Supper will be ready at 6.30, and Mr. Moncure D. Conway will take the chair as presiding officer at 8 P.M. Among other speakers engaged for this occasion are Rabbi Solomon Schindler, Mrs. Ednah D. Cheney, Mr. William J. Potter, and Mr. Gopal Venayak Joshee, of India.

F. M. HOLLAND, Sec'y.

EDITORIAL NOTES.

BY B. F. U.

MRS. CAROLINE H. DALL writes us that she has, by the request of certain members of the Browning Society in England, issued two hundred copies of an historical article on "Sordello," which was printed rather inaccurately in a magazine in 1872. The work is for sale by Roberts Brothers, Boston, at 30 cents per copy.

"This is not," remarks the *Boston Herald*, "the time of year which is technically termed 'the silly season'; but that does not prevent sundry ministerial organizations from boycotting the Sunday newspaper by formal resolution, and also voting that the use of the boycott by the workingman is a sin and a shame."

It is related that, when Darwin was bringing out his books on the habits of plants, an old family servant, having overheard his daughter express some anxiety in regard to his health, sought to reassure her by saying: "Hi believe master'd be hall right, madam, hif 'e only 'ad somethin' to hoccupy 'is mind. Sometimes, 'e stands in the conservatory from mornin' till night, just a-lookin' at the flowers. Hif 'e only 'ad somethin' to do, 'e'd be hever so much better, h'i'm sure." The joke, it is said, was enjoyed by nobody more than by the great naturalist himself.

In a lecture at Washington on "My Recollections of Anti-slavery Times," Frederick Douglass said: "Fifty years ago, I was brought from a jail on the eastern shore of Maryland, and placed on the auctioneer's block to be sold." Mr. Douglass, in continuation of his recollections, said that, on the occasion referred to, his limbs were exposed to the gaze of the purchasers, and examined as if he had been a cow or a horse. Since that time, he had seen wondrous changes in his own condition as well as in that of his race; and, where sales were formerly held in this city of slaves by the United States marshal of the district, he had held that office himself, and he added rather grimly, "I believe that there were no slave auctions when I was marshal."

THE opposition of the orthodox clergy to the Sunday paper is causing the secular press to speak in terms, generally confined hitherto to liberal journals, in regard to the pulpit. Says the *Chicago Inter-Ocean*: "Ministers 'labor' on the Sabbath as they do upon no other day in the week. The physical exertion of preaching is harder work than the mental exercise incident to the writing of most of the sermons delivered. The ringing of church bells is no less a noise than the cry of the newsboys, and the rattle of carriages over streets bearing people to and from church is quite as decided as the clatter of the early morning wagon conveying the newspaper edition to trains. If a sermon amounts to anything as a subject of thought, it causes as much mental labor with the hearers as is occasioned to the reader perusing wholesome articles in a Sunday newspaper. The ministers justify the one set of facts by the moral

influence sought to be exerted, and the editors and publishers defend the other for the great good sought to be disseminated to the public."

MISS FRANCES POWER COBBE recently sent to the *London Inquirer* an article from a French journal, purporting to give an account of a "Faithless City," to quote Miss Cobbe's own words, "now actually existing in America." The account is a libellous story put into circulation about a year ago, in regard to Liberal, Mo., by an unscrupulous man, who escaped punishment under the law because the evidence of his authorship of the libel was technically defective. The story was declared false in letters over their own names by several orthodox ministers of the town of Liberal and of adjacent towns. Miss Cobbe, probably, had not seen the denials of the truth of this account, which had been published not only in this country, but in England. Still, she seems to have been most too willing to believe and too ready to circulate an evil report, which was wholly unsupported by evidence, in regard to a community declared by her to be "faithless." Mr. Bradlaugh, who says that he has had personal experience of this lady's "unfairness and intolerance toward atheists," concludes, in the *London Reformer*, a reply to her letter on a "Faithless City" with these words: "We do not ask Miss Frances Power Cobbe to express regret, for we fear that her only regret will be that her libel is not true. We will express regret for her that so many good and pious people are so ready to believe without evidence and to circulate without inquiry any malicious calumny against unbelievers." We do not doubt that Miss Cobbe, when she becomes satisfied of the falsity of the account to which she has given the weight of her name, will, as did Mr. Spurgeon, withdraw her statements; for she is a most excellent woman, whose love of truth and sense of justice are strong. Her own religious views, from the orthodox stand-point, are so wicked that multitudes would read with much pious satisfaction any similar story, with such alterations only as would make it seem to illustrate the insufficiency of "mere theism" instead of the influence of the alleged agnosticism of the "faithless city." Many theists, who have outgrown much of the Christian theology, are still unable to be quite just to those called agnostics and atheists.

AFTER the above paragraph was in type, we received a copy of the *London Inquirer* containing a letter from Miss Cobbe, requesting the editor to reproduce from the *Sword and Trowel* a correction of the clipping she had sent to the former paper. She writes, "I had never heard of this professedly atheist town till I read the account of it in the *Genevan paper*, and that account tallied so remarkably with my own previsions of what a 'Faithless World' would resemble that I considered the description might possess some interest for the readers of my little book which you had kindly reviewed last year." The editor of the *Sword and Trowel* having copied from some American paper the same "description" of Liberal, and having received letters declaring it entirely false, wrote to friends in this country for the facts. After examining the evidence, the editor feels "bound to say that we judge the article we inserted to be far from correct, and to have been written in a prejudiced spirit. We should never have dreamed of inserting it, had we known what we now know." "We are not in a position to give a judicial opinion, for we cannot weigh the evidence; but, supposing the persons who have written to be truthful, we judge that the town of Liberal has been in several respects grossly libelled, and, therefore, we are truly sorry to have given currency to the ill report."

The Index.

BOSTON, MAY 6, 1886.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

ROOTS OF MORMONISM.

BY W. D. GUNNING.

"Nec deus intersit nisi dignus vindice nodus." (A god does not interfere except on business worthy of a god.)—*Horace.*

Two very rare volumes have fallen into my hands. They are the first editions of the Book of Mormon and the Revelations and Covenants. In the introduction to the Book of Mormon, Smith says that a portion of his first translation was perverted by a trick of the devil. God comes to Smith and complains of the devil, saying that he will show man that his wisdom is greater than the devil's cunning.

The book opens with the Chronicles of Nephi, whose father, under command of God, fled from Jerusalem to the wilderness, taking all his family except Laban. Laban had certain revelations written on plates of brass. Nephi returned to Jerusalem under divine command to get these plates. Laban would not give them up. Nephi was persistent. One day, he found his brother drunk; and the Lord said to Nephi, "Slay him." Being a very religious man, as he tells us, he was not disobedient unto the heavenly voice. "Therefore, I did obey, and took Laban by the hair of the head; and I smote off his head, and after I had smote off his head I took the garments of Laban, yea, every whit, and put them on my own body. And I went forth unto the treasury of Laban." This ancient man of God was a prototype. Here and there, to-day, is a godly man who "goes forth unto the treasury of Laban." On another page, and with no reference to this transaction, the man of God says, "For I oughter be content, and I hadn't oughter harrow up in my desires." In this confession, too, he was a prototype. The sin he confessed was the expression of a desire to be an angel, that he might sound the trump of God. It was not that he had murdered his brother or that he had "gone forth unto the treasury of Laban." Oh, no: it was that he "hadn't oughter harrow up in his desires."

This man of God went with fratricidal blood on his hand and stolen treasure in his arms to his father in the wilderness. "And it came to pass that they did rejoice exceedingly, and did offer sacrifice and burnt offerings to God. And it came to pass that they did journey in the wilderness, killing game with arrows and slings. And it came to pass that they had no fire. And it came to pass that God cooked their game. And it came to pass that, as we journeyed, behold Laman and Lemuel and two of the daughters of Ishmael did rebel against us, yea, they did rebel against I and Sam. And it came to pass that we did build a ship and sail to the promised land, even to America."

I will abridge this Book of Mormon, using its own language: "And it came to pass [on the ocean] that Laman and Lemuel did take me and bind me with cords. And it came to pass that the compass which the Lord had prepared did cease to work. And it came to pass that there was a great storm, yea, a tempest began to be exceeding sore. And it came to pass that they came to me and loosed the bands on my wrists, and behold they were swollen exceedingly. And also my ankles were much swollen, and great was the soreness thereof. And it came to pass that I took the compass, and it did work. And it came to pass that, after we had sailed the space of many days, we did land. And it came to pass that we did find [in America] both the cow and the horse and the ass and the sheep [sic]. And it came to pass that the Lord commanded me, and I did make plates of ore that I might engrave on them the records of my people. And it came to pass that the very God of Israel did my people trample under their feet, I say trample under their feet. And it came to pass that they would that I should be their king. And, behold, they were cut off from the presence of the Lord. And the Lord God did cause a skin of blackness to come to them. And thus saith the Lord God, I will make them loathsome. Oh, the wisdom of God! his mercy and grace! And it sufficeth me to say that forty years had passed away, and we had already wars and contentions with our brethren. Oh, the goodness of God! I am the Lord thy God, whose waves roar. Awake, awake! Put on strength, O arm of the Lord. Wo unto they that worship idols! Wo unto the blind. Wo unto the deaf! Wo unto the uncircumcised of heart. And, in fine, wo unto they that die in their sins. And it came to pass that Nephi died. [It is now Jacob who writes.]

"And it came to pass that the people who were not Lamanites were Nephites [Lamanites were Indians]. And it came to pass that the people of Nephi began to grow hard in their hearts, and indulge somewhat in wickedness, desiring many wives [sic]. Thus saith God, This people wax in iniquity, for they seek to excuse themselves in committing whoredoms, because of the things which were written of Solomon and David. Behold David and Solomon did have many wives, which thing was an abomination unto me. Behold, the Lamanites are more righteous than you; for they have not forgotten the command of the Lord that they should have, save it were, one wife. And I, Jacob, saw that I must go down to the grave; and I said, Enos, take the plates. Brother, adieu. [Enos now writes.] And it came to pass that we did go to battle against the Lamanites. The Lamanites know nothing concerning the Lord. How beautiful on the mountains are the feet of him who bringeth good tidings.

"And it came to pass that we went again to battle, suffering much loss. Break forth into joy. Sing together, ye waste places of Jerusalem! And it came to pass that many of the rising gen-

eration did not believe what had been said of the resurrection concerning the dead. Neither did they believe concerning the coming of Christ. And they would not be baptized, neither would they join the church. And it came to pass that they were brought before the priests. And it came to pass that they were brought before Alma, the high-priest. And it came to pass that Alma enquired of the Lord; and the voice of the Lord spake, Blessed art thou, Alma, baptized in the waters of Mormon. Behold, the Lamanites have I cursed.

"And it came to pass that a voice was heard among all the inhabitants of earth, saying, Wo, wo, unto the inhabitants of the whole earth, for the devil laugheth. Behold, the great city of Zarahemla have I buried with fire and the inhabitants thereof. And, behold, the great city of Moroniha have I covered with earth and the inhabitants thereof. And, behold, the great city of Moroni have I covered with the sea and the inhabitants thereof. And, behold, the city of Gilgal have I sunk, yea, and the city of Oniba and the city of Mocum and the inhabitants thereof, yea, and the city of Gadiandi and Gadiorna and the city of Gingimmo and the city of Jacobugath have I burned with fire and the inhabitants thereof. Behold, I am Jesus Christ. Sing, O barren, that thou didst not bear. And thus endeth the four hundredth year of the judges of Nephi. And, behold, in the end of this book, ye shall see that Gadiantugu did prove almost the complete overthrow of Nephi. Behold, I do not mean this book, but I mean the book of Nephi. Behold, a hundredth part of the proceedings of this people, —yea, the Lamanites and the Nephites,—and their wars and contentions and dissensions and preachings and prophecyings, and their righteousness, and their whoredoms, and their robberies and plunderings, cannot be contained in this book. And it came to pass that the more part of this iniquity had come to them in sixty and nine years. And it came to pass that they were enemies, notwithstanding they were not a righteous people. And it came to pass that the Lord spoke to Nephi to come forth; and Nephi bowed himself before the Lord, and kissed his feet. And it came to pass that, in the 361 year [A.D.], the Nephites did go up against the Lamanites. And it came to pass that the Lamanites did take possession of the city of Desolation. And it came to pass that I, Maroni, do not wish to harrow up the souls of men in casting before them such an awful scene of blood and carnage as was laid before my eyes. And it came to pass that my people, with their wives and children, did behold the Lamanites a-marching toward them. And, behold, all the Nephites were hewn down but twenty-four. And their bones and their flesh and their blood were left on the face of the earth, to crumble and to moulder. And, behold, the Nephites which were left were hunted down and destroyed. Behold, I am alone, and whither to go I know not. Great and marvellous has been the destruction of my people. Behold, it is the hand of the Lord which has done it. . . . Sing unto the Lord.

"And now I, Moroni, proceed to give an account of those who were destroyed by the Lord in the North countries. And Ether was the son of Coriantor, the son of Abah, the son of Seth, the son of Shiblön, the son of Coni, the son of Amnigaddah, the son of Lib, the son of Kish, the son of Kim, the son of Riplakish, the son of Jared, which came from the great tower, when the Lord confounded the language of the people and swear in his wrath that they should be scattered. And it came to pass that Riplakish did not that which was right in the sight of the Lord, for he did have many wives."

(After the extermination of the Nephites by the Lamanites, who were under a curse, there remained in America another chosen race, whose lineage this holy book traces back to the confusion of tongues at the tower. They formed two nations. The king of the one was Coriantamur. The king of the other was Lib. Let the prophet tell the story now in his own words.)

"And it came to pass that all the people on the face of the land were a-shedding blood. And Lib did smite the army of Coriantamur that they fled to the plains of Agosh. [The reader will supply to every sentence "And it came to pass."] And Coriantamur had taken all the people with him, and he smote Lib till he died. And Shiz, the brother of Lib, did pursue after Coriantamur, and did overturn many cities, and did slay both women and children, and did burn the cities thereof. And the whole face of the land was covered with bodies of the dead. And they did march from the shedding of blood to the shedding of blood; and the scent thereof went up on the face of the land, even upon the whole face of the land. And Shiz smote upon Coriantamur. And Coriantamur saw that there had already been slain by the sword two millions of his army; yea, two million mighty men and their wives and their children. And Coriantamur fled, and came to the waters of Riplakish. And they did gather on all the face of the land. And when they were all gathered together with their wives and their children, all [even children], being armed with weapons of war, did march forth to battle. And at night they took a-howling; and, so great was their howling, it did rend the air exceedingly. And, on the morrow, they did go again to battle; and great and terrible was the day, and they did rend the air with their cries and their howlings. And they did fight on the morrow, and on the morrow they did fight again; and, at night, they had all fallen by the sword except, save it were, fifty and two of the people of Coriantamur and sixty and nine of the people of Shiz. And, on the morrow, they fought again, and fainted for loss of blood. And when they had all fallen save it were Coriantamur and Shiz, and, behold, Shiz had fainted for the loss of blood, and Coriantamur leaned upon his sword that he rested a little, behold, he smote off the head of Shiz. And, behold, Shiz raised upon his hands and fell. And after he had struggled for breath, behold, he died. And Coriantamur fell to the earth, and became as if he had no life."

Shades of Kilkenny cats! What a battle! Child to child, woman to woman, man to man,—two nations, every human being killed! Shade of Hector, what heroism in Shiz! In profane history, a man usually surrenders to the inevitable when his head is cut off. Not so did Shiz. While his head was rolling over the ground, he tried to breathe; and, not succeeding, he concluded to die. I have known of St. Dennis carrying his dismembered head through the streets of Paris, but Dennis was a canonized saint. Shiz was only a Riplakishite of the city of Jacobugath.

Who now will put into divine language the battle of the Kilkenny cats? He will found a church and have an ample following.

This battle picture closes the Book of Mormon. For the honor of human nature, I could wish that my abridgment were a caricature. It is not. It is just, even in the inconsequential ejaculations. From the fratricidal beginning to the final holocaust of two nations, not one virtue is commended, not one vice is reprobated, except polygamy. The god is the same invisible Arab Sheik who, under the name of Jehovah, was the tribal god of the Jews,—the most atrocious character in all the annals of fiction.

We turn now to the Book of Revelations. The volume before me is very rare. On page 251, I read, "One man should have but one wife." But the god did not say this. He was concerned with human affairs on every side but that of morals. Hear him: "Behold, thou art Joseph [Smith, Jr.]. Behold, I am God. Martin Harris has desired a witness that you have the plates of which you testified. Behold, this shall you say unto him, He who spaketh said I, God, gave you the plates, and you must not shew them, except to those persons I command you. O thou stiff-necked generation! Mine anger is hot. Amen."

"Behold, verily, thus saith the Lord unto you: All grain is good for the food of man; nevertheless, wheat for man, corn for cows, oats for horses, and rye for hens. Amen."

I fear that the "revelator" has not heeded the injunction of Horace, which is the text of this lay sermon. It would seem that a god, speaking to man, might advise him in something more important than the feeding of rye to hens. The god goes on to say that the saints who observe these directions will receive strength in their navels and marrow in their bones.

"Verily, verily, thus saith the Lord. I say unto Joseph; or, in other words, I call you friend. Your family must give more heed to what you say, or be removed out of their places. Amen."

"Hearken, O ye people, saith the Lord; for mine anger is kindled. I, God, command and revoke as seemeth me good. Wherefore, I revoke the command given to my servant, E. Thomas, and give a new command, that he take up his journey to Missouri. And I revoke the command given to J. S. Griffin and N. Knight. I am Alpha and Omega. Yea, I am even he. Canst thou read this without rejoicing? Amen."

"Behold, thus saith the Lord to you, my servants, Sidney and Joseph. Behold, your families are pretty well. Amen."

"Verily, verily, I say unto you I am Alpha and Omega. Let Asa Dodds go West. Let Lyman Johnson and Orson Pratt go East, and unto my servants, Major N. Ashley and Burr Riggs, that they go to the South country. Amen."

"Behold and hearken. I, God, in the beginning, blessed the waters. Now, I curse them. And, now, concerning Joseph Smith and Sidney Rigdon and Oliver Cowdery, let them not journey on the waters, save it be on the canal. I was angry with you yesterday; but, to-day, I feel better."

"Behold, I, the Lord, utter my voice. I have sworn in my wrath. Wherefore, let my disciples in Kirtland arrange their temporal concerns which dwell upon the farm. I willesh that my saints shall be assembled on the land of Zion. Let Titus Billings have the care of the dispose of the land. Let my servant, Newel Whiting, retain his store; or, in other words, the store for a little season. Amen."

"Verily, verily, I say unto you, my friends. I give you counsel and command. Let my servant, Mahempson, have the lot of land which my servant got in exchange. And let Mahempson devote his money to the preaching of the word. And let my servant, Oliha, have the lot which is set off opposite the Laneshire house; in other words, lot number one. And let my servant, Alashda, have the lot where he now resides and also the corner lot, yea, verily, the whole establishment. So I willesh. I shineth in darkness [philological?]. Behold, I am not well pleased with Sidney Rigdon. Amen."

Enough. If a man were to talk as this god of Mormonism talks, we would have him in an idiot asylum within a week. If a man were to do a tithe of what he declares he is doing, an outraged

humanity would have him on the gallows as soon as a jury could meet. Suppose that a sober-minded man had read these volumes when they fell from the press and had seen that within the span of his life, from this gibberish would spring a Church of such power and vice that successive Presidents of the United States would call special attention to it in their annual messages, what would he have thought? If Humboldt had been the man who had read with such prevision, I could understand why he wrote such bitter words against the human race.

Two words must finish this most uncongenial task.

First, these Bibles never won a man or woman who did not believe in the infallibility of the Hebrew Bible. No sceptic ever became a Mormon. The converts have been and continue to be devoted worshippers of the *Old* and *New Testaments*, expending their resources of credulity chiefly on the *Old*.

Second, the converts sank rapidly in idiocy or knavery or both. The saints became like their Bibles. "I don't care," said Brigham, "whether Jo Smith was a liar or not. He might have been a liar and thief every day. I don't care, he had the true religion." It is a fact worthy of note that the Church, at the very first, was distinguished for crime. Smith and Rigdon were driven out of Kirtland for crimes. The saints then gathered in the Zion of Missouri. They were hunted from county to county, not as a religious sect, but as thieves and robbers and counterfeiters and murderers. A band of Thugs, settled in a town of New England, would not be more obnoxious to their neighbors than the Mormons were to every community which they touched. The governor of Missouri declared that they must be driven out of the State or exterminated. They were driven into Illinois, which received them hospitably as a persecuted sect. Land was given them in Hancock County, where they "gathered" again and built Nauvoo, which attained a population of fifteen thousand. The people of Hancock and adjoining counties organized an army to drive them from the State, if need be, at the point of the bayonet. You blame these men. Put yourself in their place. You are encompassed by a band of idiots and Thugs under a prophet whose very nod is law; and you know that there is not a man of them who would not, at the command of that prophet, assassinate you. What would you do? Jo Smith "prophecied" that Gov. Boggs would be "cut off." A few days after the prophecy, "Port" Rockwell, the chief of the church assassins, called Danites, left Nauvoo and Smith said he had gone "to fulfil prophecy." The governor was shot, but not killed and Smith and Rockwell were indicted. The officers who went to Nauvoo to arrest them were glad to escape with their own lives. How many Mormons were murdered by Mormons under the rule of "blood atonement," we may never know. How many Gentiles were murdered under church orders by the Danites,—shades who haunt the Mountain Meadow!—the archives of hell and the Endowment House may alone reveal. The fact is that polygamy has been the least of the crimes of Mormonism.

You are slow to believe. I ask your attention to a passage of Mormon history recorded in the careful pages of Gov. Ford, who, as the executive of Illinois, tried to protect the Mormons from the steel and lead of their outraged neighbors. Walker was the Whig candidate for Congress, and Hoge the Democratic. The Mormon vote was cast as one man. That man was the "revelator." Smith had pledged the vote to Walker; but, after giving the pledge, made better terms with Hoge.

The day before election, the entire voting population of Nauvoo, a town of fifteen thousand, assembled to hear from the Lord. Smith made a speech, in which he said that he had not seen God, and had no command from him. If God had wanted to talk with him, he could find him any time. God knows his office and his hours of business, and he had not called. "But," he went on to say, "my brother Hyrum has seen him, and has a command." Hyrum rose, and said that he had seen God, and that he commanded his saints to vote for Hoge, the Democrat. The next day, every vote in Nauvoo, save one, was cast for Hoge! What a Circe's wand is this Bible of Mormon to transform men into swine! Not a pig-headed saint who obeyed that command would have disobeyed a command to murder. Mormonism is the same to-day as in the beginning, wherever it dares to be.

CORRESPONDENCE.

THE IRISH QUESTION.

Editors of The Index:—

As the free thinkers of Providence have been listening to a discourse on this question, the orator claiming their sympathy for the Irish, and extolling both leaders in the contest for patriotism and statesmanship (see *Index* January 7), perhaps, as free thinkers, they may give some attention to another view of the question, which is truly a momentous one.

As Americans, it behooves us carefully to abstain from meddling in the internal discussions of foreign and friendly nations; and nothing could excuse our extending aid or sympathy toward either party in a matter that in no way concerns us directly, unless the case presents wrongs or abuses that shock humanity.

Does this Irish question present such, supported by specified fact? For fifty years, I have diligently sought in vain for any abuse or grievance that the Irish or English courts could not redress without further legislation, or what, under our laws and Constitution, would be held wrong or tyrannical. Still, "*the wrongs of Ireland*" have constantly rung in my ears; and, if I asked what they were, the answer would be, "Oh, everybody knows!" with a look that implied, "You must be a fool!" Well, if so, I still remain one. But I have continued to think, and have reached the conclusion that the "*wrong of Ireland*" have been confounded with the wants of Ireland. When "Pat" tells us of his great need of a few acres and fixity of tenure, and no money to buy, our hand may seek the pocket in sympathy; but, when he goes on to add, "Be the powers, I mane to have it, or somebody will get dynamite," our hand withdraws, and sympathy subsides.

Now, before we Americans gush with sympathy, let us at least have some specified charge of wrong done or suffered. It is only in the court of Billingsgate that fact is dispensed with. There, indeed, victory crowns the irate dame who has the largest vocabulary of abusive epithets, which she never thinks any one called upon to believe; and, when the talk subsides, she at once becomes amiable. Criminal charges, unsustained by fact, are libels, and by law punishable by fine and imprisonment, whether made against individuals or governments; and, if these Irish charges are found to be false and malicious, sympathy is due to the *wrong of England*.

Are we not too hasty in sending over annually a million dollars to employ agitators or demagogues in stirring an ignorant population to rebellion before we are sure there is cause for it? Are people here so stupid as not to know that a dozen open stores, unguarded, will as surely bring thieves as a heap of sugar will bring ants, and that so long as demagogues are kept in pay they will drum up complaints among the thriftless?

We may be glad to see money flow in relieving Irish distress and suffering; but what a blessing it would prove, if this contribution to swindlers and demagogues could be diverted to the only permanent relief,—to removing the needy to a new country, where the land they crave awaits them, and where every man can secure one hundred and sixty acres, only \$1.25 an acre, with fixity of tenure, secure to himself and his descendants forever, and with six

years to pay for it. Great honor is already claimed as due to Mr. Gladstone for benefits he has conferred on "*down-trodden*" Ireland. What are the facts?

Your orator says he has satisfied two of the three great grievances:—

1. The land question. But is that settled satisfactorily? We are daily hearing that he has unsettled it, that what he did was no good, and only a sham extorted from his fears; and Conservatives say that he has initiated war on England's venerable and much-lauded Constitution by profaning the sanctity of contracts between landlord and tenant, under the specious name of concession. *Concession!* What has a statesman or jurist to do with such a word in his vocabulary? What does it mean? Nothing less than robbing one man to give to another. We Americans, some forty years ago, had anti-renters, whose cry was, Down with landlordism! We had no talk of concession: we simply put our laws in force, and the cry subsided. But who knows how soon, under the evolution of social doctrines, we may again encounter the anti-renter? At present, however, he is not likely to be well received among us; and we free thinkers are certainly not prepared to indorse this measure as accreditable to Mr. Gladstone.

2. He put down the State Church, which is entirely in our line. "Every man to retain his own religious adviser." But, in dealing with that item of Irish complaint, it is well to remember that no moneys taken from the Church went into the pockets of the people to relieve their wants; and, if they thank Mr. Gladstone for that measure, they, as the Scotchman would say, are "thankful for sma' mercies."

3. Then the third and last Irish want is Home Rule,—"*repeal of the union*,"—or what we called secession, and put it down at a cost of some three thousand million and an ocean of our best blood. How can we be asked to help forward or sympathize with that? We ought to know pretty well by this time what kind of republic could be made out of Irish material. Mr. Gladstone cannot have failed to discover by this time that he has been sowing dragons' teeth.

The most amazing incident of the Gladstone administration next claims attention,—nothing less than the actual presence of Jack Cade directing the councils of the board of trade. It would seem that some witch, more potent than that of Endor, or some modern spiritual medium had raised and materialized him; for there he most certainly appeared in the flesh, and settled a question that had long puzzled philosophers, metaphysicians, and theologians, by demonstrating that intellectual development, whether toward good or evil purposes, is as active in the regions below as here. He gives us startling fundamental propositions, ingenious counterfeits of self-evident truth. "All capital," says he, "comes from labor; and, therefore, to labor all capital belongs." We cannot dispute that; but it next occurs to us that there are two kinds of labor, mental and physical, and, therefore, two kinds of owners of capital to share it. The mere muscular laborers would, to this day, if left to themselves, be savages. All capital existing in the forms of machinery, bridges, railroads, almost every article we now deem indispensable to civilized existence, is the product of mental labor, all but the work of making it. Moreover, among mental laborers, one man represents the force of an elephant, another that of a flea. To whom, then, does capital belong? Common sense answers, To the producers, thinkers, and operators, who have combined their forces and taken their shares under laws mutually agreed upon. We can find no such idiot among hod-carriers as one claiming equal share with the great engineer; no such fool among sailors as one putting his claims on a par with his captain, knowing, as he does, that his life constantly depends on the captain's skill. The man whose skill and labor, therefore, have enabled him to acquire more capital than he needs to consume lays it by for future need; and, by common consent, he becomes its rightful controller and distributor. And thus we have rich and poor, as always have been and ever will be. Were it otherwise, the best and noblest traits of humanity could never develop.

But should there be no limit set to the wealth that one man may acquire? None! The unconsumed products of labor can never be too great. The more wealth, the more powerful is the nation, however unevenly it has found owners. The man of billions personally consumes what gives him food, clothing, and

lodging; and, at the allotted time, he dies and leaves it. Does the rich man become a bloated aristocrat, eating like a pig and drinking like a sot (voices not peculiar to the rich)? Then he disgraces and grieves his family, but in no way injures the laborer except by bad example.

Does he launch into extravagant and ostentatious display of luxury? So much the worse for his family, but just so much the better for the workingmen, to whom all flows back in genial showers to fructify the fields of industry, giving employment to artisans and servants, and returning no inconsiderable portion in charity. Does he raise a family without intellectual culture, incapable of rendering any service to the community, yet most conspicuous as nuisances by dissipated habits? Then the sooner is the wealth he left released to stimulate industry; and the miserable spendthrift sinks into the most abject and hopeless poverty and suffering and humiliation known.

But does he raise a family carefully trained to become leaders of thought and distinguished as examples of integrity and high moral principles? Then what so desirable as plenty of such wealthy families, that count back generations of ancestors on whose record there is no blemish?

We must now notice another mock scientific principle claiming origin in natural rights. It is this:—

"All land belongs to the people who have made homes upon it." True: what then? What of individuals? The number of people changes every minute. Then is each man to squat on the first choice lot he finds, or is there to be some equitable distribution, if any can be devised? When our people framed their Constitution, they assumed the principle that all land belonged to the people, that part of the people then recognized as owners of land were recognized as lawful possessors, whether under grants from George III. or any of his tyrannical predecessors. It is true our legal gentry are always ready, "*for a consideration*," to look back into fraudulent titles; but the assumption is that our ancestors were satisfied with what had been done, and then the unappropriated millions of acres belonged and still belong to the people, and we sell them, and the proceeds go to the public treasury. Every man can buy all he wants; and the poor man can select one hundred and sixty acres at \$1.25 per acre, have it secured to him, and six years' time to pay for it. Thus, land becomes capital, and a *product of labor* as much as any other commodity. We are, therefore, quite satisfied with our land laws, desire no redistribution of land or capital, satisfied with our Constitution, and stand resolute and prepared as ever to deal with secessionists and rebels. Nothing could be more absurd than to deem the large contribution in aid of the Irish cause an exponent of American sentiment. It is the mere product, or at least nine-tenths of it, of American party scrambling for the Irish vote. Some prominent politician buys popularity by a large subscription to the rebel cause, and backs it with a column in his party organ of Billingsgate rhetoric, exciting hatred of the English.

As to natural rights, they may be defined as brute force, exemplified in a pack of wolves associated instinctively for mutual help. Human intellect, after such combination, advances a step further by discovering that all would benefit by a surrender of individual force to a consolidation of all force for the general good; i.e., to a government of law under a constitution circumscribing the boundaries of legislation so as to secure individual rights, and extinguishing natural rights, except the right of each individual to do his own thinking.

OCTOGENARIAS.

"THE AGE OF CONSENT."

Editors of The Index:—

As one of those specially interested in the change of the law relating to the "*age of consent*," I feel bound to reply to the strictures of Mr. T. W. Higginson in the last number of *The Index*.

To an intelligent comprehension of this important matter, three things are necessary: first, a knowledge of the laws as they actually exist, with their effect; second, an understanding of what the petitioners ask for, and why they ask it; and, third, a careful consideration of the whole question in the practical light of the actual dangers by which women are surrounded, as compared with the dangers morally and legally surrounding men.

As the laws now stand in our statutes, cases of violence (where the victim does not "consent") are punished by imprisonment in the State prison for life or for a term of years. This same penalty is prescribed when the offence is committed against a girl-child under ten, when she does "consent." When the girl is over ten, the offence becomes mutual, and is punished, in both parties, by a small fine or by three months' imprisonment in jail. In other words, no matter what the age of the man is, the girl, a victim at nine, becomes a criminal at ten; and for a sin to which it is very easy to claim that she "consents" (no matter how ignorant or unsuspecting she may be, till too late to save herself) is punished as a crime. The girl of ten years is therefore held equally guilty with the man of twenty, forty, or eighty years of age. This last is not an exaggeration, the present writer having learned of a case where the girl was twelve and the man eighty, with all the difference of knowledge and design on the one hand and ignorance and innocence on the other that this implies.

Since the issuing of the appeal to women by the Massachusetts Woman's Christian Temperance Union and the National Woman Suffrage Association of Massachusetts, scores of petitions,* representing thousands of the best men and women of the State (Mr. Samuel E. Sewall, who first called public attention to this wrong, being a good example), have been sent to the Senate, asking for more adequate penalty for seduction and for the better protection of girls. What these petitioners desire is that, in the law relating to violence, the age at which the girl may "consent" and still be legally held a victim, and not a criminal, shall be raised to at least thirteen. Also, in addition to this, that a new law shall be passed by which girls shall be protected from thirteen to eighteen (not to twenty-one), by making seduction a crime on the part of the man, with a lighter penalty than that for violence, but one which shall be sufficient to discourage the prostitution of children and the traffic, on the part of middle-aged and old men, in girls under eighteen. At present, seduction in itself is not a crime and is not punished. When the two "have sinned conjointly," the act itself becomes a crime, and is punished by equal penalties. But all that which comes before the act, and which makes the vast difference between the aggressor and the victim, is not taken into account in the law. The fact we want recognized is that, in the majority of cases of seduction, the girl is not a criminal, but a victim, and needs not punishment, but protection. The design of the petitioners is not to excuse girls of profligate habits, nor to protect them in their evil ways, but to protect children and young girls of pure lives from the many men whose chief pleasure it seems to be to go about, and with devilish insinuations, promises of marriage, and words of so-called "love," to persuade good girls to do wrong. There are too many of these men, married and single, right in our own circles of acquaintance, for the fact to be ignored even by the most fastidious.

This brings me to the third point necessary to be taken into account; and that is the vast difference in the case of the man on the one hand, and the case of the girl on the other. In the first place, it is well known that almost all girls are brought up in ignorance of the wiles of men; while almost all boys are fully equipped with knowledge, and in the majority of cases commit the sin with their eyes open. It is also well known that, while the social penalty for boys and men is almost nothing, that for girls and women is damning. Also, that the sorrow from and the effects of the sin fall almost entirely upon the woman; while, except in the sight of God and under the righteousness of his equal penalties, the man goes scot free.

Mr. Higginson urges that the boys also need protection; and to this no one can object, although a careful reading of the laws concerning houses of ill-fame and night-walking will show that men have quite well protected themselves in these matters. It may also be pointed out that the State, by its statutes, deals very gently with juvenile offenders. Still, if the legislature should think it necessary to enact a law protecting boys under eighteen from seduction,

the advocates of this movement would doubtless give it their indorsement. But, at present, this does not seem of such immediate importance. When old women of eighty and married and unmarried women of middle age, in good society and of fine social standing, go about ruining boys of ten and twelve and sixteen, it will be time to sound the alarm for boys as we are now sounding it for girls.

Let me repeat that it is not for the profligate of either sex that we ask protection, but for the poor ignorant girl, from the wealthy and respectable "gentleman." We want to make it less easy and safe for men to ruin young girls, by fixing a penalty for this sin which shall discourage it, and which shall go some little way toward making the punishment of this sin in men as great as it is now in women. At present, we see, on the one hand, habitual licentiousness, intention, age, full knowledge, no social ban; on the other, youth, ignorance, innocence, sorrow, and social damnation!

If, in some few cases, such a law as we desire would work unjustly toward very young men, it could not possibly be so unjust as the present law, which holds a girl of ten years old not only responsible, but also punishable, for an act to which in most cases she consents while knowing absolutely nothing about it or its consequences, physically, morally, or legally, of all of which the other party to the sin is, in the majority of cases, fully cognizant. As a "friend of woman and of woman suffrage," equally with Mr. Higginson, I ask that this traffic in young girls shall no longer be protected by the State.

HARRIETTE R. SHATTUCK.

"THE AGE OF CONSENT."

Editors of The Index:—

One who has heartily joined the "effort now being made to raise the so-called 'age of consent' to eighteen and even to twenty-one years" would like to say to your esteemed correspondent, Mr. Higginson, that he wholly misunderstands the "theory" on which "the attempt is based."

The law, as it now stands, screens the seducer of girl children, however mature in age he may be, from that adequate legal redress which parents or guardians of those children would naturally seek to obtain. There are too many cases frequently coming to light and already on record, where gray-haired men have enticed little girls to their ruin, for us to ignore the fact that a stringent law is needed to make these deliberate villains feel its sting as well as vindicate its own dignity. How many girls of ten or twelve or sixteen years, reared in homes of refinement, know what they "consent" to in these cases? We bring up our girls in the same ignorance, as far as this subject is concerned, as Oriental nations rear theirs, but fail to throw about their ignorance the restrictions which would save them from the dangers which attend ignorance in our larger freedom, and then make laws which connive with this ignorance to let the seducer of innocence go unpunished.

Mr. Higginson's protest against sending a boy to the State prison, while the girl is regarded merely as a victim, loses its effectiveness, when we consider the penalties which society and custom impose upon girls who, from whatever cause, swerve from a life of virtue. These penalties are never visited on boys or men. The girl is forever an outcast. A boy or man can be, and often is, the pet of society, even when his name has been connected with more than one case of such wrong-doing. Until society can agree to treat both parties alike, the laws should visit men with the heavier penalty. Even then, the woman criminal will be the greater sufferer; for it is upon her alone that Nature, as well as society, imposes her penalties.

The objection that the moral responsibility of the girl will be lessened by raising the age of consent is wholly without foundation; for the moral responsibility, whatever the age or law may be, is so great that, if she lapses once from virtue, she is damned for life. The writer would not lessen the measure of that responsibility by the slightest fraction, nor is it possible to do it. The difference in character between the chastity and unchastity of woman is irrevocably fixed. But virtuous parents of girl children, anxiously striving, with what wisdom they have, to rear those children aright, may reasonably plead for the assistance of stringent statutes and severe penalties against the crime of seduction. If their prayer

should be answered by our legislators, the writer utterly fails to perceive how the moral responsibility of parents or children is weakened in the slightest degree.

However much we may regret the fact, deplored by the writer equally with Mr. Higginson, the popular sentiment is averse to the early education of girls in matters belonging to the general subject under consideration; and, the fact being such, our legislators, our teachers, and our journalistic critics should adapt their wisdom to the situation as it is rather than to some ideal conception of the situation as it should be. We will join Mr. Higginson in reforming, as rapidly as possible, the popular sentiment in this regard, and, while doing so, shall confidently expect him to join us in the endeavor to build all possible safeguards around the chastity of our girls, the purity of our boys, and the sanctity of our homes.

S. E. BURTON.

THAT ADDRESS OF THANKS TO THE POPE.

Editors of The Index:—

An article appeared in your last week's issue criticizing the "women suffragists of New York" for the action recently taken by a few people calling themselves "The Woman Suffrage Party of New York State," in an address of thanks to Pope Leo XIII.

The large body of women suffragists of this State are entirely unconnected with this so-called "party," whose existence is in the imagination of a few persons, led by a man who claims for himself the credit of having originated most, if not all, the woman suffrage work done, not alone in this State, but in the nation. To our regret, a prominent woman suffragist, an old anti-slavery friend and co-worker of this man's father, lends her name and influence to his lucubrations, thus strengthening his various "addresses" with seeming authority.

The recognized working body of woman suffragists of New York State is known as the New York State Women Suffrage Association, of which Lillie Devereux Blake is president; Matilda Joslyn Gage and Susan B. Anthony, vice-presidents at large; Harriet Putnam Nowell, chairman executive committee; Mary Seymour Howell, corresponding secretary; Charlotte F. Daly, recording secretary; Jennie McAdam, treasurer.

Although the training of woman tends to her loss of self-respect in matters pertaining to religion, I am happy to say that no officer of the New York State Women's Suffrage Association would either write or sign such an address as the one referred to; and many of the most influential suffragists of the State stand by the side of Mrs. Stanton in their opposition to ecclesiastical domination.

MATILDA JOSLYN GAGE.

FAYETTEVILLE, N.Y., April 25, 1886.

[Mrs. E. C. Stanton writes: "Thank Mrs. Underwood for her timely word on 'Ecclesiastical Aid to Woman Suffrage.'" Mrs. Lillie Devereux Blake, President of the New York Woman Suffrage Association, referring to the same article, writes: "It criticises most sensibly the absurd letter to the pope, pretending to emanate from the so-called 'Woman Suffrage Party' of the State. It is to protest against the assumption that this 'party' is indorsed by the leading women of the State that I write in reply." Mrs. Blake states that the "party," in fact, consists really of one individual; and, although able to obtain the signatures of two others, he "is not even a member of the New York State Woman Suffrage Association, which is directing the policies and carrying on the work here, and which includes all the active and energetic workers of the State." Mrs. Hester M. Poole, who edits the "Woman's Department" in the *Religio-Philosophical Journal*, writes, "That gushing missive to the pope was so execrable that I would not notice it in my columns, where a point is made of mentioning only what redounds to the credit of women." These extracts, with Mrs. Gage's communication printed above, show how sensible women regard the letter addressed to the pope in the name of the "Woman Suffrage Party."—B. F. U.]

MR. C. K. WHIPPLE writes: "Mr. Higginson's objection to placing the legal 'age of consent' higher than sixteen years seems to be a fear that boys will be corrupted and imposed upon by vicious girls. By all means, let the boys have all the protection that

* Senator Morse has presented petitions every day since this movement began. Over one hundred and fifty have already gone to the committee, and there are many more to be offered. One petition of three hundred signatures was headed by Mrs. Wendell Phillips, and this was probably the last time she wrote her name.

legal enactments, combined with good training, can give them; but, if statistics of such a matter could be gathered, I think it would be found that a great majority of the cases of seduction and depravation of young girls are accomplished by, or by procurement of, middle-aged and elderly men; and that this feature of the case is the chief one for which legal safeguards should be provided."

THE April number of the *Freethinkers' Magazine*, in an editorial on *The Index*, after referring to this paper as one of the most cultured, scholarly free-thought journals in the world, continues: "And this is the objection that many freethinkers bring against *The Index*, that it is too cultured, too scholarly; that it is above the comprehension of what is known as the 'common people,' and therefore that it fails to reach the masses, and consequently is not doing the good it would do, if it was less aristocratic and more democratic. . . . Then another objection that we have heard urged against *The Index* is that the articles are too long and heavy,—better adapted to some monthly or quarterly publication than to a weekly paper; for instance, such an article as appeared in the number for March 25 from the pen of Moncure D. Conway, entitled 'Our Armageddon.'" The first objection our contemporary thinks is well founded. In regard to the second, it says, "We can indorse this objection only so far as this: that we think there are possibly too many such articles published in *The Index* for the interest of the paper; but, on the other hand, we are extremely glad to know that there is a free-thought journal in this country that can number among its regular correspondents the names of such distinguished persons as Mr. Conway, Felix Adler, T. W. Higginson, D. A. Wasson, John W. Chadwick, Mrs. Elizabeth Cady Stanton, George Jacob Holyoake, F. M. Holland, Felix L. Oswald, Robert C. Adams, and others of like reputation in the literary world." It is "well that we are able to say truthfully that we have published in this country a free-thought journal that, by its character and culture, commands the support of writers and subscribers who are the foremost people of this nation and of the world. Then, again, there is a want for just such a journal as *The Index*. It reaches a class of people, especially in New England, who never could be reached by such democratic papers as the *Boston Investigator*, the *Truth-seeker*, and *Iron-clad Age*." "There is much in *The Index* of great value that can be found nowhere else," and readers of other liberal papers are told that it would be greatly to their advantage to read this journal; "and many who only take *The Index*," our contemporary thinks, "would have their ideas broadened, and would imbibe more democratic views and become better acquainted with the freethought movement, by reading more of the kind of literature that is published in freethought papers of less culture than *The Index*." The entire article is extremely complimentary to the journal; but we do not see the justice of applying to it the word *aristocratic*, when it is probably as democratic as any of the journals with which it is put in contrast.

BOOK NOTICES.

SALAMMO of Gustave Flaubert. Englished by M. French Sheldon. London and New York: Saxon & Co., Tribune Building. 1885. pp. 421. Price \$1.50.

"This story," says the *London Times*, "has long been regarded as an untranslatable work," and adds that this translation "has been accomplished in such a subtle manner as to preserve all the vigor, natural realism, and idyllic style of the original." Certainly, the original could not well be more vivid in coloring, more strongly graphic in description, nor more intense in tone than this translation, which is almost Homeric in its description of battle scenes and war times. M. Flaubert seems, through some magic power, to have become transformed into an actual and sympathetic eye-witness of the life and times which he so glowingly depicts. The time of which the story treats is during the siege of Carthage, more than two centuries previous to the Christian era. Among its prominent characters is Hamilcar Barca, the father of the great Hannibal, who, by making his son swear eternal hatred to Rome, made that son's era an epoch in history. Salammbô, the heroine, is an elder sister of Hannibal, for love of whom

many of the wars of that period are supposed, by the author, to be undertaken. She is depicted as a singular composition of saintliness and sensuality; while her most earnest lover is painted as a cruel, strong, brave, yet treacherous barbarian. It is not a pleasant book, in spite of its many wonderful word paintings, which are vivid as nightmare dreams, and about as delightful. The particularity with which every detail of the differing tableaux is drawn gives evidence of careful study on the part of the writer, and consequently of the probable truthfulness of his delineation. Flaubert is said to be the founder of that realistic school of literature of which Zola is a too faithful follower,—a coarse school, which, we are sorry to observe, seems of late years to fill a demand of the French reading public, and of a certain English public as well. But, however willing we may be to confess the power of realistic genius in such works, it is not a power that works for good, save perhaps in the recoil such works are sure to give a thinking brain and sensitive heart from such phases of man's nature in real life,—a recoil which makes the reader shudderingly search for some higher, purer, more satisfying ideals toward which to aspire, and earnest in his efforts to make such nobler ideals longed for and realizable to our common humanity.

This translation has the exclusive authorization by Flaubert's heirs, to whom royalty is paid by the publishers, Messrs. Saxon & Co. S. A. U.

A WINTER IN CENTRAL AMERICA AND MEXICO. By Helen J. Sanborn. Boston: Lee & Shepard. 1886. pp. 321. Price \$1.50.

The journey the events and scenes of which this unpretentious writer describes in this interesting volume was undertaken by her as a companion and interpreter of the Spanish language to her father, a coffee merchant of Boston, who went in the interest of his trade. The journey was a difficult and toilsome one; but she seems to have borne all its hardships in a most amiable and philosophic spirit, and to have kept her eyes and ears open to good purpose. She says of the country through which she travelled: "There is fine scenery for the traveller; rich mines, valuable woods, and tropical fruits for the speculator; rare plants, birds, and animals for the naturalist; wonderful ruins for the antiquarian; and a curious and interesting people for all. But these can be reached only by toilsome journeys on mule back, and by a most decided experience in 'roughing it.'" She tells the story of their travels in a modest, straightforward, sincere style, which brings the things described vividly before the reader's mind. The book is not only a mere description of travel, but there are also many pages of real instruction. Her description of the state of affairs in Guatemala, just previous to the death of President Barrios, is very interesting; and a long interview which the travellers held with him is described in a way which throws much light upon the character of that intrepid leader. A chapter is devoted to a description of coffee culture, and the way in which the trade in it is carried on. Indeed, all through the book much information is given on this subject, since coffee was the object of the trip; and a picture of the coffee plant and berry appropriately adorns the outside cover. The manners and customs of the natives, the early history of the white settlements, the state of politics, are all touched upon; and a graphic description of a bull-fight and other incidents of her visit are given in a way which cannot fail to interest. S. A. U.

THE May number of the *North American Review* is one of unusual interest. Gen. Beauregard's first of two articles gives an account of his famous defence of Charleston in 1862, 1863, and 1864. Frederick Douglass, in "The Future of the Colored Race," expresses the opinion that the negro will be absorbed, and "appear finally, as the Phœnicians now appear on the shores of the Shannon, in the features of a blended race." The articles that follow are: "Letter to Judge Thurman," by Arthur Richmond; facsimile of the order for "The Removal of McClellan"; "Our House of Lords," one of the "No Name Series"; "Edwin M. Stanton," Don Piatt; "Ship-building vs. Ship-owning," by Capt. John Codman; "The American Dramatist," by Augustin Daly; "Statesmanship, Old and New," by Gail Hamilton; "Strikes and Arbitration," by T. V. Powderly; and "The Hours of Labor," by Edward Atkinson.

THE *Forum* is taking its place among the ablest and best of our monthlies. The May number contains several very readable articles. We can give only their titles: "The Experiment of Popular Government," by C. T. Congdon; "How I was Educated," by President F. A. P. Barnard; "Would We Do It Again?" by Edward Cary; "The Future of Arctic Exploration," by Lieut. A. W. Greely; "Do we need a Metallic Currency?" by John F. Hume; "Cremation Nevertheless," by John W. Chadwick; "Contemporary Supernaturalism," by Moncure D. Conway; "What Rights have Laborers?" by W. A. Croffut and L. T. Post. New York: Forum Publishing Company.

In the *Andover Review* for April, Dr. William W. Smith continues his papers on "The Spiritual Problem of the Manufacturing Towns." Prof. James M. Garnett writes on "The Elective System of the University of Virginia." "The Possibilities of Religious Reform in Italy," by Dr. William Chauncy Langdon, "The Bible a Theme for the Pulpit," and "The Negotiations between France and Madagascar" (editorials), together with "Biblical and Historical Criticism" and "Book Reviews and Notices," are among the attractions of this number of the scholarly representative organ of Progressive Orthodoxy. Boston: Houghton, Mifflin & Co.

WANTED, during the months of June, July, and August, the office of private secretary. Address C. F. B., care of THE INDEX.

Bound Volumes of The Index For 1871 and 1872

For sale at THE INDEX office, at \$2.00 per volume. A few complete sets of bound volumes of THE INDEX, from 1870 (Vol. I.) to 1885 (Vol. XVI.), inclusive, will be furnished at special rates.

A STUDY OF PRIMITIVE CHRISTIANITY. By LEWIS G. JONES.

8vo. 320 pages. Cloth, Gilt Top. Price \$1.50.

"No fairer statement has been made of the grounds on which the anti-supernaturalist humanitarian bases his opinion of Jesus and of the origin of Christianity. . . . Its theology and Christology are of the most radical Unitarian kind; but the temper and spirit of the book are so refined, so earnest, and so fair to all opponents, that it must impress those who are compelled to disagree with its most prominent conclusions as a model of polite and generous controversial writing."—*Brooklyn Union*.

TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS. By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crapo.

PRICE \$2.00.

For sale at the bookstores. Also sent, postpaid, on receipt of price by

THE INDEX,
44 BOYLSTON STREET, BOSTON.

Lectures by Rabbi Solomon Schindler.

1. INTRODUCTORY.
2. TWO THOUSAND YEARS AGO.
3. THE CARPENTER'S SON.
4. JUDAISM THE MOTHER, AND CHRISTIANITY THE DAUGHTER.
5. A GENUINE MESSIAH.

As a special inducement to Liberals to distribute these lectures, which are full of radical thought presented in the plainest language, they are now offered at 5 cents each; 10 copies for 30 cents; 40 copies for \$1.00.

"We are struck with the general good judgment evinced in the preparation of the volume. . . . He has done a real service to the times in bringing together, within four hundred pages, so many noble and pure thoughts. . . . All minor defects, in plan and proportions, we gladly overlook in consideration of its many and great excellences. Whoever buys it will receive many times the worth of his money."—FRANCIS ELLINGWOOD ABBOT.

CHAPTERS

FROM

The Bible of the Ages.

FOURTEEN CHAPTERS.

Selected from Hindu Vedas, Buddha, Confucius, Egyptian Divine Pyramider, Zoroaster, Talmuds, Bible, Plato, Pythagoras, Marcus Aurelius, Epictetus, Al Koran, St. Augustine, Luther, Scandinavian Eddas, Talmuds, Milton, Penn, Adam Clarke, Mary Fletcher, Wesley, F. W. Newman, Frances P. Cobbe, Tyndall, Max Müller, Elias Hicks, Channing, Garrison, H. C. Wright, Lucretia Mott, Higginson, T. Starr King, Bushnell, Parker, Emerson, Denton, Tuttle, Frothingham, F. E. Abbot, and others.

Edited and compiled by G. B. STEBBINS, Detroit, Mich.

A solid cloth-bound 400 page volume. PRICE 75 CENTS.

*Any of our publications may be ordered through the trade, or will be mailed postpaid on receipt of price.

CHARLES H. KERR & CO., 175 Dearborn Street, - - - Chicago.

"A remarkable work. Original, striking, and interesting."

THE MORALS OF CHRIST.

A Comparison with Contemporaneous Systems.

By AUSTIN BIERBOWER.

"An admirable example of the scientific treatment of an historical subject, almost as systematic as a treatise upon one of the great sciences."—*Daily News*.

"One of the most notable works of the period, remarkable for its uniqueness as well as high literary character. It may be doubted if another so thoroughly non-controversial work on Christ's teachings can be found in the entire range of the literature of the Christian era."—*Inter-Ocean*.

"The book is one of great suggestive-ness."—*Critic*.

"The whole is written in a crisp epigrammatic way that serves to keep the reader's interest closely through the whole inquiry."—*Chicago Times*.

Paper, 200 pages. 50 cents, postpaid.

CHARLES H. KERR & CO., 175 Dearborn Street, - - - Chicago.

UNITY is a weekly journal of 12 to 16 pages, edited by Jenkin Lloyd Jones and others. It aims to be a journal of liberal religion and liberal culture. Its motto, "Freedom, Fellowship, and Character in Religion." Yearly, \$1.50; four months, 50 cents; single copy, 5 cents. To any new subscriber sending \$1.50 for a year in advance, and mentioning this advertisement, we will send without charge a copy of "Unity Songs Rising," a daintily printed volume of poems by UNITY writers, the retail price of which is \$1.25. Address Charles H. Kerr & Co., Publishers, 175 Dearborn Street, Chicago.

THE Alpine Blouse Suit FOR BOYS.

(AGES 4 TO 12 YEARS.)

Our Spring Alpine Blouse Suit is one of the prettiest and most comfortable Suits manufactured by us for Boys' wear. Made single-breasted, belted and plaited, button high in the neck, insuring a nice fitting garment in every particular. Manufactured in a variety of styles, from Scottish Tweeds, English Plaids and Cheviots and the best American fabrics, in all the new shades and colors.

Parents will find our Alpine Blouse Suit combines grace and style, and the material natty and of hard-wearing qualities.

"I like smart women well enough," said Fenderson, "but I wouldn't care to marry a woman who knew more than I did." "And so," suggested Fogg, "you have been forced to remain single."

AN EASTER ECHO.—Mary: "Etta, I saw you at church yesterday. Wasn't it beautiful?" Etta: "Yes, it was splendid; but don't you think a thought more of buds on the left side and a spray or a bird in front would have been an improvement? Of course, you refer to that lady's bonnet in the third row on the right-hand side of the central aisle?" Mary: "I wasn't thinking of anybody's bonnet. I referred to the service." Etta: "Really, but I don't think I noticed that."

THE Albany Argus relates this of a little miss living up town, who had been taught and deeply impressed with the idea that God was always with her and saw everything she did. One day, she became rather impatient of playing, and wandered about the house, the dog tagging on her heels, as was his wont. Finally, she could stand it no longer; and, turning on him with impatience, she said: "I wish you would stop tagging me: it's enough to have God tagging me around all the time, without you."

PROF. DAVIDSON'S lecture on "Bruno" is for sale at *The Index* office. Price 5 cents; 20 for 50 cents.

HUSBAND'S CALCINED MAGNESIA.—Four First Premium Medals awarded. More agreeable to the taste and smaller dose than other Magnesia. For sale in bottles only, with U.S. Government Registered Label attached, without which none is genuine, at druggists and country stores, and by Thomas J. Husband, Jr., Philadelphia, Pa.

BY B. F. U.

WHEN men cry, "Burn!" "Plunder!" "Lynch!" they go beyond the reasonable limits of freedom of speech, and must be regarded by all sane and right-minded men as the enemies of society. When they incite to such acts as those committed in Chicago last week, they should be treated as desperadoes and murderers. Anarchists, socialists, or men by whatever names called or with whatever professed object in view, who murder policemen by means of dynamite bombs, should be dealt with in a manner to give no encouragement to others of like murderous disposition, and to leave in the public mind no sense of insecurity from danger to life and property by violence. For the red flag, we have no use in this republic; and, with those who carry it or march under it, it is hardly worth while to waste time in arguing. We do not argue with murderers and incendiaries, but protect our lives and our property from violence at their hands.

Mrs. E. L. WATSON, a prominent representative of Spiritualism, thus writes in the spiritualistic paper, the *Golden Gate*: "We are all compelled to sorrowfully admit that great wrongs are being done in the name of Spiritualism. I know of no greater infamy than that involved in a mediumistic fraud. The perpetrators may be counted by the hundreds, their victims number thousands. Every sacred feeling of the human heart has been trifled with, for gain and notoriety; the moral aspect of the whole movement has been smirched, our grand facts discredited, and an immense retard suffered, through the multiplicity of these unconscionable frauds, and, I may add, the ready defence made and strongholds built up for them by a class of minds incapable of a doubt as regards the genuineness of any medium or spiritualistic marvel." Mrs. Watson, in the article from which this extract is taken, says that Spiritualists are divided into two sects, "the orthodox and heterodox." By the orthodox, she means those willing to "condone and cover up fraud 'that good may come,' and regard any attempt to put mediumship to an actual test as hostile to Spiritualism." "The heterodox wing of Spiritualism,"

she says, requires solid grounds of belief, wants investigations conducted by methods which will preclude the possibility of deception, genuine mediums protected, and the frauds exposed, "to relieve mediumship of a vast load of obloquy with which, through charlatanism, it has been so long weighed down."

THE editor of the *Golden Gate*, in reply to Mrs. Watson, admits that there is more or less "fraud in mediumship," but does not favor Mrs. Watson's view of vigorous opposition to it by Spiritualists. The editor's own words are as follows: "If we have a medium of whose fraudulent acts we are satisfied, we should keep away from him or her,—leave them severely alone,—and not talk about the wrong they do; for we thereby virtually aid them in their fraudulent work. The mediums who have been the most 'exposed' are the ones who are reaping the richest harvest of dollars to-day. We should let our thoughts dwell upon the heavenly delights of genuine mediumship and upon the higher and better things of life. That is the only way of spiritual growth. There are those who, thoroughly honest and conscientious themselves, think no wrong or deception possible with any medium. Knowing the fact of materialization to be true, they take it all in. They are not looking for fraud. In their eyes, all mediums are honest. And, in this simple faith and trust, they live and are happy. If they are deceived in some instances, as they probably are, they are surely not the ones that suffer by the deception." This attitude toward the acknowledged frauds of Spiritualism, practically that of many of the Spiritualistic papers, is continually increasing the evil of which Mrs. Watson complains. The fact that "the most 'exposed' are the ones who are reaping the richest harvest of dollars to-day" gives them great advantages; and those who, like Col. Bundy and Mrs. Watson, insist upon "fraud-proof conditions" find more opposition, public and private, than co-operation and support.

THE editor of the *Investigator*, who was personally acquainted with Frances Wright, after quoting the extract from a letter relating to her which was recently printed in *The Index*, adds: "Frances Wright, as the above writer truly says, was a remarkable woman as a reformer, an author, and an orator. Wherever she lectured, she drew great crowds; and the police were oftentimes present to protect her from violence, such was the prejudice of religious bigotry against her opinions. She wrote and published several books besides the one to which allusion is made [*A Few Days in Athens*]. Among them were two large volumes entitled *First Impressions of America and England* and *The Civilizer*. Besides these, she wrote a tragedy, a number of poems, a social reform system, a book of the orations she delivered; and, fifty years ago, she was associated with Abner Kneeland in editing the *Investigator*."

REFERRING to the affirmation bill which passed the Canadian House and was sent to the Senate last week, the *Ottawa Free Press* says: "It may be said in this connection that the action of one or

two Protestants Liberals from Ontario standing alone in voting against this bill is a blot upon otherwise splendid careers as liberal politicians. It is impossible to understand the state of mind in a Liberal which prompts him to vote against a bill which applies in practice one of the cardinal principles of Liberalism; namely, that religious belief or the absence of religious belief shall carry with it no implied civil or religious disabilities. That a member of the great traditional liberal party which removed the civil and political disabilities from Jews, Roman Catholics, and Protestant dissenters, should have voted against completing the great work of Liberalism in this country, by removing one of the few remaining disabilities based upon speculative views of religious questions, is an astonishing circumstance." Whether the Senate is liberal enough to place this bill upon the statute-books of the Dominion remains to be seen.

A LITTLE girl was recently sent home from the public school at Pelham, Mass., because she refused, by the direction of her mother, to take part in the Bible-reading exercise. The *Boston Pilot* advises the mother to bring the case before the Pelham school committee. "It may be," it says, "that the Catholic minority is so small in Pelham that the protest will be overruled, and the teacher upheld in her intolerant conduct. It is probable that she had consulted the committee before expelling the child. But such action of the board will compel public attention, and public opinion will condemn the bigotry of the petty magnates of Pelham." Referring to this case, the *Springfield Republican* remarks: "There is no doubt but that the wishes of the Roman Catholic parent in this matter must be deferred to. Whatever the opinion of the school committee or the teacher may be, it is a religious scruple; and our common-school system does not comprise the enforcement of any religious observance against the conscience of the pupil or the parent."

COMMENTING upon the movement headed by Christian preachers to stop the publication of Sunday papers, the *Banner of Light* says: "This movement is only the beginning of other bigoted movements to crush out the liberties of the people. Should they succeed in stopping by law the publication of newspapers on Sunday,—as they can stop them in no other way, although their present object seems to be to get their congregations to agree not to patronize such papers, thus boycotting them,—they will turn their attention to stopping the railways and steamboats on Sunday, thus seeking to debar the people from exercising their God-given right to healthful recreation one day in the week, when they have the time to spare for that purpose. But these over-zealous clergymen will not succeed, as the people of this country are too well educated and hold too liberal views upon religious matters to allow any class of men to dictate to them what they shall do or not do on Sunday. The age of 'blue laws' is past, never to be re-enacted, thanks to the liberalizing tendencies of the present generation."

THE ANNUAL MEETING AND THE PROPOSED AMENDMENT.

The Committee of the Free Religious Association have presented their programme for the approaching Annual Meeting. It is a programme that will specially interest the members and the public, and that promises to make the nineteenth annual convention of the Association as attractive and valuable as any of its predecessors. It seemed last year as if the high-water mark of conventions was reached, such an enthusiasm was infused through all the proceedings by the presence and hearty sympathetic words of Dr. Heber Newton. But we are not sure that any success in the past measures the possibilities of what the Free Religious Association may be able to achieve in the shape of a convention. We are sure that the bill of mental fare and of social entertainment presented by the committee for the meeting this month at least deserves to draw together an unusually large body of people. We believe that it will do so, and that any friends of the Association who allow slight reasons to interfere with their attendance will afterwards regret it.

Last October, Mr. Conway was the welcomed and honored guest of the Association on his return from England. Now, he takes his place among the chief workers. Not only will he give the principal address—the one written paper—at the morning session of the convention, but he has kindly consented to preside at the festival in the evening. The subject he announces for his morning essay particularly excites mental curiosity. Students of the religious aspects of the evolution doctrine, as applied to material laws and forces, have not failed to observe that there are features of it that may be used to sustain some of the old dogmas of Calvinism; and they have been so used. The laws of heredity, for instance, it has been claimed, furnish a scientific argument for the doctrine of original sin and its imputation. "Natural Selection" is made a buttress of Calvinistic "Predestination." And the cosmic energy, so far as concerns the material universe, if identified with divine power, evidently gives a deity that works, like the Calvinistic Jehovah, according to a law of its own pleasure, regardless of considerations of human reason or benefit. In announcing his topic as "The Coming Cosmic Calvinism," it is probable that Mr. Conway has in mind these features of the evolution theory, yet not exclusively as stated by orthodox theologians. If we are not mistaken, he has quite as much in mind the idea of Deity conveyed by John Fiske in his latest published book and by other liberal thinkers of kindred views. For this reason, it is greatly to be hoped that the effort which the committee are making to secure Mr. Fiske for one of the subsequent speakers may be successful. We fear, however, that Prof. Fiske's lecture engagements at St. Louis will not permit this brilliant addition to the programme. But there will be none the less eager interest to see how Mr. Conway is going to meet these views to which his subject points.

In the afternoon, the Social Problem, and more especially the Labor Movement, will claim consideration. This subject, as handled by Mr. Newton last year, drew a crowded audience and wide attention. The matter is to be brought up again because it has become by recent events the one subject which above all others now has the public ear. Mr. Brooks, who is to introduce the topic, is not so generally known as Mr. Newton; but he has been making a special study of social themes in Germany, and, since his return, he has given, with great acceptance, a course of lectures

in Cambridge on the subject, which are spoken of in the highest terms. Mr. Brooks left a pulpit considered one of the most desirable in the country,—that so long held by Dr. Putnam in Roxbury,—in order that he might go abroad for further study of sociology; and now, after two or three years of such study, he has come back to take his chances with a new and comparatively weak society in Brockton, where he may have abundant opportunity for practical work in the same direction. What such a man may have to say on the all-absorbing question of the hour will be worth not a little pains to hear. Hon. Carroll D. Wright, known everywhere for work already done and doing, is also to speak on the same question.

Other speakers are expected at both the morning and afternoon sessions; and quite a host of brief speeches—coruscating firearms after the heavy cannonading of the day—will enliven the evening. We think it pretty sure that Frederick Douglass will be heard from in both ways. A great multitude of old friends, and a generation that knew nothing of the old anti-slavery platform, will welcome him to the various platforms of Boston's Anniversary Week which are still working for human liberty and amelioration. And not least among the attractive features of the coming convention will be the presence and speech of Mr. and Mrs. Joshee, from India. Both of them are accomplished speakers of the English tongue, as so many of the educated Hindus are; and the latter has just graduated with high distinction from a medical college in Philadelphia. Both of them adhere to the ancient Hindu religion, but they will be none the less cordially welcomed to the Free Religious gathering.

Whether the proposed amendment to the constitution of the Association (printed in this and every issue of *The Index* for the current month) will arouse much interest and call out a large attendance at the business meeting, it is difficult to foretell. On the introduction of the resolution last year, out of which this amendment has developed, quite an animated debate arose. It was finally voted that the amendment then suggested and any others which might be offered should be referred to the executive committee for consideration and for such action as should appear to them most judicious. To the amendment then proposed, another was added; and, in due time, the two were sent together in a printed circular to all members of the Association, with the request that they would express their opinion upon them, and offer also any suggestions of their own as to what amendments, if any, were required in the constitution, according to their judgment. (It may be said here that, in the second of the two amendments sent out in the circular, it was discovered afterward that a misplaced comma had somewhat confused the sense.)

When the committee met to consider the responses to the circular, so evenly divided were the opinions between the two amendments and so various the additional suggestions that, at first, it did not seem possible to frame anything that would be so generally satisfactory as to make the attempt worth while. But, on further consideration, the amendment as now proposed and published was evolved, making good and even improving upon the old adage that two heads are better than one; for, in this case, several heads proved better than two. The form finally fixed upon appears to us to obviate objections that had been made to the two other forms. It incorporates the most important of the new suggestions made in the answers of members, and harmonizes in a good measure the various views expressed, at the same time that it removes the obstacles to a hearty acceptance of

the constitution which a few minds, otherwise drawn to the Association, have found in the First Article as it now stands. The more we consider the new form proposed, the more does it seem to us to have been a specially happy hour of mental inspiration that gave birth to it; and we shall be surprised if it does not meet with general acceptance. It should be added that the committee thought it better that the amendment should be proposed on its own merits, and not with any official recommendation from the executive committee. Not all of the members of the committee were present at the consideration of it, and it is possible that not all may favor it. This article speaks only for a single member of the Association; but, unless objections now overlooked arise, that member will give the amendment proposed his cordial and entire approval.

WM. J. POTTER.

OF LABOR AGAIN.

Imagining myself talking with a member of some trades union, I will ask some questions, and answer them as I suppose we both should answer, till I come to one where we shall differ.

Has the wage-worker received hitherto his share of the product of his labor? No. Does he receive now his due share? No. Has he the right to refuse to work,—that is, to strike,—when his due share is withheld from him? Yes. Has he then the right to argue with other men, to persuade them to strike also or not to take the places of those who have struck? Yes. Have wage-workers a right to combine, the better to discuss and to decide the share which they should have, and to aid each other in refusing to work—that is, in striking—until they be paid duly? Yes. When wage-workers thus have combined, have they a right to refuse to work under any employment where other men work who will not combine or join the union? Yes. But, if so they strike, have they the right, then, to injure or cripple a business or to destroy property or material used therein, because non-union men are employed? To this, I answer, No. All measures to injure or cripple business, as by the boycotting, under such conditions or for such causes, I hold to be a tyrannous conspiracy, and all destruction of property or forcible interference with business a criminal violence. Now, here I may assume that the union wage-worker with whom I suppose myself conversing differs with me; for, at least, I will conclude that he does not these things, if he disapprove of them, yet that he is doing them in matter of plain sight and notoriety the country over. I will not discuss this difference between us at present, but say only that, so far as I can judge, every workman and every employer ought to be left free of dictation. If every wage-worker is to be held obliged to become a member of a trade union, I cannot conceive who is the authority so to compel him; and, if the employer has not the right plainly to give work to men who liked not to be union men, I cannot conceive how he was deprived of that authority or who took it away. And, if he has this right, then who may interfere with him rightly for the simple exercise of it? With this, I say I will rest for the present, because I wish simply to tell a story illustrative of what seems to me the odious tyranny of boycotts, and still more of violent actions against employers of non-union men or against the non-unionists employed.

A little while ago, I gave in my pulpit a sermon on one small part of the great labor question, in which I spoke plainly my conviction that the laboring man has great wrongs to be righted, and

that this subject must be approached by the holders of capital with a very large supply of humane love, if we are to solve the problem justly and wisely. The discourse occasioned some comment and discussion among my people; and, to one of them, of whom I may have more to say in another article, I gave *The Index* containing Mr. Underwood's account of the profit-sharing experiment of an Eastern manufacturer. My parishioner, who is a large manufacturer and an inventor, who was bred a mechanic and worked by the day like others, read the article with interest, and returned it to me, saying that he approved of it highly, if it could be done; that he had himself lain awake of nights, forming similar plans for his own workmen since his business relations had grown up to that point, and had formed some plans even more advantageous for them than the method given in Mr. Underwood's article. But he added that his own plans and the plan in the article and every other possible plan he believed to be frustrated at present and made impossible by one tyrannous fact,—namely, the boycott. "For," said my friend, "suppose I enter on any co-operative plan whatever with my men, who are unionists, Knights of Labor, or what not, and there comes a general order to strike, or suppose that my men are not unionists, and they are approached with persuasions, or, as now seems to be done, with requests tantamount to commands, to join the union; and, in either case, my men refuse,—refuse to strike, because of their agreement with me and their content with it, and refuse to join the union, because of their co-operative, profit-sharing relations with me, which they wish not to bring under other criticism or control. In such a case, my men will not be permitted to do as they please; but my business will be boycotted by the Union, the Assembly, the Knights of Labor, or whatever it may be. For this reason, no plan for mutual benefit between me and my men is possible, safe, or wise, because the first condition of such an enterprise must be the entire autonomy and self-control of all persons who are parties to it; and this is exactly what is destroyed by the tyrannous claim of the union to cripple or kill the business of all employers who have wholly or in part non-union men, or to regulate the acts of the workmen by the votes of a body which have no part and no rights whatever in the joint enterprise which might be formed between me and my workmen." This friend of mine, be it observed, disputes not in the least the right of the workmen to form unions for better co-operation, mutual help, and mutual defence, in any just way. Neither would he grudge them in the least any benefits or pleasures therefrom accruing. But he says that, if these unions will hinder and harm an employer's business, and at any period how critical soever, simply because he has men in his employ who have not combined and wish not to, then their action is as gross a tyranny on labor itself as it is on capital, and necessarily destroys, or at least threatens and makes unsafe, all joint enterprises, however equitable.

Let no one pretend that this is a man of straw, "set up to be knocked down"; for in the present rage for strikes, which seems to have reached the magnitude of an epidemic disease, no day passes without record of workmen leaving their situations for no better reason than that some men, as industrious as themselves and as good workmen, are employed by their side, who will not join their union, or who having taken vacated places are hated forever after, and stigmatized as "scabs." This moment, half a hundred switchmen are on strike in Chicago for no better reason than that six or eight men are employed in the same capacity by

the railroad, who thus took vacated places over five years ago, and with whom the present strikers have been working in quiet for this interval; and this ridiculous tyranny they enforce by violent proceedings against the property of the railroad, and against the freight, perishable in some cases, belonging to parties who never injured them in the least. I am a lover of labor; and nothing is more deep seated in me than my respect for the man who works well with his hands, and my conviction that wage-workers, as they are called, *have a cause*,—that is, a rightful complaint as to the past and certain just claims for the future. But such action as I have described I hold to be tyranny no less gross though more ignorant and less harmful than the selfish crimes and corrupt practices of manipulators of corporations and of legislatures. That it is as outrageous a despotism on the workingman himself as on the employer will appear from such a fact as the following, which occurred in another strike in Chicago lately, that at the McCormick Works. A workman employed there—at, I believe, somewhat higher pay than his associates, owing to special skill and responsibility—wished to continue to work, but was compelled to go out with the rest. Then he wished to return, but was informed by the others that, if he were seen to approach the factory, he would be shot down. This man kept his house for several days, especially at night, as the most prudent course, and then informed the woman whom he was to marry, employed at the time as a cook in a private family, that, if such was the boasted liberty of this country, he desired to return to Sweden.

J. V. BLAKE.

PROF. RUSKIN'S GUILD OF ST. GEORGE.

The fascination exerted upon our imaginations by the romantic features of St. George's Guild does not spring from the novelty of the idea of such an institution (there have been many other organizations for the testing of socialistic crotchets and hobbies), but from the *bizarre* and poetical nature of the founder, the astonishingly visionary character of many of his schemes, and the large financial sacrifices he has made for their realization.

The prime object of the Guild is "the general medicining, enriching, and preserving in political strength of the population of Great Britain." This is to be accomplished by purchasing some pieces of ground to cultivate, subjecting the cultivators to certain rules, and educating both them and their children. There is no colony, or community, localized in a central place; but the members still follow their own business, wherever they are, merely subscribing to the rules of the Guild and contributing a small fraction of their incomes for the expenses thereof. One of the chief objects of Mr. Ruskin was to show whether refined education were not possible to persons maintaining themselves by agriculture or other useful labor, and to convince some portion of the upper classes of society of the superiority of such occupations to their favorite profession of war.

It was Mr. Ruskin's (Biblical) idea at first that every member should pay to the Guild one-tenth of his or her income; but, later, this idea had to be abandoned. The central plan, always kept in view, has been the agricultural one, the intention being not merely to cultivate ordinary land, but to recover barren, rocky, or marshy districts, and bring them into good bearing condition. No matter on how small a scale the thing is begun, said the founder. Better try the experiment in two or three poor men's gardens than not at all.

But, supposing some pieces of land of respectable size were secured, then, said he, we will ascertain the absolutely best that can be made of every acre,—flowers native to the soil shall be sown in the wild places, fruit trees planted, cottages built, pasturage extended, and every foot of the land developed to its utmost.

We are prepared, of course, to hear that in these little paradises there are to be no steam-engines, no railroads, no idleness, no equality, and "no liberty," and that laborers shall be paid fixed wages; children to be educated compulsorily in agricultural and naval schools,—the boys to learn swimming or sailing; the girls, spinning, weaving, sewing, and cooking; both sexes to be taught botany, dancing, music, and art, also instructed in gentleness, finished courtesy, truth-speaking, obedience. As they grow older, they are to learn the natural history of the place they live in, to know Latin, and the history of Athens, Rome, Venice, Florence, and London. Young men who deserve higher education are to receive that of a Greek gentleman of the Periclean age, plus Christianity. Boys are to be taught "thoroughly, and with awe," the physical laws relating to their bodies.

The Guild was founded in 1871, and duly registered as a limited liability company, Ruskin, as first Master, making over to it a tenth of his income. He was worth at that time about \$550,000. Up to July, 1876, after five years of existence, the membership of St. George's Guild numbered only thirty persons, some of them young ladies. It curiously marks the unpopular nature of the enterprise that the Master, in making his list of names, dared to give at first only the initials, and, afterwards, the first and last names of such Guildsmen and Guildswomen as he thought would not blame him for so doing.

Up to July, 1877, the Guild had available cash to the amount of £3,487 12s. The title was changed from "Company" to "Guild" in 1877, owing to the ideas of fraudulency connected with so many companies of England (curious reason for changing). About the same time, also, the requirement of a tithe was dropped, as it had proved a grievous stumbling-block to the rich. It was now announced that anybody would be received as a Companion who, complying with the principles and methods of the association, would contribute one per cent. of his or her income, up to £10 on incomes reaching a thousand a year, the understanding being that, above that amount, nothing would be asked. At the same time, the word "Companions" was reserved as the appellation of a superior order of the association, the members of which would be willing to give one-tenth of their income, while ordinary Guildsmen gave only one per cent. thereof. Yet, in spite of small membership and languid progress of work, it cannot be said that the Master's reform movement has borne no fruit. If proof were needed, it is afforded, for one thing, by the establishment, in 1879, of the "Ruskin Society of Great Britain," with head-quarters at Manchester and branch societies at Aberdeen and Glasgow, the chief aims being to promote the study and circulation of Mr. Ruskin's writings, to exemplify his teachings, and to aid his practical efforts for social improvement.

The work done for St. George has been not only of an interesting nature, but of considerable extent. The first piece of actual work performed seems to have been a bit of road-making at Oxford by the students. The first interest from St. George's fund Mr. Ruskin spent in the vain attempt to keep perfectly clean a bit of London street; a cloth mill has been erected in the Isle of Man, for weaving the wool of the Manx sheep: various plots of ground have been purchased, and

at least one of them has been put under cultivation; Mr. Ruskin restored, at a cost of \$2,500, a beautiful pool* at Carshalton, near the home of his boyhood (Herne Hill, by London); he has done a good deal of expensive terracing at his own residence,—Brantwood, in the Lake District,—where, however, the wood hyacinths and heather seem to outweigh in value the hay and strawberries. One of the most amusing projects of the Master was the establishment of a tea-shop at 29 Paddington Street, London. Here, the patient idealist installed two of his mother's aged servants as clerks. The idea was to sell good tea in as small packets as people chose to buy, without charging a profit on the subdivision. But the absence of illumination by gas and the eschewing of the rhetoric of advertisements, as well as the increase in the consumption of spirits throughout the neighborhood, made sales slow. The chief check, however, on the trade of "Mr. Ruskin's Tea-shop," he thinks, was his delay in painting his sign. He could not for months determine whether the said sign should be of a Chinese character,—black upon gold; or of a Japanese,—blue upon white; or of pleasant English,—rose-color on green; and still less how far legible scale of letters could be compatible, on a board only a foot broad, with lengthy enough elucidation of the peculiar offices of the establishment. Meanwhile, rent and taxes ate up the profits, and something in addition.

But all these experiments have been only subsidiary to the main enterprise of founding a great educational museum in Sheffield. The Master intends to make his Museum of St. George the practical embodiment of all that he has taught in his writings on art and natural history. A beginning has been made; and such collections as have been got together are exhibited in a temporary museum in Upper Walkley, a hill suburb of Sheffield, inhabited chiefly by poor artisans.

The constitution of St. George's Guild has been described as that of an aristocracy, which elects an absolute chief, or doge. The members, in the order of their rank, consist of (1) the master, (2) the marshals, (3) landlords, (4) the tenantry, craftsmen, and hired laborers. Without going into details as to the respective functions of these ranks, let it be said that labor and the laborer hold the place of chief honor. All measures have reference to the laborer's well-being, and the authority of the Master and the superior officers is derived from him.

The first maxim of the Guildsmen is "to do good work, whether they live or die." Marriages are to be regulated by the Guild. As to courtship, the sum and substance of Mr. Ruskin's ideas is this: No girl should reject a lover at once nor accept him at once. A girl worth anything ought to have half a dozen suitors; and she is to put them all on probation, requiring of them as many lions' skins and giants' heads as she thinks she is worth. If a lover is absolutely disliked by her, "she may send him away for seven years or so, he vowing to live on cresses and wear sackcloth meanwhile," or do something of the kind to show his worthiness. When we read such funny things as this in Mr. Ruskin's books, we begin to understand the meaning of that quizzing, mischievous look in the eyes which he is reported occasionally to show.

The members are to use no machines, except

*The following piece of superb English and of exquisite sentiment Mr. Ruskin had carved on the fountain:—

"IN OBEDIENCE TO THE GIVER OF LIFE, OF THE BROOKS AND FRUITS THAT FEED IT, OF THE PEACE THAT ENDS IT, MAY THIS WELL BE KEPT SACRED FOR THE SERVICE OF MEN, FLOCKS, AND FLOWERS, AND BE BY KINDNESS CALLED MARGARET'S WELL."

for very heavy work, and no railroads, except for speed of travel on main lines of communication.

The rents levied by St. George will differ from common rents in respect of being lowered instead of raised in proportion to every improvement made by the tenant. Furthermore, the rents will be employed in making improvements on the estates of the tenants, landlords not being allowed to take any money, except what they earn by their personal labor. (This is surely a socialistic measure which would go far toward establishing the equality which Ruskin says he detests.)

There is to be a national store of wealth (idea seems to have been taken from Proudhon) instead of a national debt,—the store, or reserve fund, to consist of food, clothes, books, and works of art. The government will always have enough of these in its possession to meet the entire demand of its currency in circulation. "Government!" "Currency!" thinks the reader. "Why, we shall then have a government within a government." Even so. But the creed, or constitution, of St. George demands, in its seventh article, entire loyalty to the existing administration, unless it be proved to be contrary to the laws of God. In this respect (loyalty), it exactly resembles the constitution drawn up by John Brown for his anticipated republic of blacks. John Brown suffered martyrdom. But I suppose no better proof could be asked of the visionary nature of the English John's similar movement for the liberation of the white slaves of labor than the complete indifference of the existing government to this bold little rebel flag of St. George, run up by a sick and despairing prophet in the very heart of the vast empire of Great Britain.

The only use to which the Guild will put its precious metals will be to employ them for currency and in the arts. The Guildsmen are to eat out of delft and drink out of pewter (idea taken from More's *Utopia*. Ruskin has clearly studied all the Utopias, from Plato down to Brook Farm). There will also be paper money; but it will be a matter of financial indifference what part of the circulating medium is in coin and what in paper, since the power of each is but that of a government receipt for goods delivered into the general store.

In dress, everybody will have to look to it that he be clean as wax, and no ragged garments allowed. The dress of the superior orders and officers always to be plainer than that of the "peasants," as Ruskin calls them (this idea about dress also taken from Sir Thomas More). Hereditary nobles entering the Guild are kindly permitted to retain the insignia of their rank; but they must all promise to wear uncut jewels, if they wear any at all!

Prof. Ruskin's cardinal idea of obedience is to be practically enforced with a vengeance in the government of which he is *ῥιππᾶρος*. He, at one time, actually entertained the idea of ruling his peasant-slaves (I will justify the phrase immediately) by the iron rod of the military order! He states that in early life he had known so many good and wise soldiers, and had observed so constantly in his historical reading (notice how always and always he falls back for justification upon precedent, upon the past) the beneficence of military rule in time of peace, that he had seriously thought of choosing the commandants of the Guild from veteran soldiers. It was also his intention to select the laborers from such domestics and retainers of old families as had been thrown out of employment by modern social changes (these persons attractive to him because of their habits of unquestioning obedience). Well, when he had thus provided for discipline, let us see how he

would crack his whip over his coffles of peasant slaves (*Fors*, I., Letter 37). The laboring Guildsmen are compelled:—

(1) To rent their land temporarily of the Master; and they can be ejected, if they prove intractable.*

(2) To pay over one per cent. of their incomes for St. George's Benevolent Fund.

(3) To cultivate their land as the overseer may direct.

(4) To build their houses with prescribed materials, and to a fixed degree of strength.

(5) To send their children to the schools where Mr. Ruskin's ideas on education will be carried out.

(6) To take no newspaper except the one to be published by the Master, and to read no books but those published, edited, or selected for the Guild's library by him.

(7) Each and all to render "unreasoning obedience," solemn and constant, to the officers set over them.

(8) To use only such machinery as the Master may direct.

(9) To obey, in general, the laws of Plato, Christ, Lord Bacon, Sir Thomas More, and the Florentines of Dante's time.

(10) Every tradesman's books must be open to inspection on the Master's order, and his entire business affairs, including the percentages paid to clerks and producers, known to everybody.

(11) "And, finally," says Ruskin, "people whom I catch doing as they like will generally have to leave the estate!" †

At this point, I make no doubt my readers are rubbing their eyes, and asking themselves just where about in time they really are, and if they are in possession of their senses. Don't tremble or get alarmed, dear friends. Our liberties are still safe: there is no danger of Prof. Ruskin being intrusted with autocratic power. He is only dreaming, after all. Will you examine a specimen law of our ideal government? It is only six hundred years old, and comes from Florence. The law away back there was that no citizen should buy fish to sell again to middlemen. In this way, you get fresh fish, do you see? Now, we must have this law in St. George's Guild. But how to get our fish to their proper market and sold? Why, what else have the sons of the fishermen to do, and what else have idle clergymen to do, better than to peddle good fish? The day must come (says Ruskin, in all seriousness) when gentlemen will turn fish-mongers, and, hiring themselves out to the fishermen, take dripping basket on back, and cry their finny wares through the cities!

"They may stagger on," perhaps, a year or two more in their vain ways; but the day must come when your poor, little, honest puppy, whom his people have been wanting to dress up in a surplice, and call 'The to be Feared,' that he might have pay enough, by tithe or tax, to marry a pretty girl, and live in a parsonage,—some poor, little, honest wretch of a puppy, I say, will eventually get it into his glossy head that he would be incomparably more reverend to mortals, and acceptable to St. Peter and all saints, as a true monger of sweet fish than a false fisher for rotten souls; and that

*All of these conditions may be found in various parts of *Fors Clavigera* and *Time and Tide*, whence I have culled them forth.

†So Carlyle, in "Shooting Niagara," suggests that the English lords might form their estates into miniature model communities, drilling and disciplining their tenants and banishing the refractory. How all this arrogance of Ruskin and Carlyle contrasts with the spirit of gentle Walter Scott, who, though ostensibly as conservative as his two countrymen, yet, when he was settling a few families at Abbotsford, made only two conditions: first, that they should keep their cottages and doorways first, and little gardens tolerably neat; and, second, that the men should keep their guns from the game, and the boys their hands from the birds' nests and the new-planted woods! (*Lockhart's Life*, vol. v., p. 288, original edition.)

his wife would be incomparably more 'ladylike,' not to say madonna-like, marching beside him in purple stockings and sabots, or even frankly barefoot, with her creel full of caller herring on her back, than in administering any quantity of ecclesiastical scholarship to her Sunday-schools.

"How dreadful, how atrocious!" thinks the tender clerical lover. 'My wife walk with a fish-basket on her back!'

"Yes, you young scamp, you. You were going to lie to the Holy Ghost, then, were you, only that she might wear satin slippers, and be called 'a lady'?"

WM. SLOANE KENNEDY.

THOMAS PAINE AND UNITARIANISM.

Once or twice, we have in these columns called attention to the fact that Thomas Paine has more claim upon the recognition and gratitude of Unitarians than he has ever received from them. His religious views were substantially those now preached, if we mistake not, from many, if not the majority, of Unitarian pulpits. If he went further than do some of the Unitarians of to-day in rejecting the Bible as an authority, on the other hand it can be said that he had no sympathy with the pantheism and agnosticism of the more radical of the Unitarian ministers.

Some months ago, a Southern Unitarian published his own creed. Rev. George L. Chaney quoted it, and called especial attention to it as an admirable statement of the Unitarian belief. He did not then know, and has perhaps not yet learned, what we pointed out, that the statement was taken, word for word, from the *Age of Reason*, and that it was written and published nearly a century ago by "Tom Paine, the deist," as his religious creed. But such was the fact.

In presenting his religious views to the public, in days less enlightened, less liberal, and less tolerant than these, Paine excited the wrath of the clergy, and became an object of religious bigotry and abuse, and a victim of pious slanders and lies. The ingratitude shown him, the wrong done him in impugning his motives, misrepresenting his views, and blackening his reputation, is the price paid for the frank and vigorous expression of his "thoughts on religion." Now, these thoughts, freely expressed by Mr. Chadwick, Mr. Savage, or Mr. Barrows, are accepted by multitudes; and they who utter them incur no odium, and know nothing from personal experience about social ostracism, not to speak of outrageous calumny and violent abuse.

Is it not true that many, that the great mass of, Unitarians are to a considerable extent under the influence of that prejudice against Paine, and that aversion to his name, which the fearless avowal and defence of views they now hold and may express with impunity originated and have perpetuated through nearly a century? It is not uncommon in Unitarian books and papers to see Jefferson mentioned as a Unitarian; and yet it can easily be shown that Paine and Jefferson agreed almost entirely in their religious views,—that, in so far as they differed, Jefferson was the more heterodox. Neither, of course, enjoyed the advantage of acquaintance with the results of the last fifty years of research. Neither had attained to that conception of evolution which in the province of religious thought and ethics, as well as in biology, has so profoundly modified the views and methods of thinkers. Each had his "limitations," and the religious writings of both contain passages that are crude in thought, viewed in the light of to-day; but the fact remains that they both, far in advance of their age, opposed the

orthodox theology, and affirmed the right to judge the Bible on its own merits, at the same time holding firmly to the belief in a Supreme Intelligence and in the immortality of the soul, and eulogizing Jesus as one of the purest and noblest moral teachers that ever lived.

Why, then, we ask, do the Unitarians ignore Thomas Paine as one of the early and advanced thinkers who contributed powerfully to diffuse their views?

Since the Unitarian Association has published a volume made up of selections from Theodore Parker's works, may we not hope yet that they will recognize the value of Paine's religious work by publishing a volume of selections from his *Age of Reason* and from his other theological writings?

These thoughts have been suggested by an inquiry in the London *Inquirer* by a correspondent as to what fundamental difference there is between the teachings of Paine and those of Unitarians. "Paine," he says, "emphatically asserted his belief in the existence of one God, the Father Almighty, and that he was most truly served by devotion to the welfare of humanity. He believed in a future state, the happiness or misery of which depends on conduct here. He regarded Jesus as a noble example. His religion stood for the Fatherhood of God and the Brotherhood of Man. What else is Unitarianism?" "Our correspondent adds," says the editor,—"and we are strongly inclined to agree with him,—that something more than we have generally admitted is due from us to the memory of Thomas Paine for his efforts in the cause of freedom, justice, and universal progress."

The editor concludes thus: "So, if 'Tom Paine' had lived in these days, when most of his opinions are held by dignitaries of the Church, he would have been Mr. Thomas Paine, a scholarly gentleman holding somewhat heterodox opinions. On the nationalization of the Church after Mr. Albert Grey's model, he would have taken orders, and become the Rev. Thomas Paine, M.A., and with his fine scholarly abilities would successfully have become the Venerable Archdeacon Paine, Bampton Lecturer; and, finally, the Right Reverend Dr. Thomas Paine, Bishop in *partibus infidelium*, a redoubtable *malleus hereticorum*,—that is, of agnostics, positivists, and all who held opinions contrary to his enlightened Christian theism. But, seriously, Paine was a man before his age, whose remarkable life and distinguished career may well serve as a fitting theme for a lecture, even by a Unitarian minister. We should like to see a really good and trustworthy memoir of this remarkable man."

Paine was a hundred years ahead of the Unitarians of his time; but this fact should make the Unitarians of to-day who have reached the position he so clearly stated and so stoutly maintained the more ready to give him credit for his work and influence as a Unitarian,—a layman who, with his pen, did what no Unitarian pulpit had the genius and the courage to do, presented Unitarianism as it was to be after a hundred years of discussion and growth, as it was to be defined and defended by the leading organs and by popular ministers of the denomination in England and America near the close of the next century, but a few of the earliest years of which he was to see. The fact that the great Unitarian was so far in advance of his brethren in religious matters that they joined the orthodox sects in denouncing him as an "infidel" and an enemy of religion and morality, little thinking that the dogmas he was assailing would come to be regarded by Unitarians as false and mischievous and that the propositions in which he stated his religious belief would be repeated substantially from Unitarian pulpits and

in Unitarian books as the essentials of the Unitarian faith, should entitle Paine not only to recognition by Unitarians, but to grateful honors for his heroic pioneer efforts, made in the most unsectarian spirit, to promote their faith.

B. F. UNDERWOOD.

THE PARKER MEMORIAL SCIENCE CLASS.

On Sunday last, Mr. David N. Holway gave the concluding lecture for the season before the Parker Memorial Science Class, on "The Science of Life Assurance,"—a subject which, as treated by this very instructive lecturer, proved of fascinating interest. The Class voted to hold a picnic, on the first Sunday in June, at Lily's Grove, near Waltham; and the Parker Memorial Society was invited to join the Class on the occasion. The regular sessions will be resumed in October. During the season just closed, the lectures have been largely attended, and the interest sustained to the last. Many of the addresses have been by persons engaged as professors or teachers in scientific instruction, some of them distinguished authorities in regard to the subject presented. Harvard College, Tufts, and the Institute of Technology have all been laid under contribution. Not a few of the lectures have been illustrated by diagrams, photographs, and specimens pertaining to the subject discussed. The Class is especially indebted to Dr. Samuel Kneeland, who is well known as a traveller and scientific investigator, for his kindly interest in its behalf, and for services generously rendered, including a Sunday evening lecture apart from the regular course, on Thorwaldsen's Sculpture, illustrated with stereopticon, for which tickets were sold, and which attracted a large audience. Much credit is due Mr. D. H. Clark, of the Executive Committee, for his energetic and valuable service. The Class has a paying membership of sixty persons. The outlook for the next season is very promising. We give the names of the speakers, with the subjects of the lectures, for the season just closed: B. F. Underwood, on "The So-called Mind-cure Method"; Mr. Edward P. Adams, on "Ventilation"; Prof. Charles G. Fay, of Tufts College, on "The Love of Nature among Americans"; Dr. Mary J. Safford, on "Consumption as influenced by Climate and Occupation"; Mr. Hapgood, on "A Study in Embryology"; Mr. S. H. Roper, on "Oceanic Currents as Factors in Climate"; Prof. G. H. Barton, on "Classification of Rocks and Minerals"; Dr. Paul Carus, on "German Universities"; Mr. John Ritchie, Jr., on "How Some People Think"; M. Anagnos, on "Education of the Deaf"; Prof. Samuel Garman, on "Reptiles and Batrachians"; Dr. Samuel Kneeland, on "A Norwegian Family of Lapps and their Herd of Reindeer"; Mr. Walter Crane, on "Sleep"; Miss A. L. Page, on "Froebel: The Man and his Work"; Mr. Samuel Wells, on "Microscopy"; Mrs. Sara A. Underwood, on "Marriages of Genius"; Prof. A. E. Dolbeare, on "Electricity"; Dr. Cyrus Hamlin, on "The Eastern Question and its Possible Outcome"; Mr. S. W. Hathaway, on "The Uncertainties of the Theories of Physics"; Prof. S. C. Chandler, on "The Variability of the Stars"; Dr. Morton Prince, on "The Brain and the Mind"; Mr. S. H. Roper, on "What the Sun does for us"; Dr. Samuel Kneeland, on "Six Weeks in Japan"; Dr. Jane P. Culver, on "Philosophical Old Age"; Mr. John Ritchie, on "What our Astronomers are doing"; Mr. F. M. Holland, on "Francis Bacon, and the Authority of Facts as Tests of Truth"; Miss Isabel L. Johnson, on "A Talk about the Lobster"; Prof. S. P. Sharpley, on "Some Applications of Chemistry to Modern Civilization"; B. F.

Underwood, on "The Scientific Study of Nature"; Mr. David N. Holway, on "The Science of Life Assurance." On one Sunday, the Class visited the Museum of Comparative Zoölogy at Cambridge, by invitation. B. F. U.

"A FEW DAYS IN ATHENS," by Frances Wright, embellished with the author's portrait, is published by Mr. J. P. Mendum, and is for sale at *The Index* office, at 75 cents per copy. As an eloquent exposition of the Epicurean philosophy, it is unequalled by any work in the English language.

THE Society for Ethical Culture, New York, so ably led by Dr. Adler, is to celebrate its Tenth Anniversary next Sunday. The Ethical Societies of Chicago and Philadelphia are to be represented in the exercises of congratulation, and a number of speakers will add their word of appreciation of the successful work which Prof. Adler and his society have done in New York during these first ten years.

FREE RELIGIOUS ASSOCIATION.

The Annual Meeting of the Free Religious Association will open on Thursday evening, May 27, with a business session in Fraternity Hall, Parker Memorial Building, corner Berkeley and Appleton Streets, Boston, at 7.45, for hearing reports, electing officers, and considering any resolutions that may be offered. The executive committee authorize the presentation for rejection or adoption of an amendment to the Constitution, according to which present Article I. would be divided into two Articles, which would read thus:—

CONSTITUTION.

ARTICLE I.—This organization shall be called the Free Religious Association.

ARTICLE II.—The objects of this Association are to encourage the scientific study of religion and ethics, to advocate freedom in religion, to increase fellowship in spirit, and to emphasize the supremacy of practical morality in all the relations of life. All persons sympathizing with these aims are cordially invited to membership.

The other articles to remain as now, but to be numbered respectively III., IV., V., and VI.

The public convention will be held as usual in Parker Memorial Hall, Friday morning and afternoon, May 28. The opening address, at 10.30 A.M., will be made by the President, Mr. William J. Potter. Mr. Moncure D. Conway will then give an address on "The Coming Cosmic Calvinism." Mr. B. F. Underwood will speak on "An Unclerical and Untheological View of Religion." One or two brief speeches will follow, and probably a letter from Dr. Edmund Montgomery.

In the afternoon, a discussion of the Labor Movement will be opened at 3 P.M. by Rev. J. G. Brooks, of Brockton, Mass., who will speak on "Ideals and Realities in the Social Question," and be followed by Hon. Carroll D. Wright and other speakers. All interested in these subjects are invited cordially.

The Meionaon will be open for our festival on Friday, the 29th, at 6 P.M. Supper will be ready at 6.30, and Mr. Moncure D. Conway will take the chair as presiding officer at 8 P.M. Among other speakers engaged for this occasion are Rabbi Solomon Schindler, Mrs. Ednah D. Cheney, Mr. William J. Potter, and Mr. Gopal Venayak Joshee, of India. Rev. M. J. Savage, Col. T. W. Higginson, Mr. John A. Wyman, and Mr. Frederick Douglass are also expected. Quartette singing. Tickets \$1. Reserved seats may be obtained at this office, at the Convention on May 28, of Messrs. O. Ditson & Co., 451 Washington Street, and of Messrs. D. G. Crandon & Co., 11 Hanover Street.

F. M. HOLLAND, Sec'y.

The Index.

BOSTON, MAY 13, 1886.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religious and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

SCIENCE AND SIN.

BY JOHN COTTON DANA.

I.

The dogma of the sinfulness of man abides. It sits fast in the minds of many who have long since rejected the superstitions on which it rests. A lingering belief in it affects the outlook on the world of numbers of those who deny one of its fundamental conditions,—free will, as expounded in the Christian theology,—and who have given up their allegiance to the personal God of the Bible. It continues sadly to warp the minds of the great majority even of those who deny explicitly any belief in it, when they are confronted with its bald, unmodified statement.

However lamentable these facts may be, they are scarcely strange. In some form or other, the doctrine of the sinfulness of the human heart has been employed through many centuries as an explanation of man's want of harmony with himself, with man, and with nature. We may believe that no sooner did evil deeds begin to leave bitter memories in the minds of the doers of them than there was given a name to the impulse which prompted the deeds, and there arose the question whence that impulse came. Then, with advancing ages, the recollection of the wrong done became yet more sharp, and the reflection that it was a wrong yet more bitter; the feeling that only a heart out of tune with the world could so often strike a note not in harmony therewith grew stronger and stronger; and the questions, Whence and what the cause of all this discord? more and more urgently demanded an answer. In the native wickedness of the human heart was at length found a key to these problems, and mankind has long been content with the solution that key gave. It was a solution which harmonized well with man's religious beliefs; for, in large part, it grew up with and out of those beliefs. It harmonized, furthermore, with his convictions as to the origin

of moral impulses and moral laws, that they were the whispered counsels and the explicit commands of a God manlike in his love and hate. Still, another fact has assisted this explanation of human weakness and human misery in retaining its place in men's minds. It has been of value in life. With its natural corollaries of a future of pleasures or of pains, this belief has temporarily added new force to the better impulses and has checked the baser. This, with other good effects, has, no doubt, atoned in a measure for its evil influences. But the belief has outlived its usefulness. It is in accord to-day, not with the persuasions of the thoughtful and the truth-seeking, but with the creeds of the unthinking, of the dogmatic, of the timorous-minded. It brings now little but evil in its train. In our daily life, it nips in the bud the blooms of the sweet plant of charity; for it tends to give a false notion of what responsibility truly is, and leads us to regard a tendency to evil conduct as something which might be entirely repressed by those who are moved by it, even though their parentage, their training, and their surroundings have yielded them naught but impulses to evil. It vitiates our judgment of human kind at large; for it provokes in us the thought that all good men are godlike and all evil men devil-like, and tempts us to forget that the former are as much the outcome of character and training and motives as are the latter. It gives a wrong bias to our criminal legislation, and makes impossible a rational treatment alike of the petty law-breaker and of the congenitally vicious; for, the false idea of responsibility embodied in our creeds and in our statute-books and decisions once established, we are compelled to the belief that transgression of the laws, within the statutory definition, comes all from a love for that which is wicked simply because it is wicked. It clouds our apprehension of the truth as to sanity and insanity, and leads us into endless and futile discussions as to the boundary lines of responsibility and the beginnings of criminality; for it would persuade us to believe that there is a hard and fast line between the normal man of Christian theology, whose desires, as he thinks, are all evil, and who knows that they are so, and the abnormal man of the statute-books, whose desires are all evil, but who knows not that they are so.

This doctrine of sin would fain persuade us to accept these half sights and these erroneous views of life; but, happily, it succeeds in thus persuading us only in part. The most of those who hold the doctrine as a verbal statement never accept, if they ever see, the far-reaching conclusions to which it logically leads. It is true here, as in many other cases, that the convictions on which we base the most of our daily conduct are at variance with the statements in our creeds. Happy inconsistency! which permits man to embrace, in words, dogmas destructive of all happiness, almost of human society, and to live, in conduct, doctrines in harmony with charity, sympathy, and all the virtues which make life with our fellows possible.

Happily inconsistency! yet not to be praised; for it takes form in that mental disease which, in the break-up of religious ideas,—let us say in the fall of ancient superstitions,—threatens to be the disease of the age,—compromise. Beginning in an unconscious inconsistency, we pass gradually into a conscious compromise, then, perchance, into a voluntary self-deception, and even into an intellectual duplicity. First, we have not the courage of our new convictions in the face of our old beliefs; and then we think to hide our cowardice from others and from ourselves by praising

the moderation, the good judgment, and the safe conservatism of those who worship expediency, and who pretend allegiance to the old. We keep our early adherence to beliefs which have proved false in the light of our later knowledge, but we no longer guide our conduct by those beliefs. We accept the new in fact, as is evidenced by our deeds; but, in our professions, we cling to the old.

A tendency toward such inconsistency, we may even say duplicity, exists to-day in many lines of thought. Such is especially the tendency in religious thought. It is not alone those who are so ill-versed in theology's rudiments as to declare that, if there is no sin, then all conduct must be good, who cry, Hush! when the truth, that sin is not, because law everywhere reigns, promises to be spoken. Others, too, filled with the spirit of that compromise which comes from looking only at what seems expedient in the light of their old beliefs, urge that the destruction of hell and the death of the devil, the father of sin, be not proclaimed abroad, lest those not so high-souled as themselves lose the last or the only efficient restraint to their evil desires. And the same wise men, hopeless of human goodness by their own theory, not seeing that in the light of nobler doctrines there may be confidence in human goodness,—these same men will say that, though the dogma of sin be as false as hell itself, it should be retained to terrify the ignorant: otherwise, those ignorant may fall into new ways of looking at life and into evil imaginings.

How far they who urge that the teaching of dead doctrines be continued for the benefit of the ignorant and the lowly may be actuated by a selfish desire to keep those whom they profess to wish to aid thus ignorant and lowly, this is not the place to inquire. Certain it is that they preach that which promises to advantage themselves by keeping up the distinction and the barrier between the wise and the ignorant, the competent and the incompetent, the wealthy and the poor. For they seem to say, Keep the thoughts of each one on the necessity of a future salvation for himself alone and by himself alone, and he will gain no glimpse of that more assured salvation for himself and his fellows from earthly ills, which awaits but the taking. True, so long as such advice prevails, so long as the machinery of a false theology is sustained by those who see its falsity, so long as things thus continue, both those who uphold the doctrine they know to be false and those who accept from them the false doctrine as the true can gain but a faint view of the true salvation,—the elevation of humanity here on earth to the highest physical well-being and to the loftiest intellectual and moral plane. But, to such as think proper any expedient which keeps the world as it is, it seems the part of wisdom to lose not one motive to a peaceful acceptance of the present order of things or to a patient ignoring of better possibilities. And such, again, would urge that the Church of the present should be retained, though it preach false doctrines, so long as those doctrines tend to keep men in the old ways.

But, to those who believe that a first condition of man's progress is that he drop the old error and embrace the new truth, the false doctrine is a thing to be hated and expelled, never fostered or even endured. However conservative these enemies of error may be, when they come to consider the immediate destruction of old institutions, they believe that the errors, if errors they be, on which old institutions may rest, should be proclaimed as errors before all men. Only thus, not by upholding the false, however indirectly, and not by concealing the truth, with however good inten-

tions, can the new, the truer, and so the better doctrine come in, and bring with it the wider and the happier life.

Not too often, then, can it be repeated that sin is not, that the devil is dead, and that hell has been erased from all charts of the universe. These dogmas of sin, of the devil, and of hell, once destroyed, the teachings which they bring with them once deprived of their hold on human thought, and man will attempt a solution of the grand problems of life and progress with fresh and reasonable courage. Each new height won will then be accepted as a safe and enduring stand-point whence to mount to the next. The element of reason will enter more deeply and more permanently into the conduct of all men. Slowly, but surely, there will spread the truth that, while we are in and of the vast stream of tendency, which bears unconscious life along as the river bears the flood-wood on its bosom, we conscious beings—"born in a ship on the breast of the river of time"—can so guide that ship as to escape many a stranding and many a hurt in the shoals and rapids of life's stream, and can so control it as to push it on out of the eddies wherein unguided, helpless, unknowing beings whirl and toss for ages, unprogressing.

Believing thus that only by the spread of the new truth can we conquer the old error, with its train of ills, I would repeat the old attempt to show the falsity of this doctrine, that men hate the moral law of a good and loving God, by telling briefly, once again, how there has come to man this deep-rooted belief in his depravity. Could it be seen by all that this belief has no more foundation in fact than had the superstition that an eclipse was the withdrawal of a wrathful God's countenance from his unruly subjects, the belief would vanish as that superstition has vanished. An attempt, however humble, to show that man is not at enmity with nature or with nature's God, and that the vileness of his character is a doctrine which comes but from his half-sight of the methods of an unfolding universe,—such an attempt would not be in vain, if it gains but one of these ends: if it give to but one person a hope that the human heart can be uplifted to a loftier plane; if it weaken in one mind the conviction that each developing soul is strengthening, as it develops, a hatred of the moral law, of the right and of the true; if it make yet clearer to one eye the vision of a humanity gaining in each new generation a firmer grasp on a morality of experience and of reason; if it banish from one mind the thought of this same humanity forever fast in the depths of unreasoning wickedness.

A sin, the sin of Christian theology, may be defined as a voluntary violation of a moral law of God. A voluntary violation is one following the impulse or motion or choice of a free will. A moral law of God may be defined as a rule of conduct laid down for man's guidance by a Being outside of and above both man and nature. A sinner, then, is one who, having come to a point where a decision is to be made between two lines of conduct,—one, as he believes, forbidden by God, and the other commanded,—chooses the former. This choice must be originated by the individual himself. He must determine it—if by reference to anything at all—by reference to his belief as to God's command, and to nothing else. Or one may say that, in making the decision to disobey God, he must be influenced only by his desire—an inherent, ever-present desire, according to the creeds—to displease him. Did he yield to a desire to please, he would not disobey. Were he determined in his choice by that part of his nature which marks him out from other men,—that is, by

his character or by his nurture or training or by his then surroundings,—his choice would not be voluntary; and for it not he, but his ancestors, his circumstances, and, indeed, all past events, would be responsible. The word "responsible," to define again, is here used as having application simply to an originating cause. Plainly, the burden of responsibility, in that sense of the word, cannot attach to a person who has made a God-forbidden choice, unless that choice have its ultimate origin within that person's own mind and heart.

"The aim of scientific thought," as has been well said, "is to apply past experience to new circumstances." This application it cannot make, except as it uses the "instrument of scientific thought," which is "an observed uniformity in the course of events." Science,—using the word even in its broadest sense, as that generalized knowledge which makes life possible,—science, then, both declares the uniformity of nature, and can have existence only as there is such uniformity. But if nature is uniform, if it goes nowhere by leaps and jumps, if it extends its uniformity to the conduct of man, as a study of the statistics of society shows plainly that it does, then is there no such thing possible as that a choice should originate or should be originated in the mind of man, regardless of his character and of the motives brought to bear upon him. Were such self-originating choices possible, were they ever made, there would be an end of that orderly sequence of events on which rests science, and the myriad intentioned acts which constitute life. Science says, in effect, of each man's conduct, of the expression of his choices, what it says of every other movement of the world of nature,—that it is the outcome of the past, that every simplest act is done as it is done because the universe is what it is.

This being so, man is not to be, cannot be, held blameworthy for his conduct or for his determinations by a Power which is over and above that nature of which he himself but forms a part. To consider himself as thus blameworthy is as if some part of a machine of human invention and construction, endowed with self-consciousness, should think itself in fault, because it failed through want of proper adjustment to perform rightly its function.

The question of an originating will within every man, in whatever form it arises, is a simple one. Either nature is uniform, and such creative first cause in man is impossible, or it is not uniform, and such creative first cause is possible. In the former case, science is possible; in the latter, it is impossible. In the former case, nature's problems may rightly occupy our attention, and may justly promise us many a helpful solution: in the latter case, those problems are problems no longer, but mysteries, and to be forever such. In the former case, man is a being, the study of which may reward us with principles, fit guides for us in our attempt to elevate his character, and to make nobler the race in each new generation: in the latter case, man is a being whose future conduct no motives can influence, whose character no teachings can mould, and whose elevation is an impossible dream.

No: man's conduct, be it good or bad, returning again to the teachings of science, is as inevitably what it is as is the coming forth of the rose and the thorn from the rose-bush. To science there is in conduct no such thing as sinfulness: for the Power in and behind Nature and man, from which all things proceed, there can be none of that difference in the quality of human conduct which is essential to make certain acts sinful and certain others good.

With the belief that "through the ages one in-

creasing purpose runs," these propositions have nothing to do. Here I am concerned only to show that man in all his differing natures—physical, mental, spiritual, if differing natures these be—is, in his progress through the ages, such a part of universal nature as is the flower, the crystal, or the mote that dances in the sunlight.

But, to millions of mankind, the belief in sin has been through many centuries one of the most constant and enduring of conceptions. How comes it, then, returning to our question, that this conception has gained so strong a hold on man, if sin has in truth no existence? Let us see.

CORRESPONDENCE.

SOME PHILOSOPHICAL QUESTIONS.

Editors of The Index:—

An elaborate critical review of *Scientific Theism* has appeared in *The Index* by a gentleman of great scientific genius and attainments, whose researches in certain branches of science have been of the most important and meritorious character, and whose trenchant criticisms of the foundations of our prevailing scientific creeds and theories (some of which have been published in *The Index*) must exert a world-wide influence, and assist in revolutionizing the basis of modern scientific thought. But the validity of the arguments adduced in this critical review depends upon the scientific data upon which they are based. It assails the doctrine of the mutual convertibility of mental and physical forces, and argues that, as each would cease to exist on its transmutation into the other, the idea would, when consistently carried out, "exterminate at one fell swoop both science and philosophy," and he denies that physical forces can be originated through mental agency. As against the prevailing idea in modern science, that all correlation of forces is merely the transmutation of motion, this criticism is valid and impossible to refute; for, as Dr. Montgomery contends, the transformation of one form of motion into another would be the annihilation of the former. But may not science be mistaken in assuming that the "correlation of forces" consists in the mere transmutability of motion? If we regard "force" as the innate tendency of the substance of all phenomena expressed in motion, in exact accordance with its conditions, it puts altogether a different aspect on the problem. Why should not the substance of things exert a static force, as we see so constantly exemplified where opposing forces are existing in a state of equilibrium, which static tendency becomes dynamic on any change from a perfect equilibrium by the interposition of another force? Is it not one of the plainest things in the world that this is the process in every act of nature and life? The forces that move the world, build up its organisms, and evolve all its phenomena, are the interactions of its different conditions; and these conditions are not mere motions among its constituent particles, but states of tension of their very substance. Nature will ever remain a sealed book to science, and philosophy will flounder about in a state of chaos, so long as it is held that all force is the effect of the mere motion of something which, but for the motion, would be entirely inert. No philosophic writer has dealt this scientific assumption such effective blows and shown its utterly fallacy as has Dr. Montgomery in his trenchant and masterly criticism published in *The Index* in the latter part of last year. Indeed, he has fought this dogma almost single-handed against the combined opposition of the scientific thought of the world.

The condition upon which mental and physical forces are correlated in every interaction between the two is a state of equilibrated tension of opposed forces. When this state of sentient equilibrium is broken in upon by an external force (as in our sense-impressions), forthwith a change is initiated in the collocation of balanced forces that constitute our mental status; and, if this disturbance is of a kind to affect any of our sentient tendencies, it stimulates them to action in the form of Will, and, through the medium of our organic machinery, acts upon external physical conditions or forces. In this way, our consciousness is a cause and a force in the produc-

tion of physical effects; and mental and physical forces interact upon each other's conditions. No writer has so graphically delineated this universal process as Dr. Montgomery himself, in an essay in the *Popular Science Monthly* of 1878,—"*All forms of matter [of course, including living and sentient organisms] are essentially magazines of equilibrated energies, inert against such other energies as have no power to disturb their equilibrium, but seething with incalculable commotion against such other energies as have power to disturb their equilibrium.*" That we have the conscious power to cause physical effects is an ineradicable conviction in human thought, and our whole system of conscious practical experience rests upon the truth of this idea. That the essence of consciousness is force and tendency, and hence a cause, is confirmed by all metaphysical as well as objective inquiry. Indeed, in a last analysis and ultimate generalization, all physical as well as mental phenomena are resolved into conditions of force, as has been so masterly and lucidly shown by Herbert Spencer. Though this truth has no connection with his metaphysical dictum of an ultimate "Unknowable"; for, if consciousness is force, then, in knowing consciousness, we know force, and the conditions of force are all there is to know.

The basic statement that consciousness and force are identical strikes many minds as dishonoring the principle that realizes all that is felt or known, but a little reflection will show that this is not the case. One of the two great attributes of all consciousness is love or desire; and what is this but tendency? and what is all tendency but force? which is the principle of all conscious as well as unconscious processes. But still further confirmation is to be found in the fact that all conscious operations, all emotions, are comprehended in love and justice, which together constitute the great ideal passion of sentient human beings. Answering perfectly to these attributes, all physical operations generalize into tendency and balance, which are only other names for their sentient correlatives.

But it is claimed in this critical review, in opposition to *Scientific Theism*, that "the immanent relational constitution of things is utterly unintelligible to us." When we reduce all things and phenomena to their last and lowest terms, we find, as our ultimate generalization, forces, forms, and motions. The something which we realize resolves itself into force or resistance: its forms are conditions of space, its movements are conditions in time. Forces determined by conditions of space and expressed in conditions of time constitute the ultimate subject-matter of all positive scientific thought. It is true that our present science has been able to reduce only the more palpable phenomena, coming to some extent within the scope of our senses, to these primary conditions. But these are sufficient to warrant the inference that the same ultimate conditions determine qualities not yet brought within the scope of our scientific knowledge. Science shows that all the marvellous qualities in our experience of music are so many timal differentiations and co-ordinations of sound, and different timal conditions express all the various colors. Does it not, then, seem highly probable, inasmuch as all the qualities manifested to our senses are determined by these ultimate conditions, that all qualities are determined by them, especially when we bear in mind that these spatial and timal conditions of forces are necessarily infinite,—infinite in their minuteness and in their largeness, and hence no limit to their possibilities? Our consciousness can reach neither their *minima* nor their *maxima*.

But this review also claims that science consists wholly in "knowing from experience what changes things will undergo in whatever situations they may be placed." Science, according to this view, consists simply in a knowledge of motions. Then causes of these changes we can never scientifically know. Dr. Montgomery has written several essays, showing that the basis of our present scientific thought is both fallacious and inadequate, and that "to fix our attention merely on changes and their relation to each other is to grasp at the shadow of reality. That which changes is, in every respect, the substance, the potentiality, and actuality in the case; and it is essentially its specific constitution which determines the nature of the change qualitatively and quantitatively." If "the constitution of things determines their potentiality and actuality," then, to the extent

we can know these, we are encroaching on the domain of unintelligibility.

There is an intuition deep seated in our intelligence that the universe is a unity, that the same principles constitute the world of matter and mind. To comprehend these principles in their modes of operation in these diverse realms is the main spring and animating power of science, and the basis and ground of scientific effort is this intuition. If, in the realm of matter, its forces are determined in conditions of space and time, the same is true in the realm of mind, as has been abundantly shown by Shadworth Hodgson, one of the most thorough and penetrating metaphysical thinkers of our time, in his works. Our sense-impressions vary as vary the spatial and timal conditions of the external and internal forces which reciprocally cause and constitute them. All the qualitative differences in our sensations are the conditions of the sentient forces in which they occur, and respond and change in musical accord with the forces of their environment.

The bearing of the foregoing views upon the question of "Scientific Theism" will be apparent. If space and time are the infinite conditions of essential being, which determine all its *differentia*,—infinite in subtlety and minuteness as its absolute conditions,—then science includes the vast whole in its universal sweep. But, if this is not the case, and the germinal Essence of All Being has its existence apart from and independent of these spatial and timal conditions, then the disciples of the "Unknowable" are right; the cause of things is unintelligible, and any such science is an impossibility. But the affirmative is confirmed by both our rational intuitions and the deepest convictions of our conscious experience, as well as by experimental science. Because we cannot bring empirically all objective and subjective reality within these conditions, as known by our senses, is no proof that they do not determine this reality. Empirical science has shown that what appears to our senses to be momentary includes an apparently infinite number of events in time, as exemplified in the inconceivable number of separate pulsations in a second that constitute the different colors of light; five hundred and forty-two millions of millions of pulsations constituting our impression of yellow light, and each and every one of these myriads of pulsations occurring in a second, which it would take our sense millions of years to count, constitutes a definite period of time. In view of this infinity which confronts us on every hand, it becomes a question whether the Original Cause can be properly considered as a personality in any sense apprehensible by our minds. But of one thing we may be certain, that the Essential Origin embosoms every sentient attribute within its infinite folds.

DEDHAM, MASS.

FRANKLIN SMITH.

SIGNS OF THE COMING CONFLICT.

Editors of The Index:—

I have looked long and longingly for an editorial expression in the dear old *Index* on the issues of the labor problem; and it has at last come, under the title of "The Industrial Trouble," April 22. It is important to know where a leading organ of Liberalism stands. I shall therefore try to extract the essence of these views, to see where *The Index* stands in these troublous and perilous times.

The editorial in question begins in this manner: "Between the two extremes, of Labor with its grievances, real or imagined, on one side, and of Capital with its enormous power complained of, justly or unjustly, on the other, there stands the great body of American citizens, who are both laborers and capitalists, who have not partisan interest on either side, and who will judge the issue fairly, when it is presented to them." This is assuring and comforting, if true; but is it not assuming a great deal to say, "This class of citizens have it in their power to decide, legally and peacefully, the conflict which has now culminated in so much violent disturbance of the industries of the country"? A class, mind you, that thus far has had little to say or do of a direct nature concerning this great matter, and a class which is not wholly unmixed; for it includes within itself very many who are neutral because of mere temperament, external surroundings, or even lack of principle, whose opinions are colorless, whose lives are aimless, selfish, vacillating. And, then, is it not asserted with rather too much confidence that

the conflict has reached its culmination point? How any one can get such an impression as that is a mystery. The trouble has but just begun. But let us look more closely at the views of this specimen of the citizen who is free from prejudice and partisan bias. The article's attitude toward labor is critical and toward capital sympathetic, dwelling at length on the misdoings of the one and only faintly alluding to the misdeeds of the other. "Frenzied acts" and "wild speech" are attributed to the one without hesitation, though labor organizations are complimented for coming to realize the necessity of clearing themselves from responsibility for these things. And, though the writer says, "It is reported that it was the Knights who prevented at East St. Louis a bloody retaliation upon the deputy sheriffs," he fails to intimate what he thinks of the sheriffs, or their masters, the capitalists, whose hirelings they were, but goes on to say that organized workingmen "will have to do many such deeds meet for repentance before they can win the full confidence of the great body of citizens." Now, I am a member of more than one labor organization, and do not see any need of repentance of that sort, and believe that the "full confidence" of that class of citizens already mentioned would mean the defeat of the labor movement.

The boycott is denounced as "a species of despotism to which no free and self-respecting people can be expected long to submit." That is the talk for capitalism, and sounds well in the absence of definition. But it is plain that the editorial wrath is vented not against the boycott, but its abuses; for he admits it may be right "against one who has committed a gross wrong," but not when extended "to third and innocent parties," or when "dictating to an employer of labor whom he shall employ." To begin with, one's estimate of the boycott depends on his view of the situation as a whole, of the nature and extent of labor's grievance, the character and amount of capitalistic oppression, or, in a word, what the true relation between capital and labor is. It is pretty clear men are not agreed as to what is a "gross wrong" in an employer, nor as to what constitutes innocence in "third parties." I cannot but express my astonishment at the writer's looking upon concerted action among the workingmen of the country as tyranny. It is necessary to success, for the enemy is hydra-headed and iron-limbed; and it is a carrying out of the maxim, "An injury to one is the concern of all." If it is right to withdraw patronage from a newspaper, it is right to withdraw patronage from a firm who advertises in it. If it is right to strike on the Missouri Pacific, it is right to strike on the St. Louis bridge, over which all trains pass, but which is owned by another corporation; and, by analogous reasoning, strikes might be extended from one system of roads to another. I do not know of a single organization that denies to "an employer the right to engage such laborers as he may desire" or to "the workingman the right to dispose of his labor to whom and where he may choose," unless it be the State itself, which has had something to say of late about child labor, convict labor, and pauper labor, which interference with individual rights may be credited, it is true, to the labor agitation. The intimidation and compulsion in the world's past history have been almost altogether on the side of capital, and they have received sanction from both law and custom. The doctrine of the freedom of contract has been the excuse for oppression in its myriad forms. That the workingman should not use his newly acquired power in the wisest manner possible goes without saying, and that he should imitate the capitalist in some of his ways need not surprise any one. Two evils do not make a right; but let us strike at the root of the evil, and at the biggest root.

"Let arbitration come, and the boycott and the strike must go." That sounds well; but the truth would have been better served to have said that, but for the strike and the boycott, arbitration never would have come. But we are given no idea what arbitration is to accomplish. Are those who are busy now lauding this method for the settlement of our difficulties not aware that, as a rule, the employé has been willing to arbitrate, and the employer has not? Nothing but the strike and the boycott have been able to bring the capitalist to terms, and any symptom of arbitration which he now shows is not apt to spring from a principle of justice.

The writer, speaking of men employed in the running of railroad trains, says, "They have intelligence

enough to understand that they are not merely in the employ of certain corporations, but that they are paid for rendering certain services to the public," etc., and adds that they should be treated with "special magnanimity" and be "well paid." Of course, they have "intelligence enough" to know this, and a good deal more, if we did but know it. They have the intelligence which has enabled them to discover these things for themselves. Why is it that those who pretend to know more than these men only echo what they have already thought out? But they know, as things are, their treatment and wages are not determined by the public ("The public be damned"), but by the corporations. A law should be passed, it is said, requiring these men not to leave their posts "without giving reasonable warning to the managers of the road"; but the managers, it appears, are to be left to their own conscience (which is their distinguishing characteristic!) how they shall deal with their men. Not a word is said about the public owning the railroads. Oh, no! That would be socialistic or too advanced a doctrine for our time.

Toward the close of his article, the writer becomes bold, and dares to say that "the remedy of the industrial trouble, in our opinion, lies in the direction of the co-operative principle." Now, who can tell how much that means? He says, "For the full financial success of that principle, the time may not be ripe. But, if only its humane and moral features were put into effect, even this much would go a long way toward allaying the disorder." True, and a pity it is true that anything could be considered "humane and moral" that robs the workingman of half his earnings or any portion of them. No doubt, proprietors are in favor of enterprises "where the obligations and services are mutual and the ends identical" in every sense but the financial. I am amazed that charity, and not justice, should be advocated by liberal editors as a solution of our present troubles. The few attempts at co-operation in New England at the present time are a mere make-believe, a blind. The junior editor of *The Index*, in speaking of one of these, says, "It will be watched with profound interest by thousands," when a nicer scheme for the perpetuation of capitalistic greed could not well be gotten up. When will "cultured Liberalism" cease to watch and pray, and lead in something beside theorizing? Co-operation would be as easy as standing an egg on end, if we but made up our minds to it. But how can we co-operate with wealth or capital in the hands of the few? In 1870, I joined some workingmen in New York City in trying to start a co-operative community in Colorado. We went to work in real earnest, but our means failed. The papers did report our meetings, but that was the extent of the help received from that rich metropolis.

Very consoling it is to have it said in conclusion that "it is not too much to ask that all capitalists and business men whatever should strive after some measure of philanthropy, should remember at least that there is a law of justice and a Golden Rule." No, no! Some measure will not do, however philanthropic; for what we want is science. As for the Golden Rule, what does it mean but the Rule of Gold? Tell us what is right and what is true, and don't put forward palliatives and makeshifts as the decrees of righteousness. The editor of the leading Republican daily of New Haven said to me, the other day, that he had no principle for the solution of these labor troubles excepting the Golden Rule, and proposed only to deal with each case as it came up. Yet the bulletin board of this paper is an invitation to riot, a goad to rebellion, because of the spirit or style of its announcements, which is wholly one-sided. All this talk about capital and labor being friends and allies is baby talk. The relation of the two is infinitely closer than friend or ally. Wealth is the child of labor. The title-deeds of this, as of past ages, stand for nothing.

T. W. CURTIS.

[Mr. Curtis's article contains some extraordinary statements, but it needs no other reply than the accidental one made by Mr. Blake in another column. —Ed.]

Says the Boston *Sunday Herald*: "When *The Index* and the *Congregationalist* agree that the Sunday newspaper has come to stay, it seems as if the friend and the enemy of the paper had become reconciled; but the illusion is dispelled the moment the two parties begin to say what they think. *The Index* suggests that there is a better way of maintaining public mor-

als than by boycotting it, and in this opinion the *Congregationalist* coincides; but here the two papers part company. *The Index* would have the clergy, if the Sunday sheet has come to stay, give recognition to the better class of these journals, and thus encourage them to become stronger teachers of social and personal morality. The *Congregationalist* has not a good word to say for any of them. The Sunday journal is classed with other things that are common and unclean. It is one of the evils that all good Christians must shun as they would avoid any other evil that is in the world. It does not like the boycotting that has been adopted at the West, because that is not effective. Neither is it in favor of legislation. It would have all decent people simply avoid the paper, and ignore it as they would any other evil. But, with the admission that it has come to stay, and that it has not been put down in England after fifty years of constant opposition, it seems like an impotent conclusion for the guardians of public morals to growl at it from afar, as a whipped dog slinks away from his enemy with a waning bark. If the paper is the evil that these parties claim that it is, it is their duty to do one of two things,—to wage active war against it or to make it useful in the moral education of the community. The *Congregationalist* proposes to do neither. It stands still, and simply barks at the Sunday paper with the same intelligence that a hound bays at the moon. It knows nothing of Sunday journalism, and doesn't want to know anything."

BOOK NOTICES.

POETS AND PROBLEMS. By George Willis Cooke. Boston: Ticknor & Co. 1886. pp. 332.

To the lovers and students of those three living master minds, Alfred Tennyson, John Ruskin, and Robert Browning, whose lives and works are made a careful study of by Mr. Cooke, this book will be read with much interest and pleasure. In his preface, the author disclaims all intention to play the critic in regard to these writers, because, he says (seeming to think that true criticism means fault-finding only), "I have found them true companions and guides, and the best of friends. I have written of them in a sympathetic spirit and with a desire to find that in them which is most worthy and most characteristic of their genius"; yet, in spite of this declaration, there is much genuine criticism, even to the extent of fault-seeing. One hundred and sixty-nine pages are devoted to Tennyson, ninety-three to Ruskin, and one hundred and twenty-one to Browning. In considering the characters of each of these, one section is given to a brief biographical sketch. Incidentally, also, the merits and demerits of many other poets and writers are dwelt upon and critically examined, such as Wordsworth, Keats, Swinburne, Rousseau, Goethe, Emerson, Carlyle, Mrs. Browning, and others. While Mr. Cooke treats in detail of the various works of the three principal writers, he does not quote extensively from them, thus wisely guiding readers to turn to the works themselves for corroboration or refutation of his views.

He defends Tennyson from the accusations of pantheism and of agnosticism, although he confesses that "too vague, perhaps, is the form Tennyson gives to his faith." "Science he knows in its large and truth-seeking spirit, but its mockery and its spirit of destruction he will not heed." He says he "has the gift of pathos and sympathy, but not the gift of humor," and that "he is the incarnate voice of cultured and refined England in his time."

Of Ruskin, he writes: "In the history of the art revival in England, the name of one man will appear as among the greatest of the causes leading to it. The greatest of art critics, John Ruskin, has taught the English the serious meaning of art, and in what manner it may contribute to the elevation and advancement of the noblest human interests." "To the revolutionary period Ruskin does not belong, either with his head or with his heart. . . . Even less is he to be ranked with the men of the present time of scientific enthusiasm, for at all points is he the critic and opponent of science in its evolutionary and agnostic tendencies." And he says, further, "No other religious teacher of this century has taught more that is wholesomely inspiring and intrinsically religious."

Browning he classifies, with Emerson and Carlyle, as an idealist of the highest type, and makes interesting comparisons between these three great thinkers. Browning, he says, "finds the soul to be that which

transcends all other facts and laws. To him, it is the one supreme fact." That is the one phenomenon he desires to study. To an investigation of it in all its many phases, he has devoted his life. Mr. Cooke is an ardent admirer of Browning: his greatest characteristic, he declares, is "light." "We accept him as a master." "He is an original force in literature, never an imitator, but one to arouse and stimulate all who come after him. He stands apart by himself as a poet. He had no forerunner, and he is likely to have no successor." "No English poet, unless it is Shakspeare, will yield so much of thought for the attentive reader as Browning." We have not space to quote further. In these days of "Browning" and other "societies," Mr. Cooke's book will be found full of interest to those interested in the writers whom he criticises. S. A. U.

DOMESTIC PROBLEMS: Work and Culture in the Household and the Schoolmaster's Trunk, containing Papers on Home Life in Tweenit. By Mrs. A. M. Diaz. Boston: D. Lothrop & Co. 1884. pp. 236. Price \$1.

Mrs. Abby Morton Diaz—the President and one of the originators of that excellent institution, the Women's Educational and Industrial Union—is, as an author, best known as the writer of such charming children's books as "The William Henry" and "Lucy Maria" Series, of *The Jimmy-Johns, Polly Cologne*, etc.; but, in this book, she has brought her bright wit and practical common sense to bear on the domestic problems which puzzle so many thinking housekeepers and would-be educators,—problems of everyday life, manners, and morals. The chief of these problems is thus stated in the opening words of the first chapter: "How may woman enjoy the delights of culture and at the same time fulfil her duties to family and household?" This question is not asked or answered in the interests of some few exceptional women. It is for the benefit of all classes of women alike, from the woman who takes in washing to the mistresses of large establishments. Mrs. Diaz does not treat these questions of woman's misdirected energies in housework, of ignorance in child-training, of economy in strength expenditure, etc., from a mere theoretical stand-point. Every page of her spicy book shows thorough practical acquaintance with all the details of housekeeping, and a sympathetic knowledge of all the impediments in the way of changing the present order of things. She wages a lively war against useless sewing, the too elaborate cooking of rich and unhealthful food, and especially denounces pie and cake making, one paper in "The Schoolmaster's Trunk" being devoted to a consideration of the woes of "The Slaves of the Rolling-pin."

This is, eminently, a woman's rights book; and Mrs. Diaz' caustic pen administers many a stinging rebuke to masculine ignorance or indifference to the needs of the women of their households, in helping them to overwork, in overlooking their intellectual cravings, or omissions in supplying them with equal opportunities with themselves for necessary recreation. Every reader will recognize the truthfulness of the many anecdotes with which she illustrates her points in the first of these papers, and the character-drawing in the schoolmaster's story will be recognized by every New Englander as being true to life. We wish this bright, breezy, common-sense book—with its many practical hints, suggestions, directions, for lessening home cares and enlarging woman's opportunities for culture—could be placed in the hands of every house-mother in the country,—yes, and of every young girl and every man as well. It could not fail to be productive of a more general thoughtful consideration of the woman question than has ever yet been given to it. S. A. U.

ALDEN'S CYCLOPEDIA OF UNIVERSAL LITERATURE. Volume II. New York: John B. Alden. 1886. pp. 478. Price 60 cts.

This second volume gives us short sketches of the lives and brief specimens of the style of over one hundred authors whose names begin with A. and B., nine of whom are women. In addition to the information given concerning noted writers in these volumes, the frequently choice extracts from their writings which accompany the sketches give an added value to the work. They are bound in cloth, in the convenient narrow form in which so many of Mr. Alden's publications appear.

The *Library Magazine* issued by the same publisher, which has hitherto been published monthly, now ap-

pears weekly in smaller form, but giving in its four numbers more reading matter of the same superior quality than it did in its larger sized monthly edition.

"MIND," the English quarterly review of psychology and philosophy, for April, contains a variety of essays of interest. The first is on "Psychology as Philosophic Method," by John Dewey; Prof. C. Lloyd Morgan has one "On the Study of Animal Intelligence"; Prof. G. S. Fullerton, on "Conceivability and the Infinite"; Prof. H. Sidgwick treats upon "The Historical Method"; J. M. Cothell has an interesting essay on "The Time taken up by Cerebral Operations"; Alfred W. Benn treats of "Habit and Progress," and discusses the views of Sir Henry Maine put forth in a recent work on Popular Government. There are several critical notices of recent works: J. C. Murray's "Handbook of Psychology," by Prof. R. Adamson; one on the peculiar philosophic and ethical views of a remarkable thinker, the late James Hinton, as elucidated in "The Larger Life"; "Studies in Hinton's Ethics," by Caroline Haddon, by Shadworth H. Hodgson; W. R. Sorley "On the Ethics of Naturalism," by T. Whittaker; A. Seth on "Scottish Philosophy," by the editor; and others on foreign works. There are many notices of new books and "Notes" and "Correspondence." Williams & Norgate, London, publishers.

THE contents of the *Freethinkers' Magazine* for April are as follows: "Thomas Paine," by Thaddeus B. Wakeman; "The Fall and Eternal Punishment," by A. B. Bradford; "Hon. Elizabeth Wright," by L. K. Washburn; "Religion," by J. William Lloyd; "A Modern Queen of Reason," by Uncle Lute; Extracts from Letters; "An Easter Rhapsody," original poem, by Courtlandt Palmer; "Atheism and Atheists," editorial; "The Nineteenth Century Club," editorial; "The Index," editorial; "Book Reviews"; advertising pages.

For *The Index*.

HUGO TO THE ROMAN PRIESTS.

King for king and man for man,
We have fought the noble fight:
Ye, the spectres of the night,
Ye, the foemen of the light,—
Here we put ye under ban!

Linked with prophecy and dream,
Sworn to think of ye as foes,
We defy your threatened woes,
Bear the thorns and pluck the rose,
Venture grateful on the stream!

King for king and heart for heart,
We have faced the curse of Rome:
In the name of love and home,
We have done with priest and dome,
And in freedom stand apart!

Spare, oh, spare the idle blow!
We have wandered now so far
Words of treaty are no bar,
And the subtle pleadings are
Lost within the distant flow!

Not from loss of faith we seek,
But from faith of faith; and trust
Lifts us from the blinding dust:
Deep is duty that is thrust
Into hearts that are not weak!

Every day must have its end,
Every battle once is done;
Yet hath life forever won,
Though the mists may hide the sun
For the moment while we bend!

Ye have said your better line:
Cease—oh, save—the broken strain!
We have championed ye in pain,
And we strike ye to regain
Freedom to the sacred shrine!

HORACE L. TRAUBEL.

WANTED, during the months of June, July, and August, the office of private secretary.
Address C. F. B., care of THE INDEX.

THE FREE RELIGIOUS ASSOCIATION

was organized in 1867. Though having its headquarters in Boston, it is a national organization, and has members and officers in various States of the Union. It has the following

CONSTITUTION.

I. This Organization shall be called the Free Religious Association, its objects being to promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history; and to this end all persons interested in these objects are cordially invited to its membership.

II. Membership in this Association shall leave each individual responsible for his own opinions alone, and affect in no degree his relations to other associations; and nothing in the name or Constitution of the Association shall ever be construed as limiting membership by any test of speculative opinion or belief,—or as defining the position of the Association, collectively considered, with reference to any such opinion or belief,—or as interfering, in any other way, with that absolute freedom of thought and expression which is the natural right of every rational being. Any person desiring to cooperate with the Association shall be considered a member, with full right to speak in its meetings; but an annual contribution of one dollar shall be necessary to give a title to vote,—provided, also, that those thus entitled may at any time confer the privilege of voting upon the whole assembly, on questions not pertaining to the management of business.

III. The officers of the Association shall be a President, twelve Vice-Presidents, a Secretary, an Assistant Secretary, a Treasurer, and twelve Directors. They shall be chosen by ballot at the annual meeting of the Association; and the President, Vice-Presidents, Secretaries, and Treasurer shall hold their offices for one year, or until their successors be chosen. The Directors shall be chosen for four years, and, at the expiration of that term, shall not be eligible for reelection until after two years. One fourth of their number shall be chosen annually; but, at the annual meeting of 1882, the full number of twelve shall be chosen in sections of three respectively for one, two, three, and four years. The President, Secretaries, Treasurer, and Directors shall together constitute an Executive Committee, intrusted with all the business and interests of the Association in the interim of its meetings. They shall have power to fill any vacancies that may occur in their number, or in the list of Vice-Presidents, between any two annual meetings. Six members of the Executive Committee shall constitute a quorum.

IV. The Annual Meeting of the Association shall be held in the city of Boston, on Thursday of what is known as "Anniversary Week," at such place and with such sessions as the Executive Committee may appoint, of which at least one month's previous notice shall be publicly given. Other meetings and conventions may be called by the Committee, according to their judgment, at such times and places as may seem to them desirable.

V. These Articles may be amended at any Annual Meeting of the Association, by a majority vote of the members present, provided public notice of the amendment has been given with the call for the meeting.

Officers elected for the year 1882-83:—

PRESIDENT.

WILLIAM J. POTTER, New Bedford, Mass.

VICE-PRESIDENTS.

OCTAVIUS B. FROTHINGHAM, Boston, Mass.
FELIX ADLER, New York City.
GEORGE W. CURTIS, Staten Island, N.Y.
EDWARD L. YOUNG, New York City.
FREDERICK SCHUENEMANN-POTT, San Francisco, Cal.
THOMAS WENTWORTH HIGGINSON, Cambridge, Mass.
ELIZABETH B. CHASE, Providence, R.I.
GEORGE HOADLY, Cincinnati, O.
NATHANIEL HOLMES, Cambridge, Mass.
ROWLAND G. HAZARD, Peacedale, R.I.
BERNHARD FELSENFAL, Chicago, Ill.
ANNIE L. DIGGS, Lawrence, Kansas.

SECRETARY.

F. M. HOLLAND, Concord, Mass.

ASSISTANT-SECRETARY.

Miss A. A. BRIGHAM, Boston, Mass.

TREASURER.

JOHN C. HAYNES, 451 Washington St., Boston, Mass.

DIRECTORS.

Four Years.

FREDERICK A. HINCKLEY, Providence, R.I.
W. A. RUST, M.D., Boston, Mass.
Mrs. PHEBE M. KENDALL, Cambridge, Mass.

Three Years.

CORNELIUS WELLINGTON, Boston, Mass.
Miss MARY F. EASTMAN, Tewksbury, Mass.
FRED. W. GRIFFIN, Concord, Mass.

Two Years.

Mrs. CLARA M. BISBEE, Dorchester, Mass.
J. A. J. WILCOX, Chelsea, Mass.
D. G. CRANDON, Chelsea, Mass.

One Year.

B. A. BALLOU, Providence, R.I.
BETH HUNT, Springfield, Mass.
Mrs. ANNA GARLIN SPENCER, Florence, Mass.

The office of the Association is at 44 BOYLSTON ST., BOSTON (next door east of the Public Library), where is also the publication office of *The Index*.

All letters pertaining to the business of the Association (payment of membership fees, orders for its publications, etc.) should be addressed to "Free Religious Association," at the office.

Communications intended specially for the Secretary, as well as his personal correspondence, should be addressed to him at CONCORD, MASS.

Digitized by F. M. HOLLAND, Secretary F.R.A.

POPULAR BOOKS

Sent by Mail Postpaid at
PUBLISHERS' PRICES.

ANY BOOK in the subjoined List, or any other OBTAINABLE BOOK, that may be desired, will be forwarded as promptly as possible, on receipt of orders accompanied with the cash.

SPECIAL RATES will be made with persons or libraries desiring any large number of books.

Orders are respectfully solicited from all friends of THE INDEX.

We have two complete sets (12 vols. each), of Carlyle Works, library edition, cloth, gilt tops, which will be sold for one-half price, \$7.50 per set. Also, one set of Dickens' Works, 15 vols., illustrated, library edition, cloth, gilt tops, which we will sell at one-half price, \$7.50.

The idea can never be accepted in this country that a given number of laborers may, by banding themselves together in a secret union, acquire the right to a monopoly of any form of service. It is essential that all laborers shall have the privilege of accepting employment, and that employers shall be allowed to hire and discharge them, regardless of all tests but those of personal fitness. A laborer has undoubted right to quit his place for reasons of his own, if he has not agreed to stay for a definite time; but, when he quits, he is forbidden to say that another man shall not have the position, or to injure the property or business of the employer, in case such other man shall be hired. The obligation of capital to give labor a fair chance is not more distinct and imperative than the duty of one kind of labor to deal justly and equitably with labor of all other kinds.—*St. Louis Globe Democrat.*

Take no substitute for the GENUINE
H. T. MARSHALL'S
Patent Adjustable Lace Congress.

THE COMING SHOE.

Does not draw the foot like ordinary Congress. Has the stylish appearance of a Lace Boot, and is more comfortable to a full in-step or ankle. Convenient as any Congress in putting on. Requires no lacing, when once adjusted. Manufactured of best material, in 6 widths and half sizes, insure a perfect fit and full satisfaction.

If your dealer does not have them, write me, enclosing careful measurement of foot, giving size and width of shoe worn, with \$4 for machine-sewed, \$5 for hand-sewed welt, \$6.50 for all hand-sewed; and I will send you promptly by mail, registered, the best shoes made.

Of the Temple Adath Israel, Boston, with an Introduction by **MINOT J. SAVAGE.**
12mo. Cloth. Price \$1.50.

For sale at THE INDEX Office.

CONGRATULATORY FRIEND: "I hear you have received a call to a prominent church." *Rev. Mr. Pemberton:* "Ah! I didn't so regard it." "Why, I thought they offered you \$1,000 salary?" "That wasn't a call. It was a mere intimation." "Oh! And what would you consider to be a call?" "Treble the salary, the parsonage included."

REFERRING to the abolition movement in his recent address at Washington, Frederick Douglass said he "had no doubt but that in a few years the Christian Church would claim the credit of initiating this great moral reform. So far from the Church having favored this reform, it was on the other side. Slavery and Christianity seemed to be on very friendly terms. The church bell and the slave auctioneer's bell chimed together. The procession to the prayer meeting and the procession over the long bridge to the New Orleans market went on at the same time. In the earlier years, however, the Churches were opposed to slavery. The Baptists, the Presbyterians, the Methodists, and the Quakers one hundred years ago lifted up their voices against this traffic; but, when the abolition movement began, the Churches were silent."

PROF. DAVIDSON'S lecture on "Bruno" is for sale at *The Index* office. Price 5 cents; 20 for 50 cents.

HUSBAND'S CALCINED MAGNESIA.—Four First Premium Medals awarded. More agreeable to the taste and smaller dose than other Magnesia. For sale in bottles only, with U.S. Government Registered Label attached, without which none is genuine, at druggists and country stores, and by **Thomas J. Husband, Jr., Philadelphia, Pa.**

CHEAP RADICAL TRACTS!

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 5 cents; 30 copies, \$1.00.

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 3 cents; 20 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 5 cents; 30 copies, \$1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extraneous.* Price 5 cents; 30 copies, \$1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 5 cents; 30 copies, \$1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 5 cents; 30 copies, \$1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 3 cents; 20 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 3 cents; 20 copies, 50 cents.

Ampeachment of Christ
No. 9.—**"The God of Science,"** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 5 cents; 30 copies, \$1.00.

No. 10.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 5 cents; 30 copies, \$1.00.

No. 11.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 3 cents; 30 copies, 50 cents.

No. 12.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 5 cents; 30 copies, \$1.00.

No. 13.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 5 cents; 30 copies, \$1.00.

Address **THE INDEX,**
44 Boylston Street, Boston, Mass.

CURRENT TOPICS.

BY B. F. U.

MRS. CARRIE B. KILGORE, of Philadelphia, has been admitted by the Supreme Court of Pennsylvania to full fellowship at the bar. She can now practise before all the tribunals of the State.

A BALTIMORE paper states that a movement has been set afoot to establish in that city a Society for Ethical Culture, similar in its aim and purposes to the organizations in New York, Philadelphia, and Chicago.

A LARGE meeting of pit-brow women was recently held at Brynn, a colliery village near Wigan, to resist the proposed legislation to prevent the employment of women at pits. Sympathetic letters were read from a large number of people. The Earl of Crawford and Balcarres, alluding to the objections to the clothing worn by pit girls, said they might be dismissed without scruple as the "senseless clamor of ignorant prudes, who, if left alone, would probably put a frill round the ankles of their kitchen table."

GRANT ALLEN has this to say of Boston in his novel, *Babylon*: "Boston has worn itself out. The artificial centre of an unnatural, sickly, exotic culture, ever alien to the American soil, it has gone on studying, criticising, analyzing, till all the vigor and spontaneity it may ever have possessed have utterly died out of it from pure inanition. The Nemesis of sterility has fallen upon its head in the second generation. It has cultivated men, fastidious critics, receptive and appreciative intellects by the thousand; but of thinkers, workers, originalities, hardly now a single one." Too bad!

ACCORDING to the *Woman's Journal*, the vote for the municipal woman suffrage bill in the House of Representatives this year is the most favorable to suffrage since 1879, being 77 yeas to 132 nays, including pairs. In 1884, for the same bill, it was 61 yeas and 155 nays, including pairs. In 1885, for the same bill, it was 68 yeas and 137

nays, including pairs. This is a gain in the affirmative vote of 9 votes over 1885, and of 16 votes over 1884. It is a falling off in the negative vote of 5 votes since 1885, and of 23 votes since 1884. A further change of 28 votes from nay to yea would be a majority. This change the suffragists hope soon to accomplish by holding suffrage meetings and organizing suffrage leagues in the representative districts. There is slow but steady gain from year to year. Woman suffrage, as a rule, is strongest in the country towns. In view of these facts, the woman suffragists naturally feel cheerful and confident.

THE Supreme Court of the United States has decided that the San Francisco laundry ordinance, prohibiting the carrying on of a laundry in a wooden building without the consent of the Board of Supervisors, is invalid under the fourteenth amendment and the treaty with the Chinese government, made in 1881. It seems that the anti-Chinese party in the city made use of the supervisors to hasten the expulsion of the Chinese. The two hundred Chinese who applied for permits were refused; while, to the eighty white men who so applied, laundry licenses were granted. Chinamen were arrested for violating the ordinance. Then the Chinese brought suit against the sheriff of the city for their arrest. The State courts refused a *habeas corpus* motion in behalf of one of the arrested Chinamen, who then appealed to the federal courts. The United States Supreme Court, in declaring the discrimination against the Chinese illegal, says, "The conclusion cannot be resisted that no reason for it exists except prejudice and hostility to the race and nationality to which the petitioners belong."

THE popular belief that snakes have the power to charm birds is evidently without foundation in fact. When encounters are seen between snakes and birds, the bird is generally trying to frighten the snake from her nest, or to punish it for its trespass and larceny. A writer in the *Scientific American* declares that a snake "has no more power to charm a bird than a rabbit has to play the fiddle." After referring to the courage of birds in defending their nests, this writer says: "A bird's confidence of flight makes her rash in regard to snakes. She sees a rattlesnake near her nest, and at first takes wing, but, on observing the lethargic quality of her opponent, proceeds to sit on a convenient twig and scold. Meanwhile, the snake has lazily invaded the nest. Having exhausted all the profanity she knows, and emboldened by the snake's sluggishness, the bird comes nearer, wings outstretched and quivering, feathers ruffled, and beak open,—all symptoms of anger, not fear. The snake slowly gathers for a spring, and remains perfectly still. Each moment of his inaction serves to make the bird more aggressive, and tempts her nearer. At last, the dead-line is reached. There is a lightning-like straightening of the hideous folds, and the poor little misguided warrior feels the stab of those dreadful needles whose touch is death. If she had had as much horse-sense as pluck in her pretty pate, she would

have taken the matter philosophically, and gone off and laid more eggs, and laid them in a high tree, instead of staying for a row. But ladies are the same the world over, whether in feathers or not. One thing is certain: when a snake captures a bird, he does it less by his own prowess than by the natural tomfoolery of the bird; and he certainly effects nothing by 'charming.'"

"THE SCIENCE OF REVOLUTIONARY WARFARE, an Introductory Handbook to the Preparation and Use of Nitro-glycerine, Dynamite, Gun-cotton, Bombs, Poison, etc.," is the title of a little work of seventy-four pages written by Herr Most, printed in German, and issued by "The International Zeitungs-Verein," New York. "As to the importance of explosives for the social revolution," Most says, "nothing needs to be said in these days." Directions are given how to construct a dynamite cartridge, "when the purpose sought is the shattering of a wall against the base of which the bomb may be laid," and also "when there is an intention to cause a destructive action all round, as inside a house or in the midst of a large number of persons." After describing a bomb which blew a large stone block resting on it into twenty pieces, and the pieces from ten to fifteen feet in the air, Most exclaims, "What a glorious result such an explosion as this would have had, supposing it had taken place under the table of a banqueting party, or supposing the bomb had been thrown through the window upon that table!" Various appliances are described as effective in causing incendiary fires. "A hundred men provided with these weapons," says the author, "and scattered in different parts of a city, could do more in time of a rising than twenty batteries of regular artillery." Attention is also given to poisoned weapons. The best poison known to him he says is "curari," with which the South American Indians tip their arrows. He recommends that daggers be dipped in oleander, since, introduced into the system, it produces blood-poisoning. "The best of all poison," he says, "is the poison of the dead human body." He appeals to workmen everywhere to arm for the struggle which is imminent. "Good revolvers, daggers, poison, and conflagrations are destined to render important services in the moment of rebellion. But above all are nitro-glycerine, dynamite, hand grenades, and explosive missiles of all kinds adapted to stand to the proletariat in the stead of artillery, and to spread astonishment, confusion, and panic in the ranks of the enemy." The last number of Most's paper, *Freiheit*, in an article on "The Bomb in Chicago," says that five hundred revolutionists, each provided with half a dozen bombs and working in concert, could produce such panic in a great city that a small number of determined men might get possession of all commanding points. "The bomb in Chicago," this anarchistic sheet continues, "was legally justified, and in a military sense excellent. All honor to him who produced and made use of it!" A man who can write in this style must be a moral monster and needs to be carefully watched.

RELIGION FOR HARVARD.

In a recent number of the *Boston Advertiser*, which has long been recognized popularly as a sort of semi-official organ of Harvard College, there was a sketch of the new plan which the Overseers are said to have concocted for improving the religion of the Harvard students. The plan has at least one merit: it is a courageous innovation upon time-honored customs. Assuming the *Advertiser's* sketch to be correct, the first feature of the plan that will strike attention is that it puts the religious care of the students into the hands of a syndicate, representing various religious denominations. At the head of this body is to be placed the Plummer Professor of Morals and Resident Preacher of the College, to which office, vacant since Dr. A. P. Peabody's resignation, it is proposed to appoint Rev. Francis G. Peabody, one of the professors of the Divinity School. He is to be vested "with functions resembling those of a university dean in England." The other members of the syndicate are to be "five well-known ministers of the gospel," who will be assistant preachers and pastors, and each of whom, in turn, is to reside six weeks at the college for conducting religious services. Among those named for these places are "Rev. Drs. Phillips Brooks, E. E. Hale, Alexander McKenzie, and Bishop Huntington." The *Advertiser* continues:—

They, together with the Resident Professor, will have charge not only of the daily chapel service, but also of the Sunday service. They will have frequent conferences, and, it is understood, will have charge of the whole direction of the religious education of the students. All questions of attendance and of instruction in such matters will be determined by them. . . . The chapel service is under examination, and it is hoped to make the new service a great change in such worship in this country by throwing the chapel open to the public and by expending a great amount of money.

The prayer petition is in the hands of a committee of three, of whom the Rev. Drs. Brooks and Hale are members; and these will decide on the various plans submitted, among them one to have the requirements of each undergraduate consist of fourteen hours per week, prayers to count as a two hours' elective. It is hoped to make the chapel service as attractive as the famous Christ Church service at Oxford.

Provided that the college is under obligation to furnish any religious services for the students, it is certainly only fair that there should be a wider representation of religious views than heretofore among those chosen to conduct the services. But this representation, certainly, should not be limited to the three sects of which the preachers above named are members. If the design is to consider the denominational connections and religious views of the students, it may be just that Unitarian and Episcopalian preachers should be given the larger part of the time, since it appears that these two sects have a considerable majority of the students. But this reasoning makes it also only just that other denominations should have their proper apportionment in the Sunday preaching, and that lecturers outside of all the Christian sects, like Dr. Felix Adler, William M. Salter, Moncure D. Conway, should be occasionally invited to address the students. If the religious beliefs of the students or their parents are to be regarded, the proposed syndicate is not large enough to cover the demand of the argument. To make it large enough may, perhaps, be impracticable. And this line of reflection may lead to the conclusion that the innovation, if made perfectly just, would be unnecessary. All kinds of religious beliefs are now represented by societies in Cambridge or Boston; and why is it not wiser to let the students connect themselves for the satisfaction of their religious wants with

any of these societies, according to their own or parents' preferences?

Two other points have attracted our attention in this new scheme for reviving religion at Harvard. First, the chapel service is to be made apparently very ornate and costly; not costly to the students,—it is to be free, of course, to them,—but costly to the college. It is said that "a great amount of money" is to be spent upon it. Now, without doubt, by spending a great amount of money, the college can furnish a very fine musical service that shall daily draw a large audience. To those having musical taste or appreciation, such a service would present great attractions. To those void of the musical temperament, it would not mean much. But we doubt the wisdom of thus identifying to the minds of any of these young men a service of so-called worship as a costly luxury. That is not the kind of religious service which the greater part of them will be called to have anything to do with in after life. Religion has one aspect in which it appears as a fine art, entrancing the æsthetic sensibilities. It is an expensive art; and the bane of religion, where wealth and culture are combined, is that it tends strongly to this kind of expression, and hence to separation from the common experiences and duties of life. Young men in colleges need a stronger religious diet than fine music and chanted prayers will give them. Let them rather be instructed in the working religion of simplicity, truth, purity, devotion to right and duty. The remark that the new chapel service is to cost "a great deal of money" is, indeed, humorously suggestive of the old college phrase, when students were planning a specially fine entertainment of any sort, that they were going into it "utterly regardless."

But another point, and the most novel of all, in the proposed scheme of religious service for the college, is the idea of making attendance at daily prayers count on the scale of college work the same as an elective study of two hours each week. This feature is not very clearly elucidated, and has not yet been reported upon by the committee of the Overseers. But, as we understand it, it means that compulsory attendance at prayers is to be abolished. This much (if this part of the plan is adopted) will be conceded to the petition of the students and to a rational and serious view of the significance of the service. Yet there seems to be a fear that, if it be left entirely to their own free option, not many students will attend the prayers; and, therefore, the proposition is that something in the nature of a bribe shall be offered them to induce attendance. Every student is required to make up a list of studies which shall give a certain number of hours in the recitation room each week. Some of the studies are called "easy electives,"—that is, they demand little preparation, or the instructors in them are easy with their classes; and some of the students tend to this kind of electives, not having come to college for the special purpose of study. Now, it is proposed that "prayers" shall be regarded as a two hours' elective, which a student may choose at the beginning of a year as he chooses mathematics or Greek or chemistry; and, as no preparation at all is required for "prayers," it will be a particularly "easy" elective, and thereby, it appears to be assumed, will attract a large number of students. Only those studious-minded young men who go to college for work or are conscientiously opposed to set times for prayer would be likely to choose mathematics or German instead of "prayers"; and these, probably, have least need of the prayers, and so there is no occasion to ensnare their attendance: some of them may attend even without the

bribe, and take the studies besides. But, if they were to choose to study the calculus or Sanskrit while their fellows go to pray, why, let them do it! They would doubtless be few, and little harm would come of their studious zeal. It must be in some such way as this that those who have proposed this solution to the college prayer-problem have reasoned. It is a shrewd device; but we much question whether people who have been educated with the old fashioned notion that religion covers all studies and all conditions of life, and is not an elective pursuit to be adopted, say, instead of physics or the languages or algebra, will be satisfied with it.

While the Overseers are considering this matter of religion at Harvard, and are arranging for an attractive, æsthetic chapel service regardless of cost, we would earnestly commend to their attention, and to the attention of the distinguished body of clergymen who are to have charge of the religious education of the students, whether something may not be done to break up the habit of gambling, which is said to be growing to alarming proportions in the college, and for reducing other vices there to more moderate limits. A conspicuously painful illustration of the gambling evil has lately been brought to light. A beautiful chapel service may draw a crowd, but the religious revival that is to tell must be on the moral side.

WM. J. POTTER.

THE GERMAN UNIVERSITY.

I.

The German university is fairly agreed upon as being the standard university; and its plan has been imitated or partly adopted in more than one instance in other countries, especially here in America, yet with apparently less success than was hoped for. I will try to explain the merits of a German university, give at least in outline its historic origin, and point out its conditions in the present age. This done, you will see at once how far it will be desirable to introduce a similar system into this country, and what basis is needed for such an institution to rest upon.

The first German university was founded in 1348, by the Emperor Charles IV., King of Bohemia, in Prague, after the model of Italian universities. The name "university" designated collectively the scholars or professors and students (*universitas magistrorum et scholarium*). It was first adopted in the thirteenth century, and was not till later interpreted as university in the sense of universality of knowledge. The Italian universities grew out of scientific schools such as were founded in the eleventh century in Italy. There was a medical school in Salerno, and juridical ones in Ravenna, Padua, and Bologna (Lat. Bononia). Simultaneously, a famous theological school flourished in Paris. The latter was the prototype of the English universities. Accordingly, the sciences then flourishing were three,—(1) Theology, (2) Jurisprudence, (3) Medicine. Instruction in each science was given by a number of professors, who, as a body, were called a faculty; and each faculty had the right of creating any one whom they considered worthy of the honor a doctor of their faculty. A kind of annex was formed by those who devoted themselves to the Liberal Arts. Under this heading, all kinds of studies were comprised, the foremost among which was Philosophy. So long as the members of the Liberal Arts were not yet fully recognized as equal to the others, they had no right of creating doctors. The degree they conferred was that of Master of the Liberal Arts (*Magister Liberalium Artium*). Philosophy, however, was by and by accepted as the general name of a fourth faculty, equal in right with the

others; and when, in the era of the Renaissance, the Greek classics were revived, Classical Philology, or, as it was usually called, *humaniora* (soil. *studia*), remained its chief branch until the growth of natural science made other subjects, as Chemistry, Physics, etc., equally prominent, and led in some universities (for instance, in Tübingen) to a division of the philosophical faculty.

Each faculty chose annually a dean, or *Decan*, who had to preside, and take care of the faculty interests. All four faculties together formed the university, and a senate of all ordinary professors elected the rector of the university. An imperial charter granted to the University of Prague the rights of a community in such a way as to bestow upon the rector, during the time of his magistracy, the dignity of Prince (his official title was and is still "Your Magnificence"), and allowed their members to be subjected exclusively to a judiciary of their own. The same rights, with now and then very slight modifications, were conceded to all other universities which, in the course of the following centuries, were founded in different German States: Vienna, in 1365; Heidelberg, 1386; Cologne, 1388; Erfurt, 1393; Leipzig, 1409; Rostock, 1416; Löwen, 1426; Greifswald, 1456; Freiburg in Baden, 1457; Basel, 1460; Ingolstadt, 1472; Mayence and Tübingen, 1477; Wittenberg, 1502; Frankfurt-on-the-Oder, 1506; Marburg, 1527; Königsberg, 1544; Jena, 1558; Helmstädt, 1575; Altdorf, 1578. Those founded in the sixteenth century were strongly biassed by the spirit of the Reformation. Independent of the authority of the pope, they influenced also the older Catholic universities to such an extent that all ecclesiastical ascendancy was ousted; and the Jesuits, in the hope of Romanizing science, were obliged to found new universities in Bamberg, 1648; in Innsbruck, 1672; and Breslau, 1702. Their effort to regain for the Catholic Church the lost positions was fruitless.

The rights of the universities, as granted in the fourteenth century, have been handed down and faithfully preserved from generation to generation, until recently most of the privileges, especially that of a special judiciary, have been abolished. Yet still, to-day, the Rector Magnificus, at least in some universities (for instance, Leipzig), enjoys, during the time of his office, the dignity of Prince, equal in rank with the German sovereign sires. And, on festival occasions, you may, even in our present time, see him clothed in his princely robe of red purple, fringed with royal ermine.

The Italian high schools, the prototype of German universities, were founded in the most glorious time of modern Italy, when, in the league of the free cities of Lombardy, for the first time liberty dawned in even a fairer prime than it had appeared in the era of the Scipios of yore. Unfortunately, it was for too short a time. And, with the political liberty, the glory of the Italian universities dwindled. Nevertheless, the work they had begun was taken up by their descendant institutes in Germany; and the most precious heirloom which they inherited was their so-called "academic liberty,"—i.e., freedom to teach and to learn,—a fair and valuable reminiscence of the republican communities in which the first universities were founded. The German universities accordingly have been *de facto*, and were always considered, scientific republics; and, although there was much political oppression in Germany, no emperor or prince or bishop ever dared to infringe the academic liberties of German universities. There are only a few contrary instances, which occurred under rather exceptional conditions. And we are sorry to state that most of them happened in the nineteenth century. I refer to the removal of the

seven professors in Göttingen, among whom was W. Grimm, during the time of the so-called demagogic movement, and the expulsion of the German professors in Kiel, who had taken an active part in the attempt to free Holstein from the Danish yoke.

The practical consequence of this freedom was the Reformation, which would have been forever impossible but for academic liberty. It was at the University of Wittenberg, in Saxony, that Luther boldly preached and for the first time successfully attacked the abuses of the Roman Church. The students, or, as they then were also called, the academic citizens, were the first to hail the brave declaration of the frank monk who dared to utter the truth. Luther was a professor at the university, and his students clove to him. And, when he publicly burned the papal bull of excommunication, they led him in triumph to the pyre, and gladly kindled the fagots. It was a brave deed in an age when, in Spain and other countries, autos-da-fé in *majorem Dei gloriam* were burning; and such a thing was possible only in a republic,—in the scientific democracy whose members were proud of their academic liberty. It was in this bracing air that religious freedom thrived; and it, in turn, was the seed of political freedom, which, if not yet fully gained, will undoubtedly in its season spring from it.

When Germany was at the mercy of a formidable conqueror,—I mean when Napoleon I. had broken the military power of both Prussia and Austria,—the spirit of independence began to stir first in the German universities. It was a German professor, the philosopher Fichte, who in the auditory of the University of Berlin, under the very bayonets of the French enemies, dared to deliver his orations addressed to the German nation (*Reden an die deutsche Nation*). His audience consisted chiefly of students, but his words were loudly echoed throughout Germany; and, in this time of humiliation and dejection, he succeeded in elevating and strengthening the discouraged minds of his countrymen. The Germans became conscious of the treasure which is hoarded in their nationality like a spiritual *Nibelungenhort*,—a treasure which cannot be consumed by either moth or rust, and will never be taken by any foreign usurper or domestic tyrant. And, when Germany thus became aware of her mission in history, she regained strength and confidence. This was the way to conjure up the dormant spirit of liberty. And the nation recovered, in spite of all difficulties and odds, her political independence. Fichte's orations to the German nation are a classical work of the highest standard, and deserve a place beside Demosthenes' *Philippica* and *Oratio pro Corona*. They are a grand appeal to the idealism of a downtrodden people, and prove how powerful an agent the ideal is. And this purest expression of a warm and deep-felt love of liberty was spoken—how could it be otherwise?—in the hall of a university. On the altar of academic liberty, Germany kindled the torch of war for her political freedom.

The grand idea of a free and united Germany was started for the first time in the universities. But the German princes became alarmed at the enthusiasm which threatened to shake their thrones, and thus, for the first time, interfered with the academic liberty. All the hopeful blossoms were nipped in the bud, and many youths either suffered for their idealism in dungeons or were exiled. Some of them found a new home here in this country. Let me only remind you of a man like Franz Lieber, and you will confess that America reaped the advantages of the persecutions in Europe. In the year 1848, the sparks that had smouldered so long in the ashes blazed forth in

the flame of a Revolution. The universities remained all the while centres of these movements, which, although suppressed by violence, could never be entirely extirpated. The triumph of the reactionary powers only served to lead other heroes of liberty to America, among whom you find names like Carl Schurz, Friedrich Kapp, and Carl Heinzen. The universities were always the last stronghold of liberty, a kind of redoubt from which again and again the genius of independence aspired to conquer the whole field. We are well aware that Germany is far from having attained the ideal; and, at present, things seem to be worse than ever before. Nevertheless, the holy flame is not yet extinguished; and academic liberty is still respected.

PAUL CARUS.

PAPAL INDULGENCES REVIVED.

We are verging toward the close of the nineteenth century, and a glorious century for material and mental progress it undoubtedly has been. There is no better evidence of this than the almost universal uneasiness and dissatisfaction with social affairs that prevail, together with the general disposition to look forward for amelioration, to be desirous *novarum rerum* instead of sighing for imaginary "good old times." Still, there exist appalling incongruities, the presence of which might well shake the philosophy of an optimist. I have just put aside a publication which has engaged my attention for a good part of the morning. It is called the *Homeless Child and Messenger of St. Joseph's Union*. I have noticed the advent of this annual for several years, but have not given it much attention before to-day.

It has long been the proud but most unholy boast of the Roman Church that she never changes. Now, I had been led by some articles from the pen of Cardinal Newman, which appeared in the *Nineteenth Century* two or three years ago, to think that this boast of haughty ignorance was no longer true; but, so far as any conscious change is concerned, I was probably mistaken. Papal indulgence was the rock on which the Christian Church split three hundred and fifty years ago; yet, on this same question of indulgence, Rome has not altered one jot or tittle of her pretensions, as the extracts given below, from the *Messenger of St. Joseph's Union*, whose forty-eight columns are filled with similar stuff, disgusting to the freely thinking mind, abundantly prove:—

Papal indulgence granted by Pope Leo XIII. to all the members of St. Joseph's Union: Our Holy Father, Pope Leo XIII., in a brief dated Feb. 27, 1883 (and which, by a happy coincidence, reached the office of St. Joseph's Union through the ordinary mail on March 19, the feast of St. Joseph), graciously grants, *exclusively and forever*, to the members of St. Joseph's Union, established by Father Drumgoole in the year 1876, an indulgence of four hundred days, which may be gained daily by the member who shall recite twice a day, with at least contrite heart and devotion, the following prayer. [Then follows a prayer of thirty-five words to Sts. Mary and Joseph. The brief also states that two hundred days' indulgence may be gained by members who recite, with at least contrite heart and devotion, the prayer but once a day.]

We hope that the members will never forget to pray most fervently for our Holy Father, Pope Leo XIII., in return for this distinguished mark of his approval and sanction of St. Joseph's Union, and for granting to them *forever* the proof of his truly paternal solicitude for the increase of charity toward homeless and destitute children, and for the spiritual welfare of all the members of St. Joseph's Union, living or dead.

Such is the leader, well displayed with sub-heads and black-letter type. It reminds one of

Tetzel's harangues,—not so loud in rhetoric, but hardly less presumptuous in matter.

On the next page, the edifying statement is made that, during the ensuing year, 7,872 masses will be said for the members of the Union according to the "intention" of each; and the members are exhorted to remember, in forming their intention, the poor souls in purgatory. Apropos of this new world discovered by the priests in the gloom of the Dark Ages, the readers of the *Messenger* are informed that "the duration of the period of confinement in purgatory is probably much longer than we are inclined to think." We find by the revelations of Sister Francisca, of Pampeluna, that the majority of the souls in purgatory, with whose sufferings she was made acquainted, were detained there for a period extending from thirty to sixty years; and, as many of those of whom she speaks were holy Carmelites, many of whom had even wrought miracles on earth, what must be the fate of poor worldlings (!), who seldom think of gaining an indulgence for themselves or their departed friends?

"As the silver jingles in the box,
Lo! the soul from Purgatory pops,"

or like, were the catchwords used at Jutterbock.

To call Father Drumgoole a modern Tetzel would be an injustice. The goldsmith's son, who deluged the German States with papal passports to heaven in 1517, was a ribald harlequin; while Father Drumgoole is a pure and right-intentioned man. It is, however, the simple fact that he assumes to traffic in the grace of God. Therefore, he cannot escape being associated by the informed mind with his infamous predecessor.

The masses are divided into groups ranging from two hundred to two thousand, well calculated to meet the various "intentions" of the members. Five hundred are said for the solicitors of the Union "and for each one of those who aid them to obtain subscribers." As the price of a mass is one dollar, for those who value that kind of stock, it is a paying business. Be sure every good Catholic will be anxious to solicit at least one subscriber: one is as good as a thousand for the purpose of obtaining the indulgence.

The longer I contemplate the prospectus of St. Joseph's Union, the more profound becomes my admiration for the genius of its founder. Some one has said that, if the first Napoleon were alive now, he would be a great railroad king. If Ignatius Loyola were alive now, he might well employ his genius in emulating Father Drumgoole. St. Joseph's Union is in its infancy, yet its ramifications are already world-wide. Among its members are the present pope, the hierarchy of Ireland, Canada, and the United States, and priests in all parts of the world, as well as hundreds of thousands of lay members. "The object of St. Joseph's Union is the temporal and spiritual welfare of the subscribers of the *Homeless Child*," so says its organ; but this is the language of disguise, as appears from perusal of the paper itself. The feature, *ad captandum vulgus*, is the proposed rescue of the poor souls in purgatory; and these beneficiaries cannot be subscribers to the *Homeless Child*. The head of the household receives a copy of the *Messenger*; but, in sending his membership fee, he remits for his household, the absent and the dead. To illustrate, a gentleman of my acquaintance renews his subscription every spring; and, at the same time, he sends in a long list of names,—his family, friends, and dead relatives,—with the money necessary to secure for them all the benefit of the indulgence.

When we consider the value the pious Catholic attaches to a single mass as a means of salvation,

—it often being the first provision of his will that one or more masses be said for the "repose of his soul,"—we may realize how great the patronage of St. Joseph's Union.

The maintenance of homes for destitute children is in itself a most worthy object, although it is deplorable to think what moral deformities will be turned out by the institutions under the patronage of St. Joseph's Union. But it is the manner of obtaining it, not the charity, that we now regard. It will be remarked that the object of Tetzel's advent was the raising of funds to defray the building expenses of the splendid Basilica of St. Peter's,—not an unworthy notion. Unfortunately for its promoters, the temporal importance of the scheme was too apparent.

It would hardly be fair to call the protection of homeless children the ostensible object of St. Joseph's Union, when the following periods occur in the *Messenger*:—

Most of the masses mentioned above (except the masses said by Father Drumgoole himself) are said by poor bishops and priests in the United States and Canada or by missionaries in Africa and many other places throughout the world, all of whom are dependent more or less on *Intentions* for their support. Our Most Rev., Right Rev., and Rev. friends every year acknowledge, in the kindest terms, the receipt of our *honorarium* of one dollar for each Mass, and we hereby return them our very sincere thanks for their warm wishes and prayers for the success of St. Joseph's Union; and we feel deeply grateful to those good missionary priests who have from time to time said extra Masses for the spiritual and temporal welfare of the subscribers to the *Homeless Child* and for the most needy souls in Purgatory. Indeed, hundreds of Masses have been said in this way during the past year.

Exalted author of "Armageddon," iconoclasm "summa ope niti decet."

H. F. BARNARD.

THE ETHICAL CULTURE SOCIETY'S CELEBRATION.

The Society for Ethical Culture in New York has just had a three days' celebration of the tenth anniversary of its founding, and may well congratulate itself on the interest manifested and the good exhibit made of its work. The series of exercises, which were finely planned and most successfully executed, began on Saturday, the 15th inst., with an exhibition of the work done in the Kindergarten and the Workingman's School. As is well known, these two departments make together a carefully planned system of industrial education, in which, however, the material product of the labor is always subordinated to the development and training of mental faculty. There are about three hundred and fifty pupils in the aggregate, their ages grading from three to fourteen. This is wholly an institution of charity, the boys and girls coming from the families of the poor. The exhibition on Saturday must have been very satisfactory to the benevolent sustainers of the work.

On Sunday, the 16th, at 10.30 A.M., the society and its friends convened in a grand assembly in Chickering Hall. Every seat was occupied, and many persons stood through the entire programme. Excellent music gave variety and spirit to the occasion. Delegates were present from the sister societies in Chicago and Philadelphia; and these, with other invited guests, sat upon the platform. Addresses were made by Mr. Salter of Chicago, Dr. Frances Emily White of Philadelphia, Mr. W. L. Sheldon (who may be said to represent an Ethical Society soon to be formed at St. Louis), and by the senior editor of *The Index*, who endeavored to voice the cordial sympathy and appreciation felt for the Ethical Movement outside of

its immediate ranks. Mr. O. B. Frothingham also sent by letter a brief word of hearty sympathy. A very clear and interesting statement of the origin and steady growth of the New York society was read by its secretary; and, lastly, the honored leader and inspirer of the movement, Dr. Adler, made a burning speech right from his heart and conscience in response to all that had been said and done. He disclaimed, however interesting and delightful was the occasion, that it was a time for "self-laudation or self-congratulation," and declared rather that the significance of the celebration to him and the society was encouragement and incentive to larger and more consecrated efforts and higher achievements. Only a beginning had been made, of which the distant end could not yet be seen.

But the most effective and picturesque part of these Sunday morning exercises was, toward the close, the filing in and grouping upon the platform of a large portion of the boys and girls of the school, their singing and presentation to Dr. Adler of a wreath inscribed with the word "Gratitude." These children, with their faces and garments neat, but indicating the homes from which they had come, told the story.

In the evening, a banquet was held at Lieder kranz Hall, in which social intercourse and brief speeches in response to "toasts" enlivened the hours. Our friend, Mr. Conway, had just made a brilliant speech and the enthusiasm of the occasion was at the boiling point, when the present writer was obliged to tear himself away for the sharp contrast of that misstyled modern luxury and practical abomination called a "sleeping-car."

On Monday, a convention of delegates from the several Ethical Societies was held, in which it was proposed to organize a union association among them for the better promotion of their common work. And this organization, we suppose, was effected, making the best of landmarks for showing the progress of the Ethical Movement at the beginning of its second decade.

W. J. F.

AUTHORSHIP OF THE DECLARATION.

A friend, referring to a recent mention in *The Index* of Thomas Paine's services, writes, "You might have gone farther, and claimed that Paine wrote the Declaration of Independence; for this is pretty well proved now, I believe." That Paine wrote the Declaration of Independence is certainly not "pretty well proved." On the contrary, the evidence that it was written by Jefferson is so strong as to leave no room for reasonable doubt. That Jefferson made use of expressions as well as of ideas that were then current, including some that had appeared in *Common Sense* in January, 1776, is indisputable; but the fact of Jefferson's authorship is sufficiently established to satisfy anybody who will take the pains to examine the evidence.

In an address given in Boston, Aug. 2, 1826, Daniel Webster said: "The original draft, as brought by him from his study and submitted to the other members of the committee, with interlineation in the handwriting of Dr. Franklin, and others in that of Mr. Adams, was in Mr. Jefferson's possession at the time of his death. The merit of this paper is Jefferson's. Some changes were made in it on the suggestion of the other members of the committee, and others by Congress, while it was under discussion; but none of them altered the tone, the form, the arrangement, or the general character of the instrument. As a composition, the Declaration is Mr. Jefferson's. It is the projection of his mind, and the high

honor of it belongs to him clearly and absolutely."

After mentioning the friendly contention between Adams and Jefferson as to which of them should compose the document, William Wirt, in his eulogy on these men, Oct. 19, 1826, said, "Of this transaction, Mr. Adams is himself the historian; and the authorship of the Declaration, though once disputed, is thus placed forever beyond the reach of question." In the same year, Hon. Caleb Cushing, in an address at Newburyport, spoke to the same effect. "It was," he says, "reserved for Adams to do full justice to the pre-eminent merits of his compatriot, no longer viewed as his successful competitor for the palm of political distinction. That proud performance is now known to be the work of Jefferson." To these extracts, we will add one from the Centennial Oration of Hon. Robert C. Winthrop: "As often as has been observed by me the original draft of that paper, still extant in the archives of the State department at Washington, and I have observed how very few changes were made or were suggested by the illustrious men associated with its author on the committee for its preparation, it has seemed to me to be as marvellous a composition of its kind and for its purpose as the annals of mankind can show. The earliest honors of this day certainly may well be paid here and throughout the country to the young Virginian of the 'masterly pen.'"

John Adams distinctly states that Jefferson drafted the paper, that he urged him to do so, that they "conned the paper over" before it was reported, that he was "delighted with its high tone and the flights of oratory with which it abounded," and that "the instrument was reported, as I believe, in Jefferson's handwriting as he first drew it" (Adams' Works, vol. ii., pp. 412-415). In a letter to Madison, Thomas Jefferson says that the committee urged him "to undertake the draft," and adds: "I consented, I drew it; but, before I reported it to the committee, I communicated it separately to Dr. Franklin and Mr. Adams, requesting their corrections, because they were the two members of whose judgments and amendments I wished most to have the benefit before presenting it to the committee. And you have seen the original paper now in my hands, with the corrections of Dr. Franklin and Mr. Adams interlined in their own handwritings. Their alterations were two or three only, and merely verbal. I then wrote a fair copy, reported it to the committee, and from them unaltered to Congress." (Jefferson's Works, vol. vii., pp. 304-306.) In addition to these testimonies we quote the autograph inscription on the face of a mahogany writing-case which Jefferson, a few months before his death, gave to a friend. It is dated Monticello, Nov. 18, 1825: "Thomas Jefferson gives this writing-desk to Joseph Coolidge, Jr., as a memorial of his affection. The desk was made from a drawing of his own by Ben Randall, cabinet-maker of Philadelphia, with whom he lodged on his first arrival in that city in May, 1776, and is the identical one on which he wrote the Declaration of Independence."

B. F. U.

FREE RELIGIOUS ASSOCIATION.

The Annual Meeting of the Free Religious Association will open on Thursday evening, May 27, with a business session in Fraternity Hall, Parker Memorial Building, corner Berkeley and Appleton Streets, Boston, at 7.45, for hearing reports, electing officers, and considering any resolutions that may be offered. The executive committee authorize the presentation for rejection or adoption of an amendment to the Constitution, according to which present Article I. would be divided into two Articles, which would read thus:—

CONSTITUTION.

ARTICLE I.—This organization shall be called the Free Religious Association.

ARTICLE II.—The objects of this Association are to encourage the scientific study of religion and ethics, to advocate freedom in religion, to increase fellowship in spirit, and to emphasize the supremacy of practical morality in all the relations of life. All persons sympathizing with these aims are cordially invited to membership.

The other articles to remain as now, but to be numbered respectively III., IV., V., and VI.

The public convention will be held as usual in Parker Memorial Hall, Friday morning and afternoon, May 28. The opening address, at 10.30 A.M., will be made by the President, Mr. William J. Potter. Mr. Moncure D. Conway will then give an address on "The Coming Cosmic Calvinism." Mr. B. F. Underwood will speak on "An Unclerical and Untheological View of Religion." Brief speeches by Mr. Frederick Douglass, Dr. Paul Carus, and Mr. Gopal Venayak Joshee, of India, will follow, and probably a letter from Dr. Edmund Montgomery.

In the afternoon, a discussion of the Labor Movement will be opened at 3 P.M. by Rev. J. G. Brooks, of Brockton, Mass., who will speak on "Ideals and Realities in the Social Question," and be followed by Hon. Carroll D. Wright, Mrs. Mary A. Livermore, and other speakers. All interested in these subjects are invited cordially.

The Meisonaon will be open for our festival on Friday, the 29th, at 6 P.M. Supper will be ready at 6.30, and Mr. Moncure D. Conway will take the chair as presiding officer at 8 P.M. Among the speakers expected on this occasion are Rabbi Solomon Schindler, Mrs. Ednah D. Cheney, Mr. William J. Potter, Mrs. Anandibai Joshee, of India, Rev. M. J. Savage, Col. T. W. Higginson, Mr. John A. Wyman, and Mr. Frederick Douglass. Quartette singing. Tickets \$1. Reserved seats may be obtained at this office, at the Convention on May 28, of Messrs. O. Ditson & Co., 451 Washington Street, and of Messrs. D. G. Crandon & Co., 11 Hanover Street.

F. M. HOLLAND, Sec'y.

EDITORIAL NOTES.

BY B. F. U.

"WHAT IS LACKING IN CHRISTIANITY" will be the subject of Mr. Joshee's speech before the Free Religious Association this month.

MR. G. B. PURDY, of Salem, Ohio, a prominent and earnest Liberal and a friend of every good cause, died at his home on April 25.

R. C. SPENCER, of Milwaukee, writes: "I intend to bring the religious usurpations and abuses in our State normal schools to the notice of the State Board of Normal Regents, at its next meeting in July, and hope to have them prohibited by rule of that board."

THE Institute of Heredity announces its sixth annual meeting to be in Chapel Hall, Tremont Temple, May 27, at 2 o'clock and 7.30 o'clock P.M. The President, Hon. Daniel Needham, it is stated, will preside, and make the opening address. Mr. C. D. Sherman, Dr. Aurelia E. Gilbert, Dr. J. R. Buchanan, and Rev. Jesse H. Jones will be among the speakers.

THE real and legitimate bore is a distinct and indelible species in himself. Even Darwin admits that he remains the same yesterday, to-day, and forever, with characteristics that undergo no variation from age to age. The people the genuine article wearies to death are precisely those who have something vitally important to do, and he will not let them do it; who crave intelligence, variety, and charm, and he is dead level of monotony. On and on, he bores his slow winding augur

into their time, their patience, their longing to be at work, their leisure, their diversions, their everything. The greater the forbearance and the courtesy they mistakenly show him, the sooner he promises to come again. He has plenty of time, and stands ready to place it all at their disposal.—*Boston Herald.*

In the latest number of *The Present Day*, Mr. George Jacob Holyoake thus announces a change in the editorial management of that paper: "As we have already intimated, this journal will be continued by one who has been long and actively connected with questions of public progress, Mr. Thomas Barrett, a member of the Royal Historical Society, the Anthropological Institute, and other public bodies. Mr. Barrett is Honorable Secretary of the London Dialectical Society, of which during eighteen years he has been a member. His views coincide with those lines of secular and considerate advocacy which the readers of *The Present Day* have approved. Mr. Barrett is the author of *An Examination of W. H. Gillespie's Argument a priori for a First Cause* (1869), *New View of Causation* (1871), and *Introduction to the Study of Logic and Metaphysics* (1875). The wider range of subjects which the new editor will be able to introduce in *The Present Day* will interest many new readers, and I hope not fail to retain its present ones." Mr. Barrett's address is 26 Suffolk Street, Pall Mall, London, S.W.

AN intelligent gentleman of high character writes: "I am glad to see 'The Age of Consent'—a disagreeable title to a painful subject—so plainly discussed in your columns. But as yet it has been only half discussed, it seems to me. Were I a lawyer, well informed on the history of legislation on this subject and skilful in drawing bills in good shape, I should be eager to put in my 'say.' The present condition of the law is a disgrace to our civilization. But multitudes of men—i.e., male bipeds without feathers—have no idea of what is due to women in the way of protective legislation in various directions. But a young girl's chief protection from seduction must lie in her moral education. This is so inadequately given in the majority of homes, I fear, that it seems to me it would be a good thing for our public schools to be visited by wise and skilful matrons, carefully selected for their competency, who should address the girls by themselves in companies graded according to their supposed knowledge, and tell them plainly the truths they need to know, and forcibly impress the great moral lesson. This should be done three or four times, at least, every year. And, if the boys could receive lessons on the same topic from judicious gentlemen and impressive speakers quite as often, it would do good. Ignorance here, as elsewhere, is the fruitful mother of vice; and there is much ignorance here."

THE Philadelphia Society for Ethical Culture has just issued its first annual report, from which we learn that the Society has a membership of seventy, nearly three times the number with which it started a year ago. Twenty-two lectures, sixteen of them by Mr. Weston, have been given before the Society. Two sections have been organized for the study of the Ethics of Business and Home Life, which have had papers and discussions of a pertinent character. Mr. Weston has had an ethical class for children, meeting every Sunday afternoon. "Early in the season," the report says, "a number of street boys invaded this class; and, finding them interested, Mr. Weston, with the help of some members of the Society, formed a working-boys' club, which has met regularly two evenings in the week and Sunday afternoons. An appeal

to the Society brought the needed funds. A room was rented, and books and games were given. A class in brass-work and one in modelling have interested the boys." The committee hope in another year to have classes, reading and play rooms, open every evening. It is the intention also to establish a school similar to the workingman's school of the New York Society, to be opened next September. Mr. Weston writes us in regard to the school: "We intend to make it a school where children can be *rational*ly educated in every particular. It will be the centre around which the practical work of the Society will concentrate. One or two of the rooms of the building—we have rented a whole house—will be used for evening classes for street boys; i.e., for the meetings of our working-boys' club.... I feel that we close our first year with a very hopeful outlook. New members are coming in, and people of the very best kind. We have had no music this year at our Sunday morning meetings, but we shall have it next year."

VILLANELLE. *For The Index.*

If within the rose's heart still were clinging odors sweet,
Odors of the summer time,—were its petals wasted, brown,
Would you lift its folded leaves from the darkness at your feet?

Oh, the June that once was ours,—that around us thrilled
and beat!

Would you mourn its vanished bloom, from its green
boughs drifting down,

If within the rose's heart still were clinging odors sweet?

Ah! I think my longing eyes never dawn so fair will greet!
Though you kissed it, ere you set its soft splendor 'gainst
my gown,

Would you lift its folded leaves from the darkness at your feet?

But I have no skill to make my deep meaning all complete:
Would you hold this Jaqueminot yet the summer's peer-
less crown,

If within the rose's heart still were clinging odors sweet?

Nay, believe me, my own fate is this rose's, I repeat,
That you, careless, cast aside. From the stain of field or
town,

Would you lift its folded leaves from the darkness at your feet?

Therefore leave me. See my soul shining from this quaint
conceit,

Pure as unplucked flower smiles 'mid the thorns that
round it frown:

Would you lift its folded leaves from the darkness at your feet,

If within the rose's heart still were clinging odors sweet?

ADA LONGWORTHY COLLIER.

For The Index.
REPLY TO VILLANELLE.

If "the rose" were like yourself, or like any heart so sweet,
I would "mourn its vanished bloom" and its "wasted
petals, brown";

But I'd know that aught thus fair, fairer summer time
must greet!

For the "odor" of a *soul*, though its petals fade and fleet,
With the ripening of age shall be rich and richer grown;
And I'd hold you still forever but my Peerless and my
Sweet!

Yes! I see your snow-white "soul shining from this quaint
conceit"!

Ah, forgive a moment's daze! and I lay my laurels down
Beneath the very verdure that makes carpet for your feet.

"Field and town" could never "stain"! With its fragrance
can compete

Not another living blossom in Eterné's cherished crown,
Which I pray to win and welcome, and its majesty com-
plete!

For the heart that knows but beauty's *form*, in human
petals sweet,

In poverty shall languish, till, to greater wisdom grown,
It shall strive by lowly penance *all* its loveliness to greet.

And the flower-leaves that droop in the summer's quick
retreat

But enclose a promised fruitage that is Conqueror and
Crown,—

That shall rise into the Higher Life in Perfectness replete!
And I'll hold thee still forever but my Peerless and my
Sweet!

LITA BARNEY SAYLES.

May, 1886.

The Index.

BOSTON, MAY 20, 1886.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

SCIENCE AND SIN.

BY JOHN COTTON DANA.

II.

Man has long had faith in a Supreme Being to whom he owes obedience. How he has come by that faith we cannot here pause to inquire. He believes that the moral laws, which are in fact the products of his own experience, are the "thou shalt" and the "thou shalt not" of this Supreme Being, the one God. He further believes, being misled in his ignorance of psychology by his remembrance of his feelings at the time of making a choice, that he could have made at that time and can always make a choice without regard either to his character or to the motives brought to bear upon him. As a result of this false apprehension of his powers, he believes that, did nothing outside his own arbitrary will interfere, he could always obey or disobey the divine commands at pleasure. Thus believing, he naturally thinks that his transgressions of God's commands are purely wilful, and have their ultimate origin in his own mind. He is strengthened in this belief by the accompanying conviction that the unhappy feeling, the sense of dissatisfaction with himself, which follows those transgressions, is the voice of God rebuking him. Naturally, he comes so to believe in the wilful nature of his desires; for he has not yet extended his belief in the uniformity of nature to his own conduct. He does not perceive that that conduct is as inevitable and as wanting in moral character in the eyes of the Maker of all things as the tossing of the branches of a tree or the waving of a blade of grass in the passing breeze. He believes himself the ruler of his own thoughts, the uninfluenced maker, in their final character, of his own decisions.

But he notes also a fact inconsistent with this belief as to his power over his own thoughts. His daily experience shows him that his thoughts and his decisions are not in harmony with what he con-

siders the divine laws. In desire and in conduct, he is constantly transgressing those laws, although he is at the same time convinced that he could obey them if he would, and feels that his natural choice would be to obey them. Here, then, is the dilemma: man can conform to God's laws, if he will; for he is free to originate his choices. He wishes to conform to them, for he knows them to be the commands of a God of love who promises him abundant reward for his conformity and dire punishment for his disobedience; yet, with every motive impelling him to obey, and with full liberty to obey, he straightway disobeys.

Into this contradiction of an utter depravity or an irresistible sinful tendency in man, compelling him to do what he would not, existing side by side with a free will by virtue of which he can do what he would, it is useless here to enter farther. It is enough to say that the Church has explained, or rather has deceived itself with the thought that it has explained, this inconsistency between what man would do and what he does in fact do. It has accounted for this vast difference between the better things which he sees and the worse things which he follows by saying that man is a sinful being; that he is at enmity with a loving, paternal God; that into him and into all his fellows is born a desire to do that which will grieve the heart of a Being who, above all other beings, loves and benefits him. The logic of the illogical once established in the union of these doctrines of free will and depravity, in the simultaneous acceptance of the dogma of man's entire freedom to determine his conduct as he will, and of the fact that he does choose what he would not, the theologian attempts more fully to explain his philosophy thus: If God, he says, is my kind and loving father, and if I could obey him if I but chose, my violations of his commands must surely come from the promptings of an inherent wickedness. This evil tendency within me, since it leads me to do what neither my own welfare nor my better nature would dictate, yet which, in spite of my freedom, I do obey, must be something which I neither choose for myself nor can remove if I would. It came without my bidding, and to rid myself of it calls for a power outside myself and above myself.

This evil nature, this irresistible tendency to do the things the natural man would not do, man calls sin. He has related its origin in mythical tales, telling therein of the fall of man from a state of primitive purity. His belief in its existence follows naturally, as we have seen, from his religious ideas and from his vague conceptions of his own nature. And, with his general tendency to look on the past as the golden age, he came to the conception of a time when sin was not, and when every impulse was good.

And so out of a misapprehension of the teachings of experience and of the movements and development of our moral nature there has grown up a hideous theology, in which a God, vengeful and jealous, a human heart full of native hatred to that God's decrees, a devil, the instigator of that hatred, and a Being reconciling God to man by his own self-abasement, are the startling, the appalling first essentials. Under the incubus of such a theology, under the heavy burden of a belief in a native vileness in the human heart, which, however much it is striven against or however completely it is eradicated in one generation, renews itself with all its old force in the next, and will do so for all time,—under such burdens, who could rise into any hope for humanity? Who could venture even to dream of a time when selfish desires shall not be the stronger, and when, the love of man being first in all hearts, the poor we shall not have with us? And who, dwelling in

the black cloud of such a belief, would not sit with folded hands, watching gloomily the swift recurring tides of a filthy humanity, and waiting with poor patience for the summons to enter the world of those few chosen who are washed pure in blood?

But conscience is a living fact, it may be said; and, if there be conscience, how is it that there is no sin? True, conscience is a living fact; but scientific thought tells us whence conscience comes and how it has come, as it tells us whence and how the human hand has come, and whence and how has come the belief in sin. And it is as clearly to be seen that conscience does not depend upon man's sinfulness for its existence, is not an outcome of that sinfulness, and was not given him because of it, as it is to see that sinfulness itself has no existence save in the imagination.

Primitive men became united into groups through the influence, chiefly, of family ties, and through the feeling that they must be united in their action, if they would make successful their efforts to guard themselves against other clans and tribes, to protect themselves from the attacks of wild beasts, and to hunt the animals essential for food. Harmonious association and concert of action were found, probably, by long and bitter experience, to be possible only when the conduct of each individual was directed in some measure to the welfare of the whole group. There developed gradually, as an outcome of this long experience, an apprehension of the fact that certain actions, like theft and false speaking, produced contests and divisions within the group, and so made it less ready to unite against a common foe; that certain other actions, like treachery or open insubordination, were still more detrimental to the carrying on of warfare or to the successful guarding against enemies. There thus grew up what has aptly been called a "tribal conscience," a standard of conduct that is, more or less, well established in every mind, and distinguishing all acts as good or bad according as they did or did not conform to it. By this standard, every child was more or less rigorously trained, and to it every person was expected to adhere. This tribal conscience, this indwelling moral code, once established, it gained strength and permanence, as it was handed down from generation to generation, and as the impulse to conform to it became, in the mind of the average man, more constant and more enduring. Respect and reverence for dead ancestors and national heroes gradually developed into worship of them as gods; and, at the same time, this code of conduct, this tribal conscience, which they had handed down, came to be considered as having been appointed by them arbitrarily. Hence there became attached to it the divine sanction. The approbation of this code, moreover, which was found to exist in nearly every mature mind, mainly through education, in part, perhaps, by inheritance, was taken to be a voice from the gods, speaking their wisdom to the heart of every individual. This moral code, and the general approbation of it, being established, a most persistent tendency of every one was to conform to it. That manner of life of which all approved, which was inculcated at every point in the education of youth, would be the one to which all would be the most desirous of conforming. Following it, the individual would receive the praise of his fellows and the approbation of his own mind; diverging from it, their blame and his own mind's censure. But diverge from it he would. At times, more or less frequent as the selfish desires and passions might be more or less strong, individuals in the group would pursue their own inclination, and violate the tribal code. The mo-

mentary flash of desire or passion having passed, there would return the normal apprehension of the relation of his act to the tribal welfare, and of its want of conformity to his own more persistent feelings. To the blame of his fellows would then be added the reproach of his past by his present self. This reproach he called, and still calls, the voice of conscience.

I quote here Mr. Darwin's brief but lucid statement of the manner of development of this highest and noblest of human characteristics,—the moral sense, or conscience.

"A moral being is one who is capable of reflecting on his past actions and their motives,—of approving of some and disapproving of others; and the fact that man is the one being who certainly deserves this designation is the greatest of all distinctions between him and the lower animals. But I have endeavored to show that the moral sense follows, firstly, from the enduring and ever-present nature of the social instincts; secondly, from man's appreciation of the approbation and disapprobation of his fellows; and, thirdly, from the high activity of his mental faculties, with past impressions extremely vivid. And, in these latter respects, he differs from the lower animals. Owing to this condition of mind, man cannot avoid looking both backward and forward, and comparing past impressions. Hence, after some temporary desire or passion has mastered his social instincts [those approved of by what Prof. Clifford calls the tribal conscience], he reflects, and compares the now weakened impression of such past impulses with the ever-present social instincts; and he then feels that sense of dissatisfaction which all unsatisfied instincts leave behind them. He therefore resolves to act differently for the future,—and this is conscience."*

The relation of this conscience to the development of moral precepts, to the early perception of what was and what was not for the common advantage, primitive man did not see; and the man of to-day sees it but rarely and dimly. Only with difficulty can man note and understand the steps in the growth of his own mind; nor can he grasp readily the fact that, like all other products of this unfolding universe, he is himself but imperfectly fitted to the surroundings in which he finds himself. In truth, were he perfectly fitted, the conduct good for himself and the race would be the only conduct possible to him. As it is, the rules of conduct established by the experience of the race are such as the nature of the individual, with its jets of overruling passion and desire, cannot always conform to. The demands of the conscience of man are greater than the character of men can fill. The slowly developed but persistent instinct, which compels to a respect for the welfare of the group, is the more enduring, and is commonly the more powerful; but selfish instincts and desires may now and again overcome it. When this happens, the selfish instinct is not recalled with its old force in moments of after reflection; while the instinct for the general welfare is, and man reproaches himself with having yielded to a motive which was in truth the baser, and which then seems the weaker as well as the baser.

Conscience, then, is the result of development. Conduct is inevitable, and there is no sin. Sin is not; its monstrous offspring, the devil, has no power, save in the imaginings of the ignorant and superstitious, and no existence, save in the minds of the foolish and the teachings of the deluded and the crafty. No jealous God is watching for irreverence in his subjects' conduct and for rebel-

lion in their hearts. No being has appeased that God's wrath by his own abasement, or is quieting that rebellion by preaching submission and by promising rewards or threatening punishments.

To such, and they are many, as see the uniformity of nature, to such as believe that through all things is the reign of law,—to them, sin, the devil, a vengeful God, and a blood-bought immunity are but fables of the past. Would that they might more boldly speak that which they believe, and aid in lifting from the world the burden of an accursed superstition,—a superstition which falls short of the evils it would be ever waking, only because it is too monstrous to be received in all its import into healthy minds!

We cannot say that God is good, that he is love, that all his ways are just; for the world we see does not so proclaim him. But we can see that all the movements of the universe which come within our ken are toward a greater harmony, and that from that increased harmony come more of pleasure, less of pain, more of happiness, less of misery. What though the life of the world we see is a long tale of suffering? What though Nature reaches her ends, brings forth her higher forms, without thought of the suffering she leaves in her train, "absolutely without ruth"? If the end be a higher, fuller, fairer life, we can be content, can we not, with the faint glimpses of beneficent purpose given us by the knowledge that the struggle is toward that end? And we conscious beings, having once gained a sight of the harmony between all things to which all things so mercilessly tend, how can we but lend our hands to the task of tempering with mercy the mercilessness of nature's course?

The thoughts, the desires, the passions of men, are not all good. That they should be all good is the end, if we cannot say it is the aim, toward which Nature is moving in the unceasing strife she has called forth between man and nature, between man and man, between nation and nation. Surely, to soften the relentlessness of her methods is a noble task.

Men's desires are evil,—not because they wish them to be evil, as the reigning theology would teach us, but because they see not and feel not the value of the good. Uplift them, then; set them on a higher plane, whence they can see the bearing of their every act on all their life and on the life of all humanity. That would be a nobler, a more enduring deed than to prove to them by an illogical logic, based on unsupported assumptions and on the fables of man's childhood, that every human heart is, beyond all hope of cleansing, sinful and vile.

(Concluded.)

CORRESPONDENCE.

THE SISTERS OF THE SACRED HEART OF JESUS.

Editors of The Index:—

All reaction from better to worse, whether of the individual or the nation, is necessarily the result of rawness and ignorance; for no man would knowingly abandon that which was most conducive to his true happiness for that which is less so. Clearness, therefore, is the preventive of retrogression. We have frequently been told of late years that it is time to abandon the work of destruction, the day having come, it is alleged, for construction. The author from whom I translate the following extract—one of those splendid intellects whose writings have given a new lustre to French literature during the present century—is by far too sagacious to be misled into this tempting view. The day for erecting the magnificent temple of the future has not arrived, while the ground is still encumbered with the wretched huts and rubbish of a falling superstition.

There are, doubtless, many readers of *The Index*

* *Descent of Man*, p. 610.

who are familiar with the facts here presented, but there are also some who are not; and, when we reflect that this is only one of numberless preposterous fictions through which the people are stultified and enchained, its presentation, at this seemingly late day, cannot be regarded as superfluous. These things are not of a past age, as many reformers, even, keep telling us. They exist now, and in full activity. Yet the Rev. Dr. Hedge, only a few years ago, publicly declared that he would greatly prefer that Christians should return to this degrading cult than that they should progress to free thinking. And he is by no means alone among the orthodox Protestant clergy; nor are abundant examples of the same preference wanting even among the laity, of which fact the daily desertions to the popish ranks furnish ample proof.

Mrs. Underwood's excellent criticism of the action of the New York advocates of womanhood suffrage was thoroughly deserved and perfectly satisfactory. There seems to be no adequate epithet for this kind of work but *toadyism*. It reminds me forcibly of a very common conclusion of the retail shopkeeper's advertisement: "The smallest favors thankfully received."

Dean Stanley, when in this country, made a proposal for a union of all the evangelical sects,—including, of course, the Roman Catholic,—for the purpose of resisting the inroads of free thinking. Mrs. Underwood's quotation from the Brooklyn journal reminded me of the similar reception which it met with from a popish journal in New York. A few of the introductory words of the editor will suffice to show its spirit: "A person calling himself 'Dean Stanley' preached, a few days ago, in an edifice on Broadway, called 'Trinity Church,' etc. I must say it gives me a genuine satisfaction to see these super-serviceable people snubbed in this unmerciful manner." It is worthy of remark that these overtures never emanate from "the Mother Church." What she demands is submission. The only reply the New York people can make to Mrs. Underwood is to stigmatize her as a Bourbon. Here is the extract. The passage quoted by the author is from the *Life of the Saint*, by the Bishop of Soissons.

"Finally, after all these imposing preliminaries, the time was accomplished. It was in 1678 that Jesus Christ revealed to Sister Alacoque the cult of the Sacred Heart. At the same time, he explained to her its meaning and symbolism. 'Love is its object; love is its end; love is its motive. Now, the heart and love are synonyms among men.' The heart was, therefore, chosen as the object of adoration,—not the ideal heart with which the poets personify the human soul, but the very muscle, a piece of the bleeding flesh, pierced with several wounds and spitted on a little poniard. Jesus Christ tore it from his own heart, and presented it to her; and he demanded that she should give her own heart as the price of the gift which he had just made. The sister gave it to him with all the ardor of which she was capable. The Son of God really took it, and placed it in his own.' . . .

"Thus, the words of a poor idiot, evidently affected with disease, took form, and became a symbol offered for the adoration of the nations. Thus, the people adored it. A lesson truly humiliating for our pride! Eternal denial inflicted by the facts of the presumptuous calculations of our politics. Ah! let the historians for whom all history is in the barracks or the ante-chamber see therein, if they will, nothing but events of no consequence, details unworthy of their attention. For ourselves, we will recall to them without ceasing the attention of this indifferent generation, which has not yet finished the expiation of its frivolities. What! these monstrosities, dishonoring human nature, are possible to-day as they were yesterday, and you talk of equality, progress, civilization! Build, build, your ideal republics, ye dreamers; and, the day when you search around you for citizens, you will find the sectaries of Marie Alacoque and the conjurors of table-turning."

These sisters are establishing their colonies—as, of course, they have a perfect right to do—in the larger towns all over our country; and, in the schools they are opening in connection with them, they receive, with especial *empressment*, the daughters of Protestant families to be "educated," who seldom leave them without being most favorably impressed through the insinuating manners of these women, and in after life frequently become converts to popery. This would be astonishing, if one did not realize what a

sham our education is. Well might Mr. Mundella, after carefully examining our condition, exclaim, "It is lamentable to see, with the generous expenditure of money in America for educational purposes, how meagre are the results." *

MORMON AND GENTILE CRIME IN SALT LAKE CITY.

Editors of The Index:—

The criminal statistics of Salt Lake City for the year 1885 have just come to hand; and their significance is the same as that for previous years, showing that they represent not a chance difference, but permanent moral characteristics of the two classes of people involved. They are as follows:—

Total population of Salt Lake City, 26,000; Mormon population, 20,800; non-Mormon population, 5,200; proportion, 4 Mormons to 1 non-Mormon; arrests for crime in 1885,—adult males, 1,126; adult females, 134; children under ten years old, 16; total, 1,276. Of these arrests, the 20,800 Mormons furnish 96; the 5,200 non-Mormons furnish 1,180. Proportion without regard to difference of numbers, 12 non-Mormons to 1 Mormon; proportion to actual numbers, 48 non-Mormon criminals to 1 Mormon criminal.

In the city are 40 tap-rooms, 6 brothels, and an unreported number of gambling-rooms, pool tables, and the like. Of these, run by non-Mormons are 46; run by Mormons, 00.

The proportion of non-Mormon criminals in the Territory, taken as a whole, as compared with the Mormons, is still larger. This, too, it must be remembered, in a year when special pains have been taken to arrest and prosecute all Mormon polygamists.

Yet the whole power of the federal government is being used at this time, or will be used, if the new Edmunds bill is made a law, to crush out and deprive of its money a church which the figures show is forty-eight times more law-abiding—even reckoning polygamy as a crime—than the surrounding population, and to sustain a minority—one-fifth—of the people, that, even with the virtue of all the other non-Mormon churches on its side, furnishes forty-eight times as much law-breaking as the Mormon Church,—all in the interests of morality!

Could any logic be stronger, any words more eloquent, to indicate that our government, so far as morals are concerned, is on the wrong track than these simple figures? They may not show that Mormon polygamy is good, for only a small part of these 20,800 law-abiding Mormons are polygamists; but they do show that the Mormon Church is not bad, for the whole 20,800 law-abiders are its members, and trained under its teachings. K.

RELIGION IN OUR PUBLIC SCHOOLS.

Mr. R. C. Spencer, of Milwaukee, one of the visiting Board of the Wisconsin State Normal School, on a recent visit to that institution, thus addressed the school at the close of religious exercises: "I will take another opportunity, if one offers, to speak to you upon the topic suggested by President Albee, and will now speak as a citizen of the State of Wisconsin and as a member of the visiting board upon another question. I have been profoundly impressed with the religious ceremonies which I have just witnessed. For the reverent and devout feelings which these ceremonies show, I have respect. I recognize the fact that the religious sentiment is one of the most sacred of the human soul, and that it should be scrupulously guarded. It is one of the glories of our government that it protects religious rights. It is the purpose of our government that the liberty of religious opinion and worship reserved to the people to be exercised in their private and personal capacity shall never be infringed. This is clearly set forth in the fundamental law. You are familiar with the provisions of these Constitutions, including the first article of the Constitution of our own State, wherein are laid down in very clear and distinct language the reserved rights of the people. I call your attention more particularly to the eighteenth section of the First Article of the Constitution of Wisconsin.

"It doubtless seems ungracious to some of you that these ceremonies should be criticised in your presence and in the presence of your president. This is not a private institution. This Normal School is dedicated to the uses and purposes of the commonwealth of Wisconsin in preparing teachers to instruct the

youth of the State, and to rear them up to usefulness and honor in the State. Under the provisions of the Constitution of the State, this school can have no religious purposes. The State has no religious duties to perform: therefore, this institution has none. Teachers of public schools and in public institutions have, as such, no religious duties. On the contrary, the moment the teacher, in his capacity as such, begins to exercise any religious function whatever, to exert any religious influence upon the minds of those under his instruction, that moment he infringes the reserved rights of the people.

"The public school-teacher is entitled equally to his religious opinions and to their free exercise. He may lift, if he pleases, his spirit reverently toward heaven and invoke assistance. That is his private, personal right; but, the moment he enters the halls of any public school or any other State institution, then his religious feelings and opinions should be held in abeyance. If he desires to engage in worship, he should seek some appropriate place outside of these schools and institutions, so that no one would have a right to complain that the public funds are used to sustain religious opinions and modes of worship.

"One of the fundamental principles of our government is equality of rights. The Declaration of Independence declares that all men are created free and equal, endowed with certain inalienable rights, among which are life, liberty, and the pursuit of happiness. Equality of rights is the first of rights under our government. Now, if it be right for a Protestant Christian to occupy this platform during the session of this school, or at any other time, for the purpose of religious worship, then a Catholic has the same right, and an atheist or a Jew also. All may declare their religious views and worship with equal freedom, but not in or through State schools, institutions, or agencies.

"I do not question the motive which prompts President Albee. The point which I make is that these exercises in any State normal school, or any public school, are an infringement of the reserved rights of the people as declared in the Constitution of the State, and cannot result in good.

"Our government is based upon the idea that religion and State are distinct and separate. They have no connection whatever in our Constitution. The State can have no religion and can teach none. Wherever a State has a religion or teaches religion, it has a creed which it enforces; and, when it does that, it becomes a persecutor, and religious liberty suffers. Those most conversant with the religious character of nations declare that in no country is there a more conscientious and general regard for religious principles and sentiments than in America.

"I have taken this occasion to speak upon this subject from a sense of duty as a citizen of the State. I should, however, do myself and your honored president great injustice, if I neglected to say that I hold the highest regard for his eminent service to the people of this State as an educator, as a teacher of teachers. I know how thoroughly conscientious he is, and how great are the services he has rendered to this commonwealth, for which he cannot be adequately compensated. The duty which I have discharged in his presence and yours has been a trying one to me, but has, I hope, been performed in a patriotic and worthy spirit.

"I ask you, young ladies and gentlemen, the future teachers of the youth of this commonwealth, to carefully ponder upon the principle which I have endeavored thus briefly and in a general way to bring before your minds. Think of it, and let us do right toward the State and all of our fellow-citizens, as we would have them do right toward us in all things."

A PROPOSED SCHOOL OF PHILOSOPHY AND RELIGION.

Prof. Felix Adler, in a recent lecture on "Reforms needed in the Pulpit," said: "There should be founded—and we have cause to hope that there will ere long be founded—a new institution, unlike any that has ever existed in this country, or, indeed, in any country,—a School of Philosophy and Religion. A school in which philosophy, especially moral philosophy, shall be the central study around which the others will be grouped; a school in which perfect intellectual liberty shall be secured; in which

the great systems of philosophical thought shall be expounded, not by their enemies, but by their representatives; in which, for instance, a Materialist shall teach Materialism, a Spencerian shall teach Spencer, a Utilitarian shall teach Utilitarianism, an Orthodox theologian shall represent the Orthodox view, etc. In this school, the cowardly policy of artificially protecting truth against contact with error will be abandoned. Whatever any one man holds to be true, he shall throw into freest competition with what others hold to be true, on the assumption that what is really excellent will gain the ascendant by virtue of its superior excellence. In this school, the students will not be pledged or committed beforehand to any opinions; but they will be allowed to prove all things, in the assured belief that they will hold fast to that which is good, to that which most strongly appeals to their reason and conscience.

"In this school, the history of all the great religions shall be taught,—Buddhism and Islam as well as Christianity and Judaism; and specialists shall be appointed to lecture on each of the great religions. What is called the science of religion shall be taught, including such subjects as the comparative study of religious ceremonies, of religious architecture, the comparative study of doctrines, of institutions, and of methods of organization.

"In this school, as I have said, philosophy shall be the central study; but grouped around it shall be those other practical studies which I have before mentioned, such as psychology, the theory of education, economics, etc., and thorough instruction shall be imparted in each of these subjects, to the end that the future minister may be properly fitted for his vocation, that he may go forth into the world like a workman skilled in the use of his tools. I am convinced that such a school as this will fill a great need. I am convinced that many young men who now enter the theological seminaries because there are no other avenues of education open to them will gladly avail themselves of the superior advantages which this school will offer; and that its broadening, liberalizing, and elevating influence will be felt throughout our entire land."

REV. JESSE H. JONES sends us a printed circular which contains some rather extraordinary statements to be put forth by the secretary of an association which claims to have for its object the scientific study of heredity, and diffusion of knowledge in regard to this important subject. A few sentences from the circular must suffice: "The deepest and most interior secret of life in this human flesh has been discovered and disclosed; and with that secret, and God's law of life in marriage, the complete clew to this disparity of fate in families has been obtained. Hence, neighbor, I am able to make this strange and startling declaration: *It is now known how to bring it about that children shall not die any more.* I am speaking the simple truth, soberly, in plain English words. The supreme secrets of life are now so fully known that the time has come to begin to gain the victory over death in these human bodies. This ought not to seem so very strange to any Christian, and would not, had Christians only discerned what Jesus really meant when he said, *Verily, verily, I say unto you, if a man keep my word, he shall never see death*; for the context clearly shows that he was speaking of the death of the body, and of that alone. . . . *In the name of our Lord Jesus Christ, the giver of ETERNAL LIFE (which is the divine vitality of God) unto men.*—JESSE H. JONES, Cor. Sec. Institute of Heredity."

BOOK NOTICES.

A SKETCH OF THE LIFE OF APOLLONIUS OF TYANA; OR, THE FIRST TEN DECADES OF OUR ERA. By Daniel M. Treadwell. New York: Frederic Treadwell, 78 Nassau Street. 1886. pp. 354.

Mr. Treadwell, in the prefatory chapter of this handsome octavo, states that he was led to write the work by some remarks of a Brooklyn clergyman, who, alluding to the custom of extolling the traditional virtues of Zoroaster, Confucius, Krishna, and Buddha, declared that there was nothing in these allegorical biographies which rises in sublimity to the miracles of Christ or the simplicity of his life. These biographies, the clergyman said, rest upon no such reliable substratum of history as the life and doctrine of Jesus; and he challenged any man to pro-

duce, from the accumulated dust of eighteen centuries, a record of the life, sayings, and doings of any personage so well attested and by so many reputable witnesses as is that of the Saviour in the account of Matthew.

Mr. Treadwell took up the gauntlet, and selected the character of Apollonius of Tyana for the *experimentum crucis*, because, he says, "he seems especially fitted for this ordeal, inasmuch as he is said to have been a contemporary of Jesus, born in the year one of our era. It is claimed that he was divinely conceived, and that he came with a revelation as the Saviour of humanity. At all events, his written life is surrounded by a halo of miraculous phenomena almost identical with that recorded by Matthew in his Gospel of Jesus Christ. And, while Jesus is said to have been casting out devils in Galilee, Apollonius was, according to a tradition, quite as trustworthily, rendering mankind a similar service in Greece."

The life of Apollonius was written by Philostratus, a Greek, born on one of the islands of the Aegean Sea, in the latter part of the second century. He was a versatile and prolific author, who resided for some years in Rome, where he was one of the many men of letters who gravitated around Julia Domna, wife of Septimius Severus, a woman of rare attainments and purity of character. It was from her that Philostratus obtained the manuscript journal of Damis, a disciple of Apollonius, on which the biography is based. It has sometimes been called the gospel of Philostratus. Its author claims to have had, in addition to the journal of Damis, access to a sketch of Apollonius, written early in the first century. Mr. Treadwell goes into an examination of the relative value of the two records, Matthew and Philostratus, as historical Mentors, and shows, if we mistake not, this, at least: that there is as much evidence of the truth of the miracles and marvellous doings related of Apollonius by his biographer as of those related of Jesus in the anonymous Gospel ascribed to Matthew.

The parallelisms in the lives of the two characters are so numerous and marked that Christian writers have affirmed that the stories in regard to Apollonius were mere reproductions of events in the life of Christ, with slight modifications. This Mr. Treadwell emphatically denies. A temple was erected to Apollonius at Tyana. There was a vast amount of literature in regard to him, and he was worshipped even late in the fourth century. Albert Réville says that "the universal respect in which he was held by the whole pagan world testifies to the deep impression which the life of this supernatural being had indelibly fixed in their minds." Our author does not claim to have brought forward any newly discovered facts in regard to Apollonius, but he certainly deserves the credit of having put in a very readable form what can be said respecting a unique character concerning whom nothing is popularly known. The book shows patient research, has many bibliographical references which cover an important field of literature, and is the most valuable book on the subject treated that has yet appeared. Whether all the conclusions of the work are sound is a question that need not be considered in this short notice.

B. F. U.

THE STORY OF CHALDEA. From the Earliest Times to the Rise of Assyria. By Zénaïde A. Ragozin. (The "Story of the Nations" Series.) New York and London: G. P. Putnam's Sons. 1886. pp. 331. Price \$1.50.

The writer of this able summary of all that has been discovered in regard to this most ancient of nations is said to be a lady who has made a specialty of Oriental study. This series of historical works is designed to meet the needs of young students of history, and the author has shown signal ability in simplifying the story of Chaldea from the voluminous yet necessarily fragmentary sources to which she had to apply for the information she has so interestingly condensed in the chapters before us. She professes only to treat the subject "as a general introduction to the study of ancient history." The first four chapters are devoted altogether to the fascinating story of the explorations and discoveries in Mesopotamia, Assyria, and Chaldea, by Rich, Botta, Layard, and later by George Smith, whose early death, met in the pursuit of investigations in Chaldean literature, was so great a loss in this department of study. The remaining eight chapters give us all that is known or guessed of the history of Chaldea, from the probably nomadic beginnings of the

nation until its period of greatest power and culture. The author's orthodox religious faith very strongly influences her own personal views on many of the doubtful points in the fragments of Chaldean literature discovered and partially restored and translated; and one whole chapter is devoted to an attempted reconciliation of the fact that the ancient Chaldeans belonged to none of the races classed in the Bible as descended from Noah with their undoubted existence as a nation; and a very ingenious argument is made to show that they were the descendants of the accursed Cain. The legends, mythical stories, and religious lore, as shown in the sculptured images, pictures, and tablets discovered, are given at some length and coherently; but it is impressed on the reader's mind that, if these "are given here in a connected form for the sake of convenience and plainness, it must be clearly understood that they were not preserved for us in such a form, but are the result of a long and patient work of research and restoration,—a work which still continues, and every year, almost every month, brings to light some new materials, some addition, some correction to the old ones. Yet, even as the work now stands, it justifies us in asserting that our knowledge of this marvellous antiquity is fuller and more authentic than that we have of many a period and people not half so remote from us in point of place and distance"; for these records take us back, according to Mr. F. Hommel, an authority in Assyriology, to 5000 B.C.

Seventy-nine fine engravings, reproductions from the works of Layard, Rawlinson, Perrot and Chipiez, Smith, and of the Chaldean sculptures in the British Museum, accompany this work, and add much to its value. A list of nearly fifty works of leading authorities on this subject, consulted by the writer during the preparation of this volume, is also given; and a careful index of topics is appended. It is well printed and nicely bound, and will be found a valuable addition to the library of every household. For sale by Cupples, Upham & Co. S. A. U.

ARGUMENTS AGAINST WOMAN SUFFRAGE. By Rev. H. M. Dexter, D.D. Carefully examined and completely answered by D. P. Livermore. Boston: Cupples, Upham & Co. 1886. pp. 112. Paper covers. Price 25 cents.

A few months ago there appeared in the columns of the dignified and conservative *Congregationalist* a series of editorial papers presenting the strongest array of orthodox "Arguments against Woman Suffrage" possible,—arguments which, though many of them antiquated and threadbare through long use, as well as patently illogical, the writer seemed to consider perfectly pertinent and unanswerable. So convinced was he of the impossibility of any serious refutation of them that, at the close of the series of ten papers, they were gathered together in a pamphlet bearing the title "Common Sense as to Woman Suffrage." This pamphlet, written by Rev. Dr. Dexter, another reverend gentleman of a more liberal and enlightened faith makes reply to in the pages before us. Rev. D. P. Livermore, who is one of the most earnest knights of the new order of chivalry, one who supplements his wife's ardent and eloquent pleading of the woman's cause on the platform by his equal ardor for the same cause in the field of controversy, deals with Dr. Dexter's arguments and objections *seriatim*, and very effectively, showing how very frequently the latter can be "hoist with his own petard." When Dr. Dexter says that, if women voted, it would "involve inconvenience to the family," Mr. Livermore pertinently asks, "When women engage in missionary work for weeks and months and years, does it not frequently 'involve inconvenience to the family'?" And, when the doctor declares Woman Suffrage to be "a monstrous thing," he quotes from a protest once sent to Parliament by members of the East India Company, in which it is declared that "the sending of missionaries into our Eastern possessions is the maddest, most extravagant, most expensive, most unwarranted project that was ever proposed by a lunatic enthusiast." Although we are inclined to believe that, in regard to the Bible arguments against Woman Suffrage adduced by Dr. Dexter, he has rather the strongest facts on his side, yet Mr. Livermore, who also accepts the Bible as a standard, makes as strong an argument as is possible from so poor a vantage-ground. On the whole, this pamphlet contains a little arsenal of effective weapons in defence of women and their rights.

S. A. U.

CALIFORNIA FROM THE CONQUEST IN 1846 TO THE SECOND VIGILANCE COMMITTEE IN SAN FRANCISCO. A Study of American Character. By Josiah Royce, Assistant Professor of Harvard College. "American Commonwealth" Series. Boston and New York: Houghton, Mifflin & Co. 1886. pp. 501.

This volume, by a Californian whose mother, to whom the work is inscribed, was "a Californian pioneer of 1849," presents the history of California during its early formative period from 1846 to 1856, for the purpose of helping the reader toward an understanding of the present characteristics of the State. "This," says the author, "is the period of excitement, of trial, and of rapid transformation. Everything that has since happened in California, or that ever will happen there, so long as men dwell in the land, must be deeply affected by the forces of local life and society that then took their origin. And for the understanding of our American natural character, in some of its most significant qualities, this life of surprises and of searching moral ordeals has a still too little appreciated value." The work is not one simply of historical interest. It has a philosophical and sociological value; for it is a careful study of the process by which a great community, well organized, permanent, and progressive, has grown in a few years from a few detached individuals and their apparently accidental but, as shown in the sequel, profoundly important doings. The author has had the advantage of access to official and private documents of original value, including the immense collection in the possession of Mr. Hubert Howe Bancroft, and has had opportunities to discuss early Californian days with many who were in positions to observe what occurred from the conquest in 1846 through later years. Availing himself of the results of the researches and writings of previous historians of California, Mr. Royce has made considerable additions, which, with his examination of the social aspects of California life from 1846 to 1856, and the connection between the forces of that period and the civilization of the State as it now exists with the character of the Californian as now displayed, make the book a very instructive and valuable contribution to our historical literature.

B. F. U.

Among the notable articles in the May *Century* is one on "Hawthorne's Philosophy," written by his son Julian, two new portraits of Hawthorne, one, the frontispiece, accompanying the article. The history and a description of the Lick Observatory are given by Taliesin Evans, under the title "A Californian's Gift to Science." A dozen illustrations of the buildings and attachments add to the interest of this paper. Rev. T. T. Munger, who a year ago contributed an essay on "Immortality and Modern Thought," writes in this number with equal suggestiveness of "Evolution and the Faith." Among the Civil War papers is a posthumous one by Gen. McClellan, "From the Peninsula to Antietam." A long installment of Howells' story is given. Two short stories, "Iduna," by George Hibbard, and "Perturbed Spirits," by Brander Matthews, are both written in a weird vein. There is a fine short poem by Col. Higginson, "To the Memory of H. H.," with various others. Contributors to the "Open Letters" are John W. Johnston, George W. Cable, and Mary B. Welch, the two former on the Southern question, and the latter "The South Kensington School of Cookery." For sale by Cupples & Upham, Old Corner Bookstore.

"LIPPINCOTT'S MAGAZINE" for May, in addition to its two continued stories, contains also a complete short story by Julian Hawthorne, entitled "Prof. Weisheit's Experiment." There is an article by Joel Benton, on "The Poetry of Thoreau." Mrs. James B. Potter, of "Ostler Joe" fame, and the "poet of passion," Ella Wheeler Wilcox, give their "experiences" in their different callings; and there are poems by Austin Dobson, Louise Chandler Moulton, and James B. Kenyon. J. B. Lippincott, Philadelphia, Penn.

THE *Journal of Speculative Philosophy* for October has appeared with the papers by Andrew P. Peabody, Edmund Montgomery, George H. Howison, and W. T. Harris, read before the Concord School of Philosophy last summer, on the question "Is Pantheism the Legitimate Outcome of Modern Science?" Another article of interest to philosophical thinkers is by Payton Spence, on "The Facts about External

Perception." "Notes and Discussions" and "Book Notices" complete the contents of this number. D. Appleton & Co.

WANTED, during the months of June, July, and August, the office of private secretary. Address C. F. B., care of THE INDEX.

A STUDY OF PRIMITIVE CHRISTIANITY.

By LEWIS G. JAMES.

8vo. 320 pages. Cloth, Gilt Top. Price \$1.50.

"No fairer statement has been made of the grounds on which the anti-supernaturalist humanitarian bases his opinion of Jesus and of the origin of Christianity. . . . Its theology and Christology are of the most radical Unitarian kind; but the temper and spirit of the book are so refined, so earnest, and so fair to all opponents, that it must impress those who are compelled to disagree with its most prominent conclusions as a model of polite and generous controversial writing."—*Brooklyn Union*.

Sent, post-paid, on receipt of price. Address

Bound Volumes of The Index For 1871 and 1872

For sale at THE INDEX office, at \$2.00 per volume. A few complete sets of bound volumes of THE INDEX, from 1870 (Vol. I.) to 1885 (Vol. XVI.), inclusive, will be furnished at special rates.

TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crapo.

PRICE \$3.00.

For sale at the bookstores. Also sent, postpaid, on receipt of price by
THE INDEX,
44 BOYLSTON STREET, BOSTON.

Lectures by Rabbi Solomon Schindler.

1. INTRODUCTORY.
2. TWO THOUSAND YEARS AGO.
3. THE CARPENTER'S SON.
4. JUDAISM THE MOTHER, AND CHRISTIANITY THE DAUGHTER.
5. A GENUINE MESSIAH.

As a special inducement to Liberals to distribute these lectures, which are full of radical thought presented in the plainest language, they are now offered at 5 cents each; 10 copies for 30 cents; 40 copies for \$1.00.

The Religion of Philosophy;

OR, THE UNIFICATION OF KNOWLEDGE:

A comparison of the chief philosophical and religious systems of the world, made with a view to reducing the categories of thought, or the most general terms of existence, to a single principle, thereby establishing a true conception of God. By RAYMOND S. FERRIN.

For sale at THE INDEX Office. Price \$3.00.

SCIENTIFIC THEISM.

By FRANCIS ELLINGWOOD ABBOT, PH.D.

This work includes the substance of a lecture delivered last July at the Concord School of Philosophy. It is part of a new philosophy of Evolution, vitalized by the principle of UNIVERSAL ENDOGENIC TELEOLOGY and by the substitution of the ORGANIC THEORY OF EVOLUTION for the MECHANICAL THEORY advocated by Spencer and Haeckel. Its purpose is to philosophize the scientific method, and to show that modern science, interpreted by its philosophized method rather than by its non-philosophic special results, leads, not to Atheism, not to Agnosticism, not to Idealism, but to a REALISTIC SPIRITUAL THEISM which will satisfy both "the head" and "the heart."

1 vol., 12mo. Price \$2.00.

For sale at THE INDEX office, 44 BOYLSTON STREET, BOSTON.

THE FREE RELIGIOUS ASSOCIATION

was organized in 1867. Though having its headquarters in Boston, it is a national organization, and has members and officers in various States of the Union. It has the following

CONSTITUTION.

I. This Organization shall be called the Free Religious Association, its objects being to promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history; and to this end all persons interested in these objects are cordially invited to its membership.

II. Membership in this Association shall leave each individual responsible for his own opinions alone, and affect in no degree his relations to other associations; and nothing in the name or Constitution of the Association shall ever be construed as limiting membership by any test of speculative opinion or belief,—or as defining the position of the Association, collectively considered, with reference to any such opinion or belief,—or as interfering, in any other way, with that absolute freedom of thought and expression which is the natural right of every rational being. Any person desiring to cooperate with the Association shall be considered a member, with full right to speak in its meetings; but an annual contribution of one dollar shall be necessary to give a title to vote,—provided, also, that those thus entitled may at any time confer the privilege of voting upon the whole assembly, on questions not pertaining to the management of business.

III. The officers of the Association shall be a President, twelve Vice-Presidents, a Secretary, an Assistant Secretary, a Treasurer, and twelve Directors. They shall be chosen by ballot at the annual meeting of the Association; and the President, Vice-Presidents, Secretaries, and Treasurer shall hold their offices for one year, or until their successors be chosen. The Directors shall be chosen for four years, and, at the expiration of that term, shall not be eligible for reelection until after two years. One fourth of their number shall be chosen annually; but, at the annual meeting of 1882, the full number of twelve shall be chosen in sections of three respectively for one, two, three, and four years. The President, Secretaries, Treasurer, and Directors shall together constitute an Executive Committee, intrusted with all the business and interests of the Association in the interim of its meetings. They shall have power to fill any vacancies that may occur in their number, or in the list of Vice-Presidents, between any two annual meetings. Six members of the Executive Committee shall constitute a quorum.

IV: The Annual Meeting of the Association shall be held in the city of Boston, on Thursday of what is known as "Anniversary Week," at such place and with such sessions as the Executive Committee may appoint, of which at least one month's previous notice shall be publicly given. Other meetings and conventions may be called by the Committee, according to their judgment, at such times and places as may seem to them desirable.

V. These Articles may be amended at any Annual Meeting of the Association, by a majority vote of the members present, provided public notice of the amendment has been given with the call for the meeting.

Officers elected for the year 1882-83:—

PRESIDENT.

WILLIAM J. POTTER, New Bedford, Mass.

VICE-PRESIDENTS.

OCTAVIUS B. FROTHINGHAM, Boston, Mass.
FELIX ADLER, New York City.
GEORGE W. CURTIS, Staten Island, N.Y.
EDWARD L. YOUMANS, New York City.
FREDERICK SCHUENEMANN-POTT, San Francisco, Cal.
THOMAS WENTWORTH HIGGINSON, Cambridge, Mass.
ELIZABETH B. CHASE, Providence, R.I.
GEORGE HOADLY, Cincinnati, O.
NATHANIEL HOLMES, Cambridge, Mass.
ROWLAND G. HAZARD, Peacedale, R.I.
BERNHARD FELSETHAL, Chicago, Ill.
ANNIE L. DIGGS, Lawrence, Kansas.

SECRETARY.

F. M. HOLLAND, Concord, Mass.

ASSISTANT-SECRETARY.

Miss A. A. BRIGHAM, Boston, Mass.

TREASURER.

JOHN C. HAYNES, 451 Washington St., Boston, Mass.

DIRECTORS.

Four Years.
FREDERICK A. HINCKLEY, Providence, R.I.
W. A. RUST, M.D., Boston, Mass.
Mrs. PHEBE M. KENDALL, Cambridge, Mass.

Three Years.
CORNELIUS WELLINGTON, Boston, Mass.
Miss MARY F. EASTMAN, Tewksbury, Mass.
FRED. W. GRIFFIN, Concord, Mass.

Two Years.
Mrs. CLARA M. BISBEE, Dorchester, Mass.
J. A. J. WILCOX, Chelsea, Mass.
D. G. CRANDON, Chelsea, Mass.

One Year.

B. A. BALLOU, Providence, R.I.
SETH HUNT, Springfield, Mass.
Mrs. ANNA GARLIN SPENCER, Florence, Mass.

The office of the Association is at 44 BOYLSTON ST., BOSTON (next door east of the Public Library), where is also the publication office of *The Index*.

All letters pertaining to the business of the Association (payment of membership fees, orders for its publications, etc.) should be addressed to "Free Religious Association," at the office.

Communications intended specially for the Secretary, as well as his personal correspondence, should be addressed to him at CONCORD, MASS.

F. M. HOLLAND, Secretary F.R.A.

5 Appleton St., opp. 440 Tremont.

THE PATRONAGE of the liberal advertising public is respectfully solicited for **THE INDEX**. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 insertions, . . . 10c. per line.
" 13 " 25 " . . . 8c. " "
" 26 " 51 " . . . 6c. " "
" 52 " " " . . . 5c. " "

On half-column advertisements, a discount of 5 per cent. will be made; on full-column advertisements, a discount of 10 per cent.

"A remarkable work. Original, striking, and interesting."

THE MORALS OF CHRIST.

A Comparison with Contemporaneous Systems.

By AUSTIN BIERBOWER.

"An admirable example of the scientific treatment of an historical subject, almost as systematic as a treatise upon one of the great sciences."—*Daily News*.

"One of the most notable works of the period, remarkable for its uniqueness as well as high literary character. It may be doubted if another so thoroughly non-controversial work on Christ's teachings can be found in the entire range of the literature of the Christian era."—*Inter-Ocean*.

"The book is one of great suggestiveness."—*Critic*.

"The whole is written in a crisp epigrammatic way that serves to keep the reader's interest closely through the whole inquiry."—*Chicago Times*.

Paper, 200 pages. 50 cents, postpaid.

CHARLES H. KERR & CO.,
175 Dearborn Street, - - - Chicago.

"We are struck with the general good judgment evinced in the preparation of the volume. . . . He has done a real service to the times in bringing together, within four hundred pages, so many noble and pure thoughts. . . . All minor defects, in plan and proportions, we gladly overlook in consideration of its many and great excellences. Whoever buys it will receive many times the worth of his money."—FRANCIS ELLINGWOOD ABBOT.

CHAPTERS FROM

By ROBERT C. ADAMS.

For sale at THE INDEX office. Price \$1.25

HEROINES OF FREE THOUGHT, by Sara A. Underwood, contains sketches of Madame Roland, Mary Wollstonecraft, Mary Shelley, George Sand, Harriet Martineau, Frances Wright, Emma Martin, Margaret Chappell Smith, Ernestine L. Rose, Frances Power Cobbe, and George Eliot. Price \$1.75. For sale at *The Index* office.

"MAMMA," queried a little boy, "is Satan an angel?" "He is one of the fallen angels, dear." "Well, what was the trouble with the angels? Couldn't they make their wings work?"

"PA, does God make anything in vain?" "No, my child: why do you ask such a question?" "PA, didn't a whole lot of generals in the war get beat?" "Yes, my son." "Got licked every time, didn't they?" "Yes, dear." "Never licked the rebels once?" "No, my son." "Got scared and run every time the rebels came near 'em?" "Yes." "Well, didn't God make these generals in vain?" "Oh, no, my poor simple-hearted child. He made them to deliver learned lectures, and write long magazine articles and big books on the blunders and mistakes of the successful generals."

PROF. DAVIDSON'S lecture on "Bruno" is for sale at *The Index* office. Price 5 cents; 20 for 50 cents.

HUSBAND'S CALCINED MAGNESIA.—Four First Premium Medals awarded. More agreeable to the taste and smaller dose than other Magnesia. J. G. Whittier,

are for sale at this office at 25 cents each, except the first three, which are 50 cts. each, and will be sent by mail to any address on receipt of price.

Add THE INDEX,
4 Boylston St., Boston, Mass.

We have two complete sets (12 vols. each), of Carlyle Works, library edition, cloth, gilt tops, which will be sold for one-half price, \$7.50 per set. Also, one set of Dickens' Works, 15 vols., illustrated, library edition, cloth, gilt tops, which we will sell at one-half price, \$7.50. Address *The Index*, 44 Boylston Street, Boston.

THE Q. P. Index Annual for 1885 (Boston: Cupples, Upham & Co.) is now ready, forming the fifth in its own series, the nineteenth in the general. Some fifty periodicals are selectively indexed by Mr. Griswold's ingenious system of numbering. The authors are placed in a list by themselves, each with a numerical designation by which ready reference is made from his proper article.

MR. DANIEL M. TREADWELL says: "The applause received by Joseph Cook as a scientific lecturer by the religious audiences stimulated him to higher flights. His appearance before the scientific world was not unlike that of the street showman who had been so successful in tricks performed with a monkey that he was encouraged to practise them with a bear, which resulted in the discontinuance of the business."

CHEAP RADICAL TRACTS!

No. 1.—**Truths for the Times**, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 5 cents; 30 copies, \$1.00.

No. 2.—**Fear of the Living God**, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 3 cents; 20 copies, 50 cents.

No. 3.—**Lecture on the Bible**, by the Rev. Charles Voysey, of England, is an over-whelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 5 cents; 30 copies, \$1.00.

No. 4.—**Christian Propagandism**, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts*. Price 5 cents; 30 copies, \$1.00.

No. 5.—**"God in the Constitution"**, by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 5 cents; 30 copies, \$1.00.

No. 6.—**"The Sabbath"**, by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 5 cents; 30 copies, \$1.00.

No. 7.—**"Compulsory Education"**, by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 3 cents; 20 copies, 50 cents.

No. 8.—**The Present Heaven**, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 3 cents; 20 copies, 50 cents.

No. 10.—**The Impeachment of Christianity**, by F. E. Abbot. 5 cents a doz.

No. 11.—**The God of Science**, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 5 cents; 30 copies, \$1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman. Price 5 cents; 30 copies, \$1.00.

No. 13.—**The Vision of Heaven**, by F. E. Newman, of England, analyzes the Christian conception of Heaven. Price 3 cents; 30 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing**, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 5 cents; 30 copies, \$1.00.

No. 15.—**The Battle of Syracuse**. Two Essays, by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 5 cents; 30 copies, \$1.00.

Social Ideals, by David A. Wasson. Price 5 cents each; 10 for 30 cents.

Address THE INDEX,
44 Boylston Street, Boston, Mass.

BY B. F. U.

A MERCHANT of Lubeck has bequeathed to the University of Jena the sum of 300,000 marks to found a Darwin chair.

THERE were hourly trains from Boston to seaside resorts last Sunday, carrying excursionists; and the scenes at the beaches bespoke the nearness of summer.

FREDERICK DOUGLASS gave a lecture on John Brown to a large audience in Music Hall, this city, last Friday afternoon. The bushy locks of the speaker, now white, and his tall, handsome form, added greatly to the impressiveness of the lecture, which was replete with lofty thought, and abounded in passages remarkable for their strength of expression and stirring eloquence.

MR. GLADSTONE is showing now as much dexterity as a political leader in the use of party machinery to overcome opposition to his Irish Home Rule scheme as he showed statesmanship in formulating this measure. If it is, in spite of all obstacles, carried through the present House of Commons, its success will be due to the Premier's great strategical ability; and the triumph will be one without a parallel, we believe, in the history of England.

THE Western Unitarian Conference, at its annual meeting last week, was asked to declare "as a body" its belief in "one God, in immortality, in worship, and in personal righteousness, as exemplified in the example and teachings of Jesus Christ." The result was the passage of the following resolution by a vote of more than three to one: "Resolved, That the Western Unitarian Conference conditions its fellowship on no dogmatic tests, but welcomes all who wish to join it, to help establish truth and righteousness and love in the world."

FREDERICK DOUGLASS was the guest of the Massachusetts Club, in this city, last Saturday evening. In a speech, he said: "I remember that fifty or forty-five years ago I could not take a railroad car out of Boston without encountering the hostility of the mobocratic spirit that prevailed

then. Then think of my being here to-day, with the best heart and soul of old Massachusetts, the intelligence, the refinement, the wealth, the political power, represented here; and no man has said to me, 'Douglass, get out.' . . . I have seen prejudices that were deep rooted uprooted and removed. I have seen hardships that were imposed removed. I have at last seen liberty made the law of this land, and being the law, higher than the public opinion of the people, still the law for the people and the law to which the people will ultimately approximate. Hence, I am not discouraged. My friend, Buffum, here, has seen me in the toils of rowdies, and not only rowdies, but of the authorities; for I have been dragged from railroad cars, and denied the right to ride on highways or byways, railroads or stage coaches, on equal terms with other people. Now, I look around in vain for anybody to insult me."

THE committee on evolution, appointed by the General Assembly of Presbyterians at Augusta, Ga., on the 22d inst., submitted a report, so say the despatches to the papers, that "the Presbyterian Church remains sincerely convinced that the Scripture, as freely and authoritatively expounded in its confessions of faith, teaches that Adam and Eve were created, body and soul, by the immediate acts of the Almighty Power, thereby preserving a perfect race unity; that Adam's body was directly fashioned by Almighty God, without any natural animal parentage of any kind, out of matter previously created from nothing; and that any doctrine at variance therewith is a dangerous error, inasmuch as by the methods of interpreting Scripture, which it must demand, and in its consequences, which by fair implication it will involve, the theory will lead to the denial of doctrines fundamental to the faith."

A HEARING was given on Thursday, May 20, in the Green Room of the State House, before the Judiciary Committee of the Massachusetts Senate, in regard to the "age of consent" and the laws to punish seduction. The deep interest in the community on this subject, and the general desire that our present shameful laws in regard thereto be changed to accord with justice and the moral conceptions of this age, were manifest in the strong personality of the men and women who filled not only all the available seats, but every inch of standing room. Representatives of the Woman Suffragists, the Women's Christian Temperance Union, the Moral Education Association, and the Young Men's and Young Women's Christian Associations, were there, in addition to many persons distinguished for their interest in all public questions. It was a gathering of representative people of whom Massachusetts should be proud, while she has reason to be ashamed that proper legislation in this matter should require such an appeal. The hearing was begun at 11 A.M., and was intended to be closed at the usual hour; but so strong was the interest felt, and so many differing phases of the subject needed discussion, that an adjourned meeting in the afternoon was granted. The speaking was earnest, eloquent, and to the point. The speakers

of the forenoon were Judge Forbes, who presented a bill for the punishment of seduction, Rev. Dr. Duryea, Mrs. J. C. Eastman of the Moral Education Association, Rev. James Freeman Clarke, Mrs. Mary A. Livermore, Miss E. S. Tobey, President of the Massachusetts Christian Temperance Union, Miss Lillian Clark, W. H. Baldwin, President of the Young Men's Christian Union, and Hon. W. I. Bowditch. Senator Elijah Morse conducted the hearing for the petitioners, and read a letter from Judge Russell, explaining the inadequacy of the present laws. Those who spoke at the afternoon hearing were Rev. Mr. Sprague, Henry B. Blackwell, Julia Ward Howe, Mrs. H. L. T. Wolcott, Rev. H. L. Hastings, Mrs. Harriette R. Shattuck, Dr. Salome Merritt, Henry Chase, and others. The most intense interest was manifested by the large audiences present at both hearings, and yet the following is what the *Herald's* legislative reporter writes as to any hope of action on the subject by the present legislature: "The facts presented to the committee showed that hundreds and thousands of villains fail to get the punishment they so richly deserve for ruining the lives of innocent girls. But the legal gentlemen on the committee seemed to think that the present laws on the subject would go far to remedy the evil, if only enforced. In this matter as well as in many others, the laws that exist are not enforced as they might be. The committee will undoubtedly, however, report some favorable legislation."

TWENTY-SIX States and Territories have forbidden the exclusion of evidence on account of religious belief, as follows: Arizona, California, Colorado, District of Columbia, Florida, Georgia, Idaho, Indiana, Iowa, Kansas, Maine, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Montana, Nebraska, Nevada, New York, Ohio, Oregon, Wisconsin, Texas, Utah, Vermont. The list of States which retain the old restriction is shorter: Alabama, Arkansas, Connecticut, Dakota, Delaware, Illinois, Kentucky, Louisiana, Maryland, New Hampshire, New Jersey, North Carolina, Pennsylvania, Rhode Island, South Carolina, Tennessee, Virginia, Washington, West Virginia, Wyoming. Of the twenty-six States and Territories which forbid the use of the religious test, eight—District of Columbia, Georgia, Indiana, Iowa, Maine, Massachusetts, Nebraska, and Utah—allow the religious opinions of witnesses to be inquired into to affect the value of their testimony with juries. The States that exclude the testimony of atheists have an illiterate element of twenty-four per cent. The States that have no religious tests have a percentage of twelve. In other words, about a fourth of the first could neither read nor write in 1880; while only one-half as many, or one-eighth of the progressive class, were in this illiterate condition. "Of course," says H. W. Holland, to whom we are indebted for these facts, "we do not argue that the oath has much effect upon culture or crime, but merely that, when a certain stage of mental growth is reached, these restrictions upon the truth are felt to be absurd, and are speedily gotten rid of."

LIBERALISM AND CHRISTIANITY.

The *Christian Register* has recently had two able editorial articles on the meaning of the term *Unitarian*. The articles give evidence of elaborate historical research and of a hospitable, liberal spirit; recognizing, on the one hand, the authority of usage in determining the definition of words, and, on the other, the plasticity of words, especially of words that have been made religious titles, for receiving new meanings as the thoughts of men enlarge. The editor arrives in conclusion at this statement: "Unitarianism is that free and progressive development of historic Christianity which aspires to be synonymous with universal ethics and universal religion." This is finely stated; and the definition, we believe, is true, as concerns the vital and active Unitarianism of the present day. Of course, the editor is speaking of Unitarianism, not in its generic sense, as signifying merely a belief in the unity of God as against polytheism, but in its specific sense, as denoting a certain form of belief within the limits of Christianity. And the argument within these bounds is legitimate. There is no doubt that the movement known as Unitarianism in Christendom has been impelled by the spirit of liberty, and has been progressive; and, in this progress, it has reached the point where it does aspire to define Christianity as synonymous with universal religion.

But it occurs to us that this argument needs to be followed further. After Unitarianism has made this claim, that it aspires to be synonymous with universal religion and universal ethics, and has become thoroughly imbued with the spirit of the claim, can it logically call itself a form of Christianity and legitimately keep the Christian name? We think not. Its case is wholly different from that of the evangelical Christian sects. They, too, claim that Christianity is to become the universal religion. But they believe that this is to be effected by all mankind being finally converted to certain supernatural theories and dogmas, which, in their view, are the essentials of Christianity; and, on their assumption that these specially distinguish Christianity, there would be no break in their adherence to the name, if their hope of converting the world were to be fulfilled. Even though it might be questioned whether Jesus ever preached or held them, these beliefs have always, from the time of Paul, been so dominant in historical Christianity that there would be no question of the right of the Christian Church to stamp all the nations of the earth with the Christian name, if it were actually to persuade them to accept these beliefs. But the modern Unitarianism that aspires to be synonymous with universal ethics and universal religion rests its faith and hope on a very different ground. It acknowledges that Christianity, like other religions, originated and developed in a perfectly natural way; that Jesus was only a natural man with a great genius for religion; that the New Testament was of human origin and gradual growth; that Christianity, historically, is a conglomerate of mingled truth and error which human reason is to judge; and that the genuine elements of ethics and religion are not dependent on any special Christian revelation, but are as natural and universal as humanity. According to this type of Unitarianism, Christianity is to become one with universal religion, not by conversion of the world to any historical, dogmatic interpretation of itself, but by the gradual shelving off of its special dogmatic errors and claims and the evolution of its rational and universal elements—common to all forms of religion—into an organization open to all truth and as broad as human brotherhood. Now, when Chris-

tianity as a specific religion opens out into universal religion as thus conceived, it can have no right, nor can we understand how it can have a desire, to retain its old name. The name grew out of and belonged to its specific, erroneous claims, and must drop off with those claims.

We have never been disposed to define Christianity by the lines of a rigorous creed; nor do we accede the claim made by evangelical Christendom that its definition of Christianity, since it is sustained by the vast majority of Christian believers, is to be regarded as necessarily the true one. We maintain that Unitarian and other liberal Christians have had just ground for appealing from the complicated creeds of the Protestant evangelical churches to the simple and almost creedless statements about religion to be found in the reported words of Jesus, and from the papal pomp and monarchical splendor of the Roman Catholic Church to the simple life of Jesus as a despised and persecuted prophet. Since Catholic and evangelical Protestant alike declare Jesus to be the head of the Christian Church, it is perfectly valid to appeal to his life and words for a definition of Christianity against any claims made by them, however buttressed by majorities and the authority of time. But this very appeal to Jesus as the head of the Church for rectifying the popular definition of Christianity reveals one fact that is essential to every statement and phase of Christianity that has any semblance of logical soundness: it implies a special form of religion, of which Jesus is the recognized originator and still authoritative leader. And this, in our opinion, is the one necessary factor that must enter into any proper definition of Christianity. Originally, a Christian was one who accepted Jesus as the Christ, the Messiah. And, however that term Messiah, as applied to him, is to be explained, there has been, amid all the changes of doctrines and sects through all the Christian centuries, some kind of acceptance of the term among all branches of the Christian Church,—an acceptance which has at least given Jesus an exaltation and authority apart from all other religious teachers and prophets. Christianity, historically considered, did not by any means all come from Jesus nor Judea. It has been a fluent force in history, receiving accretions and taking character and color from many sources. But, through all accretions and transformations, it has kept genetic connection with that primary idea which gave it its original impetus and furnished its name,—the Messianic office and authority of Jesus. And, when this idea is no longer believed,—as it is not by those who affirm Jesus to be simply one in a company of religious teachers who belong to universal religion,—the Christian faith is really abandoned; and, in logical honesty, the name should follow.

Moreover, several of the special religions of the world, in their progressive sections, are showing the same evolution toward the ground of universal religion. Rabbi Wise, speaking several years ago for progressive Judaism on the platform of the Free Religious Association, claimed that Judaism, interpreted by the light of reason, is "synonymous with universal ethics and universal religion." The Brahmo-Somaj of India, having its historic roots in the ancient faith of that land, has progressed to the point where it aspires to make the same claim for its ideas. And Syed Ameer Ali, the liberal interpreter of Mohammedanism, says of that faith that there is hope of its freeing itself "from the blind idolatry of letters and apotheosis of dead men," when, "regaining its true character," it will devote itself to "the elevation of mankind." He writes, "The Teacher of

Islâm preached, in a thousand different ways, universal love and brotherhood, as the emblem of the love borne toward the Primal Cause of all." Thus, the progressive, liberal minds of these various faiths and the progressive, liberal minds of Christianity are really seeking to promote and establish the same things. They are interpreting their respective religious beliefs in the same way. Each aspires to make his religion "synonymous with universal religion and universal ethics." Why, then, should this common belief, which they really hold together, be called Christianity, any more than Judaism or Brahminism or Mohammedanism? Or why should any of these names be retained, to keep people apart who actually mean the same thing and wish to work for it? When the *spirit* of universal religion and universal ethics shall come in its purity and fulness, these dividing names, the relics of obsolete claims and traditions, will surely be discarded in the name of justice and brotherhood.

WM. J. POTTER.

SCHILLER.

In thinking and writing of the great German national poet, Schiller, at this beautiful season of the year, one recalls the opening lines of "The Complaint of Ceres," one of the sweetest and most thoughtful of his minor poems, which Lord Lytton has thus translated:—

"Does pleasant Spring return once more?
Does Earth her happy youth regain?
Sweet suns green hills are shining o'er;
Soft brooklets burst their icy chain.
Upon the blue, translucent river
Laughs down an all unclouded day;
The winged west winds gently quiver,
The buds are bursting from the spray.
While birds are blithe on every tree,
The Oread from the mountain shore
Sighs, 'Lo, thy flowers come back to thee:
Thy child, sad mother, comes no more.'"

Schiller was a true German or Teuton, one of the emancipators, also, of the Teutonic and European mind from thralldom to French taste and French literary canons, according to which Shakspeare was a barbarian. He was born in the same year (1759) which witnessed the birth of Burns. Unlike his Scotch contemporary, Schiller was highly cultivated, reared, as it were, under that distant Grecian sky of which he somewhere speaks. But he was a virile writer, like Burns. During most of his life, his circumstances were narrow, as were those of Burns; and he could not help envying Goethe his ability to visit Italy. But his narrow circumstances did not abate in the least his lofty self-respect or extinguish his poetic fire. When the Emperor of Austria sent him a patent of nobility entitling him to write *von* before his name, he simply remarked that it would please his wife and children.

All the great Germans have been liberators, namely: Luther from bondage to a paganized Christianity and priesthood; Niebuhr from a childish credulity in the fables of primitive history; Humboldt from narrow views of cosmos, or the physical universe; Lessing, Goethe, and Schiller from the vicious æsthetic canons of French literature, and from bondage to the letter of Scriptures; Kant from a demoralizing sense philosophy, or sensationalism; and, finally, Bismarck from an arrogant Latin imperialism and priestism. Schiller was, by birth, a child of the last half of the revolutionary eighteenth century. He himself was a revolutionist in the realm of thought. His first literary production, *The Robbers*, was an outcry, as it were, against the conventionalisms, caste spirit, and social, political, and ecclesiastical despotisms of the rotten civilization of the old régime. It

was a savage defiance of the old iniquitous order of European society. *The Robbers* gave to Schiller, when he was a mere stripling, a European reputation. He became famous in a night, as it were, as Goethe did by the publication of the *Sorrows of Werther* and Byron did by his *Childe Harold*. With Byron, too, Schiller had points in common. But both Byron and Burns were of the earth earthy, from a moral point of view, when compared with Schiller. Neither did they breathe the same empyreal air of the ideal world which he breathed.

Schiller was a poet in the highest and best sense of the word. He wrote no line which, dying, he could have wished to blot. Hence, he is not only the national poet of Germany, but he is also the ideal German man. His works may be found in the humblest abodes of the German settlers in all parts of this country. Hence, the dedication in Lincoln Park, Chicago, the other day, of a magnificent monument to his memory, surmounted by a colossal statue of him, ten feet in height, was a proper tribute in the right place, when the vast German population of the Western States is taken into account. The bronze presence of such a noble personality, who lived a life of such complete aloofness from all sordid pursuits, and so entirely in accordance with the dictates of his higher nature, cannot but exert a good influence in a place so devoted to mere traffic as Chicago. The impressive aspect of the great German bard in the Park aforesaid will remind the young American of that city and region that there are other distinctions worth winning than the distinction of mere wealth. For, before him, he sees the figure of one who was never rich or a coveter of riches, but who is, nevertheless, esteemed by one of the greatest and most enlightened nations of the earth its model man of thought and imagination, whose image its sons are in the habit of setting up for contemplation and admiration in whatever regions of the earth they may happen to settle. Schiller was a good subject for the sculptor, as the familiar statuette of him indicates. De Quincey describes him as tall in person, and of a strong, bony structure, but not muscular, and strikingly lean. His forehead was lofty, his nose aquiline, and his mouth almost of Grecian beauty. With other good points about his face, and with auburn hair, it may be presumed that his whole appearance was pleasing and impressive; while, in later years, the character of sadness and contemplative sensibility deepened the impression of his countenance.

Schiller's life was brief, but full of literary achievements of the noblest sort. He was born in 1759 and died in 1805, at the age of forty-six. He breathed the atmosphere of the current century for a few brief years; but he did not live to see the marvels of mechanical invention and the marvellous social and political changes and the altered point of view in matters of belief and opinion which have made the last half of this century so unlike any preceding century. Goethe survived Schiller twenty-seven years; but even he did not live to witness the operation of railroads, electric telegraphs, and sewing machines. Schiller was an intellectual aristocrat, but not at all an aristocrat in other respects. In Schiller's youth, Rousseau, the apostle of social and political equality and the enemy of the old pre-revolutionary civilization of Europe, was read of all such readers as Schiller, who became deeply imbued with his sentiments and sentimentalisms. But the virile philosophy of Kant extricated him from Rousseauism. Schiller's *Wallenstein* is the great historic drama of *Deutschland*. The characters of Max Piccolomini and Thekla are of divine beauty. It is a sort of dramatization of the Thirty Years'

War, the last and most devastating of religious wars; for it left Germany, which had previously been the most prosperous and wealthy country of Europe, a desolation, so that it lagged for a long time behind France and England, and, in fact, did not regain its proper position in Europe till recently. Young Max was a nursling of the camp, and had never known peace. He and his lady-love, the beautiful Thekla, were not to be united on earth. He passed swiftly "in battle and in storm"; and his commander, the star-beguiled Wallenstein, forgot for a moment all else but the fallen youth, as he stood over his mangled remains, and exclaimed:—

"He stood beside me like my youth:
Whatever fortunes may attend my future fate,
The Beautiful hath vanished, and returns not."

The passage in this drama descriptive of the contrasts of peace and war is unsurpassed:—

"Straightforward goes
The lightning's path, and straight the fearful path
Of the cannon-ball. Direct it flies and rapid,
Shattering that it may reach, and shattering what it reaches.

My son, the road the human being travels,
That on which blessing comes and goes, doth follow
The river's course, the valley's playful windings,
Curving round the corn-fields and the hill of vines,
Honoring the holy bounds of property,
And this secure, though late, leads to the end.

In war itself, war is no ultimate purpose.
The rash and sudden deeds of violence,
Adventures wild and wondrous of the moment,—
These are not they, my son, that generate
The Calm, the Blissful, the Enduring Mighty!
Lo! there the soldier, rapid architect,
Builds his light town of canvas; and, at once,
The whole scene moves and bustles momentarily
With arms and neighing steeds and mirth and quarrel.
The motley market fills. The roads, the streams,
Are crowded with new freights, trade stirs and hurries;
But, on some morrow morn. all suddenly
The tents drop down, the horde renews its march.
Dreary and solitary as a church-yard
The meadow and down-trodden seed-plot lie,
And the year's harvest is gone utterly."

Such are force and violence matched with the quiet but fruitful methods of peace and law and order. Schiller left many laconisms as pregnant with wisdom as are the sayings handed down to us from the far past of the primitive wise men. Here is one of them, entitled "Science":—

"To some she is the goddess great,
To some the milch-cow of the field:
Their care is but to calculate
What butter she will yield."

Here is another, entitled "Friend and Foe":—

"Dear is my friend. Yet from my foe,
As from my friend, comes good:
My friend shows what I can do,
And my foe shows what I should."

Of "Kant and his Commentators," he says:—

"How many starvelings one rich man can nourish!
When monarchs build, the rubbish-carriers flourish!"

In his verses entitled "Honor to Woman," contrasting man and woman, Schiller has paid such a melodious tribute to the fairer portion of humanity as can hardly elsewhere be found. Just before he died, Schiller awoke from sleep, and uttered the memorable declaration "that many things were growing plain and clear to his understanding." Goethe said of him that his proper productive talent lay in the ideal, and that it might be said of him that he had not his equal in German or any other literature. Just now, when what is called Realism is dragging literature through the slough of the commonplace and ignoble, the poetry of Schiller, with its lofty idealism, will be found an excellent mental tonic and alterative.

B. W. BALL.

* The above Schillerian epigrams are given in the version of Sir Edward Bulwer Lytton, or Lord Lytton, in his *Translation of the Poems and Ballads of Schiller*.

AN ANCIENT TOWN.

It is written in olden records that Julius Caesar had a beautiful breastplate, made of gold studded with British pearls, which he dedicated to the Venus Genitrix. One of the pearls in the English crown is said to have been found in an English river, but the palmy days of English pearl-fishing are over. Few and far between are the rich pearls found in English rivers now.

One of the most famous rivers in all Britain for pearl mussels was the Conway, in Wales. Here were great fisheries, and it was doubtless from the Conway that Julius Caesar drew his finest pearls for the breastplate of the Venus.

The Conway rises in a little dark tarn among the Welsh hills, and wends its way for thirty miles through a smiling country to the Irish Sea, where its waters mix with the briny flood. The town of Conway stands on the river's bank, about four miles from the sea and about forty-five miles from Liverpool, and is one of the quaintest of mediæval towns. It is almost incredible that there should exist such an ancient, sleepy, romantic, little walled city so near a great, bustling, nineteenth-century place as Liverpool. In two and a half hours, the steamboat carries the traveller from Liverpool to Llandudno; and a few minutes in the train takes one away from this modern watering-place to the peacefulness of a thirteenth-century fortified town.

The castle of Conway is one of the most beautiful in a country of beautiful castles, towering grimly and grandly over the ragged little town that nestles beside it. Very odd it seems to stand on the crumbling battlements, and look down on the town which is enclosed within the battlemented stone walls of the same age and fashion as the castle. Six long centuries have come and gone since the First Edward conquered Wales, and built his strong fortresses to keep the wild Cymry in subjection; but every hill-top and valley is full of suggestions of the ancient and little known race. A few names have come to us from out the mists, such as Caractacus, Llewellyn, and Owen Glyndwr; but few to-day have any idea of the fierce bravery of this ancient race or how desperately they fought for their fatherland. On every mountain-side and every hill-top there are remains of ancient fortresses of a rude type, built for defence in the long past times; of cromlechs, built for worship or for sepulture; of traces, in one form or another, of a brave and home-loving race. There is a saying among the Welsh that "Wales was Wales before Englandt was born, look you"; and an old Welsh family had written, in the midst of their family records, "About this time, the world was created." How old these ancient Britons were when Wales was first peopled, no man can say. Certain it is that the little principality has borne a brave part in the world's history, and its people have been true to their traditions. Centuries have passed since Edward conquered them, but they still speak their own language. Many a change has come over the fashions of the busy world; but the frugal and industrious Welshman still fears God, and lifts his voice in tuneful praise on the Sabbath day, as his fathers did before him.

The towers and walls of Conway are, nought save crumbling ruins; the ivy and the wall-flower have taken possession of lordly halls; the grass grows green in the banqueting places of the forgotten great ones. And we sing, while we gaze,

"A little rule, a little sway,
A sunbeam in a winter's day,
Is all the proud and mighty have
Betwixt the cradle and the grave."

The jackdaw hops on the crumbling walls of fair Queen Eleanor's oratory, and wandering lovers kneel to plight their vows on the stone where a queen once whispered her confessions to her ghostly comforter. Time and chance have played sad havoc with solid walls; but the God of Edward, of Richard, and of Elizabeth, the God of Cromwell and of Llewellyn, still lives in Conway. The little town has scarcely dared to creep outside of the walls, even though the passing centuries have brought us protection, such as stone walls could never give. The old church, built as strongly and as grandly as mediæval devotion could build it, still receives its quota of worshippers on Sunday; while the surpliced minister, with gray hair parted in the middle, and precise in speech, talks the same mediæval nonsense as of yore.

Sitting in the church on a recent Sunday, it seemed to carry one back to the days when Conway was in its prime. The church was built of native mountain limestone, which stands well. The pillars were massive, as though the builders built for aye; while the carved heads at the spring of the arches were as grotesque as ever ornamented ancient gargoyles. The saints had lost their noses, and the devils had lost their ears; but the old stone records of early faith were as suggestive as ever.

The thick, massive walls, with deeply set windows, were such as men rarely make nowadays; while the stained-glass windows and the old black oak stalls, beautifully carved, showed the pious fervor of the old murderous, pitiless times.

In such a place, to close the eyes and listen to the sweet intonation of the white surpliced reader, to hear read once more the story of the blood sprinkled on the door-posts of the Israelites to protect them while their bloodthirsty God smote the first-born of the innocent Egyptian people, carried one back to the cruel days of the dead past, when men hated their fellows as fiercely as they loved their God. The dulcet tones of the reader rose with a gentle melody, as he repeated the Sinitic commands to a people familiar with them from childhood; and the sweet-voiced choir responded in musical notes, accompanied by the powerful organ, "Lord, have mercy upon us, and incline our hearts to keep this law." The gospel was read to the people, just as it was in the "good old times," when no one could read. Yet the priest and the parson read it in such a delightful monotone that the old mural tablets, the mutilated stone faces, the stained windows, and the blood-stained castle walls, all seemed to get mixed with Owen Glyndwr, Edward I., and his fair Queen Eleanor, forming one of the sweetest services imaginable. The sermon was of a piece with the service, a dear, old, brief piece of twaddle,—no word of to-day in it, nothing for this world in it; only a set of stereotyped phrases and an injunction to other-worldliness.

The good soul of a preacher explained why it was a "young man" who was found in the Saviour's tomb. It was because God has no old men in his kingdom. There's no old age there, nor night, nor sorrow, nor tears! Sermon and broken-nosed saints, stained-windows and gospel, formed a perfect harmony.

The only modern innovations were that the fount and pulpit, reading-desk and the altar, were all decorated with the new Tory emblem, the primrose; while the "poms and vanities of this wicked world" were painfully manifest in the attire of some of the ladies, who had evidently new clothes for the occasion.

It was formerly the custom to baptize the people at Easter-tide; and, as a sign of the new nature

assumed at baptism, new clothes were put on. This old fashion still survives in many parts of Britain; and people are given to donning new clothes at this season, even though they know nought of the origin of the fashion.

The Sunday service in the Welsh church on this Easter Sunday would have been far sweeter, had one been able to shut out the pictures of the previous night, when our party had seen the toiling folk of this Welsh village holding their revels. Their sense of pleasure appeared quite in keeping with the service, with the mouldering walls and the mutilated saints. We saw noisy venders of poor crockery, selling miserable, gaudy china sets to poor, ignorant villagers. We saw men and women, like the children in some great city, playing games for sticks of "toffy." We saw such a poor, pitiful barbarism exhibited everywhere that it seemed as if the intellect of the little town had been prisoned by the stone walls, and no mental progress had been made since the town was built. There were no libraries, no lectures, no inducements anywhere to a better, a holier, a higher life.

The parson was invisible. The well-dressed crowd of Sunday worshippers were invisible. The "public house" and the vulgar claptrap of travelling peddlers were all the people had offered to them, and one could only sorrow that to-day such things are in a Christian land.

Surely, the world hath need of a better gospel than this one which is counted orthodox to-day? We need a gospel that shall lift up our own people to a higher standard, and set their minds athrob with holy thoughts; that shall set men above the power both of priests, kings, and demagogues; that shall teach men to live, as George Eliot says,

"In pulses stirred to generosity,
In deeds of daring rectitude, in scorn
For miserable aims that end with self,
In thoughts sublime that pierce the night like stars,
And with their mild persistence urge men's search
To vaster issues."

PETER ANNET.

JANES'S STUDY OF PRIMITIVE CHRISTIANITY.*

Few may be aware of a fact, which certainly deserves to be widely known, that in the city of Brooklyn there has for several years been in existence a society devoted, with untiring ardor, to studies profound, difficult, yet deeply fascinating, and of highest import for the human mind. This is the "Association for Moral and Spiritual Education." The members, I believe, are all persons engaged in active life in the world of affairs; and yet they have found time and had strength to apply themselves to patient, laborious, careful research into the history and characteristic features of some of the great historic faiths of the world.

I doubt not some of the best work done anywhere in our country certainly has been performed by this little band of lay men and women. The outline issued from year to year of their proposed studies has shown that they were intent on making acquaintance with the best things in Persian, Hindu, Egyptian, and Greek religious thought. They have not spared time, pains, or expense to avail themselves of the most valuable sources of information. It has been my privilege once or twice to meet with this circle, and I have been both surprised and delighted to see the breadth and attempted thoroughness of the researches upon which they had entered. Such work gives us new hint of the possibilities for accomplishment even to the busiest and most preoccupied among us.

One of the fruits of this noble industry we have in the volume just published by Mr. Janes. It is

* *A Study of Primitive Christianity.* By Lewis G. Janes. 320 pages. Boston, 1886.

a production of genuine merit, calm, free from bias or prepossession, intelligent, discriminating, just, presenting the best results of modern research and scholarship in a form well adapted to meet the popular understanding and speak to the general mind. And the theme with which it deals is one of unending interest to us all. We wish to learn the genesis and true story of the great faith in which we were born and reared. It is an emancipation to know that it had normal birth and growth, that all religion, Christianity itself, with whatever distinguishes it, belongs to humanity. There is nothing miraculous about it, but the true eye can see it in the line of natural human development. As we outgrow the illusions and superstitions of early education, we are filled with a quenchless thirst to read and acquire the full story, to trace the thread of historic connection, and see all in the broader horizon of the universal Truth and the law of an unending progress.

Mr. Janes has, in our judgment, done this work of elucidation remarkably well. He has put us all under deep debt to him by his admirable presentation in one small volume of the results of years of careful study.

It is a great theme; and much, very much, doubtless, remains to be done ere the full solution shall be wrought. Every year's studies are bringing us more and more to see that there has been wider intercourse of man with his fellow, even in remote times, than we have been wont to suppose; that thoughts and opinions, religious ideas, have penetrated to farthest distances without printer, or book, or style, undulating and permeating like ether, and astonishing us now, as we come to explore, by their appearance in most unexpected places. In Theban tombs of nearly two thousand years B.C. are found Chinese porcelain bottles; Asiatic jade in the Swiss lake-dwellings; an Indian Ocean shell has been discovered in a prehistoric bone-cave in Poland; and in the valley of the Mississippi, in the *tumuli* of the mound-builders, side by side lie copper from Lake Superior, shells from the Gulf, and obsidian from Mexico. Man had been a traveller, even a navigator, long before the Phœnician merchants went to the *Kassiterides* or the mariners of Necho sailed beyond the line and saw the sun to the north of them. It is unquestionably true that Christianity has drawn from numerous and widely separated sources. We find traces, genuine survivals in fact, in the New Testament, still more in the Old, from far distant past, rude, barbaric; and there are elements not only from Egypt, Babylonia, Persia, but also from the far Orient, more, probably, than Mr. Janes has supposed.

The relations of Jesus to the Essenes lie still more deeply to be examined; and I think it may be found that the connection is more intimate and vital between the inculcations of the Galilean prophet and the views and practices of that remarkable sect than any yet have suspected. The cross, also, and the worship of the mother and the child, open a field for no end of fruitful research; and every hint touching the relations of Christianity to those of far earlier time than it is interesting. It is unquestionable that the cross is one of the very earliest of symbols, found far back as an object of religious veneration in the stone age. The exploration of its pregnant history has hardly more than yet begun. Mr. Janes's volume touches upon these and other pregnant themes connected with the genesis of Christianity, and, though less full on some of them than we could have wished, is always intelligent and instructive. "Judged in the court of reason," says Mr. Janes, "and, according to the accessible evidence of history, regarded in the light of the new science of comparative re-

ligion, Christianity is no exceptional faith. Like all other religions of the world, it is a human institution, a natural growth out of pre-existing conditions, the product of our Father,—MAN."

Mr. Janes's paragraph upon the apparent presence of remnants of *solar myth* in some of the relations, particularly in John's account of the Logos, and the miracles of the Christ both in John and the Synoptics, is bright and very suggestive. Viewed in such way, the turning of water into wine, restoring of sight to the blind man, feeding of five thousand men with a few loaves and two fishes, etc., have a significant interpretation; and this finds confirmation in some degree through wider studies. Miraculous conception, birth from a virgin and in a cave, are familiar to the mythologies. It may be impossible at this distance accurately to determine to what extent there may be survival or at least reminiscence of the mythologic ideas in Old Testament and in New, but it is indubitably there in repeated instances. This fact also brings Christianity into nearer connection with other religions of the world, and enhances for us the value of the study of mythology.

No one can read this wise, thoughtful volume without being impressed anew with sense of the *vitality of human nature*. It has grown Christianity, all its qualities and worth are in that soul; it has given birth and all the fulness of his endowment to Jesus. It is yet to produce greater and more.

Mr. Janes closes his book with a prophecy of the reign of the religion of Universal Humanity, that is uplifting and inspiring to heart and soul. He sees how partial all in the past has been, sees—while recognizing the superior excellences—the limitations of Jesus and of Christianity, and realizes how much broader and more inclusive must be the faith that shall heir the ages of the future. It "shall be neither exclusively Christian nor Buddhist, nor Mohammedan nor Hindu, shall be known by no sectarian designation. Into its fold shall be welcomed all sincere and earnest seekers for the truth, all who strive for its manifestation in a life of righteousness, all who believe, in the language of one of its prophets, that 'Truth is our only armor in all passages of life and of death.'" Instinctively, we cry,—

"Swift fly the years,
And rise the expected morn."

In all ways, in its learning and its thought, its manifold suggestiveness, this is a capital book, and deserves to be read, studied by all, especially the young, who should know what this faith is into which we have been born and beneath which received our nurture. It was Auguste Comte who said, "No conception can be understood except through its history." The observation applies with full force here. The history must be learned, the antecedents and formative influences, for whoso would understand Christianity. Christianity will be seen in some respects less than we have been wont to regard it; in other respects, perhaps more. At any rate, it will appear of a piece with the normal, the general history of *man*.

CHARLES D. B. MILLS.

ANARCHIST RIOTS IN CHICAGO.

The recent riots in Chicago, and the threatening mobs in other Western cities, have caused all thoughtful people to ask themselves how they could so long have been blind to the danger of this insidious disease that has attacked the body politic. It is difficult to realize that in this land of liberty there exist wrongs and oppressions that weigh heavily on the laboring classes. Many feel aggrieved that honest labor should lift its voice in complaint; but they are dumfounded when the peace of society is menaced by the terrible foreign

foe, whose coming is largely due to their own recklessness.

Twenty years ago, the attention of Americans was urgently called to the subject of "assisted immigration"; and many able articles have since appeared, in both the daily papers and monthly magazines, pointing out the ever-increasing evils of allowing emigrants to be landed without some strict State supervision, both at the point of disembarkment and at the terminus of their journey. It has so long been a tradition of this country that every comer was welcome, and that immigration was an unmitigated good, that it is almost impossible to disabuse the public mind of the impression that, the more people poured into the country, perceptibly increase its wealth and producing power. It is always assumed to be an excellent thing for the European governments to send their superfluous and sturdy peoples to these shores to open up and colonize the great North-west, so that the native-born citizens of the country can comfortably enter in and take possession.

If the emigrants would only carry out this useful programme, it would be a gain to this country; but, unfortunately, quite a large number among them prefer the great cities, where their presence is neither desired nor required. Within a short time after their arrival, they become at liberty to vote, and to dictate to the American people what course to take in all national or complicated questions. The Irish, the Poles, the Bohemians, and the Germans are good examples of this; for all hopelessly down-trodden people become aggressive, when far from the power which has subdued them. In other words, as they are smarting under a sense of humiliation and helplessness, they seize the first moment of liberty to visit their sufferings on others.

The Poles have been a thorn in the side of almost every European government. Proud, sensitive, and emotional, with an intense love of country, they have suffered untold hardships since the infamous dismemberment of Poland, and, reckless and desperate, have wandered from city to city, promoting discontent and visiting their own sorrows on innocent people. The Irish are another instance too well known to cite. Bohemia is another beautiful and wretchedly impoverished country, priest-ridden and tax-burdened. Germany presents a different phase of oppression,—a military despotism. Every one must become a soldier. Remonstrance is useless, for the Emperor and Bismarck are inexorable. The German is sentimental by temperament and military by training. Theory is his strong point, but he would prefer enforcing the theory by brute force. This country affords an excellent vent for his smothered sentiment, and his military training may become extremely dangerous. These are the elements composing the unskilled labor and pauper populations of our large cities. Totally unprepared by previous training for self-government, hardly understanding the language, they are left without a guide, without education, without traditions to shape their own course, under conditions of the importance of which they have not the faintest conceptions.

These people are here among us. It is impossible to return them "from whence they came." There remain but two ways of dealing with the problem,—at the point of the bayonet or a strict supervision of all emigrants who are landed at the seaports, this board of supervisors to inquire into their means of support, health, previous good conduct, and destination. All the expenses of the national, county, and municipal boards are already so great that any added burden is looked on with suspicion. But, when it is considered that more

than half the prisoners, insane patients, and hospital inmates are not native-born, it will be seen that a great opportunity for retrenching is presented by returning many of them to the country from which they came.

The people already settled among us must be humanized, educated, and cared for. This is the kind of result which the bayonet is inadequate to bring about. It is also very troublesome. Americans will never take kindly to a state of siege. These emigrants are too sure of their rights and welcome among us. They must be taught the conditions under which they may remain here. Exact, in the first place, that they shall be self-supporting and also self-controlled. The right of voting should be greatly restricted, and made as difficult of attainment as possible. The American government is at present in the unfortunate position of step-father to a large and turbulent family of children.

ELLEN M. HENROTIN.

EDITORIAL NOTES.

BY B. F. U.

THE Committee of Arrangements of the Free Religious Association will be pleased to receive, at the Meisnaon, not later than two o'clock Friday afternoon, May 28, flowers from any friends who may be disposed to send them for the Festival.

THE Parker Memorial Science Class will leave the Fitchburg Depot at a quarter past nine Sunday morning, June 6, if the day is not stormy, for Lily Point Grove. The Parker Memorial Society will join the Class on this excursion.

WHAT now keeps the bulk of men moral, just, and benevolent? Not the love of God, for the most part, nor the fear of hell. It is the standard and opinion of their immediate fellows and class, of the society large or great in which they feel themselves to act. To every thoughtful and social nature, the opinion of the immediate community he lives in comes with an enormous force, in which self is lost and ennobled.—*Frederic Harrison*.

DR. EDMUND MONTGOMERY criticises contemporaneous thinkers with as much independence as ability, but always with a disposition to do the fullest justice to any author whose work he notices. In contrast to that pettiness, churlishness, and envy so often shown by writers of small ability in referring to writers whose views do not agree with their own theories, Dr. Montgomery shows that generous and magnanimous spirit which marks the truly great soul. Few men have criticised some of Herbert Spencer's positions with as much ability as he; and yet, instead of trying to belittle him as an original thinker,—as do so many without taking the pains even to acquaint themselves with Spencer's thought,—Dr. Montgomery, in the London quarterly, *Mind*, thus refers to his services, to which we have so often called attention in these columns, in affording a basis for the reconciliation of the experiential and transcendental schools of thought:—

Philosophy, after twenty-four centuries of most diversified trials, had failed to discover the ways of knowledge. In no manner could it be adequately extracted from reason, and just as little could it be fully derived from the senses. Nor had any compromise at all succeeded. Nativism and empiricism remained fundamentally irreconcilable. Suddenly, however, light began to pierce the hitherto immoveable darkness. It was Mr. Herbert Spencer who caught one of those rare revealing glimpses that initiate a new epoch in the history of thought. He saw that the evolution hypothesis "furnishes a solution of the controversy between the disciples of Locke and Kant." To us younger thinkers, into whose se-

rious meditations Darwinism entered from the beginning as a potent solvent of many an ancient mystery, this reconciliation of Transcendentalism and Experimentalism may have consistently presented itself as an evident corollary from the laws of heredity. But what an achievement for a solitary thinker, aided by no other light than the penetration of his own genius, before Darwinism was current, to discover this deeply hidden secret of nature, which with one stroke disclosed the true relation of innate and acquired faculties,—an enigma over which so many generations of philosophers had pondered in vain!

KISMET.

For *The Index*.

If what is *must* be,
 If Fate's stern mandate is, like Nature's law,
 Unheeded of appeal, lacks power to withdraw;
 And if by its decree
 One of high courage finds
 Himself among those doomed to take hard blows
 From Destiny's hand, and life from birth to close
 A forced march 'gainst fierce winds;
 If such doom be doled
 To one large-hearted, brave, sincere, and true,
 Who longs through all his being good to do,
 Must he become dwarf-souled
 From lack of power and chance
 To do the grander things he dreamed of doing,
 Because Fate wills him, with no sign of rueling,
 The slave of Circumstance?
 Nay, here man conquers Fate!
 For narrowed limits—the enemy's serried lines,
 The fight for bread to live, e'en Sin's designs—
 Keep none quite isolate
 From others lower-planed
 In scale of woe, who need uplifting aid
 From fellow-sufferers who will not upbraid,
 Since they themselves are pained
 Through stress of grief, of sin,
 Of poverty, and countless incidental ills
 Of sad humanity,—the passionate thrills
 Of love and hate that mark us kin.
 No Fate can ever fling
 Man to such depths, but, if strong will there be
 For being helpful, he clear way shall see
 Good from such ills to wring.
 If Fate makes unsought war
 On souls that shrink from blows not understood,
 Shall we, too, join such warfare?—for base, as good,
 'Tis better balm to pour.
 If round us the world rolls
 Its cold, contemptuous heavy wave of scorn,
 Let it not chill warm sympathy for those o'erborne
 In sin's quicksands and shoals.
 If Fate, for us too strong,
 Makes sin despite of purpose, spite of prayer,
 Though we fall, we need not lie prone in despair,
 But rise to right the wrong.
 And, if our own misdeeds
 Admit of no atonement, let us be brave, accept
 Our undesired penance, and, being thus adept,
 The kinder prove to other sinners' needs.
 And, even when weakly prone,
 Without the strength to rise to manhood's height,
 Our voices we may raise, and help some luckless wight
 To catch our cheery tone.
 And, e'en if voiceless, dumb,
 We still may lift moist eyes to pity woes more deep;
 If sightless grown, we may yet grope as one in sleep
 To give weak aid to those quite overcome.
 And when, as sometime haps,
 That in ourselves we fate to others play,
 Let us so act that these shall remembering say,
 "Fate at such time did lapse."

SARA A. UNDERWOOD.

The Index.

BOSTON, MAY 27, 1886.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
 BENJAMIN F. UNDERWOOD, }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index*.

The Scientific Basis of Religious Intuition.

An Address written for the Free Religious Association.

BY EDMUND MONTGOMERY.

Dear friends, I—who am now speaking to you through the kindness of another voice—know you well, though I have never seen you,—know you, from afar, through the magic sympathy of those sentiments that are joining us, not only in the broad realm of our common humanity, but in that loftier sphere of freest reverence to its sacred aspirations.

To-day again, as so often before, you have here assembled to elicit more and more decisive answers to the solemn questionings that beset human life in its dark and dubious course.

Strangely ushered into this enigmatical world, kept pending there a little while on the brink of the two eternities, then engulfed again into sightless vacancy,—it is a destiny unspeakably marvellous! How transcendently significant, and yet how frail and transitory, is this brief moment of conscious realization, kindled from what has itself forever passed away, and soon to be yielded again to what in its turn is supplanting it!

With a feeling of awe deep as our dependence on the Source of being, with a yearning for light wide as the marvel of creation, we, the children of fulfilling Fate, with open heart and ready will, are soliciting from our all-evolving mother some little insight into the true meaning of the life we bear. Launched into this tumultuous arena of present existence from out the ever-silenced infinities of departed ages,—whence does it come, this life of ours? whither does it go? what is it meant to fulfil?

Our great poets still entrance us with the same mystic bodings as the seers of old:—

"The soul that rises with us, our life's Star,
 Hath had elsewhere its setting,
 And cometh from afar:

Not in entire forgetfulness,
 And not in utter nakedness,
 But trailing clouds of glory, do we come
 From God, who is our home."

And

"So, when God's shadow, which is light,
 My wakening instincts fall across,
 Silent as sunbeams over moss,
 In my heart's nest, half-conscious things
 Stir with a helpless sense of wings,
 Lift themselves up, and tremble long
 With premonitions sweet of song."

Enchantingly beautiful verses these! And do they, indeed, carry with them, on the prophetic wings of their inspiration, the charm wherewith to solve life's precious and painful riddle?

Through the baffling gloom of our groping existence, they point out to us the glimmer of a beautiful land of fulfilment, blissfully secured in the bosom of all-sustaining Perfection. Is it there, then, and not here, that we dwell with our inmost life and being? And what we call existence in this world is but an alienated moment in the serene beatitude of eternal consciousness? And soon we shall recover there, and then all will be well forevermore?

O human desire, childish and blind, yet divinely enamoured of things that should be and are not,—how inordinate in your cravings, ever overreaching all bounds, never true to this needy life of ours!

Poets, mystics, and saints, our religious heroes, in their loftiest moods,—all lost in the impotent rapture of ideal intoxication, ever longing away from us. Unfaithful dreamers! what fictitious vision of deathless felicity have ye woven for your selfish selves out of those tender looks that from the depth of human eyes have thrilled your inmost being, out of those sweet traits of loving kindness that with inexpressible charm have touched your human hearts? Are ye forgetfully deserting our common lot?

"Ah!" we hear you say, "the flame of love dies out of human eyes. The all-subverting ravages of this inconstant world overwhelm every humanly relation. We, who have here loved and lost, are now drawing close and closer to the very heart of Love itself. With eyes freed from earthly desires, we see it now. Life only 'stains the white radiance of eternity'; and our little systems,—they are but broken lights of thee, O Lord of all."

Listening to the outpourings of religious enthusiasm, as far down into time as we can reach, this becomes certain: not ecclesiastical authority, not verbal revelation, not philosophical reasoning, not natural perception, but just the passionate yielding to this craving for eternal fulfilment has ever been the soul of religious fervor with civilized man. The artistic bent, prefiguring ideal perfection, enkindles the soul to imaginings of an elysian home, where all is dwelling for evermore in consummated glory.

We, who have vowed to follow the light of natural truth wherever it leads, willingly confess that such white heat of world-alienating emotiveness may, in the first flush of its youthful ardor, fill with sweet compassion the heart so possessed. But, ere long, all temporal joys and sorrows dwindle into shadowy insignificance in the uniform glare of this all-absorbing passion for eternal beatitude. Most of the saints who have lived through the first fervor of religious zeal, in which the love of their own kind may still keep lingering, plainly tell us that the things of this world have no value whatever; that the more, the sooner, we detach ourselves from them, the better for our future welfare.

It is Thomas à Kempis, the imitator of Christ, who, like so many other aspirants to heavenly

translation, promises that, "if thou betake thyself to the ever-living and abiding Truth, the desertion or death of a friend shall not make thee sad." Think of it,—the desertion of a friend not make thee sad! And death,—the death of beings we humanly love,—do we not feel in our unconsolable anguish that it is the solemn consecration of that world-deep sadness from whose abysmal darkness life precariously emerges? Is it not solely with our own tears and laughter that we relieve the profound, loveless gloom of this unfulfilled creation?

Yet go back thousands of years, and religious exultation will breathe its secret to you in the same life-desecrating strain. It is Yama, the King of the Departed, who discloses the way to holiness, the way to escape his—the Death-God's—power. He says: "The sage who, by meditating on his Self, recognizes the One leaves sorrow and joy far behind. But not in the Veda can this be gained, nor by understanding, nor by much learning. When all the fetters of the heart here on earth are broken, when all that binds us to this life is undone, then the mortal becomes immortal."

These, indeed, are the true accents of the saintly voice the world over. Most distinctly, it proclaims that the present existence, with all its allurements, is but a baleful hindrance to immortality. And all deviation from saintly life it deprecates as a pitiable temporizing with worldliness, as a sorry indulgence of human weaknesses.

Can we make common cause with this religion of unearthly holiness, with this world-negating, world-defaming persuasion? We who are feeling fervently attached to these endearing blandishments of our present state, can we tamely acquiesce in such a life-vilifying verdict? Can we reasonably believe natural existence to be so utterly at fault that it becomes our highest religious duty to draw away from it, with all the stern resolve of resignation, with all the world-diverted passion for eternity?

Surely, it is life's own mystic flood that sweeps through our whole being, lifting it, with prepotent might gathered from afar, into the magic sphere of its transcendent longings.

"'Tis life whereof our nerves are scant;
O life, not death, for which we pant;
More life, and fuller, that we want."

Let us, then, intrust ourselves to its seething, surging sway; and no rush of alienating enravishment shall transport us unserviceably to barren shores. It is a faithless faith,—this craving for super-worldly perfection. It yearns to transfix our vital energies in an indolent trance, which it misnames "celestial bliss."

Science, true to its stern, reality-probing ways, clearly attests that all this revelling in heavenly aspirations is but emotional excess,—a dangerous, health-sapping mode of self-intoxication, resembling the delirium of hashish, which, with gorgeous inward splendor, fires the wide reach of individual feelings, but leaves ash-gray and meaningless the rest of the world, which it is betraying.

Look at these dervishes, rapt in inner abstraction, circling round and round in giddy whirls, with weird smile and uplifted arm, invoking the divine influx that is to fill their being with ecstatic frenzy. This is *their* way of taking hashish.

And the Christian saints, soliciting the beatific vision, the ravishing union of their individual soul with All-Being,—how, in reality, do they hope to accomplish such superhuman feat? Let Meister Eckehart, the great Christian mystic, far famed for his teaching at the beginning of the fourteenth century,—let him tell you how it is done. He, if any one, knows. "The soul," so it was revealed to him, "must renounce all outwardness, must

free itself from our here and now, from matter and manifoldness. Poor in spirit, having nothing, willing nothing, knowing nothing, even abstaining from all outward religious acts and observances, it awaits its union with God." And he rapturously exclaims, "Holy and all holy are they who are thus transported into the eternal now, beyond time and place and form and matter, unmoved by body and by pain and by riches and by poverty!"

This, evidently, is taking one's fill of Christian hashish, and precisely in the old, old Hindu way.

Such extreme outcome of godly ecstasy, ending in all but cataleptic hypnotism, if generally indulged in, would soon put an end to humanity altogether. But, maybe, this exactly is the "consummation devoutly to be wished." The utmost realization of the religious ideal may, in all verity, bring us to this final pass. It may be the supreme injunction of religious inspiration to abolish human life altogether, to quash for good this foolish and unholy ado about motherhood, fatherhood, childhood, and the rest of it.

Let us not deceive ourselves. To this very conclusion, without fail, the assumption of supernatural perfection clearly leads. All sincere devotees, all fearless thinkers, who have truly given themselves up to the intuition of a heavenly state of perfect bliss, have unambiguously urged the deliverance from the entanglements of this world, as the central aspiration of the religious life, as the aim of what they call the *vita beata*. A ruling, living faith in a supernaturally pre-established realm of perfection involves most consistently the despising of this natural life.

If our acknowledged religious leaders had prevailed with us, and we were not—in the light of their ethics—such a poor lot of vacillating cowards, this vast continent, which we are fast filling with more and more sinful life, would still be the wild hunting-ground of the Ozelot and the Indian. For our forefathers, ages ago, would have succeeded in their avowed aim of overcoming this wretched little flesh-and-blood episode here on earth by a complete withdrawal from its allurements.

In such summary way would religious inspiration, left to its own guidance, deal with our human existence. Its climax of success would be just one generation of only such as were leading the *vita beata*, and this vile and troublesome mundane phase of being would then be effectually conquered for evermore.

It is a supreme duty of the science of life to dispel, as utterly baseless, such fanatic visions: to eradicate, as wholly misdirected zeal, such suicidal tendency. In all this hankering after toilsome glory, it can detect nothing but a morbid—nay, an immoral—perversion of vital gifts. It knows that joy in all its varying hues is but a delicately iridescent aureola, inseparably following, with mobile sensitiveness, the vital fluctuations of the ever-welling fountain of actual life. The passionate desire to detach—for safe-keeping—the bright, gossamery splendor from the vast, turbulent world-commotion, in which it has its birth and being, is one of the most pathetic instances of our intense childishness.

After being weaned from the sweet dependence on parental care, which with an enchanted aura of security so lovingly enfolds our early years, we dread to find ourselves in open and self-relying contact with the rude powers of the huge, impartial universe; dread to feel ourselves veritable scions of the mystic life-tree, Ygdrasil, of which the runic song informs us that none knows from what roots it sprang. In sight of the vehemently spasmodic struggle with which ascending life has

so often to extricate itself from the stifling encroachment of lower modes of being, timorous human nature is prone to desert its post of danger and duty, to surrender at discretion with all its irksomely ripened adult powers, in order to gain admittance into a realm of imaginary security, away from this troublesome scene of active conflict.

In future, the decisive question for all who desire to live up to their ideal convictions will be,—whether their religious zeal urges them to devote their temporal existence to the furtherance of the natural relations of this actual life, or whether it urges them to devote it to the establishing of personal communion with some supernatural sphere. Either the religion of exertion for outward amelioration of this time-tossed, natural existence or the religion of prayer for inward union with a time-withdrawn kingdom of eternally pre-established perfection.

The Christian Church, mother not only of its saints, but also of its many other children, by prudently interposing between the individual soul and its immediate access to God an infallible body of doctrines and a well-regulated system of observances, sobered the world-annihilating ardor of the celestial frenzy, and fixed its attention on the sundry difficulties which lie between actual existence and its visionary heaven.

The presence of evil, and the means to overcome it, were naturally the problems which forced themselves here, above all, into prominence. Evil, in this world, was far too glaring and positive a fact to be argued away, as a mere negative phase of thought or being, as only a shadowy nothing cast by want of human insight or remoteness of emanation on the taintless radiance of eternal Perfection. To the Platonically inspired Christian Fathers, it was blasphemous to attribute its existence to God, though through the mouth of the prophet Isaiah he had himself long ago declared, "I form the light, and create darkness: I make peace, and create evil: I the Lord do all these things." To his humble worshippers, this creation of evil appeared rather out of keeping with perfect goodness; and so they thought it only right to take the blame upon themselves. The sinfulness of man, with a little help from old Ahriman and his host, or other ungodly principles out of the caves of darkness, was so philosophically made to account for it. And in this manner was concocted a most perplexing conceptual jumble of moral sentiments and physical occurrences, under whose baneful influence we are still laboring.

When we consider what a narrowly encompassed telluric region, even to the Roman in his huge empire, the unopened world then was; how, in those ages, even the learned had completely failed to recognize any strictly determined causality in the sequence of events; how everything that turned up in nature, near and far, was at once looked upon as an omen portending human weal or woe, or was interpreted, in the case of striking calamities, as a direct visitation called forth by human transgressions; when we consider the opaque view of nature then prevailing,—we cannot feel surprised that the Christian Church, which has so zealously sought ever since to inculcate as supreme truth those ignorant traditions, should now find its teachings so lamentably out of harmony with the system of knowledge which science has meanwhile laboriously constructed by dint of a precise study of reality.

We need only contemplate the lives and opinions of the early Fathers, to realize in what a pitifully narrow circle of crude superstitions their thought was actually revolving. Even so broadly cultured and acute a reasoner as Augustine felt constrained, during many years of ardent search after truth, to accept—as the best he could find—the wildly

ludicrous tenets of the Manicheans. And this he did rather than adopt the doctrines of the Catholic Church, in which he had been brought up by a fervently devout mother. When, at last, he, nevertheless, became a Catholic, what was it that really won him over? Again, that strange celestial frenzy that had spread from the world-sick Oriental provinces. It was the example of Antony, of Ambrose, of the Egyptian monks, the example "of that numerous body of holy men and women who"—according to his own saying—"wholly despised the world."

And let us be just: it was, in truth, a most despicable world in which these men and women were then living; despicable as the world ever will be, where its only sphere of genuine ethical fulfilment, its actually working social system, has become hopelessly rotten to the core. To those world-despising zealots, this dying life or living death, with all its great and small mishaps, seemed most intimately connected with that sinful flesh-and-blood nature of theirs, which was still severing them from the final peace of eternal beatitude.

Cultured thought, in our day, has to stigmatize as utterly contemptible the endeavor to establish any kind of causal connection between human sin and the blighting effects of the huge world-machinery; between what, in verity, means quite exclusively the faithlessness of individuals to their human obligations and the appalling indifference, the cataclysmal, life-crushing outbreaks, the cold, merciless cruelty of the rest of creation.

Oh, with what tender solicitude would we cling to one another, if we could only fully realize against what chaotic and portentous powers of darkness we are perilously bearing up the sacred torch of humanized existence! Plagues and disasters, lust and rapine and savagery, all the dread agencies of deterioration, are ever lurking to despoil of its delicate bloom our laboriously wrought civilization. Unto death, against all dangers, are we sworn to rally round the standard of human elevation. And, with such solemn sense of plighted troth to our common, human trust, it can never happen that a feeling akin to that of the Roman gladiator should, amid the throes of our own vital struggle, obsequiously impel us to greet the calm indifference of an all-powerful Ruler with the servile shout, "*Te morituri salutamus.*"

It is meet that we should most fervently venerate the ideal of love and goodness; that we should contemplate, with breathless awe, the wonder of our own existence and of that of the world around. But, thereupon, straightforth to maintain, in the face of the multitudinous dire perils of life, that it is all the outcome of supreme perfection,—this proves to be a most irrationally lavished trust on the part of our over-confident nature.

According to the universal standard of morality,—to which we are so given to ascribe a divine origin,—it would unhesitatingly be looked upon as an inexpiable crime to have wilfully broken through the blissful tranquillity of absolute All-Being, with no other possible aim than the production of something infinitely lower than one's self, with no other desire than to witness a wild and pitiable scene of endless turmoil and trouble; nay, to place against one's own complacent self-sufficiency the sanguinary spectacle of a vast arena of multiform carnage.

If such creation or emanation from the all-embracing depth of absolute Power were, indeed, a correct interpretation of the enigmatical existence in which we find ourselves so wondrously involved, then Schopenhauer would unquestionably be our truest philosopher, and his extreme pessimism our only sensible creed. Let us not forget

that the philosophical teaching of this modern recluse is but an echo of the ancient religious intuition which fosters, as holiest zeal, the striving after deliverance from the wiles and pangs of actual existence, be it merely to overcome life's fretful dream in the final rest of Nirvana or, with living hope still aglow, to gain entrance into an ever-glorious kingdom of heaven.

Having sounded in a general way the intuition of eternal perfection, which has hitherto served as a polar star for religious guidance, we have found that it consistently leads to intellectual and moral stagnation, to humanity-despising, life-desecrating self-intoxication.

Undoubtedly, we find ourselves wholly immersed in the inscrutable marvel of existence. The immanent nature and mode of origin of the multi-fold potencies which manifest themselves in the subsistence and interaction of the things constituting our world are utterly unintelligible to us. It does not relieve our perplexity in the least to maintain that an Unknowable is bringing it all about. And just as little does it help us to pretend that a well-known Personality is the cause of it. We evidently know more about the intimate nature of a tree, after having scientifically investigated its structure and vital properties, than if we had rested satisfied with the notion that a Dryad is its principle of life. So with our own being. So with the entire cosmos.

That much is quite certain: that the developmental elaboration of actual existents is due to an infinitely laborious process among the things of this world, and not to any sleight of hand performance on the part of an outside agent. Ethical culture, in future, has to take its bearings from this fact.

But religious intuition,—how does that arise? Surely, however laboriously and separately, increment upon increment, our special life may have been evolved, it knows itself, for all that, as a unitary, self-identical existent, whose innermost nature is felt most mystically to comprise all the powers of creation, and to be transcendently one with that which steadfastly abides amid all change and decay.

In moments of keenest ideal insight, when gazing with intense self-forgetfulness into the abyssal profundity of being, where all lies hushed in silent awe, then, suddenly, strangely, the sense of our own little self intrudes into inner light, widening and widening, till at last it seems to be filling with world-deep significance the whole fathomless reach of consciousness, where it feels indissolubly melted into one with the essence of all reality.

To whom, in the rapt mindfulness of contemplative moods, this solemn experience has been vouchsafed, he knows henceforth from which source religious intuition has at all times been drawing its inspirations. And no wonder that, for all such, ever after this inner revelation, so replete with transcendent meaning, is cherished as supernal truth. For, into this far-stretching, exteriorized sphere of busy doing and scattered attention, it carries with it a precious, indelible glimpse of the undying and all-embracing substantiality of our being. We who have loosened our religious skiff from traditional moorings are much in need of a scientific elucidation of this unmistakable inner experience.

When the new astronomy came so unceremoniously to dislodge our proud dwelling-place from its central world position, peopling the infinitudes of space with systems within systems of other worlds, and leaving our own tiny globe—only an inferior orb—in some remote corner of the universe, it surely required all the nurtured self-complacency of human nature not to feel its vaunted import shrink away into most ephemeral insignifi-

cance. It is very well, from some old-established background of human persuasion, rendered quite secure through general custom and personal habit, to peep into the starry heavens, and declare the aspect to be supremely elevating. But go out, stripped of all social trappings, out into the elemental night, and there measure your bare self against the infinity of worlds, on one of which you are living your little parasitic life, no more busy at its game than one of the innumerable ants swarming at your feet; realize these clearly defined proportions and your place in them, and then return to us and reassert, if you dare, that such astronomical world-conception has been a source of supreme elevation to you.

Utterly crushing to our self-confidence would such contemplation really be, if our individual perception were only just mirroring the fact,—how external reality is lying outstretched yonder in the limitless expanse of outer space, moving in ceaseless procession through time, and leaving the record of its infinite past irrecoverably engulfed in the oblivious silence of insentient nature. Who could cheerfully bear up against the awful consciousness of a boundless stream of transitory existence, in which each of us were representing only the merest mite of evanescent being? More than ever before would such self-depressing, astronomical view induce us to huddle together under the protection of whatever power we believed competent to re-enhance our personal value.

But veritable reassurance of the transcendent worth of human existence cannot come to us through faith in any kind of external assistance, however supernaturally potent it may be deemed. It can come solely through a clear scientific insight into the natural sources whence such transcendent worth actually emanates. And science, to-day, is in a position to cast a steady light into depths of human nature,—depths of warm and throbbing life, as it here and now exists, incomparably more wondrous and significant than any of those visionary reveries in which human imagination delights to transport it on wings of subtilizing fancy to the hazy precincts of spirit-land. Science can admit of no artificial mediation between the searching mind and nature's own expressive features. It questions directly, face to face, and receives unsophisticated and decisive answers. We have been so spoiled with oracular and fantastic extravaganzas that few of us can rightly appreciate the peremptory, absolutely settling import of an actual truth of nature. If we could be made fully alive to such vital import, what an effusion of exultant light would be felt to flood the whole wide reach of existence with the clear recognition that, however remote from us in significance and expanse the external world with all its vastnesses may appear, it is, all in all, fashioned right there, as our own conscious possession, by creative powers of which we ourselves are the bearers!

No one who is not capable of understanding this central truth, now firmly established by science, can ever come adequately to realize the transcendent import of his being. Behold, from moment to moment, this our veritable being is shaping, by dint of its own indwelling might, that all-containing consciousness of ours, in which alone the world stands revealed.

Let every one not yet initiated into this open mystery, instead of casting about for marvels beyond actuality, begin by trying to figure from what slightest indications, borne to his visual organ on nothing but ethereal tremors, these same creative powers within him instantly build up the stupendous fabric of this firmly grounded, full-fashioned, stirring, and living world.

Such transcendent, world-constructing potency science proves to be dwelling in each of us, ready for action in every wakeful moment of existence. Think what wondrous springs of far-reaching efficiency must be embodied in our living being to render this so insignificantly seeming little self of ours capable of encompassing within its own sphere the entire marvel of the manifest world!

In no way are we, as is mostly believed, self-occluded personalities, coming from elsewhere and bringing with us to this planet merely a faithful mirror, in which a world strange to our innermost nature appears passively reflected. The world we actually perceive is in us, part of us, most veritably our own intimate world. And it corresponds so faithfully to what lies outside only because our own being, from the very dawn of living existence, has been fashioned to the core in ceaseless interaction with the powers that constitute the outer world. We are ourselves individually something, some one, only in relation to the world in which we are living. Very visibly there is not a single part of our body, down to its minutest textures, that is not corresponding to some outside relation,—the intestines to food, the lungs to air, the hands to objects of prehension, the senses to specific inciting influences: yea, the vital commotion in each lymph or other corpuscle, in each muscular or nerve fibre, occurs only in reference to some interaction with the outer world.

And our mind, in its widest sweep and in its most ideal flight, has clearly no other normal function than the conscious realization of our relations to outside nature. Only—to us human beings—the relations to our own kind, those most intricate, highly elaborated, and refined relations making up our social life and culture, have assumed pre-eminent importance in our mental existence. They are the real medium, in which we humanly and morally live.

The rest of the animal world, by a most pressing and relentless struggle for subsistence, is held utterly subjected to the tyranny of immediate needs. Enthralled in subservience to instinctive wants, its vitality is consumed amid narrowest consciousness. Its life of outside relations, with its awareness of things around, is all but completely dominated by the search and seizure of prey, by the avoidance of being preyed upon. It is idle to attempt to palliate, from a moral standpoint, the meanness of the organic creation. Hunger, fear, trickery, and savageness are the principles rampant on the unhumanized earth. Those of us are innocent of the real ways of nature, who, during a civilized walk among flowers and butterflies, give vent to feelings of veneration for the benignant Power that has shaped such beautiful and happy things. These very gauderies of our earth are out and out the product of successful cunning and greed. And, as regards ourselves, how can we fairly glory in the idea of being objects of a special benevolent providence, when we contemplate by what slow and cruel steps of constant bloodshed we have actually reached our present height?

Utmost candor, scientifically enlightened, is, above all, required to enable us to recognize our veritable position in this world, so that we may become fit to direct our life and its means, with less and less friction, to more and more and more fruitful ends. It is, very evidently, a misleading illusion to believe that there exists any moral purpose and direction in the universe outside human consciousness; that we need only confide in the general stream and tendency of evolution, or some such prepotent drift, to be carried to surprising elevations of moral culture.

Morality is a delicate effluence of human reci-

procity, existing exclusively among our own conscious selves, and nowhere else, as far as our knowledge reaches,—strictly *among* ourselves, and not at all in us as separate individuals. A person without social relations and recollections, on an isolated island, could not possibly be a moral being. And a saintly anchorite is certainly the very reverse of a moral being. He is, indeed, a grievous sinner against the social order and life, from which he has received everything that distinguishes him from the brutes. Our moral culture is that special part of our more general culture which seeks thoughtfully to recognize and practically to establish principles of justice and good-will among us all, as partakers of one and the same transcendent life.

The more complicated our general culture becomes, the more wisdom does it require to incorporate in the social structure such valid and sterling relations as render social morality possible. Social culture and social morality have to be indissolubly amalgamated, have to rise in indiscernible union, in order to afford worthy living expression to human existence. Genuine morality is always of the social kind, being exclusively of social origin and significance. And the desirability of human existence is in exact proportion to its ethical and social culture. Where, indeed, can humanity be found, if not in the righteous heart, and cultured mind?

The actually existing commonwealth, with its actually existing citizens, is the veritable medium in which all our ideal aspirations have to be substantiated.

This last remark may sound commonplace; but it is, nevertheless, the expression of one of the most fundamental scientific recognitions,—a recognition which, faithfully acted upon, would direct ever so much wasted energy of the best kind into fruitful and salutary channels.

It is, in all verity, a supremely momentous and pregnant fact that whatever is not structurally embodied in our living organism and its actual medium of existence remains absolutely meaningless to us. Place a book full of cultured wisdom before a savage, and what is it to him? To teach him the language in which it is written, even only so much of it as corresponds to his own already organized ideas, requires a patient process of training, involving an amount of structural elaboration at least equal to that brought into play in the acquirement of a handicraft. To teach him to read the book demands a further organic development of his cerebral structures. And to teach him really to understand it, if that were at all possible, would necessitate the building up, through actual experience, of all the socially established cerebral organization, by means of which alone the wisdom of the book can be intelligently realized.

No ambiguity must be allowed to remain here, as a vantage-ground for time-honored but progress-impeding errors. Science shows irrefutably how *structurally organized* acquisitions are the indispensable prerequisite to all progress, the sole containing and retaining substratum of all conscious realization. The notion still indulged in, that some kind of airy but full-fledged power has possession of our body as an instrument, recognizing and remembering by dint of supernaturally imported efficiencies the actual facts of nature and their true significance,—this primitive notion has become, in the light of organic science, altogether untenable and preposterous. We have and can have no faculties but such as are structurally organized in us; and all our higher faculties are developed, and can adequately operate, only in an appropriately organized social medium.

The religious spirit, then, has to realize itself in this much-despised, much-abused body of ours, through social means. It has to gain substantial

form, not in the changeless eternity of the empyrean inane, but in that veritably perpetuating incarnation of Time's fleeting achievements,—our own living, remembering self in intimate interaction with the rest of the world.

The devout Novalis, in presentiment of this great, body-consecrating truth, fervently exclaimed: "There is but one temple in the world, and that temple is the body of man. Nothing is holier than this high form. We touch heaven when we lay our hands on a human body."

O my friends, in search of the true fount of religious inspiration! could I but succeed in conveying to you a vivid sense of the sacred, eternalizing import of this temple of the world,—the body of man,—in whose organic depths is kept welling the spring of all ideal love and beauty, the spring, also, of the plastic potency wherewith to mould these supreme ideal possessions into shapes of high delight within our actual life,—could I but succeed in this, we should then have truly found what we are all in search of.

The unifying and perfecting proclivity of our world-shaping faculties, in despair of present fulfilment, has given rise to the belief in a heavenly existence of archetypal entities, only imperfectly apprehended by us here, through scattered indications among the transitory manifold of this lower material sphere. This lofty belief has been a highly inspiring and beneficial incentive, whenever its inner light was brought into play to illumine and beautify the things of this world, as has often propitiously occurred to the salvation of dogma-deadened ages. It is this reality-idealizing propensity that never ceases to delight us in the Platonic philosophers and poets. And it is this same love and joy of idealized nature that enkindle to sympathetic enthusiasm in listening to your own ever-memorable and venerable New England transcendentalists.

But it is only Arcadian simplicity that can aim to cull all this ideal bloom from its native soil, severing it in thought from the darkly brooding and maturing fecundity of our mother earth, with the futile intention of fleeing with such abducted treasure into the unfading security of a fancied paradise, out of reach of all-overtaking time.

World-originated forms, livingly moulded in the fiery clash of battling forces, are not made of such dreamy, pneumatological stuff. Their veritable reality does not consist in the becalmed vision transiently manifest in our individual mind, and believed to be miraculously transferable to eternally abiding subsistence. All this perceptive and formative potency and activity in us, which, in functional play with external influences, make up the ever-replenished wealth of our moment of conscious realization,—it is infinitely more marvelously, more profoundly, more stirringly rooted than has ever been anticipated by unscientific thought. It is obvious we bring it with us into our individual existence, a wondrously proficient gift.

From what source, then, do we derive it?

The life we bear, so singularly gifted with transcendent proficiencies, whence does it come to us? How strikingly different from lifeless nature!

What a contrast between the toilsomely sustained complexity of our life-quickened organization and the facile and uniform maintenance or mutation of inanimate things! With the intuition of its world-wide bearings and sympathies deeply woven in its all-harmonizing constitution, our living being awakens aimfully to confront, amid these its immemorial memories, a senseless, impervious world, which buries from instant to instant all its casual happenings in perpetual forgetfulness.

The firmest rock, towering in majestic grand-

eur, cleaves and falls and crumbles insentiently into scattering dust. But the frail body of man, by dint of those living bequeathments, victoriously resists the battering influences, gathering mindfully new strength in its clashing encounters, and leaving its heightened existence in rejuvenated form, to meet with fresh ardor the brunt of oncoming times.

With mystic roots, drawing our life-blood from the plenitude of all the endless reach of time-withdrawn ages, we, contemporaneous, sole-surviving scions of the one transcendently perennial life-tree, are now here faithfully to uphold all the painfully acquired worth of living existence, offering it in sympathetic interchange and glad some sacrifice to the fructifying light of progressive day.

What a sacred and exultant mission,—to be thus personally intrusted with the cumulative achievement of all bygone ages, to be constitutionally representing the crowning embodiment of all the secured results of life's sore travail!

Hallowed by the passing away into eternal silence of generation after generation of striving, feeling beings, whose offspring we are, we, heirs of all that has been, stand now here, this present moment, in awe-inspiring isolation, alone alive in the immensity of worlded space, in the infinity of lapsing time,—sole links between what was ever done before and what shall ever be done hereafter. On fidelity to our vital, to our human trust, the Past has built with never-flagging zeal; and, with helpless confidence, the Future is depending on it for its irrevocable fate.

Religion has ever been the emotive intuition of these actual and yet wondrously transcendent bearings of individuated life. With eternalizing symbolism, it has sought adequately to express the sacred and glorious worth, the all-embracing, all-representing import of real existence. And the highest office of science is to help it to realize more and more justly and profoundly the undying marvel of living organization.

Religion can do no more than conscientiously, fervently, indomitably sustain the sublime, super-individual significance of our living personality, with all its deeply grounded relations, to the rest of life and to the world at large. Life would be life, indeed, if all its relations were thus pervaded with a vivid sense of their religious bearings.

Such religious sentiment, how divinely would it sanctify the great facts of human life,—sanctify the mystery of love, when, at the aspect of human worth and beauty, with overpowering emotion from out the intuitive depths of being there suddenly stands revealed the world-concentrating import of the One who has now so strangely become All in All,—when, on the wide, fathomless sea of living existence, buoyed with lofty hope and eternal trust, life meets life in mutual love, tremblingly, joyously presentient of higher and higher world fulfilment!

And with what glorifying halo would the true religious effluence encompass the sweet, pathetic mystery of motherly rapture, when, in tearful joy, with tenderest care, she is receiving—full-fashioned in the dark profundity of being impersonated in helpless babyhood—the mystic consignment of all the ages, so completely her own and yet so transcendently belonging to the world's larger hope!

The religious influx, let it pervade and sanctify all the relations of actual life,—sanctify and indissolubly weld with high resolve the solemn ties of family life, endearing with loving devotion all its sacred obligations, and fostering within its sheltering bosom the delicate germs of human virtue and culture.

And for us, bearing the standard of freest relig-

ious zeal, citizens of this great nation, children—all of us together—of one and the same supernally endowing mother,—let the recognition of our veritable position in this world inspire us with keensighted wisdom and indefatigable ardor so to shape our national life that it may become a befitting vehicle, wherein all shall seek to realize their common humanity, finding there the ready means for full expression of the higher aspirations of their social nature.

If we fail in this, if it is not in us, if we do not possess the enthusiastic energy to accomplish these high living purposes, in vain, then, shall we languish for evermore in impotent yearning after veritable fulfilment of the transcendent, super-individual aspirations of religious intuition.

ATHEISTS AND BELIEVERS.—The debate in the House of Representatives on the credibility of witnesses who disbelieve in God was marked by less theological bias than has in the past been aroused by discussions of this kind. The matter was complicated to a certain extent by a disposition to class atheists and anarchists in the same category; but the final vote, although the measure failed of obtaining the necessary approval, was, on the whole, creditable to the growing impartiality of our people. It does not seem to us that the statement that a man who does not believe in God may be as honest in his utterances as one who does believe in a supreme Being is an assertion which needs to be defended by arguments of any kind whatsoever. The experience of those who have had much intercourse with their fellow-men must have convinced them that personal honesty is something altogether independent of religious conviction, and that there are proportionately just as many truthful atheists as truthful believers in revealed religion. Indeed, the assumption to the contrary in this matter of legal testimony is self-contradictory; for, if an atheist is notoriously a liar, he has only to follow out his natural tendency and assert in court that he does believe in God, and by so doing no one would think for a moment of challenging his veracity. In giving legal evidence, where men are not constrained by a high and conscientious sense of duty,—and this qualification is found among atheists as well as among believers,—it is the fear of punishment much more than the terrors of an oath that compels men to tell the truth.—*Boston Herald.*

BOOK NOTICES.

DOWN THE WEST BRANCH; or, Camps and Tramps around Katahdin. By Capt. Charles A. J. Farrar. Boston: Lee & Shepard. 1886. Price \$1.25. ("Lake and Forest" Series, No. 3.)

This purports to give the story of the adventures met with by a party of young fellows, members of the "Lake and Forest" Club of Boston, in a hunting and fishing trip through one of the wildest regions of Maine. If the incidents of this trip did not really occur, they are at least related with such carefulness as to detail as to make them seem like actual occurrences. A very hungry and healthy set of lads they are shown to be, since every other page or so describes, in an appetizing way, the meals of which they partook at different points of their trip; and these descriptions occur so frequently as to leave the reader with an impression that their out-of-door life rendered them remarkably voracious. Among the more thrilling adventures narrated are an impromptu fire brigade, a thrilling experience with a lynx, a fight with a moose, adventures with bears, deer, etc., with a couple of counterfeiters, and a life-saving incident. The descriptions of scenery are natural, and the moral tone of the book unexceptionable. Eleven full-page illustrations of scenes or events described are given.

THOUGHTS. By Ivan Panin. Boston: Cupples, Upham & Co. 1886. pp. 85.

Mr. Panin's little book, with its modest covers, beautiful print, and terse title, is decidedly unique in various ways. It is a book containing four hundred and thirty-five original aphorisms upon such subjects as misfortune, charity, conduct of life, speech and silence, truth, wisdom and folly, pride and humility, self-reliance, and love. These "thoughts"

are all marked by a high moral tone, none of them are of great length, and many of them deserve to be memorized and quoted. We give a few of these sayings, selected here and there at random, as specimens: "Rather than weep over the things thou canst not do rejoice over those thou canst." "The furnace which melts gold also hardens clay. Before blaming thy fate, therefore, find whether thou art gold or clay." "Viewed from the mountain-top, the oak is as slight as the shrub: only rise high enough, and the highest ambition appears as small as the petty desire." "Great pains are voiceless: it is the small pain that speaks. A heavy blow stuns: it is only the prick of a pin that startles." "Herein, the wise differ from the foolish: both have shortcomings; but the wise know them and conceal them, the foolish know them not and expose them." "Approach not too closely things dear unto thee: the most delicate web becomes coarse under the microscope." "Who can shed judiciously his ink for mankind benefits it more than he that sheds his blood for it."

A SECULAR FUNERAL AND MARRIAGE HAND-BOOK. Also, A Collection of Hymns, and Constitution for the Use of Liberal Associations. Compiled by A. R. Ayres. Hannibal, Mo. Price 50 cents, cloth.

Persons of advanced ideas in religion—who, while averse to going through the regular orthodox forms when they marry, or when their friends of like views are to be buried, but who yet wish to conform to the fashion of going through some form of service on such occasions—will find Mr. Ayres' little book full of valuable hints and suggestions of the most sensible kind. Eleven funeral hymns, and twenty songs adapted to popular airs suitable to be sung at liberal gatherings, are given in addition to the prose selections. An original feature of the book consists of twenty-five blank pages, headed "Biographical Notes," and intended for the use of any speaker invited to give the funeral address of comparative strangers, to enable him to jot down anything memorable in the life of the deceased to refer to during such address.

A STUDY OF PRIMITIVE CHRISTIANITY.

By LEWIS G. JONES.

8vo. 320 pages. Cloth, Gilt Top. Price \$1.50.

"No fairer statement has been made of the grounds on which the anti-supernaturalist humanitarian bases his opinion of Jesus and of the origin of Christianity. . . . Its theology and Christology are of the most radical Unitarian kind; but the temper and spirit of the book are so refined, so earnest, and so fair to all opponents, that it must impress those who are compelled to disagree with its most prominent conclusions as a model of polite and generous controversial writing."—*Brooklyn Union.*

THE INDEX, 44 Boylston Street, Boston, Mass.

Bound Volumes of The Index For 1871 and 1872

For sale at THE INDEX office, at \$2.00 per volume. A few complete sets of bound volumes of THE INDEX, from 1870 (Vol. I.) to 1885 (Vol. XVI.), inclusive, will be furnished at special rates.

TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crapo.

PRICE \$2.00.

For sale at the bookstores. Also sent, postpaid, on receipt of price by

Those of our readers desiring a carriage or a family vehicle of any kind should examine the large and elegant stock now on exhibition at the warehouses of Messrs. Ferd. F. French & Co.

While Charles A. Dana was managing editor of the New York Tribune, Joe Howard was officiating as war correspondent. A great battle had been fought, and Joe was telegraphing a description of it. He began with an exordium: "To God be all the glory! Mine eyes have seen the work of the Lord, and the cause of the righteous has triumphed," with more of the same sort, followed by the words: "The army of the Potomac is triumphant. We have won a great victory." A day or two afterward, he received a letter something like the following: "Hereafter, in sending your reports, please specify the number of the hymn, and save telegraph expenses."—Charles A. Dana.

BRINE & NORCROSS have had a fine trade this week. The knowledge of the great bargains there has got out among the people, and the very pleasant weather has brought them thousands of customers.

O. W. Holmes,
H. W. Longfellow,
J. G. Whittier,

are for sale at this office at 25 cents each, except the first three, which are 50 cts. each, and will be sent by mail to any address on receipt of price.

Address THE INDEX,
44 Boylston St., Boston, Mass.

We have two complete sets (12 vols. each), of Carlyle Works, library edition, cloth, gilt tops, which will be sold for one-half price, \$7.50 per set. Also, one set of Dickens Works, 15 vols., illustrated, library edition, cloth, gilt tops, which we will sell at one-half price, \$7.50. Address *The Index*, 44 Boylston Street, Boston.

LADIES often remark that the salesladies at Brine & Norcross, by their polite and courteous manners, afford a good example to be copied by those in most city stores.

THE *Forum* is to continue its very interesting series of personal experience articles. In the June number, Bishop Huntington will tell the story of his religious life; and Dr. Vincent, Chancellor of the Chautauqua Circle, will describe how he was educated.

THE New York *Sun* says: "A Study of Primitive Christianity, by Lewis G. Jones, is the production of a somewhat advanced follower of the school which repudiates the supernatural origin of the Christian religion. . . . This is not a book to be recommended to orthodox Christians. It is written with clearness and candor."

CHEAP RADICAL TRACTS!

No. 1.—*Truths for the Times*, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 5 cents; 30 copies, \$1.00.

No. 2.—*Fear of the Living God*, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 3 cents; 20 copies, 50 cents.

No. 3.—*Lecture on the Bible*, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 5 cents; 30 copies, \$1.00.

No. 4.—*Christian Propagandism*, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts*. Price 5 cents; 30 copies, \$1.00.

No. 5.—*"God in the Constitution,"* by Rev. Arthur B. Bradford, opposes the Proposed Theological Amendment to the United States Constitution. Price 5 cents; 30 copies, \$1.00.

No. 6.—*"The Sabbath,"* by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 5 cents; 30 copies, \$1.00.

No. 7.—*"Compulsory Education,"* by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 3 cents; 20 copies, 50 cents.

No. 8.—*The Present Heaven*, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 3 cents; 20 copies, 50 cents.

No. 10.—*The Impeachment of Christianity*, by F. E. Abbot. 5 cents a doz.

No. 11.—*The God of Science*, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 5 cents; 30 copies, \$1.00.

No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman [F. E. Abbot. Price 5 cents; 30 copies, \$1.00.

No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 3 cents; 30 copies, 50 cents.

No. 14.—*A Study of Religion: The Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 5 cents; 30 copies, \$1.00.

No. 15.—*The Battle of Syracuse*. Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 5 cents; 30 copies, \$1.00.

Special Ideals, by David A. Wasson. Price 5 cents each; 10 for 50 cents.

Address THE INDEX,
44 Boylston Street, Boston, Mass.

PIANOS

CURRENT TOPICS.

BY B. F. U.

THE witty editor of the *Iron-clad Age*, referring to the fact that "Herr Most, the gentle anarchist and dynamiter," was taken by the police from under a bed, exclaims, "Thus perishes liberty in its citadel of last resort!"

AN anti-anarchist society of Bohemians has been formed in New York to counteract the influence of those of their countrymen who are bringing unmerited suspicion and discredit upon the twenty-five thousand well-disposed and well-behaved Bohemians of that city.

THE most celebrated of German historians, Prof. Leopold von Ranke, died in Berlin on May 23, in the ninety-first year of his age. He was still at work, at his advanced age, on a work which he regarded as his greatest,—a history of the world, which was to be in nine volumes, six of which had been completed. It is believed that he left manuscript, from which another volume at least can be prepared by his literary executors.

DR. DIO LEWIS, the health-reformer and writer on physical culture, who died at Yonkers, N.Y., May 21, directed that his body should be cremated in these words: "Although I am averse to the somewhat unpleasant notoriety which as yet cremation involves, my very strong conviction is that it is the right disposition of the dead. I leave directions that my body shall be cremated, and that the ashes shall not be put into an urn, but in the earth, over which my wife may plant forget-me-nots."

THE *Christian Register* says: "Some of the best statements of Unitarianism we have ever heard have been given in our devotional meetings. The meeting did not carry them by a vote, but they

carried the meeting by the inspiration they contained." We have never attended "Unitarian devotional meetings," and know not whether they are held in the summer time; but the above remark has awakened a curiosity and interest in regard to them, and, at the first opportunity, we shall attend one of them, and include its exercises in our studies of psychology and religious evolution.

NO ATTEMPT was made at the Congress of Churches, held at Cleveland last week, to effect an organic union or to bring about any formal agreement between the churches; nor were the discussions followed by any decrees or votes as the result of the discussions. Indeed, those who attended were not officially accredited representatives of the churches, although many of them fairly represent the thought and life of the ecclesiastical bodies to which they belong. This congress is significant, like that at Hartford last year, as indicating a decline of the sectarian spirit and a growing disposition in the churches to encourage the discussion upon a common platform of religious and social questions by representatives of the different Christian sects.

STEPHEN PEARL ANDREWS, who died in New York City May 21, never lost hope in the general acceptance of his many theories, which, indeed, at times, he thought very near at hand; but they made little permanent impression upon leading thinkers, and what truth they contained was so mixed with vagaries and extravagances of one kind and another that they have not of late years commanded much attention. In 1870, he published *The Primary Synopsis of Universology and Alwato* as an introduction to his system, which was elaborated fully in *The Basic Outlines of Universology*, a large quarto of one thousand pages, the terminology of which is most trying, yet not impossible to grasp. Mr. Andrews had a versatile mind, was an acute speculative thinker, an effective speaker, and a man of remarkable linguistic and philological attainments. He was an active supporter of the anti-slavery organization known as the Liberty Party, and one of the early advocates of modern Spiritualism. He was born in Templeton, Mass., in 1812, and was educated at Amherst College.

IN the recent debate in the Massachusetts Senate, on the bill to remove the legal discrimination against the testimony of atheists in our courts, Mr. Lathrop, of Springfield, said in substance that he believed the time would come when oaths would be abolished. Honest men will tell the truth, anyway. Rascals are influenced by fear of temporary punishment only. Our present law puts convicted criminals and philosophic agnostics upon the same ground as to the credibility of their testimony, and they are the only classes who stand on that ground. Nearly all the States have abolished this law. Those which have this law have a percentage of illiteracy of twenty-four, those which have repealed it have only twelve. Mr. Mason, of Worcester, argued that a man's religious belief should not affect the credibility of his testimony. He alluded

to a case in which a valuable witness' statements were invalidated because he was an atheist. Mr. Fales, of Milford, said that those men who are uncertain regarding God, as understood by the men who framed the Constitution, should not be subjected to the impertinence or sport of a pettifogging lawyer, in a ten-dollar suit or in a case of assault and battery. The character of the witness, his record as a truth-telling man, not his religious opinions, should be inquired into. Mr. Lord, of Plymouth, said that the present law is never used except for persecution, never to further the ends of justice. Mr. Flynn, of Boston, Mr. Fay, of Brookline, Mr. Sweet, of Worcester, Mr. Bent, of Cambridge, and Mr. Oxley, of Ashland, opposed the bill in the usual manner. It was rejected by a vote of fifty-five yeas to one hundred and eighteen nays. This in the Massachusetts Senate in the year 1886! A correspondent of the Boston *Herald* writes: "In my judgment, the opponents of the measure that has just failed have mistaken the temper of their constituents in this matter. Personally, I know no honest person really to desire to prevent atheists from testifying in court on account of their atheism, while I do know a very large number of Christians, Jews, and others, who are outspoken in their condemnation of the bigots by whose action this attempt at just and enlightened legislation has failed." Still, we believe that the rejection of the bill was in accordance with the wishes of the great mass of Orthodox Christians of this Commonwealth. Theological bigotry, which blinds men to justice and fairness in the treatment of those who differ from them, is hard to overcome; but the friends of equal right must not relax, but rather increase their efforts and persist in their demands, until the reform in the law asked for is accomplished.

THE nineteenth annual meeting of the Free Religious Association was, in point of attendance and interest and the quality of the addresses, a great success. A report of the proceedings of the business meeting held on Thursday evening is printed on another page. The essays read and the speeches made at the morning and afternoon sessions of the Friday convention will appear in the next issue and subsequent issues of *The Index*, when our readers will be able to judge as to their merits for themselves. Mr. Conway's lecture on "The Coming Cosmic Calvinism" will appear next week. The festival at the Meionaeon on Friday evening can be appreciated only by those who attended. The sumptuous repast, the social converse, the speeches by Mr. Conway (who presided), Rabbi Schindler, Mrs. Cheney, Mr. Joshee, Rev. Julius H. Ward, Rev. M. J. Savage, and others, with the music, combined to make the occasion a most delightful one. It is to be regretted that the provisions made, which were greater than on former occasions and thought to be ample, were insufficient to accommodate the many who came, without having secured tickets, at a late hour. Mrs. Cheney, in a business letter to this office, expresses the general feeling of all we have heard speak of the convention: "I think we can congratulate ourselves upon the Friday meetings"

A TRIUMPH FOR FREE RELIGION.

We briefly chronicled last week the result of the debate in the Western Unitarian Conference on the question of the basis of its fellowship. But there are points in the debate which deserve further notice and which add to the significance of the final vote. The contest was long and earnest and direct. It was not turned off from its object by the introduction of any side issue. It was adjourned from session to session, and thus the discussion renewed itself several times; but it was not evaded. Attempts were made indefinitely to postpone the matter, to compromise, to lay it on the table; but they all failed. A special committee to whom the question was referred reported in favor of tabling it, but the conference refused to adopt their report. The convention, evidently, knew its own mind; and, though a portion of the delegates deprecated the discussion, and, as is usual in Unitarian gatherings, thought the introduction of such an issue a mere waste of time, the majority, including the earnest leaders on both sides, saw that great principles were involved, and that the issue between them should be met without flinching.

For the introduction of the question, the conservative party was responsible. Mr. Sunderland, the secretary, on the eve of the assembling of the conference, sent out a pamphlet, entitled "The Issue in the West." This pamphlet was sent into the constituent parishes, and circulated among delegates, and was plainly a challenge to the conference to define its position. Mr. Sunderland put two questions in his challenge: "Is Western Unitarianism ready to give up its Christian character?" "Is it ready to give up its theistic character?" And he argued that an active portion of the conference were rapidly moving toward an affirmative answer to both of these questions. In his report as secretary to the meeting, he again urged that this movement was perilous to the Unitarian cause, and should be discouraged and checked; and, for this purpose, he emphasized it as his most important recommendation that immediate steps should be taken by the general conference, by the State conferences, and by the individual societies, to put themselves on a basis that should tell the world what they stand for,—namely, that they are not agnostic nor non-Christian, nor organized merely for ethical culture, but are believers in God, in Christianity, and in worship.

The conference found itself, therefore, at the outset, not only challenged, but, in respect to a large and influential part of its membership, indicted. It could not well keep silent. At the first session, the challenge was taken up. Mr. Gannett and others, while acknowledging Mr. Sunderland's sincerity and earnestness, declared that he had entirely misconceived and misstated the issue in his pamphlet. They did not believe that Unitarianism in the West is ready to give up either Christianity or its theistic character. But this, they said, is not the question. The real question is this: "Is Western Unitarianism ready to exile from its full fellowship men who do not call themselves Christians or theists?" To this question, they hoped the conference would answer, "No." It was also urged that all matters of doctrine should be left as questions between individual societies and their ministers. That was a relation with which no conference had a right to interfere. Mr. Sunderland replied, defending his position.

But all this was only a preliminary and informal discussion,—a reconnoitring skirmish. The real

battle began the next day, though not finished until night of the following day. It began by Mr. Clute's offering the following resolution:—

Resolved, That the primary object of this conference is to diffuse the knowledge and promote the interests of pure Christianity.

This is the same statement of object as that made by the American Unitarian Association. Mr. Clute's motion was a very politic one, though not definitely covering all that Mr. Sunderland had asked for; and, since this statement is about as little as a body of Christians might be expected to say, the wonder is that it did not pass,—that the majority did not have the fear lest, should they not pass it, the world would say that they had denied Jesus and the Christian name. But the conference kept its head, and did not allow the issue, as Mr. Gannett had stated it, to be thrust out of sight. So Mr. Clute's resolution was not adopted. Mr. Gannett, immediately after its presentation, offered the resolution which was finally passed and which we printed last week; and thus the issue was kept clear. To his resolution, Mr. Gannett appended a second, stating that, while the conference made no dogmatic tests of fellowship, it might be useful, for the sake of giving information to inquirers, for it to set forth "the things most commonly believed" among Unitarians, "the statement being always open to restatement, and to be regarded only as the thought of the majority." But this, when the question reached a vote, the conference voted—and, as we think, wisely—not to adopt.

Another resolution of a compromise character, which was also shrewdly devised, was offered the next day by Mr. Bixby. It was in the nature of a response to Mr. Gannett's second resolution, and contained a succinct historical statement of the Unitarian movement and its distinguishing beliefs, closing with a quotation of the radical declaration of Unitarian beliefs made in one of the *Unity* short tracts. Other amendments were offered. But, finally, Mr. Sunderland put his ideas into a form of his own, which made the issue even more distinct, and brought the two sides face to face. He moved the following:—

Resolved, That, while opposing all creeds as tests of fellowship, we deem it proper to declare that the Western Unitarian Conference, as a body, stands for and represents faith in one God, in immortality, in worship, and in personal righteousness, as exemplified in the example and teachings of Jesus Christ.

But, one by one, these various resolutions and amendments were all voted down. Of Mr. Sunderland's resolution, the *Christian Register* report, from which we have largely drawn, simply says, "Lost." Mr. Clute's resolution followed it among the "Lost." So did the second part of Mr. Gannett's resolution, as well as Mr. Bixby's application of it; and, at the end, the conference found that the work was done by the passage of Mr. Gannett's first resolution by the strong vote of thirty-four to ten. We printed it last week, but let us print it again:—

Resolved, That the Western Unitarian Conference conditions its fellowship on no dogmatic test, but welcomes all who wish to join it, to help establish truth and righteousness and love in the world.

Long may the Western Unitarian Conference keep to this basis! Let it write it into its organic law, and not leave it to the uncertainties of an annual meeting. It is a good statement for other Unitarian conferences to follow. Would that the National Conference would do as well! The Free Religious Association can but give a hearty welcome to so complete an adoption of its principles.

Referring to the possible misunderstanding and

misrepresentation of this action of the conference, Mr. Gannett says in the last number of *Unity*:—

That consequence we face without a particle of fear. In truth, we face it with a holy joy; for we will turn this issue and its consequences into something for which the very men who have forced it on us, and we, shall yet exchange thanks with one another. This higher liberty is sign of deepening, not of shallowing, faith among us,—sign of the incoming, not the ebbing, of the Spirit in our hearts and in our churches. And we who know it so can well afford to bear reproach till others see it.

WM. J. POTTER.

THEOSOPHY AS A CULT IN INDIA.

Since the writing of the preceding article in the April *Index*, I have been asked by several persons, "Why do you speak so oracularly on the subject of Theosophy as a Cult in India?" If any of the statements in that article have an oracular sound, it is due only to faults in expression, caused perhaps by the writer's profound convictions upon the subject. In consequence of having been in correspondence for over ten years with various learned Hindus, and from personal observations made in India,—not as a foreigner, who is refused intimate relations with the Hindus, but as a theosophist, who, so to say, had known them for years and was entirely in their confidence,—the writer had arrived at certainty as to the facts in the case. This feeling naturally produces what some call dogmatic statement and what others feel to be oracular enunciation. But, for all allegations of fact, I can produce evidence in written and printed reports from Indian daily newspapers, the words of others and myself, as well as correspondence.

The Rev. Mr. Ashburner, in the *Independent* of a recent date, indulged in very congratulatory reflections upon the collapse in India of theosophy since the learned report of the London Psychical Research Society. Mr. Ashburner styles himself a missionary to the heathen of the blessed religion of Jesus the Jew, and pleasantly supposes that because the London expert, in a truly British style, declares that Madame Blavatsky invented the Mahatmas and adepts, therefore the Hindus will now abandon this new delusion called theosophy. This idea, although ridiculous, leads us to a point which ought to be cleared up in our inquiry into the cultivation of theosophy in Hindustan. Theosophy presents itself in one aspect to the Hindu, and in quite a different one to the European and American. In this country and in Europe, the doctrines which have filtered out to the world, through theosophical literature, seem to us new. They are in fact quite novel to us, so they color our conception of what theosophy is, representing themselves to us to be theosophy. And, as we have nothing in our past, in our literature, or in our ideas like them, it is quite natural that an ignorant missionary, learned in Christian rhetoric, should imagine, when a reputable Englishman declares the Mahatmas to have been evolved from Blavatsky's brain, that therefore there are no Mahatmas, because his first knowledge of them came from her. Even the learned Swedenborg, who saw many things clearly, did not speak of these great Beings. He only said "that, if the Freemasons desired to find the lost word, they must search for it in the deserts of Tibet." However, he did not explain himself; and our only conclusion must be, that in some way he found out that in Tibet exist persons who are so far advanced in knowledge that they are acquainted with that much sought-for lost word.

The aspect in which theosophy presents itself to the Oriental is quite different from our appreciation of it. He sees in it that which will help him

to inquire into his own religion and philosophy. The numerous books which have issued from our various presses here, would make him laugh in their endeavors to lay before readers, subjects which, with him, have been household words for ages. If Marion Crawford's novels, "Mr. Isaacs," and "Zoroaster," were respectively translated into Persian and Sanskrit or Singhalese, the Hindus, Ceylonese, and Parsees would burst with laughter at such struggling with an ancient plot, as if it were new. So a thousand reports of the Psychical Society would not for an instant shake the faith of Hindus that there are Mahatmas. The word is a common one, derived from two others, meaning together *Great Soul*. In some parts of India, it grew so common, in the lapse of centuries, that now and then it is used in derision of blusterers or those who are given to placing themselves on a pinnacle. Many Hindus have told me of various Mahatmas whom they had heard of in various parts of India. One lived on an island, another in a forest, another in a cave, and so on. In Bombay, a Hindu related to me a story, whether false or true I know not, of a man whose wife was dying. In despair, he went into the forest where a Mahatma was said to live, and had the happiness to meet a man of calm and venerable aspect. C

ced that this was the one he had heard of, he ... him to cure his wife. The sage repulsed him; and, in sorrow, he returned home, to find that the wife had suddenly completely recovered at the time when he had been refused by the sage. Next day, he returned to the forest to offer thanks, but the so-called Mahatma had disappeared. This is only one of a thousand such stories, many of them being filled in with details of a highly sensational character, and all of them very old. The very children know that their forefathers believed in Mahatmas or Arhats or Rishies, or whichever be the name, all meaning the same.

If, then, we assume, as some malignant persons have asserted, that Blavatsky, aided by Olcott, introduced this cult into India with a design of mere personal aggrandizement, it must be further admitted that they displayed a deep knowledge of Indian life and manners in thus adopting the Mahatmas. But neither of them can be proved to have been in India before 1878. Certainly, Olcott, had, up to that year, to my certain knowledge, but a limited knowledge of the subject.

Yet at the same time there were many Brahmins who had about given up beliefs in Mahatmas now; for they said, "This is Kali Yuga (the dark age), and no Mahatmas will work with men until the next yuga." So, of course, they, while thoroughly appreciating the object which theosophy had in the revivification of Aryan thought, remained agnostics as to Arhats and Mahatmas being in the society. Others had never lost their faith in them; and a great body of Hindus, unknown before the advent of the society, for years had had personal knowledge of those great beings, had been in their company, and now have, in several instances, publicly declared their belief. Some of these declarations are contained in protests published in India, deprecating the constant degradation of the names of their teachers. To this last class belonged a Brahmin friend of mine, who said to me, in Central India, "I have been for fifteen years personally convinced of the existence of Mahatmas, and have had messages from them." And the class of agnostics mentioned above, is fitly described in a letter, now in print, from a Brahmin holding an official position, running thus:—

"Many of my friends, out of sheer love to me, take me to task for being a member of the Theo-

sophical Society. . . . Theosophy means 'a science of divine things.' . . . The society has no Pope, no Grand Lama, no Saviour, no Mohammed, no Buddha, no Sankara Chariar, no Ramanuja Chariar, no Madhwa Chariar. . . . It is a society for the inculcation of universal brotherhood and its actual practice. Of this society I am a member, and shall continue one so long as the object of the society is not changed, whether I be blamed or pitied or loved in consequence."

Among this class of men, then, the society was hailed as a benefactor just as soon as they became convinced by deeds of the founders, that it was not another European trick for acquiring money, or territory, or power. And, in consequence of the old-time knowledge of the various doctrines which seem new to the Western mind, the Hindu section of our society regards theosophy as a power which has begun to make it respectable once more to be an Aryan who believes in Aryan literature. It rose upon the devoted minds of India as a lamp which would help them and their fellows to unearth the ancient treasures of the golden age, and has now become, for even the young men who had begun to follow the false gods of English money and English culture, a society, the initials of which, "F. T. S.," can be appended to their names as an honorable title.

WILLIAM Q. JUDGE.

THE UNITY OF SCIENCE.

I.

Notwithstanding the grand achievements of science during the past few decades, we can only regard our present knowledge upon scientific subjects as a state of slightly less confused ignorance. We have passed, it is true, from that stage of scientific barbarity of staring and wondering at phenomena to the more intelligent state of being able to compare such phenomena and to collate resultant facts, with a view to discovering laws by which these are governed. But, thus far, the facts which we have been able to discover and make available are simply as so many stepping-stones in one great, unsurveyed morass through which we are groping, now slipping, now floundering, and again regaining a foothold upon some friendly fact, where we pause with comforting self-gratulation to take breath. Each separate department of science has essayed to lay out the true path across this morass and through this wilderness of facts. But their tracks have crossed each other, conveyed and diverged in such confusion that each is obliged to confess, at last, that the entrance into the heart of its mysteries is not by one, but by many lines of approach. And, at last, it is dawning upon the scientific intellect that the perfection of science will be when all these apparently confused and scattered phenomena shall be found in reality to form a perfect circle, whose radii are well-known laws, separating, perchance, into groups, but still uniting the entire circle to one common centre and source of truth. Thus, the tendency of investigation is not to separate, but to *unify* science. We talk less now of sciences and more of science, making it a grand entity embracing many phases of character. In fact, the truths of many of its departments so overlap each other that it is difficult to assign them to any special domain of investigation. We must simply content ourselves with calling them truths of science, and recognize the fact that they are of universal application, belonging not alone to the chemist, but also to the biologist, to the naturalist, to the physicist, to the astronomer, to the botanist.

Even the word "*science*" is returning to its original simplicity of meaning,—knowledge; truth

ascertained and the pursuit of truth, of laws; knowledge classified. And this classification of knowledge proves to be the evolution of this central idea of *unity*; a tendency toward a grand *oneness* where individuals are merged into types, and types into kingdoms, and these also ascending in grand order from inorganic to organic, and lastly to the spiritual. Laws become *law*. "And that supreme law," says Drummond, "which has guided the development from simple to complex in matter, in individual, in sub-kingdom, and in kingdom until only two or three great kingdoms remain, now begins at the beginning again, directing the evolution of these million-peopled worlds as if they were simple cells or organisms. Thus, what applies to the individual applies to the family, what applies to the family applies to the kingdom, what applies to the kingdom applies to the kingdoms. And so out of infinite complexity there arises infinite simplicity, the foreshadowing of that final unity, of that

"One God, one law, one element,
And one far-off divine event,
To which the whole creation moves."*

The book of Nature is the universal text-book of science, the revelation of its heart secrets from Nature's Author. It is written in symbols; and we have thus far learned to decipher comparatively few of its words and sentences, to say nothing of paragraphs and pages. We have deciphered something about gravitation, about chemical affinity, and protoplasm, and vital force, and energy, and transmutation of forces; electrical separation; atoms and atomic weights, molecules and molecular constitution, nucleated cells, magnetism, heredity and differentiation, environment. We have tried to classify our knowledge thus gained, and in so doing have referred certain things to the domain of chemistry, this to the domain of physics, and that to biology,—slow to discern that all belong to the domain of universal science. The terms in one department are not without a common meaning in all its branches, even though they may be represented by different forms of expression used simply for our convenience.

The progress which science has made in the past fifty years is largely due to this tendency of the chemist, the physicist, or the biologist to leave his special domain, and to follow out some of those lines which cross his own; to trace analogies, discerning the fact that "analogous phenomena are not the fruit of parallel laws, but of the same law," as well as to the tendency of science to cease to study phenomena, and to seek after the laws by which these are governed, and which are of universal application.

Lubbock, in an annual address before the British Association for the Advancement of Science, says: "Indeed, one very marked feature in modern discovery is the manner in which distinct branches of science have thrown and are throwing light upon one another. . . . In studying the antiquity of man, the archæologist has to invoke the aid of the chemist, the geologist, the physicist, and mathematician.

"The recent progress in astronomy is greatly due to physics and chemistry; the determination of the boundaries of the different formations falls within the limits of geography; while paleontology is the biology of the past. . . . Summing up the principal results which have been obtained in the last half-century, we may mention (over and above the accumulation of valuable facts) the theory of evolution, the antiquity of man, and the far greater antiquity of the world itself; the correlation of physical force and the conservation of

* *Natural Law in the Spiritual World*, Drummond, p. 413.

energy; spectrum analysis and its application to celestial physics; the higher algebra and the modern geometry; and, lastly, the innumerable applications of science to practical life,—as, for instance, in photography, the locomotive engine, the electric telegraph, the spectroscope, and most recently the electric light and the telephone."

These have been the results chiefly of the study of the transmutations of the various kinds of energy, and of the application of one branch of science to the interpretation of the mysteries of another. Thus, the prism was taken out of the domain of optics and the realm of radiant energy, and by its use in the spectroscope has been made to subserve the purposes of chemistry in the finest of analyses, making the most subtle substances yield up the secrets of the most intimate relationship of atoms and constitution of molecules. It has also been made the servant of astronomy in determining the chemical composition of the heavenly bodies, and has most marvellously supplemented the telescope to the extent of furnishing us the positive knowledge that our earth to which we attach so much importance is only one out of at least seventy-five million similar worlds! "And all peopled?" is the question which at once rushes to our lips. Why not? With what order or orders of beings who can guess? Verily, "What is man that Thou art mindful of him?"

And thus, while the spectroscope has helped us in the study of "Light,—that sweet and heavenly messenger from the depths of space, telling us all we know of other worlds and giving us all that we enjoy of life and beauty on our own" (Duke of Argyll),—it brings to us also a grander and more far-reaching revelation concerning the unity of science. For when we remember that light is the result of an undulatory vibration of an actual material substance,—however ethereal it may be, still positively material,—which stretches itself away through space continuously between our eyes and the luminous body, and when by the aid of the spectroscope we bring in and study this light from worlds and suns so distant that in comparison our own sun is but "just around the corner," we must reflect that this common material substance by which these worlds are linked to ours and to each of us may be the vehicle not only of light and heat, but of other forces of nature. And our reflections cannot stop here; for we must conclude that not only are these seventy-five million discovered worlds—but the unnumbered undiscovered worlds—peopled, but that the same laws which operate in this world are, beyond all question, the natural laws of all worlds throughout the universe, and that other intelligences in other worlds seek to penetrate into the mysteries of "that great Pentarchy of Physical Forces constituted by Light, Heat, Magnetism, Electricity, and Chemical Affinity." Gravitation, which our own Newton discovered to us, undoubtedly interests the minds of other worlds; for everywhere where is matter is gravitation. The spectroscope demonstrates to us in all these worlds the existence of at least three of the great forces of Nature,—light, heat, chemical affinity. The presence of the remaining two, magnetism and electricity, may reasonably be inferred. The domain, then, of science is the universe, from whose very outskirts the spectroscope and telescope bring in to us truths which are the common property of a universal science,—truths which we may study in our own laboratories and observatories, and subject to tests having neither variable-ness nor shadow of turning.

Thus, the sciences lose their boundary lines, and run into unity of law and expression. Sci-

ence is a classified knowledge of nature; but, in its progress, it becomes evident that many classifications have been simply arbitrary, and not founded upon fact. It is only for our convenience that we divide science into natural, or that which considers the external form and internal structure of bodies, and physical, which concerns itself only with the nature of the matter of which such bodies are composed, and considering its divisions into mass, molecule, and atom, its attractions as gravitation, cohesion, adhesion, and chemism, and its motions as mass motion, molecular motion, and atomic motion. The divisions of matter into solids, liquids, and gases, are now found to be entirely arbitrary, and that no actual break between these different states exists. It has been one of the recent achievements of science to demonstrate that there is no such thing as absolutely permanent gases. Oxygen, nitrogen, and lastly hydrogen ("at a pressure of 650 atmospheres and a cold of 170° Centigrade below zero" [Lubbock]) have each been reduced to liquid form.

LEILA G. BEDELL.

THE GERMAN UNIVERSITY.

II.

The liberty of teaching and learning is, in the German universities, carried to the utmost extent. The professors, when once appointed, can never be removed from their position. Professors may read and instruct at pleasure, they may pause whenever they like, they may grow old and unfit for their place, they may neglect their duty: neither the prince of the country wherein the university is situated nor the Rector Magnificus has the power of dismissal. And, also, students are at liberty to study or play truant: there is no one who controls or overlooks them; for they are free, and their liberty was always respected by the professors, who wished to preserve their own freedom. Truth was the sole ideal, which can flourish only in unbounded liberty.

You may shake your heads, and think, How is it possible that science can thrive, when the students are not superintended and guided by paternal authority? and American people, who come over to Germany and witness the joyous and boisterous buoyancy of German students, may be at a loss to understand the virtues of such exaggerated liberty. German students are revelling, parading, fighting duels, and enjoying life. They seem to indulge in anything but study. Yet it is because their festivals and carousals are celebrated publicly. As soon as they apply themselves to study, they generally take to it with a zeal and earnestness which make up for the hours wasted in the circle of jovial comrades, in youthful mirth and hilarity.

And, also, this studentic,—if you allow me to coin this word,—this studentic life apart from study—namely, studentic clubs, carousals, duels, and festivals—has a long history, and is quite venerable, at least, on account of its age. Whoever has visited Heidelberg, or any other university, saw, no doubt, the students with their colored caps on their heads and a colored ribbon slanting over their hearts. Those white caps are Saxoborussians, those red ones Vandals, green indicates Westphalians, etc. All the Teutonic tribes seem to be resurrected from the past; and that their modern representatives are of no less warlike spirit may be concluded from the scars and wounds which are proudly shown.

These studentic clubs can trace their origin to institutions even older than the faculties themselves; and these institutions were the nations, or *nationes*. The academic citizens of an old univer-

sity were divided according to their nationality. In Paris, four such nations existed in the year 1206: (1) the Gallicani, which included Spaniards and Orientals; (2) the Picards; (3) the Normans; and (4) the English, who comprised also the Germans and their kin,—namely, the Dutch, Danish, and Scandinavian.

Sometimes, students lived together, forming a *collegium*, or association, in order to apply themselves better to their studies. Hence, the word college. In England, this system is kept up to this day; and many institutions are still preserved in this mediæval form. In Germany, this living together was abandoned; yet the place where professors lectured, and then the lectures themselves, retained their old name of college. *Collegien*, in German, is the official title of the lectures, readings, and demonstrations of professors.

Students who received a certain sum or stipend for enabling them to carry on their work were called *bursarii*, from *bursa* (purse, the French *bourse*); and this term engendered the German expression for a student, *Bursch*, in which, however, the origin of the word is entirely forgotten.

In Prague, the students were divided into four nations,—(1) Bohemians, (2) Poles, (3) Bavarians, (4) Saxons. But, soon after the foundation, this division into nations was officially superseded by that of the four faculties. The national tie, however, was too strong to be so easily broken. Thus, the division into nations existed still, although privately, yet with no less power than before. The chiefs of these nations, chosen by ballot, according to democratic principles, were called Seniors. Professors, in olden times, were elected by all the members of the faculty. Later on, they were appointed by the Senate. But, the more the students thus lost their influence in the faculties, the less the professors mixed with the nations. Thus, it happened that the nations consisted entirely of students. If professors had any connection with them, it was only as honorary members; and they never took an active part in their transactions. So they never were Seniors. The nations exercised a great power, and forced even the official rulers of the university to respect their influence. In order to preserve their ascendancy, they formed a union, the so-called *Seniorum Conventus*, or simply the S.C. Nation was called, in German, *Landmannschaft*, or, literally, countrymanship. And these *Landmannschaften* tyrannized over students in such a way that they forced even those not wanting to join them to place themselves under their protection. Its members consisted of (1) *Burschen*,—i.e., students,—with all rights, suffrage, etc., and (2) *foxes*, or juniors, or novices, who were not yet fully admitted to the association. The question of nationality was lost sight of very soon, and any one was allowed to choose a nation as he pleased. That he preferred generally a *Landmannschaft* of his own countrymen was generally a matter of course. Members of one and the same nation considered themselves as brothers, and bound themselves by oath to defend each other's life, interest, and honor, even though it should be with the sword. Students wore a sword of their own, a flexible straight blade, called a rapier. With this, their duels were generally fought. Quarrels among members of the same nation were adjusted peaceably, but among different nations had to be decided by a fight. The duellists were seconded by members of their own nation, while an umpire was elected from a third impartial nation. The decision of the umpire was, as a rule, without appeal. The nations changed their name in the beginning of this century to Corps; and the Prussians, Saxons, Westphalians, etc., whom you may see in their

colored caps still to-day, are the legitimate descendants of the nations of former centuries.

PAUL CARUS.

WOMEN'S PROGRESS IN EUROPE.

Mme. Rosalie d'Olivecrona, one of the well-known women's rights advocates of Sweden, writes me, in a recent letter from Stockholm, as follows:—

"The State Girls' School Board is made up of two female and four male members. The two ladies are Baroness Adlersparre (who has devoted her whole life to the improvement of the condition of her sex) and a teacher. The composition of this board may be looked upon as a great step in advance, as it is the first instance of women serving on State committees. I fear that Baroness Adlersparre has been overtaxing herself; for she is at present in very delicate health, and has been obliged to seek a change of air and to stop working for a while.

"The interest in the woman question seems to be constantly growing stronger in the Scandinavian countries. Many reforms in the social position of Swedish women have, during the past twenty-seven years, been working their way slowly and silently, and have been accepted without agitation or opposition. Nor have there been any dissensions among our reformers. But, now that the movement has become a broader one, I fear that elements of disorder may appear. The society for the protection of married women's property has resolved to extend the sphere of its activity, and has added, among other questions, women's suffrage to its programme. This is in contradistinction to the policy of the Fredrika Bremer Association, which takes a neutral stand on this question. The Gottenburg Women's Rights Society is also quite radical. Its organ, *Framåt* (Forward), published recently an article advocating, in opposition to the views of Baroness Adlersparre, as expressed in her paper, the *Home Review*, the participation of women in military duty, which is incumbent on all Swedish citizens between the ages of twenty and thirty-two. In the case of unmarried women between the ages of twenty-five and forty, this duty would take the form of nursing the sick and wounded. Training schools would be established to give instruction in this subject, and would be supported by a tax levied on those women who preferred to be exempted from an active participation in this branch of military service. Even in this year's Diet, voices were raised in favor of women's suffrage and the co-education of the sexes; but no measures were adopted to carry out these propositions.

"Every year, new female students are added to the list of those who have already passed the entrance examinations; and some of them are continuing their work in the universities. Among the latter is one of Baroness Adlersparre's nieces, who intends to take the degree of Doctor of Philosophy. We have a female professor of mathematics at the high school or non-State university of Stockholm,—Mrs. Kowalewska, a Russian or Polish lady. She was put up as a candidate for membership in the Academy of Science; but, although supported by many eminent men, among them one of our most distinguished professors of mathematics, she was defeated.

"This year, several scientific men have united and established in Stockholm courses of lectures for women, with a view of giving them an opportunity to improve and develop their knowledge in a more thorough and scientific way. These lectures are very well attended. I go with my daughter to those on physiology, and find them very interesting.

"Finland does not hold aloof from the general movement for improving the condition of women, although there are still many difficulties to overcome in that country. Among the signs of progress may be mentioned the success of Dr. Rosina Heikel, who began her medical studies in Stockholm and finished them at the University of Helsingfors, in which city she is now practising. Last year, another lady took the degree of Doctor of Philosophy at this same university, which, however, rarely opens its doors to female students."

Progress is also reported from another Scandinavian country. Miss Kirstine Frederiksen, one of the leading advocates of women's rights in Denmark, wrote me recently from Copenhagen, as follows:—

"Nothing new of importance has happened here; and nothing will happen, until our unhappy political dispute shall have been settled. Still, as one of the consequences of the present political contest, it may be stated that there are springing up in the country, among the peasants, women's societies, which may some day do a great deal to advance our cause in Parliament, where the peasantry is strongly represented. You will find among these women a very deep desire to know something about the rights of their sex."

Here, in France, too, the movement is gaining ground. It has not yet been made public, but is a fact, nevertheless, that M. Paul Bert, the celebrated *savant* and politician, who has been sent out by the government on an extraordinary mission to Tonquin, took with him, as a paid member of his embassy, a French lady doctor. And M. de Brazza, the African explorer, told a friend of mine the other day that, when he returns to the Congo, he intends to follow Paul Bert's example.

Mme. Daniel Darc, one of the most brilliant of French writers, informed me last week that, at the annual general meeting of the Authors' Benevolent Society, held here in Paris, one of the gentlemen arose and said: "We have eight hundred members, and among them are eighty-eight women. It seems to me, therefore, that it would be only fair to give these ladies a place on our executive committee." "This little speech," says Mme. Darc, "fell like a bombshell in the midst of the assembly. Nobody appeared to know what to do or say. But, finally, the president succeeded in remarking that the proposal was quite new, that it took the members by surprise, and that it ought to be submitted to the executive committee for examination before being brought before the general body. And here the matter dropped."

Dr. Julia Mitchell, of London, who, with her sister, also a physician, is building up a good practice in the English capital, has just been visiting Paris. She tells me that lady physicians are gaining every year a firmer footing in the medical profession in England, and that lady clients, the chief obstacles to the progress of the innovation, are gradually coming over to them. Dr. Mitchell also takes a very sanguine view of the women's suffrage question, and expects to see unmarried women voting in England at no distant day.

Signora Fanny Zampini Salazaro, an Italian author of merit, has just written her first work on the woman question, a modest little pamphlet,* devoted mainly to advocating the broadening of the field of woman's work. She said to me recently in a letter from Rome:—

"I am now trying to establish here a School of Art for girls of the middle class, the most neglected portion of our population, in order to enable them to enter a suitable and useful field of labor. I will endeavor by lectures and conver-

sation to awaken in them nobler and broader aspirations. When it is remembered that previous to 1860 Italian girls, except in the higher classes, were not taught even to read and write, it must be admitted that since then great progress has been made. But much still remains to be done to elevate the intellectual condition of my country-women.

"We have here, in Rome, a young lady doctor, Miss Maria Farné, who has been appointed by the Queen to be her own physician. Our Queen is very intelligent, and looks with favor on the movement for improving the industrial condition of women. She received me recently, listened attentively to my plans, and gave me every mark of encouragement. If she had more authority and were not restrained by the Constitution, the Queen of Italy could and would do an immense deal for us."

The foregoing extracts from private letters and notes of conversations might be extended. Scarcely a week passes that I do not receive through the mails or hear in some drawing-room facts like those given above. It is evident, therefore, that the Woman Question is becoming not only a universal one, but also a burning one.

THEODORE STANTON.

PARIS, May.

EDITORIAL NOTES.

BY B. F. U.

A SOUTHERN correspondent of the Boston *Traveller* writes: "The people, as a whole, are very religious; and religious subjects are discussed with a freedom which surprises a stranger not a little. Although there seems to be more religion on the surface of Southern life than at the North, still it is doubtful if there is as high a standard of morals in other respects." The people are superstitious, and a person going among them will learn of more 'signs' than he ever dreamed existed."

Of Mr. Janes' work, *A Study of Primitive Christianity*, the Chicago *Inter-Ocean* says: "This is a scholarly writing, marked for its conciseness and also for clearness of expression and its admirable method of grouping its facts. It treats of the natural evolution of the Christian religion. . . . To the discussion, the author brings to bear the wide field of literature and the truth, as it has been sifted by the wisest writers and critics. It is, however, much more than a compilation of other men's opinions: it is a wise summing up, with wise conclusions from the premises. The book will be found of great value to the student of theology and of almost equal interest to the cultivated readers among all classes."

SAYS the Boston *Herald*: "The Harvard overseers show a general willingness to open the doors of education to women, which is encouraging. Mr. Moses Merrill, himself a well-known educator, voices some of the lingering conservatism, when he says: 'I have no desire to see women arguing cases in the courts of law or preaching in the pulpit; but I would not raise a hand to prevent, though I might try to dissuade, a friend from entering such a vocation.' We opine that it will not need a strong barrier to keep women away from the practice of law in the courts; and, as for the pulpit, the men should not fear to take their chance with them, unless it be some of those men who have the womanly temperament without womanly graces to sweeten it."

A LIBERAL, who was an active worker in New York half a century ago, writes: "About the time of Frances Wright's advent here, there was a desperate attempt making to unite the Church

* *Uno Squardo all' Avenire della Donna in Italia*. Naples: Enrico Detken, Piazza Plebiscito. 1886.

with the State. The Sunday mails were to be stopped, all travelling on the Sabbath, ferries as well as vehicles, pleasure gardens were to be closed, and religion was to be a test of a man's fitness for office. The chains before the churches the old 'b'hoys,' the red-shirted New York firemen, helped to abolish. You have probably seen one of New York's old fire-engines on the rampage, with a hundred or so b'hoys manning the ropes. Well, they used to get up false alarms of fire about the right time a day, and, rushing against these chains, made short work of them."

"WHY not be frank, and say," asks Rev. De Witt Talmage, "I believe the Lord God Almighty came to the brink of the Red Sea, and with his right arm swung back the billows on the right side, and with his left arm swung back the billows on the left side, and the abashed water stood up hundreds of feet high, while, through their glassy wall, the sea monsters gazed with affrighted eyes on the passing Israelites? Oh, you say, these rationalists would laugh at me. Then let them laugh." The *Inquirer* (London) remarks that Mr. Talmage is mistaken in supposing that any scientist or rationalist would laugh at such "melancholy gibberish." "Scientists and rationalists, many of whom are enlightened religionists, value intelligence in the pulpit too highly to laugh at such an exhibition of clerical ignorance. It would excite in them only emotions of, sadness and regret."

A WRITER in the *Scientific American* on "Whales and Whaling" gives these facts: "Prior to the American Revolution, and as far back as our history reaches, a species of right whale was indigenous to the temperate Atlantic Ocean. The earliest white settlers in New England found the aborigines hunting right whales off the shore. A canoe with two or more individuals constituted the whaling outfit, the great creatures being towed to shore, and there cut up for the various purposes then calling for their capture. The whites, of course, early introduced their small vessels and improved apparatus; yet, during many years, the whale fishery consisted in but small improvement on the Indian methods. It was not until the whales became scarce that larger vessels and a more elaborate outfit were in use. It is now that the New England people, as an old writer has it, 'began to whale out in the deep sea.'"

THE Massachusetts Legislature refuses to change the law by which deceit and fraud may be practised on Sunday without punishment. "Justice" writes to the *Boston Traveller* that he is opposed to the transaction of business on "the Lord's day," is willing that a man who sells goods on Sunday shall "whistle for his pay," but thinks the law should be so amended as to protect third parties from fraud. "A man bought a note for \$1,000, given, as he knew, in payment for value received. When it became due, the signers resisted payment on the ground that it was signed on Sunday; and the sons of one of them swore that they had witnessed the transaction, and that the note, which was dated on Saturday, was signed a little after 12 o'clock Saturday night. They probably perjured themselves; but their father won his case, and the purchaser of the note lost his money. Is it strange that he thereafter had little respect for Sunday laws?"

HARRIET MARTINEAU, in her *Notes on America*, thus wrote of the prosecution of Abner Kneeland for blasphemy, which occurred in 1835: "One clear consequence of my conversation and experience together was that the next prosecution for blasphemy in Massachusetts was the last. An old man, nearly seventy, was imprisoned in a

grated dungeon for having printed that he believed the God of the Universalists to be a 'chimera of the imagination.' Some who had listened to my assertions of the rights of thought and speech drew up a memorial to the governor of the State for a pardon for old Abner Kneeland, stating their ground with great breadth and clearness, while disclaiming any kind of sympathy with the views and the spirit of the victim. The prime mover being a well-known religious man, and Dr. Channing being willing to put his name at the head of the list of requisitionists, the principle of their remonstrance stood out brightly and unmistakably. The religious corporations opposed the petitioners with all their efforts, and the newspapers threw dirt at them with extraordinary vigor, so that the governor did not grant their request. But, when old Abner Kneeland came out of his prison, everybody knew that the ancient phase of society had passed away, and that there would never again be a prosecution for blasphemy in Massachusetts."

UPON the front of the pedestal of the bronze statue of Garrison in this city, on Commonwealth Avenue, opposite Hotel Vendome, is the name "WILLIAM LLOYD GARRISON"; upon the rear, the dates "1805-1879"; upon one side, "*My country is the world, my countrymen are all mankind*"; and upon the opposite side the inscription, "*I am in earnest; I will not equivocate; I will not excuse; I will not retreat a single inch, and I will be heard.*" "Nearly fifty years ago," the *Investigator* says, "we saw William Lloyd Garrison, the celebrated anti-slavery reformer, dragged at the end of a rope down State Street, in this city, by an infuriated mob, who would probably have killed him, had he not been rescued by the mayor, who interfered with a sufficient force to save his life. His persecution was continued in one way and another for years afterwards; but, finally, at the close of the war, he grew into favor with the public and became quite popular. So much so, that, when sailing in a steamer for England, he received a national salute from a war-ship in the harbor. Time wore on, and Mr. Garrison became respected and honored by the very city that once detested him. And now, in this same city, may be seen a large bronze statue, which has been erected in honor of his name and memory. . . . Mr. Garrison fully exemplified these brave words in his whole career, and his hard struggle through life and grand success at the last prove the truth of the saying,—

"Ever the right comes uppermost,
And ever is justice done."

MR. M. D. CONWAY spoke last Sunday for the Twenty-eighth Congregational Society, at Parker Memorial Hall, on "The Evolution of Religion." The lecture was full of thought, in which there was as little merely commonplace as there was in the charming language in which the speaker boldly presented his radical views. It was one of the very best lectures we have heard on religious evolution. The concluding thought was as follows: "The God who said, 'Vengeance is mine,' is having vengeance recoil on him. The deification of Jesus was humanity and an appeal against Jehovah. These virtues are the very ones that are exerting a moral power that shall sweep away every deity less good-hearted than man and woman. We hear much about agnosticism. It means simply the death of theology and the resurrection of religion. Every such system as the prevailing system sets egotism above the moral law. A system that conflicts with the moral sense must perish. It must perish, when it has to crucify its best men for the sake of its system. Deities die that stand across the path and purposes of mankind. Christianity

is a mountain that is being tunnelled, not for the sake of being destroyed, but to let the light through. No God who cares personally whether man believes in him can survive. Such a God is an arrogant and proud deity. There is a divine Spirit in this universe: it is known only in the still, small voice which speaks in the breast of man, by which he is man. There is and can be but this religion,—the steady passion for good and the steady abhorrence of the bad."

DEFER not charities till death. He who does so is rather liberal of another man's substance than his own.—*Stretch*.

AH! we owe something to the men who have had the courage to disbelieve; and we should hold them in mind tenderly,—the men who bore hard names through life, and after death had harder names piled like stones over their memories; the men who wore themselves down with thought; the men who lived solitary and misunderstood, who were called Infidels, because they believed more than their neighbors!—*O. B. Frothingham*.

VIA CRUCIS. *For The Index.*

The poet dipped his pen, and drew
His vivid pictures, phrase by phrase,
Of skies and misty mountains blue,
Of starry nights and shimmering days.
Men said, "He breedeth fancies pure:
His touch is facile, swift, and sure."

The poet's friend was stricken sore.
In tender tears, the pen he dipped,
And breathed his gentle sorrow o'er,
And traced the sympathetic script.
Men said, "His heart is kind and true:
The laurel yet shall be his due."

The poet's child has waxen hands
That hold Death's heavy-scented rose.
She drifts to the dim shadow-lands,
And draws his wild soul as she goes.

He dipped the pen in his heart's wound,
And, sobbing, wrote,—and thus was crowned!

HELEN T. CLARK.

NORTHUMBERLAND, PENN.

AFTER THE STORM. *For The Index.*

At night, the sky was black with sullen clouds,
In swaying torrents fell the hoarded rain;
The lightning's flash revealed the misty shrouds
Of wind-swept trees writhing as if in pain.

At morn, the blackness vanished from the sky,
O'er the glad meadows golden sunlight poured,
Leaves glanced, flowers bloomed, bright song-birds floated
by,

And far and fair the infinite heaven soared.

O heart on which the bitter blast has blown,
On which at dead of night the lightning fell;
O human heart, appalled, bereft, and lone,
While waves of anguish darkly surge and swell,—

Let the storm rage, nor fear its turbulent roar.
Though sorrow's whirlwind bow thee to the dust,
Round thee are sheltering arms unfelt before,
And thou shalt rise into diviner trust.

Peace lies in wait for thee, grief-stricken one!
Morning shall dawn, and soft airs fan thy brow;
And rays will reach thee from the Eternal Sun,
Turning to good the ills that pain thee now.

Trust in the Love Divine that circles thee,
And on thy heart will drop its healing balm,
Till sweeter than thy dreams of heaven shall be,
After the storm, the spirit's inner calm.

M. F.

The Index.

BOSTON, JUNE 3, 1886.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

REPORT OF THE ANNUAL MEETING OF THE FREE RELIGIOUS ASSOCIATION.

The annual meeting of the Free Religious Association for 1886 opened with a business session Thursday evening, May 27, 1886, in the Parker Memorial, Boston. The President, Wm. J. Potter, took the chair at 8 P.M. The Secretary's report was read and accepted. Next came the report of the Executive Committee, as follows:—

REPORT OF THE EXECUTIVE COMMITTEE.

A year ago, we mourned over recent and deplorable gaps in our ranks. Let us congratulate each other on having no such cause for sorrow now.

Secularization.

One important line of work was marked out for us in the petition which was circulated in the Convention of 1885, asking for a change in the Sunday laws of Massachusetts. As interpreted by our State Supreme Court, they encourage dishonesty, not only by preventing any damages to be collected for fraud committed on Sunday, but by permitting any buyer of property on that day to keep it and not pay for it. These decisions are not dead letters, but mischievous stumbling-blocks in the path of justice. Our petitions had 630 signatures. Among these were the names of over a hundred Boston lawyers, collected by Judge Sewall, who says that not one in ten refused to sign, and that the profession is generally desirous of such a reform. A favorable hearing was given us by the Judiciary Committee of each branch of the General Court, and such a bill as we requested was recently introduced by the House Judiciary Committee. It was strongly advocated by some of the ablest lawyers present, but was rejected this very week by a vote of more than three to one. The Legislature has also considered, though not at our direct suggestion, the propriety of letting bakers do according to law what they now do contrary to law, in letting people buy their daily bread on Sunday morning. A similar privilege should be given

to market-men, during the summer at least; and thus the health and comfort of poor people should be as well secured in New England as has been the case for many years in New York. Druggists, too, should be enabled to keep open on Sunday without breaking the laws.

Another important reform which was spoken of with approval in the last report of this board has not yet been brought before the Legislature of this Commonwealth. We all want to rest on Sunday, but we want to do it healthily. There can be no healthy rest for healthy people during a whole day without some exercise in the open air. Rich people take it in their carriages, yachts, and pleasure grounds, without molestation from the police. Poor people need it much more, and should not be hindered, either by the courts or the pulpits, from getting plenty of fresh air and athletic amusement. A great work is to be done to vindicate the right of people who work hard for six days to rest in any harmless way they like on the seventh. It is high time that this Association should speak out more plainly than it has yet done.

Much is also to be said for Sunday classes in various branches of practical knowledge, for stereopticon lectures,—sale of tickets to which on Sunday would be illegal in almost all our States,—and for opening art galleries and museums. A great agitation has been going on during the past winter in New York, similar to that which threw open the reading-room in the Boston Public Library and the Art Museum, near by, on the day when such privileges are most needed by the poor. This reform is asked for in vain by New York.

These agitations—for prevention of fraud on Sunday, opening of bakeries and markets, permission of amusements and new opportunities of instruction, and admission to public libraries and museums—are vital questions. We respectfully suggest that they should receive due attention, not only in our conventions, but from the Secularization Committee.

Such efforts will, we hope, be more successful than those recently made for the less important objects of taxing churches and protecting atheists from discredit as witnesses. No attempt to agitate the church property question has been made by us since last year; but the witness petition was presented once more, and has been rejected by the Lower House of the Massachusetts Legislature by so large a vote as indicates the wisdom of bringing forward other issues.

Public Meetings.

Holding any conventions, except that in Anniversary Week, was made impossible by the low condition of the treasury, and the failure to receive any invitation accompanied by a sufficient guarantee against pecuniary loss. We did, however, succeed in giving a very pleasant reception to Mr. Conway, in Chapel Hall, on October 9. We trust that our friends will make it possible to do as much during the coming year as has been done previously. Holding another autumnal supper we can, at all events, recommend confidently and earnestly.

The Index and Other Publications.

Our weekly journal has been kept up as usual during the past year, and continues to deserve much more liberal support than it receives.

A book of great value has just been reprinted from its columns, *A Study of Primitive Christianity*, by Dr. Janes, who unites earnest purpose with sound scholarship in his able presentation of the life of Jesus and the early Church.

Two other books which have appeared during the past year show what lofty thoughts and aims have been dominant in our Association. One of

its original founders, Dr. Abbot, has put to shame the bigotry which denies him his rightful place as an accredited teacher of the highest knowledge, and announced in his volume, *Scientific Theism*, what many would agree with him in calling "the philosophy of Free Religion." And the *Twenty-five Sermons*, by our President, deserves at least a mention among our best results.

Amending the Constitution.

This board was requested by the last business meeting to consider an amendment, proposed by Mr. B. F. Underwood, and any other suggestions. A circular containing the amendment just mentioned, and another drawn up by Mr. Potter, was prepared and sent to every member of the Association. Out of about fifty answers, nearly forty showed a wish for some change, though there was great difference of opinion as to what it ought to be. After due consideration of this correspondence, an amendment was drawn up in a meeting of the Executive Committee; and the Secretary was authorized to present it, as will be done this evening, and has been already in our printed notices.

Permit us, in conclusion, to express our hope that the work next year will be done mainly for practical reforms on which we all agree.

This report was temporarily laid on the table while the Treasurer read the following report, which was accepted:—

Report of Treasurer.

Receipts.

1885.		
May 28.	Membership and patrons' fees and donations collected at the business and convention meetings.....	\$229.90
June 5.	From sale of tickets to Festival.....	177.75
Nov. 6.	From sale of tickets to M. D. Conway Supper.....	96.50
1886.		
May 27.	From sale of reports and tracts at office during year.....	22.19
" 27.	From membership and patrons' fees and donations during the year.....	149.00
	Total.....	\$675.34

Disbursements.

1885.		
June 5.	Expenses of Festival, including rent of Melonaon.....	\$187.00
" 6.	Rent of Parker Memorial, for convention meetings.....	50.00
" 6.	Advertising expenses of Convention and Festival.....	15.55
" 8.	New England Woman's Club, for use of room.....	3.00
" 29.	J. M. W. Yerrington, for reporting.....	25.00
" 29.	W. D. Le Sueur, Ottawa, Can., travelling expenses.....	25.00
Nov. 6.	Expenses of M. D. Conway Supper.....	124.90
Feb. 3.	C. Henry Adams, for lettering.....	2.40
Mar. 5.	For twenty-two copies "Freedom and Fellowship".....	7.70
1886.		
May 27.	F. M. Holland, Secretary, for postage and stationery, printing petitions and legislative documents.....	26.75
" 27.	Printing during the year.....	18.50
" 27.	Postage, envelopes, and expressage.....	5.51
" 27.	Office rent for twelve months.....	150.00
	Total.....	\$641.31
	Balance on hand, May 27, 1886.....	\$34.03

JOHN C. HAYNES, Treasurer.

BOSTON, May 27, 1886.

The report of the Executive Committee was then taken up. Mr. Hill moved to adopt the amendment there referred to; and the motion was passed after some discussion, so that the constitution now reads as follows:—

CONSTITUTION.

ARTICLE I.—This organization shall be called the Free Religious Association.

ARTICLE II.—The objects of this Association are to encourage the scientific study of religion and ethics, to advocate freedom in religion, to increase fellowship in spirit, and to emphasize the supremacy of practical morality in all the relations of life. All persons sympathizing with these aims are cordially invited to membership.

The other articles to remain as now, but to be numbered respectively III., IV., V., and VI.

The following officers were then elected:—

President: William J. Potter, New Bedford, Mass.

Vice-Presidents: Octavius B. Frothingham, Boston, Mass.; Felix Adler, New York City; George W. Curtis, Staten Island, N.Y.; Edward L. Youmans, New York City; Dr. Edmund Montgomery, Texas; Thomas Wentworth Higginson, Cambridge, Mass.; Elizabeth B. Chace, Providence, R.I.; George Hoadly, Cincinnati, Ohio; Nathaniel Holmes, Cambridge, Mass.; Rowland G. Hazard, Peacedale, R.I.; Bernard Felsenthal, Chicago, Ill.; Ednah D. Cheney, Jamaica Plain, Mass.

Secretary: F. M. Holland, Concord, Mass.

Assistant Secretary: D. G. Crandon, 11 Hanover Street, Boston, Mass.

Treasurer: John C. Haynes, 451 Washington Street, Boston, Mass.

Directors for four years: John L. Whiting, Boston, Mass.; Mrs. Anna D. Hallowell, West Medford, Mass.; John W. Chadwick, Brooklyn, N.Y.

Director for one year: Miss A. A. Brigham, Boston, Mass.

Rev. William G. Babcock then expressed his sympathy with the Association, and spoke of the work he was trying to do with the young in that very room on Sundays, under the name of the "Appleton Street Chapel."

Adjourned at 9.15 P.M.

CORRESPONDENCE.

SOMETHING SUI GENERIS.

Editors of The Index:—

In a very thoughtful letter (*Index*, May 13), Mr. Franklin Smith defends the cause of mental force against my assertion,—that mental phenomena are a forceless outcome of vital organization. He has on his side almost every school of philosophy: nay, even, natural science—formerly so materialistically inclined—is tending that way. Mind is now, more than ever, conceived as the fundamental principle of the world. Indeed, it has been the all but universal passion among thinkers, for these last ten or fifteen years, to convert everything in nature, without any residue whatever, into mind-stuff or mind-power. Mr. Franklin Smith does not, at present, go to such extremes. He only insists upon consciousness being itself a force among the other forces, whose modes of interaction constitute the universe.

I will endeavor, as briefly as possible, to show that such is not the case; that mind is something *sui generis*, not itself entering into the nexus of powers which composes the permanent texture of the world.

The philosophical conception, commonly called "the relativity of knowledge," is now almost universally recognized as an established truth. It is as much a physiological as a philosophical conception. Indeed, it is through the physiology of the senses that it has become scientifically confirmed, beyond refutation. It teaches us that the conscious outcome of definite modes of sense stimulation cannot possibly resemble the source whence such stimulation emanates: first, because something mental cannot be like something non-mental; and, second, because conscious states result from the vital reaction of a laboriously pre-established organization, while stimulation is merely a fleeting effect of inorganic media.

It seems to me that this relation of the conscious organism to the forces that stimulate its senses is not difficult to understand. And, whenever fully understood, it will bring about something like scientific consent in the philosophical interpretation of nature. For it will then be universally admitted that the fundamental contrast of knowledge does not obtain between the vivid and the faint mental states: the former constituting an object world, a world of matter, of extension, or whatever the entirety of space-phenomena may be called; and the latter constituting a subject world, a world of mind, of mere intension or self-consciousness. The relativity of knowledge unmistakably reveals that the fundamental contrast which has so long perplexed the ablest thinkers obtains, not between these ancient antithetical modes of being,—all of which belong to the same phenomenal or intra-mental order,—but that it obtains be-

tween the whole intra-mental order and the whole extra-mental order. It renders quite evident the truth that everything which makes up our consciousness, whether vivid or faint, whether extended or not extended, must be essentially of the same mental consistency. And, on the other hand, it allows us legitimately to infer that everything capable of stimulating our senses is constituting a distinct realm of existents, possessing essentially the same non-mental consistency.

I think it can be readily shown that it is only to the non-mental or stimulating order that we can rightly attribute force.

A person's sensations, perceptions, or thoughts have, as such, not the slightest power of stimulating to activity any other existent. Such mental modes affect only the person in whom they take place. Your sensations, perceptions, or thoughts, however vividly experienced by yourself, never stimulate my senses. I remain utterly unaware of them, unless you make them known to me by dint of bodily signs.

In outright contrast to this ineffective exclusiveness of all mental states, the organism with its vital activities does possess the power of stimulating the senses of any number of persons.

We, evidently, have here before us a thorough-going distinction. Mental states are utterly incapable of affecting the sensorial and perceptive faculties of any other being: non-mental existents are capable of affecting the sensorial and perceptive faculties of other beings. And it is solely on account of this power of affecting us that we attribute force to the non-mental existents. Consequently, as the mental states do not have this affecting power, they possess no force.

"The basic statement," then, is not "that consciousness and force are identical," but, on the contrary, that they constitute the greatest contrast in nature. Consciousness is forceless: stimulating influences are forces.

Let us fully realize this cardinal distinction, for it is the main clew to the most important philosophical problems. Fancy that you are watching the brain of a person looking at a dog. That person has within his consciousness the vivid percept of the dog. Where is this percept? We know that it is formed in what we perceive as his brain. Look, then, whether you can find the perceptual dog there. On closest scientific investigation, you could detect nothing but a specific molecular motion in definite parts of the brain. And nothing could be more unlike the perceptual dog than these molecular motions. Nevertheless, they correspond incomparably more closely to the percept which he is beholding than any language, gesture, or expression can correspond to the meaning conveyed thereby. If you could follow with your senses these molecular brain-motions, and had learned their correspondence to the mental states of the person whose brain you are watching, you would, by dint of such motions, infallibly know his sensations, perceptions, and thoughts. And this, because the same non-mental organic forces and activities which are specifically stimulating your senses, awakening in you the perception of a brain in definite functional activity, are also producing in the subject of which they form part his definite mental states.

But to revert to the perceptual dog and the corresponding brain-motions. You remove the non-mental or noumenal dog, and instantly the perceptual or phenomenal dog vanishes from the consciousness of the subject whose brain you are watching. Does your perception of his brain vanish likewise? Not at all. Only a peculiar functional stir ceases to occur in it. The organ itself retains its entire sense-stimulating power. Each time the noumenal dog is replaced, the same functional stir is set up in it; and, simultaneously, the perceptual dog reappears in the consciousness of the person to whom the central organ belongs.

Does that not indicate that the mental percept is a function of that organ? Obviously, then, we have made out that a mental state is the forceless outcome of an organ itself in possession of specific forces.

A correct understanding of the relativity of knowledge would furthermore render it impossible for any thinker to conceive time and space as extra-mental existents. These puzzling forms of apperception are undeniably mental phenomena, like everything else that we consciously realize. Consequently, they are altogether dependent on specific organic struc-

ture and vital activity. (See my papers on "Space and Touch," *Mind*, 1885, April, July, and October.) "The immanent noumenal constitution" of the extra-mental conditions which determine our time and space perceptions can never be known; for we know only our own mental affections, and merely infer therefrom corresponding extra-mental existents. I hope the importance of the "philosophical questions" here touched upon will excuse this rather lengthy reply. To Mr. Franklin Smith, I am sincerely grateful for the serious attention he has given to my sundry endeavors to help widen a little our clearing in the dense philosophical jungle.

Respectfully,

EDMUND MONTGOMERY.

HEMPSTEAD, TEX., May 19, 1886.

TRUMAN'S TREATMENT OF GARRISON.

Editors of The Index:—

To make a plausible and effective defence of sundry points of orthodox doctrine, misrepresentation by their advocates is indispensable, since without that the dogmas in question would plainly appear as destitute of authority as of reasonableness. For instance, it is for the interest of the ministry of that faith to have it believed that the Bible is divinely inspired, and thus infallible in fact and doctrine, and also that that book enjoins the observance of Sunday as a Sabbath. They therefore affirm these two things to be true, in spite of the fact that the book declares neither; and they bolster up these assertions by the false statements that the Bible declares itself so inspired, and that Sunday Sabbatism is enjoined in that book by Jesus and his apostles. The use of unfounded assertions or assumptions of this kind is not peculiar to Mr. Flavius Josephus Cook, but is common among the clergy of the faith in question; and they, like him, unscrupulously use the same methods, when treating of the doctrines, the characters, the motives, and the actions of their opponents.

The latest specimen I have seen of this clerical style of contest, and a very complete specimen, is found in the *Andover Review* for May, in an article by Rev. Dr. Truman M. Post, of St. Louis, reviewing the recently published Memoir of Garrison.

The extent of the Reverend Truman's hardihood may be judged of by the fact that he represents the Church and people of the United States as having been always anti-slavery in principle, and Garrison as having been a natural and legitimate product of this "moral atmosphere." According to the Reverend Truman, it was a moral atmosphere "charged with this consciousness" which shaped and colored Garrison's life from early childhood.

It is undoubtedly a fact, as this writer says, that, prior to Garrison's declaration of war against slaveholding, occasional testimonies adverse to that sin had appeared from publicists and statesmen, churches and associations, as well as in the popular press North and South. But he ignores and omits, as unsuited to his purpose, the additional facts that these utterances were in no case supported or followed by action; that they neither attempted nor purposed to do anything toward the removal of this sin; and that, when Garrison attempted to stimulate the Northern people to such action, all the classes above described turned against him, thenceforth showing themselves more opposed to practical interference with slavery than they ever had been to slavery itself.

The Reverend Truman represents the Memoir, and also the *Liberator*, as *ex parte*, and thus one-sided and unfair statements. He characteristically ignores the fact that the *Liberator*, from the beginning, republished the strongest statements of the Northern and Southern advocates and apologists of slavery, thus thoroughly representing the slave-holders' arguments, and always accurately pointing out the paper or the person or the association which put forth those arguments. Since the Memoir makes constant reference to those numbers of the *Liberator* in which the matters in question are recorded, the book as well as the paper fairly represents both sides, and thus is in no objectionable sense an *ex parte* statement.

The Reverend Truman censures Garrison's criticisms of the ministry and the churches as if they were causeless, ignoring the important fact that, in the very beginning of his enterprise, he applied in

"SIN IS NOT."

Editors of The Index:—

How delightful this intelligence through a late *Index* from one of its contributors! One can hardly repress his enthusiasm over it. "Sin is not." "Not too often can it be repeated that sin is not." "Man is not to be, cannot be, held blameworthy for his conduct." "Man's conduct, be it good or bad, is as inevitably what it is as is the coming forth of the rose and the thorn from the rose-bush." "To science there is in conduct no such thing as sinfulness." These jewels of thought are from a long and elaborate article in *The Index* of May 13. If they are statements of truth, they cannot be hailed with too much joy. The triumphs of science, so widely vaunted, reach their culmination in such discoveries, if, indeed, they be real ones, "scientifically true."

Of course, if they be so, every man now speaks the truth with his neighbor. Lying is a lost art. Cheating has ceased. Oppression, cruelty, quarrelsomeness, hatred, revenge, and the legion of moral evils under which for ages the world has suffered immeasurable woes have taken their flight. Either this is so, or these things are not sins. The nomenclature of the world is now to be "scientifically" revised, and the word "sin" is to be expunged from it. To be sure, the ills of life, in all their variety and abundance, must remain with us. We do not get clear of them. Crimes, too, of countless names will continue to be committed as heretofore. And we may be permitted to continue to call them crimes, but not sins; though even the acute philosopher of Malmesbury has told us that "though every sin is not a crime every crime is a sin." But no longer is it so. The necessities of society will continue to require punishment in all its degrees. This we must inflict, but with no sense of the offender's ill desert, no abhorrence of his character. This feeling we must repress, nay, extinguish; for "he cannot be held blameworthy." "Man's conduct, be it good or bad, is as inevitably what it is as is the coming forth of the rose and the thorn from the rose-bush." Let us banish, then, our old superstitions, and learn that "to science there is in conduct no such thing as sinfulness." What used to be called sins and what no man in his senses can fail to regard as fearful evils, inflicting on the human race its most dreadful sufferings, and denounced by the ablest moralists and the best philanthropists of the world's history as its worst curse,—these are no more sins! Science has decreed it.

The discovery is not new. The philosophy on which it professes to rest has discoursed many times before, in ancient and modern tongues, and sometimes very acutely and ingeniously to this effect; but it has made little impression on the great body of thinking men,—the world's common sense. It is not likely to become a formidable power in human society, even though, discarding the more modest name of a philosophy, it arrogates to itself now the authority of a "science."

But let us look for a moment at this last scientific defence of it.

"A sin, the sin of Christian theology," the writer begins. But hold a moment, we beg. We are not concerned with "the sin of Christian theology." This, were it to be discussed, would be found to be a very extraordinary and perplexing kind of thing. It resolves itself at the first touch into two wholly unlike elements, original and actual; and the former, though very variously conceived and defined by Christian theologians, usually parting with all the proper idea of sin. But, with "the sin of Christian theology" specially, our essayist seems after all to have nothing to do. And why it is so distinctively mentioned is not apparent. His real dealing throughout is intended to be with the broad and universal idea of sin,—an idea world-wide and world-old, known to mankind long before the obscure, ever-remodelled, yet never-consistent thing called Christian theology was heard of, and in lands where to this day there is but the dimmest idea of it. It is an idea, in multitudes of minds, quite unconnected with Christian theology or Jewish theology, or Hindu or Greek or Roman or Fiji. It springs from the constitution of man as a consciously responsible being, believing, as he almost always does, in some superior power or powers having a sense of right and wrong and holding him accountable. Whether this power is the Christian's God or the pagan's Pantheon, "a being outside of and above nature" (if one has any defi-

nite idea what this means) or otherwise, it matters not. The most indefinite belief in "a Power that makes for righteousness" is enough on which to base the doctrine of the reality of sin. Not only does man, the world over, recognize the fact of his own and of others' sin, but he cannot by all his efforts educate himself practically out of it. When he has speculated threescore years and ten with his best ingenuity, and summoned what he calls his "science" to his aid, he still finds himself obliged to impute praise and blame to his fellow-men and to himself. This is the idea the essayist seeks to explode, whose reality as a fact in human life he roundly denies.

To this, we have only to present the simple assertion of human consciousness. As we have already intimated, this is clear, universal, ineradicable. Entirely irrespective of all theology,—indeed, repudiating all idea of God,—man is by his very nature sensible of duty, duty to himself, if to no other, and indeed duty to others. He sees the propriety of rules for his conduct. He acknowledges the profound feeling of obligation. He writhes under self-reproach, enjoys an exalted happiness in self-approval. These are facts in his constitution. If they were not, no mere education could ever have made them so universal and so profound.

"Not too often can it be repeated" that, whenever a man does the thing that he believes to be wrong, whether his judgment on this point be correct or not, he commits a sin.

And, if "sin is not," righteousness, its opposite, equally is not. If no wrong-doing, then no right-doing. Virtue, benevolence, heroism, all that men the world over have felt constrained to admire, on which the best minds of all ages have lavished their encomiums, to which they have bent their energies, and for which made their greatest sacrifices, all which saves the world from being a soulless piece of mechanism, as dull and stupid as a grist mill,—all this vanishes with the denial of the reality of the moral sense, or, what is the same thing, the assertion that "man cannot be held blameworthy for his conduct."

As to the origin of this feeling, we may theorize ingeniously, and suppose its gradual development with such and such circumstances in the evolution of the race; but all this does not affect the fact that this sense, however it came into being, exists,—exists universally, and cannot be expelled from the human heart. Our speculations as to its origin are not "science," but our knowledge of human feeling is. The facts of consciousness are as undeniable as those of physics.

Into the metaphysical reasonings by which the moral responsibility of man is sought to be denied and the reign of physical law extended over all his psychical acts, it would be a threadbare and tedious business to enter,—at least now. The topic has been debated for ages, and is very abstruse. But when we find our reasonings conducting us to positions directly at variance, not only with human consciousness at large, but with the best interests of society, we may well pause and question our reasonings. There is not a claimed speculative truth, however plausibly and ingeniously defended it may seem to be, which is worth anything to man, if it is plainly, in its practical and legitimate applications, inimical to his moral well-being and the happiness of our race. Remove the doctrine of human responsibility from human belief, persuade the world that "man is not to be, cannot be, held blameworthy for his conduct," as our essayist affirms, and affirms to be scientific truth, and one has done to his fellow-men about the highest disservice in his power. J. D. K.

BOOK NOTICES.

NEW ENGLAND SUNDAY: The Olden Time Series. Gleanings chiefly from Old Newspapers of Boston and Salem, Massachusetts. (Number Three.) Selected and Arranged with Brief Comments. By Henry M. Brooks. Boston: Ticknor & Co. 1886. Price 50 cents.

To those interested in the Sunday question and its history here in New England, this compilation will be of great value. Mr. Brooks says, "This Sunday question has been so often discussed of late years, and the opinions expressed on the same are so diverse, that it may be well to print a few selections on the subject from some of the old newspapers, that those who are interested may see, as a matter of curiosity, if for no other reason, what views have been en-

person to the chief representatives of the clergy, urging them to take ground against the great national sin, and desiring their leadership in the work instead of exaltation of himself. Nothing is plainer in this Memoir than that Garrison and his associate, George Thompson, were decidedly pious men, as piety is understood by orthodox people. Garrison made early appeal to his own minister, Rev. Dr. Lyman Beecher, confidently expecting that he would recognize and rebuke the sin of slave-holding at least as much as the sin of dancing. It was only after the refusal of this eminent man, and of all the other clergymen to whom Garrison had access, to preach righteousness and rebuke sin in this department that they were denounced by him as time-serving and unfaithful. Having been taught from his childhood to honor the Christian ministry, he could not have believed, at the beginning of his anti-slavery work, that Dr. Beecher would not only refuse either to lead or co-operate in that work, but would afterward forbid the formation of an anti-slavery society among his pupils in Lane Seminary; that Andover, led by Stuart and Woods, would indorse and echo the worst utterances of the later life of Daniel Webster; that Dr. Nehemiah Adams, of Boston, and President Lord, of Dartmouth College, would publish elaborate defences of negro slavery as authorized by Scripture and reason; that one Boston church would deprive a black man, merely because he was black, of the pew he had bought and paid for; that another Boston church, in its printed pew-deeds, would forbid selling or leasing the pews to any colored person; that the orthodox ministers of Massachusetts, in view of the lectures of abolitionists, would publish and spread abroad a pastoral letter denying the right of parishioners to favor or even to hear doctrines not acceptable to their minister; and that all these things would be acquiesced in by brother ministers and sister churches as not only right, but Christian. In view of facts like these, continued for many years in the best part of New England, and among people claiming to be the best part of its population, how monstrous, both in falsehood and absurdity, seems the Reverend Truman's declaration that this nation created Garrison, and gave a prompt and potent response to his appeals!

The article I am noticing is thoroughly saturated with misrepresentation, but I can mention here but one other department of it. The Reverend Truman knocks down several men of straw, seeming to imply that they are assertions of the book under review. Thus, he says, it were absurd to ascribe to the single agency of any individual man the overthrow of slavery in the United States. As if the Memoir made any such claim! Again, he objects to Garrison's treatment of the Colonization Society, saying that they were by no means all hypocrites or knaves. As if Garrison had ever said they were so! Again, he finds in the book that "the faculty of a large human sympathy" was wanting in its subject; that is, that sympathy with four million oppressed persons, rather than with four hundred thousand oppressors and their accomplices, is not a large sympathy, and, perhaps, is not human sympathy at all. Again, he refers to some ideas of Garrison upon matters unconnected with slavery as wild, visionary, disorganizing; as impracticable fanaticisms warring on civil and ecclesiastical order, and on the generally received ideas of theological belief and religious life; while what those opinions really warred upon was the sort of civil and ecclesiastical order, and of theological belief and religious life, which acquiesced in the undisturbed continuance of slavery. One of these "impracticable fanaticisms" was Garrison's estimate of Sunday Sabbatism,—an estimate supported by Calvin, Luther, Melancthon, and all the Protestant reformers associated [with them, and also founded on that Bible which the Reverend Truman pretends to take as the authoritative and sufficient rule of life. The last of Garrison's alleged deficiencies which I have space to notice is his want of abiding reliance on strict truth and justice, and his want of patient forbearance with human ignorance and weakness; the ignorance and weakness referred to being that of men who, exalted to be leaders in Church and State, used their power to support and vindicate "the sum of all villainies."

I think, if the Reverend Truman's clerical life extends over the former half of the anti-slavery period, it might be instructive to look over that part of his record.

CHARLES K. WHIFFLE.

tertaind within the past century, more especially in New England, in reference to Sunday." Extracts are given of the Sunday laws from as early as 1644 up to the present time, and of the cases of Sabbath-breaking brought up before the courts at different periods. In 1789, Washington, at that time President of the United States, being obliged by circumstances to ride a few miles one Sunday morning in Connecticut, was stopped by "the tything-man" of the town, and made to explain all the circumstances of his Sunday riding, and promise to go no further than the town he was approaching, before he could be secure from arrest by this functionary. In 1776, at a town meeting in Belfast, Me., it was voted "that if any person makes unnecessary vizits on the Sabeth they shall be Lookt on with Contempt untill they make acknowledgement to the Public." In 1817, by a police regulation of Boston, all persons were "forbidden to drive during divine service, or while the inhabitants are going to or returning from their several houses of public worship, any carriage at a greater rate than a walk or a moderate foot-pace." Many other instances, of which our space will not permit mention, are quoted. And the gradual advance in sensible treatment of the subject is shown by extracts from the newspapers at different periods, until this era of Sunday mails, Sunday steam and horse cars, open libraries and art galleries, and Sunday concerts on the Common, paid for out of the city treasury and sanctioned by "the powers that be."

S. A. U.

FORGOTTEN MEANINGS; or An Hour with a Dictionary. By Alfred Waite, author of *The Student's Historical Manual*. Boston: Lee & Shepard. 1886. pp. 73. Cloth. Price 50 cents.

"In collecting these Forgotten Meanings," says the compiler in his preface, "I have been upon my guard against the enticements of conjectural etymology, and have rejected much that was most alluring." But, in the two or three hundred common words whose original meaning is here restored to us, he has furnished a work most likely to give to even superficial readers a stimulus calculated to awaken a more earnest interest in the history of language. Some of these meanings are extremely suggestive and appropriate, as "Cemetery [from the Greek], a sleeping-chamber"; "Character [Latin], an instrument for branding or marking"; "Dunce,—Duns Scotus was the leader of those schoolmen who opposed the study of the classics at the time of the revival of learning, hence his followers were called Dunses"; "Enthusiast [Greek], one who believes that he himself is in God, or that God is in him"; "Fanatic [Latin], one inspired by a divinity"; "Heretic [Greek] means one who chooses, and heresy simply a choice"; "Man [from the Sanskrit], the being that thinks"; "Maudlin, shedding tears of penitence, like Mary Magdalene"; and Dr. Johnson's caustic definition of "Pension" is, "In England, it is generally understood to mean pay given to a State hireling for treason to his country." Mr. Waite gives a list (with the abbreviations of them used throughout his compilation) of nine leading authorities consulted in the preparation of this book.

S. A. U.

LOVE'S LADDER. A Novel. By W. DeWitt Wallace. Chicago and New York: Belford, Clarke & Co. 1886. pp. 254.

If not "a religious story," this is at least a story of religion, with a moral. The aim of the author seems to be to strike at the pride, formalism, and intolerance of the orthodox churches. The incidents are related with so much particularity as to details that we get the impression that the whole is at least "founded on fact," if not a simple rehearsal of events which actually occurred. It is the story of an educated, spirited, industrious, moral, and willing-to-be-independent woman, who, worse than widowed, through being the deserted wife of a drunken, unprincipled man, is, though in great poverty, struggling to secure for her only child a good education. Being an honest believer in the orthodox faith, she was desirous to join a church; but, on making application, the pastor and members of the fashionable church she wished to unite with, because of her poverty and reticence as to her past history, gossiped her into insanity and at last to death. There is a unique plot and some exciting scenes described. The love story, which gives the book its title, has very little to do with the real story, but is used mainly as a thread on which its incidents are strung.

S. A. U.

BEYOND THE VEIL. By Alice Williams Brotherton. Chicago: Charles H. Kerr & Co. 1886. Price 20 cents.

The opening line of this poem of some two hundred lines tells how

"One weary with much sleeping slept and dreamed"

of a soul which, though deeming itself forever shut out from heaven, yet felt

"A wild longing in its inmost breast

To look upon the City of the Blest,"

which, when it reached, to its joy and surprise

"Stood open wide, with never bolt or bar,"

and, on entering, found that the very desire to behold a place of purity and light gave the right to remain there forever. The idea is very pretty and poetic, and the relation is in choice and tender words. The writer, who is well known to readers of Unitarian and other liberal publications, donates the proceeds of the sale of this book to the building fund of All Souls' Church in Chicago.

CANOEING IN KANUCKIA. The Haps and Mishaps Afloat and Ashore of the Statesman, the Editor, the Artist, and the Scribbler. Recorded by the Commodore and the Cook (Charles Ledyard Norton and John Habberton). New York: G. P. Putnam's Sons. 1886. Illustrated. Price 50 cents. pp. 270.

This describes in a humorous manner a canoe voyage made in Canadian waters by four gentlemen, members of the New York Canoe Club, together with their frequent explorations on land at different points in their trip. To those interested in canoes, these pages will impart full and varied information in regard to every detail. To those not interested, the book will yield cheerful bright reading for an otherwise dull hour, some bits of information as to Canadian customs and manners, and considerable amusement in looking at the many comic illustrations.

LECTURES AND ADDRESSES. By Frederick W. Farrar, D.D., Canon of Westminster. New York: John B. Alden. 1886. pp. 135. Price 40 cents, cloth.

These are the lectures delivered by Canon Farrar during his recent American trip, and are respectively entitled "Dante," "The Ideals of Nations," "Temperance Address," "Thoughts on America," and "The Inspiration of the Holy Scriptures." Those who admire Canon Farrar and who were not able to hear him lecture will be delighted to find his brilliant, scholarly, and eloquent thoughts placed in this handsome form within their reach.

THE first two chapters of William Henry Bishop's new serial, "The Golden Justice," appear in the *Atlantic* for May. The scene of the story is laid in a Western city, and the novel opens in an original manner. Charles Egbert Craddock's instalment of "In the Clouds" is one of the strongest and most thrilling pieces of work which have yet come from this remarkable writer. Henry James continues his "Princess Casanoviana" in characteristic style, transporting his hero to Paris, of which he gives some incidental descriptions. The fiction of the number is completed by a tender little sketch of New England life, "Marsh Rosemary," by Sarah Orne Jewett. John Fiske continues his papers on American History by one treating of "The Weakness of the American Government under the Articles of Confederation." E. P. Evans has a paper on "The Aryan Homestead." W. J. Stillman contributes "Memories of London." Maurice Thompson has an article on "Bird Song"; and there are five excellent poems, one of which is by W. W. Story. Criticisms of the new "Life of Longfellow," and of some recent books of travel and other volumes, with the "Contributors' Club" and "Books of the Month," complete a very good number. Houghton, Mifflin & Co., Boston.

THE *Popular Science Monthly* for May supplies its readers with most substantial intellectual food. Among the able and interesting papers are "The Difficulties of Railroad Regulation," by Arthur T. Hadley; "An Economic Study of Mexico," by David A. Wells; "Development of the Moral Faculty," by James Sully, M.A.; "De Candolle on the Production of Men of Science," by W. H. Larrabee; "The Problem of Crystallization," by Alfred Einhorn (illustrated); "The Factors of Organic Evolution," by Herbert Spencer; "Food Accessories and Digestion," by Dr. J. Burney Yeo; "Photographing the Heavens," by Dr. Herman Y. Klein (illustrated); "How

Alcoholic Liquors are made," by Joseph Dawson; "The Care of Pictures and Prints," by Philip Gilbert Hamerton; "The Evolution of Language," by M. A. Hovelacque; "The Science of Flat-fish, or Soles and Turbot"; "Sketch of Francis Galton" (with portrait). The editor, in a paper on "Charity and Sentimentality," enforces the propriety of exacting from the managers of benevolent institutions full reports of their operations, of their funds and methods, and of the objects and results of their work.

"WIDE AWAKE" for May opens with a charming frontispiece of spring-time and variable weather,—A Sudden Shower." The stories of this number are varied and excellent, and treat of the American Revolution, Roman history, and Canadian life. Mrs. Frémont describes the visit of one hundred and twenty-nine midshipmen to Paris and the tomb of Napoleon. Mrs. John Sherwood writes of the young Orleans Princesses, known as "The Lilies of France." Mr. Hooper, Nora Perry, Helen Gray Cone, Grace Denio Litchfield, Clara Doty Bates, M. E. B., and others, are among the contributors this month. D. Lothrop & Co.

A STUDY OF PRIMITIVE CHRISTIANITY.

By LEWIS G. JONES.

8vo. 320 pages. Cloth, Gilt Top. Price \$1.50.

"No fairer statement has been made of the grounds on which the anti-supernaturalist humanitarian bases his opinion of Jesus and of the origin of Christianity.... His theology and Christology are of the most radical Unitarian kind; but the temper and spirit of the book are so refined, so earnest, and so fair to all opponents, that it must impress those who are compelled to disagree with its most prominent conclusions as a model of polite and generous controversial writing."—*Brooklyn Union*.

THE INDEX, 44 BOYLSTON STREET, BOSTON, MASS.

Bound Volumes of The Index For 1871 and 1872

For sale at THE INDEX office, at \$2.00 per volume. A few complete sets of bound volumes of THE INDEX, from 1870 (Vol. I.) to 1885 (Vol. XVI.), inclusive, will be furnished at special rates.

TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crapo.

PRICE \$2.00.

For sale at the bookstores. Also sent, postpaid, on receipt of price by
THE INDEX,
44 BOYLSTON STREET, BOSTON.

Lectures by Rabbi Solomon Schindler.

1. INTRODUCTORY.
2. TWO THOUSAND YEARS AGO.
3. THE CARPENTER'S SON.
4. JUDAISM THE MOTHER, AND CHRISTIANITY THE DAUGHTER.
5. A GENUINE MESSIAH.

As a special inducement to Liberals to distribute these lectures, which are full of radical thought presented in the plainest language, they are now offered at 5 cents each; 10 copies for 30 cents; 40 copies for \$1.00.

Address THE INDEX, 44 BOYLSTON STREET, BOSTON, MASS.

The Religion of Philosophy; OR, THE UNIFICATION OF KNOWLEDGE:

A comparison of the chief philosophical and religious systems of the world, made with a view to reducing the categories of thought, or the most general terms of existence, to a single principle, thereby establishing a true conception of God. By RAYMOND S. PEARSON.

For sale at THE INDEX Office. Price \$3.00.

MANUAL TRAINING IN EDUCATION.

By James Vila Blake.

This little book of about 100 pages discusses the training of the hand as properly an integral part of education. The relation of general and special education, the need of hand-training for all classes, the dignity of hand-work, its influence on personal character, the relation of manual training to immigration and to the apprenticeship problem, and the present condition of the subject, are among the points treated, all in a very condensed way. It will be read with profit by teachers and others interested in methods of education.

Price, in paper.....25 cents.

CHARLES H. KERR & CO.,

PUBLISHERS,

175 Dearborn Street, Chicago.

Take no substitute for the GENUINE
H. T. MARSHALL'S
Patent Adjustable Lace Congress.

THE COMING SHOE.

Does not draw the foot like ordinary Congress. Has the stylish appearance of a Lace Boot, and is more comfortable to a full instep or ankle. Convenient as any Congress in putting on. Requires no lacing, when once adjusted. Manufactured of best material, in 6 widths and half sizes, insure a perfect fit and full satisfaction.

If your dealer does not have them, write me, enclosing careful measurement of foot, giving size and width of shoe worn, with \$4 for machine-sewed, \$5 for hand-sewed welt, \$6.50 for all hand-sewed; and I will send you promptly by mail, registered, the best shoes made.

A First-class Piano at a Medium Price.

Send for catalogue or call at warehouses,

146A TREMONT STREET, BOSTON.

HENRY KIDDLE writes in the *Spiritual Offering*: "Among the latter is Dr. Lewis G. Jones, the author of *A Study of Primitive Christianity*, quite recently published. We have examined this work with much interest and gratification, from the evident impartiality and candor of the writer, who has diligently studied the results of modern research on this subject, and here offers us an excellent *résumé* of them, with some intelligent views of his own. The book is well written, and will repay a careful perusal to all who desire to see what fairly may be said upon the puzzling questions involved in this interesting subject of Jesus the Christ, his career, his doctrines, and his character, as well as the origin and establishment of the religion now professed by between three and four hundred millions of the human race."

THE Massachusetts Senate last week refused to change the law by which the testimony of atheists in this State may be discredited on account of their religious opinions. The Haverhill Laborer is led to ask: "If an atheist tells a lie, and denies his atheism, his testimony will be received. If he is honest about it, he is barred out. Is this a premium on false swearing, or what is it?"

PROF. DAVIDSON's lecture on "Bruno" is for sale at *The Index* office. Price 5 cents; 25 for 50 cents.

HUSBAND'S CALCINED MAGNESIA.—Four First Premium Medals awarded. More agreeable to the taste and smaller dose than other Magnesia. For sale in bottles only, with U.S. Government Registered Label attached, without which none is genuine, at druggists and country stores, and by Thomas J. Husband, Jr., Philadelphia, Pa.

FRESH FLOWERS on every occasion.

44 Boylston St., Boston, Mass.

We have two complete sets (12 vols. each), of Carlyle Works, library edition, cloth, gilt tops, which will be sold for one-half price, \$7.50 per set. Also, one set of Dickens' Works, 15 vols., illustrated, library edition, cloth, gilt tops, which we will sell at one-half price, \$7.50. Address *The Index*, 44 Boylston Street, Boston.

As Plato has put his own extravagant political theories into the mouth of Socrates, so has John, the reported author of the Fourth Gospel, put his Alexandrian philosophy and apparently Gnostic diction into the mouth of Jesus. There may have been some elements of the true Socrates in the former, and some of the true Jesus in the latter; but no alchemy will be able to extract the pure essence of Socrates nor of Jesus.—F. W. Newman.

AGAINST HER CONSCIENCE.—Scene: Highlands. Sunday. Tourist: "Can you sell us threepenny worth of milk, Missus?" Mrs. McJob: "Whit did ye say? Losh me! sell mulk on the Sabbath Day? Na, na! I couldnae dae that; but, as ye seem decent boys, I'll jist gie ye thirpence worth for naethin', an' ye'll jist mak me a praesent o' a shulin'."—*London Fun*.

CHEAP RADICAL TRACTS!

No. 1.—*Truths for the Times*, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 5 cents; 30 copies, \$1.00.

No. 2.—*Fear of the Living God*, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 3 cents; 20 copies, 50 cents.

No. 3.—*Lecture on the Bible*, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 5 cents; 30 copies, \$1.00.

No. 4.—*Christian Propagandism*, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts*. Price 5 cents; 30 copies, \$1.00.

No. 5.—*"God in the Constitution,"* by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 5 cents; 30 copies, \$1.00.

No. 6.—*"The Sabbath,"* by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 5 cents; 30 copies, \$1.00.

No. 7.—*"Compulsory Education,"* by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 3 cents; 20 copies, 50 cents.

No. 8.—*The Present Heaven*, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 3 cents; 20 copies, 50 cents.

No. 10.—*The Impeachment of Christ*, by F. E. Abbot. 5 cents a doz.

No. 11.—*Red of Science*, by F. E. Abbot, is to show the real influence of science upon the idea of God. Price 5 cents; 30 copies, \$1.00.

No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 5 cents; 30 copies, \$1.00.

No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 3 cents; 30 copies, 50 cents.

No. 14.—*A Study of Religion: The Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 5 cents; 30 copies, \$1.00.

No. 15.—*The Battle of Syracuse*. Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 5 cents; 30 copies, \$1.00.

Social Ideals, by David A. Wasson. Price 5 cents each; 10 for 30 cents.

CURRENT TOPICS.

BY B. F. U.

WHAT England now needs, and is likely to have, is a Parliament elected upon the home rule issue.

NEXT Saturday afternoon, at 3 o'clock, a monument, erected in Forest Hills Cemetery to the memory of Karl Heinzen, will be unveiled, on which occasion Mr. C. Hermann Boppe, of Milwaukee, editor of the *Freidenker*, and others, will give addresses.

COUNT D'ALVIELLA, in the *Contemporary Evolution of Religious Thought in England, America, and India*, says: "The influence of Free Religion is not limited to those societies which have accepted its name or its patronage. The Free Religious Association has become for Unitarianism what Unitarianism itself has been for other communions,—a leaven of intellectual liberty."

A LIBERAL friend writes from Baltimore: "I am interested in Baltimore in a movement to open our public libraries and art museums on Sunday. Could you assist me in my endeavors to obtain authentic data relative to other cities, East and West, which have adopted Sunday opening for their libraries, etc? I would like to be informed as to whether such have been productive of benefit to the laboring classes, and whether they have availed themselves to any extent of the advantages tendered them by liberal communities." Any information received in response to this inquiry will be printed in *The Index*.

ONE of the most interesting recent discussions of faith-healing and kindred phenomena is that by Rev. J. M. Buckley, the editor of the *Christian Advocate*, in the last number of the *Century Magazine*. Dr. Buckley has evidently been a careful student, both through the records and through exceptional personal experience, of all phases of alleged miraculous healing. He discusses the cures by Prince Hohenlohe and Father Mathew, the cures at Knock and at Lourdes, those by Boardman, Dr. Cullis, and Mrs. Mix, Roman Catholic cures and Protestant cures. His analysis of the testimony to the sundry miraculous cures is very sharp and sensible, and effects an enormous shrinkage in the number of cases with which it is really necessary to deal. "But, after all deductions have been made, the fact that most

extraordinary recoveries have been produced must," he allows, "be admitted"; and the valuable part of his essay is his inquiry into the real and common cause. His conclusion, supported by abundant evidence, is "that the 'mind-cure,' apart from the absurd philosophy of the different sects into which it is already divided, had a basis in the laws of nature," but that the pretence of mystery is "either honest ignorance or consummate quackery." "In comparison with the Mormons, Spiritualists, mind-curers, Roman Catholics, and magnetizers, the Protestant faith-healers can accomplish as much, but no more: they have the same limitations as to diseases that they cannot heal and as to their liability to relapses." "All that they really accomplish," he says finally, "can be paralleled without assuming any supernatural cause; and a formula can be constructed out of the elements of the human mind which will give as high average results as their prayers or anointings. That formula, in its lowest form, is *concentrated attention*. If to this be added reverence, whether for the true and ever-living God, false gods, spirits, the operator, witches, magnetism, electricity, or simple unnamed *mystery*, the effect is increased greatly. If to that be added confident expectancy of particular results, the effect in causing sickness or relieving it, for life or death, may be appalling. Passes, magnets, anointings with oil, are useful only as they produce concentration of attention, reverence, and confident expectancy."

In these conclusions there is nothing new, of course. The chief interest and value of the article are in its wealth of evidence and illustration. His warnings against the faith-healing delusion, on the grounds of its tendency to produce an effeminate type of character, to set up false standards, to open the door to every superstition, and to destroy the ascendancy of reason in the soul, are worthy of the most serious consideration of the large number, in Boston as well as elsewhere, who are walking in this road, and hungering for all manner of miracles. His comparison or contrast of the modern miracles with the miracles of Christ and the apostles is the only weak point in the article. It is rather pitiable, in so sensible a discussion, to come upon exultation over the fact, where Christ's cures are being compared with those of Dr. Cullis and the rest, that "the record states that *he* healed *all* manner of disease and *all* manner of sickness." It seems never to occur to Dr. Buckley that the rules by which he works such shrinkage in the accounts of modern miracles may apply to conscientious and religious Jews as well as to conscientious and religious Yankees, and that the New Testament wonders may have their natural history, also. He does say, indeed, after referring to the account of Christ's restoring the ear of the high priest's servant, etc., that "rational men, familiar with the laws expounded in this paper, could not believe this record, if those mighty works, told of Christ and the apostles, were comprised simply in an account of wonderful tales. They would reason that it is

much more probable that those who testified to these things were deceived, or exaggerated, or that those who received them added to them, than that they should have happened. But," he urges, "when those who make the record convey to us ancient prophecies, attested and still preserved by the Jews, and fulfilled in the character and work of Christ," etc. Reasoning of this sort is not likely to produce any very great effect, and one need not bother much over this part of the article. On the whole, Dr. Buckley is to be thanked for a study which makes strongly for rationalism and common sense.

In an editorial on "Answer to Prayer," the *Independent* says that there are "four ways in which God answers prayer." The first is as follows: "He answers our general prayer for daily bread and providential care. Our common needs are supplied in answer to prayer. But it is urged that so are the common needs of men supplied who never pray. We will not here discuss that proposition further than to say that there is a vast difference between eating bread off God's table, and being clothed by a Father's hand, and the common method of filching a living from the world merely by the labor of our own hands." Pietistic puerility of thought could not go much farther, nor could contempt for honest labor, with the implied insult to the millions who earn their living with their "own hands," looking not to Heaven for manna, nor expecting to be fed by ravens. The second way that God answers prayer, says this article, is "directly and literally." Definite and specific petitions are answered; and among the cases cited—all ancient—are those of Hannah, "who besought the Lord for a son"; Hezekiah, "who besought the Lord for his life"; Elijah, who prayed for dry weather and for rain; and the Church, which prayed for Peter in prison. The writer states that "countless thousands of Christians live to testify that God has answered their prayers in the same signal manner, and that he is doing so daily." The third way that God answers prayer is "indirectly." "He gives us better things than we ask, though not the exact things." The fourth way that God answers prayer is "by saying no"; that is, by not granting it at all when we ask for that "which, if God should give it, would be for our hurt and eternal damage." With such modifications of the doctrine of prayer, with such qualifications of statements, with such illustrations drawn from the past and careful avoidance of reference to any case of answered prayer that admits of investigation, with such intellectual dishonesty as is involved in claiming that all prayers are answered, whether the petitions be granted or not, do theologians still defend a superstition opposed to which is all the science of the world, and which, but for the survival of primitive theological beliefs and methods of thought that science is powerless to change,—except slowly, by changing the mental aptitudes inherited from ages of miracle and myth, as well as by substituting truth for fiction,—would have long since disappeared from every intelligent mind.

The Index.

BOSTON, JUNE 10, 1886.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, : : : : : } Editors.
BENJAMIN F. UNDERWOOD, : : : : : }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

REPORT OF THE ANNUAL MEETING OF THE FREE RELIGIOUS ASSOCIATION.

Friday A.M., May 28.

ADDRESS BY THE PRESIDENT, WILLIAM J. POTTER.

Ladies and Gentlemen,—Friends and members of the Free Religious Association, Bostonians and inhabitants of any other planet who may have come hither this morning, again I have the honor and the pleasure to greet you all at our annual convention. We have much to do to-day; and I have tried to call you to order promptly, though the hour is already past and the assembly is still gathering. Great themes are to come before us for consideration, if not for settlement; and we must get at the work. The Free Religious Association always has a good deal to do at its annual meetings. If it is complained that the Association is doing little through the year, it will perhaps be conceded that it makes up for that inactivity on its yearly convention day. And to-day, as usual, we expect to tax your capacities to the extreme verge of endurance. We shall tax your brain-power, we shall tax your bodies, and we shall tax your purses. To this threefold form of taxation—the only kind of trinity in which the Free Religious Association as a body is permitted to believe—you patiently and devotedly submit yourselves year after year. As patriotically and as honestly as Joseph and Mary his wife, the parents of Jesus, went up to Bethlehem, of Judea, to be taxed, so you, the faithful, on this day of Anniversary Week in Boston, come up each year to this hall of holy traditions, from your various homes near or distant—to be taxed. I see by your faces that you have come up this year prepared for this living sacrifice.

But, pleasantry aside, I never look this annual convention in the face without feeling that you are drawn here by an earnest purpose, nor without a strengthening of my own conviction that the Free Religious Association not only has not existed and does not now exist in vain, but that it

has lived and does live for the promotion of great and beneficent principles; so that I almost believe that, if at any time the handful of members who are left to manage the business meeting on the Thursday evening preceding this annual convention should vote to dissolve the Association, you here, on Friday morning, would vote by the inherent right of popular sovereignty to restore it.

It is true—and we may as well confess it, for we have no secrets—that the Association is not so active as once it was, though it never attempted much in the way of local organization. But it does not hold so many conventions, nor institute lectures, nor even publish so many tracts as once it did. But one reason for this may be that not a little of this kind of work is now done for it by other organizations. A very good Free Religious convention, for instance, was held in Cincinnati, a fortnight ago, under the name of the Western Unitarian Conference; when that body, after a long and earnest discussion of its basis of membership, passed a resolution by a vote of more than three to one, to the effect that that Conference "conditions its fellowship on no dogmatic tests, but welcomes all who wish to join it, to help establish truth and righteousness and love in the world." And that is the statement made by the constitutions of several of the State Unitarian Conferences in the West. Here, in the East, Unitarianism is also, to a considerable extent, taking up our work. The Unitarian Sunday School Society is publishing text-books concerning the origin of Christianity, written on such a rationalistic basis that Profs. Norton and Ware, a little more than forty years ago,—if they could have conceived them at all,—would have condemned them as most dangerous heresies. The American Unitarian Association has published and sent out for missionary work, under its imprint, a volume of Theodore Parker; and a portrait of Parker is to grace the walls of the new Unitarian building in Boston. Emerson's address to the Divinity School at Cambridge, in 1838, which, at the time, was received as a revolutionary manifesto, is now also circulated as a Unitarian tract. Thus, the two men, Emerson and Parker—who, it may be said, more than any other two, prepared the bed-rock out of which the Free Religious Association was hewn—are now claimed as corner-stones of the Unitarian denomination, side by side with Channing. Regarded and treated as heretics in their day, it may be asserted as a fact that the Unitarianism of this day conforms much more nearly to the religious views of Emerson and Parker than to those of Channing.

Even in the matter of speakers at our meetings, things are getting much mixed. The Unitarians stole a march on us last evening, and captured our biggest gun for this field-day, Mr. Conway, to enliven and inspirit their festival at the skating-rink. I remember well when they didn't regard Mr. Conway with such distinguished favor as that; when he was a thorn in their side, addicted to introducing disagreeable resolutions of sympathy with Mr. Parker and the anti-slavery cause in their meetings, and a pestilent agitator who went about splitting churches. I think they did not mourn much when he went abroad, unless for their English brethren. But now, after twenty years, they help to welcome him back, and I doubt not with sincere cordiality. Yet, whatever courtesies may have passed between Mr. Conway and the Unitarians at their festivities last evening, I think you will discover when he presents himself to you here, as in a few minutes he will, that they have not spiked his cannon nor prematurely drawn his fire.

Our work to some extent is even being done for us in the older denominations. Dr. Heber New-

ton, for instance, in New York, is doing it in one of its phases. He is putting into the sermons that he preaches in his Episcopal church, from Sunday to Sunday, ideas and thoughts which have been the familiar speech of this platform from its foundation. And when he came here last year, entering so heartily into our meeting as well as addressing it so ably, and confessed in his festival speech that he felt himself indebted for much that he is and does to the work of this Association, and the writings and addresses of its representatives, not only did we receive fresh courage for continuing the work, but we felt ashamed if any of us in a moment of weakness had ever allowed a doubt whether the Association had any important work to do. Then, too, in another direction, the Ethical Culture Societies, with growing power, are showing what enthusiasm and zeal for great ideas may do for organizing the liberalism that is outside of all churches into practical works of morality and philanthropy.

Thus, our field is a wide one, and our members and friends may be working in various organizations and under different names. But we come hither, year by year, that we may gather fresh inspiration for these life-tasks, whatever and wherever they may be. And if, in the progress of ideas to which I have referred, things sometimes seem to be getting much mixed, so that some of us may hardly know under what banner we are marching or by what name we are to be called,—whether Unitarian, Episcopalian, Jew, Christian, Agnostic, Ethical Cultivist, Rationalist, or what-not,—this may be no bad sign, but, rather, it may signify that ideas are coming to be more valued than names; that thought is growing more powerful than ecclesiastical lines and creeds; that good deeds and good character, as the end sought, will ere long be found a perfectly safe basis of fellowship among earnest thinkers and workers.

There are, however, things which the Free Religious Association as a body can do together. For one thing, and perhaps the most important thing of all, indicating specially its mission, it can continue from platform and printing-press to sow broadcast the ideas from which those liberal and progressive results, to which I have alluded, are, at least in part, the natural harvest. Let it sow in faith, and increasingly, the seed, and not be over-anxious by whom or where the harvest shall be gathered.

In more specific ways, too, can the Association do a needed, practical work. There are laws on the statute-book interfering with religious freedom and equality, that need mending. These laws may be partially obsolete; but they are valid laws so long as they are not repealed, and they are not infrequently invoked to the doing of great injustice. Such are the laws that disqualify a witness in court because of his religious opinions, or that permit his testimony to be discredited, if it be shown that he holds agnostic or atheistic opinions. Such are the laws which attempt to make a contract on Sunday so illegal that even a gross fraud may be perpetrated in a Sunday trade, and the defrauding party may legally escape punishment, and his victim can receive no redress,—not even recover the goods out of which, under shield of the holy day, he has been cheated. The laws generally, that pertain to the observance of Sunday, need recasting, in order to prevent the hypocrisy and insincerity which now so largely prevail in the use of the day, and in order to bring law and usage into sympathy with the more rational and humane ideas of the present age. In all these directions the Free Religious Association has done some work: it has made an effort, though not attaining success as yet, before the Massa-

chusetts Legislature, for the amendment of some of these unjust laws; but this kind of work might be enlarged and systematized, and made much more effective. Our members in different States might be drawn into it, more general information gathered and circulated with regard to the various State laws, and a more regularly organized endeavor be made for carrying the needed reforms. With regard to the Sunday laws, in particular, this Association, as the secretary said in his report last evening, might pioneer the way to more consistent and just legislation.

I was in New York a week ago last Sunday, and in the afternoon went into Central Park. A great multitude of people was there, enjoying the delicious atmosphere, the bright sunshine, the fair panorama of grass and leafing trees and blossoming shrubs. The thoroughfares were filled by the rich and the gay, driving in their stylish carriages. I did not care much for them. They would get their drives somewhere, though there were no park. But the footpaths and the lake-sides and quiet nooks were alive with the poorer people,—with people who could not get such breaths of free air and such a touch of nature and of beauty on any other day of the week. There were babies in carriages with nurses, and babies toddling on foot with their mothers; and there were whole families together, and factory operatives and serving women, and laboring persons of all classes; and there were row-boats on the lakes, giving them a ride there for a few cents; and public carriages on the roads at a little greater cost for such as could afford that conveyance; and everywhere was order, healthful recreation, and happiness; and I rejoiced that the people had this place where they could come on Sunday from their dingy streets and tenement houses and shops, and that there were cars running from all directions, to make it easier for them to reach it. I asked myself, too, why the natural history museums in the Park should not also be open on Sunday, in order that those of the people who wish might have the educational benefit of that kind of exhibition, for which they have so little chance on any other day. A strong effort to this end has been made, you know, in New York the past year; but it has been defeated by Christian superstition and bigotry. And this same narrow bigotry would have closed the Park to people on Sundays a few years ago, if, indeed, it would not do it to-day, did it have the power. Only a few weeks ago, when Mr. Henry Phipps, Jr., of Allegheny City, offered \$25,000 to that city for building plant-houses, which should be open to the public every day in the week, including Sunday, the clergy and the Presbyteries of the neighborhood started up in alarm and protest. They begged Mr. Phipps to omit the condition with regard to Sunday, and they begged the Park Committee of the city not to receive the generous gift, if that proviso were retained. But the educational, refining influence of such a place for people who could visit it on no other day than Sunday was the one thing that Mr. Phipps had specially at heart. He had been reading Elizabeth Cady Stanton's magazine article on "Our Boys on Sunday," and this practical idea of the public conservatories had come to him as the result of that article. It was Mrs. Stanton's faithful seed-sowing that was to come up in those plant-houses for the people; and, as the plants by nature's decree would grow on Sundays as on other days, the public-spirited giver wanted young people to have the opportunity to see them on that day, since then they would have more leisure. Yet panic-stricken Orthodoxy did its utmost to defeat this benevolent project, on the ground that it was a sacrilege!

Now, the community needs to be enlightened with regard to the true use of such a boon for man as is, or might be, this one day in seven, which comes in the midst of our customary labors and cares; and the ecclesiastical organizations that are ever ready to restrict the uses of this day, according to their own narrow and obsolescent ideas, need to be resisted by organized effort as well as by the spirit of the age. The spirit of the age is doing well for liberty; but it should be remembered that the spirit of a *past* age still has law and usage and organization largely on its side. Therefore there is call for an organization, like this of ours, plastic to the spirit of the new age, and designed to resist vested errors, and to supplant them with larger truths. So long, at least, as the benevolence which would build and open plant-houses for the public to visit on Sundays as on other days is protested against by clergymen and churches as a sacrilege and sin; and so long as Presbyteries, consisting of learned and earnest men, are passing resolutions (as certain of them are now doing in the South) to the effect that to teach that Adam and Eve were created in any other way than is plainly taught in Genesis—Adam being made out of nothing, and Eve from his rib—is a heresy which imperils the very existence of the Christian Church,—so long as there shall be such exhibitions of ecclesiastical superstition and bigotry as these, *so long* there will be need of a religious liberation society.

But, friends, I fear that I am taking too much of the time. I have been occupying this first half-hour until the hall should be well filled, and you should be quiet. You are now reasonably quiet, and the work must begin. Mr. Conway is going to address us on "The Coming Cosmic Calvinism." I have been importuned not a little to tell what he means by his subject, and have done what I could to throw light upon it; but it seems to remain very much of a conundrum still. Mr. Conway will now answer for himself. I have the great pleasure of presenting him to you.

ADDRESS BY MONCURE D. CONWAY.
Cosmic Calvinism.

Those who adversely criticize the current theology of any period are sometimes charged with inhumanity. They are met with the plaintive remonstrance, "You are destroying the most cherished hopes of millions." Whether it be the array of Greek and Roman divinities shattered by Christianity, or the Madonna and saints swept away by Protestantism, the same cry is raised. But history shows us the old sentiments surviving their crumbled altars, adapting themselves to the new order, and wondering how mankind could ever have found satisfaction in the crude images and symbols to which they once clung with such frantic zeal. No age can recognize its own superstitions. They who hold them cannot see, with those who have cast them off, that the hopes intertwined with them are allied with terrors, and that these are making for millions an actual hell while the others are dreaming of a possible heaven. It is a fundamental mistake of theology to suppose that its enemy is intellectual scepticism. No dogma ever perished through its faulty metaphysics. The Christianity that superseded paganism contained as many fables as the systems it overthrew. Luther was as superstitious as the pope. That which overthrows a sanctified system is not a spirit of atheism, but rather a spirit of antitheism. Not, indeed, any theoretical objection to a divine existence, but hostility to the deities represented in a prevailing order. The minds which can trace out all the philosophical arguments for and against any theology are too few to make much trouble, but the people who can judge a tree by its fruits

are many. The real force with which theism has to deal is that which led Swinburne to say, "I believe in God, but am against him." The orthodox preachers are right when they say that infidelity is a matter of the heart rather than the head, only they look in the wrong direction to find the depravity. It is in their tribal god, universalized without being civilized, the preservation of whose authority requires increasing human sacrifices. Reason, law, common sense, science, have each yielded him their pound of flesh. But, at length, a victim is demanded who does not submit so easily. That is the moral sentiment.

Man is a gregarious animal. The flock is a combination of the weak against the individually stronger, for mutual defence. For the human herd, the social bond finds sanction in some totem, which develops to a supreme personality. It is the conventionalized expression of the rude and arbitrary forces required for the direction and control of a tribe individually savage, to be ruled chiefly by self-interest and terror. But, by the sympathetic forces generated in the social group, the human flock outgrows the ruder forces. The hedge of thorns begins to blossom; the thorns decrease as the flowers expand, but the totem of the thorns remains,—the terrible god. He survives through the power of his shepherds to kill off any heretical members of the flock, branding them as atheist goats, burning them in one age, boycotting them in another, and so securing the propagation of the species to the submissive. There was thus a survival of the sheep, and of the *sheepiest*. We are all descended from the sheep. Now, when even the sheep begin to rebel, it is a sign that the torture has become extreme. Such is our gregariousness, so confirmed our habit of conformity, so many the social interests which lead us to be dumb before our shearers, that the shears must have gone deep into one's moral flesh before he turns upon his totem with heretical horns. Where one man breaks away from the pious flock, we may feel sure that a hundred remain only to groan, and a hundred more are caught amid its environing brambles. The shepherds are so put to it that their adequacy declines, even though their wage is increased. There is significance in their cheers whenever one who cannot be suspected of being a hireling appears to lend a helping hand to the perfunctory pastors, who must persuade the sheep that, after all, their fold is not so bad, their hedge scientific, and that present submission will be rewarded with green pastures hereafter.

Just now, loud theological plaudits are heard for my old friend, Prof. Fiske. Compelled to beguile the flock it used to coerce, Theology has become a clever conjurer, and has borrowed Fiske's hat for a series of surprising tricks. At an earlier day, it would have had his head; but it is now grateful for his hat. He must be surprised at the variety of things drawn out of that summer-school hat of his. One brings out miracles, another total depravity, a third brings out the pope, and all reveal agnosticism dangling on a scientific gibbet.

I have been examining that hat. It is a curious hat. It contains a number of divisions,—some queer and occult,—of which I feel sure the Professor was not aware when he handed it up to the conjurers. One small space inside the scientific crown looks like a survival from the days of the clerical wig. However, we are told that it is a genuine expression of this vigorous thinker's own head,—a very good head it is,—and, however one may smile at the dogmatic uses to which it is put, we cannot be too serious in examining this new effort to harmnize theology and science.

The surviving dualism of nature is between its organic and inorganic phenomena. The organic

can be traced in unbroken continuity from man down to colloid matter; but between that jelly and inorganic matter there is no known bridge. On one side of this gap, we see inorganic matter shaping itself in crystals corresponding to some of the living forms on the other side; the molecules pile themselves up in inorganic forms and foliations, as they do in bones and plants; but no connection is traceable between the lifeless mass of the one and the sensation in the other. The abyss can only be crossed by scientific imagination or by theological faith. The man of science, seeing the phenomena of crystallization on one side and molecular forms of life on the other, as two abutments, supposes that in some earlier condition of the world—when matter was molten or cooling—a bridge spanned the chasm. Herbert Spencer believes that such evolution from inorganic to organic is implied in the phenomena of evolution. The theologian believes that the dawn of life was the special work of God.

Prof. Fiske appears to have combined the evolutionary and the theological theories into one. He finds a unity in nature complete enough to include all phenomena,—organic and inorganic,—and conceives one immaterial cause and source of them all.

This might be regarded as only one more theory of dynamics, had not Prof. Fiske claimed a religious and even ethical value for it. He claims a moral unity in all phenomena, organic and inorganic. All orderly action is divine action, he says; and, because no part of the universe is lawless, no part of it is godless. And this God, he says, is in the deepest sense a moral being. Here, he parts company with Herbert Spencer, who, when pressed by Frederic Harrison, declined to describe the Unknowable as moral.

I have vainly searched Prof. Fiske's works to find his rational link between the physical and the moral orders of the world. "We know it." Who know it? What moral unity is there between spherical hailstones and the bird protecting her young from them under her bruised wings? What sacred unity between the Xenia cyclone and the mother's kiss on the brow of her child slain by that power of the air? What is there divine in that mere order of coexistence and sequence which we call law? A cancer has laws as complete as those of the tongue it destroys. Is there an eternal divine principle that makes for cancers?

Prof. Fiske rejects the argument from design, because it would prove either an incompetent or a cruel designer. "In every part of the animal world, we find implements of torture, surpassing in devilish ingenuity anything that was ever seen in the dungeons of the Inquisition." Nature, he says, is full of maladaptation, also. But no sooner has he rejected the argument from design than he is confronted with the cosmic deity he is setting up, and takes refuge in the old commonplace of "inscrutable mystery." The Darwinian discovery, he says, has introduced us to a scene of universal strife,—with no prospect of a good or happy outcome for any sentient being,—in which the higher life is wantonly sacrificed to the lower; and the problem of evil has thus been brought up with renewed emphasis. "The only avenue of escape is the assumption of an inscrutable mystery, which would contain the solution of the problem if the human intellect could only penetrate so far."

So far! Why, here is a book (*The Idea of God*) which professes to give scientific evidence that God exists; that he is the "Infinite Sustainer" (p. 188), the "Omnipresent Energy" (xii.), the "Creative Omnipotence" (p. 126), the "Eternal

Majesty" (p. 110), the "Eternal Reality" (p. 154), the "Living God" (p. 166), the "Infinite and Eternal Power" (p. 166), the "Power that makes for Righteousness" (p. 167), a "moral Being," and the "everlasting Source of phenomena" (p. 167)! All this he knows about God, and yet tells us that the existence of evil is an "inscrutable mystery"!

That position is inadmissible. How can Mr. Fiske describe his Deity as the source of all phenomena, unless he is prepared to include the phenomena of evil? He cannot logically maintain a Creative Omnipotence and Omnipresent Energy, and withdraw its responsibility under the threadbare veil of "inscrutable mystery." We expect of an exact thinker consistent terms. "Inscrutable mystery" is the phrase of an agnostic, not of a man who undertakes to give us a clear cosmology.

A machine is not stronger than its weakest point. The one single problem of importance to theism is to find some evidence of a moral order in nature outside of man and the range of man's influence. It is at this essential point that Prof. Fiske fails. He finds in nature an immoral order; but, because it includes humanity, he asks us to believe in a moral source of the immorality. What is this but to shut us up in ourselves again? What is it but man projecting his own mind in mirage on the universe and worshipping it? This new lift breaks down just where that of Paley did, and that of Bishop Butler. Both of those famous theologians contributed to the scepticism they meant to silence. Paley showed design in nature: it turned out wicked design. Butler defended the alleged absurdities of Christianity on the ground that nature is equally absurd. "So much the worse for nature!" was the verdict. Prof. Fiske shows moral antagonism between nature and humanity: one he calls "devilish," the other spiritual. And when we ask why the two should be ascribed to one source, and that a good source, the answer is a "We know" and a "We feel sure."

I "feel sure" that this answer comes from his pious progenitors, not from himself. To his essays on Evolution, he has finally appended himself, as a notable example of theologic survival. If the hereditary Fiske had not been modified by rationalism, he might have given us a self-consistent, if not a satisfactory "idea of God." Prof. Fiske is fond of folk-lore; and he told me that once an apparition of the devil stood before him,—the mediæval devil,—with horns, hoof, and fiery eyes. Of course, he was too polite to throw his inkstand at him, and too scholarly to be frightened. He observed the grotesque figure till it vanished. But it is to be regretted that he did not "interview" old Nick on this rare opportunity. A certain intimacy with that figure, which my orthodox friends willingly concede me, warrants me in believing that my friend might have received some valuable hints for his new Cosmic Theism. In fact, I once had a subjective vision of that same mediæval personage myself. I was sitting alone in that room of the Wartburg where the devil appeared to Luther, while he was translating the Bible, and was so uncivilly treated. I had lately been constructing a sort of cosmic theism of my own; and, though it was misty on the problem of evil, I was wondering how Luther's notion could have included such a conception as the devil. All at once, the adversary appeared; and "How do you like my looks?" quoth he. "I can't say they are altogether lovely," I replied, in a friendly way. "Well," said he, "you called for me, and I have come." "I call for you!" "Yes: or, what amounts to the same thing, you were just thinking that your theism was unsatisfac-

tory." "Well, I confess it does seem to lack something." "That something is me. How often shall I have to warn you rationalists that you can't construct a deity without my help? How can you have a god, if he is to be saddled with all the wickedness in this world? The Hindus tried to get on without a devil, and their thirty-three million deities turned to demi-devils. The Jews began with no devil: Jehovah proudly claimed the creation of evil as well as good, and down went Jehovah. He had to summon me from Persia, to relieve him from responsibility for everything bad; and, by that means, he was rehabilitated under the name of First Person. The Universalists fancied they could get along without a devil, and where are they now?" "But," said I, "evolution shows that no purely evil organization can exist: it would be a survival of the unfittest." "Who said anything about organization? I am no organization. This personification, which is all in your eye, was formed by Zoroaster, and has continued as survival of the fittest for theological purposes. For some six thousand years, I have been God's scapegoat. But now that philosophers have proved my non-existence, can they prove that wickedness doesn't exist,—licentiousness, brutality, malice, murder? Can they philosophize tornadoes out of the world,—diseases, desolations? Can they call mankind to worship a creator whose throne rests on skulls?" "I have been accustomed," I said, "to regard the origin of evil as an inscrutable mystery." "Ah, that is the fog priestly conjurers created to shield their craft from common sense. There is no mystery in evil any more than in good." "Who are you, then?" I cried. "Behold!" And, with that word, this devil dissolved into jagged rocks; his mouth became a slimy tarn; his breath, malaria; his hair, desert sands; his eyes, volcanoes, with lava streaming down toward the peaceful village. I beheld a vision of the wild, soulless, inanimate chaos of unrecovered nature, the desolate places of the earth haunted by the personified terrors of superstition.

Prof. Fiske says man has a teleological instinct. If you don't understand the word, all the better. Theology used to talk about a First Cause; but, when Reason replied that it could not think of any cause without asking what caused that cause, Metaphysics stepped in, and invented the imposing word "teleology." By this, Mr. Fiske means that man has a "craving after a Final Cause." This is a curious assertion. The Buddhist world,—nearly a third of the human race,—all the positivists, the "free thinkers" of Europe and America, are apparently unconscious of any interest in a Final Cause. Can anybody point to an historic religion founded on a Final Cause? There are religions founded on gods dying for men, on gods governing men; but it would be strange to find religious enthusiasm gathering around a teleological god. Theological enthusiasm for any metaphysical theory which renews the lease of a failing dogma is comprehensible. No doubt, this supposed teleological or final-cause instinct would be found by analysis to be a survival from the long ecclesiastical régime under which our particular race was shaped. Prof. Fiske's feeling about the Final Cause reminds me of the major-general in Gilbert's opera, who repairs to a church on his estate to do penance for his prevarication before the tombs and effigies of his ancestors. True, he was not descended from them; but he had just purchased the estate, including the tombs, and they had become, by purchase, his ancestors, so that he must live worthy of them. The major-general, by the way, assumes that these ancestors.

in whose monuments he has invested, were noble beings. And some such assumption runs through these teleological pleadings. It is assumed that, if we do find a source of phenomena, we shall all fall on our knees. There is such a large investment in the family tree of creeds and churches that a sort of "corner" is formed in theology, to keep the stock from moral depreciation. To what else than unconscious bias can be attributed Prof. Fiske's invitation to worship the Final Cause of a world, whose cruel, brutal, predatory constitution he has written a thousand pages to prove? By what logic does he credit all that Sahara with the oasis of good which man is trying to defend from its consuming breath? With equal reason the pessimist claims that the oasis itself is a mere bait and delusion of a supreme Will Power that makes for evil and unhappiness. That I do not believe; but I believe that bad is bad,—genuinely,—and that out of unmitigated abhorrence of it are generated the energies which shall finally swallow up this inorganic death in and around us in the great human victory. The fact that man is clever enough to extort some good from evil experience is no credit to the evil. If a brutal father breaks his son's back, and the lad in his confinement becomes more scholarly and spiritual than he might otherwise have been, shall the youth say, "I thank thee, O father, for my broken back"?

Calvinism says, Yes. Prof. Fiske repudiates Calvinism in word, but let us look into that.

Organic life is developed amid inorganic; and, for aught anybody knows, vitality and matter are coeternal. Some part of every organization is inorganic. Paul was more scientific than he knew, when saying that he bore about with him a body of death. Our actions may be distinguished as organic and inorganic, as our human will is less or more restricted by its heritage of forces determined by elements and laws foreign to itself. Our bad actions may be caused by inorganic obstructions in us: it may be more than analogy to speak of a tempest of passion. But, because a furious man acts inorganically, it does not prove that his moral nature is evolved from his inorganic part, any more than that a mineral poison evolves the life it destroys.

That inorganic world which climbed into man's physical constitution climbed also into his conception of the universe.

Primitive man being much more at the mercy of external forces than civilized man, and of undeveloped reason, conceived a spiritual unity between himself and the elemental forces which environed and penetrated him. He ascribed personality like his own to external objects and forces. He thus conceived a natural demonology. He might call his demons gods, but that was only to flatter them: they were images of his terror, whom he sought to soothe by sacrifice and prayers. Nobody would pray, in the original sense of prayer, to a being incapable of doing him mischief, unless by force of custom. These demons, at first called deities for compliment, followed the progress of human knowledge, were moralized by man's improvement, and in the end represented systems of nature. The Egyptian, Greek, and Teutonic cosmologies are expressed in their theologies, now turned to mythologies. We find in them personifications of creative force, fatal law, generation, destruction, and other phenomena. Under the development of wider unities in the conception of nature, the deities decreased in number; supremacies grew; ultimately, a god in heaven, an underworld god, and an earth-god were sufficient final causes, the other deities being subordinated into angels or secondary causes.

But the laws personified remained the same.

Proclus said, "All the gods are contained in each." Of this, Jehovah is an example. In him, all the personifications of polytheism are found. He is the god of war; god of the sea; of the storm; the consuming fire-god; the deity of darkness, of light, of good, of evil. All the old nature-demons climbed into Jehovah, as into a cosmologic Trojan horse.

It was this monotheistic pantheon that Jesus saw to be a moral pandemonium. Prof. Fiske falls into the incidental error of saying that Jesus set forth Jehovah as the Sustainer of the universe and Father of mankind (*The Idea of God*, p. 77). But Jesus never spoke of Jehovah, and his most pointed allusion to him was when he told the Pharisees that their father was a devil. The "Father" invoked by Jesus was much more like Ormuzd, whom the Persians called "the Father of the Good Mind." In fact, Jesus headed a great antitheistic revolution. Jehovah lapsed out of religious faith before the power of the moral sentiment. He remained in nominal discredit, even after the restoration of his despotism, until Calvin made him into a theologic cross, and nailed Jesus to it.

Calvinism established a Judaism, such as the Jews had long outgrown,—even if they ever knew it, which is doubtful,—added to it the coarser features of Roman dogma, and systematized the whole into a Cosmic Theism, whose moral corollary would be devil-worship. All the ancient gods and demons are in it,—that is, the phenomena of nature are in it. Calvin's God cannot forgive: every sin must have its expiation. So with natural law: it never swerves, never forgives. The smallest sin against God must be paid with eternal torture, even as in nature the mistake of a moment may be followed by life-long misery. A sin against this God may be expiated by the innocent: man suffers for Adam's sin, Jesus for man's sin; and this suffering of the innocent for and with the guilty is a law of nature. By the law of Calvin's Jehovah, sin is hereditary, also its punishment,—just as diseases are hereditary, and moral weaknesses, to the third and fourth generation. God cursed nature, says Calvinism; and the earth is full of thorns and ferocities to attest it. God elects some for his favors, some for his hatred: such are predestined for their several salvation or damnation,—a dogma which fairly translates the internal and external differences amid which human beings find themselves through no fault or choice of their own. Calvinism is thus a genuine though bald transcript of the phenomena of nature, having been derived from ancient scriptures which record the impressions made by nature on primitive man; there being selected from those impressions only such as are terrible, because to build a deity on the beautiful and gentle phenomena of nature would be to weaken the fears in which priestly power is founded.

Thus, by ecclesiastical selection, theology has been developed out of the phenomena of the inorganic world in their pressure on the life of man, and those parts of the organic which act inorganically,—those not subject to the human will. Wherever man is able to act freely, it is on principles opposed to these natural laws; wherever man is not overruled by nature, he does not curse the earth with thorns, or refuse to forgive, or punish the innocent for the guilty, and so on. At every point there is a contrast between the human moral order and this divine moral order. If nature expresses the true moral law, then all our morality is based on human depravity.

Now, let us see what parts of this system called Calvinism survive in the new Cosmic Theism. In this new system, the same laws appear—neces-

sarily, for they are in nature—in more scientific statement. A law of natural selection and natural reprobation goes on,—some forms fitted for honor, some for dishonor. Nature is the scene of a struggle for existence. Pain is the universal law. Every tint on a butterfly's wing was painted there by an agony. The bird gained its wings from the pursuing serpent. Untold myriads of cruel deaths preceded every progression; every progression entered a new chamber of tortures, the extremest being reached by man, that spiritual and conscious being whose verdict is now required on the moral character of the process.

The verdict of the human heart has long been given. The annihilation hoped for in the East, the heaven hoped for in the West, were alike condemnations of this world. The hope of happiness in another world was nature's evolutionary device to preserve the race from despair, or reversion to unconsciousness. But, that this immortality should not threaten to repeat the miseries of earth, the faith was developed that this particular planet had somehow fallen under control of the devil. That was a way of declaring earth a hell; and, lest men should try to escape from it to paradise by suicide, it had to be added that all suicides in the devil's dominion belonged to him. In some regions, a stake was driven through the suicide's body, I suppose to make sure that it would not rise when the trump sounded. By this means, man adapted himself to his burden. But Calvinism was an exception to this faith. It refused to concede that the agonies of earth were caused by the devil, or that they would be compensated in heaven. Its deity was quite equal to the infliction of all pain; and the devil was reduced to be his agent for torturing the majority of people in the next world,—inasmuch that they were glad to remain in this, bad as it was. Nature cared not which theory prevailed, so long as mankind remained to carry on the struggle for existence.

Prof. Fiske's Cosmic Theism resembles Calvinism in its removal of the Catholic chloroform, while his attempt at a scientific etherization seems to me a failure. While the law of evolution, as he expounds it, proves the agonies to be part of the constitution of nature, he will not allow us to ascribe them to an evil prince of this world. They come from the universal Source of phenomena, and are "His" modes of action. We may not even limit them to this earth. He insists on a uniformity of the universe,—a chemical and other identity of the planets,—which forbids the hope that these predatory laws of evolution may be local. When we turn to his essay on *The Destiny of Man*, the gloom deepens; for our Cosmic theologian will not allow us rest even in the grave from this eternal round of tortures. He says, "I believe in the immortality of the soul, not in the sense in which I accept the demonstrable truths of science, but as a supreme act of faith in the reasonableness of God's work." (p. 116.) But what this reasonableness of God's work is, he has told us: it is represented in "a scene of incessant and universal strife, of which it is not apparent on the surface that the outcome is the good or the happiness of anything that is sentient"; one in which we often "find the higher life wantonly sacrificed to the lower." (I. of G., p. 122.) If this be the reasonableness of God in one world, why not in all? If the worlds are under one law, their substance the same, why may not the harried wretch of this world look forward to birth in the slums of another, and the resurrection of all his diseases and infirmities? "He that is filthy, let him be filthy still." No miracle of transformation is allowed in this Cosmic Calvinism, not even for the elect. Ignorance finds no promise of being

changed to wisdom, or rags into shining raiment, or thorns into roses. From a world where goodness is often crucified, where the most spiritual are apt to suffer most; from laws impartial between serpent and dove,—good, bad, and indifferent, beguiled no longer by the sweet reasonableness of Jesus, are delivered up to the bitter reasonableness of the nature-god. To the promise of such immortality, we may well reply with poor Claudio:

"Ay, but to die, and go we know not where;
To lie in cold obstruction, and to rot;
This sensible warm motion to become
A kneaded clod; and the delighted spirit
To bathe in fiery floods, or to reside
In thrilling regions of thick-ribbed ice;
To be imprisoned in the viewless winds
And blown with restless violence round about
The pendent world; or to be worse than worst
Of those that lawless and incertain thoughts
Imagine howling!"

Shakespeare drew these weird similitudes from that same play of inorganic nature from which primitive man drew his demonology. That demonology faith raised into theology; and it has become the hard heritage of Cosmic Theism.

Prof. Fiske would be surprised at such criticisms as these. His theory is held in connection with his personal liberalism, his catholicity, his humanity. But, once given out, the new theory goes forth to be bound up with dogmas which will turn it to their own image. "Another shall gird thee, and carry thee whither thou wouldst not." A Persian poet, speaking of doctrines, reminds men that, while thorns are green the camel may browse upon them; but, when they are old, they tear his lip. It may be that this rehabilitated Calvinism, tender with its author's sympathies, may feed the hope of some pious hearts; but its larger and ultimate effect must be to strengthen the hard and oppressive dogmas which grew out of an earlier cosmic theism of the same kind.

So, at any rate, I believe; and therefore have I spoken. I have done so at cost of personal feeling. I do not believe that this new theology is true or beautiful or good. I believe that the theory of Zoroaster, Plato, and Jesus, in the past, revived for the modern world by Leibnitz, and largely favored by Mill and Von Hartmann,—the theory which sacrifices divine absoluteness to divine goodness,—is far truer to the facts. This demand for a concept of unity between organic and inorganic, good or bad, is a mere empirical relic of a transcendentalism half emerged from Unitarian theology. Von Hartmann thinks that God created the world under a pressure of will to act, and before his "omniscience" was developed. Now that his wisdom is complete, God is supremely unhappy about his creation, and is doing his best to deliver sentient beings from the results. To brains, like my own, fashioned in a certain theologic mould, it is a relief to turn from another line of development general and unconfined. But this idea of a Deity struggling with and in the universe is inconsistent with any with the evolutionary growth,—than any other,—that it is more rational. It is proved to be an ended

Omnipotence, men turned their hearts to Mary, to the saints, who, as they thought, were doing their best for them.

The very essence of the religious ideal is the desire to save. Man has developed his form, his civilization, by a steady war against the inorganic world. He personified it as the adversary, and was led by a vision of finally chaining him. Well, the adversary is largely chained, the storm and the lightning are partly harnessed, and many ferocities have been tamed. But, by this process, we have discovered that the adversary has no personality at all: all the rage against a devil was that of a silly child beating the log over which it stumbled. But such waste of energy is continued by the monotheism which still tithes man's means and his enthusiasm for the service of a phantom formed from the very phenomena man must control. The cosmic forces shall kneel to man, not man to them. It is a delusion to think that inorganic nature has a soul that wells up in man as consciousness. Our consciousness holds some response to every phase of organic life,—to the bird on its nest, the ant in its commonwealth, the earthworm, whose soft siege turned the primal rock to a soil where a flower might grow. These are our kindred. But the elemental universe is to our consciousness only as to the sculptor is the stone he will carve to his thought.

If the sculptor shall fall on his knees before the rude block: if he believe that, apart from his art, the marble will make for righteousness, will evolve an angel,—what adequate work will you get from that sculptor? I agree with Prof. Fiske that organic evolution culminates in man, and that future evolution will be the progressive perfection of his form and his society. But if man harbors the notion that some providence outside of himself is striving to humanize this world, that delusion will surely impede his progress. The stars in their courses do not fight against our Siseras; every inferior species is striving to make the world into its own image. If the world is ever made into the stature of a perfect man, it will be because a purely human selection is substituted for natural selection. This has long been going on. In many minds there is a love of nature, a religious reverence for nature, which is really founded in a nature of man's own creation. Man has exterminated the ferocities of his planet, domesticated its wild creatures, surrounded himself with a garden, and credits to nature the fruits and flowers he has made. He forgets that nature never made a rose or a peach or a melon, or the vegetables and cattle by which he is sustained, but only the wild stocks of these things, many of them injurious.

The only deity who can move the human heart is that spirit which steadily delivers humanity from the cruel laws of natural selection,—laws imposed by inorganic nature upon the development of life. The substitution of love for selfishness, of justice for might, of self-restraint for natural impulse,—these mark the constitution of a quasi-supernatural world. Its divine ideal is expressed not in any cosmic god, but in a god suffering with man, and dying to save him from the cosmic law.

A world whose faith lingers in the far time of natural selection, clinging to what promises most pay in time and eternity, while its social life is of human selection, made up of motives not mercenary, must be expected, for some time yet, to combine its cosmic and its human concepts in one god-
ad. It wants the Saviour, hanging on a tree, to save; but it wants, too, the powerful fairy who raise him from the tomb and give him a new life. The purely human god must abide his time until mankind learn that a real religion cannot rest on promise of heavenly any more than of

earthly estates. Its hell is the evils from which it is saving man, its heaven the perfect earth for which it works. Individual conscious survival after death can only be proved, as the "Spiritualists" claim. It has never been proved to mankind otherwise. Whether it be the resurrection of Christ or of Katy King, it is the same species of evidence. Beyond that, it is what Prof. Fiske calls his "supreme act of faith in the reasonableness of God's work"; and such faith can supplement a dualistic as well as a monistic theory of nature. Indeed, the Jews, who believed in one cosmic god, seem to have borrowed the doctrine of immortality from a people which believed in two opposed and equal principles, good and evil, sharing the universe between them. Here, Cosmic Theism has really nothing more to promise than even Materialism, which can equally believe that some molecular seed in the brain survives surrounding decay, and flowers in new life.

I cannot help feeling, however, that, as these naturalistic theories of immortality take the place of the supernaturalistic heavens, and man is brought to contemplate a mere continuance of his consciousness by necessary law, under conditions that he cannot modify, either by morality or religion as he begins to face the possibility that Goethe dreaded, of going downward instead of upward in the scale of organization,—this doctrine of immortality will less and less influence the religious sentiment. Without attempting to deal with this vast question in itself, at the close of my address I will only remind you of the wisdom of the Greeks, as expressed in the fable of Prometheus. When the human-hearted Titan brought men fire and the arts by which they might master and renovate the world, he took away from mankind belief in immortality, leaving only the hope, in order that they might not dwell in the future, but in the present; should concentrate themselves on making earth a heaven, instead of overshadowing its possibilities,—as the energies of young men are often overshadowed by the certainty of entering on fortune in the future. Christendom has been for ages feeding its religious enthusiasm on the psalm and prophetic poetry of Hebrews who did not believe in immortality, and whose spiritual elevation declined when they came to believe it.

The true Promethean gift to modern man is that brought by Darwin. If it has shaken the old faith in immortality, if it has revealed the cruelty of natural selection, it has taught us the secret by which that cruelty may be evolved out of the earth. It is good to have the giant's strength, and that Darwin gave us; but it is terrible to use it like the giant, and that is what Cosmic Theism leads to. Are we to sanctify nature as a god, and raise its predatory laws of evolution into a moral code? Nay, man has learned nature's art of war, in order to subdue nature, to evolve its red fang and claw out of existence; cultivate fang and claw into useful tooth and hand; summon science, wealth, art, to build the true supernatural world.

THE PRESIDENT.—Mr. Conway has taxed your intellects. The finance committee now wish to tax your purses, and will quietly perform that ceremony. Meantime, Mr. B. F. Underwood, whom I now present to you, will take up the speaking.

ADDRESS BY B. F. UNDERWOOD.

An Unclerical and Untheological View of Religion.

I am no theologian and represent no theological system or theory; but of religion I may properly speak, and what I shall offer upon this subject on this occasion will be from a wholly unclerical and untheological point of view.

When men say that they "do not believe in religion," they mean that they do not believe in

the truth of the doctrines nor in the wisdom and utility of the forms and ceremonies which make up the various religious systems. Religion, as a *fact* in the world, whatever be thought of it, does not possibly admit of doubt. When the question is propounded, "Has religion a scientific basis?" it is pertinent only if asked in regard to theories, rituals, and practices of a religious character. If they are not mentioned, they are implied, and probably not absent from the mind of the questioner. We do not ask whether a fact—the existence of a star or a stone, for instance—has a scientific basis. Science is classified knowledge,—knowledge of *many* facts grouped and arranged after their kind, so as to constitute a basis for induction, to afford data for rational conclusions, to reveal relations and principles which, viewed separately, these facts fail to disclose.

Religious beliefs and observances prevail all over the world, among civilized and uncivilized men. Time and labor are lavishly given to their support. In their defence, millions are ready to fight and to die. And thus it has been as far back as history and tradition reach. In one form or another, religion has persisted through all changes of human condition,—the migrations of races, the rise and decay of empires, and all those vast revolutions in the conceptions and habits of men which have formed a part of the process by which the present condition has been reached. It has, too, stirred to its depths every passion, giving intensity to the highest and lowest in human nature. Mr. Abbot has well said: "If there is one word above all others which articulates in a breath the supreme sublimity and the most melancholy abasement of human nature, which carries imagination up to the heights of a heroism so pure and lofty that common lungs gasp for coarser air, and then plunges her into dungeons of superstition so foul with blood and filth that the choke damp of the coal mine seems innocuous by comparison, it is assuredly the word 'religion.'" An element of human activity and a factor in the evolutionary process so prominent as religion cannot, save by very unphilosophical and superficial minds, be ignored or treated as of slight significance.

The science of religion is just as properly a science as the science of government. Each particular science is but a segment of the circle—a division of knowledge—made by ourselves for our convenience. All phenomena are related, and all the sciences are but portions of one science,—the science of the universe. Religious thought, emotion, and practice belong to the phenomena of human life, and must be included in the study of man. We must look to anthropology, and not to that pseudo-science called theology, for the solution of religious problems. Indeed, while theology has been loudly proclaiming its *a priori* speculations in regard to God, his nature, his purposes, and his plans, as absolute truths, so evident that they must not be questioned, so sacred that doubt of them implies moral depravity and excites divine wrath against the sacrilegious offender, anthropology has been exposing the weakness of the theological assumptions, the puerility of its threats, the primitiveness of its method of thought, and showing that its "absolute truths" are but speculative fancies, which, instead of having a scientific value, begin where all science and correct reasoning end. Theology is no more entitled to be called a science than is astrology.

Let us now consider what is religion. By many, it is looked upon, as it was viewed by Miss Nesbit in *Dred*, "in the light of a ticket which, being purchased and snugly laid away in a pocket-book, is to be produced at the celestial gate, and thus secure admission into heaven." Theodore Parker

thus refers to the popular religion: "A man is a Christian, if he goes to church, pays his pew-tax, bows to the parson, and is as good as other people." And Emerson says, "Fashionable religion visits a man diplomatically three or four times,—when he is born, when he is married, when he falls sick, and when he dies,—and for the rest never interferes with him." These definitions do not aim seriously to define religion, but what the writers would probably regard as perversions of it, or religion with its essential element left out.

Shelley defines religion as "man's perception of his relation to the principle of the universe." Coleridge says that it is the "union of the subjective and objective,"—the Me and the Not-me. Schelling says it is "the union of the finite and the infinite." Schleiermacher defines it as "immediate self-consciousness of the absolute dependence of all the finite upon the infinite."

In all religious systems, we find the recognition of Power to which man sustains a relation of dependence, and a mental attitude corresponding with the conceptions prevailing: a feeling of dependence, accompanied by fear, wonder, reverence, adoration, and all those emotions arising from reflection upon the mysterious ongoings of nature and our relations thereto. That which is common to all religions, that which runs like a vertebral column through them all, that which is most fundamental, that which admits of neither denial nor doubt, is the recognition of mysterious power external to man and a sense of dependence upon it. Whether the power is one or many, whether it is good or evil, whether it is intelligent or unintelligent,—these are questions involved in theories respecting the universe and our relations to it; but deeper, more fundamental than these questions and the basis of them is the inextinguishable consciousness of a relation of dependence to the power manifested in the phenomenal world. Whatever doctrines or ceremony, whatever uttered word, whatever unexpressed emotion, stands for this common element, is religion in its essential nature.

The feeling of our relation to the universe precedes all conceptions in regard to it. The conceptions are built up out of the feelings before they can give rise to the more complex emotions. More fundamental, therefore, than any religious theories or conceptions is that deep feeling of dependence, more like that of the infant's early sense of dependence upon its mother than even those higher, those more complex emotions which result from the contemplation of nature. In the process of mental evolution there has been continuity, the higher conditions having been evolved from lower ones. The complex religious nature of the enlightened man—if evolution be true—must have grown out of conditions in which none of its highest characteristics were present. And this fact gives rise to the difficulty of deciding as to the universal existence of religion among men. Sir John Lubbock says, "If the mere sensation of fear and the recognition that there are probably other beings more powerful than man are sufficient alone to constitute a religion, then we must, I think, admit that religion is general to the human race." But, if this definition is adopted, Mr. Lubbock says, "we cannot longer regard religion as peculiar to man"; for he sees as much religion in "the feeling of a dog or a horse toward its master" as in some ceremonies which have been described as worship by travellers. If the highest races of men have come up through stages in which the lowest on earth now are,—many of them in a state of arrested development, of fixedness,—who can doubt that our early ancestors were as destitute of all that is now commonly regarded as religion as are the Arafuras off the coast of New Guinea, or the tribe of Bechuanas,

described by Moffat and Livingstone as destitute of religious beliefs and ceremonies? The fact that religion, even the highest, is rooted in the depths, and not simply upon the surface of consciousness, explains its permanence and persistence through all the mutations of human history, and the inability to restrain and direct it by moral considerations until ages of intellectual and ethical culture have strengthened the later and higher parts of our nature. Reflective thought through countless generations, exciting a multitude of emotions and adding vastly to the wealth of man's emotional nature, has added to the complexity of the religious sentiment, infused into it elements derived from intellectual and moral education, so that in the enlightened mind it is not merely recognition of mystery, a sense of dependence, a feeling of relationship, but a consciousness in which, with the deep primary religious feelings, is intimately associated and interwoven much that seems to bear as little resemblance to its early beginnings as does the tree full grown, its branches bending with fruit, bear to the tiny seed from which it grew.

The aversion, so common among some of the older school of free thinkers, to the expression "man's religious nature,"—an aversion that had its origin in opposition to the old theological conception of religion as a supernatural revelation or endowment,—disappears when the subject is viewed in the light of modern science. If man did not possess a religious nature, he would not have religious beliefs and feelings, he would not have religious exercises and practices, just as, if man had not a combative and destructive nature, there would be no war. Man, like the animals below him, acts according to his nature, and whether wisely or not depends upon whether his conduct accords with his *higher* or his *lower* nature.

Religion as a belief and the practice of devotional rites and ceremonies has been slowly *acquired*, with the development of reason and imagination, by man's contemplation of the power ever manifested to his senses, and which, invested with human qualities the greatest known or conceivable, has aroused fear, wonder, awe, admiration, gratitude, and reverence. And the results of these thoughts and emotions repeated through countless generations have become established in the race as religious tendencies. We are now familiar with the definition, "Instinct is inherited habit." It is not in fact the *habit* that is inherited, but an aptitude, a predisposition to do as the parent did. There are islands having species of animals and birds which, tame when first discovered by man, have acquired an instinctive fear of him. This is shown by the young, they having inherited the results on the brain and nervous system and the corresponding mentality, through successive generations, of the fear excited by man's power over them and his cruelty to them. They have inherited no knowledge of man, but an instinct which, when he is seen, excites dread and impels them to flee. Thus, that which is learned, whether from personal teachers or by contact with nature, repeated through centuries, may produce states of mind which, by heredity, appear in the descendants in the form of predispositions. We all come into the world with organisms whose actions and reactions are largely determined by the form and quality of structure, including all those results of generations of experience which appear in us as aptitudes and intuitions.

Systems of religion are maintained, it is true, largely by organized effort, including a vast amount of scheming and craft; but, everywhere, they have the advantages of the accumulated results of ages of religious belief and devotion, organized in the

race, making it easy for men to feel and think in religious matters, as in others, as their ancestors thought and felt in olden time.

Here we have plainly a hint of the difficulty in opposing error and superstition not always sufficiently considered. He who assails the superstitions of his day encounters not only the living, but, in their stubborn opposition,—stubborn because of this fact,—the combined ignorance and bigotry, intolerance and perversity, of millions on millions who are dead, whose bodies are dust, but the effects of whose thoughts and deeds persist, with slowly diminishing influence, as the later and more enlightened ages neutralize by their teachings and influences the inheritances from earlier, from less civilized periods. Often, acquired beliefs and inherited tendencies are in conflict; and the results are inconsistency of conduct, discontent, instability, and various intellectual and moral anomalies. A good illustration of this is seen in the life of Carlyle, as recorded by Froude. A prominent religious paper, with the usual superficiality of such journals, quotes from Carlyle, "My life here these three years has been sere and stern, almost frightful," and ascribes the absence of joy in his whole life, by implication, if not directly, to his rejection of the religion of Jesus Christ. It fails to see that, among the causes that made this great life "sere and stern, almost frightful," most powerful was that Christian theology, the sad effect of which on Scotch character is described by Buckle, and the influence of which (chiefly by inheritance, but partly by education) affected profoundly the entire life of Carlyle. He outgrew belief in it as a system, but he could not outgrow the effects of generations of ancestral belief and the mood induced thereby. It is doubtless true that his life would have been more harmonious and happy, could he have remained in that belief. Much that was anomalous, incongruous, and discordant in his disposition was due to an intellectual development involving the extinction of this faith, and the persistence of traits and tendencies which through many generations had been largely formed and fostered by it, and which in his strong nature, severed from their source of renewal and in conflict with his positive convictions, made him continually at war with himself as well as in antagonism to others. We have all outgrown, intellectually, beliefs the inherited results of which still powerfully affect us, especially when our emotional nature is strongly excited. Asked whether she believed in ghosts, Madame de Staël replied, "No; but I am afraid of them." And so it is with all men, who, having outgrown superstitions, so far as their intellect is concerned, are yet more or less subject to them in times of illness, depression, or danger, when reason is impaired and the old tendencies assert themselves, much to the mortification of their possessor, when the unimpassioned light of the understanding is no longer dimmed by the revived ignorance and fear of the past. Many who reject the popular theology are so much under its influence and so little appreciative of the thought and methods of men of science that declamation, dogmatism, and indiscriminate denunciation with them are more popular than the careful reasonings and judicial fairness of the great men whose names they have learned to speak. Saturated with the influence of theology, these minds do not become liberal in any true sense of the word by dissenting merely from one and assenting to another class of views.

In this period of transition, many, outgrowing one form of superstition or mysticism, are naturally attracted to others of essentially the same nature, presented to them under other names. There are multitudes, having renounced the ortho-

dox theology wholly or in part, who are now as naturally attracted to other professed solutions of the great problems of being as young ducks taken from their mother and their native pond are attracted to any other body of water that is within sight.

One has but to announce a new system, or claim to have discovered an esoteric meaning in some old one, or to make claim to extraordinary powers of looking into the future, or of getting into exceptionally intimate relation with the Infinite, in order to become an object of special interest to a large class in this "modern Athens." It is necessary, however, that the system taught or the claim made shall admit of neither elucidation nor proof, that it shall rest alone upon the authority of its expounder (?), science, philosophy, and intellectual effort being thus dispensed with, and the arcana of nature being mastered by a "short and easy method." The mind, thus kindly relieved of the disagreeable drudgery of collecting facts and of the strain of reflective thought, is free to expend its energies in other directions. Marvellousness usurping control, finds satisfaction in whatever is at once incapable of proof and incredible to reason. Almost any obscure expression, if it only have reference to the Infinite and is flavored with a little weak sentiment, may be accepted as a proposition expressing the very essence of true philosophy, different from other philosophy, it is believed, if, indeed, there is the faintest conception of any philosophy at all, because of its "esoteric" character,—and, too, by many who have largely outgrown the old theological creeds as formal statements.

The religious emotions, which through countless generations have been fed and stimulated by religious faith, if deprived, through change of belief, of the forms to which they have been accustomed, are sure to find expression through other forms; and the less reflective and enlightened the individual, and the less his change has been a growth, the more his need of a form of faith, by whatever name it is called, essentially like that he has cast aside. Fortunate it may be regarded, if these transitions, when due less to the process that produces its results from within than to the direct agency of external forces, are accompanied by no irregular and abnormal manifestation of religious feeling, and lead not to the adoption, under alluring names, of ideas and methods which imply reaction rather than progress.

It is sufficient for my purpose here to indicate that the so-called religious instinct, from the existence of which so many unwarranted conclusions have been drawn, is not a primordial endowment, but an acquirement, and, instead of implying what is so extravagantly claimed by theologians, it implies simply the mind with its power of feeling and thought, capable of change and growth, and the transmission of the results of experiences in the form of predispositions, together with the external world with all its varied and mysterious phenomena, impressing us from birth to death and exciting to contemplative thought.

Religion with human development and culture becomes more or less suffused with the spirit and dominated by the principles of morality. Yet the religious nature may be strong and the moral nature weak, or the moral nature strong and an almost entire absence of religious emotion, as well as what is ordinarily regarded as religious belief. A knowledge of this fact led Bentham to say, "There is no pestilence in a state like zeal for religion independent of morality." Elsewhere, he broadly defines religion to be "the whole duty of man, comprehending in it justice, charity, and sobriety." Rev. James Martineau speaks of it as

"the culminating meridian of morals"; and Matthew Arnold defines it in the well-known words, "morality touched by emotion." But these are definitions of religion as it is after it has become subordinated to the moral nature. And the same is true of the definition that "religion is the recognition of an ideal," and "religion is the effort of man to perfect himself." Socrates could say that the true philosophy of religion is an infinite search or approximation; but this is hardly true of the savage, in whom fear and a sense of dependence and desire to escape danger, like any wild beast, are the predominant religious characteristics.

Religious belief and emotion may both be strong, while morality is in a rudimentary, degenerate, or distorted condition. The Thugs, a religious sect of murderers, are very devout, do what is enjoined by their priests, and observe strictly the ceremonial rules of their religion. No Thug ever offers an insult to the woman he is about to murder.

The most corrupt periods of history have been periods in which the religious feelings were the most active, and religious observances the most intimately associated with public and private life. Writing of the Byzantine empire, Mr. Lecky says: "There has been no other enduring civilization so absolutely destitute of all the forms and elements of greatness, and none to which the epithet *mean* may be so emphatically applied. The Byzantine empire was pre-eminently the age of treachery. Its vices were the vices of men who ceased to be brave without learning to be virtuous. . . . Constantinople sank beneath the Crescent, its inhabitants wrangling about theological differences to the very moment of their fall." Speaking of the period that just preceded the advent of Christianity, Mommsen, in his History of Rome, says that "the more lax any woman was, the more piously she worshipped Isis." On the other hand (it is the Christian theist, Max Müller, who says this), "the highest morality that was ever taught before the rise of Christianity, was taught by men with whom the gods had become mere phantoms, and who had no altars, not even an altar to the Unknown God."

Often, the most religious persons among us to-day—those who revel in the excitement of religious revivals—are habitually immoral, and even criminal, as in the cases of Guiteau and the James brothers. "Unusual piety is, in the popular eye," Lange observes, "either genuine saintship or a wicked cloak of all that is vile. For the psychological subtlety of the mixture of genuine religious emotions with coarse selfishness and vicious habits, the ordinary mind has no appreciation."

"If a man has been in Mecca as a pilgrim," says an Arabian proverb, "do not live in the same house with him; if he has been there twice, do not live in the same street with him; if he has been there three times, leave the country where he lives."

It is said that, during the revolt of Texas against Mexico, Col. David Crockett made a tour through the Southern States, appealing to the passions and prejudices of his audiences, to collect money and to enlist soldiers. In his speeches, he dwelt particularly upon the strong points that the Mexicans prohibited slavery and Protestantism, and once capped a high-piled climax by exclaiming: "The cursed yellow-skinned Mexicans want us to abandon our glorious religion, and go to work ourselves. God everlastingly damn them!"

How little real humanity and morality there is in much of that orthodox faith now happily declining, supposed to be most powerful in promoting charity and love, is illustrated by the following quotation from the *Widow Bedott Papers*, by Miss Miriam Berry:—

"Rev. Mr. Price: How does Mr. Shaw feel?"

"Mrs. Shaw: I regret to say that he does not feel his lost and ruined condition as sensibly as I could wish. Oh! oh! If that man *only* had faith, had saving faith, and if Serapheen [her daughter] was *only* a Christian, my happiness would be complete.

"Mr. Price: Y-e-s. I trust that you wrestle for them, without ceasing, at the Throne of Grace.

"Mrs. Shaw: I do, Mr. Price. I do so.

"Mr. Price: And do you feel that, in case the Lord should see fit to disregard your petitions, and consign them to everlasting misery, you could acquiesce in his decrees, and rejoice in their destruction?"

"Mrs. Shaw: I feel that I could without a murmur.

"Mr. Price: Y-e-s. I am very happy, Sister Shaw, to find you in such a desirable state of mind."

It is evident that the Free Religious Association has done well in using the expression "ethics and religion" in its constitution as amended; for religion does not *necessarily* imply ethics.

Schleiermacher said: "Religion belongs neither to the domain of science nor morals, is essentially neither knowledge nor conduct, but emotion only, specific in its nature and inherent in the immediate consciousness of each individual man. Hence comes the vast variety of religious conception and of religious system observed in the world,—variety, not only thus to be accounted for, but apprehended as a necessity of human nature."

From the statement that religion belongs not to the domain of science, I must dissent, since it is included in human thought and feeling, and can be studied by observing its varied expressions in the individual and in the race. But the following comment on the passage by Dr. Willis, Spinoza's biographer, is to the point:—

This view of Schleiermacher was an immense advance on all previously entertained ideas of the nature and true worth of the religious idea, and has not yet been generally appreciated in all its significance. When we recognize it, however, we readily understand how religious emotion may be associated with crime and immorality as well as with the highest moral excellence; how a Jacques Clement and Balthasar Gerard may confess themselves to the priest, and take the sacrament of the body and blood of the Saviour by way of strengthening them in their purpose to commit the crimes that have made their memories infamous; how punctilious attention to Bible reading and devout observance among criminals of a less terrible stamp do not necessarily imply hypocrisy and cunning, as so commonly assumed, when these unhappily constituted beings are found again engaged in their objectionable courses. The piety—the religion—displayed is a perfectly truthful manifestation of the emotional element in the nature of man which seeks and finds satisfaction in acts implying intercourse with Deity, but neither seeks nor finds satisfaction in acts of honesty and virtuous life in the world. We have here an explanation of how it happens that our penitentiaries are filled with the worst sort of criminals, whose lives, prior to the detection of their crimes, were characterized by eminent piety and a strict regard for religious observances. That religion, *per se*, has no restraining influence upon the conduct of men is a truth confirmed and attested by our daily and hourly experience, and needs no elaborate argument to substantiate it.

When this statement is fully comprehended, it will be seen that what is needed is not a revival of religion, but a moral movement that shall elevate religion and make all intellectual acquisition contribute to the advancement of the best interests of the individual and of society.

One of the gentlemen who spoke from this desk, last year, on the question, "Is a Scientific Basis for Religion Possible?" said: "An institution has a sci-

entific basis when the thought, the emotions, the rites or customs, and the actions involved in it are found to accord with the scientifically ascertained nature of things. And any institution, being a fact, has a right to exist until by the use of the scientific method it is proved not to be in accord with the nature of things."* What is meant by the "nature of things" is evidently the constitution or aggregate powers of the universe. We thus speak of the nature of the brute, human nature, etc. Who shall say that anything in this world does not accord with the nature of things? When it was said to Anaxagoras, "The Athenians have condemned you to die," he replied, "And *nature*, then." Whatever exists is a part of Nature; and whatever occurs is in accordance with her laws, which we know only as her uniform modes of action. Nature gives poisonous fangs to the cobra as well as beauty and power of flight to the humming-bird, brutality to the savage as well as intelligence and refinement to the civilized man. She destroys life and property by tornadoes and floods, sparing neither age nor innocence. Who shall say that these destructive forces are not in accord with the nature of things? The fact is, Nature is often the direst enemy of man, who uses every effort to avoid the consequences of her relentless forces. But man is himself a part of Nature. With his intelligence, he learns to guard against dangers which threaten him on every hand. He improves the natural world around him, in which no moral order is discoverable, and adapts it to his needs. Men do not now deem it a virtue to submit to the external world as it is; but they recognize it within their power to make it conform, to some extent, to their requirements; in other words, to make those parts of Nature in which is seen no moral order subserve the purposes of that higher development of Nature attained in the reason and conscience of man.

All institutions accord with the nature of things; but the question should be: Is that for which an institution stands true or false? Is it founded on enlightened reason or in mere superstition? Is its specific purpose praiseworthy? Does it aid or hamper human progress? The mere fact that it exists is evidence only that it has been a necessity under the conditions that have prevailed; but it is no evidence that it is now needed, that it is still useful, that we should support it. It is our privilege to modify the institutions of our ancestors, and adjust them to the *present* conditions and wants. Ourselves a part of nature and its highest products, it is our privilege to correct the errors of nature's children of the past as well as to improve those parts of inanimate nature whose imperfections are forced upon our attention daily, making the unmoral world without correspond as far as possible with the ideal moral world within.

The recognition of mysterious Power, upon which man depends and of which he is but one of many products, being the real essence of religion, Humanity never can be substituted for that which always has been the object of the religious sentiment. The recognition of this Power must remain when all existing forms under which it is contemplated shall be regarded as we now regard the mythologies of Greece and Rome. With advancing intelligence and culture, the object of the religious consciousness is divested of its anthropomorphism, and the consciousness itself becomes less and less distinct. There are those who object to this view (from which I see no logical escape, unless religion is exempt from the process of evolution), because they say "the Unknowable" can never become an object of worship. Such persons overlook the fact that, as the human

qualities with which the eternal mystery has been invested cease to be regarded as divine attributes, worship ceases to consist in exercises to please or propitiate God, leaving, indeed, only that which is not commonly regarded as worship, nor by the masses as religion even, but which is in fact the essence of religion and all that is permanent in worship,—the recognition of a mysterious Power to which we are related, with the emotions to which such contemplations give rise. That this Power is a personality, that it is a being possessing qualities like our own mental faculties, or that it is *supernatural*, is merely a theological belief more discredited and doubted now among great thinkers perhaps than ever before in the history of human thought.

As, in the evolutionary process, religion is divested of its concreteness, its object is not changed, but the ethical element is necessarily brought into great prominence in conception and life; for with this growth, involving the religious change indicated, there must be intellectual and moral growth, however imperfectly realized in individuals whose transitions are necessarily marked by anomalies in belief and conduct. And the well-being of man is seen to demand, not expenditure of time, energy, and money in the expression of feelings toward God, but in studying man's manifold relations and improving his condition here and now; and the excess of feeling and enthusiasm which before found expression in prayer and praise, in religious rituals, now directed by enlightened thought and high moral purpose, seeks satisfaction in working for Humanity.

THE PRESIDENT.—We have with us a friend recently from Germany, his native land, who will tell us how the American problem of free religion looks from his German standpoint. I introduce to you Dr. Paul Carus.

ADDRESS OF DR. PAUL CARUS.

Germany is the country of free thought: it is the home of bold thinkers, the foremost philosophers, and patiently working scientists. Nevertheless, free thought is shackled in Germany perhaps more severely than anywhere else; for there is no freedom in the country. The people are considered by the authorities not so much as citizens, but subjects, who are not allowed to have an opinion of their own; and, if they have any, they should not utter it unless they are duly asked. Certainly, every one is free to speak his mind, but he has to bear the consequences; and woe to him who, for his existence, has to depend on the government! If he is a free thinker, he will rarely, if ever, find advancement in his career, unless he be a hypocrite and conceal his convictions. The simple fact of being a free thinker suffices for being asked to resign an official position. No wonder that to us Germans the highest ideal is liberty. And it is this ideal which has stimulated many to leave their country for America. The United States of America are praised all over the world as the land of liberty; and, truly, their institutions are such that there is no freer country upon earth. Accordingly, we are wont to consider this republic as the grandest hope of humanity. But, when I came hither, I was disappointed in one respect. There is freedom here, but very little free thought. In this great country there are comparatively few who are free and confess bravely their convictions. I soon observed that here, also, as in Germany, is a powerful tyranny exercised upon the minds of the people. But, while the oppressive influence in Germany is from above,—since it comes from the thrones and those in power,—the pressure experienced in America proceeds from the masses, who are not sufficiently educated to think freely them-

* Rev. M. J. Savage.

selves or be tolerant with those who are free thinkers. When I meet in Germany a gentleman of average education, I take it for granted that he is a free thinker, unless I know it to be otherwise. Among ten there will be found scarcely one who would prove an exception. It appears as if it were the reverse in America. Unless you know it to be otherwise, you had better make it a rule to suppose every well-educated American as addicted to some of the many creeds of this country.

Accordingly, the work to be done in Germany is to gain more freedom, by means of a greater political independence of the citizens, as well as the employés in the service of the government. For America, however, the next task is to sow the seeds of a more thorough education; and in due time there will be a richer harvest of free thought. There is no true free thought, unless it grows from earnest study and honest intellectual labor. Any other free thought is false: it is generally boastful and assuming, instead of tolerant and judicial, and its devotees often are more zealous and boisterous than even dogmatic believers. True free thought is unswerving, and, at the same time, charitable; nor is it dangerous to the community as is the license which preaches the usage of poison and dynamite.

I have come to America in the hope of being allowed with you to aspire after and to work for this noblest aim. The harvest is great and the laborers are few; but patient perseverance will overcome the difficulties. Let us be faithful, each one in his place, and we will realize more and more the ideal of true free thought.

Such free thought is not, as some people suppose, the death of religion, but develops the higher form of religion,—that of humanity. Religion, in the usual sense, means some creed and performance of ceremonies; the first of which is said to be the indispensable basis of morals, the latter is supposed to be works pleasing God. The religion of free thought does not know of any dogma: it is simply the warm heart throbbing for all ideals of human kind,—the devotion to truth, the enthusiasm for beauty, and, above all, the action of a good deed. Schiller, with regard to religion, says in a distich:—

"Which religion I have? I've none of all that you mention.

Well, then, and what is the cause? True Religion."

THE PRESIDENT.—There is good authority for saying that the first shall be last. I have reserved therefore the representative of the oldest religion in this hall this morning for the last address. Our Hindu friend who is here on the platform is not, as you may have conjectured, a member of the Brahmo-Somaj, or of Reformed Hinduism, but he is an adherent of the ancient Brahmanism. Nevertheless is he welcome among us. I introduce to you Mr. Joshee, of India.

ADDRESS OF GOPAL VENAYAK JOSHEE.

What is Lacking in Christianity?

I stand before an assembly of eminent writers, orators, philosophers, ministers, and scientists. Most of you have turned the Holy Bible upside down many a time in your life. Many have criticised every passage, nay, even every word of that sacred book. You therefore know full well what is lacking in Christianity. But it falls to my lot this morning to repeat what you have commented on, said, or heard. My countrymen, like Protap Chunder Mozoomdar, whom you have seen and heard in this very city of letters, Keshub Chunder Sen, and Rajah Rammohun Roy, have extolled to the sky the beautiful teachings of Jesus. What, then, will I say, *pro* and *con*, for and against, Christianity? Yet, my dear friends, I differ from its admirers

and its censurers. I have my best reasons for doing so. I should not judge of a religion from what it teaches, but what kind of influence it has on society. I therefore make bold to say that Christianity, as it is preached from the pulpit and practised by its followers of all shades and shapes, from the bigotted Catholic to the broad Protestant, is destitute of every noble attribute. I do not wish to touch on the Old Testament or the New one. I do not wish to say for or against Jesus of Nazareth, as I have no means of judging him rightly, one way or the other. But if he preached and practised as is recorded of him then I have no more respect for him than I have for this august body before whom I have the privilege of standing to-day. As I honor you for giving me this indulgence, so I honor him for inspiring any human Christian soul who endeavored to convert me to his faith.

Christianity lacks justice. As it was in the beginning, so it is in the middle age, and so it will be in the end, unless the current of force is changed. Man is born a sinner, and dies as such. Christianity, therefore, punishes us, whether or not we commit wrong intentionally. Look at the practical bearing this doctrine of original sin has upon mankind. The Christians condemn nations, and then devise plans of salvation. The conception of original sin is as erroneous as the plan of salvation; but look at the havoc, persecution, and ill-treatment of human beings carried on by the so-called Christian, in every land and soil! Believe as they do, or we are immediately damned. This is not done by one sect, but by all, including the broad Unitarian.

Christianity lacks righteousness. There is no character in the Bible, even that of God, which is natural and up to the mark. There is no character that I know of in Christendom which has not forced itself upon somebody. That character is righteous which has yielded itself to the claims of others. One man is seated on a spot of ground. Another comes there, and claims that spot of ground. The first quits it because it is claimed by another, without entering into the legality of the claim. He says: "Let him take it, as he wants it. I will go and stand elsewhere." But look at the Christian and non-Christian of the nineteenth century. They not only retain their own, but intrude upon their neighbors. Jesus claimed that he was God incarnate; so you writers, orators, philosophers, and ministers proclaim that you are the monarch of all you survey: there is none to dispute your rights. The natives of America have been slaughtered and driven away from place to place, and the intruders build palaces upon the stolen lands. Is this righteousness? Some will say that they have not done anything of the kind, but their forefathers did. But the man who steals and the man who has in his possession the stolen property are equally guilty: so that, if they did not slaughter the Indians, and rob them of their property, they still have the stolen things in their possession. None of the Christians who breathe on this land are righteous.

Christianity lacks humanity. I do not know if there is any one in this assembly who is humane, and who thinks that it is sinful to hurt others. It would not be righteous, but it may be justifiable, to kill those who kill us. I may, for argument's sake, excuse manslaughter, because of his being an obnoxious animal; but what harm do unto us the cattle and the innocent sheep and goats, so that they may be slaughtered in all civilized countries? Fashionable ladies and gentlemen give endowments, bequeath the property, for their pet dogs and cats, but never think for a moment how those big skeletons come on their tables.

Christian men and women ask for blessings on their bloody tables. Here, the innocent Chinamen and the Indian are butchered wholesale by the lawless mob; there, the devout men and women hurriedly go to churches, the judges and the lawyers go to administer justice, the President and the Senators talk lightly on the murderous telegraph gossips, without manifesting the least sympathy for the slaughter. The ministers are deeply engaged in vivifying the enormity of sin committed by unbelievers, and admitting to confession and Lord's supper those who have just come from slaughter-houses of both man and animal. The Christians of all casts and creeds, both literate and political, though themselves intruders in this land, feel no repugnance in advocating that foreigners, especially Chinamen, shall not come to this shore, and, if they come, shall be disposed of in a Christian-like manner. If foreigners should not come to this country because of its being forcibly and treacherously taken from the Indians, why should the American go to other countries? But I forget. What is good for the goose is not so for the gander. The Christian ministers paid no attention to the massacre of foreigners; but when they heard that the Chinamen would, in all probability, practise the same thing on their brother co-workers in China, by way of retaliation, they immediately rushed into the press, and appealed to the good sense of the American in general. What does this show, my dear friends? It is nothing short of inhumanity. I therefore say, Christianity lacks humanity.

It also lacks honesty of purpose. None need be surprised at this assertion. It is a fact that Christianity never proselyted on its own merit. Moses went behind the mountains, to receive messages from God. Jesus worked miracles that people might believe in him as a Messiah. St. Paul disbelieved Jesus while on earth; but, when he was crucified, St. Paul readily believed him to be the Son of God. The subsequent conversions were made by means of threats, force, persecution, and bribery. I do not really understand why people become "Christian"; but I know that, in all civil and criminal courts, we find men who bear personal testimony to a fact. Twenty witnesses on one side swear that they saw Mr. Smith, on the 27th of May, in New York; and twenty witnesses on the other side declare on oath that he was in San Francisco on the same date. Remember that it takes seven days for a person to come to New York from San Francisco. This is one way of conversion. Another way is that a weak, nervous, and credulous person is arrested by twenty robust apostles of Christ in the act of being involved in some worldly troubles. "Come to Jesus: you have sinned against God, and this calamity has therefore befallen you." That man, on hearing this message, falls into their clutches. This is the way Christianity is being proselyted all over the world. These ministers never attempt to go to their neighbors who do not believe in Christ, but they have the courage and means to haunt foreign countries. The question arises, Why do they leave alone their own people, and go to convert other nations? It is not for conversion that they go; but they go to educate them in luxuries and tastes for drink, that the large breweries and manufactories may be maintained at the cost of other nations. My countrymen certainly embrace Christianity, because they think that, by doing so, they will have a nice time and an easy life, like that of the American missionaries, who are supported by their people for sitting idle in easy chairs for six days, and preaching one day in the week in an unintelligible manner. But my people do not understand the Ameri-

can policy. They therefore come to grief, like the dog who, on seeing his own reflection in water, dropped his bit, in order to take that of another, and lost both. My dear friends, this is nothing but dishonesty. I therefore say that Christianity has no honesty of purpose.

Besides, the principle of charity is conspicuous by its absence throughout the length and breadth of Christendom. The Christians have no fellow-feelings; nor do they respect the prejudices and superstitions of other nations, in the same way as they expect others to respect theirs. "You must not speak against our religion and our national institutions; but we will go to your country, and say all manner of things against you. If you prevent us from doing so, we will send for man-of-war, and bombard your buildings." It is the same thing from a statesman to a loafer. "Put on our costume, eat as we do, or else you are no good." Ignorance is excusable, but deliberate connivance is an unpardonable sin. A prominent clergyman, who has visited my country three times, still does not know how we eat and drink. I was at table with him. All the animal dishes were offered to me, one by one, though I told him that I was not a carnivorous animal. When he saw that I could not accept any, he indignantly burst into exclamation: "What will you eat? You must starve now." My dear friends, this kind of indifference is not manifest in one house, but almost all. I therefore say that Christianity lacks charity.

Notwithstanding such glaring defects and absence of noble attributes, Dr. James Clarke, one of the prominent Unitarian ministers, has, in his *Ten Religions of the World*, asserted that Christianity is superior to all other religions, because of its universal application. One of the reasons he gave in support of this statement is that, wherever Christianity prevailed, there progress, civilization, and illumination of darkness kept pace with it. I also admit this fact; but let us not forget that that is the most disgusting and filthy to look at which is the best fertilizer. Are we ready to adorn our parlor tables with filth?

Now, my dear friends, it is easy to inflict wounds, but hard to heal them. I should therefore like to tell you how the Christians should behave so as to be universally respected.

Let them be just in their conception of God. He is not a respecter of persons. No one can sin against or please God. He does not punish or reward. Our sins are social, and between man and man. Let the Christian, therefore, inculcate this fundamental principle of truth, and behave justly toward all. The idea of original sin is demoralizing, and tells very badly on society. The Hindus or the Brahmans of India have never debarred people from entering heaven because of their different beliefs. When they said that the Brahmans have sprung from Brahma's head or mouth, and the Sudras from his feet, they simply signified their respective positions in the order of things. The work assigned to the head is entirely different from that assigned to feet or hands; and yet all these parts are equally important and cherishing to the central soul, which, perhaps, suffers more from the infliction of pain on the head than on any other limbs, but enjoys more pleasure from other parts of the body than from his head, when healthy. Let the Christian, therefore, take the Brahmans for their guides, and give up Moses and Abraham and Jesus; for this reason, that the former elucidated truth, and the latter imposed upon the credulity of their followers.

The Christian should be righteous, like the Buddhist. No man can be righteous when he has rights to assert. In the house of God, all things

belong to him. He permits us to use them, that we may live on; but what right has one man over another to accumulate things, and then call them his own? If he does so, he is not righteous. Higher the man, lesser his greed after earth; but the Christian knocks down everybody, and runs away with their property.

Christians should be humane. Let them obey the commandment of the Bible, "Kill not." It literally means, "Take no life." Eat all that is dead and fallen. The Buddhists do not even rob cows of their milk, which God has created for their calves, and not for man. The Buddhists starved themselves in order to feed their guests. They were humane. They suffered for others, but the Christians of the present day cause others to suffer for themselves.

Let Christians be honest in their dealings and confession. They say, "We are all one family, brothers and sisters, come from one God." But I do not remember having been treated as such in Christendom. I do not think I would have been allowed to speak here, if it had not been for introduction. Why do we need that when we belong to one family? But there is a world-wide difference between confession and practice in this country. In other countries, we tell you at the threshold that we are not universalists. We receive those who belong to us without any attempts at further acquisition. We are, therefore, honest and honorable. Let the Christians be such; let them cease to preach "Love thy neighbor as thyself," and then cut his throat, or throw him out of the window. To a stranger, your houses are closed, your churches are closed, your institutions are barred: no honesty of purpose in Christendom.

Charity, the Christians have never dreamed of it! Knock down a man; and, when he is half-dead, pour down his throat, with contempt, something that he cannot swallow. Ask a man a thousand questions; and, if he does not say a word in defence of your religion and country, sneer at him, or coerce him by bribery to flatter you. In my country, the poor are fed with respect, as if they were our equals. We love a man who praises his country and religion. Let the Christian be, therefore, the follower of the Brahmans of India in charity.

I have detained you long. Though Christianity does not possess any noble attribute, yet this country is most prosperous and wealthy. As I said before, Christianity is the best fertilizer, but a most disgusting thing to look at. I thank you, dear friends, for the kindness with which you have heard me.

THE PRESIDENT.—If there are any Christians of the Evangelical type in this hall, perhaps they now begin to understand how a pagan may feel when he hears his religion characterized by an Orthodox Christian. Mr. Joshee has turned the tables. This is the way Christendom looks to his unsophisticated eyes. It will do us no harm to reflect on the picture, and there are lessons which we may well take to heart in his drawing of it, though it does not flatter Christian pride. The Convention is now adjourned till the afternoon session.

I DON'T know that there is anything more noticeable than what we may call *conventional reputations*. There is a tacit understanding in every community of men of letters that they will not disturb the popular fallacy respecting this or that electro-gilded celebrity.—O. W. Holmes.

THE common problem, yours, mine, every one's, Is not to fancy what were fair in life, Provided it could be, but finding first What may be, then find out how to make it fair Up to our means.

—Unknown.

THE FREE RELIGIOUS ASSOCIATION

was organized in 1867. Though having its headquarters in Boston, it is a national organization, and has members and officers in various States of the Union. It has the following

CONSTITUTION.

I. This organization shall be called the Free Religious Association.

II. The objects of this Association are to encourage the scientific study of religion and ethics, to advocate freedom in religion, to increase fellowship in spirit, and to emphasize the supremacy of practical morality in all the relations of life. All persons sympathizing with these aims are cordially invited to membership.

III. Membership in this Association shall leave each individual responsible for his own opinions alone, and affect in no degree his relations to other associations; and nothing in the name or Constitution of the Association shall ever be construed as limiting membership by any test of speculative opinion or belief,—or as defining the position of the Association, collectively considered, with reference to any such opinion or belief,—or as interfering, in any other way, with that absolute freedom of thought and expression which is the natural right of every rational being. Any person desiring to cooperate with the Association shall be considered a member, with full right to speak in its meetings; but an annual contribution of one dollar shall be necessary to give a title to vote,—provided, also, that those thus entitled may at any time confer the privilege of voting upon the whole assembly, on questions not pertaining to the management of business.

IV. The officers of the Association shall be a President, twelve Vice-Presidents, a Secretary, an Assistant Secretary, a Treasurer, and twelve Directors. They shall be chosen by ballot at the annual meeting of the Association; and the President, Vice-Presidents, Secretaries, and Treasurer shall hold their offices for one year, or until their successors be chosen. The Directors shall be chosen for four years, and, at the expiration of that term, shall not be eligible for reelection until after two years. One fourth of their number shall be chosen annually; but, at the annual meeting of 1882, the full number of twelve shall be chosen in sections of three respectively for one, two, three, and four years. The President, Secretaries, Treasurer, and Directors shall together constitute an Executive Committee, intrusted with all the business and interests of the Association in the interim of its meetings. They shall have power to fill any vacancies that may occur in their number, or in the list of Vice-Presidents, between any two annual meetings. Six members of the Executive Committee shall constitute a quorum.

V. The Annual Meeting of the Association shall be held in the city of Boston, on Thursday of what is known as "Anniversary Week," at such place and with such sessions as the Executive Committee may appoint, of which at least one month's previous notice shall be publicly given. Other meetings and conventions may be called by the Committee, according to their judgment, at such times and places as may seem to them desirable.

VI. These Articles may be amended at any Annual Meeting of the Association, by a majority vote of the members present, provided public notice of the amendment has been given with the call for the meeting.

Officers elected for the year 1886-87:—

PRESIDENT.

WILLIAM J. POTTER, New Bedford, Mass.

VICE-PRESIDENTS.

OCTAVIUS B. FROTHINGHAM, Boston, Mass.
FELIX ADLER, New York City.
GEORGE W. CURTIS, Staten Island, N.Y.
EDWARD L. YOUNG, New York City.
THOMAS WENTWORTH HIGGINSON, Cambridge, Mass.
ELIZABETH B. CHASE, Providence, R.I.
GEORGE HOADLY, Cincinnati, O.
NATHANIEL HOLMES, Cambridge, Mass.
ROWLAND G. HAZARD, Peacedale, R.I.
BERNHARD FELSETHAL, Chicago, Ill.
EDNAH D. CHENEY, Jamaica Plain, Mass.
EDMUND MONTGOMERY, Hempstead, Texas.

SECRETARY.

F. M. HOLLAND, Concord, Mass.

ASSISTANT-SECRETARY.

D. G. CRANDON, Chelsea, Mass.

TREASURER.

JOHN C. HAYNES, 451 Washington St., Boston, Mass.

DIRECTORS.

Four Years.

JOHN L. WHITING, Boston, Mass.
Mrs. ANNA D. HALLOWELL, West Medford, Mass.
JOHN W. CHADWICK, Brooklyn, N.Y.

Three Years.

FREDERICK A. HINCKLEY, Providence, R.I.
W. A. RUST, M.D., Boston, Mass.
Mrs. PHEBE M. KENDALL, Cambridge, Mass.

Two Years.

CORNELIUS WELLINGTON, Boston, Mass.
Miss MARY F. EASTMAN, Tewksbury, Mass.
FRED. W. GRIFFIN, Concord, Mass.

One Year.

Mrs. CLARA M. BISBEE, Dorchester, Mass.
J. A. J. WILCOX, Chelsea, Mass.
Miss A. A. BRIGHAM, Boston, Mass.

The office of the Association is at 44 BOYLSTON ST., BOSTON (next door east of the Public Library), where is also the publication office of *The Index*.

All letters pertaining to the business of the Association (payment of membership fees, orders for its publications, etc.) should be addressed to "Free Religious Association," at the office.

Communications intended specially for the Secretary, as well as his personal correspondence, should be addressed to him at CONCORD, MASS.

F. M. HOLLAND, Secretary F.R.A.

Lower Prices on Picture Frames.

CHEAP RADICAL TRACTS!

- No. 1.—**Truths for the Times**, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 5 cents; 30 copies, \$1.00.
- No. 2.—**Fear of the Living God**, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 3 cents; 20 copies, 50 cents.
- No. 3.—**Lecture on the Bible**, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 5 cents; 30 copies, \$1.00.
- No. 4.—**Christian Propagandism**, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extractions.* Price 5 cents; 30 copies, \$1.00.
- No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 5 cents; 30 copies, \$1.00.
- No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 5 cents; 30 copies, \$1.00.
- No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 3 cents; 20 copies, 50 cents.
- No. 8.—**The Present Heaven**, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 3 cents; 20 copies, 50 cents.
- No. 10.—**The Impeachment of Christianity**, by F. E. Abbot. 5 cents a doz.
- No. 11.—**The God of Science**, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 5 cents; 30 copies, \$1.00.
- No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 5 cents; 30 copies, \$1.00.
- No. 13.—**On the Vision of Heaven**, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 3 cents; 20 copies, 50 cents.
- No. 14.—**A Study of Religion: The Name and the Thing**, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 5 cents; 30 copies, \$1.00.
- No. 15.—**The Battle of Syracuse**. Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 5 cents; 30 copies, \$1.00.

Social Ideals, by David A. Wasson. Price 5 cents each; 10 for 30 cents.

We have two complete sets (12 vols. each), of Carlyle Works, library edition, cloth, gilt tops, which will be sold for one-half price, \$7.50 per set. Also, one set of Dickens' Works, 15 vols., illustrated, library edition, cloth, gilt tops, which we will sell at one-half price, \$7.50. Address **The Index**, 44 Boylston Street, Boston.

HERE is an essay on Columbus by a member of the third class of an English school, in the Midlands: "Columbus was a man who could make an egg stand on end without breaking it. The king of Spain said to Columbus, 'Can you discover America?' 'Yes,' said Columbus, 'if you will give me a ship.' So he had a ship, and sailed over the sea in the direction where he thought America ought to be found. The sailors quarrelled, and said they believed there was no such place. But after many days the pilot came to him, and said, 'Columbus, I see land.' 'Then that is America,' said Columbus. When the ship got near, the land was full of black men. Columbus said, 'Is this America?' 'Yes, it is,' said they. Then he said, 'I suppose you are the niggers?' 'Yes,' they said, 'we are.' The chief said, 'I suppose you are Columbus?' 'You are right,' said he. Then the chief turned to his men, and said, 'There is no help for it: we are discovered at last.'"

AN Hungarian conjurer spreads a newspaper upon the floor, and places a young woman upon it, whom he covers with a piece of silk, and then causes to disappear. We have never seen this trick here; but we have known a man to put \$50,000 on a newspaper, and it has disappeared before he could cover it with anything.—*Commercial Bulletin.*

PROF. DAVIDSON'S lecture on "Bruno" is for sale at **The Index** office. Price 5 cents; 20 for 50 cents.

HUSBAND'S CALONED MAGNESIA.—Four First Premium Medals awarded. More agreeable to the taste and smaller dose than other Magnesia. For sale in bottles only, with U.S. Government Registered Label attached, without which none is genuine, at druggists and country stores, and by Thomas J. Husband, Jr., Philadelphia, Pa.

PUBLICATIONS OF THE FREE RELIGIOUS ASSOCIATION.

Freedom and Fellowship in Religion. A volume of ten essays upon speculative and practical problems of religion, by D. A. Wasson, Samuel Longfellow, Samuel Johnson, John Weiss, W. J. Potter, F. E. Abbot, O. B. Frothingham, J. W. Chadwick, T. W. Higginson, and Mrs. E. D. Cheney, and extracts from Addresses by Ralph Waldo Emerson, Lucretia Mott, Robert Dale Owen, Dr. Bartol, Wendell Phillips, Rabbi Wise, Horace Seaver, A. B. Alcott, Lucy Stone, Charles H. Malcom, Julia Ward Howe, and others,—all given on the platform of the Free Religious Association. Price (reduced) \$1.00.

Reports of Annual Conventions of Free Religious Association, from 1872 to 1879 inclusive. These contain essays and addresses by the various distinguished men and women who have spoken on the Free Religious platform, together with yearly reports of the Executive Committee. 10 cts. each.

TRACTS.

 VII. **Evolution and Religion**, by John Fiske. 5 cts.; ten, 35 cts.; one hundred, \$2.00.
 Nos. II., III., IV., V., VI., 10 cts. each; ten, 60 cts.; one hundred, \$3.00.
Reason and Revelation, by W. J. Potter. 5 cts.; ten, 30 cts.; one hundred, \$1.50.

Address **FREE RELIGIOUS ASSOCIATION,**
 44 Boylston Street, Boston Mass.

LITTLE Johnnie had been unduly familiar with a forbidden jam-pot, and had, consequently, indulged in grief and lamentation when Retribution, with a large and rolling "R," had swooped down upon him. He sat smarting and tearful for a long time in silence, broken only by an occasional sob. Then he looked up solemnly in his mother's face, and said with emphasis, "Mother, I'm sorry you ever married my pa."

The following is from the *Christian*, London, of April 22: "A missionary from China said, at the Aldersgate Street meeting, last Wednesday, that they had to be careful not to let our illustrated papers fall into the hands of the Chinese. One of their converts saw a picture in the *Graphic*, representing some fashionable affair in which several ladies were represented in full dress. The innocent Chinese explained to a companion that no doubt this was a dispensary, and the diseased ladies had removed their upper garments in order to facilitate the doctor's examination!"

REV. W. I. GILL will give a discourse next Sunday, at three o'clock, in Chickering Hall, Boston, on the "Philosophy of the Mind-cure Method."

GOPAL VINAYAK JOSHEE, of India, is open to engagements to lecture on the following subjects:—

1. The Present Condition of India.
2. The Missionary Labor in India.
3. The Religions of India.
4. The Social Manners and Customs of the Hindus.
5. Buddhism contrasted with Christianity.

Address at Roselle, N.J.

JUST READY:

MANUAL TRAINING IN EDUCATION.

By James Vila Blake.

This little book of about 100 pages discusses the training of the hand as properly an integral part of education. The relation of general and special education, the need of hand-training for all classes, the dignity of hand-work, its influence on personal character, the relation of manual training to immigration and to the apprenticeship problem, and the present condition of the subject, are among the points treated, all in a very condensed way. It will be read with profit by teachers and others interested in methods of education.

Price, in paper.....25 cents.

ANDREW CARNEGIE has made the munificent gift of \$250,000 to Allegheny City, for a free library.

THE question of Home Rule for Ireland now goes for settlement to the electors of Great Britain. The struggle will be one with justice and the progressive spirit of the age, on one side, and historic hatred, religious bigotry, and class prejudice, backed by wealth and the influence of the throne and titled nobility, on the other.

A STRANGE scene was that in the prison chapel of the Joliet (Ill.) penitentiary on Sunday, June 6, when Archbishop Feehan, of Chicago, confirmed one hundred and fifteen convicts. The chapel was trimmed with white flowers; each of the convicts wore on his breast a white bouquet, and the music was furnished by the convict orchestra.

THE preaching of Mormon missionaries in Switzerland has not been without results. Secretary Bayard has received information that in 1885 there were in that country 28 elders, 16 priests, 34 teachers, and 521 members. During the year, 95 converts were baptized and 52 emigrants sent to Utah. Nearly all the converts are made from the Protestant class. The general assembly, held at Berne, the head-quarters of Swiss Mormonism, on the 19th and 20th of December, was marked by great enthusiasm, and the hall was crowded to overflowing. "Women's aid associations" have been organized by the Swiss Mormons, and Sunday-schools are sustained at various points. When converts are about to leave for Utah, every precaution is taken to conceal their destination, and thus to avoid detention by the local authorities.

GENERALLY speaking, strikes do not pay. It is workingmen who suffer most from them. Within six weeks, the usual number of chattel mortgages filed for record in the Recorder's Office, at Chicago,

has been more than doubled,—a fact which can be explained, it is said, only by the strikes and labor troubles. During one week, three hundred and ninety-seven instruments of this class were recorded, representing an average valuation of about \$251. Of these, two hundred and sixty-three were mortgages upon furniture, but few of which represented an amount in excess of \$100. These facts indicate that many who have been living comfortably are out of employment and out of money. A Western county commissioner says that, when cold weather comes, there will be an increased demand of probably fifty per cent. upon the country for fuel, food, and help generally.

SPIRITUALIST papers are beginning to recognize the fact that their cause is suffering greatly from the character and doings of many mediums, and they are emphasizing the importance of more discrimination and care than have hitherto been exercised in examining phenomena claimed to be spiritual. Henry Kiddle, in an article on "The Elevation of Mediumship," in the *Spiritual Offering*, says: "Public mediums should be accredited in some way,—at any rate, required to present evidence of good character; and they should be required to hold their sances under proper conditions, both for the purity and verification of the manifestations." This is the position persistently maintained for years by the *Religio-Philosophical Journal*, in the face of much opposition from credulous Spiritualists and from a multitude of mediums and their adherents and supporters. The *Journal* has received not a little abuse for its course, which we are far from saying has always been wise; but its influence is beginning to show itself in a very marked manner, as we cannot help observing, on looking through the half-dozen Spiritualist journals that come weekly to this office.

THE Baltimore *News* proposes to the city council that it make an appropriation for the weekly purchase of a ton of chloroform, so that each family may obtain a supply for Sunday. The legislature, it says, has closed up everything that can be made to contribute to human comfort. Barbers' shops closed, no one can get shaved; the ice-men have demanded exemption from Sunday deliveries; the bakers are talking of stopping the delivery of bread; and the milkmen will, probably, soon refuse to deliver milk on Sunday. The *News* sees no prospect of anything for that day except hot weather, stale bread, sour milk, and hydrant water. On Sunday mornings, the people can go to church; and those not "sufficiently interested in the pretty bonnets can be soothed by a soporific sermon. But, for the rest of the day, the public will need chloroform, or there will be intense suffering this summer." It is suggested that the police be required to go around and administer it, and see that everything is safely and surely arranged. "Thus," the *News* concludes, "we should secure not only surcease of ennui, but would present a quiet front that would paralyze the stranger within our gates. A sleeping city! How sweet and beautiful it would look in the glaring sunlight and the arid drought! All its people safe from heat and

perspiration and privation, and not one guilty of the slightest harm. Blessed ideal! Bring on the chloroform."

W. D. MOORE, a Pittsburgh lawyer, in a recent lecture on "Flowers, and what they teach us," exclaimed: "Evolution is an incarnate lie, unless I am totally mistaken. If it were true, the seed of the flower would find its outcome a head of cabbage. It is an absurd caricature, that, if true, would bring chaos to the world. No such doctrine is written in the volume of the rocks. The cosmos of the world was not aided by transformations. No: flowers were since earth began; and I will conclude by saying with the cross-crucified and thorn-crowned One that Solomon in all his glory was not arrayed as one of these." This Mr. Moore is the same flowery but superficial and uninformed declaimer that he was a few years ago, when he was preaching. As to evolution, Mr. Moore is probably "mistaken." Nobody looks for a head of cabbage from a flower-seed; yet cabbage-heads, of which there are many varieties,—all admitting of more or less improvement by cultivation, make an interesting and instructive study in connection with the evolutionary processes of Nature.

THE Orangemen of the chief city of gentle Ulster have proved themselves quite equal to their Catholic countrymen in raiding and rioting, sacking stores and dwellings, and maltreating inoffensive citizens, as well as in hurling missiles at the guardians of public order. A hundred houses of prominent Catholics destroyed, and a score of deaths from collisions with the police, are among the results of the Orange outbreak at Belfast last week. These defenders of law and order in the abstract threw paving-stones at the police, to the tune of "God save the Queen" and "Rule Britannia." In their patriotic opposition to an imaginary oppression, due largely to the influence of inflammatory and seditious speeches, like those of Lord Randolph Churchill, the rioters attacked beer and whisky saloons kept by Catholics, which, in some cases, proved the strongest foes they encountered; for, the more powerful their attacks on the barrels, the more were they overcome by their contents. The hatred of the constabulary was carried to a point which can be inferred from this description by an eye-witness of the mob's attack on the Bower's Hill police station: "Women with pokers pried up paving-stones, and broke them into suitable sizes for the use of the rioters, when they ran short of missiles. Women and young girls desperately entreated the men to continue the fighting whenever they flagged, offering them aprons full of fresh stones; and, when entreaty failed, the women and girls drove the men on by savage threats." Evidently, the Protestant women of Belfast are no more lacking in courage than are their Catholic sisters of Limerick. After an outbreak like this in a Protestant city of two hundred thousand people, upon the announcement of the defeat of Mr. Gladstone's Home Rule bill, "the argument from Ulster" may have less weight with the world than it has had hitherto.

A SUCCESSFUL CHARITY.

The question is sometimes sceptically raised, "Are our charities doing any good?" No one can read the last annual report of the Massachusetts Home for Intemperate Women without the conviction that the managers of that institution can have the satisfaction of returning an emphatic *yes* to this question. The Home is situated at 41 Worcester Street, in Boston; and, so far as it is not self-supporting, which it is to the extent of sixty-seven per cent. of its expenditure, it is maintained by private beneficence.

The institution originated, as have others of our best charities, in the devoted private work of one kind and skilful woman in her own home. The Channing Hospital, for poor women incurably sick, began in the tender but effective sympathy of the noble-hearted Harriet Ryan, who, finding from time to time certain helplessly sick women in poverty and neglect, took them to her own rooms, and gave them her personal care. Such actions enlisted the sympathies of others who saw or heard of them; and her beautiful charity soon overflowed from her modest rooms into the abandoned vestry of the old Federal Street (Dr. Channing's) Church, and thence grew into the incorporated and excellently managed society which now continues the beneficent work in a convenient building on McLean Street. In like manner, this Home for the, if possible, still more unfortunate and pitiable class of intemperate women began in the personal work of its efficient matron, Mrs. Mary R. Charpiot. The report before us says: "Her conviction that intemperate women could be reached and succored by sympathy, kind treatment, and judicious oversight, led her to open her house for that purpose. By visiting the courts, and obtaining leave of the judges to take on probation such small numbers as she could from time to time accommodate, she soon proved the practicability of her scheme. The success attending her efforts attracted the notice of others; and, in order to secure the greater strength and efficiency which come from united action, the Home was regularly incorporated in 1881." A large house was then purchased, and a still larger one is now needed. There have been during the five years since incorporation more than one thousand women at the Home. The whole number in the past year has been one hundred and sixty-five. The number at any one time seems to be about thirty-five or forty.

It is claimed that a very large proportion of these women are sent out from the institution reformed. And not only are their habits changed, but the larger part of them are trained while there in a useful and profitable occupation (that of laundry work), so that, when they go out, they may get positions for employment, which shall make them much less liable to temptation. Most of the directors at the outset were sceptical whether women, who had become victims of intemperance, had not so far lost self-respect and self-control as to be incapable of redemption. But the statistics of the institution have removed all their doubts. Not only the victims of alcoholic drinks, but those addicted to opium drugs are admitted to the Home. Most of the inmates are poor women; and a large number of them—one-half of all who were admitted last year—have been sent there directly from the courts, on probation. Only one has had to be surrendered to the courts in three years. There is a small number of paying patients, who come from families of means,—the wives of merchants, bankers, phy-

sicians, etc. But the notes of cases, as kept by the matron, show that in both classes reformation is effected.

Extracts from these "Notes" of the matron are printed, and make the most effective part of the report. Here are a few specimens of them: "Mrs. W., before coming to us, attempted suicide; remained in the Home three months. After leaving us, she remained in Boston over three years, doing well; then went West three years ago; and, when we last heard from her, she was still doing well." "Mrs. F. came to us over six years ago; was a very hard case. After leaving us, she returned to her family, and has since been a good wife and mother, and helps provide for the house by doing dressmaking." "Mrs. R., widow of a contractor, had been intemperate twenty-five years when she came to us; is now thoroughly reformed, and living with her family." "Mrs. M., a morphine patient, is the wife of a physician. She is now thoroughly reformed, and living with her family." "A daughter of a wealthy merchant, since leaving us, has married; is now keeping house, and is very happy." "When M. came to us, six years ago, she was considered hopeless. To-day, she is keeping house, and supporting herself by honest labor." "Mrs. —, an intelligent and educated woman, . . . was both a morphine and alcoholic patient when she came to us. She is now reformed, and earning a good living at dressmaking." "R., a young girl, was considered a very hard case when she came to the Home; is now doing well."

The monthly visitors' reports contain similar testimony. One of them says: "On one of my visits, two nicely dressed women went out the door; and Mrs. Charpiot said, 'Those are two of my former inmates come to call upon me.' They had both been several months here, had learned to wash and iron very nicely, and are now working in a laundry at the South End, where they earn from eight to twelve dollars per week. They are boarding in a respectable family, and bring part of their earnings each week for Mrs. Charpiot to take charge of." And again, "A large number of the girls are in good families in the country, and they often write very grateful letters for what has been done for them."

Facts like these must come as a benediction upon those who are doing this work. They see that their sympathy is not wasted, that their virtue already has its reward; and that human nature, however seemingly ruined, need not be despaired of. There is a vital germ which, if touched aright, may bring moral recovery and redemption. One important principle of the institution is that the inmates shall have regular employment. There is a sewing department for those adapted to that kind of labor; but the laundry established in the Home, and well patronized by the public, is the chief mode of industry. From the laundry alone was derived last year an income of \$4,727,—considerably more than half supporting the Home. The women are trained in the nicest kinds of laundry work, and this insures for them employment at good wages after going away.

But over all departments of the Home, as the secret of its success, it is evident, presides the womanly genius of its matron,—a woman as instinctively wise in executive methods as she is benevolent and motherly in heart. We have no personal knowledge of her; we only judge what she must be from reading the report of her work. That such women exist, and do not quail before the overwhelming avalanche of human wickedness in modern days, gives us a stronger hope for the future of the race.

WM. J. POTTER.

THE CONCORD SCHOOL OF PHILOSOPHY.

The programme for the next session of this institution promises much less than was given in 1884 and 1885. In each of these years there was a discussion of some momentous theme. Among the thinkers thus brought forward were Davidson, Fiske, Abbot, and Montgomery. The other work was done, in one year, on Goethe, and, in the other, on Emerson,—two of the most interesting of modern authors, and two who, together, cover the whole field of thought. This year there is to be no formal discussion, and no modern author is to be taken up. One of the two now selected, Dante, is, of course, a great poet; but his system of thought, taken as a whole, is as antiquated as a Chinese junk. Some of his ideas about heretics and devils may still be found floating about in our kitchens, but his statements of theology and philosophy are passages which readers skip.

Plato is much more worthy of study, and might well receive a longer series of lectures than will be given him this summer. The greatest honor that could be paid him by his admirers at Concord, however, would be to imitate him in his willingness to listen to objections. He knew so well that no system can stand long, if it leaves opponents unanswered, that he actually devoted two of his ablest dialogues, the "Sophist" and "Parmenides," to stating the strongest possible objections to his fundamental position. His hero, Socrates, cared for nothing so much at his last hour as to have his disciples rate his arguments for immortality no higher than their actual worth.

If Plato and Socrates were now making out a list of lecturers, it would certainly take in representatives of various views, and would allow the systems of Locke, Mill, and Spencer, to be stated at some length by men who believe in them, so that they might be discussed fairly. This has never been done in the Concord school. Fiske and Abbot were called in only as experts, to testify in favor of theism. Their philosophical ideas received little comment. The originality of Dr. Abbot's system and its opposition to that hitherto taught in Concord are so marked that he should not be passed over in this year's programme. He has at least a right to hear why his philosophy is not accepted by the gentlemen who invited him to address them a year ago. They owe him an elaborate answer. Students of Aristotle, Bacon, Locke, Hume, Mill, Bain, and Spencer, have a right to ask, Why do not these Concord philosophers answer the objections made by authors with such influence? If they expect to propagate their views by simply ignoring opponents, how can they call themselves a school for adults?

Such questions are justified by the fact that the programme for this summer's session refers all inquirers for information to the Concord *Guide-Book*, which contains the following statement, originally issued with due authority, and still substantially correct: "It has been thought best to make the school distinctively one of philosophy, using literature only as its vehicle or adjunct, and dispensing with science, as commonly understood. A few lectures, perhaps, will be given to show the relation which natural science bears to philosophy; but the whole field of empirical and phenomenal investigation will be left for those who have a taste for it." This is simply saying, "We are not going to listen to objections." It is as if an association of protectionists were to get up a tariff school, and give out notice that "Political Economy will be dispensed with, and the whole field of investigation of statistics will be left for those who have a taste for it." "The whole field of empirical and phenomenal investigation!" Why, this means

all the region so gloriously traversed by Aristotle, Bacon, Locke, Hume, Mill, Bain, and Herbert Spencer,—the whole range of psychological investigation, all the vast domain of mental science! It is only those who know that the facts are against them, who can thus say, "So much the worse for the facts!" What are phenomena but facts? The position of the school is the same as that of its great authority, Hegel, who said: "Thought is the basis of all existence." "The reality of everything is thought." To have no reality but that of thought is precisely what might be said of the travels of Robinson Crusoe and Baron Munchausen, to distinguish them from those of Agassiz, Darwin, and Humboldt. These great men speak from experience, from "phenomenal investigation," about realities of fact. The system which claims only a reality in thought confesses itself a fiction.

F. M. HOLLAND.

THE UNITY OF SCIENCE.

II.

The kinetic theory of gases, which explains their restlessness and elasticity by the movements of their molecules, is of absorbing interest. The hydrogen molecules, estimated to be only about one-fifty-millionth of an inch in diameter, are believed to have a motion, even at 60° Fahrenheit, of over six thousand feet per second.

Although we find science discoursing thus familiarly of molecules, it is true that the best microscope has only power to make visible to us, even in the brightest part of the spectrum, objects of only about $\frac{1}{100000}$ to $\frac{1}{50000}$ of an inch in diameter; and "Sorby calculates that the smallest sphere of organic matter which could be clearly defined with our most powerful microscopes would contain many molecules of albumen and water, and it follows that there may be an almost infinite number of structural changes in organic tissues, which we can at present foresee no mode of examining." (Lubbock.)

Even the terms of science cease to take the character of a dialect belonging to the separate departments, but now assume the dignity of a universal language; and thus speaking one tongue makes all scientists akin.

The physiologist and the naturalist no longer taunt the chemist with entering their domains only as an iconoclast, tearing down substances by decomposition which he has no power of rebuilding, learning in vain their molecular constitution, while their atomic relations remain a sealed secret, known only to that subtle property of living matter,—vital force; for the chemist has learned to approach the investigation of organic substances from the physical side. And the impassable barrier which was supposed to exist between organic and inorganic substances has been broken down, first by Wöhler, in 1828, in the synthetic production of urea, and later in many other substances, as alcohol, vanilla, indigo, hydrocyanic acid. "Yes; but," objects the narrow-minded critic, "Dewar could not affect the synthesis of its atoms in the production of hydrocyanic acid, except at a temperature far above white heat; while, in nature, it is produced spontaneously in certain fruits at a temperature of 70° Fahrenheit." Very true; but what does this prove? Simply the transmutation of forces, and also that heat, as a force in nature, produces an energy infinitely less in power than that which resides in vital force. Physiological botany is a production of this interchange of scientific truths, as well as comparative anatomy and comparative embryology. Both physiology and biology as well as embryology and botany are under mutual obligation each to all the others for

light shed upon these different subjects, and especially are the mysterious processes of generation in both plant and animal rendered less problematic by this interchange. The President of the British Association, in his recent opening address at the Montreal meeting, said, "The neglected borderland between two branches of knowledge is often that which best repays cultivation, or, to use a metaphor of Maxwell's, the greatest benefits may be derived from a cross-fertilization of the sciences." And, again: "It is not always that which seems at first the most important that proves in the end to be so. The history of science teems with examples of discoveries which attracted little notice at the time, but afterward have taken root downward and borne much fruit upward."

In 1652, Harvey, from his study of the production of the chick from the egg, uttered the then so-called dogma, "Omne vivum ex ovo,"—every living thing comes from an egg. Was this sophistry? Was it mere speculation? Or was it the inspiration of truth? To Harvey, the egg of the fowl stood as an alphabet of great capital letters with which to spell out a common law of generation for both plants and animals. And yet, notwithstanding his famous scientific declaration, his theory was not confirmed until 1827, nearly two centuries later, when Baer made the discovery of the human and other mammalian ova. Now, the ovum is no longer a theory, but a fact, and one which belongs to two kingdoms of nature, the animal and the vegetable. Out of this search into primitive forms of living matter, in the next decade Schleiden and Schwann promulgated the "cell theory," as applied to growth in both plant and animal.

In considering the tendency of the progress of truth to unify science, we must not forget that word of such universal application, *protoplasm*. Whence it derives its properties, so constant wherever found, we know not; but protoplasm remains a scientific fact,—the unit, or elementary form, of all living or organic matter, vegetable or animal. "Where there is life there is protoplasm, and where there is protoplasm there is life," says Prof. Allman; and the expression "vital properties" belongs to this elementary form of living matter. Protoplasm is the physical basis of all vital action,—of that mysterious thing which we call Life. At the meeting of the American Scientific Association at Nashville, a few years ago, Prof. Marsh, in his paper on "Evolution," said: "In this long history of ancient life, I have said nothing of what life itself really is; and for the best of reasons, because I know nothing. Here, at present, our ignorance is dense; and yet we need not despair. Light, heat, electricity and magnetism, chemical affinity and motion, are now considered different forms of the same force; and the opinion is rapidly gaining ground that life, or vital force, is only another phase of the same power."

When electricity was discovered, it was supposed that very few substances contained this subtle agent. It was known, as early as six centuries before Christ, that amber, rubbed with silk, is capable of attracting light bodies; and, to this day, amber beads are supposed to possess some healing virtues, while the word "electricity" is derived from the Greek *electron*, meaning amber. In the sixteenth century, some two thousand years later, it was discovered that some other substances, such as sulphur, sealing-wax, and glass, also contain electricity. It seems incredible that the human intellect is so slow of comprehension. But here we have one of nature's forces, playing so prominent a part in science of to-day, dimly recognized by the ancients, but not practically discovered for more than twenty centuries later, with

still another pause of two hundred and fifty years before man sufficiently understood its laws to make it of any use.

In the familiar experiment of the pith-ball suspended by a thread, it was found that a glass rod which had been vigorously rubbed with a piece of silk, when brought near the pith-ball, had power to attract it in any direction. But the moment that the glass rod touched the pith-ball, imparting to it its own electricity, at once all attraction ceased. A stick of sealing-wax, however, rubbed with flannel, was found to have power to attract the pith-ball which had refused the glass. But, the moment the wax is brought into contact with it, this also is repulsed, and finds itself no longer a source of attraction; but the glass rod will again attract the coquettish pith-ball as before. Two conclusions, of course, were reached by this experiment: first, there are two kinds of electricity, vitreous and resinous, or *positive* and *negative*; second, opposite electricities *attract*, and like electricities *repel*. Subsequent study of this force soon proved that glass does not contain only positive, nor wax only negative electricity, but that all substances contain in greater or less degree both kinds, although certain substances are relatively positive, while others are relatively negative; and that friction will withdraw one kind from one substance leaving it charged with the other, while similar treatment will produce opposite results in another substance. Friction, therefore, does not produce electricity, but only produces a state of *electrical separation*,—the only condition under which it can manifest itself; while the magnet represents a state of permanent electrical separation, or a substance with its positive at one end and its negative at the other. But the law by which electrical separation is effected, by which electricity in motion is produced, and which renders it such a wonderful force in nature and such a power in applied science, seems to be a common law of nature,—the law of *attraction and repulsion*, the eternal going out of the positive after the negative. We also find this true in regard to that most mysterious of all the physical forces, chemical affinity, that the same general law obtains. The power of this force also depends upon *difference*, or the *heterogeneity* in the composition of the matter which it affects. We see here an exhibition of the law of attraction as affecting three of nature's forces, which corresponds to many other phases of the law of attraction in the universe.

In the decomposition of compound substances by electrolysis, where electricity is used to overcome the power of chemical affinity, it is found that certain atoms always cluster about the positive pole, while others go to the negative. In the electrical analysis of common salt, which is the chemical union of chlorine and sodium, it is found that the chlorine atoms always collect at the positive pole, and are therefore negative, and the sodium atoms at the negative pole, and are therefore positive, according to this universal law of attraction of opposites. Hence, we have all elementary substances classed as positive or negative; and the quality of the combining power in chemistry depends upon these properties of the atoms thus combining. Goethe, in his *Elective Affinities*, admirably illustrates chemism, or chemical affinity, in the opening chapter of a book, to read which is like the dissection of a dead body,—full of unclean and repulsive things, and which only the quest of knowledge could justify or render a wholesome occupation.

The vital properties of living matter are chiefly *contractility* and *irritability*. What either of these really means no scientist can tell. If we accept the

interpretation which electric and chemical action in inanimate nature would suggest, we might regard contractility as *attraction*, and irritability as *repulsion*,—another form of expression for a common law of animate and inanimate matter. So, in like manner, the great forces of the universe,—the centripetal and centrifugal,—which keep the millions of worlds from jostling each other as they perform their annual and diurnal motions, are, after all, only expressions of a law of attraction and repulsion, the negative or attractive force, the positive or driving force. So, also, thermal force acts under the same law. Heat is motion, cold is rest; heat is the driving force, cold attractive; heat, positive; cold, negative. A body when cold stops, or absorbs (attracts), the same ray of light which is driven out from it when heated. Analogous to this phenomenon, we find that a string of a musical instrument in a state of rest stops, or absorbs, the same note which it gives out when in motion. Passing, we will at least recall the interesting coincidence of the number seven in sound and light,—the seven notes of the musical scale and the seven colors of the spectrum; also, the correspondence in the wave lengths between the lowest note of the scale and the color red, and those of the highest note with the color violet.

We give plurality to the forces of nature, naming this quintuple power light, heat, electricity, chemical affinity, and motion. And yet science has demonstrated that electricity alone is convertible into all the others. The correlation of all these is an accepted fact. After all, we may reasonably question the existence of so many distinct forces, and presume only that of a single force of dual character manifesting itself in different ways now regarded as separate forces. The striking analogies of phenomena under each of these, and the analogies among natural laws, hint at unity of forces. The two qualities of force so easily demonstrated in electricity, which we call positive and negative (attraction and repulsion), may be identical with the dual manifestations of all forces.

May not all these terms—contractility and irritability; heat, cold; acid, alkali; motion, rest; positive and negative; centripetal and centrifugal; attraction and repulsion—be, after all, a play of words by which, in our state of dense ignorance, we seek to express the different manifestations of the same force? And, if science shall demonstrate to us the unity of her forces, may it not, after all, be vital force—that mysterious thing which we call life—which acts upon all forms of matter producing these varied phenomena?

It will be objected that we have animate and inanimate nature, organic and inorganic matter, and that the forces which move in the inorganic and inanimate cannot be confounded with vital force, which operates only in the organic, rendering it animate. And why not? The one seems analogous to kinetic, the other to potential energy. In the inanimate zinc and carbon slumbers potential energy, which chemism is capable of liberating and imparting to inanimate and inorganic metal, giving to it the power of flashing your living thought beneath the waters of the Atlantic to friends upon the other side, thus seeming at last to render inorganic matter animate. "Very good!" exults the materialistic scientist: "then you consider the forces of nature sufficient to account for all the operations of matter, animate and inanimate? And you would regard life, therefore, as only a property of matter?" On the contrary, I would regard matter as accidental to life, without which no such thing as matter even could exist. Matter is life materialized. Says Carlyle*:

"All visible things are emblems. What thou seest is not there on its own account; strictly speaking, is not there at all. Matter exists only spiritually, and to represent some idea and body it forth." Matter is but the scaffolding for the use of the immaterial, upon which it climbs to gain a broader survey of the universe, aided by science as a field-glass.

It were folly to have any quarrel with the materialist over terms, or to feel chagrin when taunted by him with our inability to define life. Life is not the only word which wanders through science undefined nor the only thing beyond the grasp of human knowledge. Even so simple an every-day fact as gravity is equally beyond our power to define. We talk learnedly of the centrifugal and centripetal forces of the universe; and yet we are really no wiser concerning them than the little girl who, when asked, "What keeps the earth in its orbit?" replied, "God beckons to it."

As the elementary form of all matter is the cell, so the elementary action or manifestations of many of nature's laws seem to be in a circuit, from the circulation of the vital fluid even in lower forms of life and the afferent and efferent motions of the nerve current to the motion of all worlds in the universe. The oxygen so essential to the animal kingdom is exhaled by the vegetable; while the carbonic acid which we throw off in every act of respiration is breathed by the plant, which appropriates the carbon and sends us back the oxygen.

The dual activity of the forces of nature, which we have assumed to be analogous to the two fluids of the electric current,—the positive and the negative,—appears also in dual form in that vital force which we call life, which manifests itself in even the slightly as well as the highly differentiated forms, in two grand divisions, both in the animal and vegetable kingdoms, which we call sex. And sex can no more be accounted for by the scientists than life. Of the attempts which have been made, none rise even to the dignity of inviting intelligent criticism. In a study of the spiritual forces of the male and female character, we cannot shut our eyes, even here, to the striking analogy to natural forces. Here is the positive, driving force of man, set in opposition to the negative, attractive force in woman. We cannot help recalling Katharine Hanson's *Spiritual Forces*:—

CENTRIPETAL.

"With eager impulse outward tending,
Keen to explore the solemn Whole,
Hot life-throbs toward far verges sending,—
What shall restrain this reaching soul?"

CENTRIFUGAL.

"By sweet, calm sway of inward might,
Held in an orbit's large control,
Illumined by the Light of light,—
What shall mislead this trusting soul?"

We also find that, in both these kingdoms,—the animal and vegetable,—a unity in the law of reproduction obtains. Here, also, we find the same law of attraction and repulsion, the same eternal going out of the positive after the negative, which gives the pollen power to burst its cells, and guides it with its countless antheridia, with unflinching certainty, to the waiting and attracting stigma of the flower. It is this unerring power of attraction which guides the microscopic antherozoid through the long cells or channels of the stigma and style down to the waiting oosphere, and whose union gives us alike the acorn and the mustard seed. In the Indian corn, it is so wonderful a process, and so evidently an expression of the universal law of attraction, that the scientist staggers before it, under a burden of doubt. But, here, the wind and the insect are alike discredited as the

agent of fertilization. We find here the pollen formed upon the so-called "tassel" of the corn several feet above the stigmata, at the ends of the corn "silk" growing out of the embryo ears of corn, each separate thread of which is traceable to an embryo kernel. Yet the pollen dust falls, lodges upon the silk; its cells burst, and its escaping antherozoids find, with unerring accuracy, in spite of unfriendly winds or storms, the open mouths of tubes at the ends of the corn-silk, and make their way through these long pistils, each to find its oosphere in the ovum of the embryonic kernel below! And yet this is a process which only the higher power of the microscope can spy out. Is it chance, is it the wind, is it insects, that secure this wonderful fertilization of the corn? Verily, "God beckons."

It is a theory of materialistic origin that the colored petals of plants are the result of a necessity for the aid of insects in the fertilization of flowers; that originally there were no petals, only stamens and pistils, but that the bright leaves appeared in response to a need for insect aid. It goes so far as to claim that the different flowers put forth the particular color most pleasing to certain kinds of insects; in other words, that the longing of the plant for the perpetuation of its kind (and being unable to accomplish this without the meddlesome interference of the insect) gave it the power to put forth its bright petals as a means of accomplishing this desire. Who shall deny, then, that the longing for individual immortality, "which springs eternal in the human breast," will give us the power to put forth our spiritual wings?

LEILA G. BEDELL.

THE GERMAN UNIVERSITY.

III.

But with all the freedom there is a powerful restraint placed upon the students, which checks the excess of license without infringing upon their liberty; and that is the examination, which forms the end and consummation of the student's career. If he has been idle, he must make up for it, or he must bear the consequences, which means that he is unable to pass his examination. And we must confess that there are always some who go to the wall, because they yield to and lose themselves in the temptations of a dissipated life.

You probably wonder that under these circumstances there are no more lost than perhaps a few per cent. The reason is that students, before they enter their university course, have received a thorough scientific training in the so-called gymnasium. The gymnasium bestows on a German youth a scientific education, which forms a basis for any study to which he may devote his life afterward; and the instruction in a gymnasium is so methodical and systematic that its fruits are not so easily lost or forgotten. The chief result of this training is intended to endow the student with scientific independence. He is taught how to study without the aid of a professor or teacher, and how to go back to and find the last source of knowledge. And, in this way, he is prepared for and enabled to make a good use of his academic liberty, for which generally the school-boy craves with longing impatience.

Thus, the German university stands on and is conditioned by the German gymnasium; and the usefulness of academic liberty is dependent on the previous methodical teaching in these schools. The lower classes of gymnasiums (or, as they are called in some districts, lycæums) answer to the so-called collegiate institutes, or preparatory schools, in this country. The higher classes are,

* Sartor Resartus, p. 43.

with regard to the subjects taught, equal to American colleges. A German gymnasiast who has passed his examination of maturity for a university has a scientific erudition of at least a Bachelor of Arts in England or America. And you may be sure that even a mediocre man who has passed this pretty severe ordeal will be able to read any passage of Homer and Plato, short of exceptionally difficult periods, at sight. In Latin, he must write and translate with fluency. In mathematics, the *pensum* encompasses conic sections, and stops short at the differential and integral calculus, which is no longer included. Insufficiency in German, of course, insures the failure of the candidate, it, as the mother tongue, being the main subject.

In French there is not more required than translating easy passages from German into French.

The papers given take a whole week's time, and are as follows:—

Monday, translation from German into Latin, perhaps a passage taken from Quintilian, Cicero, or Muretus.

Tuesday, a translation from German into Greek, perhaps a passage from Plutarch or another historian, maybe, also, from some orator.

Wednesday, a German composition,—for instance, "Die Bedeutung Klopstock's" or "Ein Vergleich Shakspere's mit Sophocles" or "Friedrich der Grosse und das Deutschthum," etc.

Thursday, mathematical problems, stereometrical, etc., calculations.

Friday, a Latin composition on such subjects as "Uter major sit Caesar aut Alexander quaeritur?" or "Qua ratione Vergilius Homerum emitaverit?" etc. Such compositions average about ten folio pages.

Saturday, a translation from German into French.

For all papers, with the exception of the French one, five hours are allowed. The French, being shorter than the others, takes three hours. On Saturday afternoon, the Hebrew and English papers are given.

All subjects, save Hebrew and English, are obligatory. After the examination papers have been duly corrected and censured, an oral examination ensues in the same subjects, and also in religion, history, and geography. For a time, in the Latin examination, the intercourse of the examiners with the candidates is carried on in Latin.

All students who frequent a university are thus uniformly educated. The enrolment in the scrolls of the university is called matriculation; and no one is duly matriculated except on presentation of his testimonial of maturity. However, besides the fully and properly matriculated students, other auditors are admitted to the lectures, of whom the greatest numbers are foreigners; and I dare say that the universities do not care very much for their presence, yet, because of the academic liberty, they are suffered to make as good a use of the lectures as they can. So the professors know what kind of audience they have to deal with, and need not trouble themselves with primary subjects or preliminary introductions. The student is not so much ordered and obliged as advised to follow a certain course of lectures, although, as before mentioned, he is by no means bound to it. The courses of study are semi-annual, or, in academical term, semesters. Medical students have to pass an examination in natural sciences, anatomy, and physiology in their third or fourth half-year, or semester, before they are admitted to the clinics. Philological, juridical, and theological students may require to be examined after six and medical students after eight semesters. This so-called governmental examina-

tion gives the physician a license to practise, the theologian the right to preach, and to the philologist the *facultas docendi* (or privilege of teaching). The juridical candidate, this examination passed, works a few years *pour le roi de Prusse*,—that is, without any salary,—and has then to stand another examination, which bestows on him the honor of Assessor. The medical examination takes almost a quarter of a year before all branches are passed. German scholars who have thus systematically pursued their university career average from twenty-four to twenty-six years of age, and a juridical man will scarcely earn a penny until he has passed his thirtieth year. You see much light casts dark shadows, and the thoroughness of study limits its use to the well-to-do classes.

The degree of Doctor, as a rule, is given on presentation of a printed and, for this purpose, published essay, which is called the Doctor Dissertation. After the so-called *Rigorosum*, an oral examination, the creation of Doctor, or, as it is generally called, the promotion, takes place. The chief trial in olden times was a disputation, which, however, has been abolished in most universities nowadays. I may add that the fees to be paid for the Doctor's degree are pretty high. They vary, in different universities, between \$100 and \$300.

The highest dignity, however, which the faculty of a university can bestow upon a person—who, of course, must be of scientific eminence—is to grant the dignity of Doctor without any examination,—*honoris causa*.

An introduction of the German system of universities, with their academic liberty and variety of study, would be very desirable for any country; for liberty, unconditioned liberty, is the basis of all sincere inquiry into truth. It is obvious that sectarian colleges, although they may prosper, will never worship the high ideal of truth; for they stand on the supposition that their creed and truth are identical. But, on the other hand, let us not forget that in Germany academic liberty and variety of study stand on the uniform training of the gymnasium. And, so long as the plan of a strict, thorough, and, to some extent, uniform education is not carried into effect in America, university institutes like those in America must prove failures. However, to lay down the standard of such a uniform preliminary training as ought to be introduced here in America is a problem to answer which would lead us now too far. It, I think, is at present the most difficult educational problem, which cannot be weighed carefully enough.

PAUL CARUS.

EDITORIAL NOTES.

BY B. F. U.

OUR neighbor, the *Christian Register*, has taken up the defence of the action of the majority in the Western Unitarian Conference at Cincinnati with so much ability and zeal that *The Index* may well be content to leave the battle in its hands.

WE received a printed hand-bill last week, which reads as follows: "Gopal Venayak Joshee, an unconverted heathen from India, will deliver a lecture in the Town Hall, Lunenburg [Mass.], on Sunday, June 13, at 2.30 P.M., under the auspices of the Lunenburg Secular Society. Subject, 'Christian Missionaries.'"

SIDNEY S. RIDER says of Dr. Janes' *Study of Primitive Christianity*, in his "Book-notes": "This book is a cool, quiet, painstaking, and fearless examination of the foundations of the religious

belief of Christians. It is no mere compilation of the words of others; but, as Mr. Chadwick well says, 'it is the outcome of an independent mind,' and that a singularly just and patient mind. Believing that truth will avail, Dr. Janes seeks earnestly that which is true, with a determination to cling to it whenever or wherever he finds it."

IN the *Religio-Philosophical Journal* of recent date is printed a Boston letter from a Spiritualist, giving some account of fraudulent performances in the name of Spiritualism at the Spiritual Temple, this city. The writer concludes thus: "Your readers have now had a plain statement of the case. It virtually represents the great issue that now divides Spiritualists. On the one side, those who are convinced that materialization, as a whole, is unreliable, and an absolutely unknown and, under present conditions, an unknowable quantity; on the other side, those who accept as a manifestation of spirit whatever is offered at a materialization exhibition, even though it be a masquerade of the medium in toggerly, surreptitiously introduced into the séance room."

THE *Boston Evening Transcript* reprints the entire letter from the *Religio-Philosophical Journal* (which, it says, "is the ablest Spiritualist newspaper in America"), prefacing the same with this complimentary mention of its editor, and of the good work he has done: "Mr. Bundy has earned the respect of all lovers of the truth, by his sincerity and courage. He has been unsparing in his exposure of the frauds which are constantly discovered, carried on under the banner of Spiritualism. He has done more in this direction than any professed enemy or opposer of Spiritualism in the country. He has been so vigorous, indeed, in this work of exposure that he has earned the jealousy and hate of great classes of Spiritualists; although we do not remember any instance where he has been proved to be in the wrong, or where the thing which he has 'exposed' has not stayed exposed."

THE *Boston Knight* is the name of a little paper published at 71 Oliver Street, Boston, and edited by Remly S. Sidelinger, President of the Barbers' Protective Union. Its excellent motto is "To uphold the dignity of labor." The general character and tone of the paper are creditable, but we regret to see that it advocates boycotting. It seems from the following paragraph that the editor of the *Knight* has himself begun to experience some of the evils of the bad method which he thinks justifiable, when employed against others: "I hear a great many people complaining about the boycott, and saying that it is unjust. I was recently talking with some of my customers about it, who were greatly indignant; and, just to show the inconsistency of mankind, those same customers, since they discovered that I was an outspoken Knight of Labor, have practised the system of boycotting, by keeping away from my shop."

THE *Critic*, in an editorial on the "Press and the President," declares, what has long been evident to intelligent readers, that the great morning journals, "while enlarging their scope as mere news-collectors, have been sinking slowly but steadily into deeper abysses of literary and moral abasement." "What," it asks, "becomes of the boast that the newspaper is an educator, or that journalism should be ranked with the literary and learned professions, if they must look for support and appreciation to a class which delights in the abominable stuff with which the columns of our 'great dailies' have recently overflowed? . . . Every decent newspaper man ought to blush—does blush, doubtless—for his calling, when he

thinks of the degradation in which the reporters have wallowed, and which the editors have extolled. A modest young girl hounded with remorseless pertinacity, tracked like a pickpocket, described like a painter's model, watched at door-window, and keyhole, followed to shops, made the target of beastly innuendo, pictured in caricature, lied about, laughed at, persecuted with an ingenuity of torture worthy an Apache. . . . "He [the President] stole through a private door to escape publicity, and a reporter was there to way, lay him; he crossed the river in a ferry-boat, and reporters stood at the windows of his carriage; he visited his future bride, and reporters knocked at the door, to get a look at him; he received a parcel from a tailor, and a reporter was at the servants' entrance, to inspect it; he ate supper, and a reporter was in waiting, to steal the menu; he departed with his bride of an hour in a special train, and the reporters followed in another; he sought a refuge in a mountain retreat, and the reporters hid behind bushes, to note the hour when the house was shut up and when it was opened. The recital is enough to make the face of a book-agent burn."

LAST Saturday afternoon, in the presence of about three hundred persons, was unveiled the monument recently erected by the Turners of this country, in Forest Hills Cemetery, Boston, to the memory of Karl Heinzen, the strong, uncompromising advocate of intellectual and political freedom. Eloquent addresses were made by Robert Lieber, chairman of the monument committee; C. Hermann Boppe, of Milwaukee, editor of the *Freidenker*, and Johann Toensfeldt, of the North American Turner Bund. We give one passage from Mr. Lieber's address: "One malady menaces us, all the more dangerous because of the flattering form which it assumes. It is the descent from tolerance into indifference, from philanthropy into powerlessness of moral judgment. Karl Heinzen never suffered from this disease. He had a passionate hatred for everything that was evil and unjust, as passionately did he love the noble and the good. He who cannot hate, cannot love; and so, while we fight for tolerance, let us preserve Heinzen's power of hating,—of hating everything evil, low, base, unclean, hypocritical, half-hearted, and untrue." Mr. Boppe said of Heinzen: "The revolution Heinzen wished was a revolution in the mind of the people: the struggle to bring it about was the struggle after the ideal. He had a higher idea of revolution than that of most of those who used the word. He understood by revolution the silent power of humanity transforming society and the world. His aim in the interests of the people was self-help and the free use of political rights. His motto for the republic was, therefore, evolution. He sought to influence men only by the power of reason. His exterior was rude, and he did not easily enter into friendships with men; yet what tenderness and depth of feeling revealed themselves in his poems! Those are not the best friends of the people who flatter them; and Heinzen could not flatter, nor did he seek that popularity which is sought with the aid of fine phrases. He hoped much from the republic, though he saw its faults."

How GREAT thy might let none by mischief know,
But what thou canst by acts of kindness show.

A power to hurt is no such noble thing:

The toad can poison, and the serpent sting.

—Anonymous.

ALL smatterers are more brisk and pert
Than those that understand an art,
As little sparkles shine more bright
Than glowing coals that give them light.

Samuel Butler.

The Index.

BOSTON, JUNE 17, 1886.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, BENJAMIN F. UNDERWOOD, } Editors.

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

ENCELADUS.

BY W. D. GUNNING.

The first want of man was force. When he was level with nature, his arm was a poor defence against the pard or panther. He put a ring around his wrist to give him force to hurl the spear or bend the bow, as the Umatilla Indian, to-day, ties a feather in the tail of his horse to give it speed. He ringed or tattooed his arm for strength against visible foes. The invisible he tried to hold at bay with other talismans. They might enter his body through the ears or nose. He pierced his ear, and hung from the wound some glittering shard, a talisman to keep out a ghoul. He pierced his nostrils; and at "the gates of breath" he placed a talisman as sentinel, to frighten away the sprites who wish to enter with the air. He wanted force against the nature he saw, and he invented religion against the nature he could not see. Experience with the visible taught him that an amulet on his arm was not strength. For help he went to the camel and the horse. He made falling water a servitor to grind his corn, the wind a servitor to move his boat. He became civilized, and found that neither sinews of the horse, nor falling water, nor moving air gave him force commensurate with his need.

Nature lies crude and raw at the foot of man. He must have force to lift her and mould her to his use. Where shall he get it? Time was when the elements of the globe were a reservoir of force. Oxygen satisfied its likings for silicon, aluminum, sodium, potassium, and, uniting with them, formed the crust of the earth. The earth's crust is a product of spent forces. Oxygen satisfied its desire for hydrogen, and the wedded gases formed the ocean. The ocean, still a mechanical force, is the product of a spent chemical force. Carbon alone, of all the elements, is found in the globe's crust potential of force; for it has not combined with oxygen. Fossil coal is chemically pure carbon. Whatever else it may contain is an impurity; that

is, it is held in mechanical mixture, not chemical union.

The attention of the world is held now by fossil carbon in chemical union with hydrogen. This leaves it still a potency.

Carbon is to life what phosphor is to thought. Haeckel has woven from carbon the most tenable theory of the origin of life. It is, of all things, the stuff of life; and, as hydro-carbon, the force given to life. The colt begins to frisk and play the very day of its birth. The human babe lies helpless for months. The mare's milk is rich in hydro-carbon. Human milk is poor in this element. The chick breaks the shell and walks away. The robin leaves the egg with strength only to lift its head and open its bill. The hen's egg is generous in hydro-carbon, the robin's egg is poor. Hydro-carbon, so potent now to move the mills of Pittsburgh and Findlay, is the chief motor to start the very mills of life.

I am writing this paper in a blaze of illumination, and amid the hiss and roar of up-rushing gas, —a volume of noise almost equal to that of Niagara. I write in Findlay, whither I came to study natural gas. Humboldt said that, in South America, while gazing on a herd of llamas willing to be shepherded, he felt as one who was looking on the cradle of civilization. Looking out on the pyramids of flame which leap from the cleft earth, I feel as one who stands before the cradle of a new civilization. My thoughts turn first to the past. This which I am seeing is no new thing under the sun. Plutarch tells us that, in Ecbatana, Alexander "was much surprised at the sight of a place where fire issues in a continuous stream from a cleft in the earth." Hydro-carbon flows up in a chain of springs along the margin of the Dead Sea, and, mingling with its waters, makes them heavy and bitter and vile. It bubbles up through the sea off the northern slope of Vesuvius. It oozes from clefts in the strata along the coast of California, from Santa Barbara to San Diego. Along this coast, in ages past, its flow formed lakes of asphalt. On the coast of Venezuela, between the Cordilleras and the Rio Zulia, is a region called "The Infernal." Columns of steam break up through the sand with a roar like that which I am hearing now from the "Hargwell." Gas rises with the steam, ignites, and flashes like weird lightning among the dark treetops.

The classic land of nature's oil and gas is a peninsula, which juts from Persia into the Caspian. The Apsheiron, from its base in the Caucasus to its terminus in the sea, is a high sandy plain, blackened with oily exudations. Here and there from clefts in the Caucasus, and here and there all over the plain, gas streams up in pyramids of flame. Here, the wonder of the early Persian was exalted to worship, and flame became the symbol of Deity. Here, the Gueber built his fanes; and here he worshipped the "Unknown," —the fire he did not understand. "The eternal fires of Baku," burning in the days of Zoroaster, are burning to-day. Moore's description of this wonderland is not greatly overdrawn:—

"On the land side, those towers sublime,
That seemed above the grasp of Time,
Were severed from the haunts of men
By a wide, deep, and wizard glen. . . .
Like distant thunder, from below,
The sound of many torrents came,
Too deep for eye or ear to know
If 'twere the sea's imprisoned flow,
Or floods of ever-restless flame.
For each ravine, each rocky spire
Of that vast mountain stood on fire;
And, though forever past the days
When God was worshipped in the blaze
That from its lofty altar shone,
Though fled the priests, the vot'ries gone,
Still did the mighty flame burn on,

Through chance and change, through good and ill,
Like its own God's eternal will,
Deep, constant, bright, unquenchable!"

Time was when these natural fires impressed all men who saw them with awe, and gendered superstitions, not always so innocent as fire-worship. Victor Hugo has Torquemada, the inquisitor, point to the eternal fires of Apsheron and fitful fires of Vesuvius, and say, "This world is a hideous roof, pierced here and there and everywhere by graves, through which falls into the eternal hell a ceaseless rain of souls"; and Torquemada tried to cauterize hell with the inquisition. *Similia similibus curantur.*

Plutarch says that "the manner of the production of this naphtha admits of divers opinions." We think not.

Carbon, essential to every form of life, itself is the product of life. Let us see what is going on in nature to-day. Everywhere under the air, the world is wasting away. Everywhere under the sea, the world is building anew. Rivers pour into oceans the waste of continents that are, the seeds of continents to be. These sediments, all save the sand, which she throws down as a fringe along her shores, the ocean holds for her myriad mouths, which will lay them to rest in new rocks. Between rocks that are and rocks to be, the go-between is a mouth. Between rocks that were and rocks that are, the go-between was a mouth. Low forms of plant life, called diatoms, swarm on the face of the polar sea, encase themselves in its silica; and, at death, the white sculptured cases fall to the bottom. The floor of the polar sea is as white with diatoms as the face of the polar land with snow. These diatoms will form rock like that which yielded oil to the Greeks at Zante.

Between the polar circles, the sea swarms with low animal forms, called rhizopods, or ray-streamers. Like the low plant, this low animal is encased. It takes lime from the sea, and houses itself in a shell of many patterns. Ray-streamer dies, and atoms of silica, potash, and iron filter through the perforations of the shell, unite, and form a cast which falls to the sea bottom. Put the dredge down through the sea where the depth ranges from three to twelve hundred feet, and you will bring up the casts of ray-streamers. These casts will form green sandy marl, like that of New Jersey, or "gault," like that which underlies the chalk of England. Put the dredge down through depths ranging from eighteen hundred to twelve thousand feet, and you will bring up a cream-colored ooze. This is composed of ray-streamer shells, not the casts of shells. It will become chalk or white marble. Let your dredge drop now through the abysses of ocean. It will bring from the abysmal world a brown-colored ooze. This is formed of the skeletons of rhizopods and other low organisms, after a portion of the lime has been dissolved away. This ooze is material for shale, or slate. Explore the shallow bed of tropic seas, and you will find the myriad polyps taking lime atoms from the water, and building them into limestone. *All sea-male rocks have been through the mill of life.*

Now, these rock systems attain a thickness, in the Alleghanies and Rockies, of forty thousand feet; in the Ohio and Mississippi Valleys, of four thousand feet. Diffused through these rocks is a portion of the carbon which once throbbed in living tissues, that made the rocks. The system of shale called Huron underlies almost all of northern Ohio, and attains a thickness of three hundred and fifty feet. Ten per cent. of this ooze from the abyss of a palæozoic sea is carbon from tissues of palæozoic life. The gas wells of Findlay probe a deeper rock than this. It is the Trenton or Cin-

cinnati limestone. The carbon of what Gladstone calls "the first water population of the globe" leaps up in these wells of Findlay, invisible in the embrace of hydrogen, to give heat and light to men. When was formed its union with hydrogen? On the answer Nature gives to this question may hang an impending revolution in the genesis of force.

In studying the silver mines of Leadville, I was impressed more by Nature's failure than by her success. Over a floor of limestone lies an immense bed of porphyry, the original matrix of all the silver in the mines. The porphyry was once covered by a lake whose waters held chlorine, the residuum of a more ancient sea. The water, percolating the porphyry, leached out the lead sulphide with its contained silver, and carried them down to the more impervious floor of limestone, where it left them as lead carbonate and silver chloride. But the process of leaching was arrested. The porphyry still holds in a state of diffusion not less than five billion dollars of silver. This is a measure of Nature's shortcoming in the process of mine-making. It is the residuum left after the close of a process. Is the carbon diffused through shale and limestone analogous to the silver diffused through Leadville porphyry?

When we think of the enormous flow of oil and gas from the Apsheron, and when we remember that this flow has been continuous from the day of Zoroaster till to-day, we can hardly conceive of the source as a fixed reservoir. The carbon diffused through the strata is a reservoir from which Nature, by percolating waters, is all the while drawing. The genesis of hydro carbon must be a continuous process. We know what that process is. We know that seaweed or sarcode of jelly-fish, imprisoned with hot water in a retort, will break the bond which held the gases together, take hydrogen, and form gas or oil. Now, of all the water that falls on the earth, not more than one drop out of four finds its way back to the sea in the surface circulation. The rest goes down, a portion goes deep. There it becomes thermal, and is under pressure. Thermal water under pressure is a universal solvent. Water not thermal, if it carries alkaline carbonate, is a universal solvent. Such percolating water may leach the carbon diffused through the rocks, and carry it down where Nature has the laboratory heat to distil the two into hydrocarbon. Nature in this, her gas, is not a mere *fact*, but a *factor*. As long as she has one element diffused through the globe's crust, and another through the ocean's, she may continue her gas-making.

I have said that, in presence of these gas wells, I feel as one who might be standing before the cradle of a new civilization. We have found Enceladus. Slain by Jupiter, he was buried deep in the earth, where he lived again with fettered limbs and breathed out jets of flame on the world above. We have broken his fetters, and he comes up an ethereal giant to help men to better ways of life. In this little city of Findlay, the grosser forms of fuel are unknown. Housekeeping has lost half its terrors. Turn a faucet, strike a match, and your house is heated or lighted,—no ashes, no smoke, no soot. Enceladus will emancipate us from the demon of soot, evoked when we evoked coal from the mine. When you approach a city, the first herald to greet you is a veil of pollution in the sky. From one of her highest towers I have looked down on Chicago. Here and there, through a rift in the curtain of soot, I saw a fleck of liquid mud and smoke called "the river," here and there a grimy spire, and here and there, through the gloom, the smirched walls of her marts of trade. I have stood on a bluff overlook-

ing Pittsburg. I saw neither spire nor roof nor wall, but swirls of soot up-wreathing, out-spreading—a tremulous sea of soot, with rifts here and there through its billows, revealing the glare of a furnace flame below. I have seen Sheffield and Huddersfield and Halifax and Leeds begrimed with soot and canopied in soot. Over as fair a land as ever sprang into verdure to greet the sun, I have seen the air so foul with grime that trees aborted and grass withered. I have noted the pale faces of those who toil under this soot-laden, ozone-wanting air. The soot cloud challenges science on the triple score of wasted force, of shattered health, and of marred beauty. Emancipation is coming through gas. Once emancipated, a city will never return to that beggarly element called bituminous coal. Even if our ethereal Enceladus has not come to abide, he has already stayed long enough to teach us a lesson. He has taught us that gas is to be the fuel of the future. The gas from a ton of coal will do more than twice the work of the coal itself. We want the *spirit*, not the body. The time is not far off when not a ton of bituminous coal will be burned in a city or village. We will distribute heat as we now distribute light, from one communal coalbin.

CORRESPONDENCE.

THE VISIBLE AND INVISIBLE FORCES.

Editors of The Index:—

On this chilly, uncomfortable day, I am reminded, by the subtle fragrance from my sofa pillow, filled with the buds of the old fir balsam, of mild sea breezes and of aromatic odors from the fir-crowned bluffs overlooking the white beaches of Maine's rugged and picturesque shores.

Questioning of the visible to the outward-looking sight, and the invisible, except to the internal vision, I ask, What is this pungent perfume which these buds, encased in their silken envelope, convey ceaselessly to my sense of smell? I take a delicate piece of lace from my drawer, and find it strongly impregnated with the attar of rose, one tiny drop of which fell on it long years ago.

"You may break, you may shatter the vase, if you will,
But the scent of the roses will hang round it still."

One pressed blossom of the sweet jasmine, enclosed in a letter, crosses ocean and continent. The envelope is opened in a distant German city, and immediately the room is filled with the sweet aroma of the silvery petals of this poetic flower; and he to whom the letter is sent immediately sees before him, instead of his studio, a room in a cottage in his native land,—the home circle, the plant-filled window, and the climbing jasmine, with its gleaming starry blossoms.

Science tells us that no smell can be perceived, unless particles from the substance containing the odor touch the olfactory nerves. Giving out ever of themselves, and never exhausted, where do the buds and leaves of the balsam obtain their supplies? More wonderful and real are the *invisible* forces of nature than those we can see with our eyes and touch with our hands. By what secret alchemy do the sweet-smelling flowers and leaves manufacture from the surrounding elements the fragrance they are ever emitting, and which lingers still in their faded leaves and petals? There is also the physical aura, which emanates from all animals, men, and brutes,—that by which the dog can perceive and follow his master's footsteps, which makes persons physically agreeable or disagreeable, and warns animals of the approach of enemies. Even more sensibly felt is that *spiritual* aura, or photosphere, which, seemingly independent of the physical system, makes itself manifest in that subtle influence which is termed magnetism. Why do we feel the presence of differing characters in a room? We cannot be indifferent to them; and, "if we do not hate or dread them, we must feel their very shadows agreeable." What strength, what inspiration, some people bring into your presence! What is this? A something name-

less, invisible, potent for good, reaches you: you feel it, know it, and rejoice.

There is also a power, a magnetism, we may call it, which has an opposite effect from this strengthening, lifting, purifying influence. If it does not persuade you to wrong thoughts or deeds, it depresses you, makes you uncomfortable in the society of those from whom it proceeds. Among flowers there are some which emit an odor as repugnant as that of the rose or the lily is sweet and agreeable. Some animals have a sickening, disgusting effluvia, which has a repelling effect on all who approach them. Thus there are in the vegetable, and also in the highest and lowest orders of the animal kingdom, opposite states of physical magnetism. The same is true, as we have seen, in the moral and mental intercourse of human beings,—some elevating, inciting to pure thoughts and deeds; and others, if not repelled by the higher moral and spiritual nature of those they come in contact with, debasing and incentive to evil.

Not only from individuals themselves, but from their productions,—books, paintings, statuary,—this all-pervading force for good or evil is given out. It has been truly said that "genius never dies." Ever acting, ever creating new thoughts and impulses in those who read and study his works, the author may, with truth, be said to be immortal. "The man of genius is he who has discovered a real law, and who, consequently, possesses an invincible force of action and direction. He may die at his task; but what he willed will go on in spite of his death, and often because of his death." This law which governs these seemingly mysterious agents in the manifestations of occult powers is, according to the theory of some philosophers, that of magnetic currents, or, in other words, the astral light or soul of the earth.

In order to counteract all vicious influences, we must surround ourselves and children with everything of an opposite character, that all these magnetic currents may impel us in the direction of justice, truth, and purity. Many sad effects of not understanding and obeying these laws we find in historical facts and in the daily record of human life. "Jean Jacques Rousseau was led to the most tragic act of his life—the abandonment of his children—by the magnetic current of a circle of libertines and the magnetic current of the banquet table." It is said that "enthusiasm produces a magnetic current, and is preserved and increased by it." This, if true, explains the contagious excitement which spreads from one to another in all great gatherings, religious, political, or patriotic.

It is important, then, that we should be enthusiastic in a right direction, and in a worthy cause. For this, we should choose books, studies in art and nature, friends and society for ourselves and our children, which will attract the magnetic currents that will increase and perpetuate our enthusiasm in everything elevating and purifying, in all that will give the moral and spiritual forces the predominance. For this, schools for ethical culture or classes in all schools for this study are needed. The lives of men and women of great moral and intellectual excellence should be studied, as examples for guidance and inspiration.

The love and interest manifested in the researches of science, especially in natural history, have a very refining effect, of which we have abundant proof in the known purity, honesty, and sincerity of those who have devoted their lives to this pursuit.

At this time there is a wide-spread interest awakened in behalf of our wild song-birds, whose melodious music enlivens the solitude of our forests, and adds so much to the pleasures of life in rural towns and cities. Attention to this wholesale destruction—which the greed for money, the selfish love of gunning for sport, and the tyrannical demands of fashion, has caused—needed only to be called forth, when hundreds of women, who had *thoughtlessly*, by the love of ornamentation natural to their sex, been helping this cruel warfare, pledged themselves never to wear another bird, wing, or feather for decoration. May the magnetic currents increase and perpetuate this enthusiasm till there will be no birds or wings displayed in the windows of millinery establishments, when a woman will be ashamed to be seen wearing any ornament which has been purchased by the murder of one of our most captivating and innocent songsters! We hope that such a public sentiment shall be created by the discussion of this sub-

ject that a man found in the woods with a gun, for the purpose of shooting birds or other harmless animals, will have to pay a sufficient penalty for his violation of law to deter him from ever again engaging in this cruel, inhuman sport. May mothers so instruct their boys in this branch of ethical culture that they will never be found in the unmanly, degrading pastime of robbing birds' nests of their eggs or of their little helpless offspring, so dear to the mother bird's maternal instincts!

R. F. BAXTER.

A LABORER'S VIEW OF LABOR QUESTIONS.

Editors of The Index:—

The articles from J. V. Blake and T. W. Curtis in a late issue of *The Index*, setting forth their respective views on the rights and wrongs of labor, and the sphere in which labor organizations should operate, are at the present time full of interest to the thoughtful candid inquirer. No intelligent person, whose mind, if freed from all bias, will, I think, deny to laborers the right to combine for mutual protection, —not for the purpose of discouraging legitimate enterprise or antagonizing the interests and welfare of their employers, but for a better understanding of their interests and for a fuller recognition of their rights as free men.

Mr. Blake's imaginary conversation with a member of a trades-union does the latter, I think, an injustice, in assuming him to defend the right of workmen to destroy property, when their demands are not acceded to. Few such things have been done during labor troubles, but are the work of a disorderly, law-ignoring element, which labor organizations are seemingly powerless to control. Wanton destruction of property by dissatisfied workmen has never been sanctioned by labor organizations with which the writer has had any connection. To hold an organization as such responsible for acts of violence which the few who cannot curb their passions commit is ungenerous, to say the least. While I think labor organizations make a great mistake when they order a suspension of work for no other reason than that the employer refuses to discharge from his employment men who will not become members of the association, yet I think it would be better for the employer if he would encourage his men to connect themselves with unions conducted by clear, cool-headed men, rather than sustain them in their opposition to that which would doubtless benefit both. The feeling of hostility expressed by some employers of labor at any effort at combination among their workers belongs to a past age, and is, I am pleased to observe, rapidly dying out. That some employers have not only discouraged organization among their men, but have made employment conditional on a forced pledge not to connect themselves in any way with workingmen's associations, cannot be disputed; and there can be no question but pursuing this foolish tyrannical policy has been the cause of much of the strife and general discontent manifested in the industrial world at the present time. What bids fair for a more peaceable settlement of labor difficulties in future is the different attitude assumed by the employing classes. Throughout nearly every department of industry, employers are realizing that, by intelligent combination on the part of their workers, holding friendly conferences from time to time, unifying their interests, and that by bringing each other nearer together in their relations, a better understanding will be reached. The animosity that feeds the fires of conflict will be buried, and in its place will spring up a sympathetic feeling, that will respect each other's rights, and combine to advance each other's interests.

Neither can I accept the statement made by Mr. Curtis, that the "employé has been willing to arbitrate, and the employer has not." My experience as a laborer leads me to believe that the great mass of working people are strangers to the principle of arbitration. Arbitration is the peace principle. It aims at adjusting the differences that arise between labor and capital, by the exercise of reason and intelligence, instead of stupidity and brute force. It recognizes that the brain is mightier than the bayonet. The people, lacking to a large extent this brain quality, and accustomed more or less to the brute form of warfare, it stands to reason that they have not as yet been sufficiently disciplined in the spirit of adjusting in a peaceable manner their disputes.

With the majority of work-people, comparative strangers to the principle of arbitration, it is absurd to suppose that they can apply it.

They have neither the power to apply it themselves nor the patience to wait till others apply it. I know from experience in labor difficulties, in which I have taken a part, that, had arbitration been proposed, or, when proposed by the employers, the workmen had accepted it in good faith, an understanding could have been reached, and, no doubt, the trouble avoided. It is true, also, that employes have at times refused to submit their case to a board of arbitration. This serves to indicate that such people are still in a state of ignorance in regard to the operation of such principles. It must be said, to the credit of working people, that they are rapidly evolving from their old, obsolete methods of dealing with labor problems. They are opening their eyes to the fallacy of keeping up a perpetual warfare on capital. They find that capital and labor must act in harmony, in order to prosper. And to effect this, the principle of arbitration will have to be adopted in future. Strikes and lockouts, with all their concomitant afflictions, will have to cease; otherwise, the toiler's future is without a hope.

Many surface indications point to a time in the near future, when labor troubles will be adjusted in accordance with *reason, justice, and human love*. President Cleveland's recent message to Congress, in which he recommends the creation of an arbitration commission, for the purpose of collecting necessary information, and adjusting, when possible, the differences that arise from time to time between capital and labor, thereby tending to remove the conditions which foster strikes, strife, and general discontent, is wise; and, at the present time, it is extremely necessary that some action should be taken immediately in reference to it. It is to be devoutly hoped that the men paid for making our laws, and protecting the welfare of society generally, will give this most important measure their early and judicious consideration.

We have not as yet reached that desired stage of social evolution dreamed of by some enthusiasts, when the lion and the lamb shall lie down together. The time has not yet come when labor and capital are prepared to forget past and present grievances, and shake the hands of peace and friendship over the bloody chasm of bygone conflicts. But the time has come when the intelligence of the age demands that other and more peaceful methods be tried in the settlement of labor disputes.

While society continues to be divided into two great factions,—the employed and employing classes,—different opinions regarding the line which separates the rights and interests of each will assert themselves. And, if those differences are not sought to be adjusted in the proper way and in the proper spirit by the parties directly concerned, we shall have in the future—as we have had in the past—a painful repetition of fierce conflicts, the nature of which makes us shudder even to contemplate. It must be acknowledged that capital on the one hand, with its greed and insatiable spirit for gains, and labor on the other, with its numerous wants and lack of discretion, have each committed errors, and acted at times in a most stupid manner; and, to avoid the blunders of the past, it becomes the representatives of those important interests to act at all times in a considerate manner. Let each be absolutely just in giving due weight to the evidence on each side, exercise more reason and less dogmatic authority,—in short, recognize that each has rights that should be considered; and differences, when they do arise, if approached in a broad, humanitarian spirit, will be more easily and more speedily reconciled.

DAVID ROSS.

SCIENCE AND MATERIALISM.

Editors of The Index:—

On looking over one of our leading religious journals the other day, I was startled from my customary quiet mood by words more common in "blood and thunder literature" than in philosophical writings. "Science has dealt materialism its death-blow," were the words which, in one of the periodicals, caught my eye. "Materialism is ruled out, gone by, relegated to the limbo of discarded crudities," etc., appeared in prominent characters. "Religion has disbelieved and denounced materialism for ages."

continued the narrator. "She has been haunted by it as by a ghost, which all her conjurations could not lay," etc. And here a little bit of consolation is thrown in; and then we are told in truly solemn words that "there is a sort of grim irony in the fact that, while Religion has always been stigmatizing science as materialistic, she herself has never been able to demonstrate the opposite of materialism, but has had to wait for science to do it for her; and this (magnanimous murder) science has at last done."

Rev. M. J. Savage, who is the writer of the article from which I have quoted, plainly conveys to his readers the impression that his statements are backed by the authority of Tyndall. But the paragraph from which Mr. Savage quotes contains not the slightest allusion to any combat between science and materialism; in fact, they are never placed as antagonists to each other. And I will venture to say that, in all Tyndall's writings, not a sentence implying any such antagonism can be found. On the contrary, for more than twenty years Tyndall has been the stanch defender and upholder of materialism, and is so to-day. Who, twelve years ago, delivered that notable address at Belfast, which provoked wrathful criticism of the whole religious world, on account of its outspoken materialism? And who was it that Rev. James Martineau denounced in such earnest and unmeasured terms for delivering this same address? Was it not this veritable Tyndall? What authority has Mr. Savage for saying or presuming that Tyndall has so far turned round as to oppose to the very death a principle he held with the greatest determination ten years ago? Has Mr. Savage some recent information from the distinguished physicist? I should certainly think so, were he not so given to mentioning the names of scientific men, and making them unwarrantably stand sponsor for his statements.

For instance, when he reads in Tyndall (p. 211) that, "so far as the eye of science has hitherto ranged through nature, no intrusion of purely creative power into any series of phenomena has ever been observed"; "that both life and its conditions set forth the operations of a Power utterly inscrutable to man: we know not its origin, we know not its end,"—Mr. Savage straightway prepares an article for the *Unitarian Review*, announcing that, "within this generation, for the first time in the history of the world, science has given to religion a temple,—a universe-house" (with ample offices, anterooms, and outbuildings, etc.),—"whose builder and maker is God."

In like manner, Spencer declares that "we are incapable of comprehending that which is behind appearances." Nevertheless, Mr. Savage tells us with the utmost confidence that "the form, behind and manifested in and through what we call matter, is really spirit." Spencer's "causal agent, and posited not to be known at all," is really, according to Mr. Savage, the best known and the most prominent object in the universe. Such is a sample of Mr. Savage's tactics in dealing with these men!

But this is not the extent of his waywardness. In his treatment of the passage on which he bases his attack on materialism, and to which I wish to call special attention, he has garbled a quotation; and, on this garbled quotation, he bases the charge of "incompetence," on which he ultimately deposes materialism from her legitimate position; whereas, the passage, in its original entirety, places both science and materialism in the same category. "If materialism [says Tyndall] is confounded, science is rendered dumb." I quote from the second volume of *Fragments of Science*, sixth London edition, 1879.

"Materialism, therefore [says Tyndall], is not a thing to be mourned over, but to be honestly considered; accepted if wholly true, rejected if false" (p. 221). "It ought to be known and avowed that the physical philosopher, as such, must be a pure materialist. His inquiries deal with matter and force, and with them alone" (p. 72). "As regards knowledge, physical science is polar" (p. 52). "It is the advance of [this] knowledge that has given a materialistic color to the philosophy of our age" (p. 222). "We may fear and scorn materialism; but he who knew all about it, and could apply his knowledge, might become the preacher of a new gospel" (p. 221). "Through our neglect of the monitions of a reasonable materialism, we sin and suffer daily" (p. 224). "The practical monitions are plain enough which declare that on our dealings with matter depends our well

or woe, physical and moral" (p. 223). "It is our duty not to shirk—it ought rather to be our privilege to accept, the established results of physical inquiries; for here, assuredly, our ultimate weal depends upon our loyalty to truth. Is mind degraded by this recognition of its dependence [on matter]? Assuredly not. Matter, on the contrary, is raised to the level it ought to occupy, and from which timid ignorance would remove it" (p. 221). "Matter is not that empty capacity which philosophers and theologians have pictured it, but the universal Mother, who brings forth all things as the fruit of her own womb. Nature is seen to do all things spontaneously, without the meddling of the gods" (p. 193). "Matter I define as that mysterious thing by which all that is, is accomplished. How it came to have the power which it possesses is a question on which I never ventured an opinion" (p. 193). "I discern in matter the promise and potency of all terrestrial life" (p. 251). "Does life belong to what we call matter, or is it an independent principle infused into matter at some suitable epoch"? (p. 131). "There does not exist a barrier, possessing the strength of a cobweb, in opposition to the hypothesis which ascribes the appearance of life to that 'potency of matter' which finds its expression in natural evolution." "Divorced from matter, where is life?" (p. 192). "To man, as we know him, matter is necessary to consciousness" (p. 192). "Every meal we eat, and every cup we drink, illustrates the mysterious control of mind by matter" (p. 50). "If these statements startle, it is because matter has been defined and maligned by philosophers and theologians (who were ignorant alike of its mystical and transcendental powers)" (p. 51). "Two courses, and two only, are possible: either let us open our doors freely to the conception of creative acts or, abandoning them, let us radically change our notions of matter" (p. 191). "Without this total revolution of the notions now prevalent, the evolution hypothesis must stand condemned" (p. 133). "If we look at matter as defined by our scientific text-books, the notion of conscious life coming out of it cannot be formed by the mind" (p. 191). "Spirit and matter have ever been present to us in the rudest contrast: the one as all noble, the other as all vile. But is this correct? Upon the answer to this question, all depends" (p. 133).

After referring to the lives and sentiments of some such men as Holyoake, called atheists and materialists, and comparing their conduct and sentiments to some religionists, Tyndall sums up by saying, "It may comfort some to know that there are among us many whom the gladiators of the pulpit would call atheists and materialists, whose lives, as tested by any accessible standard of morality, would contrast more than favorably with the lives of those who seek to defame them" (p. 368). "If I wished to find men who are scrupulous in their adherence to engagements, whose word is their bond, and to whom all moral shiftiness is a stranger, I should seek and find them among the atheists and materialists to which I refer" (p. 369). So much for Tyndall. I reserve for another letter some remarks in regard to Huxley's position.

W. MITCHELL.

THE NORTHERN AND SOUTHERN VIEW.

Editors of *The Index* :—

In an editorial note of May 6, accusing the Southern people of "an absence of good taste and of wisdom, if not of fealty to the government he sought to destroy, in the recent honors showered upon Jefferson Davis," your paper makes several statements that were upheld by the North during and after the war, but were always exactly opposite to the opinions of the South. As the welfare of each section was then involved in these subjects, it is reasonable to infer that neither was in a condition fairly to see their truth or falsity. But, now that they have not been investigated for twenty years, and both North and South can afford to admit their mistakes, it seems as though it should not be unpleasant to look at both sides of the contradictory beliefs. I now quote the statements referred to, and follow them with the Southern views.

1. "Jefferson Davis recently described the attempt to found a Southern Confederacy as the 'glorious dream of idealized liberty.' And yet, of that Confederacy, human slavery was to be the corner-stone."

When investment in negroes ceased to be remun-

nerative to the North, she disposed of all her slaves to the South, and then demanded their emancipation, without offering to pay for those she had sold. Slavery embraced nearly all the wealth of the South; and, to save it, she tried to establish a separate government.

2. "He [Davis] refers to the Rebellion as a 'holy war of defence,' when he knows that it was offensive against the Union from its first act of aggressive warfare,—the firing upon Fort Sumter."

The only way to induce the majority of the Northern people to consent to a hostile invasion of the South was to make the Southerners appear to desire war by firing the first gun. Secretary Seward accomplished this important design at Fort Sumter. He constantly assured the South, through Judge Campbell, that Sumter was to be evacuated; while President Lincoln was sending down a large number of soldiers to re-enforce it. The South did not wish to have war, and only fought in self-defence.

3. "Only by the wonderful magnanimity of the nation he had sought to divide were his life and liberty spared at the close of the war."

Davis was kept in prison over two years, while his trial for treason was being delayed. The reason that the intended trial was finally abandoned was because it became evident that, if the subject was fully discussed, the world would decide that he was not guilty. He owed allegiance to the State of Mississippi. When the State seceded, he was no longer a citizen of the United States. As Alexander H. Stephens plainly proved, no Union would ever have been formed, if it had been understood that States that joined could never withdraw; and three of them, in their ratifications, stated that it was the understanding that, if at any time their welfare should appear to demand that they should abandon the Union, they would have a right to do it.

A. E. BLACKMAR.

NEW ORLEANS.

"SIN" ONCE MORE.

Editors of *The Index* :—

Among those who see the great need of reform in the orthodox theology, some individuals show a special repugnance to the word "sin," seeming to suppose that it necessarily includes the Calvinistic notion of an inherent enmity to God and goodness in every human being. Mr. John Cotton Dana, in his two articles, in many respects admirable, in *The Index*, May 13 and 20, seems to understand by sin "a love for that which is wicked simply because it is wicked." He seems, however, to admit the existence of wrong doing, of evil desires impelling to evil deeds and leading to the actual commission of evils deeds. When such wrong doing violates human laws, it is called crime; and a voluntary act consciously impairing the welfare or violating the rights of one's fellow-beings or one's self, whether contrary to human law or not, is what I understand by "sin." What I mean by sin is wrong doing in its relation to God,—not to such a God as Mr. Dana argues against, "manlike in his love and hate," and with a personality including the limitations and deficiencies of man's personality, but to Him who purposed that unceasing purpose which runs through the ages.

We may agree with Mr. Dana in refusing to regard evil conduct as something which can always be "entirely repressed" by those who are moved by it, and yet we may distinguish the very numerous cases in which such repression can be effected by following the higher impulses and resisting the lower. When Ovid saw and approved the good, and yet followed the evil, I understand him to have committed sin and incurred responsibility; and I think the signification of the word "sin," thus interpreted, is one which we cannot afford to lose from the English language. The act of stealing or of getting drunk, after a deliberate consideration of the reasons for and against, seems to me to be the commission of sin; and I do not see why the erroneous teaching of Calvin and the Westminster Assembly should prevent my calling it so. If, to take Mr. Dana's own concession, "we conscious beings can so guide our ship as to escape many a stranding and many a hurt in the shoals and rapids of life's stream," the deliberate neglect of such guidance is one of the things I recognize as "sin"; and I do not see how it can be shown that he who thus neglects is not responsible for it to himself and to God.

Again, Mr. Dana seems to me to misstate, when he

says that the person about to act must determine his choice, if by reference to anything at all, "by reference to his belief as to God's command, and to nothing else." On the contrary, his reference in most cases is to what is pleasant on one side and to what is right on the other. And the deliberate choice of the pleasant in violation of the right is what I mean by sin. The offender's self-condemnation when, after the act, he no longer feels the temptation, seems to show his recognition of the fact that he could have chosen the better part, and therefore ought to have chosen it. He thus admits his guilt. And, if this internal decision shows him responsible to his own conscience for right behavior under temptation, he may well also consider himself responsible to a just God, whose rod as well as his staff is used for the benefit and permanent welfare of his children. The recognition of such a Divinity by no means implies belief in the reality of the Moloch of the Ammonites, the Jehovah of the Hebrews, or that uglier idol described in the catechism of the Westminster Assembly.

C. K. W.

For *The Index*.

TO —.

More brave than Cæsar, thou hast felled a foe
That bade thee cast thy manhood to the dust;
More wise than Bacon, thou hast followed slow
The oracle the markets name the Just.

Upon life's sea they sought to lead the way
To ports abhorrent ere thou fittest unrest:
Ah! thou wert watchful of the coming day,
And bared thine honor to the sullen test!

The lips of tempest closed when thou wert brave;
The waters hushed, as though to spare thee pain;
They who had feared to lose thee now could save,
And what seemed discord touched a magic strain.

The days of honor usher to our doors
The tempter golden with the pride of state:
The heart that labors upward never pours
Its treasures lowly by the market gate.

Thy lips refused to pass the word of wrong,
Thy heart smote all temptation and all lust;
The doubt that came to see thee kneel, along
A wondrous path was taught a higher trust.

The life of man is writ on scrolls of flame,
And many loved of earth of gods get hate:
I seek unheeding souls whom gilded fame
Hath bent before, when long compelled to wait!

HORACE L. TRACBEL.

A CORRESPONDENT finds the following interesting document among his papers:—

"Dear Sir,—I can influence you either the LL.D. or Ph.D. degree from a highly respectable University in America at the total expense of £20, including the handsome diploma on vellum and certificate of registration. Or I can let you have both the Ph.D. and M.A. degrees on one diploma for one single fee. I can get you examined in London. There will be no difficulty about that. Waiting your reply, I remain, dear sir, yours faithfully," etc.

We suppress the name of the vender of these bogus diplomas. Our correspondent hopes that this and similar swindles are now numbered with the iniquities of the past. We know they are,—and with the iniquities of the present time also. "Non est ad astra mollis a terris via." So said Seneca, but this age is more accommodating.—*The Inquirer* (London).

NEVER defend an error because you once thought it truth.—*Franklin*.

Do not think of the sacrifice thou dost make:
Think of the prize, the goal that's to be won.
—*Schiller*.

THE wider the intellect, the larger and simpler the expressions in which its knowledge is embodied. The inferior race, the small-minded individual, live in the details which, to larger minds and more advanced tribes of men, reduce themselves to axioms and laws.—*O. W. Holmes*.

WHATEVER a man may pray for, he prays for a miracle. Every prayer comes to this: "Great God, let twice two not make four." Only such a prayer is a real prayer, face to face. To pray to the Spirit of the universe, to the Supreme Being, to the abstract, unreal god of Kant or Hegel, is impossible, unthinkable. But can a personal, living, imaginable God make twice two other than four? Every true believer must answer, "Yes, he can." And he is obliged to convince himself of it. But what if his reason rebels

against such nonsense? Then Shakspeare comes to his aid: "There are more things in heaven and earth, Horatio." But if you seek to controvert him in the name of truth? He has merely to repeat the well-known question, "What is truth?" And so let us eat, drink, and be merry,—and pray.—*Ivan Turguénief*.

BOOK NOTICES.

SCRIPTURES, HEBREW AND CHRISTIAN. Arranged and edited for Young Readers as an Introduction to the Study of the Bible. By Edward T. Bartlett, A.M., Dean of the Protestant Episcopal Divinity School in Philadelphia, and John P. Peters, Ph.D. Vol. I. New York and London: G. P. Putnam's Sons. 1886. pp. 545. Price \$1.50.

The editors of this compilation of Scriptural history intend to follow this volume, which relates only to Jewish history, from the creation to the Babylonian captivity, by a second and third. The second volume will treat of the story of the Jews from the exile to the time of Christ, and will also give the Hebrew laws, customs, and literature. The third volume will give selections from the New Testament. Bible phraseology is used, but with considerable condensation and rearrangement, in order to systematize and simplify the narrative. The "object of this work is to serve as an introduction to the study of the Bible," and to furnish a sufficient clew for the guidance of the ordinary Bible reader and student. The present volume is divided into four parts: Part I. being the "Hebrew Story, from the Beginning to the Time of Saul"; Part II., the "Kingdom of all Israel"; Part III. treats of "Samaria, or the Northern Kingdom"; and Part IV., of "Judah, from Rehoboam to the Exile."

MRS. BURNETT's fascinating "Little Lord Fauntleroy" continues in the June *St. Nicholas* to deepen the reader's interest in a character scarcely second to Dickens' *Paul Dombey* in charm of portrayal. J. T. Trowbridge begins one of his characteristic stories for boys in this number, entitled "The Kelp-Gatherers." "A Boy's Camp" is described by one of the campers. Horace E. Scudder writes about "George Washington." "The St. Nicholas Dog Stories" series gives five well-told stories of intelligent dogs. "Fishes and their Young," by C. F. Holder; and the description of Paris, given by Frank Stockton, in his serial "personally conducted,"—are brimful of useful information.

THE *Art Amateur* for June is specially devoted to decorative art, and the amateur in this department will find abundant wealth of suggestion for all sorts of work. The decoration of the library is fully considered, and the very practical lessons on the Art of Embroidery are continued. The Boston correspondence gives a eulogy on the late distinguished architect, Mr. Richardson; and we have accounts of the Paris Salon and the Impressionist Exhibition. Amateur photography gets its full share of attention. It is a useful number, more interesting to the practical artist or designer than to the general public; but it is well worth the reading.

THE handsome frontispiece, "Preparing for the Feast of Dolls," in the June *Wide Awake*, is designed to illustrate Prof. Edward S. Morse's piquant article in the same number, on "Japanese Boys and Girls." Sarah Orne Jewett tells a thrilling story in verse of "York Garrison" in 1640, very fully illustrated. "The Royal Girls," sketched by Mrs. Sherwood for this month, are the three Danish princesses: Alexandra, Princess of Wales; Dagmar, wife of the Russian Czar; and Thyra, Duchess of Cumberland. A biographical sketch of Dante is given, also one of Henry D. Thoreau, with a portrait of the hermit poet of Concord.

JOHN BIGELOW contributes to the June *Century* interesting extracts from twenty-four hitherto unpublished letters of Benjamin Franklin; and the frontispiece of the number is a portrait of Houdon's bust of the philosopher, showing a strong characteristic face. A charming dialect story is "Meh Lady: A Story of the War," by Thomas Nelson Page. In the "Open Letters," E. R. Sill discusses the question, "Shall Women go to College?" and Washington Gladden, the "Labor Question." We have already called attention to Dr. Buckley's strong article, dealing with "Faith-healing and Kindred Phenomena."

AMONG the various topics considered by the contributors to the *Catholic World* for June, we have space only to call attention to the following well-treated and timely articles: "Trade Brotherhoods, Past and Present," by W. Seton; "The Royal Irish Constabulary," by an ex-Inspector; "Charms and Charm Medicine," by Mrs. L. D. Morgan; "Woman in Ireland of Old," by Charles de Kay; and "Day Nurseries in France," by L. Binssae. In addition to the longer articles, this number contains poems, stories, and "Book-chat." New York: Catholic Publishing Society.

POEMS for recitation, stories by "Pansy" and "Margaret Sidney," short sketches of Harriet Newell and of Josiah Quincy, with eight full-page and many smaller illustrations, several pages of "Pansy's" characteristic letters to the little ones,—these are a few of the attractions of the June *Pansy*. D. Lothrop & Co.

THE May number of the *Revue de Belgique* contains elaborate articles on co-operation, on the disposal of sewerage as a fertilizer, and on the negroes who dwell along the Congo.

A STUDY OF
PRIMITIVE CHRISTIANITY.

By LEWIS G. JONES.

8vo. 320 pages. Cloth, Gilt Top. Price \$1.50.

"No fairer statement has been made of the grounds on which the anti-supernaturalist humanitarian bases his opinion of Jesus and of the origin of Christianity. . . . Its theology and Christology are of the most radical Unitarian kind; but the temper and spirit of the book are so refined, so earnest, and so fair to all opponents, that it must impress those who are compelled to disagree with its most prominent conclusions as a model of polite and generous controversial writing."—*Brooklyn Union*.

Sent, post-paid, on receipt of price. Address
THE INDEX, 44 BOYLSTON STREET, BOSTON, MASS.

Bound Volumes of The Index
For 1871 and 1872

For sale at THE INDEX office, at \$2.00 per volume. A few complete sets of bound volumes of THE INDEX, from 1870 (Vol. I.) to 1885 (Vol. XVI.), inclusive, will be furnished at special rates.

TWENTY-FIVE SERMONS
OF
TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crapo.

PRICE \$2.00.

For sale at the bookstores. Also sent, postpaid, on receipt of price by

THE INDEX,
44 BOYLSTON STREET, BOSTON.

Lectures by Rabbi Solomon Schindler.

1. INTRODUCTORY.
2. TWO THOUSAND YEARS AGO.
3. THE CARPENTER'S SON.
4. JUDAISM THE MOTHER, AND CHRISTIANITY THE DAUGHTER.
5. A GENUINE MESSIAH.

As a special inducement to Liberals to distribute these lectures, which are full of radical thought presented in the plainest language, they are now offered at 5 cents each; 10 copies for 30 cents; 40 copies for \$1.00.

Address: THE INDEX, 44 BOYLSTON STREET, BOSTON, MASS.

The Religion of Philosophy;
OR, THE UNIFICATION OF KNOWLEDGE:

A comparison of the chief philosophical and religious systems of the world, made with a view to reducing the categories of thought, or the most general terms of existence, to a single principle, thereby establishing a true conception of God. By RAYMOND S. PERKINS.

For sale at THE INDEX Office. Price \$3.00.

CHEAP RADICAL TRACTS!

- No. 1.—*Truths for the Times*, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 5 cents; 30 copies, \$1.00.
- No. 2.—*Fear of the Living God*, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 3 cents; 20 copies, 50 cents.
- No. 3.—*Lecture on the Bible*, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 5 cents; 30 copies, \$1.00.
- No. 4.—*Christian Propagandism*, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extractions.* Price 5 cents; 30 copies, \$1.00.
- No. 5.—*"God in the Constitution"*, by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 5 cents; 30 copies, \$1.00.
- No. 6.—*"The Sabbath"*, by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 5 cents; 30 copies, \$1.00.
- No. 7.—*"Compulsory Education"*, by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 3 cents; 20 copies, 50 cents.
- No. 8.—*The Present Heaven*, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 3 cents; 20 copies, 50 cents.
- No. 10.—*The Impenitency of Christianity*, by F. E. Abbot. 5 cents a doz.
- No. 11.—*The God of Science*, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 5 cents; 30 copies, \$1.00.
- No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 5 cents; 30 copies, \$1.00.
- No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 3 cents; 30 copies, 50 cents.
- No. 14.—*A Study of Religion: The Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 5 cents; 30 copies, \$1.00.
- No. 15.—*The Battle of Syracuse*. Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 5 cents; 30 copies, \$1.00.
- Social Ideals**, by David A. Wasson. Price 5 cents each; 10 for 50 cents.

A WESTERN firm guarantees a wife to every man who purchases of them a suit of clothes. What this country needs is somebody to guarantee a suit of clothes to every man who gets a wife. —*Macon Telegraph.*

Mrs. THREESTARS was complaining the other day of the cruel fate which obliged her eternally to "make over her things." "Really," said the little woman, petulantly, "I never shall have anything new and fresh. Everything is always second-hand." "That's true, mamma," replied small Elsie; "and I've no doubt when you get to heaven you'll have to put on a pair of wings that have been left over, or didn't fit, or Aunt Jane was tired of wearing."

A RITUALIST clergyman, writes an old correspondent of ours, in catechising a class of Sunday-school children on the Apostles' Creed, asked them, "Where did Christ go after his death?" They replied, "To heaven." He then scolded them, and said, "Don't you know the creed says he descended into hell?" And by and by he asked them where would they go after death. "To hell, sir," they replied. The clergyman was horrified, and threatened to box their ears for giving him such a reply. But in justice his ears ought to be boxed for reading a creed which contains such nonsense. The answer of the children was surely a natural sequence to the teaching of the creed, and it proves how desirable it is to substitute "hades" for "hell."

PUBLICATIONS

OF THE
FREE RELIGIOUS ASSOCIATION.

Freedom and Fellowship in Religion.
A volume of ten essays upon speculative and practical problems of religion, by D. A. Wasson, Samuel Longfellow, Samuel Johnson, John Weiss, W. J. Potter, F. E. Abbot, O. B. Frothingham, J. W. Chadwick, T. W. Higginson, and Mrs. E. D. Cheney, and extracts from Addresses by Ralph Waldo Emerson, Lucretia Mott, Robert Dale Owen, Dr. Bartol, Wendell Phillips, Rabbi Wise, Horace Seaver, A. B. Alcott, Lucy Stone, Charles H. Malcom, Julia Ward Howe, and others,—all given on the platform of the Free Religious Association. Price (reduced) \$1.00.

Reports of Annual Conventions of Free Religious Association, from 1872 to 1879 inclusive. These contain essays and addresses by the various distinguished men and women who have spoken on the Free Religious platform, together with yearly reports of the Executive Committee. 10 cts. each.

TRACTS.

- II. *The Bible and Science*, by John Weiss.
III. *The Sympathy of Religions*, by T. W. Higginson. Enlarged edition.
IV. *Transcendentalism*, by Theodore Parker. Never before published.
V. *The Public School Question*, as understood by a Catholic American citizen (Bishop McQuinn), Cornell Univ Lib
VI. *How Shall We Keep Sunday?* Answer in Four Parts: 1. Sunday in the Bible. 2. Sunday in Church History. 3. Sunday in the Massachusetts Laws. 4. The Workingman's Sunday. By Charles K. Whipple, Minot J. Savage, Charles E. Pratt, and Wm. C. Gannett.

- VII. *Evolution and Religion*, by John Fiske. 5 cts.; ten, 35 cts.; one hundred, \$2.00.
Nos. II., III., IV., V., VI., 10 cts. each; ten, 60 cts.; one hundred, \$3.00.
Reason and Revelation, by W. J. Potter. 5 cts.; ten, 30 cts.; one hundred, \$1.50.

FREE RELIGIOUS ASSOCIATION,
44 Boylston Street, Boston Mass.

"WHILE practising law a number of years ago," said Judge Tourgee, "I had a peculiar will case. An old lady who was a slave-holder, dying, bequeathed her colored man, John, and her dusky maid, Jane, who sustained to each the relation of husband and wife, to the trustees of her church, 'to be used as far as possible to the glory of God.' I was curious to know what course was taken, and upon investigation found that after meditation and prayer the pious trustees sold their living legacy at auction, and with the proceeds sent a missionary to China."

DR. A. S. V. MANSFELDE, Professor of General Pathology and Histology in Omaha Medical College, and Secretary of Nebraska State Medical Society, writes: "The Index has come to my library table for ten years, and no journal or paper is more welcome. In fact, it has become a necessity in my household."

HUSBAND'S CALCINED MAGNESIA.—Four First Premium Medals awarded. More agreeable to the taste and smaller dose than other Magnesia. For sale in bottles only, with U.S. Government Registered Label attached, without which none is genuine, at druggists and country stores, and by Thomas J. Husband, Jr., Philadelphia, Pa.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions, . . .	10c. per line.

" 26 " 51 " . . .	6c. " "
" 52 " " " . . .	5c. " "

On half-column advertisements, a discount of 5 per cent. will be made; on full-column advertisements, a discount of 10 per cent.

JUST READY:

MANUAL TRAINING IN EDUCATION.

By James Vila Blake.

This little book of about 100 pages discusses the training of the hand as properly an integral part of education. The relation of general and special education, the need of hand-training for all classes, the dignity of hand-work, its influence on personal character, the relation of manual training to immigration and to the apprenticeship problem, and the present condition of the subject, are among the points treated, all in a very condensed way. It will be read with profit by teachers and others interested in methods of education.

Price, in paper, . . . 25 cents.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of medievalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature- worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value." —*Boston Evening Transcript.*

BY B. F. U.

THE girl graduates of the Vincennes (Ind.) High School, who refused to receive diplomas in company with a colored miss, will probably be heartily ashamed of it when they come to reflect upon their absurd and silly conduct.

THE Calcutta *Liberal*, in explaining the meaning of its own name, says, "Liberalism, in one word, is theism." The editor may yet come to see that Liberalism is not limited to any particular theory in regard to the origin or nature of things.

THE Overseers of Harvard College have at last yielded to the pressure brought to bear upon them by the students and a liberal public sentiment, in voting to make attendance at the chapel exercises voluntary. The change will go into effect next year. One more victory for justice and freedom in matters of religion, after years of opposition to this reform and much foolish talk about the necessity of compulsory religious observance in the interests of morality!

REV. DR. BUCKLEY, of the New York *Christian Advocate*, advocates Christian unity within certain bounds, but is opposed to such conventions as that of the churches lately held in Cleveland. He wants ecclesiastical relations only where there is "unity in essentials." "Conventions of Christian churches," he says, "which welcome Unitarians, Universalists, Swedenborgians, and Roman Catholics, instead of promoting genuine Christian unity, promote the disintegration of all organizations called churches, except those that are built upon something else than the common faith and a common devotion to Jesus Christ."

In the death of Edwin Percy Whipple, Boston has lost its foremost critical writer, an essayist of European as well as of American reputation. Mr. Whipple, although deficient in constructive power, excelled in analysis; and subtlety of thought and fine discrimination were among his most prom-

inent intellectual characteristics. His essays are mainly criticisms of life or books. He was a well-equipped writer, and discussed subjects not only with penetration, but with a fulness of knowledge as conspicuous as his acuteness of thought and clearness of style. That he was not in all respects up to the newer criticism of to-day must be said; and this is not strange, when we remember that he commenced writing half a century ago, and that much of his best work was done between 1840 and 1850. Mr. Whipple did not have the advantages and escaped the evils of a college education; and his culture, thought, style, and method were acquired by himself outside of schools. He was catholic in his sympathies and independent in his judgments. Sham of every kind he hated. From that envy of other writers' success and reputation, which is not uncommon among literary men, he was quite free. By those who knew him well, he was not only admired for his ability as a writer, but esteemed for his many private virtues.

THE Universalist *Christian Leader*, commenting on the vote of Western Unitarian Conference, that it "conditions its fellowship on no dogmatic test, but welcomes all who wish to join it, to help establish truth and righteousness and love in the world," says that such a scheme misses its aim inevitably. "The rule, to which there are scarcely any exceptions, is that platforms made broad and indefinite, in order not to exclude anybody, exclude nearly everybody. Only the very small number of persons in any community whose opinions have no cohesive centre will cross the street to get on such a platform. It hence comes to pass that, just as the 'basis' broadens, the superstructure shrinks. All the large sects are definite and dogmatic. It is the fashion to decry creeds. But sharp, clear, pointed affirmatives are what nine men out of every ten will be attracted to. Generalities may diffuse sentiment: they gather no armies." There is much truth in the *Leader's* remarks, and food for reflection, too. The sects that are the most "definite and dogmatic," that have "sharp, clear, pointed affirmatives," in regard to matters not within the range of experience, and not admitting of verification or proof, are the sects to which the multitudes are attracted. The adherents of such sects must "think in herds." Freedom of thought they cannot exercise. In proportion as men think for themselves, they must doubt, differ on some points, protest against "sharp, clear, pointed affirmatives," in the absence of proof, and lose faith in creeds, and reverence for hierarchical authority. So little do the mass of people know of science, philosophy, history, so incapable are they of getting out of old ruts of thought, old traditional beliefs, of distinguishing between assertion and evidence, of examining carefully the creeds to which they assent, that only those sects that are definite and dogmatic have any attractions for them. But it does not follow that those who have outgrown creeds must keep on affirming them, or that those who hold to them, provisionally, qualifiedly, or doubtfully, must continue to put them

forth, definitely and dogmatically, as the truth, and make them a condition of fellowship. There are those who, while differing on speculative points, are opposed in common to the method and practice of teaching theological dogmas as truths too sacred to be questioned, and are in favor of the fullest and freest discussion of the creed of every sect and the doctrines of every school. Such may wisely unite for the attainment and promotion of truth, without being "definite and dogmatic" in statements of belief, and with a higher motive and purpose than to command the attention and favor and immediate influence which numerical strength is necessary to secure.

THE editor of the *Popular Science Monthly* has been looking over the reports of charitable institutions, and finds too little information of value, in a scientific point of view, and "any amount of sentimentality and gush, pious ascription of thanks to Providence, considerable laudation of the officers engaged in the work of the institution, and long lists of donations, with the names of the donors, of course." What is needed, he thinks, is information regarding each inmate, whether he or she is really an orphan; and, if so, how the condition of orphanage and dependence arose, why private aid from friends or relatives was not forthcoming, whether the existence of a convenient asylum had anything to do with it, what moral effects flow from absence of parental influence, what the special influences of the home or asylum seem to be in different classes of cases, and what the life of children released from the home has been. The editor of the *Popular Science Monthly* declares that fuss and vanity enter largely into many of the schemes of charity, so called. "They reek with sentimentality; and, therefore, it is no wonder that those who work them content themselves with reports at once jejune and nauseating,—jejune in facts, nauseating in phraseology. The best possible way to check these flabby imitations of real charity would be to summon them somewhat peremptorily to give such facts as might furnish material for a really scientific study of their operations. They could not in decency refuse the demand, if made by a certain number of their respectable supporters; and yet we are convinced that to comply with the demand in anything like an honest and thorough fashion would be to show that their work was, in part at least, hollow and even hurtful. We believe that a vast amount of harm is being done, not only by thoughtless private charity, but by ill-organized, ill-directed, and over-ambitious corporate charity. However, let scientific thinkers—men who have taken to heart all that is implied in the great truth that two and two make four—settle right down to work on the reports of some of these pretentious concerns; and, where they find information lacking that ought to be given, quietly ask for it. The world would be none the worse for the puncturing of a few of the bubbles blown by vanity and floated by sentimentality; and the way to puncture them is to bring the 'scientific method' to bear on their very unscientific operations."

NOT REPRESSION, BUT LIBERTY FOR EXPRESSION.

The objection has sometimes been made to the Free Religious Association that, on account of the large breadth of its fellowship, and the openness of its platform to all earnest opinions, its members have little or nothing to say for themselves to the world, and that therefore, in their individual work, their power is rather diminished than increased. We will not stop here to discuss the position whether the things which the Association says together in its constitution are of little or no importance to the world. It suffices now to say that they are as important as the fundamental principles of intellectual liberty, practical ethics, and human, unsectarian fellowship in seeking truth and promoting right. But we wish to point out the fact that this objection rests on an entire misconception of the relation of the members to the Association. They do not agree to repress any of their own individual convictions of truth, nor any of their individual beliefs as to what may be the best methods of working for the promotion of truth and right. On the contrary, one of the primary objects of the Association is to guarantee full liberty for the expression of such individual convictions, both on its platform and elsewhere, and full liberty to work by such ways and organizations, as may seem to any individual member good. That the members expect in their various individual positions, as writers, speakers, or workers of any sort, to confine themselves to stating and restating the general principles which they have declared in their constitution is a gross error; and that they have no definite convictions to utter is equally an error.

For instance, Mr. F. E. Abbot, though rejecting Christianity, has always been a pronounced theist; and he has never felt himself hampered in the advocacy of either his theistic views or his objections to Christianity by the fact that the constitution of the Free Religious Association, which he helped to frame, made no declaration on either point, but, on the contrary, expressly said that no speculative opinion or belief should be a condition of membership. That he did not wish to impose his beliefs on the Association as a test of membership did not preclude his urging them, on its platform and elsewhere, with all his earnestness and ability. Mr. M. J. Savage, with kindred earnestness and ability, advocates Christian theism, and never dreamed that he was prevented therefrom by the fact that he was a member and director of the same Association. Col. Higginson has adhered more closely than many of his fellow-members of the Association to the intuitional and transcendental view of religion; and he has felt perfect freedom to advocate this view, though the constitution makes no mention whatever of it. The present president of the Association believes that religion, rationally understood, is a very vital element in the many-sided culture and progress of humanity, and it is the main work of his life to set forth and inculcate the principles of such a religion to a regularly corporated religious society; nor has the fact that, for nineteen years, he has been secretary or president of the Free Religious Association ever appeared to him to stand at all in the way of his doing this work, though that Association does not in the least define these religious doctrines which he holds and urges, and even expressly says that it will not make them a part of its constitution. There are, also, not a few agnostics who are members and officers of the Association. They are convinced that their views are true and good for the

world, and they utter them accordingly, by the voice and the pen. That the constitution is silent on agnosticism they have never interpreted as an injunction of silence upon themselves. Thus, these various thinkers and believers, though saying certain things together as members of the Free Religious Association, have never for a moment supposed that, in their individual speech and work, they were to pare their utterances down to these general statements which they have made in common. This would be but to revive in another form the vicious creed-principle, with the added evil of emasculating belief by taking away from it specific personal convictions. The Free Religious Association has had precisely the opposite intent. It has sought to secure the amplest expression of individual conviction; and it has brought persons of different views and beliefs together, not for them to repress or suppress their honest convictions for the sake of harmony, but in order to find, underneath the freest utterance of different beliefs, that deeper harmony which unites all souls who love genuine truth and right better even than their own present views of truth and right.

In the recent discussion concerning the action of the Western Unitarian Conference, we have noticed that the conservatives are repeating this old objection that has been urged so mistakenly against the Free Religious Association. They are saying to Messrs. Gannett, Jones, and their friends: "If you believe, as you aver, and as we know you do, in God, and in immortality, and in worship, and in the high spiritual purpose of Jesus, why are you not willing to say so, and together, to the world? Why be satisfied, in conference, to express only a minimum of your beliefs, or only generalities, and leave such specific beliefs as these unuttered? Such silence really misrepresents yourselves." At the close of the Cincinnati debate, Mr. Gannett in hushed voice uttered an earnest aspiration, called a prayer, which deeply touched all hearts. "Oh that we could say that to the world!" exclaimed Mr. Sunderland, earnestly, as they moved away. But Mr. Gannett is saying that to the world all the time. He does not write nor speak for himself without saying it. But he would not say it for a whole conference, because he thinks there may be some equally honest and earnest soul there who, though seeking essentially the same thing, might find a stumbling-block in his form of words. For the same reason, he and the others of the majority in the conference did not put the words God, Immortality, and Worship, into the conference resolution, though perfectly free themselves to use the words, and in fact using them in their own speech and work. Where the conference speaks for itself as a body, they would have it, in the interest of the largest fellowship, use only the great generic words, such as Truth, Righteousness, Love,—though whether words like these express only a minimum of beliefs may be questioned. But they do not thereby agree to confine themselves to these words in their own religious nomenclature, or to refrain from uttering whatever specific religious convictions may seem to them best calculated at any time to convey the highest truth. And the same liberty which they thus claim and use for themselves they would accord equally to a brother worker, who is working with the same earnestness and sincerity, but who finds that sincerity requires him to work with convictions and expressions somewhat different. In such a union there will be no repression, no touting down of individual beliefs, for the sake of peace, but a completer utterance. Each does his best at his own post, in his own way, to urge what he himself most deeply believes; and he is willing

that his brother shall do likewise. But since all profess to be working for truth, righteousness, and love, why may they not come together on one platform, to tell each other how they do it, and trustfully to help each other to do such work, and better?

WM. J. POTTER.

LA DIDACHE, OR THE TEACHINGS OF THE TWELVE APOSTLES.*

Monseigneur Philotheas Bryennios published in the year 1875 a complete text of the Clementine Epistles, which he had discovered in the library of Saint Sepulchre, at Constantinople. This library belongs to the convent of the same name, so called because, though at Constantinople, it belongs to the Patriarchate of Jerusalem. The stir in the learned world was very great, but proved much greater when, in February of the last year, it was known that the Metropolitan Bishop was also to publish the book before us, the *Didaché*, or the *Teachings of the Twelve Apostles*, enriched with Prolegomena and Notes, condensing in the volume all the materials necessary to the most complete study of the work. The French editor, Paul Sabatier, has not unworthily followed after in what he calls the beautiful work of Monseigneur Bryennios.

It is written in entirely classic Greek, and not in modern, as has been erroneously stated. Its style is of great clearness, and the reading easy to persons very little familiar with the Greek language. He says, moreover, in regard to his own labors, he has tried to make the bibliography of the subject complete. In enumerating the leaves, the monographs, the volumes, provoked by the publication of the texts of the *Didaché*, he says that Germany has produced the great majority, of which some are made with science and erudition not to be surpassed. Yet, for all that, it has not made any particular noise beyond the scientific or religious circles who interest themselves in such studies. In other words, the great German public has very vaguely understood, and rather by hearsay learned, of this discovery of Monseigneur Bryennios. It has been very different in America, where the text of the *Didaché* was transmitted by telegraph, and was immediately reproduced in papers secular and religious, translated and commented upon in numerous volumes. But, in that effervescence, the scientific interest was far from being of the highest character. The different sects each thought to find in it what should support their own doctrines, and oppose those of their neighbors. Let us hasten, however, to say that, in the avalanche of works,—often of mediocrity,—there has appeared some serious, scientific, and independent studies. In England, they are far less preoccupied with the *Didaché* than in America; neither scientific nor ecclesiastical interest has been greatly excited. In France, the editor gives a respectable list, and hopes the happy relation made between the Greek Church and German universities may subsist also for France, by seeing its students seated, also, at the feet of the Faculty of Paris. In a note, referring to the *History of the Christian Church*, by Dr. Philip Schaff, our author says, "One such book does great honor to its author and to the American science, which we have judged elsewhere a little too precipitately." So much for the introduction which, in our hands, has been so greatly condensed as to seem quite inexpressive.

The *Didaché* lies before us in its beautiful, fine, and clear Greek text, over which we pass as needs

* Retrouvé par Mgr. Philotheas Bryennios, Métropolitain de Nicomédie. Publié pour la première fois en France avec un commentaire et des notes par Paul Sabatier, ancien élève de la faculté de Théologie Protestant de Paris. 1885.

must, having not even the little learning that would find it easy, to the well-printed French translation, with wide margin, making it fair and pleasant to read.

The summary at the head of the thirteen chapters is not, of course, in the original. The mention of a few of the points will give some hint to the reader of what he will find and of what he will not find. Metaphysics, doctrines, polemics, are not there. The old familiar "two ways" meet us first: the "two ways" of profane and sacred writers from the earliest time. In far antiquity, it is a natural thought. Hesiod gives it in poetry; Xenophon in the apologue of Hercules between vice and virtue; while, with the Jews, it was of constant recurrence, taking on a more religious turn, as with the old patriarchs and in New Testament teachings, whether of Christian or Judaic bias. "Behold, then, the way of life"; "behold, then, the way of death," it is said. The chapters with this text are double in number to the others. Baptism, fasts and prayers, the eucharist, the assembly of Sunday, ecclesiastical discipline, bishops and deacons, and things final close the subjects.

We do not propose to go over the arguments that have carried our author to his conclusions as to the time and place of origin of this legacy of the apostles to the faithful of their day. They are so fully stated on their positive and negative side, their internal and external evidence so skilfully drawn out, the objections of opposing scholars so candidly met, that we cannot withhold our assent to the author's decisions. The *Didaché*, then, belongs to the early part of the first century after Christ. The character of its catechetical teachings, its relation with an evangelic manual different from our Synoptics, the simplicity of its rites of baptism and the Supper, the ecclesiastical directions taking birth at the side of spiritual gifts, the conciseness of their final hopes, and, above all, the Judaic character of the document,—all carry us back to a period of origins, where the Christian thought, yet uncertain, formed rather a tendency of Judaism than of a new religion; to the time before Greek metaphysics and spiritual mysticism had given a psychological intent to the doctrines of the Church. These are but hints of the internal evidences, while those from the historic or traditional gleanings of the circumstances and life around them more than justify the conclusions reached. Perhaps the strongest point is in the eschatology of the document. If we place its birth near the middle of the first century, it lights with a vivid light this period so obscure. What, in effect, passed in those years which followed the death of Jesus? A great hope had traversed many souls: they awaited his return. A brief delay, and the noise of it spread; and on all sides they heard the cry, "What shall I do to be saved?" The *Didaché* responds to this question as clearly and as briefly as possible, for "the time is short: Maranatha, the Lord is at hand." This, then, is the salvation, this the immortality: that the faithful shall dwell with the Messiah on the earth and in the body, at his coming. Little by little, the illusions ceased, and they must set themselves to spiritualize the too concrete images of the first days. As yet, eminently Judaic must be the teaching of the apostles; a term by no means confined to the immediate followers of the Messiah. And the sincerity of the old document coming out from among the Syrian Jews and addressed to the numerous "proselytes of the Gate," forming at first the early Church, is a strong argument for its authenticity and early date. Such a document would not have been counterfeited at any late day.

Soon enough came the accretions, which some-

times were corruptions, of the early Church, as witnessed by the Gospels and Epistles, which remained oral traditions till a later time than this oldest of the sacred documents. Yet, as much as it differed in tone and teaching from the later evangels, it did not, perhaps, differ more from the Epistles to the Thessalonians, for instance, than some of St. Paul's letters from each other.

Evolution did not stay its course with the newly risen sect. Yet it is good to see the new-born Church, as yet not plagued with episcopates and bishops and deacons and a priesthood, all set apart from the brethren; to see, now, no doctrines of Logos or Paraclete, no redemption nor expiation, nor justification by faith, no real presence; as yet, no new and distinctive millinery,—garb of alb and chasuble and dalmatic; no bands and surplice; nothing like a hierarchy.

Out of a quiet harbor floated the early Church,—the Church universal, wearing as it must its race-signals, but hoisting no national colors of sect or kingdom,—to cross over the vast sea of humanity. Nor shall that ark of safety ever sink below the horizon.

The "period of origins" may charm us as with the thought of going home to our birth-place, but the life of the Church should better satisfy us that it has come to finer issues in the diviner spirit of humanity. It looked for a Messiah to the Jews: it could not comprehend the Messiah that should for ever and ever be coming on the earth.

HORATIA S. WARE.

THE UNITY OF SCIENCE.

III.

Our psychical attractions and repulsions we call love and hate. In the social sphere, man is the centrifugal, or driving, force, and woman the centripetal, or attractive, force. Man is the positive, woman the negative. And that peculiar, never-old-and-never-new psychical phenomenon which we call love corresponds with striking analogy to a state of electrical separation in two bodies of opposite polarity, by which the opposite currents attract each other with dual force. Happy for the persons in such anthropo-psychic electric state, if they will learn a lesson from the pith-ball, and so preserve their individual electricities by proper reserve that they shall not become charged with like currents, and thus change attraction to repulsion! Chemism furnishes us still other analogies for this psychical attraction which we have been accustomed to regard as not a subject of natural law. In chemistry, we find, in accordance with the quality of the combining power of atoms, that acids are negative and bases and alkalis are positive. The stronger acid, by its superior attraction, displaces the weaker in a compound already formed, and, taking possession of the base, forms an entirely new combination. So powerful is the attraction of some elements, as oxygen, for certain others that a union resulting in a new compound, often of less value than either of the original elements alone, may be the result of mere propinquity. On the other hand, some of the most valuable and useful compounds, as water, require extreme electric or thermal force to effect the synthesis of the combining elements. Chemical analysis, which is capable of divorcing such a pair, demonstrates to us that, in the wedlock of the acid and the base, neither has lost its individuality, though the twain have become one substance. Again, we are familiar with the unstable character of certain compounds and their great susceptibility to the influence of certain elements to which they may be brought near, and the necessity for keeping such compounds carefully isolated

from and protected against such influences, in order to preserve their fidelity to the original union. On the other hand, we are familiar, also, with the enormous disorganizing power of certain elements, enabling them to break up even the most stable compounds with great facility. The well-being of such demands that these, too, be carefully guarded and restrained. So obvious are the analogies here between natural laws and social laws that an attempt to point them out would be superfluous.

We will now stop to examine the influence of modern science upon religion. Is the relation of science to religion, in its present advanced state, that of enmity or friendship? Is it a help or a hindrance to the moral and spiritual evolution of man?

The man of science, "standing upon actual things among fixed laws," at first grows suspicious of theology, and scoffs at the supernatural. He will have only nature and law. Here, he avers, is enough of mystery for him. But here, at last, he suddenly finds himself lost in amazement over the supernaturalness of the natural; and, before he can fairly recover himself, its likeness to revelation leads him kindly and safely back to a new starting-point, where, in the light which science sheds upon religion, he now discovers himself actually looking forward to a time when science shall be called upon to "arbitrate between conflicting creeds," and when theology, stripped of the "adulterations and accumulations of centuries of uncontrolled speculation," shall accept the friendly aid of science to "disclose to a waning scepticism the naturalness of the supernatural,"* and thus justify man's faith in the unseen in the spiritual world upon the ground of his willing acceptance of the equally mysterious in the natural world.

The tendency of science, therefore, toward unity of law and expression, will be followed by a corresponding and inevitable tendency toward unity in religion. "In so far as doubt is a conscientious tribute to the inviolability of nature, it is entitled to respect" (Drummond); and the honest desire on the part of science to challenge all authority deserves a better name than infidelity.

"At this triumphal entry of science upon the stage of modern thought," says Brackett,† "religion is the only power that has as yet sounded the note of alarm." The known and the unknown, or the realms of science and philosophy, are only separated by an imaginary boundary line. Hence, as science progresses and the unknown becomes the known, as the realm of philosophy gives up its mysteries and faith is lost in sight, this boundary line must change. And this no more implies that philosophy has heretofore usurped unlawful possessions than that science has recklessly neglected to take possession of her own. If religion sets up human creeds in the pathway of science, the sappers and miners are liable to level them in their preparation for the onward march of truth. And why should we tremble at their downfall? Do we love our creed better than we love the truth? Said the Christ to his sorrowing disciples: "I will not leave you comfortless. I will pray the Father, and he shall give you another comforter, even the Spirit of Truth, that he may abide with you forever." Are the dead forms of our religion more to us than this living Spirit of Truth, hovering ever near us to give us correct answers to the *how* and *why* which are the everlasting "interrogatories so profoundly instinct in humanity,—the instinct of cosmic interrogation upon which the evolution of the human mind depends"? And where should we expect to find this Spirit of Truth more than in

* *Natural Law in the Spiritual World*, Drummond.

† *Popular Science Monthly*, vol. xv., p. 168.

the real and tangible things of nature, written all over as they are with revelation concerning their Author, where, "in the impersonal authority of law, man may everywhere recognize the authority of God"? It is not against religion, but against human creeds, that science has instituted charges. But "*credo*" is such a dear word to us. It gratifies man's natural opinionativeness,—"*I believe*"! And, after all, it is not the "believe" which so infatuates us as that monument of selfhood, that perpendicular "*I*"!

"As other men have creeds, so I have mine:
I keep the holy faith in God, in man,
And in the angels ministrant between.

"I hold to one true church of all true souls,
Whose churchly seal is neither bread nor wine,
Nor laying on of hands, nor holy oil,
But only the anointing of God's grace.

"I hate all kings, and caste, and pride of birth;
For all the sons of men are sons of God.
Nor limps a beggar but is nobly born;
Nor wears a slave a yoke, nor czar a crown,
That makes him less or more than just a man.

"I love my country and her righteous cause,
So dare I not keep silent of her sin,—
And after Freedom may her bells ring Peace.

"I love one woman with a holy fire,
Whom I revere as priestess of my house;
I stand with wondering awe before my babes
Till they rebuke me to a nobler life.

"I keep a faithful friendship with my friend,
Whom loyally I serve before myself;
I lock my lips too close to speak a lie,
I wash my hands too white to touch a bribe;
I owe no man a debt I cannot pay,—
Except the love that men should always owe.

"Withal, each day before the blessed heaven,
I open wide the chambers of my soul,
And pray the Holy Ghost to enter in.

"Thus reads the fair confession of my faith,
So crossed by contradictions of my life
That now may God forgive the written lie.

"Yet, still by help of Him who helpeth men,
I face two worlds, and fear not life nor death.
O Father, lead me by thy hand! Amen."

—Tilton.

In the great "change of front on the part of the universe," which began in the sixteenth century, when Copernicus "shattered the crystal spheres of Ptolemy, and set the stationary earth in motion and sent it spinning around the sun" (Savage), and which the revolution of science has continued to effect down to the present time, religion has been slow to adjust itself to its new environment, and many times has failed to use prudent discrimination between a warfare against atheism and the world's spiritual enemies and a wholesale antagonism toward science and the denunciation of scientific truths, when uttered, as it avers, by godless materialists; while the infirmity of science, on the other hand, is, beyond doubt, a tendency to arrogance and to an unreasoning unbelief in what it terms the supernatural. Because it is the testimony of the everlasting rocks that the earth has existed a much longer period than six thousand years, and because evolution teaches us to believe in a subjective rather than an objective creation, and therefore discredits the Mosaic account of the origin of the earth and its occupants, as literal scientific truth, must we protest that therefore there was no creation at all, nor even a Creator? Does not evolution imply also involution? And, if man was evolved, through a long series of ages, from a simple primitive cell, does not this imply that the cell involved infinite potentialities, originating with an Infinite Intelligence?

"There can be no objection, of course," says the late Henry James, Sen.,* "to the scientific man's attempt to reduce, if he can, all organized existence to a common basis; but the objection comes in when he attempts to make any formula of his

* *Society the Redeemed Form of Man*, Henry James.

on this grossly gratuitous and impertinent subject of vital concern to philosophy. For, in doing this, he at once betrays his ignorance of what philosophy means, confounding, for example, every concept that is proper and dear to it with its exact opposite,—individuality with identity, life with existence, form with substance, cause with condition, creation with constitution. Philosophy is perfectly indifferent to what naturally constitutes existence or gives it outward body, but reserves all her interest for what spiritually creates it or gives it inward soul. To misconceive and misrepresent this, however, is the inveterate temptation of clever scientific men; and the infirmity has never been more aptly illustrated than in the development of our recent scientific materialism. 'Pursue,' says Prof. Huxley, 'the nettle and the oak, the midge and the mammoth, the infant and the adult, Shakspeare and Caliban, to their common root, and you have protoplasm for your pains. Beyond this analysis, science cannot go; and any metaphysic of existence, consequently, which is not fast tethered to this physical substance, which is not firmly anchored in protoplasm, is an affront to the scientific understanding.' . . . Here Prof. Huxley restricts his researches to the principle of identity in existence,—that point in which all existence becomes essentially chaotic or substantially indistinguishable. The philosopher, on the other hand, who sees science to be not the end, but the means of the mind's ultimate enfranchisement, enlarges his researches to the principle of *individuality* in existence. We have no reason to doubt, upon Mr. Huxley's own showing, that the initial fact of all organization is protoplasm; but, at the same time, it is impossible for us to conceive of a fact of less vital significance to philosophy. Philosophy cheerfully takes that and every similar fact for granted. The initial fact in the edifice of St. Peter's, at Rome, was a quantity of stone and lime. This fact was assumed by the architect as necessarily included in the *form* of his edifice, about which form alone he was concerned. The *identity* of his edifice, or what it possessed of common substance with all other buildings, interested him very little: only its *individuality*, or what it should possess of differential form from all other buildings, was what exercised his imagination. To conceive of Michelangelo concerning himself mainly with the rude protoplasm, or mere flesh and bones, of his building is at once to reduce him from an architect to a mason. And, in like manner, to conceive the philosopher intent upon running man's immortal destiny, or spiritual form, into the abject slime of protoplasm, out of which his body germinates, is to reduce him from a philosopher to a noodle."

LEILA G. BEDELL.

OF LABOR ONCE MORE.

Recently, I spoke of a manufacturer who has thought much how to make his men more independent of himself, of each other, and of circumstances, but found every plan that occurred to him, or that he had read of, ruthlessly cut off or seriously threatened by the possibility of a boycott. I think it will be instructive, in the present state of affairs, if I give a chapter from this man's history, as a pivot on which to hang the lesson of the value of a strong individual character.

He began life as a mechanic, working by the day in a little manufacturing town in New England. But his activity, intelligence, and industry stood him in such stead that, whereas all the other mechanics of the place were earning but \$2.00, or at the most \$2.25 a day, he was paid \$3.50. He more than earned the difference. Like many

other workmen in the place, he was employed to run a certain machine, the care and operation of one of which were considered, and in actual truth were, one man's work. He, however, succeeded by superior ability and energy in running three, or sometimes five, of these same machines, so he has informed me. Of course, he was paid for this extra productiveness. And here the question occurs, Was it not right that he, producing more and giving more value, should be paid more,—that is, receive more value? I see not how any one can deny such a claim; for, if labor be the source of wealth, as labor reformers, trades-unions, Knights of Labor, and other such, are never weary of saying, then certainly the more labor done, the more wealth made, for which proportionate return should be made. Who, I say, would deny this justice? Yet the workmen of that New England village twenty years ago denied it. My friend was waited on one evening, a little before the end of working hours, by a number of mechanics, who informed him that a union of iron-workers was to be formed, and asked him to join. He refused; and, on being pressed for his reasons, he told the men frankly that he could not permit others, individually or collectively, to go between him and his employer on the subject of wages. He declared that he must make his own bargains. "If," he said to them, "you form this union, you will undertake to regulate wages, which means that you will press down mine as one means of pushing the pay of others up; but that I will not submit to. I earn my larger wages, because it is for the interest of my employer to have my skill and activity. I will continue to make it for his interest, and to profit by it myself." The men answered, "Then we give you twenty-four hours to leave town." "I will not go." "Yes, you will; if not on your feet, then carried in a deal box," the meaning of which eloquent threat was plain. Then followed in fact sundry incidents, which it is needless to relate here. Suffice it that my friend did not leave town, did not join the union, was not killed or even hurt, though dogged about for a little while; that the union fell to pieces in three months; and that he, the ambitious mechanic, has gone on from his humble beginning to be a large manufacturer and employer. That was twenty years ago. The conditions since then have changed in this: that *now* this man could not defy successfully the kind of opposition and the imperious demand which then he resisted and vanquished. At present, his business, or his employer's business, would be maimed, and perhaps destroyed, and he himself beaten, if not killed. But the times have not changed as to the demand made on my friend. The same claims still are put forward, with a view of levelling wages, by cutting down as many peaks as may be needful to fill up the natural hollows. This is a kind of insensate democracy applied to work, taking no account of skill or of personal value, but putting all men on a level, on the basis of so much time told off by the clock. This destroys all individuality. Indeed, it is easy to see that, not individual value, but action in the mass wholly, is the basis of trades-unions, as now they are carried on. For example, it is no uncommon thing that an employer has paid his men generously, and in all respects satisfied them: yet, suddenly, they cripple him by a strike. Why? Because the men of some other employer, who has not been generous or just, are on a strike, and all men of that trade are ordered out to help them. What justice in this? And how plain it is that rights of the workingmen are as much ignored thereby as justice to employers! That they cannot see the injustice, as often is the case, no doubt,

makes no difference. This sinking of men into a mass is a characteristic of barbarism; and the results of it are barbarous, in whatever stage of civilization it may occur. Wherever such claims are enforced by violence or by threats of violence, the tyranny is enormous; and that this is done triumphantly is notorious. That the unions disclaim it is true, but by what discipline they repress lawless acts has not yet appeared. I said that my friend could not now defy the combination of his fellow workmen as then he did: an illustrative case is at hand. In the late railroad strike, in a town near Chicago, a ticket agent of a railroad was warned to leave the town immediately; and he obeyed, urged by the violence which he had seen used toward others. Yet his whole offence was that he had been active, as an officer of the road, in transporting laborers from a distance to take the place of the strikers.

It will be said that only unbalanced or bad men will engage in tyranny of this kind, which, no doubt, is true. But the very difficulty is that our trades-unions, as they now show themselves, seem not to discriminate as to personal character, and hence become largely confederations of unsound heads and surly minds. I met a case in point lately. I visited a very large meat-packing establishment in Chicago, at the famous stock-yards, where there have been at different times many strikes. As I stood looking at the processes, one of the workmen left his place, came and spoke to me, asked if I had ever visited such an establishment before, and then begged five cents for beer. On my refusing to give the money, he looked at me sullenly and sourly, and returned to his place, whence he continued to cast vicious glances at me as long as I remained in his neighborhood. Now, that man was a beggar in spirit, which signifies a cringing, crawling, servile fellow. If there is any reason why he should turn beggar to me more than I to him, I cannot conceive what it is. But I can see plainly that his state of mind is the same, though in a vulgar way, as that which he would be one of the most violent, by mouth or act, to charge on the capitalist; namely, the willingness to clutch money without earning it. It needs little wisdom to predict that that man, all his life, will be as servile in station as he is in nature. The pity is that he seems as good material for a trades-union, and as fully equipped to take his part in the union's counsels, as the most respectable workingman, and no doubt is in front, when there is opportunity to throw bricks with small risk. All trades-unions and associations should purge themselves of such men, because they are a disgrace to labor. But, more than this, labor societies ought to be composed of men who would not submit to be drilled like an army, and ordered in or out at the beck of majorities, who may have no connection whatever with the business or the obligations of the workmen whom they rule. Counsel, advice, discussion, of one kind, and good; but unreasoning subservience, and the sinking of individuality in masses, are of another kind, and bad. I believe a man, in whatever sphere of life, who feels his power to be valuable, will not endure to have others prescribe how valuable he shall be, and how much or how little he shall work, or what contracts he shall make for his labor.

Let me say, again, that I feel very sure indeed that labor has a grievance which ought to be righted. And I feel equally sure that, however a part of the grievance springs from the common heritage of social imperfections, with which we all are struggling, a large part also is the result of the intolerable greed of the prosperous classes, and of practices morally abominable, if not le-

gally criminal. But the wrongs will not be righted merely by an exchange of masters, and the sullenness of ignorance is as hostile to society as the coldness of selfishness.

That fellow who turned pauper toward me for a drink of beer,—pah! I cannot forget him. It is these beggars that nurse Cæsars.

J. V. BLAKE.

SUNDAY READING-ROOMS AND MUSEUMS.

The movement for opening these avenues of knowledge and bulwarks against intemperance has been carried on in many cities, and with uniform success. The Art Museum in Boston has been opened on Sunday afternoons for seven years. On March 7, 1886, there were 4,200 visitors. The average number for 1885 was 1,332; that on Saturday, also a free day, was 1,006; that of paying visitors on other days was 67. I am satisfied, from my own inspection, as well as from the reports of others, that these Sunday visitors are, to a great extent, mechanics, maid-servants, and shop-girls. They are always well behaved, and, in fact, give less trouble in touching pictures and statues than the people who pay an entrance fee. It should also be noticed that the attendants are paid by the day, and on Sunday get a full day's pay for half a day's work.

One of the best known instances of the advantage of opening public libraries on Sunday is in Worcester. The report of the librarian, Mr. S. S. Green, may be found in the *Christian Register* for Feb. 21, 1884; in the *Library Journal* for May, 1884; and in the *Sunday Review* (Trübner & Co., Ludgate Hill, London) for June, 1885. This library was first opened Dec. 8, 1872. During the first twelve months there were 5,706 visitors. There has been a steady increase; and, during twelve months in 1881-82, the number was 14,946. All the books in the building are accessible for reading, though none can be taken out; but the call is mainly for newspapers and magazines. The attendants are not employed there on other days. The rooms are as quiet on Sunday as any parlor, and no effort is ever needed to secure order. Nor has there been any complaint of bad results. The visitors are largely men who do not belong to churches, and are without quiet, comfortable homes.

The reading-room of the Boston Public Library was first opened on Feb. 9, 1873. The average number of periodicals given out has increased from 476 in 1876 to 558 in 1885. In 1883, it was 582. The reading-room of the Christian Union in Boston has been opened since 1868, and there are three times as many readers as during the week. The Cincinnati Public Library, which has been open since 1871, soon averaged 1,100 readers; and the president of the Young Men's Christian Union, who at first opposed the step, has been fully satisfied with the results. The Mercantile Library in Philadelphia, which was thrown open in 1870, had 700 readers the second year. Other dates, also taken from the pamphlet, "How shall we keep Sunday," pp. 85, 86, are Milwaukee, 1869 and 1870; New York Mercantile Library, May, 1872; St. Louis Public Library, June, 1872. Public libraries are also open in Chicago and Detroit. It should be added that the great collections which belong to the Boston Athenæum and to Harvard University are now open for consultation on Sunday. All the extra labor in the latter case is done by one small boy, who is paid by the day. Those who wish to read arguments for these measures will find them ably put in sermons by Brooke Herford, Heber Newton, Robert Collyer, and Henry Ward Beecher. I think

it is the last who says that a Sunday reading-room takes ten young men from the street where it takes one from the church. Among the libraries open in England is that in Birmingham; and at least one workingman's wife has been heard to bless the day when this was done, for her husband, who used to spend his afternoons in the public house, never goes anywhere now but to the reading-room, and is there so long as it is open.

F. M. HOLLAND.

EDITORIAL NOTES.

BY B. F. U.

THE members of the Parker Memorial Science Class and their friends will make an excursion (weather permitting) to the Blue Hills, on Sunday next, leaving the Boston & Providence Depot at 8.30 o'clock A.M. Carriages to convey the excursionists to the Hills will be in readiness on arrival of the train. The Committee of Arrangements request us to say that "well-filled baskets will be in order."

IN reply to a statement that he is wanting in the "historical sense," Charles Voysey thus writes to the *London Inquirer*: "The 'historical sense,' as I have seen it exercised by Unitarians, means simply the seeing in the gospel records what is *not* there, and the closing of the eyes to what is there. If a man claims to be my 'master,' especially 'our greatest master in spiritual things,' my first duty is to hear what that master has to teach; and, in the case of Jesus, I go to the only books which even profess to tell us what he taught. Now, both you and I find there teachings which we reject, which we would not accept on *any* terms; and I contend that, if we criticise his teachings at all, much more if we denounce some of them as evil and impious, then it is sheer folly to call that teacher 'master' any more."

DR. R. HEBER NEWTON, in a lecture in his church, on the labor question, on May 16, said in substance: We may reasonably expect that labor organizations here will educate themselves, as they have done in England, in the practical methods of self-help. The trades-unions of skilled labor are even now conservative institutions. They represent intelligence in intelligent action. You have all read lately the calm, wise words of Mr. Arthur, chief of the Brotherhood of Locomotive Engineers. Power is safely lodged in such hands. Unskilled labor, comparatively ignorant and distrustful of its employers, will in time follow the guidance of skilled labor; and this is always conservative. Such an association as the Knights of Labor, which, because of its comprehensive character, seems to threaten so much danger, presents the very safeguard which society needs. So far from standing aloof from the Knights of Labor, it seems to me that all employers of labor ought frankly to recognize this order as an invaluable ally. Its principles are, upon the whole, excellent. The present head of the order may possibly lack the genius of a Napoleon; but his judgment is, upon the whole, sound, and his spirit temperate, and he may turn out a Wellington. What could be more excellent advice to our workmen than that which he has given officially in the secret circular which lately came to light? He is fighting within this national order the battle of society with the lawless elements which are threatening rebellion. That order has already prevented hundreds of strikes; and for its own preservation will tighten discipline, so as to prevent local assemblies from precipitating general contests. As it seems to me, employers cannot better help themselves, and society through them,

than by lending encouragement to such leaders of the ranks of labor as are honestly striving to turn the immense power of such an order in channels where it will drive the wheels of reform, rather than let it pour forth in floods of anarchy and revolt over the fields of industry.

THE New York Sun, commenting upon the Harrisburg resolution of the Young Men's Christian Association that "it is inadvisable for the associations to engage in any organized efforts for moral reform," asks: "Are we to infer that the Young Men's Christian Associations are less exacting in their requirements for membership than the White Cross Army is? Are they less intolerant of the seducer and the libertine? Are they afraid to demand 'personal purity among young men' who would come into their ranks or remain there? Will they go on praying with closed eyes, while a woman is flung into the gutter, and her paramour is allowed to go unrebuked and to be rewarded with honor? If they are disposed so to act, let them at once pass another resolution at Harrisburg, striking out the word Christian from the title of their organization."

THE following is an extract from a private letter we received recently from Dr. Edmund Montgomery: "The mere expression of opinion counts for nothing when it comes to natural science. Proof is here everything. So it was with gravitation, so with evolution, so with all natural science problems. Both Newton and Darwin worked for ever so long at the *proof* of their hypothesis. In both cases, many others had previously more or less distinctly advanced similar ideas. The power of scientific views lies wholly in their being open to verification. It is thus only that they conquer prejudices. . . . Before Darwin, the *Biblical* notion of the fixity of species prevailed. Linné and Cuvier had used their very accurate knowledge of natural objects in support of this preconception. The liberal opposition theory at that time was the Platonic archetype theory. Dear old Platonism, here, as everywhere, came in as liberating solvent of dogmatic fixity. But its ideal archetype, believed to govern ectypal formation, could not be verified; and thus no real science could be constructed on such a supersensible basis. Meanwhile, paleontological discoveries rendered it too plain that there had been a gradual development of organic forms. The puzzle was how to reconcile such experience with Biblical traditions. Hugh Miller, in geology, and Richard Owen, in biology, are types of such reconcilers. Owen conceived organic development as a constant creation, superintended by a directing deity, in fulfilment of a pre-established plan. Thus, for instance, the gradual stages of equine development, represented by fossil remains found in different geological strata, Owen looked upon as creative acts, evolving the horse for the final use of man. This is no science: it is merely a mixture of Biblical and transcendental conception. Lamarck, likewise guided by paleontological researches, framed the only pre-Darwinian theory of development open to scientific verification. But he himself did not work out the proof with sufficient scientific precision. This, no doubt, will be done in future; and I believe that transmission of faculties, acquired through individual exertion, will be found to play a great part in evolution. Darwin's greatness consists: first, in the conception of an hypothesis wholly in keeping and not transcending the actual facts of nature; and then in the laborious and scrupulous pains he has taken to gauge and verify his hypothesis in presence of *all* the facts of nature he could get hold of."

The Index.

BOSTON, JUNE 24, 1886.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

Ideals and Realities in the Social Question.

BY REV. J. G. BROOKS.

A Paper read before the Free Religious Association at Parker Memorial Hall, Boston, May 28, 1886.

The social question is one of ideals,—of ideals over against things actual. A period sleepy and contented with itself would have no such problems. When men come to hate the existing, because they see the possibilities of a better, we first have the conditions out of which all social questions spring. In the nobler epochs, these discontents are always active. Our special difficulties press no harder than in other periods. The spirit of this long struggle is as old as civilization. Only the form of it has changed. Allowing for all such formal changes,—allowing for that most profound of all changes, from status to contract,—we yet find, especially in all higher moments of social development, the passionate forces of criticism hotly at work upon the actual order.

As is the case to-day there are in all history those who apologize for and stand by the existing state of things, whatever it may be. The greatest names in England defended rotten boroughs until 1832. When there were two hundred and twenty-three crimes punishable by death,—death for shooting a rabbit, or injuring trees, or Westminster Bridge,—the Lord Chancellor, Eldon, and the Chief Justice stood stiffly for things as they were, "because they were best." Lord Ellenboro railed against the innovators, and said that nothing was safe before such "speculation and modern philosophy." The thinker and the sufferer become critics of such vested wrongs.

Why is it that now, when we have triumphed over so many of these inequalities and ills, men were never less satisfied with the actual? The fault-finders never were busier, nor were they ever among a more respectable or learned part of society. We find dissatisfaction with things as they are, where we should least expect it.

In Prof. Paulsen's little book upon Kant's contribution to present problems in Germany, we find

a kind of pained wonder that, after all her splendid victories,—Austria and France so easily and so swiftly subdued, unity of empire at last secure,—the old fever of intellectual disquiet and critical irritation with actual things is profounder than ever.

At a dinner table in Paris, I heard a man boasting that the French were getting back far more money from the Germans than ever had been paid them by the war indemnity. Why? Because, while in France, the Germans got a good taste of the French wines, and would thereafter never be content with their own. Prof. Paulsen too, as others have done, suggests that the very successes of his nation have brought the people into wider relations than they had ever known, thereby catching sight of ideals of life and society which left them no peace with the actual. In such a case as this, so far as it is true, no remedy is of much worth that does not deal with this changed social sentiment. Nothing more truly characterizes the profound change in the form of the social question than this change in the sentiment of the masses. No fact is so deep and certain as a feeling. Whether to be praised or blamed, it is for the time irresistible. Optimistic statisticians wonder that their wise figuring doesn't silence all objections. It might, if the problem were any longer to be measured by things external.

It is simply because a new and almost universal feeling has entered into all the issues that no proof of outward improvement in the least satisfies those who have for the first time become conscious of social inequalities, and also caught sight of new and more certain means of lessening them. It is only saying that the masses are at last feeling upon their half-wakened nature the power of social ideals.

In earlier history, it was the few who dreamed of a new society. Now, the great unrest has fallen upon the hearts of the people at large. Let us trace for a few moments the history of social ideals. We shall find them slowly through the centuries coming nearer to the Demos, until, under the effects of commerce and popular education, the multitude of common toilers are moved not only to criticise the actual, but to use definite and practical forces to gain their ends, thus uniting into one working energy the ideal and the real.

Prof. Pfeiderer believes that Abelard was the first to teach altruism, in its modern sense of acting with no thought of self, solely for the good of the social whole. Though all practical interests seem covered by a great fog, in which the shades of Nominalism and Realism do battle, there yet appears in the realism which Abelard approached (a realism which we always have to think of as the exact opposite connoted by the present use of the word) the great thought of humanity as somewhat common to all the individuals of the race. The differences among them Abelard thought to be unimportant and superficial, while the spiritual similarities were profound.

This ideal speculation seems everywhere to fore-run all historic uprisings of the lower orders. As certainly as Rousseau *thinks* revolution before it flames into act, so surely do we find the dreamer of better things antedating the deed. Until "the people" got themselves related, through political power and education, to real social forces, their struggles to realize their ideals largely failed. The ideal was hopelessly separated from things real. For almost six centuries after Abelard, ideals never got into working connection with realities.

Early in the thirteenth century, Bohlke and his followers were crushed out, as was Rienzi later, for claiming that citizens should have part in the elec-

tions. Through all these dreary spaces of history, men were desiring equality of chances, but had no practical power to get it. Almost exactly five hundred years ago in England, the workingmen were crying out against their employers as bitterly as at any subsequent period. John Ball, the priest, used these words, which are like columns that one might cut each week from our labor papers: "How ill," he says, "have they treated us! And why do they keep us in bondage? Are not Adam and Eve their ancestors as well as ours? What can they show and what reason can they give, why they should be more masters than we? except, maybe, because they make us labor and work, for them to spend. They are clothed in velvet and rich stuffs, trimmed with ermine and other furs, whilst we are forced to wear coarse cloth. They have wine, spices, and nice bread, whilst we have only rye and straw refuse. If we drink, it must be water. They have grand houses and homesteads, but we must face wind and rain as we labor in the open; yet our labor it is which keeps up their luxury." As with Tyler, his complaints are against the cruel weight of taxation and the hopeless inequality of condition.

A century later, we find the laborers in South Germany making the same outcry against taxes and social inequalities. The young Boheim, their leader, says: "We will have it that all men live like equals and like brothers." His request seems to have been quite fair, but the bishop did not think so, and burned him at the stake.

Jack Cade, with whose actual history Shakspeare has taken as much liberty as with the coast of Bohemia, formulated fifteen grievances. He was probably right about every one of them, as were the German peasants, two generations later, with their twelve complaints, almost all of which have since been righted and become the common-places of social privilege.

From the thirteenth to the nineteenth, no century is without these uprisings and agitations for social equality. Throughout, the same spirit of conflict between an ideal and an actual. Things as they exist are intolerable to the thinker upon the one hand, and, upon the other, to those who struggle under the burdens. Abelard, from above, says the nature of man demands the equality which our uncorrupted instincts feel to be just. From below, Oldenburg peasants, sweating under a weight of special evils, revolt against their oppressors. Sir Thomas More, in his land of nowhere, pours out his whole heart about that fairer state that might be, if the gentler qualities were allowed to rule. At the other end is the practical revolutionist, who says to the London citizens: "The king is turning all Kent into a forest. The poor get no justice, and if convicted no trial. Officials extort great fees. Elections are only for men born to rank and favor," etc. These real evils he with his followers attack, and go to the wall; because all power was lodged with the upper classes. In Germany, it was a philosopher who said, in 1520, that things were all rank with injustice. A few years later, one hundred thousand peasants were killed for trying to get rid of some of these wrongs.

Everywhere, in this long history, is the thinker, with his ideals of justice, dreaming of an equity that nowhere exists. Everywhere, also, among the masses, instinct and actual sense of wrong play their part in social revolts. In everything that can properly be called the social question, the ideal and the actual, the dream and the fact, seem widely sundered, at least in no wise closely related, until the present century. The philosophers had ideals enough,—Plutarch's mythical Lyncurgus, Plato's Republic, More's Utopia, Bacon's

Atlantis, and Campanella's City of the Sun,—together with a host of lesser schemes, into which men of finer quality poured their hope of better things, and expressed their hatred of existing society.

The masses, too, a thousand times turn savagely upon their oppressors, and strive, with a certain dumb fury, to break their chains. Yet, until the French Revolution, no real light, like that of day, was ever reached. Comte, in his best and sanest book, has shown what was reached here,—nothing positive, not even a method, but the opportunity which freedom and the sense of it always give. The significance of that upheaval, even for our present problems, no one will easily magnify. The study of it made the poet Heine call it the prelude to another revolution, out of all reckoning, vaster and more momentous,—not necessarily one of violence, like that of 1793, but a revolution structurally far more profound. Whether Lasalle got it from Heine, whom, at this period, he knew, or from Fichte, whom he read passionately, is doubtful and perhaps unimportant. It is this conception of a revolution that he, by pen and speech, popularizes in Germany, perfecting what was begun in France as an ideal. No one ever did more than he to bring into working relation social ideals and social realities. The ideals of Louis Blanc are turned into real political forces by Lasalle. A French socialist acknowledges that, after the Revolution of 1830, Germany slowly came to the front in its leadership of the social question under its political aspects. Here, too, was a century of conflict between things ideal and things real.

There is in Goethe no thought that appears oftener than that touching the relation of ideals to realities. He will admit nothing to be beautiful or good in life or art, in prose or poetry, that doesn't so unite the stuff of our experience with ideals that the relation shall be free, natural, and mutually helpful. The greatest tribute that Stahr pays to Lessing is that he was first to make this clear to German thought. He calls it the greatest conception of the century. It was Goethe who perfected it, and made it a necessity to all thinking, even in the ideals of social life. Fichte has no end of fine socialistic speculation; but Lasalle, with an eloquence and a learning, too, that have made him an enormous influence, became an interpreter to the people of those larger thoughts and hopes which the few had cherished alone. What is peculiar to our modern problems finds its most perfect expression through this man. Karl Marx is too technically economic ever to be popular. Lasalle is full of subtle sympathy with history. He has restraint as well as passion, judgment as well as imagination. In spite of much to be forgiven, he is an "epoch-maker" in the social question. But the measure of his importance is his gift of translating into common speech the philosophic ideals of men like Fichte. Lasalle is often called a revolutionary socialist,—not in the sense of violence, however. His revolution was to be a growth and a very necessity of *thought*,—a revolution which comes because the thinking of the people brings it about. He says, "The true revolution will be founded on *thinking*." "That kind of a revolution," he adds, "never fails." It is in strict accordance with this idea of a change in popular thinking that led him to lay such emphasis upon education, the press, and all means that could make the people really look intelligently upon their own condition, and understand how unjust it was. In none, as in this leader, do we see so clearly both elements, ideals and actuals. Through him, we best see that historic change from mere philosophic vision to the definite use

of weapons purely practical. Lasalle is both thinker and doer. It is hard to tell if he be more idealist or realist. He saw clearly that political power was to make a new world of opportunity for the laborer. Here were the forces that were to give the masses their chance.

The earlier phases of the social question were dreams. Under the spread of the democratic spirit, they have changed into common activities, such as all men now use to gain their ends. Listen to the speeches of the most intelligent leaders of German socialism, and we best see how great a change has come. Compare the delicate speculation of Saint-Simon, Fourier, or even Louis Blanc, with that of Lasalle: "You common men," he says, "have at last power. Train yourselves to use it." Under a wider education and the suffrage, that is just what his followers are to-day doing. The old days of mere declamatory agitation are passing away. It is said German socialists are impatient of any and every speaker who falls into the old talk about "freedom," "justice," and abstract rights, and will cry him down. Liebknecht, in London, infuses this same purely practical spirit into the English following. "Agitate," he says, "to one sole end,—the use of actual political weapons." The Industrial Congress of 1883 shows the same tendency (and that to a remarkable degree) to unite upon definite working issues. A comparison of the manifestoes of the last generation with the more recent ones makes it clear that these men have lost all interest in sonorous phrases about "solidarity," "liberty," etc. They ask now, "What is to be done in the most direct, definite, and practical way to reach our end?"

It is a change not only from theory and vision to organized action, it is an activity that has at last, and for the first time in history, got *power* as well as a sense of rights. It has even more than this: it has become *conscious* of its power. This new consciousness of power it is that so changes the problem. There has come with it a vast mass of feeling, a new sense of contrast between rich and poor; and it doesn't in the least answer to say, "But Mr. Giffen and the statisticians have proved that the laborers get more wages and more comforts." All these things are relative to new desires that have been aroused. They are all relative to a new order of intelligence and ambitions, and to a new sense that power is at last gained, which may be used to equalize the human lot. I am not saying that this feeling is justified or otherwise, only that it is a fact of very great importance. Again, it is this new sense of the situation on the part of the working-day world that makes all confident optimism and despondent pessimism alike ridiculous. Every bit of perfervid optimism that builds itself on such external facts as higher wages and the increased purchasing power of money (losing sight of the new consciousness and sense of power) is all wide of the mark. The problem has become serious, because the subjective factor in it has grown into such prominence.

An optimistic friend will have it that the laborers are great fools, because they don't see how much their conditions have changed for the better. They used, forsooth, to wear no white shirts, and now they can buy them for forty cents. They once went barefoot, and now shoes can be bought for a single day's labor. This is not open to dispute, but it does not help us much. It rather tends to conceal the real difficulty,—namely, the changed nature of the problem, if not from an external to an inward one, at least to one in which feeling and a new consciousness of rights and powers have come to be most important.

Now, whatever opinions we form upon this question, whatever methods we adopt to reach our

end, this essentially new element must be reckoned with. Never in the world were the wage-workers so clearly conscious of the almost ghastly inequalities of existence. Our civilization and education are everywhere quickening them into this new knowledge of good and evil. And thus it is that they are by no means to be put down by any good-natured talk about cheap transportation or added wage. They well say, "For millions of us, things are intolerable, in spite of your progress."

But the optimist meets another practical difficulty in quieting the good people. They have learned at last that very many of the ablest economists and most instructed students call the actual order by quite as hard names as do those who suffer from its ills. The workers have read, or have been told, through their clubs and papers, what such men as Schaffle, Mill, Lange, Spencer, Fawcett, Laveleye, Jevons, Cairnes, and other specialists, have been saying about actual commercial society, and the welfare in that society of the lower-class workmen. These men of widest knowledge acknowledge, in the strongest terms, how cruelly unjust present distribution is, and how unfairly a multitude of laborers come out of the struggle. If the appeal is to authority, the wage-earner has as good a showing as his antagonist, and has come perfectly well to know it; and all those who think to quiet them, by appeals merely to external gains here and there, utterly misconceive the problem that is set us. Never before did the thinker and the doer quite so well understand each other as now. Never before was the ablest theorizing so at one with the practical aims of workingmen. The books of some of the profoundest German economists are handbooks of the agitators.

The movement known as "State socialism" was for a long time an ideal of the thinkers; now, it has become, in tendency at least, a reality. The widest common purpose, probably, among our labor organization is that toward this State socialism. Upon nothing do they more unite than upon the need of measures that shall insure State management of railroads, telegraphs, banking, etc., that vast private gains may be saved by the government for public uses. We know what powerful objections there are against this tendency; still, it is significant that the practical exigences of our industrial society are everywhere forcing upon the legislator this increase of governmental functions. The ideals of the thinker are being met by a form of legislation springing up out of the very necessities of present business and political life.

Perhaps even more significant is this growing union in another field, of the speculative and the practical. Co-operation was first a dream. Since 1846, some practical successes have been realized, though the earlier hopes have met with profound disappointment. Its very successes have shown how deep and permanent a function capitalist, director, and wage-earner alike represent. The middleman has not been got rid of, neither is there any sign that he will be. Schultze Delitzsch's scheme of banking in Germany has lasted a generation, as has the productive form in France, and the distributive in England. There is something pathetic in comparing the earlier hopes of those who were beginners in this movement with actual results. It has, I believe, grown certain that what is deepest in this social problem never will be touched by the older forms of co-operation. Only as co-operation passes into some form of profit-sharing, which preserves the threefold distinction of capitalist, manager, and wage-earner, does there seem to be any hope. It is, however, in this new form that the union of ideal and real elements is so full of promise. We now have a demand for this greatly improved co-operation (profit-sharing), that comes

not from the thinker, but from the practical business man.

The kind of agitation that has so disturbed the community during the last few months has made a distinct change of attitude toward these questions. What does this agitation mean? So far as we can measure it by any material test, it means that the present method of distributing the products and profits of industry is unsatisfactory, and must be modified. Everywhere in this great unrest there is the tacit assumption that business may be done without leaving such frightful contrasts among those who *do* the business; everywhere, the assumption that products are not now distributed upon any rational principle whatever. The labor organizations are asking for such a principle. What, then, is this principle of distribution which ablest theorists and scholars say is right and ought to exist, and for which labor is now clamoring?

The principle had, perhaps, its first most perfect statement almost a century ago, by Saint-Simon, in France. He rejected communism, because not practicable. As decidedly he rejected all appeals to violent methods or revolution. He rejected all the talk about equality, and said men were created unequal, and would and should remain so, except that all should have equal opportunity so far as possible. His principle was that each, according to his service to the community, should receive again. That in every business each should get out of it somewhat fairly proportionate to the quantity and quality of his work, is what Saint-Simon wished. This is what the wisest among economic students say is just, and ought to be. It is what the labor organizations tell us they mean to have.

Where, then, are the signs that we are coming a little nearer to this larger thought of Saint-Simon about business relationships? What evidence is there that his ideals are getting nearer to the real? Two bankers, in New York, have just told us that this must in principle come. I have heard, recently, three large manufacturers give it as their opinion that it must come. They knew nothing of the history of profit-sharing, but spoke only out of their own experience as practical business men. One said: "None of us will live to see more than its beginnings, nor can any one tell just what shape it will assume. Possibly, some form of wages by 'sliding scale,' so that the gains and losses of business shall come to all of us fairly. Business can't continue as things are and will be. Our men must be identified with our business in such way as to insure them such portion of the gains as their fidelity and efficiency permit."

This week, a large manufacturer in another branch told me that, in his opinion, our present wage-system must be modified, simply because the men were getting to know too much, and were, therefore, becoming too restless to leave business in any permanent security. Being pressed for something more definite, he said, "Just how it is to be, no one can see; but it is certain to my mind that, allowing for competent management, risks of capital, ratio of losses, etc., we have got to learn how, employer and employed, to work together, so sharing results that each man shall get more nearly what he contributes." This man had probably never read a volume upon these subjects in his life, but his own troubles had driven him to this conclusion. The man of ideals has been met at last in this question. The hard realities of common business are driving men to say that the dreamer was, after all, right.

We have, of course, only the beginning of these things as yet. The organizations will suffer defeat

and bitter disappointment, because they will, in their haste, overstep the severe economic limits that shut in about every one of the practical questions, higher wages or fewer hours. The first hard aspect is one purely of business possibilities. There can be no generalizing about them whatever. "Will this definite trade (competition, prices, etc., being as they are) admit of increased pay or shorter time?" Because they substitute heated rhetoric for a cool reckoning with these conditions, the laborers will suffer no end of ills until conditions are learned. In many great trades in France and England, however, they have been learned, and learned so well, that the laborers are as hostile to all disturbances as the employer. A system of bulletins, giving the daily statistics of the trade, prices, supply of labor, etc., has come to be of incalculable good in training the men to know their interests. We are just hearing in this country the demand for such helps to wiser and more cautious action. The hard experience of repeated failure is forcing the Knights to recognize the need of a prudence based upon slower and more careful investigation of industrial and economic facts.

The thing of moment, however, is the growing recognition among hard-headed business men that Saint-Simon's principle was, after all, a right one. The dreamer, the special student, and the wage-earner have come to a practical understanding. Godin and Leclaire proved that the ideal may work among realities. Here is a method that is as right in its sphere as the scientific method in its own.

Two things are now necessary: first, to extend cautiously and tentatively its use; second, to spread among labor organizations, by every means within our power, such economic knowledge as shall make them (as the great English unions have become) careful to know and to obey industrial conditions.

Let us note, finally, one other thing of hopeful character. If we sharply mark the limits between theory and practice, the social question is everywhere opening to the influence of higher moral forces. We are coming to see a little more clearly where scientific theory, untouched by sympathy, must have its rights, and also where, through practical application of principles, all moral energies may work under the guidance of a method that shall be based upon a large and well-ordered experience. This is essentially the method of science, and never until recent years was reached in the world's charitable work. But, before illustrating this, look for a moment to the new attitude of the economist toward morality.

While preparing this paper, I received a little book by Mr. Bowker, *Economics for the People*. It seems to me (though reading it hastily) hardly possible to praise it too highly. Wholly simple and popular, holding fast the conception of industrial laws, faithful upon the whole to the English school, it yet reflects with singular skill and sympathy the new and certain tendency of such studies into larger relations. Having stated the fact of theory, and of the persistent action of laws, he adds that such laws are reviewable by ethics. "Economics, as an art," he says, "is subject to a higher law." Over against the atom and self-interest, he places the whole of the commonwealth, which whole is under laws that are first ethical. No better statement than that is possible of what is best in the German ethical school of economists. He sees that these economic questions rise, and pass into larger political and social questions. We have such sentences as these: "The evils that society has done society must undo"; "Labor has not profited by civilization as it should have done"; "Better distribution depends largely upon social control,"—a statement that both Mill and

Fawcett make, adding that this social control is moral. "Legislation," he continues, "in the future must look to the many, rather than the few," and public opinion must hold each man to a responsibility in proportion to his power. He closes the book with words of Channing, "In proportion as Christianity shall spread the spirit of brotherhood there will be and must be a more equal distribution of toil and means of improvement." It is worth while comparing for a moment such sentiments in this little book with works of first-rate importance, something between the extreme ethical or historical school and the older *laissez faire*. Gustav Cohn, of Göttingen, represents probably what is best in German economic study. The first part of his *System of Political Economy* has just been published. He pronounces economics, in all these larger relations, strictly ethical, open and plastic to moral forces. All that enters into distribution is never to be disconnected from ethical considerations. The State, moreover, has definite, positive, moral obligations.

The other book (a part of which some Oxford scholars have lately translated) is by the greatest European scholar of political science, the late Prof. Bluntschli. He holds that the moment we rise to the thought of the social whole all questions become distinctively moral. He stands strongly for the historical movement,—that out of which the ethical economy has sprung,—and says, "The advantage of the historical over the empirical method is that it does not thoughtlessly and servilely worship actual institutions and facts." This method unites ideas and facts. The methods do not conflict, but supplement each other. It is the method, in a word, of the whole,—a method, he affirms, that is throughout moral. He makes the problem consist of a practical recognition of both ideal and real elements, losing hold at no point of either in our struggle to realize social ends.

To recapitulate, I have endeavored to show that the social question has become more and more a question of sentiment and feeling, and far less one that can in any way be measured by such external signs as the statistician tabulates. All these social relations have changed to the new consciousness of the wage-earner. He has been instructed into a new attitude; and the old evidences do not satisfy him, and will less and less satisfy as the same causes work further upon him that have brought him to his present critical and irritated condition. He has further grown to know the meaning of his new political influence, giving him, as it does, a sense of power to push home his claims, never before felt by the labor world. The new feeling and the new power have changed our problem. But, while hoping, it has given us a new and more definite hope. As the problem has become far more one of feeling, it has by so far opened to the action of intellectual and moral influence. This, together with the other fact that we have at last a rational method, based more and more upon a classified experience, is our hope. This I tried secondly to show, that, in this history, the ideal and the actual have been coming into closer sympathy and connection.

Methods of social work, involving such intimate union of theory and practice, intelligence and feeling, are new, and have been made possible by the rise of the democratic spirit. No English statesman ever thought of throwing himself for victory upon the masses of the people as Gladstone is now doing. Though he fail, his follower will win. Extremes here have come to understand each other so far that they will soon act to a common end.

One last word, then, upon this method through which the whole man may act, and act under the

guidance of a rational principle resting upon adequate experience. We have already reached such a principle in our associated charities. What is essential to the method is that it is rational, and guides itself by the largest and best-ordered experience. In the older ways of charity there was nothing that in any way resembled a method. There were only disordered kindly actions, springing from the impulses of pity. The new way is radically different, in that it allows the whole man to act and work for his fellows,—opening a way both for the head and the heart,—while it controls emotion in accordance to a theoretic conception, based upon systematized experience. The new way brings ideals and realities together.

To give one further illustrations: The first tenement houses, built from the promptings of charity, ran squarely counter to economic laws, like competition, supply and demand, and flow of population. There was no sort of reconciliation between reason and emotion, between ideals and realities. The new way does reconcile them. One may come with very high ideals, and still get on hopefully with the sternest facts of the situation. All privileges are granted to tenants in accordance to thrift, cleanliness, order, and honest self-help. All rests upon a solid business basis. In several of our largest cities, the returns have been five and six per cent. Houses were taken in the worst quarters. Occupants were subjected to thorough sanitary regulations. Doors are locked at ten o'clock. Prompt payment is required, a generous percentage being taken off if rents are paid in advance, and all sanitary and other regulations met. It is a system of physical, moral, and mental discipline, reaching not only the older tenants, but, what is far more important for the future, surrounding the children with such influences from the start as to insure them a fair chance in the world. I believe no one can study the results of such work as Octavia Hill has done, and such as has been done among us for five or six years, without feeling that for this special field a method permanently and ultimately right has been reached. The method never will be changed, but only perfected and extended. Ideals and realities meet here, and work together. In several of our most important fields of social work, no one need longer be shut out by any sense of despair from becoming, under guidance of these principles, a real helper in this problem of problems. These are humble and quite unexciting ways. The work will be tedious and slow, nor will any see great result of his endeavor. Yet all who feel that the work is worth doing may help it on. We must leave the excitements of revolutionary schemes to those who cannot work without melodramatic accompaniments.

The socialist (of revolutionary type) is not a builder. He is a critic, and our business is to use the sentiment he creates to constructive ends. As a fault-finder, he does invaluable service; but our answer to him must always be in the form of some better work than he does or can do on his theory. His ideals we must take, and turn them as fast as we can into facts. There never was a time when so large a number could intelligently and effectually work for this bettering of social conditions as to-day. Never before could those who wish well to their fellows, and are capable of acting from the idea of the social whole, so hopefully bring to bear upon these issues all that they know and all that they feel. Never had social ideals a fairer field for realization. We may excuse and even thank the fiercest of socialist critics, if he but quicken us to do what it is possible to do through methods that have now been reached.

The more feeling the fault-finder creates, the more force we have to use at our own proper work,—that of strengthening and educating, enlightening and moralizing, that general social sentiment out of which, so far as it is improved, every good must spring.

CORRESPONDENCE.

SCIENCE AND MATERIALISM.

II.

Editors of The Index:—

On looking over *Lay Sermons*, published by Appleton & Co., New York, 1871, I find that Prof. Huxley says, on page 106, "If there is one thing clear about the progress of modern science, it is the tendency to reduce all scientific problems to questions of molecular physics,—that is to say, to the attractions, repulsions, motions, and co-ordinations of the ultimate particles of matter."

"In the language of physical science (which, by the nature of the case, is materialistic), the actions of men, so far as they are recognizable by science, are the results of molecular changes in the matter of which they are composed; and, in the long run, these must come into the hands of the physical. *A fortiori*, the phenomena of biology and of chemistry are, in their ultimate analysis, questions of molecular physics."

"What I term legitimate materialism,—that is, the extension of the conceptions of physical science to the highest as well as the lowest phenomena of vitality" (p. 341). "What we call operations of the mind are functions of the brain, and the materials of consciousness are products of cerebral activity" (Hume, p. 52). "We know that the phenomena of vitality are not something apart from other physical phenomena, but are one with them; and matter and force are the two names of the one artist who fashions the living and the lifeless. Living matter differs from other matter in degree, but not in kind. Modern physiology offers physical explanations of vital phenomena, or frankly confesses it has none to offer. Descartes said, 'I shall try to explain our whole bodily machinery in such a way that it will be no more necessary to suppose that the soul produces such movements as are not voluntary than it is to think there is in a clock a soul which causes it to show the hours.'"

"These words," says Huxley, "might be taken as a motto for any treatise on modern physiology." "Descartes' physiology," he remarks, "like modern physiology, leads straight to materialism. Thus," says he, "I am prepared to go with the materialist wherever the true pursuit of the path of Descartes may lead. I hold with the materialist that the human body, like all living bodies, is a machine, all the operations of which will sooner or later be explained on physical principles. I believe that we shall sooner or later arrive at a mechanical equivalent of consciousness, just as we have arrived at a mechanical equivalent of heat. We know that in the individual man consciousness grows from a dim glimmer to its full light, whether we view it in the infant advancing in years or in the adult emerging from slumber and swoon. And we have as much reason for regarding the mode of motion of the nervous system as the cause of the state of consciousness as we have for regarding any event as the cause of another. It is quite true, then, to the best of my judgment, that all states of consciousness in man and in brutes are immediately caused by molecular changes in the brain substance. Our mental conditions are simply symbols in consciousness of the changes which take place automatically in the organism. I should not wonder if gross and brutal materialism were the mildest terms applied to what I have just said; and most undoubtedly the terms of the propositions are distinctly materialistic." "And I take it to be demonstrable that it is utterly impossible to prove that anything whatever may not be the effect of a material cause." "And I am glad on all occasions to declare my belief that their fearless development of the materialistic aspect of these matters has had an immense and most beneficial influence upon both physiology and psychology."

"And every one acquainted with the history of science will admit that its progress has in all ages meant, and now more than ever means, the exten-

sion of the province of what we call matter and causation, and the concomitant gradual banishment from all regions of human thought of what we call spirit and spontaneity. And, as surely as every future grows out of the past and present, so will the physiology of the future extend the realm of matter and law, until it is co-extensive with knowledge, with feeling, and with action" (p. 142). "And, with a view to the progress of science, the materialistic terminology is every way to be preferred, inasmuch as it connects thought with the other phenomena of the universe, and suggests inquiry into those physical conditions or concomitants of thought which are more or less accessible to us, and a knowledge of which may in future help us to exercise the same kind of control over the world of thought as we already possess in respect of the material world. Whereas, the alternative, or spiritualistic terminology is utterly barren, and leads to nothing but obscurity and confusion of ideas.

"Thus, there can be little doubt that the further science advances, the more extensively and consistently will all the phenomena of nature be represented by materialistic formula and symbols" (p. 146).

And now, with these quotations before my readers, I would ask if any of them (in the absence of Mr. Savage's statements) would have suspected such a wide divergence and such a determined spirit of antagonism between science and materialism, or between the scientist and materialist, as would be likely to lead one to murder or exterminate the other, as represented by Mr. Savage.

Is there not, on the contrary, a spirit of amity, a similarity of sentiment, a oneness of object and purpose, which could only exist under the closest relationship and in the most cordial friendship?

In fact, have we not found that the two doctrines, the two characters, are centred in the same individual? The scientist is the materialist. Tyndall represents in one bodily organism both identities, and tells us in the most emphatic language that "the physical philosopher must be a pure materialist, and acknowledges himself to be such." And, with such testimony as this before us, are we not justified in concluding that Mr. Savage's tragic story did not arise in any fact connected with reading Tyndall or science?

In regard to Mr. Savage's statement that "as a theory for the explanation of the universe, and especially for the phenomena of 'conscious thought,' materialism has utterly broken down,"—to a person unacquainted with scientific principles and methods, this charge might, on the face of it, look reasonable; but to the merest tyro in science it is a most absurd allegation.

When did either science or materialism ever engage to account for all the phenomena of the universe? Never! It is Mr. Savage's religion and revelation which make such fallacious pretensions. Modern science and materialism make no pretensions to know more than they do know, and no creed or criterion binds them to attain to any stipulated standard. Science would commit suicide says Huxley by adopting a creed. What they know, they know provisionally; but the unknown and the unknowable they are in no way responsible for.

Tyndall says (p. 52), "As regards knowledge, physical science is polar. In one sense, it knows or is destined to know everything. In another sense, it knows nothing." Or, in other words, regarding certain things, science knows or is destined to know all; but, regarding other subjects and matters, she knows nothing, and never can know anything. "While science is a powerful instrument of intellectual culture and a ministrant to the material wants of men, if asked whether science [not materialism] has solved or is likely to solve the problem of the universe, I must shake my head in doubt" (p. 335).

"The burden of my writings is as much a recognition of the weakness of science (not the weakness of materialism) as an assertion of its strength. I have resolved at all hazards to draw the distinction between what men may know and what they may never expect to know" (p. 394). "The phenomena of matter and force come within man's intellectual range; but, beyond and above and around us, the real mystery of the universe lies unsolved, and, so far as we are concerned, is incapable of solution" (p. 395). "As far as I can see, there is no quality in the human intellect which is fit to be applied to the solution of the problem. It entirely transcends us" (p. 73).

As to the connection between molecular motions and states of consciousness, between the objective and subjective, "I do not see the connection, nor have I met with anybody who does. The thing eludes all mental presentation. . . . And yet there is a connection, as the prick of a pin suffices to prove. And, while accepting fearlessly the facts of materialism as dwelt upon in these pages, I bow my head in the dust before that mystery of mind which has hitherto defied its own penetrative power" (p. 409).

Accepting this testimony as valid, Mr. Savage must see that, if he condemns and deposes materialism for its "incompetence" to account for the "phenomena of the universe and the facts of consciousness," he must also place "physical science" ("God's very archangel"), as well as the "physical philosopher," the human intellect, and even poor Tyndall himself, in the same category. All are equally incompetent.

Now, what are we going to do about it? Will he and Mr. Fiske consent to reinstate materialism, or shall we consign all the other "incompetents to the limbo of past crudities," and take back our orthodox God?

As to the present standing of materialism and its forming a basis for a future philosophical system, if Mr. Savage had consulted either Huxley or Tyndall, or mixed a few hours with men of all classes of common intelligence, he would surely have given a different verdict from that which he quotes from Mr. Fiske.

When Tyndall said, "The philosophy of the future will assuredly take more account of the dependence of thought and feeling on physical processes," was he mistaken, or is it a fact? Is the brain now acknowledged to be the source of all mental processes, or do we still think the mind a supernatural entity? Every physiologist knows, now, that all manifestations of mind depend on physical conditions alone. And when Huxley said, "There can be little doubt that the further science advances, the more extensively and consistently will the phenomena of nature be represented by materialistic formula and symbols," did he say what was not the fact? We will let Edward von Hartmann answer, instead of John Fiske (Hartmann's *Philosophy of the Unconscious*, recently issued, vol. ii., p. 62),—"Almost all naturalists, physiologists, and physicians are materialists; and the more the knowledge and methods of physics and physiology are diffused among the educated public, the more does the materialistic view of the world gain ground."

Only those unacquainted with these facts, as the unscientific multitude, or the learned world without physical or physiological knowledge, or those who approach the facts with the preconceived opinions of religious or philosophic systems, can alone remain outside their influence. They must absolutely convince every unprejudiced thinking man, because they need only to be taken just as they are: they declare their meaning with such naïve plainness that it is not at all necessary to look for it. And this naïve clearness and directness, this forcible self-evidence which can only be denied by violence,—this it is which secures for the materialistic conception of the mind so great a superiority over the difficult and subtle deductions and probabilities, over the arbitrary assumptions and often distorted consequences, of the spiritualistic psychology, which induces all clear heads averse to mysticism and mere speculation to enrol themselves under the banner of materialism, which is simple as the nature which teaches it, and clear and correct in its consequences as its august mother, Nature."

I should very much like to add to the above, the testimony of Dr. Morton Prince, which is of the same purport; but my encroachments are already too great on *The Index*, for which I sincerely apologize, and with thanks for the editor's indulgence. True, Prof. Huxley says that the fundamental doctrines of materialism—that is, questions involving the ultimate nature of things—lie outside of the limits of philosophical inquiry. But this he likewise says of Spiritualism (such as Mr. Savage believes in), "and most other isms" (*Lay Sermons*, p. 144). In the sense that Mr. Huxley is not a materialist there are no materialists among thinkers to-day, for they all recognize the principle of the relativity of knowledge; and by this principle the ultimate substance, by whatever name called, is known only in its relation to consciousness, but in the sense in which Tyndall speaks of scientific materialism, and in the sense in which

I call myself a materialist, materialism has nothing to fear from such criticism as that of Mr. Savage. I am truly,

W. MITCHELL.

GLIMPSES OF COLONIAL LIFE.

Editors of *The Index*:—

In looking over some ancient papers, I found a few items of historical interest worthy to be preserved, and which may amuse your readers.

"At a court holden in Hartford the 27th of July Anno Dom. 1771," "James Johnson," "a transient person," was brought up to answer a complaint that, "on or about the 25th of July instant, with Force and Arms he entered into the shop of the complainant, . . . and did then and there Feloniously steal and Carry away from the complainant the following Articles To wit, Three Thousand of Fourteen ounce Taz or nails so Called of the Value of Five Shillings money two thousand Brass Chaise nails so called of the Value of Fourteen Shillings money amounting in the whole to the sum of nineteen shillings money." According to the law, he is condemned to pay to the complainant "fifty-seven shillings for his treble damages, and also a Fine to the King of ten shillings money to be disposed of according to Law and cost of prosecution allowed to be £0.10 and in case the said James shall refuse or be unable to pay said fine, then to be Whipped eight stripes on his naked body and that he stand committed untill the sentence be duly executed." In case said Johnson pays the fine, but cannot or will not pay the treble damages, then the Court "doth assign the said James in service to the said Jonathan for the satisfying the said sum." That is to say, "the said James shall faithfully serve the said Jonathan the full term of four months, . . . during which time the said Jonathan shall find and furnish said Servant with suitable and convenient apparel, meat, Drink, Washing and Lodging."

It seems questionable whether the thief or the complainant had the best of the bargain in this last judgment.

The grand jury in 1774 bring in a complaint "that on or about the 14th day of October Last past at Hartford aforesaid one John a Transient person, now residing in said Hartford not having the fear of God before his eyes, But being moved and instigated by the Devil, did then and there, wickedly and profanely swear by the Holy Name of God, and spoke and uttered with an audible voice these words to wit 'God damn you, I wish I may be Damnd if I dont whip you!' with many other vile words and Execrations of the same Wicked import against the peace of our Lord the King, and contrary to the form and effect of the statute of this colony, in such case made and provided," etc.

The warrant was issued in his Majesty's name to arrest this dangerous free speaker, but it does not appear what punishment awaited him. Another warrant is issued against certain parties, for a violent attack upon two women,—one Sarah, the wife of a citizen of Hartford; the other upon Sylvia, the property of Sarah Ledyard, a negro girl. The assaulting party were boys under twenty-one years of age, with one Jacko, a negro servant; and their natural guardians and Jacko's master are summoned to appear and be responsible for them. This paper is dated the 29th day of June, A.D. 1778.

These glimpses of Colonial life certainly do not make us regret that we soon after escaped from under the benign rule of George III.

E. D. C.

BOOK NOTICES.

THE INFLUENCE OF EMERSON. By William B. Thayer. Boston: Cupples, Upham & Co. Paper covers. Price 25 cts.

In this essay, Emerson's philosophy is reviewed from the stand-point of a careful reader and admiring student of his works. We give a paragraph or two which will indicate the drift of the writer's conclusions. "Cheerfulness and courage are the supreme virtues after Emerson's heart; they shine through his writings, and lived in his conduct. He exacts a deep patriotism and love of one's time. The practicalness of his teaching stimulates every one who has tasted it. . . . We have in him a unique combination of common sense and spiritual insight." "Let us not blink the fact that many persons do not understand Emerson; that some pronounce his essays

'commonplace,' while others lift their eyebrows, and with a superior air say, 'Moonshine'; that others, again, with exemplary modesty, if genuine, declare that 'he is too deep for them.' There is another class of Emersonian fanatics, who take it amiss that everybody will not worship at the little altar they have dedicated to him. By argument or sarcasm or brow-beating, they would capture that homage which is worthless, unless it come by love. But those who have imbibed even the humblest drop of Emerson's meaning will be annoyed by none of these; for they have learned from him that only the Infinite can satisfy all needs and appease all yearnings. To no book or music or landscape or friend is it granted to say the right word at every moment; but it is Emerson's high distinction to appeal to us in those moments the soul recognizes as the best. Seek him in lower moods, and his words kindle no response." "To those who, in reverence and sympathy, seek his wisdom, he unfolds precious revelations. He strips things and persons of their material wrap, and shows beneath the spirit, which is their substance, imperishable and infinite, the soul of the world."

ROMER, KING OF NORWAY, and Other Dramas. By Adair Welcker. Sacramento, Cal.: Lewis & Johnson. 1885. pp. 245.

The poem which gives its title to this book is the closing one. The others are respectively entitled "The Bitter End," "Flavia," and "A Dream of Realms beyond us." The scene of the first is laid in San Francisco, the second in ancient Rome, the third in Californian forests and the "unseen realms," and "Romer" in Norway. Love, madness, war, and death are the prevailing themes; and all but one of the dramas end in a melancholy manner. The author has evidently been a close student of Shakspeare, and has caught the Shaksperian tone, though not the spirit of the great dramatist. Considerable unexceptionable, because commonplace, moralizing is done by the heroes and heroines of these plays.

For The Index.

INSCRIBED TO TOM HUGHES.

You said it well, Tom Hughes! that bliss
Without alloy is simply this,—
To cut and turn and smell the hay,
An everlasting holiday.

Your heaven, old chap, would surely please:
You'd banish thrones; get off your knees;
Burn up psalm books; then plant more trees;
And praise the Lord, with birds and bees.

And if, dear Tom, you'll start the thing,
I know at least a baker's dozen
Will go for breaking up the Ring
And making Paradise a Common.

We won't deny the elect a chance
About their golden streets to drone,
And brag before a great white throne
Of how the damned their joys enhance.

Oh, no, Tom Hughes! if they can find
Such joys are suited to their mind,
Why, let them hide themselves on high,
In some sly corner of the sky.

We'll take our chance; endure the test;
We'll cut the hay, and do our best
To enjoy the world and help the rest;
And, blessing others, be more blest.

CLINTON, N.Y.

E. P. POWELL.

C. K. W. writes: "In the preface to that admirable book, *The Jesus of History*, now unfortunately out of print, its author acknowledges his resemblance to Joseph of Arimathea in one particular. He had held for several years the views expressed in that work, but had not declared them publicly, 'for fear of the Christians.' But for my remembrance of this expression, I should have failed to notice an historical inaccuracy in the excellent address made by Frederick Douglass in Tremont Temple, May 24, at the anniversary meeting of the New England Woman Suffrage Association. Speaking of the idea upon which this Association was founded, Mr. Douglass said that its growth had been strong, steady, and irrepressible, 'though the

heathen raged.' History will have to record that it was the Christians, not the heathen, and pre-eminently the Christian ministers, who 'raged,' when Abby Kelley and Lucy Stone and the sisters Grimké began to speak in public, though their speech was advocacy of righteousness and rebuke of popular sin. The facts upon this subject, happily preserved in the pages of the *Liberator*, must be remembered and repeated as long as the orthodox clergy continue their false declarations that the abolition of slavery and the elevation of woman have been brought about by such Christianity as they teach, and such Christians as have grown up under their tuition."

A STUDY OF PRIMITIVE CHRISTIANITY.

By LEWIS G. JONES.

8vo. 320 pages. Cloth, Gilt Top. Price \$1.50.

"No fairer statement has been made of the grounds on which the anti-supernaturalist humanitarian bases his opinion of Jesus and of the origin of Christianity. . . . Its theology and Christology are of the most radical Unitarian kind; but the temper and spirit of the book are so refined, so earnest, and so fair to all opponents, that it must impress those who are compelled to disagree with its most prominent conclusions as a model of polite and generous controversial writing."—*Brooklyn Union*.

TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crapo.

PRICE \$2.00.

For sale at the bookstores. Also sent, postpaid, on receipt of price by

The Religion of Philosophy;

OR, THE UNIFICATION OF KNOWLEDGE:

A comparison of the chief philosophical and religious systems of the world, made with a view to reducing the categories of thought, or the most general terms of existence, to a single principle, thereby establishing a true conception of God. By RAYMOND S. PERRIN.

For sale at THE INDEX Office. Price \$3.00.

SCIENTIFIC THEISM.

By FRANCIS ELLINGWOOD ABBOT, PH.D.

This work includes the substance of a lecture delivered last July at the Concord School of Philosophy. It is part of a new philosophy of Evolution, vitalized by the principle of UNIVERSAL ENDOSCOPIC TELEOLOGY and by the substitution of the ORGANIC THEORY OF EVOLUTION for the MECHANICAL THEORY advocated by Spencer and Haeckel. Its purpose is to philosophize the scientific method, and to show that modern science, interpreted by its philosophized method rather than by its non-philosophic special results, leads, not to Atheism, not to Agnosticism, not to Idealism, but to a REALISTIC SPIRITUAL THEISM which will satisfy both "the head" and "the heart."

1 vol., 12mo. Price \$2.00.

For sale at THE INDEX Office, 44 BOYLSTON STREET, BOSTON.

THE FREE RELIGIOUS ASSOCIATION

was organized in 1867. Though having its headquarters in Boston, it is a national organization, and has members and officers in various States of the Union. It has the following

CONSTITUTION.

I. This organization shall be called the Free Religious Association.

II. The objects of this Association are to encourage the scientific study of religion and ethics, to advocate freedom in religion, to increase fellowship in spirit, and to emphasize the supremacy of practical morality in all the relations of life. All persons sympathizing with these aims are cordially invited to membership.

III. Membership in this Association shall leave each individual responsible for his own opinions alone, and affect in no degree his relations to other associations; and nothing in the name or Constitution of the Association shall ever be construed as limiting membership by any test of speculative opinion or belief,—or as defining the position of the Association, collectively considered, with reference to any such opinion or belief,—or as interfering, in any other way, with that absolute freedom of thought and expression which is the natural right of every rational being. Any person desiring to cooperate with the Association shall be considered a member, with full right to speak in its meetings; but an annual contribution of one dollar shall be necessary to give a title to vote,—provided, also, that those thus entitled may at any time confer the privilege of voting upon the whole assembly, on questions not pertaining to the management of business.

IV. The officers of the Association shall be a President, twelve Vice-Presidents, a Secretary, an Assistant Secretary, a Treasurer, and twelve Directors. They shall be chosen by ballot at the annual meeting of the Association; and the President, Vice-Presidents, Secretaries, and Treasurer shall hold their offices for one year, or until their successors be chosen. The Directors shall be chosen for four years, and, at the expiration of that term, shall not be eligible for reelection until after two years. One fourth of their number shall be chosen annually; but, at the annual meeting of 1882, the full number of twelve shall be chosen in sections of three respectively for one, two, three, and four years. The President, Secretaries, Treasurer, and Directors shall together constitute an Executive Committee, intrusted with all the business and interests of the Association in the interim of its meetings. They shall have power to fill any vacancies that may occur in their number, or in the list of Vice-Presidents, between any two annual meetings. Six members of the Executive Committee shall constitute a quorum.

V. The Annual Meeting of the Association shall be held in the city of Boston, on Thursday of what is known as "Anniversary Week," at such place and with such sessions as the Executive Committee may appoint, of which at least one month's previous notice shall be publicly given. Other meetings and conventions may be called by the Committee, according to their judgment, at such times and places as may seem to them desirable.

VI. These Articles may be amended at any Annual Meeting of the Association, by a majority vote of the members present, provided public notice of the amendment has been given with the call for the meeting.

Officers elected for the year 1886-87:—

PRESIDENT.

WILLIAM J. POTTER, New Bedford, Mass.

VICE-PRESIDENTS.

OCTAVIUS B. FROTHINGHAM, Boston, Mass.
FELIX ADLER, New York City.
GEORGE W. CURTIS, Staten Island, N.Y.
EDWARD L. YOUNG, New York City.
THOMAS WENTWORTH HIGGINSON, Cambridge, Mass.
ELIZABETH B. CHASE, Providence, R.I.
GEORGE HODLEY, Cincinnati, O.
NATHANIEL HOLMES, Cambridge, Mass.
ROWLAND G. HAZARD, Peacedale, R.I.
BERNHARD FELSETHAL, Chicago, Ill.
EDNAH D. CHENEY, Jamaica Plain, Mass.
EDMUND MONTGOMERY, Hampstead, Texas.

SECRETARY.

F. M. HOLLAND, Concord, Mass.

ASSISTANT-SECRETARY.

D. G. CRANDON, Chelsea, Mass.

TREASURER.

JOHN C. HAYNES, 451 Washington St., Boston, Mass.

DIRECTORS.

Four Years.
JOHN L. WHITING, Boston, Mass.
MRS. ANNA D. HALLOWELL, West Medford, Mass.
JOHN W. CHADWICK, Brooklyn, N.Y.

Three Years.

FREDERICK A. HINCKLEY, Providence, R.I.
W. A. RUST, M.D., Boston, Mass.
MRS. PHEBE M. KENDALL, Cambridge, Mass.

Two Years.

CORNELIUS WELLINGTON, Boston, Mass.
MRS. MARY F. EASTMAN, Tewksbury, Mass.
FRED. W. GRIFFIN, Concord, Mass.

One Year.

MRS. CLARA M. BISBEE, Dorchester, Mass.
J. A. J. WILCOX, Chelsea, Mass.
MISS A. A. BRIGHAM, Boston, Mass.

The office of the Association is at 44 BOYLSTON ST., Boston (next door east of the Public Library), where is also the publication office of *The Index*.

All letters pertaining to the business of the Association (payment of membership fees, orders for its publications, etc.) should be addressed to "Free Religious Association," at the office.

Communications intended specially for the Secretary, as well as his personal correspondence, should be addressed to him at CONCORD, MASS.

F. M. HOLLAND, Secretary F.R.A.

CHEAP RADICAL TRACTS!

No. 1.—*Truths for the Times*, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 5 cents; 30 copies, \$1.00.

No. 2.—*Fear of the Living God*, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 3 cents; 20 copies, 50 cents.

No. 3.—*Lecture on the Bible*, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 5 cents; 30 copies, \$1.00.

No. 4.—*Christian Propagandism*, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extractions.* Price 5 cents; 30 copies, \$1.00.

No. 5.—*"God in the Constitution,"* by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 5 cents; 30 copies, \$1.00.

No. 6.—*"The Sabbath,"* by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 5 cents; 30 copies, \$1.00.

No. 7.—*"Compulsory Education,"* by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 3 cents; 20 copies, 50 cents.

No. 8.—*The Present Heaven*, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 3 cents; 20 copies, 50 cents.

No. 10.—*The Impeachment of Christianity*, by F. E. Abbot. 5 cents a doz.

No. 11.—*The God of Science*, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 5 cents; 30 copies, \$1.00.

No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 5 cents; 30 copies, \$1.00.

No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 3 cents; 30 copies, 50 cents.

No. 14.—*A Study of Religion: The Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 5 cents; 30 copies, \$1.00.

No. 15.—*The Battle of Syracuse*. Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 5 cents; 30 copies, \$1.00.

Social Ideals, by David A. Wasson. Price 5 cents each; 10 for 30 cents.

JUST READY:

MANUAL TRAINING IN EDUCATION.

By James Vila Blake.

This little book of about 100 pages discusses the training of the hand as properly an integral part of education. The relation of general and special education, the need of hand-training for all classes, the dignity of hand-work, its influence on personal character, the relation of manual training to immigration and to the apprenticeship problem, and the present condition of the subject, are among the points treated, all in a very condensed way. It will be read with profit by teachers and others interested in methods of education.

Price, in paper.....25 cents.

CHARLES H. KERR & CO.,
PUBLISHERS,
175 Dearborn Street, Chicago.

MISS KEENE: "Why, Mr. B., what has caused this change in your appearance?" Mr. B.: "I presume it's my glasses. I've just begun to wear them." Miss K.: "Well, you should always wear them. You've no idea how intelligent they make you look. I scarcely knew you."

"SOLAR HEAT GRAVITATION AND SUN SPOTS" is the title of an able and interesting work by Mr. J. H. Kedgic, which aims to show that sun-spots are produced by an excess or deficiency of heat, and that to the shadows of the planets alone can we look for the cooling influence upon the maculated zones of the sun, as there are no other intervening bodies.

"Yes," said Mrs. Richladié, "my daughter graduates next week." "I understand she is at the head of her class?" "No," she said, with some sadness, "she will not be the valetudinarian, but she will take the salutary, and that's nearly as high." "The commencement exercises are to be very interesting." "Oh, yes: Rev. Dr. Grace will preach the bacchanalian sermon, Rev. Mr. Mortimer will deliver the dilemmas, and there will be other detractions too numerous to mention."—*Washington Critic.*

A LADY said one day that her priest "did not allow her to read such books as Herbert Spencer's," for fear of undermining her religion." Whereupon, another lady said: "Well, I don't know about that. It seems to me they show almost too much fear of Herbert Spencer's power. I once read his *Fairy Queen*, and I'm sure it did not change my faith in the least."—*London Inquirer.*

Address
FREE RELIGIOUS ASSOCIATION,
44 Boylston Street, Boston Mass.

PHILIP GILBERT HAMERTON in the *July Atlantic* makes this remark: "A writer cannot acquire experience in his profession without discovering that the spirit of justice is the greatest of all hindrances to effect. Just writing does not amuse, but malevolence can easily be made entertaining."

A WORTHY clergyman in a neighboring town is very absent-minded, and has a short memory. It is a common habit with him in the pulpit to forget something, and then, after sitting down, to rise up and commence his supplementary remarks with the expression, "By the way." A few Sundays ago, he got half through a prayer, when he hesitated, forgot what he was about, and sat down abruptly, without closing. In a moment or two, he arose, and, pointing his forefinger at the amazed congregation, he said, "Oh, by the way, amen."—*Troy Times.*

A LITTLE boy, who was told that the tiny baby sister he was bending over had come from heaven, looked at her awhile, and then said, softly, "Please tell us all about heaven, baby, before you forget it."—*Harper's Bazar.*

HUSBAND'S CALCIUM MAGNESIA.—Four First Premium Medals awarded. More agreeable to the taste and smaller dose than other Magnesia. The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in conscious in the diffusion of science, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*
